ENGLISH PROSE OF THE VICTORIAN ERA

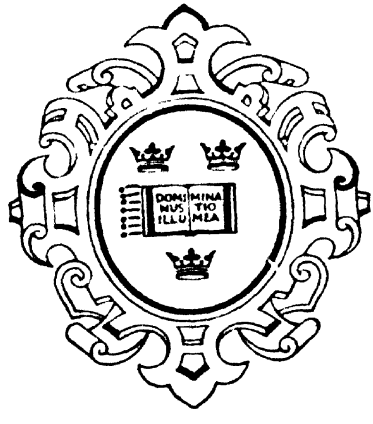
ENGLISH PROSE OF THE VICTORIAN ERA

Chosen and Edited by

CHARLES FREDERICK HARROLD
Late Professor of English, Ohio State University

AND

WILLIAM D. TEMPLEMAN
Professor of English Language and Literature
The University of Southern California



New York
OXFORD UNIVERSITY PRESS

Copyright 1938 by Oxford University Press, Inc.

Fourteenth Printing, 1968

Printed in the United States of America

Acknowledgments

For permission to quote substantial passages in the text, in the footnotes, in the Commentaries, and in the general Notes, the editors are happy to acknowledge the courtesy of the following publishers, and to indicate the works from which selections have been made:

George Allen and Unwin, Ltd.: E. T. Cook, *The Life of Ruskin.*

The American Book Co.: French and Sanders, *The Reader's Macaulay.*

D. Appleton-Century Co.: Bertram Newman, *Newman*; Leonard Huxley, *Life and Letters of Thomas Henry Huxley*; the works of Huxley.

Jonathan Cape: Malcolm Elwin, *Thackeray: A Personality.*

James Clarke and Co.: Charles H. Harvey, *Matthew Arnold: a Critic of the Victorian Period.*

Dodd, Mead and Co.: George Saintsbury, *A History of Criticism*, and *Matthew Arnold*; Charles Whibley, *William Makepeace Thackeray.*

Gerald Duckworth and Co.: Montague Weekley, *William Morris.*

E. P. Dutton and Co.: J. R. Ainsworth Davis, *Thomas Henry Huxley.*

Hamish Hamilton: Mary Agnes Hamilton, *John Stuart Mill.*

Harper and Brothers: Charles Grosvenor Osgood, *The Voice of England*; *The Correspondence of John Lothrop Motley.*

Longmans, Green and Co.: J. W. Mackail, *The Life of William Morris*; William Morris, *News From Nowhere*; Wilfrid Ward, *Life of Newman*; J. Lewis May, *Newman.*

The Macmillan Co.: A. C. Benson, *Walter Pater*; R. H. Hutton, *Contemporary Thought and Thinkers*; J. J. Reilly, *Newman as a Man of Letters*; John Morley, *Miscellanies*; Frederic Harrison, *John Ruskin*; works of Arnold and Pater.

Methuen and Co.: W. G. Collingwood, *Life of Ruskin.*

John Murray: A. C. Benson, *Ruskin.*

The Oxford University Press: *The Poems of Matthew Arnold* (introduction by Sir Arthur Quiller-Couch).

G. P. Putnam's Sons: Leslie Stephen, *Robert Louis Stevenson: an Essay*; Thomas Wright, *The Life of Walter Pater.*

Charles Scribner's Sons: W. C. Brownell, *Victorian Prose Masters*; Augustine Birrell, *Res Judicatae*; G. W. E. Russell, *Matthew Arnold*; the works of Robert Louis Stevenson.

Preface

In this volume the editors' aim has been to supply an ample body of readings for use in a course in Victorian prose covering either a long or a short term. In view of its possible use throughout an academic year, they have added full though selected bibliographies, and considerable material in the Appendix, so that the best additional or collateral reading may be clearly indicated. The volume is adaptable for use in a short term owing to the fact that what in many cases would be called 'outside readings' or 'library work,' assigned for the purposes of completeness, is present within the volume, in its unprecedented fullness of selections and its relatively small dependence upon abridgments. The study of the great Victorians has grown so rapidly in recent years, as has the critical and scholarly approach to their best work, that it has seemed to the editors an opportune moment for the presentation of the great bulk of the best Victorian 'non-fiction' prose within the covers of one volume, so that the reader may gain in one continuous sweep a vivid and accurate picture of that prose.

Every effort has been made to supply the reader with all the information necessary to a ready understanding of the text. This effort explains the nature and the number of the footnotes. The editors justify their generosity in this matter by pointing out that in the experience of most instructors, students are often hampered by the lack of time, or library facilities, or general opportunity to look up allusions, to ascertain the meanings of obscure terms, or to identify quotations. Moreover, it may be debated whether such labor is really as profitable as has often been maintained. It would seem to be the business of a conscientious editor to clear away all textual impediments, and to make it possible for the reader to concentrate on larger and much

more important matters: the author's ideas, his methods of presentation, his style, and the relevance of his thought to the world of the reader. Furthermore, it is becoming clearer every year that the enlarged curricula of modern schools, from the elementary levels to those of the colleges and universities, cover such wide and diverse fields that certain items of knowledge — such as in classical literature and mythology, or in religious history and belief — which were considered elementary, and of inevitable accomplishment, only twenty years ago, must now no longer be so certainly assumed. Many modern students, especially in America, combine an astonishing amount of information on subjects formerly inaccessible or non-existent, with an equally astonishing ignorance of certain backgrounds necessary for a true reading of the literature of their grandfathers. As the Victorian era becomes more and more a 'historical' epoch, and as its problems are seen to involve intellectual and religious and cultural concepts no longer so integral to our present patterns of life, it becomes increasingly necessary to supply the reader with editorial aids. Finally, since the present volume is addressed to all the varieties of American students, from the most fortunate to the least equipped, the justification of liberal aid lies in the wider possibilities of its usefulness. Such aid may be ignored by the student who does not need it; on the other hand, it may be of real value to the reader who is developing the habit of scholarly attention to allusion and exact meaning. Since certain selections may be omitted from the course, the editors have not hesitated to repeat material in the footnotes in various places, wherever necessary; and since courses vary in their treatment of backgrounds, the footnotes sometimes repeat, concisely and promptly, material covered in more detail in the Introduction.

The aim of the Introduction is twofold: to supply basic information of the backgrounds of Victorian prose, and to stimulate thought on the problems with which that prose deals. Wherever the Introduction attempts to evaluate, the reader should exercise his own judgment in coming to conclusions, and should not regard

any passage as dogmatic in nature or intention. The Introduction is of course indebted to the labors of many authorities on the period; it is at times especially indebted to the work of D.C.Somervell, G.M.Trevelyan, Esmé Wingfield-Stratford, H.V.Routh, and G.M.Young, who have written always stimulatingly, and often brilliantly, on the nature of the Victorians and their achievement. Responsibility for statements, and for the general interpretation of the Victorian era as presented in the Introduction, is indicated by the initials at the end.

In all cases the text of the present volume is based on that of standard and accepted editions. No intentional changes have been made, except in cases of obvious misprint. The authors' footnotes have been retained only when they were interesting and significant, or when they were necessary to the meaning of a passage. English spelling has been preserved in the text; American spelling has been used in the editors' footnotes.

Abbreviations used in the bibliographies are as follows: *CR*, Contemporary Review; *ESt*, English Studies; *FR*, Fortnightly Review; *JEGP*, Journal of English and Germanic Philology; *LQHR*, London Quarterly and Holborn Review; *MLN*, Modern Language Notes; *MLR*, Modern Language Review; *MP*, Modern Philology; *NAm*, North American Review; *NC*, Nineteenth Century and After; *NEQ*, New England Quarterly; *PMLA*, Publications of the Modern Language Association of America; *PQ*, Philological Quarterly; *QR*, Quarterly Review; *RA*, Revue Anglo-Américaine; *RES*, Review of English Studies; *RLC*, Revue de Littérature Comparée; *SAQ*, South Atlantic Quarterly; *SP*, Studies in Philology; *TLS*, (London) Times Literary Supplement; *VQR*, Virginia Quarterly Review.

For helpful opinion and advice at various stages in the preparation of this volume, the editors are grateful to Professors Karl Young of Yale University, Robert Morss Lovett of the University of Chicago, Franklyn Bliss Snyder, Frederic E. Faverty, and James A. Work of Northwestern University, John M. Booker of the University of

North Carolina, and Horace A. Eaton of Syracuse University. The editors wish also to thank Professors Walter H. French and Harry Caplan of Cornell University for permission to use their scholarly translations of the Latin in Macaulay's essay on Bacon, and Professor Gerald D. Sanders of the Michigan State Normal College for the aid of his admirable annotation. Finally, the editors are grateful to Professor Howard F. Lowry of the College of Wooster for his being in many ways one of the true begetters of the present volume.

Introductory Survey:

MAJOR ASPECTS OF THE VICTORIAN PERIOD

Most of the great or distinguished prose published between the appearance of Macaulay's essay on Milton in 1825 and the death of Queen Victoria in 1901 reflects the tumult of a very eventful period. More than in any previous era, English literary prose during those years was intimately related to life and thought. It mirrored the rise and fall and vicissitudes of doctrines, ideals, political principles, religious conceptions, scientific theories, and cultural change. Merely to glance through the pages of Carlyle, Ruskin, or Arnold is to meet the surge and thunder of conflicting ideas; everywhere there are allusions to the advance of science, the revival of Anglicanism, the growth of democracy, the rapid spread of industrialism, the developing faith in 'progress' and the 'march of mind.' All of the great writers of 'non-fiction' prose were directly or indirectly involved in these conflicting forces. Some of the writers were largely in tune with their age: Macaulay, Mill, Huxley, and Spencer. Others were sharply opposed to some of the most distinctive tendencies of the time: they were self-dedicated 'prophets' and social critics; and each offered his own solution for the problems of his bewildered contemporaries. Carlyle's solution was a religious transcendentalism founded on German literature and philosophy; Newman's answer was a turning to the dogmas of the Roman Catholic Church; Ruskin's early hope was in art, and later in social and economic doctrines derived to some extent from his master, Carlyle; Arnold's message was that of the harmonious and well-rounded culture of the individual and of society; and finally, at the end of the century, Pater counselled a retreat into the world of art and aesthetic sensibility.

Without continuing the list of writers who promoted or reacted against the main tendencies of the age, we can see that any true understanding of them requires some knowledge of the period which produced them. The effort to understand their economic, social, and intellectual background is not without its own rewards, for most of the problems which the Victorians attacked are with us still, and many of their suggested solutions have a relevance and a vitality in our own day. What they wrote constitutes a fascinating chapter in the history of the English mind, and also provides a perspective for viewing much that continues to perplex the world. Above all, a survey of their beliefs and assumptions will illuminate the richness of their prose, a prose which is often highly allusive, sometimes deceptively simple, and always susceptible to fresh and profitable interpretation as the symbol of their thought, and the eloquent expression of their convictions.

I

The Nature of the Age

The Victorian age refuses to come out neatly as a clearly marked, well-rounded historical epoch. We cannot apply to it any pat and helpful phrase, like 'the Age of Reason,' or 'the Great Awakening.' Misleading as such labels are at best, they

are extremely unsatisfactory when applied to the exuberant, complex, and at times chaotic years of Victoria's reign, whether we call those years the 'Age of Science and Democracy,' or the 'Age of Hope,' or the 'Age of Darwin.' Nor is the chronological extent of the period less free from dispute: its beginnings are variously set at 1830, 1832, and 1837 (the year of the Queen's accession), though Macaulay's first great essay appeared twelve years before the latter date; the end of the age occurs anywhere between 1884 (the year of the third Reform Bill) and the end of the reign (1901). It is generally agreed, however, as Somervell remarks, that 'it is only in the middle period that we are unconscious of either eighteenth or twentieth century frontiers. This is the "Victorian" period *par excellence*.'

In spite of the difficulties in comprehending the multitudinous complexities of the period, it is obvious that the greatest single fact of the age was that of change and adjustment. The Victorians lived in a time of unprecedented rapidity of development. They experienced the swift culmination of four centuries of transition which had begun with the break-up of medieval unity in the Renaissance and the Reformation, and which had been accelerated by the rise of a credit economy, the increasing influence of the middle classes, the growth of science, the expansion of industry, the demand for political freedom, and the relaxation of religious control over life. In the nineteenth century these elements of transition were profoundly revolutionary. Within the lifetime of an older Victorian, England passed from stage-coaches to railways and telegraphs, from general illiteracy to widespread education, from government under a Tory oligarchy to government under democratic suffrage, from a world of settled and static adjustments to a world of evolution, growth, and functional change. It was natural for the Victorian to view his age with exhilaration and bewilderment. While engineers, economists, and politicians were achieving miracles in the physical comfort and efficiency of life, certain scientists were setting forth theories and facts which shook the frame-work of the world, and the great lay-prophets — Carlyle, Newman, Ruskin, Arnold — poured forth a torrent of eloquent exhortation, denunciation, and warning. In the confusion of nineteenth-century transition — in religion, business, government, and scientific outlook — men sought for a way to preserve their identity, to remain personalities rather than to become economic or political or material victims of the machine civilization which threatened to enslave them.

The effort to save what humanity calls 'values' — beauty, individuality, love, reverence, duty — took many forms, and has received many interpretations, some of which we may note. On the spiritual and religious side, it has been said that the conflict was primarily between the powerful tradition of eighteenth-century rationalism (with its skepticism, atheism, materialism) and what may be broadly termed as the 'Catholic' reaction manifesting itself in romanticism, in the revival of Gothic architecture, the reaffirmation of the supernatural and the mysterious in human experience, as in Tractarianism and Transcendentalism. This conflict has also been stated in terms of Naturalism *versus* Idealism: with the decline of orthodox religious influence,

men were torn between a desire to see man and nature as merely physical mechanisms, and an aspiration to view them, on the other hand, as essentially spiritual realities clothed in a garment of matter. In addition to this struggle over moral and religious ideas, there was also the economic and social conflict: the age felt both the desire for freedom and the need for organization, *i.e.*, for liberalism, free trade, democracy, *laissez-faire*, and also for co-operative effort (as in Trades Unionism), collectivism (as in Socialism), or institutionalism (as in the Tractarian Movement). The effort to reconcile these forces is manifested in the universal attempt at readjustment, between society and the individual, or between tradition and innovation; and it appears in one of the characteristic features of the age, the spirit of compromise.

The genius for compromise probably never had a richer opportunity than in nineteenth-century England. All men felt that they were living between two worlds, one dead, the other struggling to be born. Behind them lay the American and the French Revolutions, and around them surged an even greater revolution in industry and agriculture. Sometimes they saw themselves romantically ill in the throes of new-birth, and seized upon a new phrase, the *mal du siècle*, to express their plight. But their immensely practical minds, largely in reaction to the excesses, failures, and impossible dreams of the Romantics, applied to the task of reconstruction their talent for compromise. The wealthy and newly triumphant middle class, unlike the middle class in the French Revolution, did not insist on a clean sweep and a radically democratic program; instead it allied itself with the aristocracy, which willingly recruited itself from the lower group. This arrangement, at once political and social, rested upon a multiple basis, profoundly 'Victorian' in its nature: upon a love for tradition and a capacity for necessary innovation, on a cautious willingness to patch up the Constitution, on an admiration for industrial wealth, and upon a determination to be at once prosperous and philanthropic — to build up enormous fortunes, and yet to inaugurate unprecedented reforms in industry, education, municipal government, public welfare. The Victorian revolution, brought about by this spirit of mutual concession and self-regarding advancement, extended to the three major fields of activity, the economic, the political, and the intellectual; it showed itself in the tremendous advances in industrialism, democracy, and science.

Along with this spirit of practical compromise, with its utilitarian emphasis on use, there naturally went the spirit of secularism, or the tendency to order the affairs of life independently of the church or of religious considerations. For the first time in history, men attempted systematically and persistently to conceive of society as organized on a purely economic and political basis. To a sixteenth-century Catholic or Protestant, such an attempt would have seemed both impious and incomprehensible. But after the Age of Reason, and with the beginning of the Victorian age, the secular spirit was swift and irresistible. Men like Macaulay and John Stuart Mill thought they saw the new world which Bacon had sighted, a world of organized thought, and of man in control of nature through obedience to her

laws. Secularism promised to make of this world the heaven dreamed of by the hungry generations of the past, to enable man to save himself and improve his nature, independently of religion, and to create a self-sustaining society of happy and rational human beings. The purely secular view, as expressed, for example, in Mill, was attacked by both the orthodox believer, like Newman, and by the non-theological idealist, like Carlyle. While orthodoxy clung to a frankly supernatural view of man and society, Carlyle strove to retain something of that view by declaring nature to be mysteriously spiritual, in the doctrine of 'natural supernaturalism.'

Another feature of the time was the rapid growth of the historical spirit. In contrast to the old mechanical view of nature, the new outlook was organic; it stressed continuity, process, slow transformation of one stage of growth into the next. The Victorians found the historical method applicable in a variety of fields — in Carlyle's doctrine of the universe and of society as organisms, in Newman's study of the development of dogma, in the geologist's rejection of sudden and catastrophic change in preference for explanations involving slow changes over vast extents of time, and eventually in Darwin's evolutionary hypothesis. The idea of growth and process became the master-key. The older preoccupation with Nature, as in the Romantics, gave way to an interest in history; the doctrine of 'the perfectibility of man,' laboriously stated by Godwin, yielded to the new dogma of 'progress.' Together with economic prosperity and political reform, the historical spirit contributed, not always without an element of fallacy, to the growth of mid-Victorian optimism.

Underlying all the surface phenomena of Victorian life, there was an immense confidence — confidence in individual men and in the age as a whole. The great leaders — Carlyle, Macaulay, Newman, Mill, Arnold — might disagree, each seeming to have won a portion of the truth; but the great public dimly felt that, in spite of discords, the total would somehow reconcile all differences and attest to the reasonableness of certainty. In a sense they were at one with life, not of course with the material environment, which incessantly called for improvement, but with what that environment promised to become. Until the final decades of the century, the typical Victorian had faith in an ultimate deliverance of man from the ancient tyrannies of want, political power, ignorance, and chance. The Utilitarians, the political economists, the Evangelical reformers, the leaders of religion (whether conservative or liberal), the practical industrialists, and even the great literary prophets, all carried the Victorian faith in the possibility of a solution to the riddle of life. They had faith in human nature, in logic, and in the tendency of the world to grow better. Though their practices might be at odds with some of their religious ideals, and though their religious ideas might be at variance with their intelligence, nevertheless, in the midst of material progress, political reform, and humanitarian enlightenment, they felt impelled to believe in the essential rightness of things and in the eventual accomplishment of peace, freedom, material comfort for all, and the steady moral progress of the race.

Much that has happened since the end of the nineteenth century gives to the Victorians' faith a quality at once naïve and tragic. Their belief in education, in democracy, in progress, and in the developing dignity of man has received many an ironic comment in many fields — in economics, in politics, and in the problems of war and peace. As the age recedes farther into the past, the drama of its mighty forces becomes clearer, and the Victorian satisfaction with compromise makes that drama seem more and more like a tragedy. It was a great age, great in achievement and in self-criticism; and it is often compared favorably with the age of Shakespeare and Bacon. But it failed to go to the bottom of its greatest problems. Thus one eminent critic of the Victorians, Wingfield-Stratford, can say: 'There was as much idealism, generosity, disinterestedness, to be found among the men of Dickens's time, as among those of Shakespeare's or Cromwell's. Their tragedy is at least not ignoble. They brought much to the solution of the great problem with which they were confronted, that of adapting their civilization to the conditions of a machine age. But they did not bring quite enough. In that their tragedy consists.'

II

The Triumph of the Middle-Class Spirit

The history of England in the mid decades of the nineteenth century was the history of the middle class. This class, for whom Ruskin provided some knowledge of art, whose ideal of work was ethically exalted by Carlyle, and whose cultural absurdities were satirized by Arnold, supplied the brains of England, set her policy and her standards, and realized her ideals. It was made up largely of merchants, financiers, and owners or controllers of mills, factories, mines, and warehouses. Its interests were neither those of the aristocracy nor those of the lower classes. Its mentality had evolved out of centuries of struggle; it had led the van of the Reformation and had been the backbone of the Puritan revolution. It was Protestant in religion, relatively democratic in politics, and highly individualistic in business. It was at odds with the old aristocratic tradition of authority, and with the medieval tradition of asceticism. It exalted, as its model, the honest, reliable, God-fearing, and successful merchant. It rode to power on the Industrial Revolution — to economic power through machinery, and to political power through democratic reform. In reaction to the Romantic visionaries, it was sharply practical; in dread of a repetition of the French Revolution on English soil, it was conservatively liberal; in abhorrence of the atheism of Godwin and Paine, it was determined to maintain at least the forms of religion; in disgust at the licentiousness of the Regency, it decided to be respectable.

The religious spirit of the middle class was not only Protestant; it was also puritan, and in some respects Calvinistic. Directly or indirectly, through the Dissenting sects or through some of the leaders of the Evangelical wing of the Established Church, the middle class imbibed the spirit of Calvin: it tended to think of God as an absolute sovereign and a Taskmaster; it saw man as the inheritor of the sin of Adam, yet as an individual battling

toward salvation, or toward the *evidences* of it in worldly success; it tended to regard the destinies of men as pre-ordained, and discoverable to men only through action; it saw history, and the whole panorama of nature, as the working-out of a divine plan; it was inclined, especially after the Romantics had exalted the man of genius, to respect the great leader, and to think of him as among the 'elect'; yet it also believed, after the pattern of Calvin's thought, in the right of men to rebel against godless rulers. The spirit of Calvinism was never identical with its dogmas; the Calvinistic temperament may appear, and has appeared, in many times and places. It found its most eloquent Victorian expression in Carlyle, who had repudiated its theology (if not Christianity itself); it is discernible in the young Newman, and crops out in Newman's last utterances; it is to be seen in the minds of Ruskin, Macaulay, and Arnold. Most of the Calvinistic virtues are the virtues of the middle class: sobriety, frugality, industry, chastity, honesty, independence, resourcefulness. In them lie all the potentialities for democracy, individualism, competition, prudery, earnestness, thrift, and diligence, — all of which, when in suitable combination, make up what we call 'Victorianism.' Three of the middle-class virtues were especially powerful in shaping character: the idealization of chastity meant the abhorrence not only of sexual sin but also of dancing, theater-going, even of art; the virtue of labor meant eventually that the acquisition of wealth gained a kind of religious sanction; and honesty became in time only 'respectability.' It would be a mistake, of course, to attribute to Calvinism all the virtues, vices, achievements, and failures of the Victorian middle class; other religious groups — and several powerful non-religious thinkers, like Mill and Macaulay — helped shape the age. But in the triumph of the middle class, the Calvinist spirit, as a part of the general Protestant mentality, helped usher in the capitalist system which brought the age its culmination of prosperity, complacency, and hypocrisy. This practical Protestantism — an attitude rather than a set of beliefs — characterized the *bourgeois* consciousness, repudiating political and economic restraints as vigorously as it had thrown off ecclesiastical interference generations before.

If the new ruling class was indebted in a large degree to the puritan tradition, it was no less indebted to certain elements in the rationalist tradition of the eighteenth century. Most Victorians, even after the idea of evolution and growth had displaced the older concept of a mechanical universe, still held a rather narrow Newtonian view of nature. They thought of the world as a kind of mechanism which God, as an artificer, had made and set running according to unalterable laws which the scientist could discover. They still looked for analogies in nature, for evidences of a divine design, or all-embracing law. Even Huxley, the great popularizer of evolution, believed in the machine-universe, and in the validity of proofs of God's existence by evidences of design in nature, until the publication of Darwin's epoch-making book in 1859. It was natural therefore for the Victorian to carry over into his economic and social thinking the old mechanical and deterministic concepts. If the great universe runs

by mathematical laws, as shown in Newton's *Principia*, and if man ignores or tampers with such laws at his peril, may not one assume that mathematical laws operate in economic production and consumption, in increases in the population, and in the relations between capital and labor? And should not such laws be allowed to operate *naturally*, without interference, by the rule of *laissez-faire*? To be sure, there were intellectual difficulties in this view. As in the old Calvinist theology, how could one reconcile the notion of universal and unalterable law with man's desire and achievement in reform? Despite these theoretical problems, influential thinkers and powerful practical men adapted to economic situations the methods of mathematical science. The rising industrial middle classes were the first to benefit by the new doctrines.

In Adam Smith's *Wealth of Nations* (1776), they found themselves justified and their functions recognized as productive of social utilities. Adam Smith rationalized their optimistic faith in a divine natural order, in enlightened self-interest, in the natural rights of property and liberty, in free-trade, free competition, and *laissez-faire*. Though he sympathized more with the farmer and the laborer than with the industrialist, the latter chose to ignore his humane views on workmen, and regarded his book as the bible of economic individualism. To this work and its powerful influence, the reader added the *Essay on the Principle of Population* (1798, 1803) by Thomas Robert Malthus, who argued that whereas the means of subsistence increases in arithmetical progression (2:4:6:8:10:12), the population increases in geometrical progression (2:4:8:16:32:64), unless it is checked by such 'natural' causes as famine, disease, war, crime. Any effort to aid the poor merely increases their numbers, lowers their wage-level, and adds to their misery. The only hope for the poor is the unlikely one of birth-control through 'moral restraint.' These conclusions — somewhat altered in the second edition of Malthus's work — added greater weight to the doctrine of *laissez-faire*. 'By explaining poverty,' as one critic acidly observes, 'Malthus robbed it of its horrors for the rich.' It now remained for David Ricardo, a successful banker and a Radical member of Parliament, to apply Malthus's ideas to the science of Adam Smith, in his *Principles of Political Economy* (1817). As a champion of the new industrial class, Ricardo declared that nature had ordained an inevitable antagonism between landowners, industrialists, and wage-earners; that the 'wage-fund' — the amount of wealth to be divided among the workers — is a fixed sum which cannot be altered by legislation or collective bargaining without disastrous consequences for all; and that wage rates are mathematically determined by fluctuations in the labor population. These articles of the new 'political economy' — of what Carlyle called the 'dismal science' — seemed to the uncritical practical man to rest on mathematical foundations, and they consoled the uneasy conscience of many an employer. But they were attacked by the great champions of human values, especially by Carlyle and Ruskin. Even John Stuart Mill, who had contributed much to the new philosophy, came at last to modify it in the light of a more humane sociology. And Macaulay, the staunch supporter of middle-class

ideals, finally made a strong plea for government interference when, in 1846, the Ten Hours Bill was before the House of Commons.

The middle-class spirit, as expressed in industrialism, free competition, and a faith in the 'natural laws' of political economy, came into economic power, and eventually into political control, with the advent of two revolutions, the industrial and the agricultural. We need not repeat in any detail the often-told story of these two mighty processes. The transition from the old order to the new had unfortunately to be made under extremely unfavorable circumstances, during the war with Napoleon. To defeat him, it was necessary to keep the furnaces roaring and the wheels whizzing; the problems of working conditions, wage-rates, profiteering, and general social waste had to wait for a future solution. Thus the century opens with a war-boom, with exploited labor, and with recurrent financial panics. In the rural areas, suffering was increased by the continuation of the eighteenth-century practice, on the part of many landlords, of 'enclosing' the waste lands, common fields (used by the poor as pasture), and small farms. By a series of acts of Parliament, the 'improving landlords' thus dispossessed, legally or otherwise, a great mass of the agricultural population, which had already felt the ruinous competition of machine-weaving as their hand-loom-weaving became increasingly outmoded. This impoverished rural population — farm hands, and small farmers who had lost or sold their land for a small sum — streamed into the industrial cities, where their numbers reduced wages or added to the problem of unemployment. As a result of the enclosures, and of scientific improvement of their land, of the breed of their stock, and of the quality of their crops, the landlord class, a small body of nobility and gentry, owned the greater portion of the land, and were able to receive high rents, enjoy unlimited local influence, and ignore the world's ills. Protected by the Corn Laws, which kept the price of grain high, and by the Game Laws, which protected their game from the starving peasantry, this class became what Carlyle called the 'idle, game-preserving aristocracy.' They continued to enjoy their prosperity until well into the 1870's.

In the meantime, the industrial towns were undergoing revolutionary changes, especially in the textile industries: with the introduction of the steam-loom, for example, one man in 1835 could spin as much as three hundred men in 1760. Production and consumption grew by leaps and bounds: between 1801 and 1849, the consumption of raw cotton rose from 54,000,000 pounds to 775,500,000. Owing to improved machinery and starvation wages, the cost of production fell as profits rose: one piece of material, for example, which cost 32 shillings to produce in 1795, cost only 5½ shillings in 1834. Improvements in manufacture spread to other industries, as the steam engine, the utilization of coal for the extraction and working of iron, and the increasing mechanization of manufacturing processes led to immense and rapid growth in business — in wool, metal, wood, leather. While the continental nations were struggling with Napoleon, England seized the opportunity, while participating in the war, to become the workshop of the world. She built

factories, dug mines, spread a net-work of toll-pikes, macadamized roads, and canals over the country, and began the building of railways. Great masses of her population — which nearly doubled between 1801 and 1841 — shifted to the industrial northwest, where cities like Liverpool grew five times their size between 1770 and 1831. During the first four decades of the century, enclosures and machinery brought England through her war with Napoleon, and laid the foundations for mid-Victorian prosperity. The landed aristocracy, largely Whig or liberal in point of view, remained prosperous and wealthy; the new industrial middle class, acquiring riches and a new political power, felt the thrill of strength, and led the irresistible forces of liberalism. In the meantime, the lot of the masses was one of degradation and misery, as men, women, and children labored long hours in the factories and mines. By the time Carlyle wrote his *Past and Present* (1843), in protest against the 'condition of England,' there were nearly one and a half million paupers in England and Wales (about one eleventh of the population). Thus side by side with the achievements of improved agriculture and mechanized industry, there were the appalling problems of the working class — pauperism, starvation, disease, smouldering revolutionary resentment. Indeed it was not until after the crucial year of 1848 that the ruling classes were free of the dread of revolution. By 1830, however, owing to favorable circumstances at home and abroad, the fear of actual revolution had so far disappeared that many of the more powerful political leaders decided that certain reforms could be effected without danger.

III

The Years of Change: 1832 to 1848

From 1783 until the formation of the Whig ministry of Lord Grey, in 1830, England had been governed almost continuously under a Tory regime. The Tories of the old type, as represented in Lord Eldon or the Duke of Wellington, stood for an ancient tradition. Taking as their support the ideal of Burke, who loved the Constitution and revered the venerable traditions and the prejudices inherited from the past, they maintained the authority of the Crown and the Church, and controlled education and the administration of justice. While guiding the destinies of England through the period of the French Revolution, and through the Napoleonic wars, they ruled with admirable courage but with ruthless suppression of all evidences of 'Jacobinism' (radicalism) or liberalism. Though they later advocated cautious social reforms, they remained convinced that a national Church was inseparable from the State, that religion was the foundation of society and government, and that society was not a mere contract, but a brotherhood, a hierarchy and system of mutual responsibilities and privileges, of obedience from the lowly and obligation from the superior. Traditional Toryism had been more or less like that of Dr. Johnson. For the great doctor, a man's obligations were quite simple: he was to conform, earnestly and sensibly, to all the precepts of established morality; to fear God; to honor the King and all who represented him; and to labor honestly and manfully in whatever station in life he had been placed by the Almighty, without indulging in any trea-

sonous nonsense about liberty, or in any twaddle about the mysteries of his soul. If he thought at all about the constitution of society, he preferred, in his best moments, to think, with Burke, in his *Reflections on the French Revolution*, that a nation is not, as the Whigs held, a 'partnership agreement in a trade of pepper and coffee, callico or tobacco, or some other such low concern,' but a perpetual partnership in all knowledge, in all art, in all virtue, and in every perfection; a spiritual union of men as brothers, unequal in abilities and status, but bound by loyalty and mutual responsibility. At its best, the Tory point of view — which is too much neglected in discussions of nineteenth-century England — represented a dynamic concept of society as distinguished from the mechanical concept of eighteenth-century rationalism. Thus men like Southey, Coleridge, and Carlyle were less concerned with men's political or mechanical liberties than with their inner or moral liberties, less with society as an affair of balances and checks than with society as a growing spiritual organism. Their opposition to liberalism, their coldness toward science and its application to industry, their suspicion of parliamentary activities were all based on a consistent philosophy of society and the individual. They thought of society as an organic growth, motivated by ideals, guided by loyalties; not as a political mechanism, run by competition, and directed to the acquisition of material goods. Their ideas were at once old and new. Burke's view of the Constitution was at times surprisingly organic; but the Reign of Terror led him to regard it as too near perfection to permit further tampering. But men like Coleridge and Carlyle united the Burkean idea, at its best, with new ideas coming from Germany, and conceived of the state as a living spiritual organism. Early Victorian Toryism, however, especially as seen in its political practitioners, had become a set of reactionary prejudices. It was too moribund to hold such men as Peel and Gladstone. Yet the true Tory attitude — possible in any time and place — persisted, and appeared not only in Disraeli but also in Ruskin, who in the tenth letter of *Fors Clavigera* declared himself to be 'a violent Tory of the old school; — Walter Scott's school, that is to say, and Homer's.'

The Whig party had been essentially the party of the great landed aristocracy, and was now being recruited from the newly wealthy middle class, which opposed, as much as the Whig aristocrats, the possibility of either the Crown or the lower classes assuming any formidable political power. The Victorian Whig, such as Macaulay, was inclined to look back with pride on the 'glorious revolution' settlement of 1689, when, with the abdication of James II and the accession of William and Mary, the House of Commons was made supreme, and the Crown became but a symbol of the nation. The Whig had always opposed either temporal or ecclesiastical authority, had favored the separation of Church and State, had stood for toleration and freedom in belief and expression, and had welcomed the growth of democratic sentiment and the application of reason and science to life. But he had never committed himself to any radical theory or to any drastic course of action: his method was always that of compromise. 'Balance of mind, self-possession, modera-

tion, a taste for or a habit of compromise, all these valuable political qualities . . . had been able to raise the fabric of liberty on the aristocratic soil of England.' The typical Whig of Macaulay's time summed up all the energy, individualism, self-satisfaction, integrity, and 'respectability' which stamped the age which he dominated. The Victorian Whig, whether of the old landed aristocracy or of the new industrial 'millocracy,' was a portent in the earlier half of the reign; for though the old Whig aristocrats had retained much of that eighteenth-century genteel skepticism which was so much abhorred by the Tractarians, nevertheless they cautiously opened their exclusive world to the new spirit of 'progress,' commercial success, and middle-class sobriety, so much admired by Macaulay and so vehemently satirized by Carlyle. Thus Chesterton can wittily say: 'The chief turn of nineteenth-century England was taken about the time when a footman at Holland House [the exclusive and powerful Whig center] opened a door and announced "Mr. Macaulay."'

Both the Whigs and the Tories were opposed to several of the various types of early Victorian radicalism. They detested the works of Tom Paine, whose *Rights of Man* (1790, 1792), widely read by the Victorian working man, had advocated a graduated income tax, free education, maternity benefits, old-age pensions, limitation of armaments, as well as the abolition of royalty, the peerage, and all special privileges. They also feared the radicalism of Cobbett, whose journal *The Political Register* was read avidly by the factory workers, and whose radicalism consisted in looking back with longing to pre-industrial England, when there were no borough politicians, no profiteering manufacturers, or Malthusian 'political economists' to enslave the defenseless masses. Of all the seething radicalisms of the time, however, there was one which commended itself to the governing class: Philosophic Radicalism, or Utilitarianism. In the doctrines of Jeremy Bentham, especially in his *Principles of Morals and Legislation* (1789), the new industrialism found its persuasive justification. It found in Bentham a 'mind intent on clarity and simplification,' urging parliamentary reform, the improvement of the law and legal procedure, the amelioration of the criminal code, the increase of humanitarianism. Bentham appealed to the new age in setting up as his central criteria the ideas of self-interest, utility, and the 'greatest happiness of the greatest number.' Assuming that the aim of all government is the good of the governed (utility), he attacked the existing system as the instrument of an aristocratic minority in Church and State, and therefore advocated the extension of popular government on the ground that control by the majority would promote the greatest happiness of the greatest number. According to Bentham, society is merely the sum of its individuals, each properly seeking his own ends (self-interest); it is the business of law and government to permit the free play of individual forces in harmonizing with each other, or in competing, thus producing a common utility, the sum of particular utilities, by observing the principle of *laissez-faire*. Bentham's view of man's nature was as mechanical as his view of society: pain and pleasure are the 'sovereign masters' of man's conduct, not

duty, loyalty, reverence, love. Thus the motive of man is always self-interest, and the cohesion of society lies not in the traditional moral virtues but in pleasure and pain, in rewards and punishments, which can be scientifically determined and measured. In spite of the harshly mechanical nature of Bentham's teachings, he influenced a number of active and powerful men: James Mill (his only real English disciple), John Stuart Mill, Grote, Roebuck, and Joseph Hume, who, with others, made up the school of Philosophic Radicals, and also two other groups of men, practical statesmen like Brougham, Peel, and Durham, and popular agitators like Cobbett, 'Orator Hunt,' Francis Burdett, and Francis Place. Believing, with Bentham's master, Helvetius, that 'it is only by good laws that you can make virtuous men,' they placed their faith in legislation. They rejected all notions of moral obligation, religious appeal, or spirituality; and looked forward to a time when justice, freedom, and comfort would be within the reach of all, through scientific legislation which would permit the 'natural laws' of society and of man to operate freely. Enormous as was their influence for good in the great age of reform, the irony of their position, by its very logic, committed them to the interests of the propertied classes, who resisted government interference on purely selfish grounds as the Benthamites opposed it on the grounds of reason and theory. Their doctrinaire adherence to a set of theories prevented them from dealing realistically with many of the worst social evils. Thus they aided powerfully in the passing of the Reform Bill, because it would enfranchise intelligence and property, and would indirectly promote the greatest happiness of the greatest number; but they also aided in passing the New Poor Law (1834), which removed the dole and substituted the workhouse, because it avoided muddle and waste, and was in accordance with the teachings of Malthus. The Benthamites were wholly political and legislative in outlook; they were interested in the self-reliant, self-supporting individual, who could be aided by wise laws; they were not concerned with the social salvation of the poor, who should be permitted to work out their destinies according to nature, and whose surviving members would be all the better for such natural selection.[1] The Benthamites were therefore behind practically all the *legislative* reforms of the middle period of the century; those 'social reforms' which ran counter to their doctrines, such as the Factory Acts, were passed in spite of the wide-spread notion that men ought to be left alone to pursue their own interests according to the laws of their own natures. The cruder elements of Benthamite Utilitarianism were later softened by John Stuart Mill, in his *Utilitarianism* (1863), which introduced the idea of *quality* in the judgment of pleasures, and recognized the 'social feelings' as the ultimate sanction of happiness and morality. In the mean time, however, it was left for such Evangelical Tories as Lord Shaftesbury to champion the cause of women and children in the factories and mines.

When the Whigs came into power in 1830, there had already been a series of reforms indicative of the temper of the

1. This phrase was not used by the Benthamites, but one remembers that it was in reading Malthus that Darwin hit upon the idea of 'natural selection' as the key to the origin of species.

age. Little by little, as Benthamism made headway among the best elements of the governing class, recently enriched by recruits from the middle class, in such men as Peel and Canning, signs of political reformation became visible: in 1824 and 1825, the laws against associations of workmen were repealed; in 1829 parliament voted Catholic Emancipation; the criminal laws were subjected to various reforms; Huskisson, President of the Board of Trade, secured the abolition of the old 'Navigation Laws' which impeded free trade with foreign countries. By 1830 the reform of parliament was regarded as an absolute necessity; the radicals desired it as an entering wedge for representation of the lower classes; the Whigs wanted it as a safe and reasonable adjustment of the political mechanism to the needs of the growing commercial and industrial classes. When in July the French rose and dethroned Charles X and replaced him with the bourgeois 'citizen King,' Louis Philippe, it appeared that great changes could be made without plunging the country into revolutionary chaos. The Great Reform Bill of 1832 was enacted after much parliamentary debate and confusion, and during wide-spread popular excitement, rioting, political agitation, and even secret military drill. The fact that it could be passed, and passed without any show of violence, was almost as important to the new age as the Bill itself; it indicated that England was embarking on a great era of peaceful reform.

The Bill itself did not, as is often said, give all power to the middle class; it merely divided the power between all the landlords on one side and a portion of the middle class on the other. Half the middle class was left without votes; they later joined with the working-men to demand a further extension of the franchise under Bright and Gladstone. In the boroughs, the power to vote was given to all resident occupiers of premises of £10 yearly value (the 'ten-pound franchise'); but the agricultural laborers and nearly all the industrial working class were excluded from the franchise. The Bill may be said, however, to have 'asserted the power of the whole nation, enfranchised or unenfranchised, because it had been carried by the popular will against the strenuous resistance of the old order entrenched in the House of Lords. . . . In England, the "nation" was defined afresh by each of the Franchise Acts of 1867, 1884, and 1918.'

The Reform Bill, therefore, was 'not the end but the beginning of a phase in the evolution of Great Britain,' a phase which, between 1832 and 1848, grew so tumultuous in reform and distress, that it became, in Carlyle's phrasing, 'the Condition-of-England Question.' The Poor Law of 1834 was a triumph of reforming legislation by the class which the Reform Bill had elevated to power; it enormously reduced the number of paupers by forcing them to accept the employers' conditions or endure those of the Poor Law Bastilles, where life was just sufficiently maintained to be conscious of its own misery. Families which had hitherto derived support from the rates for every additional child, had now to send forth the mother and children to labor under appalling conditions, especially in the rural areas. In the language of the new revolutionism, Friedrich Engels declared: 'The proletarians must submit

. . . to have the law actually declare them superfluous. This has been done by the New Poor Law.' The opposition to this law united the working class more than had hitherto been possible; it was on this issue that the battle was joined between the voting middle and the non-voting working classes. Deserted by the Whigs, and ignored by the Tories and the Philosophic Radicals, the suffering workers formed a world all their own, so that by 1845 Disraeli could say, in his novel *Sybil*: 'There are two nations, between whom there is no intercourse and no sympathy, who are ignorant of each other's habits, thoughts, and feelings. . . . I mean the rich and the poor.' Even when employed, the industrial working class inhabited towns that hideously revealed the absolute dependence and helplessness of the mass of the people living in them. They were not so much towns as barracks: not the refuge of a civilization but the barracks of an industry. Until the reign of George III a town was regarded as improving a landscape. Until then, a city was a glorious and beautiful thing, an object to be proud of. But never since civilization began had there been such ugliness as was created in the modern English industrial town. Ruskin saw in these structures a true index of the mind of their builders and inhabitants, and the sight filled him with horror. In the midst of ugliness, filth, and despair the struggling working class was like a race forgotten. The old medieval relation between master and man, a warm and human relation from time immemorial, had been displaced by the new one of employer and employee. The worker's despair arose not only from starvation wages and a sub-human environment, but also from the sense of homelessness, as the former bonds of loyalty and reverence for his superiors was turned into uncomprehending hatred, and as the new relations became those merely of 'supply-and-demand' and 'cash-payment.' The latter expression, bitterly reiterated throughout *Past and Present*, found its way at last into a work which contained ominous forebodings for the future, namely, in the *Communist Manifesto*.

The 'Condition of England,' during the thirties and forties, was not, however, merely a matter of pauperism and the New Poor Law; it was also a struggle on many economic and social fronts. It involved the repeal of the Corn Laws, the rise and fall of Chartism, the passing of a number of Factory Acts, and a grappling with the Irish Question.

In the British Isles, the word 'corn' means grain of any sort, and is in particular applied to wheat. For centuries a duty had been imposed on all imported corn, in an effort to encourage its production at home. In 1773, and especially in 1781, corn laws were passed in order to make the duties more restrictive, but had affected the price of grain very slightly. Then came the Napoleonic wars. The landlords, in spite of improved agricultural processes, found themselves unable to pay the immense debts with which their estates were encumbered; and so, in an effort to increase their revenue, they secured the enactment in 1815 of a law, known to the common people as 'the Famine Law,' which prevented any foreign importation of grain so long as the domestic price was below eighty shillings a quarter. The price of bread rose greatly; yet the duties were made still more re-

strictive. In 1838 wheat rose to seventy-seven shillings a quarter, or to about two dollars and thirty cents a bushel, which, considering the wages and salaries of those days, was several times higher than the price of wheat during and after the World War of 1914–1918. As soon as it was observed that the landed interests were determined to maintain high prices, a cry for untaxed bread went up from all the manufacturing districts. The leaders in the movement against the Corn Laws were Richard Cobden and John Bright, at whose suggestion there was formed the Anti-Corn-Law League in 1839. Cobden opposed the Corn Laws not only because they made bread dear, but because they prevented the operation of Free Trade, which if permitted to operate would benefit manufacturers in lower wages. The agitation for repeal was carried on with great national excitement, with Cobden addressing enormous crowds in large towns and country districts. By 1841, it was evident that the Whigs, though the representatives of Liberalism in Parliament, were too closely connected with landlord ideas and interests ever to secure repeal. A General Election brought the Tories into power under Peel, and it was soon evident that the new leader favored an enlightened opportunism — 'Tory men and Whig measures,' as Disraeli had phrased it in his great political novel, *Coningsby*. Cobden and Bright, as the leaders of the new 'Manchester School' of Free Trade, pacifism, and anti-imperialism, had influenced both the Whigs and the Tories in the direction of appeasing the industrial population. They had succeeded in giving point to the epigram that 'what Lancashire thinks today, England will think tomorrow.' Their work as leaders of the Anti-Corn-Law League once more allied great numbers of the workers with the middle class, as in 1832. Agitation became extremely acute by 1845, as a series of bad harvests occurred, and as a potato blight brought famine to Ireland, giving to this suffering period the historical name of 'the hungry forties.' After a failure to carry his whole Cabinet with him on the decision to repeal the Corn Laws, and after the Whigs once more showed lack of nerve for the crisis, Peel secured the abolition of the Laws in June 1846. The potato blight had tipped the balance. The Duke of Wellington remarked: 'Rotten potatoes have done it; they put Peel in his damned fright.' The Tory party was disastrously split by Peel's service to the nation at large; and, in disgrace in the House that had been elected to support him, he resigned at the end of June. Repeal had demonstrated the power of the ten-pound franchiser, though the Cabinets continued to be drawn from the landowning and higher professional classes. Nor was repeal disastrous for the landlords, even though agriculture now took second place in the national economy. Owing to increased population, the gold discoveries in California and Australia, the Crimean War, and higher wages, the nominal price of corn fell only slightly. And for another generation the landlords drew great rents, enjoyed the luxuries of country life, and continued the golden age of hunting and shooting, in the cheery atmosphere immortalized by Leech's pictures in *Punch* and Surtees' sporting novels.

The working class had not been whole-

heartedly in sympathy with the Anti-Corn-Law League. Beneath the missionary zeal of Bright and Cobden, the working-men saw the master whom they hated. Many of them therefore rejected the League and built their hopes upon the radical movement known as Chartism. The agitation by the League had been a thoroughly middle-class movement; and it had succeeded in shifting the attention of many of the working people from their own objectives to those of an upper class. That was why the Charter was doomed from the outset. Chartism was, in a sense, the alternative to the socialistic trades unionism of Robert Owen, who led the workers in the grandiose scheme until the lean years following 1836, when they failed to hold their own against the employers, or to win more than an insignificant minority of the workers to their ranks. After the failure of this non-parliamentary program, the workers turned to the political movement of the Chartists. The People's Charter contained six claims: (i) for manhood suffrage, (ii) for the vote by ballot at elections, (iii) for annual Parliaments, (iv) for the payment of members, (v) for the opening of the House of Commons to all men by the abolition of the property qualification, and (vi) for equal electoral districts.[2] In a period when, in spite of tumult and suffering, the reins of power were in the hands of a strong and satisfied middle class, the Chartists could get the backing of none of the great political parties; they had no competent leaders; and they were detested for their noisy turbulence by both the Whigs and the Tories. Parliament refused to take them seriously, and laughed in derision at their monster petitions to the House of Commons, supposedly containing a million and a half or even three million signatures. In 1839, in 1842, and in 1848, the Chartists made vigorous but awkward attempts to be heard. In the latter year, the last of the monster petitions was sent to the House of Commons; the Chartist leader, Feargus O'Connor, summoned a great meeting on Kennington Common, and threatened to march on Westminster with 500,000 men. But the middle class assembled 200,000 'special constables' and some troops, and so awed the Chartists that the great crowd melted away, and Chartism as such had made its last outbreak. Its divided aims, its lack of leadership, its noisy public meetings, and its purely working-class personnel had been against it from the start. But its force was not a spent one; when in 1867, the country, much to Carlyle's alarm, 'shot Niagara,' and later in 1884 won manhood suffrage, many an 'old Chartist' exulted in a victory partly his own.

In the meantime, while labor and the manufacturing interests were fighting for repeal of the Corn Laws, the landed interests were supporting a movement for factory legislation. Though this legislation was never a party question, it was opposed by the majority of the millowners, who had attacked the Corn Laws on the ground of humanity. The umpire between these disputants was the Parliament of English country gentlemen, Liberal and Conservative, who had no personal interest involved. The first effective Factory Act was passed by the Whigs in 1833, as a result of the findings of a Royal Commission of investigation: the Act (sometimes called the 'children's charter') ap-

2. All of these claims except the sixth have long since been granted.

plied to the weaving industries, and prohibited night-work to all young persons under eighteen, allowed no child under nine to work except in silk mills, and prescribed a limitation of hours of labor to nine in one day, or forty-eight in a week, for every child under eleven. Government inspectors were provided to enforce the law. A second wave of factory legislation began in 1840, when Lord Shaftesbury obtained the appointment of a Royal Commission on the employments of the people. The 'ten hours Bill' was the climax of years of aspiration on the part of labor and of immense agitation everywhere. Passed in 1847, it limited the daily work of women and children in the factories in such a fashion that no work by grown men could be done after ten hours. This Bill was one of the great victories of the forces arrayed against pure *laissez-faire*. Its passage revealed curious cleavages in the political ranks: such leaders of the masses as Cobden and Bright were against it (on the basis of the 'political economy' of the Manchester School); yet Macaulay, the utilitarian Whig, voted for it, as did Russell and Palmerston. In 1850 came the third great Act, which was in some respects the final triumph of the movement: it required that the factory hours should be between 6 a.m. and 6 p.m., or between 7 a.m. and 7 p.m., with an hour and a half off for meals, and that factories should close at two o'clock on Saturdays. The principle of state regulation of working conditions was extended to non-textile factories, to mines, to ordinary workshops, and to home-workers. Throughout the movement for government interference in the exploitation of labor, the one great figure was the Evangelical philanthropist, Lord Shaftesbury, who struggled obstinately and heroically to check the raw power of the new industrial system.

During all the turmoil of the thirties and forties, the Irish Question remained one of the flaming issues. Catholic Emancipation in 1829 had completely failed to quiet Ireland; it merely encouraged the Irish, under the leadership of Daniel O'Connell, to start two new agitations. The first involved the demand for the abolition of the Union of 1800, and the establishment of a local Parliament in Dublin; the second was the Tithe War, a rebellion against the payment by the Catholic peasantry of tithes for support of the Established Church of Ireland. Under the second Melbourne ministry (1835–41) the Irish Tithe Act was passed, relieving the peasantry of the duty of paying the contribution, and transferring it to the landlords, so that it became a charge on rent. But the agitation for repeal of the Union continued, gaining influence in 1842 by the addition of a body of recruits known as the 'Young Ireland Party,' led by Smith O'Brien, Meagher, and Gavan Duffy. The agitation came to a head in 1843, when O'Connell gathered a great crowd at Tara and excited it with promises of a 'Parliament of their own on College Green within the year.' Peel had O'Connell and his lieutenants arrested and tried for sedition. O'Connell was ultimately acquitted, but the show of force by the government brought the movement to collapse, and the beginning of the famine years in Ireland added further discouragements to rebellion. In 1845 there had been a partial failure in the potato crop, the staple food of the Irish peasantry; in 1846 an even greater failure occurred

when the crop was struck by blight. Four million persons were suddenly brought to the verge of starvation. The population had increased from five million to eight million during the previous half century, and tried in vain to live on farms that would not support it. The landlords, themselves disastrously affected by the blight, engaged in wholesale evictions of tenants. The peasants were driven out of Ireland by the hundred thousand, and emigrated to America, with fanatical hatred for the Anglo-Irish landholding classes, and for the English government which had sanctioned their expulsion. Over half a million of the Irish who remained died of famine and pestilence. It was not till 1847 that the English government fully realized the horror of the famine, and belatedly established soup-kitchens and depots for free food for all over the land. In 1848, the year after the famine, the 'Young Ireland Party,' led by Smith O'Brien made a faltering attempt at insurrection in Tipperary, and was quickly put down. The 'Irish ulcer' continued to fester throughout the rest of the reign.

Owing largely to the abolition of the Corn Laws and the revenue tariff, and to general world improvements, a great development of trade and prosperity set in about 1847. The growth of railways, of ocean steamers, of the world-market for English trade, and of the economic welfare of the working classes, contributed to the amazing prosperity of the mid-Victorian decades. By 1848 the major issues of the early years of the reign had been met with relative success; and the Victorians, under the aegis of a flourishing and vigorous middle class, and encouraged by a Queen who shared not a little in the middle-class point of view, set out to enjoy that 'unexampled prosperity' which was later to bring down upon itself the stinging satire of Matthew Arnold.

Throughout the stormy years of change, from 1832 to 1848, there was more than economic and political strife; there was also an intellectual and religious struggle. And though many of the issues are no longer living ones, enough of their vitality survives to make it worth while to examine them; and several are of such historical importance that it may well be said that the way to understand the Victorian age is to comprehend its religion. It is necessary to glance at the various religious groups, and to outline briefly two great movements of the time: Tractarianism (in the Oxford Movement), and Transcendentalism.

At the beginning of the Victorian period, the majority of English believers fell into three great groups: the old Orthodox or High Church party, the Evangelical party, and the Nonconformist or Dissenting sects. On the whole, the mass of the rural population and the aristocracy belonged to the Anglican Church; the individuals who raised themselves above the masses through wealth and ability tended to leave the Church and to join the sects of middle-class Nonconformity; those of the upper middle class who aspired to an aristocratic position generally moved toward the Church of England. The old Orthodox, like the Evangelicals, were a minority in the Church; they laid emphasis upon episcopacy, upon the Prayer Book as offering a middle position between Romanism and Protestantism, upon the unity of the

Church, and upon a sober and restrained Sacramentalism. Their divines preached 'sensible' sermons, abhorred 'enthusiasm,' and, at their best, were manly, reserved, sometimes scholarly, priding themselves on their common sense. They detested the Latitudinarians, who were indifferent toward creeds and ceremonies; and they were inclined to lean upon the arm of the State, some of them regarding the Church as hardly more than a part of the government ('Erastianism'). Most of the bishops, having been selected by a long line of Tory prime ministers, were Tory in outlook. Many Orthodox clergymen were merely 'country gentlemen in orders, who rode to hounds, and shot and danced, and often did worse things.' Some of them were pluralists, like the Bishop of Llandaff, who held sixteen livings, and visited his diocese once in the thirty-four years of his episcopate; others, like Manners-Sutton, Archbishop of Canterbury, might distribute numerous livings, including cathedral appointments, among the members of his family. These men of the 'high and dry' Church held the lucid and rational views of the eighteenth century, as expressed in Archdeacon Paley's *Evidences of Christianity* (1794), which treated religion as if it were a set of mathematical principles, and which advocated a frank theological utilitarianism: 'virtue is doing good to mankind, in obedience to the will of God, and for the sake of everlasting happiness.' They followed the advice of the first Lord Shaftesbury, 'to be gentlemen and to believe that God is a gentleman who would hardly send one to hell for a few gentlemanly sins.' It was these gentlemen, cool, rational, cultured, aristocratic, and loyal to old tradition and ritual, who voted with the Tory Lords against the Reform Bill in 1831.

At the other end of the scale were the Nonconformists: the Congregationalists, the Baptists, the Methodists, the Presbyterians, the Unitarians, the Quakers. Originally animated by a Calvinistic spirit, these sects were strongly Protestant, congregational in organization, individualistic in temper. As the century advanced, they encouraged right and liberty in the political sphere, and a philosophical rather than a theological presentation of truths in the religious sphere. By the beginning of the Victorian era, the religious fervor of the Methodists, so detested by the Orthodox, had considerably abated; and all of the Nonconformists were now zealous in political and ecclesiastical reform: they participated in the Anti-Corn-Law agitation; they fought against the Church rates; they sought entry into the Universities, to which only Churchmen had been admitted. The individualistic middle class found its spiritual home with the Nonconformists, for 'Nonconformity was the backbone of British Liberalism.' Eventually they were to support the Liberalism of Gladstone and Cobden, both Churchmen, and of John Bright, the Quaker, because these men combined religion and democracy in a form irresistible to Nonconformist eyes. It is almost impossible to over-estimate the influence of the Nonconformists in the growth of humanitarian reform, especially through the spirit of Methodism. The great humanitarian, philanthropic, social, and anti-slavery movements of industrial and commercial England in the nineteenth century were largely inspired by Methodism. And Nonconformity, together with Evangelicalism, added also the tone of

middle-class culture which characterized the age.

Just as in the sphere of politics the old Tory domination gave way to the vigorous optimism of the Benthamites, so in the religious sphere the old high-and-dry Orthodoxy yielded to the ardors of the Evangelicals. But while Benthamism was a European phenomenon, Evangelicalism was purely English, so much so that it is important to look at it carefully. By the turn of the nineteenth century it had ceased to display its former religious zeal; it became instead a formative social influence, moulding the character of the nation, and supplying the principal ingredients in what was later contemptuously called 'Victorianism.' The red skies of Paris sobered the English nation, and soon among the wealthy, religion became almost 'the thing.' So deeply did it color Victorian life that Halévy finds in it the chief ground of difference between the life of England and that of other countries in the nineteenth century: 'A few months after the passage of the Reform Bill, English Evangelicalism may be said to have reached its apogee. It constituted the essence of the Methodist preaching, and in their hatred of Catholics and Latitudinarians the Wesleyans were drawing closer to the Church from which they were sprung. And within the Church the influence of the Evangelicals grew stronger every day. . . . The parochial clergy were no longer the keen hunters and hard drinkers they had been a few years earlier. By their preaching and example the Evangelicals had enforced a stricter observance of decorum. . . . Among the aristocracy who governed the country the Evangelicals were bringing the duel into discredit. Among the lower classes they were attacking the use of intoxicating liquors: the first Temperance Societies had just been founded. . . . The credit of the two great humanitarian measures passed by the new Parliament, the emancipation of the slaves [1833] and the protection of child labor in factories, belongs to the Evangelicals even more than to the Radicals. . . . Men of letters disliked the Evangelicals for their narrow Puritanism, men of science for their intellectual feebleness. Nevertheless during the nineteenth century Evangelical religion was the moral cement of English society. It . . . invested the British aristocracy with an almost Stoic dignity, restrained the plutocrats newly risen from the masses from vulgar ostentation and debauchery, and placed over the proletariat a select body of workmen enamored of virtue and capable of self-restraint.' Its earliest notable convert was William Wilberforce, the friend of Pitt and a pioneer in the anti-slavery cause, whose *Practical View of the System of Christianity* (1797) revealed its social and religious emphasis in counselling the poor to discharge their duties faithfully and patiently, without envying the rich, whose worldly position could never give the peace which poverty brings! The Evangelical and the well-to-do Utilitarian had, fundamentally, much in common: the former championed the poor because they had souls to be saved, and neglected their political rights; the latter fought against the exploitation of the masses because their political aim was 'the greatest happiness of the greatest number.' Both supported legal reform, Church reform, individualism — the Evangelical in religion, the Utilitarian in politics and business — and the narrower forms of salva-

tion, the former in puritan restraints, the latter in utilitarian comfort. Their union of prosperity and piety, of material reform and obtuseness in the subtler realm of the spirit, contributed heavily to the Philistinism of the middle class.

Evangelicalism contained a strong element of Calvinism: it preached the corruption of human nature, the efficacy of the Atonement, the sanctifying influence of the Holy Spirit, the importance of conversion, the belief in the Bible as the directly inspired word of God, the punishment in hell of all sinners who deviate from the narrow path of puritan righteousness. The Evangelical, as one critic has put it, 'lived in a constant sense of his own damnworthiness.' He was concerned less with men's economic and political rights than with preventing any 'sinful' diversions on Sunday. Worshipping a God of wrath, he threw a depressing shadow over life, and viewed with horror the pleasures of the stage, of dancing, and of card-playing. At his best, he was industrious and reliable; at his worst he sank to appalling depths of cant and hypocrisy, to the reptilian loathsomeness of Mr. Slope in Trollope's *Barchester Towers*. By the middle of the century, Evangelicalism had imposed on Victorian society its code of Sabbath observance, responsibility, and philanthropy; its discipline in the home, and its regularity in affairs; and it had created a most effective technique for public agitation, private persuasion, and social persecution. The early Evangelicals who assembled round Wilberforce and two eminent financiers named Thornton, father and son, were known as the 'Clapham Sect,' and included Zachary Macaulay, Lord Teignmouth, and Granville Sharp. Later, Evangelicalism appeared in the factory legislation promoted by Lord Shaftesbury, in the educational reforms executed by Thomas Arnold, in the puritan aesthetics of Ruskin, in the persistent strain of Calvinism running throughout the work of Newman. The Evangelicals had their own journal. Just as Whiggism found expression in the *Edinburgh Review*, Toryism in the *Quarterly*, and Utilitarianism in the *Westminster Review*, Evangelicalism found utterance in the *Christian Observer*, first edited by Zachary Macaulay on its being founded in 1802 by the Clapham group. The combination of Evangelicalism and Benthamism in so many members of the prosperous middle class — with its individualism, its indifference to external organization, and its readiness to ally itself with secular Liberalism and with Nonconformity — together with the frigid conservatism of the high Tories, led a small group of Oxford Churchmen to inaugurate a movement in sharp reaction to the prevailing tendencies.

The Oxford Movement was a part of the general and widespread revival of the 'corporate,' as against the 'individual' spirit of the nineteenth century. Like Romanticism, with which it shares certain characteristics, it was an awakening to the past, especially to the spirit and teachings of the Church in the fourth and fifth centuries. It was a reaction against liberal and radical views in both politics and religion, against a narrow and aggressive rationalism which preferred intellectual to moral excellence. Above all, it was a search for authority, in an age when all authorities were beginning to be questioned. In seeking for the seat of ultimate authority, the Oxford leaders tried to show, in Newman's words, that

'there is something greater than the Established Church [of the English Reformation], and that was the Church Catholic and Apostolic, set up from the beginning, of which she was but the local presence and organ.' They viewed the English Church as the Catholic Church in England, belonging by descent and by its basic profession to that one, supernaturally founded, endowed, and perpetuated body which claimed to be the extension of the spiritual body of Christ. They thought of the English Church as arising from a Source beyond the political authority of the nation, and therefore in no way to be identified with its secular establishment. They called to all Churchmen to support their bishops as the successors of the apostles, thus reviving the doctrine of Apostolical Succession. And they emphasized anew the importance of the sacraments as the means of grace. Thus they replied to the High-and-dry party, who had thought of the Church as a department of the State; to the Evangelicals, who regarded it as a convenience for individual salvation; to the Roman Catholics, who viewed it as merely a legalized schism; and to the Nonconformists, for whom it was an aggregate of separate congregations. According to the Oxford men, the main undertaking of a Christian Church was not to make men good members of society, honest, upright, industrious, and well-conducted — and inclined, in return, to become skeptics and radicals — but to make men saints, 'heirs of the world to come,' ministered to, and led by, a body of bishops and priests to whom had been communicated, by apostolic succession, the original powers and gifts of the first Apostles. This was indeed a strange and startling doctrine in 1832, when the spirit of political expediency, scientific progress and democratic reform was sweeping all before it. When the Movement began in 1833, the Church as it then stood had lost much of its prestige. The bishops, as a whole, had voted with the Tory Lords against the Reform Bill; the Whigs were now in office, and among their allies were the emancipated Roman Catholics and the unsatisfied Dissenters. When therefore, in 1833, a Bill was introduced into Parliament for the suppression of ten of the twenty-two sees of the Irish Protestant Church (which represented only a fraction of the Irish population), the cry was raised that the Church was in danger of disestablishment and spoliation. There was in fact no real danger; the Evangelicals, who welcomed reform, would have stoutly resisted any attack on the Church; and the enemies of the Church were a mere handful without any definite program. But John Keble, a Fellow of Oriel College, denounced from the pulpit the Irish Church Bill as a 'direct disavowal of the sovereignty of God' and an act of 'national apostasy.' From this sermon the Oxford Movement is generally said to have begun.

Newman has told us, in an early chapter of the *Apologia*,[3] the absorbing story of the beginnings of that Movement, and has supplied us, in memorably eloquent prose, with the portraits of the chief protagonists in the conflict. Newman, Keble, and Hurrell Froude, and, later, Edward Bouverie Pusey, and others, all joined in rallying the Church to its own defence by publishing a series of Tracts. The first, signifi-

3. See the chapter entitled 'History of My Religious Opinions up to 1833,' in the present collection.

cantly entitled 'Thoughts on the Ministerial Commission,' was written by Newman and published on September 9, 1833; its advice to the bishops was to remember their divinely ordained gifts, and to magnify their office. Many other Tracts followed, 'clear, brief, stern appeals to conscience and reason, . . . like the short, sharp, rapid utterances of men in pain and danger and pressing emergency.' Their purpose was to explain the nature of the Church, its historical and doctrinal basis, its fundamental articles of belief, its authority, and its spiritual independence from the State. Newman and his friends rode round to country vicarages, begging the clergy to read the Tracts. In time, some of the Tracts reached even the bishops in their palaces, and stirred their minds on the question of their true authority and obligation. The Tractarians, as the men were soon called, became popular; recruits poured in; London lawyers, rising statesmen like Gladstone, and hundreds of the clergy flocked to Newman's standard. When, in 1834, Dr. Pusey joined the band by publishing Tract 18, on Fasting, and signed his initials, the Movement gained in prestige, and in weightiness of method; for Pusey was a Professor and Canon of Christ Church, and a deeply learned and religious man, with vast social and ecclesiastical influence. In publishing his initials he inadvertently gave the Movement the name of 'Puseyism.' By 1835, Tractarianism had become a power in the country; the earnest and religious Victorians devoured sermons as readily as a later public devoured novels; and the Tracts were everywhere read and discussed. In the meantime, another force which propelled the Movement was the spiritual power and eloquence of Newman's sermons.[4] They contributed the personal appeal which gave the Movement additional vitality. As Dean Church later described them, they were 'plain, direct, unornamented, clothed in English that was only pure and lucid, free from any faults of taste; . . . they were the expression of a piercing and large insight into character and conscience, . . . of a sympathy at once most tender and most stern.'

So far there had been no opposition. But soon events began to impede progress and to bring signs of hostility. In 1836 the Tractarians, aided by the Evangelicals, who later opposed their teachings, prevented the liberal Dr. Hampden, appointed by the Whigs as Regius Professor of Divinity, from having any power over University preachers. For the first time the charge of Romanizing appeared. Yet at this same point in the Movement, the gifted Roman Catholic prelate, later Archbishop and Cardinal, Wiseman, attacked the position claimed for the English Church by the Oxford leaders. Newman, however, felt secure; he lectured on 'Romanism and Popular Protestantism'—later published as *The Via Media*—and showed the Church to stand midway between the errors of the Roman Catholics and those of the Protestants. But in 1838, the publication of the *Remains* of Froude, who had died in 1836, shocked the public by revealing that at least one of the Tractarians viewed the Protestant reformers of the sixteenth century as guilty of bigotry and deception, and detested the Reformation as a 'limb badly set.' Though the charges of

4. See Matthew Arnold's famous description of these sermons in the essay on Emerson, in *Discourses in America.*

Romanizing continued to increase, Newman still remained loyal to his position; he became editor of the *British Critic*, the new journal of the Movement; and its brilliant articles brought new influence. In 1839, however, he was disturbed by what he found in his study of the early Church; the position of Anglicanism reminded him at times of the early heresies — of the Monophysite and Donatist heresies of the fourth and fifth centuries. And when a friend called his attention to St. Augustine's summary against the heretics, *Securus judicat orbis terrarum*, 'the whole world judges right' (the universal sense of the whole Church must be right against one local body), Newman was indeed perplexed. Still believing that the English Church was the Church of Augustine, Anselm, and Becket, he set out to prove that it still held the original Catholic Faith. This effort took shape in the publication on February 27, 1841, of Tract 90, entitled 'Remarks on Certain Passages in the Thirty-Nine Articles.' Applying the historical method to the Articles, Newman attempted to show that their language was not directed against Catholic doctrine but principally against abuses and perversions of a great popular and authorized system, and that the framers of the Articles had intended to be obscure and ambiguous in order to satisfy the Protestants and at the same time make it possible for the Roman Catholics to subscribe to them. For some time the younger and more radical followers of Newman had been on the point of going over to the Church of Rome; and the Heads of the Colleges had been rapidly growing indignant at the 'Romeward' tendencies of the Movement. The Heads now solemnly condemned the Tract and branded it as dishonest. Newman, stunned at this turn of affairs, and denounced everywhere as a traitor to his Church, retired to his chapelry at Littlemore, where, in the company of a small group of friends, he lived in semi-monastic seclusion, wrote the uncompleted *Development of Christian Doctrine*, and joined the Roman Catholic Church on October 9, 1845.

Though no one of the original colleagues in the Movement went with Newman into the Roman Church, the fact of Newman's secession was regarded as a national disaster. Disraeli long afterward said that it was a blow from which the Church still reeled; Gladstone compared it to a storm which left a wreck on every shore; indeed it created almost as great a stir as Sir Robert Peel's conversion to Corn Law repeal several months afterwards. With the condemnation of Tract 90 there occurred a great number of conversions to the Roman Church. And for several years the effects of the Movement were felt in many families. The general effect of the Movement was, of course, both good and bad. On the good side, it had lifted religion from a rather gross and bourgeois condition to a pure and unworldly idealism, from the cold dryness of the old High Churchmen to the warm spirituality of passionately religious men. It checked to some extent the naïve rationalism of conventional believers, and their equally naïve emotionalism. It invigorated the clergy, tightened the bonds of discipline among both the priesthood and the laity, and revived the sense of corporateness within the Church. Though it was not interested in men's political condition, it did awaken the Church to men's moral condition, especially in the neglected areas of the great cities. Little by little the

austere, clean-shaven, self-forgetful High Churchman began to replace the solid, whiskered Evangelist as the type of clergyman who served a cause incommensurate with political and economic desires. The new Churchmanship tended to introduce into religion a note of beauty, a feeling for Church architecture, especially for Gothic, and a sympathy for the forms and dignities of worship. On the other hand, the Movement widened the breach between Dissent and the Church; the stiffer Churchmanship of the next generation drove many into unmitigated Nonconformity, and intensified the harsh Dissidence of Dissent of which many members of the middle class were already too proud. The Tractarian controversy split England into two hostile camps, and the 'Ritualists,' who followed the Tractarians with an over-emphasis on external forms which would have disgusted Newman and Keble, stirred the wrath of the Low and Broad Churchmen (the liberals), by reviving the ceremonies and vestments of the pre-Reformation Church. More serious, however, was the fact that the Tractarians had remained untouched by the great European movement of thought and science which was soon to confront the Church with a set of ideas and criteria for which the clergy were totally unprepared. Though Newman and his colleagues appealed to history, their historical sense was limited and uncritical. They stressed the development of the Church, but they stopped with the fourth and fifth centuries, and regarded the Church of the early fathers as the only true development from the primitive Gospel. Their view of the Church was in reality static. When therefore the wave of Higher Criticism of the Bible, of Church history, and of dogmas swept over England from Germany, and when the historical method was applied to the Biblical texts, the English Church took a blindly conservative position. The Tractarian Movement was an achievement in spirituality; but it left unconsidered the problems with which the great German theologians were grappling, and which were to destroy mid-Victorian religious certainty. The Tractarians, in turning to the past, failed to derive from it any creative principle which would enable their contemporaries to interpret religion in terms of growth and change. The nearest approach to such a principle was made in Newman's *Development of Christian Doctrine*; but, striking as was his argument for development, many readers felt that Newman was merely justifying, with logic, a process which he wished to believe had happened. Against the deluge of critical attack upon the Church, on the Bible, and on the very existence of Jesus Christ, an attack led by Strauss' *Life of Jesus*, there was scant protection in the literature of the Tractarian Movement; the defence of the Church of England was left to Cambridge, to Alford, Westcott, Lightfoot, and Thirlwall.

Just as the Oxford Movement was a reaction against liberalism, rationalism, and a disregard of authority in matters of religion, so an idealistic movement developed against Utilitarianism and the great tradition of British empiricism. Since the time of Bacon the dominant philosophy in England had been empirical; that is, it had argued that all our knowledge, our very personalities, are built up by experience, by sensations received from the material world. The mind, said John Locke (1632–

1704), is, in its first being, a blank tablet; all its materials of reason and knowledge are derived through the senses and through the mind's reflections on them and on its own processes. Though Locke believed that matter, mind, and spirit are three substances, the general impression left by his teaching was that matter is primary, mind merely a derivative of it. This materialistic conclusion was attacked by George Berkeley (1685–1753), Bishop of Cloyne, who, while agreeing with Locke that our knowledge of what we call the external world is derived from 'ideas of sensations,' went further in showing that from these sensations we can form no picture of what that external world really is, since all that we can know of it is our sensations. Apart from our sensations of sight, touch, smelling, we know nothing about an object; in fact the object, in order to exist, has to have a mind to perceive it. Thus Berkeley was led to believe that the material world is held in existence by an infinite perceiving Mind, or God; and the world of matter became a shadowy and unsubstantial 'appearance.' This conclusion seemed at first sight to be a vindication of the truths of spirit and religion. But what Berkeley had done with sensation was soon done by David Hume (1711–76) to the mind. Not only must we not trust to sensation to give us a true report of the material world; we must not trust to our minds to give us any assurance of a world of spirit. The ideas in our mind seem to be bound by certain 'laws,' such as cause and effect. But, says Hume, our thoughts and ideas are really bound together by association (resemblance, contiguity, contrast, etc.); and what actually connects them we can never discover. The mind itself is not a self-active principle, but merely a heap or collection of different perceptions united by certain relations. We can form therefore no true knowledge of either the world of matter or the world of spirit; all ends in a series of distinct perceptions and images and ideas, without any demonstrable substance or principle as the ground of continuity. In short, Hume's arguments led English empirical philosophy to its logical end: complete skepticism. The great tradition which had started so practically with unquestionable sensations had developed into a philosophy which left man without a sense of the spiritual nature of society, without religion, without a soul, without even the groundwork for practical conduct. English philosophy, from the nature of its own traditions, could make no reply to Hume. In Germany, however, a reply was made in the form of the Critical Philosophy of Immanuel Kant (1724–1804), and in the post-Kantian idealism of Fichte, Schelling, Hegel, and a number of minor thinkers.

But though the English philosophers had no convincing reply to Hume's arguments, an English man of letters succeeded in formulating an idealism which seemed to many of his contemporaries to point the way toward truth. This man was Samuel Taylor Coleridge. He died in 1834, on the threshold of the Victorian age, which was, to a large extent, hopefully arraying its forces under the banners of Utilitarianism. Only a few of the more thoughtful liberals were seeking a reconciliation of reason and faith; the great mass of the population was unaware of what had happened to philosophy and theology. The orthodox believers, in so far as they neglected the signs of the times, felt secure in their faith. But

those individuals who wished to retain their religious faith and yet not violate their intelligence looked about them for guidance. Many of them found it in Coleridge. He had studied the philosophy of Schelling, and had fashioned an idealistic doctrine which he felt was sufficient to revitalize the Church of England. His great aim was to restore the broken harmony between faith and reason, by enlarging the conception of both, *i.e.*, by making faith more rational and less the expression of superstition, and by showing that reason is not the mechanical illusion which it appears to be in Hume's works, but a broader, more dynamic faculty, which calls into play the emotions and the will as much as the analytical understanding. Coleridge thus attempted to vindicate the rationality of religion, to assert against the empirical and Utilitarian schools the spiritual constitution of human nature, and to show that the higher life of the spirit is throughout rational, if we discard the mechanical for the dynamic and volitional in our conception of reason. His influence was for a time very vigorous, as we know from the testimony of such men as Archdeacon Hare, John Sterling, Newman, Carlyle, and John Stuart Mill. Indeed, so stimulating was Coleridge's thought that Mill later declared him to have been one of the great seminal minds of the century. His influence is discernible not only in the transcendental tendencies of Victorian religious thought, but also in such a definite activity as the Broad Church movement under men like Thomas Arnold, Frederick Denison Maurice, and Charles Kingsley. Victorian transcendentalism, however, is more indebted to Carlyle than to Coleridge, for Carlyle had the qualities, which Coleridge lacked, to make the new German ideas effective among English readers. He had not only an immense learning in German literature, but also some knowledge of German philosophy, a knowledge less technical and accurate than Coleridge's but more fortunate in its vivid and passionate exposition. To understand the new idealistic point of view in religion and politics, it is necessary first, however, to glance at the German doctrines from which Coleridge and Carlyle set out to form their own transcendentalism — that is, a philosophy which would assert the reality of a world transcending space, time, matter, and logic — a set of ideas which was to prove one of the great formative influences on the Victorian mind.

It is impossible to sketch even briefly, in the space at our command, the outlines of the great philosophical systems which sprang up in Germany after the publication of Kant's *Critique of Pure Reason* in 1781, or to indicate at all adequately the nature of the literary work of Goethe, Schiller, Richter, and Novalis, which in many ways supplemented, for Coleridge and Carlyle, the general implications of the new German philosophy. But an understanding of the Kantian and post-Kantian theories is so necessary to an understanding of Carlyle's enormous influence on the Victorians that it is worth while to note carefully just what Kant succeeded in doing. At the risk of misstatement through condensation and simplification, we may view the nature and general significance of his main doctrines in somewhat the following way. Hume's reasoning had showed young men like Carlyle that reason and science could never, of themselves, justify his believing in the reality of duty,

goodness, spirit, beauty; all reason ended ultimately in paradoxes and skepticism. Kant replied by an analysis or *critique* of the nature of knowledge and of the powers and limitations of the human mind, hence the title of his greatest work, the *Critique of Pure Reason*. He showed that science and its methods are quite valid in describing the world as man sees it through his logical Understanding, but that they are quite unable to tell him what the world is like when not viewed through that highly selective instrument. Science is a true description of *phenomena*, that is, of the way things appear to us through our senses and within the limits of our reasoning faculties. But it gives us no picture of *noumena*, the real world behind the phenomena, as it would appear to a perfect mind, freed of all human limitations, like that of God. We are limited, by our senses and the nature of our mind, to seeing everything in space, in time, and in form, color, odor. The empiricists had said that our concepts of time and space, and our percepts of color, sound, or odor depend on the nature of the external world; but now Kant points out that just the reverse is true: the world of phenomena, the external world, must depend on the forms of our intelligence. Space and time are not realities or things in themselves; they are merely the ways our sensibility has of apprehending objects, they are forms or functions of the senses. Now just as our senses impose their 'forms' on nature, showing us objects in their various aspects, the Understanding likewise imposes its forms, or 'categories,' on what it analyzes. Some of these categories are 'quantity,' 'quality,' 'relation,' 'modality.' Far from the mind being, as Hume said, a mere heap or string of disconnected ideas and images, it is on the contrary a unified and unifying consciousness. There could be no knowledge, no connected world of experience, without such a synthetic unity of perceptions on a level above, or 'transcending,' the level of individual sensations. So Kant concludes that knowledge is the application by the mind of its categories, or forms, to objects furnished us by the senses under their forms in time and space. In short, the mind partially creates its knowledge by laying down the conditions under which it may know anything. The mind is thus not a passive receptor from the outside world; it is not merely the accumulation of images, ideas, and remembered sensations, as the empiricists had suggested: it is a self-consciousness, not a derivative of matter; it is an activity on a different plane from that of the world of objects. Its knowledge, when properly limited, *i.e.*, limited to *phenomena*, in mathematics and physics, is real and universal, a knowledge of the form and arrangement of *phenomena*. Of things in themselves it can have no knowledge. Yet, according to Kant, things in themselves exist, otherwise sensation is unexplainable. The Understanding inevitably goes astray when it attempts to deal with these things. It becomes hopelessly paradoxical when it tries to build up systems of metaphysics, psychology, cosmology, or theology; for notions like cause and effect, substance and accident, which have meaning when applied to the phenomenal order, have no meaning whatever when transferred to the noumenal world. When it tries to reduce the objective conditions of all our phenomena to an ultimate and supreme condition, or to the unconditioned, it falls into all kinds of contradictions: it

can prove, for example, that the world had a beginning in time, and also, with equal cogency, that it had no beginning in time, or is eternal; that bodies are infinitely divisible, and that they are not.

Yet — and this is most important — Kant partially justifies this effort of the mind. When thought is limited to the creation of knowledge from the data of experience, the results are concepts, the products of the Understanding (*Verstand*). But thought is not limited thus absolutely; it may exercise a unifying power independently of all data, and produce Ideas which can never be realized in experience: as such, they are the products of what Kant calls the Reason (*Vernunft*). For example: our Understanding may produce the concept of power, as an attribute of a strong man, or of a motor, or of an earthquake. Then Reason (*Vernunft*) may produce, from combined concepts of various kinds of power, the Idea of unlimited Power as a thing in itself. Thus we arrive at such Ideas as God, freedom, immortality. The purpose of the Idea, according to Kant, is not to encourage one to expect to encounter absolute Power or freedom in experience, or even to conclude, on the basis of reason, that they exist, but merely to stimulate the Understanding to seek constantly a more complete unity of knowledge of powerful or free objects. The Ideas thus have a 'regulative' function, never a 'constitutive' one. Reason is Understanding in its most synthetic and aspiring activity; though it will always fail to prove what it aspires to know, it nevertheless, by its very dynamic unity and power, gives a hint of realities beyond the plane of sensation and logic. And this provides Kant with the means of justifying some of our moral and religious convictions. In the *Critique of Practical Reason* (1788) he proceeds to show that the experiences of conscience, beauty, and religious impulse, though they cannot fit into our rational and mechanistic science, are too strong and too important to be dismissed as mere illusion. Even if we cannot 'know' the realm of things in themselves, there is yet a 'practical Reason' which rehabilitates our world of moral values. The Ideas of Reason — immortality, free will, and God — can never be verified by the senses or the Understanding; but because these Ideas are so closely bound up with our sense of obligation, duty, and moral law, Kant feels justified in equating Reason with moral will. The practical Reason thus becomes our contact with the real world, the moral and spiritual world behind, or above, the world of logic. To the objection that the possibility of freedom, for example, remains totally incomprehensible, Kant replies that, though as an Idea of the Reason it remains of doubtful objectivity, it is nevertheless of infinite *practical*, or moral, importance. He sees our consciousness of the moral law as 'an ultimate fact of Reason,' and as the expression of 'the autonomy of Reason, *i.e.*, of a man's freedom and spontaneity.' Man's recognition of the command of *duty*, as the great fact of his very nature, involves the further recognition that he can *do* it, and so assures him of the objective reality of his transcendental freedom even though he can never verify or prove that freedom in experience. In short, the Reason has its own category of ***obligation***. The Ideas of Reason have thus a dynamic value: to realize and fulfil the moral law is to realize these Ideas. Though they do not admit of a ***full*** realization in the natural world, they

are indispensable, both as satisfying our consciousness of freedom and as providing the self, which is a unity, with the aim of making the world itself a unity by man's moral acts. Though we can never empirically know the Ideas, such as absolute Goodness, or absolute Truth, or absolute freedom, we strive ceaselessly to realize them in our moral experience. Nor is there any room for differences of opinion on our obligation to obey the moral law. On the contrary, the moral law is a *categorical imperative*: it commands categorically, unconditionally; it does not say, Do this if you would be happy or successful, but Do it because it is your duty: Always act so that you can will that everybody shall follow the principle of your action.

Through a series of arguments too lengthy and too technical to be repeated here, Kant concludes that man's moral consciousness, his sense of right and wrong, his conscience, as indicated in the categorical imperative, implies the existence of God, the immortality of the soul, and the freedom of the will. If, for example, the world of space, time, and causal order were the real world, freedom of the will would indeed be impossible. But, according to Kant, the world as it appears to our senses is not the real world. Hence freedom is *possible*. Whether it is *actual* or not we should never know if it were not for the moral law which points us to a timeless, spaceless universe, to the intelligible world of free beings. In short, the moral consciousness of man, his sense of right and wrong, gives him an insight into a realm that is different from the world of matter presented to his senses.

It has been necessary to enter rather fully into Kant's thought — though of course a great deal has been omitted — because of the revolutionary effect he had upon the latter part of the eighteenth century and upon the whole of the nineteenth. He had achieved what has been called 'the Copernican revolution' in modern thought: he put an end to eighteenth-century dogmatic faith in the ability of reason to attain demonstrable knowledge of God, of spirit, of immortality; yet he showed knowledge of nature to be possible through the Understanding if we observe its limits; the 'revolution' consisted in Kant's showing that the Understanding prescribes its laws to nature. Space, time, matter did not now look so self-existent, or so tyrannous over the spirit. If time and space are the 'forms' of our sensibility, the way we apprehend nature, then the mind must have a reality of its own. Thus Carlyle, writing in his journal in 1830, after having studied long in German transcendentalism — popularized Kantism and post-Kantian idealism — concluded with evident relief: 'I think I have got rid of materialism: Matter no longer seems to me so ancient, so unsubduable, so *certain* and palpable as Mind.' Kant's theories, and their implications, seemed to leave the way open for belief in anything which interested the *whole* of human nature rather than merely its sensuous and logical side. He restored men's confidence in themselves as spiritual beings, in their world as a spiritual order, and in God as a reality. There was of course much uncritical use of his doctrines; and few people grasped their true meanings. But because he had given a brilliant reply to dogmatic rationalism with rationalism's own tool, the reason, his influence was immense, not so much through his own difficult works as through a host of

popularizers, and through the great systematic works of Fichte (1762–1814), Schelling (1775–1854), and Hegel (1770–1831). These men, starting with the distinction between the Reason and the Understanding, and with Kant's 'thing-in-itself' (*Ding an sich*), made the moral will, or freedom, the beginning of their speculations; and they ended by affirming the ideal or supersensible world, the world of mind or spirit (*Geist*), to be the real world, and in making the world of matter the expression, garment, symbol, or instrument of spiritual Reality. They sought to explain everything in terms of mind, purpose, and development. The common denominator of their idealism (idea-ism) was that idea or mind is alone real and primary. The world was no longer a fixed and mechanical thing, but a developing and purposive organism, with an Idea or an Ideal within it as both an urge and a goal. Man was no longer regarded as largely a thinking machine, but at bottom instinctive, emotional, dynamic, a growing organism; to understand him aright, one should go to the poet and the saint, not to the scientist or the logician. This new point of view — developmental, purposive, and organic — brought into fresh focus all the questions of religion, morals, art, literature, social and political philosophy, and education. Religion was not a science to be demonstrated, but an experience to be lived. Morality was not a set of rules, but essentially the good will and the performance of one's duty. Art was not a matter of form and structure, but of feeling and organic expression. Society was not a cold-blooded enterprise, a contract founded on self-interest, but a vast organism pressing onward to realize dimly seen ideals, in which all individuals are members one of another. These doctrines constitute, of course, a great part of what we call Romanticism. And the post-Kantians are often classified as Romantic: they exalted individuality, freedom of self-development, disregard of convention, self-reliance. This was, in part, the message of such men as Goethe, Fichte, and Friedrich Schlegel in Germany, of Coleridge and Carlyle in England, of Emerson in America.

The transcendentalism of such men as Coleridge and Carlyle was heavily indebted, for its terms and its patterns of thought, to the great German thinkers of the late eighteenth and early nineteenth centuries, thinkers whom they read not always accurately but always profitably. In Fichte's philosophy, and in his popularizers, like Friedrich Schlegel and Novalis, there was found a God very different from the watch-maker divinity of the previous age; instead there was a God who was not so much an artificer as the creative Soul of the world, its life, of which men and their activities were its highest expression. All history was a part of the cosmic struggle of this God — called sometimes the infinite Ego, or, in respect to its operation, the Divine Idea — to spiritualize, turn to moral ends, everything in the world. God was no longer an 'absentee' God, sitting apart watching his machine-universe grinding according to mechanical laws, but an indwelling, immanent, shaping Will, manifesting itself in the beauty and power of nature, in man's ethical aspirations, in great men, in the rise and fall of civilizations. And the purpose of man's life was seen to be ethical *action* rather than happiness or thought; his aim was to utilize his lower physical self so as to bring to fruition

his higher ideal self, just as the infinite Self (or God) evidently is utilizing the world of nature to manifest His own infinite patterns. Our Understanding is of use in the material and mechanical basis of our experience, in science; our Reason (for Fichte a spiritual and mystical intuition) pierces into the inexpressible realities of religion, beauty, truth, which, being of the Divine Idea, are eternal. And this Reason is to be exalted, obeyed, allowed ever freer operation in using the physical as an instrument to work out the infinite designs of God in this world of time and space.

These conceptions of history, nature, activity, reason, great men, and civilizations made a tremendous appeal to the nineteenth century. Space does not permit our glancing into the variations on these themes by Schelling and Hegel, who emphasized the conception of nature as a developing organism. It was Hegel especially who applied the notion of organism to the entire range of natural processes and to human activity: nature, art, religion, politics, literature — all were growths, stages in the universal divine process through which the life of God returns to itself with increasing fullness. Unlike Fichte, who stressed the ethical nature of the divine process, Hegel emphasizes the rational: reality is, for Hegel, a logical process of evolution; God is the living moving reason of the world, revealing himself in the world, in nature and in history. In the light of these new teachings, time and history took on a new significance; the old mechanical views of Locke and Newton gave way to the new genetic and historical outlook, and men's minds were gradually prepared for Higher Criticism and for evolutionism. They were soon to see Strauss apply Hegel's ideas to the story of Jesus, and to behold all the supernaturalism in that story rejected in favor of the doctrine that the resurrection of Christ was not a historical event but was, and is, an unending process of the divine spirit working in nature and through history.[5] True Hegelianism, however, in its effects upon English religious thought, does not appear until the last decades of the century. In the earlier years it is the influence of Kant, Fichte, and Schelling which is most clearly discernible.

In interpreting the new ideas, especially those of Kant and Fichte, Thomas Carlyle played the greatest part. Victorian Protestantism — often a Calvinistic Protestantism — found in him a renewer of the old religious doctrines, in fresh terms, and in such forms as would commend themselves to men who had lost their moorings in the orthodox faith and wished to believe without retaining the old supernaturalism. In Carlyle's transcendentalism, as notably expressed in *Sartor Resartus*, they found the substance of the old religion in a new form: predestination, and God's providence, now appeared in the German doctrine of the progressive unfolding of the Divine Idea in history; the Calvinist's 'elect' were now the Heroes, on which Carlyle lectured; the middle-class Protestant reverence for work seemed amply justified in Fichte's emphasis on the moral deed, rather than on the pretensions of the understanding or the longing for 'happiness'; nature — always a snare and a delusion to the religious — was now seen as, in one sense, an unreal 'appearance,' since time and space are merely relative,

5. On Strauss and Higher Criticism, and their relation to Victorian religious ideas, see p. lix.

and in another sense, as the raw material with which man was to express his true self through work; and God, who had seemed so remote and incomprehensible, was now an inner spiritual Will or Self, mysteriously at work in nature and in man. All objects, all institutions, all things visible were but partial and temporary embodiments, or symbols, of that Will. It was but natural that religious institutions and creeds, like any other symbol or garment, should grow old, and be discarded for newer and ampler raiments. Thus Carlyle assured his contemporaries that though the church, and political traditions, and social organizations were collapsing, the essential spirit underlying each was indestructible, and only awaited more fitting embodiments in new forms and institutions.

Equally influential on him, and therefore on his own time, were some of the teachings of Goethe, in his novel *Wilhelm Meister*: reverence, the 'worship of sorrow,' renunciation, and 'doing the duty which lies nearest.' Much in the thought of Goethe in his later years had, for Carlyle, a substantial similarity with some of the principles in the ethical idealism of Fichte. Both men had preached the doctrine of work, of the development of one's real self. Carlyle interpreted Goethe for his countrymen, and showed him as having passed through the fires of skepticism, and as having come forth with the conviction that underneath the painful contradictions of life — good and evil, happiness and sorrow, birth and death — there is but one universal divine power, in which all men share. They share it by heeding the two great, seemingly contradictory, impulses: the need for self-fulfillment, and the need for self-sacrifice. Their life, says Goethe, and Carlyle after him, is a success not through final static achievement, but in the measure in which they fulfill or sacrifice themselves according to the exigency of each moral occasion, and in the degree in which they make this process the growth of their personalities. The secret of living is growth, in a giving and taking; life is dynamic, and is to be measured by the fullness of its expression and the spirit in which it is lived. 'The man is the spirit he worked in,' said Carlyle in *Sartor Resartus*; 'not what he did but what he became.' The whole nineteenth century thrilled to this ideal, and saw its expression not only in Carlyle's words but also in the words of Browning's Rabbi Ben Ezra:

> What I aspired to be,
> And was not, comforts me.

At the same time that Carlyle attempted a transcendental rehabilitation of the truths of religion, as he saw them, and as his contemporaries were soon to view them, there was, unfortunately, a tendency to debase his teachings. In the minds of many middle-class readers, the spiritual doctrine of 'work' as worship became work for selfish advancement; the idea of utilizing nature for spiritual ends became merely the exploitation of nature; reverence for Heroes became the Victorian eagerness to see in any successful or impressive leader the lineaments of the 'great man'; renunciation often took hypocritical forms; the idea that the Eternal works his way through nature and history added its weight to the growing faith in the dogma of 'progress.' This is not to say that Carlyle was responsible for these aberrations.

Yet to no inconsiderable extent the teachings of Carlyle were instrumental in many of the excesses of the period. By 1845 his influence was wide and deep, greater than that of any other of the 'prophets.' He was read and studied by all classes. At his best, he eased the transition from the old comfortable orthodoxy to the newer religious outlook. Though he was at heart a conservative, there was something in his writings for the Liberal, the Tory, the Socialist, the Churchman, the Nonconformist, the Radical. Those individuals who could not follow John Keble in the Tractarian effort to revive the doctrine of apostolical succession or the Catholic note in the Church of England, or Newman in his entrance into the Roman Catholic fold, or John Stuart Mill in his faith in a future society on purely secular lines, or the Nonconformists in their emotional religion and their simple adherence to the 'inspiration of the Bible'—such individuals as rejected these sets of ideas and beliefs could always turn to the mystical, many-sided, and intensely stimulating teachings of Carlyle. He was a refuge for those who had abandoned the dogmas of theism without abandoning the theistic point of view.

The early Victorians, who saw the Reform Bill enacted while riots occurred in the streets, and who beheld the monster petition of the Chartists in 1848, lived in a period of storm and stress. The Corn Laws, the Factory Acts, Chartism, Tractarianism, and a multitude of local reforms were events in a time of great and stirring change. Victorian character was shaped in this early period of struggle. It was a time peculiarly calculated to create and foster the habit of concentration, the moral earnestness, solidity, and toughness which alone could survive the rigors of that harshly competitive period. Equally tough and vigorous was their mental digestion: they read eagerly in *Past and Present*, in *Modern Painters*, in the Oxford *Tracts for the Times*, in countless sermons, in the popular three-volume novels. If they were at times complacent, hypocritical, and prosaic, they supplied their own satirists and critics, and enabled them to live comfortably by buying their books. If they were acquisitive, they were also idealistic; if they were bold in enterprise, they managed to emerge with the happy success that is born of compromise. Of the practical early Victorian it could always be said, as Walter Bagehot was later to say: 'He had plenty of go in him, but he knew when to pull up.' Like his own favorite statesman, Palmerston, 'he went with a great swing; but he never tumbled over; he always managed to pull up before there was any danger.' Thus England passed the crucial year of 1848, when revolutionary disturbances throughout Europe shook every throne, and the French *bourgeoisie* retreated to the shelter of military dictatorship under Louis Napoleon. England in 1848 was moving into that peaceful and prosperous mid-Victorian interval, 'when, as it seemed to those who recalled the sordid and sullen past, England was renewing her youth.' She was entering the 'great peace of the fifties,' a moment of cultural equilibrium which has moved one Victorian critic to say: 'Of all decades in our history, a wise man would choose the eighteen-fifties to be young in.'

IV

Victorian Peace, Plenty, and Doubt: 1848 to 1867

After 1848 England's Continental rivals became involved in a cycle of wars, and in the sixties the United States was engaged in the struggle betwen the North and the South; England herself was little affected by the blunder of her Crimean adventure, or the tragedy of the Indian Mutiny. Thus at home and abroad she was able to continue the development of her commerce. Free Trade became almost a gospel; the volume of her exports, which had risen to about forty millions a year by 1810, leaped to nearly sixty millions during Peel's ministry, and was to rise, by 1876, to two hundred millions. The railway boom, though it led to overspeculation and panic in 1846, left England with an effective railway system. Opportunities for investment lay almost everywhere. The first act permitting the formation of Limited Liabilities Companies in 1837 was strengthened by the Companies Act of 1862; in 1861 Gladstone had secured, for the workers, the Post Office Savings Bank. The colonies, now coming of age as self-governing communities, created a vast new market for England's goods. Nor did reforms cease: University reform, divorce-law reform, the management of London's government, the creation of the Public Accounts Committee, the Public Health Act of 1848, Civil Service Reform (1850–70) — these, and many others, gave the mid-Victorians the feeling that progress was being made in all important fields. Humanitarian and economic progress was felt by all classes: real wages rose, and employment became more regular; the Co-operative movement, originated by a handful of Chartist and Owenite workmen of Rochdale in 1844, spread among the working classes and trained them in self-government and business management. The landlords experienced prosperity in spite of the grain that was poured into England from overseas: prices and rents kept up, owing to increased population, higher wages, the expanding foreign market, the Crimean War (1854–56), and the gold discoveries in California and Australia. England had become a creditor nation, and London was the universal counting house. By 1866 money had become so plentiful that even the pessimistic Carlyle, in his inaugural address at Edinburgh, ironically alluded to it: 'There is an abundance and over-abundance of money. Sometimes I cannot help thinking that probably never has there been, at any other time, in Scotland, the hundredth part of the money that now is, even the thousandth part. For wherever I go, there is that same gold-nuggeting [*a laugh*], — that "unexampled prosperity," and men counting their balances by the million sterling. Money was never so abundant, and nothing that is good to be done with it [*Hear, hear, and a laugh*].'

Much reform remained yet to be achieved; even during the good years about four per cent of the workers remained unemployed: but the governing class was surprisingly humane. Though it believed in individualism — every man for himself, and the Devil take the hindmost — nevertheless it permitted the passing of the Factory Acts, which were diametrically opposed to the teachings of the classical economists. This was partly owing to the obstinate survival of the aristocracy, made

up now of the capitalists and directors of the chief English industry: three and a half million acres under wheat, crops from thirty bushels upwards to the acre, encircled by a prosperous and respectful tenantry, with what Gladstone called 'its sneaking kindness for a lord.' The middle class respected this aristocracy not only for its birth but also for its sobriety, its robustness, its moderation in religion, its political sanity. And the English *bourgeoisie*, whenever possible, lifted itself into the aristocratic class and perpetuated the tradition of leadership, self-advancement, and responsibility. The governing class considered the period to be the culmination of all that was fit and proper. It agreed with Lecky that 'the world has never seen a better Constitution than England enjoyed between the Reform Bill of 1832 and the Reform Bill of 1867. Very few parliamentary governments have included more talent, or represented more faithfully the various interests and opinions of a great nation, or maintained under many trying circumstances a higher level of political purity and patriotism.' It agreed with Roebuck: 'I ask you whether, the world over or in past history, there is anything like it? Nothing. I pray that our unrivalled happiness may last.' And they read with solid satisfaction the footnotes of the third chapter of Macaulay's history.

Romance and Liberalism were at their height; Tennyson reigned supreme in poetry; John Stuart Mill in thought; John Ruskin had awakened an interest in modern Gothic. The triumphs of the Industrial Revolution, of peace and industry, were displayed in the great Exhibition in Hyde Park, in 1851. Under the auspices of Prince Albert, who, with Queen Victoria, had come to represent the embodiment of middle-class Victorian optimism and respectability and achievement, the Crystal Palace stood as the symbol of a bright future. Carlyle might shriek at its consecration of Mammonism, and Ruskin might denounce its use of glass and steel as architecturally unsuitable for the expression of God's word; but the people saw in the Exhibition a great hope. Chartism had proved a mere bugbear, the Irish rebellion had been a farce, the Corn Laws were gone, and Free Trade had proved a magical formula. The Exhibition, the first World's Fair, was designed to show, through the products of industry, the 'solidarity of the world,' the inevitability of world-peace on the triumph of machinery. No expectation was ever more ill-founded. After forty years of comparative peace, since the battle of Waterloo, Europe was to see the beginning of four great wars, and England, whose soldiers had not fired a shot since 1815, was not to be without her share in them. But for the time being, the vast and ugly Crystal Palace remained the symbol of mid-Victorian hope and innocence.

The comparative calm of this period was owing partly to the fact that the great political parties were in a state of confusion: the Tories were split over Peel's action on the Corn Laws, and the Whig prime minister, Lord John Russell, had quarreled with his Foreign Secretary, Palmerston. Thus no party was strong enough to command a majority in the country. There followed a series of short ministries: the Conservative ministry of Derby and Disraeli (1852); the coalition ministry of the Peelite Tories and the

moderate Whigs under Aberdeen (1852–55); then a Whig ministry under Palmerston, who had won national glory over his seeming success in bringing the Crimean War to a conclusion (1855–58); a second Derby-Disraeli (Conservative) ministry (1858–59); a second Palmerston ministry of Whigs, Peelites, and Liberals (1859–65); and Earl Russell's Liberal ministry of 1865–66. It is important to note these short-lived ministries, for they show the significant shift of the liberal Tories, such as Gladstone and Palmerston, to the Whig ranks, since the memorable year of Corn Law repeal under the Tory minister, Peel, who thought he should serve the nation rather than his party. These liberal Tories, or 'Peelites,' agreed with the Whigs that reform and change had not gone far enough, and that the Constitution needed further change. Gladstone was of the opinion that an extension of the suffrage was inevitable; he awaited only the passing of Palmerston's more conservative influence. In the meantime, Disraeli, who had left behind him his reputation as a prince of dandies, now came forward with a new Toryism, which should appeal to the whole nation, as against Whiggism, which appealed to a class or faction. He sought to 'educate' his party, to rid it of its old anti-intellectual traditions of the days of Lord Eldon. He opposed the Utilitarian and Radical programs, and the blind conservatism of the older Tories. His conception of the nation was organic, rather than contractual, and thus was an enemy of all liberal doctrine; he appealed to England's sense of race and nationhood. He laid down three great principles: the maintenance of the institutions of the country; social reform, or the elevation of the condition of the people; and the development of England's empire. His Toryism was typical in its approach to reform on its social side rather than on its political side; here he was naturally the enemy of the Whigs and Liberals, who, with the Benthamites, placed their trust in political measures. In this mid-Victorian interval, the lines of battle were being drawn; as yet the fight could not really begin, but would have to wait for the seventies and eighties, when the two 'grand old men' would be the protagonists in a great political duel. As yet the Whigs and Tories, now coming to be called Liberals and Conservatives, were aware of necessary reforms, but were held back by powerful interests on both sides. Both parties desired the support of the people, and were inclined to hedge and trim in order to secure and hold power. Whiggism was therefore the predominating note in domestic politics regardless of what party held office. It was this reluctance to grapple with fundamental issues which aroused the anger of men like Carlyle and Ruskin. And it was the politicians' obvious desire to cater to the populace which caused the conservative Carlyle to abandon all hope of true government after the death of Peel, who alone of the statesmen of that time was regarded by Carlyle as a great man. The outcome of the mid-Victorian political struggle was that the Conservatives decided in 1867, in Derby's memorable words, to 'dish the Whigs'—to grant an extension of the franchise in a Second Reform Bill, to 'shoot Niagara,' as Carlyle said, and await the deluge of 'American democracy.'

While capital multiplied and prosperity

grew, the Trades Union movement likewise increased. In 1852 the Amalgamated Society of Engineers came to be regarded as the 'new model' of the aristocracy of labor. It showed the way to organizing single crafts, practical in aim and spirit, and opposed to the vague idealism of Owen's 'Grand National' for all workers. Gradually there were introduced various new functions: that of a trade organization, and of an insurance and benefit Club. Benefits were administered by local branches, and strike pay and policy by the Central Executive. Expert salaried executives were another important feature of the 'new model.' The working-man had come to think of his own capacities for improvement, and to look among his own kind for guidance. The organization of labor grew slowly, but it was a significant sign of the times. By an act passed in 1859 permission was given to workers to carry on peaceful strikes in order to secure better wages and better conditions of work. This did not wholly protect the Unions or the strikers, but it was a step far in advance over the workers' position in the eighteen-twenties. As yet the workers' associations were mainly confined to efforts in improving their conditions; the idea of seriously questioning the capitalist system, and of considering the doctrines of socialism, had little influence in the fifties and sixties. It was not until Victorian prosperity began to wane in the seventies, and hardships were keenly felt in the eighties, that English socialism, under such men as William Morris, could gain any real vitality.

Though the period was one of economic progress and social equilibrium, there was a disturbing note in the intellectual atmosphere. The mid-Victorians had inherited the Romantic faith in a deity which is immanent, and indwelling, in nature and in man's consciousness. Carlyle had taught them to find God in themselves, in their ideals, in man's history, in the long record of human institutions. He bade them let the divinity within them meet the divinity that operated everywhere around them. This had been one answer to the Victorian longing for certainty, for grasping in secular life the kind of inspiration which was once found in sacred scriptures. The search for God, or some substitute just as good, colored the thinking of all Victorians. Their passionate longing to believe led them to grasp at any straw: if they could not believe in the God of Newman, they turned to the God of Carlyle, or Maurice, or Thomas Erskine; if they could no longer accept the immanent Will as described in *Sartor Resartus*, they turned to Spencer's Unknowable, or the scientists' ether, or force, or evolution. Their ancient beliefs had been the corner-stone of an entire culture. They wanted to go on believing in God because the long tradition of Christendom, recently reaffirmed by the German and the English Romantics, had made that belief the cohesive force of their lives, and the motivation of their deeds; their God had supplied rewards and punishments, assistance, consolation, warning; He had supported the physical and moral economy of the universe, and had given it all meaning and hope. Retaining this belief was facilitated, in some cases, by reading the universe in terms of Newton and eighteenth-century mathematics; most Victorians who had advanced beyond dogma still held unbroken the Newtonian framework, and if their idea of God grew pale

and colorless with the growth of knowledge, it nevertheless remained firm, comforting in its implications of everlasting order, stability, and design. But beneath the surface of Victorian assurance there was bankruptcy. Religion had become 'respectable,' but it had not gained renewed life. Tractarianism had done nothing to relieve the poverty of thought that had been the fatal accompaniment of the Evangelical movement in pre-Victorian days. Men's beliefs did not square with their practices: political economy and free competition could not be reconciled with the Sermon on the Mount. Beneath the Victorian's air of confidence there was thus a haunting doubt that 'it could not last.'

Within the Church, there was a great and deceptive calm. The ideal of the Christian gentleman had, even in the highest circles, taken the place of the polite worldliness of such older types as Lord Chesterfield or Horace Walpole. This period of calm has been described by Samuel Butler in *The Way of All Flesh*: 'The year 1858 was the last of a term during which the peace of the Church of England was singularly unbroken. Between 1844 when *Vestiges of Creation* appeared, and 1860, when *Essays and Reviews* marked the commencement of that storm which raged until many years afterwards, there was not a single book published in England that caused a serious commotion within the bosom of the Church. Perhaps Buckle's *History of Civilization* and Mill's *Liberty* were the most alarming, but neither of them reached the substratum of the reading public. . . . The Evangelical movement had become almost a matter of ancient history. Tractarianism had subsided into a tenth day's wonder; it was at work, but it was not noisy. The *Vestiges* were forgotten . . . the Catholic aggression scare had lost its terrors . . . the Crimean war was the one engrossing subject, to be followed by the Indian Mutiny and the Franco-Austrian war. . . . There was no enemy to the faith which could arouse even a languid interest. At no time probably since the beginning of the century could an ordinary observer have detected less signs of coming disturbance.' There was, on the contrary, a revival of interest in religious art, in church Gothic, and in ritual. The Pre-Raphaelite painters, of course, contributed their share to the public interest in religious subjects treated artistically. Under the influence of Ruskin, many turned their attention to the decayed condition of many of the church fabrics; and there followed, to Ruskin's horror, a mania for 'restoring,' often involving the destruction of priceless carvings, and the copying of what seemed a more authentic model. This concern with the symbols of religion revealed in what degree Victorian Christianity was a romantic veneer. Behind the bulwark of Paley's *Evidences of Christianity* and Butler's *Analogy*, the Church continued to slumber while science passed from triumph to triumph and was tolerated so long as it contributed to the comforts of life and did not lay its hands upon the Bible or the Thirty-Nine Articles.

In an effort to adjust the Church to changing conditions a new movement of democratic sympathy and liberal views was advanced by the Broad Churchmen, Frederick Denison Maurice, Charles Kingsley, Thomas Arnold, A. P. Stanley, and Benjamin Jowett. As a group they were numerically small, and they were neglected by successive prime ministers;

but their activities were of great importance. While the High Churchmen looked back wistfully to an undivided Christendom, the Broad Churchmen looked hopefully forward to a synthesis of religion and science. The first great name among them had been that of Archbishop Richard Whately, who had laid great stress on logic and philosophy, rather than upon dogma. And there had been Coleridge, likewise, who had exerted a powerful influence; he had widened the meaning of the word 'Church,' using it to refer to the nation organized and acting as a moral personality, just as the State is the nation organized for safeguarding individual interests. In the fifties the Broad Churchmen proclaimed the futility of Christianity unless applied to economic and social relations. As 'Christian Socialists' they tried to apply the principles of Christ to political and social evils by setting up co-operative work-shops, and by founding the Working Men's College, at which Ruskin lectured. Among all the Broad Churchmen there was especially the conviction that what divided men was of less importance than what properly united them. Stanley, for example, following the ideas of Thomas Arnold, was continually engaged in trying to reconcile all sections of the Church, and invited even the Dissenters to join in a truly national Church. All dogmas were to be relaxed, all differences reconciled. Neither Stanley nor Arnold nor Maurice fully recognized the nature of their attempt. Mill later declared that Maurice's brilliant mind was wasted on the task of proving that all that nineteenth-century men knew had been known by the Church of England from the beginning. And Disraeli pulled up Stanley with his famous remark, 'Remember, Mr. Dean; no dogma, no dean!' The Broad Church movement made no triumph; it was intellectually too loose and vague: but it merits remembering for its honest attempt to face the facts of social and political change.

While Jowett and other Broad Churchmen were at war with old orthodoxy at Oxford, the spirit of John Stuart Mill was abroad in the land. Even in Oxford, which still echoed with the Tractarian tumult, his work was eagerly picked up by the younger generation. His *Principles of Political Economy* (1847) became the standard treatise on the subject, and remained so until the end of the century. His essay *On Liberty*, which appeared in the same year (1859) as did Darwin's epoch-making *Origin of Species*, shook the framework of Victorianism. The old Victorian world of humanism, of allegiance to a set of social and religious ideals which rested on sentiment rather than on reason, was subjected by Mill to the test of logic. The human mind was to be freed from every influence except the logical understanding. Mill looked forward to a time when educated people would indeed have no allegiances or convictions too precious to be disproved or too profoundly intimate to be analysed. The individual was to be free not only from political and ecclesiastical tyranny but also from the tyranny of the opinion of his fellows, whether the majority or the minority. Men were to be intellectually restless, resourceful, self-reliant. Mill's book became the bible of a whole generation, which knew it nearly by heart. Charles Kingsley declared that it made him a 'clearer-headed and braver-minded man on the spot.' Readers were

stimulated by Mill's refusal to be overwhelmed by the vulgarity, the mammonism, the maladministration of the age, and by his challenge to their intelligence. Departing from the narrow Utilitarianism of his father, he recognized that intelligence operates not only through logic but also through imagination; this was the lesson he learned from Wordsworth. He thus calls upon the individual to justify himself, to measure up to the ideal of well-rounded self-development championed by Goethe, Wilhelm von Humboldt, and other German thinkers. This is possible only through the freedom granted by society to its members. Mill's ideas of freedom and development were conditioned to some extent by his study of the great French positivist philosopher, Auguste Comte (1798–1857), whose writings he had read and whose teachings he expounded in the *Westminster Review*. The Positive Philosophy, like the Kantian, holds that we can know nothing about 'noumena' (the nature of things behind the facts of science); we can know only 'phenomena,' or facts in their relations. The aim of man should be not the impossible knowledge of essences or ultimate causes, but, from an imperfect knowledge of facts, the progressively improved handling of relationships: that is, in the best methods of government, of distribution of wealth, of moral and physical growth in the individual and society. Mill and Comte sought to rescue the individual from the domination of metaphysics and theology, and from the tyranny of institutions, whether the Church, the State, the community, or the family. This is one of the central themes of Mill's *Representative Government* (1861), and *The Subjection of Women* (1869). And it was this radical application of reason to time-honored institutions and habits and beliefs which made him at once a bright champion of humanity and a disturber of Victorian serenity. In him the older generation saw a traitor within the ranks, a man whose impeccable logic and personal integrity had betrayed a great heritage. In him they saw the lineaments of the new religion of man. And the vision filled many an older Victorian with horror, even while it was stimulating the younger generation by appealing to its sense of intellectual responsibility. It is to no inconsiderable extent the result of Mill's influence that one critic has declared that 'it was during the middle decades of the nineteenth century that, in England, the impulse of self-subordinating service was transferred, consciously and overtly, from God to Man.'

This shift in direction and emphasis is to be seen most strikingly in the rapid growth of the historical spirit. As we look back over the century we note that its changes are due to the co-operation of a number of forces, all moving in the same direction: the historical method, Romanticism with its interest in the past, German idealism with its conception of the world-process and of development, and finally evolutionary science. The keynote of all these forces is the idea of growth. Hegel had exalted history, since it was no longer to be regarded as a mere succession of events but the actual unfolding of the nature of mind or spirit. Even the Oxford Movement had contributed to the new outlook, for it called not only for a study of Scripture but also for an examination of 'ecclesiastical antiquity.' By the middle of the century Darwin had become the

clearest voice of the historical spirit in its widest sense; at the end of his most famous book he wrote: 'We no longer look at an organic being as a savage looks at a ship, as something wholly beyond our comprehension; . . . we regard every production of Nature as one which has had a long history.'

The eighteenth century, enamored of a fixed and mathematical universe, was satisfied with what it was; the nineteenth century, aware of mighty processes throughout all nature and human history, was interested in what was becoming. Yet even in the eighteenth century, in its closing years, the foundations were being laid for almost every branch of physical science. The principles of Newton were first applied in a thorough and systematic manner when Laplace published between 1799 and 1825 his *Mécanique Céleste*. With the turn of the century science grew rapidly: Cuvier organized and shaped the new science of comparative anatomy; Dalton in 1802 announced the law of the expansion of gaseous fluids, and in 1803 propounded the atomic theory; Thomas Young in 1801 showed the undulatory character of light, and Davy began his discoveries in electro-chemistry; Lamarck in 1809 suggested that species were evolved by the transmission of acquired characteristics; Bichat's physiological researches, announced in 1800, were later followed by Sir Charles Bell's investigations into the anatomy of the brain; later, in the eighteen-thirties, Schwann and Schleiden gave an entirely new direction to biological research by publishing their cellular theory of animal and plant organization; the investigations of Meckel and Von Baer called into being the new science of embryology; and Liebig in 1826 had showed the importance of organic chemistry.

It was not until after 1830 that science aroused much popular interest; and it was not until the last decades of the century that it got a footing in educated thought in England and an important place in the Universities. Higher education resisted the advance of scientific studies because academic instruction was predominantly classical in tone and was in the control of the clergy. Science was regarded as an upstart; and many people, including Newman, objected to the 'vulgarity' of the language used by scientists. But 1830 was a great year of triumph: it saw the publication of Herschel's *Discourse on the Study of Natural Philosophy*, which, with Whewell's *History of the Inductive Sciences* (1837), was to do much to make science better known; it saw also the foundation of the British Association, the first satisfactory attempt to organize and give a 'platform' to scientific research; but, most important of all, it saw the publication of Lyell's *Geology*. By this time all branches of science were drawing popular interest, but particularly the sciences of astronomy and geology. It was geology which turned the tide of interest, because this science satisfied the intellect without sacrificing the claims of the imagination, and because Lyell, at first, tried to show that his ideas could be reconciled with the book of *Genesis*. Following in the footsteps of Hutton and Werner, who had explained geological formations by fire and by water, respectively, Lyell substituted for the old theories of catastrophic change, a 'uniformitarian' theory of slow modification of the earth's surface through changes still

going on. When Darwin's *Origin of Species* appeared, Lyell received the work with suspicion; but in 1863, in his own *Evidences of the Antiquity of Man*, he accepted Darwin's theory of the origin of species, and gave to man an existence on earth far exceeding that which Biblical chronology had allowed. In the meantime, there had appeared in 1844 an anonymous work entitled *Vestiges of the Natural History of Creation*, which denied the special creation of species, though admitting the possibility of a gradual development under divine guidance. The *Vestiges* — actually written by Robert Chambers, a Scottish popularizer of science whose name is preserved in *Chambers' Encyclopaedia* — was violently attacked by scientists who still held to the fixity of species, and by theologians who held to the doctrine of special creation by divine *fiat*, and who were shocked by the materialism of evolution and by the degradation of man through the suggestion of an animal ancestry. But the public was gradually becoming accustomed to evolutionary theories. In 1852 Herbert Spencer published an essay on *The Development Hypothesis*, in which the theory of evolution is fully and clearly set forth; and in 1858 he issued a program for a series of works dealing with astronomic, geological, and organic evolution. Thus when Darwin's work appeared, it found a ready public: the first edition — modestly limited to 1,250 copies — was sold out on the day of publication. The *Origin of Species* was but the culmination of a long line of thought and investigation by numerous men. The idea of biological progress, and of differentiation and reversion, was extremely old: the idea, in one form or another, goes back as far as Aristotle, and can be traced, in its various modifications, in Kant, Linnaeus, Erasmus Darwin, Goethe, Saint-Hilaire, Von Buch, Prichard, and Mayhew. Charles Darwin's book succeeded because it collected a vast amount of evidence, because it suggested a possible *method* of evolution, that of Natural Selection, because it suggested that Nature's test was survival value in the struggle for existence, and because it found a ready framework in the vast aeons of time which the geologists had provided for the production of endless varieties of life-forms.

The effect of scientific theories, especially of geology and biology, on Victorian religion was to stir up a bitter conflict. 'The conflict between science and theology,' as summed up by Storr, 'raged round the following points. What was the efficacy of prayer? Was not the reign of law universal; could there be any interference by God, in answer to prayer, with the fixed order of nature? Was miracle possible, in the sense of contravention of natural law? Was it reasonable to believe in the Christian story of redemption, in face of the revelation made by science as to the vastness of the universe? Could such an insignificant planet as this earth have been the scene of a drama so stupendous? Theologians felt that the general outlook of science was hostile to religion. Science robbed the world of its poetry and spirituality. It interpreted existence in terms of mechanism, bringing even human life under the control of mechanical forces. What room was left for freedom; and, if there was no freedom, what became of the theological doctrine of sin? . . . The conception of a vast system of physical causation, embracing man and nature in one iron whole,

seemed to leave no room for religion. The very sanctities of the human heart were in danger of invasion. Here were men who would "peep and botanize" even on a mother's grave. Wordsworth's plea for a spiritual interpretation of nature, as in the lines on *Tintern Abbey*, came home again with power to many hearts, as a protest against the soulless and godless creed of physical science.' Evolutionism, and science in general, had dealt a final blow to eighteenth-century Deism; it increased the territory of the natural at the expense of the supernatural, as Newman had already foreseen it would; it drove men back from the spiritual, compelling them to find their certainties in material things; it undermined the traditional story of the Fall of man, and of the Incarnation; it destroyed the old optimism of Paley, who taught that nature was a marvellous system of happy adjustments, of purpose and design; it took from man and his earth their importance in space and time. John Lightfoot, a Cambridge scholar of the seventeenth century, had calculated that the creation of man took place at 9 a.m. on October 23, in the year 4004 B.C. This exact confirmation of Archbishop Ussher's date had to give way to an entirely new way of looking at the history of man and the earth. What made the scientists' attitude so frequently arrogant and belligerent was a similar attitude on the part of the theologians. On both sides there was presumption, pugnacity, and a defensive point of view. The conflict is now remembered for two or three historic moments. At the meeting of the British Association at Oxford in 1860, Bishop Wilberforce attempted to laugh evolution out of court by asking Huxley — 'Darwin's bulldog' — whether he claimed descent from a monkey on his grandfather's or his grandmother's side; Huxley replied, with devastating dignity and composure, that he would rather have a monkey for his ancestor than 'a man who used great gifts to obscure the truth.' Later, in 1864, during a dramatic speech in the Sheldonian Theater, at Oxford, Disraeli took the opportunity of making clear his position regarding man's descent: on the question of whether man was an ape or an angel, he himself was on the side of the angels. The subject of man's ancestry seems to have provided many occasions for mid-Victorian wit. One defender of the old ways ended his impassioned discourse with the words: 'Leave me my ancestors in Paradise and I will allow you yours in the Zoological Gardens.' It must not be thought, however, that the attitude of religious men was one of unbroken opposition: the new theories were received with considerable equanimity by such eminent Churchmen as Hort, Charles Kingsley, Frederick Temple (later Archbishop of Canterbury), and Dean Church. It is true that in the sixties there was a veritable flood-tide of materialism and agnosticism, but as time passed, scientists and religious thinkers began to see that each had need of the other, and that concessions would have to be made and toleration exercised. Darwinism as preached by Huxley affected many Victorians in the same way as did Mill's non-biological theory of freedom and development: it inspired them with a vision of man as independent, self-reliant, almost godlike in his freedom from fear, and responsible to nobody except himself and his descendants. The outlook might be bleak, but it was tonic.

One result of the triumph of evolution

was the deepening of the conviction in many minds that progress is natural and inevitable. Darwin's theories appeared at just the psychological moment for evolution to take on a kind of religious value; it was accepted as a scientific rendering of the traditional faith in God's providence. The age welcomed any attempt to pour new wine into old bottles — to give 'evolutionary' interpretations to old religious creeds, to revise theologies on the idealistic plans of the Germans, to re-read Hegel in terms of Darwin, and to replace the doctrine of 'original sin' with the idea that the evolutionary process culminated in Christian morality. Thus the spirit of compromise found new fields. It was Herbert Spencer who gave the evolutionary theory the most dogmatic utterance: 'Progress,' he wrote, 'is not an accident but a necessity. What we call evil and immorality must disappear. It is certain that man must become perfect.' Herschel had been no less certain: 'Man's progress towards a higher state need never fear a check, but must continue till the very last existence of history.' Bury has shown how the dogma of progress had three distinct stages: the first, when it was taken rather casually, during the eighteenth century, up to the French Revolution; the second, when the study of sociology, especially by the Socialists and political reformers, led men to accept social progress as a gospel, and to search for a general law of 'development'; the third, when, with the publication of Darwin's work, the brilliant guesses during the earlier period were translated into biological terms. The Romantic doctrine of human perfectibility, asserted by Condorcet and Godwin, now took new ground; and men thought that for the first time in human history, the 'dim outlines of a gigantic plan' in the universe could be scientifically ascertained. The idea became one of the commonplaces of conversation. The young Lord Balfour related in a letter in the sixties that even his barber discoursed of 'the doctrine of evolution, Darwin and Huxley and the lot of them — hashed up somehow with the good time coming and the universal brotherhood, and I don't know what else.'

Evolutionism meant one more great triumph of the secular tendency of the time. It was adaptable to the tough and agile habit of compromise, and enabled many a Victorian to build up a world-view of his own, with curious combinations of contradictory ideas. Some were able to fuse the results of science with liberal interpretations of the Bible and the Church, and perhaps to add acceptable doctrines from the Tractarians, or from Carlyle. In the fusion of various beliefs and fragments of knowledge, in the Victorian search for unity and authority, 'we feel we can discern,' says G. M. Young, 'the religious philosophy of Later Victorian England moving towards its next objective, while from *In Memoriam* to *The Woods of Westermain*, from *The Woods of Westermain* to the Choruses of *The Dynasts*, we can follow the secular intellect seeking its way to such an apprehension of Being as Process as might hereafter reconcile the spiritual demands of humanity with the rapt and cosmic indifference of Evolution.' There was consolation, and a kind of optimism, in such efforts; for they rested on the belief that science worked automatically for progress. But this belief was naïve. It was rudely broken by the very man who had done so much to build it up in the

minds of his contemporaries: in his Romanes Lectures on *Evolution and Ethics* in 1893, Huxley declared that the cosmic process, far from manifesting an increasing progress toward good, seemed almost a power of evil. That Nature which, in Tyndall's famous Belfast Address, had been seen as 'doing all things spontaneously of herself, without the intermeddling of the gods,' was no longer the arena of grand designs for good; it was but a mighty process, of which the origin and the purpose, good or bad, are hidden from the eye of science.

Before 1859 there was very little to shake the Victorian faith in the eternal verities, but after that year nothing remained the same. Most of the scholars, journalists, and literary men knew of the conclusions of science at second hand; those who knew them more intimately still insisted that they did not invalidate one's belief in what is eternal and omnipotent. But with the spread of scientific ideas in the fifties and sixties, there occurred also the spread of Biblical, or 'Higher,' Criticism among readers who had hitherto had no inkling of what effects the new historical spirit would have upon religion. While Continental, and especially German, thinkers were advancing in Biblical criticism, England had been slumbering in orthodoxy: the indifference of her clergy, the reactionary effect on her of the French Revolution, and her traditional view of the Bible as directly inspired from cover to cover had all preserved her in stagnant isolation. Only a few of her theologians approached their problems in the critical spirit: Alexander Geddes (1737–1802) and Herbert Marsh (1757–1839), Bishop of Llandaff, had ventured to examine the Bible as any other literature. In 1825 Connop Thirlwall published his translation of Schleiermacher's *Critical Essay on the Gospel of St. Luke*, prefacing an Introduction in which he denied the possibility of absolutely certain conclusions in Biblical research, while insisting that such research should be genuine. In 1830 appeared Milman's *History of the Jews*, which disturbed its readers by exalting the human element at the expense of the divine, by calling Abraham an Arab Sheik. There was thus a certain amount of tentative groping among a few theologians. Thomas Arnold urged the study of the history and literature of other nations as valuable in throwing light on the Biblical narrative. But even more interesting was Coleridge's posthumous *Confessions of an Inquiring Spirit* (1840), which showed the influence of the great Germans, Eichhorn and Reimarus, and which aimed to show that the Bible, taken as a whole, has nothing to lose and everything to gain by abandoning the old unhistorical view of inspiration and by substituting for it a larger and more living conception. Coleridge was the first in England to apply to the Bible the categories of life and development. He asserted the *spiritual* authority of the Bible, the only kind of authority which would appeal to the more advanced minds of his time; and he frankly accepted critical principles and their results. Re-inforcing the conclusions of these pioneers in the historical method as applied to religion, there was the study of comparative religion. This new study possibly had its beginning when on May 8, 1840, Carlyle lectured on Mahomet. This was a radical departure from the orthodox position; Mahomet and his fol-

lowers were dangerous rivals of Christianity. Yet the public read the lecture with great interest when it was published in *Heroes and Hero-Worship*. Other works which stimulated the interest in general religion were F. D. Maurice's Boyle Lectures of 1846 on *The Religions of the World*, Max Müller's edition of *The Sacred Books of the East*, and W. Robertson Smith's studies in the Semitic religions and their connection with the religion of the Old Testament.

The first great shock to the general public came with the publication of Strauss' *Leben Jesu* in 1835, translated by George Eliot in 1846. The year 1835 was a turning point in the history of Biblical criticism. It saw, besides Strauss' great work, the publication of Vatke's *Biblical Theology*, which applied the conception of development to the religion of Israel; and F. C. Baur's treatise on the *Pastoral Epistles*, which showed that the criticism of primitive Christianity must concern itself, not only with documentary analysis, but also with the whole environment of life and thought in which the Christian community developed. It was Strauss, however, who provided the stimulus which led to the growth of sound literary criticism of the New Testament. His aim was to reconcile Christian theology with the Hegelian philosophy, to destroy absolutely all belief in the supernatural and miraculous, and to write the life of Jesus according to the strictest canons of scientific, historical criticism. The orthodox had held that the Gospels contained genuine history, partly natural and partly supernatural, and that the Gospels, particularly those of Matthew and John, were the work of eye-witnesses. For Strauss, however, the whole Gospel story was but a myth. For him, the supernatural was impossible, because, according to the Hegelian theory, religion is a historical development; the sudden introduction of a perfect man into the story of a slowly developing humanity would render evolution meaningless; perfection must come at the end of the stream, not at some half-way point. The story of Jesus, therefore, is a myth, not the creation of any individual mind, but that of the common mind of the people among whom it arose. Strauss did not deny the existence of Jesus. There was such a prophet, and he gave his life for his ministry. What happened was that the human Jesus was transformed in the mind of the early Church into the divine and supernatural Christ; out of the actual impression made by Jesus on his contemporaries, and out of the rich store of Messianic beliefs which had been handed down among the Jews for centuries, there emerged, through the natural myth-making tendency of man, the Christ of orthodox theology. What we receive through the New Testament is the Jewish dream of a national hero, the allegories of a man-god fulfilling the Law and the Prophets, a theological romance, which satisfied the aspirations of a despised and persecuted race. Strauss never answered one question, which still perplexes Biblical critics: why the primitive Church community transferred to Jesus the attributes of the Messiah. But, in spite of the extravagance of some of his conclusions, and indeed because of them, his book spread consternation throughout religious circles, not only in Germany but also in England, where it aroused great interest even before it was translated, and where in the English translation it became a much discussed best-

seller during the late forties. Strauss' original aim was not to destroy faith entirely but to shatter faith in the supernatural, and to urge a faith based on reason, to show that in essence Christian and philosophical truth are one, and to point out the unity of the divine and the human, making the incarnation of the divine a perpetual necessity for God. This aim had a strong appeal for many believers, but for the majority it was appalling. 'Here was the supernatural entirely banished; the Gospel story reduced to myth with only a bare residuum of historical fact, and that almost incapable of separation from its imaginative presentation: above all Christ set forth, not as the creator, but as the creation of the Church.'

One of the first important fruits of Strauss' teachings was another *Life of Jesus*, the work of a young French Oriental scholar now known to fame as Ernest Renan. The turning point in Renan's career was reached in 1846, when he formed the conviction that there is no intelligent will-power in the universe higher than man's. His *Vie de Jésus* (1863) was merely one expression of this life-long conviction. He did not attempt to explain Jesus away, but rather to re-create Jesus' environment — the landscape, the cults, customs, and creeds — and to show that Jesus was a man of great charm and heroism. The treatment is sentimental and at times highly emotional, more like that of an imaginative novelist than that of the competent scholar such as Renan undoubtedly was. The book was received with disdain by the experts, but soon had a considerable vogue, partly because of its literary skill. The importance of the work, historically, lies in its inauguration or illustration of a new direction in which rationalism was going: the romanticizing of the Gospel story, with an attempt to recapture its historical setting.

Two years after Renan's volume there appeared in England an anonymous work entitled *Ecce Homo*. Written by Sir John R. Seely, it laid emphasis on the manhood of Jesus rather than on his divinity. Reaction to it was in many quarters very sharp: Lord Shaftesbury described it as having been 'vomited from the jaws of Hell.' This sensitiveness to unorthodox views grew more acute throughout the sixties, as volume after volume appeared to try one's faith. In 1860 there had appeared, for example, a volume of *Essays and Reviews*, by a group of scholars, including Jowett, Temple, and Mark Pattison, who showed the influence of the 'German rationalists,' especially De Wette and Ewald. The authors discussed the problems of doctrine and of hagiography in a reverent but acutely critical spirit. The tone of the work was only mildly rationalistic, and much of the contents would now be regarded as mere commonplace; but the book stirred up a great deal of indignation. Two years later Bishop Colenso published his work on *The Pentateuch Critically Examined*, which brought out the conclusion that the first five Books of the Bible, traditionally ascribed to Moses, were in fact forgeries of a much later date than the dates of Moses' life, and that *Deuteronomy*, in particular, was a pious fraud of the prophet Jeremiah. Owing to Colenso's position as a bishop (of Natal, South Africa), the effect of his book on the religious public was immense. The English bishops, except Thirlwall, demanded his resignation; the South African bishops deposed and excommuni-

cated him; but Colenso, refusing to notice their action, was supported by legal decisions which gave to him the control of Church property in Natal. The result was a schism among the bishops, which continued until 1891.

Thus the great period of mid-Victorian peace and plenty was tainted with doubt. The findings of geology, zoology, and biology had contributed to men's disillusionment with the universe. The political economists had already indicated that God is not to be found in the tendencies of society. The faith in a beneficent Providence gradually faded away until even the belief in a directing Intelligence began to disappear. Life in all departments seemed to point to the same conclusion: there had been democratic and humanitarian progress, truly enough, but that progress was vitiated by a taint which foredoomed any future realization of Christ's ideals. That progress, founded on factories and warehouses, depended on the degradation of the majority of the people. Yet these considerations did not lead the Victorians to despair of themselves; the test of their self-reliance was to come later when they had digested Darwinism. In the fifties and sixties they were learning to despair of God.

In the midst of economic and political triumphs, the Victorians were disturbed by what was happening to their inherited sentiments and ideals. They were suffering a loss of values; they were losing the significance and reality of their religion. This was not true, of course, of the great mass of conventional or uninformed people; it was true of those who kept abreast of their time, and tried to adjust their minds to new conditions and new ideas. In the past, these people, whether orthodox or not, had seen that no educated man need be a rationalist, and that the message of the poets, the essayists, and the novelists was that of a superintending Divine Will. Faith in this Deity guaranteed greatness to man; it enlarged and sanctified his sentiments. Men had been accustomed to acting on the belief that all were deputies of God, who was all-powerful in Heaven as man was becoming all-powerful on earth. They followed the declared will of God in spiritual matters; they followed what they imagined to be the will of God in secular matters. But as mechanical progress increased, and men prospered, and life became ever more complicated, men seemed to be losing control of their own instruments of civilization. 'Civilization was beginning to control them. Things developed of their own accord, in their own way, and man, the crown of creation, the representative of God, was no longer the master-mind. He was himself falling under the subjection of laws neither human nor divine.' As he looked about him, and saw the immense financial and commercial and business institutions growing at an accelerated rate, he could not help suspecting that prosperity was a deception. Power, wealth, mechanized comforts were narrowing men's lives, involving them in dirt, monotony, suffering, ugliness. All this industrialism, which had been welcomed as the means of self-fulfillment, had turned out to be the enemy of culture; the new opportunities required the sacrifice of so many of the old human values that life was being robbed of its savor, as it had long since been robbed of its serenity. The older Victorian 'prophets' — Carlyle, especially — had preached the doctrine of self-fulfillment through

turning to one's surroundings and laboring with piety and a sense of humane order and design. But by the sixties and seventies of the century, it was difficult to find one's best self in the mechanized patterns on which society was based. The prosperity of the nation had been so rapid, the rush of science and democracy and industry had been so breathtaking, that they had overwhelmed the human spirit, obscuring its sentiment, its religion, its culture. 'England,' as Routh declares, 'had lost the object of living among the accessories of life.'

To the dilemma of the early Victorians there had been the reply of Carlyle, and of the Germans whom he popularized — Fichte, Goethe, Schiller, Novalis; and there had been the reply by Newman, and the Tractarian recourse to a divine institution. These replies had been religious, in an older and traditional sense; they had appealed to the supernatural, whether in the orthodox form, or in the form of transcendentalism. But a new generation had risen, for whom there were 'prophets' who would come to grips with the newer and more acute forms of antagonism between what, for the want of a better term, we may call the humanistic tradition, and the harsh realities of an industrial and democratic civilization. For the mid-Victorians, two leaders out of the dilemma were Ruskin and Matthew Arnold.

Ruskin brought to bear upon the problem his knowledge of the Bible, of literature, and of art. He had learned from the Bible and from Carlyle to see God in the world, and from his studies in art to see Him in all things characterized by purity, repose, and design. Above all, he had learned to expect a sense of brotherhood from men, and to believe that there was something profoundly wrong where such feeling of brotherhood was absent. In his early career he had such faith in the regenerative power of beauty upon the soul that he studied modern painters and Gothic architecture with a view to showing modern Englishmen that they might learn from the Middle Ages, and from great art, not only how to erect beautiful buildings but also how to live in them. Throughout all his effort he shows that his contemporaries have lost sight of their goal in becoming absorbed in the means: he quarrels with industrialism because its motives are fatal to the human spirit. In the midst of his art-criticism he is overwhelmed with the realization that beauty without justice will never save civilization. So long as economic and social injustice splits society into classes, and likewise splits the individual into the conflicting elements of a fragmentary personality, modern life will be anarchical, and men will continue to be less than men. Until the sixties, Ruskin had been content to fight the forces of dispersion, of narrow rationalism, and of political economy, with what he had accumulated from the culture of the past — all his emotional and sensuous experiences, translated in terms of art, morality, reverence for nature and for human worth. He had assumed that men could save themselves from the vortex of material life if they would but live intensely the life of observation, meditation, and faith in nature's beauty as a revelation of God. This was the essence of *Modern Painters*, the *Stones of Venice*, the *Seven Lamps of Architecture*.

By 1860, Ruskin had done his best work in expounding art and architecture as the key to a new way of life. Yet he had failed.

His books were eagerly read; they sold in enormous quantities. But they were read for their brilliant descriptions, their impassioned eloquence, their informative digressions into literary criticism or history or morality, and for their discussion of technique. What the public ignored was precisely what he had hoped to make irresistible: the appeal to their sense of the divine in themselves and in nature, and to their desire for a society of happy, fraternal human beings, living under the law of God. He had changed their tastes in architecture and painting, but he had not really touched their way of life. Thus in *Unto this Last* (1860) and in *Munera Pulveris* (1862–63) he attacks the very roots of what he considers to be the giant evil of his time: the theory and practice of 'political economy.' The classical economists had divorced economics from the vital part of men's lives, and had created the *economic man*, an abstraction which soon came to be taken as a reality. In attacking this paralyzing abstraction, Ruskin was pleading for a trust in the great humanist tradition handed down from the Renaissance, a tradition which included the conception of human nature as a mystery which could best be understood not by scientific questions but by sympathy and imagination — art, beauty, love, and the wisdom of the philosophers. Human personality was regarded as many-sided, profound, passionate, and imaginative. The insight of the poet and the seer would understand it better than the plodding investigator. And life itself would take on harmony and depth only if individuals were permitted to develop the various elements of their being. With the Bible, with the great literature of the past and present, and with art, Ruskin tried to recreate religion, and to set up an ideal of co-operation, individual self-sufficiency, simplicity and purity of taste, and economic justice through a collectivistic and paternalistic redirection of the industrial system. In his own way, Ruskin continued the great effort of the nineteenth century, the effort to achieve unity and harmony in the individual, in the midst of warring ideals, materialism, and intellectual confusion.

Matthew Arnold has been called by H. V. Routh 'perhaps the most flawless product of middle-class culture. . . . Assuredly, he knew the "back-bone of England," from the cranium to the lumbar vertebrae.' His criticism of his time, and the solutions he offered, were conditioned by his background. From the vantage point of a middle-class home and of a classical education, he viewed the malady of his age with judicial insight. He saw that 'the ideology of the nineteenth century was threatening [that] inwardness which is (according to him) the finer breath of culture. Civilization was becoming cosmopolitan, co-operative, and mechanical. In order to think like Hume, Helvetius, Malthus, Ricardo, Bentham, Mill, Spencer, Cobden, Strauss, and Lyell, one had to accept premises, propositions, and syllogisms as if they were appliances manufactured ready for use, utterly disconnected with the thinker's past associations, and of equal value to everybody. . . . But Arnold seems to have realized that a man cannot safely adopt new ideas unless he holds himself spiritually responsible for their truth and application.' Hence he attempted to supply his contemporaries with standards of truth and excellence. He had nourished his genius on the great classics

of antiquity, which had glorified the moods in which men most successfully meet the responsibilities of civilized life; and he had studied Dante, Shakespeare, Milton, Goethe, and Wordsworth. In these thinkers he had seen the human mind adjusting itself to duty, with serenity, self-reliance, and moral conviction. If his contemporaries could no longer live and think in the spirit of the great poets — Homer, Sophocles, Dante, Goethe — they could at least apply their wisdom and morality to that 'multitudinousness' which he told Clough was the curse of the modern world. They might help men find their bearings in a time when the miraculous and the supernatural could no longer be accepted, and when philosophic and scientific alternatives came so quickly that one had no time to organize and spiritualize their implications. The spiritual sincerity and intellectual flexibility of the great poets and thinkers might show the aristocracy how to be less materialistic, and the middle class less Philistine.

Arnold's doctrine, therefore, is *culture*, in the sense of development of potentialities, as in horti*culture*. The well-rounded soul, the ideal of Plato, and the well-rounded and harmonious society — these are the aims which Arnold sets before his age. With this central thought, he criticizes his contemporaries, not merely in reference to passing events or political unrest or religious crises, but in terms of the Victorians' loss of the social sense. Victorian individualism, self-assertiveness, sectarianism, intolerance, and absorption in the *machinery* of life must all be subjected to the critical and flexible intellect, guided by an ideal of social harmony and individual growth. For Arnold, as for Burke, the state is the 'appointed frame and prepared vessel for our best self'; for Arnold, as for Aristotle, man is inconceivable outside the state. Unlike Carlyle and the other early-Victorian moralists, Arnold does not wish to abolish or severely restrict the democratic and industrial order; he wishes merely to persuade men to adopt the disinterested critical powers of the Greeks in an effort to make the new order serve human ends, and to prevent that order from victimizing humanity. He applies the same principles to Victorian religion. On the one hand, he opposes the prevailing sentimental monism inherited from the Romantics — the doctrine that there is but one God within and without us, and that all is therefore God; on the other hand, he insists that there is a 'not ourselves which makes for righteousness,' the God in which both the pagan and the Christian have believed. Yet he rejects the dogmatism of the Oxford movement, and the narrow indoctrination of the Nonconformists. The individual must discover God within himself by the light of great literature, and must release his 'best self' from the lower. The infinite Being is constantly rousing us to aspire to It; our earthly destiny is therefore to unite our egoistic will and impulse to that Higher Will. Thus he concludes, with Sophocles, that religion aims at conduct, and conduct is three-fourths of life; and that the real secret of Jesus was that of Socrates — self-examination, leading to repentance, and then to self-betterment. The essence of Arnold's teaching — in literary or social or religious criticism — is the need for self-possession and self-development. This quest for spiritual self-possession marked the whole epoch into which Arnold was born, and in which he came

to present criticisms and ideals which both disturbed and stimulated his contemporaries.

Fulfillment and Decline: 1867 to 1901

With the passing of the Second Reform Bill in 1867, the Victorian governing class 'took a leap in the dark.' Until that date there had been considerable fear of the triumph of 'pure democracy.' It was generally believed that, in view of the uneducated condition of the lower classes, the enfranchisement of the working-men would be disastrous. But the tide of the times was in the direction of increasing democracy. The ideas of Bentham, of the political economists, of Mill, Cobden, Bright, and other believers in the liberal employment of reason, had formed an irresistible current of opinion and political tendency, which was to triumph over the forces represented by Carlyle's distrust of democracy and Newman's distrust of the secular mind. Both of the great political parties, though differing profoundly in their prejudices, agreed in the necessity of meeting the desires of the increasingly powerful and now politically-minded lower classes. As yet, however, the two parties were still, to some extent, draped with the old garments of Whiggism and Toryism, and the issues were not clear. Thus when Gladstone contended in 1864 that it was harsh injustice to 'exclude forty-nine fiftieths of the working classes' from coming 'within the pale of the constitution,' Disraeli declared that his rival had 'revived the doctrine of Tom Paine.' But on Palmerston's death, the ministry of Lord John Russell brought forward a Reform Bill, which was opposed by Lord Derby and his Conservative followers, though Disraeli had long ago pointed out that a Reform Bill of some sort was inevitable. Enough Whigs of the old Palmerstonian policy seceded to give the Tories strength, and the Bill was thrown out, and Russell resigned. In the Derby-Disraeli ministry which followed, the question of Reform came to a head: the middle and working classes, the one under-represented and the other not represented at all, united to demand the franchise. Under the leadership of John Bright, who rallied the Trades Unions as well as the lower-middle-class groups, the movement for extended franchise gained momentum. In one public demonstration, the railings in Hyde Park were pulled down; this occurrence was the only show of violence, but it was sufficient to cause people to think, and it was moderate enough to prevent the fear of revolution. Disraeli determined to solve the problem in a spirit above party. He consulted Bright, who indicated the measure of Reform which would bring political peace. Since the early years of the century, the nation's prosperity had created a new 'nation,' cut off from any vital contact with the governing class, — the industrial laborers, who had increased enormously in numbers and in potential power. In view of the immense industrialization of the country, Disraeli decided that the day of the old 'territorial aristocracy' was over; and since he had never shared the Whigs' idealization of the middle class, he admitted the advisability of extending the suffrage to the working class. What Gladstone and Lord John Russell had advocated was thus carried through by the opportunistic Disraeli. The passing of the Bill

was marked by considerable dissension. The fear of unrestrained democracy was present in both parties, and all manner of amendments were suggested. Finally, forced to choose between dropping the Bill altogether and resigning, or passing it without its safeguards against the introduction of pure democracy, Disraeli chose the latter alternative, and 'took the leap in the dark.' The Bill granted what was practically household suffrage, leaving the agricultural laborers as the only considerable class in the country without the vote.

The far-reaching effects of the Reform Bill were slow in manifesting themselves. At first it seemed as if that great step was not to make much vital difference after all. The newly enfranchised, however, knew whom to thank, for as soon as Lord Derby retired and Disraeli, as premier, appealed to the new electorate, he found the working men against him; Gladstone was returned with a substantial majority. In the great ministry of 1868–74, Gladstone was able to develop a policy of thorough-going reform in accordance with the doctrines of the Manchester School: peace, retrenchment, honorable neutrality in the Franco-German War, and unmilitaristic firmness with Russia in the Black Sea. The 'new Liberalism' of Gladstone and his followers came as a climax of middle-class rule. Divested of its Whiggery it was practically Radicalism: it had extended the franchise, and it now set out to satisfy and educate the masses. It was still divided, however, on the question of State interference in the private life of the citizen. Though some of the younger Liberals were dreaming of 'paternal legislation' for the improvement by law of the conditions of life among the poor, there were enough adherents of *laissez-faire* nd strict political economy — the principles of the Manchester School — to prevent for some time the realization of many of the Liberal ideals. During the first Gladstone ministry, however, a pacific foreign policy was maintained, and cheap government enabled Gladstone to reduce the Income Tax. In addition, there was a long list of reforms: the Irish Protestant Church was thrown entirely on its own resources; a Land Act protected the Irish tenants from rapacious landlords; army reform abolished the purchase of commissions, and other evils; the Civil Service was strengthened by competitive examinations; an old Chartist demand was finally met by the secret ballot; the Universities were opened to free competition; and, most important of all, universal State education, though as yet neither free nor compulsory, was provided by the Education Act of 1870.

After 1874 there was an alternation of Conservative and Liberal ministries until 1886, when the Conservatives under Salisbury were supported by the Unionists — Liberals who opposed Irish Home Rule; Gladstone's fourth ministry lasted from 1892 to 1894, and was followed by that of Rosebery (Liberal); the reign ended during the Conservative ministry of Salisbury (1895–1902). During this period of struggle between the Liberals and the Conservatives, the latter succeeded in effecting considerable sanitary and municipal legislation, and in assisting the Trades Unions. During Gladstone's second ministry (1880–85) the Third Reform Bill was passed (1884), conferring the franchise on the agricultural laborer. The last

decades of the century were marked by a number of problems in foreign policy and in the management of the empire: the problems of Irish Home Rule, the Russo-Turkish War, the Afghan War, the purchase of the Suez Canal, the Zulu War, the Boer War. These wars were distant struggles, and hardly disturbed the placid surface of late-Victorian life, though they provided material for the new and more strident journalism of the daily newspapers. It was on the problems of foreign policy rather than upon those of domestic legislation that the two parties fundamentally differed in the last years of the reign. Gladstonian Liberalism included a concern for the liberty and welfare not only of England but of other nations, especially of the smaller and oppressed nations. In this moral passion for spreading what he thought was right and truth throughout the world, Gladstone was not always consistent, not always very subtle or profound, but, with John Bright, he goes down as one of the greatest of mid-century Liberals. In Gladstone's ideals the Victorian middle-class conviction — made vigorous by the zeal of the Nonconformists — reached their most eloquent political form. And in him there was likewise the characteristic Victorian sense of righteousness, the talent for compromise, the failure to penetrate very far beneath the surface of a problem but to attack it with moral rhetoric and faith in progress.

Disraeli was the exponent of a patriotism quite different from that of the Gladstonian Liberals. Though he was a believer in progress, he did not agree with the Liberal tendency to think of the past as a dead weight on the present and future. Disraeli had something of Burke's conception of the nation and of progress, though it is often difficult to distinguish in him the sincere statesman from the political opportunist. Like Burke, however, he saw the nation in perpetual process of development, an organic process in which the past, rather than a set of political theories, inspires the nation's orderly growth through the present into the future. He therefore sought to 'educate' his party out of the blind reaction of earlier days, and to make it welcome such reforms as the secret ballot and triennial parliaments, on the basis of the broad Toryism of such great leaders of the past as Bolingbroke and Windham. He even professed sympathy for the Chartists as against the middle-class capitalists, who, he believed, were monopolizing power without assuming corresponding duties and responsibilities. The Conservative party, according to Disraeli, should be the party of the whole nation, not, like the Whig party, the political organization of a class or faction. At one time, in the middle of the century, he had led what was called the 'Young England' movement, a sentimental effort on the part of certain young aristocrats to recapture the spirit of medieval England, with a happy people at the feet of benevolent lords of the soil, and with a Church devoted to the material, intellectual, and spiritual needs of the people. This movement had never gained much ground, but it was significant of one branch of British political opinion. In the great struggle with Gladstone in the last decades of the reign, the Disraelian ideal included not only the romantic concept of a united medieval state but also the vision of empire. In this vision the central thought was that of

race, in which England's colonies would cease being regarded as commercial enterprises and would begin to be looked upon in the manner of the ancients, who thought of their colonies as children of the Mother Country. Disraeli had a vision of the Anglo-Saxon race spreading its power and civilization throughout the world. In all this, he had a very limited view of the value of liberty; it was not freedom that men wanted, he thought, but ideals, allegiance, something to admire and serve. He thus appealed to England's imagination and will, as Gladstone appealed to her ancient love of liberty.

Ever since the pugnacious foreign policy of Palmerston in the middle decades, there had been a growing feeling for empire. This growth had been checked by the power of the Manchester School — by such men as Cobden and Bright — who looked upon colonies as an expensive luxury, and who believed that the management of an empire would necessitate the sacrifice of the principles of international liberty and of free trade. The Manchester doctrines of *laissez-faire* and inexpensive government and low taxes were more applicable in a 'little England' than in a vast and uncontrollable empire. But the imperial spirit made steady progress. We can trace it back to the early years of the century. It is implicit in Carlyle's suggestions on Emigration at the end of *Sartor Resartus*, and it comes out quite bluntly in several chapters in *Past and Present*. Influenced by the German Romanticists, Carlyle threw his weight in favor of a State organization, with obedience, heroic leadership, the worship of force, and the exaltation of the Anglo-Saxon stock, as the hall-marks of a new and as yet theoretic imperialism. Later, in 1869, Charles Dilke preached the glories of imperialism after he had travelled in the colonies, India, and the United States. In the next year, in his inaugural lecture at Oxford, John Ruskin added force to the teachings of his master, Carlyle, by declaring that England 'must found colonies as fast and as far as she is able . . . to advance the power of England by land and sea.' Another disciple of Carlyle, the historian Froude, continued the imperialistic message through his history of Henry VIII and through his studies of England's possessions overseas. It was Sir John Seeley, however, who first brought to educated minds the historical significance of the British Empire, in a rather generalized form, in his *History of British Expansion*, and in his *History of British Policy*. All of this formulation of the imperialistic ideal prepared the way for the much keener spirit of empire in the nineties, as expressed in the work of Kipling. This spirit found popular expression during the Queen's Jubilee of 1887, marking the fiftieth anniversary of her accession, and during the Jubilee of 1897. In both, the pomp and circumstance, the pageantry, the crowds, all brought forth a great outburst of enthusiasm. Victoria was declared to be the 'living symbol of the unity not merely of the British Nation but of the British Empire.' She had been made Empress of India, in 1876, as a part of Disraeli's romantic imperialism.

But imperialism was merely one manifestation of a growing tendency which disturbed many a thoughtful late-Victorian: namely, the dwarfing of the individual, the passing of the great personalities of the earlier period, and the exploitation of the vast new electorate by

a new kind of statesman represented by Joseph Chamberlain. Many forces conspired to bring about the decline of individuality. In the seventies there was a series of bad harvests, which culminated in the summer of 1879; in addition to this disaster, the grain fields of North America began to compete with the British farmer; rentals fell as low as half their former sum; and estates had often to be disposed of to the *nouveaux riches*, who aspired to the condition of the country gentleman. On the other hand, members of the older families were frequently obliged to go into trade. The great agricultural depression occurred just at the time when the old order was breaking up. Thus the individuality of village and country life declined, as did the individuality of the urban middle classes. Society began to become fluid; classes mixed, or overlapped; and everywhere, there was less leisure and less space to pursue the old ways of life. The upper classes took refuge in an unintellectual retreat from the world. The lower classes, now touched by the Education Act, became more and more susceptible to mass suggestion and more easily organized for combined action: Sam Weller had joined a Union, and was reading his Henry George. The new middle class, unlike the old, was sensitive about its status, and perpetually sought to pass for something other than what it was. The Philistines of Matthew Arnold had been proudly and aggressively class-conscious; like Mr. Pickwick, they were not ashamed of being middle class. But the new *bourgeoisie*, unforgettably pictured in the Veneerings of Dickens' *Our Mutual Friend*, were 'brand-new people in a brand-new house in a brand-new quarter of London,' and were rather uneasy about it. They educated their sons to be as nearly as possible like what they thought the sons of the aristocracy were. And in their want of roots in the new world into which they had been catapulted by powerful and uncomprehended economic forces, they added to the momentum of the deluge of dullness and vulgarity which swept over late-Victorian life.

The political atmosphere of the last years of the reign may be indicated by noting how the imperialist sentiment united with the new political methods. Politics had ceased to maintain its old formality: the Queen, for instance, was shocked that Gladstone in his Midlothian campaign should address crowds from the window of a railway carriage. But Chamberlain's methods were in advance of this. He helped form the National Liberal Federation, which operated on the basis of democratic local Associations, known in America by the word 'caucus.' The caucus system enabled the humbler members of the party throughout the country to control the policy of the chiefs to a far greater extent than would have been tolerated twenty years before. But it also enabled the party chief, Chamberlain, to direct, through committees, the votes of the entire party. Individual liberty in forming judgment was now mercilessly subordinated to the purpose of political victory. The old party mechanisms, the hearty individualism led by great party leaders who appealed to the voter's judgment, had begun to pass away. What Carlyle had predicted, what Bagehot had feared, was rapidly approaching: democracy was 'cancelling itself,' by falling under the dominion of the 'party-politician.'

The caucus was no doubt a step away from aristocracy; it placed much power directly in the hands of the voters as a group: but whether this massing of voting-power was in the direction of real democracy or in the direction of wire-pulling was a question hotly disputed. The complexity of modern life contributed to the development of a political instrument which in many cases defeated the aims of democracy. The triumph of Chamberlainism was the clearest proof of the democratic peril pointed out by Mill and Spencer. As central committees, whose very composition was unknown to all but a favored few, and who were in uncontrolled possession of huge funds, imposed their candidates and their platform-issues on the bewildered party-members, there was little to do but obey the caucus: 'Vote as you are told.'

While Chamberlainism at home was manifested in the new power of the caucus, it was manifested abroad by an ever keener imperialistic spirit. The ideal of Liberalism, of representative institutions, and of instinctive trust in the individual, was everywhere on the wane, as mass-mindedness at home and *Realpolitik* abroad grew in power and influence. Chamberlain had begun his career as a Radical, but soon his aggressive and business-like intellect found in the imperial ideal its fitting objective. He believed that the day of small kingdoms with their petty jealousies was past. 'The future is with the great empires, and there is no greater empire than the British Empire.' Chamberlain was not devoid of sentiment, but he had a vision of the Empire on a business footing; romantic vastness would be united with industrial profit. It was not difficult to persuade the voting millions of the advantages of this union, and the spirit of empire waxed stronger and stronger, until in the Diamond Jubilee (1897) it reached its zenith, when it was mildly chilled by Kipling's warning refrain:

Lest we forget! Lest we forget!

The end of Victorianism, as we know it at its climax in the sixties and seventies, therefore comes in a time of unwieldy power, of unstable public opinion, of increasing social uniformity, and of a spirit of depletion. As life became more and more complex and hurried, as public taste became debased by cheap literature, and as the older systems of thought in economics and religion and philosophy seemed less and less adaptable to the multitudinous flow of experience, the age was increasingly marked with a sense of exhaustion, with the spirit of *fin de siècle*. And as this spirit grew, as the middle class degenerated, and democracy struggled, sometimes absurdly, with the intricate problems of modern life, there was developing in Germany a spirit of disdain for *bourgeois* principles. Prussia had set the pace for Germany, and Bismarck had set the pace for Europe. Bismarck was the new portent: in his achievement in organizing a nation's commerce, education, diplomacy and armaments, Liberalism suffered one of its greatest blows. The old free and liberal Germany had passed away, though most Englishmen still thought of her in terms of eccentric professors, romantic music, and idealistic philosophy. The Victorian of the seventies was more inclined to value what was German than to value what was French. In the Franco-

German War, Carlyle threw all the weight of his enormous influence on the German side. Only a few leaders of English thought — such as Matthew Arnold — realized that there was something in the German *Geist* at once admirable and dangerous. The 'collective righteousness' of Gladstone, who had maintained, against the imperialism of Disraeli, an ideal of international peace and freedom, gave way to the *Realpolitik* of Bismarck. Matthew Arnold had observed the new spirit of Germany, and had noted that middle-class Philistinism had not sufficiently taken warning: the English middle class had lost prestige. He had been aware of how deeply decay had eaten into the Liberal tradition as manifested in its practitioners. He thus quoted Bismarck's disdainful comment on one of England's foreign secretaries: 'What does it matter? Nothing is to be feared, as nothing to be hoped, from these people.' In the atmosphere of imperialism, nationalism, and bewilderment, the late-Victorians saw the end of their time: the passing of the great dogma of inevitable progress, the weakening of faith in democratic panaceas, the loss of their old certainty about the ultimate triumph of right and truth in the individual, the nation, and the world.

While in the realm of international relations the old Romantic Liberalism and faith in the power of discussion and persuasion were giving way to *Realpolitik*, or the doctrine of authority and force, there was a similar transition in the relations between classes. Though the doctrines of Karl Marx had little political influence on the minds of the English working-men, it is worth while going back to the year 1864 and considering the development of one aspect of British Socialism. It was in that year that the International Workingmen's Association, or First International, was founded in London by Karl Marx. Three years later he published the first volume of his treatise on *Capital*. It was not to be expected that Marx's severely logical arguments, and his abstruse doctrine of dialectical materialism, would make much appeal to the practical British worker. Yet in the minds of many who read him, Marx did force home the great problem that had faced mankind since the beginning of the Industrial Revolution, and he translated class conflict into terms which appeared realistic, and were certainly challenging. He disdained the kindly Socialism of men like Owen, and substituted the ruthless dogma of the necessity of violent expropriation of the capitalist class by the proletariat. During the seventies the English working-man was still so conservative, and Victorian Liberalism had still so much of its old glamor, that he remained willing to march under the banner of Gladstone, whose name still meant advanced democracy. To be sure, there had been some indignation over the Liberal crippling of Trades Union activities; but Disraeli had secured the passing of a Combination Act which satisfied the Unions for the time being. The Unions themselves were at a low ebb, their forces wasted in numerous jarring sections. The First International therefore created little stir among the workers as a whole, and Socialism was as yet neither an aspiration nor a spectre. But with Gladstone's second ministry, together with the capitalist solution of the Egyptian problem and the coercion of Ireland, the working class

began to suspect that they had little to hope for from either the capitalist Liberals or the squires of the Conservative party. The caucus system had begun to teach its lesson: the working-men needed their own political organization. It was in the eighties that a book appeared which, through its simplicity of style and theme, made a far greater appeal than the work of Marx; this was Henry George's *Progress and Poverty* (1879). Though the depressed condition of English agriculture made George's arguments far from plausible, the book had great influence on democratic intellectuals. A number of these intellectuals, inspired, more or less, by Marx and George, formed the nucleus of the Socialist party, in the Social Democratic Federation (1881), reorganized in 1883 with a more distinctly Socialist program. Among Socialists and Trades Unionists there appeared a new attitude towards the governing class: an atmosphere of bitterness and violence was introduced into trade disputes; the interests of capitalist and wage-earner now tended to appear as irreconcilable.

In the English Socialism of this time, there was little in the temperament or the condition of the workers to call forth their allegiance to Karl Marx, to the sweeping doctrines of a German Jew who had worked out his ideas in the Reading Room of the British Museum. It was natural for British wage-earners to listen to the eloquence of the poet and craftsman William Morris. They found in Morris a man who attacked the existing system not by means of an abstract theory of value, of 'the proletariat' pitted against 'Capital,' and of the 'economic interpretation of history,' but by reminding them of the simplicity, security, and beauty of the Middle Ages. Like them, Morris was profoundly unhappy in his modern industrial environment; he saw that men could not express their individuality and hunger for beauty and dignity in their daily employments. He reminded the working-men of what Carlyle and Ruskin had insisted on as the basic requisite in a wholesome economic order: that men should not only be able to work, but also be able to find joy and self-fulfillment in that work. He abhorred the product of the machine, because it reduced men to mechanisms and because it was itself ugly and lacking in that individuality which comes from the touch of the craftsman. It was Morris' great mission to present not a finished program but the explanation to the workers of just what had happened to them. Most of them had resigned themselves to their fate; many had spent their whole lives in industrial drudgery; the capitalistic machine was the only universe they knew. Morris' teachings had little basis in formal economic doctrines; they were more like an impassioned dream of a return to an idyllic simplicity, in which all work should be pleasure, in which competition should be supplanted by loving cooperation and kindliness. Morris was typically Victorian in attacking the industrial problem from an individualistic angle: he himself was a craftsman, a poet, a practitioner of joyful labor. Thus his message was a stimulation rather than a set of rules for reconstructing society. In *News from Nowhere* there is indeed a suggestion that the transition of the future must be a change of system rather than merely a change of heart: he describes a revolt of the workers and a massacre in Trafalgar Square, after which things somehow ad-

just themselves and the tragedy of life is transformed by some miraculous change in human nature, so that men may live in a kind of pastoral Utopia. Morris eventually parted company with the Social Democratic Federation, through a violent quarrel with one of its leaders, and he found nowhere an organization which would accept him as its chief. But the appeal of Socialism continued to spread, being especially powerful with men of intellect and creative genius, like Oscar Wilde, whose *Soul of Man under Socialism* declared that the problem to be solved was essentially spiritual, not legislative. In 1884 Socialism appeared in another society, this time recruited not from the working class but largely from the surburban middle class, under the guidance of such men as Sidney Webb and Bernard Shaw. Far from counselling any violent revolutionary change, the Fabians advocated a gradual evolution towards Socialism, through extending the functions of the State and its officials.

In the meantime the 'new Unionism' was growing in strength and appeal. While small businesses amalgamated and joint-stock companies increased in number, the Trades Unions showed a corresponding tendency to unite their forces. Gradually the Trades Union Congress became a respectable British institution. Within the Unions there had been an almost fatal apathy and sectionalism, which was to disappear in the eighties. The timidity of the late seventies faded away before a new and ambitious policy of developing the Unions into fighting organizations. They were more and more united into an all-embracing Union, including the unskilled and badly paid workers who had hitherto been impossible to organize. The test of strength was the great London Dock Strike, in which the British instinct for fair play was aroused to such an extent that financial support was received from many of the well-to-do. Cardinal Manning presided over a committee which succeeded in granting the substance of the men's demands. Public opinion was becoming sympathetic with the efforts of the lower classes to secure economic and political justice. By the time of the Golden Jubilee (1887), Trades Union activities had been strengthened through a revival of trade. The victory of the Dockers, and the contempt of the younger Unionists for the meager legislation of the Liberals, prompted the workers to consider the advisability of forming a party of their own: the Independent Labor Party was organized in 1892. In the imperialistic craze of the nineties, however, the Labor Party made little real progress. Its true political significance did not appear till eleven years later.

The last three decades of Victoria's reign were decades of decline. This decline was the result of many forces too complex and too close to us for any clear and comprehensive understanding. It is obvious, however, that as the Continental nations and the United States put up tariff walls, the British reliance on Free Trade would be less and less justifiable. Yet mid-Victorian prosperity had lulled the nation into a false security. The growth of European nationalism and of science left English industry at a disadvantage. The mental habits of the industrial leaders were those of an earlier and more individualistic day; they could not, or at least did not, cope

with the results of research and mass-production of competing nations. The Manchester doctrines were no longer acceptable abroad. And at home, the sons of the early- and mid-Victorians were men of an easier gait; they were content to follow the older ways, rather than to struggle violently as their fathers had struggled in the battle of competition with other nations. Moreover, the English genius is ill-adapted to organized effort in science and in the intricate application of science to industry. It was no longer called upon to achieve the grand and simple changes of the times of Arkwright and Stephenson. The English genius buds most successfully in individual effort, as in a Darwin, a Lister, or a Clerk Maxwell. But the new day required a different talent, the talent for highly organized research and application. Just as there was a decline in industrial leadership, there was also a decline in agricultural leadership. After 1879, the year which climaxed a series of bad harvests, the landed interest went under an eclipse. What was once the leading English industry had received a set-back from which it was destined never properly to recover, and the great landed interest, which had counted for so much in English history, lost the foundations of its power. As this double decline in English life continued, there developed to its logical conclusion the transvaluation of values which had begun generations before: the shift of man's attention away from his own spiritual cultivation and control to his control and cultivation of the external forces of nature. As the great personalities of the past disappeared, so did the great certainties. It was during the seventies and the eighties that faith in anything whatsoever was overshadowed by doubt; the names of Huxley, Spencer, W. K. Clifford, John Morley, and Balfour remind us of how thick was the air with skeptical analysis. There was indeed the Positivist philosophy, popularized by Frederic Harrison, George Henry Lewes, and Richard Congreve: it tried to set up the religion of humanity, and to glorify our knowledge of phenomena over our pretended knowledge of things spiritual; it hoped to reconcile man to his earthly lot, and to make him happy and comfortable by organizing society on the basis of justice according to positive science. But the religion of humanity never appealed to more than a few intellectuals. The decline in faith, in the power of science, and in man himself went on apace. And the rising tide of mass-democracy added its weight to late-Victorian gloom. 'Early Victorian England,' says G. M. Young, 'with some of the defects, had the one great merit at least of oligarchic government: a clear and rational political philosophy.' He continues, in respect to the great changes in men's minds, 'I cannot in my own time observe anything of greater consequence than the dethronement of ancient faith by natural science and historical criticism, and the transition from oligarchic to democratic representation.' The day of the expert had arrived, and with it the age of uniformity in taste and enjoyment. 'The common residual intelligence was becoming impoverished for the benefit of the specialist, the technician, and the aesthete.'

By 1891 most of the great leaders of Victorian thought had died: Newman in 1890, Matthew Arnold in 1888, Pusey and Darwin in 1882, Carlyle and Disraeli in 1881, W. K. Clifford in 1879,

Bagehot in 1877, Lyell in 1875, Mill in 1873, Grote in 1871. Ruskin's best work was done; and Huxley, Morris, and Pater were gone by 1896. By the early eighties there had been a change in the intellectual climate; the public could no longer be held in raptures by a sermon, whether by a clergyman or by Ruskin. It no longer placed so much faith in great personalities, or in their dogmas: the doctrines of Carlyle, Newman, Arnold, and Ruskin began to lose their hold on the public mind, which now wished to be entertained or given a veneer of culture rather than to be challenged by a moral ideal. The daily newspaper, the cheap magazine, and the novelette had supplanted, to a large extent, the literature of former years. Literature was retreating before journalism, or was being absorbed by it. For the minority there remained, of course, the great quarterlies, the *Edinburgh Review*, *Blackwood's*, the *Quarterly*, and, in addition, the great new journals, the *Fortnightly*, the *Contemporary*, the *Nineteenth Century*, and the *Saturday Review* and the *Spectator*. The *fin de siècle* weariness with late-Victorian hustle and vulgarity — with its music-halls, its bicycles, its triumph of the average man — found expression in the new school of aesthetes. The Pre-Raphaelites — Millais, Holman Hunt, Burne-Jones, William Morris, Rossetti — had already signalled a sharp reaction to mid-Victorian stodginess, and had found in Ruskin one of its greatest champions in the early fifties. Similarly the revival of interest in Gothic, under the influence of Pugin, had been a protest against modern ugliness in architecture. His *Contrasts: or a Parallel between the Architecture of the Fifteenth and Nineteenth Centuries* (1836) had been enormously influential, as was his later work, *True Principles of Pointed or Christian Architecture* (1841). Ruskin had tried to bring the principles of Gothic architecture into functional relationship with modern economic and social forces. In this attempt, he had failed, as he tells us in the lecture on 'The Mystery of Life and its Arts,' and in the second lecture printed in *The Crown of Wild Olive*. The practical and compromising Victorian mind had merely adopted Gothic as a decorative art, or as a means of concealing or disguising the hideousness of their railway stations and other public structures. Ruskin's career was a demonstration that, in Victorian England, art and life could not, or did not, fuse in organic harmony. So it was that art gradually withdrew itself from life, and began to develop on the basis of art for art's sake. Instead of becoming the expression of a spirit, of a national or religious idea, as Ruskin had hoped, the new art became an exercise in technique; it ceased to express anything vital in contemporary life, and passed from the hands of seers like Ruskin and Turner into those of specialists like Burne-Jones and Whistler.

It is this separation of art from life which provides one with a basis for understanding Pater. For it is as if Pater had given up all hope for the Victorian world. There had been a multitude of panaceas for the ills of nineteenth-century England, and they had ended in material prosperity, vulgarity, and boredom: there had been the democratic hope, faith in the machine and universal comfort, the Carlylean idealism, the passionate supernaturalism of the Tractarians, the magnificent humanitarian reforms, the trust in reason and progress,

the exaltation of political economy, the fine appeal by Arnold to men's sense of the reasonable and harmonious, the mighty struggle between classes, the grand belief in the ultimate victory of good-will, peace, and fraternity, and in men's innate preference for persuasion over force; and all these dreams and ideals had ended in the triumph of mediocrity, uniformity, monotony, mass-power and mass-mentality. And in Europe generally, where there had once been the dream of altruistic Liberalism, of the free play of men's individual capacities, there was now the hard cynicism of *Realpolitik*, the crushing organization of life for domination and brute power. The humane values of the pre-Darwinian era were gone; the new era was one in which only the fittest survived, in a struggle which set mankind back among the standards of the jungle. Vulgarity, monotony, brutality — these were among the characteristics of modern life which impelled men like Pater to look on art, literature, and even religion, as a 'refuge, a sort of cloisteral refuge, from . . . the actual world.' It was the refuge of an Oxford bachelor don, but it nevertheless had a strong appeal to many sensitive late-Victorians. They accompanied him in his recourse to Greek, medieval, or Renaissance art and religion, in the quest for the exquisite moment. They saw in Pater's spirit the modern awareness of universal relativity, the rejection of 'systems' of thought, the consciousness that habit is death, the conviction that only experience — sensations, and memories, and vivid thoughts — could be real in a world of flux; and that in such a world, where so much was gross and superfluous, there was an endless opportunity for delicate choices. Whereas Carlyle had bidden men to work, to bring order into the world, and to serve a mysterious Divine Idea lying half-legible in their environment, and within themselves, Pater presented a New Epicureanism, a withdrawal from the world's brawls. In Pater the Victorian age shows its fatigue. It is now ready to enjoy with the languor of a powerful and weary giant some of the delicate pleasures which had been denied it during its strenuous apprenticeship and its laborious maturity. With a mind relaxed by skepticism, yet stored with the world's past, it tried to be in all ages at once, in order to savor the quality of life at as many points as possible. The small audience of intellectuals who really made up Pater's following delighted in the sustained and artificial and limpid beauty of his style; they luxuriated in his making art a religion, and religion an art; in his imparting to the aesthetic experience something of the austerity of asceticism in addition to the rich though delicate pleasures of the senses. Victorian love of labor, and its suspicion of the flesh, and therefore its 'respectability,' had broken down. In Pater there is no social gospel, no humanitarian passion, no concern with the problems of politics and the class struggle. In Pater, the Victorian returns, as it were, to the earlier reliance on *individual* salvation rather than on salvation through economic, political, or social organizations. Now, however, the solution is to be attained through the cultivation of emotions and sensations, in a refined egoism distinguishable from mere selfishness by its inclusion among the emotions not only those of beauty and art but also those of moral and religious truth. The New Epicureanism is not a crude 'gospel of happiness'; indeed, like Epicurus himself, Pater was fundamentally a melan-

choly man, and his philosophy of beauty, sensations, and the flux of experience is at bottom as sad as the hedonism of Fitzgerald's Omar. Its significance in the late-Victorian period was that while it taught the doctrine of beauty and subtle pleasure — including the ethical and spiritual — it had no dynamic power or intention to move men to action. An age of stupendous achievement, of gigantic labors, was at length bidden to seek the truth in the aesthetic experience.

Our survey of late-Victorian England has been necessarily fragmentary; it has sufficed, however, to show the most obvious characteristics: the imperialism of Disraeli and Chamberlain, the valiant Liberalism of Gladstone, the emergence of Socialism and a revived Trades Unionism, the decay of the religious interest, and the supersession of the aristocracy by the plutocracy. In our consideration of the age as a whole, in our concentration on the problems of the time, especially as revealed in its 'non-fiction' prose, we have naturally neglected some of the brighter features: the humor of Dickens and Lewis Carroll; the persistent charm of the informal essay in the hands of Thackeray, Alexander Smith, and Robert Louis Stevenson; the gaiety of Gilbert and Sullivan; the spread of education; the quantity and quality of Victorian fiction, and the revival of drama in the nineties. In spite of a sense of indirection and vagueness in the last years of the period, there was much evidence of ever greater enlightenment and greater care for the amenities of life. Instead of the narrow logic of the Philosophic Radicals, there was a much wider psychology of the individual and of society, a wider range of observation, a more exact scrutiny of evidence, an openness to influences from abroad — not merely from Germany as in the days of Carlyle's ascendency, but also from France, Italy, Russia. The age is now frankly secular. What it lacks in religious fervor it makes up in an increased aesthetic sensibility, and in a Socialistic urge to correct the injustices of society, in a multitude of minor reforms which bring greater democracy and more comfortable living conditions for the masses. In spite of the secularist spirit, religion still has a strong influence: the officials of the Trades Unions are as yet often preachers and chapel leaders; and among the more intellectual, there is still some of the imprint of the ideas of Coleridge, Arnold, and the Tractarians; so that the humanitarianism of the eighteenth century, and of the Evangelicals, has been enriched by a reverence for social and historical relations. The future may bring some form of Socialism, but if it comes, it will probably run in the channels of insular tradition, through the Trades Unions, the municipality, the parliamentary committee. One of the signs of the times is the penetration of Fabian ideas into the methods of local government.

The prose of the great Victorian 'prophets,' and of other leaders of thought and feeling, is, as we noted at the beginning of our discussion, the reflection of a time of immense and often painful change. A study of that prose enables one to understand the Victorians' achievement and failure, and also to observe some of the ways in which their thought was prophetic of the subsequent years, down to the world conflict of 1914–1918. For the achievement of the Victorians was in some respects a gigantic paradox. Their success in science, in politi-

cal reform, in religious and philosophic thought, and in industrial progress was won at the expense of a deeper and more revolutionary examination of the understructure of their civilization. Their sense of 'decency' and their genius for compromise led them to trust in good will and in practical activity as the road toward a happy solution to problems which might, on closely logical examination, contain ugly or disturbing elements. They postponed or ignored the solution of such problems as the new and more acute class struggle, the relation of Darwinian nature with Christian ethics, the contradiction between Gladstonian international altruism and Disraelian imperialism, the triumph of manhood suffrage and the persistence of the values associated with aristocracy, the amazing increase of man's control over nature and his lack of control over himself. In extenuation, it may be said, of course, that the Victorians were faced with the double task of coping with the immediate emergencies of a new machine-dominated social order, and of solving the long-range problems of religious doubt, political conflict, and the philosophical implications of science. Readjustment in ideas, standards, and values had to be made in a time of economic upheaval, of physical grappling with land and machinery. Throughout the course of this readjustment, the Victorian mind — never much inclined to long-range views when practical measures offered themselves — made a truce with the deeper questions, and trusted in reason, discussion, the 'laws of nature,' hard work, earnestness, and the idea of progress. They could not doubt that, with the eighteenth-century achievements of reason, and with nineteenth-century evolutionism and social enlightenment, man had at last lifted himself out of the dark ages. In their advances in material wellbeing they had faith in a similar advance in man's moral nature. Sooner or later, the friction between classes, between money and labor, between democracy and empire, between the doubting mind and the believing heart, between man the barbarian and man the humane citizen, would wear itself away in mutual concessions, compromises, and good will. World peace would of necessity arrive with the growth of international trade and understanding. True enough, a series of wars pierced the calm of the Victorian hope; but these wars were distant, they were relatively restricted, they were the last clinging relics of that barbarism which eighteenth-century and nineteenth-century man had been plainly discarding. But in their engrossment with immediate tasks the Victorians gave too little thought to the ways and means of securing the reality of their faith, and they were content — at least until the *fin de siècle* years — to try to fit the new world of science and the machine into the framework of the earlier tradition of Victorian humanism, of Carlyle, Newman, Arnold, and Ruskin.

The *late*-Victorians, however, were conscious of a change in the intellecual climate. The great days of reconstruction were over. The new day was one of reflection and sensibility and disillusionment. Just as the old mechanical universe had to be discarded for the new growing universe, so the old ethical certainties must yield to a new relativistic ethic, in which good and evil were no longer so clearly distinguishable. Freedom had broadened from politics into morality. With the growth of women's

freedom — stimulated by the influence of Mill's treatise on *The Subjection of Women*, — late-Victorian life was more and more characterized by flexibility and tolerance. The rigidity of the earlier generations gave way before a newer generation's repugnance for 'respectability.' Freedom in thought and belief, the conviction that all is relative, and that life is for the living, followed naturally on the earlier wave of agnosticism. It is curious to observe that as early as 1869, Carlyle noted in his Journal the 'consciously increasing Atheism,' and the accompanying moral relativity, especially as manifested in France and in English translations of French literature: 'The fast-increasing flood of *Atheism* on me takes no hold — does not even wet the soles of my feet. . . . Nay, are there not perhaps temporary *necessities* for it, inestimable future uses in it? . . . The new diabolic school of the French is really curious to me. Beaudelaire for example. Ode of his in "Fraser" the other night. Was there ever anything so bright infernal? *Fleurs du Mal* indeed!' In the relaxed mood created by the aesthetes, by Pater, Swinburne, and Fitzgerald's Omar, the late-Victorian saw the imminent dissolution of the sturdy world of his fathers.

In the meantime, out of the new egoistic Germany there came a bold and startling voice, that of Friedrich Nietzsche, who applied the Darwinian idea to ethics as it had been applied to the world of nature. All that was meant by Christian morality — meekness, love, self-sacrifice, the sense of sin — was now called the 'slave morality,' and was to be repudiated for the morality of the 'strong man' — pride, self-assertion, a pagan love of the instincts and the senses, the glorification of power. The new commandment was 'be hard.' The new slogans were 'the will to power' and 'the good war justifies every cause.' Nietzsche was little known to the late-Victorians, but the Edwardians, who did read him, could well remember a similar voice in mid-Victorian England: Carlyle also had exalted force, and had preached the doctrine of 'might makes right.' He had regarded the mass of mankind as foolish and knavish, fit only for control by the strong man, a Cromwell or a Frederick the Great. He likewise had thought the Teutonic race alone worthy of being admired and followed. Thus as the late-Victorian world beheld the rise of jingoism in Germany, it only vaguely realized to what extent the new nationalism was related to doctrines once preached by Carlyle. Victorian liberalism was soon to face a ruthless antagonist, in actual conflict; and the unstable combination of romantic imperialism, complacency, hopeful liberalism, and *fin de siècle* weariness would be no match for its opponent, especially since Carlyle, Dilke, Ruskin, and Froude had already glorified strength, domination, and empire, and had thus weakened the old Victorian faith in the natural triumph of reason and liberty.

It would be possible to note other and perhaps even more striking ways in which Victorian prose, as we have considered it here, expressed ideas which foreshadowed developments in the world as we now know it. But our chief concern has been with the Victorians' mental and moral world as it appeared in its most characteristic form. We have surveyed it in a general way. And we have noted that it is only in the middle decades that we are not conscious of either eighteenth- or twentieth-

century frontiers. In those years we see the age at its height — confident, earnest, laborious, practical, moral. Those years were filled with a sustained effort and a devouring earnestness which are the qualities needed to produce work worthy to be remembered. Perhaps even more memorable than their actual work, or their ideas and aspirations, is the fact of their powerful individuality. Their age was one which produced men of strong character, integrity, and conviction, as exemplified in Sir Robert Peel, Thomas Arnold, Herbert Spencer, Lord Shaftesbury, John Bright, the Duke of Wellington. Victorian individuality is reflected in the variety of its prose: in the tortured and dynamic utterances of Carlyle; in the fine, flexible, intellectual prose of Newman; in the passionate though lucid eloquence of Ruskin; in the 'sinuous, easy, unpolemical' prose of Matthew Arnold; in the subtle, low-voiced, delicate rhythms of Pater. The work of these men is a splendid literary expression of their age, of its amazing energy and variety, and of its hopes, despairs, and ideals.

English Prose of the Victorian Era

English Prose of the Victorian Era

Thomas Carlyle
1795–1881

CHARACTERISTICS

THE healthy know not of their health, but only the sick: this is the Physician's Aphorism; and applicable in a far wider sense than he gives it. We may say, it holds no less in moral, intellectual, political, poetical, than in merely corporeal therapeutics; that wherever, or in what shape soever, powers of the sort which can be named *vital* are at work, herein lies the test of their working right or working wrong.

In the Body, for example, as all doctors are agreed, the first condition of complete health is, that each organ perform its function unconsciously, unheeded; let but any organ announce its separate existence, were it even boastfully, and for pleasure, not for pain, then already has one of those unfortunate 'false centres of sensibility' established itself, already is derangement there. The perfection of bodily well-being is, that the collective bodily activities seem one; and be manifested, moreover, not in themselves, but in the action they accomplish. If a Dr. Kitchiner [1] boast that his system is in high order, Dietetic Philosophy may indeed take credit; but the true Peptician was that Countryman who answered that, 'for his part, he had no system.' In fact, unity, agreement is always silent, or soft-voiced; it is only discord that loudly proclaims itself. So long as the several elements of Life, all fitly adjusted, can pour forth their movement like harmonious tuned strings, it is a melody and unison; Life, from its mysterious fountains, flows out as in celestial music and diapason, — which also, like that other music of the spheres, even because it is perennial and complete, without interruption and without imperfection, might be fabled to escape the ear. Thus too, in some languages, is the state of health well denoted by a term expressing unity: when we feel ourselves as we wish to be, we say that we are *whole*.

Few mortals, it is to be feared, are permanently blessed with that felicity of 'having no system'; nevertheless, most of us, looking back on young years, may remember seasons of a light, aërial translucency and elasticity and perfect freedom; the body had not yet become the prison-house of the soul, but was its vehicle and implement, like a creature of the thought, and altogether pliant to its bidding. We knew not that we had limbs, we only lifted, hurled, and leapt; through eye and ear, and all avenues of sense, came clear unimpeded tidings from without, and from within issued clear victorious force; we stood as in the centre of Nature, giving and receiving, in harmony with it all; unlike Virgil's Husbandmen, 'too happy *because* we did not know our Blessedness.' [2] In those days, health and sickness were foreign traditions that did not concern us; our whole being was as yet One, the whole man like an incorporated Will. Such, were Rest or ever-successful Labour the human lot, might our life continue to be: a pure, perpetual, unregarded music; a beam of perfect white light, rendering all things visible, but itself unseen, even because it was of that perfect whiteness, and no irregular obstruction

1. Dr. William Kitchiner (1775?–1827), a miscellaneous writer, published *Apicius Redivivus, or the Cook's Oracle* (1817, 7th ed. 1827). (Apicius was a celebrated Roman epicure.)

2. See Virgil, *Georgics*,ii,458–59: 'Ah too fortunate the husbandmen, did they know their own felicity!' (Transl. J.W.MacKail.)

had yet broken it into colours. The beginning of Inquiry is Disease: all Science, if we consider well, as it must have originated in the feeling of something being wrong, so it is and continues to be but Division, Dismemberment, and partial healing of the wrong. Thus, as was of old written, the Tree of Knowledge springs from a root of evil, and bears fruits of good and evil. Had Adam remained in Paradise, there had been no Anatomy and no Metaphysics.

But, alas, as the Philosopher declares, 'Life itself is a disease; a working incited by suffering';[3] action from passion! The memory of that first state of Freedom and paradisaic Unconsciousness has faded away into an ideal poetic dream. We stand here too conscious of many things: with Knowledge, the symptom of Derangement, we must even do our best to restore a little Order. Life is, in few instances, and at rare intervals, the diapason of a heavenly melody; oftenest the fierce jar of disruptions and convulsions, which, do what we will, there is no disregarding. Nevertheless, such is still the wish of Nature on our behalf; in all vital action, her manifest purpose and effort is, that we should be unconscious of it, and, like the peptic Countryman, never know that we 'have a system.' For, indeed, vital action everywhere is emphatically a means, not an end; Life is not given us for the mere sake of Living, but always with an ulterior external Aim: neither is it on the process, on the means, but rather on the result, that Nature, in any of her doings, is wont to intrust us with insight and volition. Boundless as is the domain of man, it is but a small fractional proportion of it that he rules with Consciousness and by Forethought: what he can contrive, nay what he can altogether know and comprehend, is essentially the mechanical, small; the great is ever, in one sense or other, the vital; it is essentially the mysterious, and only the surface of it can be understood. But Nature, it might seem, strives, like a kind mother, to hide from us even this, that she is a mystery: she will have us rest on her beautiful and awful bosom as if it were our secure home; on the bottomless boundless Deep, whereon all human things fearfully and wonderfully swim, she will have us walk and build, as if the film which supported us there (which any scratch of a bare bodkin will rend asunder, any sputter of a pistol-shot instantaneously burn up) were no film, but a solid rock-foundation. Forever in the neighbourhood of an inevitable Death, man can forget that he is born to die; of his Life, which, strictly meditated, contains in it an Immensity and an Eternity, he can conceive lightly, as of a simple implement wherewith to do day-labour and earn wages. So cunningly does Nature, the Mother of all highest Art, which only apes her from afar, 'body forth the Finite from the Infinite';[4] and guide man safe on his wondrous path, not more by endowing him with vision, than, at the right place, with blindness! Under all her works, chiefly under her noblest work, Life, lies a basis of Darkness, which she benignantly conceals; in Life too, the roots and inward circulations which stretch down fearfully to the regions of Death and Night, shall not hint of their existence, and only the fair stem with its leaves and flowers, shone on by the fair sun, shall disclose itself, and joyfully grow.

However, without venturing into the abstruse, or too eagerly asking Why and How, in things where our answer must needs prove, in great part, an echo of the question, let us be content to remark farther, in the merely historical way, how that Aphorism of the bodily Physician holds good in quite other departments. Of the Soul, with her activities, we shall find it no less true than of the Body: nay, cry the Spiritualists, is not that very division of the unity, Man, into a dualism of Soul and Body, itself the symptom of disease; as, perhaps, your frightful theory of Materialism, of his being but a Body, and there-

4. *Cf. Sartor Resartus,* chapter on 'Symbols.'

fore, at least, once more a unity, may be the paroxysm which was critical, and the beginning of cure! But omitting this, we observe, with confidence enough, that the truly strong mind, view it as Intellect, as Morality, or under any other aspect, is nowise the mind acquainted with its strength; that here as before the sign of health is Unconsciousness. In our inward, as in our outward world, what is mechanical lies open to us; not what is dynamical and has vitality. Of our Thinking, we might say, it is but the mere upper surface that we shape into articulate Thoughts; — underneath the region of argument and conscious discourse, lies the region of meditation; here, in its quiet mysterious depths, dwells what vital force is in us; here, if aught is to be created, and not merely manufactured and communicated, must the work go on. Manufacture is intelligible, but trivial; Creation is great, and cannot be understood. Thus if the Debater and Demonstrator, whom we may rank as the lowest of true thinkers, knows what he has done, and how he did it, the Artist, whom we rank as the highest, knows not; must speak of Inspiration, and in one or the other dialect, call his work the gift of a divinity.

But on the whole 'genius is ever a secret to itself';[5] of this old truth we have, on all sides, daily evidence. The Shakspeare takes no airs for writing *Hamlet* and the *Tempest*, understands not that it is anything surprising: Milton, again, is more conscious of his faculty, which accordingly is an inferior one. On the other hand, what cackling and strutting must we not often hear and see, when, in some shape of academical prolusion, maiden speech, review article, this or the other well-fledged goose has produced its goose-egg, of quite measurable value, were it the pink of its whole kind; and wonders why all mortals do not wonder!

Foolish enough, too, was the College Tutor's surprise at Walter Shandy:[6] how, though unread in Aristotle, he could nevertheless argue; and not knowing the name of any dialectic tool, handled them all to perfection. Is it the skilfulest anatomist that cuts the best figure at Sadler's Wells?[7] or does the boxer hit better for knowing that he has a *flexor*[8] *longus* and a *flexor brevis*? But indeed, as in the higher case of the Poet, so here in that of the Speaker and Inquirer, the true force is an unconscious one. The healthy Understanding, we should say, is not the Logical, argumentative, but the Intuitive; for the end of Understanding is not to prove and find reasons, but to know and believe. Of logic, and its limits, and uses and abuses, there were much to be said and examined; one fact, however, which chiefly concerns us here, has long been familiar: that the man of logic and the man of insight; the Reasoner and the Discoverer, or even Knower, are quite separable, — indeed, for most part, quite separate characters. In practical matters, for example, has it not become almost proverbial that the man of logic cannot prosper? This is he whom business-people call Systematic and Theoriser and Word-monger; his *vital* intellectual force lies dormant or extinct, his whole force is mechanical, conscious: of such a one it is foreseen that, when once confronted with the infinite complexities of the real world, his little compact theorem of the world will be found wanting; that unless he can throw it overboard and become a new creature, he will necessarily founder. Nay, in mere Speculation itself, the most ineffectual of all characters, generally speaking, is your dialectic man-at-arms; were he armed cap-a-pie[9] in syllogistic mail of proof, and perfect master of logic-fence, how little does

6. See Sterne's *Tristram Shandy*,I,xix.

7. Originally a hydropathic establishment, north of London; in the 18th century it became a fashionable resort, with a theater, etc.

8. *flexor*: a muscle which serves to bend a limb or part.

9. From head to foot (see *Hamlet*,I,ii,200).

it avail him! Consider the old Schoolmen,[10] and their pilgrimage towards Truth: the faithfulest endeavour, incessant unwearied motion, often great natural vigour; only no progress: nothing but antic feats of one limb poised against the other; there they balanced, somersetted, and made postures; at best gyrated swiftly, with some pleasure, like Spinning Dervishes,[11] and ended where they began. So is it, so will it always be, with all System-makers and builders of logical card-castles; of which class a certain remnant must, in every age, as they do in our own, survive and build. Logic is good, but it is not the best. The Irrefragable Doctor, with his chains of induction, his corollaries, dilemmas and other cunning logical diagrams and apparatus, will cast you a beautiful horoscope, and speak reasonable things; nevertheless your stolen jewel, which you wanted him to find you, is not forthcoming. Often by some winged word, winged as the thunderbolt is, of a Luther, a Napoleon, a Goethe, shall we see the difficulty split asunder, and its secret laid bare; while the Irrefragable, with all his logical tools, hews at it, and hovers round it, and finds it on all hands too hard for him.

Again, in the difference between Oratory and Rhetoric, as indeed everywhere in that superiority of what is called the Natural over the Artificial, we find a similar illustration. The Orator persuades and carries all with him, he knows not how; the Rhetorician can prove that he ought to have persuaded and carried all with him: the one is in a state of healthy unconsciousness, as if he 'had no system'; the other, in virtue of regimen and dietetic punctuality, feels at best that 'his system is in high order.' So stands it, in short, with all the forms of Intellect, whether as directed to the finding of truth, or to the fit imparting thereof; to Poetry, to Eloquence, to depth of Insight, which is the basis of both these; always the characteristic of right performance is a certain spontaneity, an unconsciousness; 'the healthy know not of their health, but only the sick.' So that the old precept of the critic, as crabbed as it looked to his ambitious disciple, might contain in it a most fundamental truth, applicable to us all, and in much else than Literature: 'Whenever you have written any sentence that looks particularly excellent, be sure to blot it out.' In like manner, under milder phraseology, and with a meaning purposely much wider, a living Thinker has taught us: 'Of the Wrong we are always conscious, of the Right never.'[12]

But if such is the law with regard to Speculation and the Intellectual power of man, much more is it with regard to Conduct, and the power, manifested chiefly therein, which we name Moral. 'Let not thy left hand know what thy right hand doeth':[13] whisper not to thy own heart, How worthy is this action! — for then it is already becoming worthless. The good man is he who *works* continually in welldoing;[14] to whom welldoing is as his natural existence, awakening no astonishment, requiring no commentary; but there, like a thing of course, and as if it could not be so. Self-contemplation, on the other hand, is infallibly the symptom of disease, be it or be it not the sign of cure. An unhealthy Virtue is one that consumes itself to leanness in repenting and anxiety; or, still worse, that inflates itself into dropsical boastfulness and vainglory: either way, there is a self-seeking; an unprofitable looking behind us to measure the way we have made: whereas the sole concern is to

10. Philosophers or divines of the schools of the Middle Ages, versed in the niceties of academical disputation or of school divinity. The 'Irrefragable Doctor,' mentioned a few lines below, was Alexander of Hales, 13th-century English Theologian.

11. Members of a Mohammedan ascetic order, sworn to vows of poverty and austerity, and to whirling or dancing as means of discipline.

14. See *Sartor*, chapter on 'The Everlasting Yea.'

walk continually forward, and make more way. If in any sphere of man's life, then in the Moral sphere, as the inmost and most vital of all, it is good that there be wholeness; that there be unconsciousness, which is the evidence of this. Let the free, reasonable Will, which dwells in us, as in our Holy of Holies, be indeed free, and obeyed like a Divinity, as is its right and its effort: the perfect obedience will be the silent one. Such perhaps were the sense of that maxim, enunciating, as is usual, but the half of a truth: To say that we have a clear conscience, is to utter a solecism: had we never sinned, we should have had no conscience. Were defeat unknown, neither would victory be celebrated by songs of triumph.

This, true enough, is an ideal, impossible state of being; yet ever the goal towards which our actual state of being strives; which it is the more perfect the nearer it can approach. Nor, in our actual world, where Labour must often prove *in*effectual, and thus in all senses Light alternate with Darkness, and the nature of an ideal Morality be much modified, is the case, thus far, materially different. It is a fact which escapes no one, that, generally speaking, whoso is acquainted with his worth has but a little stock to cultivate acquaintance with. Above all, the public acknowledgment of such acquaintance, indicating that it has reached quite an intimate footing, bodes ill. Already, to the popular judgment, he who talks much about Virtue in the abstract, begins to be suspect; it is shrewdly guessed that where there is great preaching, there will be little almsgiving. Or again, on a wider scale, we can remark that ages of Heroism are not ages of Moral Philosophy; Virtue, when it can be philosophised of, has become aware of itself, is sickly and beginning to decline. A spontaneous habitual all-pervading spirit of Chivalrous Valour shrinks together, and perks itself up into shrivelled Points of Honour; humane Courtesy and Nobleness of mind dwindle into punctilious Politeness, 'avoiding meats'; 'paying tithe of mint and anise, neglecting the weightier matters of the law.'[15] Goodness, which was a rule to itself, must now appeal to Precept, and seek strength from Sanctions;[16] the Freewill no longer reigns unquestioned and by divine right, but like a mere earthly sovereign, by expediency, by Rewards and Punishments: or rather, let us say, the Freewill, so far as may be, has abdicated and withdrawn into the dark, and a spectral nightmare of a Necessity[17] usurps its throne; for now that mysterious Self-impulse of the whole man, heaven-inspired, and in all senses partaking of the Infinite, being captiously questioned in a finite dialect, and answering, as it needs must, by silence, — is conceived as non-extant, and only the outward Mechanism of it remains acknowledged: of Volition, except as the synonym of Desire, we hear nothing; of 'Motives,' without any Mover, more than enough.

So too, when the generous Affections have become wellnigh paralytic, we have the reign of Sentimentality. The greatness, the profitableness, at any rate the extremely ornamental nature of high feeling, and the luxury of doing good: charity, love, self-forgetfulness, devotedness and all manner of godlike magnanimity, — are everywhere insisted on, and pressingly inculcated in speech and writing, in prose and verse; Socinian Preachers[18] proclaim 'Benevolence' to all the four winds, and have TRUTH engraved on their watch-seals: unhappily with little or no effect.

15. See *Matthew*, xxiii,23.
16. The rest of the paragraph is Carlyle's mournful and satirical summary of what the doctrine of Utilitarianism means to him.
17. The world of natural law, considered as mechanical, inevitable, and alone real (as opposed to the spontaneity of mind and self).
18. Followers of Lelio Sozzini (Socinus) and Faustus Sozzini (1539–1604), Italian theologians who denied leading Catholic and Protestant doctrines (the Trinity, the divinity of Christ, etc.), and offered rationalistic, benevolent, and humanitarian doctrines and explanations.

Were the limbs in right walking order, why so much demonstrating of motion? The barrenest of all mortals is the Sentimentalist. Granting even that he were sincere, and did not wilfully deceive us, or without first deceiving himself, what good is in him? Does he not lie there as a perpetual lesson of despair, and type of bedrid valetudinarian impotence? His is emphatically a Virtue that has become, through every fibre, conscious of itself; it is all sick, and feels as if it were made of glass, and durst not touch or be touched; in the shape of work, it can do nothing; at the utmost, by incessant nursing and caudling, keep itself alive. As the last stage of all, when Virtue, properly so called, has ceased to be practised, and become extinct, and a mere remembrance, we have the era of Sophists,[19] descanting of its existence, proving it, denying it, mechanically 'accounting' for it; — as dissectors and demonstrators cannot operate till once the body be dead.

Thus is true Moral genius, like true Intellectual, which indeed is but a lower phasis thereof, 'ever a secret to itself.' The healthy moral nature loves Goodness, and without wonder wholly lives in it: the unhealthy makes love to it, and would fain get to live in it; or, finding such courtship fruitless, turns round, and not without contempt abandons it. These curious relations of the Voluntary and Conscious to the Involuntary and Unconscious, and the small proportion which, in all departments of our life, the former bears to the latter, — might lead us into deep questions of Psychology and Physiology: such, however, belong not to our present object. Enough, if the fact itself become apparent, that Nature so meant it with us; that in this wise we are made. We may now say, that view man's individual Existence under what aspect we will, under the highest spiritual, as under the merely animal aspect, everywhere the grand vital energy, while in its sound state, is an unseen unconscious one; or, in the words of our old Aphorism, 'the healthy know not of their health, but only the sick.'

To understand man, however, we must look beyond the individual man and his actions or interests, and view him in combination with his fellows. It is in Society that man first feels what he is; first becomes what he can be. In Society an altogether new set of spiritual activities are evolved in him, and the old immeasurably quickened and strengthened. Society is the genial element wherein his nature first lives and grows; the solitary man were but a small portion of himself, and must continue forever folded in, stunted and only half alive. 'Already,' says a deep Thinker, with more meaning than will disclose itself at once, 'my opinion, my conviction, gains *infinitely* in strength and sureness, the moment a second mind has adopted it.'[20] Such, even in its simplest form, is association; so wondrous the communion of soul with soul as directed to the mere act of Knowing! In other higher acts, the wonder is still more manifest; as in that portion of our being which we name the Moral: for properly, indeed, all communion is of a moral sort, whereof such intellectual communion (in the act of knowing) is itself an example. But with regard to Morals strictly so called, it is in Society, we might almost say, that Morality begins; here at least it takes an altogether new form, and on every side, as in living growth, expands itself. The Duties of Man to himself, to what is Highest in himself, make but the First Table of the Law: to the First Table is now superadded a Second, with the Duties of Man to his Neighbour; whereby also the significance of the

20. Quoted from Novalis's *Fragmente* (see ed. by H.Friedemann, Berlin, 1908, no.312).

First now assumes its true importance. Man has joined himself with man; soul acts and reacts on soul; a mystic miraculous unfathomable Union establishes itself; Life, in all its elements, has become intensated, consecrated. The lightning-spark of Thought, generated, or say rather heaven-kindled, in the solitary mind, awakens its express likeness in another mind, in a thousand other minds, and all blaze-up together in combined fire; reverberated from mind to mind, fed also with fresh fuel in each, it acquires incalculable new light as Thought, incalculable new heat as converted into Action. By and by, a common store of Thought can accumulate, and be transmitted as an everlasting possession: Literature, whether as preserved in the memory of Bards, in Runes [21] and Hieroglyphs engraved on stone, or in Books of written or printed paper, comes into existence, and begins to play its wondrous part. Polities are formed; the weak submitting to the strong; with a willing loyalty, giving obedience that he may receive guidance: or say rather, in honour of our nature, the ignorant submitting to the wise; for so it is in all even the rudest communities, man never yields himself wholly to brute Force, but always to moral Greatness; thus the universal title of respect, from the Oriental *Sheik*,[22] from the *Sachem* [23] of the Red Indians, down to our English *Sir*, implies only that he whom we mean to honour is our *senior*. Last, as the crown and all-supporting keystone of the fabric, Religion arises. The devout meditation of the isolated man, which flitted through his soul, like a transient tone of Love and Awe from unknown lands, acquires certainty, continuance, when it is shared-in by his brother men. 'Where two or three are gathered together' in the name of the Highest, then first does the Highest, as it is written, 'appear among them to bless them'; [24] then first does an Altar and act of united Worship open a way from Earth to Heaven; whereon, were it but a simple Jacob's-ladder,[25] the heavenly Messengers will travel, with glad tidings and unspeakable gifts for men. Such is SOCIETY, the vital articulation of many individuals into a new collective individual: greatly the most important of man's attainments on this earth; that in which, and by virtue of which, all his other attainments and attempts find their arena, and have their value. Considered well, Society is the standing wonder of our existence; [26] a true region of the Supernatural; as it were, a second all-embracing Life, wherein our first individual Life becomes doubly and trebly alive, and whatever of Infinitude was in us bodies itself forth, and becomes visible and active.

To figure Society as endowed with life is scarcely a metaphor; but rather the statement of a fact by such imperfect methods as language affords. Look at it closely, that mystic Union, Nature's highest work with man, wherein man's volition plays an indispensable yet so subordinate a part, and the small Mechanical grows so mysteriously and indissolubly out of the infinite Dynamical, like Body out of Spirit, — is truly enough vital, what we can call vital, and bears the distinguishing character of life. In the same style also, we can say that Society has its periods of sickness and vigour, of youth, manhood, decrepitude, dissolution and new birth; in one or other of which stages we may, in all times, and all places where men inhabit, discern it; and do ourselves, in this time and place, whether as coöperating or as contending, as healthy members or as diseased ones, to our joy and sorrow, form

part of it. The question, What is the actual condition of Society? has in these days unhappily become important enough. No one of us is unconcerned in that question; but for the majority of thinking men a true answer to it, such is the state of matters, appears almost as the one thing needful. Meanwhile, as the true answer, that is to say, the complete and fundamental answer and settlement, often as it has been demanded, is nowhere forthcoming, and indeed by its nature is impossible, any honest approximation towards such is not without value. The feeblest light, or even so much as a more precise recognition of the darkness, which is the first step to attainment of light, will be welcome.

This once understood, let it not seem idle if we remark that here too our old Aphorism holds; that again in the Body Politic, as in the animal body, the sign of right performance is Unconsciousness. Such indeed is virtually the meaning of that phrase, 'artificial state of society,' as contrasted with the natural state, and indicating something so inferior to it. For, in all vital things, men distinguish an Artificial and a Natural; founding on some dim perception or sentiment of the very truth we here insist on; the artificial is the conscious, mechanical; the natural is the unconscious, dynamical. Thus, as we have an artificial Poetry, and prize only the natural; so likewise we have an artificial Morality, an artificial Wisdom, an artificial Society. The artificial Society is precisely one that knows its own structure, its own internal functions; not in watching, not in knowing which, but in working outwardly to the fulfilment of its aim, does the wellbeing of a Society consist. Every Society, every Polity, has a spiritual principle; is the embodiment, tentative and more or less complete, of an Idea: [27] all its tendencies of endeavour, specialties of custom, its laws, politics and whole procedure (as the glance of some Montesquieu,[28] across innumerable superficial entanglements, can partly decipher), are prescribed by an Idea, and flow naturally from it, as movements from the living source of motion. This Idea, be it of devotion to a man or class of men, to a creed, to an institution, or even, as in more ancient times, to a piece of land, is ever a true Loyalty; has in it something of a religious, paramount, quite infinite character; it is properly the Soul of the State, its Life; mysterious as other forms of Life, and like these working secretly, and in a depth beyond that of consciousness.

Accordingly, it is not in the vigorous ages of a Roman Republic that Treatises of the Commonwealth are written: while the Decii [29] are rushing with devoted bodies on the enemies of Rome, what need of preaching Patriotism? The virtue of Patriotism has already sunk from its pristine all-transcendent condition, before it has received a name. So long as the Commonwealth continues rightly athletic, it cares not to dabble in anatomy. Why teach obedience to the Sovereign; why so much as admire it, or separately recognise it, while a divine idea of Obedience perennially inspires all men? Loyalty, like Patriotism, of which it is a form, was not praised till it had begun to decline; the *Preux Chevaliers* [30] first became rightly admirable, when 'dying for their king' had ceased to be a habit with chevaliers. For if the mystic significance of the State, let this be what it may, dwells vitally in every heart, encircles every life as with a second higher life, how should it stand self-questioning? It must rush outward, and express itself by

27. 'All visible things are emblems. . . Matter exists only spiritually, and to represent some Idea, and *body* it forth' (*Sartor*, chapter entitled 'Prospective').

28. 1689–1755; French political philosopher, whose greatest work was *De l'esprit des lois* (1748), which analysed various kinds of political constitutions.

29. Famous Roman consuls of the 3rd and 4th centuries B.C., who devoted themselves to death in the defense of their people.

30. *i.e.*, the gallant or valiant knights of the feudal period, and of old romance.

works. Besides, if perfect, it is there as by necessity, and does not excite inquiry: it is also by nature infinite, has no limits; therefore can be circumscribed by no conditions and definitions; cannot be reasoned of; except *musically*, or in the language of Poetry, cannot yet so much as be spoken of.

In those days, Society was what we name healthy, sound at heart. Not indeed without suffering enough; not without perplexities, difficulty on every side: for such is the appointment of man; his highest and sole blessedness is, that he toil, and know what to toil at: not in ease, but in united victorious labour, which is at once evil and the victory over evil, does his Freedom lie. Nay often, looking no deeper than such superficial perplexities of the early Time, historians have taught us that it was all one mass of contradiction and disease; and in the antique Republic of feudal Monarchy have seen only the confused chaotic quarry, not the robust labourer, or the stately edifice he was building of it.

If Society, in such ages, had its difficulty, it had also its strength; if sorrowful masses of rubbish so encumbered it, the tough sinews to hurl them aside, with indomitable heart, were not wanting. Society went along without complaint; did not stop to scrutinise itself, to say, How well I perform! or, Alas, how ill! Men did not yet feel themselves to be 'the envy of surrounding nations'; and were enviable on that very account. Society was what we can call *whole*, in both senses of the word. The individual man was in himself a whole, or complete union; and could combine with his fellows as the living member of a greater whole. For all men, through their life, were animated by one great Idea; thus all efforts pointed one way, everywhere there was *wholeness*. Opinion and Action had not yet become disunited; but the former could still produce the latter, or attempt to produce it; as the stamp does its impression while the wax is not hardened. Thought and the voice of thought were also a unison; thus, instead of Speculation, we had Poetry; Literature, in its rude utterance, was as yet a heroic Song, perhaps too a devotional Anthem.

Religion was everywhere; Philosophy lay hid under it, peaceably included in it. Herein, as in the life-centre of all, lay the true health and oneness. Only at a later era must Religion split itself into Philosophies; and thereby, the vital union of Thought being lost, disunion and mutual collision in all provinces of Speech and Action more and more prevail. For if the Poet, or Priest, or by whatever title the inspired thinker may be named, is the sign of vigour and wellbeing; so likewise is the Logician, or uninspired thinker, the sign of disease, probably of decrepitude and decay. Thus, not to mention other instances, one of them much nearer hand, — so soon as Prophecy among the Hebrews had ceased, then did the reign of Argumentation begin; and the ancient Theocracy, in its Sadduceeisms and Phariseeisms,[31] and vain jangling of sects and doctors, give token that the *soul* of it had fled, and that the *body* itself, by natural dissolution, 'with the old forces still at work, but working in reverse order,' was on the road to final disappearance.

We might pursue this question into innumerable other ramifications; and everywhere, under new shapes, find the same truth, which we here so imperfectly enunciate, disclosed; that throughout the whole world of man, in all manifestations and performances of his nature, outward and inward, personal and social, the Perfect, the Great is a mystery to itself, knows not itself; whatsoever does know itself is already little, and more or less imperfect. Or otherwise, we may say, Unconscious-

31. *Theocracy*: government of a state by the immediate direction of God, through priests, ministers, etc. — The *Sadducees*, one of a sect among the ancient Jews, denied the resurrection, personal immortality, future retribution, fate, etc. — The *Pharisees*, another sect among the ancient Jews, were noted for strict observance of rites, ceremonies, traditions, etc.

ness belongs to pure unmixed life; Consciousness to a diseased mixture and conflict of life and death: Unconsciousness is the sign of creation; Consciousness, at best, that of manufacture. So deep, in this existence of ours, is the significance of Mystery. Well might the Ancients make Silence a god; for it is the element of all godhood, infinitude, or transcendental greatness; at once the source and the ocean wherein all such begins and ends. In the same sense, too, have Poets sung 'Hymns to the Night';[32] as if Night were nobler than Day; as if Day were but a small motley-coloured veil spread transiently over the infinite bosom of Night, and did but deform and hide from us its purely transparent eternal deeps. So likewise have they spoken and sung as if Silence were the grand epitome and complete sum-total of all Harmony; and Death, what mortals call Death, properly the beginning of Life. Under such figures, since except in figures there is no speaking of the Invisible, have men endeavoured to express a great Truth; —a Truth, in our Times, as nearly as is perhaps possible, forgotten by the most; which nevertheless continues forever true, forever all-important, and will one day, under new figures, be again brought home to the bosoms of all.

But indeed, in a far lower sense, the rudest mind has still some intimation of the greatness there is in Mystery. If Silence was made a god of by the Ancients, he still continues a government-clerk among us Moderns. To all quacks, moreover, of what sort soever, the effect of Mystery is well known: here and there some Cagliostro,[33] even in latter days, turns it to notable account: the blockhead also, who is ambitious, and has no talent, finds sometimes in 'the talent of silence,' a kind of succedaneum.[34] Or again, looking on the opposite side of the matter, do we not see, in the common understanding of mankind, a certain distrust, a certain contempt of what is altogether self-conscious and mechanical? As nothing that is wholly seen through has other than a trivial character; so anything professing to be great, and yet wholly to see through itself, is already known to be false, and a failure. The evil repute your 'theoretical men' stand in, the acknowledged inefficiency of 'paper constitutions,' and all that class of objects, are instances of this. Experience often repeated, and perhaps a certain instinct of something far deeper that lies under such experiences, has taught men so much. They know beforehand, that the loud is generally the insignificant, the empty. Whatsoever can proclaim itself from the housetops may be fit for the hawker, and for those multitudes that must needs buy of him; but for any deeper use, might as well continue unproclaimed. Observe too, how the converse of the proposition holds; how the insignificant, the empty, is usually the loud; and, after the manner of a drum, is loud even because of its emptiness. The uses of some Patent Dinner Calefactor[35] can be bruited abroad over the whole world in the course of the first winter; those of the Printing Press are not so well seen into for the first three centuries: the passing of the Select-Vestries Bill[36] raises more noise and hopeful expectancy among mankind than did the promulgation of the Christian Religion. Again, and again, we say, the great, the creative and enduring is ever a secret to itself; only the small, the barren and transient is otherwise.

32. As did Novalis. See Carlyle's essay on Novalis, *Ess.*,II,18,44–45.

33. Count Alessandro Cagliostro (1743–95), notorious Italian charlatan, who rose from selling drugs and philtres throughout Europe to mixing in the best society of London and Paris. See Carlyle's essay on him, and on 'The Diamond Necklace.'

34. 'substitute.'

35. *Calefactor*: a small kind of stove or heater.

36. Providing for a representative committee, elected annually, to manage the temporal affairs of the parish. (See *Report on Select and Other Vestries*, 1830, no.25,215.)

If we now, with a practical medical view, examine, by this same test of Unconsciousness, the Condition of our own Era, and of man's Life therein, the diagnosis we arrive at is nowise of a flattering sort. The state of Society in our days is, of all possible states, the least an unconscious one: this is specially the Era when all manner of Inquiries into what was once the unfelt, involuntary sphere of man's existence, find their place, and, as it were, occupy the whole domain of thought. What, for example, is all this that we hear, for the last generation or two, about the Improvement of the Age, the Spirit of the Age, Destruction of Prejudice, Progress of the Species, and the March of Intellect,[37] but an unhealthy state of self-sentience, self survey; the precursor and prognostic of still worse health? That Intellect do march, if possible at double-quick time, is very desirable; nevertheless, why should she turn round at every stride, and cry: See you what a stride I have taken! Such a marching of Intellect is distinctly of the spavined kind; what the Jockeys call 'all action and no go.' Or at best, if we examine well, it is the marching of that gouty Patient, whom his Doctors had clapt on a metal floor artificially heated to the searing point, so that he was obliged to march, and did march with a vengeance — nowhither. Intellect did not awaken for the first time yesterday; but has been under way from Noah's Flood downwards: greatly her best progress, moreover, was in the old times, when she said nothing about it. In those same 'dark ages,' Intellect (metaphorically as well as literally) could invent *glass*, which now she has enough ado to grind into *spectacles*. Intellect built not only Churches, but a Church, *the* Church, based on this firm Earth, yet reaching up, and leading up, as high as Heaven; and now it is all she can do to keep its doors bolted, that there be no tearing of the Surplices, no robbery of the Alms-box. She built a Senate-house likewise, glorious in its kind; and now it costs her a well-nigh mortal effort to sweep it clear of vermin, and get the roof made rain-tight.

But the truth is, with Intellect, as with most other things, we are now passing from that first or boastful stage of Self-sentience into the second or painful one: out of these often-asseverated declarations that 'our system is in high order,' we come now, by natural sequence, to the melancholy conviction that it is altogether the reverse. Thus, for instance, in the matter of Government, the period of the 'Invaluable Constitution' has to be followed by a Reform Bill;[38] to laudatory De Lolmes[39] succeed objurgatory Benthams.[40] At any rate, what Treatises on the Social Contract,[41] on the Elective Franchise, the Rights of Man, the Rights of Property, Codifications, Institutions, Constitutions, have we not, for long years, groaned under! Or again, with a wider survey, consider those Essays on Man, Thoughts on Man, Inquiries concerning Man; not to mention Evidences of the Christian Faith, Theories of Poetry, Considerations on the

37. These were current watch-words, or 'slogans,' of the middle-class liberals of the time.

38. Passed in 1832: under vigorous discussion everywhere in Great Britain during Carlyle's composition of the present article. It provided for more just and equal representation in Parliament.

39. John Louis De Lolme (1740?–1807), born in Geneva, came to England in 1760, and published *The Constitution of England* (first Engl. ed., 1775).

40. Jeremy Bentham (1748–1832), English writer on jurisprudence, ethics, reform, etc., published numerous works urging reform in education, law, government. His *Introduction to Principles of Morals and Legislation* (1780) and *A Catechism of Parliamentary Reform* (1817) are typical of his efforts, in contrast to those of 'laudatory De Lolme.'

41. The sentence which follows alludes to the literature of reform and revolution, as written by Rousseau, Tom Paine, the Utilitarians, etc., all evidences of the modern habit of self-consciousness.

Origin of Evil, which during the last century have accumulated on us to a frightful extent.[42] Never since the beginning of Time was there, that we hear or read of, so intensely self-conscious a Society. Our whole relations to the Universe and to our fellow-man have become an Inquiry, a Doubt; nothing will go on of its own accord, and do its function quietly; but all things must be probed into, the whole working of man's world be anatomically studied. Alas, anatomically studied, that it may be medically aided! Till at length indeed, we have come to such a pass, that except in this same *medicine*, with its artifices and appliances, few can so much as imagine any strength or hope to remain for us. The whole Life of Society must now be carried on by drugs: doctor after doctor appears with his nostrum, of Coöperative Societies, Universal Suffrage, Cottage-and-Cow systems, Repression of Population, Vote by Ballot. To such height has the dyspepsia of Society reached; as indeed the constant grinding internal pain, or from time to time the mad spasmodic throes, of all Society do otherwise too mournfully indicate.

Far be it from us to attribute, as some unwise persons do, the disease itself to this unhappy sensation that there is a disease! The Encyclopedists [43] did not produce the troubles of France; but the troubles of France produced the Encyclopedists, and much else. The Self-consciousness is the symptom merely; nay, it is also the attempt towards cure. We record the fact, without special censure; not wondering that Society should feel itself, and in all ways complain of aches and twinges, for it has suffered enough. Napoleon was but a Job's-comforter,[44] when he told his wounded Staff-officer, twice unhorsed by cannon-balls, and with half his limbs blown to pieces: '*Vous vous écoutez trop!*' [45]

On the outward, as it were Physical diseases of Society, it were beside our purpose to insist here. These are diseases which he who runs may read; and sorrow over, with or without hope. Wealth has accumulated itself into masses; and Poverty, also in accumulation enough, lies impassably separated from it; opposed, uncommunicating, like forces in positive and negative poles. The gods of this lower world sit aloft on glittering thrones, less happy than Epicurus's gods,[46] but as indolent, as impotent; while the boundless living chaos of Ignorance and Hunger welters terrific, in its dark fury, under their feet. How much among us might be likened to a whited sepulchre: outwardly all pomp and strength; but inwardly full of horror and despair and deadmen's bones! Iron highways, with their wains firewinged, are uniting all ends of the firm Land; quays and moles,[47] with their innumerable stately fleets, tame the Ocean into our pliant bearer of burdens; Labour's thousand arms, of sinew and of metal, all-conquering everywhere, from the tops of the mountain down to the depths of the mine and caverns of the sea, ply unweariedly for the service of man: yet man remains unserved. He has subdued this Planet, his habitation and inheritance; yet reaps no profit from the victory.

Sad to look upon: in the highest stage of civilisation, nine tenths of mankind have

42. In this sentence, allusion is made to literary, philosophical, and theological self-consciousness, in the writings of Pope, Hartley, Hume, Alison, Paley, etc.

43. *i.e.*, Diderot, D'Alembert, d'Holbach, Voltaire, and others, who contributed to, or directed, the *Encyclopédie* (1751–76), which showed a pronounced skeptical tendency in its rationalistic explanations.

44. *Job's-comforter*: allusion to the friends who visited Job, in his afflictions, and assumed that his misfortunes were punishments. See *Job*, xxii.

45. 'You pay too much attention to yourself!'

46. Epicurus (342–270 B.C.), Greek philosopher, held happiness to be the greatest good, and the gods to be serenely indifferent to human joy or sorrow.

47. *moles*: masonry laid in the sea, as a breakwater.

to struggle in the lowest battle of savage or even animal man, the battle against Famine. Countries are rich, prosperous in all manner of increase, beyond example: but the Men of those countries are poor, needier than ever of all sustenance outward and inward; of Belief, of Knowledge, of Money, of Food. The rule, *Sic vos non vobis*,[48] never altogether to be got rid of in men's Industry, now presses with such incubus weight, that Industry must shake it off, or utterly be strangled under it; and, alas, can as yet but gasp and rave, and aimlessly struggle, like one in the final deliration. Thus Change, or the inevitable approach of Change, is manifest everywhere. In one Country we have seen lava-torrents of fever-frenzy envelop all things; Government succeed Government, like the phantasms of a dying brain.[49] In another Country, we can even now see, in maddest alternation, the Peasant governed by such guidance as this: To labour earnestly one month in raising wheat, and the next month labour earnestly in burning it.[50] So that Society, were it not by nature immortal, and its death ever a new-birth, might appear, as it does in the eyes of some, to be sick to dissolution, and even now writhing in its last agony. Sick enough we must admit it to be, with disease enough, a whole nosology[51] of diseases; wherein he perhaps is happiest that is not called to prescribe as physician; — wherein, however, one small piece of policy, that of summoning the Wisest in the Commonwealth, by the sole method yet known or thought of, to come together and with their whole soul consult for it, might, but for late tedious experiences, have seemed unquestionable enough.

But leaving this, let us rather look within, into the Spiritual condition of Society, and see what aspects and prospects offer themselves there. For after all, it is there properly that the secret and origin of the whole is to be sought: the Physical derangements of Society are but the image and impress of its Spiritual; while the heart continues sound, all other sickness is superficial, and temporary. False Action is the fruit of false Speculation; let the spirit of Society be free and strong, that is to say, let true Principles inspire the members of Society, then neither can disorders accumulate in its Practice; each disorder will be promptly, faithfully inquired into, and remedied as it arises. But alas, with us the Spiritual condition of Society is no less sickly than the Physical. Examine man's internal world, in any of its social relations and performances, here too all seems diseased self-consciousness, collision and mutually-destructive struggle. Nothing acts from within outwards in undivided healthy force; everything lies impotent, lamed, its force turned inwards, and painfully 'listens to itself.'

To begin with our highest Spiritual function, with Religion, we might ask, Whither has Religion now fled? Of Churches and their establishments we here say nothing; nor of the unhappy domains of Unbelief, and how innumerable men, blinded in their minds, have grown to 'live without God in the world';[52] but, taking the fairest side of the matter, we ask, What is the nature of that same Religion, which still lingers in the hearts of the few who are called, and call themselves, specially the Religious? Is it a healthy religion, vital, unconscious of itself; that shines forth spontaneously in doing of the Work, or even in preaching of the Word? Unhappily, no. Instead of heroic martyr Conduct, and inspired and soul-inspiring Eloquence, whereby Religion itself were brought home to our living bosoms, to live and reign there, we

48. 'Thus ye labor, but not for yourselves.'

49. Probably an allusion to the July Revolution, in Paris, 1830.

50. Allusion to rick-burning, by the English peasants, in the 1820's and 1830's; an expression of popular hatred of unjust rural landlords, and evidence of widespread misery and economic dislocation.

51. 'classification.'

52. *Ephesians*, ii,12.

have 'Discourses on the Evidences,'[53] endeavouring, with smallest result, to make it probable that such a thing as Religion exists. The most enthusiastic Evangelicals do not preach a Gospel, but keep describing how it should and might be preached: to awaken the sacred fire of faith, as by a sacred contagion, is not their endeavour; but, at most, to describe how Faith shows and acts, and scientifically distinguish true Faith from false. Religion, like all else, is conscious of itself, listens to itself; it becomes less and less creative, vital; more and more mechanical. Considered as a whole, the Christian Religion of late ages has been continually dissipating itself into Metaphysics; and threatens now to disappear, as some rivers do, in deserts of barren sand.

Of Literature, and its deep-seated, widespread maladies, why speak? Literature is but a branch of Religion, and always participates in its character: however, in our time, it is the only branch that still shows any greenness; and, as some think, must one day become the main stem. Now, apart from the subterranean and tartarean[54] regions of Literature; — leaving out of view the frightful, scandalous statistics of Puffing,[55] the mystery of Slander, Falsehood, Hatred and other convulsion-work of rabid Imbecility, and all that has rendered Literature on that side a perfect 'Babylon the mother of Abominations,'[56] in very deed making the world 'drunk' with the wine of her iniquity; — forgetting all this, let us look only to the regions of the upper air; to such Literature as can be said to have some attempt towards truth in it, some tone of music, and if it be not poetical, to hold of the poetical. Among other characteristics, is not this manifest enough: that it knows itself? Spontaneous devotedness to the object, being wholly possessed by the object, what we can call Inspiration, has well-nigh ceased to appear in Literature. Which melodious Singer forgets that he is singing melodiously? We have not the love of greatness, but the love of the love of greatness. Hence infinite Affectations, Distractions; in every case inevitable Error. Consider, for one example, this peculiarity of Modern Literature, the sin that has been named View-Hunting.[57] In our elder writers, there are no paintings of scenery for its own sake; no euphuistic gallantries with Nature, but a constant heart-love for her, a constant dwelling in communion with her. View-hunting, with so much else that is of kin to it, first came decisively into action through the *Sorrows of Werter*;[58] which wonderful Performance, indeed, may in many senses be regarded as the progenitor of all that has since become popular in Literature; whereof, in so far as concerns spirit and tendency, it still offers the most instructive image; for nowhere, except in its own country, above all in the mind of its illustrious Author, has it yet fallen wholly obsolete. Scarcely ever, till that late epoch, did any worshipper of Nature become entirely aware that he was worshipping, much to his own credit; and think of saying to himself: Come, let us make a description! Intolerable enough: when every puny whipster plucks out his pencil, and insists on painting you a scene; so that the instant you discern such a thing as 'wavy outline,' 'mirror of the lake,' 'stern headland,' or the like, in any Book, you tremulously hasten on; and scarcely the Author of Waverley himself can tempt you not to skip.

Nay, is not the diseased self-conscious

53. Such as William Paley's *Evidences of Christianity* (1794), which attempted to prove the existence of God by the design apparent in nature and in the human body, etc.

54. Dark as Tartarus, the place, in the *Iliad*, below Hades, where the rebel Titans were confined. Carlyle was very fond of the expression.

55. Advertising, which Carlyle abominated.

56. See *Revelation*, xvii,5.

57. See similar passage in *Sartor Resartus*, chapter on 'The Sorrows of Teufelsdröckh.'

58. Goethe's novel (1774) of sentimental and frustrated love, ending in suicide.

state of Literature disclosed in this one fact, which lies so near us here, the prevalence of Reviewing! Sterne's [59] wish for a reader 'that would give-up the reins of his imagination into his author's hands, and be pleased he knew not why, and cared not wherefore,' might lead him a long journey now. Indeed, for our best class of readers, the chief pleasure, a very stinted one, is this same knowing of the Why; which many a Kames [60] and Bossu [61] has been, ineffectually enough, endeavouring to teach us: till at last these also have laid down their trade; and now your Reviewer is a mere *taster*; who tastes, and says, by the evidence of such palate, such tongue, as he has got, It is good, It is bad. Was it thus that the French carried out certain inferior creatures on their Algerine Expedition, to taste the wells for them, and try whether they were poisoned? Far be it from us to disparage our own craft, whereby we have our living! Only we must note these things: that Reviewing spreads with strange vigour; that such a man as Byron reckons the Reviewer and the Poet equal; that at the last Leipzig Fair, there was advertised a Review of Reviews. By and by it will be found that all Literature has become one boundless self-devouring Review; and, as in London routs, we have to *do* nothing, but only to *see* others do nothing. — Thus does Literature also, like a sick thing, superabundantly 'listen to itself.'

No less is this unhealthy symptom manifest, if we cast a glance on our Philosophy, on the character of our speculative Thinking. Nay already, as above hinted, the mere existence and necessity of a Philosophy is an evil. Man is sent hither not to question, but to work: 'the end of man,' it was long ago written, 'is an Action, not a Thought.' [62] In the perfect state, all Thought were but the picture and inspiring symbol of Action; Philosophy, except as Poetry and Religion, would have no being. And yet how, in this imperfect state, can it be avoided, can it be dispensed with? Man stands as in the centre of Nature; his fraction of Time encircled by Eternity, his handbreadth of Space encircled by Infinitude: how shall he forbear asking himself, What am I; and Whence; and Whither? [63] How too, except in slight partial hints, in kind asseverations and assurances, such as a mother quiets her fretfully inquisitive child with, shall he get answer to such inquiries?

The disease of Metaphysics, accordingly, is a perennial one. In all ages, those questions of Death and Immortality, Origin of Evil, Freedom and Necessity, must, under new forms, anew make their appearance; ever, from time to time, must the attempt to shape for ourselves some Theorem of the Universe be repeated. And ever unsuccessfully: for what Theorem of the Infinite can the Finite render complete? [64] We, the whole species of Mankind, and our whole existence and history, are but a floating speck in the illimitable ocean of the All; yet *in* that ocean; indissoluble portion thereof; partaking of its infinite tendencies: borne this way and that by its deep-swelling tides, and grand ocean currents; — of which what faintest chance is there that we should ever exhaust the significance, ascertain the goings and comings? A region of Doubt, therefore, hovers forever in the background; in Action alone can we have certainty.

59. Laurence Sterne (1713-68), sentimental novelist, author of *Tristram Shandy* (1760-67) and *A Sentimental Journey* (1768). Carlyle alludes to a passage in *Tristram Shandy*, Vol. iii,Ch.12.

60. Henry Home, Lord Kames (1696–1782), a Scottish judge, published an *Introduction to the Art of Thinking* (1761), and *Elements of Criticism* (1762), widely read in their day.

61. René Le Bossu (1631–80), French critic, author of a *Traité du poème épique*, highly regarded by the much greater French critic, Boileau (1636–1711).

62. Adapted from Aristotle, *Ethics*,I,iii;X,ix;etc., and quoted in *Sartor*, 'Sorrows of Teufelsdröckh.'

63. See a similar passage in *Sartor*, 'The World out of Clothes.'

64. See same chapter in *Sartor*.

Nay properly Doubt is the indispensable inexhaustible material whereon Action works, which Action has to fashion into Certainty and Reality; only on a canvas of Darkness, such is man's way of being, could the many-coloured picture of our Life paint itself and shine.

Thus if our eldest system of Metaphysics is as old as the *Book of Genesis*, our latest is that of Mr. Thomas Hope, published only within the current year. It is a chronic malady that of Metaphysics, as we said, and perpetually recurs on us. At the utmost, there is a better and a worse in it; a stage of convalescence, and a stage of relapse with new sickness: these forever succeed each other, as is the nature of all Life-movement here below. The first, or convalescent stage, we might also name that of Dogmatical or Constructive Metaphysics; when the mind constructively endeavours to scheme out and assert for itself an actual Theorem of the Universe, and therewith for a time rests satisfied. The second or sick stage might be called that of Sceptical or Inquisitory Metaphysics; when the mind having widened its sphere of vision, the existing Theorem of the Universe no longer answers the phenomena, no longer yields contentment; but must be torn in pieces, and certainly anew sought for in the endless realms of denial. All Theologies and sacred Cosmogonies belong, in some measure, to the first class; in all Pyrrhonism, from Pyrrho[65] down to Hume and the innumerable disciples of Hume,[66] we have instances enough of the second. In the former, so far as it affords satisfaction, a temporary anodyne to doubt, an arena for wholesome action, there may be much good; indeed in this case, it holds rather of Poetry than of Metaphysics, might be called Inspiration rather than Speculation. The latter is Metaphysics proper; a pure, unmixed, though from time to time a necessary evil.

For truly, if we look into it, there is no more fruitless endeavour than this same, which the Metaphysician proper toils in: to educe Conviction out of Negation. How, by merely testing and rejecting what is not, shall we ever attain knowledge of what is? Metaphysical Speculation, as it begins in No or Nothingness, so it must needs end in Nothingness; circulates and must circulate in endless vortices; creating, swallowing — itself. Our being is made up of Light and Darkness, the Light resting on the Darkness, and balancing it; everywhere there is Dualism, Equipoise; a perpetual Contradiction dwells in us: 'where shall I place myself to escape from my own shadow?'[67] Consider it well, Metaphysics is the attempt of the mind to rise above the mind; to environ and shut in, or as we say, *comprehend* the mind. Hopeless struggle, for the wisest, as for the foolishest! What strength of sinew, or athletic skill, will enable the stoutest athlete to fold his own body in his arms, and, by lifting, lift up *himself*? The Irish Saint swam the Channel, 'carrying his head in his teeth'; but the feat has never been imitated.

That this is the age of Metaphysics, in the proper, or sceptical Inquisitory sense; that there was a necessity for its being such an age, we regard as our indubitable misfortune. From many causes, the arena of free Activity has long been narrowing, that of sceptical Inquiry becoming more and more universal, more and more perplexing. The Thought conducts not to the Deed; but in boundless chaos, self-devouring, engenders monstrosities, phantasms, fire-breathing chimeras. Profitable Speculation were this: What is to be done; and How is it to be done? But with us not so much as the What can be got sight of. For some generations, all Philosophy has been a painful, captious, hostile question

65. Pyrrho, founder of the skeptical or Pyrrhonian school of philosophy, in the time of Alexander the Great.

66. David Hume (1711–76), Scotch philosopher of skepticism, author of *Enquiry concerning Human Understanding* (1748).

67. See a similar passage on metaphysical speculation in *Sartor*, 'The Everlasting Yea.'

towards everything in the Heaven above, and in the Earth beneath: Why art thou there? Till at length it has come to pass that the worth and authenticity of all things seems dubitable or deniable: our best effort must be unproductively spent not in working, but in ascertaining our mere Whereabout, and so much as whether we are to work at all. Doubt, which, as was said, ever hangs in the background of our world, has now become our middleground and foreground; whereon, for the time, no fair Life-picture can be painted, but only the dark air-canvas itself flow round us, bewildering and benighting.

Nevertheless, doubt as we will, man is actually Here; not to ask questions, but to do work: in this time, as in all times, it must be the heaviest evil for him, if his faculty of Action lie dormant, and only that of sceptical Inquiry exert itself. Accordingly, whoever looks abroad upon the world, comparing the Past with the Present, may find that the practical condition of man in these days is one of the saddest; burdened with miseries which are in a considerable degree peculiar. In no time was man's life what he calls a happy one; in no time can it be so. A perpetual dream there has been of Paradises, and some luxurious Lubberland,[68] where the brooks should run wine, and the trees bend with ready baked viands; but it was a dream merely; an impossible dream. Suffering, contradiction, error, have their quite perennial, and even indispensable abode in this Earth. Is not labour the inheritance of man? And what labour for the present is joyous, and not grievous? Labour, effort, is the very interruption of that ease, which man foolishly enough fancies to be his happiness; and yet without labour there were no ease, no rest, so much as conceivable. Thus Evil, what we call Evil, must ever exist while man exists: Evil, in the widest sense we can give it, is precisely the dark, disordered material out of which man's Freewill has to create an edifice of order and Good.[69] Ever must Pain urge us to Labour; and only in free Effort can any blessedness be imagined for us.

But if man has, in all ages, had enough to encounter, there has, in most civilised ages, been an inward force vouchsafed him, whereby the pressure of things outward might be withstood. Obstruction abounded; but Faith also was not wanting. It is by Faith that man removes mountains: while he had Faith, his limbs might be wearied with toiling, his back galled with bearing; but the heart within him was peaceable and resolved. In the thickest gloom there burnt a lamp to guide him. If he struggled and suffered, he felt that it even should be so; knew for what he was suffering and struggling. Faith gave him an inward Willingness; a world of Strength wherewith to front a world of Difficulty. The true wretchedness lies here: that the Difficulty remain and the Strength be lost; that Pain cannot relieve itself in free Effort; that we have the Labour, and want the Willingness. Faith strengthens us, enlightens us, for all endeavours and endurances; with Faith we can do all, and dare all, and life itself has a thousand times been joyfully given away. But the sum of man's misery is even this, that he feel himself crushed under the Juggernaut[70] wheels, and know that Juggernaut is no divinity, but a dead mechanical idol.

Now this is specially the misery which has fallen on man in our Era. Belief, Faith has well-nigh vanished from the world. The youth on awakening in this wondrous Universe no longer finds a competent theory of its wonders. Time was, when if he asked himself, What is man, What are

68. Land of plenty.

69. This idea, developed by one of Carlyle's earliest admirers, Robert Browning, became one of the master-thoughts of Victorian literature.

70. Or Jagannath (Hindu for 'Lord of the world'), idol of Vishnu, drawn upon a car during festivals; devotees allow themselves to be crushed under its wheels.

the duties of man? the answer stood ready written for him. But now the ancient 'ground-plan of the All' belies itself when brought into contact with reality; Mother Church has, to the most, become a superannuated Step-mother, whose lessons go disregarded; or are spurned at, and scornfully gainsaid. For young Valour and thirst of Action no ideal Chivalry invites to heroism, prescribes what is heroic: the old ideal of Manhood has grown obsolete, and the new is still invisible to us, and we grope after it in darkness, one clutching this phantom, another that; Werterism, Byronism, even Brummelism,[71] each has its day. For Contemplation and love of Wisdom, no Cloister now opens its religious shades; the Thinker must, in all senses, wander homeless, too often aimless, looking up to a Heaven which is dead for him, round to an Earth which is deaf. Action, in those old days, was easy, was voluntary, for the divine worth of human things lay acknowledged; Speculation was wholesome, for it ranged itself as the handmaid of Action; what could not so range itself died out by its natural death, by neglect. Loyalty still hallowed obedience, and made rule noble; there was still something to be loyal to: the Godlike stood embodied under many a symbol in men's interests and business; the Finite shadowed forth the Infinite; Eternity looked through Time. The Life of man was encompassed and overcanopied by a glory of Heaven, even as his dwelling-place by the azure vault.

How changed in these new days! Truly may it be said, the Divinity has withdrawn from the Earth; or veils himself in that wide-wasting Whirlwind of a departing Era, wherein the fewest can discern his goings. Not Godhead, but an iron, ignoble circle of Necessity embraces all things; binds the youth of these times into a sluggish thrall, or else exasperates him into a rebel. Heroic Action is paralysed; for what worth now remains unquestionable with him? At the fervid period when his whole nature cries aloud for Action, there is nothing sacred under whose banner he can act; the course and kind and conditions of free Action are all but undiscoverable. Doubt storms-in on him through every avenue; inquiries of the deepest, painfulest sort must be engaged with; and the invincible energy of young years waste itself in sceptical, suicidal cavillings; in passionate 'questionings of Destiny,' whereto no answer will be returned.

For men, in whom the old perennial principle of Hunger (be it Hunger of the poor Day-drudge who stills it with eightpence a-day, or of the ambitious Place-hunter who can nowise still it with so little) suffices to fill up existence, the case is bad; but not the worst. These men have an aim, such as it is; and can steer towards it, with chagrin enough truly; yet, as their hands are kept full, without desperation. Unhappier are they to whom a higher instinct has been given; who struggle to be persons, not machines; to whom the Universe is not a warehouse, or at best a fancy-bazaar, but a mystic temple and hall of doom. For such men there be properly two courses open. The lower, yet still an estimable class, take up with worn-out Symbols of the Godlike; keep trimming and trucking between these and Hypocrisy, purblindly enough, miserably enough. A numerous intermediate class end in Denial; and form a theory that there is no theory; that nothing is certain in the world, except this fact of Pleasure being pleasant; so they try to realise what trifling modicum of Pleasure they can come at, and to live contented therewith, winking hard. Of these we speak not here; but only of the second nobler class, who also have dared to say No and cannot yet say Yea; but feel that in the No they

71. Forms of literary and sartorial dandyism. George Bryan (Beau) Brummel (1778–1840) flourished most brilliantly during the regency of George IV.

dwell as in a Golgotha,[72] where life enters not, where peace is not appointed them.

Hard, for most part, is the fate of such men; the harder the nobler they are. In dim forecastings, wrestles within them the 'Divine Idea of the World,'[73] yet will nowhere visibly reveal itself. They have to realise a Worship for themselves, or live unworshipping. The Godlike has vanished from the world; and they, by the strong cry of their soul's agony, like true wonder-workers, must again evoke its presence. This miracle is their appointed task; which they must accomplish, or die wretchedly: this miracle has been accomplished by such; but not in our land; our land yet knows not of it. Behold a Byron, in melodious tones, 'cursing his day': he mistakes earthborn passionate Desire for heaven-inspired Freewill; without heavenly load-star, rushes madly into the dance of meteoric lights that hover on the mad Mahlstrom; and goes down among its eddies. Hear a Shelley filling the earth with inarticulate wail; like the infinite, inarticulate griet and weeping of forsaken infants. A noble Friedrich Schlegel,[74] stupefied in that fearful loneliness, as of a silenced battle-field, flies back to Catholicism; as a child might to its slain mother's bosom, and cling there. In lower regions, how many a poor Hazlitt must wander on God's verdant earth, like the Unblest on burning deserts; passionately dig wells, and draw up only the dry quicksand; believe that he is seeking Truth, yet only wrestle among endless Sophisms, doing desperate battle as with spectre-hosts; and die and make no sign!

To the better order of such minds any mad joy of Denial has long since ceased: the problem is not now to deny, but to ascertain and perform. Once in destroying the False, there was a certain inspiration; but now the genius of Destruction has done its work, there is now nothing more to destroy. The doom of the Old has long been pronounced, and irrevocable; the Old has passed away: but, alas, the New appears not in its stead; the Time is still in pangs of travail with the New. Man has walked by the light of conflagrations, and amid the sound of falling cities; and now there is darkness, and long watching till it be morning. The voice even of the faithful can but exclaim: 'As yet struggles the twelfth hour of the Night: birds of darkness are on the wing, spectres uproar, the dead walk, the living dream. — Thou, Eternal Providence, wilt cause the day to dawn!'[75]

Such being the condition, temporal and spiritual, of the world at our Epoch, can we wonder that the world 'listens to itself,' and struggles and writhes, everywhere externally and internally, like a thing in pain? Nay, is not even this unhealthy action of the world's Organisation, if the symptom of universal disease, yet also the symptom and sole means of restoration and cure? The effort of Nature, exerting her medicative force to cast-out foreign impediments, and once more become One, become whole? In Practice, still more in Opinion, which is the precursor and prototype of Practice, there must needs be collision, convulsion; much has to be ground away. Thought must needs be Doubt and Inquiry before it can again be Affirmation and Sacred Precept. Innumerable 'Philosophies of Man,' contending in boundless hubbub, must annihilate each other, before

'Place of skulls' (Calvary); see *Matthew*, xxvii, 33.

An expression from Fichte (1762–1814), German philosopher, denoting the ultimate divine principle pervading the universe. See Carlyle's 'State of German Literature,' *Ess.*, I.58ff.

1772–1829; German romantic critic, notable for his studies in the history of literature; brother of the brilliant translator, August Wilhelm von Schlegel; and friend of Novalis. It was through Fr. Schlegel that Carlyle received much of his knowledge of German philosophy, mysticism, and literary criticism.

75. Jean Paul's *Hesperus* (Vorrede). [Carlyle's note.]

an inspired Poesy and Faith for Man can fashion itself together.

From this stunning hubbub, a true Babel-like confusion of tongues, we have here selected two Voices; less as objects of praise or condemnation, than as signs how far the confusion has reached, what prospect there is of its abating. Friedrich Schlegel's *Lectures* delivered at Dresden, and Mr. Hope's *Essay* published in London, are the latest utterances of European Speculation: far asunder in external place, they stand at a still wider distance in inward purport; are, indeed, so opposite and yet so cognate that they may, in many senses, represent the two Extremes of our whole modern system of Thought; and be said to include between them all the Metaphysical Philosophies, so often alluded to here, which, of late times, from France, Germany, England, have agitated and almost overwhelmed us. Both in regard to matter and to form, the relation of these two Works is significant enough.

Speaking first of their cognate qualities, let us remark, not without emotion, one quite extraneous point of agreement; the fact that the Writers of both have departed from this world; they have now finished their search, and had all doubts resolved: while we listen to the voice, the tongue that uttered it has gone silent forever. But the fundamental, all-pervading similarity lies in this circumstance, well worthy of being noted, that both these Philosophies are of the Dogmatic or Constructive sort: each in its way is a kind of Genesis; an endeavour to bring the Phenomena of man's Universe once more under some theoretic Scheme: in both there is a decided principle of unity; they strive after a result which shall be positive; their aim is not to question but to establish. This, especially if we consider with what comprehensive concentrated force it is here exhibited, forms a new feature in such works.

Under all other aspects, there is the most irreconcilable opposition; a staring contrariety, such as might provoke contrasts, were there far fewer points of comparison. If Schlegel's Work is the apotheosis of Spiritualism; Hope's again is the apotheosis of Materialism: in the one, all Matter is evaporated into a Phenomenon, and terrestrial Life itself, with its whole doings and showings, held out as a Disturbance (*Zerrüttung*) produced by the *Zeitgeist* (Spirit of Time); in the other, Matter is distilled and sublimated into some semblance of Divinity: the one regards Space and Time as mere forms of man's mind, and without external existence or reality; the other supposes Space and Time to be 'incessantly created,' and rayed-in upon us like a sort of 'gravitation.' Such is their difference in respect of purport: no less striking is it in respect of manner, talent, success and all outward characteristics. Thus, if in Schlegel we have to admire the power of Words, in Hope we stand astonished, it might almost be said, at the want of an articulate Language. To Schlegel his Philosophic Speech is obedient, dextrous, exact, like a promptly ministering genius; his names are so clear, so precise and vivid, that they almost (sometimes altogether) become things for him: with Hope there is no Philosophical Speech; but a painful, confused stammering, and struggling after such; or the tongue, as in doatish forgetfulness, maunders, low, long-winded, and speaks not the word intended, but another; so that here the scarcely intelligible, in these endless convolutions, becomes the wholly unreadable; and often we could ask, as that mad pupil did of his tutor in Philosophy, 'But whether is Virtue a fluid, then, or a gas?' If the fact, that Schlegel, in the city of Dresden, could find audience for such high discourse, may excite our envy; this other fact, that a person of strong powers, skilled in English Thought and master of its Dialect, could write the *Origin and Prospects of Man*, may painfully remind us of the reproach, that Eng-

land has now no language for Meditation; that England, the most calculative, is the least meditative, of all civilised countries.

It is not our purpose to offer any criticism of Schlegel's Book; in such limits as were possible here, we should despair of communicating even the faintest image of its significance. To the mass of readers, indeed, both among the Germans themselves, and still more elsewhere, it nowise addresses itself, and may lie forever sealed. We point it out as a remarkable document of the Time and of the Man; can recommend it, moreover, to all earnest Thinkers, as a work deserving their best regard; a work full of deep meditation, wherein the infinite mystery of Life, if not represented, is decisively recognised. Of Schlegel himself, and his character, and spiritual history, we can profess no thorough or final understanding; yet enough to make us view him with admiration and pity, nowise with harsh contemptuous censure: and must say, with clearest persuasion, that the outcry of his being 'a renegade,' and so forth, is but like other such outcries, a judgment where there was neither jury, nor evidence, nor judge. The candid reader, in this Book itself, to say nothing of all the rest, will find traces of a high, far-seeing, earnest spirit, to whom 'Austrian Pensions,' and the Kaiser's crown, and Austria altogether, were but a light matter to the finding and vitally appropriating of Truth. Let us respect the sacred mystery of a Person; rush not irreverently into man's Holy of Holies! Were the lost little one, as we said already, found 'sucking its dead mother, on the field of carnage,' could it be other than a spectacle for tears? A solemn mournful feeling comes over us when we see this last Work of Friedrich Schlegel, the unwearied seeker, end abruptly in the middle; and, as if he *had not* yet found, as if emblematically of much, end with an '*Aber* —,' with a 'But —'! This was the last word that came from the Pen of Friedrich Schlegel: about eleven at night he wrote it down, and there paused sick; at one in the morning, Time for him had merged itself in Eternity; he was, as we say, no more.

Still less can we attempt any criticism of Mr. Hope's new Book of Genesis. Indeed, under any circumstances, criticism of it were now impossible. Such an utterance could only be responded to in peals of laughter; and laughter sounds hollow and hideous through the vaults of the dead. Of this monstrous Anomaly, where all sciences are heaped and huddled together, and the principles of all are, with a childlike innocence, plied hither and thither, or wholly abolished in case of need; where the First Cause is figured as a huge Circle, with nothing to do but radiate 'gravitation' towards its centre; and so construct a Universe, wherein all, from the lowest cucumber with its coolness, up to the highest seraph with his love, were but 'gravitation,' direct or reflex, 'in more or less central globes,' — what can we say, except, with sorrow and shame, that it could have originated nowhere save in England? It is a general agglomerate of all facts, notions, whims and observations, as they lie in the brain of an English gentleman; as an English gentleman, of unusual thinking power, is led to fashion them, in his schools and in his world: all these thrown into the crucible, and if not fused, yet soldered or conglutinated with boundless patience; and now tumbled out here, heterogeneous, amorphous, unspeakable, a world's wonder. Most melancholy must we name the whole business; full of long-continued thought, earnestness, loftiness of mind; not without glances into the Deepest, a constant fearless endeavour after truth; and with all this nothing accomplished, but the perhaps absurdest Book written in our century by a thinking man. A shameful Abortion; which, however, need not now be smothered or mangled, for it is already dead; only, in our love and sorrowing reverence for the writer of *Ana-*

stasius,[76] and the heroic seeker of Light, though not bringer thereof, let it be buried and forgotten.

For ourselves, the loud discord which jars in these two Works, in innumerable works of the like import, and generally in all the Thought and Action of this period, does not any longer utterly confuse us. Unhappy who, in such a time, felt not, at all conjunctures, ineradicably in his heart the knowledge that a God made this Universe, and a Demon not! And shall Evil always prosper, then? Out of all Evil comes Good; and no Good that is possible but shall one day be real. Deep and sad as is our feeling that we stand yet in the bodeful Night; equally deep, indestructible is our assurance that the Morning also will not fail. Nay already, as we look round, streaks of a dayspring are in the east; it is dawning; when the time shall be fulfilled, it will be day. The progress of man towards higher and nobler developments of whatever is highest and noblest in him, lies not only prophesied to Faith, but now written to the eye of Observation, so that he who runs may read.

One great step of progress, for example, we should say, in actual circumstances, was this same; the clear ascertainment that we are in progress. About the grand Course of Providence, and his final Purposes with us, we can know nothing, or almost nothing: man begins in darkness, ends in darkness; mystery is everywhere around us and in us, under our feet, among our hands. Nevertheless so much has become evident to every one, that this wondrous Mankind is advancing somewhither; that at least all human things are, have been and forever will be, in Movement and Change; — as, indeed, for beings that exist in Time, by virtue of Time, and are made of Time, might have been long since understood. In some provinces, it is true, as in Experimental Science, this discovery is an old one; but in most others it belongs wholly to these latter days. How often, in former ages, by eternal Creeds, eternal Forms of Government and the like, has it been attempted, fiercely enough, and with destructive violence, to chain the Future under the Past; and say to the Providence, whose ways with man are mysterious, and through the great deep: Hitherto shalt thou come, but no farther! A wholly insane attempt; and for man himself, could it prosper, the frightfulest of all enchantments, a very Life-in-Death. Man's task here below, the destiny of every individual man, is to be in turns Apprentice and Workman; or say rather, Scholar, Teacher, Discoverer: by nature he has a strength for learning, for imitating; but also a strength for acting, for knowing on his own account. Are we not in a world seen to be Infinite; the relations lying closest together modified by those latest discovered and lying farthest asunder? Could you ever spell-bind man into a Scholar merely, so that he had nothing to discover, to correct; could you ever establish a Theory of the Universe that were entire, unimprovable, and which needed only to be got by heart; man then were spiritually defunct, the Species we now name Man had ceased to exist. But the gods, kinder to us than we are to ourselves, have forbidden such suicidal acts. As Phlogiston[77] is displaced by Oxygen, and the Epicycles[78] of Ptolemy by the Ellipses of Kepler;[79] so does Paganism give place to Catholicism, Tyranny to Monarchy, and Feudalism to Representative Government, — where also the process

76. The picaresque novel by Thomas Hope, whom Carlyle is reviewing. Published in 1819, it enjoyed considerable popularity.

77. In old chemistry, the hypothetical principle of fire, regarded as a material substance.

78. In Ptolemaic astronomy, an epicycle was one in which a planet moved, the center of which was carried upon the circumference of a larger circle.

79. Johann Kepler (1571–1630), German astronomer, who provided the foundation of much in the work of Newton. — *Ellipse*: the path of a point, the sum of whose distances from two fixed points (the foci) is constant.

does not stop. Perfection of Practice, like completeness of Opinion, is always approaching, never arrived; Truth, in the words of Schiller,[80] *immer wird, nie ist*; never *is*, always *is a-being*.

Sad, truly, were our condition did we know but this, that Change is universal and inevitable. Launched into a dark shoreless sea of Pyrrhonism,[81] what would remain for us but to sail aimless, hopeless; or make madly merry, while the devouring Death had not yet ingulfed us? As indeed, we have seen many, and still see many do. Nevertheless so stands it not. The venerator of the Past (and to what pure heart is the Past, in that 'moonlight of memory,' other than sad and holy?) sorrows not over its departure, as one utterly bereaved. The true Past departs not, nothing that was worthy in the Past departs; no Truth or Goodness realised by man ever dies, or can die; but is all still here, and, recognised or not, lives and works through endless changes. If all things, to speak in the German dialect, are discerned by us, and exist for us, in an element of Time, and therefore of Mortality and Mutability; yet Time itself reposes on Eternity: the truly Great and Transcendental has its basis and substance in Eternity; stands revealed to us as Eternity in a vesture of Time. Thus in all Poetry, Worship, Art, Society, as one form passes into another, nothing is lost: it is but the superficial, as it were the *body* only, that grows obsolete and dies; under the mortal body lies a *soul* which is immortal; which anew incarnates itself in fairer revelation; and the Present is the living sum-total of the whole Past.

In Change, therefore, there is nothing terrible, nothing supernatural: on the contrary, it lies in the very essence of our lot and life in this world. To-day is not yesterday: we ourselves change; how can our Works and Thoughts, if they are always to be the fittest, continue always the same? Change, indeed, is painful; yet ever needful; and if Memory have its force and worth, so also has Hope. Nay, if we look well to it, what is all Derangement, and necessity of great Change, in itself such an evil, but the product simply of *increased resources* which the old *methods* can no longer administer; of new wealth which the old coffers will no longer contain? What is it, for example, that in our own day bursts asunder the bonds of ancient Political Systems, and perplexes all Europe with the fear of Change, but even this: the increase of social resources, which the old social methods will no longer sufficiently administer? The new omnipotence of the Steam-engine is hewing asunder quite other mountains than the physical. Have not our economical distresses, those barnyard Conflagrations themselves,[82] the frightfulest madness of our mad epoch, their rise also in what is a real increase: increase of Men; of human Force; properly, in such a Planet as ours, the most precious of all increases? It is true again, the ancient methods of administration will no longer suffice. Must the indomitable millions, full of old Saxon energy and fire, lie cooped-up in this Western Nook, choking one another, as in a Blackhole of Calcutta,[83] while a whole fertile untenanted Earth, desolate for want of the ploughshare, cries: Come and till me, come and reap me? If the ancient Captains can no longer yield guidance, new must be sought after: for the difficulty lies not in nature, but in artifice; the European Calcutta-Blackhole has no walls but air ones and paper ones. — So too, Scepticism itself,

80. Johann C. F. von Schiller (1759-1805), German dramatist and lyric poet, probably the earliest of Carlyle's favorites among German writers.

81. Skepticism. See note 65.

82. Rick-burning. See note 50.

83. The punishment cell of the barracks in Fort William, Calcutta, into which, by order of Suraja Dowlah, 146 Europeans were thrust for a whole night in 1756, of whom only 23 survived till the morning; an episode in the Seven Years War, during the career of Clive in India. (See Macaulay's essay on Lord Clive.)

with its innumerable mischiefs, what is it but the sour fruit of a most blessed increase, that of Knowledge; a fruit too that will not always continue *sour*?

In fact, much as we have said and mourned about the unproductive prevalence of Metaphysics, it was not without some insight into the use that lies in them. Metaphysical Speculation, if a necessary evil, is the forerunner of much good. The fever of Scepticism must needs burn itself out, and burn out thereby the Impurities that caused it; then again will there be clearness, health. The principle of life, which now struggles painfully, in the outer, thin and barren domain of the Conscious or Mechanical, may then withdraw into its inner sanctuaries, its abysses of mystery and miracle; withdraw deeper than ever into that domain of the Unconscious, by nature infinite and inexhaustible; and creatively work there. From that mystic region, and from that alone, all wonders, all Poesies, and Religions, and Social Systems have proceeded: the like wonders, and greater and higher, lie slumbering there; and, brooded on by the spirit of the waters, will evolve themselves, and rise like exhalations from the Deep.

Of our Modern Metaphysics, accordingly, may not this already be said, that if they have produced no Affirmation, they have destroyed much Negation? It is a disease expelling a disease: the fire of Doubt, as above hinted, consuming away the Doubtful; that so the Certain come to light, and again lie visible on the surface. English or French Metaphysics, in reference to this last stage of the speculative process, are not what we allude to here; but only the Metaphysics of the Germans. In France or England, since the days of Diderot and Hume, though all thought has been of a sceptico-metaphysical texture, so far as there was any Thought, we have seen no Metaphysics; but only more or less ineffectual questionings whether such could be. In the Pyrrhonism of Hume and the Materialism of Diderot, Logic had, as it were, overshot itself, overset itself. Now, though the athlete, to use our old figure, cannot, by much lifting, lift up his own body, he may shift it out of a laming posture, and get to stand in a free one. Such a service have German Metaphysics done for man's mind. The second sickness of Speculation has abolished both itself and the first. Friedrich Schlegel complains much of the fruitlessness, the tumult and transiency of German as of all Metaphysics; and with reason. Yet in that wide-spreading, deep-whirling vortex of Kantism,[84] so soon metamorphosed into Fichteism, Schellingism, and then as Hegelism,[85] and Cousinism,[86] perhaps finally evaporated, is not this issue visible enough, That Pyrrhonism and Materialism, themselves necessary phenomena in European culture, have disappeared; and a Faith in Religion has again become possible and inevitable for the scientific mind; and the word *Free*-thinker no longer means the Denier or Caviller, but the Believer, or the Ready to believe? Nay, in the higher Literature of Germany, there already lies, for him that can read it, the beginning of a new revelation of the Godlike; as yet unrecognised by the mass of the world; but waiting there for recognition, and sure to find it when the fit hour comes. This age also is not wholly without its Prophets.

Again, under another aspect, if Utilitarianism, or Radicalism, or the Mechanical Philosophy, or by whatever name it is

84. By 'Kantism' Carlyle means not only the Critical Philosophy of Immanuel Kant (1724–1804), but also the general idealistic philosophy in Germany which arose through the efforts of minor thinkers to rehabilitate religion by interpreting Kant's severe inquiries into the nature of reason (*Critique of Pure Reason*, 1781) in a spiritual fashion, as in Reinhold (1758–1823) and F.H.Jacobi (1743–1819).

85. Allusion to the idealistic systems of thought constructed by Johann Gottlieb Fichte (1762–1814), Friedrich Wilhelm J. von Schelling (1775–1854), and Georg Wilhelm Friedrich Hegel (1770–1831).

86. Victor Cousin (1792–1867), French philosopher, opponent to materialism.

called, has still its long task to do; nevertheless we can now see through it and beyond it; in the better heads, even among us English, it has become obsolete; as in other countries, it has been, in such heads, for some forty or even fifty years. What sound mind among the French, for example, now fancies that men can be governed by 'Constitutions'; by the never so cunning mechanising of Self-interests, and all conceivable adjustments of checking and balancing; in a word, by the best possible solution of this quite insoluble and impossible problem, *Given a world of Knaves, to produce an Honesty from their united action*? Were not experiments enough of this kind tried before all Europe, and found wanting, when, in that doomsday of France, the infinite gulf of human Passion shivered asunder the thin rinds of Habit; and burst forth all-devouring, as in seas of Nether Fire? Which cunningly-devised 'Constitution,' constitutional, republican, democratic, sansculottic, could bind that raging chasm together? Were they not all burnt up, like paper as they were, in its molten eddies; and still the fire-sea raged fiercer than before? It is not by Mechanism, but by Religion; not by Self-interest, but by Loyalty, that men are governed or governable.

Remarkable it is, truly, how everywhere the eternal fact begins again to be recognised, that there is a Godlike in human affairs; that God not only made us and beholds us, but is in us and around us; that the Age of Miracles, as it ever was, now is. Such recognition we discern on all hands and in all countries: in each country after its own fashion. In France, among the younger nobler minds, strangely enough; where, in their loud contention with the Actual and Conscious, the Ideal or Unconscious is, for the time, without exponent; where Religion means not the parent of Polity, as of all that is highest, but Polity itself; and this and the other earnest man has not been wanting, who could audibly whisper to himself: 'Go to, I will make religion.' In England still more strangely; as in all things, worthy England will have its way: by the shrieking of hysterical women, casting out of devils, and other 'gifts of the Holy Ghost.' Well might Jean Paul say, in this his twelfth hour of the Night, 'the living dream'; well might he say, 'the dead walk.'[87] Meanwhile let us rejoice rather that so much has been seen into, were it through never so diffracting media, and never so madly distorted; that in all dialects, though but half-articulately, this high Gospel begins to be preached: Man is still Man. The genius of Mechanism, as was once before predicted, will not always sit like a choking incubus on our soul; but at length, when by a new magic Word the old spell is broken, become our slave, and as familiar-spirit do all our bidding. 'We are near awakening when we dream that we dream.'[88]

He that has an eye and a heart can even now say: Why should I falter? Light has come into the world; to such as love Light, so as Light must be loved, with a boundless all-doing, all-enduring love. For the rest, let that vain struggle to read the mystery of the Infinite cease to harass us. It is a mystery which, through all ages, we shall only read here a line of, there another line of. Do we not already know that the name of the Infinite is Good, is God? Here on Earth we are as Soldiers, fighting in a foreign land; that understand not the plan of the campaign, and have no need to understand it; seeing well what is at our hand to be done. Let us do it like Soldiers; with submission, with courage, with a heroic joy. 'Whatsoever thy hand findeth to do, do it with all thy might.'[89] Behind us, behind each one of us, lie Six Thousand Years of human effort, human conquest: before us is the boundless Time, with its

89. *Ecclesiastes*, ix,10; quoted at the end of 'The Everlasting Yea,' in *Sartor*.

as yet uncreated and unconquered Continents and Eldorados,[90] which we, even we, have to conquer, to create; and from the bosom of Eternity there shine for us celestial guiding stars.

90. *Eldorado*: land of gold.

'My inheritance how wide and fair!
Time is my fair seed-field, of Time I'm heir.' [91]

91. This quotation from Goethe (lines prefaced to *Wilhelm Meisters Wanderjahre*, Stuttgart, 1821) became the motto on the title-page of *Sartor Resartus*.

BIOGRAPHY

MAN's sociality of nature evinces itself, in spite of all that can be said, with abundant evidence by this one fact, were there no other: the unspeakable delight he takes in Biography. It is written, 'The proper study of mankind is man'; [1] to which study, let us candidly admit, he, by true or by false methods, applies himself, nothing loath. 'Man is perennially interesting to man; nay, if we look strictly to it, there is nothing else interesting.' [2] How inexpressibly comfortable to know our fellow-creature; to see into him, understand his goings-forth, decipher the whole heart of his mystery: nay, not only to see him, but even to see out of him, to view the world altogether as he views it; so that we can theoretically construe him, and could almost practically personate him; and do now thoroughly discern both what manner of man he is, and what manner of thing he has got to work on and live on!

A scientific interest and a poetic one alike inspire us in this matter. A scientific: because every mortal has a Problem of Existence set before him, which, were it only, what for the most it is, the Problem of keeping soul and body together, must be to a certain extent *original*, unlike every other; and yet, at the same time, so *like* every other; like our own, therefore; instructive, moreover, since we also are indentured to *live*. A poetic interest still more: for precisely this same struggle of human Freewill against material Necessity, which every man's Life, by the mere circumstance that the man continues alive, will more or less victoriously exhibit, — is that which above all else, or rather inclusive of all else, calls the Sympathy of mortal hearts into action; and whether as acted, or as represented and written of, not only is Poetry, but is the sole Poetry possible. Borne onwards by which two all-embracing interests, may the earnest Lover of Biography expand himself on all sides, and indefinitely enrich himself. Looking with the eyes of every new neighbour, he can discern a new world different for each: feeling with the heart of every neighbour, he lives with every neighbour's life, even as with his own. Of these millions of living men, each individual is a mirror to us; a mirror both scientific and poetic; or, if you will, both natural and magical; — from which one would so gladly draw aside the gauze veil; and, peering therein, discern the image of his own natural face, and the supernatural secrets that prophetically lie under the same!

Observe, accordingly, to what extent, in the actual course of things, this business of Biography is practised and relished. Define to thyself, judicious Reader, the real significance of these phenomena, named Gossip, Egoism, Personal Narrative (miraculous or not), Scandal, Raillery, Slander, and suchlike; the sum-total of which (with some fractional addition of a better ingredient, generally too small to be noticeable) constitutes that other grand phenomenon still called 'Conversation.' Do they not mean wholly: *Biography* and *Autobiography*? Not only in the common Speech of men; but in all Art too, which is or should be the concentrated and con-

1. See Pope's *Essay on Man*, II,2.
2. See similar passage in *Sartor*, 'Prospective.'

served essence of what men can speak and show, Biography is almost the one thing needful.

Even in the highest works of Art, our interest, as the critics complain, is too apt to be strongly or even mainly of a Biographic sort. In the Art we can nowise forget the Artist: while looking on the *Transfiguration*, while studying the *Iliad*, we ever strive to figure to ourselves what spirit dwelt in Raphael; [3] what a head was that of Homer, wherein, woven of Elysian [4] light and Tartarean [5] gloom, that old world fashioned itself together, of which these written Greek characters are but a feeble though perennial copy. The Painter and the Singer are present to us; we partially and for the time become the very Painter and the very Singer, while we enjoy the Picture and the Song. Perhaps too, let the critic say what he will, this is the highest enjoyment, the clearest recognition, we can have of these. Art indeed is Art; yet Man also is Man. Had the *Transfiguration* been painted without human hand; had it grown merely on the canvas, say by atmospheric influences, as lichen-pictures do on rocks, — it were a grand Picture doubtless; yet nothing like so grand as *the* Picture, which, on opening our eyes, we everywhere in Heaven and in Earth see painted; and everywhere pass over with indifference, — because the Painter was not a Man. Think of this; much lies in it. The Vatican is great; yet poor to Chimborazo [6] or the Peak of Teneriffe: [7] its dome is but a foolish Big-endian or Little-endian [8] chip of an egg-shell, compared with that star-fretted Dome where Arcturus and Orion glance forever; which latter, notwithstanding, who looks at, save perhaps some necessitous star-gazer bent to make Almanacs; some thick-quilted watchman, to see what weather it will prove? The Biographic interest is wanting: no Michael Angelo [9] was He who built that 'Temple of Immensity'; [10] therefore do we, pitiful Littlenesses as we are, turn rather to wonder and to worship in the little toybox of a Temple built by our like.

Still more decisively, still more exclusively does the Biographic interest manifest itself, as we descend into lower regions of spiritual communication; through the whole range of what is called Literature. Of history, for example, the most honoured, if not honourable species of composition, is not the whole purport Biographic? 'History,' it has been said, 'is the essence of innumerable Biographies.' [11] Such, at least, it should be: whether it is, might admit of question. But, in any case, what hope have we in turning over those old interminable Chronicles, with their garrulities and insipidities; or still worse, in patiently examining those modern Narrations, of the Philosophic kind, where 'Philosophy, teaching by Experience,' [12] has to sit like owl on housetop, *seeing* nothing, *understanding* nothing, uttering only, with such solemnity, her perpetual most wearisome *hoo-hoo*: — what hope have we,

3. Raffaello Santi (1483–1520), famous Italian painter.
4. Heavenly; from 'Elysian Fields,' in classical mythology.
5. Like Tartarus, one of the lowest regions of Hades.
6. A mountain in Ecuador, over 20,000 feet high.
7. Teneriffe (or Tenerife) is the largest of the Canary Islands.
8. Religious parties in the imaginary empire of Lilliput (in *Gulliver's Travels*), satirizing the Catholics and the Protestants, respectively; the Big-endians regarded it as their duty to break their eggs on the big end, though contrary to the law as set up by the Little-endians, who broke theirs on the little end.
9. 1475–1564: Italian painter and sculptor.
10. 'Is not Immensity a Temple?' (the universe a symbol of God?) — *Sartor*, chapter on 'Organic Filaments,' final paragraph.
11. Quoted from Carlyle's essay, 'On History,' fifth paragraph. See also *Sartor*, 'Prospective.'
12. Quoted from 'On History,' third paragraph. Carlyle's quotation is a paraphrase of Lord Bolingbroke's remark in his essay on the study of history, that history is of 'the greatest use to the readers, as [it] will open a large field of noble, and *profitable examples*.' (Italics added.) See Bolingbroke's *Works*, Philadelphia, 1841, II,433.

except the for most part fallacious one of gaining some acquaintance with our fellow-creatures, though dead and vanished, yet dear to us; how they got along in those old days, suffering and doing; to what extent, and under what circumstances, they resisted the Devil and triumphed over him, or struck their colours to him, and were trodden under foot by him; how, in short, the perennial Battle went, which men name Life, which we also in these new days, with indifferent fortune, have to fight, and must bequeath to our sons and grandsons to go on fighting, — till the Enemy one day be quite vanquished and abolished, or else the great Night sink and part the combatants; and thus, either by some Millennium or some new Noah's Deluge, the Volume of Universal History wind itself up! Other hope, in studying such Books, we have none: and that it is a deceitful hope, who that has tried knows not? A feast of widest Biographic insight is spread for us; we enter full of hungry anticipations: alas, like so many other feasts, which Life invites us to, a mere Ossian's 'feast of *shells*,'[13] — the food and liquor being all emptied out and clean gone, and only the vacant dishes and deceitful emblems thereof left! Your modern Historical Restaurateurs are indeed little better than high-priests of Famine; that keep choicest china dinner-sets, only no dinner to serve therein. Yet such is our Biographic appetite, we run trying from shop to shop, with ever new hope; and, unless we could eat the wind, with ever new disappointment.

Again, consider the whole class of Fictitious Narratives; from the highest category of epic or dramatic Poetry, in Shakspeare and Homer, down to the lowest of froth Prose in the Fashionable Novel. What are all these but so many mimic Biographies? Attempts, here by an inspired Speaker, there by an uninspired Babbler, to deliver himself, more or less ineffectually, of the grand secret wherewith all hearts labour oppressed: The significance of Man's Life; — which deliverance, even as traced in the unfurnished head, and printed at the Minerva Press,[14] finds readers. For, observe, though there is *a* greatest Fool, as a superlative in every kind; and *the* most Foolish man in the Earth is now indubitably living and breathing, and did this morning or lately eat breakfast, and is even now digesting the same; and looks out on the world with his dim horn-eyes, and inwardly forms some unspeakable theory thereof: yet where shall the authentically Existing be personally met with! Can one of us, otherwise than by guess, know that we have got sight of him, have orally communed with him? To take even the narrower sphere of this our English Metropolis, can any one confidently say to himself, that he has conversed with the identical, individual Stupidest man now extant in London? No one. Deep as we dive in the Profound, there is ever a new depth opens: where the ultimate bottom may lie, through what new scenes of being we must pass before reaching it (except that we know it does lie somewhere, and might by human faculty and opportunity be reached), is altogether a mystery to us. Strange, tantalising pursuit! We have the fullest assurance, not only that there is a Stupidest of London men actually resident, with bed and board of some kind, in London; but that several persons have been or perhaps are now speaking face to face with him: while for us, chase it as we may, such scientific blessedness will too probably be forever denied! — But the thing we meant to enforce was this comfortable fact, that no known Head was so wooden, but there might be other heads to which it were a genius and

13. As related in James Macpherson's (1736–96) *Ossian* (1762, 1763); see Book I of *Temora*.

14. A popular press in Leadenhall Street, London; issuing, about 1800, a series of very sentimental novels

Friar Bacon's Oracle.[15] Of no given Book, not even of a Fashionable Novel, can you predicate with certainty that its vacuity is absolute; that there are not other vacuities which shall partially replenish themselves therefrom, and esteem it a *plenum*.[16] How knowest thou, may the distressed Novel-wright exclaim, that I, here where I sit, am the Foolishest of existing mortals; that this my Long-ear of a Fictitious Biography shall not find one and the other, into whose still longer ears it may be the means, under Providence, of instilling somewhat? We answer, None knows, none can certainly know: therefore, write on, worthy Brother, even as thou canst, even as it has been given thee.

Here, however, in regard to 'Fictitious Biographies,' and much other matter of like sort, which the greener mind in these days inditeth, we may as well insert some singular sentences on the importance and significance of *Reality*, as they stand written for us in Professor Gottfried Sauerteig's[17] *Æsthetische Springwurzeln*; a Work, perhaps, as yet new to most English readers. The Professor and Doctor is not a man whom we can praise without reservation; neither shall we say that his *Springwurzeln* (a sort of magical pick-locks, as he affectedly names them) are adequate to '*start*' every *bolt* that locks-up an æsthetic mystery: nevertheless, in his crabbed, one-sided way, he sometimes hits masses of the truth. We endeavour to translate faithfully, and trust the reader will find it worth serious perusal:

'The significance, even for poetic purposes,' says Sauerteig, 'that lies in REALITY is too apt to escape us; is perhaps only now beginning to be discerned. When we named *Rousseau's Confessions*[18] an elegiaco-didactic Poem, we meant more than an empty figure of speech; we meant a historical scientific fact.

'Fiction, while the feigner of it knows that he is feigning, partakes, more than we suspect, of the nature of *lying*; and has ever an, in some degree, unsatisfactory character. All Mythologies were once Philosophies; were *believed*: the Epic Poems of old time, so long as they continued *epic*, and had any complete impressiveness, were Histories, and understood to be narratives of *facts*. In so far as Homer employed his gods as mere ornamental fringes, and had not himself, or at least did not expect his hearers to have, a belief that they were real agents in those antique doings; so far did he fail to be *genuine*; so far was he a partially *hollow* and false singer; and sang to please only a portion of man's mind, not the whole thereof.

'Imagination is, after all, but a poor matter when it has to part company with Understanding, and even front it hostilely in flat contradiction. Our mind is divided in twain: there is contest; wherein that which is weaker must needs come to the worse. Now of all feelings, states, principles, call it what you will, in man's mind, is not Belief the clearest, strongest; against which all others contend in vain? Belief is, indeed, the beginning and first condition of all spiritual Force whatsoever: only in so

15. Allusion to the legend about Roger Bacon (1214?–94), that he constructed a head of brass which, if he should hear it speak, would enable him to surround England with a wall of brass. His servant, Miles, set to watch the head, allowed his master to sleep while the head said, 'Time is,' 'Time was,' and 'Time is past;' whereupon the head fell and broke in pieces. The legend is used as a theme in Robert Greene's *Friar Bacon and Friar Bungay*, acted in 1594.

16. Space entirely filled with matter.

17. Gottfried Sour-dough. Carlyle employs the device of a humorous pseudonym, to permit himself greater liberty in statement and in style. He is thus able to quote or paraphrase his own works, or to draw from his note-books and journals such materials as he has not been able to use in more formal writings.

18. Jean-Jacques Rousseau (1712–78), in writing his *Confessions* (published after his death), enormously quickened, if he did not create, the modern desire for biography and autobiography.

far as Imagination, were it but momentarily, is *believed*, can there be any use or meaning in it, any enjoyment of it. And what is momentary Belief? The enjoyment of a moment. Whereas a perennial Belief were enjoyment perennially, and with the whole united soul.

'It is thus that I judge of the Supernatural in an Epic Poem; and would say, the instant it has ceased to be authentically supernatural, and become what you call "Machinery": sweep it out of sight (*schaff' es mir vom Halse*)! Of a truth, that same "Machinery," about which the critics make such hubbub, was well named *Machinery*; for it is in very deed mechanical, nowise inspired or poetical. Neither for us is there the smallest æsthetic enjoyment in it; save only in this way; that we believe it *to have been believed*, — by the Singer or his Hearers; into whose case we now laboriously struggle to transport ourselves; and so, with stinted enough result, catch some reflex of the Reality, which for them was wholly real, and visible face to face. Whenever it has come so far that your "Machinery" is avowedly mechanical and unbelieved, — what is it else, if we dare tell ourselves the truth, but a miserable, meaningless Deception, kept-up by old use and wont alone? If the gods of an *Iliad* are to us no longer authentic Shapes of Terror, heart-stirring, heart-appalling, but only vague-glittering Shadows, — what must the dead Pagan gods of an *Epigoniad* [19] be, the dead-living Pagan-Christian gods of a *Lusiad*,[20] the concrete-abstract, evangelical-metaphysical gods of a *Paradise Lost*? Superannuated lumber! Cast raiment, at best; in which some poor mime, strutting and swaggering, may or may not set forth new noble Human Feelings (again a Reality), and so secure, or not secure, our pardon of such hoydenish masking; for which, in any case, he has a pardon to *ask*.

'True enough, none but the earliest Epic Poems can claim this distinction of entire credibility, of Reality: after an *Iliad*, a *Shaster*, a *Koran*,[21] and other the like primitive performances, the rest seem, by this rule of mine, to be altogether excluded from the list. Accordingly, what *are* all the rest, from Virgil's *Æneid* downwards, in comparison? Frosty, artificial, heterogeneous things; more of gumflowers [22] than of roses; at the best, of the two mixed incoherently together: to some of which, indeed, it were hard to deny the title of Poems; yet to no one of which can that title belong in any sense even resembling the old high one it, in those old days, conveyed, — when the epithet "divine" or "sacred" as applied to the uttered Word of man, was not a vain metaphor, a vain sound, but a real name with meaning. Thus, too, the farther we recede from those early days, when Poetry, as true Poetry is always, was still sacred or divine, and inspired (what ours, in great part, only pretends to be), — the more impossible becomes it to produce any, we say not true Poetry, but tolerable semblance of such: the hollower, in particular, grow all manner of Epics; till at length, as in this generation, the very name of Epic sets men a-yawning, the announcement of a new Epic is received as a public calamity.

'But what if the *impossible* being once for all quite discarded, the *probable* be well adhered to: how stands it with fiction *then*? Why, then, I would say, the evil is much mended, but nowise completely cured. We have then, in place of the wholly dead modern Epic, the partially living modern Novel; to which latter it is much easier to lend that above-mentioned, so essential "momentary credence" than to the

22. Artificial flowers.

former: indeed, infinitely easier; for the former being flatly incredible, no mortal *can* for a moment credit it, for a moment enjoy it. Thus, here and there, a *Tom Jones*, a *Meister*, a *Crusoe*,[23] will yield no little solacement to the minds of men; though still immeasurably less than a *Reality* would, were the significance thereof as impressively unfolded, were the genius that could so unfold it once given us by the kind Heavens. Neither say thou that proper Realities are wanting: for Man's Life, now, as of old, is the genuine work of God; wherever there is a Man, a God also is revealed, and all that is Godlike: a whole epitome of the Infinite, with its meanings, lies enfolded in the Life of every Man. Only, alas, that the Seer to discern this same Godlike, and with fit utterance *unfold* it for us, is wanting, and may long be wanting!

'Nay, a question arises on us here, wherein the whole German reading-world will eagerly join: Whether man *can* any longer be so interested by the spoken Word, as he often was in those primeval days, when rapt away by its inscrutable power, he pronounced it, in such dialect as he had, to be *transcendental* (to *transcend* all measure), to be sacred, prophetic and the inspiration of a god? For myself, I (*ich meines Ortes*), by faith or by insight, do heartily understand that the answer to such question will be, Yea! For never that I could in searching find out, has Man been, by Time which devours so much, deprivated of any faculty whatsoever that he in any era was possessed of. To my seeming, the babe born yesterday has all the organs of Body, Soul and Spirit, and in exactly the same combination and entireness, that the oldest Pelasgic[24] Greek, or Mesopotamian Patriarch, or Father Adam himself could boast of. Ten fingers, one heart with venous and arterial blood therein, still belong to man that is born of woman: when did he lose any of his spiritual Endowments either; above all, his highest spiritual Endowment, that of revealing Poetic Beauty, and of adequately receiving the same? Not the material, not the susceptibility is wanting; only the Poet, or long series of Poets, to work on these. True, alas too true, the Poet *is* still utterly wanting, or all but utterly: nevertheless have we not centuries enough before us to produce him in? Him and much else! — I, for the present, will but predict that chiefly by working more and more on REALITY, and evolving more and more wisely *its* inexhaustible meanings; and, in brief, speaking forth in fit utterance whatsoever our whole soul *believes*, and ceasing to speak forth what thing soever our whole soul does not believe, — will this high emprise be accomplished, or approximated to.'

These notable, and not unfounded, though partial and *deep*-seeing rather than *wide*-seeing observations on the great import of REALITY, considered even as a poetic material, we have inserted the more willingly, because a transient feeling to the same purpose may often have suggested itself to many readers; and, on the whole, it is good that every reader and every writer understand, with all intensity of conviction, what quite infinite worth lies in *Truth*: how all-pervading, omnipotent, in man's mind, is the thing we name *Belief*. For the rest, Herr Sauerteig, though one-sided, on this matter of Reality, seems heartily persuaded, and is not perhaps so ignorant as he looks. It cannot be unknown to him, for example, what noise is made about 'Invention'; what a supreme rank this faculty is reckoned to hold in the poetic endowment. Great truly is Invention: nevertheless, that is but a poor exercise of it with which Belief is not concerned. 'An Irishman with whisky in his

head,' as poor Byron said, will invent you, in this kind, till there is enough and to spare. Nay, perhaps, if we consider well, the highest exercise of Invention has, in very deed, nothing to do with Fiction; but is an invention of new Truth, what we can call a Revelation; which last does undoubtedly transcend all other poetic efforts, nor can Herr Sauerteig be too loud in its praises. But, on the other hand, whether such effort is still possible for man, Herr Sauerteig and the bulk of the world are probably at issue! — and will probably continue so till that same 'Revelation,' or new 'Invention of Reality,' of the sort he desiderates, shall itself make its appearance.

Meanwhile, quitting these airy regions, let any one bethink him how impressive the smallest historical *fact* may become, as contrasted with the grandest *fictitious event*; what an incalculable force lies for us in this consideration: The Thing which I here hold imaged in my mind did actually occur; was, in very truth, an element in the system of the All, whereof I too form part; had therefore, and has, through all time, an authentic being; is not a dream, but a reality! We ourselves can remember reading, in *Lord Clarendon*,[25] with feelings perhaps somehow accidentally opened to it, — certainly with a depth of impression strange to us then and now, — that insignificant-looking passage, where Charles, after the battle of Worcester, glides down, with Squire Careless, from the Royal Oak, at nightfall, being hungry: how, 'making a shift to get over hedges and ditches, after walking at least eight or nine miles, which were the more grievous to the King by the weight of his boots (for he could not put *them* off when he cut off his hair, for want of shoes), before morning they came to *a poor cottage, the owner whereof, being a Roman Catholic, was known to Careless.*' How this poor drudge, being knocked-up from his snoring, 'carried them into a little barn full of hay, which was a better lodging than he had for himself'; and by and by, not without difficulty, brought his Majesty 'a piece of bread and a great pot of buttermilk,' saying candidly that 'he himself lived by his daily labour, and that what he had brought him was the fare he and his wife had': on which nourishing diet his Majesty, 'staying upon the haymow,' feeds thankfully for two days; and then departs, under new guidance, having first changed clothes, down to the very shirt and 'old pair of shoes,' with his landlord; and so, as worthy Bunyan has it, 'goes on his way, and sees him no more.' Singular enough, if we will think of it! This, then, was a genuine flesh-and-blood Rustic of the year 1651: he did actually swallow bread and buttermilk (not having ale and bacon), and do field-labour: with these hobnailed 'shoes' has sprawled through mud-roads in winter, and, jocund or not, driven his team a-field in summer: he made bargains; had chafferings and higglings, now a sore heart, now a glad one; was born; was a son, was a father; toiled in many ways, being forced to it, till the strength was all worn out of him; and then — lay down 'to rest his galled back,' and sleep there till the long-distant morning! — How comes it, that he alone of all the British rustics who tilled and lived along with him, on whom the blessed sun on that same 'fifth day of September' was shining, should have chanced to rise on us; that this poor pair of clouted Shoes, out of the million million hides that have been tanned, and cut, and worn, should still subsist, and hang visibly together? We see him but for a moment; for one moment, the blanket of the Night is rent asunder, so that we behold and see, and then closes over him — forever.

So, too, in some *Boswell's Life of Johnson*, how indelible and magically bright does many a little *Reality* dwell in our remembrance! There is no need that the personages on the scene be a King and Clown;

25. *History of the Rebellion*, iii.625. [Carlyle's note.]

that the scene be the Forest of the Royal Oak, 'on the borders of Staffordshire'; need only that the scene lie on this old firm Earth of ours, where we also have so surprisingly arrived; that the personages be *men*, and *seen* with the eyes of a man. Foolish enough, how some slight, perhaps mean and even ugly incident, if *real* and well presented, will fix itself in a susceptive memory, and lie ennobled there; silvered over with the pale cast of thought, with the pathos which belongs only to the Dead. For the Past is all holy to us; the Dead are all holy, even they that were base and wicked while alive. Their baseness and wickedness was not *They*, was but the heavy and unmanageable Environment that lay round them, with which they fought unprevailing: *they* (the ethereal god-given Force that dwelt in them, and was their *Self*) have now shuffled-off that heavy Environment, and are free and pure: their life-long Battle, go how it might, is all ended, with many wounds or with fewer; they have been recalled from it, and the once harsh-jarring battlefield has become a silent awe-inspiring Golgotha, and *Gottesacker* (Field of God)! — Boswell relates this in itself smallest and poorest of occurrences: 'As we walked along the Strand tonight, arm in arm, a woman of the town accosted us in the usual enticing manner. "No, no, my girl," said Johnson; "it won't do."[26] He, however, did not treat her with harshness; and we talked of the wretched life of such women.' Strange power of *Reality*! Not even this poorest of occurrences, but now, after seventy years are come and gone, has a meaning for us. Do but consider that it is *true*; that it did in very deed occur! That unhappy Outcast, with all her sins and woes, her lawless desires, too complex mischances, her wailings and her riotings, has departed utterly; alas! her siren finery has got all besmutched, ground, generations since, into dust and smoke; of her degraded body, and whole miserable earthly existence, all is away: *she* is no longer here, but far from us, in the bosom of Eternity, — whence we too came, whither we too are bound! Johnson said, 'No, no, my girl; it won't do'; and then 'we talked'; — and herewith the wretched one, seen but for the twinkling of an eye, passes on into the utter Darkness. No high Calista,[27] that ever issued from Story-teller's brain, will impress us more deeply than this meanest of the mean; and for a good reason: That *she* issued from the Maker of Men.

It is well worth the Artist's while to examine for himself what it is that gives such pitiable incidents their memorableness; his aim likewise is, above all things, to be *memorable*. Half the effect, we already perceive, depends on the object; on its being *real*, on its being really *seen*. The other half will depend on the observer; and the question now is: How are real objects to be *so* seen; on what quality of observing, or of style in describing, does this so intense pictorial power depend? Often a slight circumstance contributes curiously to the result: some little, and perhaps to appearance accidental, feature is presented; a light-gleam, which instantaneously *excites* the mind, and urges it to complete the picture, and evolve the meaning thereof for itself. By critics, such light-gleams and their almost magical influence have frequently been noted: but the power to produce such, to select such features as will produce them, is generally treated as a knack, or trick of the trade, a secret for being 'graphic'; whereas these magical feats are, in truth, rather inspirations; and the gift of performing them, which acts unconsciously, without forethought, and as if by nature alone, is properly a *genius* for description.

One grand, invaluable secret there is, however, which includes all the rest, and,

26. See Boswell's *Johnson*, July 1763 (Oxf.Stand. Ed., I,305).

27. The haughty heroine of *The Fair Penitent* (produced in 1703), by Nicholas Rowe (1674–1718). Type of unreal heroine in 'heroic tragedy.'

what is comfortable, lies clearly in every man's power: *To have an open loving heart, and what follows from the possession of such.* Truly, it has been said, emphatically in these days ought it to be repeated: A loving Heart is the beginning of all Knowledge. This it is that opens the whole mind, quickens every faculty of the intellect to do its fit work, that of *knowing*; and therefrom, by sure consequence, of *vividly uttering-forth*. Other secret for being 'graphic' is there none, worth having: but this is an all-sufficient one. See, for example, what a small Boswell can do! Hereby, indeed, is the whole man made a living mirror, wherein the wonders of this ever-wonderful Universe are, in their true light (which is ever a magical, miraculous one) represented, and reflected back on us. It has been said, 'the heart sees farther than the head': but, indeed, without the seeing heart, there is no true seeing for the head so much as possible; all is mere *oversight*, hallucination and vain superficial phantasmagoria, which can permanently profit no one.

Here, too, may we not pause for an instant, and make a practical reflection? Considering the multitude of mortals that handle the Pen in these days, and can mostly spell, and write without glaring violations of grammar, the question naturally arises: How is it, then, that no Work proceeds from them, bearing any stamp of authenticity and permanence; of worth for more than one day? Ship-loads of Fashionable Novels, Sentimental Rhymes, Tragedies, Farces, Diaries of Travel, Tales by flood and field, are swallowed monthly into the bottomless Pool: still does the Press toil; innumerable Paper-makers, Compositors, Printers' Devils, Book-binders, and Hawkers grown hoarse with loud proclaiming, rest not from their labour; and still, in torrents, rushes on the great array of Publications, unpausing, to their final home; and still Oblivion, like the Grave, cries, Give! Give! How is it that of all these countless multitudes, no one can attain to the smallest mark of excellence, or produce aught that shall endure longer than 'snowflake on the river,'[28] or the foam of penny beer? We answer: Because they *are* foam; because there is no *Reality* in them. These Three Thousand men, women and children, that make up the army of British Authors, do not, if we will well consider it, *see* anything whatever; consequently *have* nothing that they can record and utter, only more or fewer things that they can plausibly pretend to record. The Universe, of Man and Nature, is still quite shut-up from them; the 'open secret'[29] still utterly a secret; because no sympathy with Man or Nature, no love and free simplicity of heart has yet unfolded the same. Nothing but a pitiful Image of their own pitiful Self, with its vanities, and grudgings, and ravenous hunger of all kinds, hangs forever painted in the retina of these unfortunate persons; so that the starry ALL, with whatsoever it embraces, does but appear as some expanded magic-lantern shadow of that same Image, — and naturally looks pitiful enough.

It is vain for these persons to allege that they are naturally without gift, naturally stupid and sightless, and so *can* attain to no knowledge of anything; therefore, in writing of anything, must needs write falsehoods of it, there being in it no truth for them. Not so, good Friends. The stupidest of you has a certain faculty; were it but that of articulate speech (say, in the Scottish, the Irish, the Cockney dialect, or even in 'Governess-English'), and of physically discerning what lies under your nose. The stupidest of you would perhaps grudge to be compared in faculty with James Boswell; yet see what he has produced! You do not use your faculty honestly; your heart is shut up; full of greediness, malice, discontent; so your intellectual sense cannot be open. It is vain

28. Based on Burns's *Tam o' Shanter*, 61–62.

29. A phrase from Goethe's *Maximen und Reflexionen* (see ed. Hecker, Weimar, 1907, no.201).

also to urge that James Boswell had opportunities; saw great men and great things, such as you can never hope to look on. What make ye of Parson White in Selborne? [30] He had not only no great men to look on, but not even men; merely sparrows and cock-chafers: yet has he left us a *Biography* of these; which, under its title *Natural History of Selborne*, still remains valuable to us; which has copied a little sentence or two *faithfully* from the Inspired Volume of Nature, and so is itself not without inspiration. Go ye and do likewise. Sweep away utterly all frothiness and falsehood from your heart; struggle unweariedly to acquire, what is possible for every god-created Man, a free, open, humble soul: *speak not at all, in any wise, till you have somewhat to speak*; care not for the *reward* of your speaking, but simply and with undivided mind for the *truth* of your speaking: then be placed in what section of Space and of Time soever, do but open your eyes, and they shall actually *see*, and bring you real *knowledge*, wondrous, worthy of *belief*; and instead of one Boswell and one White, the world will rejoice in a thousand, — stationed on their thousand several watch-towers, to instruct us by indubitable documents, of whatsoever in our so stupendous World comes to light and *is*! O, had the Editor of this Magazine but a magic rod to turn all that not inconsiderable Intellect, which now deluges us with artificial fictitious soap-lather, and mere Lying, into the faithful study of Reality, — what knowledge of great, everlasting Nature, and of Man's ways and doings therein, would not every year bring us in! Can we but change one single soap-latherer and mountebank Juggler, into a true Thinker and Doer, who even *tries* honestly to think and do, — great will be our reward.

30. Gilbert White (1720–93), curate of Selborne, began in 1751 to keep a 'Garden Kalendar,' later a 'Naturalist's Journal.' In 1789, he published his *Natural History and Antiquities of Selborne*.

But to return; or rather from this point to begin our journey! If now, what with Herr Sauerteig's *Springwurzeln*, what with so much lucubration of our own, it have become apparent how deep, immeasurable is the 'worth that lies in *Reality*,' and farther, how exclusive the interest which man takes in Histories of Man, — may it not seem lamentable, that so few genuinely good *Biographies* have yet been accumulated in Literature; that in the whole world, one cannot find, going strictly to work, above some dozen, or baker's dozen, and those chiefly of very ancient date? Lamentable; yet, after what we have just seen, accountable. Another question might be asked: How comes it that in England we have simply one good Biography, this *Boswell's Johnson*; and of good, indifferent, or even bad attempts at Biography, fewer than any civilised people? Consider the French and Germans, with their Moreris, Bayles, Jördenses, Jöchers,[31] their innumerable *Mémoires*, and *Schilderungen*,[32] and *Biographies Universelles*; not to speak of Rousseaus, Goethes, Schubarts,[33] Jung-Stillings: [34] and then contrast with these our poor Birches and Kippises and Pecks; [35] the

31. Louis Moreri (1643–80), author of a *Grand dictionnaire historique* (1674). — Pierre Bayle (1647–1706), French philosopher, author of the *Dictionnaire historique et critique* (1697–1702). — Karl Heinrich Jordens (1757–1835), author of a *Lexikon der deutschen Dichter und Prosaisten* (1806–11). — Christian Gottlieb Jocher (1694–1758), German lexicographer.

32. 'Sketches,' or 'Portraits.'

33. Christian Friedrich Daniel Schubart (1739–91), wild and dissolute poet of the German Romantic era, who wrote his *Life and Opinions* (1791–93).

34. Johann Heinrich Jung-Stilling (1740–1817), friend of Goethe and Herder; author of novels and mystical works, and of his memorable *Heinrich Stillings Jugend* (1777).

35. Thomas Birch (1705–66), divine, and secretary of the Royal Society (1752–65), published historical works and contributed to a *General Dictionary, Historical and Critical* (1731–41). — Andrew Kippis (1725–95), nonconformist, divine, and tutor, whose chief literary work was the preparation of the second edition of

whole breed of whom, moreover, is now extinct!

With this question, as the answer might lead us far, and come out unflattering to patriotic sentiment, we shall not intermeddle; but turn rather, with great pleasure, to the fact, that one excellent Biography *is* actually English; — and even now lies, in Five new Volumes, at our hand, soliciting a new consideration from us; such as, age after age (the Perennial showing ever new phases as *our* position alters), it may long be profitable to bestow on it; — to which task we here, in this position, in this age, gladly address ourselves.

First, however, let the foolish April-fool Day [36] pass by; and our Reader, during these twenty-nine days of uncertain weather that will follow, keep pondering, according to convenience, the purport of BIOGRAPHY in general: then, with the blessed dew of May-day, and in unlimited convenience of space, shall all that we have written on *Johnson* and *Boswell's Johnson* and *Croker's Boswell's Johnson* be faithfully laid before him.

the *Biographia Britannica* (1778, 1793, 1795). — Francis Peck (1692–1743), antiquary, prebendary of Lincoln, whose 'remarkable faculty for the accumulation of out-of-the-way facts' appeared in his *Desiderata Curiosa* (1732–35), and in his memoirs of Cromwell and of Milton (1740).

36. Allusion to the month during which the present essay appeared in *Fraser's Magazine* in 1832.

BOSWELL'S LIFE OF JOHNSON

ÆSOP'S Fly, sitting on the axle of the chariot, has been much laughed at for exclaiming: What a dust I do raise! Yet which of us, in his way, has not sometimes been guilty of the like? Nay, so foolish are men, they often, standing at ease and as spectators on the highway, will volunteer to exclaim of the Fly (not being tempted to it, as *he* was) exactly to the same purport: What a dust *thou* dost raise! Smallest of mortals, when mounted aloft by circumstances, come to seem great; smallest of phenomena connected with them are treated as important, and must be sedulously scanned, and commented upon with loud emphasis.

That Mr. Croker [1] should undertake to edit *Boswell's Life of Johnson*, was a praiseworthy but no miraculous procedure: neither could the accomplishment of such undertaking be, in an epoch like ours, anywise regarded as an event in Universal History; the right or the wrong accomplishment thereof was, in very truth, one of the most insignificant of things. However, it sat in a great environment, on the axle of a high, fast-rolling, parliamentary chariot; and all the world has exclaimed over it, and the author of it: What a dust thou dost raise! List to the Reviews, and 'Organs of Public Opinion,' from the *National Omnibus* upwards: criticisms, vituperative and laudatory, stream from their thousand throats of brass and of leather; here chanting *Io-pæans*; [2] there grating harsh thunder or vehement shrew-mouse squeaklets; till the general ear is filled, and nigh deafened. Boswell's Book had a noiseless birth, compared with this Edition of Boswell's Book. On the other hand, consider with what degree of tumult *Paradise Lost* and the *Iliad* were ushered in!

To swell such clamour, or prolong it beyond the time, seems nowise our vocation

1. John Wilson Croker (1780–1857), a contributor to the *Quarterly Review*, and notorious for his scathing criticism of Keats's *Endymion*. His edition of Boswell's *Life of Johnson* was severely criticized not only by Carlyle but also by Macaulay, whose *History of England* was the subject of Croker's attack in 1849. His writings are remembered for their expression of malevolence, and of obtuseness in the presence of contemporary works of genius.

2. Plural for 'Hail, Apollo!'

here. At most, perhaps, we are bound to inform simple readers, with all possible brevity, what manner of performance and Edition this is; especially, whether, in our poor judgment, it is worth laying out three pounds sterling upon, yea or not. The whole business belongs distinctly to the lower ranks of the trivial class.

Let us admit, then, with great readiness, that as Johnson once said, and the Editor repeats, 'all works which describe manners require notes in sixty or seventy years, or less';[3] that, accordingly, a new Edition of Boswell was desirable; and that Mr. Croker has given one. For this task he had various qualifications: his own voluntary resolution to do it; his high place in society, unlocking all manner of archives to him; not less, perhaps, a certain anecdotico-biographic turn of mind, natural or acquired; we mean, a love for the *minuter* events of History, and talent for investigating these. Let us admit too, that he has been very diligent; seems to have made inquiries perseveringly far and near; as well as drawn freely from his own ample stores; and so tells us, to appearance quite accurately, much that he has not found lying on the highways, but has had to seek and dig for. Numerous persons, chiefly of quality, rise to view in these Notes; when and also where they came into this world, received office or promotion, died and were buried (only what they *did*, except digest, remaining often too mysterious), — is faithfully enough set down. Whereby all that their various and doubtless widely-scattered Tombstones could have taught us, is here presented, at once, in a bound Book. Thus is an indubitable conquest, though a small one, gained over our great enemy, the all-destroyer Time; and as such shall have welcome.

Nay, let us say that the spirit of Diligence, exhibited in this department, seems to attend the Editor honestly throughout: he keeps everywhere a watchful outlook on his Text; reconciling the distant with the present, or at least indicating and regretting their irreconcilability; elucidating, smoothing down; in all ways exercising, according to ability, a strict editorial superintendence. Any little Latin or even Greek phrase is rendered into English, in general with perfect accuracy; citations are verified, or else corrected. On all hands, moreover, there is a certain spirit of Decency maintained and insisted on: if not good morals, yet good manners, are rigidly inculcated; if not Religion, and a devout Christian heart, yet Orthodoxy, and a cleanly Shovel-hatted[4] look, — which, as compared with flat Nothing, is something very considerable. Grant too, as no contemptible triumph of this latter spirit, that though the Editor is known as a decided Politician and Party-man, he has carefully subdued all temptations to transgress in that way: except by quite involuntary indications, and rather as it were the pervading temper of the whole, you could not discover on which side of the Political Warfare he is enlisted and fights. This, as we said, is a great triumph of the Decency-principle: for this, and for these other graces and performances, let the Editor have all praise.

Herewith, however, must the praise unfortunately terminate. Diligence, Fidelity, Decency, are good and indispensable: yet, without Faculty, without Light, they will not do the work. Along with that Tombstone-information, perhaps even without much if it, we could have liked to gain some answer, in one way or other, to this wide question: What and how was *English Life* in Johnson's time; wherein has ours grown to differ therefrom? In other words: What things have we to forget, what to fancy and remember, before we, from such distance, can put ourselves in Johnson's *place*; and so, in the full sense

3. Said with reference to *The Spectator* (see Boswell's *Life of Johnson*, under April 3, 1773).

4. Allusion to the broad-brimmed hat, turned up at the sides like a shovel, worn by the clergy of the Church of England. 'Shovel-hattery' is a term used often by Carlyle to denote hypocritical conformity in religious matters.

of the term, *understand* him, his sayings and his doings? This was indeed specially the problem which a Commentator and Editor had to solve: a complete solution of it should have lain in him, his whole mind should have been filled and prepared with perfect insight into it; then, whether in the way of express Dissertation, of incidental Exposition and Indication, opportunities enough would have occurred of bringing out the same: what was dark in the figure of the Past had thereby been enlightened; Boswell had, not in show and word only, but in very fact, been made *new* again, readable to us who are divided from him, even as he was to those close at hand. Of all which very little has been attempted here; accomplished, we should say, next to nothing, or altogether nothing.

Excuse, no doubt, is in readiness for such omission; and, indeed, for innumerable other failings; — as where, for example, the Editor will punctually explain what is already sun-clear; and then anon, not without frankness, declare frequently enough that 'the Editor does not understand,' that 'the Editor cannot guess,' — while, for most part, the Reader cannot help both guessing and seeing. Thus, if Johnson say, in one sentence, that 'English names should not be used in Latin verses'; and then, in the next sentence, speak blamingly of 'Carteret being used as a dactyl,' will the generality of mortals detect any puzzle there? Or again, where poor Boswell writes: 'I always remember a remark made to me by a Turkish lady, educated in France: *"Ma foi, monsieur, notre bonheur dépend de la façon que notre sang circule;"*'[5] — though the Turkish lady here speaks English-French, where is the call for a Note like this: 'Mr. Boswell no doubt fancied these words had some meaning, or he would hardly have quoted them: but what that meaning is, the Editor cannot guess'? The Editor is clearly no witch at a riddle. — For these and all kindred deficiencies the excuse, as we said, is at hand; but the fact of their existence is not the less certain and regrettable.

Indeed it, from a very early stage of the business, becomes afflictively apparent, how much the Editor, so well furnished with all external appliances and means, is from within unfurnished with means for forming to himself any just notion of Johnson, or of Johnson's Life; and therefore of speaking on that subject with much hope of edifying. Too lightly is it from the first taken for granted that *Hunger*, the great basis of our life, is also its apex and ultimate perfection; that as 'Neediness and Greediness and Vainglory' are the chief qualities of most men, so no man, not even a Johnson, acts or can think of acting on any other principle. Whatsoever, therefore, cannot be referred to the two former categories (Need and Greed), is without scruple ranged under the latter. It is here properly that our Editor becomes burdensome; and, to the weaker sort, even a nuisance. 'What good is it,' will such cry, 'when we had still some faint shadow of belief that man was better than a selfish Digesting-machine, what good is it to poke in, at every turn, and explain how this and that which we thought noble in old Samuel, was vulgar, base; that for him too there was no reality but in the Stomach; and except Pudding, and the finer species of pudding which is named Praise, life had no pabulum? Why, for instance, when we know that Johnson *loved* his good Wife, and says expressly that their marriage was "a love-match on both sides," — should two closed lips open to tell us only this: "Is it not possible that the obvious advantage of having a woman of experience to superintend an establishment of this kind (the Edial School) may have contributed to a match so disproportionate in point of age? — ED."? Or again when, in the Text, the honest cynic speaks freely of his former poverty, and it is known that he once lived on fourpence-halfpenny a-day, — need a

5. 'Indeed, my dear Sir, our happiness depends upon the way our blood circulates.'

Commentator advance, and comment thus: "When we find Dr. Johnson tell unpleasant truths to, or of, other men, let us recollect that he does not appear to have spared himself, on occasions in which he might be forgiven for doing so"? Why in short,' continues the exasperated Reader, 'should Notes of this species stand affronting me, when there might have been no Note at all?'—Gentle Reader, we answer, Be not wroth. What other could an honest Commentator do, than give thee the best he had? Such was the picture and theorem he had fashioned for himself of the world and of man's doings therein: take it, and draw wise inferences from it. If there did exist a Leader of Public Opinion, and Champion of Orthodoxy in the Church of Jesus of Nazareth, who reckoned that man's glory consisted in not being poor; and that a Sage, and Prophet of his time, must needs blush because the world had paid him at that easy rate of fourpence-halfpenny *per diem*—was not the fact of such existence worth knowing, worth considering?

Of a much milder hue, yet to us practically of an all-defacing, and for the present enterprise quite ruinous character,—is another grand fundamental failing; the last we shall feel ourselves obliged to take the pain of specifying here. It is, that our Editor has fatally, and almost surprisingly, mistaken the limits of an Editor's function; and so, instead of working on the margin with his Pen, to elucidate as best might be, strikes boldly into the body of the page with his Scissors, and there clips at discretion! Four Books Mr. C. had by him, wherefrom to gather light for the fifth, which was Boswell's. What does he do but now, in the placidest manner,—slit the whole five into slips, and sew these together into a *sextum quid*,[6] exactly at his own convenience; giving Boswell the credit of the whole! By what art-magic, our readers ask, has he united them? By the simplest of all: by Brackets. Never before was the full virtue of the Bracket made manifest. You begin a sentence under Boswell's guidance, thinking to be carried happily through it by the same: but no; in the middle, perhaps after your semicolon, and some consequent 'for,'—starts up one of these Bracket-ligatures, and stitches you in from half a page to twenty or thirty pages of a Hawkins, Tyers, Murphy, Piozzi;[7] so that often one must make the old sad reflection, Where we are, we know; whither we are going, no man knoweth! It is truly said also, There is much between the cup and the lip; but here the case is still sadder: for not till after consideration can you ascertain, now when the cup is *at* the lip, what liquor it is you are imbibing; whether Boswell's French wine which you began with, or some Piozzi's ginger-beer, or Hawkins's entire,[8] or perhaps some other great Brewer's penny-swipes[9] or even alegar,[10] which has been surreptitiously substituted instead thereof. A situation almost original; not to be tried a second time! But, in fine, what ideas Mr. Croker entertains of a literary *whole* and the thing called *Book*, and how the very Printer's Devils did not rise in mutiny against such a conglomeration as this, and refuse to print it,—may remain a problem.

6. 'Sixth entity, or object.'

7. Sir John Hawkins (1719–89), author, member of Johnson's club at the King's Head, drew up Johnson's will, and published *Johnson's Life and Works* (1787–89).—Thomas Tyers (1726–87), author, barrister, joint-manager of Vauxhall Gardens, was a favorite of Dr. Johnson's.—Arthur Murphy (1727–1805), author and actor, wrote an *Essay on the Life and Genius of Samuel Johnson* (1792).—Hester Lynch Piozzi (1741–1821), at whose house in Streatham (when she was Mrs. Henry Thrale) Johnson had been almost a member of the family, wrote, and published in 1786, *Anecdotes of the Late Samuel Johnson*; two years later she published her correspondence with Dr. Johnson.

8. Porter, or stout ('entire' because it combined the flavors of beer, ale, and twopenny).

9. Very cheap beer or ale, either poor, thin, or spoiled.

10. Sour ale.

And now happily our say is said. All faults, the Moralists tell us, are properly *shortcomings*; crimes themselves are nothing other than a *not doing enough*; *a fighting*, but with defective vigour. How much more a mere insufficiency, and this after good efforts, in handicraft practice! Mr. Croker says: 'The worst that can happen is that all the present Editor has contributed may, if the reader so pleases, be rejected as *surplusage*.' It is our pleasant duty to take with hearty welcome what he has given; and render thanks even for what he meant to give. Next and finally, it is our painful duty to declare, aloud if that be necessary, that his gift, as weighed against the hard money which the Booksellers demand for giving it you, is (in our judgment) very greatly the lighter. No portion, accordingly, of our small floating capital has been embarked in the business, or shall ever be; indeed, were we in the market for such a thing, there is simply *no* Edition of *Boswell* to which this last would seem preferable. And now enough, and more than enough!

We have next a word to say of James Boswell. Boswell has already been much commented upon; but rather in the way of censure and vituperation than of true recognition. He was a man that brought himself much before the world; confessed that he eagerly coveted fame, or if that were not possible, notoriety; of which latter as he gained far more than seemed his due, the public were incited, not only by their natural love of scandal, but by a special ground of envy, to say whatever ill of him could be said. Out of the fifteen millions that then lived, and had bed and board, in the British Islands, this man has provided us a greater *pleasure* than any other individual, at whose cost we now enjoy ourselves; perhaps has done us a greater *service* than can be specially attributed to more than two or three: yet, ungrateful that we are, no written or spoken eulogy of James Boswell anywhere exists; his recompense in solid pudding (so far as copyright went) was not excessive; and as for the empty praise, it has altogether been denied him. Men are unwiser than children; they do *not* know the hand that feeds them.

Boswell was a person whose mean or bad qualities lay open to the general eye; visible, palpable to the dullest. His good qualities, again, belonged not to the Time he lived in; were far from common then; indeed, in such a degree, were almost unexampled; not recognisable therefore by every one; nay, apt even (so strange had they grown) to be confounded with the very vices they lay contiguous to, and had sprung out of. That he was a wine-bibber and gross liver; gluttonously fond of whatever would yield him a little solacement, were it only of a stomachic character, is undeniable enough. That he was vain, heedless, a babbler; had much of the sycophant, alternating with the braggadocio, curiously spiced too with an all-pervading dash of the coxcomb; that he gloried much when the Tailor, by a court-suit, had made a new man of him; that he appeared at the Shakspeare Jubilee with a riband, imprinted 'CORSICA BOSWELL,'[11] round his hat; and in short, if you will, lived no day of his life without doing and saying more than one pretentious ineptitude: all this unhappily is evident as the sun at noon. The very look of Boswell seems to have signified so much. In that cocked nose, cocked partly in triumph over his weaker fellow-creatures, partly to snuff-up the smell of coming pleasure, and scent it from afar; in those bag-cheeks, hanging like half-filled wine-skins, still able to contain more; in that coarsely-protruded shelf-mouth, that fat dewlapped chin; in all this,

11. Boswell was introduced to General Paoli, the Corsican patriot, in 1765–66, during a continental trip. As a result he became absorbed in Corsican affairs, and published *An Account of Corsica* (1768) and *Essays in Favor of the Brave Corsicans* (1769). (The Corsicans were fighting to throw off the tyranny of the Genoese and the French.)

who sees not sensuality, pretension, boisterous imbecility enough; much that could not have been ornamental in the temper of a great man's overfed great man (what the Scotch name *flunky*), though it had been more natural there? The under part of Boswell's face is of a low, almost brutish character.

Unfortunately, on the other hand, what great and genuine good lay in him was nowise so self-evident. That Boswell was a hunter after spiritual Notabilities, that he loved such, and longed, and even crept and crawled to be near them; that he first (in old Touchwood Auchinleck's phraseology) 'took on with Paoli'; and then being off with 'the Corsican landlouper,'[12] took on with a schoolmaster, 'ane that keeped a schule, and ca'd it an academy': that he did all this, and could not help doing it, we account a very singular merit. The man, once for all, had an 'open sense,' an open loving heart, which so few have: where Excellence existed, he was compelled to acknowledge it; was drawn towards it, and (let the old sulphur-brand of a Laird say what he liked) *could not but* walk with it, — if not as superior, if not as equal, then as inferior and lackey, better so than not at all. If we reflect now that his love of Excellence had not only such an evil *nature* to triumph over; but also what an *education* and social position withstood it and weighed it down, its innate strength, victorious over all these things, may astonish us. Consider what an inward impulse there must have been, how many mountains of impediment hurled aside, before the Scottish Laird could, as humble servant, embrace the knees (the bosom was not permitted him) of the English Dominie! Your Scottish Laird, says an English naturalist of these days, may be defined as the hungriest and vainest of all bipeds yet known. Boswell too was a Tory; of quite peculiarly feudal, genealogical, pragmatical temper; had been nurtured in an atmosphere of Heraldry, at the feet of a very Gamaliel[13] in that kind; within bare walls, adorned only with pedigrees, amid serving-men in threadbare livery; all things teaching him, from birth upwards, to remember that a Laird was a Laird. Perhaps there was a special vanity in his very blood: old Auchinleck had, if not the gay, tail-spreading, peacock vanity of his son, no little of the slow-stalking, contentious, hissing vanity of the gander; a still more fatal species. Scottish Advocates will yet tell you how the ancient man, having chanced to be the first sheriff appointed (after the abolition of 'hereditary jurisdictions') by royal authority, was wont, in dull-snuffing pompous tone, to preface many a deliverance from the bench with these words: 'I, the first King's Sheriff in Scotland.'

And now behold the worthy Bozzy, so prepossessed and held back by nature and by art, fly nevertheless like iron to its magnet, whither his better genius called! You may surround the iron and the magnet with what enclosures and encumbrances you please, — with wood, with rubbish, with brass: it matters not, the two feel each other, they struggle restlessly towards each other, they *will* be together. The iron may be a Scottish squirelet, full of gulosity and 'gigmanity';[14] the magnet an English plebeian, and moving rag-and-dust mountain, coarse, proud, irascible, imperious: nevertheless, behold how they embrace, and inseparably cleave to one another! It is one of the strangest phenomena of the past century, that at a time when the old reverent feeling of Discipleship (such as brought men from far countries, with rich

12. 'Vagabond.'

13. The learned Pharisee who was Paul's instructor. (*Acts*, xxii,3.)

14. '*Q.* What do you mean by "respectable"? — *A.* He always kept a gig.' (*Thurtell's Trial.*) — 'Thus,' it has been said, 'does society naturally divide itself into four classes: Noblemen, Gentlemen, Gigmen and Men.' [Carlyle's note. This appears to be the earliest printed use of 'gigmanity' in Carlyle's works. It designated for him all that was meant by Victorian middle-class respectability and hypocrisy.]

gifts, and prostrate soul, to the feet of the Prophets) had passed utterly away from men's practical experience, and was no longer surmised to exist (as it does), perennial, indestructible, in man's inmost heart, — James Boswell should have been the individual, of all others, predestined to recall it, in such singular guise, to the wondering, and, for a long while, laughing and unrecognising world. It has been commonly said, The man's vulgar vanity was all that attached him to Johnson; he delighted to be seen near him, to be thought connected with him. Now let it be at once granted that no consideration springing out of vulgar vanity could well be absent from the mind of James Boswell, in this his intercourse with Johnson, or in any considerable transaction of his life. At the same time, ask yourself: Whether such vanity, and nothing else, actuated him therein; whether this was the true essence and moving principle of the phenomenon, or not rather its outward vesture, and the accidental environment (and defacement) in which it came to light? The man was, by nature and habit, vain; a sycophant-coxcomb, be it granted: but had there been nothing more than vanity in him, was Samuel Johnson the man of men to whom he must attach himself? At the date when Johnson was a poor rusty-coated 'scholar,' dwelling in Temple-lane, and indeed throughout their whole intercourse afterwards, were there not chancellors and prime ministers enough; graceful gentlemen, the glass of fashion; [15] honour-giving noblemen; dinner-giving rich men; renowned fire-eaters, swordsmen, gownsmen; Quacks and Realities of all hues, — any one of whom bulked much larger in the world's eye than Johnson ever did? To any one of whom, by half that submissiveness and assiduity, our Bozzy might have recommended himself; and sat there, the envy of surrounding lickspittles; pocketing now solid emolument, swallowing now well-cooked viands and wines of rich vintage; in each case, also, shone-on by some glittering reflex of Renown or Notoriety, so as to be the observed of innumerable observers.[16] To no one of whom, however, though otherwise a most diligent solicitor and purveyor, did he so attach himself: such vulgar courtierships were his paid drudgery, or leisure amusement; the worship of Johnson was his grand, ideal, voluntary business. Does not the frothy-hearted, yet enthusiastic man, doffing his Advocate's-wig, regularly take post, and hurry up to London, for the sake of his Sage chiefly; as to a Feast of Tabernacles,[17] the Sabbath of his whole year? The plate-licker and wine-bibber dives into Bolt Court, to sip muddy coffee with a cynical old man, and a sour-tempered blind old woman (feeling the cups, whether they are full, with her finger); and patiently endures contradictions without end; too happy so he may but be allowed to listen and live. Nay, it does not appear that vulgar vanity could ever have been much flattered by Boswell's relation to Johnson. Mr. Croker says, Johnson was, to the last, little regarded by the great world; from which, for a vulgar vanity, all honour, as from its fountain, descends. Bozzy, even among Johnson's friends and special admirers, seems rather to have been laughed at than envied: his officious, whisking, consequential ways, the daily reproofs and rebuffs he underwent, could gain from the world no golden but only leaden opinions. His devout Discipleship seemed nothing more than a mean Spanielship, in the general eye. His mighty 'constellation,' or sun, round whom he, as satellite, observantly gyrated, was, for the mass of men, but a huge ill-snuffed tallow-light, and he a weak night-moth, circling foolishly, dangerously about it, not knowing what he wanted. If he enjoyed Highland dinners and toasts, as henchman to a new sort of chieftain, Henry Erskine, in the domestic

15. See *Hamlet*, III,i,159–68.

16. See *Hamlet*, III,i,163.

17. See *Leviticus*, xxiii,34; *Deuteronomy*, xvi,16; etc.

'Outer-House,'[18] could hand him a shilling 'for the sight of his Bear.' Doubtless the man was laughed at, and often heard himself laughed at for his Johnsonism. To be envied is the grand and sole aim of vulgar vanity; to be filled with good things is that of sensuality: for Johnson perhaps no man living *envied* poor Bozzy; and of good things (except himself paid for them) there was no vestige in that acquaintanceship. Had nothing other or better than vanity and sensuality been there, Johnson and Boswell had never come together, or had soon and finally separated again.

In fact, the so copious terrestrial dross that welters chaotically, as the outer sphere of this man's character, does but render for us more remarkable, more touching, the celestial spark of goodness, of light, and Reverence for Wisdom, which dwelt in the interior, and could struggle through such encumbrances, and in some degree illuminate and beautify them. There is much lying yet undeveloped in the love of Boswell for Johnson. A cheering proof, in a time which else utterly wanted and still wants such, that living Wisdom is quite *infinitely* precious to man, is the symbol of the Godlike to him, which even weak eyes may discern; that Loyalty, Discipleship, all that was ever meant by *Hero-worship*, lives perennially in the human bosom, and waits, even in these dead days, only for occasions to unfold it, and inspire all men with it, and again make the world alive! James Boswell we can regard as a practical witness, or real *martyr*, to this high everlasting truth. A wonderful martyr, if you will; and in a time which made such martyrdom doubly wonderful: yet the time and its martyr perhaps suited each other. For a decrepit, death-sick Era, when CANT had first decisively opened her poison-breathing lips to proclaim that God-worship and Mammon-worship were one and the same, that Life was a *Lie*, and the Earth Beelzebub's,[19] which the *Supreme Quack* should inherit; and so all things were fallen into the yellow leaf,[20] and fast hastening to noisome corruption: for such an Era, perhaps no better Prophet than a parti-coloured Zany-Prophet, concealing, from himself and others, his prophetic significance in such unexpected vestures, — was deserved, or would have been in place. A precious medicine lay hidden in floods of coarsest, most composite treacle: the world swallowed the treacle, for it suited the world's palate; and now, after half a century, may the medicine also begin to show itself! James Boswell belonged, in his corruptible part, to the lowest classes of mankind; a foolish, inflated creature, swimming in an element of self-conceit: but in his corruptible there dwelt an incorruptible,[21] all the more impressive and indubitable for the strange lodging it had taken.

Consider too, with what force, diligence and vivacity he has rendered back all this which, in Johnson's neighbourhood, his 'open sense' had so eagerly and freely taken in. That loose-flowing, careless-looking Work of his is as a picture by one of Nature's own Artists; the best possible resemblance of a Reality; like the very image thereof in a clear mirror. Which indeed it was: let but the mirror be *clear*, this is the great point; the picture must and will be genuine. How the babbling Bozzy, inspired only by love, and the recognition and vision which love can lend, epitomises nightly the words of Wisdom, the deeds and aspects of Wisdom, and so, by little and little, unconsciously works together for us a whole *Johnsoniad*; a more free, perfect, sunlit and spirit-speaking likeness than for many centuries had been drawn by man of man! Scarcely since the days of

18. Henry Erskine (1746–1817), lord advocate in 1783 and 1806, author of 'The Emigrant: an Eclogue' (1773); friend of the poor. The 'Outer-House' is the great hall in the Parliament-House in Edinburgh, in which the high courts sit.

19. *i.e.* the Devil's. See *Matthew*, x,25;xii,24: *Mark*, iii,22; etc.

20. See *Macbeth*, V,iii,23.

21. See *I Corinthians*, xv,53.

Homer has the feat been equalled; indeed, in many senses, this also is a kind of Heroic Poem. The fit *Odyssey* of our unheroic age was to be written, not sung; of a Thinker, not of a Fighter; and (for want of a Homer) by the first open soul that might offer, — looked such even through the organs of a Boswell. We do the man's intellectual endowment great wrong, if we measure it by its mere logical outcome; though here too, there is not wanting a light ingenuity, a figurativeness and fanciful sport, with glimpses of insight far deeper than the common. But Boswell's grand intellectual talent was, as such ever is, an *unconscious* one, of far higher reach and significance than Logic; and showed itself in the whole, not in parts. Here again we have that old saying verified, 'The heart sees farther than the head.'

Thus does poor Bozzy stand out to us as an ill-assorted, glaring mixture of the highest and the lowest. What, indeed, is man's life generally but a kind of beast-godhood; the god in us triumphing more and more over the beast; striving more and more to subdue it under his feet? Did not the Ancients, in their wise, perennially-significant way, figure Nature itself, their sacred ALL, or PAN,[22] as a portentous commingling of these two discords; as musical, humane, oracular in its upper part, yet ending below in the cloven hairy feet of a goat? The union of melodious, celestial Freewill and Reason with foul Irrationality and Lust; in which, nevertheless, dwelt a mysterious unspeakable Fear and half-mad *panic* Awe; as for mortals there well might! And is not man a microcosm, or epitomised mirror of that same Universe; or rather, is not that Universe even Himself, the reflex of his own fearful and wonderful being, 'the waste fantasy of his own dream'?[23] No wonder that man, that each man, and James Boswell like the others, should resemble it! The peculiarity in his case was the unusual defect of amalgamation and subordination: the highest lay side by side with the lowest; not morally combined with it and spiritually transfiguring it, but tumbling in half-mechanical juxtaposition with it, and from time to time, as the mad alternation chanced, irradiating it, or eclipsed by it.

The world, as we said, has been but unjust to him; discerning only the outer terrestrial and often sordid mass; without eye, as it generally is, for his inner divine secret; and thus figuring him nowise as a god Pan, but simply of the bestial species, like the cattle on a thousand hills.[24] Nay, sometimes a strange enough hypothesis has been started of him; as if it were in virtue even of these same bad qualities that he did his good work; as if it were the very fact of his being among the worst men in this world that had enabled him to write one of the best books therein![25] Falser hypothesis, we may venture to say, never rose in human soul. *Bad* is by its nature negative, and can do *nothing*; whatsoever enabled us to *do* anything is by its very nature *good*. Alas, that there should be teachers in Israel, or even learners, to whom this world-ancient fact is still problematical or even deniable! Boswell wrote a good Book because he had a heart and an eye to discern Wisdom, and an utterance to render it forth; because of his free insight, his lively talent, above all, of his Love and childlike Open-mindedness. His sneaking sycophan-

22. God of flocks and shepherds among the ancient Greeks; lover of music, and inventor of the syrinx or shepherd's flute; sometimes represented as a sensual being, capable, however, of throwing men into *panic*, awe, or fear.

23. An expression from Novalis's works, to indicate the shadowy and unreal character of the physical universe in comparison with the real and eternal world of spirit. Quoted in *Sartor*, 'The World out of Clothes.'

24. See *Psalms*, 1,10.

25. See Macaulay's review of Croker's *Boswell*, which appeared in the *Edinburgh Review*, September 1831, and which vigorously and eloquently expressed this view of Boswell. Carlyle's review appeared in *Fraser's* in May 1832.

cies, his greediness and forwardness, whatever was bestial and earthy in him, are so many blemishes in his Book, which still disturb us in its clearness; wholly hindrances, not helps. Towards Johnson, however, his feeling was not Sycophancy, which is the lowest, but Reverence, which is the highest of human feelings. None but a *reverent* man (which so unspeakably few are) could have found his way from Boswell's environment to Johnson's: if such worship for real God-made superiors showed itself also as worship for apparent Tailor-made superiors, even as hollow interested mouth-worship for such, — the case, in this composite human nature of ours, was not miraculous, the more was the pity! But for ourselves, let every one of us cling to this last article of Faith, and know it as the beginning of all knowledge worth the name: That neither James Boswell's good Book, nor any other good thing, in any time or in any place, was, is or can be performed by any man in virtue of his *badness*, but always and solely in spite thereof.

As for the Book itself, questionless the universal favour entertained for it is well merited. In worth as a Book we have rated it beyond any other product of the eighteenth century: all Johnson's own Writings, laborious and in their kind genuine above most, stand on a quite inferior level to it; already, indeed, they are becoming obsolete for this generation; and for some future generation may be valuable chiefly as Prolegomena and expository Scholia to this *Johnsoniad* [26] of Boswell. Which of us remembers, as one of the sunny spots of his existence, the day when he opened these airy volumes, fascinating him by a true natural magic! It was as if the curtains of the past were drawn aside, and we looked mysteriously into a kindred country, where dwelt our Fathers; inexpressibly dear to us, but which had seemed forever hidden from our eyes. For the dead Night had engulfed it; all was gone, vanished as if it had not been. Nevertheless, wondrously given back to us, there once more it lay; all bright, lucid, blooming; a little island of Creation amid the circumambient Void. There it still lies; like a thing stationary, imperishable, over which changeful Time were now accumulating itself in vain, and could not, any longer, harm it, or hide it.

If we examine by what charm it is that men are still held to this *Life of Johnson*, now when so much else has been forgotten, the main part of the answer will perhaps be found in that speculation 'on the import of *Reality*,' communicated to the world, last month, in this Magazine. The *Johnsoniad* of Boswell turns on objects that in very deed existed; it is all *true*. So far other in melodiousness of tone, it vies with the *Odyssey*, or surpasses it, in this one point: to us these read pages, as those chanted hexameters were to the first Greek hearers, are, in the fullest deepest sense, wholly *credible*. All the wit and wisdom lying embalmed in Boswell's Book, plenteous as these are, could not have saved it. Far more scientific *instruction* (mere excitement and enlightenment of the *thinking power*) can be found in twenty other works of that time, which make but a quite secondary impression on us. The other works of that time, however, fall under one of two classes: Either they are professedly Didactic; and, in that way, mere Abstractions, Philosophic Diagrams, incapable of interesting us much otherwise than as *Euclid's Elements* may do: Or else, with all their vivacity, and pictorial richness of colour, *they are Fictions and not Realities*. Deep truly, as Herr Sauerteig [27] urges, is the force of this consideration: the thing here stated is a fact; those figures, that local habitation,[28] are not shadow but substance. In virtue of such advantages, see how a very Boswell may become Poetical!

26. Carlyle's coinage for Boswell's *Life of Johnson*, in imitation, of course, of *Iliad*.

27. See 'Biography,' note no.17.

28. See *Midsummer Night's Dream*, v,1,17.

Critics insist much on the Poet that he should communicate an 'Infinitude' to his delineation; that by intensity of conception, by that gift of 'transcendental Thought,' which is fitly named *genius*, and inspiration, he should *inform* the Finite with a certain Infinitude of significance; or as they sometimes say, ennoble the Actual into Idealness. They are right in their precept; they mean rightly. But in cases like this of the *Johnsoniad*, such is the dark grandeur of that 'Time element,' wherein man's soul here below lives imprisoned, — the Poet's task is, as it were, done to his hand: Time itself, which is the outer veil of Eternity, invests, of its own accord, with an authentic, felt 'infinitude' whatsoever it has once embraced in its mysterious folds. Consider all that lies in that one word *Past*! What a pathetic, sacred, in every sense *poetic*, meaning is implied in it; a meaning growing ever the clearer, the farther we recede in Time, — the *more* of that same Past we have to look through! — On which ground indeed must Sauerteig have built, and not without plausibility, in that strange thesis of his: 'That History, after all, is the true Poetry; that Reality, if rightly interpreted, is grander than Fiction; nay that even in the right interpretation of Reality and History does genuine Poetry consist.'

Thus for *Boswell's Life of Johnson* has Time done, is Time still doing, what no ornament of Art or Artifice could have done for it. Rough Samuel and sleek wheedling James *were*, and *are not*. Their Life and whole personal Environment has melted into air. The Mitre Tavern still stands in Fleet Street: but where now is its scot-and-lot paying, beef-and-ale loving, cocked-hatted, pot-bellied Landlord; its rosy-faced assiduous Landlady, with all her shining brass-pans, waxed tables, well-filled larder-shelves; her cooks, and bootjacks, and errand-boys, and watery-mouthed hangers-on? Gone! Gone! The becking Waiter who, with wreathed smiles, was wont to spread for Samuel and Bozzy their supper of the gods, has long since pocketed his last sixpence; and vanished, sixpences and all, like a ghost at cock-crowing. The Bottles they drank out of are all broken, the Chairs they sat on all rotted and burnt; the very Knives and Forks they ate with have rusted to the heart, and become brown oxide of iron, and mingled with the indiscriminate clay. All, all has vanished; in every deed and truth, like that baseless fabric of Prospero's air-vision.[29] Of the Mitre Tavern nothing but the bare walls remain there: of London, of England, of the World, nothing but the bare walls remain; and these also decaying (were they of adamant), only slower. The mysterious River of Existence rushes on: a new Billow thereof has arrived, and lashes wildly as ever round the old embankments; but the former Billow with *its* loud, mad eddyings, where is it? — Where! — Now this Book of Boswell's, this is precisely a revocation of the edict of Destiny; so that Time shall not utterly, not so soon by several centuries, have dominion over us. A little row of Naphtha-lamps, with its line of Naphtha-light, burns clear and holy through the dead Night of the Past: they who are gone are still here; though hidden they are revealed, though dead they yet speak. There it shines, that little miraculously lamplit Pathway; shedding its feebler and feebler twilight into the boundless dark Oblivion, — for all that our Johnson *touched* has become illuminated for us: on which miraculous little Pathway we can still travel, and see wonders.

It is not speaking with exaggeration, but with strict measured sobriety, to say that this Book of Boswell's will give us more real insight into the *History of England* during those days than twenty other Books, falsely entitled 'Histories,' which take to themselves that special aim. What good is it to me though innumerable Smol

29 See *The Tempest*, IV,i,151–56. (Oxf.Stand. Ed.)

letts and Belshams [30] keep dinning in my ears that a man named George the Third was born and bred up, and a man named George the Second died; that Walpole, and the Pelhams, and Chatham, and Rockingham, and Shelburne, and North,[31] with their Coalition or their Separation Ministries, all ousted one another; and vehemently scrambled for 'the thing they called the Rudder of Government, but which was in reality the Spigot of Taxation'? That debates were held, and infinite jarring and jargoning took place; and road-bills and enclosure-bills,[32] and game-bills [33] and India-bills,[34] and Laws which no man can number, which happily few men needed to trouble their heads with beyond the passing moment, were enacted, and printed by the King's Stationer? That he who sat in Chancery, and rayed-out speculation from the Woolsack, was now a man that squinted, now a man that did not squint? To the hungry and thirsty mind all this avails next to nothing. These men and these things, we indeed know, did swim, by strength or by specific levity, as apples or as horse-dung, on the top of the current: but is it by painfully noting the courses, eddyings and bobbings hither and thither of such drift-articles, that you will unfold to me the nature of the current itself; of that mighty-rolling, loud-roaring Life-current, bottomless as the foundations of the Universe, mysterious as its Author? The thing I want to see is not Redbook Lists, and Court Calendars, and Parliamentary Registers, but the LIFE OF MAN in England: what men did, thought, suffered, enjoyed; the form, especially the spirit, of their terrestrial existence, its outward environment, its inward principle; *how* and *what* it was; whence it proceeded, whither it was tending.

Mournful, in truth, is it to behold what the business called 'History,' in these so enlightened and illuminated times, still continues to be. Can you gather from it, read till your eyes go out, any dimmest shadow of an answer to that great question: How men lived and had their being; [35] were it but economically, as, what wages they got, and what they bought with these? Unhappily you cannot. History will throw no light on any such matter. At the point where living memory fails, it is all darkness; Mr. Senior [36] and Mr. Sadler [37] must still debate this simplest of all elements in the condition of the Past: Whether men were better off, in their mere larders and pantries, or were worse off than now! History, as it stands all bound up in gilt volumes, is but a shade more instructive than the wooden volumes of a Backgammon-board. How my Prime

30. George Tobias Smollett (1721–71), English novelist, brought out a large *History of England* in 1757 — William Belsham (1752–1827), political writer and historian, published philosophical and historical works in support of Whig principles.

31. Allusion to the coalitions and ministries during the reigns of the first three Georges, the ministries running as follows: Sir Robert Walpole, 1721–42, Henry Pelham, 1743–54; Duke of Devonshire (real head, William Pitt, 1756–57, 1762, etc.); Marquis of Rockingham, 1765–66, 1782; Lord North, 1770–82; Earl of Shelburne, 1782–83.

32. Bills permitting rural landlords to acquire the 'open fields' of the countryside, and to amass or consolidate huge estates. Under George III, from 1760 to 1796, nearly 3,000,000 acres were 'enclosed,' turning small farmers into tenants or farm-hands.

33. Enabling the aristocracy to 'preserve its game' from the common people. *Cf.* Carlyle's term, 'double-barrelled game-preservers,' as descriptive of the idle, 'do-nothing' aristocracy of his time.

34. Such as Lord North's Regulating Act of 1773, or Fox's India Bill of 1783, which resulted in the fall of the Coalition.

35. See *Acts*, xvii,28.

36. William Nassau Senior (1790–1864), economist, professor of political economy at Oxford, 1825–30; author of the Poor Law Report, 1834; etc.

37. Michael Thomas Sadler (1780–1835), social reformer, author of *Law of Population* (1830), parliamentary leader of the cause of radical working men; urged reform of working conditions in mills and factories.

Minister was appointed is of less moment to me than How my House Servant was hired. In these days, ten ordinary Histories of Kings and Courtiers were well exchanged against the tenth part of one good History of Booksellers.

For example, I would fain know the History of Scotland: who can tell it me? 'Robertson,' say innumerable voices; 'Robertson against the world.'[38] I open Robertson; and find there, through long ages too confused for narrative, and fit only to be presented in the way of epitome and distilled essence, a cunning answer and hypothesis, not to this question: By whom, and by what means, when and how, was this fair broad Scotland, with its Arts and Manufactures, Temples, Schools, Institutions, Poetry, Spirit, National Character, created, and made arable, verdant, peculiar, great, here as I can see some fair section of it lying, kind and strong (like some Bacchus-tamed Lion),[39] from the Castle-hill of Edinburgh? — but to this other question: How did the King keep himself alive in those old days; and restrain so many Butcher-Barons and ravenous Henchmen from utterly extirpating one another, so that killing went on in some sort of moderation? In the one little Letter of Æneas Sylvius,[40] from old Scotland, there is more of History than in all this. — At length, however, we come to a luminous age, interesting enough; to the age of the Reformation. All Scotland is awakened to a second higher life: the Spirit of the Highest stirs in every bosom, agitates every bosom; Scotland is convulsed, fermenting, struggling to body itself forth anew. To the herdsman, among his cattle in remote woods; to the craftsman, in his rude, heath-thatched workshop, among his rude guild-brethren; to the great and to the little, a new light has arisen: in town and hamlet groups are gathered, with eloquent looks, and governed or ungovernable tongues; the great and the little go forth together to do battle for the Lord against the mighty. We ask, with breathless eagerness: How was it; how went it on? Let us understand it, let us see it, and know it! — In reply, is handed us a really graceful and most dainty little Scandalous Chronicle (as for some Journal of Fashion) of two persons: Mary Stuart, a Beauty, but over lightheaded; and Henry Darnley, a Booby who had fine legs.[41] How these first courted, billed and cooed, according to nature; then pouted, fretted, grew utterly enraged, and blew one another up with gunpowder: this, and not the History of Scotland, is what we good-naturedly read. Nay, by other hands, something like a horse-load of other Books have been written to prove that it was the Beauty who blew up the Booby, and that it was not she. Who or what it was, the thing once for all *being* so effectually done, concerns us little. To know Scotland, at that great epoch, were a valuable increase of knowledge: to know poor Darnley, and see him with burning candle, from centre to skin, were no increase of knowledge at all. — Thus is History written.

Hence, indeed, comes it that History, which should be 'the essence of innumerable Biographies,' will tell us, question it as we like, less than one genuine Biography may do, pleasantly and of its own accord! The time is approaching when History will be attempted on quite other principles; when the Court, the Senate and the

38. William Robertson (1721–93), Scotch historian, author of a *History of Scotland* (1759). *History of Charles V* (1769), *History of America* (1777); representative in many ways of 18th-century historiography, in its rationalism, and in its emphasis on the political aspect of history.

39. *Bacchus* (or Dionysus): Greek god of wine, frequently represented as riding in a chariot drawn by tigers.

40. Later Pope Pius II, from 1458 to 1464; as a young man he was engaged on various diplomatic missions, one to England and Scotland.

41. *Cf. Sartor*, chapter entitled 'Miscellaneous-Historical,' for a passage on 'Henry Darnley, an unfledged booby and bustard' with fine limbs.

Battlefield, receding more and more into the background, the Temple, the Workshop and Social Hearth will advance more and more into the foreground; and History will not content itself with shaping some answer to that question: How were men *taxed* and *kept quiet* then? but will seek to answer this other infinitely wider and higher question: How and what *were men* then? Not our Government only, or the '*House* wherein our life was led,' but the *Life* itself we led there, will be inquired into. Of which latter it may be found that Government, in any modern sense of the word, is after all but a secondary condition: in the mere sense of *Taxation* and *Keeping quiet*, a small, almost a pitiful one. — Meanwhile let us welcome such Boswells, each in his degree, as bring us any genuine contribution, were it never so inadequate, so inconsiderable.

An exception was early taken against this *Life of Johnson*, and all similar enterprises, which we here recommend; and has been transmitted from critic to critic, and repeated in their several dialects, uninterruptedly, ever since: That such jottings-down of careless conversation are an infringement of social privacy; a crime against our highest Freedom, the Freedom of man's intercourse with man. To this accusation, which we have read and heard oftener than enough, might it not be well for once to offer the flattest contradiction and plea of *Not at all guilty*? Not that conversation is noted down, but that conversation should not deserve noting down, is the evil. Doubtless, if conversation be falsely recorded, then is it simply a Lie; and worthy of being swept, with all despatch, to the Father of Lies.[42] But if, on the other hand, conversation can be authentically recorded, and any one is ready for the task, let him by all means proceed with it; let conversation be kept in remembrance to the latest date possible. Nay, should the consciousness that a man may be among us 'taking notes' tend, in any measure, to restrict those floods of idle insincere *speech*, with which the *thought* of mankind is wellnigh drowned, — were it other than the most indubitable benefit? He who speaks honestly cares not, needs not care, though his words be preserved to remotest time: for him who speaks *dis*honestly, the fittest of all punishments seems to be this same, which the nature of the case provides. The dishonest speaker, not he only who purposely utters falsehoods, but he who does not purposely, and with sincere heart, utter Truth, and Truth alone; who babbles he knows not what, and has clapped no bridle on his tongue, but lets it run racket, ejecting chatter and futility, — is among the most indisputable malefactors omitted, or inserted, in the Criminal Calendar. To him that will well consider it, idle speaking is precisely the beginning of all Hollowness, Halfness, *Infidelity* (want of Faithfulness); the genial atmosphere in which rank weeds of every kind attain the mastery over noble fruits in man's life, and utterly choke them out: one of the most crying maladies of these days, and to be testified against, and in all ways to the uttermost withstood. Wise, of a wisdom far beyond our shallow depth, was that old precept: *Watch thy tongue*; out of it are the issues of Life![43] 'Man is properly an *incarnated word*': the *word* that he speaks is the *man* himself. Were eyes put into our head, that we might *see*; or only that we might fancy, and plausibly pretend, we had *seen*? Was the tongue suspended there, that it might tell truly what we had seen, and make man the soul's-brother of man; or only that it might utter vain sounds, jargon, soul-confusing, and so *divide* man, as by enchanted walls of Darkness, from union with man? Thou who wearest that cunning, heaven-made organ, a Tongue, think well of this. Speak not, I passionately entreat thee, till thy thought hath silently matured itself, till thou have other than mad and mad-making noises to

42. See *John*, viii,44.

43. 'Keep thy heart with all diligence; for out of it are the issues of life.' *Proverbs*, iv,23.

emit: *hold thy tongue* (thou hast it a-holding) till *some* meaning lie behind, to set it wagging. Consider the significance of SILENCE: [44] it is boundless, never by meditating to be exhausted; unspeakably profitable to thee! Cease that chaotic hubbub, wherein thy own soul runs to waste, to confused suicidal dislocation and stupor: out of Silence comes thy strength. 'Speech is silvern, Silence is golden; Speech is human, Silence is divine.' Fool! thinkest thou that because no Boswell is there with ass-skin and blacklead to note thy jargon, it therefore dies and is harmless? Nothing dies, nothing can die. No idlest word thou speakest but is a seed cast into Time, and grows through all Eternity! The Recording Angel, consider it well, is no fable, but the truest of truths: the paper tablets thou canst burn; of the 'iron leaf' [45] there is no burning. — Truly, if we can permit God Almighty to note down our conversation, thinking it good enough for Him, — any poor Boswell need not scruple to work his will of it.

Leaving now this our English *Odyssey*, with its Singer and Scholiast,[46] let us come to the *Ulysses*; that great Samuel Johnson himself, the far-experienced, 'much-enduring man,' [47] whose labours and pilgrimage are here sung. A full-length image of his Existence has been preserved for us: and he, perhaps of all living Englishmen, was the one who best deserved that honour. For if it is true, and now almost proverbial, that 'the Life of the lowest mortal, if faithfully recorded, would be interesting to the highest'; how much more when the mortal in question was already distinguished in fortune and natural quality, so that his thinkings and doings were not significant of himself only, but of large masses of mankind! 'There is not a man whom I meet on the streets,' says one, 'but I could like, were it otherwise convenient, to know his Biography': nevertheless, could an enlightened curiosity be so far gratified, it must be owned the Biography of most ought to be, in an extreme degree, *summary*. In this world, there is so wonderfully little self-subsistence among men; next to no originality (though never absolutely *none*): one Life is too servilely the copy of another; and so in whole thousands of them you find little that is properly new; nothing but the old song sung by a new voice, with better or worse execution, here and there an ornamental quaver, and false notes enough: but the fundamental tune is ever the same; and for the *words*, these, all that they meant stands written generally on the Churchyard-stone: *Natus sum; esuriebam, quærebam; nunc repletus requiesco.*[48] Mankind sail their Life-voyage in huge fleets, following some single whale-fishing or herring-fishing Commodore: the log-book of each differs not, in essential purport, from that of any other: nay the most have no legible log-book (reflection, observation not being among their talents); keep no reckoning, only *keep in sight* of the flagship, — and fish. Read the Commodore's Papers (know *his* Life); and even your lover of that street Biography will have learned the most of what he sought after.

Or, the servile *imitancy*, and yet also a nobler relationship and mysterious union to one another which lies in such imitancy, of Mankind might be illustrated under the different figure, itself nowise *original*, of a Flock of Sheep.[49] Sheep go in flocks for

44. See *Sartor*, chapter on 'Symbols.'

45. Recording Angels are mentioned in the *Koran*, but there is nothing concerning 'iron leaves.'

46. Commentator or annotator.

47. An epithet frequently applied to Ulysses in the *Odyssey*.

48. 'I was born; I hungered, I sought; now, satisfied, I sleep.'

49. The paragraph which now follows is an expression of a part of the hero-doctrine generally overlooked by readers of Carlyle: the idea of what Novalis called 'born average men,' who need a strong leader rather than liberty. The basis for Carlyle's later and strident anti-democratic outcries is here vigorously set forth.

three reasons: First, because they are of a gregarious temper, and *love* to be together: Secondly, because of their cowardice; they are afraid to be left alone: Thirdly, because the common run of them are dull of sight, to a proverb, and can have no choice in roads; sheep can in fact *see* nothing; in a celestial Luminary, and a scoured pewter Tankard, would discern only that both dazzled them, and were of unspeakable glory. How like their fellow-creatures of the human species! Men too, as was from the first maintained here, are gregarious; then surely faint-hearted enough, trembling to be left by themselves; above all, dull-sighted, down to the verge of utter blindness. Thus are we seen ever running in torrents, and mobs, if we run at all; and after what foolish scoured Tankards, mistaking them for Suns! Foolish Turnip-lanterns likewise, to all appearance supernatural, keep whole nations quaking, their hair on end. Neither know we, except by blind habit, where the good pastures lie: solely when the sweet grass is between our teeth, we know it, and chew it; also when grass is bitter and scant, we know it, — and bleat and butt: these last two facts we know of a truth and in very deed. Thus do Men and Sheep play their parts on this Nether Earth; wandering restlessly in large masses, they know not whither; for most part, each following his neighbour, and his own nose.

Nevertheless, not always; look better, you shall find certain that do, in some small degree, *know whither*. Sheep have their Bell-wether; some ram of the folds, endued with more valour, with clearer vision than other sheep; he leads them through the wolds, by height and hollow, to the woods and water-courses, for covert or for pleasant provender; courageously marching, and if need be leaping, and with hoof and horn doing battle, in the van: him they courageously and with assured heart follow. Touching it is, as every herdsman will inform you, with what chivalrous devotedness these woolly Hosts adhere to their Wether; and rush after him, through good report and through bad report, were it into safe shelters and green thymy nooks, or into asphaltic lakes and the jaws of devouring lions. Ever also must we recall that fact which we owe Jean Paul's [50] quick eye: 'If you hold a stick before the Wether, so that he, by necessity, leaps in passing you, and then withdraw your stick, the Flock will nevertheless all leap as he did; and the thousandth sheep shall be found impetuously vaulting over air, as the first did over an otherwise impassable barrier.' Reader, wouldst thou understand Society, ponder well those ovine proceedings; thou wilt find them all curiously significant.

Now if sheep always, how much more must men always, have their Chief, their Guide! Man too is by nature quite thoroughly *gregarious*: nay ever he struggles to be something more, to be *social*; not even when Society has become impossible, does that deep-seated tendency and effort forsake him. Man, as if by miraculous magic, imparts his Thoughts, his Mood of mind to man; an unspeakable communion binds all past, present and future men into one indissoluble whole, almost into one living individual. Of which high, mysterious Truth, this disposition to *imitate*, to lead and be led, this impossibility *not* to imitate, is the most constant, and one of the simplest manifestations. To imitate! which of us all can measure the significance that lies in that one word? By virtue of which the infant Man, born at Woolsthorpe,[51] grows up not to be a hairy Savage, and chewer of Acorns, but an Isaac Newton and Discoverer of Solar Systems! — Thus both in a celestial and terrestrial sense are we a *Flock*, such as there

50. Jean Paul Friedrich Richter (1763–1825), German romantic novelist and humorist, one of Carlyle's favorites among German writers; whose style, humor, literary method, and general outlook on life confirmed Carlyle in the ways of his own genius, if they did not actually direct and influence him.

51. Where Sir Isaac Newton was born, in 1642.

is no other: nay looking away from the base and ludicrous to the sublime and sacred side of the matter (since in every matter there are two sides), have not we also a SHEPHERD, 'if we will but hear his voice'? Of those stupid multitudes there is no one but has an immortal Soul within him; a reflex and living image of God's whole Universe: strangely, from its dim environment, the light of the Highest looks through him; — for which reason, indeed, it is that we claim a brotherhood with him, and so love to know his History, and come into clearer and clearer union with all that he feels, and says, and does.

However, the chief thing to be noted was this: Amid those dull millions, who, as a dull flock, roll hither and thither, whithersoever they are led; and seem all sightless and slavish, accomplishing, attempting little save what the animal instinct in its somewhat higher kind might teach, To keep themselves and their young ones alive, — are scattered here and there superior natures, whose eye is not destitute of free vision, nor their heart of free volition. These latter, therefore, examine and determine, not what others do, but what it is right to do; towards which, and which only, will they, with such force as is given them, resolutely endeavour: for if the Machine, living or inanimate, is merely *fed*, or desires to be fed, and so *works*; the Person can *will*, and so *do*. These are properly our Men, our Great Men; the guides of the dull host, — which follows them as by an irrevocable decree. They are the chosen of the world: they had this rare faculty not only of 'supposing' and 'inclining to think,' but of *knowing* and *believing*; the nature of their being was, that they lived not by Hearsay, but by clear Vision; while others hovered and swam along, in the grand Vanity-fair of the World, blinded by the mere Shows of things, these saw into the Things themselves, and could walk as men having an eternal loadstar,[52] and with their feet on sure paths. Thus was there a *Reality* in their existence; something of a perennial character; in virtue of which indeed it is that the memory of them is perennial. Whoso belongs only to his own age, and reverences only *its* gilt Popinjays [53] or soot-smeared Mumbojumbos,[54] must needs die with it: though he have been crowned seven times in the capitol, or seventy-and-seven times, and Rumour have blown his praises to all the four winds, deafening every ear therewith, — it avails not; there was nothing universal, nothing eternal in him; he must fade away, even as the Popinjay-gildings and Scarecrow apparel, which he could not see through. The great man does, in good truth, belong to his own age; nay more so than any other man; being properly the synopsis and epitome of such age with its interests and influences: but belongs likewise to all ages, otherwise he is not great. What was transitory in him passes away; and an immortal part remains, the significance of which is in strict speech inexhaustible, — as that of every *real* object is. Aloft, conspicuous, on his enduring basis, he stands there, serene, unaltering; silently addresses to every new generation a new lesson and monition. Well is his Life worth writing, worth interpreting; and ever, in the new dialect of new times, of re-writing and re-interpreting.

Of such chosen men was Samuel Johnson: not ranking among the highest, or even the high, yet distinctly admitted into that sacred band; whose existence was no idle Dream, but a Reality which he transacted *awake*; nowise a Clothes-horse and Patent Digester, but a genuine Man. By nature he was gifted for the noblest of earthly tasks, that of Priesthood, and Guidance of mankind; by destiny, more-

52. Or *lodestar*; a star that leads; especially the polestar.

53. Allusion to the brightly colored and talkative parrot or parrakeet. See Scott's *Old Mortality*, Ch.ii.

54. Allusion to the tutelary genius of a village, among the Negroes of the western Sudan, represented by a masked man who wards off evil and keeps the women in awe and subjection.

over, he was appointed to this task, and did actually, according to strength, fulfil the same: so that always the question, *How; in what spirit; under what shape?* remains for us to be asked and answered concerning him. For as the highest Gospel was a Biography, so is the Life of every good man still an indubitable Gospel, and preaches to the eye and heart and whole man, so that Devils even must believe and tremble,[55] these gladdest tidings: 'Man is heaven-born; not the thrall of Circumstances, of Necessity, but the victorious subduer thereof: behold how he can become the "Announcer of himself and of his Freedom"; and is ever what the Thinker has named him, "the Messias of Nature." '[56] — Yes, Reader, all this that thou hast so often heard about 'force of circumstances,' 'the creature of the time,' 'balancing of motives,'[57] and who knows what melancholy stuff to the like purport, wherein thou, as in a nightmare Dream, sittest paralysed, and hast no force left, — was in very truth, if Johnson and waking men are to be credited, little other than a hag-ridden vision of death-sleep; some *half*-fact, more fatal at times than a whole falsehood. Shake it off; awake; up and be doing, even as it is given thee!

The Contradiction which yawns wide enough in every Life, which it is the meaning and task of Life to reconcile, was in Johnson's wider than in most. Seldom, for any man, has the contrast between the ethereal heavenward side of things, and the dark sordid earthward, been more glaring: whether we look at Nature's work with him or Fortune's, from first to last, heterogeneity, as of sunbeams and miry clay, is on all hands manifest. Whereby indeed, only this was declared, That *much Life* had been given him; many things to triumph over, a great work to *do*. Happily also he did it; better than the most.

Nature had given him a high, keen-visioned, almost poetic soul; yet withal imprisoned it in an inert, unsightly body; he that could never rest had not limbs that would move with him, but only roll and waddle: the inward eye, all-penetrating, all-embracing, must look through bodily windows that were dim, half-blinded; he so loved men, and 'never once *saw* the human face divine'![58] Not less did he prize the love of men; he was eminently social; the approbation of his fellows was dear to him, 'valuable,' as he owned, 'if from the meanest of human beings': yet the first impression he produced on every man was to be one of aversion, almost of disgust. By Nature it was farther ordered that the imperious Johnson should be born poor: the ruler-soul, strong in its native royalty, generous, uncontrollable, like the lion of the woods, was to be housed, then, in such a dwelling-place: of Disfigurement, Disease, and lastly of a Poverty which itself made him the servant of servants. Thus was the born king likewise a born slave: the divine spirit of Music must awake imprisoned amid dull-croaking universal Discords; the Ariel finds himself encased in the coarse hulls of a Caliban.[59] So is it more or less, we know (and thou, O Reader, knowest and feelest even now), with all men: yet with the fewest men in any such degree as with Johnson.

Fortune, moreover, which had so managed his first appearance in the world, lets not her hand lie idle, or turn the other way, but works unweariedly in the same spirit, while he is journeying through the world. What such a mind, stamped of Nature's noblest metal, though in so ungainly a die,

55. See *James*, ii,19.

56. Quoted from Novalis, to refer to man as a *natural* messiah, as distinguished from Christ, the supernatural messiah (or savior). See Carlyle's essay on Novalis, *Ess.*,II,40, where the phrase is quoted.

57. Phrases occurring frequently in contemporary materialistic and Utilitarian literature, much to Carlyle's alarm and repugnance.

58. See *Paradise Lost*, iii,44.

59. In Shakespeare's *The Tempest*, Ariel is the airy spirit waiting upon the magician Prospero; Caliban, the misshapen evil-natured monster who lives on a sub-human plane.

was specially and best of all fitted for, might still be a question. To none of the world's few Incorporated Guilds could he have adjusted himself without difficulty, without distortion; in none been a Guild-Brother well at ease. Perhaps, if we look to the strictly practical nature of his faculty, to the strength, decision, method that manifests itself in him, we may say that his calling was rather towards Active than Speculative life; that as Statesman (in the higher, now obsolete sense), Law-giver, Ruler, in short as Doer of the Work, he had shone even more than as Speaker of the Word. His honesty of heart, his courageous temper, the value he set on things outward and material, might have made him a King among Kings. Had the golden age of those new French Prophets, when it shall be *à chacun selon sa capacité, à chaque capacité selon ses œuvres*,[60] but arrived! Indeed even in our brazen and Birmingham-lacquer age, he himself regretted that he had not become a Lawyer, and risen to be Chancellor, which he might well have done. However, it was otherwise appointed. To no man does Fortune throw open all the kingdoms of this world, and say: It is thine; choose where thou wilt dwell! To the most she opens hardly the smallest cranny or doghutch, and says, not without asperity: There, that is thine while thou canst keep it; nestle thyself there, and bless Heaven! Alas, men must fit themselves into many things: some forty years ago, for instance, the noblest and ablest Man in all the British lands might be seen not swaying the royal sceptre, or the pontiff's censer, on the pinnacle of the World, but gauging ale-tubs in the little burgh of Dumfries! Johnson came a little nearer the mark than Burns: but with him too 'Strength was mournfully denied its arena!' he too had to fight Fortune at strange odds, all his life long.

Johnson's disposition for *royalty* (had the Fates so ordered it) is well seen in early boyhood. 'His favourites,' says Boswell, 'used to receive very liberal assistance from him; and such was the submission and deference with which he was treated, that three of the boys, of whom Mr. Hector was sometimes one, used to come in the morning as his humble attendants, and carry him to school. One in the middle stooped, while he sat upon his back, and one on each side supported him; and thus was he borne triumphant.' The purfly,[61] sand-blind lubber and blubber, with his open mouth, and face of bruised honeycomb; yet already dominant, imperial, irresistible! Not in the 'King's-chair' (of human arms), as we see, do his three satellites carry him along: rather on the *Tyrant's-saddle*, the back of his fellow-creature, must he ride prosperous! — The child is father of the man.[62] He who had seen fifty years into coming Time, would have felt that little spectacle of mischievous schoolboys to be a great one. For us, who look back on it, and what followed it, now from afar, there arise questions enough: How looked these urchins? What jackets and galligaskins [63] had they; felt headgear, or of dogskin leather? What was old Lichfield doing then; what thinking? — and so on, through the whole series of Corporal Trim's 'auxiliary verbs.'[64] A picture of it all fashions itself together; — only unhappily we have no brush and no fingers.

Boyhood is now past; the ferula of Pedagogue waves harmless, in the distance:

60. 'To each according to his ability, to each ability according to its achievements.' Evidently Carlyle is alluding to the Socialism of Claude Henri, Comte de Saint-Simon (1760–1825), and his followers. The publication of Carlyle's essay on 'The Signs of the Times' (1829) attracted their enthusiastic attention, and they invited him to join their movement. On Goethe's advice, Carlyle declined, but continued to be interested in French socialism.

61. Wrinkled. (Archaic.)

62. From Wordsworth's 'My Heart Leaps Up.'

63. Loose, wide hose or breeches worn in the 17th century.

64. See Sterne's *Tristram Shandy*, Vol.V, Chapters xlii and xliii.

Samuel has struggled up to uncouth bulk and youthhood, wrestling with Disease, and Poverty, all the way; which two continue still his companions. At College we see little of him; yet thus much, that things went not well. A rugged wildman of the desert, awakened to the feeling of himself; proud as the proudest, poor as the poorest; stoically shut up, silently enduring the incurable: what a world of blackest gloom, with sun-gleams and pale tearful moon-gleams, and flickerings of a celestial and an infernal splendour, was this that now opened for him! But the weather is wintry; and the toes of the man are looking through his shoes. His muddy features grow of a purple and sea-green colour; a flood of black indignation mantling beneath. A truculent, raw-boned figure! Meat he has probably little; hope he has less: his feet, as we said, have come into brotherhood with the cold mire.

'Shall I be particular,' inquires Sir John Hawkins, 'and relate a circumstance of his distress, that cannot be imputed to him as an effect of his own extravagance or irregularity, and consequently reflects no disgrace on his memory? He had scarce any change of raiment, and, in a short time after Corbet left him, but one pair of shoes, and those so old that his feet were seen through them: a gentleman of his college, the father of an eminent clergyman now living, directed a servitor one morning to place a new pair at the door of Johnson's chamber; who seeing them upon his first going out, so far forgot himself and the spirit which must have actuated his unknown benefactor, that, with all the indignation of an insulted man, he threw them away.'

How exceedingly surprising! — The Rev. Dr. Hall remarks: 'As far as we can judge from a cursory view of the weekly account in the buttery-books, Johnson appears to have lived as well as other commoners and scholars.' Alas! such 'cursory view of the buttery-books,' now from the safe distance of a century, in the safe chair of a College Mastership, is one thing; the continual view of the empty or locked buttery itself was quite a different thing. But hear our Knight, how he farther discourses. 'Johnson,' quoth Sir John, could 'not at this early period of his life divest himself of an idea that poverty was disgraceful; and was very severe in his censures of that economy in both our Universities, which exacted at meals the attendance of poor scholars, under the several denominations of Servitors [65] in the one, and Sizers [66] in the other: he thought that the scholar's, like the Christian life, levelled all distinctions of rank and worldly preëminence; but in this he was *mistaken*: civil polity,' etc., etc. — Too true! It is man's lot to err.

However, Destiny, in all ways, means to prove the mistaken Samuel, and see what stuff is in him. He must leave these butteries of Oxford. Want like an armed man compelling him; retreat into his father's mean home: and there abandon himself for a season to inaction, disappointment, shame and nervous melancholy nigh run mad: he is probably the wretchedest man in wide England. In all ways he too must 'become perfect through *suffering*.' [67] — High thoughts have visited him; his College Exercises have been praised beyond the walls of College; Pope himself has seen that *Translation*, and approved of it: Samuel had whispered to himself: I too am 'one and somewhat.' False thoughts; that leave only misery behind! The fever-fire of Ambition is too painfully extinguished (but not cured) in the frost-bath of Poverty. Johnson has knocked at the gate, as one having a right; but there was no opening: the world lies all encircled as with brass; nowhere can he find or force the smallest entrance. An ushership at Market Bosworth, and 'a disagreement between

65. Undergraduates, at Oxford, partly supported by the college funds, whose duty it was to wait at table.

66. Or Sizars, at Cambridge, who were exempted from college fees and charges, after passing certain examinations, and who waited at table.

67. *Cf. Hebrews*, ii,10.

him and Sir Wolstan Dixie, the patron of the school,' yields him bread of affliction and water of affliction; but so bitter, that unassisted human nature cannot swallow them. Young Samson [68] will grind no more in the Philistine mill of Bosworth; quits hold of Sir Wolstan, and the 'domestic chaplaincy, so far at least as to say grace at table,' and also to be 'treated with what he represented as intolerable harshness'; and so, after 'some months of such complicated misery,' feeling doubtless that there are worse things in the world than quick death by Famine, 'relinquishes a situation, which all his life afterwards he recollected with the strongest aversion, and even horror.' Men like Johnson are properly called the Forlorn Hope of the World: judge whether his hope was forlorn or not, by this Letter to a dull oily Printer who called himself *Sylvanus Urban*:

'Sir, — As you appear no less sensible than your readers of the defect of your poetical article, you will not be displeased if (in order to the improvement of it) I communicate to you the sentiments of a person who will undertake, on reasonable terms, sometimes to fill a column.

'His opinion is, that the public would' etc., etc.

'If such a correspondence will be agreeable to you, be pleased to inform me in two posts, what the conditions are on which you shall expect it. Your late offer (for a Prize Poem) gives me no reason to distrust your generosity. If you engage in any literary projects besides this paper, I have other designs to impart.'

Reader, the generous person, to whom this letter goes addressed, is 'Mr. Edmund Cave,[69] at St. John's Gate, London'; the addressor of it is Samuel Johnson, in Birmingham, Warwickshire.

Nevertheless, Life rallies in the man; reasserts its right to be *lived*, even to be enjoyed. 'Better a small bush,' say the Scotch, 'than no shelter': Johnson learns to be contented with humble human things; and is there not already an actual realised human Existence, all stirring and living on every hand of him? Go thou and do likewise! [70] In Birmingham itself, with his own purchased goose-quill, he can earn 'five guineas'; nay, finally, the choicest terrestrial good: a Friend, who will be Wife to him! Johnson's marriage with the good Widow Porter has been treated with ridicule by many mortals, who apparently had no understanding thereof. That the purblind, seamy-faced Wildman, stalking lonely, woe-stricken, like some Irish Gallowglass [71] with peeled club, whose speech no man knew, whose look all men both laughed at and shuddered at, should find any brave female heart to acknowledge, at first sight and hearing of him, 'This is the most sensible man I ever met with'; and then, with generous courage, to take him to itself, and say, Be thou mine; be thou warmed here, and thawed to life! — in all this, in the kind Widow's love and pity for him, in Johnson's love and gratitude, there is actually no matter for ridicule. Their wedded life, as is the common lot, was made up of drizzle and dry weather; but innocence and worth dwelt in it; and when death had ended it, a certain sacredness: Johnson's deathless affection for his Tetty was always venerable and noble.

However, be all this as it might, Johnson is now minded to wed; and will live by the trade of Pedagogy, for by this also may life be kept in. Let the world therefore take notice: *'At Edial near Lichfield, in Staffordshire, young gentlemen are boarded, and taught the Latin and Greek languages, by* — SAMUEL JOHNSON.' Had this Edial enterprise prospered, how

68. *Cf. Judges*, xvi,21.

69. Not Edmund, but Edward Cave (1691–1754), London printer, who conducted the *Gentleman's Magazine*, 1731–54.

70. *Luke*, x,37.

71. Or *galloglass*: a soldier or armed follower of an Irish or Gaelic chief. See *Macbeth*, I,ii,13.

different might the issue have been! Johnson had lived a life of unnoticed nobleness, or swoln into some amorphous Dr. Parr,[72] of no avail to us; Bozzy would have dwindled into official insignificance, or risen by some other elevation; old Auchinleck had never been afflicted with 'ane that keeped a schule,' or obliged to violate hospitality by a 'Cromwell do? God, sir, he gart kings ken that there was a *lith* [73] in their neck!' — But the Edial enterprise did not prosper; Destiny had other work appointed for Samuel Johnson; and young gentlemen got board where they could elsewhere find it. This man was to become a Teacher of grown gentlemen, in the most surprising way; a Man of Letters, and Ruler of the British Nation for some time, — not of their bodies merely but of their minds, not *over* them but *in* them.

The career of Literature could not, in Johnson's day, any more than now, be said to lie along the shores of a Pactolus: [74] whatever else might be gathered there, gold-dust was nowise the chief produce. The world, from the times of Socrates, St. Paul, and far earlier, has always had its Teachers; and always treated them in a peculiar way. A shrewd Townclerk (not of Ephesus), once, in founding a Burgh-Seminary, when the question came, How the Schoolmasters should be maintained? delivered this brief counsel: 'D—n them, keep them *poor*!' Considerable wisdom may lie in this aphorism. At all events, we see, the world has acted on it long, and indeed improved on it, — putting many a Schoolmaster of its great Burgh-Seminary to a death which even *cost* it something. The world, it is true, had for some time been too busy to go out of its way, and *put* any author to death; however, the old sentence pronounced against them was found to be pretty sufficient. The first Writers, being Monks, were sworn to a vow of Poverty; the modern Authors had no need to swear to it. This was the epoch when an Otway [75] could still die of hunger; not to speak of your innumerable Scrogginses,[76] whom 'the Muse found stretched beneath a rug,' with 'rusty grate unconscious of a fire,' stocking-nightcap, sanded floor, and all the other escutcheons of the craft, time out of mind the heirlooms of Authorship. Scroggins, however, seems to have been but an idler; not at all so diligent as worthy Mr. Boyce,[77] whom we might have seen *sitting up* in bed, with his wearing-apparel of Blanket about him, and a hole slit in the same, that his hand might be at liberty to work in its vocation. The worst was, that too frequently a blackguard recklessness of temper ensued, incapable of turning to account what good the gods even here had provided: your Boyces acted on some stoico-epicurean principle of *carpe diem*,[78] as men do in bombarded towns, and seasons of raging pestilence; — and so had lost not only their life, and presence of mind, but their status as persons of respectability. The trade of Author was at about one of its lowest ebbs when Johnson embarked on it.

Accordingly we find no mention of Illuminations in the city of London, when this same Ruler of the British Nation arrived in it: no cannon-salvos are fired; no flourish of drums and trumpets greets his

72. Samuel Parr (1747–1825), pedagogue, headmaster of three schools; fine Latin scholar; writer of Dr. Johnson's epitaph in St. Paul's; author of works full of verbosity and mannerisms.

73. *lith*: joint, or member.

74. A small but celebrated river in Lydia, fabled as having golden shores.

75. Thomas Otway (1652–85), dramatist, author of *Venice Preserved* (1682); the manner of his death while in a state of destitution is still disputed.

76. Scroggen is the poet in Goldsmith's poem, *A Description of an Author's Bedchamber*, from which Carlyle is quoting.

77. Samuel Boyce (or Boyse) (d.1775) was the author of a dramatic pastoral, and several other poems; he was among the early associates of Johnson at St. John's Gate. (See Boswell's *Johnson*, Oxf.Stand.Ed.,II,640,n.)

78. 'Pluck the day'; enjoy life while you may. (Horace, *Odes*,I,xi,8.)

appearance on the scene. He enters quite quietly, with some copper halfpence in his pocket; creeps into lodgings in Exeter Street, Strand; and has a Coronation Pontiff also, of not less peculiar equipment, whom, with all submissiveness, he must wait upon, in his Vatican of St. John's Gate. This is the dull oily Printer alluded to above.

'Cave's temper,' says our Knight Hawkins, 'was phlegmatic: though he assumed, as the publisher of the Magazine, the name of Sylvanus Urban, he had few of those qualities that constitute urbanity. Judge of his want of them by this question, which he once put to an author: "Mr. ——, I hear you have just published a pamphlet, and am told there is a very good paragraph in it upon the subject of music: did you write that yourself?" His discernment was also slow; and as he had already at his command some writers of prose and verse, who, in the language of Booksellers, are called good hands, he was the backwarder in making advances, or courting an intimacy with Johnson. Upon the first approach of a stranger, his practice was to continue sitting; a posture in which he was ever to be found, and for a few minutes to continue silent: if at any time he was inclined to begin the discourse, it was generally by putting a leaf of the Magazine, then in the press, into the hand of his visitor, and asking his opinion of it. . . .

'He was so incompetent a judge of Johnson's abilities, that meaning at one time to dazzle him with the splendour of some of those luminaries in Literature, who favoured him with their correspondence, he told him that if he would, in the evening, be at a certain alehouse in the neighbourhood of Clerkenwell, he might have a chance of seeing Mr. Browne and another or two of those illustrious contributors: Johnson accepted the invitation; and being introduced by Cave, dressed in a loose horseman's coat, and such a great bushy wig as he constantly wore, to the sight of Mr. Browne, whom he found sitting at the upper end of a long table, in a cloud of tobacco-smoke, had his curiosity gratified.'

In fact, if we look seriously into the condition of Authorship at that period, we shall find that Johnson had undertaken one of the ruggedest of all possible enterprises; that here as elsewhere Fortune had given him unspeakable Contradictions to reconcile. For a man of Johnson's stamp, the Problem was twofold: *First*, not only as the humble but indispensable condition of all else, to keep himself, if so might be, *alive*; but *secondly*, to keep himself alive by speaking forth the *Truth* that was in him, and speaking it *truly*, that is, in the clearest and fittest utterance the Heavens had enabled him to give it, let the Earth say to this what she liked. Of which twofold Problem if it be hard to solve either member separately, how incalculably more so to solve it, when both are conjoined, and work with endless complication into one another! He that finds himself already *kept alive* can sometimes (unhappily not always) speak a little truth; he that finds himself able and willing, to all lengths, to *speak lies*, may, by watching how the wind sits, scrape together a livelihood, sometimes of great splendour: he, again, who finds himself provided with *neither* endowment, has but a ticklish game to play, and shall have praises if he win it. Let us look a little at both faces of the matter; and see what front they then offered our Adventurer, what front he offered them.

At the time of Johnson's appearance on the field, Literature, in many senses, was in a transitional state; chiefly in this sense, as respects the pecuniary subsistence of its cultivators. It was in the very act of passing from the protection of Patrons into that of the Public; no longer to supply its necessities by laudatory Dedications to the

Great, but by judicious Bargains with the Booksellers. This happy change has been much sung and celebrated; many a 'lord of the lion heart and eagle eye'[79] looking back with scorn enough on the bygone system of Dependency: so that now it were perhaps well to consider, for a moment, what good might also be in it, what gratitude we owe it. That a good was in it, admits not of doubt. Whatsoever has existed has had its value: without some truth and worth lying in it, the thing could not have hung together, and been the organ and sustenance, and method of action, for men that reasoned and were alive. Translate a Falsehood which is wholly false into Practice, the result comes out *zero*; there is no fruit or issue to be derived from it. That in an age, when a Nobleman was still noble, still with his wealth the protector of worthy and humane things, and still venerated as such, a poor Man of Genius, his brother in nobleness, should, with unfeigned reverence, address him and say: 'I have found Wisdom here, and would fain proclaim it abroad; wilt thou, of thy abundance, afford me the means?'— in all this there was no baseness; it was wholly an honest proposal, which a free man might make, and a free man listen to. So might a Tasso,[80] with a *Gerusalemme* in his hand or in his head, speak to a Duke of Ferrara; so might a Shakspeare to his Southampton; and Continental Artists generally to their rich Protectors, — in some countries, down almost to these days. It was only when the reverence became *feigned*, that baseness entered into the transaction on both sides; and, indeed, flourished there with rapid luxuriance, till that became disgraceful for a Dryden, which a Shakspeare could once practise without offence.

Neither, it is very true, was the new way of Bookseller Mæcenasship[81] worthless; which opened itself at this juncture, for the most important of all transport-trades, now when the old way had become too miry and impassable. Remark, moreover, how this second sort of Mæcenasship, after carrying us through nearly a century of Literary Time, appears now to have wellnigh discharged *its* function also; and to be working pretty rapidly towards some *third* method, the exact conditions of which are yet nowise visible. Thus all things have their end; and we should part with them all, not in anger, but in peace. The Bookseller-System, during its peculiar century, the whole of the eighteenth, did carry us handsomely along; and many good Works it has left us, and many good Men it maintained: if it is now expiring by PUFFERY,[82] as the Patronage-System did by FLATTERY (for *Lying* is ever the forerunner of Death, nay is itself Death), let us not forget its benefits; how it nursed Literature through boyhood and school-years, as Patronage had wrapped it in soft swaddling-bands; — till now we see it about to put on the *toga virilis*,[83] could it but *find* any such!

There is tolerable travelling on the beaten road, run how it may; only on the new road not yet levelled and paved, and on the old road all broken into ruts and quagmires, is the travelling bad or impracticable. The difficulty lies always in the *transition* from one method to another. In which state it was that Johnson now found Literature; and out of which, let us also say, he manfully carried it. What remarkable mortal *first paid copyright* in England we have not ascertained; perhaps,

79. See Smollett's *Ode to Independence*.

80. Torquato Tasso (1544–95), one of the great poets of the Italian Renaissance, published *Jerusalem Delivered* in 1581.

81. Caius Cilnius Maecenas (c.70–8 B.C.) was a Roman knight, celebrated for his patronage of learning and letters in the time of Augustus; he was the protector and benefactor of Virgil and Horace.

82. Advertising; especially among booksellers and reviewers.

83. 'garb of manhood' — assumed by Roman boys when they reached maturity, at sixteen.

for almost a century before, some scarce visible or ponderable pittance of wages had occasionally been yielded by the Seller of Books to the Writer of them: the original Covenant, stipulating to produce *Paradise Lost* on the one hand, and *Five Pounds Sterling* on the other, still lies (we have been told) in black-on-white, for inspection and purchase by the curious, at a Bookshop in Chancery Lane. Thus had the matter gone on, in a mixed confused way, for some threescore years; — as ever, in such things, the old system *overlaps* the new, by some generation or two, and only dies quite out when the new has got a complete organisation and weather-worthy surface of its own. Among the first Authors, the very first of any significance, who lived by the day's wages of his craft, and composedly faced the world on that basis, was Samuel Johnson.

At the time of Johnson's appearance there were still two ways, on which an Author might attempt proceeding: there were the Mæcenases proper in the West End of London; and the Mæcenases virtual of St. John's Gate and Paternoster Row.[84] To a considerate man it might seem uncertain which method were preferable: neither had very high attractions; the Patron's aid was now wellnigh *necessarily* polluted by sycophancy, before it could come to hand; the Bookseller's was deformed with greedy stupidity, not to say entire wooden-headedness and disgust (so that an Osborne[85] even required to be knocked down, by an author of spirit), and could barely keep the thread of life together. The one was the wages of suffering and poverty; the other, unless you gave strict heed to it, the wages of sin. In time, Johnson had opportunity of looking into both methods, and ascertaining what they were; but found, at first trial, that the former would in nowise do for him. Listen, once again, to that far-famed Blast of Doom, proclaiming into the ear of Lord Chesterfield, and, through him, of the listening world, that patronage should be no more!

'Seven years, my Lord, have now past, since I waited in your outward rooms, or was repulsed from your door; during which time I have been pushing on my Work[86] through difficulties, of which it is useless to complain, and have brought it at last to the verge of publication, without one act of assistance,[87] one word of encouragement, or one smile of favour.

'The shepherd in Virgil grew at last acquainted with Love, and found him a native of the rocks.

'Is not a patron, my Lord, one who looks with unconcern on a man struggling for life in the water, and when he has reached ground, encumbers him with help? The notice which you have been pleased to take of my labours, had it been early, had been kind: but it has been delayed till I am indifferent and cannot enjoy it; till I am solitary and cannot impart it; till I am known and do not want it. I hope, it is no very cynical asperity, not to confess obligations where no benefit has been received; or to be unwilling that the public should consider me as owing that to a patron which Providence has enabled me to do for myself.

'Having carried on my Work thus far

84. Paternoster Row was, and still is, a seat of the publishing business; adjoining St. Paul's Cathedral.

85. Thomas Osborne (d.1767), bookseller, issued Richardson's *Pamela*; was satirized in *The Dunciad*; and, though the principal bookseller (publisher) of his time, was ignorant of books; he was beaten by Johnson for impertinence. (See Boswell's *Johnson*, Oxf.Stand. Ed.,I,105.)

86. The *English Dictionary*. [Carlyle's note.]

87. Were time and printer's space of no value, it were easy to wash away certain foolish soot-stains dropped here as 'Notes'; especially two: the one on this word, and on Boswell's Note to it; the other on the paragraph which follows. Let 'ED.' look a second time; he will find that Johnson's sacred regard for *Truth* is the only thing to be 'noted' in the former case; also, in the latter, that this of 'Love's being a native of the rocks' actually *has* a 'meaning.' [Carlyle's note.]

with so little obligation to any favourer of learning, I shall not be disappointed though I should conclude it, if less be possible, with less: for I have long been awakened from that dream of hope, in which I once boasted myself with so much exultation.

'My Lord, your Lordship's most humble, most obedient servant,

SAM. JOHNSON.'

And thus must the rebellious 'Sam. Johnson' turn him to the Bookselling guild, and the wondrous chaos of 'Author by trade'; and, though ushered into it only by that dull oily Printer, 'with loose horseman's coat and such a great bushy wig as he constantly wore,' and only as subaltern to some commanding-officer 'Browne,[88] sitting amid tobacco-smoke at the head of a long table in the alehouse at Clerkenwell,' — gird himself together for the warfare; having no alternative!

Little less contradictory was that other branch of the twofold Problem now set before Johnson: the speaking forth of *Truth*. Nay taken by itself, it had in those days become so complex as to puzzle strongest heads, with nothing else imposed on them for solution; and even to turn high heads of that sort into mere hollow *vizards*, speaking neither truth nor falsehood, nor anything but what the Prompter and Player (ὑποκριτὴς) put into them. Alas! for poor Johnson Contradiction abounded; in spirituals and in temporals, within and without. Born with the strongest unconquerable love of just Insight, he must begin to live and learn in a scene where Prejudice flourishes with rank luxuriance. England was all confused enough, sightless and yet restless, take it where you would; but figure the best intellect in England nursed up to manhood in the idol-cavern[89] of a poor Tradesman's house, in the cathedral city of Lichfield! What is Truth? said jesting Pilate.[90] What is Truth? might earnest Johnson much more emphatically say. Truth, no longer, like the Phoenix, in rainbow plumage, poured, from her glittering beak, such tones of sweetest melody as took captive every ear: the Phoenix[91] (waxing old) had wellnigh ceased her singing, and empty wearisome Cuckoos, and doleful monotonous Owls, innumerable Jays also, and twittering Sparrows on the housetop, pretended they were repeating her.

It was wholly a divided age, that of Johnson; Unity existed nowhere, in its Heaven, or in its Earth. Society, through every fibre, was rent asunder: all things, it was then becoming visible, but could not then be understood, were moving onwards, with an impulse received ages before, yet now first with a decisive rapidity, towards that great chaotic gulf, where, whether in the shape of French Revolutions, Reform Bills, or what shape soever, bloody or bloodless, the descent and engulfment assume, we now see them weltering and boiling. Already Cant, as once before hinted, had begun to play its wonderful part, for the hour was come: two ghastly Apparitions, unreal *simulacra* both, HYPOCRISY and ATHEISM are already, in silence, parting the world. Opinion and Action, which should live together as wedded pair, 'one flesh,' more properly as Soul and Body, have commenced their open quarrel, and are suing for a separate maintenance, — as if they could exist separately. To the

88. Isaac Hawkins Browne (1705–60), often called by Carlyle 'Tobacco Browne,' was a wit and a poet; Dr. Johnson highly admired his conversational powers. Browne was best at imitation, his poem *A Pipe of Tobacco* imitating Colley Cibber, Ambrose Philips, James Thomson, Young, Pope, Swift, and others.

89. See Macaulay's essay on Bacon, in the present collection, note no.86.

90. 'What is Truth?' said jesting Pilate; and would not stay for an answer.' — Bacon's essay *Of Truth*. (*Cf. John*, xviii.37–38.)

91. In Egyptian religion, the phoenix was a miraculous bird which lived for 500 years, was then consumed in fire by its own act, and rose again in youthful freshness from its own ashes. Carlyle makes frequent use of the phoenix as a symbol of social regeneration. See *Sartor*, Bk.III,Ch.v, 'The Phoenix.'

earnest mind, in any position, firm footing and a life of Truth was becoming daily more difficult: in Johnson's position it was more difficult than in almost any other.

If, as for a devout nature was inevitable and indispensable, he looked up to Religion, as to the polestar of his voyage, already there was no *fixed* polestar any longer visible; but two stars, a whole constellation of stars, each proclaiming itself as the true. There was the red portentous comet-star of Infidelity; the dim fixed-star, burning ever dimmer, uncertain now whether not an atmospheric *meteor*, of Orthodoxy: which of these to choose? The keener intellects of Europe had, almost without exception, ranged themselves under the former: for some half century, it had been the general effort of European speculation to proclaim that Destruction of Falsehood was the only Truth: daily had Denial waxed stronger and stronger, Belief sunk more and more into decay. From our Bolingbrokes [92] and Tolands [93] the sceptical fever had passed into France, into Scotland; and already it smouldered, far and wide, secretly eating out the heart of England. Bayle [94] had played his part; Voltaire [95] on a wider theatre, was playing his, — Johnson's senior by some fifteen years: Hume [96] and Johnson were children almost of the same year.[97] To this keener order of intellects did Johnson's indisputably belong: was he to join them; was he to oppose them? A complicated question: for, alas, the Church itself is no longer, even to him, wholly of true adamant, but of adamant and baked mud conjoined: the zealously Devout has to find his Church tottering; and pause amazed to see, instead of inspired Priest, many a swine-feeding Trulliber [98] ministering at her altar. It is not the least curious of the incoherences which Johnson had to reconcile, that, though by nature contemptuous and incredulous, he was, at that time of day, to find his safety and glory in defending, with his whole might, the traditions of the elders.

Not less perplexingly intricate, and on both sides hollow or questionable, was the aspect of Politics. Whigs struggling blindly forward, Tories holding blindly back; each with some forecast of a half truth; neither with any forecast of the whole! Admire here this other Contradiction in the life of Johnson; that, though the most ungovernable, and in practice the most independent of men, he must be a Jacobite,[99] and worshipper of the Divine Right. In Politics also there are Irreconcilables enough for him. As, indeed, how could it be other-

92. Henry St. John, Viscount Bolingbroke (1678–1751), statesman and deistic thinker, expressed his rationalistic and skeptical point of view in various philosophical fragments, versified by Pope in the *Essay on Man* (1732–34).

93. John Toland (1670–1722), deistic thinker, published *Christianity Not Mysterious* (1696); was coupled with John Locke as a Socinian (rationalist concerning the supernaturalism of religion), and was denounced from the pulpit; to him was first applied the term 'freethinker,' which he used himself.

94. Pierre Bayle (1647–1706), French philosopher, author of the *Dictionnaire historique et critique* (1697–1702), a pioneer work in scientific biography and in criticism of religion and legend.

95. Voltaire (1694–1778) was, of course, the greatest and most influential French skeptic of the 18th century; he rejected all religious systems, and urged the abolition of all institutional religion. See Carlyle's essay on Voltaire, *Ess.*,I,396–468.

96. David Hume (1711–76), philosopher and historian, developed a remarkable philosophical skepticism in his chief work, *Treatise of Human Nature* (1739), also in his *Essays Moral and Political* (1741–42), *The Natural History of Religion* (1757), and *Dialogues concerning Natural Religion* (1779). His rationalistic, skeptical treatment of human nature, politics, society, ethics, and religion was extremely influential upon advancing thinkers of the 18th and 19th centuries.

97. Johnson, September 1709; Hume, April 1711. [Carlyle's note.]

98. The parson in Fielding's *Joseph Andrews* (1742).

99. A partisan of the Stuarts after the revolution of 1688, from *Jacobus*, Latin for James; the Stuart kings maintained the doctrine of the 'divine right of kings.'

wise? For when Religion is torn asunder, and the very heart of man's existence set against itself, then in all subordinate departments there must needs be hollowness, incoherence. The English Nation had rebelled against a Tyrant;[100] and, by the hands of religious tyrannicides, exacted stern vengeance of him: Democracy had risen iron-sinewed, and, 'like an infant Hercules, strangled serpents in its cradle.'[101] But as yet none knew the meaning or extent of the phenomenon: Europe was not ripe for it; not to be ripened for it but by the culture and various experience of another century and a half. And now, when the King-killers were all swept away, and a milder *second* picture was painted over the canvas of the *first*, and betitled 'Glorious Revolution,'[102] who doubted but the catastrophe was over, the whole business finished, and Democracy gone to its long sleep? Yet was it like a business finished and not finished; a lingering uneasiness dwelt in all minds: the deep-lying, resistless Tendency, which had still to be *obeyed*, could no longer be *recognised*; thus was there haltness, insincerity, uncertainty in men's ways; instead of heroic Puritans and heroic Cavaliers, came now a dawdling set of argumentative Whigs, and a dawdling set of deaf-eared Tories; each half-foolish, each half-false. The Whigs were false and without basis; inasmuch as their whole object was Resistance, Criticism, Demolition, — they knew not why, or towards what issue. In Whiggism, ever since a Charles and his Jeffries[103] had ceased to meddle with it, and to have any Russel[104] or Sydney[105] to meddle with, there could be no divineness of character; not till, in these latter days, it took the figure of a thorough-going, all-defying Radicalism,[106] was there any solid footing for it to stand on. Of the like uncertain, half-hollow nature had Toryism become, in Johnson's time; preaching forth indeed an everlasting truth, the duty of Loyalty; yet now, ever since the final expulsion of the Stuarts, having no *Person*, but only an *Office* to be loyal to;[107] no living *Soul* to worship, but only a dead velvet-cushioned *Chair*. Its attitude, therefore, was stiff-necked refusal to move; as that of Whiggism was clamorous command to move, — let rhyme and reason, on both hands, say to it what they might. The consequence was: Immeasurable floods of contentious jargon, tending nowhither; false convic-

100. Against Charles I (1600–49), who was beheaded after refusing trial before a court constituted of the House of Commons.

101. Son of Zeus by Alcmene. Hera (Juno), jealous, sent two serpents to destroy the babe in its cradle, whereupon the infant Hercules strangled the serpents with his own hands. (Carlyle is quoting Boswell on Johnson. See *Life*, for May 9, 1773.)

102. *i.e.* the revolution of 1688.

103. Or Jeffreys, George, first Baron Jeffreys of Wem (1648–89), judge under Charles II and James II, notorious for his brutality in the 'bloody assize' (court session) after the suppression of Monmouth's rebellion in 1685.

104. William Russell, Lord Russell (1639–83), seconded the introduction of the Exclusion Bill in the Oxford Parliament, 1681 (in an effort to prevent Roman Catholics from succeeding to the throne); was sent to the Tower of London on a charge of complicity in the Rye House plot, 1683. (See Macaulay's *History*, Ch.ii (present collection), notes 56 and 58.)

105. Algernon Sidney (1622–83), grand-nephew of Sir Philip Sidney, fought against Charles I, later refused allegiance to Charles II, and was tried before Jeffreys and executed on Tower Hill.

106. In Carlyle's early years, Radicalism meant sweeping changes in laws and methods of government, with the least delay, especially in order to equalize, or to remedy existing evils arising from, social conditions. The working-class movement and the Utilitarian school of thought were contemporary evidences of this phenomenon.

107. With the expulsion of the Stuarts, the throne ceased to have its former powers; the king was now said to reign but not to rule. Under the first two Georges, Cabinet and party government rapidly developed, with the leader of the majority in power in the House of Commons, *i.e.* the Prime Minister, taking the place of the Sovereign as head of the Cabinet.

tion; false resistance to conviction; decay (ultimately to become decease) of whatsoever was once understood by the words, *Principle*, or *Honesty* of heart; the louder and louder triumph of *Half*ness and Plausibility over *Whole*ness and Truth; — at last, this all-overshadowing efflorescence of QUACKERY, which we now see, with all its deadening and killing fruits, in all its innumerable branches, down to the lowest. How, between these jarring extremes, wherein the rotten lay so inextricably intermingled with the sound, and as yet no eye could see through the ulterior meaning of the matter, was a faithful and true man to adjust himself?

That Johnson, in spite of all drawbacks, adopted the Conservative side; stationed himself as the unyielding opponent of Innovation, resolute to hold fast the form of sound words, could not but increase, in no small measure, the difficulties he had to strive with. We mean, the *moral* difficulties; for in *economical* respects, it might be pretty equally balanced; the Tory servant of the Public had perhaps about the same chance of promotion as the Whig: and all the promotion Johnson aimed at was the privilege *to live*. But, for what, though unavowed, was no less indispensable, for his peace of conscience, and the clear ascertainment and feeling of his Duty as an inhabitant of God's world, the case was hereby rendered much more complex. To resist Innovation is easy enough on one condition: that you resist Inquiry. This is, and was, the common expedient of your common Conservatives; but it would not do for Johnson: he was a zealous recommender and practiser of Inquiry; once for all, could not and would not believe, much less speak and act, a Falsehood: the *form* of sound words, which he held fast, must have a *meaning* in it. Here lay the difficulty: to behold a portentous mixture of True and False, and feel that he must dwell and fight there; yet to love and defend only the True. How worship, when you cannot and will not be an idolater; yet cannot help discerning that the Symbol of your Divinity has half become idolatrous? This was the question, which Johnson, the man both of clear eye and devout believing heart, must answer, — at peril of his life. The Whig or Sceptic, on the other hand, had a much simpler part to play. To him only the idolatrous side of things, nowise the divine one, lay visible: not *worship*, therefore, nay in the strict sense not heart-honesty, only at most lip- and hand-honesty, is required of him. What spiritual force is his, he can conscientiously employ in the work of cavilling, of pulling-down what is False. For the rest, that there is or can be any Truth of a higher than sensual nature, has not occurred to him. The utmost, therefore, that he as man has to aim at, is RESPECTABILITY, the suffrages of his fellow-men. Such suffrages he may weigh as well as count: or count only: according as he is a Burke [108] or a Wilkes.[109] But beyond these there lies nothing divine for him; these attained, all is attained. Thus is his whole world distinct and rounded-in; a clear goal is set before him; a firm path, rougher or smoother; at worst a firm region wherein to seek a path: let him gird-up his loins, and travel on without misgivings! For the honest Conservative, again, nothing is distinct, nothing rounded-in: RESPECTABILITY can nowise be his highest Godhead; not one aim, but two conflicting aims to be continually reconciled by him, has he to strive after. A difficult position, as we said; which accordingly the most did,

108. Edmund Burke (1729–97), greatest of the Whig statesmen of the 18th century, devoted to emancipation of the House of Commons from the control of George III, the emancipation of the American colonies, of Irish Trade, the Irish parliament, and the Irish Catholics; and of India from misgovernment by the East India Company. Burke was a member of Johnson's club.

109. John Wilkes (1727–97), politician; dissolute and scandalous in public and private life; but of much wit and ability; founder of *The North Briton* in 1762; asserted and secured several important political rights to the people.

even in those days, but half defend: by the surrender, namely, of their own too cumbersome *honesty* or even *understanding*; after which the completest defence was worth little. Into this difficult position Johnson, nevertheless, threw himself: found it indeed full of difficulties; yet held it out manfully, as an honest-hearted, open-sighted man, while life was in him.

Such was that same 'twofold Problem' set before Samuel Johnson. Consider all these moral difficulties; and add to them the fearful aggravation, which lay in that other circumstance, that he needed a continual appeal to the Public, must continually produce a certain impression and conviction on the Public; that if he did not, he ceased to have 'provision for the day that was passing over him,' he could not any longer live! How a vulgar character, once launched into this wild element; driven onwards by Fear and Famine; without other aim than to clutch what Provender (of Enjoyment in any kind) he could get, always if possible keeping *quite* clear of the Gallows and Pillory, that is to say, minding heedfully both 'person' and 'character,'—would have floated hither and thither in it; and contrived to eat some three repasts daily, and wear some three suits yearly, and then to depart and disappear, having consumed his last ration: all this might be worth knowing, but were in itself a trivial knowledge. How a noble man, resolute for the Truth, to whom Shams and Lies were once for all an abomination, was to act in it: *here* lay the mystery. By what methods, by what gifts of eye and hand, does a heroic Samuel Johnson, now when cast forth into that waste Chaos of Authorship, maddest of things, a mingled Phlegethon[110] and Fleet-ditch,[111] with its floating lumber, and sea-krakens,[112] and mud-spectres,—shape himself a voyage; of the *transient* driftwood, and the *enduring* iron, build him a sea-worthy Life-boat, and sail therein, undrowned, unpolluted, through the roaring 'mother of dead dogs,'[113] onwards to an eternal Landmark, and City that hath foundations? This high question is even the one answered in Boswell's Book; which Book we therefore, not so falsely, have named a *Heroic Poem*; for in it there lies the whole argument of such. Glory to our brave Samuel! He accomplished this wonderful Problem; and now through long generations we point to him, and say: Here also was a Man; let the world once more have assurance of a Man![114]

Had there been in Johnson, now when afloat on that confusion worse confounded[115] of grandeur and squalor, no light but an earthly outward one, he too must have made shipwreck. With his diseased body and vehement voracious heart, how easy for him to become a *carpe-diem* Philosopher, like the rest, and live and die as miserably as any Boyce of that Brotherhood! But happily there was a higher light for him; shining as a lamp to his path; which, in all paths, would teach him to act and walk not as a fool, but as wise, and in those evil days too 'redeeming the time.'[116] Under dimmer or clearer manifestations, a Truth had been revealed to him: I also am a Man; even in this unutterable element of Authorship, I may live as beseems a man! That Wrong is not only different from Right, but that it is in strict scientific terms *infinitely* different;

110. The river in Hades in whose channel flowed flames instead of water.

111. Fleet creek, or river, which ran south from Hampstead and into the Thames at Blackfriars, and which gave its name to the street which was, and still is, the headquarters of London journalism.

112. *kraken*: a fabulous Scandinavian sea-monster, sometimes resembling an immense octopus.

113. Probably an allusion to the filth and refuse of Fleet River. 'Mother of dead dogs' has also been a nickname of the Thames River.

114. See *Hamlet*, III,iv,62.

115. See *Paradise Lost*, ii,996.

116. See *Colossians*, iv,5; *Ephesians*, v,15–16.

even as the gaining of the whole world set against the losing of one's own soul,[117] or (as Johnson had it) a Heaven set against a Hell; that in all situations out of the Pit of Tophet,[118] wherein a living Man has stood or can stand, there is actually a Prize of quite *infinite* value placed within his reach, namely a *Duty* for him to do: this highest Gospel, which forms the basis and worth of all other Gospels whatsoever, had been revealed to Samuel Johnson; and the man had believed it, and laid it faithfully to heart. Such knowledge of the *transcendental*, immeasurable character of Duty we call the basis of all Gospels, the essence of all Religion: he who with his whole soul knows not this, as yet knows nothing, as yet *is* properly nothing.

This, happily for him, Johnson was one of those that knew: under a certain authentic Symbol it stood forever present to his eyes: a Symbol, indeed, waxing old as doth a garment;[119] yet which had guided forward, as their Banner and celestial Pillar of Fire,[120] innumerable saints and witnesses, the fathers of our modern world; and for him also had still a sacred significance. It does not appear that at any time Johnson was what we call irreligious: but in his sorrows and isolation, when hope died away, and only a long vista of suffering and toil lay before him to the end, then first did Religion shine forth in its meek, everlasting clearness; even as the stars do in black night, which in the daytime and dusk were hidden by inferior lights. How a true man, in the midst of errors and uncertainties, shall work out for himself a sure Life-truth; and adjusting the transient to the eternal, amid the fragments of ruined Temples build up, with toil and pain, a little Altar for himself, and worship there; how Samuel Johnson, in the era of Voltaire, can purify and fortify his soul, and hold real communion with the Highest, 'in the Church of St. Clement Danes': this too stands all unfolded in his Biography, and is among the most touching and memorable things there; a thing to be looked at with pity, admiration, awe. Johnson's Religion was as the light of life to him; without it his heart was all sick, dark and had no guidance left.

He is now enlisted, or impressed, into that unspeakable shoeblack-seraph Army of Authors; but can feel hereby that he fights under a celestial flag, and will quit him like a man.[121] The first grand requisite, an assured heart, he therefore has: what his outward equipments and accoutrements are, is the next question; an important, though inferior one. His intellectual stock, intrinsically viewed, is perhaps inconsiderable: the furnishings of an English School and English University; good knowledge of the Latin tongue, a more uncertain one of Greek: this is a rather slender stock of Education wherewith to front the world. But then it is to be remembered that his world was England; that such was the culture England commonly supplied and expected. Besides, Johnson has been a voracious reader, though a desultory one, and oftenest in strange scholastic, too obsolete Libraries; he has also rubbed shoulders with the press of Actual Life for some thirty years now: views or hallucinations of innumerable things are weltering to and fro in him. Above all, be his weapons what they may, he has an arm that can wield them. Nature has given him her choicest gift, — an open eye and heart. He will look on the world, wheresoever he can catch a glimpse of it, with eager curiosity: to the last, we find this a striking characteristic of him; for all human interests he has a sense; the meanest handicraftsman could interest him, even in extreme age, by speaking of his craft: the ways of men are all interest-

118. Hell.
119. *authentic Symbol*: the Church of England. — *waxing old*, etc.: see *Hebrews*, i,11.
120. *Cf. Exodus*, xiii,21.
121. *quit him like a man*: *I Samuel*, iv,9.

ing to him; any human thing, that he did not know, he wished to know. Reflection, moreover, Meditation, was what he practised incessantly, with or without his will: for the mind of the man was earnest, deep as well as humane. Thus would the world, such fragments of it as he could survey, form itself, or continually tend to form itself, into a coherent Whole; on any and on all phases of which, his vote and voice must be well worth listening to. As a Speaker of the Word, he will speak real words; no idle jargon or hollow triviality will issue from him. His aim too is clear, attainable; that of *working for his wages*: let him *do* this honestly, and all else will follow of its own accord.

With such omens, into such a warfare, did Johnson go forth. A rugged hungry Kerne [122] or Gallowglass,[123] as we called him: yet indomitable; in whom lay the true spirit of a Soldier. With giant's force he toils, since such is his appointment, were it but at hewing of wood and drawing of water [124] for old sedentary bushy-wigged Cave; distinguishes himself by mere quantity, if there is to be no other distinction. He can write all things; frosty Latin verses, if these are the saleable commodity; Book-prefaces, Political Philippics, Review Articles, Parliamentary Debates: all things he does rapidly; still more surprising, all things he does thoroughly and well. How he sits there, in his rough-hewn amorphous bulk, in that upper-room at St. John's Gate, and trundles-off sheet after sheet of those Senate-of-Lilliput [125] Debates, to the clamorous Printer's Devils waiting for them with insatiable throat, down stairs; himself perhaps *impransus* [126] all the while! Admire also the greatness of Literature; how a grain of mustard-seed [127] cast into its Nile-waters, shall settle in the teeming mould, and be found, one day, as a Tree, in whose branches all the fowls of heaven may lodge. Was it not so with these Lilliput Debates? In that small project and act began the stupendous FOURTH ESTATE; [128] whose wide world-embracing influences what eye can take in; in whose boughs are there not already fowls of strange feather lodged? Such things, and far stranger, were done in that wondrous old Portal, even in latter times. And then figure Samuel dining 'behind the screen,' from a trencher covertly handed-in to him, at a preconcerted nod from the 'great bushy wig'; Samuel too ragged to show face, yet 'made a happy man of' by hearing his praise spoken. If to Johnson himself, then much more to us, may that St. John's Gate be a place we can 'never pass without veneration.' [129]

122. A light armed Celtic foot-soldier of Ireland or Scotland. *Cf. Macbeth*, I,ii,13.

123. An armed Irish foot-soldier. *Cf. Macbeth*, I,ii,13.

124. See *Joshua*, ix,21.

125. *Lilliput*: Land of pygmies (*Gulliver's Travels*).

126. Not having had breakfast; fasting.

127. *grain of mustard seed*: see *Matthew*, xiii,31.

128. The public press; the newspapers; — formerly applied variously, as to the mob.

129. All Johnson's places of resort and abode are venerable, and now indeed to the many as well as to the few; for his name has become great; and, as we must often with a kind of sad admiration recognise, there is, even to the rudest man, no greatness so venerable as intellectual, as spiritual greatness: nay properly there is no other venerable at all. For example, what soul-subduing magic, for the very clown or craftsman of our England, lies in the word 'Scholar'! 'He is a Scholar:' he is a man *wiser* than we: of a wisdom to us *boundless*, infinite: who shall speak his worth! Such things, we say, fill us with a certain pathetic admiration of defaced and obstructed yet glorious man: archangel though in ruins, — or rather, though in *rubbish* of encumbrances and mud-incrustations, which also are not to be perpetual.

Nevertheless, in this mad-whirling all-forgetting London, the haunts of the mighty that were can seldom without a strange difficulty be discovered. Will any man, for instance, tell us which *bricks* it was in Lincoln's Inn Buildings that Ben Jonson's hand and trowel laid? No man, it is to be feared, — and also grumbled at. With Samuel Johnson may it prove otherwise! A Gentleman of the British Museum is said

Poverty, Distress, and as yet Obscurity, are his companions: so poor is he that his Wife must leave him, and seek shelter among other relations; Johnson's household has accommodation for one inmate only. To all his ever-varying, ever-recurring troubles, moreover, must be added this continual one of ill-health, and its concomitant depressiveness: a galling load, which would have crushed most common mortals into desperation, is his appointed ballast and life-burden; he 'could not remember the day he had passed free from pain.' Nevertheless, Life, as we said before, is always Life: a healthy soul, imprison it as you will, in squalid garrets, shabby coat, bodily sickness, or whatever else, will assert its heaven-granted indefeasible Freedom, its right to conquer difficulties, to do work, even to feel gladness. Johnson does not whine over his existence, but manfully makes the most and best of it. 'He said, a man might live in a garret at eightenpence a-week: few people would inquire where he lodged; and if they did, it was easy to say, "Sir, I am to be found at such a place." By spending threepence in a coffee-house, he might be for some hours every day in very good company; he might dine for sixpence, breakfast on bread-and-milk for a penny, and do without supper. On *clean-shirt day* he went abroad and paid visits.' Think by whom and of whom this was uttered, and ask then, Whether there is more pathos in it than in a whole circulating-library of *Giaours* and *Harolds*,[130] or less pathos? On another occasion, 'when Dr. Johnson, one day, read his own Satire,[131] in which the life of a scholar is painted, with the various obstructions thrown in his way to fortune and to fame, he burst into a passion of tears: Mr. Thrale's family and Mr. Scott only were present, who, in a jocose way, clapped him on the back, and said, "What's all this, my dear sir? Why, you and I and *Hercules*, you know, were all troubled with *melancholy*." He was a very large man, and made out the triumvirate with Johnson and Hercules comically enough.' These were sweet tears; the sweet victorious remembrance lay in them of toils indeed frightful, yet never flinched from, and now triumphed over. 'One day it shall delight you also to remember labour done!'—Neither, though Johnson is obscure and poor, need the highest enjoyment of existence, that of heart freely communing with heart, be denied him. Savage[132] and he wander home-

to have made drawings of all *his* residences: the blessing of Old Mortality be upon him! We ourselves, not without labour and risk, lately discovered GOUGH SQUARE, between Fleet Street and Holborn (adjoining both to BOLT COURT and to JOHNSON'S COURT); and on the second day of search, the very House there, wherein the *English Dictionary* was composed. It is the first or corner house on the right hand, as you enter through the arched way from the North-west. The actual occupant, an elderly, well-washed, decent-looking man, invited us to enter; and courteously undertook to be *cicerone*; though in his memory lay nothing but the foolishest jumble and hallucination. It is a stout, old-fashioned, oak-balustraded house: 'I have spent many a pound and penny on it since then,' said the worthy Landlord: 'here, you see, this Bedroom was the Doctor's study; that was the garden' (a plot of delved ground somewhat larger than a bed-quilt), 'where he walked for exercise; these three garret Bedrooms' (where his three Copyists sat and wrote) 'were the place he kept his —*Pupils* in!' *Tempus edax rerum!* ['Time devouring all things.'] Yet *ferax* ['fruitful'] also: for our friend now added, with a wistful look, which strove to seem merely historical: 'I let it all in Lodgings, to respectable gentlemen; by the quarter or the month; it's all one to me.'—'To me also,' whispered the Ghost of Samuel, as we went pensively our ways. [Carlyle's note.]

130. Byron's Oriental and highly colored narrative poem, *The Giaour* appeared in 1813; *Childe Harold's Pilgrimage*, a partly autobiographical narrative poem in Spenserian stanzas, appeared in 1812–18, its sentimental melancholy and rhetorical sweep bringing Byron his first burst of fame. Carlyle never tired of ridiculing and attacking the attitudinizing, self-pity, and rebellion in the poetry of Byron and his imitators.

131. *i.e. The Vanity of Human Wishes.*

132. Richard Savage (d.1743), a poor and unsuccessful poet, author of several second-

less through the streets; without bed, yet not without friendly converse; such another conversation not, it is like, producible in the proudest drawing-room of London. Nor, under the void Night, upon the hard pavement, are their own woes the only topic: nowise; they 'will stand by their country,' they there, the two 'Backwoodsmen' of the Brick Desert!

Of all outward evils Obscurity is perhaps in itself the least. To Johnson, as to a healthy-minded man, the fantastic article, sold or given under the title of *Fame*, had little or no value but its intrinsic one. He prized it as the means of getting him employment and good wages; scarcely as anything more. His light and guidance came from a loftier source; of which, in honest aversion to all hypocrisy or pretentious talk, he spoke not to men; nay perhaps, being of a *healthy* mind, had never spoken to himself. We reckon it a striking fact in Johnson's history, this carelessness of his to Fame. Most authors speak of their 'Fame' as if it were a quite priceless matter; the grand ultimatum, and heavenly Constantine's-Banner [133] they had to follow, and conquer under. — Thy 'Fame'! Unhappy mortal, where will it and thou both be in some fifty years? Shakspeare himself has lasted but two hundred: Homer (partly by accident) three thousand: and does not already an ETERNITY encircle every *Me* and every *Thee*? Cease, then, to sit feverishly hatching on that 'Fame' of thine; and flapping and shrieking with fierce hisses, like brood-goose on her last egg, if man shall or dare approach it! Quarrel not with me, hate me not, my Brother: make what thou canst of thy egg, and welcome: God knows, I will not steal it; I believe it to be *addle*. — Johnson, for his part, was no man to be killed by a review; [134] concerning which matter, it was said by a benevolent person: If any author *can* be reviewed to death, let it be, with all convenient despatch, *done*. Johnson thankfully receives any word spoken in his favour; is nowise disobliged by a lampoon, but will look at it, if pointed out to him, and show how it might have been done better: the lampoon itself is indeed *nothing*, a soap-bubble that next moment will become a drop of sour suds; but in the meanwhile, if it do anything, it keeps him more in the world's eye, and the next *bargain* will be all the richer: 'Sir, if they should cease to talk of me, I must starve.' Sound heart and understanding head: these fail no man, not even a Man of Letters!

Obscurity, however, was, in Johnson's case, whether a light or heavy evil, likely to be no lasting one. He is animated by the spirit of a true *workman*, resolute to do his work well; and he *does* his work well; all his work, that of writing, that of living. A man of this stamp is unhappily not so common in the literary or in any other department of the world, that he can continue always unnoticed. By slow degrees, Johnson emerges; looming, at first, huge and dim in the eye of an observant few; at last disclosed, in his real proportions, to the eye of the whole world, and encircled with a 'light-nimbus' of glory, so that whoso is not blind must and shall behold him. By slow degrees, we said; for this also is notable; slow but sure: as his fame waxes not by exaggerated clamour of what he *seems* to be, but by better and better insight of what he *is*, so it will last and stand wearing, being genuine. Thus indeed is it always, or nearly always, with true fame. The heavenly Luminary rises amid vapours; stargazers enough must scan it with critical telescopes; it makes no blazing, the world can either look at it, or forbear looking at it; not till after a time and times does its celestial eternal nature become indubitable. Pleasant, on the other

rate comedies and poems. Johnson made his acquaintance about 1737, and later wrote his life.

133. Allusion to the inscription in the sky over a shadowy cross which the Roman emperor Constantine (A.D. 272–337) saw on his march to Rome: 'In this sign conquer.'

134. Alluding to Keats's death, 1821.

hand, is the blazing of a Tarbarrel; the crowd dance merrily round it, with loud huzzaing, universal three-times-three, and, like Homer's peasants, 'bless the useful light': but unhappily it so soon ends in darkness, foul choking smoke; and is kicked into the gutters, a nameless imbroglio of charred staves, pitch-cinders and *vomissement du diable*![135]

But indeed, from of old, Johnson has enjoyed all, or nearly all, that Fame can yield any man: the respect, the obedience of those that are about him and inferior to him; of those whose opinion alone can have any forcible impression on him. A little circle gathers round the Wise man; which gradually enlarges as the report thereof spreads, and more can come to see and to believe; for Wisdom is precious, and of irresistible attraction to all. 'An inspired-idiot,'[136] Goldsmith, hangs strangely about him; though, as Hawkins says, 'he loved not Johnson, but rather envied him for his parts; and once entreated a friend to desist from praising him, "for in doing so," said he, "you harrow-up my very soul!"' Yet, on the whole, there is no evil in the 'gooseberry-fool';[137] but rather much good; of a finer, if of a weaker, sort than Johnson's; and all the more genuine that he himself could never become *conscious* of it, — though unhappily never cease *attempting* to become so: the Author of the genuine *Vicar of Wakefield*, nill he, will he, must needs fly towards such a mass of genuine Manhood; and Dr. Minor keep gyrating round Dr. Major,[138] alternately attracted and repelled. Then there is the chivalrous Topham Beauclerk, with his sharp wit, and gallant courtly ways: there is Bennet Langton, an orthodox gentleman, and worthy; though Johnson once laughed, louder almost than mortal, at his last will and testament; and 'could not stop his merriment, but continued it all the way till he got without the Temple-gate; then burst into such a fit of laughter that he appeared to be almost in a convulsion; and, in order to support himself, laid hold of one of the posts at the side of the foot-pavement, and sent forth peals so loud that, in the silence of the night, his voice seemed to resound from Temple-bar to Fleet-ditch!' Lastly comes his solid thinking, solid-feeding Thrale, the well-beloved man; with *Thralia*, a bright papilionaceous creature, whom the elephant loved to play with, and wave to and fro upon his trunk. Not to speak of a reverent Bozzy, for what need is there farther? — Or of the spiritual Luminaries, with tongue or pen, who made that age remarkable; or of Highland Lairds drinking, in fierce usquebaugh, 'Your health, Toctor Shonson!' — Still less of many such as that poor 'Mr. F. Lewis,' older in date, of whose birth, death and whole terrestrial *res gestæ*,[139] this only, and strange enough this actually, survives: 'Sir, he lived in London, and hung loose upon society!' *Stat* PARVI *nominis umbra*. —[140]

In his fifty-third year he is beneficed, by the royal bounty, with a Pension of three-hundred pounds. Loud clamour is always more or less insane: but probably the insanest of all loud clamours in the eighteenth century was this that was raised about Johnson's Pension. Men seem to be led by the noses: but in reality, it is by the ears, — as some ancient slaves were, who had their ears bored; or as some modern quadrupeds may be, whose ears are long. Very falsely was it said, 'Names do not change Things.' Names do change Things; nay for most part they are the only substance, which mankind can discern in

135. 'devil's vomit.'

136. So called by Horace Walpole.

137. Thus Goldsmith humorously styled himself in his poem *Retaliation*.

138. So Johnson and Goldsmith were dubbed by the Rev. George Graham (d.1767), assistant master at Eton and author of *Telemachus*, a masque, 1763.

139. *res gestae*: 'affairs transacted.'

140. *stat parvi*, etc.: 'The shade of a little name remains (stands).'

Things. The whole sum that Johnson, during the remaining twenty-two years of his life, drew from the public funds of England, would have supported some Supreme Priest for about half as many weeks; it amounts very nearly to the revenue of our poorest Church-Overseer for one twelvemonth. Of secular Administrators of Provinces, and Horse-subduers, and Game-destroyers,[141] we shall not so much as speak: but who were the Primates of England,[142] and the Primates of All England,[143] during Johnson's days? No man has remembered. Again, is the Primate of all England something, or is he nothing? If something, then what but the man who, in the supreme degree, teaches and spiritually edifies, and leads towards Heaven by guiding wisely through the Earth, the living souls that inhabit England? We touch here upon deep matters; which but remotely concern us, and might lead us into still deeper: clear, in the mean while, it is that the true Spiritual Edifier and Soul's-Father of all England was, and till very lately continued to be, the man named Samuel Johnson, — whom this scot-and-lot-paying world cackled reproachfully to see remunerated like a Supervisor of Excise!

If Destiny had beaten hard on poor Samuel, and did never cease to visit him too roughly, yet the last section of his Life might be pronounced victorious, and on the whole happy. He was not idle; but now no longer goaded-on by want; the light which had shone irradiating the dark haunts of Poverty, now illuminates the circles of Wealth, of a certain culture and elegant intelligence; he who had once been admitted to speak with Edmund Cave and Tobacco Browne, now admits a Reynolds[144] and a Burke to speak with him. Loving friends are there; Listeners, even Answerers: the fruit of his long labours lies round him in fair legible Writings, of Philosophy, Eloquence, Morality, Philology; some excellent, all worthy and genuine Works; for which too, a deep, earnest murmur of thanks reaches him from all ends of his Fatherland. Nay there are works of Goodness, of undying Mercy, which even he has possessed the power to do: 'What I gave I have; what I spent I had!' Early friends had long sunk into the grave; yet in his soul they ever lived, fresh and clear, with soft pious breathings towards them, not without a still hope of one day meeting them again in purer union. Such was Johnson's Life: the victorious Battle of a free, true Man. Finally he died the death of the free and true: a dark cloud of Death, solemn and not untinged with haloes of immortal Hope, 'took him away,' and our eyes could no longer behold him; but can still behold the trace and impress of his courageous honest spirit, deep-legible in the World's Business, wheresoever he walked and was.

To estimate the quantity of Work that Johnson performed, how much poorer the World were had it wanted him, can, as in all such cases, never be accurately done; cannot, till after some longer space, be approximately done. All work is as seed sown; it grows and spreads, and sows itself anew, and so, in endless palingenesia,[145] lives and works. To Johnson's Writings, good and solid, and still profitable as they are, we have already rated his Life and Conversation as superior. By the one and by the other, who shall compute what effects have been produced, and are still, and into deep Time, producing?

So much, however, we can already see: It is now some three quarters of a century that Johnson has been the Prophet of the English; the man by whose light the Eng-

lish people, in public and in private, more than by any other man's, have guided their existence. Higher light than that immediately *practical* one; higher virtue than an honest PRUDENCE, he could not then communicate; nor perhaps could they have received: such light, such virtue, however, he did communicate. How to thread this labyrinthic Time, the fallen and falling Ruin of Times; to silence vain Scruples, hold firm to the last the fragments of old Belief, and with earnest eye still discern some glimpses of a true path, and go forward thereon, 'in a world where there is much to be done, and little to be known': this is what Samuel Johnson, by act and word, taught his Nation; what his Nation received and learned of him, more than of any other. We can view him as the preserver and transmitter of whatsoever was genuine in the spirit of Toryism; which genuine spirit, it is now becoming manifest, must again embody itself in all new forms of Society, be what they may, that are to exist, and have continuance — elsewhere than on Paper. The *last* in many things, Johnson was the last genuine Tory; the last of Englishmen who, with strong voice and wholly-believing heart, preached the Doctrine of Standing still; who, without selfishness or slavishness, reverenced the existing Powers, and could assert the privileges of rank, though himself poor, neglected and plebeian; who had heart-devoutness with heart-hatred of cant, was orthodox-religious with his eyes open; and in all things and everywhere spoke out in plain English, from a soul wherein jesuitism could find no harbour, and with the front and tone not of a diplomatist but of a man.

The last of the Tories was Johnson: not Burke, as is often said; Burke was essentially a Whig, and only, on reaching the verge of the chasm towards which Whiggism from the first was inevitably leading, recoiled; and like a man vehement rather than earnest, a resplendent far-sighted Rhetorician rather than a deep sure Thinker, recoiled with no measure, convulsively, and damaging what he drove back with him.[146]

In a world which exists by the balance of Antagonisms, the respective merit of the Conservator and the Innovator must ever remain debatable. Great, in the mean while, and undoubted for both sides, is the merit of him who, in a day of Change, walks wisely, honestly. Johnson's aim was in itself an impossible one: this of stemming the eternal Flood of Time; of clutching all things, and anchoring them down, and saying, Move not! — how could it or should it, ever have success? The strongest man can but retard the current partially and for a short hour. Yet even in such shortest retardation may not an inestimable value lie? If England has escaped the blood-bath of a French Revolution; and may yet, in virtue of this delay and of the experience it has given, work out her deliverance calmly into a new Era, let Samuel Johnson, beyond all contemporary or succeeding men, have the praise for it. We said above that he was appointed to be Ruler of the British Nation for a season: whoso will look beyond the surface, into the heart of the world's movements, may find that all Pitt Administrations, and Continental Subsidies,[147] and Waterloo victories,[148] rested on the possibility of making England, yet a little while, *Tory-*

146. Burke recoiled from the French Revolution. His *Appeal from the New to the Old Whigs* (1791) was his reply to charges of inconsistency for renouncing the French Revolution after having championed the cause of the American colonies (though not of American independence). See Burke's *Reflections on the French Revolution* (1790), and his *Letters on a Regicide Peace* (1795-97).

147. 'Pitt gave Prussia subsidies to fight France, which she used for the more agreeable purpose of slaughtering the Poles and dividing up their country with Russia' during the First Coalition against the French Revolution and Napoleon, 1793–95. (G.M.Trevelyan, *British History in the 19th Century*, London, 1922, p.82.)

148. Napoleon was finally defeated at the battle of Waterloo, June 18, 1815.

ish, Loyal to the Old; and this again on the anterior reality, that the Wise had found such Loyalty still practicable, and recommendable. England had its Hume, as France had its Voltaires and Diderots; but the Johnson was peculiar to us.

If we ask now, by what endowment it mainly was that Johnson realised such a Life for himself and others; what quality of character the main phenomena of his Life may be most naturally deduced from, and his other qualities most naturally subordinated to, in our conception of him, perhaps the answer were: The quality of Courage, of Valour: that Johnson was a Brave Man. The Courage that can go forth, once and away, to Chalk-Farm,[149] and have itself shot, and snuffed out, with decency, is nowise wholly what we mean here. Such courage we indeed esteem an exceeding small matter; capable of coexisting with a life full of falsehood, feebleness, poltroonery and despicability. Nay oftener it is Cowardice rather that produces the result: for consider, Is the Chalk-Farm Pistoleer inspired with any reasonable Belief and Determination; or is he hounded-on by haggard indefinable Fear, — how he will be *cut* at public places, and 'plucked geese of the neighbourhood' will wag their tongues at him a plucked goose? If he go then, and be shot without shrieking or audible uproar, it is well for him: nevertheless there is nothing amazing in it. Courage to manage all this has not perhaps been denied to any man, or to any woman. Thus, do not recruiting sergeants drum through the streets of manufacturing towns, and collect ragged losels enough; every one of whom, if once dressed in red, and trained a little, will receive fire cheerfully for the small sum of one shilling *per diem*, and have the soul blown out of him at last, with perfect propriety? The Courage that dares only *die* is on the whole no sublime affair; necessary indeed, yet universal; pitiful when it begins to parade itself. On this Globe of ours there are some thirty-six persons that manifest it, seldom with the smallest failure, during every second of time. Nay look at Newgate:[150] do not the offscourings of Creation, when condemned to the gallows as if they were not men but vermin, walk thither with decency, and even to the scowls and hootings of the whole Universe, give their stern good-night[151] in silence? What is to be undergone only once, we may undergo; what must be, comes almost of its own accord. Considered as Duellist, what a poor figure does the fiercest Irish Whiskerando[152] make in comparison with any English Game-cock, such as you may buy for fifteenpence!

The Courage we desire and prize is not the Courage to die decently, but to live manfully. This, when by God's grace it has been given, lies deep in the soul; like genial heat, fosters all other virtues and gifts; without it they could not live. In spite of our innumerable Waterloos and Peterloos,[153] and such campaigning as there has been, this Courage we allude to, and call the only true one, is perhaps rarer in these last ages than it has been in any other since the Saxon Invasion under Hengist.[154] Altogether extinct it can never be among men; otherwise the species Man were no longer for this world: here and there, in all times, under various guises, men are sent hither not only to demonstrate but exhibit it, and testify, as from

154. Hengist and Horsa, leaders of the Jutes, are traditionally said to have landed in England about 449.

heart to heart, that it is still possible, still practicable.

Johnson, in the eighteenth century, and as Man of Letters, was one of such; and, in good truth, 'the bravest of the brave.' What mortal could have more to war with? Yet, as we saw, he yielded not, faltered not; he fought, and even, such was his blessedness, prevailed. Whoso will understand what it is to have a man's heart may find that, since the time of John Milton, no braver heart had beat in any English bosom than Samuel Johnson now bore. Observe too that he never called himself brave, never felt himself to be so; the more completely *was* so. No Giant Despair,[155] no Golgotha,[156] Death-dance [157] or Sorcerer's-Sabbath [158] of 'Literary Life in London,' appals this pilgrim; he works resolutely for deliverance; in still defiance steps stoutly along. The thing that is given him to do, he can make himself do; what is to be endured, he can endure in silence.

How the great soul of old Samuel, consuming daily his own bitter unalleviable allotment of misery and toil, shows beside the poor flimsy little soul of young Boswell; one day flaunting in the ring of vanity, tarrying by the wine-cup [159] and crying, Aha, the wine is red; the next day deploring his downpressed, night-shaded, quite poor estate, and thinking it unkind that the whole movement of the Universe should go on, while *his* digestive-apparatus had stopped! We reckon Johnson's 'talent of silence' to be among his great and too rare gifts. Where there is nothing farther to be done, there shall nothing farther be said: like his own poor blind Welshwoman, he accomplished somewhat, and also 'endured fifty years of wretchedness with unshaken fortitude.' How grim was Life to him; a sick Prison-house and Doubting-castle! [160] 'His great business,' he would profess, 'was to escape from himself.' Yet towards all this he has taken his position and resolution; can dismiss it all 'with frigid indifference, having little to hope or to fear.' Friends are stupid, and pusillanimous, and parsimonious; 'wearied of his stay, yet offended at his departure': it is the manner of the world. 'By popular delusion,' remarks he with a gigantic calmness, 'illiterate writers will rise into renown': it is portion of the History of English Literature; a perennial thing, this same popular delusion; and will — alter the character of the Language.

Closely connected with this quality of Valour, partly as springing from it, partly as protected by it, are the more recognisable qualities of Truthfulness in word and thought, and Honesty in action. There is a reciprocity of influence here: for as the realising of Truthfulness and Honesty is the lifelight and great aim of Valour, so without Valour they cannot, in anywise, be realised. Now, in spite of all practical shortcomings, no one that sees into the significance of Johnson will say that his prime object was not Truth. In conversation, doubtless, you may observe him, on occasion, fighting as if for victory; — and must pardon these ebulliences of a careless hour, which were not without temptation and provocation. Remark likewise two things: that such prize-arguings were ever on merely superficial debatable questions; and then that they were argued generally by the fair laws of battle and logic-fence, by one cunning in that same. If their purpose was excusable, their effect was harmless, perhaps beneficial: that of taming noisy mediocrity, and showing it another side of a debatable matter; to see *both* sides of which

160. See note 155.

was, for the first time, to see the Truth of it. In his Writings themselves are errors enough, crabbed prepossessions enough; yet these also of a quite extraneous and accidental nature, nowhere a wilful shutting of the eyes to the Truth. Nay, is there not everywhere a heartfelt discernment, singular, almost admirable, if we consider through what confused conflicting lights and hallucinations it had to be attained, of the highest everlasting Truth, and beginning of all Truths: this namely, that man is ever, and even in the age of Wilkes and Whitefield,[161] a Revelation of God to man; and lives, moves and has his being [162] in Truth only; is either true, or, in strict speech, *is* not at all?

Quite spotless, on the other hand, is Johnson's love of Truth, if we look at it as expressed in Practice, as what we have named Honesty of action. 'Clear your mind of Cant';[163] *clear* it, throw Cant utterly away: such was his emphatic, repeated precept; and did not he himself faithfully conform to it? The Life of this man has been, as it were, turned inside out, and examined with microscopes by friend and foe; yet was there no Lie found in him. His Doings and Writings are not *shows* but *performances*: you may weigh them in the balance, and they will stand weight. Not a line, not a sentence is dishonestly done, is other than it pretends to be. Alas! and he wrote not out of inward inspiration, but to earn his wages: and with that grand perennial tide of 'popular delusion' flowing by; in whose waters he nevertheless refused to fish, to whose rich oyster-beds the dive was too muddy for him. Observe, again, with what innate hatred of Cant, he takes for himself, and offers to others, the lowest possible view of his business, which he followed with such nobleness. Motive for writing he had none, as he often said, but money; and yet he wrote *so*. Into the region of Poetic Art he indeed never rose; there was no *ideal* without him avowing itself in his work: the nobler was that unavowed *ideal* which lay within him, and commanded saying, Work out thy Artisanship in the spirit of an Artist! They who talk loudest about the dignity of Art, and fancy that they too are Artistic guild-brethren, and of the Celestials, — let them consider well what manner of man this was, who felt himself to be only a hired day-labourer. A labourer that was worthy of his hire;[164] that has laboured not as an eye-servant, but as one found faithful! Neither was Johnson in those days perhaps wholly a unique. Time was when, for money, you might have ware: and needed not, in all departments, in that of the Epic Poem, in that of the Blacking-bottle, to rest content with the mere *Persuasion* that you had ware. It was a happier time. But as yet the seventh Apocalyptic [165] Bladder (of PUFFERY) had not been rent open, — to whirl and grind, as in a West-Indian Tornado, all earthly trades and things into wreck, and dust, and consummation, — and regeneration. Be it quickly, since it must be! —

That Mercy can dwell only with Valour, is an old sentiment or proposition; which in Johnson again receives confirmation. Few men on record have had a more merciful, tenderly affectionate nature than old Samuel. He was called the Bear; and did indeed too often look, and roar, like one; being forced to it in his own defence: yet within that shaggy exterior of his there beat a heart warm as a mother's, soft as a little child's. Nay generally, his very roaring was but the anger of affection: the

161. George Whitefield (1714–70), leader of Calvinistic methodists; joined Charles Wesley's Methodist Society; later formed a rival Methodist party. Carlyle couples Whitefield with Wilkes to include the extremes of cynical immorality and religious fanaticism. (Carlyle frequently attacked the narrowness of 'Methodism.')

165. *Apocalypse*: a revelation. In the last book of the Bible, *Revelation*, there are seven seals, or seven revelations (disclosures of the future).

rage of a Bear, if you will; but of a Bear bereaved of her whelps. Touch his Religion, glance at the Church of England, or the Divine Right; and he was upon you! These things were his Symbols of all that was good and precious for men; his very Ark of the Covenant: [166] whoso laid hand on them tore asunder his heart of hearts. Not out of hatred to the opponent, but of love to the thing opposed, did Johnson grow cruel, fiercely contradictory: this is an important distinction; never to be forgotten in our censure of his conversational outrages. But observe also with what humanity, what openness of love, he can attach himself to all things: to a blind old woman, to a Doctor Levett, to a cat 'Hodge.' 'His thoughts in the latter part of his life were frequently employed on his deceased friends; he often muttered these or suchlike sentences: "Poor man! and then he died."' How he patiently converts his poor home into a Lazaretto; [167] endures, for long years, the contradiction of the miserable and unreasonable; with him unconnected, save that they had no other to yield them refuge! Generous old man! Worldly possession he has little; yet of this he gives freely; from his own hard-earned shilling, the halfpence for the poor, that 'waited his coming out,' are not withheld: the poor 'waited the coming out' of one not quite so poor! A Sterne can write sentimentalities on Dead Asses: [168] Johnson has a rough voice; but he finds the wretched Daughter of Vice fallen down in the streets; carries her home on his own shoulders, and like a good Samaritan gives help to the help-needing, worthy or unworthy. Ought not Charity, even in that sense, to cover a multitude of sins? No Penny-a-week Committee-Lady, no manager of *Soup-Kitchens*, dancer at *Charity-Balls*, [169] was this rugged, stern-visaged man: but where, in all England, could there have been found another soul so full of Pity, a hand so heavenlike bounteous as his? The widow's mite, we know, was greater than all the other gifts.

Perhaps it is this divine feeling of Affection, throughout manifested, that principally attracts us towards Johnson. A true brother of men is he; and filial lover of the Earth; who, with little bright spots of Attachment, 'where lives and works some loved one,' has beautified 'this rough solitary Earth into a peopled garden.' Lichfield, with its mostly dull and limited inhabitants, is to the last one of the sunny islets for him: *Salve magna parens!* [170] Or read those Letters on his Mother's death: what a genuine solemn grief and pity lies recorded there; a looking back into the Past, unspeakably mournful, unspeakably tender. And yet calm, sublime; for he must now act, not look: his venerated Mother has been taken from him; but he must now write a *Rasselas* to defray her funeral! Again in this little incident, recorded in his Book of Devotion, are not the tones of sacred Sorrow and Greatness deeper than in many a blank-verse Tragedy; — as, indeed, 'the fifth act of a Tragedy,' though unrhymed, does 'lie in every death-bed, were it a peasant's, and of straw':

'Sunday, October 18, 1767. Yesterday, at about ten in the morning, I took my leave forever of my dear old friend, Catherine Chambers, who came to live with my mother about 1724, and has been but little parted from us since. She buried my father, my brother and my mother. She is now fifty-eight years old.

166. In Jewish history, the wooden chest which supported the 'mercy seat' and occupied the most sacred place in the sanctuary. In it Moses placed the two tables of stone containing the ten commandments. See *Numbers*, x,33,etc.

167. Public hospital; so called from the church of Santa Maria di Nazaret, Venice, used in the 15th century as a pest-house.

168. See Sterne's *Sentimental Journey*, 19th and 20th chapters.

169. Expressions of Carlyle's repugnance for the humanitarianism of the rising middle class, too often a cloak for smugness and economic rapacity.

170. 'Hail, great mother!' (Virgil, *Georgics*, ii,173.)

'I desired all to withdraw; then told her that we were to part forever; that as Christians, we should part with prayer; and that I would, if she was willing, say a short prayer beside her. She expressed great desire to hear me; and held up her poor hands as she lay in bed, with great fervour, while I prayed kneeling by her. . . .

'I then kissed her. She told me that to part was the greatest pain she had ever felt, and that she hoped we should meet again in a better place. I expressed, with swelled eyes and great emotion of tenderness, the same hopes. We kissed and parted; I humbly hope, to meet again, and to part no more.'

Tears trickling down the granite rock: a soft well of Pity springs within! — Still more tragical is this other scene: 'Johnson mentioned that he could not in general accuse himself of having been an undutiful son. "Once, indeed," said he, "I was disobedient: I refused to attend my father to Uttoxeter market. Pride was the source of that refusal, and the remembrance of it was painful. A few years ago I desired to atone for this fault."' — But by what method? — What method was now possible? Hear it; the words are again given as his own, though here evidently by a less capable reporter:

'Madam, I beg your pardon for the abruptness of my departure in the morning, but I was compelled to it by conscience. Fifty years ago, Madam, on this day, I committed a breach of filial piety. My father had been in the habit of attending Uttoxeter market, and opening a stall there for the sale of his Books. Confined by indisposition, he desired me, that day, to go and attend the stall in his place. My pride prevented me; I gave my father a refusal. — And now to-day I have been at Uttoxeter; I went into the market at the time of business, uncovered my head, and stood with it bare, for an hour, on the spot where my father's stall used to stand. In contrition I stood, and I hope the penance was expiatory.'

Who does not figure to himself this spectacle, amid the 'rainy weather, and the sneers,' or wonder, 'of the bystanders'? The memory of old Michael Johnson, rising from the far distance; sad-beckoning in the 'moonlight of memory':[171] how he had toiled faithfully hither and thither; patiently among the lowest of the low; been buffeted and beaten down, yet ever risen again, ever tried it anew — And oh, when the wearied old man, as Bookseller, or Hawker, or Tinker, or whatsoever it was that Fate had reduced him to, begged help of *thee* for one day, — how savage, diabolic, was that mean Vanity, which answered, No! He sleeps now; after life's fitful fever, he sleeps well:[172] but thou, O Merciless, how now wilt thou still the sting of that remembrance? — The picture of Samuel Johnson standing bareheaded in the market there, is one of the grandest and saddest we can paint. Repentance! Repentance! he proclaims, as with passionate sobs: but only to the ear of Heaven, if Heaven will give him audience: the earthly ear and heart, that should have heard it, are now closed, unresponsive forever.

That this so keen-loving, soft-trembling Affectionateness, the inmost essence of his being, must have looked forth, in one form or another, through Johnson's whole character, practical and intellectual, modifying both, is not to be doubted. Yet through what singular distortions and superstitions, moping melancholies, blind habits, whims about 'entering with the right foot,' and 'touching every post as he walked along'; and all the other mad chaotic lumber of a brain that, with sun-clear intellect, hovered forever on the verge of insanity, — must that same inmost essence have looked forth; unrecognisable to all but the most observant! Accordingly it was not

171. A phrase from Richter. See Carlyle's Journal for February 8, 1835, in Froude's *Life*.

172. See *Macbeth*, III,ii,23.

recognised; Johnson passed not for a fine nature, but for a dull, almost brutal one. Might not, for example, the first-fruit of such a Lovingness, coupled with his quick Insight, have been expected to be a peculiarly courteous demeanour as man among men? In Johnson's 'Politeness,' which he often, to the wonder of some, asserted to be great, there was indeed somewhat that needed explanation. Nevertheless, if he insisted always on handing lady-visitors to their carriage; though with the certainty of collecting a mob of gazers in Fleet Street, — as might well be, the beau having on, by way of court-dress, 'his rusty brown morning suit, a pair of old shoes for slippers, a little shrivelled wig sticking on the top of his head, and the sleeves of his shirt and the knees of his breeches hanging loose': — in all this we can see the spirit of true Politeness, only shining through a strange medium. Thus again, in his apartments, at one time, there were unfortunately no chairs. 'A gentleman who frequently visited him whilst writing his *Idlers*, constantly found him at his desk, sitting on one with three legs; and on rising from it, he remarked that Johnson never forgot its defect; but would either hold it in his hand, or place it with great composure against some support; taking no notice of its imperfection to his visitor,' — who meanwhile, we suppose, sat upon folios, or in the sartorial fashion. 'It was remarkable in Johnson,' continues Miss Reynolds (*Renny dear*), 'that no external circumstances ever prompted him to make any apology, or to seem even sensible of their existence. Whether this was the effect of philosophic pride, or of some partial notion of his respecting high-breeding, is doubtful.' That it *was*, for one thing, the effect of genuine Politeness, is nowise doubtful. Not of the Pharisaical Brummellean Politeness,[173] which would suffer crucifixion rather than ask twice for soup: but the noble universal Politeness of a man that knows the dignity of men, and feels his own; such as may be seen in the patriarchal bearing of an Indian Sachem;[174] such as Johnson himself exhibited, when a sudden chance brought him into dialogue with his King.[175] To us, with our view of the man, it nowise appears 'strange' that he should have boasted himself cunning in the laws of Politeness; nor 'stranger still,' habitually attentive to practise them.

More legibly is this influence of the Loving heart to be traced in his intellectual character. What, indeed, is the beginning of intellect, the first inducement to the exercise thereof, but attraction towards somewhat, *affection* for it? Thus too, who ever saw, or will see, any true talent, not to speak of genius, the foundation of which is not goodness, love? From Johnson's strength of Affection, we deduce many of his intellectual peculiarities; especially that threatening array of perversions, known under the name of 'Johnson's Prejudices.' Looking well into the root from which these sprang, we have long ceased to view them with hostility, can pardon and reverently pity them. Consider with what force early-imbibed opinions must have clung to a soul of this Affection. Those evil-famed Prejudices of his, that Jacobitism, Church-of-Englandism, hatred of the Scotch, belief in Witches, and suchlike, what were they but the ordinary beliefs of well-doing, well-meaning provincial Englishmen in that day? First gathered by his Father's hearth; round the kind 'country fires' of native Staffordshire; they grew with his growth and strengthened with his strength: they were hallowed by fondest sacred recollections; to part with them was parting with his heart's blood. If the man who has no strength of Affection, strength of Belief, have no strength of Prejudice, let him thank Heaven for it, but to himself take small thanks.

Melancholy it was, indeed, that the noble

173. Allusion to George Bryan (Beau) Brummell (1778–1840), famous dandy.

174. Chief.

175. *i.e.* with George III.

Johnson could not work himself loose from these adhesions; that he could only purify them, and wear them with some nobleness. Yet let us understand how they grew out from the very centre of his being: nay moreover, how they came to cohere in him with what formed the business and worth of his Life, the sum of his whole Spiritual Endeavour. For it is on the same ground that he became throughout an Edifier and Repairer, not, as the others of his make were, a Puller-down; that in an age of universal Scepticism, England was still to produce its Believer. Mark too his candour even here; while a Dr. Adams, with placid surprise, asks, 'Have we not evidence enough of the soul's immortality?' Johnson answers, 'I wish for more.'

But the truth is, in Prejudice, as in all things, Johnson was the product of England; one of those *good* yeomen whose limbs were made in England: alas, the last of *such* Invincibles, their day being now done! His culture is wholly English; that not of a Thinker but of a 'Scholar': his interests are wholly English; he sees and knows nothing but England; he is the John Bull of Spiritual Europe: [176] let him live, love him, as he was and could not but be! Pitiable it is, no doubt, that a Samuel Johnson must confute Hume's irreligious Philosophy by some 'story from a Clergyman of the Bishoprick of Durham'; should see nothing in the great Frederick but 'Voltaire's lackey'; in Voltaire himself but a man *acerrimi ingenii, paucarum literarum*; [177] in Rousseau but one worthy to be hanged; and in the universal, long-prepared, inevitable Tendency of European Thought but a green-sick milkmaid's crotchet of, for variety's sake, 'milking the Bull.' [178] Our good, dear John! Observe too what it is that he sees in the city of Paris: no feeblest glimpse of those D'Alemberts and Diderots,[179] or of the strange questionable work they did; solely some Benedictine Priests, to talk kitchen-latin [180] with them about *Editiones Principes*.[181] *'Monsheer Nongtongpaw!'* [182] Our dear, foolish John: yet is there a lion's heart within him! — Pitiable all these things were, we say; yet nowise inexcusable; nay, as basis or as foil to much else that was in Johnson, almost venerable. Ought we not, indeed, to honour England, and English Institutions and Way of Life, that they could still equip such a man; could furnish him in heart and head to be a Samuel Johnson, and yet to love them, and unyieldingly fight for them? What truth and living vigour must such Institutions once have had, when, in the middle of the Eighteenth Century, there was still enough left in them for this!

It is worthy of note that, in our little British Isle, the two grand Antagonisms of Europe should have stood embodied, under their very highest concentration, in two men produced simultaneously among ourselves. Samuel Johnson and David Hume, as was observed, were children nearly of the same year: [183] through life they were spectators of the same Life-movement; often inhabitants of the same city. Greater contrast, in all things, between two great men, could not be. Hume, well-born, competently provided for, whole in body and mind, of his own determination forces a way into Literature: Johnson, poor, moonstruck, diseased, forlorn, is forced into it 'with the bayonet of necessity at his back.' And what a part did they severally play there! As Johnson became the father of all succeeding Tories; so was Hume the father of all succeeding Whigs, for his own Jacobitism was but an

176. So Boswell had called him, in the *Tour* (Introduction).

177. 'of keenest intellect, and of little learning.' (See the *Life*, November 5, 1775.)

178 Proverbial for 'fruitless speculation.'

179. *i.e.* the brilliant, skeptical authors of the *Encyclopédie*.

180. From the German, *Küchen-latein*, or dog-latin.

181. First editions (of the classics).

182. 'Mr. Doesn't-understand.' Carlyle's meaning here is not clear.

183. Johnson, 1709; Hume, 1711.

accident, as worthy to be named Prejudice as any of Johnson's. Again, if Johnson's culture was exclusively English; Hume's, in Scotland, became European; — for which reason too we find his influence spread deeply over all quarters of Europe, traceable deeply in all speculation, French, German, as well as domestic; while Johnson's name, out of England, is hardly anywhere to be met with. In spiritual stature they are almost equal; both great, among the greatest: yet how unlike in likeness! Hume has the widest, methodising, comprehensive eye; Johnson the keenest for perspicacity and minute detail: so had, perhaps chiefly, their education ordered it. Neither of the two rose into Poetry; yet both to some approximation thereof: Hume to something of an Epic clearness and method, as in his delineation of the Commonwealth Wars; Johnson to many a deep Lyric tone of plaintiveness and impetuous graceful power, scattered over his fugitive compositions. Both, rather to the general surprise, had a certain rugged Humour shining through their earnestness: the indication, indeed, that they *were* earnest men, and had *subdued* their wild world into a kind of temporary home and safe dwelling. Both were, by principle and habit, Stoics:[184] yet Johnson with the greater merit, for he alone had very much to triumph over; farther, he alone ennobled his Stoicism into Devotion. To Johnson Life was as a Prison, to be endured with heroic faith: to Hume it was little more than a foolish Bartholomew-Fair[185] Showbooth, with the foolish crowdings and elbowings of which it was not worth while to quarrel; the whole would break up, and be at liberty, so *soon*. Both realised the highest task of Manhood, that of living like men; each died not unfitly, in his way: Hume as one, with factitious, half-false gaiety, taking leave of what was itself wholly but a Lie: Johnson as one, with awe-struck, yet resolute and piously expectant heart, taking leave of a Reality, to enter a Reality still higher. Johnson had the harder problem of it, from first to last: whether, with some hesitation, we can admit that he was intrinsically the better-gifted, may remain undecided.

These two men now rest; the one in Westminster Abbey here; the other in the Calton-Hill Churchyard of Edinburgh. Through Life they did not meet: as contrasts, 'like in unlike,' love each other; so might they two have loved, and communed kindly, — had not the terrestrial dross and darkness that was in them withstood! One day, their spirits, what Truth was in each, will be found working, living in harmony and free union, even here below. They were the two half-men of their time: whoso should combine the intrepid Candour and decisive scientific Clearness of Hume, with the Reverence, the Love and devout Humility of Johnson, were the whole man of a new time. Till such whole man arrive for us, and the distracted time admit of such, might the Heavens but bless poor England with half-men worthy to tie the shoe-latchets[186] of these, resembling these even from afar! Be both attentively regarded, let the true Effort of both prosper; — and for the present, both take our affectionate farewell!

184. *i.e.* they believed that happiness consists in liberation from the bondage of the passions and appetites, and in approximation to God by obeying the moral law; that virtue is the highest good, and suffering a matter of indifference. Carlyle is using the word very loosely, especially in its application to Hume. The original Stoics were a school of Greek philosophers, in the 4th century B.C.

185. A fair held, from the time of Henry II, within the churchyard of the priory of St. Bartholomew, Smithfield, London, at Bartholomew tide (Aug. 24, O.S.); it continued as a pleasure-fair until 1855. See Ben Jonson's comedy, *Bartholomew Fayre* (1614).

186. *Cf. Mark*, i,7.

SARTOR RESARTUS

CHAPTER V

The World in Clothes

'As Montesquieu wrote a *Spirit of Laws*,'[1] observes our Professor, 'so could I write a *Spirit of Clothes*; thus, with an *Esprit des Lois*, properly an *Esprit de Coutumes*, we should have an *Esprit de Costumes*. For neither in tailoring nor in legislating does man proceed by mere Accident, but the hand is ever guided on by mysterious operations of the mind. In all his Modes, and habilatory endeavours, an Architectural Idea will be found lurking; his Body and the Cloth are the site and materials whereon and whereby his beautified edifice, of a Person, is to be built. Whether he flow gracefully out in folded mantles, based on light sandals; tower-up in high headgear, from amid peaks, spangles and bell-girdles; swell-out in starched ruffs, buckram stuffings, and monstrous tuberosities; or girth himself into separate sections, and front the world an Agglomeration of four limbs, — will depend on the nature of such Architectural Idea: whether Grecian, Gothic, Later-Gothic, or altogether Modern, and Parisian or Anglo-Dandiacal.[2] Again, what meaning lies in Colour! From the soberest drab to the high-flaming scarlet, spiritual idiosyncrasies unfold themselves in choice of Colour: if the Cut betoken Intellect and Talent, so does the Colour betoken Temper and Heart. In all which, among nations as among individuals, there is an incessant, indubitable, though infinitely complex working of Cause and Effect: every snip of the Scissors has been regulated and prescribed by ever-active Influences, which doubtless to Intelligences of a superior order are neither invisible nor illegible.

'For such superior Intelligences a Cause-and-Effect Philosophy[3] of Clothes, as of Laws, were probably a comfortable winter-evening entertainment: nevertheless, for inferior Intelligences, like men, such Philosophies have always seemed to me uninstructive enough. Nay, what is your Montesquieu himself but a clever infant spelling Letters from a hieroglyphical prophetic Book, the lexicon of which lies in Eternity, in Heaven? — Let any Cause-and-Effect Philosopher explain, not why I wear such and such a Garment, obey such and such a Law; but even why *I* am *here*, to wear and obey anything! — Much, therefore, if not the whole, of that same *Spirit of Clothes* I shall suppress, as hypothetical, and ineffectual, and even impertinent: naked Facts, and Deductions drawn therefrom in quite another than that omniscient style, are my humbler and proper province.'

Acting on which prudent restriction, Teufelsdröckh has nevertheless contrived to take-in a wellnigh boundless extent of field; at least, the boundaries too often lie quite beyond our horizon. Selection being indispensable, we shall here glance-over his First Part only in the most cursory manner. This First Part is, no doubt, distinguished by omnivorous learning, and utmost patience and fairness: at the same time, in its results and delineations, it is much more likely to interest the Compilers of some *Library* of General, Entertaining, Useful, or even Useless Knowl-

1. Montesquieu's comprehensive and monumental work on laws and customs, *Esprit des lois*, appeared in 1748. — 'Our Professor' is, of course, Diogenes Teufelsdrockh, the 'hero' of *Sartor Resartus*. His name is significant: Diogenes (meaning 'God-born' [see p. 101 note no. 13]) refers to the higher, ideal, transcendental, or spiritual nature of the man; Teufelsdröckh ('Devil's dung') refers to his lower, physical, 'descendental' nature (see p. 91a, l.9).
2. An allusion to modes in the age of the Dandy, of Beau Brummel (1778–1840), and Count D'Orsay (1801–52).
3. Carlyle's satiric term for English empirical, and utilitarian, thought from John Locke (1632–1704) to David Hume (1711–76).

edge [4] than the miscellaneous readers of these pages. Was it this Part of the Book which Heuschrecke [5] had in view, when he recommended us to that joint-stock vehicle of publication, 'at present the glory of British Literature'? If so, the Library Editors are welcome to dig in it for their own behoof.

To the First Chapter, which turns on Paradise and Fig-leaves, and leads us into interminable disquisitions of a mythological, metaphorical, cabalistico-sartorial [6] and quite antediluvian cast, we shall content ourselves with giving an unconcerned approval. Still less have we to do with 'Lilis,[7] Adam's first wife, whom, according to the Talmudists, he had before Eve, and who bore him, in that wedlock, the whole progeny of aerial, aquatic, and terrestrial Devils,' [8] — very needlessly, we think. On this portion of the Work, with its profound glances into the *Adam-Kadmon*,[9] or Primeval Element, here strangely brought into relation with the *Nifl* and *Muspel* [10] (Darkness and Light) of the antique North, it may be enough to say, that its correctness of deduction, and depth of Talmudic and Rabbinical lore have filled perhaps not the worst Hebraist in Britain with something like astonishment.

But, quitting this twilight region, Teufelsdröckh hastens from the Tower of Babel,[11] to follow the dispersion of Mankind over the whole habitable and habilable globe. Walking by the light of Oriental, Pelasgic,[12] Scandinavian, Egyptian, Otaheitean,[13] Ancient and Modern researches of every conceivable kind, he strives to give us in compressed shape (as the Nürnbergers give an *Orbis Pictus*) [14] an *Orbis Vestitus*; [15] or view of the costumes of all mankind, in all countries, in all times. It is here that to the Antiquarian, to the Historian, we can triumphantly say: Fall to! Here is learning: an irregular Treasury, if you will; but inexhaustible as the Hoard of King Nibelung,[16] which twelve wagons in twelve days, at the rate of three journeys a day, could not carry off. Sheepskin cloaks and wampum [17] belts; phylacteries, stoles, albs; chlamydes, togas, Chinese silks, Afghaun shawls, trunk-hose, leather breeches, Celtic philibegs (though breeches, as the name *Gallia Braccata* indicates, are the more ancient), Hussar cloaks, Vandyke tippets, ruffs, fardingales, are brought vividly before us, — even the Kilmarnock nightcap [18] is not forgotten.

4. An actual *Society for Diffusion of Useful Knowledge* had been founded by Lord Brougham in 1825.
5. German for *grasshopper*. Teufelsdröckh's intimate friend.
6. Mysteriously relating to clothes (from *Cabala*, or *Cabbala*, the system of occult theosophy or mystical interpretation of the Scriptures among Jewish rabbis and certain medieval Christians).
7. According to the Hebrew *Talmud*, Lilis, or Lilith, was Adam's first wife, but was originally a female Babylonian demon.
8. This quotation is adapted from Robert Burton's *Anatomy of Melancholy* (1577–1640).
9. Cabbalistic, Hebrew term for *the first man*.
10. In Old Norse mythology, the *mist-home* and the *bright-home*, respectively, in the northern region.
11. See *Genesis*, xi,1–9.
12. Prehistoric Mediterranean
13. Tahitian; allusion to the island in the Southern Pacific.
14. 'The World in Pictures,' the title of a 17th-century schoolbook
15. 'The World in Clothes,' the title of the present chapter.
16. Hero of a Middle High German epic. Correct: four days rather than twelve.
17. Beads made of shells, used by North American Indians as money, ornaments, pledges, etc.
18. *phylacteries*: small leather cases containing sacred writings, texts, etc., and worn as an amulet or charm. — *stoles*, *albs*: ecclesiastical vestments. — *chlamydes*: mantles worn by ancient Greek soldiers — *togas*: outer robes worn by Roman citizens. — *trunk-hose*: short full breeches, reaching halfway down the thigh, worn by gentlemen in the 16th and 17th centuries. — *philibegs*: kilts. — *Gallia Braccata*: Gauls in Breeches (in contrast to Romans in togas). — *tippets*: long hanging parts of a dress, as from sleeve, cape, etc., seen in paintings by Sir Anthony Van Dyck (1599–1641). — *ruff*: a kind of collar worn by ladies and gentlemen in the 16th and 17th centuries. — *fardingales*: hoop-skirts. — *Kilmarnock nightcap*: cap, or cowl, made in Kilmarnock, Scotland.

For most part, too, we must admit that the Learning, heterogeneous as it is, and tumbled-down quite pell-mell, is true concentrated and purified Learning, the drossy parts smelted out and thrown aside.

Philosophical reflections intervene, and sometimes touching pictures of human life. Of this sort the following has surprised us. The first purpose of Clothes, as our Professor imagines, was not warmth or decency, but ornament. 'Miserable indeed,' says he, 'was the condition of the Aboriginal Savage, glaring fiercely from under his fleece of hair, which with the beard reached down to his loins, and hung round him like a matted cloak; the rest of his body sheeted in its thick natural fell. He loitered in the sunny glades of the forest, living on wild-fruits; or, as the ancient Caledonian,[19] squatted himself in morasses, lurking for his bestial or human prey; without implements, without arms, save the ball of heavy Flint, to which, that his sole possession and defence might not be lost, he had attached a long cord of plaited thongs; thereby recovering as well as hurling it with deadly unerring skill. Nevertheless, the pains of Hunger and Revenge once satisfied, his next care was not Comfort but Decoration (*Putz*). Warmth he found in the toils of the chase; or amid dried leaves, in his hollow tree, in his bark shed, or natural grotto: but for Decoration he must have Clothes. Nay, among wild people we find tattooing and painting even prior to Clothes. The first spiritual want of a barbarous man is Decoration, as indeed we still see among the barbarous classes in civilised countries.

'Reader, the heaven-inspired melodious Singer; loftiest Serene Highness; nay thy own amber-locked, snow-and-rose-bloom Maiden, worthy to glide sylphlike almost on air, whom thou lovest, worshippest as a divine Presence, which, indeed, symbolically taken, she is, — has descended, like thyself, from that same hair-mantled, flint-hurling Aboriginal Anthropophagus![20] Out of the eater cometh forth meat; out of the strong cometh forth sweetness.[21] What changes are wrought, not by time, yet in Time! For not Mankind only, but all that Mankind does or beholds, is in continual growth, regenesis and self-perfecting vitality. Cast forth thy Act, thy Word, into the ever-living, ever-working Universe: it is a seed-grain that cannot die; unnoticed to-day (says one), it will be found flourishing as a Banyan-grove[22] (perhaps, alas, as a Hemlock-forest!) after a thousand years.

'He who first shortened the labour of Copyists by device of *Movable Types*[23] was disbanding hired Armies, and cashiering most Kings and Senates, and creating a whole new Democratic world: he had invented the Art of Printing. The first ground handful of Nitre, Sulphur, and Charcoal drove Monk Schwartz's[24] pestle through the ceiling: what will the last do? Achieve the final undisputed prostration of Force under Thought, of Animal courage under Spiritual. A simple invention it was in the old-world Grazier, — sick of lugging his slow Ox about the country till he got it bartered for corn or oil, — to take a piece of Leather, and thereon scratch or stamp the mere Figure of an Ox (or *Pecus*); put it in his pocket, and call it *Pecunia*, Money. Yet hereby did Barter grow Sale, the Leather Money is now Golden and Paper, and all miracles have been outmiracled: for there are Rothschilds and English National Debts; and whoso has sixpence is sovereign (to the length of sixpence) over all men; commands cooks to feed him, philosophers to teach him, kings

19. Scotch.

20. Cannibal. See *Othello*, I,iii,144.

21. See *Judges*, xiv,14.

22. The banyan tree, of East India, sends down its branches to take root and spread its growth. — *Hemlock-forest*: Carlyle is evidently thinking of the hemlock *herb*, with which Socrates was poisoned.

23. Movable types were first invented, in Europe, by Johann Fust (or Faust), partner of Johann Gutenberg, in the 15th century.

24. Berthold Schwartz who discovered the process of granulating gunpowder early in the 14th century.

to mount guard over him, — to the length of sixpence. — Clothes too, which began in foolishest love of Ornament, what have they not become! Increased Security and pleasureable Heat soon followed: but what of these? Shame, divine Shame (*Schaam*, Modesty), as yet a stranger to the Anthropophagous bosom, arose there mysteriously under Clothes; a mystic grove-encircled shrine for the Holy in man. Clothes gave us individuality, distinctions, social polity; Clothes have made Men of us; they are threatening to make Clothes-screens of us.

'But, on the whole,' continues our eloquent Professor, 'Man is a Tool-using Animal [25] (*Handthierendes Thier*). Weak in himself, and of small stature, he stands on a basis, at most for the flattest-soled, of some half-square foot, insecurely enough; has to straddle out his legs, lest the very wind supplant him. Feeblest of bipeds! Three quintals [26] are a crushing load for him; the steer of the meadow tosses him aloft, like a waste rag. Nevertheless he can use Tools, can devise Tools: with these the granite mountain melts into light dust before him; he kneads glowing iron, as if it were soft paste; seas are his smooth highway, winds and fire his unwearying steeds. Nowhere do you find him without Tools; without Tools he is nothing, with Tools he is all.'

Here may we not, for a moment, interrupt the stream of Oratory with a remark, that this Definition of the Tool-using Animal, appears to us, of all that Animal-sort, considerably the precisest and best? Man is called a Laughing Animal: but do not the apes also laugh, or attempt to do it; and is the manliest man the greatest and oftenest laugher? Teufelsdröckh himself, as we said, laughed only once. Still less do we make of that other French Definition of the Cooking Animal; which, indeed, for rigorous scientific purposes, is as good as useless. Can a Tartar be said to cook, when he only readies his steak by riding on it? [27] Again, what Cookery does the Greenlander use, beyond stowing-up his whale-blubber, as a marmot,[28] in the like case, might do? Or how would Monsieur Ude [29] prosper among those Orinocco Indians, who, according to Humboldt,[30] lodge in crow-nests, on the branches of trees; and, for half the year, have no victuals but pipe-clay, the whole country being under water? But, on the other hand, show us the human being, of any period or climate, without his Tools: those very Caledonians, as we saw, had their Flint-ball, and Thong to it, such as no brute has or can have.

'Man is a Tool-using Animal,' concludes Teufelsdröckh in his abrupt way; 'of which truth Clothes are but one example: and surely if we consider the interval between the first wooden Dibble [31] fashioned by man, and those Liverpool Steam-carriages,[32] or the British House of Commons, we shall note what progress he has made. He digs up certain black stones from the bosom of the earth, and says to them, *Transport me and this luggage at the rate of five-and-thirty miles an hour*; and they do it: he collects, apparently by lot, six-hundred and fifty-eight miscellaneous individuals, and says to them, *Make this nation toil for us, bleed for us, hunger and sorrow and sin for us*; and they do it.'

Chapter VIII

The World out of Clothes

If in the Descriptive-Historical portion of this Volume, Teufelsdröckh, discussing merely the *Werden* (Origin and successive

25. So defined in Boswell's *Life of Johnson*, after Benjamin Franklin (April 7, 1778).
26. Hundredweights, or 100 pounds in America.
27. See Butler's *Hudibras*, I,II,265–78.
28. Ground hog.
29. Louis Eustache Ude, famous French cook of the time.
30. Alexander von Humboldt, German explorer and naturalist, travelled up the Orinoco in 1800.
31. A pointed tool used to make holes in the ground, for seed, etc.
32. Allusion to the Liverpool-Manchester railway, the first in England, which was opened September 15, 1830.

Improvement) of Clothes, has astonished many a reader, much more will he in the Speculative-Philosophical portion, which treats of their *Wirken*, or Influences. It is here that the present Editor first feels the pressure of his task; for here properly the higher and new Philosophy of Clothes commences: an untried, almost inconceivable region, or chaos; in venturing upon which, how difficult, yet how unspeakably important is it to know what course, of survey and conquest, is the true one; where the footing is firm substance and will bear us, where it is hollow, or mere cloud, and may engulf us! Teufelsdröckh undertakes no less than to expound the moral, political, even religious Influences of Clothes; he undertakes to make manifest, in its thousandfold bearings, this grand Proposition, that Man's earthly interests 'are all hooked and buttoned together, and held up, by Clothes.' He says in so many words, 'Society is founded upon Cloth'; and again, 'Society sails through the Infinitude on Cloth, as on a Faust's Mantle,[1] or rather like the Sheet of clean and unclean beasts in the Apostle's Dream:[2] and without such Sheet or Mantle, would sink to endless depths, or mount to inane limboes, and in either case be no more.'

By what chains, or indeed infinitely complected tissues, of Meditation this grand Theorem is here unfolded, and innumerable practical Corollaries are drawn therefrom, it were perhaps a mad ambition to attempt exhibiting. Our Professor's method is not, in any case, that of common school Logic, where the truths all stand in a row, each holding by the skirts of the other; but at best that of practical Reason, proceeding by large Intuition[3] over whole systematic groups and kingdoms; whereby, we might say, a noble complexity, almost like that of Nature, reigns in his Philosophy, or spiritual Picture of Nature: a mighty maze, yet, as faith whispers, not without a plan.[4] Nay we complained above, that a certain ignoble complexity, what we must call mere confusion, was also discernible. Often, also, we have to exclaim: Would to Heaven those same Biographical Documents were come! For it seems as if the demonstration lay much in the Author's individuality; as if it were not Argument that had taught him, but Experience. At present it is only in local glimpses, and by significant fragments, picked often at wide-enough intervals from the original Volume and carefully collated, that we can hope to impart some outline or foreshadow of this Doctrine. Readers of any intelligence are once more invited to favour us with their most concentrated attention: let these, after intense consideration, and not till then, pronounce, Whether on the utmost verge of our actual horizon there is not a looming as of Land; a promise of new Fortunate Islands,[5] perhaps whole undiscovered Americas, for such as have canvas to sail thither? — As exordium to the whole, stand here the following long citation:

'With men of a speculative turn,' writes Teufelsdröckh, 'there come seasons, meditative, sweet, yet awful hours, when in wonder and fear you ask yourself that unanswerable question: Who am *I*; the thing that can say "I" (*das Wesen das sich* Ich *nennt*)? The world, with its loud trafficking, retires into the distance; and, through the paper-hangings, and stone-walls, and thick-plied tissues of Commerce and Polity, and all the living and lifeless integuments (of Society and a Body), wherewith your Existence sits surrounded, — the sight reaches forth into the void Deep, and you are alone with the Universe, and silently commune with it, as one mysterious Presence with another.

1. See Goethe's *Faust*, I,iv.
2. *Acts*, x,9–18.
3. *Practical Reason . . . Intuition*: terms used in the Kantian philosophy to denote that power of the mind which reaches beyond the limits of logic, into moral and spiritual truths.
4. *mighty maze . . . plan*: see Pope's *Essay on Man*, 1,6ff.
5. The islands to which favored Greek heroes passed without dying; now called the *Canary* and *Madeira* islands.

'Who am I; what is this ME? A Voice, a Motion, an Appearance; — some embodied, visualised Idea in the Eternal Mind? *Cogito, ergo sum.*[6] Alas, poor Cogitator, this takes us but a little way. Sure enough, I am; and lately was not: but Whence? How? Whereto? The answer lies around, written in all colours and motions, uttered in all tones of jubilee and wail, in thousand-figured, thousand-voiced, harmonious Nature: but where is the cunning eye and ear to whom that God-written Apocalypse will yield articulate meaning? We sit as in a boundless Phantasmagoria and Dream-grotto; boundless, for the faintest star, the remotest century, lies not even nearer the verge thereof: sounds and many-coloured visions flit round our sense; but Him, the Unslumbering, whose work both Dream and Dreamer are, we see not; except in rare half-waking moments, suspect not. Creation, says one, lies before us, like a glorious Rainbow; but the Sun that made it lies behind us, hidden from us. Then, in that strange Dream, how we clutch at shadows as if they were substances; and sleep deepest while fancying ourselves most awake! Which of your Philosophical Systems is other than a dream-theorem; a net quotient, confidently given out, where divisor and dividend are both unknown? What are all your national Wars, with their Moscow Retreats,[7] and sanguinary hate-filled Revolutions, but the Somnambulism of uneasy Sleepers? This Dreaming, this Somnambulism is what we on Earth call Life; wherein the most indeed undoubtingly wander, as if they knew right hand from left; yet they only are wise who know that they know nothing.

'Pity that all Metaphysics had hitherto proved so inexpressibly unproductive! The secret of Man's Being is still like the Sphinx's secret:[8] a riddle that he cannot rede; and for ignorance of which he suffers death, the worst death, a spiritual. What are your Axioms, and Categories, and Systems, and Aphorisms? Words, words. High Air-castles are cunningly built of Words, the Words well bedded also in good Logic-mortar, wherein, however, no Knowledge will come to lodge. *The whole is greater than the part*: how exceedingly true! *Nature abhors a vacuum*: how exceedingly false and calumnious! Again, *Nothing can act but where it is*: with all my heart; only, WHERE is it? Be not the slave of Words: is not the Distant, the Dead, while I love it, and long for it, and mourn for it, Here, in the genuine sense, as truly as the floor I stand on? But that same WHERE, with its brother WHEN are from the first the master-colours of our Dream-grotto; say rather, the Canvas (the warp and woof thereof) whereon all our Dreams and Life-visions are painted. Nevertheless, has not a deeper meditation taught certain of every climate and age, that the WHERE and WHEN, so mysteriously inseparable from all our thoughts, are but superficial terrestrial adhesions to thought; that the Seer may discern them where they mount up out of the celestial EVERYWHERE and FOREVER: have not all nations conceived their God as Omnipresent and Eternal; as existing in a universal HERE, an everlasting Now? Think well, thou too wilt find that Space is but a mode of our human Sense, so likewise Time; there *is* no Space and no Time: WE are — we know not what; — light-sparkles floating in the æther of Deity!

6. 'I think, therefore I am.' The famous dictum of the French philosopher, Descartes (1596–1650), by which he asserted that since we can doubt everything but the act of doubting (thinking), consciousness is the ground, or starting-point, for all metaphysics.

7. Napoleon retreated from Moscow in 1812, after a six months' campaign in which only 25,000 of his half-million men survived.

8. The riddle of the Sphinx, of Thebes, a fabulous monster who asked: What creature walks in the morning upon four feet, at noon upon two, at evening upon three. Oedipus answered: Man, as a baby on hands and knees, as a man on his feet, later with a staff. Whereupon the Sphinx killed herself, as others had been destroyed by her on failing to 'rede' her riddle.

'So that this so solid-seeming World, after all, were but an air-image, our ME the only reality: and Nature, with its thousandfold production and destruction, but the reflex of our own inward Force, the "phantasy of our Dream"; or what the Earth-Spirit in *Faust* names it, *the living visible Garment of God*:

"In Being's floods, in Action's storm,
I walk and work, above, beneath,
Work and weave in endless motion!
Birth and Death,
An infinite ocean;
A seizing and giving
The fire of Living:
'Tis thus at the roaring Loom of Time I ply,
And weave for God the Garment thou seest Him by." [9]

Of twenty millions that have read and spouted this thunder-speech of the *Erdgeist*, are there yet twenty units of us that have learned the meaning thereof?

'It was in some such mood, when wearied and fordone with these high speculations, that I first came upon the question of Clothes. Strange enough, it strikes me, is this same fact of there being Tailors and Tailored. The Horse I ride has his own whole fell: strip him of the girths and flaps and extraneous tags I have fastened round him, and the noble creature is his own sempster and weaver and spinner; nay his own bootmaker, jeweller, and man-milliner; he bounds free through the valleys, with a perennial rain-proof court-suit on his body; wherein warmth and easiness of fit have reached perfection; nay, the graces also have been considered, and frills and fringes, with gay variety of colour, featly appended, and ever in the right place, are not wanting. While I — good Heaven! — have thatched myself over with the dead fleeces of sheep, the bark of vegetables, the entrails of worms, the hides of oxen or seals, the felt of furred beasts; and walk abroad a moving Rag-screen, overheaped with shreds and tatters raked from the Charnel-house of Nature, where they would have rotted, to rot on me more slowly! Day after day, I must thatch myself anew; day after day, this despicable thatch must lose some film of its thickness; some film of it, frayed away by tear and wear, must be brushed-off into the Ashpit, into the Laystall; till by degrees the whole has been brushed thither, and I, the dust-making, patent Rag-grinder, get new material to grind down. O subter-brutish! vile! most vile! For have not I too a compact all-enclosing Skin, whiter or dingier? Am I a botched mass of tailor's and cobblers' shreds, then; or a tightly-articulated, homogeneous little Figure, automatic, nay alive?

'Strange enough how creatures of the human-kind shut their eyes to plainest facts; and by the mere inertia of Oblivion and Stupidity, live at ease in the midst of Wonders and Terrors. But indeed man is, and was always, a blockhead and dullard; much readier to feel and digest, than to think and consider. Prejudice, which he pretends to hate, is his absolute lawgiver; mere use-and-wont everywhere leads him by the nose; thus let but a Rising of the Sun, let but a Creation of the World happen *twice*, and it ceases to be marvellous, to be noteworthy, or noticeable. Perhaps not once in a lifetime does it occur to your ordinary biped, of any country or generation, be he gold-mantled Prince or russet-jerkined Peasant, that his Vestments and his Self are not one and indivisible; that *he* is naked, without vestments, till he buy or steal such, and by forethought sew and button them.

'For my own part, these considerations, of our Clothes-thatch, and how, reaching inwards even to our heart of hearts, it tailorises and demoralises us, fill me with a certain horror at myself and mankind; almost as one feels at those Dutch Cows, which, during the wet season, you see grazing deliberately with jackets and petticoats (of striped sacking), in the meadows

9. *Faust*, I,ll.501–09.

of Gouda.[10] Nevertheless there is something great in the moment when a man first strips himself of adventitious wrappages; and sees indeed that he is naked, and, as Swift has it, " a forked straddling animal with bandy legs "; [11] yet also a Spirit, and unutterable Mystery of Mysteries.'

Chapter X

Pure Reason [1]

It must now be apparent enough that our Professor, as above hinted, is a speculative Radical, and of the very darkest tinge; acknowledging, for most part, in the solemnities and paraphernalia of civilised Life, which we make so much of, nothing but so many Cloth-rags, turkey-poles, and ' bladders with dried peas.' [2] To linger among such speculations, longer than mere Science requires, a discerning public can have no wish. For our purposes the simple fact that such a *Naked World* is possible, nay actually exists (under the Clothed one), will be sufficient. Much, therefore, we omit about ' Kings wrestling naked on the green with Carmen,' [3] and the Kings being thrown: ' dissect them with scalpels,' says Teufelsdröckh; ' the same viscera, tissues, livers, lights, and other life-tackle are there: examine their spiritual mechanism; the same great Need, great Greed, and little Faculty; nay ten to one but the Carman, who understands draught-cattle, the rimming of wheels, something of the laws of unstable and stable equilibrium, with other branches of wagon-science, and has actually put forth his hand and operated on Nature, is the more cunningly gifted of the two. Whence, then, their so unspeakable difference? From Clothes.' Much also we shall omit about confusion of Ranks, and Joan and My Lady,[4] and how it would be everywhere ' Hail fellow well met,' and Chaos were come again: [5] all which to any one that has once fairly pictured-out the grand mother-idea, *Society in a state of nakedness*, will spontaneously suggest itself. Should some sceptical individual still entertain doubts whether in a world without Clothes, the smallest Politeness, Polity, or even Police, could exist, let him turn to the original Volume, and view there the boundless Serbonian Bog [6] of Sansculottism,[7] stretching sour and pestilential: over which we have lightly flown; where not only whole armies but whole nations might sink! If indeed the following argument, in its brief riveting emphasis, be not of itself incontrovertible and final:

' Are we Opossums; have we natural Pouches, like the Kangaroo? Or how, without Clothes, could we possess the master-organ, soul's seat, and true pineal gland [8] of the Body Social: I mean, a Purse? '

Nevertheless, it is impossible to hate Professor Teufelsdröckh; at worst, one knows not whether to hate or to love him. For though, in looking at the fair tapestry of human Life, with its royal and even sacred figures, he dwells not on the obverse alone, but here chiefly on the reverse; and indeed turns out the rough seams,

10. A town in Holland, famous for its cheese.
11. See *King Lear*, III,iv,111.

1. The title of this chapter was probably suggested to Carlyle by the title of Kant's *Critique of Pure Reason* (1781), in which the philosopher attempts to lay down the limits, and to show the nature, of reason *a priori*, or independently of experience or observation. Carlyle uses the term, however, in a post-Kantian sense, to mean intuition, moral insight, mystical knowledge, sometimes merely imagination. By means of this *reason* we are to look *through* the garment of nature (matter) into the world of spirit (the ' world out of clothes ').
2. Used by drivers of turkeys; *cf.* end of Ch.ix.
3. Drivers of carts.
4. See *Love's Labor's Lost*, III,i,215.

6. Lake Serbonis, in Egypt, near the Suez Canal. Carlyle's phrasing is from *Paradise Lost*, ii,592–94.
7. *Sansculottism*: revolutionism. From *Sansculotte* (' without breeches '), applied by aristocrats in the French Revolution to republicans, who rejected short breeches for pantaloons.
8. A small gland at the base of the brain, formerly thought to be the seat of the soul.

tatters, and manifold thrums of that unsightly wrong-side, with an almost diabolic patience and indifference, which must have sunk him in the estimation of most readers, — there is that within which unspeakably distinguishes him from all other past and present Sansculottists. The grand unparalleled peculiarity of Teufelsdröckh is, that with all this Descendentalism,[9] he combines a Transcendentalism, no less superlative; whereby if on the one hand he degrade man below most animals, except those jacketed Gouda Cows, he, on the other, exalts him beyond the visible Heavens, almost to an equality with the Gods.

'To the eye of vulgar Logic,' says he, 'what is man? An omnivorous Biped, that wears Breeches. To the eye of Pure Reason what is he? A Soul, a Spirit, and divine Apparition. Round his mysterious ME, there lies, under all those wool-rags, a Garment of Flesh (or of Senses), contextured in the Loom of Heaven: whereby he is revealed to his like, and dwells with them in UNION and DIVISION; and sees and fashions for himself a Universe, with azure Starry Spaces, and long Thousands of Years. Deep-hidden is he under that strange Garment; amid Sounds and Colours and Forms, as it were, swathed-in, and inextricably overshrouded: yet it is sky-woven, and worthy of a God. Stands he not thereby in the centre of Immensities, in the conflux of Eternities? He feels; power has been given him to know, to believe; nay does not the spirit of Love, free in its celestial primeval brightness, even here, though but for moments, look through? Well said Saint Chrysostom,[10] with his lips of gold, "the true SHEKINAH[11] is Man": where else is the GOD'S-PRESENCE manifested not to our eyes only, but to our hearts, as in our fellow-man?'

In such passages, unhappily too rare, the high Platonic Mysticism of our Author, which is perhaps the fundamental element of his nature, bursts forth, as it were, in full flood: and, through all the vapour and tarnish of what is often so perverse, so mean in his exterior and environment, we seem to look into a whole inward Sea of Light and Love; — though, alas, the grim coppery clouds soon roll together again, and hide it from view.

Such tendency to Mysticism is everywhere traceable in this man; and indeed, to attentive readers, must have been long ago apparent. Nothing that he sees but has more than a common meaning, but has two meanings: thus, if in the highest Imperial Sceptre and Charlemagne-Mantle,[12] as well as in the poorest Ox-goad and Gypsy-Blanket, he finds Prose, Decay, Contemptibility; there is in each sort Poetry also, and a reverend Worth. For Matter, were it never so despicable, is Spirit, the manifestation of Spirit: were it never so honourable, can it be more? The thing Visible, nay the thing Imagined, the thing in any way conceived as Visible, what is it but a Garment, a Clothing of the higher, celestial Invisible, 'unimaginable, formless, dark with excess of bright'?[13] Under which point of view the following passage, so strange in purport, so strange in phrase, seems characteristic enough.

'The beginning of all Wisdom is to look fixedly on Clothes, or even with armed eyesight, till they become *transparent*. "The Philosopher," says the wisest of this age,[14] "must station himself in the middle": how true! The Philosopher is he to whom the Highest has descended, and the Lowest has mounted up; who is the equal and kindly brother of all.

'Shall we tremble before clothwebs and

9. The opposite of *trans*cendentalism, i.e. realism, empiricism.

10. Saint John Chrysostom (c.345–407), an early Christian Father, famed for his eloquence.

11. *Shekinah*: Hebrew word for 'dwelling,' also for divine intermediary between God and man, or embodiment of the Divine.

12. The magnificent robe of Charlemagne (c.742–814), said to be preserved in St. Peter's at Rome.

13. *Paradise Lost*, iii,380: 'Dark with *excessive* bright.'

14. Goethe, in *Wilhelm Meister* (Carlyle's transl., Centenary ed.), II,267.

cobwebs, whether woven in Arkwright [15] looms, or by the silent Arachnes [16] that weave unrestingly in our imagination? Or, on the other hand, what is there that we cannot love; since all was created by God?

'Happy he who can look through the Clothes of a Man (the woollen, and fleshly, and official Bank-paper and State-paper Clothes) into the Man himself; and discern, it may be, in this or the other Dread Potentate, a more or less incompetent Digestive-apparatus; yet also an inscrutable venerable Mystery, in the meanest Tinker that sees with eyes!'

For the rest, as is natural to a man of this kind, he deals much in the feeling of Wonder; insists on the necessity and high worth of universal Wonder; which he holds to be the only reasonable temper for the denizen of so singular a Planet as ours. 'Wonder,' says he, 'is the basis of Worship: the reign of wonder is perennial, indestructible in Man; only at certain stages (as the present), it is, for some short season, a reign *in partibus infidelium*.'[17] That progress of Science, which is to destroy Wonder, and in its stead substitute Mensuration and Numeration, finds small favour with Teufelsdröckh, much as he otherwise venerates these two latter processes.

'Shall your Science,' exclaims he, 'proceed in the small chink-lighted, or even oil-lighted, underground workshop of Logic alone; and man's mind become an Arithmetical Mill, whereof Memory is the Hopper, and mere Tables of Sines and Tangents, Codification, and Treatises of what you call Political Economy, are the Meal? And what is that Science, which the scientific head alone, were it screwed off, and (like the Doctor's in the Arabian Tale) [18] set in a basin to keep it alive, could prosecute without shadow of a heart, — but one other of the mechanical and menial handicrafts, for which the Scientific Head (having a Soul in it) is too noble an organ? I mean that Thought without Reverence is barren, perhaps poisonous; at best, dies like cookery with the day that called it forth; does not live, like sowing, in successive tilths and wider-spreading harvests, bringing food and plenteous increase to all Time.'

In such wise does Teufelsdröckh deal hits, harder or softer, according to ability; yet ever, as we would fain persuade ourselves, with charitable intent. Above all, that class of 'Logic-choppers, and treble-pipe Scoffers, and professed Enemies to Wonder; who, in these days, so numerously patrol as night-constables about the Mechanics' Institute [19] of Science, and cackle, like true Old-Roman geese [20] and goslings round their Capitol, on any alarm, or on none; nay who often, as illuminated Sceptics, walk abroad into peaceable society, in full daylight, with rattle and lantern, and insist on guiding you and guarding you therewith, though the Sun is shining, and the street populous with mere justice-loving men': that whole class is inexpressibly wearisome to him. Hear with what uncommon animation he perorates:

'The man who cannot wonder, who does not habitually wonder (and worship) were he President of innumerable Royal Societies, and carried the whole *Mécanique Céleste* [21] and *Hegel's Philosophy*,[22] and the epitome of all Laboratories and Observatories with their results, in his single head, — is but a Pair of Spectacles behind which there is no Eye. Let those who have

16. Spiders. (Arachne, a Lydian girl, was turned into a spider by Athena for presuming to compete with her in weaving.)
17. 'in the country of the unbelievers.'
18. 'The Greek King and Douban the Physician,' in *The Arabian Nights*.
19. Mechanics' Institutes, or working-men's colleges, with libraries, museums, etc., had been founded by George Birkbeck (1776–1841) and Lord Brougham (1778–1868).
20. The sacred geese of Juno which had given the alarm when the Gauls in 390 B.C. attempted to surprise and take the Capitol.
21. By Laplace, in 5 volumes, 1799–1825.
22. G.W.F.Hegel (1770–1831), German philosopher.

Eyes look through him, then he may be useful.

'Thou wilt have no Mystery and Mysticism; wilt walk through thy world by the sunshine of what thou callest Truth, or even by the hand-lamp of what I call Attorney-Logic; and "explain" all, "account" for all, or believe nothing of it? Nay, thou wilt attempt laughter; whoso recognises the unfathomable, all-pervading domain of Mystery, which is everywhere under our feet and among our hands; to whom the Universe is an Oracle and Temple, as well as a Kitchen and Cattlestall, — he shall be a delirious Mystic; to him thou, with sniffing charity, wilt protrusively proffer thy hand-lamp, and shriek, as one injured, when he kicks his foot through it? — *Armer Teufel!*[23] Doth not thy cow calve, doth not thy bull gender?[24] Thou thyself, wert thou not born, wilt thou not die? "Explain" me all this, or do one of two things: Retire into private places with thy foolish cackle; or, what were better, give it up, and weep, not that the reign of wonder is done, and God's world all disembellished and prosaic, but that thou hitherto art a Dilettante and sandblind Pedant.'

Chapter XI

Prospective

The Philosophy of Clothes is now to all readers, as we predicted it would do, unfolding itself into new boundless expansions, of a cloudclapt, almost chimerical aspect, yet not without azure loomings in the far distance, and streaks as of an Elysian brightness;[1] the highly questionable purport and promise of which it is becoming more and more important for us to ascertain. Is that a real Elysian brightness, cries many a timid wayfarer, or the reflex of Pandemonian lava?[2] Is it of a truth leading us into beatific Asphodel meadows,[3] or the yellow-burning marl[4] of a Hell-on-Earth?

Our Professor, like other Mystics, whether delirious or inspired, gives an Editor enough to do. Ever higher and dizzier are the heights he leads us to; more piercing, all-comprehending, all-confounding are his views and glances. For example, this of Nature being not an Aggregate but a Whole:

'Well sang the Hebrew Psalmist: "If I take the wings of the morning and dwell in the uttermost parts of the universe, God is there."[5] Thou thyself, O cultivated reader, who too probably art no Psalmist, but a Prosaist, knowing God only by tradition, knowest thou any corner of the world where at least Force is not? The drop which thou shakest from thy wet hand, rests not where it falls, but tomorrow thou findest it swept away; already on the wings of the Northwind, it is nearing the Tropic of Cancer. How came it to evaporate, and not lie motionless? Thinkest thou there is aught motionless; without Force, and utterly dead?

'As I rode through the Schwarzwald,[6] I said to myself: That little fire which grows star-like across the dark-growing (*nachtende*) moor, where the sooty smith bends over his anvil, and thou hopest to replace thy lost horseshoe, — is it a detached, separated speck, cut-off from the whole Universe; or indissolubly joined to the whole? Thou fool, that smithy-fire was (primarily) kindled at the Sun; is fed by air that circulates from before Noah's Deluge, from beyond the Dogstar; therein, with Iron Force, and Coal Force, and the far stranger Force of Man, are cunning

23. 'Poor devil!'

24. See *Job*, xxi,10;xxxix,1.

1. Heavenly brightness: from *Elysion*, classical Greek 'place of the dead.'

2. Allusion to the bottom of Pandaemonium, 'high Capital of Satan and his Peers' (*Paradise Lost*, i,227ff,296,etc.)

3. The meadows where the souls of departed heroes dwelt (Homer, *Odyssey*, xi,539).

4. Allusion, as before, to *Paradise Lost*, i,296. *Marl* — clay, together with calcium carbonate; or *poetic* for 'earth.'

5. See *Psalms*, cxxxix,9,10.

6. The Black Forest, in Germany.

affinities and battles and victories of Force brought about; it is a little ganglion, or nervous centre, in the great vital system of Immensity. Call it, if thou wilt, an unconscious Altar, kindled on the bosom of the All; whose iron sacrifice, whose iron smoke and influence reach quite through the All; whose dingy Priest, not by word, yet by brain and sinew, preaches forth the mystery of Force; nay preaches forth (exoterically enough) one little textlet from the Gospel of Freedom, the Gospel of Man's Force, commanding, and one day to be all-commanding.

'Detached, separated! I say there is no such separation: nothing hitherto was ever stranded, cast aside, but all, were it only a withered leaf, works together with all; is borne forward on the bottomless, shoreless flood of Action, and lives through perpetual metamorphoses. The withered leaf is not dead and lost, there are Forces in it and around it, though working in inverse order; else how could it *rot*? Despise not the rag from which man makes Paper, or the litter from which the earth makes Corn. Rightly viewed no meanest object is insignificant; all objects are as windows, through which the philosophic eye looks into Infinitude itself.'

Again, leaving that wondrous Schwarzwald Smithy-Altar, what vacant, high-sailing air-ships are these, and whither will they sail with us?

'All visible things are emblems; what thou seest is not there on its own account; strictly taken, is not there at all: Matter exists only spiritually, and to represent some Idea, and *body* it forth. Hence Clothes, as despicable as we think them, are so unspeakably significant. Clothes, from the King's mantle downwards, are emblematic, not of want only, but of a manifold cunning Victory over Want. On the other hand, all Emblematic things are properly Clothes, thought-woven or hand-woven: must not the Imagination weave Garments, visible Bodies, wherein the else invisible creations and inspirations of our Reason are, like Spirits, revealed, and first become all-powerful; — the rather if, as we often see, the Hand too aid her, and (by wool Clothes or otherwise) reveal such even to the outward eye?

'Men are properly said to be clothed with Authority,[7] clothed with Beauty, with Curses, and the like. Nay, if you consider it, what is Man himself, and his whole terrestrial Life, but an Emblem; a Clothing or visible Garment for that divine ME of his, cast hither, like a light-particle, down from Heaven? Thus is he said also to be clothed with a Body.[8]

'Language is called the Garment of Thought: however, it should rather be, Language is the Flesh-Garment, the Body, of thought. I said that Imagination wove this Flesh-Garment; and does not she? Metaphors are her stuff: examine Language; what, if you except some few primitive elements (of natural sound), what is it all but Metaphors, recognised as such, or no longer recognised; still fluid and florid, or now solid-grown and colourless? If those same primitive elements are the osseous fixtures in the Flesh-Garment, Language, — then are Metaphors its muscles and tissues and living integuments. An unmetaphorical style you shall in vain seek for: is not your very *Attention a Stretching-to*?[9] The difference lies here: some styles are lean, adust, wiry, the muscle itself seems osseous; some are even quite pallid, hunger-bitten and dead-looking; while others again glow in the flush of health and vigorous self-growth, sometimes (as in my own case) not without an apoplectic tendency. Moreover, there are sham Metaphors, which overhanging that same Thought's-Body (best naked), and deceptively bedizening, or bolstering it out, may be called its false stuffings, superfluous show-cloaks (*Putz-Mäntel*), and tawdry woollen rags: whereof he that runs and

7. See *Measure for Measure*, II,ii,117–18.
8. So in *Job*, x,11.
9. Latin: *ad* + *tendere*, to 'stretch towards.'

reads may gather whole hampers, — and burn them.'

Than which paragraph on Metaphors did the reader ever chance to see a more surprisingly metaphorical? However, that is not our chief grievance; the Professor continues:

'Why multiply instances? It is written, the Heavens and the Earth shall fade away like a Vesture; [10] which indeed they are: the Time-vesture of the Eternal. Whatsoever sensibly exists, whatsoever represents Spirit to Spirit, is properly a Clothing, a suit of Raiment, put on for a season, and to be laid off. Thus in this one pregnant subject of CLOTHES, rightly understood, is included all that men have thought, dreamed, done, and been: the whole External Universe and what it holds is but Clothing; [11] and the essence of all Science lies in the PHILOSOPHY OF CLOTHES.'

Towards these dim infinitely-expanded regions, close-bordering on the impalpable Inane, it is not without apprehension, and perpetual difficulties, that the Editor sees himself journeying and struggling. Till lately a cheerful daystar of hope hung before him, in the expected Aid of Hofrath Heuschrecke; which daystar, however, melts now, not into the red of morning, but into a vague, grey half light, uncertain whether dawn of day or dusk of utter darkness. For the last week, these so-called Biographical Documents are in his hand. By the kindness of a Scottish Hamburg Merchant, whose name, known to the whole mercantile world, he must not mention; but whose honourable courtesy, now and often before spontaneously manifested to him, a mere literary stranger, he cannot soon forget, — the bulky Weissnichtwo Packet, with all its Custom-house seals, foreign hieroglyphs, and miscellaneous tokens of Travel, arrived here in perfect safety, and free of cost. The reader shall now fancy with what hot haste it was broken up, with what breathless expectation glanced over; and, alas, with what unquiet disappointment it has, since then, been often thrown down, and again taken up.

Hofrath Heuschrecke, in a too long-winded Letter, full of compliments, Weissnichtwo politics, dinners, dining repartees, and other ephemeral trivialities, proceeds to remind us of what we know well already: that however it may be with Metaphysics, and other abstract Science originating in the Head (*Verstand*) alone, no Life-Philosophy (*Lebensphilosophie*), such as this of Clothes pretends to be, which originates equally in the Character (*Gemüth*), and equally speaks thereto, can attain its significance till the Character itself is known and seen; 'till the Author's View of the World (*Weltansicht*), and how he actively and passively came by such view, are clear: in short till a Biography of him has been philosophico-poetically written, and philosophico-poetically read.' 'Nay,' adds he, 'were the speculative scientific Truth even known, you still, in this inquiring age, ask yourself, Whence came it, and Why, and How? — and rest not, till, if no better may be, Fancy have shaped-out an answer; and either in the authentic lineaments of Fact, or the forged ones of Fiction, a complete picture and Genetical History of the Man and his spiritual Endeavour lies before you. But why,' says the Hofrath, and indeed say we, 'do I dilate on the uses of our Teufelsdröckh's Biography? The great Herr Minister von Goethe [12] has penetratingly remarked that "Man is properly the *only* object that interests man": [13] thus I too have noted, that in Weissnichtwo our

10. Thus in *Psalms*, cii,25,26; *Hebrews*, i, 12;etc.

11. Similar phrasing occurs in Swift's *A Tale of a Tub*, Sect.II; also suggesting that man's body be regarded as a 'micro-coat.'

12. Johann Wolfgang von Goethe (1749–1832), novelist, critic, dramatist, scientist, and the greatest of the German poets.

13. From Goethe's *Wilhelm Meister* (Carlyle's transl., Cent. ed.), I,131. *Cf.* Pope's well-known line, 'The proper study of mankind is man' (*Essay on Man*, ii,2).

whole conversation is little or nothing else but Biography or Auto-Biography; ever humano-anecdotal (*menschlichanekdotisch*). Biography is by nature the most universally profitable, universally pleasant of all things: especially Biography of distinguished individuals.[14]

'By this time, *mein Verehrtester* (my Most Esteemed),' continues he, with an eloquence which, unless the words be purloined from Teufelsdröckh, or some trick of his, as we suspect, is well-nigh unaccountable, 'by this time you are fairly plunged (*vertieft*) in that mighty forest of Clothes-Philosophy; and looking round, as all readers do, with astonishment enough. Such portions and passages as you have already mastered, and brought to paper, could not but awaken a strange curiosity touching the mind they issued from; the perhaps unparalleled psychical mechanism, which manufactured such matter, and emitted it to the light of day. Had Teufelsdröckh also a father and mother; did he, at one time, wear drivel-bibs, and live on spoon-meat? Did he ever, in rapture and tears, clasp a friend's bosom to his; looks he also wistfully into the long burial-aisle of the Past, where only winds, and their low harsh moan, give inarticulate answer? Has he fought duels; — good Heaven! how did he comport himself when in Love? By what singular stair-steps, in short, and subterranean passages, and sloughs of Despair,[15] and steep Pisgah[16] hills, has he reached this wonderful prophetic Hebron[17] (a true Old-Clothes Jewry) where he now dwells?

'To all these natural questions the voice of public History is as yet silent. Certain only that he has been, and is, a Pilgrim, and Traveller from a far Country; more or less footsore and travel-soiled; has parted with road-companions; fallen among thieves,[18] been poisoned by bad cookery, blistered with bug-bites; nevertheless, at every stage (for they have let him pass), has had the Bill to discharge. But the whole particulars of his Route, his Weather-observations, the picturesque Sketches he took, though all regularly jotted down (in indelible sympathetic-ink[19] by an invisible interior Penman), are these nowhere forthcoming? Perhaps quite lost: one other leaf of that mighty Volume (of human Memory) left to fly abroad, unprinted, unpublished, unbound up, as waste paper; and to rot, the sport of rainy winds?

'No, *verehrtester Herr Herausgeber*,[20] in no wise! I here, by the unexampled favour you stand in with our Sage, send not a Biography only, but an Autobiography: at least the materials for such; wherefrom, if I misreckon not, your perspicacity will draw fullest insight: and so the whole Philosophy and Philosopher of Clothes will stand clear to the wondering eyes of England, nay thence, through America, through Hindostan, and the antipodal New Holland, finally conquer (*einnehmen*) great part of this terrestrial Planet!'

And now let the sympathising reader judge of our feeling when, in place of this same Autobiography with 'fullest insight,' we find — Six considerable PAPER-BAGS, carefully sealed, and marked successively, in gilt China-ink, with the symbols of the Six southern Zodiacal Signs, beginning at Libra;[21] in the inside of which sealed Bags lie miscellaneous masses

14. This sentence is a foreshadowing of the doctrine presented in *Heroes and Hero-Worship* (1841).
15. *Cf.* Bunyan's 'Slough of Despond' (*Pilgrim's Progress*).
16. From Mount Pisgah, Moses viewed the Promised Land (*Deuteronomy*, xxxiv,1).
17. One of the oldest Hebrew cities, closely connected with Abraham in Bible tradition, at one time the residence of King David.
18. *Cf. Luke*, x,30.
19. Invisible ink, made visible by pressing with a hot iron.
20. 'most esteemed Mr. Editor.'
21. As follows: Libra (Balance) ♎; Scorpio (Scorpion) ♏; Sagittarius (Archer) ♐; Capricornus (Goat) ♑; Aquarius (Waterbearer) ♒; and Pisces (Fishes) ♓. Each bag covers about one period of Teufelsdröckh's life.

of Sheets, and oftener Shreds and Snips, written in Professor Teufelsdröckh's scarce legible *cursiv-schrift*;[22] and treating of all imaginable things under the Zodiac and above it, but of his own personal history only at rare intervals, and then in the most enigmatic manner.

Whole fascicles there are, wherein the Professor, or, as he here, speaking in the third person, calls himself, 'the Wanderer,' is not once named. Then again, amidst what seems to be a Metaphysico-theological Disquisition, 'Detached Thoughts on the Steam-engine,' or, 'The continued Possibility of Prophecy,' we shall meet with some quite private, not unimportant Biographical fact. On certain sheets stand Dreams, authentic or not, while the circumjacent waking Actions are omitted. Anecdotes, oftenest without date of place or time, fly loosely on separate slips, like Sibylline leaves.[23] Interspersed also are long purely Autobiographical delineations; yet without connexion, without recognisable coherence; so unimportant, so superfluously minute, they almost remind us of 'P.P. Clerk of this Parish.'[24] Thus does famine of intelligence alternate with waste. Selection, order, appears to be unknown to the Professor. In all Bags the same imbroglio; only perhaps in the Bag *Capricorn*, and those near it, the confusion a little worse confounded.[25] Close by a rather eloquent Oration, 'On receiving the Doctor's-Hat,' lie washbills, marked *bezahlt* (settled). His Travels are indicated by the Street-Advertisements of the various cities he has visited; of which Street-advertisements, in most living tongues, here is perhaps the completest collection extant.

So that if the Clothes-Volume itself was too like a Chaos, we have now instead of the solar Luminary[26] that should still it, the airy Limbo[27] which by intermixture will farther volatilise and discompose it! As we shall perhaps see it our duty ultimately to deposit these Six Paper-Bags in the British Museum, farther description, and all vituperation of them, may be spared. Biography or Autobiography of Teufelsdröckh there is, clearly enough, none to be gleaned here: at most some sketchy, shadowy fugitive likeness of him may, by unheard-of efforts, partly of intellect, partly of imagination, on the side of Editor and of Reader, rise up between them. Only as a gaseous-chaotic Appendix to that aqueous-chaotic Volume can the contents of the Six Bags hover round us, and portions thereof be incorporated with our delineation of it.

Daily and nightly does the Editor sit (with green spectacles) deciphering these unimaginable Documents from their perplexed *cursiv-schrift*; collating them with the almost equally unimaginable Volume, which stands in legible print. Over such a universal medley of high and low, of hot, cold, moist and dry, is he here struggling (by union of like with like, which is Method) to build a firm Bridge for British travellers. Never perhaps since our first Bridge-builders, Sin and Death, built that stupendous Arch from Hell-gate to the Earth, did any Pontifex, or Pontiff,[28] undertake such a task as the present Editor. For in this Arch too, leading, as we humbly presume, far otherwards than that grand primeval one, the materials are to be fished-up from the weltering deep, and down from the simmering air, here one mass, there another, and cunningly cemented, while the elements boil beneath: nor is there any supernatural force to do it with; but simply the Diligence and feeble thinking Faculty of an English Editor,

22. Handwriting.

23. *i.e.* like the leaves of the sibyl, or prophetess, of Cumae, who sold her prophetic books, in Greek, to the Roman King, Tarquin the Proud.

24. Title of a work attributed to Pope.

25. *Cf. Paradise Lost*, ii,996.

26. *i.e.* the sun; *cf.* 'that great Luminary' (*Paradise Lost*, iii,576).

27. *Cf.* Milton's 'limbo' (*Paradise Lost*, iii,489ff).

28. *Pontiff*, *Pontifex* originally meant 'bridge-builder,' later any Roman magistrate whose sacred function was to superintend bridges.

endeavouring to evolve printed Creation out of a German printed and written Chaos, wherein, as he shoots to and fro in it, gathering, clutching, piercing the Why to the far-distant Wherefore, his whole Faculty and Self are like to be swallowed up.

Patiently, under these incessant toils and agitations, does the Editor, dismissing all anger, see his otherwise robust health declining; some fraction of his allotted natural sleep nightly leaving him, and little but an inflamed nervous-system to be looked for. What is the use of health, or of life, if not to do some work therewith? And what work nobler than transplanting foreign Thought into the barren domestic soil,[29] except indeed planting Thought of your own, which the fewest are privileged to do? Wild as it looks, this Philosophy of Clothes, can we ever reach its real meaning, promises to reveal new-coming Eras, the first dim rudiments and already-budding germs of a nobler Era, in Universal History. Is not such a prize worth some striving? Forward with us, courageous reader; be it towards failure, or towards success! The latter thou sharest with us; the former also is not all our own.

BOOK SECOND

CHAPTER I

Genesis

IN a psychological point of view, it is perhaps questionable whether from birth and genealogy, how closely scrutinised soever, much insight is to be gained. Nevertheless, as in every phenomenon the Beginning remains always the most notable moment; so, with regard to any great man, we rest not till, for our scientific profit or not, the whole circumstances of his first appearance in this Planet, and what manner of Public Entry he made, are with utmost completeness rendered manifest. To the Genesis of our Clothes-Philosopher, then, be this First Chapter consecrated. Unhappily, indeed, he seems to be of quite obscure extraction; uncertain, we might almost say, whether of any: so that this Genesis of his can properly be nothing but an Exodus (or transit out of Invisibility into Visibility); whereof the preliminary portion is nowhere forthcoming.

'In the village of Entepfuhl,'[1] thus writes he, in the Bag *Libra*, on various Papers, which we arrange with difficulty, 'dwelt Andreas Futteral and his wife; childless, in still seclusion, and cheerful though now verging towards old age. Andreas had been grenadier Sergeant, and even regimental Schoolmaster under Frederick the Great;[2] but now, quitting the halbert and ferule for the spade and pruning-hook, cultivated a little Orchard, on the produce of which he, Cincinnatus-like,[3] lived not without dignity. Fruits, the peach, the apple, the grape, with other varieties came in their season; all which Andreas knew how to sell: on evenings he smoked largely, or read (as beseemed a regimental Schoolmaster), and talked to neighbours that would listen about the Victory of Rossbach;[4] and how Fritz the Only (*der Einzige*) had once with his own royal lips spoken to him, had been pleased to say, when Andreas as camp-sentinel demanded the pass-word, "*Schweig Hund* (Peace, hound)!" before any of his staff-adjutants could answer. "*Das nenn' ich mir einen König*, There is what I call a

29. Such transplanting of foreign thought was indeed Carlyle's own vocation, the promulgation among British readers of the ideas and works of Goethe, Schiller, Richter, Novalis, and other German writers.

1. German for 'duck-pond,' suggesting Carlyle's own birthplace, Ecclefechan, with its large duck-pond near his home.
2. King of Prussia from 1740 to 1786.
3. Cincinnatus, hero of the Roman republic, was called from his plow to dictatorship in a war with the Aequians (458 B.C.); after a few days, his duty done, and the enemy vanquished, he returned to his farm.
4. In which Frederick defeated the French in 1757.

King," would Andreas exclaim: "but the smoke of Kunersdorf [5] was still smarting his eyes."

'Gretchen, the housewife, won like Desdemona by the deeds rather than the looks of her now veteran Othello,[6] lived not in altogether military subordination; for, as Andreas said, "the womankind will not drill (*wer kann die Weiberchen dressiren*)": nevertheless she at heart loved him both for valour and wisdom; to her a Prussian grenadier Sergeant and Regiment's Schoolmaster was little other than a Cicero and Cid: [7] what you see, yet cannot see over, is as good as infinite. Nay, was not Andreas in very deed a man of order, courage, downrightness (*Geradheit*); that understood Büsching's *Geography*,[8] had been in the victory of Rossbach, and left for dead in the camisade of Hochkirch? [9] The good Gretchen, for all her fretting, watched over him and hovered round him as only a true housemother can: assiduously she cooked and sewed and scoured for him; so that not only his old regimental sword and grenadier-cap, but the whole habitation and environment, where on pegs of honour they hung, looked ever trim and gay: a roomy painted Cottage, embowered in fruit-trees and forest-trees, evergreens and honeysuckles; rising many-coloured from amid shaven grass-plots, flowers struggling-in through the very windows; under its long projecting eaves nothing but garden-tools in methodic piles (to screen them from rain), and seats where, especially on summer nights, a King might have wished to sit and smoke, and call it his. Such a *Bauergut* (Copyhold) had Gretchen given her veteran; whose sinewy arms, and long-disused gardening talent, had made it what you saw.

'Into this umbrageous Man's-nest, one meek yellow evening or dusk, when the Sun, hidden indeed from terrestrial Entepfuhl, did nevertheless journey visible and radiant along the celestial Balance (*Libra*), it was that a Stranger of reverend aspect entered; and, with grave salutation, stood before the two rather astonished housemates. He was close-muffled in a wide mantle; which without further parley unfolding, he deposited therefrom what seemed some Basket, overhung with green Persian silk; saying only: *Ihr lieben Leute, hier bringe ein unschätzbares Verleihen; nehmt es in aller Acht, sorgfältigst benützt es: mit hohem Lohn, oder wohl mit schweren Zinsen, wird's einst zurückgefordert.* "Good Christian people, here lies for you an invaluable Loan; take all heed thereof, in all carefulness employ it: with high recompense, or else with heavy penalty, will it one day be required back." Uttering which singular words, in a clear, bell-like, forever memorable tone, the Stranger gracefully withdrew; and before Andreas or his wife, gazing in expectant wonder, had time to fashion either question or answer, was clean gone. Neither out of doors could aught of him be seen or heard; he had vanished in the thickets, in the dusk; the Orchard-gate stood quietly closed: the Stranger was gone once and always. So sudden had the whole transaction been, in the autumn stillness and twilight, so gentle, noiseless, that the Futterals could have fancied it all a trick of Imagination, or some visit from an authentic Spirit. Only that the green-silk Basket, such as neither Imagination nor authentic Spirits are wont to carry, still stood visible and tangible on their little parlour-table. Towards this the astonished couple, now with lit candle, hastily turned their attention. Lifting the green veil, to see what invaluable it hid, they descried

7. Examples of wisdom and courage, respectively, in Cicero (106–43 B.C.), Roman scholar and orator, and the Cid ('Arabic for 'Lord Champion'), Ruy Diaz of Bivar, 11th-century hero of Spain, prominent in her literature.
8. Published in 1754–59, by A.F.Büsching, German geographer, much consulted by Carlyle.
9. The night-attack at Hochkirchen, Saxony, where the Austrians defeated Frederick in 1758.

there, amid down and rich white wrappages, no Pitt Diamond [10] or Hapsburg Regalia,[11] but, in the softest sleep, a little red-coloured Infant! Beside it, lay a roll of gold Friedrichs,[12] the exact amount of which was never publicly known; also a *Taufschein* (baptismal certificate), wherein unfortunately nothing but the Name was decipherable; other document or indication none whatever.

'To wonder and conjecture was unavailing, then and always thenceforth. Nowhere in Entepfuhl, on the morrow or next day, did tidings transpire of any such figure as the Stranger; nor could the Traveller, who had passed through the neighbouring Town in coach-and-four, be connected with this Apparition, except in the way of gratuitous surmise. Meanwhile, for Andreas and his wife, the grand practical problem was: What to do with this little sleeping red-coloured Infant? Amid amazements and curiosities, which had to die away without external satisfying, they resolved, as in such circumstances charitable prudent people needs must, on nursing it, though with spoon-meat, into whiteness, and if possible into manhood. The Heavens smiled on their endeavour: thus has that same mysterious Individual ever since had a status for himself in this visible Universe, some modicum of victual and lodging and parade-ground; and now expanded in bulk, faculty and knowledge of good and evil, he, as HERR DIOGENES TEUFELSDROCKH, professes or is ready to profess, perhaps not altogether without effect, in the new University of Weissnichtwo, the new Science of Things in General.'

Our Philosopher declares here, as indeed we should think he well might, that these facts, first communicated, by the good Gretchen Futteral, in his twelfth year, 'produced on the boyish heart and fancy a quite indelible impression. Who this Reverend Personage,' he says, 'that glided into the Orchard Cottage when the Sun was in Libra, and then, as on spirit's wings, glided out again, might be? An inexpressible desire, full of love and of sadness, has often since struggled within me to shape an answer. Ever, in my distresses and my loneliness, has Fantasy turned, full of longing (*sehnsuchtsvoll*), to that unknown Father, who perhaps far from me, perhaps near, either way invisible, might have taken me to his paternal bosom, there to lie screened from many a woe. Thou beloved Father, dost thou still, shut out from me only by thin penetrable curtains of earthly Space, wend to and fro among the crowd of the living? Or art thou hidden by those far thicker curtains of the Everlasting Night, or rather of the Everlasting Day, through which my mortal eye and outstretched arms need not strive to reach? Alas, I know not, and in vain vex myself to know. More than once, heart-deluded, have I taken for thee this and the other noble-looking Stranger; and approached him wistfully, with infinite regard; but he too had to repel me; he too was not thou.

'And yet, O Man born of Woman,' cries the Autobiographer, with one of his sudden whirls, 'wherein is my case peculiar? Hadst thou, any more than I, a Father whom thou knowest? The Andreas and Gretchen, or the Adam and Eve, who led thee into Life, and for a time suckled and pap-fed thee there, whom thou namest Father and Mother; these were, like mine, but thy nursing-father and nursing-mother: thy true Beginning and Father is in Heaven, whom with the bodily eye thou shalt never behold, but only with the spiritual.'

'The little green veil,' adds he, among much similar moralising, and embroiled discoursing, 'I yet keep; still more insep-

10. The 'Regent Diamond,' brought from India by Thomas Pitt, Governor of Madras, and sold to the French Regent for £135,000.
11. Of the Habsburgs, former Imperial Family of Austria.
12. Old Prussian gold coins, each worth about $3.98.

arably the Name, Diogenes Teufelsdröckh. From the veil can nothing be inferred: a piece of now quite faded Persian silk, like thousands of others. On the Name I have many times meditated and conjectured; but neither in this lay there any clue. That it was my unknown Father's name I must hesitate to believe. To no purpose have I searched through all the Herald's Books, in and without the German Empire, and through all manner of Subscriber-Lists (*Pranumeranten*), Militia-Rolls, and other Name-catalogues; extraordinary names as we have in Germany, the name Teufelsdröckh, except as appended to my own person, nowhere occurs. Again, what may the unchristian rather than Christian "Diogenes" mean?[13] Did that reverend Basket-bearer intend, by such designation, to shadow-forth my future destiny, or his own present malign humour? Perhaps the latter, perhaps both. Thou ill-starred Parent, who like an Ostrich hadst to leave thy ill-starred offspring to be hatched into self-support by the mere sky-influences of Chance, can thy pilgrimage have been a smooth one? Beset by Misfortune thou doubtless hast been: or indeed by the worst figure of Misfortune, by Misconduct. Often have I fancied how, in thy hard life-battle, thou wert shot at, and slung at, wounded, hand-fettered, hamstrung, browbeaten and bedevilled by the Time-Spirit (*Zeitgeist*)[14] in thyself and others, till the good soul first given thee was seared into grim rage; and thou hast nothing for it but to leave in me an indignant appeal to the Future, and living speaking Protest against the Devil, as that same Spirit not of the Time only, but of Time itself, is well named! Which Appeal and Protest, may I now modestly add, was not perhaps quite lost in air.

'For indeed, as Walter Shandy often insisted, there is much, nay almost all, in Names. The Name is the earliest Garment you wrap round the earth-visiting ME; to which it thenceforth cleaves, more tenaciously (for there are Names that have lasted nigh thirty centuries) than the very skin. And now from without, what mystic influences does it not send inwards, even to the centre; especially in those plastic first-times, when the whole soul is yet infantine, soft, and the invisible seedgrain will grow to be an all overshadowing tree! Names? Could I unfold the influence of Names, which are the most important of all Clothings, I were a second greater Trismegistus.[15] Not only all common Speech, but Science, Poetry itself is no other, if thou consider it, than a right *Naming*. Adam's first task was giving names[16] to natural Appearances: what is ours still but a continuation of the same; be the Appearances exotic-vegetable, organic, mechanic, stars or starry movements (as in Science); or (as in Poetry) passions, virtues, calamities, God-attributes, Gods? — In a very plain sense the Proverb says, *Call one a thief, and he will steal*; in an almost similar sense may we not perhaps say, *Call one Diogenes Teufelsdröckh, and he will open the Philosophy of Clothes*?'

'Meanwhile the incipient Diogenes, like others, all ignorant of his Why, his How or Whereabout, was opening his eyes to the kind Light; sprawling out his ten fingers and toes; listening, tasting, feeling; in a word, by all his Five Senses, still more by his Sixth Sense of Hunger, and a whole infinitude of inward, spiritual, half-awakened Senses, endeavouring daily to acquire

13. Diogenes = 'God-born.' From the famous Greek Cynic philosopher of the 5th century B.C., who was said to live in a tub, and to go about with a lantern, looking for an 'honest man.'

14. Carlyle's view of time was paradoxical, as both (1) the evil and devouring principle in all things, and (2) the 'seed-field' or opportunity given to us as the foundation for self-development.

15. 'Thrice-greatest' Hermes, the Greek name given to Thoth, the Egyptian god of science, letters, speech, etc. *Cf. Tristram Shandy*, Bk.IV,Ch.XI.

16. See *Genesis*, II,19.

for himself some knowledge of this strange Universe where he had arrived, be his task therein what it might. Infinite was his progress; thus in some fifteen months, he could perform the miracle of — Speech! To breed a fresh Soul, is it not like brooding a fresh (celestial) Egg; wherein as yet all is formless, powerless; yet by degrees organic elements and fibres shoot through the watery albumen; and out of vague Sensation grows Thought, grows Fantasy and Force, and we have Philosophies, Dynasties, nay Poetries and Religions!

'Young Diogenes, or rather young Gneschen, for by such diminutive had they in their fondness named him, travelled forward to those high consummations, by quick yet easy stages. The Futterals, to avoid vain talk, and moreover keep the roll of gold Friedrichs safe, gave-out that he was a grand-nephew; the orphan of some sister's daughter, suddenly deceased, in Andreas's distant Prussian birthland; of whom, as of her indigent sorrowing widower, little enough was known at Entepfuhl. Heedless of all which, the Nurseling took to his spoon-meat, and throve. I have heard him noted as a still infant, that kept his mind much to himself; above all, that seldom or never cried. He already felt that time was precious; that he had other work cut-out for him than whimpering.'

Such, after utmost painful search and collation among these miscellaneous Papermasses, is all the notice we can gather of Herr Teufelsdröckh's genealogy. More imperfect, more enigmatic it can seem to few readers than to us. The Professor, in whom truly we more and more discern a certain satirical turn, and deep undercurrents of roguish whim, for the present stands pledged in honour, so we will not doubt him: but seems it not conceivable that, by the 'good Gretchen Futteral,' or some other perhaps interested party, he has himself been deceived? Should these sheets, translated or not, ever reach the Entepfuhl Circulating Library, some cultivated native of that district might feel called to afford explanation. Nay, since Books, like invisible scouts, permeate the whole habitable globe, and Timbuctoo[17] itself is not safe from British Literature, may not some Copy find out even the mysterious basket-bearing Stranger, who in a state of extreme senility perhaps still exists; and gently force even him to disclose himself; to claim openly a son, in whom any father may feel pride?

Chapter II

Idyllic

'Happy season of Childhood!' exclaims Teufelsdröckh: 'Kind Nature, that art to all a bountiful mother; that visitest the poor man's hut with auroral radiance; and for thy Nurseling hast provided a soft swathing of Love and infinite Hope, wherein he waxes and slumbers, danced-round (*umgaukelt*) by sweetest Dreams! If the paternal Cottage still shuts us in, its roof still screens us: with a Father we have as yet a prophet, priest and king, and an Obedience that makes us free. The young spirit has awakened out of Eternity, and knows not what we mean by Time: as yet Time is no fast-hurrying stream, but a sportful sunlit ocean; years to the child are as ages: ah! the secret of Vicissitude, of that slower or quicker decay and ceaseless downrushing of the universal World-fabric, from the granite mountain to the man or day-moth, is yet unknown; and in a motionless Universe, we taste, what afterwards in this quick-whirling Universe is forever denied us, the balm of Rest. Sleep on, thou fair Child, for thy long rough journey is at hand! A little while, and thou too shalt sleep no more, but thy very dreams shall be mimic battles; thou too, with old Arnauld, wilt have to say in stern patience: "Rest? Rest? Shall I not have all Eternity to rest in?"[1] Celestial

17. A town on the southern edge of the Sahara Desert, in the French Sudan.

1. Antoine Arnauld (1612–94), French philosopher and Jansenist theologian of the Port Royal

Nepenthe![2] though a Pyrrhus[3] conquer empires, and an Alexander[4] sack the world, he finds thee not; and thou hast once fallen gently, of thy own accord, on the eyelids, on the heart of every mother's child. For as yet, sleep and waking are one: the fair Life-garden rustles infinite around, and everywhere is dewy fragrance, and the budding of Hope; which budding, if in youth, too frostnipt, it grow to flowers, will in manhood yield no fruit, but a prickly, bitter-rinded stone-fruit, of which the fewest can find the kernel.'

In such rose-coloured light does our Professor, as Poets are wont, look back on his childhood; the historical details of which (to say nothing of much other vague oratorical matter) he accordingly dwells on with an almost wearisome minuteness. We hear of Entepfuhl standing 'in trustful derangement' among the woody slopes; the paternal Orchard flanking it as extreme out-post from below; the little Kuhbach[5] gushing kindly by, among beech-rows, through river after river, into the Donau,[6] into the Black Sea, into the Atmosphere and Universe; and how 'the brave old Linden,' stretching like a parasol of twenty ells in radius, overtopping all other rows and clumps, towered-up from the central *Agora*[7] and *Campus Martius*[8] of the Village, like its Sacred Tree; and how the old men sat talking under its shadow (Gneschen often greedily listening), and the wearied labourers reclined, and the unwearied children sported, and the young men and maidens often danced to flute-music. 'Glorious summer twilights,' cries Teufelsdröckh, 'when the Sun, like a proud Conqueror and Imperial Taskmaster, turned his back, with his gold-purple emblazonry, and all his fireclad body-guard (of Prismatic Colours); and the tired brickmakers of this clay Earth might steal a little frolic, and those few meek Stars would not tell of them!'

Then we have long details of the *Weinlesen* (Vintage), the Harvest-Home, Christmas, and so forth; with a whole cycle of the Entepfuhl Children's-games, differing apparently by mere superficial shades from those of other countries. Concerning all which, we shall here, for obvious reasons, say nothing. What cares the world for our as yet miniature Philosopher's achievements under that 'brave old Linden'? Or even where is the use of such practical reflections as the following? 'In all the sports of Children, were it only in their wanton breakages and defacements, you shall discern a creative instinct (*schaffenden Trieb*): the Mankin feels that he is a born Man, that his vocation is to work. The choicest present you can make him is a Tool; be it knife or pen-gun,[9] for construction or for destruction; either way it is for Work, for Change. In gregarious sports of skill or strength, the Boy trains himself to Cooperation, for war or peace, as governor or governed: the little Maid again, provident of her domestic destiny, takes with preference to Dolls.'

Perhaps, however, we may give this anecdote, considering who it is that relates it: 'My first short-clothes were of yellow serge; or rather, I should say, my first short-cloth, for the vesture was one and indivisible, reaching from neck to ankle, a mere body with four limbs: of which fashion how little could I then divine the architectural, how much less the moral significance!'

More graceful is the following little picture: 'On fine evenings I was wont to

School, made this reply to a friend who complained of the ardors of controversy.

2. A potion or drug, used by the ancients to give relief or forgetfulness. *Cf.* Milton's *Comus*, 675; or Homer's *Odyssey*, iv,221.
3. King of Epirus, 3rd century B.C., who twice defeated the Romans.
4. King of Macedon, 4th century B.C., who conquered most of the known (ancient) world.
5. 'Cowbrook,' suggestive of the brook which flowed through the single street of Ecclefechan.
6. The Danube River.
7. Market-place in Greek Cities.
8. 'Field of Mars,' place of assembly in ancient Rome.
9. Pop-gun.

carry-forth my supper (bread-crumb boiled in milk), and eat it out-of-doors. On the coping of the Orchard-wall, which I could reach by climbing, or still more easily if Father Andreas would set-up the pruning-ladder, my porringer was placed: there, many a sunset, have I, looking at the distant western Mountains, consumed, not without relish, my evening meal. Those hues of gold and azure, that hush of World's expectation as Day died, were still a Hebrew Speech for me; nevertheless I was looking at the fair illumi nated Letters, and had an eye for their gilding.'

With 'the little one's friendship for cattle and poultry' we shall not much intermeddle. It may be that hereby he acquired a 'certain deeper sympathy with animated Nature': but when, we would ask, saw any man, in a collection of Biographical Documents, such a piece as this: 'Impressive enough (*bedeutungsvoll*) was it to hear, in early morning, the Swineherd's horn; and know that so many hungry happy quadrupeds were, on all sides, starting in hot haste to join him, for breakfast on the Heath. Or to see them at eventide, all marching-in again, with short squeak, almost in military order; and each, topographically correct, trotting-off in succession to the right or left, through its own lane, to its own dwelling; till old Kunz, at the Village-head, now left alone, blew his last blast, and retired for the night. We are wont to love the Hog chiefly in the form of Ham; yet did not these bristly thick-skinned beings here manifest intelligence, perhaps humour of character; at any rate, a touching, trustful submissiveness to Man, — who, were he but a Swineherd, in darned gabardine,[10] and leather breeches more resembling slate or discoloured-tin breeches, is still the Hierarch of this lower world?'

It is maintained, by Helvetius [11] and his set, that an infant of genius is quite the same as any other infant, only that certain surprisingly favourable influences accompany him through life, especially through childhood, and expand him, while others lie closefolded and continue dunces. Herein, say they, consists the whole difference between an inspired Prophet and a double-barrelled Game-preserver: [12] the inner man of the one has been fostered into generous development; that of the other, crushed-down perhaps by vigour of animal digestion, and the like, has exuded and evaporated, or at best sleeps now irresuscitably stagnant at the bottom of his stomach. 'With which opinion,' cries Teufelsdröckh, 'I should as soon agree as with this other, that an acorn might, by favourable or unfavourable influences of soil and climate, be nursed into a cabbage, or the cabbage-seed into an oak.

'Nevertheless,' continues he, 'I too acknowledge the all-but omnipotence of early culture and nurture: hereby we have either a doddered dwarf bush, or a high-towering, wide-shadowing tree; either a sick yellow cabbage, or an edible luxuriant green one. Of a truth, it is the duty of all men, especially of all philosophers, to note-down with accuracy the characteristic circumstances of their Education, what furthered, what hindered, what in any way modified it: to which duty, nowadays so pressing for many a German Autobiographer, I also zealously address myself.' — Thou rogue! Is it by short-clothes of yellow serge, and swineherd horns, that an infant of genius is educated? And yet, as usual, it ever remains doubtful whether he is laughing in his sleeve at these Autobiographical times of ours, or writing from the abundance of his own fond ineptitude. For he continues: 'If among the ever-streaming currents of Sights, Hearings, Feelings for Pain or Pleasure, whereby, as in a Magic Hall,

10. A coarse loose frock or coat, or smock.

11. Claude Adrien Helvétius (1715–71), French philosopher.

12. Carlyle's satirical term for the self-indulgent aristocracy who punished the poor for poaching on the game-preserves, yet did nothing to alleviate the conditions of the poor.

young Gneschen went about environed, I might venture to select and specify, perhaps these following were also of the number:

'Doubtless, as childish sports call forth Intellect, Activity, so the young creature's Imagination was stirred up, and a Historical tendency given him by the narrative habits of Father Andreas; who, with his battle-reminiscences, and gay austere yet hearty patriarchal aspect, could not but appear another Ulysses and "much-enduring Man."[13] Eagerly I hung upon his tales, when listening neighbours enlivened the hearth; from these perils and these travels, wild and far almost as Hades[14] itself, a dim world of Adventure expanded itself within me. Incalculable also was the knowledge I acquired in standing by the Old Men under the Linden-tree: the whole of Immensity was yet new to me; and had not these reverend seniors, talkative enough, been employed in partial surveys thereof for nigh fourscore years? With amazement I began to discover that Entepfuhl stood in the middle of a Country, of a World; that there was such a thing as History, as Biography; to which I also, one day, by hand and tongue, might contribute.

'In a like sense worked the *Postwagen* (Stage-coach), which, slow-rolling under its mountains of men and luggage, wended through our Village: northwards, truly, in the dead of night; yet southwards visibly at eventide. Not till my eighth year did I reflect that this Postwagen could be other than some terrestrial Moon, rising and setting by mere Law of Nature, like the heavenly one; that it came on made highways, from far cities towards far cities; weaving them like a monstrous shuttle into closer and closer union. It was then that, independently of Schiller's *Wilhelm Tell*, I made this not quite insignificant reflection (so true also in spiritual things): *Any road, this simple Entepfuhl road, will lead you to the end of the world!*[15]

'Why mention our Swallows, which, out of far Africa, as I learned, threading their way over seas and mountains, corporate cities and belligerent nations, yearly found themselves, with the month of May, snug-lodged in our Cottage Lobby? The hospitable Father (for cleanliness' sake) had fixed a little bracket plumb under their nest: there they built, and caught flies, and twittered, and bred: and all, I chiefly, from the heart loved them. Bright, nimble creatures, who taught *you* the mason-craft; nay, stranger still, gave you a masonic incorporation, almost social police? For if, by ill chance, and when time pressed, your House fell, have I not seen five neighbourly Helpers appear next day; and swashing to and fro, with animated, loud, long-drawn chirpings, and activity almost super-hirundine, complete it again before nightfall?

'But undoubtedly the grand summary of Entepfuhl child's-culture, where as in a funnel its manifold influences were concentrated and simultaneously poured-down on us, was the annual Cattle-fair. Here, assembling from all the four winds, came the elements of an unspeakable hurly-burly. Nutbrown maids and nutbrown men, all clear-washed, loud-laughing, bedizened and beribanded; who came for dancing, for treating, and if possible, for happiness. Topbooted Graziers from the North; Swiss Brokers, Italian Drovers, also topbooted, from the South; these with their subalterns in leather jerkins, leather skullcaps, and long oxgoads; shouting in half-articulate speech, amid the inarticulate barking and bellowing. Apart stood Potters from far Saxony, with their crockery in fair rows; Nürnberg Pedlars, in booths that to me seemed richer than Ormuz[16]

13. An epithet very frequent in the *Odyssey*.

14. The abode of the dead, in Greek religion and mythology.

15. Adapted from Schiller's *Wilhelm Tell*, IV,iii, 2619.

16. Ormuz, off the coast of Persia, was formerly celebrated for its wealthy market in the trade with India. *Cf.* 'wealth of Ormus and of Ind' (*Paradise Lost*, ii,2).

bazaars; Showmen from the Lago Maggiore; [17] detachments of the *Wiener Schub* (Offscourings of Vienna) vociferously superintending games of chance. Balladsingers brayed, Auctioneers grew hoarse; cheap New Wine (*heuriger*) flowed like water, still worse confounding the confusion; and high over all, vaulted, in ground-and-lofty tumbling, a particoloured Merry-Andrew,[18] like the genius of the place and of Life itself.

'Thus encircled by the mystery of Existence; under the deep heavenly Firmament; waited-on by the four golden Seasons, with their vicissitudes of contribution, for even grim Winter brought its skating-matches and shooting-matches, its snow-storms and Christmas-carols, — did the Child sit and learn. These things were the Alphabet, whereby in aftertime he was to syllable and partly read the grand Volume of the World; what matters it whether such Alphabet be in large gilt letters or in small ungilt ones, so you have an eye to read it? For Gneschen, eager to learn, the very act of looking thereon was a blessedness that gilded all: his existence was a bright, soft element of Joy; out of which, as in Prospero's Island,[19] wonder after wonder bodied itself forth to teach by charming.

'Nevertheless, I were but a vain dreamer to say, that even then my felicity was perfect. I had, once for all, come down from Heaven into the Earth. Among the rainbow colours that glowed on my horizon, lay even in childhood a dark ring of Care, as yet no thicker than a thread, and often quite overshone; yet always it reappeared, nay ever waxing broader and broader; till in after-years it almost over-shadowed my whole canopy, and threatened to engulf me in final night. It was the ring of Necessity [20] whereby we are all begirt; happy he for whom a kind heavenly Sun brightens it into a ring of Duty, and plays round it with beautiful prismatic diffractions; yet ever, as basis and as bourne for our whole being, it is there.

'For the first few years of our terrestrial Apprenticeship, we have not much work to do; but, boarded and lodged gratis, are set down mostly to look about us over the workshop, and see others work, till we have understood the tools a little, and can handle this and that. If good Passivity alone, and not good Passivity and good Activity together, were the thing wanted, then was my early position favourable beyond the most. In all that respects openness of Sense, affectionate Temper, ingenuous Curiosity, and the fostering of these, what more could I have wished? On the other side, however, things went not so well. My Active Power (*Thatkraft*) was unfavourably hemmed-in; of which misfortune how many traces yet abide with me! In an orderly house, where the litter of children's sports is hateful enough, your training is too stoical; rather to bear and forbear than to make and do. I was forbid much: wishes in any measure bold I had to renounce; everywhere a strait bond of Obedience inflexibly held me down. Thus already Freewill often came in painful collision with Necessity; so that my tears flowed, and at seasons the Child itself might taste that root of bitterness,[21] wherewith the whole fruitage of our life is mingled and tempered.

'In which habituation to Obedience, truly, it was beyond measure safer to err by excess than by defect. Obedience is our universal duty and destiny; wherein whoso will not bend must break: too early and too thoroughly we cannot be trained to know that Would, in this world of ours, is as mere zero to Should,

17. A lake in northern Italy.

18. A clown or buffoon.

19. See *The Tempest*, *passim*. 'Charming' here means 'enchanting.'

20. *i.e.* actual circumstance, or environment, to be seized upon as opportunity. *Cf.* Carlyle's essay on Burns (Cent. ed., I,295): 'Manhood begins when we have in any way made truce with Necessity . . . felt that in Necessity we are free.'

21. Phrasing from *Hebrews*, xii,15.

and for most part as the smallest of fractions even to Shall. Hereby was laid for me the basis of worldly Discretion, nay, of Morality itself. Let me not quarrel with my upbringing! It was rigorous, too frugal, compressively secluded, everyway unscientific: yet in that very strictness and domestic solitude might there not lie the root of deeper earnestness, of the stem from which all noble fruit must grow? Above all, how unskilful soever, it was loving, it was well-meant, honest; whereby every deficiency was helped. My kind Mother, for as such I must ever love the good Gretchen, did me one altogether invaluable service: she taught me, less indeed by word than by act and daily reverent look and habitude, her own simple version of the Christian Faith. Andreas too attended Church; yet more like a parade-duty, for which he in the other world expected pay with arrears, — as, I trust, he has received: but my Mother, with a true woman's heart, and fine though uncultivated sense, was in the strictest acceptation Religious. How indestructibly the Good grows, and propagates itself, even among the weedy entanglements of Evil! The highest whom I knew on Earth I here saw bowed down, with awe unspeakable, before a Higher in Heaven: such things, especially in infancy, reach inwards to the very core of your being; mysteriously does a Holy of Holies [22] build itself into visibility in the mysterious deeps; and Reverence, the divinest in man, springs forth undying from its mean envelopment of Fear. Wouldst thou rather be a peasant's son that knew, were it never so rudely, there was a God in Heaven and in Man; or a duke's son that only knew there were two-and-thirty quarters [23] on the family-coach? '

To which last question we must answer: Beware, O Teufelsdröckh, of spiritual pride!

22. See *Exodus*, xxvi,33,34.

23. Divisions of the shield in heraldry.

Chapter III

Pedagogy

Hitherto we see young Gneschen, in his indivisible case of yellow serge, borne forward mostly on the arms of kind Nature alone; seated, indeed, and much to his mind, in the terrestrial workshop; but (except his soft hazel eyes, which we doubt not already gleamed with a still intelligence) called upon for little voluntary movement there. Hitherto, accordingly, his aspect is rather generic, that of an incipient Philosopher and Poet in the abstract; perhaps it would trouble Herr Heuschrecke himself to say wherein the special Doctrine of Clothes is as yet foreshadowed or betokened. For with Gneschen, as with others, the Man may indeed stand pictured in the Boy (at least all the pigments are there); yet only some half of the Man stands in the Child, or young Boy, namely, his Passive endowment, not his Active. The more impatient are we to discover what figure he cuts in this latter capacity; how when, to use his own words, 'he understands the tools a little, and can handle this or that,' he will proceed to handle it.

Here, however, may be the place to state that, in much of our Philosopher's history, there is something of an almost Hindoo character: nay perhaps in that so well-fostered and everyway excellent 'Passivity' of his, which, with no free development of the antagonist Activity, distinguished his childhood, we may detect the rudiments of much that, in after days, and still in these present days, astonishes the world.[1] For the shallow-sighted, Teufelsdröckh is oftenest a man without Activity of any kind, a No-man; for the deep-sighted, again, a man with Activity almost superabundant, yet so spiritual, close-hidden, enigmatic, that no mortal can foresee its explosions, or even when it has exploded, so much as ascer-

1. That is, of patience, submission, contemplation, and insight.

tain its significance. A dangerous, difficult temper for the modern European; above all, disadvantageous in the hero of a Biography! Now as heretofore it will behove the Editor of these pages, were it never so unsuccessfully, to do his endeavour.

Among the earliest tools of any complicacy which a man, especially a man of letters, gets to handle, are his Class-books. On this portion of his History, Teufelsdröckh looks down professedly as indifferent. Reading he 'cannot remember ever to have learned'; so perhaps had it by nature.[2] He says generally: 'Of the insignificant portion of my Education, which depended on Schools, there need almost no notice be taken. I learned what others learn; and kept it stored-by in a corner of my head, seeing as yet no manner of use in it. My Schoolmaster, a downbent, brokenhearted, underfoot martyr, as others of that guild are, did little for me, except discover that he could do little: he, good soul, pronounced me a genius, fit for the learned professions; and that I must be sent to the Gymnasium,[3] and one day to the University. Meanwhile, what printed thing soever I could meet with I read. My very copper pocket-money I laid-out on stall-literature;[4] which, as it accumulated, I with my own hands sewed into volumes. By this means was the young head furnished with a considerable miscellany of things and shadows of things: History in authentic fragments lay mingled with Fabulous chimeras,[5] wherein also was reality; and the whole not as dead stuff, but as living pabulum, tolerably nutritive for a mind as yet so peptic.'

That the Entepfuhl Schoolmaster judged well, we now know. Indeed, already in the youthful Gneschen, with all his outward stillness, there may have been manifest an inward vivacity that promised much; symptoms of a spirit singularly open, thoughtful, almost poetical. Thus, to say nothing of his Suppers on the Orchard-wall, and other phenomena of that earlier period, have many readers of these pages stumbled, in their twelfth year, on such reflections as the following? 'It struck me much, as I sat by the Kuhbach, one silent noontide, and watched it flowing, gurgling, to think how this same streamlet had flowed and gurgled, through all changes of weather and of fortune, from beyond the earliest date of History. Yes, probably on the morning when Joshua forded Jordan;[6] even as at the midday when Cæsar, doubtless with difficulty, swam the Nile, yet kept his *Commentaries* dry,[7] — this little Kuhbach, assiduous as Tiber,[8] Eurotas[9] or Siloa,[10] was murmuring on across the wilderness, as yet unnamed, unseen: here, too, as in the Euphrates and the Ganges, is a vein or veinlet of the grand World-circulation of Waters, which, with its atmospheric arteries, has lasted and lasts simply with the World. Thou fool! Nature alone is antique, and the oldest art a mushroom; that idle crag thou sittest on is six-thousand years of age.'[11] In which little thought, as in a little fountain, may there not lie the beginning of those well-nigh unutterable meditations on the grandeur and mystery of TIME, and its relation to ETERNITY, which play such a part in this Philosophy of Clothes?

Over his Gymnasic and Academic years the Professor by no means lingers so lyrical and joyful as over his childhood. Green sunny tracts there are still; but in-

2. In the words of Dogberry, in *Much Ado About Nothing*, III,iii,14–16.
3. German for 'grammar-school,' or 'academy' in Scotland.
4. Pamphlets and periodicals sold at a bookseller's stall, or bench.
5. Like those described in the *Iliad*, Bk. vi.
6. See *Joshua*, iii,14–17.
7. As related in Plutarch's *Lives*.
8. On the banks of which stands Rome.
9. On which stood Sparta.
10. The river or pool near Jerusalem. (See *Isaiah*, viii,6; *Paradise Lost*, i,11.)
11. Biblical chronology dated the creation at 4004 B.C.

tersected by bitter rivulets of tears, here and there stagnating into sour marshes of discontent. 'With my first view of the Hinterschlag [12] Gymnasium,' writes he, 'my evil days began. Well do I still remember the red sunny Whitsuntide morning, when, trotting full of hope by the side of Father Andreas, I entered the main street of the place, and saw its steeple-clock (then striking Eight) and *Schuldthurm* (Jail), and the aproned or disaproned Burghers moving-in to breakfast: a little dog, in mad terror, was rushing past; for some human imps had tied a tin-kettle to its tail; thus did the agonised creature, loud-jingling, career through the whole length of the Borough, and become notable enough. Fit emblem of many a Conquering Hero, to whom Fate (wedding Fantasy to Sense, as it often elsewhere does) has malignantly appended a tin-kettle of Ambition, to chase him on; which the faster he runs, urges him the faster, the more loudly and more foolishly! Fit emblem also of much that awaited myself, in that mischievous Den; as in the World, whereof it was a portion and epitome!

'Alas, the kind beech-rows of Entepfuhl were hidden in the distance: I was among strangers, harshly, at best indifferently, disposed towards me; the young heart felt, for the first time, quite orphaned and alone.' His schoolfellows, as is usual, persecuted him: 'They were Boys,' he says, 'mostly rude Boys, and obeyed the impulse of rude Nature, which bids the deerherd fall upon any stricken hart, the duck-flock put to death any broken-winged brother or sister, and on all hands the strong tyrannise over the weak.' He admits, that though 'perhaps in an unusual degree morally courageous,' he succeeded ill in battle, and would fain have avoided it; a result, as would appear, owing less to his small personal stature (for in passionate seasons he was 'incredibly nimble'), than to his 'virtuous principles': 'if it was disgraceful to be beaten,' says he, 'it was only a shade less disgraceful to have so much as fought; thus was I drawn two ways at once, and in this important element of school-history, the war-element, had little but sorrow.' On the whole, that same excellent 'Passivity,' so notable in Teufelsdröckh's childhood, is here visibly enough again getting nourishment. 'He wept often; indeed to such a degree that he was nicknamed *Der Weinende* (the Tearful), which epithet, till towards his thirteenth year, was indeed not quite unmerited. Only at rare intervals did the young soul burst-forth into fire-eyed rage, and, with a stormfulness (*Ungestüm*) under which the boldest quailed, assert that he too had Rights of Man, or at least of Mankin.' In all which, who does not discern a fine flower-tree and cinnamon-tree (of genius) nigh choked among pumpkins, reed-grass and ignoble shrubs; and forced if it would live, to struggle upwards only, and not outwards; into a *height* quite sickly, and disproportioned to its *breadth*?

We find, moreover, that his Greek and Latin were 'mechanically' taught; Hebrew scarce even mechanically; much else which they called History, Cosmography, Philosophy, and so forth, no better than not at all. So that, except inasmuch as Nature was still busy; and he himself 'went about, as was of old his wont, among the Craftsmen's workshops, there learning many things'; and farther lighted on some small store of curious reading, in Hans Wachtel the Cooper's house, where he lodged, — his time, it would appear, was utterly wasted. Which facts the Professor has not yet learned to look upon with any contentment. Indeed, throughout the whole of this Bag *Scorpio*, where we now are, and often in the following Bag, he shows himself unusually animated on the matter of Education, and not without some touch of what we might presume to be anger.

'My Teachers,' says he, 'were hide-

12. 'Smite-behind.'

bound Pedants, without knowledge of man's nature, or of boy's; or of aught save their lexicons and quarterly account-books. Innumerable dead Vocables (no dead Language, for they themselves knew no Language) they crammed into us, and called it fostering the growth of mind. How can an inanimate, mechanical Gerund-Grinder,[13] the like of whom will, in a subsequent century, be manufactured at Nürnberg out of wood and leather, foster the growth of anything; much more of Mind, which grows, not like a vegetable (by having its roots littered with etymological compost), but like a spirit, by mysterious contact of Spirit; Thought kindling itself at the fire of living Thought? How shall *he* give kindling, in whose own inward man there is no live coal, but all is burnt-out to a dead grammatical cinder? The Hinterschlag Professors knew syntax enough; and of the human soul thus much: that it had a faculty called Memory, and could be acted-on through the muscular integument by appliance of birch-rods.

'Alas, so is it everywhere, so will it ever be; till the Hodman [14] is discharged, or reduced to hodbearing, and an Architect is hired, and on all hands fitly encouraged: till communities and individuals discover, not without surprise, that fashioning the souls of a generation by Knowledge can rank on a level with blowing their bodies to pieces by Gunpowder; that with Generals and Field-marshals for killing, there should be world-honoured Dignitaries, and were it possible, true God-ordained Priests, for teaching. But as yet, though the Soldier wears openly, and even parades, his butchering-tool, nowhere, far as I have travelled, did the Schoolmaster make show of his instructing-tool: nay, were he to walk abroad with birch girt on thigh, as if he therefrom expected honour, would there not, among the idler class, perhaps a certain levity be excited?'

In the third year of this Gymnasic period, Father Andreas seems to have died: the young Scholar, otherwise so maltreated, saw himself for the first time clad outwardly in sables, and inwardly in quite inexpressible melancholy. 'The dark bottomless Abyss,[15] that lies under our feet, had yawned open; the pale kingdoms of Death,[16] with all their innumerable silent nations and generations, stood before him; the inexorable word, NEVER! now first showed its meaning. My Mother wept, and her sorrow got vent; but in my heart there lay a whole lake of tears, pent-up in silent desolation. Nevertheless the unworn Spirit is strong; Life is so healthful that it even finds nourishment in Death: these stern experiences, planted down by Memory in my Imagination, rose there to a whole cypress-forest, sad but beautiful; waving, with not unmelodious sighs, in dark luxuriance, in the hottest sunshine, through long years of youth: — as in manhood also it does, and will do; for I have now pitched my tent under a Cypress-tree; the Tomb is now my inexpugnable Fortress, ever close by the gate of which I look upon the hostile armaments, and pains and penalties of tyrannous Life placidly enough, and listen to its loudest threatenings with a still smile. O ye loved ones, that already sleep in the noiseless Bed of Rest, whom in life I could only weep for and never help; and ye, who wide-scattered still toil lonely in the monster-bearing Desert, dyeing the flinty ground with your blood, — yet a little while, and we shall all meet THERE, and our Mother's bosom will screen us all; and Oppression's harness, and Sorrow's fire-whip, and all the Gehenna [17]

13. Carlylese for pedantic grammarian.
14. Or uninspired plodding pedagogue. A term borrowed from the German philosopher, Fichte (*On the Nature of the Scholar*).
15. Phrasing from *Paradise Lost*, ii,405.
16. As in Virgil's *Aeneid*, vi,269ff.
17. The valley of Hinnom, near Jerusalem, where some of the Israelites sacrificed their children to the god Moloch; used later as a receptacle for refuse, fires being kept up to prevent pesti-

Bailiffs that patrol and inhabit ever-vexed Time, cannot thenceforth harm us any more!'

Close by which rather beautiful apostrophe, lies a laboured Character [18] of the deceased Andreas Futteral; of his natural ability, his deserts in life (as Prussian Sergeant); with long historical inquiries into the genealogy of the Futteral Family, here traced back as far as Henry the Fowler: [19] the whole of which we pass over, not without astonishment. It only concerns us to add, that now was the time when Mother Gretchen revealed to her foster-son that he was not at all of this kindred, or indeed of any kindred, having come into historical existence in the way already known to us. 'Thus was I doubly orphaned,' says he; 'bereft not only of Possession, but even of Remembrance. Sorrow and Wonder, here suddenly united, could not but produce abundant fruit. Such a disclosure, in such a season, struck its roots through my whole nature: ever till the fears of mature manhood, it mingled with my whole thoughts, was as the stem whereof all my day-dreams and night-dreams grew. A certain poetic elevation, yet also a corresponding civic depression, it naturally imparted: *I was like no other*; in which fixed idea, leading sometimes to highest, and oftener to frightfulest results, may there not lie the first spring of Tendencies, which in my Life have become remarkable enough? As in birth, so in action, speculation, and social position, my fellows are perhaps not numerous.'

In the Bag *Sagittarius*, as we at length discover, Teufelsdröckh has become a University man; though, how, when, or of what quality, will nowhere disclose itself with the smallest certainty. Few things, in the way of confusion and capricious indistinctness, can now surprise our readers; not even the total want of dates, almost without parallel in a Biographical work. So enigmatic, so chaotic we have always found, and must always look to find, these scattered Leaves. In *Sagittarius*, however, Teufelsdröckh begins to show himself even more than usually Sibylline: fragments of all sorts; scraps of regular Memoir, College-Exercises, Programs, Professional Testimoniums, Milkscores, torn Billets, sometimes to appearance of an amatory cast; all blown together as if by merest chance, henceforth bewilder the sane Historian. To combine any picture of these University, and the subsequent, years; much more, to decipher therein any illustrative primordial elements of the Clothes-Philosophy, becomes such a problem as the reader may imagine.

So much we can see; darkly, as through the foliage of some wavering thicket: a youth of no common endowment, who has passed happily through Childhood, less happily yet still vigorously through Boyhood, now at length perfect in 'dead vocables,' and set down, as he hopes, by the living Fountain, there to superadd Ideas and Capabilities. From such Fountain he draws, diligently, thirstily, yet never or seldom with his whole heart, for the water nowise suits his palate; discouragements, entanglements, aberrations are discoverable or supposable. Nor perhaps are even pecuniary distresses wanting; for 'the good Gretchen, who in spite of advices from not disinterested relatives has sent him hither, must after a time withdraw her willing but too feeble hand.' Nevertheless in an atmosphere of Poverty and manifold Chagrin, the Humour of that young Soul, what character is in him, first decisively reveals itself; and, like strong sunshine in weeping skies, gives out variety of colours, some of which are prismatic. Thus, with the aid of Time and of what Time brings, has the stripling Diogenes Teufelsdröckh waxed into manly stature; and into so

lence; hence, later, Hell (*cf. Paradise Lost*, i.405). Here, with *Bailiffs*: Hell-torturers.

18 Character-sketch.

19. Emperor of Germany from 919 to 936.

questionable an aspect,[20] that we ask with new eagerness, How he specially came by it, and regret anew that there is no more explicit answer. Certain of the intelligible and partially significant fragments, which are few in number, shall be extracted from that Limbo of a Paper-bag, and presented with the usual preparation.

As if, in the Bag *Scorpio*, Teufelsdröckh had not already expectorated his antipedagogic spleen; as if, from the name *Sagittarius*, he had thought himself called upon to shoot arrows, we here again fall-in with such matter as this: 'The University where I was educated still stands vivid enough in my remembrance, and I know its name well; which name, however, I, from tenderness to existing interests and persons, shall in nowise divulge. It is my painful duty to say that, out of England and Spain, ours was the worst of all hitherto discovered Universities. This is indeed a time when right Education is, as nearly as may be, impossible: however, in degrees of wrongness there is no limit: nay, I can conceive a worse system than that of the Nameless itself; as poisoned victual may be worse than absolute hunger.

'It is written, When the blind lead the blind, both shall fall into the ditch:[21] wherefore, in such circumstances, may it not sometimes be safer, if both leader and led simply — sit still? Had you, anywhere in Crim Tartary;[22] walled-in a square enclosure; furnished it with a small, ill-chosen Library; and then turned loose into it eleven-hundred Christian striplings, to tumble about as they listed, from three to seven years: certain persons, under the title of Professors, being stationed at the gates, to declare aloud that it was a University, and exact considerable admission-fees, — you had, not indeed in mechanical structure, yet in spirit and result, some imperfect resemblance of our High Seminary. I say, imperfect; for if our mechanical structure was quite other, so neither was our result altogether the same: unhappily, we were not in Crim Tartary, but in a corrupt European city, full of smoke and sin; moreover, in the middle of a Public, which, without far costlier apparatus than that of the Square Enclosure, and Declaration aloud, you could not be sure of gulling.

'Gullible, however, by fit apparatus, all Publics are; and gulled, with the most surprising profit. Towards anything like a *Statistics of Imposture*, indeed, little as yet has been done: with a strange indifference, our Economists, nigh buried under Tables for minor Branches of Industry, have altogether overlooked the grand all-overtopping Hypocrisy Branch; as if our whole arts of Puffery,[23] of Quackery, Priestcraft, Kingcraft, and the innumerable other crafts and mysteries of that genus, had not ranked in Productive Industry at all! Can any one, for example, so much as say, What moneys, in Literature and Shoeblacking, are realised by actual Instruction and actual jet Polish; what by fictitious-persuasive Proclamation of such; specifying, in distinct items, the distributions, circulations, disbursements, incomings of said moneys, with the smallest approach to accuracy? But to ask, How far, in all the several infinitely-complected departments of social business, in government, education, in manual, commercial, intellectual fabrication of every sort, man's Want is supplied by true Ware; how far by the mere Appearance of true Ware: — in other words, To what extent, by what methods, with what effects, in various times and countries, Deception takes the place of wages of Performance: here truly is an Inquiry big with results for the future time, but to which hitherto only the vaguest answer can be given. If for the present, in our Europe, we estimate the ratio of Ware to Appearance of Ware so high

20. Phrasing from *Hamlet*, I,iv,43.
21. See *Matthew*, xv,14.
22. Medieval Crimea, inhabited by the Tartars.
23. Advertising.

even as at One to a Hundred (which, considering the Wages of a Pope, Russian Autocrat, or English Game-Preserver, is probably not far from the mark), — what almost prodigious saving may there not be anticipated, as the *Statistics of Imposture* advances, and so the manufacturing of Shams (that of Realities rising into clearer and clearer distinction therefrom) gradually declines, and at length becomes all but wholly unnecessary!

'This for the coming golden ages. What I had to remark, for the present brazen one, is, that in several provinces, as in Education, Polity, Religion, where so much is wanted and indispensable, and so little can as yet be furnished, probably Imposture is of sanative, anodyne nature, and man's Gullibility not his worst blessing. Suppose your sinews of war quite broken: I mean your military chest insolvent, forage all but exhausted: and that the whole army is about to mutiny, disband, and cut your and each other's throat, — then were it not well could you, as if by miracle, pay them in any sort of fairy-money, feed them on coagulated water, or mere imagination of meat; whereby, till the real supply came up, they might be kept together and quiet? Such perhaps was the aim of Nature, who does nothing without aim, in furnishing her favourite, Man, with this his so omnipotent or rather omnipatient Talent of being Gulled.[24]

'How beautifully it works, with a little mechanism: nay, almost makes mechanism for itself! These Professors in the Nameless lived with ease, with safety, by a mere Reputation, constructed in past times, and then too with no great effort, by quite another class of persons. Which Reputation, like a strong, brisk-going undershot wheel,[25] sunk into the general current, bade fair, with only a little annual repainting on their part, to hold long together, and of its own accord assiduously grind for them. Happy that it was so, for the Millers! They themselves needed not to work; their attempts at working, at what they called Educating, now when I look back on it, filled me with a certain mute admiration.

'Besides all this, we boasted ourselves a Rational University; in the highest degree hostile to Mysticism; thus was the young vacant mind furnished with much talk about Progress of the Species, Dark Ages, Prejudice, and the like; so that all were quickly enough blown out into a state of windy argumentativeness; whereby the better sort had soon to end in sick, impotent Scepticism; the worser sort explode (*crepiren*) in finished Self-conceit, and to all spiritual intents become dead. — But this too is portion of mankind's lot. If our era is the Era of Unbelief, why murmur under it; is there not a better coming, nay come? As in long-drawn Systole and long-drawn Diastole, must the period of Faith alternate with the period of Denial;[26] must the vernal growth, the summer luxuriance of all Opinions, Spiritual Representations and Creations, be followed by, and again follow, the autumnal decay, the winter dissolution. For man lives in Time, has his whole earthly being, endeavour and destiny shaped for him by Time: only in the transitory Time-Symbol is the ever-motionless Eternity we stand on made manifest. And yet, in such winter-seasons of Denial, it is for the nobler-minded perhaps a comparative misery to have been born, and to be awake and work; and for the duller a felicity, if, like hibernating animals, safe-lodged in some Salamanca University,[27] or Sybaris City,[28] or other

24. This paragraph is in the spirit of *A Tale of a Tub* (Sect.IX) and *Hudibras* (II,iii,1ff.).

25. A mill-wheel moved by water passing beneath.

26. A favorite doctrine with Carlyle.

27. A school of theology and law, in Spain, famous throughout Europe in the 15th and 16th centuries.

28. In southern Italy, mentioned by Herodotus and Aristotle as notorious for its wealth and luxury.

superstitious or voluptuous Castle of Indolence,[29] they can slumber-through, in stupid dreams, and only awaken when the loud-roaring hailstorms have all done their work, and to our prayers and martyrdoms the new Spring has been vouchsafed.'

That in the environment, here mysteriously enough shadowed forth, Teufelsdröckh must have felt ill at ease, cannot be doubtful. 'The hungry young,' he says, 'looked up to their spiritual Nurses; and, for food, were bidden eat the east-wind.[30] What vain jargon of controversial Metaphysic, Etymology, and mechanical Manipulation falsely named Science, was current there, I indeed learned, better perhaps than most. Among eleven-hundred Christian youths, there will not be wanting some eleven eager to learn. By collision with such, a certain warmth, a certain polish was communicated; by instinct and happy accident, I took less to rioting (*renommiren*), than to thinking and reading, which latter also I was free to do. Nay from the chaos of that Library, I succeeded in fishing-up more books perhaps than had been known to the very keepers thereof. The foundation of a Literary Life was hereby laid: I learned, on my own strength, to read fluently in almost all cultivated languages, on almost all subjects and sciences; farther, as man is ever the prime object to man, already it was my favourite employment to read character in speculation, and from the Writing to construe the Writer. A certain groundplan of Human Nature and Life began to fashion itself in me; wondrous enough, now when I look back on it; for my whole Universe, physical and spiritual, was as yet a Machine! However, such a conscious, recognised groundplan, the truest I had, *was* beginning to be there, and by additional experiments might be corrected and indefinitely extended.'

Thus from poverty does the strong educe nobler wealth; thus in the destitution of the wild desert does our young Ishmael[31] acquire for himself the highest of all possessions, that of Self-help. Nevertheless a desert this was, waste, and howling with savage monsters. Teufelsdröckh gives us long details of his 'feverparoxysms of Doubt';[32] his Inquiries concerning Miracles, and the Evidences of religious Faith; and how 'in the silent night-watches, still darker in his heart than over sky and earth, he has cast himself before the All-seeing, and with audible prayers cried vehemently for Light, for deliverance from Death and the Grave. Not till after long years, and unspeakable agonies, did the believing heart surrender; sink into spellbound sleep, under the night-mare, Unbelief; and, in this hagridden dream, mistake God's fair living world for a pallid, vacant Hades and extinct Pandemonium. But through such Purgatory pain,' continues he, 'it is appointed us to pass; first must the dead Letter of Religion own itself dead, and drop piecemeal into dust, if the living Spirit of Religion, freed from this its charnel-house, is to arise on us, newborn of Heaven, and with new healing under its wings.'[33]

To which Purgatory pains, seemingly severe enough, if we add a liberal measure of Earthly distresses, want of practical guidance, want of sympathy, want of money, want of hope; and all this in the fervid season of youth, so exaggerated in imagining, so boundless in desires, yet here so poor in means, — do we not see a strong incipient spirit oppressed and overloaded from without and from

29. The title of a poem by James Thomson (1700–48).

30. See Milton's *Lycidas*, 125ff.; and *Job*, xv,2.

31. See *Genesis*, xvi,1-16, for an account of Ishmael, son of Abraham by Hagar, destined to be an outcast.

33. Phrasing from *Malachi*, iv,2.

within; the fire of genius struggling-up among fuel-wood of the greenest, and as yet with more of bitter vapour than of clear flame?

From various fragments of Letters and other documentary scraps, it is to be inferred that Teufelsdröckh, isolated, shy, retiring as he was, had not altogether escaped notice: certain established men are aware of his existence; and, if stretching-out no helpful hand, have at least their eyes on him. He appears, though in dreary enough humour, to be addressing himself to the Profession of Law; — whereof, indeed, the world has since seen him a public graduate. But omitting these broken, unsatisfactory thrums of Economical relation, let us present rather the following small thread of Moral relation; and therewith, the reader for himself weaving it in at the right place, conclude our dim arras-picture of these University years.

'Here also it was that I formed acquaintance with Herr Towgood, or, as it is perhaps better written, Herr Toughgut; a young person of quality (*von Adel*), from the interior parts of England. He stood connected, by blood and hospitality, with the Counts von Zähdarm,[34] in this quarter of Germany; to which noble Family I likewise was, by his means, with all friendliness, brought near. Towgood had a fair talent, unspeakably ill-cultivated; with considerable humour of character: and, bating his total ignorance, for he knew nothing except Boxing and a little Grammar, showed less of that aristocratic impassivity, and silent fury, than for most part belongs to Travellers of his nation. To him I owe my first practical knowledge of the English and their ways; perhaps also something of the partiality with which I have ever since regarded that singular people. Towgood was not without an eye, could he have come at any light. Invited doubtless by the presence of the Zähdarm Family, he had travelled hither, in the almost frantic hope of perfecting his studies; he, whose studies had as yet been those of infancy, hither to a University where so much as the notion of perfection, not to say the effort after it, no longer existed! Often we would condole over the hard destiny of the Young in this era: how, after all our toil, we were to be turned-out into the world, with beards on our chins indeed, but with few other attributes of manhood; no existing thing that we were trained to Act on, nothing that we could so much as Believe. "How has our head on the outside a polished Hat," would Towgood exclaim, "and in the inside Vacancy, or a froth of Vocables and Attorney-Logic! At a small cost men are educated to make leather into shoes; but at a great cost, what am I educated to make? By Heaven, Brother! what I have already eaten and worn, as I came thus far, would endow a considerable Hospital of Incurables." — "Man, indeed," I would answer, "has a Digestive Faculty, which must be kept working, were it even partly by stealth. But as for our Miseducation, make not bad worse; waste not the time yet ours, in trampling on thistles because they have yielded us no figs.[35] *Frisch zu, Bruder!*[36] Here are Books, and we have brains to read them; here is a whole Earth and a whole Heaven, and we have eyes to look on them: *Frisch zu!*"

'Often also our talk was gay; not without brilliancy, and even fire. We looked-out on Life, with its strange scaffolding, where all at once harlequins dance, and men are beheaded and quartered: motley, not unterrific was the aspect; but we looked on it like brave youths. For myself, these were perhaps my most genial hours. Towards this young warmhearted, strongheaded and wrongheaded Herr

34. *Zähdarm*: German for 'Tough-gut.'

35. See *Matthew*, vii,16.

36. 'To work, my Brother!'

Towgood I was even near experiencing the now obsolete sentiment of Friendship. Yes, foolish Heathen that I was, I felt that, under certain conditions, I could have loved this man, and taken him to my bosom, and been his brother once and always. By degrees, however, I understood the new time, and its wants. If man's *Soul* is indeed, as in the Finnish Language,[37] and Utilitarian Philosophy,[38] a kind of *Stomach*, what else is the true meaning of Spiritual Union but an Eating together? Thus we, instead of Friends, are Dinner-guests; and here as elsewhere have cast away chimeras.'

So ends, abruptly as is usual, and enigmatically, this little incipient romance. What henceforth becomes of the brave Herr Towgood, or Toughgut? He has dived-under, in the Autobiographical Chaos, and swims we see not where. Does any reader 'in the interior parts of England' know of such a man?

Chapter VII

The Everlasting No

Under the strange nebulous envelopment, wherein our Professor has now shrouded himself, no doubt but his spiritual nature is nevertheless progressive, and growing: for how can the 'Son of Time,'[1] in any case, stand still? We behold him, through those dim years, in a state of crisis, of transition: his mad Pilgrimings, and general solution into aimless Discontinuity, what is all this but a mad Fermentation; wherefrom, the fiercer it is, the clearer product will one day evolve itself.

Such transitions are ever full of pain: thus the Eagle when he moults is sickly; and, to attain his new beak, must harshly dash-off the old one upon rocks. What Stoicism soever our Wanderer, in his individual acts and motions, may affect, it is clear that there is a hot fever of anarchy and misery raging within; coruscations of which flash out: as, indeed, how could there be other? Have we not seen him disappointed, bemocked of Destiny, through long years? All that the young heart might desire and pray for has been denied; nay, as in the last worst instance, offered and then snatched away. Ever an 'excellent Passivity';[2] but of useful, reasonable Activity, essential to the former as Food to Hunger, nothing granted: till at length, in this wild Pilgrimage, he must forcibly seize for himself an Activity, though useless, unreasonable. Alas, his cup of bitterness, which had been filling drop by drop, ever since that first 'ruddy morning' in the Hinterschlag Gymnasium, was at the very lip; and then with that poison-drop, of the Towgood-and-Blumine business, it runs over, and even hisses over in a deluge of foam.

He himself says once, with more justice than originality: 'Man is, properly speaking, based upon Hope, he has no other possession but Hope; this world of his is emphatically the Place of Hope.' What, then, was our Professor's possession? We see him, for the present, quite shut-out from Hope; looking not into the golden orient, but vaguely all round into a dim copper firmament, pregnant with earthquake and tornado.

Alas, shut-out from Hope, in a deeper sense than we yet dream of! For, as he wanders wearisomely through this world, he has now lost all tidings of another and

37. False etymology.

38. The philosophy usually identified with Jeremy Bentham (1748-1832), James Mill (1773-1836), and John Stuart Mill (1806-73), holding that only the useful is the good, that right conduct should be considered only according to the usefulness of the consequences, and that the aim of moral action is the largest possible balance of pleasure over pain, and the greatest happiness of the greatest number.

1. A phrase from Goethe's poem, *Gott, Gemüth und Welt*; referring here to man as encompassed by stubborn fact (environment) which he can regard either as an obstacle or as a creative opportunity.

2. Teufelsdröckh's capacity for unembittering sorrow and suffering, later to be developed into ethical 'renunciation,' in the Everlasting Yea

higher. Full of religion, or at least of religiosity, as our Friend has since exhibited himself, he hides not that, in those days, he was wholly irreligious: 'Doubt had darkened into Unbelief,' says he; 'shade after shade goes grimly over your soul, till you have the fixed, starless, Tartarean [3] black.' To such readers as have reflected, what can be called reflecting, on man's life, and happily discovered, in contradiction to much Profit-and-loss Philosophy,[4] speculative and practical, that Soul is *not* synonymous with Stomach; who understand, therefore, in our Friend's words, 'that, for man's well-being, Faith is properly the one thing needful; how, with it, Martyrs, otherwise weak, can cheerfully endure the shame and the cross; and without it, Worldlings puke-up their sick existence, by suicide, in the midst of luxury': to such it will be clear that, for a pure moral nature, the loss of his religious Belief was the loss of everything. Unhappy young man! All wounds, the crush of long-continued Destitution, the stab of false Friendship and of false Love, all wounds in thy so genial heart, would have healed again, had not its life-warmth been withdrawn. Well might he exclaim, in his wild way: 'Is there no God, then; but at best an absentee God, sitting idle, ever since the first Sabbath, at the outside of his Universe, and *seeing* it go?' [5] Has the word Duty no meaning; is what we call Duty no divine Messenger and Guide, but a false earthly Fantasm, made-up of Desire and Fear, of emanations from the Gallows and from Dr. Graham's Celestial-Bed? [6] Happiness of an approving Conscience! Did not Paul of Tarsus, whom admiring men have since named Saint, feel that *he* was "the chief of sinners"; [7] and Nero of Rome, jocund in spirit (*wohlgemuth*), spend much of his time in fiddling? [8] Foolish Word-monger and Motive-grinder, who in thy Logic-mill hast an earthly mechanism for the God-like itself, and wouldst fain grind me out Virtue from the husks of Pleasure,[9] — I tell thee, Nay! To the unregenerate Prometheus Vinctus [10] of a man, it is ever the bitterest aggravation of his wretchedness that he is conscious of Virtue, that he feels himself the victim not of suffering only, but of injustice. What then? Is the heroic inspiration we name Virtue but some Passion; some bubble of the blood, bubbling in the direction others *profit* by? I know not: only this I know, If what thou namest Happiness be our true aim, then are we all astray. With Stupidity and sound Digestion man may front much. But what, in these dull unimaginative days, are the terrors of Conscience to the diseases of the Liver! Not on Morality, but on Cookery, let us build our stronghold: there brandishing our frying-pan, as censer, let us offer sweet incense to the Devil, and live at ease on the fat things *he* has provided for his Elect!'

Thus has the bewildered Wanderer to stand, as so many have done, shouting question after question into the Sibyl-cave of Destiny, and receive no Answer but an Echo. It is all a grim Desert, this once-fair world of his; wherein is heard only the howling of wild-beasts, or the shrieks of despairing, hate-filled men; and no Pillar of Cloud by day, and no Pillar

3. Gloomy as Tartarus, the inner region of Hell in the *Iliad*.
4. Utilitarianism.
5. Allusion to 18th-century Deism, according to which God as an Artificer, having created the universe on a pattern discoverable by man, now lets it run without his presence.
6. Supposed to cure sterility in married people, and invented by the notorious quack doctor, James Graham (1745–94).
7. *I Timothy*, i.15.
8. As related in Tacitus' *Annals*, xiv.14.
9. According to the Utilitarian formula propounded by Bentham
10. The title of Aeschylus' drama representing Prometheus (Forethought) stealing fire (symbol of life-giving, creative spirit) from Heaven; for which he was condemned by Zeus to be chained to a rock on Mt. Caucasus while a vulture gnawed his liver until some immortal should consent to die in his stead.

of Fire by night,[11] any longer guides the Pilgrim. To such length has the spirit of Inquiry carried him. 'But what boots it (*was thut's*)?' cries he: 'it is but the common lot in this era. Not having come to spiritual majority prior to the *Siècle de Louis Quinze*,[12] and not being born purely a Loghead (*Dummkopf*), thou hast no other outlook. The whole world is, like thee, sold to Unbelief; their old Temples of the Godhead, which for long have not been rainproof, crumble down; and men ask now: Where is the Godhead; our eyes never saw him?'

Pitiful enough were it, for all these wild utterances, to call our Diogenes wicked. Unprofitable servants as we all are, perhaps at no era of his life was he more decisively the Servant of Goodness, the Servant of God, than even now when doubting God's existence. 'One circumstance I note,' says he: 'after all the nameless woe that Inquiry, which for me, what it is not always, was genuine Love of Truth, had wrought me, I nevertheless still loved Truth, and would bate no jot of my allegiance to her. "Truth"! I cried, "though the Heavens crush me for following her: no Falsehood! though a whole celestial Lubberland[13] were the price of Apostasy." In conduct it was the same. Had a divine Messenger from the clouds, or miraculous Handwriting on the wall,[14] convincingly proclaimed to me *This thou shalt do*, with what passionate readiness, as I often thought, would I have done it, had it been leaping into the infernal Fire. Thus, in spite of all Motive-grinders, and Mechanical Profit-and-Loss Philosophies, with the sick ophthalmia and hallucination they had brought on, was the Infinite nature of Duty[15] still dimly present to me: living without God in the world,[16] of God's light I was not utterly bereft; if my as yet sealed eyes, with their unspeakable longing, could nowhere see Him, nevertheless in my heart He was present, and His heaven written Law still stood legible and sacred there.'

Meanwhile, under all these tribulations, and temporal and spiritual destitutions, what must the Wanderer, in his silent soul, have endured! 'The painfullest feeling,' writes he, 'is that of your own Feebleness (*Unkraft*); ever, as the English Milton says, to be weak is the true misery.[17] And yet of your Strength there is and can be no clear feeling, save by what you have prospered in, by what you have done. Between vague wavering Capability and fixed indubitable Performance, what a difference! A certain inarticulate Self-consciousness dwells dimly in us; which only our Works can render articulate and decisively discernible. Our Works are the mirror wherein the spirit first sees its natural lineaments. Hence, too, the folly of that impossible Precept, *Know thyself*;[18] till it be translated into this partially possible one, *Know what thou canst work-at*.

'But for me, so strangely unprosperous had I been, the net result of my Workings amounted as yet simply to — Nothing. How then could I believe in my Strength, when there was as yet no mirror to see it in? Ever did this agitating, yet, as I now perceive, quite frivolous question, remain to me insoluble: Hast thou a certain Faculty, a certain Worth, such even as the most have not; or art thou

11. Which led the Children of Israel out of the wilderness (*Exodus*, xiii,21).
12. The title of a history by Voltaire, and the name of the Age of Reason, of all that Carlyle inveighed against.
13. Land of plenty.
14. *Cf. Daniel*, v,5–28.
15. That is, infinite in the sense of not properly being bound by considerations of time, space, logic, but by such incommensurate considerations as values, ideals, etc.
16. Phrasing from *Ephesians*, ii,12.
17. *Paradise Lost*, i,157: 'Fallen Cherub, to be weak is miserable.'
18. The motto inscribed on the temple at Delphi; possibly an original maxim of Socrates or Thales.

the completest Dullard of these modern times? Alas! the fearful Unbelief is unbelief in yourself; and how could I believe? Had not my first, last Faith in myself, when even to me the Heavens seemed laid open, and I dared to love, been all-too cruelly belied? The speculative Mystery of Life grew ever more mysterious to me: neither in the practical Mystery had I made the slightest progress, but been everywhere buffeted, foiled, and contemptuously cast-out. A feeble unit in the middle of a threatening Infinitude, I seemed to have nothing given me but eyes, whereby to discern my own wretchedness. Invisible yet impenetrable walls, as of Enchantment, divided me from all living: was there, in the wide world, any true bosom I could press trustfully to mine? O Heaven, No, there was none! I kept a lock upon my lips: why should I speak much with that shifting variety of so-called Friends, in whose withered, vain and too-hungry souls Friendship was but an incredible tradition? In such cases, your resource is to talk little, and that little mostly from the Newspapers. Now when I look back, it was a strange isolation I then lived in. The men and women around me, even speaking with me, were but Figures; I had, practically, forgotten that they were alive, that they were not merely automatic. In midst of their crowded streets and assemblages, I walked solitary; and (except as it was my own heart, not another's, that I kept devouring) savage also, as the tiger in his jungle. Some comfort it would have been, could I, like a Faust, have fancied myself tempted and tormented of the Devil: for a Hell, as I imagine, without Life, though only diabolic Life, were more frightful: but in our age of Down-pulling and Disbelief, the very Devil has been pulled down, you cannot so much as believe in a Devil. To me the Universe was all void of Life, of Purpose, of Volition, even of Hostility: it was one huge, dead, immeasurable Steam-engine, rolling on, in its dead indifference, to grind me limb from limb. O, the vast, gloomy, solitary Golgotha,[19] and Mill of Death![20] Why was the Living banished thither companionless, conscious? Why, if there is no Devil; nay, unless the Devil is your God?'

A prey incessantly to such corrosions, might not, moreover, as the worst aggravation to them, the iron constitution even of a Teufelsdröckh threaten to fail? We conjecture that he has known sickness; and, in spite of his locomotive habits, perhaps sickness of the chronic sort. Hear this, for example: 'How beautiful to die of broken-heart, on Paper![21] Quite another thing in practice; every window of your Feeling, even of your Intellect, as it were, begrimed and mud-bespattered, so that no pure ray can enter; a whole Drugshop in your inwards; the fordone soul drowning slowly in quagmires of Disgust!'

Putting all which external and internal miseries together, may we not find in the following sentences, quite in our Professor's still vein, significance enough? 'From Suicide a certain aftershine (*Nachschein*) of Christianity withheld me: perhaps also a certain indolence of character; for, was not that a remedy I had at any time within reach? Often, however, was there a question present to me: Should some one now, at the turning of that corner, blow thee suddenly out of Space, into the other World, or other No-World, by pistol-shot, — how were it? On which ground, too, I have often, in sea-storms and sieged cities and other death-scenes, exhibited an imperturbability, which passed, falsely enough, for courage.'

'So had it lasted,' concludes the Wanderer, 'so had it lasted, as in bitter pro-

19. Calvary, where Christ was crucified; literally 'Place of Skulls.'

20. A phrase from one of Carlyle's favorite German writers, Novalis.

21. Satirical allusion to the Byronic attitude popular at the time.

tracted Death-agony, through long years. The heart within me, unvisited by any heavenly dewdrop, was smouldering in sulphurous, slow-consuming fire. Almost since earliest memory I had shed no tear; or once only when I, murmuring half-audibly, recited Faust's Deathsong, that wild *Selig der den er im Siegesglanze findet* (Happy whom *he* finds in Battle's splendour),[22] and thought that of this last Friend even I was not forsaken, that Destiny itself could not doom me not to die. Having no hope, neither had I any definite fear, were it of Man or of Devil: nay, I often felt as if it might be solacing, could the Arch-Devil himself, though in Tartarean terrors, but rise to me, that I might tell him a little of my mind. And yet, strangely enough, I lived in a continual, indefinite, pining fear; tremulous, pusillanimous, apprehensive of I knew not what: it seemed as if all things in the Heavens above and the Earth beneath would hurt me; as if the Heavens and the Earth were but boundless jaws of a devouring monster, wherein I, palpitating, waited to be devoured.

'Full of such humour, and perhaps the miserablest man in the whole French Capital or Suburbs, was I, one sultry Dog-day, after much perambulation, toiling along the dirty little *Rue Saint-Thomas de l'Enfer*, among civic rubbish enough, in a close atmosphere, and over pavements hot as Nebuchadnezzar's Furnace;[23] whereby doubtless my spirits were little cheered; when, all at once, there rose a Thought in me, and I asked myself: "What *art* thou afraid of? Wherefore, like a coward, dost thou forever pip and whimper, and go cowering and trembling? Despicable biped! what is the sum-total of the worst that lies before thee? Death? Well, Death; and say the pangs of Tophet too, and all that the Devil and Man may, will or can do against thee! Hast thou not a heart; canst thou not suffer whatsoever it be; and, as a Child of Freedom, though outcast, trample Tophet itself under thy feet, while it consumes thee? Let it come, then; I will meet it and defy it!" And as I so thought, there rushed like a stream of fire over my whole soul; and I shook base Fear away from me forever. I was strong, of unknown strength; a spirit, almost a god. Ever from that time, the temper of my misery was changed: not Fear or whining Sorrow was it, but Indignation and grim fire-eyed Defiance.

'Thus had the EVERLASTING NO (*das ewige Nein*) pealed authoritatively through all the recesses of my Being, of my ME; and then was it that my whole ME stood up, in native God-created majesty, and with emphasis recorded its Protest. Such a Protest, the most important transaction in Life, may that same Indignation and Defiance, in a psychological point of view, be fitly called. The Everlasting No had said: "Behold, thou art fatherless, outcast, and the Universe is mine (the Devil's)"; to which my whole Me now made answer: "*I* am not thine, but Free, and forever hate thee!"

'It is from this hour that I incline to date my Spiritual New-birth, or Baphometic[24] Fire-baptism; perhaps I directly thereupon began to be a Man.'[25]

22. Phrasing adapted from Goethe's *Faust*, I,iv, ll.1573–76.

23. See *Daniel*, iii,19.

24. From 'Baphomet,' the symbol or idol which the Templars were accused of using in their mysterious rites. (The Templars were a religious and military order established at Jerusalem about A.D. 1118 for the protection of pilgrims to the Holy Sepulcher; and for a time they occupied quarters next to the building known as Solomon's Temple, hence their name.) The etymology of 'Baphomet' is obscure, but is possibly the combination of the Greek words for 'baptism' and 'wisdom' (or 'fire').

25. In short, to realize that he was both a 'son of Freedom' and a 'Son of Time'; that is, a free spirit conditioned by time and space.

Chapter VIII

Centre of Indifference [1]

Though, after this 'Baphometic Fire-baptism' of his, our Wanderer signifies that his Unrest was but increased; as, indeed, 'Indignation and Defiance,' especially against things in general, are not the most peaceable inmates; yet can the Psychologist surmise that it was no longer a quite hopeless Unrest; that henceforth it had at least a fixed centre to revolve round. For the fire-baptised soul, long so scathed and thunder-riven, here feels its own Freedom, which feeling is its Baphometic Baptism: the citadel of its whole kingdom it has thus gained by assault, and will keep inexpugnable; outwards from which the remaining dominions, not indeed without hard battling, will doubtless by degrees be conquered and pacificated. Under another figure, we might say, if in that great moment, in the *Rue Saint-Thomas de l'Enfer*, the old inward Satanic School [2] was not yet thrown out of doors, it received peremptory judicial notice to quit:—whereby, for the rest, its howl-chantings, Ernulphus cursings,[3] and rebellious gnashings of teeth, might, in the meanwhile, become only the more tumultuous, and difficult to keep secret.

Accordingly, if we scrutinise these Pilgrimings well, there is perhaps discernible henceforth a certain incipient method in their madness.[4] Not wholly as a Spectre does Teufelsdröckh now storm through the world; at worst as a spectre-fighting Man, nay who will one day be a Spectre-queller. If pilgriming restlessly to so many 'Saints' Wells,' and ever without quenching of his thirst, he nevertheless finds little secular wells, whereby from time to time some alleviation is ministered. In a word, he is now, if not ceasing, yet intermitting to 'eat his own heart'; and clutches round him outwardly on the Not-me [5] for wholesomer food. Does not the following glimpse exhibit him in a much more natural state

'Towns also and Cities, especially the ancient, I failed not to look upon with interest. How beautiful to see thereby, as through a long vista, into the remote Time; to have, as it were, an actual section of almost the earliest Past brought safe into the Present, and set before your eyes! There, in that old City, was a live ember of Culinary Fire put down, say only two thousand years ago; and there, burning more or less triumphantly, with such fuel as the region yielded, it has burnt, and still burns, and thou thyself seest the very smoke thereof. Ah! and the far more mysterious live ember of Vital Fire was then also put down there; and still miraculously burns and spreads; and the smoke and ashes thereof (in these Judgment-Halls and Churchyards), and

1. A term used in physics, to denote that point midway between two extremes of a magnet, where the attractive force of the two poles is stable; the equator of the magnet. Used here in a psychological sense, to describe Teufelsdröckh's condition: he has discovered, or rediscovered, his will, or self, but has yet seized upon any creative channels in which that will may contribute to the growth of his personality, and to the construction of a new universe out of the wreck of his former, immature, and illusive world. He is now in a state of moral indifference, receptive to impressions, but unable as yet to utilize them as dynamic stimuli to self-expression.
2. Satirical allusion to the poetry of Byron, Shelley, and their followers, so called first by Southey in the preface to his 'Vision of Judgment' (1821), to characterize the 'Satanic spirit of pride and audacious impiety' in their poetry.
3. The curse of Ernulf (1040–1124), Bishop of Rochester, is given in Sterne's *Tristram Shandy*, Vol.III,Ch.xi.
4. *Hamlet*, II.ii.211–12.
5. The objective, physical world, as opposed to the subjective, spiritual world within man. Seizing on the world of brute fact and making it the instrument of mind, or spirit, is the heart of Carlyle's doctrine of *work*.

its bellows-engines (in these Churches), thou still seest; and its flame, looking out from every kind countenance, and every hateful one, still warms thee or scorches thee.

'Of Man's Activity and Attainment the chief results are aeriform, mystic, and preserved in Tradition only:[6] such are his Forms of Government, with the Authority they rest on; his Customs, or Fashions both of Cloth-habits and of Soul-habits; much more his collective stock of Handicrafts, the whole Faculty he has acquired of manipulating Nature: all these things, as indispensable and priceless as they are, cannot in any way be fixed under lock and key, but must flit, spirit-like, on impalpable vehicles, from Father to Son; if you demand sight of them, they are nowhere to be met with. Visible Ploughmen and Hammermen there have been, ever from Cain and Tubalcain[7] downwards: but where does your accumulated Agricultural, Metallurgic, and other Manufacturing SKILL lie warehoused? It transmits itself on the atmospheric air, on the sun's rays (by Hearing and by Vision); it is a thing aeriform, impalpable, of quite spiritual sort. In like manner, ask me not, Where are the LAWS; where is the GOVERNMENT? In vain wilt thou go to Schönbrunn, to Downing Street, to the Palais Bourbon:[8] thou findest nothing there but brick or stone houses, and some bundles of Papers tied with tape. Where, then, is that same cunningly-devised almighty GOVERNMENT of theirs to be laid hands on? Everywhere, yet nowhere: seen only in its works, this too is a thing aeriform, invisible; or if you will, mystic and miraculous. So spiritual (*geistig*) is our whole daily Life: all that we do springs out of Mystery, Spirit, invisible Force; only like a little Cloud-image, or Armida's Palace,[9] air-built, does the Actual body itself forth from the great mystic Deep.

'Visible and tangible products of the Past, again, I reckon-up to the extent of three: Cities, with their Cabinets and Arsenals; then tilled Fields, to either or to both of which divisions Roads with their Bridges may belong; and thirdly — Books. In which third truly, the last invented, lies a worth far surpassing that of the two others. Wondrous indeed is the virtue of a true Book. Not like a dead city of stones, yearly crumbling, yearly needing repair; more like a tilled field, but then a spiritual field: like a spiritual tree, let me rather say, it stands from year to year, and from age to age (we have Books that already number some hundred-and-fifty human ages); and yearly comes its new produce of leaves (Commentaries, Deductions, Philosophical, Political Systems; or were it only Sermons, Pamphlets, Journalistic Essays), every one of which is talismanic and thaumaturgic,[10] for it can persuade men. O thou who art able to write a Book, which once in the two centuries or oftener there is a man gifted to do, envy not him whom they name City-builder, and inexpressibly pity him whom they name Conqueror or City-burner! Thou too art a Conqueror and Victor: but of the true sort, namely over the Devil: thou too hast built what will outlast all marble and metal, and be a wonder-bringing City of the Mind, a Temple and Seminary and Prophetic Mount, whereto all kindreds of the Earth will pilgrim. — Fool! why journeyest thou wearisomely, in thy antiquarian fervour, to gaze on the stone pyramids of Geeza, or the clay ones of

6. The rest of the chapter shows Teufelsdröckh viewing the world as the evidence of spirit, or mind, at work manifesting itself in the various forms of human activity — governments, occupations, books, wars, inventions, etc.
7. See *Genesis*, iv,1–22.
8. Seats of government in Vienna, London, and Paris, respectively.
9. The castle of the enchantress in Tasso's *Jerusalem Delivered*.
10. 'Wonder-working,' indicating the 'magical' nature which the spiritual life had for Carlyle.

Sacchara?[11] These stand there, as I can tell thee, idle and inert, looking over the Desert, foolishly enough, for the last three-thousand years: but canst thou not open thy Hebrew BIBLE, then, or even Luther's Version[12] thereof?'

No less satisfactory is his sudden appearance not in Battle, yet on some Battle-field; which, we soon gather, must be that of Wagram;[13] so that here, for once, is a certain approximation to distinctness of date. Omitting much, let us impart what follows:

'Horrible enough! A whole Marchfeld[14] strewed with shell-splinters, cannon-shot, ruined tumbrils, and dead men and horses; stragglers still remaining not so much as buried. And those red mould heaps: ay, there lie the Shells of Men, out of which all the Life and Virtue has been blown; and now are they swept together, and crammed-down out of sight, like blown Egg-shells!—Did Nature, when she bade the Donau bring down his mould-cargoes from the Carinthian and Carpathian Heights, and spread them out here into the softest, richest level,—intend thee, O Marchfeld, for a corn-bearing Nursery, whereon her children might be nursed; or for a Cockpit, wherein they might the more commodiously be throttled and tattered? Were thy three broad Highways, meeting here from the ends of Europe, made for Ammunition-wagons, then? Were thy Wagrams and Stillfrieds but so many ready-built Casemates, wherein the house of Hapsburg might batter with artillery, and with artillery be battered? König Ottokar, amid yonder hillocks, dies under Rodolf's truncheon; here Kaiser Franz falls a-swoon under Napoleon's: within which five centuries, to omit the others, how has thy breast, fair Plain, been defaced and defiled! The greensward is torn-up and trampled-down; man's fond care of it, his fruit-trees, hedgerow, and pleasant dwellings, blown-away with gunpowder; and the kind seedfield lies a desolate, hideous Place of Sculls.[15]—Nevertheless, Nature is at work; neither shall these Powder-Devilkins with their utmost devilry gainsay her: but all that gore and carnage will be shrouded-in, absorbed into manure; and next year the Marchfeld will be green, nay greener. Thrifty unwearied Nature, ever out of our great waste educing some little profit of thy own,—how dost thou, from the very carcass of the Killer, bring Life for the Living![16]

'What, speaking in quite unofficial language, is the net-purport and upshot of war? To my own knowledge, for example, there dwell and toil, in the British village of Dumdrudge, usually some five-hundred souls. From these, by certain "Natural Enemies" of the French, there are successively selected, during the French war, say thirty able-bodied men: Dumdrudge, at her own expense, has suckled and nursed them: she has, not without difficulty and sorrow, fed them up to manhood, and even trained them to crafts, so that one can weave, another build, another hammer, and the weakest can stand under thirty stone avoirdupois. Nevertheless, amid much weeping and swearing, they are selected; all dressed in red; and shipped away, at the public charges, some two-thousand miles, or say only to the south of Spain; and fed there till wanted. And now to that same spot, in the south of Spain,[17] are thirty similar French artisans, from a French Dumdrudge, in like manner wending: till at length, after infinite effort, the two parties come into actual juxtaposition; and

11. The famous pyramids near Cairo.
12. Which appeared in 1534–35.
13. A village near Vienna where Napoleon defeated the Austrians on July 5–6, 1809.
14. A plain near Vienna, where the Austrians defeated the Bohemians in 1278, and where, five centuries later, Napoleon defeated the Austrians.
15. Golgotha.
16. See *Judges*, xiv,9.
17. Where the British were engaged against Napoleon in 1808–09.

Thirty stands fronting Thirty, each with a gun in his hand. Straightway the word "Fire!" is given: and they blow the souls out of one another; and in place of sixty brisk useful craftsmen, the world has sixty dead carcasses, which it must bury, and anew shed tears for. Had these men any quarrel? Busy as the Devil is, not the smallest! They lived far enough apart; were the entirest strangers; nay, in so wide a Universe, there was even, unconsciously, by Commerce, some mutual helpfulness between them. How then? Simpleton! their Governors had fallen-out; and, instead of shooting one another, had the cunning to make these poor blockheads shoot.—Alas, so is it in Deutschland, and hitherto in all other lands; still as of old, "what devilry soever Kings do, the Greeks must pay the piper!" [18]—In that fiction of the English Smollet,[19] it is true, the final Cessation of War is perhaps prophetically shadowed forth; where the two Natural Enemies, in person, take each a Tobacco-pipe, filled with Brimstone; light the same, and smoke in one another's faces, till the weaker gives in: but from such predicted Peace-Era, what blood-filled trenches, and contentious centuries, may still divide us!'

Thus can the Professor, at least in lucid intervals, look away from his own sorrows, over the many-coloured world, and pertinently enough note what is passing there. We may remark, indeed, that for the matter of spiritual culture, if for nothing else, perhaps few periods of his life were richer than this. Internally, there is the most momentous instructive Course of Practical Philosophy, with Experiments, going on; towards the right comprehension of which his Peripatetic habits, favourable to Meditation, might help him rather than hinder. Externally, again, as he wanders to and fro, there are, if for the longing heart little substance, yet for the seeing eye sights enough: in these so boundless Travels of his, granting that the Satanic School was even partially kept down, what an incredible knowledge of our Planet, and its Inhabitants and their Works, that is to say, of all knowable things, might not Teufelsdröckh acquire!

'I have read in most Public Libraries,' says he, 'including those of Constantinople and Samarcand: in most Colleges, except the Chinese Mandarin ones, I have studied, or seen that there was no studying. Unknown Languages have I oftenest gathered from their natural repertory, the Air, by my organ of Hearing; Statistics, Geographies, Topographies came, through the Eye, almost of their own accord. The ways of Man, how he seeks food, and warmth, and protection for himself, in most regions, are ocularly known to me. Like the great Hadrian [20] I meted-out much of the terraqueous Globe with a pair of Compasses that belonged to myself only.

'Of great Scenes why speak? Three summer days, I lingered reflecting, and even composing (*dichtete*), by the Pine-chasms of Vaucluse; [21] and in that clear Lakelet moistened my bread. I have sat under the Palm-trees of Tadmor; [22] smoked a pipe among the ruins of Babylon. The great Wall of China I have seen; and can testify that it is of gray brick, coped and covered with granite, and shows only second-rate masonry.—Great Events, also, have not I witnessed? Kings sweated-down (*ausgemergelt*) [23] into Berlin-and-Milan Customhouse-Officers; the

20. Hadrian (76–138), the Roman emperor who spent the greater part of his reign in travelling throughout his empire, to inspect its condition.

21. A village near Avignon, in south-east France, famous as the home of Petrarch.

22. *i.e.* Palmyra, 'City of Palms,' built by Solomon, in the Syrian Desert; now in ruins.

23. European Kings under Napoleon were reduced nearly to the status of mere tax-collectors.

World well won, and the World well lost;[24] oftener than once a hundred-thousand individuals shot (by each other) in one day. All kindreds and peoples and nations dashed together, and shifted and shovelled into heaps, that they might ferment there, and in time unite. The birth-pangs of Democracy,[25] wherewith convulsed Europe was groaning in cries that reached Heaven, could not escape me.

'For great Men I have ever had the warmest predilection; and can perhaps boast that few such in this era have wholly escaped me. Great Men are the inspired (speaking and acting) Texts of that divine BOOK OF REVELATIONS, whereof a Chapter is completed from epoch to epoch, and by some named HISTORY; to which inspired Texts your numerous talented men, and your innumerable untalented men, are the better or worse exegetic Commentaries, and wagonload of too-stupid, heretical or orthodox, weekly Sermons. For my study the inspired Texts themselves! Thus did not I, in very early days, having disguised me as tavern-waiter, stand behind the field chairs, under that shady Tree at Treisnitz[26] by the Jena Highway; waiting upon the great Schiller and greater Goethe; and hearing what I have not forgotten. For——'

——But at this point the Editor recalls his principle of caution, some time ago laid down, and must suppress much. Let not the sacredness of Laurelled, still more, of Crowned Heads, be tampered with. Should we, at a future day, find circumstances altered, and the time come for Publication, then may these glimpses into the privacy of the Illustrious be conceded; which for the present were little better than treacherous, perhaps traitorous Eavesdroppings. Of Lord Byron, therefore, of Pope Pius,[27] Emperor Tarakwang,[28] and the 'White Water-roses' (Chinese Carbonari)[29] with their mysteries, no notice here! Of Napoleon himself we shall only, glancing from afar, remark that Teufelsdröckh's relation to him seems to have been of very varied character. At first we find our poor Professor on the point of being shot as a spy; then taken into private conversation, even pinched on the ear, yet presented with no money; at last indignantly dismissed, almost thrown out of doors, as an 'Ideologist.'[30] 'He himself,' says the Professor, 'was among the completest Ideologists, at least Ideopraxists:[31] in the Idea (*in der Idee*) he lived, moved and fought. The man was a Divine Missionary, though unconscious of it; and preached, through the cannon's throat, that great doctrine, *La carrière ouverte aux talens* (The Tools to him that can handle them), which is our ultimate Political Evangel, wherein alone can liberty lie. Madly enough he preached, it is true, as Enthusiasts[32] and first Missionaries are wont, with imperfect utterance, amid much frothy rant; yet as articulately perhaps as the case admitted. Or call him, if you will, an American Backwoodsman, who had to fell unpenetrated forests, and battle with innumerable wolves, and did not entirely forbear strong liquor, rioting, and even theft; whom, notwithstanding, the peaceful Sower will follow, and, as he cuts the boundless harvest, bless.'

More legitimate and decisively authentic is Teufelsdröckh's appearance and emergence (we know not well whence)

24. *Cf.* the title of Dryden's play, *All for Love, or the World Well Lost.*
25. As manifested in the July Revolution in Paris, 1830, and in the Reform agitation in Great Britain during the 1820's and 1830's.
26. Or Tiesnitz, near Jena, Germany, where Goethe and Schiller sometimes met in the period of their literary collaboration.
27. Probably Pope Pius VII, who was Pope from 1800 to 1823.
28. Tao Kuang ascended the throne of China in 1821.
29. Secret revolutionary societies in China and Italy, respectively.
30. Theorist or dreamer.
31. Those who put theory into practice.
32. Used in the older sense, to mean *religious madmen.*

in the solitude of the North Cape, on that June Midnight. He has 'a light-blue Spanish cloak' hanging round him, as his 'most commodious, principal, indeed sole upper garment'; and stands there, on the World-promontory, looking over the infinite Brine, like a little blue Belfry (as we figure), now motionless indeed, yet ready, if stirred, to ring quaintest changes.

'Silence as of death,' writes he; 'for Midnight, even in the Arctic latitudes, has its character: nothing but the granite cliffs ruddy-tinged, the peaceable gurgle of that slow-heaving Polar Ocean, over which in the utmost North the great Sun hangs low and lazy, as if he too were slumbering. Yet is his cloud-couch wrought of crimson and cloth-of-gold; yet does his light stream over the mirror of waters, like a tremulous fire-pillar, shooting downwards to the abyss, and hide itself under my feet. In such moments, Solitude also is invaluable; for who would speak, or be looked on, when behind him lies all Europe and Africa, fast asleep, except the watchmen; and before him the silent Immensity, and Palace of the Eternal, whereof our Sun is but a porch-lamp?

'Nevertheless, in this solemn moment comes a man, or monster, scrambling from among the rock-hollows; and, shaggy, huge as the Hyperborean [33] Bear, hails me in Russian speech: most probably, therefore, a Russian Smuggler. With courteous brevity, I signify my indifference to contraband trade, my humane intentions, yet strong wish to be private. In vain: the monster, counting doubtless on his superior stature, and minded to make sport for himself, or perhaps profit, were it with murder, continues to advance; ever assailing me with his importunate train-oil [34] breath; and now has advanced, till we stand both on the verge of the rock, the deep Sea rippling greedily down below. What argument will avail? On the thick Hyperborean, cherubic reasoning, seraphic eloquence were lost. Prepared for such extremity, I, deftly enough, whisk aside one step; draw out, from my interior reservoirs, a sufficient Birmingham Horse-pistol, and say, "Be so obliging as retire, Friend (*Er ziehe sich zuruck, Freund*), and with promptitude!" This logic even the Hyperborean understands; fast enough, with apologetic, petitionary growl, he sidles off; and, except for suicidal as well as homicidal purposes, need not return.

'Such I hold to be the genuine use of Gunpowder: that it makes all men alike tall. Nay, if thou be cooler, cleverer than I, if thou have more *Mind*, though all but no Body whatever, then canst thou kill me first, and art the taller. Hereby, at last, is the Goliath powerless, and the David resistless; [35] savage Animalism is nothing, inventive Spiritualism is all.[36]

'With respect to Duels, indeed, I have my own ideas. Few things, in this so surprising world, strike me with more surprise. Two little visual Spectra of men, hovering with insecure enough cohesion in the midst of the UNFATHOMABLE, and to dissolve therein, at any rate, very soon, — make pause at the distance of twelve paces asunder; whirl round; and, simultaneously by the cunningest mechanism, explode one another into Dissolution; and off-hand become Air, and Non-extant! Deuce on it (*verdammt*), the little spitfires! — Nay, I think with old Hugo von Trimberg: [37] "God must needs laugh outright, could such a thing be, to see his wondrous Manikins here below."'

But amid these specialties, let us not forget the great generality, which is our chief quest here: How prospered the inner man of Teufelsdröckh under so much

33. Most Northern (from 'Boreas,' North Wind).

37. Medieval Meistersinger (1260–1309).

outward shifting? Does Legion [38] still lurk in him, though repressed; or has he exorcised that Devil's Brood? We can answer that the symptoms continue promising. Experience is the grand spiritual Doctor; and with him Teufelsdröckh has now been long a patient, swallowing many a bitter bolus.[39] Unless our poor Friend belong to the numerous class of Incurables, which seems not likely, some cure will doubtless be effected. We should rather say that Legion, or the Satanic School, was now pretty well extirpated and cast out, but next to nothing introduced in its room; whereby the heart remains, for the while, in a quiet but no comfortable state.

'At length, after so much roasting,' thus writes our Autobiographer, 'I was what you might name calcined. Pray only that it be not rather, as is the more frequent issue, reduced to a *caput-mortuum*' [40] But in any case, by mere dint of practice, I had grown familiar with many things. Wretchedness was still wretched; but I could now partly see through it, and despise it. Which highest mortal, in this inane Existence, had I not found a Shadow-hunter, or Shadow-hunted; and, when I looked through his brave garnitures, miserable enough? Thy wishes have all been sniffed aside, thought I: but what, had they even been all granted! Did not the Boy Alexander weep because he had not two Planets to conquer; [41] or a whole Solar System; or after that, a whole Universe? *Ach Gott*, when I gazed into these Stars, have they not looked down on me as if with pity, from their serene spaces; like Eyes glistening with heavenly tears over the little lot of man! Thousands of human generations, all as noisy as our own, have been swallowed-up of Time, and there remains no wreck [42] of them any more; and Arcturus and Orion and Sirius and the Pleiades are still shining in their courses, clear and young, as when the Shepherd first noted them in the plain of Shinar.[43] Pshaw! what is this paltry little Dog-cage [44] of an Earth; what art thou that sittest whining there? Thou art still Nothing, Nobody: true; but who, then, is Something, Somebody? For thee the Family of Man has no use; it rejects thee; thou art wholly as a dissevered limb: so be it; perhaps it is better so!'

Too heavy-laden Teufelsdröckh! Yet surely his bands are loosening; one day he will hurl the burden far from him, and bound forth free and with a second youth.

'This,' says our Professor, 'was the CENTRE OF INDIFFERENCE I had now reached; through which whoso travels from the Negative Pole to the Positive must necessarily pass.'

CHAPTER IX

The Everlasting Yea

'TEMPTATIONS in the Wilderness!' [1] exclaims Teufelsdröckh: 'Have we not all to be tried with such? Not so easily can the old Adam,[2] lodged in us by birth, be dispossessed. Our Life is compassed round with Necessity; yet is the meaning of Life itself no other than Freedom, than Voluntary Force: thus have we a warfare; in the beginning, especially, a hard-fought battle. For the God-given mandate, *Work thou in Welldoing*,[3] lies mysteriously written, in Promethean [4] Prophetic Char-

38. See *Mark*, v,9.

39. Large pill administered by veterinarians. (Carlylean humor.)

40. 'Death's head.' In old chemistry, a worthless residue.

41. As related in *Hudibras*, I,iii,1022,etc.

42. Remains, or ruins.

43. On which was built the Tower of Babel (*Genesis*, xi,1–9).

44. A wheel-like cage in which a dog turned the jack of a turnspit, and so roasted the meat. The term is here used to suggest the mechanical and endless and aimless routine of life when seen without the eyes of faith.

1. See *Matthew*, iv,1; *Paradise Regained*, i,193ff.

2. *Cf. Colossians*, iii,9: 'put off the old man.'

3. Probably adapted from *II Thessalonians*, iii,13.

4. 'Fire-bearing.'

acters, in our hearts; and leaves us no rest, night or day, till it be deciphered and obeyed; till it burn forth, in our conduct, a visible, acted Gospel of Freedom. And as the clay-given mandate, *Eat thou and be filled*, at the same time persuasively proclaims itself through every nerve, — must not there be a confusion, a contest, before the better Influence can become the upper?

'To me nothing seems more natural than that the Son of Man, when such God-given mandate first prophetically stirs within him, and the Clay must now be vanquished, or vanquish, — should be carried of the spirit into grim Solitudes, and there fronting the Tempter do grimmest battle with him; defiantly setting him at naught, till he yield and fly. Name it as we choose: with or without visible Devil, whether in the natural Desert of rocks and sands, or in the populous moral Desert of selfishness and baseness, — to such Temptation are we all called. Unhappy if we are not! Unhappy if we are but Half-men, in whom that divine handwriting has never blazed forth, all-subduing, in true sun-splendour; but quivers dubiously amid meaner lights: or smoulders, in dull pain, in darkness, under earthly vapours! — Our Wilderness is the wide World in an Atheistic Century; our Forty Days are long years of suffering and fasting: nevertheless, to these also comes an end. Yes, to me also was given, if not Victory, yet the consciousness of Battle, and the resolve to persevere therein while life or faculty is left. To me also, entangled in the enchanted forests, demon-peopled, doleful of sight and of sound, it was given, after weariest wanderings, to work out my way into the higher sunlit slopes — of that Mountain which has no summit, or whose summit is in Heaven only!'

He says elsewhere, under a less ambitious figure; as figures are, once for all, natural to him: 'Has not thy Life been that of most sufficient men (*tüchtigen Männer*) thou hast known in this generation? An outflush of foolish young Enthusiasm, like the first fallow-crop, wherein are as many weeds as valuable herbs: this all parched away, under the Droughts of practical and spiritual Unbelief, as Disappointment, in thought and act, often-repeated gave rise to Doubt, and Doubt gradually settled into Denial! If I have had a second-crop, and now see the perennial greensward, and sit under umbrageous cedars, which defy all Drought (and Doubt); herein too, be the Heavens praised, I am not without examples, and even exemplars.'

So that, for Teufelsdröckh also, there has been a 'glorious revolution': these mad shadow-hunting and shadow-hunted Pilgrimings of his were but some purifying 'Temptation in the Wilderness,' before his Apostolic work (such as it was) could begin; which Temptation is now happily over, and the Devil once more worsted! Was 'that high moment in the *Rue de l'Enfer*,' then, properly the turning-point of the battle; when the Fiend said, *Worship me or be torn in shreds*; and was answered valiantly with an *Apage Satana*?[5] — Singular Teufelsdröckh, would thou hadst told thy singular story in plain words! But it is fruitless to look there, in those Paper-bags, for such. Nothing but innuendoes, figurative crotchets: a typical Shadow, fitfully wavering, prophetico-satiric; no clear logical Picture. 'How paint to the sensual eye,' asks he once, 'what passes in the Holy-of-Holies of Man's Soul; in what words, known to these profane times, speak even afar-off of the unspeakable?' We ask in turn: Why perplex these times, profane as they are, with needless obscurity, by omission and by commission? Not mystical only is our Professor, but whimsical; and involves himself, now more than ever, in eye-bewildering *chiaroscuro*.[6] Successive glimpses, here faithfully imparted,

5. 'Get thee hence, Satan!' (*Matthew*, iv,8–10).
6. 'Light and shade.'

our more gifted readers must endeavour to combine for their own behoof.

He says: 'The hot Harmattan wind[7] had raged itself out; its howl went silent within me; and the long-deafened soul could now hear. I paused in my wild wanderings; and sat me down to wait, and consider; for it was as if the hour of change drew nigh. I seemed to surrender, to renounce utterly, and say: Fly, then, false shadows of Hope; I will chase you no more, I will believe you no more. And ye too, haggard spectres of Fear, I care not for you; ye too are all shadows and a lie. Let me rest here: for I am way-weary and life-weary; I will rest here, were it but to die: to die or to live is alike to me; alike insignificant.' - And again: 'Here, then, as I lay in that CENTRE OF INDIFFERENCE; cast, doubtless by benignant upper Influence, into a healing sleep, the heavy dreams rolled gradually away, and I awoke to a new Heaven and a new Earth. The first preliminary moral Act, Annihilation of Self (*Selbsttodtung*),[8] had been happily accomplished; and my mind's eyes were now unsealed, and its hands ungyved.'[9]

Might we not also conjecture that the following passage refers to his Locality, during this same 'healing sleep'; that his Pilgrim-staff lies cast aside here, on 'the high table-land'; and indeed that the repose is already taking wholesome effect on him? If it were not that the tone, in some parts, has more of rancy, even of levity, than we could have expected! However, in Teufelsdröckh, there is always the strangest Dualism:[10] light dancing, with guitar-music, will be going on in the fore-court, while by fits from within comes the faint whimpering of woe and wail. We transcribe the piece entire:

'Beautiful it was to sit there, as in my skyey Tent, musing and meditating; on the high table-land, in front of the Mountains; over me, as roof, the azure Dome, and around me, for walls, four azure-flowing curtains, — namely, of the Four azure winds, on whose bottom-fringes also I have seen gilding. And then to fancy the fair Castles that stood sheltered in these Mountain hollows; with their green flower-lawns, and white dames and damosels, lovely enough: or better still, the straw-roofed Cottages, wherein stood many a Mother baking bread, with her children round her: — all hidden and protectingly folded-up in the valley-folds; yet there and alive, as sure as if I beheld them. Or to see, as well as fancy, the nine Towns and Villages, that lay round my mountain-seat, which, in still weather, were wont to speak to me (by their steeple-bells) with metal tongue; and, in almost all weather, proclaimed their vitality by repeated Smoke-clouds: whereon, as on a culinary horologe, I might read the hour of the day. For it was the smoke of cookery, as kind housewives at morning, midday, eventide, were boiling their husbands' kettles; and ever a blue pillar rose up into the air, successively or simultaneously, from each of the nine, saying, as plainly as smoke could say: Such and such a meal is getting ready here. Not uninteresting! For you have the whole Borough, with all its love-makings and scandal-mongeries, contentions and contentments, as in miniature, and could cover it all with your hat. — If, in my wide Wayfarings, I had learned to look into the business of the World in its details, here perhaps was the place for combining it into general propositions, and deducing inferences therefrom.

'Often also could I see the black Tempest marching in anger through the Dis-

7. A dry dust-laden wind blowing from the interior on the Atlantic coast of Africa, withering vegetation and drying the skin.
8. A term adopted from Novalis, originally meaning the act of removing from one's *thinking* the distracting and falsifying personal element.
9. Unfettered.
10. Between the ideal and the actual, the spiritual and the physical, hope and despair, the poetic and the prosaic; in short, the transcendental and the descendental.

tance: round some Schreckhorn,[11] as yet grim-blue, would the eddying vapour gather, and there tumultuously eddy, and flow down like a mad witch's hair; till, after a space, it vanished, and, in the clear sunbeam, your Schreckhorn stood smiling grim-white, for the vapour had held snow. How thou fermentest and elaboratest, in thy great fermenting-vat and laboratory of an Atmosphere, of a World, O Nature! — Or what is Nature? Ha! why do I not name thee God? Art not thou the "Living Garment of God"? O Heavens, is it, in very deed, He, then, that ever speaks through thee; that lives and loves in thee, that lives and loves in me?

'Fore-shadows, call them rather fore-splendours, of that Truth, and Beginning of Truths, fell mysteriously over my soul. Sweeter than Dayspring to the Ship-wrecked in Nova Zembla; ah, like the mother's voice to her little child that strays bewildered, weeping, in unknown tumults; like soft streamings of celestial music to my too-exasperated heart, came that Evangel. The Universe is not dead and demoniacal, a charnel-house with spectres; but godlike, and my Father's!

'With other eyes, too, could I now look upon my fellow man; with an infinite Love, an infinite Pity. Poor, wandering, wayward man! Art thou not tired, and beaten with stripes, even as I am? Ever, whether thou bear the royal mantle or the beggar's gabardine, art thou not so weary, so heavy-laden; and thy Bed of Rest is but a Grave. O my Brother, my Brother, why cannot I shelter thee in my bosom, and wipe away all tears from thy eyes![12] Truly, the din of many-voiced Life, which, in this solitude, with the mind's organ, I could hear, was no longer a maddening discord, but a melting one; like inarticulate cries, and sobbings of a dumb creature, which in the ear of Heaven are prayers. The poor Earth, with her poor joys, was now my needy Mother, not my cruel Stepdame; man, with his so mad Wants and so mean Endeavours, had become the dearer to me; and even for his sufferings and his sins, I now first named him Brother. Thus I was standing in the porch of that "*Sanctuary of Sorrow*"; [13] by strange, steep ways had I too been guided thither; and ere long its sacred gates would open, and the "*Divine Depth of Sorrow*" lie disclosed to me.'

The Professor says, he here first got eye on the Knot that had been strangling him, and straightway could unfasten it, and was free. 'A vain interminable controversy,' writes he, 'touching what is at present called Origin of Evil, or some such thing, arises in every soul, since the beginning of the world; and in every soul, that would pass from idle Suffering into actual Endeavouring, must first be put an end to. The most, in our time, have to go content with a simple, incomplete enough Suppression of this controversy: to a few some Solution of it is indispensable. In every new era, too, such Solution comes-out in different terms; and ever the Solution of the last era has become obsolete, and is found unserviceable. For it is man's nature to change his Dialect from century to century; he cannot help it though he would. The authentic *Church-Catechism* of our present century has not yet fallen into my hands: meanwhile, for my own private behoof, I attempt to elucidate the matter so. Man's Unhappiness, as I construe, comes of his Greatness; it is because there is an Infinite in him, which with all his cunning he cannot quite bury under the Finite. Will the whole Finance Ministers and Upholsterers and Confectioners of modern Europe undertake, in joint-stock company, to make one Shoeblack HAPPY? They cannot accomplish it, above an hour or two; for the Shoeblack also has a Soul quite other than his Stomach; and would require, if you consider it,

11. One of the chief summits in the Bernese Alps, in Switzerland.

12. *Cf. Revelation*, xxi,4.

13. An expression adapted from *Wilhelm Meister*.

for his permanent satisfaction and saturation, simply this allotment, no more, and no less: *God's infinite Universe altogether to himself*, therein to enjoy infinitely, and fill every wish as fast as it rose. Oceans of Hochheimer,[14] a Throat like that of Ophiuchus:[15] speak not of them; to the infinite Shoeblack they are as nothing. No sooner is your ocean filled, than he grumbles that it might have been of better vintage. Try him with half of a Universe, of an Omnipotence, he sets to quarrelling with the proprietor of the other half, and declares himself the most maltreated of men. -- Always there is a black spot in our sunshine: it is even as I said, the *Shadow of Ourselves*.

'But the whim we have of Happiness is somewhat thus. By certain valuations, and averages, of our own striking, we come upon some sort of average terrestrial lot; this we fancy belongs to us by nature, and of indefeasible right. It is simple payment of our wages, of our deserts; requires neither thanks nor complaint; only such *overplus* as there may be do we account Happiness; any *deficit* again is Misery. Now consider that we have the valuation of our own deserts ourselves, and what a fund of Self-conceit there is in each of us, -- do you wonder that the balance should so often dip the wrong way, and many a Blockhead cry: See there, what a payment; was ever worthy gentleman so used! -- I tell thee, Blockhead, it all comes of thy Vanity; of what thou *fanciest* those same deserts of thine to be. Fancy that thou deservest to be hanged (as is most likely), thou wilt feel it happiness to be only shot: fancy that thou deservest to be hanged in a hair-halter, it will be a luxury to die in hemp.

'So true is it, what I then say, that *the Fraction of Life can be increased in value not so much by increasing your Numerator as by lessening your Denominator*. Nay, unless my Algebra deceive me, *Unity* itself divided by *Zero* will give *Infinity*. Make thy claim of wages a zero, then; thou hast the world under thy feet. Well did the Wisest of our time[16] write: "It is only with Renunciation (*Entsagen*) that Life, properly speaking, can be said to begin."

'I asked myself: What is this that, ever since earliest years, thou hast been fretting and fuming, and lamenting and self-tormenting, on account of? Say it in a word: is it not because thou art not HAPPY? Because the THOU (sweet gentleman) is not sufficiently honoured, nourished, soft-bedded, and lovingly cared for? Foolish soul! What Act of Legislature was there that *thou* shouldst be Happy? A little while ago thou hadst no right to *be* at all. What if thou wert born and predestined not to be Happy, but to be Unhappy! Art thou nothing other than a Vulture, then, that fliest through the Universe seeking after somewhat to *eat*; and shriekest dolefully because carrion enough is not given thee? Close thy *Byron*; open thy *Goethe*.'[17]

'*Es leuchtet mir ein*,[18] I see a glimpse of it!' cries he elsewhere: 'there is in man a HIGHER than Love of Happiness: he can do without Happiness, and instead thereof find Blessedness! Was it not to preach-forth this same HIGHER that sages and martyrs, the Poet and the Priest, in all times, have spoken and suffered; bearing testimony, through life and through death, of the Godlike that is in Man, and how in the Godlike only has he Strength and Freedom? Which God-inspired Doctrine art thou also honoured to be taught; O Heavens! and broken with manifold mer-

15. Allusion to the Constellation, *Serpentarius*, a man holding a serpent in his hands.
16. Goethe, in *Wilhelm Meister* (Carlyle's transl., Cent. ed.), II.334.
17. That is, cease all impotent brooding over the mystery of suffering and frustration, and begin the creative life by doing the best with the actual environment at hand.
18. Meister's exclamation when he catches a glimpse of the significance of the three kinds of 'reverence' in Chapter x of the *Wanderjahre*.

ciful Afflictions, even till thou become contrite, and learn it! O, thank thy Destiny for these; thankfully bear what yet remain: thou hadst need of them; the Self in thee needed to be annihilated. By benignant fever-paroxysms is Life rooting out the deep-seated chronic Diseases, and triumphs over Death. On the roaring billows of Time, thou art not engulfed, but borne aloft into the azure of Eternity. Love not Pleasure; love God.[19] This is the EVERLASTING YEA, wherein all contradiction is solved: wherein whoso walks and works, it is well with him.'

And again: 'Small is it that thou canst trample the Earth with its injuries under thy feet, as old Greek Zeno [20] trained thee: thou canst love the Earth while it injures thee, and even because it injures thee; for this a Greater than Zeno was needed, and he too was sent. Knowest thou that "*Worship of Sorrow*"? [21] The Temple thereof, founded some eighteen centuries ago, now lies in ruins, overgrown with jungle, the habitation of doleful creatures: [22] nevertheless, venture forward; in a low crypt, arched out of falling fragments, thou findest the Altar still there, and its sacred Lamp perennially burning.'

Without pretending to comment on which strange utterances, the Editor will only remark, that there lies beside them much of a still more questionable character; unsuited to the general apprehension; nay wherein he himself does not see his way. Nebulous disquisitions on Religion, yet not without bursts of splendour; on the 'perennial continuance of Inspiration'; on Prophecy; that there are 'true Priests, as well as Baal-Priests,[23] in our own day': with more of the like sort. We select some fractions, by way of finish to this farrago.

'Cease, my much-respected Herr von Voltaire,' [24] thus apostrophises the Professor: 'shut thy sweet voice; for the task appointed thee seems finished. Sufficiently hast thou demonstrated this proposition, considerable or otherwise: That the Mythus of the Christian Religion looks not in the eighteenth century as it did in the eighth. Alas, were thy six-and-thirty quartos, and the six-and-thirty thousand other quartos and folios, and flying sheets or reams, printed before and since on the same subject, all needed to convince us of so little! But what next? Wilt thou help us to embody the divine Spirit of that Religion in a new Mythus, in a new vehicle and vesture, that our Souls, otherwise too like perishing, may live? What! thou hast no faculty in that kind? Only a torch for burning, no hammer for building? Take our thanks, then, and — thyself away.

'Meanwhile what are antiquated Mythuses to me? Or is the God present, felt in my own heart, a thing which Herr von Voltaire will dispute out of me: or dispute into me? To the "*Worship of Sorrow*" ascribe what origin and genesis thou pleasest, *has* not that Worship originated, and been generated; is it not *here*? Feel it in thy heart, and then say whether it is of God! This is Belief; all else is Opinion, — for which latter whoso will let him worry and be worried.'

'Neither,' observes he elsewhere, 'shall ye tear-out one another's eyes, struggling over "Plenary Inspiration," [25] and such like: try rather to get a little even Partial Inspiration, each of you for himself. One BIBLE I know, of whose Plenary Inspira-

19. *Cf. II Timothy*, iii,4.
20. The Greek Stoic philosopher of the 3rd century B.C., who taught submission to the law of the world, rather than the pursuit of happiness.
21. This phrase is an expansion on Goethe's *sanctuary* and *divine depths of sorrow*, to denote the fundamental nature of religion, that is, the acceptance of suffering as a means to spiritual growth.
22. Phrasing from *Isaiah*, xiii,21.
23. False priests (*I Kings*, xviii,17-40).
24. Voltaire (1694-1778), French poet, dramatist, critic, and skeptic, summed up, for Carlyle, all the irreligion of the 18th century.
25. The theological doctrine which holds that the Bible was supernaturally inspired, in all its subjects and statements.

tion doubt is not so much as possible; nay with my own eyes I saw the God's-Hand writing it: thereof all other Bibles are but leaves, — say, in Picture-Writing to assist the weaker faculty.'

Or, to give the wearied reader relief, and bring it to an end, let him take the following perhaps more intelligible passage:

'To me, in this our life,' says the Professor, 'which is an internecine warfare with the Time-spirit, other warfare seems questionable. Hast thou in any way a Contention with thy brother, I advise thee, think well what the meaning thereof is. If thou gauge it to the bottom, it is simply this: "Fellow, see! thou art taking more than thy share of Happiness in the world, something from *my* share: which, by the Heavens, thou shalt not; nay I will fight thee rather." — Alas, and the whole lot to be divided is such a beggarly matter, truly a "feast of shells,"[26] for the substance has been spilled out: not enough to quench one Appetite; and the collective human species clutching at them! — Can we not, in all such cases, rather say: "Take it, thou too-ravenous individual; take that pitiful additional fraction of a share, which I reckoned mine, but which thou so wantest; take it with a blessing: would to Heaven I had enough for thee!"

If Fichte's *Wissenschaftslehre* be, "to a certain extent, Applied Christianity,"[27] surely to a still greater extent, so is this. We have here not a Whole Duty of Man,[28] yet a Half Duty, namely the Passive half: could we but do it, as we can demonstrate it!

'But indeed Conviction, were it never so excellent, is worthless till it convert itself into Conduct. Nay properly Conviction is not possible till then; inasmuch as all Speculation is by nature endless, formless, a vortex amid vortices: only by a felt indubitable certainty of Experience does it find any centre to revolve round, and so fashion itself into a system. Most true is it, as a wise man teaches us, that "Doubt of any sort cannot be removed except by Action."[29] On which ground, too, let him who gropes painfully in darkness or uncertain light, and prays vehemently that the dawn may ripen into day, lay this other precept well to heart, which to me was of invaluable service: "*Do the Duty which lies nearest thee*,"[30] which thou knowest to be a Duty! Thy second Duty will already have become clearer.

'May we not say, however, that the hour of Spiritual Enfranchisement is even this: When your Ideal World, wherein the whole man has been dimly struggling and inexpressibly languishing to work, becomes revealed, and thrown open; and you discover, with amazement enough, like the Lothario in *Wilhelm Meister*, that your "America is here or nowhere"?[31] The Situation that has not its Duty, its Ideal, was never yet occupied by man. Yes here, in this poor, miserable, hampered, despicable Actual, wherein thou even now standest, here or nowhere is thy Ideal: work it out therefrom; and working, believe, live, be free. Fool! the Ideal is in thyself, the impediment too is in thyself: thy Condition is but the stuff thou art to shape that same Ideal out of: what matters whether such stuff be of this sort or that, so the Form thou give it be heroic, be poetic? O thou that pinest in the imprisonment of the Actual, and criest bitterly to the gods for a kingdom wherein

26. *i.e.* of shells from which the yolks have been blown.

27. A statement of Novalis's (quoted in Carlyle's *Essays* [Cent ed.], II,43). Fichte's *Wissenschaftslehre* (or 'Doctrine of Knowledge') (1794) was an influential post-Kantian work which attempted, among other things, to show that the thinking Self, the *Ego*, is the only reality, and that the physical is but a creation of this self, or spirit.

28. The title of an anonymous devotional work of the 17th century.

29. From *Wilhelm Meister*, I,386.

30. *Ibid.* II,2.

31. See *Wilhelm Meister*, II,11 (Bk.VII,Ch.iii), for an illuminating passage on this ethical problem. Carlyle is following Goethe very closely in this and in the preceding paragraph.

to rule and create, know this of a truth: the thing thou seekest is already with thee, "here or nowhere," couldst thou only see!

'But it is with man's Soul as it was with Nature: the beginning of Creation is — Light.[32] Till the eye have vision, the whole members are in bonds.[33] Divine moment, when over the tempest-tost Soul, as once over the wild-weltering Chaos, it is spoken: Let there be Light! Ever to the greatest that has felt such moment, is it not miraculous and God-announcing; even as, under simpler figures, to the simplest and least. The mad primeval Discord is hushed; the rudely-jumbled conflicting elements bind themselves into separate Firmaments: deep silent rock-foundations are built beneath; and the skyey vault with its everlasting Luminaries above: instead of a dark wasteful Chaos, we have a blooming, fertile, heaven-encompassed World.

'I too could now say to myself: Be no longer a Chaos, but a World, or even Worldkin. Produce! Produce! Were it but the pitifullest infinitesimal fraction of a Product, produce it, in God's name! 'Tis the utmost thou hast in thee: out with it, then. Up, up! Whatsoever thy hand findeth to do, do it with thy whole might. Work while it is called Today; for the Night cometh, wherein no man can work.'[34]

BOOK THIRD

CHAPTER III

Symbols

PROBABLY it will elucidate the drift of these foregoing obscure utterances,[1] if we here insert somewhat of our Professor's speculations on *Symbols*. To state his whole doctrine, indeed, were beyond our compass: nowhere is he more mysterious, impalpable, than in this of 'Fantasy being the organ of the God-like';[2] and how 'Man thereby, though based, to all seeming, on the small Visible, does nevertheless extend down into the infinite deeps of the Invisible, of which Invisible, indeed, his Life is properly the bodying forth.' Let us, omitting these high transcendental aspects of the matter, study to glean (whether from the Paper-bags or the Printed Volume) what little seems logical and practical, and cunningly arrange it into such degree of coherence as it will assume. By way of proem, take the following not injudicious remarks:

'The benignant efficacies of Concealment,' cries our Professor, 'who shall speak or sing? SILENCE and SECRECY! Altars might still be raised to them (were this an altar building time) for universal worship. Silence is the element in which great things fashion themselves together; that at length they may emerge, full-formed and majestic, into the daylight of Life, which they are thenceforth to rule. Not William the Silent[3] only, but all the considerable men I have known, and the most undiplomatic and unstrategic of these, forbore to babble of what they were creating and projecting. Nay, in thy own mean perplexities, do thou thyself but *hold thy tongue for one day*; on the morrow, how much clearer are thy purposes and duties; what wreck and rubbish have those mute workmen within thee swept

32. See *Genesis*, i,3.
33. Phrasing from *Matthew*, vi,22–23.
34. These last, climactic sentences are an adaptation of two Biblical passages: *Ecclesiastes*, ix,10, and *John*, ix,4.

1. That is, in the preceding chapter, on 'Church-Clothes,' in which Carlyle points out the modern decay of much in religious doctrine, yet holds out hope in his doctrine of *Palingenesia*, or 'new-birth,' — the forms or symbols of religious realities perish, but religion remains. Thus the present chapter, on 'Symbols,' is an examination of the nature of forms and symbols as such.
2. Quoted from Friedrich von Schlegel (1772–1829), German romantic writer and critic.
3. Count of Nassau and Prince of Orange (1533–84), founder of the Dutch Republic; silent largely for political purposes.

away, when intrusive noises were shut out! Speech is too often not, as the Frenchman defined it, the art of concealing Thought; but of quite stifling and suspending Thought, so that there is none to conceal. Speech too is great, but not the greatest. As the Swiss Inscription says: *Sprechen ist silbern, Schweigen ist golden* (Speech is silvern, Silence is golden); or as I might rather express it: Speech is of Time, Silence is of Eternity.

'Bees will not work except in darkness; Thought will not work except in Silence; neither will Virtue work except in Secrecy. Let not thy left hand know what thy right hand doeth![4] Neither shalt thou prate even to thy own heart of "those secrets known to all." Is not Shame (*Schaam*) the soil of all Virtue, of all good manners and good morals? Like other plants, Virtue will not grow unless its root be hidden, buried from the eye of the sun. Let the sun shine on it, nay do but look at it privily thyself, the root withers, and no flower will glad thee. O my Friends, when we view the fair clustering flowers that over-wreathe, for example, the Marriage-bower, and encircle man's life with the fragrance and hues of Heaven, what hand will not smite the foul plunderer that grubs them up by the roots, and with grinning, grunting satisfaction, shows us the dung they flourish in! Men speak much of the Printing-Press with its Newspaper: *du Himmel!* what are these to Clothes and the Tailor's Goose?'[5]

'Of kin to the so incalculable influences of Concealment, and connected with still greater things, is the wondrous agency of *Symbols*. In a Symbol there is concealment and yet revelation: here therefore, by Silence and by Speech acting together, comes a double significance. And if both the Speech be itself high, and the Silence fit and noble, how expressive will their union be! Thus in many a painted Device, or simple Seal-emblem, the commonest Truth stands-out to us proclaimed with quite new emphasis.

'For it is here that Fantasy with her mystic wonderland plays into the small prose domain of Sense, and becomes incorporated therewith. In the Symbol proper, what we can call a Symbol, there is ever, more or less distinctly and directly, some embodiment and revelation of the Infinite; the Infinite is made to blend itself with the Finite, to stand visible, and as it were, attainable there. By Symbols, accordingly, is man guided and commanded, made happy, made wretched. He everywhere finds himself encompassed with Symbols, recognised as such or not recognised: the Universe is but one vast Symbol of God; nay if thou wilt have it, what is man himself but a Symbol of God; is not all that he does symbolical; a revelation to Sense of the mystic god-given force that is in him; a "Gospel of Freedom," which he, the "Messias[6] of Nature," preaches, as he can, by act and word? Not a Hut he builds but is the visible embodiment of a Thought; but bears visible record of invisible things; but is, in the transcendental sense, symbolical as well as real.'

'Man,' says the Professor elsewhere, in quite antipodal contrast with these high-soaring delineations, which we have here cut short on the verge of the inane, 'Man is by birth somewhat of an owl. Perhaps, too, of all the owleries that ever possessed him, the most owlish, if we consider it, is that of your actually existing Motive-Millwrights.[7] Fantastic tricks enough man has played, in his time; has fancied himself to be most things, down even to an animated heap of Glass;[8] but to fancy himself a dead Iron-Balance for weighing

4. *Matthew*, vi,3.
5. Tailor's iron.
6. *Messias*: Greek form of Hebrew *Messiah*, 'the anointed one,' or Christ. (Man is to 'redeem' Nature, as Christ redeemed Man; also, Man is a 'natural' Messiah, as Christ was a divine one.)
7. Utilitarians.
8. As in Burton's *Anatomy of Melancholy*.

Pains and Pleasures on, was reserved for this his latter era. There stands he, his Universe one huge Manger, filled with hay and thistles to be weighed against each other; and looks long-eared enough. Alas, poor devil! spectres are appointed to haunt him: one age he is hag-ridden, bewitched; the next, priestridden, befooled; in all ages, bedevilled. And now the Genius of Mechanism smothers him worse than any Nightmare did; till the Soul is nigh choked out of him, and only a kind of Digestive, Mechanic life remains. In Earth and in Heaven he can see nothing but Mechanism; has fear for nothing else, hope in nothing else: the world would indeed grind him to pieces; but cannot he fathom the Doctrine of Motives, and cunningly compute these, and mechanise them to grind the other way?

'Were he not, as has been said, purblinded by enchantment, you had but to bid him open his eyes and look. In which country, in which time, was it hitherto that man's history, or the history of any man, went-on by calculated or calculable "Motives"? What make ye of your Christianities, and Chivalries, and Reformations, and Marseillese Hymns, and Reigns of Terror?[9] Nay, has not perhaps the Motive-grinder himself been *in Love*? Did he never stand so much as a contested Election? Leave him to Time, and the medicating virtue of Nature.'

'Yes, Friends,' elsewhere observes the Professor, 'not our Logical, Mensurative faculty, but our Imaginative one is King over us; I might say, Priest and Prophet to lead us heavenward; our Magician and Wizard to lead us hellward. Nay, even for the basest Sensualist, what is Sense but the implement of Fantasy;[10] the vessel it drinks out of? Ever in the dullest existence there is a sheen either of Inspiration or of Madness (thou partly hast it in thy choice, which of the two), that gleams-in from the circumambient Eternity, and colours with its own hues our little islet of Time. The Understanding[11] is indeed thy window, too clear thou canst not make it; but Fantasy is thy eye, with its colour-giving retina, healthy or diseased. Have not I myself known five-hundred living soldiers sabred into crows'-meat for a piece of glazed cotton, which they called their Flag; which, had you sold it at any market-cross, would not have brought above three groschen? Did not the whole Hungarian Nation rise, like some tumultuous moon stirred Atlantic, when Kaiser Joseph[12] pocketed their Iron Crown; an Implement, as was sagaciously observed, in size and commercial value little differing from a horseshoe? It is in and through *Symbols* that man, consciously or unconsciously, lives, works, and has his being: those ages, moreover, are accounted the noblest which can the best recognise symbolical worth, and prize it the highest. For is not a Symbol ever, to him who has eyes for it, some dimmer or clearer revelation of the Godlike?

'Of Symbols, however, I remark farther, that they have both an extrinsic and intrinsic value; oftenest the former only. What, for instance, was in that clouted Shoe, which the Peasants bore aloft with them as ensign in their *Bauernkrieg* (Peasants' War)?[13] Or in the Watlet-and-staff round which the Netherland *Gueux*, glorying in that nickname of Beggars, heroically rallied and prevailed though against King Philip himself?[14] Intrinsic significance these had none: only extrinsic; as the accidental Standards of

9. See Carlyle's *French Revolution*, *passim*.

10. Fantasy is here used as virtually equivalent to intuition, 'Reason,' spiritual insight, etc.

11. As used by the German philosopher Kant (1724–1804), who opposed Understanding (*Verstand*) to Reason (*Vernunft*), the latter leading to practical faith in God, freedom, and immortality.

12. Joseph II (1741–90), of Austria.

13. In 1524–25, one episode of the Reformation.

14. *i.e.* against Philip II of Spain, whose tyranny was stirring the wrath of the Dutch nobles.

multitudes more or less sacredly uniting together; in which union itself, as above noted, there is ever something mystical and borrowing of the Godlike. Under a like category, too, stand, or stood, the stupidest heraldic Coats-of-arms; military Banners everywhere; and generally all national or other Sectarian Costumes and Customs: they have no intrinsic, necessary divineness, or even worth; but have acquired an extrinsic one. Nevertheless through all these there glimmers something of a Divine Idea;[15] as through military Banners themselves, the Divine Idea of Duty, of heroic Daring; in some instances of Freedom, of Right. Nay, the highest ensign that men ever met and embraced under, the Cross itself, had no meaning save an accidental extrinsic one.

'Another matter it is, however, when your Symbol has intrinsic meaning, and is of itself *fit* that men should unite round it. Let but the Godlike manifest itself to Sense; let but Eternity look, more or less visibly, through the Time-Figure (*Zeitbild*)! Then is it fit that men unite there; and worship together before such Symbol: and so from day to day, and from age to age, superadd to it new divineness.

'Of this latter sort are all true works of Art: in them (if thou know a Work of Art from a Daub of Artifice) wilt thou discern Eternity looking through Time; the Godlike rendered visible. Here too may an extrinsic value gradually superadd itself: thus certain *Iliads*, and the like, have, in three-thousand years, attained quite new significance. But nobler than all in this kind, are the Lives of heroic god-inspired Men; for what other Work of Art is so divine? In Death too, in the Death of the Just, as the last perfection of a Work of Art, may we not discern symbolic meaning? In that divinely transfigured Sleep, as of Victory, resting over the beloved face which now knows thee no more, read (if thou canst for tears) the confluence of Time with Eternity, and some gleam of the latter peering through.

'Highest of all Symbols are those wherein the Artist or Poet has risen into Prophet, and all men can recognise a present God, and worship the same: I mean religious Symbols. Various enough have been such religious Symbols, what we call *Religions*; as men stood in this stage of culture or the other, and could worse or better body-forth the Godlike: some Symbols with a transient intrinsic worth; many with only an extrinsic. If thou ask to what height man has carried it in this manner, look on our divinest Symbol: on Jesus of Nazareth, and his Life, and his Biography, and what followed therefrom. Higher has the human Thought not yet reached: this is Christianity and Christendom; a Symbol of quite perennial, infinite character: whose significance will ever demand to be anew inquired into, and anew made manifest.

'But, on the whole, as time adds much to the sacredness of Symbols, so likewise in his progress he at length defaces or even desecrates them; and Symbols, like all terrestrial Garments, wax old. Homer's Epos has not ceased to be true; yet it is no longer *our* Epos, but shines in the distance, if clearer and clearer, yet also smaller and smaller, like a receding Star. It needs a scientific telescope, it needs to be reinterpreted and artificially brought near us, before we can so much as know that it *was* a Sun. So likewise a day comes when the Runic Thor, with his Eddas,[16] must withdraw into dimness; and many an African Mumbo-Jumbo[17] and Indian Pawaw[18] be

15. An expression from the philosophy of Fichte, to denote the rational activity at the heart of things, or in any person or thing.

16. Collections of Norse myths and hymns, in prose and poetry. Thor was the Norse thunder-god. Runes were the signs or characters in the Norse alphabet.

17. An African bogie, for frightening unruly women.

18. Or powwow. North American Indian medicine man.

utterly abolished. For all things, even Celestial Luminaries, much more atmospheric meteors, have their rise, their culmination, their decline.'

'Small is this which thou tellest me, that the Royal Sceptre is but a piece of gilt-wood; that the Pyx [19] has become a most foolish box, and truly, as Ancient Pistol [20] thought, "of little price." A right Conjuror might I name thee, couldst thou conjure back into these wooden tools the divine virtue they once held.'

'Of this thing, however, be certain: wouldst thou plant for Eternity, then plant into the deep infinite faculties of man, his Fantasy and Heart; wouldst thou plant for Year and Day, then plant into his shallow superficial faculties, his Self-love and Arithmetical Understanding, what will grow there. A Hierarch,[21] therefore, and Pontiff [22] of the World will we call him, the Poet and inspired Maker; who, Prometheus-like,[23] can shape new Symbols, and bring new Fire from Heaven to fix it there. Such too will not always be wanting; neither perhaps now are. Meanwhile, as the average of matters goes, we account him Legislator and wise who can so much as tell when a Symbol has grown old, and gently remove it.

'When, as the last English Coronation [24] was preparing,' concludes this wonderful Professor, 'I read in their Newspapers that the "Champion of England," [25] he who has to offer battle to the Universe for his new King, had brought it so far that he could now "mount his horse with little assistance," I said to myself: Here also we have a Symbol well-nigh superannuated. Alas, move whithersoever you may, are not the tatters and rags of superannuated worn-out symbols (in this Ragfair of a World) dropping off everywhere, to hoodwink, to halter, to tether you; nay, if you shake them not aside, threatening to accumulate, and perhaps produce suffocation?'

19. The box, vase, or case containing the Eucharist, or bread and wine, used in the sacrament of the Lord's Supper.
20. See *Henry V*, III.vi.47.
21. Chief of a sacred order.
22. Or Pope.
23. As if bearing fire, or inspiration.
24. That of George IV. [Carlyle's note.]
25. The Coronation official who 'challenges' any one to dispute the sovereign's right to succession; he appears in full armor.

Chapter VII

Organic Filaments [1]

For us, who happen to live while the World-Phœnix [2] is burning herself, and burning so slowly that, as Teufelsdröckh calculates, it were a handsome bargain would she engage to have done 'within two centuries,' there seems to lie but an ashy prospect. Not altogether so, however, does the Professor figure it. 'In the living subject,' says he, 'change is wont to be gradual: thus, while the serpent sheds its old skin, the new is already formed beneath. Little knowest thou of the burning of a World-Phœnix, who fanciest that she must first burn-out, and lie as a dead cinereous heap; and therefrom the young one start-up by miracle, and fly heavenward. Far otherwise! In that Fire-whirlwind, Creation and Destruction proceed together; ever as the ashes of the Old are blown about, do organic filaments of the New mysteriously spin themselves: and amid the rushing and the waving of the Whirlwind-Element come tones of a melodious Deathsong, which end not but in tones of a more melodious Birthsong. Nay, look into the Fire-whirlwind with thy own eyes, and thou wilt see.' Let us actually look, then: to poor individuals, who cannot expect to live two centuries, those same organic filaments, mysteriously spinning themselves, will be the best part of the

1. Or the elements (new religion, new society, etc.) out of which a new Phoenix, symbol of re-birth, will arise from the ashes of the old, and unite all things and creatures into one.
2. *Phoenix*: in ancient Egyptian religion, a miraculous bird, the embodiment of the sun-god, which was fabled to live for 500 years, then to be consumed in fire by its own act, and later to rise in youthful freshness from its own ashes.

spectacle. First, therefore, this of Mankind in general:

'In vain thou deniest it,' says the Professor; 'thou *art* my Brother. Thy very Hatred, thy very Envy, those foolish lies thou tellest of me in thy splenetic humour: what is all this but an inverted Sympathy? Were I a Steam-engine, wouldst thou take the trouble to tell lies of me? Not thou! I should grind all unheeded, whether badly or well.

'Wondrous truly are the bonds that unite us one and all; whether by the soft binding of Love, or the iron chaining of Necessity, as we like to choose it. More than once have I said to myself, of some perhaps whimsically strutting Figure, such as provokes whimsical thoughts: "Wert thou, my little Brotherkin, suddenly covered-up within the largest imaginable Glass-bell, — what a thing it were, not for thyself only, but for the world! Post Letters, more or fewer, from all the four winds, impinge against thy Glass walls, but have to drop unread: neither from within comes there question or response into any Postbag; thy Thoughts fall into no friendly ear or heart, thy Manufacture into no purchasing hand: thou art no longer a circulating venous-arterial Heart, that, taking and giving, circulatest through all Space and all Time: there has a Hole fallen-out in the immeasurable, universal World-tissue, which must be darned-up again!"

'Such venous-arterial circulation, of Letters, verbal Messages, paper and other Packages, going out from him and coming in, are a blood-circulation, visible to the eye: but the finer nervous circulation, by which all things, the minutest that he does, minutely influence all men, and the very look of his face blesses or curses whomso it lights on, and so generates ever new blessing or new cursing: all this you cannot see, but only imagine. I say, there is not a red Indian, hunting by Lake Winnipic,[3] can quarrel with his squaw, but the whole world must smart for it: will not the price of beaver rise? It is a mathematical fact that the casting of this pebble from my hand alters the centre of gravity of the Universe.

'If now an existing generation of men stand so woven together, not less indissolubly does generation with generation. Hast thou ever meditated on that word, Tradition: how we inherit not Life only, but all the garniture and form of Life; and work, and speak, and even think and feel, as our Fathers, and primeval grandfathers, from the beginning, have given it us? — Who printed thee, for example, this unpretending Volume on the Philosophy of Clothes? Not the Herren Stillschweigen and Company; but Cadmus of Thebes,[4] Faust of Mentz,[5] and innumerable others whom thou knowest not. Had there been no Mœsogothic Ulfila,[6] there had been no English Shakspeare, or a different one. Simpleton! it was Tubalcain[7] that made thy very Tailor's needle, and sewed that court-suit of thine.

'Yes, truly; if Nature is one, and a living indivisible whole, much more is Mankind, the Image that reflects and creates Nature, without which Nature were not. As palpable life-streams in that wondrous Individual Mankind, among so many life-streams that are not palpable, flow on those main currents of what we call Opinion; as preserved in Institutions, Polities, Churches, above all in Books. Beautiful it is to understand and know that a Thought did never yet die; that as thou, the originator thereof, hast gathered it and created it from the whole Past, so thou wilt transmit it to the whole Future. It is thus that the heroic heart, the seeing eye of

3. Lake Winnipeg.

4. Legendary founder of Thebes, who introduced into Greece from Phoenicia or Egypt an alphabet of sixteen letters.

5. Inventor of movable types, in the 15th century.

6. Or Ulfilas (c.311–83), Bishop of the Arian Visigoths, apostle of Christianity to the Goths, translated the Bible into Gothic. *Mœsogothic*: Moesia = modern Serbia, Bulgaria, etc.

7. See *Genesis*, iv,22.

the first times, still feels and sees in us of the latest; that the Wise Man stands ever encompassed, and spiritually embraced, by a cloud of witnesses [8] and brothers; and there is a living, literal *Communion of Saints*,[9] wide as the World itself, and as the History of the World.

'Noteworthy also, and serviceable for the progress of this same Individual, wilt thou find his subdivision into Generations. Generations are as the Days of toilsome Mankind: Death and Birth are the vesper and the matin bells, that summon Mankind to sleep, and to rise refreshed for new advancement. What the Father has made, the Son can make and enjoy; but has also work of his own appointed him. Thus all things wax, and roll onwards; Arts, Establishments, Opinions, nothing is completed, but ever completing. Newton [10] has learned to see what Kepler [11] saw; but there is also a fresh heaven-derived force in Newton; he must mount to still higher points of vision. So too the Hebrew Lawgiver [12] is, in due time, followed by an Apostle of the Gentiles.[13] In the business of Destruction, as this also is from time to time a necessary work, thou findest a like sequence and perseverance: for Luther it was as yet hot enough to stand by that burning of the Pope's Bull; [14] Voltaire could not warm himself at the glimmering ashes, but required quite other fuel. Thus likewise, I note, the English Whig [15] has, in the second generation, become an English Radical; who, in the third again, it is to be hoped, will become an English Rebuilder. Find Mankind where thou wilt, thou findest it in living movement, in progress faster or slower: the Phœnix soars aloft, hovers with outstretched wings, filling Earth with her music; or, as now, she sinks, and with spheral swan-song immolates herself in flame, that she may soar the higher and sing the clearer.'

Let the friends of social order, in such a disastrous period, lay this to heart, and derive from it any little comfort they can. We subjoin another passage, concerning Titles:

'Remark, not without surprise,' says Teufelsdröckh, 'how all high Titles of Honour come hitherto from fighting. Your *Herzog* (Duke, *Dux*) is Leader of Armies: your Earl (*Jarl*) is Strong Man; your Marshal cavalry Horse-shoer. A Millennium, or reign of Peace and Wisdom, having from of old been prophesied, and becoming now daily more and more indubitable, may it not be apprehended that such Fighting-titles will cease to be palatable, and new and higher need to be devised?

'The only Title wherein I, with confidence, trace eternity, is that of King. *König* (King), anciently *Konning*, means Kenning (Cunning), or which is the same thing, Can-ning.[16] Ever must the Sovereign of Mankind be fitly entitled King.'

'Well, also,' says he elsewhere, 'was it written by Theologians: a King rules by divine right. He carries in him an authority from God, or man will never give it him. Can I choose my own King? I can choose my own King Popinjay,[17] and play what farce or tragedy I may with him: but he who is to be my Ruler, whose will is to be higher than my will, was chosen for me in Heaven. Neither except in such Obedience to the Heaven-chosen is Freedom so much as conceivable.'

8. See *Hebrews*, xii,1.
9. Adapted from the Apostle's Creed.
10. Sir Isaac Newton (1642–1727), English mathematician and philosopher.
11. Johann Kepler (1571–1630), German astronomer, whose three laws of planetary motion provided the basis for much of Newton's work.
12. Moses. (*John*, i,17.)
13. Paul. (*Romans*, xi,13.)
14. Which excommunicated Luther, and which Luther publicly burnt, thus initiating the destruction of Church unity in Europe.
15. Or Liberal.
16. Carlyle's etymology is no longer held. *King*: Old English *cyng*, *cyning*, belonging to a tribe, or *cynn*. *Cunning*: Old English *cunnan*, to know, be able. *Can*: Old English *cunnan*, in the sense of know *how*.
17. See Scott's *Old Mortality*, Ch.ii.

The Editor will here admit that, among all the wondrous provinces of Teufelsdröckh's spiritual world, there is none he walks in with such astonishment, hesitation, and even pain, as in the Political. How, with our English love of Ministry and Opposition, and that generous conflict of Parties, mind warming itself against mind in their mutual wrestle for the Public Good, by which wrestle, indeed, is our invaluable Constitution kept warm and alive; how shall we domesticate ourselves in this spectral Necropolis,[18] or rather City both of the Dead and of the Unborn, where the Present seems little other than an inconsiderable Film dividing the Past and the Future? In those dim longdrawn expanses, all is so immeasurable; much so disastrous, ghastly; your very radiances and straggling light-beams have a supernatural character. And then with such an indifference, such a prophetic peacefulness (accounting the inevitably coming as already here, to him all one whether it be distant by centuries or only by days), does he sit; — and live, you would say, rather in any other age than in his own! It is our painful duty to announce, or repeat, that, looking into this man, we discern a deep, silent, slow-burning, inextinguishable Radicalism, such as fills us with shuddering admiration.

Thus, for example, he appears to make little even of the Elective Franchise; at least so we interpret the following: 'Satisfy yourselves,' he says 'by universal, indubitable experiment, even as ye are now doing or will do, whether FREEDOM, heavenborn and leading heavenward, and so vitally essential for us all, cannot peradventure be mechanically hatched and brought to light in that same Ballot-Box of yours; or at worst, in some other discoverable or devisable Box, Edifice, or Steam-mechanism. It were a mighty convenience; and beyond all feats of manufacture witnessed hitherto.' Is Teufelsdröckh acquainted with the British Constitution, even slightly? — He says, under another figure: 'But after all, were the problem, as indeed it now everywhere is, To rebuild your old House from the top downwards (since you must live in it the while), what better, what other, than the Representative Machine will serve your turn? Meanwhile, however, mock me not with the name of Free, "when you have but knit-up my chains into ornamental festoons."'[19] — Or what will any member of the Peace Society[20] make of such an assertion as this: 'The lower people everywhere desire War. Not so unwisely; there is then a demand for lower people — to be shot!'

Gladly, therefore, do we emerge from those soul-confusing labyrinths of speculative Radicalism, into somewhat clearer regions. Here, looking round, as was our best, for 'organic filaments,' we ask, may not this, touching 'Hero worship,' be of the number? It seems of a cheerful character; yet so quaint, so mystical, one knows not what, or how little, may lie under it. Our readers shall look with their own eyes:

'True is it that, in these days, man can do almost all things, only not obey. True likewise that whoso cannot obey cannot be free, still less bear rule; he that is the inferior of nothing, can be the superior of nothing, the equal of nothing. Nevertheless, believe not that man has lost his faculty of Reverence; that if it slumber in him, it has gone dead. Painful for man is that same rebellious independence, when it has become inevitable; only in loving companionship with his fellows does he feel safe; only in reverently bowing down before the Higher does he feel himself exalted.

'Or what if the character of our so troublous Era lay even in this: that man had forever cast away Fear, which is the lower; but not yet risen into perennial Reverence, which is the higher and highest?

'Meanwhile, observe with joy, so cunningly has Nature ordered it, that whatsoever man ought to obey, he cannot but

18. *i.e.* City of the Dead; cemetery.

19. Quoted from one of Goethe's epigrams.

20. Founded by the Quakers in 1816, in London.

obey. Before no faintest revelation of the Godlike did he ever stand irreverent; least of all, when the Godlike showed itself revealed in his fellowman. Thus is there a true religious Loyalty forever rooted in his heart; nay in all ages, even in ours, it manifests itself as a more or less orthodox *Hero-worship*. In which fact, that Hero-worship exists, has existed, and will forever exist, universally among Mankind, mayest thou discern the corner-stone of living-rock, whereon all Polities for the remotest time may stand secure.'

Do our readers discern any such corner-stone, or even so much as what Teufelsdröckh is looking at? He exclaims, 'Or hast thou forgotten Paris and Voltaire? [21] How the aged, withered man, though but a Sceptic, Mocker, and millinery Court-poet, yet because even he seemed the Wisest, Best, could drag mankind at his chariot-wheels, so that princes coveted a smile from him, and the loveliest of France would have laid their hair beneath his feet! All Paris was one vast Temple of Hero-worship: though their Divinity, moreover, was of feature too apish.

'But if such things,' continues he, 'were done in the dry tree, what will be done in the green? [22] If, in the most parched season of Man's History, in the most parched spot of Europe, when Parisian life was at best but a scientific *Hortus Siccus*,[23] bedizened with some Italian Gumflowers,[24] such virtue could come out of it; what is to be looked for when Life again waves leafy and bloomy, and your Hero-Divinity shall have nothing apelike, but be wholly human? Know that there is in man a quite indestructible Reverence for whatsoever holds of Heaven, or even plausibly counterfeits such holding. Show the dullest clodpole, show the haughtiest featherhead, that a soul higher than himself is actually here; were his knees stiffened into brass, he must down and worship.'

Organic filaments, of a more authentic sort, mysteriously spinning themselves, some will perhaps discover in the following passage:

'There is no Church, sayest thou? The voice of Prophecy has gone dumb? This is even what I dispute: but in any case, hast thou not still Preaching enough? A Preaching Friar settles himself in every village; and builds a pulpit, which he calls Newspaper. Therefrom he preaches what most momentous doctrine is in him, for man's salvation; and dost not thou listen, and believe? Look well, thou seest everywhere a new Clergy of the Mendicant Orders, some bare-footed, some almost bare-backed, fashion itself into shape, and teach and preach, zealously enough, for copper alms and the love of God. These break in pieces the ancient idols; and, though themselves too often reprobate, as idol-breakers are wont to be, mark out the sites of new Churches, where the true God-ordained, that are to follow, may find audience, and minister. Said I not, Before the old skin was shed, the new had formed itself beneath it?'

Perhaps also in the following; wherewith we now hasten to knit-up this ravelled sleeve: [25]

'But there is no Religion?' reiterates the Professor. 'Fool! I tell thee, there is. Hast thou well considered all that lies in this immeasurable froth-ocean we name LITERATURE? Fragments of a genuine Church-*Homiletic* lie scattered there, which Time will assort: nay fractions even of a *Liturgy* could I point out. And knowest thou no Prophet, even in the vesture, environment, and dialect of this age? None to whom the Godlike had revealed itself, through all meanest and highest forms of the Common; and by him been again prophetically revealed: in whose inspired melody, even in these rag-gathering and rag-burning days, Man's Life again begins, were it but

21. At the age of eighty-four, on February 10, 1778, Voltaire returned in triumph to Paris, after an absence (an exile) of twenty-eight years.
22. *Cf. Luke*, xxiii,31.
23. Collection of dried plants, for study.
24. Scotch for 'artificial flowers.'
25. *Cf. Macbeth*, II,ii,38.

afar off, to be divine? Knowest thou none such? I know him, and name him — Goethe.

'But thou as yet standest in no Temple; joinest in no Psalm-worship; feelest well that, where there is no ministering Priest, the people perish? [26] Be of comfort! Thou are not alone, if thou have Faith. Spake we not of a Communion of Saints, unseen, yet not unreal, accompanying and brother-like embracing thee, so thou be worthy? Their heroic Sufferings rise up melodiously together to Heaven, out of all lands, and out of all times, as a sacred *Miserere*; [27] their heroic Actions also, as a boundless everlasting Psalm of Triumph. Neither say that thou hast now no Symbol of the Godlike. Is not God's Universe a Symbol of the Godlike; is not Immensity a Temple; is not Man's History, and Men's History, a perpetual Evangel? [28] Listen, and for organ-music thou wilt ever, as of old, hear the Morning Stars sing together.' [29]

Chapter VIII

Natural Supernaturalism [1]

It is in his stupendous Section, headed *Natural Supernaturalism*, that the Professor first becomes a Seer; and, after long effort, such as we have witnessed, finally subdues under his feet this refractory Clothes Philosophy, and takes victorious possession thereof. Phantasms enough he has had to struggle with; 'Cloth-webs and Cob-webs,' of Imperial Mantles, Superannuated Symbols, and what not: yet still did he courageously pierce through. Nay, worst of all, two quite mysterious, world-embracing Phantasms, Time and Space, have ever hovered round him, perplexing and bewildering: but with these also he now resolutely grapples, these also he victoriously rends asunder. In a word, he has looked fixedly on Existence, till, one after the other, its earthly hulls and garnitures have all melted away; and now, to his rapt vision, the interior celestial Holy of Holies lies disclosed.

Here, therefore, properly it is that the Philosophy of Clothes attains to Transcendentalism; this last leap, can we but clear it, takes us safe into the promised land,[2] where *Palingenesia*,[3] in all senses, may be considered as beginning. 'Courage, then!' may our Diogenes exclaim, with better right than Diogenes the First once did.[4] This stupendous Section we, after long painful meditation, have found not to be unintelligible; but, on the contrary, to grow clear, nay radiant, and all-illuminating. Let the reader, turning on it what utmost force of speculative intellect is in him, do his part; as we, by judicious selection and adjustment, shall study to do ours:

'Deep has been, and is, the significance of Miracles,' thus quietly begins the Professor; 'far deeper perhaps than we imagine. Meanwhile, the question of questions were: What specially is a Miracle? To that Dutch King of Siam,[5] an icicle had been a miracle; whoso had carried with him an air-pump, and vial of vitriolic ether, might have worked a miracle. To my Horse, again, who unhappily is still more unscientific, do not I work a miracle, and magical "*Open sesame!*" [6] every time I please to pay twopence, and open for him an impassable *Schlagbaum*, or shut Turnpike?

26. *Cf. Proverbs*, xxix,18.
27. The 51st *Psalm*: 'Have mercy upon me, O God' (*Miserere mei Deus*).
28. Or revelation of hidden and divine truth
29. Phrasing from *Job*, xxxviii,7.

1. This title refers, of course, to Carlyle's conception of nature as marvelous or 'miraculous' in her own right, as distinguished from the older doctrine of a plane of supernaturalism from which came miraculous interventions in the order of nature.
2. See *Deuteronomy*, xix,8; xxvi,9; etc.
3. Re-birth.
4. In Laertius' *Lives of the Philosophers*, Diogenes, when a tedious lecture was near the end, cried to his neighbors: 'Courage, friends! I see land!'
5. Alluded to in Hume's *Inquiry concerning Human Understanding*, Sect.X.
6. The magical words which opened the door of the cavern in 'Ali Baba and the Forty Thieves,' in *The Arabian Nights*.

'"But is not a real Miracle simply a violation of the Laws of Nature?" ask several. Whom I answer by this new question: What are the Laws of Nature? To me perhaps the rising of one from the dead were no violation of these Laws, but a confirmation; were some far deeper Law, now first penetrated into, and by Spiritual Force, even as the rest have all been, brought to bear on us with its Material Force.

'Here too may some inquire, not without astonishment: On what ground shall one, that can make Iron swim,[7] come and declare that therefore he can teach Religion? To us, truly, of the Nineteenth Century, such declaration were inept enough; which nevertheless to our fathers, of the First Century, was full of meaning.

'"But is it not the deepest Law of Nature that she be constant?" cries an illuminated class: "Is not the Machine of the Universe fixed to move by unalterable rules?" Probable enough, good friends: nay I, too, must believe that the God, whom ancient inspired men assert to be "without variableness or shadow of turning,"[8] does indeed never change; that Nature, that the Universe, which no one whom it so pleases can be prevented from calling a Machine, does move by the most unalterable rules. And now of you, too, I make the old inquiry: What those same unalterable rules, forming the complete Statute-Book of Nature, may possibly be?

'They stand written in our Works of Science, say you; in the accumulated records of Man's Experience? — Was Man with his Experience present at the Creation, then, to see how it all went on? Have any deepest scientific individuals yet dived-down to the foundations of the Universe, and gauged everything there? Did the Maker take them into His counsel; that they read His ground-plan of the incomprehensible All; and can say, This stands marked therein, and no more than this? Alas, not in anywise! These scientific individuals have been nowhere but where we also are; have seen some handbreadths deeper than we see into the Deep that is infinite, without bottom as without shore.[9]

'Laplace's[10] Book on the Stars, wherein he exhibits that certain Planets, with their Satellites, gyrate round our worthy Sun, at a rate and in a course, which, by greatest good fortune, he and the like of him have succeeded in detecting, — is to me as precious as to another. But is this what thou namest "Mechanism of the Heavens," and "System of the World"; this, wherein Sirius and the Pleiades, and all Herschel's[11] Fifteen-thousand Suns per minute,[12] being left out, some paltry handful of Moons, and inert Balls, had been — looked at, nicknamed, and marked in the Zodiacal Way-bill; so that we can now prate of their Whereabout; their How, their Why, their What, being hid from us, as in the signless Inane?

'System of Nature! To the wisest man, wide as is his vision, Nature remains of quite *infinite* depth, of quite infinite expansion; and all Experience thereof limits itself to some few computed centuries and measured square-miles. The course of Nature's phases, on this our little fraction of a Planet, is partially known to us: but who knows what deeper courses these depend on; what infinitely larger Cycle (of causes) our little Epicycle[13] revolves on? To the

7. See *II Kings*, vi,6.
8. See *James*, i,17.
9. See the argument at the end of *Job*, xxxviii. Carlyle is attempting to keep the 'miraculous' in nature by pointing out the limitations of our knowledge; but this merely alters the meaning — or at least the scope — of the term
10. Pierre Simon, Marquis de Laplace (1749–1827), French mathematician and astronomer, author of the *Mécanique céleste* (5 vols., 1799–1825).
11. Sir William Herschel (1738–1822), English astronomer (born in Germany), who discovered more than 2,000 nebulae, over 800 double-stars, etc.
12. The astronomical minute is the 60th part of a degree, according to the Ptolemaic (and the earlier, Babylonian) division of the circle and its diameter into degrees.
13. In Ptolemaic astronomy, a circle which moves on or around another circle.

Minnow every cranny and pebble, and quality and accident, of its little native Creek may have become familiar: but does the Minnow understand the Ocean Tides and periodic Currents, the Trade-winds, and Monsoons,[14] and Moon's Eclipses; by all which the condition of its little Creek is regulated, and may, from time to time (*un*miraculously enough), be quite overset and reversed? Such a Minnow is Man: his Creek this Planet Earth; his ocean the immeasurable All; his Monsoons and periodic Currents the mysterious Course of Providence through Æons of Æons.

'We speak of the Volume of Nature: and truly a Volume it is, — whose Author and Writer is God. To read it! Dost thou, does man, so much as well know the Alphabet thereof? With its Words, Sentences, and grand descriptive Pages, poetical and philosophical, spread out through Solar Systems, and Thousands of Years, we shall not try thee. It is a Volume written in celestial hieroglyphs, in the true Sacred-writing; of which even Prophets are happy that they can read here a line and there a line. As for your Institutes, and Academies of Science, they strive bravely; and, from amid the thick-crowded, inextricably intertwisted hieroglyphic writing, pick-out, by dextrous combination, some Letters in the vulgar Character, and therefrom put together this and the other economic Recipe, of high avail in Practice. That Nature is more than some boundless Volume of such Recipes, or huge, well-nigh inexhaustible Domestic-Cookery Book, of which the whole secret will in this manner one day evolve itself, the fewest dream.

'Custom,' continues the Professor, 'doth make dotards of us all.[15] Consider well, thou wilt find that Custom is the greatest of Weavers; and weaves air-raiment for all the Spirits of the Universe; whereby indeed these dwell with us visibly, as ministering servants, in our houses and workshops; but their spiritual nature becomes, to the most, forever hidden. Philosophy complains that Custom has hoodwinked us, from the first: that we do everything by Custom, even Believe by it; that our very Axioms, let us boast of Free-thinking as we may, are oftenest simply such Beliefs as we have never heard questioned. Nay, what is Philosophy throughout but a continual battle against Custom: an ever-renewed effort to *transcend* the sphere of blind Custom, and so become Transcendental?

'Innumerable are the illusions and legerdemain-tricks of Custom: but of all these, perhaps the cleverest is her knack of persuading us that the Miraculous, by simple repetition, ceases to be Miraculous. True, it is by this means we live; for man must work as well as wonder: and herein is Custom so far a kind nurse, guiding him to his true benefit. But she is a fond foolish nurse, or rather we are false foolish nurslings, when, in our resting and reflecting hours, we prolong the same deception. Am I to view the Stupendous with stupid indifference, because I have seen it twice, or two-hundred, or two-million times? There is no reason in Nature or in Art why I should: unless, indeed, I am a mere Work-Machine, for whom the divine gift of Thought were no other than the terrestrial gift of Steam is to the Steam-engine; a power whereby Cotton might be spun, and money and money's worth realised.

'Notable enough too, here as elsewhere, wilt thou find the potency of Names: which indeed are but one kind of such custom-woven, wonder-hiding Garments. Witchcraft, and all manner of Spectre-work, and Demonology, we have now named Madness and Diseases of the Nerves. Seldom reflecting that still the new question comes upon us: What is Madness, what are Nerves? Ever, as before, does Madness remain a mysterious-terrific, altogether *infernal* boiling-up of the Nether Chaotic Deep, through this fair-painted Vision of Creation, which swims

14. Periodic winds in the Indian Ocean.

15. *Cf. Hamlet*, III,i,83: 'Thus conscience does make cowards of us all.'

thereon, which we name the Real. Was Luther's Picture of the Devil less a Reality, whether it were formed within the bodily eye, or without it? [16] In every the wisest Soul lies a whole world of internal Madness, an authentic Demon Empire; out of which, indeed, his world of Wisdom has been creatively built together, and now rests there, as on its dark foundations does a habitable flowery Earth-rind.

'But deepest of all illusory Appearances, for hiding Wonder, as for many other ends, are your two grand fundamental world-enveloping Appearances, SPACE and TIME. These, as spun and woven for us from before Birth itself, to clothe our celestial ME for dwelling here, and yet to blind it, — lie all embracing, as the universal canvas, or warp and woof, whereby all minor Illusions, in this Phantasm Existence, weave and paint themselves. In vain, while here on Earth, shall you endeavour to strip them off; you can, at best, but rend them asunder for moments, and look through.

'Fortunatus [17] had a wishing Hat, which when he put on, and wished himself Anywhere, behold he was There. By this means had Fortunatus triumphed over Space, he had annihilated Space; for him there was no Where, but all was Here. Were a Hatter to establish himself, in the Wahngasse of Weissnichtwo, and make felts of this sort for all mankind, what a world we should have of it! Still stranger, should, on the opposite side of the street, another Hatter establish himself; and as his fellow-craftsman made Space-annihilating Hats, make Time-annihilating! Of both would I purchase, were it with my last groschen; [18] but chiefly of this latter. To clap-on your felt, and, simply by wishing that you were Any*where*, straightway to be *There*! Next to clap-on your other felt, and, simply by wishing that you were Any*when*, straightway to be *Then*! This were indeed the grander: shooting at will from the Fire-Creation of the World to its Fire-Consummation; here historically present in the First Century, conversing face to face with Paul and Seneca; there prophetically in the Thirty-first, conversing also face to face with other Pauls [19] and Senecas,[20] who as yet stand hidden in the depth of that late Time!

'Or thinkest thou it were impossible, unimaginable? Is the Past annihilated, then, or only past; is the Future non-extant, or only future? Those mystic faculties of thine, Memory and Hope, already answer: already through those mystic avenues, thou the Earth-blinded summonest both Past and Future, and communest with them, though as yet darkly, and with mute beckonings. The curtains of Yesterday drop down, the curtains of Tomorrow roll up; but Yesterday and Tomorrow both *are*. Pierce through the Time-element, glance into the Eternal. Believe what thou findest written in the sanctuaries of Man's Soul, even as all Thinkers, in all ages, have devoutly read it there: that Time and Space are not God, but creations of God; that with God as it is a universal HERE, so is it an everlasting Now.

'And seest thou therein any glimpse of IMMORTALITY? — O Heaven! Is the white Tomb of our Loved One, who died from our arms, and had to be left behind us there, which rises in the distance, like a pale, mournfully receding Milestone, to tell how many toilsome uncheered miles we have journeyed on alone, — but a pale spectral Illusion! Is the lost Friend still mysteriously Here, even as we are Here mysteriously, with God! — Know of a truth that only the Time-shadows have per-

ished, or are perishable; that the real Being of whatever was, and whatever is, and whatever will be, *is* even now and forever. This, should it unhappily seem new, thou mayest ponder at thy leisure; for the next twenty years, or the next twenty centuries: believe it thou must; understand it thou canst not.

'That the Thought-forms, Space and Time, wherein, once for all, we are sent into this Earth to live, should condition and determine our whole Practical reasonings, conceptions, and imagings or imaginings, — seems altogether fit, just, and unavoidable. But that they should, furthermore, usurp such sway over pure spiritual Meditation, and blind us to the wonder everywhere lying close on us, seems nowise so. Admit Space and Time to their due rank as Forms of Thought; nay even, if thou wilt, to their quite undue rank of Realities: and consider, then, with thyself how their thin disguises hide from us the brightest God-effulgences! Thus, were it not miraculous, could I stretch forth my hand and clutch the Sun? Yet thou seest me daily stretch forth my hand and therewith clutch many a thing, and swing it hither and thither. Art thou a grown baby, then, to fancy that the Miracle lies in miles of distance, or in pounds avoirdupois of weight; and not to see that the true inexplicable God-revealing Miracle lies in this, that I can stretch forth my hand at all; that I have free Force to clutch aught therewith? Innumerable other of this sort are the deceptions, and wonder-hiding stupefactions, which Space practises on us.

'Still worse is it with regard to Time. Your grand anti-magician, and universal wonder-hider, is this same lying Time. Had we but the Time-annihilating Hat, to put on for once only, we should see ourselves in a World of Miracles, wherein all fabled or authentic Thaumaturgy, and feats of Magic, were outdone. But unhappily we have not such a Hat; and man, poor fool that he is, can seldom and scantily help himself without one.

'Were it not wonderful, for instance, had Orpheus,[21] or Amphion,[22] built the walls of Thebes by the mere sound of his Lyre? Yet tell me, Who built these walls of Weissnichtwo; summoning-out all the sandstone rocks, to dance along from the *Steinbruch*[23] (now a huge Troglodyte[24] Chasm, with frightful green-mantled pools); and shape themselves into Doric and Ionic pillars, squared ashlar houses and noble streets? Was it not the still higher Orpheus, or Orpheuses, who, in past centuries, by the divine Music of Wisdom, succeeded in civilising Man? Our highest Orpheus walked in Judea, eighteen hundred years ago: his sphere-melody, flowing in wild native tones, took captive the ravished souls of men; and, being of a true sphere-melody, still flows and sounds, though now with thousandfold accompaniments, and rich symphonies, through all our hearts; and modulates, and divinely leads them. Is that a wonder, which happens in two hours; and does it cease to be wonderful if happening in two million? Not only was Thebes built by the music of an Orpheus; but without the music of some inspired Orpheus was no city ever built, no work that man glories-in ever done.

'Sweep away the Illusion of Time; glance, if thou hast eyes, from the near moving-cause to its far-distant Mover: The stroke that came transmitted through a whole galaxy of elastic balls, was it less a stroke than if the last ball only had been struck, and sent flying? O, could I (with the Time-annihilating Hat) transport thee direct from the Beginnings to the Endings, how were thy eyesight unsealed, and thy heart set flaming in the Light-sea of celestial wonder! Then sawest thou that this fair Universe, were it in the meanest province thereof, is in very deed the star-

domed City of God; [25] that through every star, through every grass-blade, and most through every Living Soul, the glory of a present God still beams. But Nature, which is the Time-vesture of God, and reveals Him to the wise, hides Him from the foolish.

'Again, could anything be more miraculous than an actual authentic Ghost? The English Johnson longed, all his life, to see one; but could not, though he went to Cock Lane, and thence to the church-vaults, and tapped on coffins.[26] Foolish Doctor! Did he never, with the mind's eye as well as with the body's, look round him into that full tide of human Life he so loved; did he never so much as look into Himself? The good Doctor was a Ghost, as actual and authentic as heart could wish; well-nigh a million of Ghosts were travelling the streets by his side. Once more I say, sweep away the illusion of Time; compress the threescore years into three minutes: what else was he, what else are we? Are we not Spirits, that are shaped into a body, into an Appearance; and that fade-away again into air and Invisibility? This is no metaphor, it is a simple scientific *fact*: we start out of Nothingness, take figure, and are Apparitions; round us, as round the veriest spectre, is Eternity; and to Eternity minutes are as years and æons. Come there not tones of Love and Faith, as from celestial harp-strings, like the Song of beatified Souls? And again, do not we squeak and jibber [27] (in our discordant, screech-owlish debatings and recriminatings); and glide bodeful, and feeble, and fearful; or uproar (*poltern*), and revel in our mad Dance of the Dead, — till the scent of the morning air [28] summons us to our still Home; and dreamy Night becomes awake and Day? Where now is Alexander of Macedon: does the steel Host, that yelled in fierce battle-shouts at Issus and Arbela,[29] remain behind him; or have they all vanished utterly, even as perturbed Goblins must? Napoleon too, and his Moscow Retreats and Austerlitz Campaigns! Was it all other than the veriest Spectre-hunt; which has now, with its howling tumult that made Night hideous,[30] flitted away? — Ghosts! There are nigh a thousand-million walking the Earth openly at noontide; some half-hundred have vanished from it, some half-hundred have arisen in it, ere thy watch ticks once.

'O Heaven, it is mysterious, it is awful to consider that we not only carry each a future Ghost within him; but are, in very deed, Ghosts! These Limbs, whence had we them; this stormy Force; this life blood with its burning Passion? They are dust and shadow; [31] a Shadow-system gathered round our ME; wherein, through some moments or years, the Divine Essence is to be revealed in the Flesh. That warrior on his strong war-horse, fire flashes through his eyes; force dwells in his arm and heart: but warrior and war-horse are a vision; a revealed Force, nothing more. Stately they tread the Earth, as if it were a firm substance: fool! the earth is but a film; it cracks in twain, and warrior and war-horse sink beyond plummet's sounding.[32] Plummet's? Fantasy herself will not follow them. A little while ago, they were not; a little while, and they are not, their very ashes are not.

'So has it been from the beginning, so will it be to the end. Generation after generation takes to itself the Form of a Body; and forth-issuing from Cimmerian [33] Night, on Heaven's mission APPEARS. What Force and Fire is in each he expends: one

grinding in the mill of Industry; one hunter-like climbing the giddy Alpine heights of Science; one madly dashed in pieces on the rocks of Strife, in war with his fellow: — and then the Heaven-sent is recalled; his earthly Vesture falls away, and soon even to Sense becomes a vanished Shadow. Thus, like some wild-flaming, wild-thundering train of Heaven's Artillery, does this mysterious MANKIND thunder and flame, in long-drawn, quick-succeeding grandeur, through the unknown Deep. Thus, like a God-created, fire-breathing Spirit-host, we emerge from the Inane; haste stormfully across the astonished Earth; [34] then plunge again into the Inane. Earth's mountains are levelled, and her seas filled up, in our passage: can the Earth, which is but dead and a vision, resist Spirits which have reality and are alive? On the hardest adamant some foot-print of us is stamped-in; the last Rear of the host will read traces of the earliest Van. But whence? — O Heaven, whither? Sense knows not; Faith knows not; only that it is through Mystery to Mystery, from God and to God.

"We *are such stuff*
As Dreams are made of, and our little Life
Is rounded with a sleep!" [35]

THE FRENCH REVOLUTION

VOL. I — BOOK V

CHAPTER IV [1]

To Arms!

So hangs it, dubious, fateful, in the sultry days of July. It is the passionate printed *advice* of M. Marat, to abstain, of all things, from violence. Nevertheless the hungry poor are already burning Town Barriers,[2] where Tribute on eatables is levied; getting clamorous for food.

The twelfth July morning is Sunday: the streets are all placarded with an enormous-sized *De par le Roi*,[3] 'inviting peaceable citizens to remain within doors,' to feel no alarm, to gather in no crowd. Why so? What mean these 'placards of enormous size'? Above all, what means this clatter of military; dragoons, hussars, rattling in from all points of the compass towards the Place Louis Quinze; with a staid gravity of face, though saluted with mere nicknames, hootings and even missiles? Besenval [4] is with them. Swiss Guards of his

1. This chapter and the three which follow provide a picture of what is commonly referred to as 'the taking of the Bastille.' The scene is Paris, the time July 12, 1789. Paris is nervous and irritable; the representatives of the common people have formed a National Assembly, with which representatives of the Nobility and Clergy have refused to meet, a little group of prelates and noblemen, forming the 'court party,' have kept King Louis XVI ignorant of the true state of public opinion, of the wide and insistent demand for reform, and of the imminence of revolution; and now, as a step toward dispersing the Estates General and retaining the old order intact, the 'court party' summons Swiss and German troops in the employ of France, and sends them into Paris to suppress any violence which might occur when Necker, popular for his efforts toward reform, is dismissed, and the plans of the National Assembly are frustrated. Marat, aware that certain forces in the government desire to stir Paris to revolt in order to justify crushing an uprising, sends out a plea for all men to abstain from violence. — Jean Paul Marat (1743–93), writer and revolutionary leader, was later one of the authors of the September Massacres (1792).

2. High iron *grilles*, with guard-houses attached; at which the *octroi*, or tax, was levied when commodities were brought into the city. There was bitter hatred of this tax.

3. 'By order of the King.'

4. Pierre Victor, Baron de Besenval de Bronstatt (1722–91), was commander of the Swiss Guard

are already in the Champs Elysées, with four pieces of artillery.

Have the destroyers descended on us, then? From the Bridge of Sèvres to utmost Vincennes, from Saint-Denis to the Champs-de-Mars, we are begirt! Alarm, of the vague unknown, is in every heart. The Palais Royal has become a place of awestruck interjections, silent shakings of the head: one can fancy with what dolorous sound the noontide cannon (which the Sun fires at crossing of his meridian) went off there; bodeful, like an inarticulate voice of doom. Are these troops verily come out 'against Brigands'? Where are the Brigands? What mystery is in the wind? — Hark! a human voice reporting articulately the Job's-news: *Necker,*[5] *People's Minister, Saviour of France, is dismissed.* Impossible; incredible! Treasonous to the public peace! Such a voice ought to be choked in the water-works; — had not the newsbringer quickly fled. Nevertheless, friends, make of it what ye will, the news is true. Necker is gone. Necker hies northward incessantly, in obedient secrecy, since yesternight. We have a new Ministry: Broglie[6] the War-god; Aristocrat Breteuil;[7] Foulon[8] who said the people might eat grass!

Rumour, therefore, shall arise; in the Palais Royal, and in broad France. Paleness sits on every face; confused tremor and fremescence; waxing into thunderpeals, of Fury stirred on by Fear.

But see Camille Desmoulins,[9] from the Café de Foy, rushing out, sibylline in face; his hair streaming, in each hand a pistol! He springs to a table: the Police satellites are eyeing him; alive they shall not take him, not they alive him alive. This time, he speaks without stammering: — Friends! shall we die like hunted hares? Like sheep hounded into their pinfold; bleating for mercy, where is no mercy, but only a whetted knife? The hour is come; the supreme hour of Frenchman and Man; when Oppressors are to try conclusions with Oppressed; and the word is, swift Death, or Deliverance for ever. Let such hour be *well*-come! Us, meseems, one cry only befits: To Arms! Let universal Paris, universal France, as with the throat of the

in succession to his father. During the episode of the Bastille, he was inactive and hesitant because the court gave him too little assurance of supporting him with additional troops. He was arrested, and tried at the Châtelet, but acquitted. The authenticity of the rather scandalous *Mémoires* left by him has been disputed. But they formed a substantial and fairly reliable source for Carlyle's narrative.

5. Jacques Necker (1732–1804), twice director-general of finances under Louis XVI, had attempted reforms in taxation, in the national budget, and in political representation, all of which made him a popular figure but won him the enmity of the court, especially of Marie Antoinette. He was dismissed because the court regarded him as a prime cause of the revolution.

6. Victor François, Duc de Broglie (1718–1804), Marshall of France, had won distinction at Prague during the German War, later in the Seven Years' War; was appointed minister on July 12, 1789, but proved inadequate in the crisis, emigrated, and later (1792) commanded the 'Army of the Princes' against the Revolutionists.

Louis Charles Auguste le Tonnelier, Baron de Breteuil (1730–1807) had been a secret agent and diplomatist under Louis XV and Louis XVI; his influence with the King and Queen was very great. The fall of the Bastille put an end to his ministry.

Joseph François Foulon (1717–89) had been general commissary of the army in the Seven Years' War, later intendant of finances; he was hated by the peasants for his severity, and by the Parisians for his wealth. There is probably no foundation for his having said, 'If the people cannot get bread, let them eat grass.' After the fall of the Bastille, he was seized by the mob, brought to the Hôtel-de-Ville (City Hall), and, in spite of the intervention of Lafayette, was dragged to a nearby lamp-post and hanged. See Carlyle's vivid account of this episode in Vol.I, Book V, Chap.IX 'The Lanterne.'

1760–94; journalist and politician. Desmoulins was a deputy from the province of Guise, and one of the commissioners for the election of deputies to the States General; he was really a mob-orator and demagogue, and an inflaming pamphleteer; at one time Danton's secretary; executed with Danton in April 1794, displaying cowardice at the end.

whirlwind, sound only: To arms! — 'To arms!' yell responsive the innumerable voices; like one great voice, as of a Demon yelling from the air: for all faces wax fire-eyed, all hearts burn up into madness. In such, or fitter words, does Camille evoke the Elemental Powers, in this great moment. — Friends, continues Camille, some rallying-sign! Cockades; green ones; — the colour of Hope! — As with the flight of locusts, these green tree-leaves; green ribands from the neighbouring shops; all green things are snatched, and made cockades of. Camille descends from his table; 'stifled with embraces, wetted with tears'; has a bit of green riband handed him; sticks it in his hat. And now to Curtius' Image-shop there; to the Boulevards; to the four winds, and rest not till France be on fire!

France, so long shaken and wind-parched, is probably at the right inflammable point. — As for poor Curtius, who, one grieves to think, might be but imperfectly paid, — he cannot make two words about his Images. The Wax-bust of Necker, the Wax-bust of D'Orléans,[10] helpers of France: these, covered with crape, as in funeral procession, or after the manner of suppliants appealing to Heaven, to Earth, and Tartarus[11] itself, a mixed multitude bears off. For a sign! As indeed man, with his singular imaginative faculties, can do little or nothing without signs: thus Turks look to their Prophet's Banner; also Osier *Mannikins* have been burnt, and Necker's Portrait has erewhile figured, aloft on its perch.

In this manner march they, a mixed, continually increasing multitude; armed with axes, staves and miscellanea; grim, many-sounding, through the streets. Be all Theatres shut; let all dancing, on planked floor, or on the natural greensward, cease! Instead of a Christian Sabbath, and feast of *guinguette*[12] tabernacles, it shall be a Sorcerer's Sabbath;[13] and Paris, gone rabid, dance, — with the Fiend for piper!

However, Besenval, with horse and foot, is in the Place Louis Quinze. Mortals promenading homewards, in the fall of the day, saunter by, from Chaillot or Passy, from flirtation and a little thin wine; with sadder step than usual. Will the Bust-Procession pass that way? Behold it; behold also Prince Lambesc dash forth on it, with his Royal-Allemands! Shots fall, and sabre-strokes; Busts are hewed asunder; and, alas, also heads of men. A sabred Procession has nothing for it but to *explode*, along what streets, alleys, Tuileries Avenues it finds; and disappear. One unarmed man lies hewed down; a Garde Française by his uniform: bear him (or bear even the report of him) dead and gory to his Barracks; — where he has comrades still alive!

But why not now, victorious Lambesc, charge through that Tuileries Garden[14] itself, where the fugitives are vanishing? Not show the Sunday promenaders too how steel glitters, besprent with blood; that it be told of, and men's ears tingle? — Tingle, alas, they did; but the wrong way. Victorious Lambesc, in this his second or Tuileries charge, succeeds but in overturning (call it not slashing, for he struck

10. Louis Philippe Joseph, Duke of Orleans (1747–93), called Philippe Égalité, debauched and cynical Bourbon, beloved by the Parisians for his gifts to the poor and for his opening of the gardens of the Palais Royal to the people; he was liberal in his views, and led a minority of 47 noblemen in secession from their own estate to join the Third Estate in the meeting of the States-General. His part in the events of July 1789 is very obscure. There is evidence to prove that he was absent from Paris during the rioting in the city. Later, though he voted for the death of the King, he was arrested during the Terror and, because he was a Bourbon, was executed on Nov. 6, 1793.

11. *Tartarus*: the lower regions (hell) in Greek mythology.

12. *guinguette*: road-side inn; tea-garden, etc.

13. Or Witches' Sabbath: a midnight orgy in which witches and devils were supposed to participate, often with blasphemous rites.

14. Gardens of the Royal Palace.

with the flat of his sword) one man, a poor old schoolmaster, most pacifically tottering there; and is driven out, by barricade of chairs, by flights of 'bottles and glasses,' by execrations in bass-voice and treble. Most delicate is the mob-queller's vocation; wherein Too-much may be as bad as Not-enough. For each of these bass-voices, and more each treble voice, borne to all parts of the City, rings now nothing but distracted indignation; will ring all night. The cry, *To arms*, roars tenfold; steeples with their metal storm-voice boom out, as the sun sinks; armorers' shops are broken open, plundered; the streets are a living foam-sea, chafed by all the winds.

Such issue came of Lambesc's charge on the Tuileries Garden: no striking of salutary terror into Chaillot promenaders; a striking into broad waketulness of Frenzy and the three Furies, — which otherwise were not asleep! For they lie always, those subterranean Eumenides[15] (fabulous and yet so true), in the dullest existence of man; — and can dance, brandishing their dusky torches, shaking their serpent-hair. Lambesc with Royal-Allemand may ride to his barracks, with curses for his marching-music; then ride back again, like one troubled in mind: vengeful Gardes Françaises, *sacré*ing, with knit brows, start out on him, from their barracks in the Chaussé d'Antin; pour a volley into him (killing and wounding); which he must not answer, but ride on.

Counsel dwells not under the plumed hat. If the Eumenides awaken, and Broglie has given no orders, what can a Besenval do? When the Gardes Françaises, with Palais-Royal volunteers, roll down, greedy of more vengeance, to the Place Louis Quinze itself, they find neither Besenval, Lambesc, Royal-Allemand, nor any soldier now there. Gone is military order. On the far Eastern Boulevard, of Saint-Antoine, the Chasseurs Normandie arrive, dusty, thirsty, after a hard day's ride; but can find no billet-master, see no course in this City of confusions; cannot get to Besenval, cannot so much as discover where he is: Normandie must even bivouac there, in its dust and thirst, — unless some patriot will treat it to a cup of liquor, with advices.

Raging multitudes surround the Hôtel-de-Ville,[16] crying: Arms! Orders! The Six-and-twenty Town Councillors, with their long gowns, have ducked under (into the raging chaos); — shall never emerge more. Besenval is painfully wriggling himself out, to the Champ-de-Mars; he must sit there 'in the cruellest uncertainty': courier after courier may dash off for Versailles; but will bring back no answer, can hardly bring himself back. For the roads are all blocked with batteries and pickets, with floods of carriages arrested for examination: such was Broglie's one sole order; the Œil-de Bœuf,[17] hearing in the distance such mad din, which sounded almost like invasion, will before all things keep its own head whole. A new Ministry, with, as it were, but one foot in the stirrup, cannot take leaps. Mad Paris is abandoned altogether to itself.

What a Paris, when the darkness fell! A European metropolitan City hurled suddenly forth from its old combinations and arrangements; to crash tumultuously together, seeking new. Use and wont will now no longer direct any man; each man, with what of originality he has, must begin thinking; or following those that think. Seven hundred thousand individuals, on the sudden, find all their old paths, old ways of acting and deciding, vanish from under their feet. And so there go they, with clangour and terror, they know not as yet whether running, swimming or flying, —

15. In Greek mythology and literature, the avenging spirits, snaky-haired women who pursued evil-doers and inflicted madness.

16. City Hall.

17. Literally 'ox-eye'; the famous room in the palace of Versailles, so called from the oval window opening into it. Carlyle refers to the 'court-party,' obstinately and stupidly sitting idle while Paris seethes in revolutionary rage.

headlong into the New Era. With clangour and terror: from above, Broglie the war-god impends, preternatural, with his red-hot cannon-balls; and from below, a preternatural Brigand-world menaces with dirk and fire-brand: madness rules the hour.

Happily, in place of the submerged Twenty-six, the Electoral Club [18] is gathering; has declared itself a 'Provisional Municipality.' On the morrow, it will get Provost Flesselles,[19] with an Echevin [20] or two, to give help in many things. For the present it decrees one most essential thing: that forthwith a 'Parisian Militia' shall be enrolled. Depart, ye heads of Districts, to labour in this great work; while we here, in Permanent Committee, sit alert. Let fencible men, each party in its own range of streets, keep watch and ward, all night. Let Paris court a little fever-sleep; confused by such fever-dreams, of 'violent motions the P. Roval'; — or from time to time start awake, and look out, palpitating, in its nightcap, at the clash of discordant mutually-unintelligible Patrols; on the gleam of distant Barriers, going up all too ruddy towards the vault of Night.

Chapter V

Give Us Arms

On Monday, the huge City has awoke, not to its week-day industry: to what a different one! The working man has become a fighting man; has one want only: that of arms. The industry of all crafts has paused; — except it be the smith's, fiercely hammering pikes; and, in a faint degree, the kitchener's, cooking offhand victuals, for *bouche va toujours*.[1] Women too are sewing cockades; — not now of *green*, which being D'Artois colour, the Hôtel-de-Ville has had to interfere in it; [2] but of *red* and *blue*, our old Paris colours: these, once based on a ground of constitutional *white*, are the famed Tricolor, — which (if Prophecy err not) 'will go round the world.'

All shops, unless it be the Bakers' and Vintners', are shut: Paris is in the streets; — rushing, foaming like some Venice wine-glass into which you had dropped poison. The tocsin, by order, is pealing madly from all steeples. Arms, ye Elector Municipals; thou Flesselles with thy Echevins, give us arms! Flesselles gives what he can: fallacious, perhaps insidious promises of arms from Charleville; order to seek arms here, order to seek them there. The new Municipals give what they can: some three hundred and sixty indifferent firelocks, the equipment of the City-Watch: [3] 'a man in wooden shoes, and without coat, directly clutches one of them, and mounts guard.' Also as hinted, an order to all Smiths to make pikes with their whole soul.

Heads of Districts are in fervent consultation; subordinate Patriotism roams distracted, ravenous for arms. Hitherto at the Hôtel-de-Ville was only such modicum of indifferent firelocks as we have seen. At the so-called Arsenal, there lies nothing but rust, rubbish and saltpetre, — overlooked too by the guns of the Bastille. His Majesty's Repository, what they call *Garde-Meuble*,[4] is forced and ransacked: tapes-

18. The remains of the Assembly of Electors of Paris, chosen by all persons who contributed to the *taille* and other taxes. They applied repeatedly for leave to meet throughout the crisis, but had been refused; now a few members decide that conditions justify their forming a provisional municipality, or government.

19. Flesselles was Lord Mayor, under the old Municipality of Paris, and thus joined the Elector's provisional system against his will. His hesitant stand led eventually to his being massacred. See Chapter vii, 'Not a Revolt.'

20 *Échevins* were aldermen; Paris had four.

1 'The mouth (hunger) ever continues.'

2. *i.e.* because of the intense unpopularity of Charles Philippe, Comte d'Artois, the King's younger brother, who was one of the leaders of the court 'ring' who regarded the Third Estate as insolent and a menace to the old regime.

3. *i.e.* the Night-watch, or Guard.

4. Where the crown jewels were kept. Later, during the September Massacre, on Sept. 17, 1792, the crown diamonds were actually stolen from

tries enough, and gauderies; but of serviceable fighting-gear small stock! Two silver-mounted cannons there are; an ancient gift from his Majesty of Siam to Louis Fourteenth: gilt sword of the Good Henri;[5] antique Chivalry arms and armour. These, and such as these, a necessitous Patriotism snatches greedily, for want of better. The Siamese cannons go trundling, on an errand they were not meant for. Among the indifferent firelocks are seen tournay-lances; the princely helm and hauberk glittering amid ill-hatted heads, — as in a time when all times and their possessions are suddenly sent jumbling!

At the *Maison de Saint-Lazare*, Lazar-House once, now a Correction-House with Priests, there was no trace of arms; but, on the other hand, corn, plainly to a culpable extent. Out with it, to market; in this scarcity of grains! — Heavens, will 'fifty-two carts,' in long row, hardly carry it to the *Halle aux Bleds*?[6] Well truly, ye reverend Fathers, was your pantry filled; fat are your larders; over-generous your wine-bins, ye plotting exasperators of the Poor; traitorous forestallers of bread!

Vain is protesting, entreaty on bare knees: the House of Saint-Lazarus has that in it which comes not out by protesting. Behold, how, from every window, it *vomits*: mere torrents of furniture, of bellowing and hurlyburly; — the cellars also leaking wine. Till, as was natural, smoke rose, — kindled, some say, by the desperate Saint-Lazaristes themselves, desperate of other riddance; and the Establishment vanished from this world in flame. Remark nevertheless that 'a thief' (set on or not by Aristocrats), being detected there, is 'instantly hanged.'

Look also at the Châtelet Prison. The Debtors' Prison of La Force is broken from without; and they that sat in bondage to Aristocrats go free: hearing of which the Felons at the Châtelet do likewise 'dig up their pavements,' and stand on the offensive; with the best prospects, — had not Patriotism, passing that way, 'fired a volley' into the Felon-world; and crushed it down again under hatches. Patriotism consorts not with thieving and felony: surely also Punishment, this day, hitches (if she still hitch) after Crime, with frightful shoes-of-swiftness! 'Some score or two' of wretched persons, found prostrate with drink in the cellars of that Saint-Lazare, are indignantly haled to prison; the Jailor has no room; whereupon, other place of security not suggesting itself, it is written, '*on les pendit*, they hanged them.' Brief is the word: not without significance, be it true or untrue!

In such circumstances, the Aristocrat, the unpatriotic rich man is packing up for departure. But he shall not get departed. A wooden-shod force has seized all Barriers, burnt or not: all that enters, all that seeks to issue, is stopped there, and dragged to the Hôtel-de Ville: coaches, tumbrils, plate, furniture, 'many meal-sacks,' in time even 'flocks and herds' encumber the Place de Grève.[7]

And so it roars, and rages, and brays; drums beating, steeples pealing; criers rushing with hand-bells: 'Oyez, oyez. All men to their Districts to be enrolled!' The Districts have met in gardens, open squares: are getting marshalled into volunteer troops. No red-hot ball has yet fallen from Besenval's Camp; on the contrary, Deserters with their arms are continually dropping in: nay now, joy of joys, at two in the afternoon, the Gardes Françaises, being ordered to Saint-Denis, and flatly declining, have come over in a body! It is a fact worth many. Three thousand six hundred of the best fighting men, with

the *Garde-Meuble* under conditions which still remain something of a mystery. See Vol. III, Book I, Chapter vi, 'The Circular.'

5. Henry IV (1553-1610), King of France, was remembered for his good-heartedness, his wit, his courage, and his combination of idealism in his royal office and of sympathy for the common people.

6. Corn Exchange.

7. The open square in front of the Hôtel-de-Ville.

complete accoutrement; with cannoneers even, and cannon! Their officers are left standing alone; could not so much as succeed in 'spiking the guns.' The very Swiss, it may now be hoped, Château-Vieux and the others, will have doubts about fighting.

Our Parisian Militia, which some think it were better to name National Guard, — is prospering as heart could wish. It promised to be forty-eight thousand; but will in few hours double and quadruple that number: invincible, if we had only arms!

But see, the promised Charleville Boxes, marked *Artillerie*! Here then are arms enough? — Conceive the blank face of Patriotism, when it found them filled with rags, foul linen, candle-ends, and bits of wood! Provost of the Merchants, how is this? Neither at the Chartreux Convent, whither we were sent with signed order, is there or ever was there any weapon of war. Nay here, in this Seine Boat, safe under tarpaulings (had not the nose of Patriotism been of the finest), are 'five thousand-weight of gunpowder'; not coming *in*, but surreptitiously going out! What meanest thou, Flesselles? 'Tis a ticklish game, that of 'amusing' us. Cat plays with captive mouse: but mouse with enraged cat, with enraged National Tiger?

Meanwhile, the taster, O ye black-aproned Smiths, smite; with strong arm and willing heart. This man and that, all stroke from head to heel, shall thunder alternating, and ply the great forgehammer, till stithy reel and ring again; while ever and anon, overhead, booms the alarm-cannon, — for the City has now got gun powder. Pikes are fabricated; fifty thousand of them, in six-and-thirty hours: judge whether the Black-aproned have been idle. Dig trenches, unpave the streets, ye others, assiduous, man and maid; cram the earth in barrel-barricades, at each of them a volunteer sentry; pile the whinstones in window-sills and upper rooms. Have scalding pitch, at least boiling water ready, ye weak old women, to pour it and dash it on Royal-Allemand, with your old skinny arms: your shrill curses along with it will not be wanting! — Patrols of the newborn National Guard, bearing torches, scour the streets, all that night; which otherwise are vacant, yet illuminated in every window by order. Strange looking; like some naphtha-lighted City of the Dead, with here and there a flight of perturbed Ghosts.

O poor mortals, how ye make this Earth bitter for each other; this fearful and wonderful Life fearful and horrible; and Satan has his place in all hearts! Such agonies and ragings and wailings ye have, and have had, in all times: — to be buried all, in so deep silence; and the salt sea is not swoln with your tears.

Great meanwhile is the moment, when tidings of Freedom reach us; when the long-enthralled soul, from amid its chains and squalid stagnancy, arises, were it still only in blindness and bewilderment, and swears by Him that made it, that it will be *free*! Free? Understand that well, it is the deep commandment, dimmer or clearer, of our whole being, to be *free*. Freedom is the one purport, wisely aimed at, or unwisely, of all man's struggles, toilings and sufferings in this Earth. Yes, supreme is such a moment (if thou have known it): first vision as of a flame-girt Sinai,[8] in this our waste Pilgrimage, — which thenceforth wants not its pillar of cloud by day, and pillar of fire by night![9] Something it is even, — nay, something considerable, when the chains have grown *corrosive*, poisonous, — to be free 'from oppression by our fellow-man.' Forward, ye maddened sons of France; be it towards this destiny or towards that! Around you is but starvation, falsehood, corruption and the calm of death. Where ye are is no abiding.

Imagination may, imperfectly, figure how Commandant Besenval, in the Champ-de-Mars, has worn out these sorrowful hours. Insurrection raging all

8. See *Exodus*, xxxi.
9. See *Exodus*, xiii,21

round; his men melting away! From Versailles, to the most pressing messages, comes no answer; or once only some vague word of answer which is worse than none. A Council of Officers can decide merely that there is no decision: Colonels inform him, 'weeping,' that they do not think their men will fight. Cruel uncertainty is here: war-god Broglie sits yonder, inaccessible in his Olympus; does not descend terror-clad, does not produce his whiff of grapeshot; sends no orders.

Truly, in the Château of Versailles all seems mystery: in the Town of Versailles, were we there, all is rumour, alarm and indignation. An august National Assembly sits, to appearance, menaced with death; endeavouring to defy death. It has resolved 'that Necker carries with him the regrets of the Nation.' It has sent solemn Deputation over to the Château, with entreaty to have these troops withdrawn. In vain: his Majesty, with a singular composure, invites us to be busy rather with our own duty, making the constitution! Foreign Pandours, and such like, go pricking and prancing, with a swashbuckler air; with an eye too probably to the *Salle des Menus*,[10] — were it not for the 'grim-looking countenances' that crowd all avenues there. Be firm, ye National Senators; the cynosure of a firm, grim-looking people!

The august National Senators determine that there shall, at least, be Permanent Session till this thing end. Wherein however, consider that worthy Lafranc de Pompignan,[11] our new President, whom we have named Bailly's[12] successor, is an old man, wearied with many things. He is the Brother of that Pompignan[13] who meditated lamentably on the Book of *Lamentations*:

> *Savez-vous pourquoi Jérémie*
> *Se lamentait toute sa vie?*
> *C'est qu'il prévoyait*
> *Que Pompignan le traduirait!*[14]

Poor Bishop Pompignan withdraws; having got Lafayette[15] for helper or substitute: this latter, as nocturnal Vice-President, with a thin house in disconsolate humour, sits sleepless, with lights unsnuffed; — waiting what the hours will bring.

So at Versailles. But at Paris, agitated Besenval, before retiring for the night, has stept over to old M. de Sombreuil,[16] of the

10. The *Salle des Menus-Plaisirs* was the meeting-place of the States-General, which had been closed by royal order, leading to the 'Tennis Court Oath' of the National Assembly. See Vol.I, Book V, Chapter II, 'Mercury de Breze.'

11. Lefranc de Pompignan, Archibishop of Vienne, had been a deputy for the Clergy of Dauphiné, later Clerical patronage secretary; he died in 1790. — The Presidency of the Assembly changed every fortnight.

12. Jean Sylvain Bailly (1736–93) was born of the best blood of the Parisian *Bourgeoisie*; was an artist, mathematician, astronomer, historian, philosopher, philanthropist, and last and least, politician. He was chosen first deputy for Paris, then Dean of the Third Estate, from his high character. — Carlyle drew heavily from Bailly's *Mémoires*, written in prison, and still (esp. Vol.I) invaluable as an authority on the internal history of the Assembly. Bailly as Mayor alienated some of the mob by trying to preserve order; he resigned and retired in 1791, but during the Terror he was guillotined under horrible circumstances of cruelty, showing remarkable courage and coolness to the very last. See Vol.III, Book V, Chapter II, 'Death.'

13. J.J.Lefranc Marquis de Pompignan was a *littérateur* who wrote much against the *philosophes* and other skeptical thinkers of the 18th century.

14. 'Do you know why Jeremiah mourned throughout his life? It was because he foresaw that Pompignan would translate him!'

15. 1757–1834; Carlyle draws too unfavorable a picture of Lafayette through the entire narrative, but it is true that Lafayette lacked firmness and at times good judgment, that he vacillated during the crisis of revolution owing to his preference for preventing bloodshed to preserving order. Though he admired Republicanism, he did not think it suitable for France.

16. C.F.V.Sombreuil was governor of the *Invalides*, a hospital or asylum for disabled soldiers or sailors (*cf.* Chelsea Hospital, London). It had no defense, since it was not a fortress, but it had considerable stores of arms. Sombreuil was executed in June 1794, during the final months of the Terror. See

Hôtel des Invalides hard by. M. de Sombreuil has, what is a great secret, some eight and-twenty thousand stand of muskets deposited in his cellars there; but no trust in the temper of his Invalides. This day, for example, he sent twenty of the fellows down to unscrew those muskets; lest Sedition might snatch at them: but scarcely, in six hours, had the twenty unscrewed twenty gun-locks, or dogsheads (*chiens*) of locks, — each Invalide his dogshead! If ordered to fire, they would, he imagines, turn their cannon against himself.

Unfortunate old military gentleman, it is your hour, not of glory! Old Marquis de Launay [17] too, of the Bastille, has pulled up his drawbridges long since, 'and retired into his interior'; with sentries walking on his battlements, under the midnight sky, aloft over the glare of illuminated Paris; — whom a National Patrol, passing that way, takes the liberty of firing at: 'seven shots towards twelve at night,' which do not take effect. This was the 13th day of July 1789; a worse day, many said, than the last 13th was, when only hail fell out of Heaven, not madness rose out of Tophet,[18] ruining worse than crops!

In these same days, as Chronology will teach us, hot old Marquis Mirabeau [19] lies stricken down, at Argenteuil, — *not* within sound of these alarm-guns; for *he* properly is not there, and only the body of him now lies, deaf and cold for ever. It was on Saturday night that he, drawing his last life-breaths, gave up the ghost there; — leaving a world, which would never go to his mind, now broken out, seemingly, into deliration and the *culbute générale*.[20] What is it to him, departing elsewhither, on his long journey? The old Château Mirabeau stands silent, far off, on its scarped rock, in that 'gorge of two windy valleys'; the pale-fading spectre now of a Château: this huge World-riot, and France, and the World itself, fades also, like a shadow on the great still mirror-sea; and all shall be as God wills.

Young Mirabeau,[21] sad of heart, for he loved this crabbed brave old Father; sad of heart, and occupied with sad cares, — is withdrawn from Public History. The great crisis transacts itself without him.

Chapter VI

Storm and Victory

But, to the living and the struggling, a new, Fourteenth morning dawns. Under all roofs of this distracted City is the nodus of a drama, not untragical, crowding towards solution. The bustlings and preparings, the tremors and menaces; the tears that fell from old eyes! This day, my sons, ye shall quit you like men. By the memory of your fathers' wrongs, by the hope of your children's rights! Tyranny impends in red wrath: help for you is none, if not in your own right hands. This day ye must do or die.

From earliest light, a sleepless Permanent Committee has heard the old cry, now waxing almost frantic, mutinous: Arms! Arms! Provost Flesselles, or what traitors there are among you, may think of those Charleville Boxes. A hundred-and-fifty thousand of us; and but the third man fur-

Vol. III, Book VI, Chapter iv, 'Mumbo-Jumbo.'

17. B.R.J.Marquis de Launay (or Launey) was governor of the Bastille, and gave evidence of being willing to deal justly with the mob. In the confusion of the riot, however, he was suspected of treachery, and soon murdered. See Chapter vii, 'Not a Revolt.'

18. Hell.

19. Victor Riqueti, Marquis de Mirabeau (1715–89), father of the great Mirabeau, had died on July 11. He was in some ways as great as his son Honoré; he had a feudal mind rapidly absorbing democratic ideas, though demanding strong central government.

20. 'General overturn.' See Vol.I, Book VI, Chapter iii.

21. Honoré Gabriel Riqueti, Comte de Mirabeau (1749–91) was the only protagonist in the French Revolution whom Carlyle regarded as a truly great man. See Vol. I, Book IV, Chapter iv, 'The Procession.'

nished with so much as a pike! Arms are the one thing needful: with arms we are an unconquerable man-defying National Guard; without arms, a rabble to be whiffed with grapeshot.[1]

Happily the word has arisen, for no secret can be kept, — that there lie muskets at the *Hôtel des Invalides*. Thither will we: King's Procureur [2] M. Ethys de Corny, and whatsoever of authority a Permanent Committee can lend, shall go with us. Besenval's Camp is there: perhaps he will not fire on us; if he kill us, we shall but die.

Alas, poor Besenval, with his troops melting away in that manner, has not the smallest humour to fire! At five o'clock this morning, as he lay dreaming, oblivious in the *École Militaire*, a 'figure' stood suddenly at his bedside; 'with face rather handsome; eyes inflamed, speech rapid and curt, air audacious': such a figure drew Priam's curtains![3] The message and monition of the figure was, that resistance would be hopeless; that if blood flowed, woe to him who shed it. Thus spoke the figure: and vanished. 'Withal there was a kind of eloquence that struck one.' Besenval admits that he should have arrested him, but did not. Who this figure with inflamed eyes, with speech rapid and curt, might be? Besenval knows, but mentions not. Camille Desmoulins? Pythagorean Marquis Valadi,[4] inflamed with 'violent motions all night at the Palais Royal'? Fame names him, 'Young M. Meillar';[5] then shuts her lips about him for ever.

In any case, behold about nine in the morning, our National Volunteers rolling in long wide flood, southwestward to the *Hôtel des Invalides*; in search of the one thing needful. King's Procureur M. Ethys de Corny and officials are there; the Curé of Saint-Etienne du Mont marches unpacific, at the head of his militant Parish; the Clerks of the Basoche in red coats we see marching, now Volunteers of the Basoche; the Volunteers of the Palais Royal: — National Volunteers, numerable by tens of thousands; of one heart and mind. The King's muskets are the Nation's; think, old M. de Sombreuil, how, in this extremity, thou wilt refuse them! Old M. de Sombreuil would fain hold parley, send couriers; but it skills not:[6] the walls are scaled, no Invalide firing a shot; the gates must be flung open. Patriotism rushes in, tumultuous, from grunsel up to ridge-tile, through all rooms and passages; rummaging distractedly for arms. What cellar, or what cranny can escape it? The arms are found; all safe there; lying packed in straw, — apparently with a view to being burnt! More ravenous than famishing lions over dead prey, the multitude, with clangour and vociferation, pounces on them; struggling, dashing, clutching: — to the jamming-up, to the pressure, fracture and probable extinction of the weaker Patriot. And so, with such protracted crash of deafening, most discordant Orchestra-music, the Scene is changed; and eight and twenty thousand sufficient firelocks are on the shoulders of as many National Guards, lifted thereby out of darkness into fiery light.

Let Besenval look at the glitter of these muskets, as they flash by! Gardes Françaises, it is said, have cannon levelled on him; ready to open, if need were, from the

1. According to Carlyle's dramatic view of the Revolution, it was a 'whiff of grapeshot' (clusters of small iron balls) discharged from cannon under the direction of Napoleon, that ended the Revolution. See Vol.III, Book VII, Chapter vii, 'The Whiff of Grapeshot.'
2. Attorney; or proxy.
3. See the *Iliad*,XXIV. (Allusion to the god Hermes appearing to Priam sleeping in Achilles' tent, and warning the old man to flee.)
4. Guillotined in Dec 1793. Valadi had resigned his commission in the French army, had gone to Geneva, and had met an English Quaker, Robert Pigott, whose vegetarianism (under the name of 'Pythagoreanism') was adopted by Valadi.
5. Not identified. (See Fletcher's ed. of the *French Revolution*, I,236, note 2.)
6. *skills not*: archaic for 'it does not matter.'

other side of the River. Motionless sits he; 'astonished,' one may flatter oneself, 'at the proud bearing (*fière contenance*) of the Parisians.' — And now, to the Bastille, ye intrepid Parisians! There grapeshot still threatens: thither all men's thoughts and steps are now tending.

Old De Launay, as we hinted, withdrew 'into his interior' soon after midnight of Sunday. He remains there ever since, hampered, as all military gentlemen now are, in the saddest conflict of uncertainties. The Hôtel-de-Ville 'invites' him to admit National Soldiers, which is a soft name for surrendering. On the other hand, His Majesty's orders were precise. His garrison is but eighty two old Invalides, reinforced by thirty two young Swiss; his walls indeed are nine feet thick, he has cannon and powder; but, alas, only one day's provision of victuals. The city too is French, the poor garrison mostly French. Rigorous old De Launay, think what thou wilt do!

All morning, since nine, there has been a cry everywhere: To the Bastille! Repeated 'deputations of citizens' have been here, passionate for arms; whom De Launay has got dismissed by soft speeches through port-holes. Towards noon, Elector Thuriot de la Rosière[7] gains admittance; finds De Launay indisposed for surrender; nay disposed for blowing up the place rather. Thuriot mounts with him to the battlements: heaps of paving stones, old iron and missiles lie piled; cannon all duly levelled; in every embrasure a cannon, — only drawn back a little! But outwards, behold, O Thuriot, how the multitude flows on, welling through every street: tocsin furiously pealing, all drums beating the *générale*:[8] the Suburb Saint-Antoine rolling hitherward wholly, as one man! Such vision (spectral yet real) thou, O Thuriot, as from thy Mount of Vision, beholdest in this moment: prophetic of what other Phantasmagories, and loud-gibbering Spectral Realities, which thou yet beholdest not, but shalt! '*Que voulez-vous?*'[9] said De Launay, turning pale at the sight, with an air of reproach, almost of menace. 'Monsieur,' said Thuriot, rising into the moral-sublime, 'what mean *you*? Consider if I could not precipitate *both* of us from this height,' — say only a hundred feet, exclusive of the walled ditch! Whereupon De Launay fell silent. Thuriot shows himself from some pinnacle, to comfort the multitude becoming suspicious, fremescent: then descends; departs with protest; with warning addressed also to the Invalides, — on whom, however, it produces but a mixed indistinct impression. The old heads are none of the clearest; besides, it is said, De Launay has been profuse of beverages (*prodigua des buissons*). They think, they will not fire, — if not fired on, if they can help it; but must, on the whole, be ruled considerably by circumstances.

Woe to thee, De Launay, in such an hour, if thou canst not, taking some one firm decision, *rule* circumstances! Soft speeches will not serve: hard grapeshot is questionable: but hovering between the two is *un*questionable. Ever wilder swells the tide of men: their infinite hum waxing ever louder, into imprecations, perhaps into crackle of stray musketry, — which latter, on walls nine feet thick, cannot do execution. The Outer Drawbridge has been lowered for Thuriot: new *deputation of citizens* (it is the third, and noisiest of all) penetrates that way into the Outer Court: soft speeches producing no clearance of these, De Launay gives fire; pulls up his Drawbridge. A slight sputter; — which has *kindled* the too combustible chaos; made it a roaring fire-chaos! Bursts forth Insurrection, at sight of its own blood (for there were deaths by that sputter of fire), into endless rolling explosion of musketry, distraction, execration; — and over head, from

7 Thuriot de la Rosière, a lawyer, was an elector for the district of Saint-Louis. He later sat in the Legislative Assembly and in the Convention, and was for a short time in the Committee of Public Safety (July 1793). He died in 1829.

8. *générale*: fire-drum, or general alarm.

9. 'What do you want?' or 'What do you mean by this?'

the Fortress, let one great gun, with its grapeshot, go booming, to show what we *could* do. The Bastille is besieged!

On, then, all Frenchmen, that have hearts in your bodies! Roar with all your throats, of cartilage and metal, ye Sons of Liberty; stir spasmodically whatsoever of utmost faculty is in you, soul, body, or spirit; for it is the hour! Smite, thou Louis Tournay, cartwright of the Marais, old-soldier of the Regiment Dauphiné; smite at that Outer Drawbridge chain, though the fiery hail whistles round thee! Never, over nave [10] or felloe,[11] did thy axe strike such a stroke. Down with it, man; down with it to Orcus: [12] let the whole accursed Edifice sink thither, and Tyranny be swallowed up for ever! Mounted, some say, on the roof of the guard-room, some 'on bayonets stuck into joints of the wall,' Louis Tournay smites, brave Aubin Bonnemère (also an old soldier) seconding him: the chain yields, breaks; the huge Drawbridge slams down, thundering (*avec fracas*). Glorious: and yet, alas, it is still but the outworks. The Eight grim Towers, with their Invalide musketry, their paving stones and cannon-mouths, still soar aloft intact; — Ditch yawning impassable, stone-faced; the inner Drawbridge with its *back* towards us: the Bastille is still to take![13]

To describe this Siege of the Bastille (thought to be one of the most important in History) perhaps transcends the talent of mortals. Could one but, after infinite reading, get to understand so much as the plan of the building! But there is open Esplanade, at the end of the Rue Saint-Antoine; there are such Forecourts, *Cour Avancé*, *Cour de l'Orme*,[14] arched Gateway (where Louis Tournay now fights); then new drawbridges, dormant bridges, rampart-bastions, and the grim Eight Towers: a labyrinthic Mass, high-frowning there, of all ages from twenty years to four hundred and twenty; — beleaguered, in this its last hour, as we said, by mere Chaos come again! Ordnance of all calibres; throats of all capacities; men of all plans, every man his own engineer: seldom since the war of Pygmies and Cranes [15] was there seen so anomalous a thing. Half-pay Elie [16] is home for a suit of regimentals; no one would heed him in coloured clothes: half pay Hulin [17] is haranguing Gardes Françaises in the Place de Grève. Frantic Patriots pick up the grapeshots; bear them, still hot (or seemingly so), to the Hôtel-de-Ville: — Paris, you perceive, is to be burnt! Flesselles is 'pale to the very lips,' for the roar of the multitude grows deep. Paris wholly has got to the acme of its frenzy; whirled, all ways, by panic madness. At every street-barricade, there whirls simmering a minor whirlpool, — strengthening the barricade, since God knows what is coming; and all minor whirlpools play distractedly into that grand Fire-Mahlstrom [18] which is lashing round the Bastille.

And so it lashes and it roars. Cholat the wine-merchant has become an impromptu cannoneer. See Georget, of the Marine Service, fresh from Brest, ply the King of Siam's cannon. Singular (if we were not used to the like): Georget lay, last night, taking his ease at his inn; the King of

10. *nave*: in this connection, the hub of a wheel
11. Or felly: the exterior rim, or segment of the rim, of a wheel, supported by the spokes.
12. Hades, or Hell.
13. 'This is all confusion,' says Fletcher of Carlyle's narrative at this point; 'the breaking of the chains of the outer drawbridge was not done under fire; not till the crowd was in the second court and was attacking the second drawbridge under cover of a heavy fire from outside, did De Launay order his men to fire.' (See Fletcher's ed. of *The French Revolution*, I,240, note 1.)
14. 'Forecourt, Elm-court.'
15. See the *Iliad*, III.
16. 'Elie had been a non-commissioned officer in the "Queen's" regiment' (Fletcher).
17. 'Hulin had passed from the French Army into the service of Geneva.' He had much more to do with the success of the attack than Elie; he got the chains of the second drawbridge broken with cannon shot. (Fletcher.)
18. Or Maelstrom.

Siam's cannon also lay, knowing nothing of *him*, for a hundred years. Yet now, at the right instant, they have got together, and discourse eloquent music. For, hearing what was toward, Georget sprang from the Brest Diligence,[19] and ran. Gardes Françaises also will be here, with real artillery: were not the walls so thick! — Upwards from the Esplanade, horizontally from all neighbouring roofs and windows, flashes one irregular deluge of musketry, without effect. The Invalides lie flat, firing comparatively at their ease from behind stone; hardly through portholes, show the tip of a nose. We fall, shot; and make no impression!

Let conflagration rage; of whatsoever is combustible! Guard rooms are burnt, Invalides mess-rooms. A distracted 'Perukemaker with two fiery torches' is for burning 'the saltpetres of the Arsenal'; — had not a woman run screaming; had not a Patriot, with some tincture of Natural Philosophy, instantly struck the wind out of him (butt of musket on pit of stomach), overturned barrels, and stayed the devouring element. A young beautiful lady, seized escaping in these Outer Courts, and thought falsely to be De Launay's daughter, shall be burnt in De Launay's sight; she lies swooned on a paillasse: but again a Patriot, it is brave Aubin Bonnemère the old soldier, dashes in, and rescues her. Straw is burnt; three cartloads of it, hauled thither, go up in white smoke: almost to the choking of Patriotism itself; so that Elie had, with singed brows, to drag back one cart; and Réole the 'gigantic haberdasher' another. Smoke as of Tophet; confusion as of Babel;[20] noise as of the Crack of Doom!

Blood flows; the aliment of new madness. The wounded are carried into houses of the Rue Cerisaie; the dying leave their last mandate not to yield till the accursed Stronghold fall. And yet, alas, how fall? The walls are so thick! Deputations, three in number, arrive from the Hôtel-de-Ville; Abbé Fauchet[21] (who was of one) can say, with what almost superhuman courage of benevolence. These wave their Town-flag in the arched Gateway; and stand, rolling their drum; but to no purpose. In such Crack of Doom, De Launay cannot hear them, dare not believe them: they return, with justified rage, the whew of lead still singing in their ears. What to do? The Firemen are here, squirting with their fire-pumps on the Invalides cannon, to wet the touchholes; they unfortunately cannot squirt so high; but produce only clouds of spray. Individuals of classical knowledge propose *catapults*. Santerre, the sonorous Brewer of the Suburb Saint-Antoine, advises rather that the place be fired, by a 'mixture of phosphorus and oil-of-turpentine spouted up through forcing pumps': O Spinola-Santerre, hast thou the mixture *ready*? Every man his own engineer! And still the fire-deluge abates not: even women are firing, and Turks; at least one woman (with her sweetheart), and one Turk. Gardes Françaises have come: real cannon, real cannoneers. Usher[22] Maillard is busy; half-pay Elie, half-pay Hulin rage in the midst of thousands.

How the great Bastille Clock ticks (in-

19 *Diligence*: a public stagecoach.

20. See *Genesis*, xi,4, etc.

21. Claude Fauchet (1744–93), a distinguished ecclesiastic, once the chaplain to the King, had been an elector for the Clergy of Paris, and sat in the Provisional Municipality of Paris. Later, he voted against the King's death, and was executed with the Girondins, in Oct. 1793.

22 *Usher*: in this connection, 'door-keeper,' 'sheriff's officer,' 'gentleman usher,' etc. — Stanislas Maillard appears frequently in Carlyle's narrative, he was a typical mob-leader (leading not only the attack on the Bastille, but also the Insurrection of Women and the September Massacres [*cf.* Vol.I, Book VII, and Vol.III, Book I]). Later he became a police spy. He died in obscurity, under another name, in 1805. — Santerre, one of Maillard's helpers, was a wealthy brewer, born in 1752 and dying in 1809. He was closely attached to Danton's party, and later was in command of all the armed force of Paris at the King's execution. His orders for the drums to be beaten prevented the King's last words from being heard.

audible) in its Inner Court there, at its ease, hour after hour; as if nothing special, for it or the world, were passing! It tolled One when the firing began; and is now pointing towards Five, and still the firing slakes not. — Far down, in their vaults, the seven Prisoners hear muffled din as of earthquakes; their Turnkeys answer vaguely.

Woe to thee, De Launay, with thy poor hundred Invalides! Broglie is distant, and his ears heavy: Besenval hears, but can send no help. One poor troop of Hussars has crept, reconnoitring, cautiously along the Quais, as far as the Pont Neuf. 'We are come to join you,' said the Captain; for the crowd seems shoreless. A large-headed dwarfish individual, of smoke bleared aspect, shambles forward, opening his blue lips, for there is sense in him; and croaks: 'Alight then, and give up your arms!' The Hussar-Captain is too happy to be escorted to the Barriers, and dismissed on parole. Who the squat individual was? Men answer, It is M. Marat, author of the excellent pacific *Avis au Peuple*! Great truly, O thou remarkable Dogleech,[23] is this thy day of emergence and new-birth: and yet this same day come four years —— !-- But let the curtains of the Future hang.

What shall De Launay do? One thing only De Launay could have done: what he said he would do. Fancy him sitting, from the first, with lighted taper, within arm's length of the Powder-Magazine; motionless, like old Roman Senator, or Bronze Lamp-holder; coldly apprising Thuriot, and all men, by a slight motion of his eye, what his resolution was: — Harmless he sat there, while unharmed; but the King's Fortress, meanwhile, could, might, would, or should, in nowise be surrendered, save to the King's Messenger: one old man's life is worthless, so it be lost with honour; but think, ye brawling *canaille*, how will it be when a whole Bastille springs skyward! — In such statuesque, taper-holding attitude, one fancies De Launay might have left Thuriot, the red Clerks of the Basoche, Curé of Saint-Stephen and all the tag-rag-and-bobtail of the world, to work their will.

And yet, withal, he could not do it. Hast thou considered how each man's heart is so tremulously responsive to the hearts of all men; hast thou noted how omnipotent is the very sound of many men? How their shriek of indignation palsies the strong soul; their howl of contumely withers with unfelt pangs? The Ritter Glück[24] confessed that the ground-tone of the noblest passage, in one of his noblest Operas, was the voice of the Populace he had heard at Vienna, crying to their Kaiser: Bread! Bread! Great is the combined voice of men; the utterance of their *instincts*, which are truer than their *thoughts*: it is the greatest a man encounters, among the sounds and shadows which make up this World of Time. He who can resist that, has his footing somewhere *beyond* Time. De Launay could not do it. Distracted, he hovers between two; hopes in the middle of despair; surrenders not his Fortress; declares that he will blow it up, seizes torches to blow it up, and does not blow it. Unhappy old De Launay, it is the death-agony of thy Bastille and thee! Jail, Jailoring and Jailor, all three, such as they may have been, must finish.

For four hours now has the World-Bedlam roared: call it the World-Chimera, blowing fire! The poor Invalides have sunk under their battlements, or rise only with reversed muskets: they have made a white flag of napkins: go beating the *chamade*,[25]

23. Marat practiced medicine, and had a medical degree from St. Andrews, Scotland, though none from France; when he took up his political career, he was scoffed at as a quack-doctor and charlatan. During his early years he had been made doctor to the bodyguard of the Comte d'Artois, from which fact, mistaking the meaning of *écuries*, Carlyle was fond of calling him 'horse-leech,' meaning 'veterinarian,' and hence also 'dog-leech.' See Vol.I, Book II, Chapter vi, 'Windbags.'

24. C.W.von Gluck (1714–87), German composer of operas (*Orpheus and Eurydice*, etc.)

25. *chamade*: signal of surrender.

or seeming to beat, for one can hear nothing. The very Swiss at the Portcullis look weary of firing; disheartened in the fire-deluge: a porthole at the drawbridge is opened, as by one that would speak. See Hussier Maillard, the shifty man! On his plank, swinging over the abyss of that stone Ditch; plank resting on parapet, balanced by weight of Patriots, — he hovers perilous: such a Dove towards such an Ark! Deftly, thou shifty Usher: one man already fell; and lies smashed, far down there, against the masonry! Usher Maillard falls not: deftly, unerring he walks, with outspread palm. The Swiss holds a paper through his porthole; the shifty Usher snatches it, and returns. Terms of surrender: Pardon, immunity to all! Are they accepted? — '*Foi d'officier*, On the word of an officer,' answers half-pay Hulin, — or half-pay Elie, for men do not agree on it, 'they are!' Sinks the drawbridge, — Usher Maillard bolting it when down; rushes-in the living deluge: the Bastille is fallen! *Victoire! La Bastille est prise!* [26]

Chapter VII

Not a Revolt

Why dwell on what follows? Hulin's *foi d'officier* should have been kept, but could not. The Swiss stand drawn up, disguised in white canvas smocks; the Invalides without disguise; their arms all piled against the wall. The first rush of victors, in ecstasy that the death-peril is passed, 'leaps joyfully on their necks'; but new victors rush, and ever new, also in ecstasy not wholly of joy. As we said, it was a living deluge, plunging headlong: had not the Gardes Françaises, in their cool military way, 'wheeled round with arms levelled,' it would have plunged suicidally, by the hundred or the thousand, into the Bastille-ditch.

And so it goes plunging through court and corridor; billowing uncontrollable, firing from windows — on itself; in hot frenzy of triumph, of grief and vengeance for its slain. The poor Invalides will fare ill; one Swiss, running off in his white smock, is driven back, with a death-thrust. Let all Prisoners be marched to the Townhall, to be judged! — Alas, already one poor Invalide has his right hand slashed off him; his maimed body dragged to the Place de Grève, and hanged there. This same right hand, it is said, turned back De Launay from the Powder-Magazine, and saved Paris.

De Launay, 'discovered in grey frock with poppy coloured riband,' is for killing himself with the sword of his cane. He shall to the Hôtel-de-Ville; Hulin, Maillard and others escorting him; Elie marching foremost 'with the capitulation-paper on his sword's point.' Through roarings and cursings; through hustlings, clutchings, and at last through strokes! Your escort is hustled aside, felled down; Hulin sinks exhausted on a heap of stones. Miserable De Launay! He shall never enter the Hôtel-de-Ville: only his 'bloody hair-queue, held up in a bloody hand'; that shall enter, for a sign. The bleeding trunk lies on the steps there; the head is off through the streets; ghastly, aloft on a pike.

Rigorous De Launay has died; crying out, 'O friends, kill me fast!' Merciful De Losme [1] must die; though Gratitude embraces him, in this fearful hour, and will die for him; it avails not. Brothers, your wrath is cruel! Your Place de Grève is become a Throat of the Tiger; full of mere fierce bellowings, and thirst of blood. One other officer is massacred; one other Invalide is hanged on the Lamp-iron; with difficulty, with generous perseverance, the Gardes Françaises will save the rest. Provost Flesselles, stricken long since with the paleness of death, must descend from his seat, 'to be judged at the Palais Royal': — alas, to be shot dead, by an unknown hand, at the turning of the first street! —

O evening sun of July, how, at this hour,

26. 'Victory! The Bastille is taken!'

1. De Losme was Major in the Bastille, and much liked by the prisoners.

thy beams fall slant on reapers amid peaceful woody fields; on old women spinning in cottages; on ships far out in the silent main; on Balls at the Orangerie of Versailles, where high-rouged Dames of the Palace are even now dancing with double-jacketed Hussar-Officers; — and also on this roaring Hell-porch of a Hôtel-de-Ville! Babel Tower, with the confusion of tongues, were not Bedlam added with the conflagation of thoughts, was no type of it. One forest of distracted steel bristles, endless, in front of an Electoral Committee; points itself, in horrid radii, against this and the other accused breast. It was the Titans warring with Olympus; and they, scarcely crediting it, have *conquered*: prodigy of prodigies; delirious, — as it could not but be. Denunciation, vengeance; blaze of triumph on a dark ground of terror: all outward, all inward things fallen into one general wreck of madness!

Electoral Committee? Had it a thousand throats of brass, it would not suffice. Abbé Lefevre, in the Vaults down below, is black as Vulcan, distributing that 'five thousand-weight of Powder'; with what perils, these eight-and-forty hours! Last night, a Patriot, in liquor, insisted on sitting to smoke on the edge of one of the Powder-barrels: there smoked he, independent of the world, — till the Abbé 'purchased his pipe for three francs,' and pitched it far.

Elie, in the grand Hall, Electoral Committee looking on, sits 'with drawn sword bent in three places'; with battered helm, for he was of the Queen's Regiment, Cavalry; with torn regimentals, face singed and soiled; comparable, some think, to 'an antique warrior'; — judging the people: forming a list of Bastille Heroes. O Friends, stain not with blood the greenest laurels ever gained in this world: such is the burden of Elie's song: could it but be listened to. Courage, Elie! Courage, ye Municipal Electors! A declining sun; the need of victuals, and of telling news, will bring assuagement, dispersion: all earthly things must end.

Along the streets of Paris circulate Seven Bastille Prisoners, borne shoulder high; seven Heads on pikes; the Keys of the Bastille; and much else. See also the Gardes Françaises, in their steadfast military way, marching home to their barracks, with the Invalides and Swiss kindly enclosed in hollow square. It is one year and two months since these same men stood unparticipating, with Brennus d'Agoust at the Palais de Justice, when Fate overtook D'Espréménil;[2] and now they have participated; and will participate. Not Gardes Françaises henceforth, but *Centre Grenadiers of the National Guard*: men of iron discipline and humour, — not without a kind of thought in them!

Likewise ashlar stones of the Bastille continue thundering through the dusk; its paper archives shall fly white. Old secrets come to view; and long-buried Despair finds voice. Read this portion of an old Letter: 'If for my consolation Monseigneur would grant me, for the sake of God and the Most Blessed Trinity, that I could have news of my dear wife; were it only her name on a card, to show that she is alive! It were the greatest consolation I could receive; and I should for ever bless the greatness of Monseigneur.' Poor Prisoner, who namest thyself *Quéret-Démery*, and hast no other history, — she is *dead*, that dear wife of thine, and thou art dead! 'Tis fifty years since thy breaking heart put this question; to be heard now first, and long heard, in the hearts of men.

But so does the July twilight thicken; so must Paris, as sick children, and all distracted creatures do, brawl itself finally into a kind of sleep. Municipal Electors, astonished to find their heads still uppermost, are home: only Moreau de Saint Méry[3] of tropical birth and heart, of cool-

2. See Vol.I, Book III, Chapter viii, 'Loménie's Death-throes'

3. Moreau de Saint-Méry (1750–1819) was a barrister in Paris, and prominent in literary and scientific circles. He became a member of the Constituent Assembly as a deputy for Martinique. After Aug. 10, 1792, he fled to Amer-

est judgement; he, with two others, shall sit permanent at the Townhall. Paris sleeps; gleams upward the illuminated City: patrols go clashing, without common watchword; there go rumours; alarms of war, to the extent of 'fifteen thousand men marching through the Suburb Saint-Antoine,'—who never got it marched through. Of the day's distraction judge by this of the night: Moreau de Saint-Méry, 'before rising from his seat, gave upwards of three thousand orders.' What a head: comparable to Friar Bacon's Brass Head![4] Within it lies all Paris. Prompt must the answer be, right or wrong; in Paris is no other authority extant. Seriously, a most cool clear head;—for which also thou, O brave Saint-Méry, in many capacities, from august Senator to Merchant's Clerk, Book dealer, Vice King; in many places, from Virginia to Sardinia, shalt, ever as a brave man, find employment.

Besenval has decamped, under cloud of dusk, 'amid a great affluence of people,' who did not harm him; he marches, with faint growing tread, down the left bank of the Seine, all night,—towards infinite space. Re-summoned shall Besenval himself be; for trial, for difficult acquittal. His King's-troops, his Royal-Allemand, are gone hence for ever.

The Versailles Ball and lemonade is done; the Orangerie is silent except for nightbirds. Over in the Salle des Menus, Vice-president Lafayette, with unsnuffed lights, 'with some Hundred or so of Members, stretched on tables round him,' sits erect; outwatching the Bear.[5] This day, a second solemn Deputation went to his Majesty; a second and then a third: with no effect. What will the end of these things be?

In the Court, all is mystery, not without whisperings of terror; though ye dream of lemonade and epaulettes, ye foolish women! His Majesty, kept in happy ignorance, perhaps dreams of double-barrels and the Woods of Meudon. Late at night, the Duke de Liancourt, having official right of entrance, gains access to the Royal Apartments; unfolds, with earnest clearness, in his constitutional way, the Job's-news. '*Mais*,' said poor Louis, '*c'est une révolte*, Why, that is a revolt.'—'Sire,' answered Liancourt, 'it is not a revolt,—it is a revolution.'[6]

ica for the duration of the Revolution, and set up as bookseller and printer. He served under the Consulate and the Empire until 1806.

4. Allusion to the legend relating to Roger Bacon (1214?–94) and Thomas Bungay (fl.1290) who were said to have made a head of brass which, with the aid of the Devil, was to speak within a month. A servant, set to watch it, allowed Bacon to sleep while the head came alive and said, 'Time is; time was; time has past,' and then fell and broke into pieces. (See the Elizabethan comedy, by Greene, *Friar Bacon and Friar Bungay* [acted in 1594].)

VOL. III — BOOK II

Chapter VIII

Place de la Révolution

[The Execution of Louis XVI, January 21, 1793.]

To this conclusion, then, hast thou come, O hapless Louis! The Son of Sixty Kings is to die on the Scaffold by form of Law. Under Sixty Kings this same form of Law, form of Society, has been fashioning itself together, these thousand years: and has become, one way and other, a most strange

5. See Milton, *Il Penseroso*, 87.

6. Thus ends the episode as Carlyle presents it, more or less as a unit. Fletcher's note at this point is worth considering in view of the fact that Carlyle does not distinguish between the two elements in the crowd before the Bastille, the respectable citizens who tried to get in touch with De Launay and avert a riot, and the 'scum of Paris' which took advantage of the riot to plunder, loot, and kill. 'Respectable Paris,' says Fletcher, 'which had on [the] 13th begun to organise itself for the suppression of "brigandage" was on [the] 15th obliged to bend its head before the "brigands" and salute them as "liberators." It did not lift its head again till July 27th, 1794.' (Fletcher's ed. of Carlyle's *French Revolution*, I,250, note 1.)

Machine. Surely, if needful, it is also frightful, this Machine; dead, blind; not what it should be; which, with swift stroke, or by cold slow torture, has wasted the lives and souls of innumerable men. And behold now a King himself, or say rather Kinghood in his person, is to expire here in cruel tortures; — like a Phalaris shut in the belly of his own red-heated Brazen Bull![1] It is ever so; and thou shouldst know it, O haughty tyrannous man: injustice breeds injustice; curses and falsehoods do verily return 'always *home*,' wide as they may wander. Innocent Louis bears the sins of many generations: he too experiences that man's tribunal is not in this Earth; that if he had no Higher one, it were not well with him.

A King dying by such violence appeals impressively to the imagination; as the like must do, and ought to do. And yet at bottom it is not the King dying, but the man! Kingship is a coat: the grand loss is of the skin. The man from whom you take his Life, to him can the whole combined world do *more*? Lally[2] went on his hurdle; his mouth filled with a gag. Miserablest mortals, doomed for picking pockets, have a whole five-act Tragedy in them, in that dumb pain, as they go to the gallows, unregarded; they consume the cup of trembling down to the lees. For Kings and for Beggars, for the justly doomed and the unjustly, it is a hard thing to die. Pity them all: thy utmost pity, with all aids and appliances and throne-and-scaffold contrasts, how far short is it of the thing pitied!

A Confessor has come; Abbé Edgeworth,[3] of Irish extraction, whom the King knew by good report, has come promptly on this solemn mission. Leave the Earth alone, then, thou hapless King; it with its malice will go its way, thou also canst go thine. A hard scene yet remains: the parting with our loved ones. Kind hearts, environed in the same grim peril with us; to be left *here*! Let the Reader look with the eyes of Valet Cléry, through these glass-doors, where also the Municipality watches; and see the cruellest of scenes:

'At half-past eight, the door of the anteroom opened: the Queen appeared first, leading her Son by the hand; then Madame Royale[4] and Madame Elizabeth:[5] they all flung themselves into the arms of the King. Silence reigned for some minutes; interrupted only by sobs. The Queen made a movement to lead his Majesty towards the inner room, where M. Edgeworth was waiting unknown to them: "No," said the King, "let us go into the dining-room, it is there only that I can see you." They entered there; I shut the door of it, which was of glass. The King sat down, the Queen on his left hand, Madame Elizabeth on his right, Madame Royale almost in front; the young Prince remained standing between his Father's legs. They all leaned towards him, and often held him embraced.

1. *Phalaris*: tyrant of Agrigentum, who had made for him a brazen bull, in which criminals were put to death by a fire under the beast's belly.
2. T.A.Baron de Lally-Tollendal (1702-66), French general who had ably served his country in the war with Austria (1734) and in India; while a prisoner of war in England, he was accused in France of treachery, and boldly returned to stand his trial, whereupon he was thrown into prison, and after much painful delay was beheaded. His son, T.G Marquis of Lally-Tollendal forced through the Parlement of 1788 a reversal of the sentence of 1766. When the Revolution broke out, the younger Lally-Tollendal played a considerable part in its early stages, served on the Committee for drawing up a constitution, but resigned at the end of the Insurrection of Women (see Vol.I, Book VII, Chapter 11). He is the real author of one of Carlyle's chief sources in *The French Revolution*, namely, the *Mémoires concernant Marie Antoinette* (London, 1804–09) by Joseph Weber, Marie Antoinette's foster-brother.
3. Henry Essex Edgeworth de Firmont (1745–1807), son of an Irish clergyman, educated by the Jesuits at Toulouse and at Paris, who became the confessor to the French Princess Elizabeth, sister of Louis XVI, in 1791, and then to the King himself.
4. Marie-Thérèse-Charlotte, afterwards Duchesse d'Angoulême (1778–1851), daughter of Louis XVI.
5. Sister of the King, born in 1764, guillotined on April 22, 1794.

This scene of woe lasted an hour and three quarters; during which we could hear nothing; we could see only that always when the King spoke, the sobbings of the Princesses redoubled, continued for some minutes; and that then the King began again to speak.'[6] — And so our meetings and our parting do now end! The sorrows we gave each other; the poor joys we faithfully shared, and all our lovings and our sufferings, and confused toilings under the earthly Sun, are over. Thou good soul, I shall never, never through all ages of Time, see thee any more! — NEVER! O Reader, knowest thou that hard word?

For nearly two hours this agony lasts; then they tear themselves asunder. 'Promise that you will see us on the morrow.' He promises: — Ah yes, yes; yet once; and go now, ye loved ones; cry to God for yourselves and me! — It was a hard scene, but it is over. He will not see them on the morrow. The Queen, in passing through the ante-room, glanced at the Cerberus Municipals;[7] and, with woman's vehemence, said through her tears, '*Vous êtes tous des scélérats.*'[8]

King Louis slept sound, till five in the morning, when Cléry, as he had been ordered, awoke him. Cléry dressed his hair: while this went forward, Louis took a ring from his watch, and kept trying it on his finger; it was his wedding-ring, which he is now to return to the Queen as a mute farewell. At half-past six, he took the Sacrament; and continued in devotion, and conference with Abbé Edgeworth. He will not see his Family: it were too hard to bear.

At eight, the Municipals enter: the King gives them his Will, and messages and effects; which they, at first, brutally refuse to take charge of: he gives them a roll of gold pieces, a hundred and twenty-five louis; these are to be returned to Malesherbes,[9] who had lent them. At nine, Santerre[10] says the hour is come. The King begs yet to retire for three minutes. At the end of three minutes, Santerre again says the hour is come. 'Stamping on the ground with his right foot, Louis answers: "*Partons*, Let us go."' — How the rolling of those drums comes in, through the Temple bastions and bulwarks, on the heart of a queenly wife: soon to be a widow! He is gone, then, and has not seen us? A Queen weeps bitterly; a King's Sister and Children. Over all these Four does Death also hover: all shall perish miserably save one; she, as Duchesse d'Angoulême, will live, — not happily.

At the Temple[11] Gate were some faint cries, perhaps from voices of pitiful women: '*Grâce! Grâce!*' Through the rest of the streets there is silence as of the grave. No man not armed is allowed to be there: the armed, did any even pity, dare not express it, each man overawed by all his neighbours. All windows are down, none seen looking through them. All shops are shut. No wheel carriage rolls, this morning, in these streets but one only. Eighty-thousand armed men stand ranked, like armed statues of men; cannons bristle, cannoneers with match burning, but no word or movement: it is as a city enchanted into silence and stone: one carriage with its escort, slowly rumbling, is the only sound. Louis reads, in his Book of Devotion, the Prayers of the Dying: clatter of this death-march falls sharp on the ear, in the great

6. Cléry's Narrative (London, 1798), cited in Weber, iii.312. [Carlyle's note. — Cléry had been in attendance on the King since August 26. He was imprisoned on the King's death till July 1793, and died in Vienna in 1809.]

7. Officers of the Municipal government. — *Cerberus*: the triple-headed dog which guarded the entrance to Hades.

8. 'You are all scoundrels.'

9. Chrétien Guillaume de Lamoignon de Malesherbes (1721–94) had been one of Louis's ministers; he foretold the revolutionary conflagration, defended the King at his trial, and was guillotined on April 22, 1794.

10. See the chapter entitled 'Storm and Victory,' note 23.

11. The Royal family and attendants had been confined to the Temple (an ancient building dating from Philip Augustus, who died in 1223) since August 13, 1792.

silence; but the thought would fain struggle heavenward, and forget the Earth.

As the clocks strike ten, behold the Place de la Révolution, once Place de Louis Quinze: the Guillotine, mounted near the old Pedestal where once stood the Statue of that Louis! Far round, all bristles with cannons and armed men: spectators crowding in the rear; D'Orléans Égalité [12] there in cabriolet. Swift messengers, *hoquetons*,[13] speed to the Townhall, every three minutes: near by is the Convention sitting, — vengeful for Lepelletier.[14] Heedless of all, Louis reads his Prayers of the Dying; not till five minutes yet has he finished; then the Carriage opens. What temper he is in? Ten different witnesses will give ten different accounts of it. He is in the collision of all tempers; arrived now at the black Mahlstrom and descent of Death: in sorrow, in indignation, in resignation struggling to be resigned. 'Take care of M. Edgeworth,' he straitly charges the Lieutenant who is sitting with them: then they two descend.

The drums are beating: '*Taisez-vous*, Silence!' he cries 'in a terrible voice, *d'une voix terrible*.' He mounts the scaffold, not without delay; he is in puce [15] coat, breeches of grey, white stockings. He strips off the coat; stands disclosed in a sleeve-waistcoat of white flannel. The Executioners approach to bind him: he spurns, resists; Abbé Edgeworth has to remind him how the Saviour, in whom men trust, submitted to be bound. His hands are tied, his head bare; the fatal moment is come. He advances to the edge of the Scaffold, 'his face very red,' and says: 'Frenchmen, I die innocent: it is from the Scaffold and near appearing before God that I tell you so. I pardon my enemies; *i* desire that France ——' A General on horseback, Santerre or another, prances out, with uplifted hand: '*Tambours!*' [16] The drums drown the voice. 'Executioners, do your duty!' The Executioners, desperate lest themselves be murdered (for Santerre and his Armed Ranks will strike, if they do not), seize the hapless Louis: six of them desperate, him singly desperate, struggling there; and bind him to their plank. Abbé Edgeworth, stooping, bespeaks him: 'Son of Saint Louis, ascend to Heaven.' The Axe clanks down; a King's Life is shorn away. It is Monday the 21st day of January 1793. He was aged Thirty-eight years four months and twenty eight days.

Executioner Samson [17] shows the Head: fierce shout of *Vive la République* [18] rises, and swells; caps raised on bayonets, hats waving: students of the College of Four Nations take it up, on the far Quais: fling it over Paris. D'Orléans drives off in his cabriolet: the Townhall Councillors rub their hands, saying, 'It is done, It is done.' There is dipping of handkerchiefs, of pike points in the blood. Headsman Samson, though he afterwards denied it, sells locks of the hair: fractions of the puce coat are long after worn in rings. — And so, in some half-hour it is done; and the multitude has all departed. Pastry cooks, coffee-sellers, milkmen sing out their trivial quotidian cries: the world wags on, as if this were a common day. In the coffee houses that evening, says Prudhomme,[19] Patriot shook hands with Patriot in a more cordial manner than usual. Not till some days

12. See the chapter entitled 'To Arms!' note 10.
13. 'yeomen of the guard.'
14. Louis Michel Lepelletier de Saint-Fargeau (1760–93) had been one of the deputies to the States-General for the Paris *Noblesse*, and had held other high posts; he was assassinated on the night before the King's execution for having voted for the King's death.
15. ***puce***: red, but low in brilliance.
16. 'Drums!'
17. Charles Henri Sanson (b.1739), public executioner of Paris from 1788 to 1795; he inherited his office from his father and bequeathed it to his son, who held it until his death in 1840. Carlyle consistently spells the name *Samson*.
18. 'Long live the Republic!'
19. L.M.Prudhomme (1752–1830), proprietor of the first and most widely read of the Radical newspapers, *Révolutions de Paris*, appearing on July 17, 1789.

after, according to Mercier,[20] did public men see what a grave thing it was. . . .

At home this Killing of a King has divided all friends; and abroad it has united all enemies. Fraternity of Peoples, Revolutionary Propagandism; Atheism, Regicide; total destruction of social order in this world! All Kings, and lovers of Kings, and haters of Anarchy, rank in coalition; as in a war for life. England signifies to Citizen Chauvelin, the Ambassador or rather Ambassador's-Cloak, that he must quit the country in eight days.[21] Ambassador's-Cloak and Ambassador, Chauvelin and Talleyrand,[22] depart accordingly. Talleyrand, implicated in that Iron Press of the Tuileries,[23] thinks it safest to make for America.

England has cast out the Embassy: England declares war, — being shocked principally, it would seem, at the condition of the River Scheldt. Spain declares war; being shocked principally at some other thing; which doubtless the Manifesto indicates. Nay we find it was not England that declared war first, or Spain first; but that France herself declared war first on both of them;[24] — a point of immense Parliamentary and Journalistic interest in those days, but which has become of no interest whatever in these. They all declare war. The sword is drawn, the scabbard thrown away. It is even as Danton said, in one of his all-too gigantic figures: 'The coalized Kings threaten us; we hurl at their feet, as gage of battle, the Head of a King.'

20 L. S. Mercier (1740–1814), revolutionary journalist, author of *Tableau de Paris*, *Le nouveau Paris*, etc., from which Carlyle drew copiously for material, though aware of the doubtful character of much of Mercier's reporting.

21 English sympathy with Louis had declined since his flight to Varennes but the September Massacres had aroused public indignation. Chauvelin was dismissed on January 24, and universal mourning was worn for Louis in London (Fletcher).

22 Charles Maurice Talleyrand-Périgord (1754–1838), after an audacious career in the revolution, had been sent to London as adviser to Chauvelin. The provocative actions of Chauvelin, together with the French Convention's decision to set aside the rights of the Dutch over the estuary of the Scheldt River, brought the English and the French to the brink of war. Thus Talleyrand was obliged to leave British soil, and to make his way to the United States, where he remained until November 1795.

23 Allusion to an iron press which Louis had had constructed in the Tuileries for the concealment of 'traitorous Correspondence' (see *French Revolution*, Vol. III, Book II, Chapter v, 'Stretching of Formulas'). Talleyrand was only one of many who were suspected of treason because of the letters found in the press.

24 Thus was precipitated the 'First Coalition' against France (1793–95), consisting of Britain, Prussia, Austria, Spain, and the Piedmont. England went to war chiefly because the French had declared the river Scheldt open to navigation in defiance of Great Britain, who was bound to protect it, and because the English had been horrified at the execution of Louis.

ON HEROES, HERO-WORSHIP, AND THE HEROIC IN HISTORY

Lecture I

The Hero as Divinity. Odin. Paganism: Scandinavian Mythology

[Tuesday, 5th May 1840.]

We have undertaken to discourse here for a little on Great Men, their manner of appearance in our world's business, how they have shaped themselves in the world's history, what ideas men formed of them, what work they did; — on Heroes, namely, and on their reception and performance; what I call Hero-worship and the Heroic in human affairs. Too evidently this is a large topic; deserving quite other treatment than we can expect to give it at present. A large topic; indeed, an illimitable one; wide as Universal History itself. For, as I take it,

Universal History, the history of what man has accomplished in this world, is at bottom the History of the Great Men who have worked here. They were the leaders of men, these great ones; the modellers, patterns, and in a wide sense creators, of whatsoever the general mass of men contrived to do or to attain; all things that we see standing accomplished in the world are properly the outer material result, the practical realisation and embodiment, of Thoughts that dwelt in the Great Men sent into the world: the soul of the whole world's history, it may justly be considered, were the history of these. Too clearly it is a topic we shall do no justice to in this place!

One comfort is, that Great Men, taken up in any way, are profitable company. We cannot look, however imperfectly, upon a great man, without gaining something by him. He is the living light-fountain, which it is good and pleasant to be near. The light which enlightens, which has enlightened the darkness of the world; and this not as a kindled lamp only, but rather as a natural luminary shining by the gift of Heaven; a flowing light-fountain, as I say, of native original insight, of manhood and heroic nobleness; — in whose radiance all souls feel that it is well with them. On any terms whatsoever, you will not grudge to wander in such neighbourhood for a while. These Six classes of Heroes,[1] chosen out of widely-distant countries and epochs, and in mere external figure differing altogether, ought, if we look faithfully at them, to illustrate several things for us. Could we see *them* well, we should get some glimpses into the very marrow of the world's history. How happy, could I but, in any measure, in such times as these, make manifest to you the meanings of Heroism; the divine relation (for I may well call it such) which in all times unites a Great Man to other men; and thus, as it were, not exhaust my subject, but so much as break ground on it! At all events, I must make the attempt.

It is well said, in every sense, that a man's religion is the chief fact with regard to him. A man's, or a nation of men's. By religion I do not mean here the church creed which he professes, the articles of faith which he will sign and, in words or otherwise, assert; not this wholly, in many cases not this at all. We see men of all kinds of professed creeds attain to almost all degrees of worth or worthlessness under each or any of them. This is not what I call religion, this profession and assertion; which is often only a profession and assertion from the outworks of the man, from the mere argumentative region of him, if even so deep as that. But the thing a man does practically believe (and this is often enough *without* asserting it even to himself, much less to others); the thing a man does practically lay to heart, and know for certain, concerning his vital relations to this mysterious Universe, and his duty and destiny there, that is in all cases the primary thing for him, and creatively determines all the rest. That is his *religion*; or, it may be, his mere scepticism and *no-religion*: the manner it is in which he feels himself to be spiritually related to the Unseen World or No-World; and I say, if you tell me what that is, you tell me to a very great extent what the man is, what the kind of things he will do is. Of a man or of a nation we inquire, therefore, first of all, What religion they had? Was it Heathenism, — plurality of gods, mere sensuous representation of this Mystery of Life, and for chief recognised element therein Physical Force? Was it Christianism; faith in an Invisible, not as real only, but as the only reality; Time, through every meanest moment of it, resting on Eternity; Pagan empire of Force displaced by a nobler supremacy, that of Holiness? Was it Scepticism, un-

1. As divinity (Odin), as prophet (Mahomet), as poet (Dante and Shakespeare), as priest (Luther and Knox), as man of letters (Johnson, Rousseau, and Burns), and as king (Cromwell and Napoleon).

certainty and inquiry whether there was an Unseen World, any Mystery of Life except a mad one; — doubt as to all this, or perhaps unbelief and flat denial? Answering of this question is giving us the soul of the history of the man or nation. The thoughts they had were the parents of the actions they did; their feelings were parents of their thoughts: it was the unseen and spiritual in them that determined the outward and actual; — their religion, as I say, was the great fact about them. In these Discourses, limited as we are, it will be good to direct our survey chiefly to that religious phasis of the matter. That once known well, all is known. We have chosen as the first Hero in our series, Odin the central figure of Scandinavian Paganism; an emblem to us of a most extensive province of things. Let us look for a little at the Hero as Divinity, the oldest primary form of Heroism.

Surely it seems a very strange-looking thing this Paganism; almost inconceivable to us in these days. A bewildering, inextricable jungle of delusions, confusions, falsehoods, and absurdities, covering the whole field of Life! A thing that fills us with astonishment, almost, if it were possible, with incredulity, — for truly it is not easy to understand that sane men could ever calmly, with their eyes open, believe and live by such a set of doctrines. That men should have worshipped their poor fellow-man as a God, and not him only, but stocks and stones, and all manner of animate and inanimate objects; and fashioned for themselves such a distracted chaos of hallucinations by way of Theory of the Universe: all this looks like an incredible fable. Nevertheless, it is a clear fact that they did it. Such hideous inextricable jungle of misworships, misbeliefs, men, made as we are, did actually hold by, and live at home in. This is strange. Yes, we may pause in sorrow and silence over the depths of darkness that are in man; if we rejoice in the heights of purer vision he has attained to. Such things were and are in man; in all men; in us too.

Some speculators have a short way of accounting for the Pagan religion: mere quackery, priestcraft, and dupery, say they; no sane man ever did believe it, — merely contrived to persuade other men, not worthy of the name of sane, to believe it! It will be often our duty to protest against this sort of hypothesis about men's doings and history; and I here, on the very threshold, protest against it in reference to Paganism, and to all other *isms* by which man has ever for a length of time striven to walk in this world. They have all had a truth in them, or men would not have taken them up. Quackery and dupery do abound; in religions, above all in the more advanced decaying stages of religions, they have fearfully abounded; but quackery was never the originating influence in such things; it was not the health and life of such things, but their disease, the sure precursor of their being about to die! Let us never forget this. It seems to me a most mournful hypothesis, that of quackery giving birth to any faith even in savage men. Quackery gives birth to nothing; gives death to all things. We shall not see into the true heart of anything, if we look merely at the quackeries of it: if we do not reject the quackeries altogether; as mere diseases, corruptions, with which our and all men's sole duty is to have done with them, to sweep them out of our thoughts as out of our practice. Man everywhere is the born enemy of lies. . . . — We shall begin to have a chance of understanding Paganism, when we first admit that to its followers it was, at one time, earnestly true. Let us consider it very certain that men did believe in Paganism; men with open eyes, sound senses, men made altogether like ourselves; that we, had we been there, should have believed in it. Ask now, What Paganism could have been?

Another theory, somewhat more respectable, attributes such things to Allegory. It was a play of poetic minds, say these the-

orists; a shadowing-forth, in allegorical fable, in personification and visual form, of what such poetic minds had known and felt of this Universe. Which agrees, add they, with a primary law of human nature, still everywhere observably at work, though in less important things. That what a man feels intensely, he struggles to speak-out of him, to see represented before him in visual shape, and as if with a kind of life and historical reality in it. Now doubtless there is such a law, and it is one of the deepest in human nature; neither need we doubt that it did operate fundamentally in this business. The hypothesis which ascribes Paganism wholly or mostly to this agency, I call a little more respectable; but I cannot yet call it the true hypothesis. Think, would *we* believe, and take with us as our life-guidance, an allegory, a poetic sport? Not sport but earnest is what we should require. It is a most earnest thing to be alive in this world: to die is not sport for a man. Man's life never was a sport to him: it was a stern reality, altogether a serious matter to be alive!

I find, therefore, that though these Allegory theorists are on the way towards truth in this matter, they have not reached it either. Pagan Religion is indeed an Allegory, a Symbol of what men felt and knew about the Universe; and all Religions are Symbols of that, altering always as that alters: but it seems to me a radical perversion, and even *in*version, of the business, to put that forward as the origin and moving cause, when it was rather the result and termination. To get beautiful allegories, a perfect poetic symbol, was not the want of men; but to know what they were to believe about this Universe, what course they were to steer in it; what, in this mysterious Life of theirs, they had to hope and to fear, to do and to forbear doing. The *Pilgrim's Progress* is an Allegory, and a beautiful, just and serious one: but consider whether Bunyan's[2] Allegory could have *preceded* the Faith it symbolises! The Faith had to be already there, standing believed by everybody; — of which the Allegory could *then* become a shadow; and, with all its seriousness, we may say a *sportful* shadow, a mere play of the Fancy, in comparison with that awful Fact and scientific certainty which it poetically strives to emblem. The Allegory is the product of the certainty, not the producer of it; not in Bunyan's nor in any other case. For Paganism, therefore, we have still to inquire, Whence came that scientific certainty, the parent of such a bewildered heap of allegories, errors and confusions? How was it, what was it?

Surely it were a foolish attempt to pretend 'explaining,' in this place, or in any place, such a phenomenon as that far-distant distracted cloudy imbroglio[3] of Paganism, — more like a cloudfield than a distant continent of firm land and facts! It is no longer a reality, yet it was one. We ought to understand that this seeming cloudfield was once a reality; that not poetic allegory, least of all that dupery and deception was the origin of it. Men, I say, never did believe idle songs, never risked their soul's life on allegories: men in all times, especially in early earnest times, have had an instinct for detecting quacks, for detesting quacks. Let us try if, leaving out both the quack theory and the allegory one, and listening with affectionate attention to that far-off confused rumour of the Pagan ages, we cannot ascertain so much as this at least, That there was a kind of fact at the heart of them: that they too were not mendacious and distracted, but in their own poor way true and sane!

You remember that fancy of Plato's,[4] of a man who had grown to maturity in some

2. John Bunyan's *Pilgrim's Progress* appeared in 1678. A second part appeared in 1684.

3. Entanglement.

4. See *Phaedo*, 109; *Republic*, Bk.vii, beginning: 'After this, I said, imagine the enlightenment or ignorance of our nature in a figure: Behold! human beings living in a sort of underground den,' etc. Carlyle was fond of this figure. *Cf. Sartor*, Bk.I, Ch.viii.

dark distance, and was brought on a sudden into the upper air to see the sun rise. What would his wonder be, his rapt astonishment at the sight we daily witness with indifference! With the free open sense of a child, yet with the ripe faculty of a man, his whole heart would be kindled by that sight, he would discern it well to be Godlike, his soul would fall down in worship before it. Now, just such a childlike greatness was in the primitive nations. The first Pagan Thinker among rude men, the first man that began to think, was precisely this child man of Plato's. Simple, open as a child, yet with the depth and strength of a man. Nature had as yet no name to him; he had not yet united under a name the infinite variety of sights, sounds, shapes and motions, which we now collectively name Universe, Nature, or the like, — and so with a name dismiss it from us. To the wild deep hearted man all was yet new, not veiled under names or formulas; it stood naked, flashing in on him there, beautiful, awful, unspeakable. Nature was to this man, what to the Thinker and Prophet it for ever is, *preter*natural. This green flowery rock-built earth, the trees, the mountains, rivers, many sounding seas; - that great deep sea of azure that swims overhead; the winds sweeping through it; the black cloud fashioning itself together, now pouring out fire, now hail and rain; what *is* it? Ay, what? At bottom we do not yet know; we can never know at all. It is not by our superior insight that we escape the difficulty: it is by our superior levity, our inattention, our *want* of insight. It is by *not* thinking that we cease to wonder at it. Hardened round us, encasing wholly every notion we form, is a wrappage of traditions, hearsays, mere *words*. We call that fire of the black thunder cloud 'electricity,' and lecture learnedly about it, and grind the like of it out of glass and silk: but *what* is it? What made it? Whence comes it? Whither goes it? Science has done much for us; but it is a poor science that would hide from us the great deep sacred infinitude of Nescience,[5] whither we can never penetrate, on which all science swims as a mere superficial film. This world, after all our science and sciences, is still a miracle; wonderful, inscrutable, *magical* and more, to whosoever will *think* of it.

That great mystery of TIME,[6] were there no other; the illimitable, silent, never-resting thing called Time, rolling, rushing on, swift, silent, like an all-embracing oceantide, on which we and all the Universe swim like exhalations, like apparitions which *are*, and then *are not*: this is for ever very literally a miracle; a thing to strike us dumb, — for we have no word to speak about it. This Universe, ah me — what could the wild man know of it; what can we yet know? That it is a Force, and thousandfold Complexity of Forces; a Force which is *not we*. That is all; it is not we, it is altogether different from *us*. Force, Force, everywhere Force; we ourselves a mysterious Force in the centre of that. 'There is not a leaf rotting on the highway but has Force in it: how else could it rot?'[7] Nay surely, to the Atheistic Thinker, if such a one were possible, it must be a miracle too, this huge illimitable whirlwind of Force, which envelops us here; never-resting whirlwind, high as Immensity, old as Eternity. What is it? God's creation, the religious people answer; it is the Almighty God's! Atheistic science babbles poorly of it, with scientific nomenclatures, experiments and what-not, as if it were a poor dead thing, to be bottled-up in Leyden jars[8] and sold over counters: but the natural sense of man, in all times, if he will honestly apply his sense, proclaims it to be

5. Complete ignorance: suggesting the mystery of the universe.
6. *Cf. Sartor*, the chapter on 'Natural Supernaturalism.'
7. Adapted from *Sartor*, Bk I, Ch XI.
8. *Leyden jar*: an electrical condenser, consisting of a glass jar, coated with tin foil, within and without, and surmounted by a brass knob which communicates with the inner coating.

a living thing, — ah, an unspeakable, godlike thing; towards which the best attitude for us, after never so much science, is awe, devout prostration and humility of soul; worship if not in words, then in silence. . . .

Worship is transcendent wonder; wonder for which there is now no limit or measure: that is worship. To these primeval men, all things and everything they saw exist beside them were an emblem of the Godlike, of some God.

And look what perennial fibre of truth was in that. To us also, through every star, through every blade of grass, is not a God made visible, if we will open our minds and eyes? We do not worship in that way now: but is it not reckoned still a merit, proof of what we call a 'poetic nature,' that we recognise how every object has a divine beauty in it; how every object still verily is 'a window through which we may look into Infinitude itself'? [9] He that can discern the loveliness of things, we call him Poet, Painter, Man of Genius, gifted, lovable. These poor Sabeans [10] did even what he does, — in their own fashion. That they did it, in what fashion soever, was a merit: better than what the entirely stupid man did, what the horse and camel did, — namely, nothing!

But now if all things whatsoever that we look upon are emblems to us of the Highest God, I add that more so than any of them is man such an emblem. You have heard of St. Chrysostom's [11] celebrated saying in reference to the Shekinah,[12] or Ark of Testimony, visible Revelation of God, among the Hebrews: 'The true Shekinah is Man!' Yes, it is even so: this is no vain phrase; it is veritably so. The essence of our being, the mystery in us that calls itself 'I,' — ah, what words have we for such things? — is a breath of Heaven; the Highest Being reveals himself in man. This body, these faculties, this life of ours, is it not all as a vesture for that Unnamed? 'There is but one Temple in the Universe,' says the devout Novalis,[13] 'and that is the Body of Man. Nothing is holier than that high form. Bending before men is a reverence done to this Revelation in the Flesh. We touch Heaven when we lay our hand on a human body!' This sounds much like a mere flourish of rhetoric; but it is not so. It well meditated, it will turn out to be a scientific fact; the expression, in such words as can be had, of the actual truth of the thing. *We* are the miracle of miracles, — the great inscrutable mystery of God. We cannot understand it, we know not how to speak of it; but we may feel and know, if we like, that it is verily so.

Well; these truths were once more readily felt than now. The young generations of the world, who had in them the freshness of young children, and yet the depth of earnest men, who did not think they had finished-off all things in Heaven and Earth by merely giving them scientific names, but had to gaze direct at them there, with awe and wonder: they felt better what of divinity is in man and Nature; — they, without being mad, could *worship* Nature, and man more than anything else in Nature. Worship, that is, as I said above, admire without limit: this, in the full use of their faculties, with all sincerity of heart, they could do. I consider Hero-worship to be the grand modifying element in that ancient system of thought. What I called the perplexed jungle of Paganism sprang, we may say, out of many roots: every admiration, adoration of a star or natural object, was a root or fibre of a root; but Hero-

9. *Cf. Sartor*, 'Prospective.'

10. Syrian inhabitants of Mesopotamia who, in the early Middle Ages, worshipped the sun, moon, and stars.

11. Chrysostom, the 'golden mouthed' (347?–407) preacher and father of the early Greek Church.

12. The Divine Manifestation. See *Numbers*, vii,89. *Cf. Sartor*, 'Pure Reason.'

13. Pseudonym of Friedrich Leopold von Hardenberg (1772–1801), German romantic poet, novelist, and mystic. Carlyle is quoting from Novalis's *Fragments*, which here adapts *I Corinthians*, iii,16. *Cf. Sartor*, 'Old Clothes.'

worship is the deepest root of all; the taproot, from which in a great degree all the rest were nourished and grown.

And now if worship even of a star had some meaning in it, how much more might that of a Hero! Worship of a Hero is transcendent admiration of a Great Man. I say great men are still admirable! I say there is, at the bottom, nothing else admirable! No nobler feeling than this of admiration for one higher than himself dwells in the breast of man. It is to this hour, and at all hours, the vivifying influence in man's life. Religion I find stand upon it; not Paganism only, but far higher and truer religions, — all religion hitherto known. Hero worship, heartfelt prostrate admiration, 'submission, burning, boundless, for a noblest godlike Form of Man, — is not that the germ of Christianity itself? The greatest of all Heroes in One — whom we do not name here! Let sacred silence meditate that sacred matter; you will find it the ultimate perfection of a principle extant throughout man's whole history on earth.

Or coming into lower, less *un*speakable provinces, is not all Loyalty akin to religious Faith also? Faith is loyalty to some inspired Teacher, some spiritual Hero. And what therefore is loyalty proper, the life-breath of all society, but an effluence of Hero-worship, submissive admiration for the truly great? Society is founded on Hero-worship. All dignities of rank, on which human association rests, are what we may call a *Hero*-archy (Government of Heroes), — or a Hierarchy, for it is 'sacred' enough withal! The Duke means *Dux*, Leader; King is *Kön-ning*, *Kan-ning*, Man that *knows* or *cans*.[14] Society everywhere is some representation, not *in*supportably inaccurate, of a graduated Worship of Heroes; — reverence and obedience done to men really great and wise. Not *in*supportably inaccurate, I say! They are all as bank-notes, these social dignitaries, all representing gold; — and several of them, alas, always are *forged* notes. We can do with some forged false notes; with a good many even; but not with all, or the most of them forged! No: there have to come revolutions then; cries of Democracy, Liberty and Equality, and I know not what: — the notes being all false, and no gold to be had for *them*, people take to crying in their despair that there is no gold, that there never was any! — 'Gold,' Hero-worship, *is* nevertheless, as it was always and everywhere, and cannot cease till man himself ceases.

I am well aware that in these days Hero-worship, the thing I call Hero-worship, professes to have gone out, and finally ceased. This, for reasons which it will be worth while some time to inquire into, is an age that as it were denies the existence of great men; denies the desirableness of great men. Show our critics a great man, a Luther for example, they begin to what they call 'account' for him; not to worship him, but take the dimensions of him, — and bring him out to be a little kind of man! He was the 'creature of the Time,' they say; the Time called him forth, the Time did everything, he nothing — but what we the little critic could have done too! This seems to me but melancholy work. The Time call forth? Alas, we have known Times *call* loudly enough for their great man; but not find him when they called! He was not there; Providence had not sent him; the Time, *calling* its loudest, had to go down to confusion and wreck because he would not come when called.

For if we will think of it, no Time need have gone to ruin, could it have *found* a man great enough, a man wise and good enough: wisdom to discern truly what the Time wanted, valour to lead it on the right road thither; these are the salvation of any Time. But I liken common languid Times, with their unbelief, distress, perplexity, with their languid doubting characters and embarrassed circumstances, impotently crumbling down into ever worse distress

14. *King* is really derived from Old English *cynn*, race, and *ing*, the patronymic ending, meaning 'a man of (noble) race.'

towards final ruin; — all this I liken to dry dead fuel, waiting for the lightning out of Heaven that shall kindle it. The great man, with his free force direct out of God's own hand, is the lightning. His word is the wise healing word which all can believe in. All blazes round him now, when he has once struck on it, into fire like his own. The dry mouldering sticks are thought to have called him forth. They did want him greatly: but as to calling him forth — ! — Those are critics of small vision, I think, who cry: 'See, is it not the sticks that made the fire?' No sadder proof can be given by a man of his own littleness than disbelief in great men. There is no sadder symptom of a generation than such general blindness to the spiritual lightning, with faith only in the heap of barren dead fuel. It is the last consummation of unbelief. In all epochs of the world's history, we shall find the Great Man to have been the indispensable saviour of his epoch; — the lightning, without which the fuel never would have burnt. The History of the World, I said already, was the Biography of Great Men. . . .

Yes, from Norse Odin to English Samuel Johnson, from the divine Founder of Christianity to the withered Pontiff of Encyclopedism,[15] in all times and places, the Hero has been worshipped. It will ever be so. We all love great men; love, venerate and bow down submissive before great men: nay can we honestly bow down to anything else? Ah, does not every true man feel that he is himself made higher by doing reverence to what is really above him? No nobler or more blessed feeling dwells in man's heart. And to me it is very cheering to consider that no sceptical logic, or general triviality, insincerity and aridity of any Time and its influences can destroy this noble inborn loyalty and worship that is in man. In times of unbelief, which soon have to become times of revolution, much down-rushing, sorrowful decay and ruin is visible to everybody. For myself, in these days, I seem to see in this indestructibility of Hero-worship the everlasting adamant lower than which the confused wreck of revolutionary things cannot fall. The confused wreck of things crumbling and even crashing and tumbling all round us in these revolutionary ages, will get down so far; *no* farther. It is an eternal corner-stone, from which they can begin to build themselves up again. That man, in some sense or other, worships Heroes; that we all of us reverence and must ever reverence Great Men: this is, to me, the living rock amid all rushings-down whatsoever; — the one fixed point in modern revolutionary history, otherwise as if bottomless and shoreless.

So much of truth, only under an ancient obsolete vesture, but the spirit of it still true, do I find in the Paganism of old nations. Nature is still divine, the revelation of the workings of God; the Hero is still worshipable: this, under poor cramped incipient forms, is what all Pagan religions have struggled, as they could, to set forth. I think Scandinavian Paganism, to us here, is more interesting than any other. It is, for one thing, the latest; it continued in these regions of Europe till the eleventh century: eight-hundred years ago the Norwegians were still worshippers of Odin. . . .

Of the chief god, Odin, we shall speak by and by. Mark at present so much; what the essence of Scandinavian and indeed of all Paganism is: a recognition of the forces of Nature as godlike, stupendous, personal Agencies, — as Gods and Demons. Not inconceivable to us. It is the infant Thought of man opening itself, with awe and wonder, on this ever-stupendous Universe. To

15. *i.e.* Voltaire (1694–1778), who contributed to the famous *Encyclopédie* (1751–76) directed by Diderot and D'Alembert, and embodying the philosophic spirit of the 18th century in its attempt to give a rational explanation of the universe and to destroy superstition. Its skeptical tendencies brought forth the hostility of the clergy and the official classes. Carlyle frequently attacked it for its scorn of faith, wonder, reverence, mystery, etc.

me there is in the Norse System something very genuine, very great and manlike. A broad simplicity, rusticity, so very different from the light gracefulness of the old Greek Paganism, distinguishes this Scandinavian System. It is Thought; the genuine Thought of deep, rude, earnest minds, fairly opened to the things about them; a face-to-face and heart-to heart inspection of the things, — the first characteristic of all good Thought in all times. Not graceful lightness, half-sport, as in the Greek Paganism; a certain homely truthfulness and rustic strength, a great rude sincerity, discloses itself here. It is strange, after our beautiful Apollo [16] statues and clear smiling mythuses, to come down upon the Norse Gods 'brewing ale' [17] to hold their feast with Aegir,[18] the Sea-Jötun; sending out Thor to get the caldron for them in the Jötun country; Thor,[19] after many adventures, clapping the Pot on his head, like a huge hat, and walking off with it, — quite lost in it, the ears of the Pot reaching down to his heels! A kind of vacant hugeness, large awkward gianthood, characterises that Norse System; enormous force, as yet altogether untutored, stalking helpless with large uncertain strides. Consider only their primary mythus of the Creation. The Gods, having got the Giant Ymer [20] slain, a Giant made by 'warm wind,' and much confused work, out of the conflict of Frost and Fire, — determined on constructing a world with him. His blood made the Sea; his flesh was the Land, the Rocks his bones; of his eyebrows they formed Asgard their Gods'-dwelling; his skull was the great blue vault of Immensity, and the brains of it became the Clouds. What a Hyper-Brobdingnagian [21] business! Untamed Thought, great, giantlike, enormous; — to be tamed in due time into the compact greatness, not giantlike, but godlike and stronger than gianthood, of the Shakspeares, the Goethes! — Spiritually as well as bodily these men are our progenitors.

I like, too, that representation they have of the Tree Igdrasil. All Life is figured by them as a Tree. Igdrasil, the Ash-tree of Existence, has its roots deep-down in the kingdoms of Hela or Death; its trunk reaches up heaven-high, spreads its boughs over the whole Universe: it is the Tree of Existence. At the foot of it, in the Death-kingdom, sit three *Nornas*, Fates, — the Past, Present, Future; watering its roots from the Sacred Well.[22] Its 'boughs,' with their buddings and disleafings, — events, things suffered, things done, catastrophes, — stretch through all lands and times. Is not every leaf of it a biography, every fibre there an act or word? Its boughs are Histories of Nations. The rustle of it is the noise of Human Existence, onwards from of old. It grows there, the breath of Human Passion rustling through it; — or stormtost, the stormwind howling through it like the voice of all the gods. It is Igdrasil, the Tree of Existence. It is the past, the present, and the future; what was done, what is doing, what will be done; 'the infinite conjugation of the verb *To do*.' Considering how human things circulate, each inextricably in communion with all, — how the word I speak to you today is borrowed, not from Ulfila [23] the Mœsogoth only, but from all men since the first man began to speak, — I find no similitude so true as this of a Tree. Beautiful; altogether beautiful and great. The '*Machine* of the

16. The Greek god of beauty, poetry, music, etc.; later of the sun.
17. For this story, see the *Heimskringla*, or Mallet's *Northern Antiquities*, 375.
18. The chief of the sea-giants, representing the peaceful ocean. *Jotun*: Norse for 'giant.'
19. The thunder-god.
20. The primeval giant who was nourished on the milk of the cow Audhumla; his vast bulk filled a portion of the original abyss. He was the father of the frost-giants.
21. Allusion to the land of Brobdingnag, peopled by giants, in *Gulliver's Travels* (1726), by Jonathan Swift (1667–1745).
22. Or well of wisdom, presided over by the giant water-demon, Mimir.
23. Or Ulfilas (c.311–83), bishop to the Goths, for whom he translated the Bible. Moesia was south of the Danube River.

Universe,'[24] — alas, do but think of that in contrast!

Well, it is strange enough this old Norse view of Nature; different enough from what we believe of Nature. Whence it specially came, one would not like to be compelled to say very minutely! One thing we may say: It came from the thoughts of Norse men; — from the thought, above all, of the *first* Norse man who had an original power of thinking. The First Norse 'man of genius,' as we should call him! Innumerable men had passed by, across this Universe, with a dumb vague wonder, such as the very animals may feel; or with a painful, fruitlessly inquiring wonder, such as men only feel; — till the great Thinker came, the *original* man, the Seer; whose shaped spoken Thought awakes the slumbering capability of all into Thought. It is ever the way with the Thinker, the spiritual Hero. What he says, all men were not far from saying, were longing to say. The Thoughts of all start up, as from painful enchanted sleep, round his Thought; answering to it, Yes, even so! Joyful to men as the dawning of day from night; — *is* it not, indeed, the awakening for them from no-being into being, from death into life? We still honour such a man; call him Poet, Genius, and so forth: but to these wild men he was a very magician, a worker of miraculous unexpected blessing for them; a Prophet, a God! — Thought once awakened does not again slumber; unfolds itself into a System of Thought; grows, in man after man, generation after generation, — till its full stature is reached, and *such* System of Thought can grow no farther, but must give place to another. . . .

. . . Of Odin what history? Strange rather to reflect that he *had* a history! That this Odin, in his wild Norse vesture, with his wild beard and eyes, his rude Norse speech and ways, was a man like us; with our sorrows, joys, with our limbs, features; — intrinsically all one as we: and did such a work! But the work, much of it, has perished; the worker, all to the name. '*Wednes*day' men will say tomorrow; Odin's day! Of Odin there exists no history; no document of it; no guess about it worth repeating. . . .

How the man Odin came to be considered a *god*, the chief god? — that surely is a question which nobody would wish to dogmatise upon. I have said, his people knew no *limits* to their admiration of him; they had as yet no scale to measure admiration by. Fancy your own generous heart's-love of some greatest man expanding till it *transcended* all bounds, till it filled and overflowed the whole field of your thought! Or what if this man Odin, — since a great deep soul, with the afflatus and mysterious tide of vision and impulse rushing on him he knows not whence, is ever an enigma, a kind of terror and wonder to himself, — should have felt that perhaps *he* was divine; that *he* was some effluence of the 'Wuotan,' '*Movement*,' Supreme Power and Divinity, of whom to his rapt vision all Nature was the awful Flame-image; that some effluence of *Wuotan* dwelt here in him! He was not necessarily false; he was but mistaken, speaking the truest he knew. A great soul, any sincere soul, knows not *what* he is, — alternates between the highest height and the lowest depth; can, of all things, the least measure — Himself! What others take him for, and what he guesses that he may be; these two items strangely act on one another, help to determine one another. With all men reverently admiring him; with his own wild soul full of noble ardours and affections, of whirlwind chaotic darkness and glorious new light; a divine Universe bursting all into godlike beauty round him, and no man to whom the like ever had befallen, what could he think himself to be? 'Wuotan?' All men answered, 'Wuotan!' —

And then consider what mere Time will

24. Perhaps an allusion to works like Laplace's *Mécanique céleste* (1799–1825), or, more certainly, to the Utilitarian conception of the universe. *Cf.* Carlyle's 'Characteristics.'

do in such cases; how if a man was great while living, he becomes tenfold greater when dead. What an enormous *camera-obscura*[25] magnifier is Tradition! How a thing grows in the human Memory, in the human Imagination, when love, worship, and all that lies in the human Heart is there to encourage it. . . . Why, in thirty or forty years, were there no books, any great man would grow *mythic*, the contemporaries who had seen him, being once all dead. And in three-hundred years, and in three-thousand years — '— To attempt *theorising* on such matters would profit little: they are matters which refuse to be *theoremed* and diagramed; which Logic ought to know that she *cannot* speak of. Enough for us to discern, far in the uttermost distance, some gleam as of a small real light shining in the centre of that enormous camera obscura image; to discern that the centre of it all was not a madness and nothing, but a sanity and something.

This light, kindled in the great dark vortex of the Norse Mind, dark but living, waiting only for light; this is to me the centre of the whole. How such light will then shine out, and with wondrous thousandfold expansion spread itself, in forms and colours, depends not on *it*, so much as on the National Mind recipient of it. The colours and forms of your light will be those of the *cut-glass* it has to shine through. — Curious to think how, for every man, any the truest fact is modelled by the nature of the man! I said. The earnest man, speaking to his brother men, must always have stated what seemed to him a *fact*, a real Appearance of Nature. But the way in which such Appearance or fact shaped itself, — what sort of *fact* it became for him, — was and is modified by his own laws of thinking; deep, subtle, but universal, ever-operating laws. The world of Nature, for every man, is the Fantasy of Himself; this world is the multiplex 'Image of his own Dream.'[26] Who knows to what unnameable subtleties of spiritual law all these Pagan Fables owe their shape! The number *Twelve*, divisiblest of all, which could be halved, quartered, parted into three, into six, the most remarkable number, — this was enough to determine the *Signs of the Zodiac*, the number of Odin's *Sons*, and innumerable other Twelves. Any vague rumour of number had a tendency to settle itself into Twelve. So with regard to every other matter. And quite unconsciously too, — with no notion of building-up 'Allegories'! But the fresh clear glance of those First Ages would be prompt in discerning the secret relations of things, and wholly open to obey these. . . . — On the whole, we must leave those boundless regions. Cannot we conceive that Odin was a reality? Error indeed, error enough: but sheer falsehood, idle fables, allegory aforethought, — we will not believe that our Fathers believed in these.

Odin's *Runes*[27] are a significant feature of him. Runes, and the miracles of 'magic' he worked by them, make a great feature in tradition. Runes are the Scandinavian Alphabet; suppose Odin to have been the inventor of Letters, as well as 'magic,' among that people! It is the greatest invention man has ever made, this of marking-down the unseen thought that is in him by written characters. It is a kind of second speech, almost as miraculous as the first. You remember the astonishment and incredulity of Atahualpa[28] the Peruvian

25 Or 'dark chamber,' having an aperture through which light from external objects enters to form an image on the surface opposite.

26. Adapted from Novalis's 'The Pupils at Sais,' and quoted in *Sartor*, 'The World out of Clothes.'

27. *Rune*. Old English *rūn* = secret, a mystery. The runic alphabet was used by the Teutonic, or Germanic, peoples from about the 3rd century A.D., and originally consisted of 24 characters. In the *Elder Edda*, Odin is said to have hung nine whole nights on the tree Igdrasil, sacrificing himself to himself, and there discovered the runes.

28. 'The last of the Incas' (c.1502–33), of Peru, king of Quito, treacherously executed by Pi-

King; how he made the Spanish Soldier who was guarding him scratch *Dios* on his thumb-nail, that he might try the next soldier with it, to ascertain whether such a miracle was possible. If Odin brought Letters among his people, he might work magic enough!

Writing by Runes has some air of being original among the Norsemen: not a Phœnician[29] Alphabet, but a native Scandinavian one. . . . Transport yourselves into the early childhood of nations; the first beautiful morning-light of our Europe, when all yet lay in fresh young radiance as of a great sunrise, and our Europe was first beginning to think, to be! Wonder, hope; infinite radiance of hope and wonder, as of a young child's thoughts, in the hearts of these strong men! Strong sons of Nature; and here was not only a wild Captain and Fighter; discerning with his wild flashing eyes what to do, with his wild lion-heart daring and doing it; but a Poet too, all that we mean by a Poet, Prophet, great devout Thinker and Inventor, — as the truly Great Man ever is. A Hero is a Hero at all points; in the soul and thought of him first of all. This Odin, in his rude semi-articulate way, had a word to speak. A great heart laid open to take in this great Universe, and man's Life here, and utter a great word about it. A Hero, as I say, in his own rude manner; a wise, gifted, noble-hearted man. And now, if we still admire such a man beyond all others, what must these wild Norse souls, first awakened into thinking, have made of him! To them, as yet without names for it, he was noble and noblest; Hero, Prophet, God; *Wuotan*, the greatest of all. Thought is thought, however it speak or spell itself. Intrinsically, I conjecture, this Odin must have been of the same sort of stuff as the greatest kind of men. A great thought in the wild deep heart of him! The rough words he articulated, are they not the rudimental roots of those English words we still use? He worked so, in that obscure element. But he was as a *light* kindled in it; a light of Intellect, rude Nobleness of heart, the only kind of lights we have yet; a Hero, as I say: and he had to shine there, and make his obscure element a little lighter, — as is still the task of us all.

We will fancy him to be the Type Norseman; the finest Teuton whom that race had yet produced. The rude Norse heart burst-up into *boundless* admiration round him; into adoration. He is as a root of so many great things; the fruit of him is found growing, from deep thousands of years, over the whole field of Teutonic Life. Our own Wednesday, as I said, is it not still Odin's Day? Wednesbury, Wansborough, Wanstead, Wandsworth: Odin grew into England too, these are still leaves from that root! He was the Chief God to all the Teutonic People; their Pattern Norseman; — in such way did *they* admire their Pattern Norseman; that was the fortune he had in the world.

Thus if the man Odin himself have vanished utterly, there is this huge Shadow of him which still projects itself over the whole History of his People. For this Odin once admitted to be God, we can understand well that the whole Scandinavian Scheme of Nature or dim No-scheme, whatever it might before have been, would now begin to develop itself altogether differently, and grow thenceforth in a new manner. What this Odin saw into, and taught with his runes and his rhymes, the whole Teutonic People laid to heart and carried forward. His way of thought became their way of thought: — such, under new conditions, is the history of every great thinker still. In gigantic confused lineaments, like some enormous camera-obscura shadow thrown upward from the

zarro. He admired the European art of reading and writing. The incident alluded to by Carlyle is narrated in Robertson's *History of America* (1777–96).

29. The alphabet of the Phœnicians (inhabitants of the eastern coast of the Mediterranean) dating back to about 1000 B.C., and forming the ancestor of the Greek, Roman, and modern European alphabets.

dead deeps of the Past, and covering the whole Northern Heaven, is not that Scandinavian Mythology in some sort the Portraiture of this man Odin? The gigantic image of *his* natural face, legible or not legible there, expanded and confused in that manner! Ah, Thought, I say, is always Thought. No great man lives in vain. The History of the world is but the Biography of great men.

To me there is something very touching in this primeval figure of Heroism; in such artless, helpless, but hearty entire reception of a Hero by his fellow-men. Never so helpless in shape, it is the noblest of feelings, and a feeling in some shape or other perennial as man himself. If I could show in any measure, what I feel deeply for a long time now, That it is the vital element of manhood, the soul of man's history here in our world, — it would be the chief use of this discoursing at present. We do not now call our great men Gods, nor admire *without* limit; ah, no, *with* limit enough! But if we have no great men, or do not admire at all, — that were a still worse case.

This poor Scandinavian Hero worship, that whole Norse way of looking at the Universe, and adjusting oneself there, has an indestructible merit for us. A rude childlike way of recognising the divineness of Nature, the divineness of Man; most rude, yet heartfelt, robust, gianthke; betokening what a giant of a man this child would yet grow to! — It was a truth, and is none. Is it not as the half-dumb stifled voice of the long-buried generations of our own Fathers, calling out of the depths of ages to us, in whose veins their blood still runs: 'This then, this is what *we* made of the world: this is all the image and notion we could form to ourselves of this great mystery of a Life and Universe. Despise it not. You are raised high above it, to large free scope of vision; but you too are not yet at the top. No, your notion too, so much enlarged, is but a partial, imperfect one; that matter is a thing no man will ever, in time or out of time, comprehend; after thousands of years of ever-new expansion, man will find himself but struggling to comprehend again a part of it: the thing is larger than man, not to be comprehended by him; an Infinite thing!'

The essence of the Scandinavian, as indeed of all Pagan Mythologies, we found to be recognition of the divineness of Nature; sincere communion of man with the mysterious invisible Powers visibly seen at work in the world round him. This, I should say, is more sincerely done in the Scandinavian than in any Mythology I know. Sincerity is the great characteristic of it. Superior sincerity (far superior) consoles us for the total want of old Grecian grace. Sincerity, I think, is better than grace. I feel that these old Northmen were looking into Nature with open eye and soul: most earnest, honest; childlike, and yet manlike; with a great-hearted simplicity and depth and freshness, in a true, loving, admiring, unfearing way. A right valiant, true old race of men. Such recognition of Nature one finds to be the chief element of Paganism: recognition of Man, and his Moral Duty, though this too is not wanting, comes to be the chief element only in purer forms of religion. Here, indeed, is a great distinction and epoch in Human Beliefs; a great landmark in the religious development of Mankind. Man first puts himself in relation with Nature and her Powers, wonders and worships over those; not till a later epoch does he discern that all Power is Moral, that the grand point is the distinction for him of Good and Evil, of *Thou shalt* and *Thou shalt not*. . . .

That the man Odin, speaking with a Hero's voice and heart, as with an impressiveness out of Heaven, told his People the infinite importance of Valour, how man thereby became a god; and that his People, feeling a response to it in their own hearts, believed this message of his, and thought it a message out of Heaven, and him a

Divinity for telling it them: this seems to me the primary seed-grain of the Norse Religion, from which all manner of mythologies, symbolic practices, speculations, allegories, songs and sagas would naturally grow. Grow, — how strangely! I called it a small light shining and shaping in the huge vortex of Norse darkness. Yet the darkness itself was *alive*; consider that. It was the eager inarticulate uninstructed Mind of the whole Norse People, longing only to become articulate, to go on articulating ever farther! The living doctrine grows, grows; — like a Banyan-tree;[30] the first *seed* is the essential thing: any branch strikes itself down into the earth, becomes a new root; and so, in endless complexity, we have a whole wood, a whole jungle, one seed the parent of it all. Was not the whole Norse Religion, accordingly, in some sense, what we called 'the enormous shadow of this man's likeness'? Critics trace some affinity in some Norse mythuses, of the Creation and suchlike, with those of the Hindoos. The Cow Adumbla,[31] 'licking the rime from the rocks,' has a kind of Hindoo look. A Hindoo Cow, transported into frosty countries. Probably enough: indeed we may say undoubtedly, these things will have a kindred with the remotest lands, with the earliest times. Thought does not die, but only is changed. The first man that began to think in this Planet of ours, he was the beginner of all. And then the second man, and the third man; — nay, every true Thinker to this hour is a kind of Odin, teaches men *his* way of thought, spreads a shadow of his own likeness over sections of the History of the World. . . .

. . . These old Norse songs have a *truth* in them, an inward perennial truth and greatness, — as, indeed, all must have that can very long preserve itself by tradition alone. It is a greatness not of mere body and gigantic bulk, but a rude greatness of soul. There is a sublime uncomplaining melancholy traceable in these old hearts. A great free glance into the very deeps of thought. They seem to have seen, these brave old Northmen, what Meditation has taught all men in all ages, That this world is after all but a show, — a phenomenon or appearance, no real thing. All deep souls see into that, — the Hindoo Mythologist, the German Philosopher, — the Shakspeare, the earnest Thinker, wherever he may be: —

> 'We are such stuff as Dreams are made of!'[32]

. . . There is something pathetic, tragic for me in this last voice of Paganism. Thor is vanished, the whole Norse world has vanished; and will not return ever again. In like fashion to that, pass away the highest things. All things that have been in this world, all things that are or will be in it, have to vanish: we have our sad farewell to give them.

Lecture III

The Hero as Poet. Dante; Shakspeare

[Tuesday, 12th May, 1840.]

The Hero as Divinity, the Hero as Prophet,[1] are productions of old ages: not to be repeated in the new. They presuppose a certain rudeness of conception, which the progress of mere scientific knowledge puts an end to. There needs to be, as it were, a world vacant, or almost vacant of scientific forms, if men in their loving wonder are to fancy their fellow-man either a god or one speaking with the voice of a god. Divinity and Prophet are past. We are now to see our Hero in the less ambitious, but also less questionable,

30. Which sends its branches down to take root and spread its growth. It flourishes in the East Indies. *Cf. Sartor*, 'The World in Clothes.'

31. Representing Chaos.

32. *The Tempest*, IV.i.156–57. Properly: 'made *on*.'

1. Discussed by Carlyle in the preceding lecture, on Mahomet.

character of Poet; a character which does not pass. The Poet is a heroic figure belonging to all ages; whom all ages possess, when once he is produced, whom the newest age as the oldest may produce; — and will produce, always when Nature pleases. Let Nature send a Hero soul; in no age is it other than possible that he may be shaped into a Poet.

Hero, Prophet, Poet, — many different names, in different times and places, do we give to Great Men; according to varieties we note in them, according to the sphere in which they have displayed themselves! We might give many more names, on this same principle. I will remark again, however, as a fact not unimportant to be understood, that the different *sphere* constitutes the grand origin of such distinction: that the Hero can be Poet, Prophet, King, Priest or what you will, according to the kind of world he finds himself born into. I confess, I have no notion of a truly great man that could not be *all* sorts of men. The Poet who could merely sit on a chair, and compose stanzas, would never make a stanza worth much. He could not sing the Heroic warrior, unless he himself were at least a Heroic warrior too. I fancy there is in him the Politician, the Thinker, Legislator, Philosopher; — in one or the other degree, he could have been, he is all these. So too I cannot understand how a Mirabeau, with that great glowing heart, with the fire that was in it, with the bursting tears that were in it, could not have written verses, tragedies, poems, and touched all hearts in that way, had his course of life and education led him thitherward. The grand fundamental character is that of Great Man; that the man be great. Napoleon has words in him which are like Austerlitz Battles.[2] Louis Fourteenth's[3] Marshals are a kind of poetical men withal; the things Turenne[4] says are full of sagacity and geniality, like sayings of Samuel Johnson. The great heart, the clear deep-seeing eye: there it lies; no man whatever, in what province soever, can prosper at all without these. Petrarch[5] and Boccaccio did diplomatic messages, it seems, quite well: one can easily believe it; they had done things a little harder than these! Burns, a gifted song-writer, might have made a still better Mirabeau.[6] Shakspeare, — one knows not what *he* could not have made, in the supreme degree.

True, there are aptitudes of Nature too. Nature does not make all great men, more than all other men, in the self-same mould. Varieties of aptitude doubtless; but infinitely more of circumstance; and far oftenest it is the *latter* only that are looked to. But it is as with common men in the learning of trades. You take any man, as yet a vague capability of a man, who could be any kind of craftsman; and make him into a smith, a carpenter, a mason: he is then and thenceforth that and nothing else. And if, as Addison complains, you sometimes see a street-porter staggering under his load on spindle-shanks, and near at hand a tailor with the frame of a Samson handling a bit of cloth and small Whitechapel[7] needle, — it cannot be considered that aptitude of Nature alone has been consulted here either! — The Great Man also, to what shall he be bound apprentice? Given your Hero, is he to become Conqueror, King, Philosopher, Poet? It is an inexplicably complex controversial-calculation between the world and him! He will read the world and its laws; the world with its

2 Richter had said that Luther's words had been 'half-battles,' as quoted in Carlyle's essay, 'Goethe's Works.'

3. Louis XIV (1638–1715), memorable for the splendor of his court and his embodiment of the ideal 'grand monarch.'

4. 1611–75; brilliant marshal of France in the dynastic wars of the age of Louis XIV.

5. 1304–74; Italian poet and humanist, first of the modern classical scholars, who, with Boccaccio (1313?–75), novelist, helped initiate the revival of classical learning in the 14th century.

6. 1749–91; French orator and revolutionary leader whom Carlyle admired above all of the leaders in the French Revolution.

7. A quarter of London, just east of the 'City' (financial center), now largely Jewish.

laws will be there to be read. What the world, on *this* matter, shall permit and bid is, as we said, the most important fact about the world. —

Poet and Prophet differ greatly in our loose modern notions of them. In some old languages, again, the titles are synonymous; *Vates* means both Prophet and Poet: and indeed at all times, Prophet and Poet, well understood, have much kindred of meaning. Fundamentally indeed they are still the same; in this most important respect especially, That they have penetrated both of them into the sacred mystery of the Universe; what Goethe calls 'the open secret.'[8] 'Which is the great secret?' asks one. — 'The *open* secret,' — open to all, seen by almost none! That divine mystery, which lies everywhere in all Beings, 'the Divine Idea of the World, that which lies at the bottom of Appearance,'[9] as Fichte styles it; of which all Appearance, from the starry sky to the grass of the field, but especially the Appearance of Man and his work, is but the *vesture*, the embodiment that renders it visible. This divine mystery *is* in all times and in all places; veritably is. In most times and places it is greatly overlooked; and the Universe, definable always in one or the other dialect, as the realised Thought of God, is considered a trivial, inert, commonplace matter, — as if, says the Satirist,[10] it were a dead thing, which some upholsterer had put together! It could do no good, at present, to *speak* much about this; but it is a pity for every one of us if we do not know it, live ever in the knowledge of it. Really a most mournful pity; — a failure to live at all, if we live otherwise!

But now, I say, whoever may forget this divine mystery, the *Vates*, whether Prophet or Poet, has penetrated into it; is a man sent hither to make it more impressively known to us. That always is his message; he is to reveal that to us, — that sacred mystery which he more than others lives ever present with. While others forget it, he knows it; — I might say, he has been driven to know it; without consent asked of *him*, he finds himself living in it, bound to live in it. Once more, here is no Hearsay, but a direct Insight and Belief; this man too could not help being a sincere man! Whosoever may live in the shows of things, it is for him a necessity of nature to live in the very fact of things. A man once more, in earnest with the Universe, though all others were but toying with it. He is a *Vates*, first of all, in virtue of being sincere. So far Poet and Prophet, participators in the 'open secret,' are one.

With respect to their distinction again: The *Vates* Prophet, we might say, has seized that sacred mystery rather on the moral side, as Good and Evil, Duty and Prohibition; the *Vates* Poet on what the Germans call the æsthetic side, as Beautiful, and the like. The one we may call a revealer of what we are to do, the other of what we are to love. But indeed these two provinces run into one another, and cannot be disjoined. The Prophet too has his eye on what we are to love: how else shall he know what it is we are to do? The highest Voice ever heard on this earth said withal, 'Consider the lilies of the field; they toil not, neither do they spin: yet Solomon in all his glory was not arrayed like one of these.'[11] A glance, that, into the deepest deep of Beauty. 'The lilies of the field,' — dressed finer than earthly princes, springing-up there in the humble furrow-field; a beautiful *eye* looking-out on you, from the great inner Sea of Beauty! How could the rude Earth make these if her Essence, rugged as she looks and is, were not inwardly Beauty? In this point of

9. Quoted from *On the Nature of the Scholar* (1806), by Fichte, the German philosopher, to denote the ultimate and divine principle pervading the visible universe.

10. Carlyle himself, who frequently quotes from, or alludes to, his own writings and ideas. *Cf. Sartor*, 'Natural Supernaturalism.'

11. From *Matthew*, vi,28–29.

view, too, a saying of Goethe's, which has staggered several, may have meaning: 'The Beautiful,' he intimates, 'is higher than the Good; the Beautiful includes in it the Good.'[12] The *true* Beautiful; which however, I have said somewhere,[13] 'differs from the *false* as Heaven does from Vauxhall!'[14] So much for the distinction and identity of Poet and Prophet. —

In ancient and also in modern periods we find a few Poets who are accounted perfect; whom it were a kind of treason to find fault with. This is noteworthy; this is right: yet in strictness it is only an illusion. At bottom, clearly enough, there is no perfect Poet! A vein of Poetry exists in the hearts of all men; no man is made altogether of Poetry. We are all poets when we *read* a poem well. The 'imagination that shudders at the Hell of Dante,'[15] is not that the same faculty, weaker in degree, as Dante's own? No one but Shakspeare can embody, out of *Saxo Grammaticus*,[16] the story of *Hamlet* as Shakspeare did: but every one models some kind of story out of it; every one embodies it better or worse. We need not spend time in defining. Where there is no specific difference, as between round and square, all definition must be more or less arbitrary. A man that has *so* much more of the poetic element developed in him as to have become noticeable, will be called Poet by his neighbours. World-Poets too, those whom we are to take for perfect Poets, are settled by critics in the same way. One who rises *so* far above the general level of Poets will, to such and such critics, seem a Universal Poet; as he ought to do. And yet it is, and must be, an arbitrary distinction. All Poets, all men, have some touches of the Universal; no man is wholly made of that. Most Poets are very soon forgotten: but not the noblest Shakspeare or Homer of them can be remembered *forever*; — a day comes when he too is not!

Nevertheless, you will say, there must be a difference between true Poetry and true speech not poetical: what is the difference? On this point many things have been written, especially by late German Critics, some of which are not very intelligible at first. They say, for example, that the Poet has an *infinitude* in him; communicates an *Unendlichkeit*, a certain character of 'infinitude,' to whatsoever he delineates. This, though not very precise, yet on so vague a matter is worth remembering: if well meditated, some meaning will gradually be found in it. For my own part, I find considerable meaning in the old vulgar distinction of Poetry being *metrical*, having music in it, being a Song. Truly, if pressed to give a definition, one might say this as soon as anything else: If your delineation be authentically *musical*, musical not in word only, but in heart and substance, in all the thoughts and utterances of it, in the whole conception of it, then it will be poetical; if not, not. — Musical: how much lies in that! A *musical* thought is one spoken by a mind that has penetrated into the inmost heart of the thing; detected the inmost mystery of it, namely the *melody* that lies hidden in it; the inward harmony of coherence which is its soul, whereby it exists, and has a right to be, here in this world. All inmost things, we may say, are melodious; naturally utter themselves in Song. The meaning of Song goes deep. Who is there that, in logical words, can express the effect music has on us? A kind of inarticulate unfathomable speech, which leads us to the edge of the Infinite, and lets us for moments gaze into that!

Nay all speech, even the commonest speech, has something of song in it: not a parish in the world but has its parish-ac-

cent; — the rhythm or *tune* to which the people there *sing* what they have to say! Accent is a kind of chanting; all men have accent of their own, — though they only *notice* that of others. Observe too how all passionate language does of itself become musical, — with a finer music than the mere accent; the speech of a man even in zealous anger becomes a chant, a song. All deep things are Song. It seems somehow the very central essence of us, Song; as if all the rest were but wrappages and hulls! The primal element of us; of us, and of all things. The Greeks fabled of Sphere-Harmonies: it was the feeling they had of the inner structure of Nature: that the soul of all her voices and utterances was perfect music. Poetry, therefore, we will call *musical Thought*. The Poet is he who *thinks* in that manner. At bottom, it turns still on power of intellect; it is a man's sincerity and depth of vision that makes him a Poet. See deep enough, and you see musically; the heart of Nature *being* everywhere music, if you can only reach it. . . .

Nay here in these ages, such as they are, have we not two mere Poets, if not deified, yet we may say beatified? Shakspeare and Dante are Saints of Poetry; really, if we will think of it, *canonised*, so that it is impiety to meddle with them. The unguided instinct of the world, working across all these perverse impediments, has arrived at such result. Dante and Shakspeare are a peculiar Two. They dwell apart, in a kind of royal solitude; none equal, none second to them: in the general feeling of the world, a certain transcendentalism, a glory as of complete perfection, invests these two. They *are* canonised, though no Pope or Cardinals took hand in doing it! Such, in spite of every perverting influence, in the most unheroic times, is still our indestructible reverence for heroism. — We will look a little at these Two, the Poet Dante and the Poet Shakspeare: what little it is permitted us to say here of the Hero as Poet will most fitly arrange itself in that fashion.

Many volumes have been written by way of commentary on Dante and his Book; yet, on the whole, with no great result. His Biography is, as it were, irrecoverably lost for us. An unimportant, wandering, sorrow-stricken man, not much note was taken of him while he lived; and the most of that has vanished, in the long space that now intervenes. It is five centuries since he ceased writing and living here. After all commentaries, the Book itself is mainly what we know of him. The Book; — and one might add that Portrait commonly attributed to Giotto,[17] which, looking on it, you cannot help inclining to think genuine, whoever did it. To me it is a most touching face; perhaps of all faces that I know, the most so. Lonely there, painted as on vacancy, with the simple laurel wound round it; the deathless sorrow and pain, the known victory which is also deathless; — significant of the whole history of Dante! I think it is the mournfulest face that ever was painted from reality; an altogether tragic, heart affecting face. There is in it, as a foundation of it, the softness, tenderness, gentle affection as of a child; but all this is as if congealed into sharp contradiction, into abnegation, isolation, proud hopeless pain. A soft ethereal soul looking-out so stern, implacable, grim-trenchant, as from imprisonment of thick-ribbed ice! Withal it is a silent pain too, a silent scorntul one: the lip is curled in a kind of godlike disdain of the thing that is eating-out his heart, — as if it were withal a mean insignificant thing, as if he whom it had power to torture and strangle were greater than it. The face of one wholly in protest, and life-long unsurrendering battle, against the world. Affection all converted into indignation: an implacable indignation; slow, equable, silent, like that of a god! The eye too, it looks-out as in a kind of *surprise*, a kind of inquiry, Why the world was of such a sort? This is

17 The most famous artist of his time (1267?–1337), friend of Dante (1265–1321). Just what portrait Carlyle alludes to is not known

Dante: so he looks, this 'voice of ten silent centuries,' and sings us 'his mystic unfathomable song.' [18]

The little that we know of Dante's Life corresponds well enough with this Portrait and this Book. He was born at Florence, in the upper class of society, in the year 1265. His education was the best then going; much school-divinity, Aristotelian logic, some Latin classics, — no inconsiderable insight into certain provinces of things: and Dante, with his earnest intelligent nature, we need not doubt, learned better than most all that was learnable. He has a clear cultivated understanding, and of great subtlety; this best fruit of education he had contrived to realise from these scholastics. He knows accurately and well what lies close to him; but, in such a time, without printed books or free intercourse, he could not know well what was distant: the small clear light, most luminous for what is near, breaks itself into singular *chiaroscuro* striking on what is far off. This was Dante's learning from the schools. In life, he had gone through the usual destinies; been twice out campaigning as a soldier for the Florentine State, been on embassy; had in his thirty-fifth year, by natural gradation of talent and service, become one of the Chief Magistrates of Florence. He had met in boyhood a certain Beatrice Portinari,[19] a beautiful little girl of his own age and rank, and grown-up thenceforth in partial sight of her, in some distant intercourse with her. All readers know his graceful affecting account of this; and then of their being parted; of her being wedded to another, and of her death soon after. She makes a great figure in Dante's Poem; seems to have made a great figure in his life. Of all beings it might seem as if she, held apart from him, far apart at last in the dim Eternity, were the only one he had ever with his whole strength of affection loved. She died: Dante himself was wedded; but it seems not happily, far from happily.[20] I fancy, the rigorous earnest man, with his keen excitabilities, was not altogether easy to make happy. . . .

I said, Dante's Poem was a Song: it is Tieck [21] who calls it 'a mystic unfathomable Song'; [22] and such is literally the character of it. Coleridge remarks very pertinently somewhere, that wherever you find a sentence musically worded, of true rhythm and melody in the words, there is something deep and good in the meaning too. For body and soul, word and idea, go strangely together here as everywhere. Song: we said before, it was the Heroic of Speech! All *old* Poems, Homer's and the rest, are authentically Songs. I would say, in strictness, that all right Poems are; that whatsoever is not *sung* is properly no Poem, but a piece of Prose cramped into jingling lines, — to the great injury of the grammar, to the great grief of the reader, for most part! What we want to get at is the *thought* the man had, if he had any: why should he twist it into jingle, if he *could* speak it out plainly? It is only when the heart of him is rapt into true passion of melody, and the very tones of him, according to Coleridge's remark, become musical by the greatness, depth and music of his thoughts, that we can give him right to rhyme and sing; that we call him a Poet, and listen to him as the Heroic of Speakers, — whose speech *is* Song. Pretenders to this are many; and to an earnest reader, I doubt, it is for most part a very melan-

18 Quoted from Carlyle's translation of Tieck's opinion of Novalis. See *Ess.*,II,53.

19. Possibly Bice Portinari, who married Simone de Bardi. Some Dante scholars believe 'Beatrice' was really another Florentine lady, whose identity Dante kept secret; while others hold that she was an ideal person without earthly existence. Dante's 'graceful affecting account' of his boyhood meeting with her occurs in his *La Vita Nuova* (The New Life), his first book.

20. According to Boccaccio; but 'there is no clear evidence for the belief that the union was otherwise than happy' (*Enc.Brit.*).

21. German poet, novelist, and critic (1773–1853); one of the chief founders of the German Romantic School of literature.

22. See note 18 of the present chapter.

choly, not to say an insupportable business, that of reading rhyme! Rhyme that had no inward necessity to be rhymed: — it ought to have told us plainly, without any jingle, what it was aiming at. I would advise all men who *can* speak their thought, not to sing it; to understand that, in a serious time, among serious men, there is no vocation in them for singing it. Precisely as we love the true song, and are charmed by it as by something divine, so shall we hate the false song, and account it a mere wooden noise, a thing hollow, superfluous, altogether an insincere and offensive thing.

I give Dante my highest praise when I say of his *Divine Comedy* that it is, in all senses, genuinely a Song. In the very sound of it there is a *canto fermo*;[23] it proceeds as by a chant. The language, his simple *terza rima*,[24] doubtless helped him in this. One reads along naturally with a sort of *lilt*. But I add, that it could not be otherwise; for the essence and material of the work are themselves rhythmic. Its depth, and rapt passion and sincerity, makes it musical; — go *deep* enough, there is music everywhere. A true inward symmetry, what one calls an architectural harmony, reigns in it, proportionates it all: architectural; which also partakes of the character of music. The three kingdoms, *Inferno*, *Purgatorio*, *Paradiso*, look-out on one another like compartments of a great edifice; a great supernatural world-cathedral, piled-up there, stern, solemn, awful; Dante's World of Souls! It is, at bottom, the *sincerest* of all Poems; sincerity, here too, we find to be the measure of worth. It came deep out of the author's heart of hearts; and it goes deep, and through long generations, into ours. The people of Verona, when they saw him on the streets, used to say, '*Eccovi l' uom ch' è stato all' Inferno*, See, there is the man that was in Hell!'[25] Ah yes, he had been in Hell; — in Hell enough, in long severe sorrow and struggle; as the like of him is pretty sure to have been. Commedias that come-out *divine* are not accomplished otherwise. Thought, true labour of any kind, highest virtue itself, is it not the daughter of Pain? Born as out of the black whirlwind; — true *effort*, in fact, as of a captive struggling to free himself: that is Thought. In all ways we are 'to become perfect through *suffering*.'[26] — But, as I say, no work known to me is so elaborated as this of Dante's. It has all been as it molten, in the hottest furnace of his soul. It had made him 'lean' for many years.[27] Not the general whole only; every compartment of it is worked-out, with intense earnestness, into truth, into clear visuality. Each answers to the other; each fits in its place, like a marble stone accurately hewn and polished. It is the soul of Dante, and in this the soul of the middle ages, rendered forever rhythmically visible there. No light task; a right intense one: but a task which is *done*.

Perhaps one would say, *intensity*, with the much that depends on it, is the prevailing character of Dante's genius. Dante does not come before us as a large catholic mind, rather a narrow, and even sectarian mind: it is partly the fruit of his age and position, but partly too of his own nature. His greatness has, in all senses, concentered itself into fiery emphasis and depth. He is world great not because he is world wide, but because he is world-deep. Through all objects he pierces as it were down into the heart of Being. I know nothing so intense as Dante. Consider, for example, to begin with the outermost development of his intensity, consider how he paints. He has a great power of vision;

23. From Late Latin *cantus firmus*, a plain chant or simple Gregorian melody, sung without change, regardless of whatever variations of harmony may accompany it.

24. 'Third' or 'triple rhyme.' Dante's verse consisted of lines of five iambic feet, with an extra syllable, in sets of three lines, the middle line of each rhyming with the first and third lines of the next set (aba, bcb, cdc, *etc.*).

25. According to a story related in Boccaccio's *Memoir* of Dante.

26. See *Hebrews*, ii,10.

27. See *Paradiso*, xxv, opening lines.

seizes the very type of a thing; presents that and nothing more. You remember that first view he gets of the Hall of Dite:[28] *red* pinnacle, redhot cone of iron glowing through the dim immensity of gloom; — so vivid, so distinct, visible at once and forever! It is as an emblem of the whole genius of Dante. There is a brevity, an abrupt precision in him: Tacitus[29] is not briefer, more condensed; and then in Dante it seems a natural condensation, spontaneous to the man. One smiting word; and then there is silence, nothing more said. His silence is more eloquent than words. It is strange with what a sharp decisive grace he snatches the true likeness of a matter: cuts into the matter as with a pen of fire. Plutus,[30] the blustering giant, collapses at Virgil's rebuke; it is 'as the sails sink, the mast being suddenly broken.' Or that poor Brunetto Latini, with the *cotto aspetto*, 'face *baked*,' parched brown and lean;[31] and the 'fiery snow' that falls on them there, a 'fiery snow without wind,' slow, deliberate, never-ending![32] Or the lids of those Tombs; square sarcophaguses, in that silent dim-burning Hall, each with its Soul in torment;[33] the lids laid open there; they are to be shut at the Day of Judgment, through Eternity. And how Farinata rises; 'and how Cavalcante falls — at hearing of his Son, and the past tense '*fue*'![35] The very movements in Dante have something brief; swift, decisive, almost military. It is of the inmost essence of his genius, this sort of painting. The fiery, swift Italian nature of the man, so silent, passionate, with its quick abrupt movements, its silent 'pale rages,' speaks itself in these things. . . .

Dante's Hell, Purgatory, Paradise, are a symbol withal, an emblematic representation of his Belief about this Universe: — some Critic in a future age, like those Scandinavian ones the other day, who has ceased altogether to think as Dante did, may find this too all an 'Allegory,' perhaps an idle Allegory! It is a sublime embodiment, or sublimest, of the soul of Christianity. It expresses, as in huge worldwide architectural emblems, how the Christian Dante felt Good and Evil to be the two polar elements of this Creation, on which it all turns; that these two differ not by *preferability* of one to the other, but by incompatibility absolute and infinite; that the one is excellent and high as light and Heaven, the other hideous, black as Gehenna and the Pit of Hell! Everlasting Justice, yet with Penitence, with everlasting Pity, — all Christianism, as Dante and the Middle Ages had it, is emblemed here. Emblemed: and yet, as I urged the other day, with what entire truth of purpose; how unconscious of any embleming! Hell, Purgatory, Paradise: these things were not fashioned as emblems; was there, in our Modern European Mind, any thought at all of their being emblems! Were they not indubitable awful facts; the whole heart of man taking them for practically true, all Nature everywhere confirming them? So is it always in these things. Men do not believe an Allegory. The future Critic, whatever his new thought may be, who considers this of Dante to have been all got-up as an Allegory, will commit one sore mistake! — Paganism we recognised as a veracious expression of the earnest awe-struck feeling of man towards the Universe; veracious, true once, and still not without worth for us. But mark here the difference of Paganism and Christianism; one great difference. Paganism emblemed chiefly the Operations of Nature; the destinies, efforts, combinations, vicissitudes of things and men in this world; Christianism emblemed

the Law of Human Duty, the Moral Law of Man. One was for the sensuous nature: a rude helpless utterance of the *first* Thought of men, — the chief recognised virtue, Courage, Superiority to Fear. The other was not for the sensuous nature, but for the moral. What a progress is here, if in that one respect only! —

And so in this Dante, as we said, had ten silent centuries, in a very strange way, found a voice. The *Divina Commedia* is of Dante's writing; yet in truth *it* belongs to ten Christian centuries, only the finishing of it is Dante's. So always. The craftsman there, the smith with that metal of his, with these tools, with these cunning methods, — how little of all he does is properly *his* work! All past inventive men work there with him; — as indeed with all of us, in all things. Dante is the spokesman of the Middle Ages; the Thought they lived by stands here, in everlasting music. These sublime ideas of his, terrible and beautiful, are the fruit of the Christian Meditation of all the good men who had gone before him. Precious they; but also is not he precious? Much, had not he spoken, would have been dumb; not dead, yet living voiceless. . . .

As Dante, the Italian man, was sent into our world to embody musically the Religion of the Middle Ages, the Religion of our Modern Europe, its Inner Life; so Shakspeare, we may say, embodies for us the Outer Life of our Europe as developed then, its chivalries, courtesies, humours, ambitions, what practical way of thinking, acting, looking at the world, men then had. As in Homer we may still construe Old Greece; so in Shakspeare and Dante, after thousands of years, what our modern Europe was, in Faith and in Practice, will still be legible. Dante has given us the Faith or Soul; Shakspeare, in a not less noble way, has given us the Practice or body. This latter also we were to have; a man was sent for it, the man Shakspeare. Just when that chivalry way of life had reached its last finish, and was on the point of breaking down into slow or swift dissolution, as we now see it everywhere, this other sovereign Poet, with his seeing eye, with his perennial singing voice, was sent to take note of it, to give long-enduring record of it. Two fit men: Dante, deep, fierce as the central fire of the world; Shakspeare, wide, placid, far-seeing, as the Sun, the upper light of the world. Italy produced the one world-voice; we English had the honour of producing the other.

Curious enough how, as it were by mere accident, this man came to us. I think always, so great, quiet, complete and self-sufficing is this Shakspeare, had the Warwickshire Squire not prosecuted him for deer stealing, we had perhaps never heard of him as a Poet! The woods and skies, the rustic Life of Man in Stratford there, had been enough for this man! But indeed that strange outbudding of our whole English Existence, which we call the Elizabethan Era, did not it too come as of its own accord? The 'Tree Igdrasil' buds and withers by its own laws, — too deep for our scanning. Yet it does bud and wither, and every bough and leaf of it is there, by fixed eternal laws; not a Sir Thomas Lucy[38] but comes at the hour fit for him. Curious, I say, and not sufficiently considered: how everything does cooperate with all; not a leaf rotting on the highway but is indissoluble portion of solar and stellar systems; no thought, word or act of man but has sprung withal out of all men, and works sooner or later, recognisably or irrecognisably, on all men! It is all a Tree: circulation of sap and influences, mutual communication of every minutest leaf with the lowest talon of a root, with every other greatest and minutest portion of the whole.

The 'Warwickshire Squire' already mentioned (1532-1600), owner of Charlecote, Warwickshire; alleged to have prosecuted Shakespeare for deer-stealing, 1585; the original of Shakespeare's Justice Shallow (*Henry IV*, Pt.II; and *Merry Wives of Windsor*).

The Tree Igdrasil, that has its roots down in the Kingdoms of Hela and Death, and whose boughs overspread the highest Heaven! —

In some sense it may be said that this glorious Elizabethan Era with its Shakspeare, as the outcome and flowerage of all which had preceded it, is itself attributable to the Catholicism of the Middle Ages. The Christian Faith, which was the theme of Dante's Song, had produced this Practical Life which Shakspeare was to sing. For Religion then, as it now and always is, was the soul of Practice: the primary vital fact in men's life. And remark here, as rather curious, that Middle-Age Catholicism was abolished, so far as Acts of Parliament could abolish it, before Shakspeare, the noblest product of it, made his appearance. He did make his appearance nevertheless. Nature at her own time, with Catholicism or what else might be necessary, sent him forth: taking small thought of Acts of Parliament. King-Henrys, Queen-Elizabeths [37] go their way; and Nature too goes hers. Acts of Parliament, on the whole, are small, notwithstanding the noise they make. What Act of Parliament, debate at St. Stephen's,[38] on the hustings [39] or elsewhere, was it that brought this Shakspeare into being? No dining at Freemasons' Tavern,[40] opening subscription lists, selling of shares, and infinite other jangling and true or false endeavouring! This Elizabethan Era, and all its nobleness and blessedness, came without proclamation, preparation of ours. Priceless Shakspeare was the free gift of Nature; given altogether silently; — received altogether silently, as if it had been a thing of little account. And yet, very literally, it is a priceless thing. One should look at that side of matters too.

Of this Shakspeare of ours, perhaps the opinion one sometimes hears a little idolatrously expressed is, in fact, the right one; I think the best judgment not of this country only, but of Europe at large, is slowly pointing to the conclusion, That Shakspeare is the chief of all Poets hitherto; the greatest intellect who, in our recorded world, has left record of himself in the way of Literature. On the whole, I know not such a power of vision, such a faculty of thought, if we take all the characters of it, in any other man. Such a calmness of depth; placid joyous strength; all things imaged in that great soul of his so true and clear, as in a tranquil unfathomable sea! It has been said,[41] that in the constructing of Shakspeare's Dramas there is, apart from all other 'faculties' as they are called, an understanding manifested, equal to that in Bacon's *Novum Organum*.[42] That is true; and it is not a truth that strikes every one. It would become more apparent if we tried, any of us for himself, how, out of Shakspeare's dramatic materials, *we* could fashion such a result! The built house seems all so fit, — everyway as it should be, as if it came there by its own law and the nature of things, — we forget the rude disorderly quarry it was shaped from. The very perfection of the house, as if Nature herself had made it, hides the builder's merit. Perfect, more perfect than any other man, we may call Shakspeare in this: he

37 *i.e.* Tudor monarchs who opposed the dominance of Roman Catholicism in England

39 The platform from which candidates for Parliament were formerly nominated, also, the proceedings at an election, etc

40 Where Carlyle met with a number of distinguished men, on June 24, 1840 (a few weeks after delivering the present lecture) to found the London Library. This sentence was obviously added when Carlyle revised the lecture for printing early in 1841. (D.A.Wilson, *Carlyle on Cromwell and Others*, p.99.)

41 By Carlyle himself, in the essay on Burns (*Es.* I.278).

42 The philosophical treatise (1620), in Latin, in which Bacon (1561–1626) attempted to extend to the utmost the dominion of man over nature by means of knowledge; the work is a series of aphorisms, or short and concentrated statements, describing the method by which knowledge may be universalized.

discerns, knows as by instinct, what condition he works under, what his materials are, what his own force and its relation to them is. It is not a transitory glance of insight that will suffice; it is deliberate illumination of the whole matter; it is a calmly *seeing* eye; a great intellect, in short. How a man, of some wide thing that he has witnessed, will construct a narrative, what kind of picture and delineation he will give of it, — is the best measure you could get of what intellect is in the man. Which circumstance is vital and shall stand prominent; which unessential, fit to be suppressed; where is the true *beginning*, the true sequence and ending? To find out this, you task the whole force of insight that is in the man. He must *understand* the thing; according to the depth of his understanding, will the fitness of his answer be. You will try him so. Does like join itself to like; does the spirit of method stir in that confusion, so that its embroilment becomes order? Can the man say, *Fiat lux*, Let there be light; [43] and out of chaos make a world? Precisely as there is *light* in himself, will he accomplish this.

Or indeed we may say again, it is in what I called Portrait-painting, delineating of men and things, especially of men, that Shakspeare is great. All the greatness of the man comes out decisively here. It is unexampled, I think, that calm creative perspicacity of Shakspeare. The thing he looks at reveals not this or that face of it, but its inmost heart, and generic secret: it dissolves itself as in light before him, so that he discerns the perfect structure of it. Creative, we said: poetic creation, what is this too but *seeing* the thing sufficiently? The *word* that will describe the thing, follows of itself from such clear intense sight of the thing. And is not Shakspeare's *morality*, his valour, candour, tolerance, truthfulness; his whole victorious strength and greatness, which can triumph over such obstructions, visible there too? Great as the world! No *twisted*, poor convex-concave [44] mirror, reflecting all objects with its own convexities and concavities; a perfectly *level* mirror; — that is to say withal, if we will understand it, a man justly related to all things and men, a good man. It is truly a lordly spectacle how this great soul takes-in all kinds of men and objects, a Falstaff, an Othello, a Juliet, a Coriolanus; sets them all forth to us in their round completeness; loving, just, the equal brother of all. *Novum Organum*, and all the intellect you will find in Bacon, is of a quite secondary order; earthly, material, poor in comparison with this. Among modern men, one finds, in strictness, almost nothing of the same rank. Goethe alone, since the days of Shakspeare, reminds me of it. Of him too you say that he *saw* the object; you may say what he himself says of Shakspeare: 'His characters are like watches with dial-plates of transparent crystal; they show you the hour like others, and the inward mechanism also is all visible.' [45]

The seeing eye! It is this that discloses the inner harmony of things; what Nature meant, what musical idea Nature has wrapped-up in these often rough embodiments. Something she did mean. To the seeing eye that something were discernible. Are they base, miserable things? You can laugh over them, you can weep over them; you can in some way or other genially relate yourself to them; — you can, at lowest, hold your peace about them, turn away your own and others' face from them, till the hour come for practically exterminating and extinguishing them! At bottom, it is the Poet's first gift, as it is all men's, that he have intellect enough. He will be a Poet if he have: a Poet in word; or failing that, perhaps still better, a Poet in act. Whether he write at all; and if so, whether

43. *Cf. Genesis*, i,3: 'And God said, Let there be light: and there was light.'

44. *i.e.* one which would utterly distort its image; an idea adapted from Richter, the German Romantic humorist and novelist (1763–1825). See *Ess.*,II,158.

45. Something like this was said, not by Goethe, but by Dr. Johnson, in comparing Richardson and Fielding. (*Boswell*, sub ann., 1768.)

in prose or in verse, will depend on accidents: who knows on what extremely trivial accidents, — perhaps on his having had a singing-master, on his being taught to sing in his boyhood! But the faculty which enables him to discern the inner heart of things, and the harmony that dwells there (for whatsoever exists has a harmony in the heart of it, or it would not hold together and exist), is not the result of habits or accidents, but the gift of Nature herself; the primary outfit for a Heroic Man in what sort soever. To the Poet, as to every other, we say first of all, *See*. If you cannot do that, it is of no use to keep stringing rhymes together, jingling sensibilities against each other, and *name* yourself a Poet; there is no hope for you. If you can, there is, in prose or verse, in action or speculation, all manner of hope. The crabbed old Schoolmaster[46] used to ask, when they brought him a new pupil, 'But are ye sure he's *not a dunce*?' Why, really one might ask the same thing, in regard to every man proposed for whatsoever function; and consider it as the one inquiry needful: Are ye sure he's not a dunce? There is, in this world, no other entirely fatal person. . . .

If I say, therefore, that Shakspeare is the greatest of Intellects, I have said all concerning him. But there is more in Shakspeare's intellect than we have yet seen. It is what I call an unconscious intellect;[47] there is more virtue in it than he himself is aware of. Novalis beautifully remarks of him,[48] that those Dramas of his are Products of Nature too, deep as Nature herself. I find a great truth in this saying. Shakspeare's Art is not Artifice; the noblest worth of it is not there by plan or precontrivance. It grows-up from the deeps of Nature, through this noble sincere soul, who is a voice of Nature. The latest generations of men will find new meanings in Shakspeare, new elucidations of their own human being; 'new harmonies with the infinite structure of the Universe; concurrences with later ideas, affinities with the higher powers and senses of man.' This well deserves meditating. It is Nature's highest reward to a true simple great soul, that he get thus to be *a part of herself*. Such a man's works, whatsoever he with utmost conscious exertion and forethought shall accomplish, grow up withal *un*consciously, from the unknown deeps in him; — as the oak-tree grows from the Earth's bosom, as the mountains and waters shape themselves; with a symmetry grounded on Nature's own laws, conformable to all Truth whatsoever. How much in Shakspeare lies hid; his sorrows, his silent struggles known to himself; much that was not known at all, not speakable at all: like *roots*, like sap and forces working underground! Speech is great; but Silence is greater.[49]

Withal the joyful tranquillity of this man is notable. I will not blame Dante for his misery: it is as battle without victory; but true battle, — the first, indispensable thing. Yet I call Shakspeare greater than Dante, in that he fought truly, and did conquer. Doubt it not, he had his own sorrows: those *Sonnets* of his will even testify expressly in what deep waters he had waded, and swum struggling for his life; — as what man like him ever failed to have to do? It seems to me a heedless notion, our common one, that he sat like a bird on the bough; and sang forth, free and offhand, never knowing the troubles of other men. Not so; with no man is it so. How could a man travel forward from rustic deer poaching to such tragedy-writing, and not fall-in with sorrows by the way? Or, still better, how could a man delineate a Hamlet, a Coriolanus, a Macbeth, so

many suffering heroic hearts, if his own heroic heart had never suffered? — And now, in contrast with all this, observe his mirthfulness, his genuine overflowing love of laughter! You would say, in no point does he *exaggerate* but only in laughter. Fiery objurgations, words that pierce and burn, are to be found in Shakspeare; yet he is always in measure here; never what Johnson would remark as a specially 'good hater.'[50] But his laughter seems to pour from him in floods; he heaps all manner of ridiculous nicknames on the butt he is bantering, tumbles and tosses him in all sorts of horse-play; you would say, with his whole heart laughs. And then, if not always the finest, it is always a genial laughter. Not at mere weakness, at misery or poverty; never. No man who *can* laugh, what we call laughing, will laugh at these things. It is some poor character only *desiring* to laugh, and have the credit of wit, that does so. Laughter means sympathy; good laughter is not 'the crackling of thorns under the pot.'[51] Even at stupidity and pretension this Shakspeare does not laugh otherwise than genially. Dogberry and Verges[52] tickle our very hearts; and we dismiss them covered with explosions of laughter: but we like the poor fellows only the better for our laughing; and hope they will get on well there, and continue Presidents of the City-watch. Such laughter, like sunshine on the deep sea, is very beautiful to me. . . .

Shakspeare's works . . . are so many windows, through which we see a glimpse of the world that was in him. All his works seem, comparatively speaking, cursory, imperfect, written under cramping circumstances; giving only here and there a note of the full utterance of the man. Passages there are that come upon you like splendour out of Heaven; bursts of radiance, illuminating the very heart of the thing: you say, 'That is *true*, spoken once and forever; wheresoever and whensoever there is an open human soul, that will be recognised as true!' Such bursts, however, make us feel that the surrounding matter is not radiant; that it is, in part, temporary, conventional. Alas, Shakspeare had to write for the Globe Playhouse: his great soul had to crush itself, as it could, into that and no other mould. It was with him, then, as it is with us all. No man works save under conditions. The sculptor cannot set his own free Thought before us; but his Thought as he could translate it into the stone that was given, with the tools that were given. *Disjecta membra*[53] are all that we find of any Poet, or of any man.

Whoever looks intelligently at this Shakspeare may recognise that he too was a *Prophet*, in his way; of an insight analogous to the Prophetic, though he took it up in another strain. Nature seemed to this man also divine; *un*speakable, deep as Tophet,[54] high as Heaven: 'We are such stuff as Dreams are made of!'[55] That scroll[56] in Westminster Abbey, which few read with understanding, is of the depth of any seer. But the man sang; did not preach, except musically. We called Dante the melodious Priest of Middle-Age Catholicism. May we not call Shakspeare the still more melodious Priest of a *true* Catholicism, the 'Universal Church' of the Future and of all times? No narrow superstition, harsh asceticism, intolerance, fanatical fierceness or perversion: a Revelation, so far as it goes, that such a thousandfold hidden beauty and divineness dwells in all Nature; which let all men worship as they can! We may say without offence, that

there rises a kind of universal Psalm out of this Shakspeare too; not unfit to make itself heard among the still more sacred Psalms. Not in disharmony with these, if we understood them, but in harmony! — I cannot call this Shakspeare a 'Sceptic,' as some do; his indifference to the creeds and theological quarrels of his time misleading them. No: neither unpatriotic, though he says little about his Patriotism; nor sceptic, though he says little about his Faith. Such 'indifference' was the fruit of his greatness withal: his whole heart was in his own grand sphere of worship (we may call it such); these other controversies, vitally important to other men, were not vital to him.

But call it worship, call it what you will, is it not a right glorious thing, and set of things, this that Shakspeare has brought us? For myself, I feel that there is actually a kind of sacredness in the fact of such a man being sent into this Earth. Is he not an eye to us all; a blessed heaven sent Bringer of Light? — And, at bottom, was it not perhaps far better that this Shakspeare, everyway an unconscious man, was *conscious* of no Heavenly message? He did not feel, like Mahomet, because he saw into those internal Splendours, that he specially was the 'Prophet of God': and was he not greater than Mahomet in that? Greater; and also, if we compute strictly, as we did in Dante's case, more successful. It was intrinsically an error that notion of Mahomet's, of his supreme Prophethood; and has come down to us inextricably involved in error to this day; dragging along with it such a coil of fables, impurities, intolerances, as makes it a questionable step for me here and now to say, as I have done, that Mahomet was a true Speaker at all, and not rather an ambitious charlatan, perversity and simulacrum; no Speaker, but a Babbler! Even in Arabia, as I compute, Mahomet will have exhausted himself and become obsolete, while this Shakspeare, this Dante may still be young; — while this Shakspeare may still pretend to be a Priest of Mankind, of Arabia as of other places, for unlimited periods to come!

Compared with any speaker or singer one knows, even with Æschylus[57] or Homer, why should he not, for veracity and universality, last like them? He is *sincere* as they; reaches deep down like them, to the universal and perennial. But as for Mahomet, I think it had been better for him *not* to be so conscious! Alas, poor Mahomet; all that he was *conscious* of was a mere error; a futility and triviality, — as indeed such ever is. The truly great in him too was the unconscious: that he was a wild Arab lion of the desert, and did speak-out with that great thunder-voice of his, not by words which he *thought* to be great, but by actions, by feelings, by a history which *were* great! His Koran[58] has become a stupid piece of prolix absurdity; we do not believe, like him, that God wrote that! The Great Man here too, as always, is a Force of Nature: whatsoever is truly great in him springs-up from the *in*articulate deeps.

Well: this is our poor Warwickshire Peasant, who rose to be Manager of a Playhouse, so that he could live without begging; whom the Earl of Southampton[59] cast some kind glances on; whom Sir Thomas Lucy, many thanks to him, was for sending to the Treadmill![60] We did not account him a god, like Odin, while he dwelt with us; — on which point there were much to be said. But I will say rather, or repeat: In spite of the sad state Hero-worship now lies in, consider what

60. Victorian counterpart for Elizabethan punishment for poaching; a mill worked by prisoners treading on steps on the periphery of a wide wheel having a horizontal axis.

this Shakspeare has actually become among us. Which Englishman we ever made, in this land of ours, which million of Englishmen, would we not give-up rather than the Stratford Peasant? There is no regiment of highest Dignitaries that we would sell him for. He is the grandest thing we have yet done. For our honour among foreign nations, as an ornament to our English Household, what item is there that we would not surrender rather than him? Consider now, if they asked us, Will you give-up your Indian Empire or your Shakspeare, you English; never have had any Indian Empire, or never have had any Shakspeare? Really it were a grave question. Official persons would answer doubtless in official language; but we, for our part too, should not we be forced to answer: Indian Empire, or no Indian Empire; we cannot do without Shakspeare! Indian Empire will go, at any rate, some day; but this Shakspeare does not go, he lasts forever with us; we cannot give-up our Shakspeare! . . .

Yes, truly, it is a great thing for a Nation that it get an articulate voice; that it produce a man who will speak-forth melodiously what the heart of it means! Italy, for example, poor Italy lies dismembered, scattered asunder, not appearing in any protocol or treaty as a unity at all; yet the noble Italy is actually *one*: Italy produced its Dante; Italy can speak! The Czar of all the Russias, he is strong with so many bayonets, Cossacks[61] and cannons; and does a great feat in keeping such a tract of Earth politically together; but he cannot yet speak. Something great in him, but it is a dumb greatness. He has had no voice of genius, to be heard of all men and times. He must learn to speak. He is a great dumb monster hitherto. His cannons and Cossacks will all have rusted into nonentity, while that Dante's voice is still audible. The Nation that has a Dante is bound together as no dumb Russia can be. — We must here end what we had to say of the *Hero-Poet*.

61. War-like, pastoral people of the Russian steppes, skillful as horsemen, and formerly used as cavalry troops.

Lecture VI

The Hero as King. Cromwell, Napoleon: Modern Revolutionism

[Friday, 22d May 1840.]

We come now to the last form of Heroism; that which we call Kingship. The Commander over Men; he to whose will our wills are to be subordinated, and loyally surrender themselves, and find their welfare in doing so, may be reckoned the most important of Great Men. He is practically the summary for us of *all* the various figures of Heroism: Priest, Teacher, whatsoever of earthly or of spiritual dignity we can fancy to reside in a man, embodies itself here, to *command* over us, to furnish us with constant practical teaching, to tell us for the day and hour what we are to *do*. He is called *Rex*, Regulator, *Roi*: our own name is still better: King, *Könning*, which means *Can*-ning, Able-man.[1]

Numerous considerations, pointing towards deep, questionable, and indeed unfathomable regions, present themselves here: on the most of which we must resolutely for the present forbear to speak at all. As Burke said that perhaps fair *Trial by Jury* was the soul of Government, and that all legislation, administration, parliamentary debating, and the rest of it, went on, in 'order to bring twelve impartial men into a jury-box'; — so, by much stronger reason, may I say here, that the finding of your *Ableman* and getting him invested with the *symbols of ability*, with dignity, worship (*worth*-ship), royalty, kinghood, or whatever we call it, so that *he* may actually have room to guide according to his faculty of doing it, — is the business, well or ill accomplished, of all social procedure whatsoever in this world! Hustings-speeches,[2] Parliamentary motions, Reform

1. See Lecture I, note 14.
2. See Lecture III, note 39.

Bills,[3] French Revolutions, all mean at heart this; or else nothing. Find in any country the Ablest Man that exists there; raise *him* to the supreme place, and loyally reverence him: you have a perfect government for that country; no ballot-box, parliamentary eloquence, voting, constitution-building, or other machinery whatsoever can improve it a whit. It is in the perfect

leal country. The Ablest Man; he means also the truest-hearted, justest, the Noblest Man: what he *tells us to do* must be precisely the wisest, fittest, that we could anywhere or anyhow learn; — the thing which it will in all ways behove us, with right loyal thankfulness, and nothing doubting, to do! Our *doing* and life were then, so far as government could regulate it, well regulated; that were the ideal of constitutions.

Alas, we know very well that Ideals can never be completely embodied in practice. Ideals must ever lie a very great way off; and we will right thankfully content ourselves with any not intolerable approximation thereto! Let no man, as Schiller [4] says, too querulously 'measure by a scale of perfection the meagre product of reality' in this poor world of ours. We will esteem him no wise man; we will esteem him a sickly, discontented, foolish man. And yet, on the other hand, it is never to be forgotten that Ideals do exist; that if they be not approximated to at all, the whole matter goes to wreck! Infallibly. No bricklayer builds a wall *perfectly* perpendicular, mathematically this is not possible; a certain degree of perpendicularity suffices him; and he, like a good bricklayer, who must have done with his job, leaves it so. And yet if he sway *too much* from the perpendicular; above all, if he throw plummet and level quite away from him, and pile brick on brick heedless, just as it comes to hand — ! Such bricklayer, I think, is in a bad way. *He* has forgotten himself: but the Law of Gravitation does not forget to act on him; he and his wall rush-down into confused welter of ruin! —

This is the history of all rebellions, French Revolutions, social explosions in ancient or modern times. You have put the too *Un*able Man at the head of affairs! The too ignoble, unvaliant, fatuous man You have forgotten that there is any rule, or natural necessity whatever, of putting the Able Man there. Brick must lie on brick as it may and can. Unable Simulacrum of Ability, *quack*, in a word, must adjust himself with quack, in all manner of administration of human things; — which accordingly lie unadministered, fermenting into unmeasured masses of failure, of indigent misery: in the outward, and in the inward or spiritual, miserable millions stretch-out the hand for their due supply, and it is not there. The 'law of gravitation' acts; Nature's laws do none of them forget to act. The miserable millions burst-forth into Sansculottism,[5] or some other sort of madness: bricks and bricklayer lie as a fatal chaos! —

Much sorry stuff, written some hundred years ago or more, about the 'Divine right of Kings,' moulders unread now in the Public Libraries of this country. Far be it from us to disturb the calm process by which it is disappearing harmlessly from the earth, in those repositories! At the same time, not to let the immense rubbish go without leaving us, as it ought, some soul of it behind — I will say that it did mean something: something true, which it is important for us and all men to keep in mind. To assert that in whatever man you chose to lay hold of (by this or the other plan of clutching at him); and clapt a round piece of metal on the head of, and called King, — there straightway came to

3 Especially the Reform Bill of 1832 which widened the parliamentary franchise and removed inequalities and abuses of representation.

4 1759–1805; German dramatist and lyric poet, friend of Goethe. Carlyle's sentence is an adaptation (and an alteration) of a passage from Schiller's *Aesthetic Education of Man*, quoted in Carlyle's *Ess.*, I,58.

5 Or 'radicalism'

reside a divine virtue, so that *he* became a kind of god, and a Divinity inspired him with faculty and right to rule over you to all lengths: this, — what can we do with this but leave it to rot silently in the Public Libraries? But I will say withal, and that is what these Divine-right men meant, That in Kings, and in all human Authorities, and relations that men god-created can form among each other, there is verily either a Divine Right or else a Diabolic Wrong; one or the other of these two! For it is false altogether, what the last Sceptical Century taught us, that this world is a steamengine. There is a God in this world; and a God's-sanction, or else the violation of such, does look-out from all ruling and obedience, from all moral acts of men. There is no act more moral between men than that of rule and obedience. Woe to him that claims obedience when it is not due; woe to him that refuses it when it is! God's law is in that, I say, however the Parchment-laws may run: there is a Divine Right or else a Diabolic Wrong at the heart of every claim that one man makes upon another.

It can do none of us harm to reflect on this: in all the relations of life it will concern us; in Loyalty and Royalty, the highest of these. I esteem the modern error, That all goes by self-interest and the checking and balancing of greedy knaveries, and that, in short, there is nothing divine whatever in the association of men, a still more despicable error, natural as it is to an unbelieving century, than that of a 'divine right' in people *called* Kings. I say, Find me the true *Kön-ning*, King or Able-man, and he *has* a divine right over me. That we knew in some tolerable measure how to find him, and that all men were ready to acknowledge his divine right when found: this is precisely the healing which a sick world is everywhere, in these ages, seeking after! The true King, as guide of the practical, has ever something of the Pontiff in him, — guide of the spiritual, from which all practice has its rise. . . .

Truly, without the French Revolution, one would not know what to make of an age like this at all. We will hail the French Revolution, as shipwrecked mariners might the sternest rock, in a world otherwise all of baseless sea and waves. A true Apocalypse,[6] though a terrible one, to this false withered artificial time; testifying once more that Nature is *preter*natural; if not divine, then diabolic; that Semblance is not Reality; that it has to become Reality, or the world will take-fire under it, — burn *it* into what it is, namely Nothing! Plausibility has ended; empty Routine has ended; much has ended. This, as with a Trump of Doom, has been proclaimed to all men. They are the wisest who will learn it soonest. Long confused generations before it be learned; peace impossible till it be! The earnest man, surrounded, as ever, with a world of inconsistencies, can await patiently, patiently strive to do *his* work, in the midst of that. Sentence of Death is written down in Heaven against all that; sentence of Death is now proclaimed on the Earth against it: this he with his eyes may see. And surely, I should say, considering the other side of the matter, what enormous difficulties lie there, and how fast, fearfully fast, in all countries, the inexorable demand for solution of them is pressing on, - he may easily find other work to do than labouring in the Sansculottic province at this time of day!

To me, in these circumstances, that of 'Hero-worship' becomes a fact inexpressibly precious; the most solacing fact one sees in the world at present. There is an everlasting hope in it for the management of the world. Had all traditions, arrangements, creeds, societies that men ever instituted, sunk away, this would remain. The certainty of Heroes being sent us; our faculty, our necessity, to reverence Heroes when sent: it shines like a polestar through smoke-clouds, dust-clouds, and all manner of down-rushing and conflagration.

Hero-worship would have sounded very

6. Or revelation of hidden law or meaning.

strange to those workers and fighters in the French Revolution. Not reverence for Great Men; not any hope or belief, or even wish, that Great Men could again appear in the world! Nature, turned into a 'Machine,' was as if effete now; could not any longer produce Great Men: — I can tell her, she may give-up the trade altogether, then; we cannot do without Great Men! - - But neither have I any quarrel with that of 'Liberty and Equality'; with the faith that, wise great men being impossible, a level immensity of foolish small men would suffice. It was a natural faith then and there. 'Liberty and Equality; no Authority needed any longer. Hero-worship, reverence for *such* Authorities, has proved false, is itself a falsehood: no more of it! We have had such *forgeries*, we will now trust nothing. So many base plated coins passing in the market, the belief has now become common that no gold any longer exists, — and even that we can do very well without gold! ' I find this, among other things, that universal cry of Liberty and Equality; and find it very natural, as matters then stood.

And yet surely it is but the *transition* from false to true. Considered as the whole truth, it is false altogether; the product of entire sceptical blindness, as yet only *struggling* to see. Hero-worship exists forever, and everywhere: not Loyalty alone; it extends from divine adoration down to the lowest practical regions of life. 'Bending before men,' if it is not to be a mere empty grimace, better dispensed with than practised, is Hero-worship, — a recognition that there does dwell in that presence of our brother something divine; that every created man, as Novalis said, is a 'revelation in the Flesh.' [7] They were Poets too, that devised all those graceful courtesies which make life noble! Courtesy is not a falsehood or grimace; it need not be such. And Loyalty, religious Worship itself, are still possible; nay still inevitable.

May we not say, moreover, while so many of our late Heroes have worked rather as revolutionary men, that nevertheless every Great Man, every genuine man, is by the nature of him a son of Order, not of Disorder? It is a tragical position for a true man to work in revolutions. He seems an anarchist; and indeed a painful element of anarchy does encumber him at every step, — him to whose whole soul anarchy is hostile, hateful. His mission is Order; every man's is. He is here to make what was disorderly, chaotic, into a thing ruled, regular. He is the missionary of Order. Is not all work of man in this world a ***making of Order***? The carpenter finds rough trees; shapes them, constrains them into square fitness, into purpose and use. We are all born enemies of Disorder: it is tragical for us all to be concerned in image-breaking and down pulling; for the Great Man, *more* a man than we, it is doubly tragical.

Thus too all human things, maddest French Sansculottisms, do and must work towards Order. I say, there is not a ***man*** in them, raging in the thickest of the madness, but is impelled withal, at all moments, towards Order. His very life means that; Disorder is dissolution, death. No chaos but it seeks a *centre* to revolve round. While man is man, some Cromwell or Napoleon is the necessary finish of a Sansculottism. — Curious: in those days when Hero-worship was the most incredible thing to every one, how it does come-out nevertheless, and assert itself practically, in a way which all have to credit. Divine ***right***, take it on the great scale, is found to mean divine ***might*** withal! While old false Formulas are getting trampled everywhere into destruction, new genuine Substances unexpectedly unfold themselves indestructible. In rebellious ages, when Kingship itself seems dead and abolished, Cromwell, Napoleon step-forth again as Kings. The history of these men is what we have now to look at, as our last phasis of Heroism. The old ages are brought back to us; the manner in which Kings were made, and

7 See Lecture I, notes 11,12, and 13.

Kingship itself first took rise, is again exhibited in the history of these Two.

We have had many civil wars in England; wars of Red and White Roses,[8] wars of Simon de Montfort;[9] wars enough, which are not very memorable. But that war of the Puritans has a significance which belongs to no one of the others. Trusting to your candour, which will suggest on the other side what I have not room to say, I will call it a section once more of that great universal war which alone makes-up the true History of the World, — the war of Belief against Unbelief! The struggle of men intent on the real essence of things, against men intent on the semblances and forms of things. The Puritans, to many, seem mere savage Iconoclasts,[10] fierce destroyers of Forms; but it were more just to call them haters of *untrue* Forms. . . .

It is meritorious to insist on forms; Religion and all else naturally clothes itself in forms. Everywhere the *formed* world is the only habitable one. The naked formlessness of Puritanism is not the thing I praise in the Puritans; it is the thing I pity, — praising only the spirit which had rendered that inevitable! All substances clothe themselves in forms: but there are suitable true forms, and then there are untrue unsuitable. As the briefest definition, one might say, Forms which *grow* round a substance, if we rightly understand that, will correspond to the real nature and purport of it, will be true, good; forms which are consciously *put* round a substance, bad. I invite you to reflect on this. It distinguishes true from false in Ceremonial Form, earnest solemnity from empty pageant, in all human things.

There must be a veracity, a natural spontaneity in forms. In the commonest meeting of men, a person making, what we call, 'set speeches,' is not he an offence? In the mere drawing-room, whatsoever courtesies you see to be grimaces, prompted by no spontaneous reality within, are a thing you wish to get away from. But suppose now it were some matter of vital concernment, some transcendent matter (as Divine Worship is), about which your whole soul, struck dumb with its excess of feeling, knew not how to *form* itself into utterance at all, and preferred formless silence to any utterance there possible, — what should we say of a man coming forward to represent or utter it for you in the way of upholsterer-mummery? Such a man, — let him depart swiftly, if he love himself! You have lost your only son; are mute, struck down, without even tears: an importunate man importunately offers to celebrate Funeral Games for him in the manner of the Greeks! Such mummery is not only not to be accepted, — it is hateful, unendurable. It is what the old Prophets called 'Idolatry,' worshipping of hollow *shows*; what all earnest men do and will reject. We can partly understand what those poor Puritans meant. Laud dedicating that St. Catherine Creed's Church,[11] in the manner we have it described; with his multiplied ceremonial bowings, gesticulations, exclamations: surely it is rather the rigorous formal *Pedant*, intent on his 'College-rules,' than the earnest Prophet, intent on the essence of the matter.

Puritanism found *such* forms insupportable; trampled on such forms; — we have to excuse it for saying, No form at all rather than such! It stood preaching in its bare pulpit, with nothing but the Bible

8. The struggle between the houses of York (white) and Lancaster (red) from 1455 to 1485.

9. 1208?–1265; leader of the insurgent barons against Henry III.

10. Image-breakers. The Puritans, the party of the English Protestants of the 16th and 17th centuries who regarded the reformation of the Church under Elizabeth as incomplete, called for further 'purification,' including the destruction of images used in ecclesiastical ceremonies and worship. They included Baptists, Presbyterians, Independents, etc.

11. William Laud (1573–1645), Archbishop of Canterbury, offended the Puritans by his defense of ceremony and ritual.

in its hand. Nay, a man preaching from his earnest *soul* into the earnest *souls* of men: is not this virtually the essence of all Churches whatsoever? The nakedest, savagest reality, I say, is preferable to any semblance, however dignified. Besides, it will clothe itself with *due* semblance by and by, if it be real. No fear of that; actually no fear at all. Given the living *man*, there will be found *clothes* for him; he will find himself clothes. But the suit-of-clothes pretending that *it* is both clothes and man — ! — We cannot 'fight the French' by three-hundred-thousand red uniforms; there must be *men* in the inside of them! Semblance, I assert, must actually *not* divorce itself from Reality. If Semblance do, — why then there must be men found to rebel against Semblance, for it has become a lie! These two Antagonisms at war here, in the case of Laud and the Puritans, are as old nearly as the world. They went to fierce battle over England in that age; and fought out their confused controversy to a certain length, with many results for all of us. . . .

. . . They tell us, It was a sorrowful thing to consider that the foundation of our English Liberties should have been laid by 'Superstition.' These Puritans came forward with Calvinistic incredible Creeds,[12] Anti-Laudisms, Westminster Confessions;[13] demanding, chiefly of all, that they should have liberty to *worship* in their own way. Liberty to *tax* themselves: that was the thing they should have demanded! It was Superstition, Fanaticism, disgraceful ignorance of Constitutional Philosophy to insist on the other thing! — Liberty to *tax* oneself? Not to pay out money from your pocket except on reason shown? No century, I think, but a rather barren one would have fixed on that as the first right of man! I should say, on the contrary, A just man will generally have better cause than *money* in what shape soever, before deciding to revolt against his Government. Ours is a most confused world; in which a good man will be thankful to see any kind of Government maintain itself in a not insupportable manner: and here in England, to this hour, if he is not ready to pay a great many taxes which *he* can see very small reason in, it will not go well with him, I think! He must try some other climate than this. Taxgatherer? Money? He will say: 'Take my money, since you *can*, and it is so desirable to you; take it, — and take yourself away with it; and leave me alone to my work here. *I* am still here; can still work, after all the money you have taken from me!' But if they come to him, and say, 'Acknowledge a Lie; pretend to say you are worshipping God, when you are not doing it: believe not the thing that *you* find true, but the thing that I find, or pretend to find true!' He will answer: 'No; by God's help, no! You may take my purse; but I cannot have my moral Self annihilated. The purse is any Highwayman's who might meet me with a loaded pistol: but the Self is mine and God my Maker's: it is not yours; and I will resist you to the death, and revolt against you, and, on the whole, front all manner of extremities, accusations and confusions, in defence of that!' —

Really, it seems to me the one reason which could justify revolting, this of the Puritans. It has been the soul of all just revolts among men. Not *Hunger* alone produced even the French Revolution; no, but the feeling of the insupportable all-pervading *Falsehood* which had now embodied itself in Hunger, in universal material Scarcity and Nonentity, and thereby become *indisputably* false in the eyes of all! We will leave the Eighteenth century with its 'liberty to tax itself.' We will not as-

12 John Calvin (1509–64), French theologian, propounded the doctrines of original sin, predestination, and election; he was strongly anti-Roman, and supplied much of the vitality in the Protestant position.

13 The Westminster Confession contains the articles of faith of the Presbyterians; drawn up by the Westminster Assembly, which met July 1, 1643.

tonish ourselves that the meaning of such men as the Puritans remained dim to it. To men who believe in no reality at all, how shall a *real* human soul, the intensest of all realities, as it were the voice of this world's Maker still speaking to *us*, — be intelligible? What it cannot reduce into constitutional doctrines relative to 'taxing,' or other the like material interest, gross, palpable to the sense, such a century will needs reject as an amorphous heap of rubbish. Hampdens, Pyms and Ship-money [14] will be the theme of much constitutional eloquence, striving to be fervid; — which will glitter, if not as fire does, then as *ice* does: and the irreducible Cromwell will remain a chaotic mass of 'madness,' 'hypocrisy,' and much else. . . .

Truly it is a sad thing for a people, as for a man, to fall into Scepticism, into dilettantism, insincerity; not to know a Sincerity when they see it. For this world, and for all worlds, what curse is so fatal? The heart lying dead, the eye cannot see. What intellect remains is merely the *vulpine* intellect. That a true *King* be sent them is of small use; they do not know him when sent. They say scornfully, Is this your King? The Hero wastes his heroic faculty in bootless contradiction from the unworthy; and can accomplish little. For himself he does accomplish a heroic life, which is much, which is all; but for the world he accomplishes comparatively nothing. The wild rude Sincerity, direct from Nature, is not glib in answering from the witness-box: in your small-debt *pie-powder* [15] court, he is scouted as a counterfeit. The vulpine intellect 'detects' him. For being a man worth any thousand men, the response your Knox,[16] your Cromwell gets, is an argument for two centuries whether he was a man at all. God's greatest gift to this Earth is sneeringly flung away. The miraculous talisman is a paltry plated coin, not fit to pass in the shops as a common guinea.

Lamentable this! I say, this must be remedied. Till this be remedied in some measure, there is nothing remedied. 'Detect quacks'? Yes do, for Heaven's sake; but know withal the men that are to be trusted! Till we know that, what is all our knowledge; how shall we even so much as 'detect'? For the vulpine sharpness, which considers itself to be knowledge, and 'detects' in that fashion, is far mistaken. Dupes indeed are many: but, of all *dupes*, there is none so fatally situated as he who lives in undue terror of being duped. The world does exist; the world has truth in it, or it would not exist! First recognise what is true, we shall *then* discern what is false; and properly never till then.

'Know the men that are to be trusted': alas, this is yet, in these days, very far from us. The sincere alone can recognise sincerity. Not a Hero only is needed, but a world fit for him; a world not of *Valets*; — the Hero comes almost in vain to it otherwise! Yes, it is far from us: but it must come; thank God, it is visibly coming. Till it do come, what have we? Ballot-boxes, suffrages, French Revolutions: — if we are as Valets, and do not know the Hero when we see him, what good are all these? A heroic Cromwell comes; and for a hundred-and-fifty years he cannot have a vote from us. Why, the insincere, unbelieving world is the *natural property* of the Quack, and of the Father of quacks and quackeries! Misery, confusion, unveracity are alone possible there. By ballot-boxes we alter the *figure* of our Quack; but the substance of

14. John Hampden (1594–1643) was the famous leader of the resistance to the revival by Charles I of the ancient tax levied on ports and maritime towns and counties during war ('ship-money'). John Pym (1584–1643) was a parliamentary statesman during the Puritan Revolution, supporting the Petition of Right.

15. Or 'piepoudre' (from Old French *pié*, foot + *poudreux*, dusty), formerly an itinerant merchant or peddlar; later a lower court for immediate trials for injuries at fairs and markets.

16. John Knox (1505–72), Scotch religious reformer; discussed by Carlyle in Lecture IV, 'The Hero as Priest.'

him continues. The Valet-World *has* to be governed by the Sham-Hero, by the King merely *dressed* in King-gear. It is his; he is its! In brief, one of two things: We shall either learn to know a Hero, a true Governor and Captain, somewhat better, when we see him; or else go on to be forever governed by the Unheroic; -- had we ballot-boxes clattering at every street-corner, there were no remedy in these.

Poor Cromwell,[17] — great Cromwell! The inarticulate Prophet; Prophet who could not *speak*. Rude, confused, struggling to utter himself, with his savage depth, with his wild sincerity; and he looked so strange, among the elegant Euphemisms,[18] dainty little Falklands,[19] didactic Chillingworths,[20] diplomatic Clarendons![21] Consider him. An outer hull of chaotic confusion, visions of the Devil, nervous dreams, almost semi-madness; and yet such a clear determinate man's energy working in the heart of that. A kind of chaotic man. The ray as of pure starlight and fire, working in such an element of boundless hypochondria, *un*formed black of darkness! And yet withal this hypochondria, what was it but the very greatness of the man? The depth and tenderness of his wild affections; the quantity of *sympathy* he had with things, — the quantity of insight he would yet get into the heart of things, the mastery he would yet get over things: this was his hypochondria. The man's misery, as man's misery always does, came of his greatness. Samuel Johnson too is that kind of man. Sorrow-stricken, half distracted; the wild element of mournful *black* enveloping him, — wide as the world. It is the character of a prophetic man; a man with his whole soul *seeing*, and struggling to see.

On this ground, too, I explain to myself Cromwell's reputed confusion of speech. To himself the internal meaning was sun-clear; but the material with which he was to clothe it in utterance was not there. He had *lived* silent; a great unnamed sea of Thought round him all his days; and in his way of life little call to attempt *naming* or uttering that. With his sharp power of vision, resolute power of action, I doubt not he could have learned to write Books withal, and speak fluently enough; — he did harder things than writing of Books. This kind of man is precisely he who is fit for doing manfully all things you will set him on doing. Intellect is not speaking and logicising; it is seeing and ascertaining. Virtue, *Vir-tus*, manhood, *hero*hood, is not fair-spoken immaculate regularity; it is first of all, what the Germans well name it, *Tugend* (*Taugend*, *dow*-ing or *Doughtiness*), Courage and the Faculty to *do*. This basis of the matter Cromwell had in him.

One understands moreover how, though he could not speak in Parliament, he might *preach*, rhapsodic preaching; above all, how he might be great in extempore prayer. These are the free outpouring utterances of what is in the heart: method is not required in them; warmth, depth, sincerity are all that is required. Cromwell's habit of prayer is a notable feature of him. All his great enterprises were commenced with prayer. In dark inextricable-looking difficulties, his Officers and he used to assemble, and pray alternately, for hours, for days, till some definite resolution rose among them, some 'door of hope,' as they

17. Oliver Cromwell (1599–1658) was general and statesman during the Puritan revolution, and Lord Protector after the execution of Charles I, from 1653 to 1658.

18. The substitution of less distasteful phrases or words for more accurate but more offensive ones.

19. Lucius Cary Falkland (1610?–43) was a learned and accomplished Royalist whose convictions went with Parliament; he served in the Royalist army.

20. William Chillingworth (1602–44), member of Falkland's coterie; a scholar and fellow of Trinity College, Oxford; served in the Royalist army.

21. Edward Hyde, Earl of Clarendon (1609–74) first sided with Parliament, then supported the King; became Lord Chancellor to Charles II; now known for his *History of the Rebellion* (1702–04).

would name it, disclosed itself. Consider that. *In tears, in fervent prayers, and cries* to the great God, to have pity on them, to make His light shine before them. They, armed Soldiers of Christ, as they felt themselves to be; a little band of Christian Brothers, who had drawn the sword against a great black devouring world not Christian, but Mammonish, Devilish, — they cried to God in their straits, in their extreme need, not to forsake the Cause that was His. The light which now rose upon them, — how could a human soul, by any means at all, get better light? Was not the purpose so formed like to be precisely the best, wisest, the one to be followed without hesitation any more? To them it was as the shining of Heaven's own Splendour in the waste-howling darkness; the Pillar of Fire by night,[22] that was to guide them on their desolate perilous way. *Was* it not such? Can a man's soul, to this hour, get guidance by any other method than intrinsically by that same, — devout prostration of the earnest struggling soul before the Highest, the Giver of all Light; be such *prayer* a spoken, articulate, or be it a voiceless, inarticulate one? There is no other method. 'Hypocrisy'? One begins to be weary of all that. They who call it so, have no right to speak on such matters. They never formed a purpose, what one can call a purpose. They went about balancing expediencies, plausibilities; gathering votes, advices; they never were alone with the *truth* of a thing at all. — Cromwell's prayers were likely to be 'eloquent,' and much more than that. His was the heart of a man who *could* pray. . . .

But in fact there are two errors, widely prevalent, which pervert to the very basis our judgments formed about such men as Cromwell; about their 'ambition,' 'falsity,' and suchlike. The first is what I might call substituting the *goal* of their career for the course and starting-point of it. The vulgar Historian of a Cromwell fancies that he had determined on being Protector *of England, at the time when he was ploughing the marsh lands of Cambridge*shire. His career lay all mapped out: a program of the whole drama; which he then step by step dramatically unfolded, with all manner of cunning, deceptive dramaturgy, as he went on, — the hollow, scheming Ὑποκριτής, or Play actor, that he was! This is a radical perversion; all but universal in such cases. And think for an instant how different the fact is! How much does one of *us* foresee of his own life? Short way ahead of us it is all dim; an *un*wound skein of possibilities, of apprehensions, attemptabilities, vague looming hopes. This Cromwell had *not* his life lying all in that fashion of Program, which he needed then, with that unfathomable cunning of his, only to enact dramatically, scene after scene! Not so. We see it so; but to him it was in no measure so. What absurdities would fall away of themselves, were this one undeniable fact kept honestly in view by History! Historians indeed will tell you that they do keep it in view; — but look whether such is practically the fact! Vulgar History, as in this Cromwell's case, omits it altogether; even the best kinds of History only remember it now and then. To remember it duly with rigorous perfection, as in the fact it *stood*, requires indeed a rare faculty; rare, nay impossible. A very Shakspeare for faculty; or more than Shakspeare; who could *enact* a brother man's biography, see with the brother man's eyes at all points of his course what things *he* saw; in short, *know* his course and him, as few 'Historians' are like to do. Half or more of all the thick-plied perversions which distort our image of Cromwell, will disappear, if we honestly so much as try to represent them so; in sequence, as they *were*; not in the lump, as they are thrown-down before us.

But a second error, which I think the generality commit, refers to this same 'ambition' itself. We exaggerate the ambition of Great Men; we mistake what the nature

22. *Exodus*, xiii,21.

of it is. Great Men are not ambitious in that sense; he is a small poor man that is ambitious so. Examine the man who lives in misery because he does not shine above other men; who goes about producing himself, pruriently anxious about his gifts and claims; struggling to force everybody, as it were begging everybody for God's sake, to acknowledge him a great man, and set him over the heads of men! Such a creature is among the wretchedest sights seen under this sun. A *great* man? A poor morbid prurient empty man; fitter for the ward of a hospital, than for a throne among men. I advise you to keep-out of his way. He cannot walk on quiet paths; unless you will look at him, wonder at him, write paragraphs about him, he cannot live. It is the *emptiness* of the man, not his greatness. Because there is nothing in himself, he hungers and thirsts that you would find something in him. In good truth, I believe no great man, not so much as a genuine man who had health and real substance in him of whatever magnitude, was ever much tormented in this way.

Your Cromwell, what good could it do him to be 'noticed' by noisy crowds of people? God his maker already noticed him. He, Cromwell, was already there; no notice would make *him* other than he already was. Till his hair was grown grey; and Life from the downhill slope was all seen to be limited, not infinite but finite, and all a measurable matter *how* it went, — he had been content to plough the ground, and read his Bible. He in his old days could not support it any longer, without selling himself to Falsehood, that he might ride in gilt carriages to Whitehall,[23] and have clerks with bundles of papers haunting him, 'Decide this, decide that,' which in utmost sorrow of heart no man can perfectly decide! What could gilt carriages do for this man? From of old, was there not in his life a weight of meaning, a terror and a splendour as of Heaven itself? His existence there as man set him beyond need of gilding. Death, Judgment and Eternity: these already lay as the background of whatsoever he thought or did. All his life lay begirt as in the sea of nameless Thoughts, which no speech of a mortal could name. God's Word, as the Puritan prophets of that time had read it: this was great, and all else was little to him. To call such a man 'ambitious,' to figure him as the prurient windbag described above, seems to me the poorest solecism. Such a man will say: 'Keep your gilt carriages and huzzaing mobs, keep your red-tape clerks, your influentialities, your important businesses. Leave me alone, leave me alone: there is *too much of life* in me already!' Old Samuel Johnson, the greatest soul in England in his day, was not ambitious. 'Corsica Boswell'[24] flaunted at public shows with printed ribbons round his hat; but the great old Samuel stayed at home. The world wide soul wrapt-up in its thoughts, in its sorrows; — what would paradings, and ribbons in the hat, do for it?

Ah yes, I will say again: The great *silent* men! Looking round on the noisy inanity of the world, words with little meaning, actions with little worth, one loves to reflect on the great Empire of *Silence*. The noble silent men, scattered here and there, each in his department; silently thinking, silently working; whom no Morning Newspaper makes mention of! They are the salt of the Earth. A country that has none or few of these is in a bad way. Like a forest which had no *roots*; which had all turned into leaves and boughs; — which must soon wither and be no forest. Woe for us if we had nothing but what we can *show*, or speak. Silence, the great Empire of Silence: higher than the stars; deeper than the Kingdoms of Death! It alone is great; all else is small. — I hope we Eng-

23. The royal residence in the 16th and 17th centuries; today the name refers to the thoroughfare in London where government offices are located.

24. So called — and self-styled — because of his enthusiasm for Corsica in her fight for independence from France in the 1760's.

lish will long maintain our *grand talent pour le silence*. Let others that cannot do without standing on barrelheads, to spout, and be seen of all the market-place, cultivate speech exclusively, — become a most green forest without roots! Solomon says, There is a time to speak; but also a time to keep silence.[25] Of some great silent Samuel, not urged to writing, as old Samuel Johnson says he was, by *want of money*, and nothing other, one might ask, 'Why do not you too get up and speak; promulgate your system, found your sect?' 'Truly,' he will answer, 'I am *continent* of my thought hitherto; happily I have yet had the ability to keep it in me, no compulsion strong enough to speak it. My "system" is not for promulgation first of all; it is for serving myself to live by. That is the great purpose of it to me. And then the "honour"? Alas, yes; — but as Cato said of the statue: So many statues in that Forum of yours, may it not be better if they ask, Where is Cato's statue?'[26] —

But now, by way of counterpoise to this of Silence, let me say that there are two kinds of ambition; one wholly blamable, the other laudable and inevitable. Nature has provided that the great silent Samuel shall not be silent too long. The selfish wish to shine over others, let it be accounted altogether poor and miserable. 'Seekest thou great things? seek them not:'[27] this is most true. And yet, I say, there is an irrepressible tendency in every man to develop himself according to the magnitude which Nature has made him of; to speak-out, to act-out, what Nature has laid in him. This is proper, fit, inevitable; nay it is a duty, and even the summary of duties for a man. The meaning of life here on earth might be defined as consisting in this: To unfold your *self*, to work what thing you have the faculty for. It is a necessity for the human being, the first law of our existence. Coleridge beautifully remarks that the infant learns to *speak* by this necessity it feels.[28] We will say therefore: To decide about ambition, whether it is bad or not, you have two things to take into view. Not the coveting of the place alone, but the fitness of the man for the place withal: that is the question. Perhaps the place was *his*; perhaps he had a natural right, and even obligation, to seek the place! Mirabeau's ambition to be Prime Minister, how shall we blame it, if he were 'the only man in France that could have done any good there'? Hopefuler perhaps had he not so clearly *felt* how much good he could do! But a poor Necker,[29] who could do no good, and had even felt that he could do none, yet sitting broken-hearted because they had flung him out, and he was now quit of it, well might Gibbon[30] mourn over him. - - Nature, I say, has provided amply that the silent great man shall strive to speak withal; *too* amply, rather!

Fancy, for example, you had revealed to the brave old Samuel Johnson, in his shrouded-up existence, that it was possible for him to do priceless divine work for his country and the whole world. That the perfect Heavenly Law might be made Law on this Earth; that the prayer he prayed daily, 'Thy kingdom come,' was at length to be fulfilled! If you had convinced his judgment of this; that it was possible, practicable; that he the mournful silent Samuel was called to take a part in it! Would not the whole soul of the man have flamed-up into a divine clearness, into noble utterance and determination to act; casting all sor-

26. Adapted, and altered, from the account of Cato 'the Elder' (234–149 B.C.) in Plutarch's *Lives*.

27. *Jeremiah*, xlv, 5.

28. So freely adapted from Coleridge that the original passage has not been identified

29. Jacques Necker (1732–1804), French statesman and finance minister of Louis XVI whose dismissal from the control of the finances contributed to the outbreak of the French Revolution.

30. Edward Gibbon (1737–94), author of *The Decline and Fall of the Roman Empire* (1776–88); he was at one time engaged to Susanne Churchod, whom Necker married.

rows and misgivings under his feet, counting all affliction and contradiction small, — the whole dark element of his existence blazing into articulate radiance of light and lightning? It were a true ambition this! And think now how it actually was with Cromwell. From of old, the sufferings of God's Church, true zealous Preachers of the truth flung into dungeons, whipt, set on pillories, their ears cropt-off, God's Gospel-cause trodden under foot of the unworthy: all this had lain heavy on his soul. Long years he had looked upon it, in silence, in prayer; seeing no remedy on Earth; trusting well that a remedy in Heaven's goodness would come, - -that such a course was false, unjust, and could not last forever. And now behold the dawn of it; after twelve years silent waiting, all England stirs itself; there is to be once more a Parliament,[31] the Right will get a voice for itself: inexpressible well-grounded hope has come again into the Earth. Was not such a Parliament worth being a member of? Cromwell threw down his ploughs, and hastened thither.

He spoke there, — rugged bursts of earnestness, of a self-seen truth, where we get a glimpse of them. He worked there; he fought and strove, like a strong true giant of a man, through cannon-tumult and all else, — on and on, till the Cause *triumphed*, its once so formidable enemies all swept from before it, and the dawn of hope had become clear light of victory and certainty. That *he* stood there as the strongest soul of England, the undisputed Hero of all England, — what of this? It was possible that the Law of Christ's Gospel could now establish itself in the world! The Theocracy which John Knox in his pulpit might dream of as a 'devout imagination,' this practical man, experienced in the whole chaos of most rough practice, dared to consider as capable of being realised. Those that were highest in Christ's Church, the devoutest wisest men, were to rule the land: in some considerable degree, it might be so and should be so. Was it not *true*, God's truth? And if *true*, was it not then the very thing to do? The strongest practical intellect in England dared to answer, Yes! This I call a noble true purpose; is it not, in its own dialect, the noblest that could enter into the heart of Statesman or man? For a Knox to take it up was something; but for a Cromwell, with his great sound sense and experience of what our world *was*, — History, I think, shows it only this once in such a degree. I account it the culminating point of Protestantism; the most heroic phasis that 'Faith in the Bible' was appointed to exhibit here below. Fancy it: that it were made manifest to one of us, how we could make the Right supremely victorious over Wrong, and all that we had longed and prayed for, as the highest good to England and all lands, an attainable fact!

Well, I must say, the *vulpine* intellect, with its knowingness, its alertness and expertness in 'detecting hypocrites,' seems to me a rather sorry business. We have had but one such Statesman in England; one man, that I can get sight of, who ever had in the heart of him any such purpose at all. One man, in the course of fifteen-hundred years; and this was his welcome. He had adherents by the hundred or the ten; opponents by the million. Had England rallied all round him, — why, then, England might have been a *Christian* land! As it is, vulpine knowingness sits yet at its hopeless problem, 'Given a world of Knaves, to educe an Honesty from their united action'; — how cumbrous a problem, you may see in Chancery[32] Law-Courts, and some other places! Till at length, by Heaven's just anger, but also by Heaven's great

31. This was the Short Parliament, first of two summoned by Charles I in 1640; sought redress of grievances before granting supply to the King; was dissolved within three weeks. In the autumn the Long Parliament convened and effected several reforms. Purged of those members favorable to the King (1648), it was later (1653) dissolved by Cromwell, restored in 1659, finally dissolved the next year.

32. The chief court of justice in Great Britain.

grace, the matter begins to stagnate; and this problem is becoming to all men a *palpably* hopeless one. —

But with regard to Cromwell and his purposes: Hume,[33] and a multitude following him, come upon me here with an admission that Cromwell *was* sincere at first; a sincere 'Fanatic' at first, but gradually became a 'Hypocrite' as things opened round him. This of the Fanatic-Hypocrite is Hume's theory of it; extensively applied since, — to Mahomet and many others. Think of it seriously, you will find something in it; not much, not all, very far from all. Sincere hero hearts do not sink in this miserable manner. The Sun flings-forth impurities, gets balefully incrusted with spots; but it does not quench itself, and become no Sun at all, but a mass of Darkness! I will venture to say that such never befell a great deep Cromwell; I think, never. Nature's own lion-hearted Son; Antæus-like,[34] his strength is got by *touching the Earth*, his Mother; lift him up from the Earth, lift him up into Hypocrisy, Inanity, his strength is gone. We will not assert that Cromwell was an immaculate man; that he fell into no faults, no insincerities among the rest. He was no dilettante professor of 'perfections,' 'immaculate conducts.' He was a rugged Orson,[35] rending his rough way through actual true *work*, — doubtless with many a *fall* therein. Insincerities, faults, very many faults daily and hourly: it was too well known to him; known to God and him! The Sun was dimmed many a time; but the Sun had not himself grown a Dimness. Cromwell's last words, as he lay waiting for death, are those of a Christian heroic man. Broken prayers to God, that He would judge him and this Cause, He since man could not, in justice yet in pity. They are most touching words. He breathed-out his wild great soul, its toils and sins all ended now, into the presence of his Maker, in this manner.

I, for one, will not call the man a Hypocrite! Hypocrite, mummer, the life of him a mere theatricality; empty barren quack, hungry for the shouts of mobs? The man had made obscurity do very well for him till his head was grey; and now he *was*, there as he stood recognised unblamed, the virtual King of England. Cannot a man do without King's Coaches and Cloaks? Is it such a blessedness to have clerks forever pestering you with bundles of papers in red tape? A simple Diocletian[36] prefers planting of cabbages; a George Washington, no very immeasurable man, does the like. One would say, it is what any genuine man could do; and would do. The instant his real work were out in the matter of Kingship, — away with it!

Let us remark, meanwhile, how indispensable everywhere a *King* is, in all movements of men. It is strikingly shown, in this very War, what becomes of men when they cannot find a Chief Man, and their enemies can. The Scotch Nation was all but unanimous in Puritanism; zealous and of one mind about it, as in this English end of the Island was always far from being the case. But there was no great Cromwell among them; poor tremulous, hesitating, diplomatic Argyles,[37] and suchlike: none of them had a heart true enough for the truth, or durst commit himself to the truth. They had no leader; and the scattered Cavalier party in that country had

33. David Hume (1711–76), in his *History of Great Britain* (1754–61), gives a Tory account of Cromwell as 'at bottom as frantic an enthusiast [fanatic] as the worst of them' (Ch.lxi).

34. The Lybian giant, son of the sea and the earth, who, when wrestling with Hercules, drew strength from his mother whenever he touched the ground.

35. Character in an early French romance; he is carried away by a bear and reared as a wild man.

36. Roman Emperor (245–313) who abdicated after a reign of 21 years, and devoted himself to the cultivation of his garden.

37. Allusion to the Marquis of Argyle (1598–1661); wavering, intriguing; executed under Charles II.

one: Montrose,[38] the noblest of all the Cavaliers; an accomplished, gallant-hearted, splendid man; what one may call the Hero-Cavalier. Well, look at it; on the one hand subjects without a King; on the other a King without subjects! The subjects without King can do nothing; the subjectless King can do something. This Montrose, with a handful of Irish or Highland savages, few of them so much as guns in their hands, dashes at the drilled Puritan armies like a wild whirlwind; sweeps them, time after time, some five times over, from the field before him. He was at one period, for a short while, master of all Scotland. One man; but he was a man: a million zealous men, but *without* the one; they against him were powerless! Perhaps of all the persons in that Puritan struggle, from first to last, the single indispensable one was verily Cromwell. To see and dare, and decide; to be a fixed pillar in the welter of uncertainty; — a King among them, whether they called him so or not. . . .

Precisely a century and a year after this of Puritanism had got itself hushed-up into decent composure, and its results made smooth, in 1688,[39] there broke-out a far deeper explosion, much more difficult to hush up, known to all mortals, and like to be long known, by the name of French Revolution. It is properly the third and final act of Protestantism; the explosive confused return of mankind to Reality and Fact, now that they were perishing of Semblance and Sham. We call our English Puritanism the second act: 'Well then, the Bible is true; let us go by the Bible!' 'In Church,' said Luther; 'In Church and State,' said Cromwell, 'let us go by what actually *is* God's Truth.' Men have to return to reality; they cannot live on semblance. The French Revolution, or third act, we may well call the final one; for lower than that savage *Sansculottism*[40] men cannot go. They stand there on the nakedest haggard Fact, undeniable in all seasons and circumstances; and may and must begin again confidently to build-up from that. The French explosion, like the English one, got its King, — who had no Notary parchment to show for himself. We have still to glance for a moment at Napoleon, our second modern King.

Napoleon does by no means seem to me so great a man as Cromwell. His enormous victories which reached over all Europe, while Cromwell abode mainly in our little England, are but as the high *stilts* on which the man is seen standing; the stature of the man is not altered thereby. I find in him no such *sincerity* as in Cromwell; only a far inferior sort. No silent walking, through long years, with the Awful Unnamable of this Universe; 'walking with God,'[41] as he called it; and faith and strength in that alone: *latent* thought and valour, content to lie latent, then burst out as in blaze of Heaven's lightning! Napoleon lived in an age when God was no longer believed; the meaning of all Silence, Latency, was thought to be Nonentity: he had to begin not out of the Puritan Bible, but out of poor Sceptical *Encyclopédies*.[42] This was the length the man carried it. Meritorious to get so far. His compact, prompt, everyway articulate character is in itself perhaps small, compared with our great chaotic *in*articulate Cromwell's. Instead of '*dumb* Prophet struggling to speak,' we have a portentous mixture of the Quack withal! Hume's notion of the Fanatic-Hypocrite, with such truth as it has, will apply much better to Napoleon than it did to Cromwell, to Mahomet or

38. Marquis of Montrose (1612–50), great general who defeated Argyle; he took a prominent part in Scottish history just before the fall of Charles I. He became the principal figure in Scott's *A Legend of Montrose*.

39. *i.e.* in the 'glorious [bloodless] revolution' of 1688, which ended the struggle against the tyranny and Roman Catholicism of James II, who abdicated; resulting in a more settled constitutional government under William of Orange and Mary (James's daughter).

40. Revolutionary radicalism.

41. See *Genesis*, v,22,24.

42. See Lecture I, note 15.

the like, — where indeed taken strictly it has hardly any truth at all. An element of blamable ambition shows itself, from the first, in this man; gets the victory over him at last, and involves him and his work in ruin.

'False as a bulletin' became a proverb in Napoleon's time. He makes what excuse he could for it: that it was necessary to mislead the enemy, to keep-up his own men's courage, and so forth. On the whole, there are no excuses. A man in no case has liberty to tell lies. It had been, in the long-run, *better* for Napoleon too if he had not told any. In fact, if a man have any purpose reaching beyond the hour and day, meant to be found extant *next* day, what good can it ever be to promulgate lies? The lies are found-out; ruinous penalty is exacted for them. No man will believe the liar next time even when he speaks truth, when it is of the last importance that he be believed. The old cry of wolf! — A Lie is *no*-thing; you cannot of nothing make something; you make *nothing* at last, and lose your labour into the bargain.

Yet Napoleon *had* a sincerity: we are to distinguish between what is superficial and what is fundamental in insincerity. Across these outer manœuverings and quackeries of his, which were many and most blamable, let us discern withal that the man had a certain instinctive ineradicable feeling for reality; and did base himself upon fact, so long as he had any basis. He has an instinct of Nature better than his culture was. His *savans*,[43] Bourrienne [44] tells us, in that voyage to Egypt,[45] were one evening busily occupied arguing that there could be no God. They had proved it, to their satisfaction, by all manner of logic. Napoleon looking up into the stars, answers, 'Very ingenious, Messieurs: but *who made* all that?' The Atheistic logic runs-off from him like water; the great Fact stares him in the face: 'Who made all that?' So too in Practice: he, as every man that can be great, or have victory in this world, sees, through all entanglements, the practical heart of the matter; drives straight towards that. When the steward of his Tuileries[46] Palace was exhibiting the new upholstery, with praises, and demonstration how glorious it was, and how cheap withal, Napoleon, making little answer, asked for a pair of scissors, clipt one of the gold tassels from a window-curtain, put it in his pocket, and walked on. Some days afterwards, he produced it at the right moment, to the horror of his upholstery functionary; it was not gold but tinsel! In Saint Helena,[47] it is notable how he still, to his last days, insists on the practical, the real. 'Why talk and complain; above all, why quarrel with one another? There is no *result* in it; it comes to nothing that one can *do*. Say nothing, if one can do nothing!' He speaks often so, to his poor discontented followers; he is like a piece of silent strength in the middle of their morbid querulousness there.

And accordingly was there not what we can call a *faith* in him, genuine so far as it went? That this new enormous Democracy asserting itself here in the French Revolution is an insuppressible Fact, which the whole world, with its old forces and institutions, cannot put down; this was a true insight of his, and took his conscience and enthusiasm along with it, — a *faith*. And did he not interpret the dim purport of it well? '*La carrière ouverte aux talens*,'[48] The implements to him who can handle them:' this actually is the truth, and even the whole truth; it includes what-

43. Or *savants*: men of learning.

44. 1769–1834; French diplomatist, author of the *Mémoires* (1829–31) from which Carlyle probably got the allusion to 'false as a bulletin.' He held various positions under Napoleon and under Louis XVIII.

45. In 1798.

46. The royal palace in Paris (on the site of a *tuilerie*, or brickyard); destroyed in the time of the Commune, 1871.

47. Where Napoleon was confined for the rest of his life, after his defeat at Waterloo, June 18, 1815.

48. A favorite saying of Napoleon's, meaning 'the career open to the talents.'

ever the French Revolution, or any Revolution, could mean. Napoleon, in his first period, was a true Democrat. And yet by the nature of him, fostered too by his military trade, he knew that Democracy, if it were a true thing at all, could not be an anarchy: the man had a heart-hatred for anarchy. On that Twentieth of June[49] (1792), Bourrienne and he sat in a coffee-house, as the mob rolled by: Napoleon expresses the deepest contempt for persons in authority that they do not restrain this rabble. On the Tenth of August[50] he wonders why there is no man to command these poor Swiss; they would conquer if there were. Such a faith in Democracy, yet hatred of anarchy, it is that carries Napoleon through all his great work. Through his brilliant Italian Campaigns,[51] onwards to the Peace of Leoben,[52] one would say, his inspiration is: 'Triumph to the French Revolution; assertion of it against these Austrian Simulacra that pretend to call it a Simulacrum!' Withal, however, he feels, and has a right to feel, how necessary a strong Authority is; how the Revolution cannot prosper or last without such. To bridle-in that great devouring, self-devouring French Revolution; to *tame* it, so that its intrinsic purpose can be made good, that it may become *organic*, and be able to live among other organisms and *formed* things, not as a wasting destruction alone: is not this still what he partly aimed at, as the true purport of his life; nay what he actually managed to do? Through Wagrams,[53] Austerlitzes;[54] triumph after triumph, — he triumphed so far. There was an eye to see in this man, a soul to dare and do. He rose naturally to be the King. All men saw that he *was* such. The common soldiers used to say on the march: 'These babbling *Avocats*, up at Paris; all talk and no work! What wonder it runs all wrong? We shall have to go and put our *Petit Caporal* there!' They went, and put him there; they and France at large. Chief-consulship, Emperorship, victory over Europe; — till the poor Lieutenant of *La Fère*,[55] not unnaturally, might seem to himself the greatest of all men that had been in the world for some ages.

But at this point, I think, the fatal charlatan-element got the upper hand. He apostatised from his old faith in Facts, took to believing in Semblances; strove to connect himself with Austrian Dynasties,[56] Popedoms, with the old false Feudalities which he once saw clearly to be false; — considered that *he* would found 'his Dynasty' and so forth; that the enormous French Revolution meant only that! The man was 'given-up to strong delusion, that he should believe a lie';[57] a fearful but most sure thing. He did not know true from false now when he looked at them, — the fearfulest penalty a man pays for yielding to untruth of heart. *Self* and false ambition had now become his god: *self*-deception once yielded to, *all* other deceptions follow naturally more and more. What a paltry patchwork of theatrical paper-mantles, tinsel and mummery, had this man wrapt his own great reality in, thinking to make it more real thereby! His hollow Pope's-*Concordat*,[58] pretending to be a re-

49. When the mob invaded the Tuileries. See Carlyle's *French Revolution*, Vol.II,Bk.VI,Ch.i; and Bourrienne's *Mémoires*.

50. When the mob made another and a more violent armed assault on the Tuileries, and massacred several hundred Swiss guards. See Carlyle's *French Revolution*, Vol.II,Bk.VI,Ch.vii.

51. 1796–97.

52. Between Austria and Napoleon, April 18,1797.

53. The battle of Wagram was fought July 5, 6, 1809.

54. At Austerlitz (like Wagram, not far from Vienna), Napoleon defeated the Austrians and Russians, December 2, 1805.

55. A town in northern France. Napoleon had been (1785–91) lieutenant in a regiment given that 'territorial' name.

56. By divorcing Josephine and marrying, in 1810, Maria Louisa, daughter of the Emperor of Austria.

57. *II Thessalonians*, ii,11.

58. His treaty with the Pope, September 1801, declaring the Roman Catholic religion the religion of the majority of Frenchmen, and setting up bishoprics by the Pope and the French gov-

establishment of Catholicism, felt by himself to be the method of extirpating it, '*la vaccine de la religion*': [59] his ceremonial Coronations, consecrations by the old Italian Chimera in Notre-Dame,[60] — 'wanting nothing to complete the pomp of it,' as Augereau [61] said, 'nothing but the half-million of men who had died to put an end to all that'! Cromwell's Inauguration was by the Sword and Bible; what we must call a genuinely *true* one. Sword and Bible were borne before him, without any chimera: were not these the *real* emblems of Puritanism; its true decoration and insignia? It had used them both in a very real manner, and pretended to stand by them now! But this, poor Napoleon mistook: he believed too much in the *Dupeability* of men; saw no fact deeper in man than Hunger and this! He was mistaken. Like a man that should build upon cloud; his house and he fall down in confused wreck, and depart out of the world.

Alas, in all of us this charlatan-element exists; and *might* be developed, were the temptation strong enough. 'Lead us not into temptation'! But it is fatal, I say, that it *be* developed. The thing into which it enters as a cognisable ingredient is doomed to be altogether transitory; and, however huge it may *look*, is in itself small. Napoleon's working, accordingly, what was it with all the noise it made? A flash as of gunpowder wide-spread; a blazing-up as of dry heath. For an hour the whole Universe seems wrapt in smoke and flame; but only for an hour. It goes out: the Universe with its old mountains and streams, its stars above and kind soil beneath, is still there.

The Duke of Weimar [62] told his friends always, To be of courage; this Napoleonism was *unjust*, a falsehood, and could not last. It is true doctrine. The heavier this Napoleon trampled on the world, holding it tyrannously down, the fiercer would the world's recoil against him be, one day. Injustice pays itself with frightful compound-interest. I am not sure but he had better have lost his best park of artillery, or had his best regiment drowned in the sea, than shot that poor German Bookseller, Palm! [63] It was a palpable tyrannous murderous injustice, which no man, let him paint an inch thick, could make-out to be other. It burnt deep into the hearts of men, it and the like of it; suppressed fire flashed in the eyes of men, as they thought of it, — waiting their day! Which day *came*: Germany rose round him. — What Napoleon *did* will in the long-run amount to what he did *justly*; what Nature with her laws will sanction. To what of reality was in him; to that and nothing more. The rest was all smoke and waste. *La carrière ouverte aux talens*: that great true Message, which has yet to articulate and fulfil itself everywhere, he left in a most inarticulate state. He was a great *ébauche*,[64] a rude-draught never completed; as indeed what great man is other? Left in *too* rude a state, alas!

His notions of the world, as he expresses them there at St. Helena, are almost tragical to consider. He seems to feel the most unaffected surprise that it has all gone so; that he is flung-out on the rock here, and the World is still moving on its axis. France is great, and all-great; and at bottom, he is France. England itself, he says, is by Nature only an appendage of France; 'another Isle of Oleron [65] to France.' So it was *by Nature*, by Napoleon-Nature; and yet look how in fact — HERE AM I! He

59. 'Vaccination against religion.' Said by Napoleon to Cabanis, the famous French physician, shortly after the *Concordat* was signed.

60. The Cathedral in Paris, where, on December 2, 1804, Napoleon was crowned emperor of the French in the presence of the Pope.

61. 1757–1816; one of Napoleon's marshals. The allusion is to an episode narrated by Bourrienne.

62. Karl August (1775–1828), friend and patron of Goethe.

63. Johann Philipp Palm (1768–1806), bookseller of Nuremberg, court-martialed and shot by Napoleon's orders because he had sold a pamphlet directed against the French. This event contributed to bringing about the German war of liberation from the French.

64. 'rough sketch.'

65. An island off the west coast of France.

cannot understand it: inconceivable that the reality has not corresponded to his program of it; that France was not all-great, that he was not France. 'Strong delusion,' that he should believe the thing to be which *is* not! The compact, clear-seeing, decisive Italian nature of him, strong, genuine, which he once had, has enveloped itself, half-dissolved itself, in a turbid atmosphere of French fanfaronade. The world was not disposed to be trodden-down underfoot; to be bound into masses, and built together, as *he* liked, for a pedestal to France and him: the world had quite other purposes in view! Napoleon's astonishment is extreme. But alas, what help now? He had gone that way of his; and Nature also had gone her way. Having once parted with Reality, he tumbles helpless in Vacuity; no rescue for him. He had to sink there, mournfully as man seldom did; and break his great heart, and die,[66] – this poor Napoleon: a great implement too soon wasted, till it was useless: our last Great Man!

Our last, in a double sense. For here finally these wide roamings of ours through so many times and places, in search and study of Heroes, are to terminate. I am sorry for it: there was pleasure for me in this business, if also much pain. It is a great subject, and a most grave and wide one, this which, not to be too grave about it, I have named *Hero-worship*. It enters deeply, as I think, into the secret of Mankind's ways and vitalest interests in this world, and is well worth explaining at present. With six months, instead of six days, we might have done better. I promised to break-ground on it; I know not whether I have even managed to do that. I have had to tear it up in the rudest manner in order to get into it at all. Often enough, with these abrupt utterances thrown-out isolated, unexplained, has your tolerance been put to the trial. Tolerance, patient candour, all-hoping favour and kindness, which I will not speak of at present. The accomplished and distinguished, the beautiful, the wise, something of what is best in England, have listened patiently to my rude words. With many feelings, I heartily thank you all; and say, Good be with you all!

66 On May 5, 1821

PAST AND PRESENT

BOOK III — THE MODERN WORKER

CHAPTER I

Phenomena

BUT, it is said, our religion is gone: we no longer believe in St. Edmund,[1] no longer see the figure of him 'on the rim of the sky,' minatory or confirmatory! God's absolute Laws, sanctioned by an eternal Heaven and an eternal Hell, have become Moral Philosophies, sanctioned by able computations of Profit and Loss, by weak considerations of Pleasures of Virtue and the Moral Sublime.

It is even so. To speak in the ancient dialect, we 'have forgotten God';[2] — in the most modern dialect and very truth of the matter, we have taken up the Fact of this Universe as it *is not*. We have quietly closed our eyes to the eternal Substance of things, and opened them only to the Shows and Shams of things. We quietly believe this Universe to be intrinsically a great

1. 841–70; king of the East Angles: defeated by the Danes, and shot and beheaded on refusing to renounce Christianity. His remains are enshrined at Bury St. Edmunds. See *Past and Present*, Book II, Chapters ii and iii, for Carlyle's account of St. Edmund and the monastery which provides a contrast (the 'past') with the 'present' (Victorian England).

2. *Cf. Isaiah*, xvii,10; *Jeremiah*, iii,21.

unintelligible PERHAPS; extrinsically, clear enough, it is a great, most extensive Cattle-fold and Workhouse, with most extensive Kitchen-ranges, Dining-tables, — whereat he is wise who can find a place! All the truth of this Universe is uncertain; only the profit and loss of it, the pudding and praise of it, are and remain very visible to the practical man.

There is no longer any God for us! God's Laws are become a Greatest-Happiness Principle,[3] a Parliamentary Expediency: the Heavens overarch us only as an Astronomical Time-keeper; a butt for Herschel[4]-telescopes to shoot science at, to shoot sentimentalities at: — in our and old Jonson's dialect, man has lost the *soul* out of him; and now, after the due period, — begins to find the want of it! This is verily the plague-spot; centre of the universal Social Gangrene, threatening all modern things with frightful death. To him that will consider it, here is the stem, with its roots and taproot, with its world-wide upas-boughs and accursed poison-exudations, under which the world lies writhing in atrophy and agony. You touch the focal-centre of all our disease, of our frightful nosology[5] of diseases, when you lay your hand on this. There is no religion; there is no God; man has lost his soul, and vainly seeks antiseptic salt. Vainly: in killing Kings, in passing Reform Bills, in French Revolutions, Manchester Insurrections, is found no remedy.[6] The foul elephantine leprosy, alleviated for an hour, reappears in new force and desperateness next hour.

For actually this is *not* the real fact of the world; the world is not made so, but otherwise! — Truly, any Society setting out from this No-God hypothesis will arrive at a result or two. The *Un*veracities, escorted, each Unveracity of them by its corresponding Misery and Penalty; the Phantasms, and Fatuities, and ten-years Corn-Law Debatings,[7] that shall walk the Earth at noonday, — must needs be numerous! The Universe *being* intrinsically a Perhaps, being too probably an 'infinite Humbug,' why should any minor Humbug astonish us? It is all according to the order of Nature; and Phantasms riding with huge clatter along the streets, from end to end of our existence, astonish nobody. Enchanted St. Ives' Workhouses and Joe-Manton Aristocracies;[8] giant Working Mammonism[9] near strangled in the partridge-nets of giant-looking Idle Dilettantism,[10] — this, in all its branches, in its thousand thousand modes and figures, is a sight familiar to us.

The Popish Religion, we are told, flourishes extremely in these years; and is the most vivacious looking religion to be met with at present. '*Elle a trois cents ans dans le ventre*,' counts M. Jouffroy; '*c'est pourquoi je la respecte!*'[11] — The old Pope of Rome, finding it laborious to kneel so

5 Allusion, of course, to the Utilitarian philosophy.

4. Sir William Herschel (1738–1822), German astronomer at the court of George III.

5. Classification.

6. Allusions, respectively, to the execution of Charles I, in the Puritan Revolution, on January 30, 1649; to the Reform Bill of 1832; to the French Revolution (1789–95); and to the Peterloo massacre at Manchester, August 16, 1819, where several persons were killed and about 600 injured when cavalry and yeomanry charged a workers' reform-meeting in St. Peter's Field.

7. The Corn (grain) Laws, enacted in 1815, permitted importation of grain only when the price of wheat had risen to 80 shillings a quarter (8 bushels); thus the price of bread was kept high, for the benefit of the great rural landlords and farmers, but to the misery of factory workers. The laws were repealed in 1846, after agitation by the Anti-Corn-Law League, led by Cobden and Bright

8. *i.e.* aristocrats idling their time away by hunting with fowling pieces made by the celebrated London gunsmith, Joseph Manton (1766?–1835).

9. Riches; the demon of greed. 'Ye cannot serve God and mammon' (*Matthew*, vi,24).

10. Carlyle's satirical expression to allude to the idle aristocracy.

11. 'She has three hundred years to live, and that is why I respect her.' Théodore Simon Jouffroy (1796–1842) was a French philosopher much interested in the thought of the Scotch philosophers Reid and Stewart, pointing toward

long while they cart him through the streets to bless the people on *Corpus-Christi* Day,[12] complains of rheumatism; whereupon his Cardinals consult; — construct him, after some study, a stuffed cloaked figure, of iron and wood, with wool or baked hair; and place it in a kneeling posture. Stuffed figure, or rump of a figure; to this stuffed rump he, sitting at his ease on a lower level, joins, by the aid of cloaks and drapery, his living head and outspread hands: the rump with its cloaks kneels, the Pope looks, and holds his hands spread; and so the two in concert bless the Roman population on *Corpus-Christi* Day, as well as they can.

I have considered this amphibious Pope, with the wool-and-iron back, with the flesh head and hands; and endeavoured to calculate his horoscope. I reckon him the remarkablest Pontiff that has darkened God's daylight, or painted himself in the human retina, for these several thousand years. Nay, since Chaos first shivered, and 'sneezed,' as the Arabs say, with the first shaft of sunlight shot through it, what stranger product was there of Nature and Art working together? Here is a Supreme Priest who believes God to be — What, in the name of God, *does* he believe God to be? — and discerns that all worship of God is a scenic phantasmagory of wax-candles, organ-blasts, Gregorian Chants, mass-brayings, purple monsignori,[13] wool-and-iron rumps, artistically spread out, — to save the ignorant from worse.

O reader, I say not who are Belial's[14] elect. This poor amphibious Pope, too, gives loaves to the Poor; has in him more good latent than he is himself aware of. His poor Jesuits,[15] in the late Italian Chol-

a scientific statement of the laws of consciousness. His remark about the Catholic Religion takes on significance in the light of Jouffroy's interests.

12. The Thursday after Trinity Sunday, for the festival honoring the Eucharist.
13. Prelates of the Roman Church.
14. Satan's.
15. Members of the Society of Jesus, a religious order founded by Ignatius Loyola in 1534; hated by many Protestants for equivocation and intrigue.

era, were, with a few German Doctors, the only creatures whom dastard terror had not driven mad: they descended fearless into all gulfs and bedlams; watched over the pillow of the dying, with help, with counsel and hope; shone as luminous fixed stars, when all else had gone out in chaotic night: honour to them! This poor Pope, — who knows what good is in him? In a Time otherwise too prone to forget, he keeps up the mournfulest ghastly memorial of the Highest, Blessedest, which once was; which, in new fit forms, will again partly have to be. Is he not as a perpetual death's-head and cross-bones, with their *Resurgam*,[16] on the grave of a Universal Heroism, — grave of a Christianity? Such Noblenesses, purchased by the world's best heart's-blood, must not be lost; we cannot afford to lose them, in what confusions soever. To all of us the day will come, to a few of us it has already come, when no mortal, with his heart yearning for a 'Divine Humility,' or other 'Highest form of Valour,' will need to look for it in death's-heads, but will see it round him in here and there a beautiful living head.

Besides, there is in this poor Pope, and his practice of the Scenic Theory of Worship, a frankness which I rather honour. Not half and half, but with undivided heart does *he* set about worshipping by stage-machinery; as if there were now, and could again be, in Nature no other. He will ask you, what other? Under this my Gregorian Chant, and beautiful wax-light Phantasmagory, kindly hidden from you is an Abyss, of Black Doubt, Scepticism, nay Sansculottic Jacobinism;[17] an Orcus[18] that has no bottom. Think of that. 'Groby Pool *is* thatched with pancakes,' — as Jeannie Deans's Innkeeper defied it to be![19]

16. From the Latin, *resurgo*, to rise again; 'I shall rise again.'
17. Revolutionism.
18. Hades, or Hell.
19. See Scott's *Heart of Midlothian*.

The Bottomless of Scepticism, Atheism, Jacobinism, behold, it is thatched over, hidden from your despair, by stage-properties judiciously arranged. This stuffed rump of mine saves not me only from rheumatism, but you also from what other *isms*! In this your Life-pilgrimage Nowhither, a fine Squallacci [20] marching-music, and Gregorian Chant, accompanies you, and the hollow Night of Orcus is well hid!

Yes truly, few men that worship by the rotatory Calabash of the Calmucks [21] do it in half so great, frank or effectual a way. Drury-Lane,[22] it is said, and that is saying much, might learn from him in the dressing of parts, in the arrangement of lights and shadows. He is the greatest Play-actor that at present draws salary in this world. Poor Pope; and I am told he is fast growing bankrupt too; and will, in a measurable term of years (a great way *within* the 'three hundred'), not have a penny to make his pot boil! His old rheumatic back will then get to rest; and himself and his stage-properties sleep well in Chaos for evermore.

Or, alas, why go to Rome for Phantasms walking the streets? Phantasms, ghosts, in this midnight hour, hold jubilee, and screech and jabber; and the question rather were, What high Reality anywhere is yet awake? Aristocracy has become Phantasm-Aristocracy, no longer able to *do* its work, not in the least conscious that it has any work longer to do. Unable, totally careless to *do* its work; careful only to clamour for the *wages* of doing its work, — nay for higher, and *palpably* undue wages, and Corn-Laws and *increase* of rents; the old rate of wages not being adequate now! In hydra-wrestle, giant '*Mil-*locracy' [23] so-called, a real giant, though as yet a blind one and but half-awake, wrestles and wrings in choking nightmare, 'like to be strangled in the partridge-nets of Phantasm-Aristocracy,' as we said, which fancies itself still to be a giant. Wrestles, as under nightmare, till it do awaken; and gasps and struggles thousandfold, we may say, in a truly painful manner, through all fibres of our English Existence, in these hours and years! Is our poor English Existence wholly becoming a Nightmare; full of mere Phantasms? —

The Champion of England,[24] cased in iron or tin, rides into Westminster Hall, 'being lifted into his saddle with little assistance,' and there asks, If in the four quarters of the world, under the cope of Heaven, is any man or demon that dare question the right of this King? Under the cope of Heaven no man makes intelligible answer, — as several men ought already to have done. Does not this Champion too know the world; that it is a huge Imposture, and bottomless Inanity, thatched over with bright cloth and other ingenious tissues? Him let us leave there, questioning all men and demons.

Him we have left to his destiny; but whom else have we found? From this the highest apex of things, downwards through all strata and breadths, how many fully awakened Realities have we fallen in with: — alas, on the contrary, what troops and populations of Phantasms, not God-Veracities but Devil-Falsities, down to the very lowest stratum, — which now, by such superincumbent weight of Unveracities, lies enchanted in St. Ives' Workhouses, broad enough, helpless enough! You will walk in no public thoroughfare or remotest by-way of English Existence but you will meet a man, an interest of

20. Carlylese for strident Italian music.

21. Members of a confederacy of Buddhist Mongol tribes, in central Asia, who prayed by whirling a calabash (gourd) containing prayers.

22. Famous theater in London, converted from a cock-pit in the reign of James I, rebuilt in 1674 and in 1812; the scene of many Christmas pantomimes in the early 19th century.

23. Carlylese for the new middle-class power, or aristocracy, the owners and operators of mills.

24. The coronation official whose duty it is to challenge anyone who may dispute the sovereign's right to succession; he appears in full armor.

men, that has given up hope in the Everlasting, True, and placed its hope in the Temporary, half or wholly False. The Honourable Member complains unmusically that there is 'devil's-dust' in Yorkshire cloth. Yorkshire cloth, — why, the very Paper I now write on is made, it seems, partly of plaster-lime well-smoothed, and obstructs my writing! You are lucky if you can find now any good Paper, — any work really *done*; search where you will, from highest Phantasm apex to lowest Enchanted basis.

Consider, for example, that great Hat seven-feet high, which now perambulates London Streets; which my Friend Sauerteig [25] regarded justly as one of our English notabilities; 'the topmost point as yet,' said he, 'would it were your culminating and returning point, to which English Puffery [26] has been observed to reach!' — The Hatter in the Strand of London, instead of making better felt-hats than another, mounts a huge lath-and-plaster Hat, seven-feet high, upon wheels; sends a man to drive it through the streets; hoping to be saved *thereby*. He has not attempted to *make* better hats, as he was appointed by the Universe to do, and as with this ingenuity of his he could very probably have done; but his whole industry is turned to *persuade* us that he has made such! He too knows that the Quack has become God. Laugh not at him, O reader; or do not laugh only. He has ceased to be comic; he is fast becoming tragic. To me this all-deafening blast of Puffery, of poor Falsehood grown necessitous, of poor Heart-Atheism fallen now into Enchanted Workhouses, sounds too surely like a Doom's-blast! I have to say to myself in old dialect: 'God's blessing is not written on all this; His curse is written on all this!' Unless perhaps the Universe *be* a chimera; — some old totally deranged eight-day clock, dead as brass; which the Maker, if there ever was any Maker, has long ceased to meddle with? — To my Friend Sauerteig this poor seven-feet Hat-manufacturer, as the topstone of English Puffery, was very notable.

Alas, that we natives note him little, that we view him as a thing of course, is the very burden of the misery. We take it for granted, the most rigorous of us, that all men who have made anything are expected and entitled to make the loudest possible proclamation of it, and call on a discerning public to reward them for it. Every man his own trumpeter; that is, to a really alarming extent, the accepted rule. Make loudest possible proclamation of your Hat: true proclamation if that will do; if that will not do, then false proclamation, — to such extent of falsity as will serve your purpose; as will not seem too false to be credible! — I answer, once for all, that the fact is not so. Nature requires no man to make proclamation of his doings and hat-makings; Nature forbids all men to make such. There is not a man or hat-maker born into the world but feels, or has felt, that he is degrading himself if he speak of his excellences and prowesses, and supremacy in his craft: his inmost heart says to him, 'Leave thy friends to speak of these; if possible, thy enemies to speak of these; but at all events, thy friends!' He feels that he is already a poor braggart; fast hastening to be a falsity and speaker of the Untruth.

Nature's Laws, I must repeat, are eternal: her small still voice, speaking from the inmost heart of us, shall not, under terrible penalties, be disregarded. No one man can depart from the truth without damage to himself; no one million of men; no Twenty-Seven Millions of men. Show me a Nation fallen everywhere into this course, so that each expects it, permits it to others and himself, I will show you a Nation travelling with one assent on the broad way. The broad way, however many Banks of England, Cotton-Mills and Duke's Pal-

25. Carlyle's pseudonym, meaning 'Sour-dough,' by means of which he is able to quote from his published or unpublished writings, with greater freedom, perhaps, than otherwise.

26. Advertising.

aces it may have. Not at happy Elysian fields, and everlasting crowns of victory, earned by silent Valour, will this Nation arrive; but at precipices, devouring gulfs, if it pause not. Nature has appointed happy fields, victorious laurel-crowns; but only to the brave and true: *Un*nature, what we call Chaos, holds nothing in it but vacuities, devouring gulfs. What are Twenty-seven Millions, and their unanimity? Believe them not: the Worlds and the Ages, God and Nature and All Men say otherwise.

'Rhetoric all this'? No, my brother, very singular to say, it is Fact all this. Cocker's Arithmetic is not truer.[27] Forgotten in these days, it is old as the foundations of the Universe, and will endure till the Universe cease. It is forgotten now; and the first mention of it puckers thy sweet countenance into a sneer: but it will be brought to mind again, — unless indeed the Law of Gravitation chance to cease, and men find that they *can* walk on vacancy. Unanimity of the Twenty-seven Millions will do nothing; walk not thou with them; fly from them as for thy life. Twenty-seven Millions travelling on such courses, with gold jingling in every pocket, with vivats heaven-high, are incessantly advancing, let me again remind thee, towards the *firmland's end*, — towards the end and extinction of what Faithfulness, Veracity, real Worth, was in their way of life. Their noble ancestors have fashioned for them a 'life-road'; — in how many thousand senses, this! There is not an old wise Proverb on their tongue, an honest Principle articulated in their hearts into utterance, a wise true method of doing and dispatching any work or commerce of men, but helps yet to carry them forward. Life is still possible to them, because all is not yet Puffery, Falsity, Mammon-worship and Unnature; because somewhat is yet Faithfulness, Veracity and Valour. With a certain very considerable finite quantity of Unveracity and Phantasm, social life is still possible; not with an infinite quantity! Exceed your certain quantity, the seven-feet Hat, and all things upwards to the very Champion cased in tin, begin to reel and flounder, — in Manchester Insurrections, Chartisms, Sliding-scales;[28] the Law of Gravitation not forgetting to act. You advance incessantly towards the land's end; you are, literally enough, 'consuming the way.' Step after step, Twenty-seven Million unconscious men; — till you are *at* the land's end; till there is not Faithfulness enough among you any more: and the next step now is lifted *not* over land, but into air, over ocean-deeps and roaring abysses: unless perhaps the Law of Gravitation have forgotten to act?

O, it is frightful when a whole Nation, as our Fathers used to say, has 'forgotten God'; has remembered only Mammon, and what Mammon leads to! When your self-trumpeting Hat-maker is the emblem of almost all makers, and workers, and men, that make anything, — from soul-overseerships, body-overseerships, epic poems, acts of parliament, to hats and shoeblacking! Not one false man but does uncountable mischief: how much, in a generation or two, will Twenty-seven Millions, mostly false, manage to accumulate? The sum of it, visible in every street, marketplace, senate-house, circulating-library, cathedral, cotton-mill, and union-workhouse, fills one *not* with a comic feeling!

27. Edward Cocker (1631–75) published his arithmetic in 1664; it went through more than a hundred editions

28. *Chartisms*: the 'People's Charter' embodied the demands of the Chartists who came into prominence in the early 1830's; its 'Six Points' were: universal suffrage, vote by ballot, annual parliaments, payment of members, abolition of property qualifications, and equal electoral districts. The movement collapsed in 1848. See Carlyle's *Chartism*, Kingsley's *Alton Locke*, etc. — *Sliding Scales*: allusion to one aspect of the Corn Laws.

Chapter II

Gospel of Mammonism

Reader, even Christian Reader as thy title goes, hast thou any notion of Heaven and Hell? I rather apprehend, not. Often as the words are on our tongue, they have got a fabulous or semi-fabulous character for most of us, and pass on like a kind of transient similitude, like a sound signifying little.[1]

Yet it is well worth while for us to know, once and always, that they are not a similitude, nor a fable nor semi-fable; that they are an everlasting highest fact! 'No Lake of Sicilian or other sulphur burns now anywhere in these ages,' sayest thou? Well, and if there did not! Believe that there does not; believe it if thou wilt, nay hold by it as a real increase, a rise to higher stages, to wider horizons and empires. All this has vanished, or has not vanished; believe as thou wilt as to all this. But that an Infinite of Practical Importance, speaking with strict arithmetical exactness, an *Infinite*, has vanished or can vanish from the Life of any Man: this thou shalt not believe! O brother, the Infinite of Terror, of Hope, of Pity, did it not at any moment disclose itself to thee, indubitable, unnameable? Came it never, like the gleam of *preternatural* Oceans, like the voice of old Eternities, far-sounding through thy heart of hearts? Never? Alas, it was not thy Liberalism then; it was thy Animalism! The Infinite is more sure than any other fact. But only men can discern it; mere building beavers, spinning arachnes, much more the predatory vulturous and vulpine species, do not discern it well! —

'The word Hell,' says Sauerteig, 'is still frequently in use among the English People: but I could not without difficulty ascertain what they meant by it. Hell generally signifies the Infinite Terror, the thing a man *is* infinitely afraid of, and shudders and shrinks from, struggling with his whole soul to escape from it. There is a Hell therefore, if you will consider, which accompanies man, in all stages of his history, and religious or other development: but the Hells of men and Peoples differ notably. With Christians it is the infinite terror of being found guilty before the Just Judge. With old Romans, I conjecture, it was the terror not of Pluto,[2] for whom probably they cared little, but of doing unworthily, doing unvirtuously, which was their word for un*man*fully. And now what is it, if you pierce through his Cants,[3] his oft-repeated Hearsays, what he calls his Worships and so forth, — what is it that the modern English soul does, in very truth, dread infinitely, and contemplate with entire despair? What *is* his Hell, after all these reputable, oft-repeated Hearsays, what is it? With hesitation, with astonishment, I pronounce it to be: The terror of "Not succeeding"; of not making money, fame, or some other figure in the world, — chiefly of not making money! Is not that a somewhat singular Hell?'

Yes, O Sauerteig, it is very singular. If we do not 'succeed,' where is the use of us? We had better never have been born. 'Tremble intensely,' as our friend the Emperor of China says: *there* is the black Bottomless of Terror; what Sauerteig calls the 'Hell of the English!' — But indeed this Hell belongs naturally to the Gospel of Mammonism, which also has its corresponding Heaven. For there *is* one Reality among so many Phantasms; about one thing we are entirely in earnest: The making of money. Working Mammonism does divide the world with idle game-preserving Dilettantism: — thank Heaven that there is even a Mammonism, *any*thing we are in earnest about! Idleness is worst, Idleness alone is without hope: work earnestly at anything, you will by degrees learn to work at almost all things. There is endless hope in work, were it even work at making money.

True, it must be owned, we for the

1. *Cf. Macbeth*, V,v,27–28.

2. God of the Underworld or Hades.

3. *Cants*: insincere uses of pious phraseology.

present, with our Mammon-Gospel, have come to strange conclusions. We call it a Society; and go about professing openly the totallest separation, isolation. Our life is not a mutual helpfulness; but rather, cloaked under due laws-of-war, named 'fair competition' and so forth, it is a mutual hostility. We have profoundly forgotten everywhere that *Cash-payment* is not the sole relation of human beings; we think, nothing doubting, that *it* absolves and liquidates all engagements of man. 'My starving workers?' answers the rich Millowner: 'Did not I hire them fairly in the market? Did I not pay them, to the last sixpence, the sum covenanted for? What have I to do with them more?'— Verily Mammon-worship is a melancholy creed. When Cain, for his own behoof, had killed Abel, and was questioned, 'Where is thy brother?' he too made answer, 'Am I my brother's keeper?'[4] Did I not pay my brother *his* wages, the thing he had merited from me?

O sumptuous Merchant-Prince, illustrious game-preserving Duke, is there no way of 'killing' thy brother but Cain's rude way! 'A good man by the very look of him, by his very presence with us as a fellow wayfarer in this Life-pilgrimage, *promises* so much': woe to him if he forget all such promises, if he never know that they are given! To a deadened soul, seared with the brute Idolatry of Sense, to whom going to Hell is equivalent to not making money, all 'promises,' and moral duties, that cannot be pleaded for in Courts of Requests,[5] address themselves in vain. Money he can be ordered to pay, but nothing more. I have not heard in all Past History, and expect not to hear in all Future History, of any Society anywhere under God's Heaven supporting itself on such Philosophy. The Universe is not made so; it is made otherwise than so. The man or nation of men that thinks it is made so, marches forward nothing doubting, step after step; but marches — whither we know! In these last two centuries of Atheistic Government (near two centuries now, since the blessed restoration of his Sacred Majesty, and Defender of the Faith,[6] Charles Second), I reckon that we have pretty well exhausted what of 'firm earth' there was for us to march on; — and are now, very ominously, shuddering, reeling, and let us hope trying to recoil, on the cliff's edge! —

For out of this that we call Atheism come so many other *isms* and falsities, each falsity with its misery at its heels! — A SOUL is not like wind (*spiritus*, or breath) contained within a capsule; the ALMIGHTY MAKER is not like a Clockmaker that once, in old immemorial ages, having *made* his Horologe of a Universe, sits ever since and sees it go![7] Not at all. Hence comes Atheism; come, as we say, many other *isms*; and as the sum of all, comes Valetism, the *reverse* of Heroism; sad root of all woes whatsoever. For indeed, as no man ever saw the above-said wind-element enclosed within its capsule, and finds it at bottom more deniable than conceivable; so too he finds, in spite of Bridgewater Bequests,[8] your Clockmaker Almighty an entirely questionable affair, a deniable affair; — and accordingly denies it, and along with it so much else. Alas, one knows not what

4. See *Genesis*, iv,9.

5. Small local debt-courts, now mostly fallen into disuse in England.

6. This title was first conferred (1521) by Pope Leo X on Henry VIII of England for his tract, 'Assertion of the Seven Sacraments,' against Luther, and is still retained by English sovereigns.

7. Allusion to the deistic conception of God, vigorous in the 18th century: God has made the universe on a plan partly discernible to man, and has now withdrawn from his work and watches it go.

8. The Rev. Francis Henry Egerton, 8th Earl of Bridgewater (1756–1829) left £8,000 for the best work on 'The Goodness of God as manifested in the Creation,' which was divided among the eight authors of the 'Bridgewater Treatises.'

and how much else! For the faith in an Invisible, Unnameable, Godlike, present everywhere in all that we see and work and suffer, is the essence of all faith whatsoever; and that once denied, or still worse, asserted with lips only, and out of bound prayerbooks only, what other thing remains believable? That Cant well-ordered is marketable Cant; that Heroism means gas-lighted Histrionism;[9] that seen with 'clear eyes' (as they call Valet-eyes), no man is a Hero, or ever was a Hero, but all men are Valets and Varlets.[10] The accursed practical quintessence of all sorts of Unbelief! For if there be now no Hero, and the Histrio himself begin to be seen into, what hope is there for the seed of Adam here below? We are the doomed everlasting prey of the Quack; who, now in this guise, now in that, is to filch us, to pluck and eat us, by such modes as are convenient for him. For the modes and guises I care little. The Quack once inevitable, let him come swiftly, let him pluck and eat me; — swiftly, that I may at least have done with him; for in his Quack-world I can have no wish to linger. Though he slay me, yet will I *not* trust in him.[11] Though he conquer nations, and have all the Flunkeys of the Universe shouting at his heels, yet will I know well that *he* is an Inanity; that for him and his there is no continuance appointed, save only in Gehenna and the Pool.[12] Alas, the Atheist world, from its utmost summits of Heaven and Westminster Hall, downwards through poor seven-feet Hats and 'Unveracities fallen hungry,' down to the lowest cellars and neglected hunger-dens of it, is very wretched.

One of Dr. Alison's Scotch facts struck us much.[13] A poor Irish Widow, her husband having died in one of the Lanes of Edinburgh, went forth with her three children, bare of all resource, to solicit help from the Charitable Establishments of that City. At this Charitable Establishment and then at that she was refused; referred from one to the other, helped by none; — till she had exhausted them all; till her strength and heart failed her: she sank down in typhus-fever; died, and infected her Lane with fever, so that 'seventeen other persons' died of fever there in consequence. The humane Physician asks thereupon, as with a heart too full for speaking, Would it not have been *economy* to help this poor Widow? She took typhus-fever, and killed seventeen of you! — Very curious. The forlorn Irish Widow applies to her fellow-creatures, as if saying, 'Behold I am sinking, bare of help: ye must help me! I am your sister, bone of your bone; one God made us: ye must help me!' They answer, 'No; impossible; thou art no sister of ours.' But she proves her sisterhood; her typhus-fever kills *them*: they actually were her brothers, though denying it! Had human creature ever to go lower for a proof?

For, as indeed was very natural in such case, all government of the Poor by the Rich has long ago been given over to Supply-and-demand, Laissez-faire[14] and such like, and universally declared to be 'impossible.' 'You are no sister of ours; what shadow of proof is there? Here are our parchments, our padlocks, proving in-

9. Play-acting.

10. Both *valet* and *varlet* come from Old French *vallet*, *varlet*, *vaslet*, and at one time meant the same thing: manservant. *Varlet* now means, generally, a *scoundrel*. Carlyle is saying, of course, that all men, except Heroes, are either fools or knaves.

11. *Cf. Job*, xiii,15.

12. *i.e.* in Hell.

13. Observations on the Management of the Poor in Scotland: By William Pulteney Alison, M.D. (Edinburgh, 1840). [Carlyle's note.]

14. Watchwords of the Utilitarians and Political Economists of the day. *Laissez-faire*: a phrase used in economics, especially by the physiocrats of the 18th century, deprecating government interference intended to foster or regulate labor, etc. In Carlyle's time, it meant also that government should not interrupt the play of economic law in order to protect the working class.

disputably our money-safes to be *ours*, and you to have no business with them. Depart! It is impossible! '—Nay, what wouldst thou thyself have us do? cry indignant readers. Nothing, my friends,—till you have got a soul for yourselves again. Till then all things are 'impossible.' Till then I cannot even bid you buy, as the old Spartans would have done, two-pence worth of powder and lead, and compendiously shoot to death this poor Irish Widow: [15] even that is 'impossible' for you. Nothing is left but that she prove her sisterhood by dying, and infecting you with typhus. Seventeen of you lying dead will not deny such proof that she *was* flesh of your flesh; and perhaps some of the living may lay it to heart.

'Impossible': of a certain two-legged animal with feathers it is said, if you draw a distinct chalk-circle round him, he sits imprisoned, as if girt with the iron ring of Fate; and will die there, though within sight of victuals,—or sit in sick misery there, and be fatted to death. The name of this poor two-legged animal is—Goose; and they make of him, when well fattened, *Pâté de foie gras*, much prized by some!

Chapter IV

Happy

All work, even cotton-spinning, is noble; work is alone noble: be that here said and asserted once more. And in like manner, too, all dignity is painful; a life of ease is not for any man, nor for any god. The life of all gods figures itself to us as a Sublime Sadness,—earnestness of Infinite Battle against Infinite Labour. Our highest religion is named the 'Worship of Sorrow.' [1]

For the son of man there is no noble crown, well worn, or even ill worn, but is a crown of thorns!—These things, in spoken words, or still better, in felt instincts alive in every heart, were once well known.

Does not the whole wretchedness, the whole *Atheism* as I call it, of man's ways, in these generations, shadow itself for us in that unspeakable Life-philosophy of his: The pretension to be what he calls 'happy'? Every pitifullest whipster that walks within a skin has his head filled with the notion that he is, shall be, or by all human and divine laws ought to be, 'happy.' His wishes, the pitifullest whipster's, are to be fulfilled for him; his days, the pitifullest whipster's, are to flow on in ever-gentle current of enjoyment, impossible even for the gods. The prophets preach to us, Thou shalt be happy; thou shalt love pleasant things, and find them. The people clamour, Why have we not found pleasant things?

We construct our theory of Human Duties, not on any Greatest-Nobleness Principle, never so mistaken; no, but on a Greatest-Happiness Principle. 'The word *Soul* with us, as in some Slavonic dialects, seems to be synonymous with *Stomach*.' [2] We plead and speak, in our Parliaments and elswhere, not as from the Soul, but from the Stomach;—wherefore, indeed, our pleadings are so slow to profit. We plead not for God's Justice; we are not ashamed to stand clamouring and pleading for our own 'interests,' our own rents and trade-profits; we say, They are the 'interests' of so many; there is such an intense desire in us for them! We demand Free-Trade, with much just vociferation and benevolence, That the poorer classes, who are terribly ill-off at present, may have cheaper New-Orleans bacon. Men ask on Free-trade platforms, How can the indomitable spirit of Englishmen be kept up without plenty of bacon? We shall become a ruined Nation!—Surely, my

15. Allusion to the Spartan method of killing the Helots (slaves) when they became too numerous, since they could be neither freed nor sold. See Plutarch's *Lives*, 'Lycurgus.'

1. A phrase from Goethe's *Wilhelm Meister*. *Cf. Sartor*, 'The Everlasting Yea.'

2. See *Sartor*, 'Pedagogy,' penultimate paragraph.

friends, plenty of bacon is good and indispensable: but, I doubt, you will never get even bacon by aiming only at that. You are men, not animals of prey, well-used or ill-used! Your Greatest-Happiness Principle [3] seems to me fast becoming a rather unhappy one. — What if we should cease babbling about 'happiness,' and leave *it* resting on its own basis, as it used to do!

A gifted Byron rises in his wrath; and feeling too surely that he for his part is not 'happy,' declares the same in very violent language, as a piece of news that may be interesting. It evidently has surprised him much. One dislikes to see a man and poet reduced to proclaim on the streets such tidings: but on the whole, as matters go, that is not the most dislikable. Byron speaks the *truth* in this matter. Byron's large audience indicates how true it is felt to be.

'Happy,' my brother? First of all, what difference is it whether thou art happy or not! To-day becomes Yesterday so fast, all To-morrows become Yesterdays; and then there is no question whatever of the 'happiness,' but quite another question. Nay, thou hast such a sacred pity left at least for thyself, thy very pains, once gone over into Yesterday, become joys to thee. Besides, thou knowest not what heavenly blessedness and indispensable sanative virtue was in them; thou shalt only know it after many days, when thou art wiser! — A benevolent old Surgeon sat once in our company, with a Patient fallen sick by gormandizing, whom he had just, too briefly in the Patient's judgement, been examining. The foolish Patient still at intervals continued to break in on our discourse, which rather promised to take a philosophic turn: 'But I have lost my appetite,' said he, objurgatively, with a tone of irritated pathos; 'I have no appetite; I can't eat!' — 'My dear fellow,' answered the Doctor in mildest tone, 'it isn't of the slightest consequence'; — and continued his philosophical discoursings with us!

Or does the reader not know the history of that Scottish iron Misanthrope? The inmates of some town-mansion, in those Northern parts, were thrown into the fearfullest alarm by indubitable symptoms of a ghost inhabiting the next house, or perhaps even the partition-wall! Ever at a certain hour, with preternatural gnarring, growling and screeching, which attended as running bass, there began, in a horrid, semi-articulate, unearthly voice, this song: 'Once I was hap-hap-happy, but now I'm *mees*-erable! Clack-clack-clack, gnarr-r-r, whuz-z: Once I was hap-hap-happy, but now I'm *mees*-erable!' — Rest, rest, perturbed spirit; [4] — or indeed, as the good old Doctor said: My dear fellow, it isn't of the slightest consequence! But no; the perturbed spirit could not rest; and to the neighbours, fretted, affrighted, or at least insufferably bored by him, it *was* of such consequence that they had to go and examine in his haunted chamber. In his haunted chamber, they find that the perturbed spirit is an unfortunate — Imitator of Byron? No, is an unfortunate rusty Meat-jack, gnarring and creaking with rust and work; and this, in Scottish dialect, is *its* Byronian musical Life-philosophy, sung according to ability!

Truly, I think the man who goes about pothering and uproaring for his 'happiness,' — pothering, and were it ballot-boxing, poem-making, or in what way soever fussing and exerting himself, — he is not the man that will help us to 'get our knaves and dastards arrested'! No; he rather is on the way to increase the number, — by at least one unit and his tail! Observe, too, that this is all a modern affair; belongs not to the old heroic times, but to these dastard new times. 'Happiness

3. Carlylese for the ethical and social objective of the Utilitarians: the greatest happiness of the greatest number.

4. See Hamlet's words to his father's ghost. *Hamlet*, I,v,182.

our being's end and aim,'[5] all that very paltry speculation, is at bottom, if we will count well, not yet two centuries old in the world.

The only happiness a brave man ever troubled himself with asking much about was, happiness enough to get his work done. Not 'I can't eat!' but 'I can't work!' that was the burden of all wise complaining among men. It is, after all, the one unhappiness of a man. That he cannot work; that he cannot get his destiny as a man fulfilled. Behold, the day is passing swiftly over, our life is passing swiftly over; and the night cometh, wherein no man can work. The night once come, our happiness, our unhappiness, — it is all abolished; vanished, clean gone; a thing that has been: 'not of the slightest consequence' whether we were happy as eupeptic Curtis,[6] as the fattest pig of Epicurus, or unhappy as Job with potsherds, as musical Byron with Giaours and sensibilities of the heart; as the unmusical Meat-jack with hard labour and rust! But our work, — behold that is not abolished, that has not vanished: our work, behold, it remains, or the want of it remains; — for endless Times and Eternities, remains; and that is now the sole question with us for evermore! Brief brawling Day, with its noisy phantoms, its poor paper-crowns tinsel-gilt, is gone; and divine everlasting Night, with her star-diadems, with her silences and her veracities, is come! What hast thou done, and how? Happiness, unhappiness: all that was but the *wages* thou hadst; thou hast spent all that, in sustaining thyself hitherward; not a coin of it remains with thee, it is all spent, eaten: and now thy work, where is thy work? Swift, out with it, let us see thy work!

Of a truth, if man were not a poor hungry dastard, and even much of a blockhead withal, he would cease criticizing his victuals to such extent; and criticize himself rather, what he does with his victuals!

5. Pope, *Essay on Man*, iv,1.
6. Sir William Curtis (1752–1829), politician and banker, notorious for his epicureanism; a favorite of George IV.

Chapter V

The English

And yet, with all thy theoretic platitudes, what a depth of practical sense in thee, great England! A depth of sense, of justice, and courage; in which, under all emergencies and world-bewilderments, and under this most complex of emergencies we now live in, there is still hope, there is still assurance!

The English are a dumb people. They can do great acts, but not describe them. Like the old Romans, and some few others, *their* Epic Poem is written on the Earth's surface: England her Mark! It is complained that they have no artists: one Shakespeare indeed; but for Raphael only a Reynolds; for Mozart nothing but a Mr. Bishop:[1] not a picture, not a song. And yet they did produce one Shakespeare: consider how the element of Shakespearean melody does lie imprisoned in their nature; reduced to unfold itself in mere Cotton-mills, Constitutional Governments, and such like; — all the more interesting when it does become visible, as even in such unexpected shapes it succeeds in doing! Goethe spoke of the Horse, how impressive, almost affecting it was that an animal of such qualities should stand obstructed so; its speech nothing but an inarticulate neighing, its handiness mere *hoof*iness, the fingers all constricted, tied together, the finger-nails coagulated into a mere hoof, shod with iron. The more significant, thinks he, are those eye-lashings of the generous noble quadruped; those prane-

1. Sir Henry Rowley Bishop (1786–1855), composer and director at Covent Garden, produced operatic music for Scott's *Lady of the Lake* (1811), and for several of Shakespeare's comedies and tragedies; he was musical director at Vauxhall Gardens, and professor of music at Edinburgh, later at Oxford. His fame now rests chiefly on his glees.

ings, curvings of the neck clothed with thunder.

A Dog of Knowledge has free utterance; but the Warhorse is almost mute, very far from free! It is even so. Truly, your freest utterances are not by any means always the best: they are the worst rather; the feeblest, trivialest; their meaning prompt, but small, ephemeral. Commend me to the silent English, to the silent Romans. Nay, the silent Russians too I believe to be worth something: are they not even now drilling, under much obloquy, an immense semi-barbarous half-world from Finland to Kamtschatka, into rule, subordination, civilization, — really in an old Roman fashion; speaking no word about it; quietly hearing all manner of vituperative Able Editors speak! While your ever-talking, ever-gesticulating French, for example, what are they at this moment drilling? — Nay, of all animals, the freest of utterance, I should judge, is the genus *Simia*: go into the Indian woods, say all Travellers, and look what a brisk, adroit, unresting Ape-population it is!

The spoken Word, the written Poem, is said to be an epitome of the man: how much more the done Work. Whatsoever of morality and of intelligence; what of patience, perseverance, faithfulness, or method, insight, ingenuity, energy: in a word, whatsoever of Strength the man had in him will lie written in the Work he does. To work: why, it is to try himself against Nature, and her everlasting unerring Laws; these will tell a true verdict as to the man. So much of virtue and of faculty did *we* find in him; so much and no more! He had such capacity of harmonizing himself with *me* and my unalterable ever-veracious Laws; of co-operating and working as *I* bade him; — and has prospered, and has not prospered, as you see! — Working as great Nature bade him: does not that mean virtue of a kind; nay, of all kinds? Cotton can be spun and sold, Lancashire operatives can be got to spin it, and at length one has the woven webs and sells them, by following Nature's regulations in that matter: by not following Nature's regulations, you have them not. You have them not; — there is no Cotton-web to sell: Nature finds a bill against you; your 'Strength' is not Strength, but Futility! Let faculty be honoured, so far as it is faculty. A man that can succeed in working is to me always a man.

How one loves to see the burly figure of him, this thick-skinned, seemingly opaque, perhaps sulky, almost stupid Man of Practice, pitted against some light adroit Man of Theory, all equipped with clear logic, and able anywhere to give you Why for Wherefore! The adroit Man of Theory, so light of movement, clear of utterance, with his bow full-bent and quiver full of arrow-arguments, — surely he will strike down the game, transfix everywhere the heart of the matter; triumph everywhere, as he proves that he shall and must do? To your astonishment, it turns out oftenest No. The cloudy-browed, thick-soled, opaque Practicality, with no logic utterance, in silence mainly, with here and there a low grunt or growl, has in him what transcends all logic-utterance: a Congruity with the Unuttered. The Speakable, which lies atop, as a superficial film, or outer skin, is his or is not his: but the Doable, which reaches down to the World's centre, you find him there!

The rugged Brindley[2] has little to say for himself; the rugged Brindley, when difficulties accumulate on him, retires silent, 'generally to his bed'; retires 'sometimes for three days together to his bed, that he may be in perfect privacy there,' and ascertain in his rough head how the difficulties can be overcome. The ineloquent Brindley, behold he *has* chained seas together; his ships do visibly float over valleys, invisibly through the hearts of mountains; the Mersey and the Thames,

2. James Brindley (1716–72), famous engineer and builder of canals, constructed over 360 miles of canals in Great Britain.

the Humber and the Severn have shaken hands: Nature most audibly answers, Yea! The man of Theory twangs his full-bent bow: Nature's Fact ought to fall stricken, but does not: his logic-arrow glances from it as from a scaly dragon, and the obstinate Fact keeps walking its way. How singular! At bottom, you will have to grapple closer with the dragon; take it home to you, by real faculty, not by seeming faculty; try whether you are stronger or it is stronger. Close with it, wrestle it: sheer obstinate toughness of muscle; but much more, what we call toughness of heart, which will mean persistence hopeful and even desperate, unsubduable patience, composed candid openness, clearness of mind: all this shall be 'strength' in wrestling your dragon; the whole man's real strength is in this work, we shall get the measure of him here.

Of all the Nations in the world at present the English are the stupidest in speech, the wisest in action. As good as a 'dumb' Nation, I say, who cannot speak, and have never yet spoken, — spite of the Shakespeares and Miltons who show us what possibilities there are! — O Mr. Bull, I look in that surly face of thine with a mixture of pity and laughter, yet also with wonder and veneration. Thou complainest not, my illustrious friend; and yet I believe the heart of thee is full of sorrow, of unspoken sadness, seriousness, — profound melancholy (as some have said) the basis of thy being. Unconsciously, for thou speakest of nothing, this great Universe is great to thee. Not by levity of floating, but by stubborn force of swimming, shalt thou make thy way. The Fates sing of thee that thou shalt many times be thought an ass and a dull ox, and shalt with a godlike indifference believe it. My friend, — and it is all untrue, nothing ever falser in point of fact! Thou art of those great ones whose greatness the small passer-by does not discern. Thy very stupidity is wiser than their wisdom. A grand *vis inertiae* [3] is in thee; how many grand qualities unknown to small men! Nature alone knows thee, acknowledges the bulk and strength of thee: thy Epic, unsung in words, is written in huge characters on the face of this Planet, — seamoles, cotton-trades, railways, fleets and cities, Indian Empires, Americas, New-Hollands; legible throughout the Solar System!

But the dumb Russians too, as I said, they, drilling all wild Asia and wild Europe into military rank and file, a terrible yet hitherto a prospering enterprise, are still dumber. The old Romans also could not *speak*, for many centuries: — not till the world was theirs; and so many speaking Greekdoms, their logic-arrows all spent, had been absorbed and abolished. The logic-arrows, how they glanced futile from obdurate thick-skinned Facts; Facts to be wrestled down only by the real vigour of Roman thews! — As for me, I honour, in these loud-babbling days, all the Silent rather. A grand Silence that of Romans; — nay the grandest of all, is it not that of the gods! Even Triviality, Imbecility, that can sit silent, how respectable is it in comparison! The 'talent of silence' is our fundamental one. Great honour to him whose Epic is a melodious hexameter Iliad; not a jingling Sham-Iliad, nothing true in it but the hexameters and forms merely. But still greater honour, if his Epic be a mighty Empire slowly built together, a mighty Series of Heroic Deeds, — a mighty Conquest over Chaos; *which* Epic the 'Eternal Melodies' have, and must have, informed and dwelt in, as *it* sung itself! There is no mistaking that latter Epic. Deeds are greater than Words. Deeds have such a life, mute but undeniable, and grow as living trees and fruit-trees do; they people the vacuity of Time, and make it green and worthy. Why should the oak prove logically that it ought to grow, and will grow? Plant it, try it; what gifts of diligent judicious assimilation and secretion it has, of progress and resistance, of *force* to grow, will then declare themselves. My much-

3. 'force of inertia.'

honoured, illustrious, extremely inarticulate Mr. Bull! —

Ask Bull his spoken opinion of any matter, — oftentimes the force of dullness can no farther go. You stand silent, incredulous, as over a platitude that borders on the Infinite. The man's Churchisms, Dissenterisms, Puseyisms, Benthamisms, College Philosophies, Fashionable Literatures,[4] are unexampled in this world. Fate's prophecy is fulfilled; you call the man an ox and an ass. But set him once to work, — respectable man! His spoken sense is next to nothing, nine-tenths of it palpable *non*-sense: but his unspoken sense, his inner silent feeling of what is true, what does agree with fact, what is doable and what is not doable, — this seeks its fellow in the world. A terrible worker; irresistible against marshes, mountains, impediments, disorder, incivilization; everywhere vanquishing disorder, leaving it behind him as method and order. He 'retires to his bed three days,' and considers!

Nay withal, stupid as he is, our dear John, — ever, after infinite tumblings, and spoken platitudes innumerable from barrel-heads and parliament-benches, he does settle down somewhere about the just conclusion; you are certain that his jumblings and tumblings will end, after years or centuries, in the stable equilibrium. Stable equilibrium, I say; centre-of-gravity lowest; — not the unstable, with centre-of-gravity highest, as I have known it done by quicker people! For indeed, do but jumble and tumble sufficiently, you avoid that worse fault, of settling with your centre-of-gravity highest; your centre-of-gravity is certain to come lowest, and to stay there. If slowness, what we in our impatience call 'stupidity,' be the price of stable equilibrium over unstable, shall we grudge a little slowness? Not the least admirable quality of Bull is, after all, that of remaining insensible to logic; holding out for considerable periods, ten years or more, as in this of the Corn-Laws, after all arguments and shadow of arguments have faded away from him, till the very urchins on the street titter at the arguments he brings. Logic, — Λογική, the 'Art of Speech,' — does indeed speak so and so; clear enough: nevertheless Bull still shakes his head; will see whether nothing else *illogical*, not yet 'spoken,' not yet able to be 'spoken,' do not lie in the business, as there so often does! — My firm belief is, that, finding himself now enchanted, hand-shackled, foot-shackled, in Poor-Law Bastilles[5] and elsewhere, he will retire three days to his bed, and *arrive* at a conclusion or two! His three-years 'total stagnation of trade,' alas, is not that a painful enough 'lying in bed to consider himself'? Poor Bull!

Bull is a born Conservative; for this too I inexpressibly honour him. All great Peoples are conservative; slow to believe in novelties; patient of much error in actualities; deeply and for ever certain of the greatness that is in LAW, in Custom once solemnly established, and now long recognized as just and final. — True, O Radical Reformer, there is no Custom that can, properly speaking, be final; none. And yet thou seest *Customs* which, in all civilized countries, are accounted final; nay, under the Old-Roman name of *Mores*, are accounted *Morality*, Virtue, Laws of God Himself. Such, I assure thee, not a few of them are; such almost all of them once were. And greatly do I respect the solid character, — a blockhead, thou wilt say; yes, but a well-conditioned blockhead, and the best-conditioned, — who esteems all

4. Allusion, respectively, to current debate and discussion of the claims of the Established Church; of the Dissenters (Methodists, Congregationalists, etc.); of the Oxford Movement (1833–45), led by John Henry Newman, John Keble, and Edward B. Pusey, toward greater conservatism in religious dogma and observance; of Utilitarianism, led by Jeremy Bentham, James and John Stuart Mill, and others; and of academic metaphysics, and popular literature, represented in the rapidly growing English novel.

5. *i.e.* work-houses, where the able-bodied poor were maintained at public expense, and compelled to labor.

'Customs once solemnly acknowledged' to be ultimate, divine, and the rule of a man to walk by, nothing doubting, not inquiring farther. What a time of it had we, were all men's life and trade still, in all parts of it, a problem, a hypothetic seeking, to be settled by painful Logics and Baconian Inductions![6] The Clerk in Eastcheap[7] cannot spend the day in verifying his Ready-Reckoner;[8] he must take it as verified, true and indisputable; or his Book-keeping by Double Entry will stand still. 'Where is your Posted Ledger?' asks the Master at night. — 'Sir,' answers the other, 'I was verifying my Ready-Reckoner, and find some errors. The Ledger is — !' — Fancy such a thing!

True, all turns on your Ready-Reckoner being moderately correct, — being *not* insupportably incorrect! A Ready-Reckoner which has led to distinct entries in your Ledger such as these: '*Creditor* an English People by fifteen hundred years of good Labour; and *Debtor* to lodging in enchanted Poor-Law Bastilles: *Creditor* by conquering the largest Empire the Sun ever saw; and *Debtor* to Donothingism and "Impossible" written on all departments of the government thereof: *Creditor* by mountains of gold ingots earned; and *Debtor* to No Bread purchasable by them': — *such* Ready-Reckoner, methinks, is beginning to be suspect; nay is ceasing, and has ceased, to be suspect! Such Ready-Reckoner is a Solecism in Eastcheap; and must, whatever be the press of business, and will and shall be rectified a little. Business can go on no longer with *it*. The most Conservative English People, thickest-skinned, most patient of Peoples, is driven alike by its Logic and its Unlogic, by things 'spoken,' and by things not yet spoken or very speakable, but only felt and very unendurable, to be wholly a Reforming People. Their Life as it is has ceased to be longer possible for them.

Urge not this noble silent People: rouse not the Berserkir-rage[9] that lies in them! Do you know their Cromwells, Hampdens, their Pyms and Bradshaws?[10] Men very peaceable, but men that can be made very terrible! Men who, like their old Teutsch Fathers in Agrippa's days,[11] 'have a soul that despises death'; to whom 'death,' compared with falsehoods and injustices, is light; — 'in whom there is a rage unconquerable by the immortal gods!' Before this, the English People have taken very preternatural-looking Spectres by the beard; saying virtually: 'And if thou *wert* "preternatural"[12] Thou with thy "divine-rights" grown diabolic wrongs? Thou, — not even "natural"; decapitable; totally extinguishable!' — Yes, just so godlike as this People's patience was, even so godlike will and must its impatience be. Away, ye scandalous Practical Solecisms, children actually of the Prince of Darkness;[12] ye have near broken our hearts; we can and will endure you no

6. *Baconian Inductions*: Sir Francis Bacon (1561–1626), in his *Novum Organum* (1620) set forth the methods by which he thought knowledge could be universalized, through experience as the source, and through induction as the method (inferring that what has been established or observed in respect to a part, individual, or species, may, on the ground of analogy, be affirmed or received of the whole to which it belongs).
7. In the center of old London (the City or financial district); Eastcheap is a street continuing Cannon Street, running south-west of St. Paul's.
8. A book of mathematical tables.
9. In Norse folklore, a Berserk or Berserker, was one of a class of warriors who in battle were seized with a frenzy, howled, bit their shields, foamed at the mouth, and were believed invulnerable.
10. See Lecture on Hero as King, note 17. John Hampden (1594–1643), Puritan statesman, supported Pym in the Long Parliament, fought at Edgehill, was wounded in a skirmish at Oxford, died from wounds received at Chalgrove Field. — John Pym (1584–1643), parliamentary statesman during the Puritan Revolution. — John Bradshaw (1602–59) was one of the regicides, pronouncing the sentence executing Charles I.
11. See Tacitus's *De Moribus et Populis Germaniae*. The word *Teutsch* means 'German.'
12. The Devil. *Cf. King Lear*, III.iv.147 (Oxf. Stand.Ed.).

longer. Begone, we say; depart, while the play is good! By the Most High God, whose sons and born missionaries true men are, ye shall not continue here! You and we have become incompatible; can inhabit one house no longer. Either you must go, or we. Are ye ambitious to try *which* it shall be?

O my Conservative friends, who still specially name and struggle to approve yourselves 'Conservative,' would to Heaven I could persuade you of this world-old fact, than which Fate is not surer, That Truth and Justice alone are *capable* of being 'conserved' and preserved! The thing which is unjust, which is *not* according to God's Law, will you, in a God's Universe, try to conserve that? It is so old, say you? Yes, and the hotter haste ought *you*, of all others, to be in to let it grow no older! If but the faintest whisper in your hearts intimate to you that it is not fair, — hasten, for the sake of Conservatism itself, to probe it rigorously, to cast it forth at once and for ever if guilty. How will or can you preserve *it*, the thing that is not fair? 'Impossibility' a thousandfold is marked on that. And ye call yourselves Conservatives, Aristocracies: — ought not honour and nobleness of mind, if they had departed from all the Earth elsewhere, to find their last refuge with you? Ye unfortunate!

The bough that is dead shall be cut away, for the sake of the tree itself. Old? Yes, it is too old. Many a weary winter has it swung and creaked there, and gnawed and fretted, with its dead wood, the organic substance and still living fibre of this good tree; many a long summer has its ugly naked brown defaced the fair green umbrage; every day it has done mischief, and that only: off with it, for the tree's sake, if for nothing more; let the Conservatism that would preserve cut *it* away. Did no wood-forester apprise you that a dead bough with its dead root left sticking there is extraneous, poisonous; is as a dead iron spike, some horrid rusty ploughshare driven into the living substance; — nay is far worse; for in every windstorm ('commercial crisis' or the like), it frets and creaks, jolts itself to and fro, and cannot lie quiet as your dead iron spike would.

If I were the Conservative Party of England (which is another bold figure of speech), I would not for a hundred thousand pounds an hour allow those Corn-Laws to continue! Potosi and Golconda put together would not purchase my assent to them.[13] Do you count what treasuries of bitter indignation they are laying up for you in every just English heart? Do you know what questions, not as to Corn-prices and Sliding-scales alone, they are *forcing* every reflective Englishman to ask himself? Questions insoluble, or hitherto unsolved; deeper than any of our Logic-plummets hitherto will sound: questions deep enough, — which it were better that we did not name even in thought! You are forcing us to think of them, to begin uttering them. The utterance of them is begun; and where will it be ended, think you? When two millions of one's brother-men sit in Workhouses, and five millions, as is insolently said, 'rejoice in potatoes,' there are various things that must be begun, let them end where they can.

Chapter XI

Labour

For there is a perennial nobleness, and even sacredness, in Work. Were he never so benighted, forgetful of his high calling, there is always hope in a man that actually and earnestly works: in Idleness alone is there perpetual despair. Work, never so Mammonish, mean, *is* in communication with Nature; the real desire to get Work done will itself lead one more and more to truth, to Nature's appointments and regulations which are truth.

13. *Potosi*: a department of Bolivia, rich in minerals, especially in silver and copper. — *Golconda*: a fortress and ruined city of India, where diamonds, found in other parts of the country, were cut.

The latest Gospel in this world is, Know thy work and do it. 'Know thyself:'[1] long enough has that poor 'self' of thine tormented thee; thou wilt never get to 'know' it, I believe! Think it not thy business, this of knowing thyself; thou art an unknowable individual: know what thou canst work at; and work at it, like a Hercules! That will be thy better plan.

It has been written, 'an endless significance lies in Work'; a man perfects himself by working. Foul jungles are cleared away, fair seed-fields rise instead, and stately cities; and withal the man himself first ceases to be a jungle and foul unwholesome desert thereby. Consider how, even in the meanest sorts of Labour, the whole soul of a man is composed into a kind of real harmony, the instant he sets himself to work! Doubt, Desire, Sorrow, Remorse, Indignation, Despair itself, all these like helldogs lie beleaguering the soul of the poor dayworker, as of every man: but he bends himself with free valour against his task, and all these are stilled, all these shrink murmuring far off into their caves. The man is now a man. The blessed glow of Labour in him, is it not as purifying fire, wherein all poison is burnt up, and of sour smoke itself there is made bright blessed flame!

Destiny, on the whole, has no other way of cultivating us. A formless Chaos, once set it *revolving*, grows round and ever rounder; ranges itself, by mere force of gravity, into strata, spherical courses; is no longer a Chaos, but a round compacted World. What would become of the Earth, did she cease to revolve? In the poor old Earth, so long as she revolves, all inequalities, irregularities disperse themselves; all irregularities are incessantly becoming regular. Hast thou looked on the Potter's wheel,[2] — one of the venerablest objects; old as the Prophet Ezekiel and far older? Rude lumps of clay, how they spin themselves up, by mere quick whirling, into beautiful circular dishes. And fancy the most assiduous Potter, but without his wheel; reduced to make dishes, or rather amorphous botches, by mere kneading and baking! Even such a Potter were Destiny, with a human soul that would rest and lie at ease, that would not work and spin! Of an idle unrevolving man the kindest Destiny, like the most assiduous Potter without wheel, can bake and knead nothing other than a botch; let her spend on him what expensive colouring, what gilding and enamelling she will, he is but a botch. Not a dish; no, a bulging, kneaded, crooked, shambling, squint-cornered, amorphous botch, — a mere enamelled vessel of dishonour! Let the idle think of this.

Blessed is he who has found his work; let him ask no other blessedness. He has a work, a life-purpose; he has found it, and will follow it! How, as a free-flowing channel, dug and torn by noble force through the sour mud-swamp of one's existence, like an ever-deepening river there, it runs and flows; — draining off the sour festering water, gradually from the root of the remotest grass-blade; making, instead of pestilential swamp, a green fruitful meadow with its clear-flowing stream. How blessed for the meadow itself, let the stream and *its* value be great or small! Labour is Life: from the inmost heart of the Worker rises his god-given Force, the sacred celestial Life-essence breathed into him by Almighty God; from his inmost heart awakens him to all nobleness, — to all knowledge, 'self-knowledge' and much else, so soon as Work fitly begins. Knowledge? The knowledge that will hold good in working, cleave thou to that; for Nature herself accredits that, says Yea to that. Properly thou hast no other knowledge but what thou hast got by working: the rest is yet all a hypothesis of knowledge; a thing to be argued of in schools, a thing floating in the clouds, in endless logic-vortices, till

1. The inscription over the portico of the temple at Delphi; attributed to Solon, Socrates, Thales, etc. See *Sartor*, 'The Everlasting No.'
2. See *Psalms*, ii,9; *Lamentations*, iv,2; etc.

we try it and fix it. 'Doubt, of whatever kind, can be ended by Action alone.'

And again, hast thou valued Patience, Courage, Perseverance, Openness to light; readiness to own thyself mistaken, to do better next time? All these, all virtues, in wrestling with the dim brute Powers of Fact, in ordering of thy fellows in such wrestle, there and elsewhere not at all, thou wilt continually learn. Set down a brave Sir Christopher [3] in the middle of black ruined Stone-heaps, of foolish unarchitectural Bishops, redtape Officials, idle Nell-Gwyn [4] Defenders of the Faith; [5] and see whether he will ever raise a Paul's Cathedral out of all that, yea or no! Rough, rude, contradictory are all things and persons, from the mutinous masons and Irish hodmen, up to the idle Nell-Gwyn Defenders, to blustering redtape Officials, foolish unarchitectural Bishops. All these things and persons are there not for Christopher's sake and his Cathedral's; they are there for their own sake mainly! Christopher will have to conquer and constrain all these, — if he be able. All these are against him. Equitable Nature herself, who carries her mathematics and architectonics not on the face of her, but deep in the hidden heart of her, — Nature herself is but partially for him; will be wholly against him, if he constrain her not! His very money, where is it to come from? The pious munificence of England lies far-scattered, distant, unable to speak, and say, 'I am here'; — must be spoken to before it can speak. Pious munificence, and all help, is so silent, invisible like the gods; impediment, contradictions manifold are so loud and near! O brave Sir Christopher, trust thou in those, notwithstanding, and front all these; understand all these; by valiant patience, noble effort, insight, by man's-strength, vanquish and compel all these, — and, on the whole, strike down victoriously the last topstone of that Paul's Edifice; thy monument for certain centuries, the stamp 'Great Man' impressed very legibly on Portland stone [6] there! —

Yes, all manner of help, and pious response from Men or Nature, is always what we call silent; cannot speak or come to light, till it be seen, till it be spoken to. Every noble work is at first 'impossible.' In very truth, for every noble work the possibilities will lie diffused through Immensity; inarticulate, undiscoverable except to faith. Like Gideon thou shalt spread out thy fleece at the door of thy tent; see whether under the wide arch of Heaven there be any bounteous moisture, or none.[7] Thy heart and life-purpose shall be as a miraculous Gideon's fleece, spread out in silent appeal to Heaven; and from the kind Immensities, what from the poor unkind Localities and town and country Parishes there never could, blessed dew-moisture to suffice thee shall have fallen!

Work is of a religious nature: — work is of a *brave* nature; which it is the aim of all religion to be. All work of man is as the swimmer's: a waste ocean threatens to devour him; if he front it not bravely, it will keep its word. By incessant wise defiance of it, lusty rebuke and buffet of it, behold how it loyally supports him, bears him as its conqueror along. 'It is so,' says Goethe, 'with all things that man undertakes in this world.' [8]

3. Sir Christopher Wren (1632–1723), architect and scientist, surveyor-general to Charles II's works in 1661, rebuilt many of the public buildings and churches in London after the Great Fire of 1666, notably St. Paul's Cathedral.
4. Nell Gwyn (1650–87), actress, and mistress of Charles II.
5. Satirical allusion to such English monarchs as Charles II, who, in spite of their immorality, retained, of course, the title of 'Defender of the Faith,' first conferred upon Henry VIII by Pope Leo X in 1521.
6. From the Isle of Portland, off the coast of Dorsetshire, England, famous for its limestone.
7. 'Behold, I will put a fleece of wool in the floor; and if the dew be on the fleece only, and it be dry upon all the earth beside, then shall I know that thou wilt save Israel by mine hand, as thou hast said.' *Judges*, vi,37.
8. This paragraph paraphrases a passage in Goethe's *Wilhelm Meister*, II,321.

Brave Sea-captain, Norse Sea-king, — Columbus, my hero, royallest Sea-king of all! it is no friendly environment this of thine, in the waste deep waters; around thee mutinous discouraged souls, behind thee disgrace and ruin, before thee the unpenetrated veil of Night. Brother, these wild water-mountains, bounding from their deep bases (ten miles deep, I am told), are not entirely there on thy behalf! Meseems *they* have other work than floating thee forward: — and the huge Winds, that sweep from Ursa Major to the Tropics and Equators, dancing their giant-waltz through the kingdoms of Chaos and Immensity, they care little about filling rightly or filling wrongly the small shoulder-of-mutton sails in this cockle-skiff of thine! Thou are not among articulate-speaking friends, my brother; thou art among immeasurable dumb monsters, tumbling, howling wide as the world here. Secret, far off, invisible to all hearts but thine, there lies a help in them: see how thou wilt get at that. Patiently thou wilt wait till the mad South-wester spend itself, saving thyself by dexterous science of defence, the while: valiantly, with swift decision, wilt thou strike in, when the favouring East, the Possible, springs up. Mutiny of men thou wilt sternly repress; weakness, despondency, thou wilt cheerily encourage: thou wilt swallow down complaint, unreason, weariness, weakness of others and thyself; — how much wilt thou swallow down! There shall be a depth of Silence in thee, deeper than this Sea, which is but ten miles deep: a Silence unsoundable; known to God only. Thou shalt be a Great Man. Yes, my World-Soldier, thou of the World Marine-service, — thou wilt have to be *greater* than this tumultuous unmeasured World here round thee is: thou, in thy strong soul, as with wrestler's arms, shalt embrace it, harness it down; and make it bear thee on, — to new Americas, or whither God wills!

Chapter XII

Reward

'Religion,' I said; for, properly speaking, all true Work is Religion: and whatsoever Religion is not Work may go and dwell among the Brahmins, Antinomians, Spinning Dervishes,[1] or where it will; with me it shall have no harbour. Admirable was that of the old Monks, '*Laborare est Orare*, Work is Worship.'

Older than all preached Gospels was this unpreached, inarticulate, but ineradicable, forever-enduring Gospel: Work, and therein have wellbeing. Man, Son of Earth and of Heaven, lies there not, in the innermost heart of thee, a Spirit of active Method, a Force for Work; — and burns like a painfully smouldering fire, giving thee no rest till thou unfold it, till thou write it down in beneficent Facts around thee! What is immethodic, waste, thou shalt make methodic, regulated, arable; obedient and productive to thee. Whereso ever thou findest Disorder, there is thy eternal enemy; attack him swiftly, subdue him; make Order of him, the subject not of Chaos, but of Intelligence, Divinity and Thee! The thistle that grows in thy path, dig it out, that a blade of useful grass, a drop of nourishing milk, may grow there instead. The waste cotton-shrub, gather its waste white down, spin it, weave it; that, in place of idle litter, there may be folded webs, and the naked skin of man be covered.

But above all, where thou findest Ignorance, Stupidity, Brute-mindedness, — yes, there, with or without Church-tithes and Shovel-hat,[2] with or without Talfourd-

1. *Brahmins*: members of the highest or sacerdotal caste among the Hindus, who teach the Vedas and perform religious ceremonies. — *Antinomians*: those who believe that, under the gospel dispensation, the moral law is of no use or obligation, and that faith alone is necessary to salvation. — *Spinning Dervishes*: members of a Mohammedan ascetic order, engaging in whirling or dancing as a means of discipline.
2. Allusion to the shovel-shaped hat worn by the clergy of the English Church. For Carlyle, a

Mahon Copyrights,[3] or were it with mere dungeons and gibbets and crosses, attack it, I say; smite it wisely, unweariedly, and rest not while thou livest and it lives; but smite, smite, in the name of God! The Highest God, as I understand it, does audibly so command thee; still audibly, if thou have ears to hear. He, even He, with his *un*spoken voice, awfuller than any Sinai thunders or syllabled speech of Whirlwinds; for the SILENCE of deep Eternities, of Worlds from beyond the morning-stars, does it not speak to thee? The unborn Ages; the old Graves, with their long-mouldering dust, the very tears that wetted it now all dry, — do not these speak to thee, what our ear hath not heard? The deep Death-kingdoms, the Stars in their never-resting courses, all Space and all Time, proclaim it to thee in continual silent admonition. Thou too, if ever man should, shalt work while it is called To-day. For the Night cometh, wherein no man can work.[4]

All true Work is sacred; in all true Work, were it but true hand-labour, there is something of divineness. Labour, wide as the Earth, has its summit in Heaven. Sweat of the brow; and up from that to sweat of the brain, sweat of the heart; which includes all Kepler calculations, Newton meditations,[5] all Sciences, all spoken Epics, all acted Heroisms, Martyrdoms, — up to that 'Agony of bloody sweat,'[6] which all men have called divine! O brother, if this is not 'worship,' then I say, the more pity for worship; for this is the noblest thing yet discovered under

symbol of religious conformity, sometimes of hypocrisy.

3. Sir Thomas Noon Talfourd (1795-1854), judge and author; and Philip Henry, 5th Earl Stanhope (1805-75), historian and statesman, were instrumental in the passing of the Copyright Act of 1842.

4. See *Ecclesiastes*, ix,10; *John*, ix,4; *Sartor Resartus*, 'The Everlasting Yea,' last paragraph.

5. Johann Kepler (1571-1630) and Sir Isaac Newton (1642-1727), German and English astronomers, respectively.

6. *Cf. Luke*, xxii,44.

God's sky. Who art thou that complainest of thy life of toil? Complain not. Look up, my wearied brother; see thy fellow Workmen there, in God's Eternity; surviving there, they alone surviving: sacred Band of the Immortals, celestial Bodyguard of the Empire of Mankind. Even in the weak Human Memory they survive so long, as saints, as heroes, as gods; they alone surviving; peopling, they alone, the unmeasured solitudes of Time! To thee Heaven, though severe, is *not* unkind; Heaven is kind, — as a nobler Mother; as that Spartan Mother, saying, while she gave her son his shield, 'With it, my son, or upon it!' Thou too shalt return *home* in honour; to thy far-distant Home, in honour; doubt it not, — if in the battle thou keep thy shield! Thou, in the Eternities and deepest Death-kingdoms, art not an alien; thou everywhere art a denizen! Complain not; the very Spartans did not *complain*.

And who art thou that braggest of thy life of Idleness; complacently showest thy bright gilt equipages; sumptuous cushions; appliances for folding of the hands to mere sleep? Looking up, looking down, around, behind or before, discernest thou, if it be not in Mayfair[7] alone, any *idle* hero, saint, god, or even devil? Not a vestige of one. In the Heavens, in the Earth, in the Waters under the Earth, is none like unto thee. Thou art an original figure in this Creation; a denizen in Mayfair alone, in this extraordinary Century or Half-Century alone! One monster there is in the world: the idle man. What is his 'Religion'? That Nature is a Phantasm, where cunning beggary or thievery may sometimes find good victual. That God is a lie; and that Man and his Life are a lie. — Alas, alas, who of us *is* there that can say, I have worked? The faithfullest of us are unprofitable servants;[8] the faithfullest of us know that best. The faithfullest of us

7. A district north of Piccadilly, London, throughout the 19th century the 'smart' quarter of the city.

8. *Cf. Luke*, xvii,10

may say, with sad and true old Samuel. 'Much of my life has been trifled away!'[9] But he that has, and except 'on public occasions' professes to have, no function but that of going idle in a graceful or graceless manner; and of begetting sons to go idle; and to address Chief Spinners and Diggers, who at least *are* spinning and digging, 'Ye scandalous persons who produce too much' — My Corn-Law friends, on what imaginary still richer Eldorados,[10] and true iron-spikes with law of gravitation, are ye rushing!

As to the Wages of Work there might innumerable things be said; there will and must yet innumerable things be said and spoken, in St. Stephen's and out of St. Stephen's;[11] and gradually not a few things be ascertained and written, on Law-parchment, concerning this very matter: — 'Fair day's-wages for a fair day's-work' is the most unrefusable demand! Money-wages 'to the extent of keeping your worker alive that he may work more'; these, unless you mean to dismiss him straightway out of this world, are indispensable alike to the noblest Worker and to the least noble!

One thing only I will say here, in special reference to the former class, the noble and noblest; but throwing light on all the other classes and their arrangements of this difficult matter: The 'wages' of every noble Work do yet lie in Heaven or else Nowhere. Not in Bank-of-England bills, in Owen's Labour-bank,[12] or any the most improved establishment of banking and money-changing, needest thou, heroic soul, present thy account of earnings. Human banks and labour-banks know thee not; or know thee after generations and centuries have passed away, and thou art clean gone from 'rewarding,' — all manner of bank-drafts, shop-tills, and Downing-street Exchequers lying very invisible, so far from thee![13] Nay, at bottom, dost thou need any reward? Was it thy aim and life-purpose to be filled with good things for thy heroism; to have a life of pomp and ease, and be what men call 'happy,' in this world, or in any other world? I answer for thee deliberately, No. The whole spiritual secret of the new epoch lies in this, that thou canst answer for thyself, with thy whole clearness of head and heart, deliberately, No!

My brother, the brave man has to give his Life away. Give it, I advise thee; — thou dost not expect to *sell* thy Life in an adequate manner? What price, for example, would content thee? The just price of thy LIFE to thee, — why, God's entire Creation to thyself, the whole Universe of Space, the whole Eternity of Time, and what they hold: that is the price which would content thee; that, and if thou wilt be candid, nothing short of that! It is thy all; and for it thou wouldst have all. Thou art an unreasonable mortal; — or rather thou art a poor *infinite* mortal, who, in thy narrow clay-prison here, *seemest* so unreasonable! Thou wilt never sell thy Life, or any part of thy Life, in a satisfactory manner. Give it, like a royal heart; let the price be Nothing: thou *hast* then, in a certain sense, got All for it! The heroic man, — and is not every man, God be thanked, a potential hero? — has to do so, in all times and circumstances. In the most heroic age, as in the most unheroic, he will have to

9. See Boswell's *Johnson* (Oxf. Stand. Ed.), I,322; II,332–33; etc.
10. Lands of Gold.
11. St. Stephen's Chapel, Westminster, until destroyed by fire in 1834, was used by the House of Commons as its place of assembly.
12. Allusion to the 'Equitable Labour Exchange' formed in 1832 by Robert Owen (1771–1858), reformer and Socialist, and his followers; 'Labour Notes' were used as the currency for dealings with the Exchange, since prices were calculated according to the cost of the raw material and the time expended in making the article.
13. Downing Street, Westminster, London, contains not only the official residence of the British prime minister but also that of the chancellor of the exchequer (or of the treasury).

say, as Burns said proudly and humbly of his little Scottish Songs, little dewdrops of Celestial Melody in an age when so much was unmelodious: 'By Heaven, they shall either be invaluable or of no value; I do not need your guineas for them!'[14] It is an element which should, and must, enter deeply into all settlements of wages here below. They never will be 'satisfactory' otherwise; they cannot, O Mammon Gospel, they never can! Money for my little piece of work 'to the extent that will allow me to keep working'; yes, this, — unless you mean that I shall go my ways *before* the work is all taken out of me: but as to 'wages' — ! —

On the whole, we do entirely agree with those old Monks, *Laborare est Orare*. In a thousand senses, from one end of it to the other, true Work *is* Worship. He that works, whatsoever be his work, he bodies forth the form of Things Unseen: a small Poet every Worker is. The idea, were it but of his poor Delf Platter, how much more of his Epic Poem, is as yet 'seen,' half-seen, only by himself; to all others it is a thing unseen, impossible; to Nature herself it is a thing unseen, a thing which never hitherto was; — very 'impossible,' for it is as yet a No-thing! The Unseen Powers had need to watch over such a man; he works in and for the Unseen. Alas, if he look to the Seen Powers only, he may as well quit the business; his No-thing will never rightly issue as a Thing, but as a Deceptivity, a Sham-thing, — which it had better not do!

Thy No-thing of an Intended Poem, O Poet who hast looked merely to reviewers, copyrights, booksellers, popularities, behold it has not yet become a Thing; for the truth is not in it! Though printed, hot-pressed, reviewed, celebrated, sold to the twentieth edition: what is all that? The Thing, in philosophical uncommercial language, is still a No thing, mostly semblance, and deception of the sight; — benign Oblivion incessantly gnawing at it, impatient till Chaos, to which it belongs, do reabsorb it! —

He who takes not counsel of the Unseen and Silent, from him will never come real visibility and speech. Thou must descend to the *Mothers*,[15] to the *Manes*, and Hercules-like long suffer and labour there, wouldst thou emerge with victory into the sunlight. As in battle and the shock of war, — for is not this a battle? — thou too shalt fear no pain or death, shalt love no ease or life; the voice of festive Lubberlands,[16] the noise of greedy Acheron[17] shall alike lie silent under thy victorious feet. Thy work, like Dante's, shall 'make thee lean for many years.'[18] The world and its wages, its criticisms, counsels, helps, impediments, shall be as a waste ocean-flood; the chaos through which thou art to swim and sail. Not the waste waves and their weedy gulf-streams, shalt thou take for guidance: thy star alone, — '*Se tu segui tua stella!*' Thy star alone, now clear-beaming over Chaos, nay now by fits gone out, disastrously eclipsed: this only shalt thou strive to follow. O, it is a business, as I fancy, that of weltering your way through Chaos and the murk of Hell! Green-eyed dragons watching you, three-headed Cerberuses, — not without sympathy of *their*

14. See *Letters of Robert Burns* (ed. J.D.Ferguson, 1931), II,122 (September 16, 1792). Carlyle is not quoting literally.

15. See Goethe's *Faust*, Part II, Sc.v, 'Gloomy gallery' (Everyman's Library), and note on pp. 429–30. The *Mothers* represent for Goethe 'the unfettered Realm of Form . . . the Sphere of the Ideal . . . perhaps the creative powers of the imagination.' Goethe refers to Plutarch's *Life of Marcellus*. — *Manes*: i.e. *the good*, the name given by the Romans to the souls of the departed, who were worshipped as gods. In Hercules' twelfth labor, he struggled with Cerberus, the triple-headed dog that guarded the gates of Hades, and dragged him to the upper world.

16. Lands of Plenty.

17. The river in the lower world (in Greek mythology) round which the shades of departed souls hovered.

18. See Dante's *Paradiso*, xxv, opening lines.

sort![19] *'Eccovi l' uom ch' è stato all' Inferno.'*[20] For in fine, as Poet Dryden says, you do walk hand in hand with sheer Madness, all the way,[21] — who is by no means pleasant company! You look fixedly into Madness, and *her* undiscovered, boundless, bottomless Night-empire; that you may extort new Wisdom out of it, as an Eurydice from Tartarus.[22] The higher the Wisdom, the closer was its neighbourhood and kindred with mere Insanity; literally so; — and thou wilt, with a speechless feeling, observe how highest Wisdom, struggling up into this world, has oftentimes carried such tinctures and adhesions of Insanity still cleaving to it hither!

All Works, each in their degree, are a making of Madness sane; — truly enough a religious operation; which cannot be carried on without religion. You have not work otherwise; you have eye-service, greedy grasping of wages, swift and ever swifter manufacture of semblances to get hold of wages. Instead of better felt-hats to cover your head, you have bigger lath-and-plaster hats set travelling the streets on wheels. Instead of heavenly and earthly Guidance for the souls of men, you have 'Black or White Surplice'[23] Controversies, stuffed hair-and-leather Popes; — terrestrial *Law-wards*, Lords[24] and Law-bringers, 'organizing Labour' in these years, by passing Corn-Laws. With all which, alas, this distracted Earth is now full, nigh to bursting. Semblances most smooth to the touch and eye; most accursed nevertheless to body and soul. Semblances, be they of Sham-woven Cloth or of Dilettante Legislation, which are *not* real wool or substance, but Devil's-dust, accursed of God and man! No man has worked, or can work, except religiously; not even the poor day-labourer, the weaver of your coat, the sewer of your shoes. All men, if they work not as in a Great Taskmaster's eye,[25] will work wrong, work unhappily for themselves and you.

Industrial work, still under bondage to Mammon, the rational soul of it not yet awakened, is a tragic spectacle. Men in the rapidest motion and self-motion; restless, with convulsive energy, as if driven by Galvanism,[26] as if possessed by a Devil; tearing asunder mountains, — to no purpose, for Mammonism is always Midas-eared![27] This is sad, on the face of it. Yet courage! the beneficent Destinies, kind in their sternness, are apprising us that this cannot continue. Labour is not a devil, even while encased in Mammonism; Labour is ever an imprisoned god, writhing unconsciously or consciously to escape out of Mammonism! Plugson of Undershot,[28] like Taillefer of Normandy,[29] wants victory; how much

19. See Dante's *Inferno*, VI.
20. 'Behold the man who has been in Hell.' Said of Dante, according to a story related in Boccaccio's *Memoir* of Dante.
21. *Cf.* Dryden, *Absalom and Achitophel*, line 163: 'Great wits are sure to madness near allied.'
22. Orpheus won back from Hades (Tartarus) his bride Eurydice by the charms of his lyre; but lost her at the entrance into the upper world by breaking his promise not to look back to see if she followed him.
23. Allusion to the revival of ceremonial, in indirect connection with the Oxford Movement (1833–45). The Episcopalian clergy in Scotland during the 18th century used the black gown as the 'vesture for all ministrations,' until the Synod of Aberdeen, in 1811, recommended the cautious introduction of the surplice (an outer vestment of white linen). Much controversy arose over this during the later 'ritualist movement.'
24. *Lord*: Old English *bread-keeper*: 'hlaf' (bread, loaf) + 'weard' (keeper, guard).
25. *Cf.* Milton's sonnet, 'How soon hath Time,' etc.
26. *i.e.* by electrical current.
27. In Greek mythology, when Midas considered Pan's music superior to Apollo's, the latter god changed Midas's ears to those of an ass.
28. Type of rising middle-class business man in Victorian England. See Chapter X of Book III. *Undershot*: undershot (mill) wheel.
29. A minstrel in the army of William the Conqueror, who, at the battle of Hastings, is said to have encouraged the Normans by singing of the deeds of Roland, one of the twelve peers of Charlemagne.

happier will even Plugson be to have a Chivalrous victory than a Chactaw one! The unredeemed ugliness is that of a slothful People. Show me a People energetically busy; heaving, struggling, all shoulders at the wheel; their heart pulsing, every muscle swelling, with man's energy and will; — I show you a People of whom great good is already predicable; to whom all manner of good is yet certain, if their energy endure. By very working, they will learn; they have, Antaeus-like,[30] their foot on Mother Fact: how can they but learn?

The vulgarest Plugson of a Master-Worker, who can command Workers, and get work out of them, is already a considerable man. Blessed and thrice-blessed symptoms I discern of Master Workers who are not vulgar men; who are Nobles, and begin to feel that they must act as such: all speed to these, they are England's hope at present! But in this Plugson himself, conscious of almost no nobleness whatever, how much is there! Not without man's faculty, insight, courage, hard energy, is this rugged figure. His words none of the wisest: but his actings cannot be altogether foolish. Think, how were it, stoodst thou suddenly in his shoes! He has to command a thousand men. And not imaginary commanding; no, it is real, incessantly practical. The evil passions of so many men (with the Devil in them, as in all of us) he has to vanquish; by manifold force of speech and of silence, to repress or evade. What a force of silence, to say nothing of the others, is in Plugson! For these his thousand men he has to provide raw-material, machinery, arrangement, house-room; and ever at the week's end, wages by due sale. No Civil-List,[31] or Goulburn-Baring Budget [32] has he to fall back upon, for paying of his regiment; he has to pick his supplies from this confused face of the whole Earth and Contemporaneous History, by his dexterity alone. There will be dry eyes if he fail to do it! — He exclaims, at present, 'black in the face,' near strangled with Dilettante Legislation: 'Let me have elbow-room, throat-room, and I will not fail! No, I will spin yet, and conquer like a giant: what "sinews of war" lie in me, untold resources towards the Conquest of this Planet, if instead of hanging me, you husband them, and help me!' — My indomitable friend, it is *true*; and thou shalt and must be helped.

This is not a man I would kill and strangle by Corn-Laws, even if I could! No, I would fling my Corn-Laws and Shotbelts to the Devil; and try to help this man. I would teach him, by noble precept and law-precept, by noble example most of all, that Mammonism was not the essence of his or of my station in God's Universe; but the adscititious excrescence of it; the gross, terrene, godless embodiment of it; which would have to become, more or less, a god-like one. By noble *real* legislation, by true *noble's*-work, by unwearied, valiant, and were it wageless effort, in my Parliament and in my Parish, I would aid, constrain, encourage him to effect more or less this blessed change. I should know that it would have to be effected; that unless it were in some measure effected, he and I and all of us, I first and soonest of all, were doomed to perdition! — Effected it will be; unless it were a Demon that made this Universe; which I, for my own part, do at no moment, under no form, in the least believe.

May it please your Serene Highnesses, your Majesties, Lordships and Law-wardships, the proper Epic of this world is not now 'Arms and the Man'; how much less, 'Shirt-frills and the Man': no, it is now 'Tools and the Man': [33] that, henceforth

30. Antaeus, son of the earth and the sea, remained invincible in a fight so long as he kept his contact with the earth.

31. The fund providing for the payment of pensions granted by royal bounty.

32. Henry Goulburn (1784–1856), statesman, was chancellor of the exchequer, 1841–46; Sir Francis Thornhill Baring (1796–1866) had held that office from 1839 to 1841.

33. *Cf.* the opening lines of the *Aeneid*.

to all time, is now our Epic; — and you, first of all others, I think, were wise to take note of that!

Chapter XIII

Democracy

If the Serene Highnesses and Majesties do not take note of that, then, as I perceive, *that* will take note of itself! The time for levity, insincerity, and idle babble and play-acting, in all kinds, is gone by; it is a serious, grave time. Old long-vexed questions, not yet solved in logical words or parliamentary laws, are fast solving themselves in facts, somewhat unblessed to behold! This largest of questions, this question of Work and Wages, which ought, had we heeded Heaven's voice, to have begun two generations ago or more, cannot be delayed longer without hearing Earth's voice. 'Labour' will verily need to be somewhat 'organized,' as they say, — God knows with what difficulty. Man will actually need to have his debts and earnings a little better paid by man; which, let Parliaments speak of them, or be silent of them, are eternally his due from man, and cannot, without penalty and at length not without death-penalty, be withheld. How much ought to cease among us straightway; how much ought to begin straightway, while the hours yet are!

Truly they are strange results to which this of leaving all to 'Cash'; of quietly shutting up the God's Temple, and gradually opening wide-open the Mammon's Temple, with 'Laissez-faire, and Every man for himself,' — have led us in these days! We have Upper, speaking Classes, who indeed do 'speak' as never man spake before; the withered flimsiness, godless baseness and barrenness of whose Speech might of itself indicate what kind of Doing and practical Governing went on under it! For Speech is the gaseous element out of which most kinds of Practice and Performance, especially all kinds of moral Performance, condense themselves, and take shape; as the one is, so will the other be. Descending, accordingly, into the Dumb Class in its Stockport Cellars and Poor-Law Bastilles, have we not to announce that they are hitherto unexampled in the History of Adam's Posterity?

Life was never a May-game for men: in all times the lot of the dumb millions born to toil was defaced with manifold sufferings, injustices, heavy burdens, avoidable and unavoidable; not play at all, but hard work that made the sinews sore and the heart sore. As bond-slaves, *villani*, *bordarii*, *sochemanni*, nay indeed as dukes, earls and kings, men were oftentimes made weary of their life; and had to say, in the sweat of their brow and of their soul, Behold, it is not sport, it is grim earnest, and our back can bear no more! Who knows not what massacrings and harryings there have been; grinding, long-continuing, unbearable injustices, — till the heart had to rise in madness, and some '*Eu Sachsen, nimith euer sachses*, You Saxons, out with your gully-knives, then!' You Saxons, some 'arrestment,' partial 'arrestment of the Knaves and Dastards' has become indispensable! — The page of Dryasdust is heavy with such details.

And yet I will venture to believe that in no time, since the beginnings of Society, was the lot of those same dumb millions of toilers so entirely unbearable as it is even in the days now passing over us. It is not to die, or even to die of hunger, that makes a man wretched; many men have died; all men must die, — the last exit of us all is in a Fire-Chariot of Pain. But it is to live miserable we know not why; to work sore and yet gain nothing; to be heart-worn, weary, yet isolated, unrelated, girt-in with a cold universal Laissez-faire: it is to die slowly all our life long, imprisoned in a deaf, dead, Infinite Injustice, as in the accursed iron belly of a Phalaris' Bull! [1] This is and remains for ever intolerable to all

1. Phalaris, a tyrant of Agrigentum, punished criminals by confining them in a brazen bull with a fire burning beneath it.

men whom God has made. Do we wonder at French Revolutions, Chartisms, Revolts of Three Days? The times, if we will consider them, are really unexampled.

Never before did I hear of an Irish Widow reduced to 'prove her sisterhood by dying of typhus-fever and infecting seventeen persons,' — saying in such undeniable way, 'You *see*, I was your sister!' Sisterhood, brotherhood, was often forgotten; but not till the rise of these ultimate Mammon and Shotbelt Gospels did I ever see it so expressly denied. If no pious Lord or *Law-ward* would remember it, always some pious Lady ('*Hlaf dig*,' Benefactress, '*Loaf-giveress*,' they say she is, — blessings on her beautiful heart!) was there, with mild mother-voice and hand, to remember it; some pious thoughtful *Elder*, what we now call 'Prester,' *Presbyter* or 'Priest,' was there to put all men in mind of it, in the name of the God who had made all.

Not even in Black Dahomey[2] was it ever, I think, forgotten to the typhus-fever length. Mungo Park,[3] resourceless, had sunk down to die under the Negro Village-Tree, a horrible White object in the eyes of all. But in the poor Black Woman, and her daughter who stood aghast at him, whose earthly wealth and funded capital consisted of one small calabash of rice, there lived a heart richer than '*Laissez-faire*': they, with a royal munificence, boiled their rice for him; they sang all night to him, spinning assiduous on their cotton distaffs, as he lay to sleep: 'Let us pity the poor white man; no mother has he to fetch him milk, no sister to grind him corn!' Thou poor black Noble One, — thou *Lady* too: did not a God make thee too; was there not in thee too something of a God! —

2. A West African state, whose inhabitants engaged in human sacrifices, cannibalism, etc.

3. Mungo Park (1771–1806), Scotch surgeon and African explorer, travelled up the Niger and became famous by his *Travels in the Interior of Africa* (1799). On a return to the Niger, he died in a conflict with the natives, at Boussa, in 1806.

Gurth, born thrall of Cedric the Saxon,[4] has been greatly pitied by Dryasdust and others. Gurth, with the brass collar round his neck, tending Cedric's pigs in the glades of the wood, is not what I call an exemplar of human felicity: but Gurth, with the sky above him, with the free air and tinted boscage and umbrage round him, and in him at least the certainty of supper and social lodging when he came home; Gurth to me seems happy, in comparison with many a Lancashire and Buckinghamshire man, of these days, not born thrall of anybody! Gurth's brass collar did not gall him: Cedric *deserved* to be his Master. The pigs were Cedric's, but Gurth too would get his parings of them. Gurth had the inexpressible satisfaction of feeling himself related indissolubly, though in a rude brass-collar way, to his fellow-mortals in this Earth. He had superiors, inferiors, equals. — Gurth is now 'emancipated' long since; has what we call 'Liberty.' Liberty, I am told, is a Divine thing. Liberty when it becomes the 'Liberty to die by starvation' is not so divine!

Liberty? The true liberty of a man, you would say, consisted in his finding out, or being forced to find out, the right path, and to walk thereon. To learn, or to be taught, what work he actually was able for; and then by permission, persuasion, and even compulsion, to set about doing of the same! That is his true blessedness, honour, 'liberty' and maximum of wellbeing: if liberty be not that, I for one have small care about liberty. You do not allow a palpable madman to leap over precipices; you violate his liberty, you that are wise; and keep him, were it in strait-waistcoats, away from the precipices! Every stupid, every cowardly and foolish man is but a less palpable madman: his true liberty were that a wiser man, that any and every wiser man, could, by brass collars, or in whatever milder or sharper way, lay hold of him when he was going wrong, and order and compel him to go a little righter. O, if thou really art

4. See Scott's *Ivanhoe*.

my *Senior*, Seigneur, my *Elder*, Presbyter or Priest, — if thou art in very deed my *Wiser*, may a beneficent instinct lead and impel thee to 'conquer' me, to command me! If thou do know better than I what is good and right, I conjure thee in the name of God, force me to do it; were it by never such brass collars, whips and handcuffs, leave me not to walk over precipices! That I have been called, by all the Newspapers, a 'free man' will avail me little, if my pilgrimage have ended in death and wreck. O that the Newspapers had called me slave, coward, fool, or what it pleased their sweet voices to name me, and I had attained not death, but life! — Liberty requires new definitions.

A conscious abhorrence and intolerance of Folly, of Baseness, Stupidity, Poltroonery and all that brood of things, dwells deep in some men: still deeper in others an *un*conscious abhorrence and intolerance, clothed moreover by the beneficent Supreme Powers in what stout appetites, energies, egoisms so-called, are suitable to it; — these latter are your Conquerors, Romans, Normans, Russians, Indo-English; Founders of what we call Aristocracies. Which indeed have they not the most 'divine right' to found; — being themselves very truly Ἄριστοι, BRAVEST, BEST; and conquering generally a confused rabble of WORST, or at lowest, clearly enough, of WORSE? I think their divine right, tried, with affirmatory verdict, in the greatest Law-Court known to me, was good! A class of men who are dreadfully exclaimed against by Dryasdust; of whom nevertheless beneficent Nature has oftentimes had need; and may, alas, again have need.

When, across the hundredfold poor scepticisms, trivialisms, and constitutional cobwebberies of Dryasdust, you catch any glimpse of a William the Conqueror,[5] a Tancred[6] of Hauteville or such like, — do you not discern veritably some rude outline of a true God-made King; whom not the Champion of England cased in tin, but all Nature and the Universe were calling to the throne? It is absolutely necessary that he get thither. Nature does not mean her poor Saxon children to perish, of obesity, stupor or other malady, as yet: a stern Ruler and Line of Rulers therefore is called in, — a stern but most beneficent *perpetual House-Surgeon* is by Nature herself called in, and even the appropriate *fees* are provided for him! Dryasdust[7] talks lamentably about Hereward[8] and the Fen Counties; fate of Earl Waltheof;[9] Yorkshire and the North reduced to ashes; all of which is undoubtedly lamentable. But even Dryasdust apprises me of one fact: 'A child, in this William's reign, might have carried a purse of gold from end to end of England.' My erudite friend, it is a fact which outweighs a thousand! Sweep away thy constitutional, sentimental, and other cobwebberies; look eye to eye, if thou still have any eye, in the face of this big burly William Bastard: thou wilt see a fellow of most flashing discernment, of most strong lion-heart; — in whom, as it were, within a frame of oak and iron, the gods have planted the soul of 'a man of genius'! Dost thou call that nothing? I call it an immense thing! — Rage enough was in

5. William I, of Normandy, 'The Conqueror,' king of England, 1066–87. He was of illegitimate birth; hence Carlyle's reference to him as 'big burly William Bastard,' later in the paragraph.

6. One of the Norman heroes of the first Crusade. He figures in Tasso's *Jerusalem Delivered* as one of the principal knights serving under Godfrey of Bouillon.

7. *Dryasdust*: a fictitious character, a prosy antiquarian, whom Sir Walter Scott addresses in the prefaces to some of his novels. Carlyle takes over the name to allude to any unimaginative or pedestrian dealer in mere facts.

8. Hereward the Wake flourished in the 11th century; he was an outlaw, and a hero in romance and legend. He headed a rising against William the Conqueror in 1070.

9. Waltheof, earl of Northumberland (d.1076), was arrested by William the Conqueror on suspicion of having invited the Danish fleet to the Humber, 1075; was imprisoned at Winchester, and executed there; later regarded by the English as a martyr.

this Willelmus Conquæstor, rage enough for his occasions; — and yet the essential element of him, as of all such men, is not scorching *fire*, but shining illuminative *light*. Fire and light are strangely interchangeable; nay, at bottom, I have found them different forms of the same most godlike 'elementary substance' in our world: a thing worth stating in these days. The essential element of this Conquestor is, first of all, the most sun-eyed perception of what *is* really what on this God's-Earth; — which, thou wilt find, does mean at bottom 'Justice,' and 'Virtues' not a few: *Conformity* to what the Maker has seen good to make: that, I suppose, will mean Justice and a Virtue or two? —

Dost thou think Willelmus Conquæstor would have tolerated ten years' jargon, one hour's jargon, on the propriety of killing Cotton-manufactures by partridge Corn-Laws? I fancy, this was not the man to knock out of his night's-rest with nothing but a noisy bedlamism in your mouth! 'Assist us still better to bush the partridges; strangle Plugson who spins the shirts?' — '*Par la Splendeur de Dieu!*' — Dost thou think Willelmus Conquestor, in this new time, with Steam-engine Captains of Industry on one hand of him, and Joe-Manton Captains of Idleness[10] on the other, would have doubted which *was* really the BEST; which did deserve strangling, and which not?

I have a certain indestructible regard for Willelmus Conquæstor. A resident House-Surgeon, provided by Nature for her beloved English People, and even furnished with the requisite fees, as I said; for he by no means felt himself doing Nature's work, this Willelmus, but his own work exclusively! And his own work withal it was; informed '*par la Splendeur de Dieu*.' — I say, it is necessary to get the work out of such a man, however harsh that be! When a world, not yet doomed for death, is rushing down to ever-deeper Baseness and Confusion, it is a dire necessity of Nature's to bring in her ARISTOCRACIES, her BEST, even by forcible methods. When their descendants or representatives cease entirely to *be* the Best, Nature's poor world will very soon rush down again to Baseness; and it becomes a dire necessity of Nature's to cast them out. Hence French Revolutions, Five-point Charters, Democracies, and a mournful list of *Etceteras*, in these our afflicted times.

To what extent Democracy has now reached, how it advances irresistible with ominous, ever-increasing speed, he that will open his eyes on any province of human affairs may discern. Democracy is everywhere the inexorable demand of these ages, swiftly fulfilling itself. From the thunder of Napoleon battles, to the jabbering of Open-vestry in St. Mary Axe,[11] all things announce Democracy. A distinguished man, whom some of my readers will hear again with pleasure, thus writes to me what in these days he notes from the Wahngasse of Weissnichtwo, where our London fashions seem to be in full vogue. Let us hear the Herr Teufelsdröckh again, were it but the smallest word![12]

'Democracy, which means despair of finding any Heroes to govern you, and contented putting up with the want of them, — alas, thou too, *mein Lieber*,[13] seest well how close it is of kin to *Atheism*, and other sad *Isms*: he who discovers no God whatever, how shall he discover Heroes, the visible Temples of God? — Strange enough meanwhile it is, to observe with what thoughtlessness, here in our rigidly Conservative Country, men rush into Democracy with full cry. Beyond doubt, his Ex-

10. See note 8 of the chapter entitled 'Phenomena.'

11. In the administration of the temporal affairs of the Church of England, open vestries, which expressed the will of the ratepaying parishioners, were coming to be regarded in many quarters as admirably democratic.

12. The succeeding paragraphs are not quotations from *Sartor Resartus*, but passages written under the pseudonym of Teufelsdröckh, as previous passages had been ascribed to Sauerteig.

13. 'My dear friend.'

cellenz the Titular-Herr Ritter [14] Kauderwälsch von Pferdefuss-Quacksalber,[15] he our distinguished Conservative Premier himself, and all but the thicker-headed of his Party, discern Democracy to be inevitable as death, and are even desperate of delaying it much!

'You cannot walk the streets without beholding Democracy announce itself: the very Tailor has become, if not properly Sansculottic, which to him would be ruinous, yet a Tailor unconsciously symbolizing, and prophesying with his scissors, the reign of Equality. What now is our fashionable coat? A thing of superfinest texture, of deeply meditated cut; with Malines-lace [16] cuffs; quilted with gold; so that a man can carry, without difficulty, an estate of land on his back? *Keineswegs*. By no manner of means! The Sumptuary Laws [17] have fallen into such a state of desuetude as was never before seen. Our fashionable coat is an amphibium between barn-sack and drayman's doublet. The cloth of it is studiously coarse; the colour a speckled soot-black or rust-brown grey; — the nearest approach to a Peasant's. And for shape, — thou shouldst see it! The last consummation of the year now passing over us is definable as Three Bags; a big bag for the body, two small bags for the arms, and by way of collar a hem! The first Antique Cheruscan [18] who, of felt-cloth or bear's-hide, with bone or metal needle, set about making himself a coat, before Tailors had yet awakened out of Nothing, — did not he make it even so? A loose wide poke for body, with two holes to let out the arms; this was his original coat: to which holes it was soon visible that two small loose pokes, or sleeves, easily appended, would be an improvement.

'Thus has the Tailor-art, so to speak, overset itself, like most other things; changed its centre-of-gravity; whirled suddenly over from zenith to nadir. Your Stulz, with huge somerset, vaults from his high shopboard down to the depths of primal savagery, — carrying much along with him! For I will invite thee to reflect that the Tailor, as topmost ultimate froth of Human Society, is indeed swift-passing, evanescent, slippery to decipher; yet significant of much, nay of all. Topmost evanescent froth, he is churned up from the very lees, and from all intermediate regions of the liquor. The general outcome he, visible to the eye, of what men aimed to do, and were obliged and enabled to do, in this one public department of symbolizing themselves to each other by covering of their skins. A smack of all Human Life lies in the Tailor: its wild struggles towards beauty, dignity, freedom, victory; and how, hemmed in by Sedan and Huddersfield, by Nescience, Dullness, Prurience, and other sad necessities and laws of Nature, it has attained just to this: Grey savagery of Three Sacks with a hem!

'When the very Tailor verges towards Sansculottism, is it not ominous? The last Divinity of poor mankind dethroning himself; sinking *his* taper too, flame downmost, like the Genius of Sleep or of Death: admonitory that Tailor-time shall be no more! — For, little as one could advise Sumptuary Laws at the present epoch, yet nothing is clearer than that where ranks do actually exist, strict division of costumes will also be enforced; that if we ever have a new Hierarchy and Aristocracy, acknowledged veritably as such, for which I daily pray Heaven, the Tailor will re-awaken;

14. *Ritter*: knight.
15. *Kauderwälsch*: broken language, gibberish. — *Pferdefuss-Quacksalber*: Horsefoot-Quackdoctor. (Carlylean humor.) The 'distinguished Conservative Premier' is, of course, Peel, prime minister for the second time, 1841–46. Though a Conservative, he brought about the repeal of the Corn Laws, to the ruin of the Tory party; and gave evidence of his conviction that Democracy was as 'inevitable as death.'
16. Lace made in Malines, a town between Brussels and Antwerp.
17. Laws to prevent extravagance in private life by limiting expenditure for clothing, food, furniture, etc.
18. The Cherusci were an ancient German tribe dwelling between the Elbe and the Weser.

and be, by volunteering and appointment, consciously and unconsciously, a safeguard of that same.' — Certain farther observations, from the same invaluable pen, on our never-ending changes of mode, our 'perpetual nomadic and even ape-like appetite for change and mere change' in all the equipments of our existence, and the 'fatal revolutionary character' thereby manifested, we suppress for the present. It may be admitted that Democracy, in all meanings of the word, is in full career; irresistible by any Ritter Kauderwälsch or other Son of Adam, as times go. 'Liberty' is a thing men are determined to have.

But truly, as I had to remark in the meanwhile, 'the liberty of not being oppressed by your fellow man' is an indispensable, yet one of the most insignificant fractional parts of Human Liberty. No man oppresses thee, can bid thee fetch or carry, come or go, without reason shown. True; from all men thou art emancipated: but from Thyself and from the Devil — ? No man, wiser, unwiser, can make thee come or go: but thy own futilities, bewilderments, thy false appetites for Money, Windsor Georges[19] and such like? No man oppresses thee, O free and independent Franchiser: but does not this stupid Porter-pot oppress thee? No Son of Adam can bid thee come or go; but this absurd Pot of Heavy-wet,[20] this can and does! Thou art the thrall not of Cedric the Saxon, but of thy own brutal appetites, and this scoured dish of liquor. And thou pratest of thy 'liberty'? Thou entire blockhead!

Heavy-wet and gin: alas, these are not the only kinds of thraldom. Thou who walkest in a vain show, looking out with ornamental dilettante sniff, and serene supremacy, at all Life and all Death; and amblest jauntily; perking up thy poor talk into crotchets, thy poor conduct into fatuous somnambulisms; — and *art* as an 'enchanted Ape' under God's sky, where thou mightest have been a man, had proper Schoolmasters and Conquerors, and Constables with cat-o'-nine tails, been vouchsafed thee: dost thou call that 'liberty'? Or your unreposing Mammon-worshipper, again, driven, as if by Galvanisms, by Devils and Fixed-Ideas, who rises early and sits late, chasing the impossible; straining every faculty to 'fill himself with the east wind,' — how merciful were it, could you, by mild persuasion or by the severest tyranny so-called, check him in his mad path, and turn him into a wiser one! All painful tyranny, in that case again, were but mild 'surgery'; the pain of it cheap, as health and life, instead of galvanism and fixed-idea, are cheap at any price.

Sure enough, of all paths a man could strike into, there *is*, at any given moment, a *best path* for every man; a thing which, here and now, it were of all things *wisest* for him to do; — which could he be but led or driven to do, he were then doing 'like a man,' as we phrase it; all men and gods agreeing with him, the whole Universe virtually exclaiming Well-done to him! His success, in such case, were complete; his felicity a maximum. This path, to find this path and walk in it, is the one thing needful for him. Whatsoever forwards him in that, let it come to him even in the shape of blows and spurnings, is liberty: whatsoever hinders him, were it wardmotes, open-vestries, poll-booths, tremendous cheers, rivers of heavy-wet, is slavery.

The notion that a man's liberty consists in giving his vote at election-hustings, and saying, 'Behold now I too have my twenty-thousandth part of a Talker in our National Palaver;[21] will not all the gods be good to me?' — is one of the pleasantest! Nature nevertheless is kind at present; and puts it into the heads of many, almost of all. The liberty especially which has to purchase itself by social isolation, and each man standing separate from the other, hav-

19. *i.e.* pomp, as in royal displays, processions, etc.

20. *Heavy-wet*: slang for malt liquor, as strong ale or porter (stout).

21. Parliament.

ing 'no business with him' but a cash-account: this is such a liberty as the Earth seldom saw; — as the Earth will not long put up with, recommend it how you may. This liberty turns out, before it have long continued in action, with all men flinging up their caps round it, to be, for the Working Millions, a liberty to die by want of food; for the Idle Thousands and Units, alas, a still more fatal liberty to live in want of work; to have no earnest duty to do in this God's-World any more. What becomes of a man in such predicament? Earth's Laws are silent; and Heaven's speak in a voice which is not heard. No work, and the ineradicable need of work, give rise to new very wondrous life-philosophies, new very wondrous life-practices! Dilettantism, Pococurantism,[22] Beau-Brummelism,[23] with perhaps an occasional, half-mad, protesting burst of Byronism, establish themselves: at the end of a certain period, — if you go back to 'the Dead Sea,' there is, say our Moslem friends, a very strange 'Sabbath-day' transacting itself there![24]

— Brethren, we know but imperfectly yet, after ages of Constitutional Government, what Liberty and Slavery are.

Democracy, the chase of Liberty in that direction, shall go its full course; unrestrained by him of Pferdefuss-Quacksalber, or any of *his* household. The Toiling Millions of Mankind, in most vital need and passionate instinctive desire of Guidance, shall cast away False-Guidance; and hope, for an hour, that No-Guidance will suffice them: but it can be for an hour only. The smallest item of human Slavery is the oppression of man by his Mock-Superiors; the palpablest, but I say at bottom the smallest. Let him shake off such oppression, trample it indignantly under his feet; I blame him not, I pity and commend him. But oppression by your Mock-Superiors well shaken off, the grand problem yet remains to solve: That of finding government by your Real-Superiors! Alas, how shall we ever learn the solution of that, benighted, bewildered, sniffing, sneering, godforgetting unfortunates as we are? It is a work for centuries; to be taught us by tribulations, confusions, insurrections, obstructions; who knows if not by conflagration and despair! It is a lesson inclusive of all other lessons; the hardest of all lessons to learn.

One thing I do know: Those Apes, chattering on the branches by the Dead Sea, never got it learned; but chatter there to this day. To them no Moses need come a second time; a thousand Moseses would be but so many painted Phantasms, interesting Fellow-Apes of new strange aspect, — whom they would 'invite to dinner,' be glad to meet with in lion-soirées. To them the voice of Prophecy, of heavenly monition, is quite ended. They chatter

22. Indifferentism.

23. Dandyism

24. See Chapter iii, 'Gospel of Dilettantism,' last two paragraphs: —

'Perhaps few narratives in History or Mythology are more significant than that Moslem one, of Moses and the Dwellers by the Dead Sea. A tribe of men dwelt on the shores of that same Asphaltic Lake; and having forgotten, as we are all too prone to do, the inner facts of Nature, and taken up with the falsities and outer semblances of it, were fallen into sad conditions, — verging indeed towards a certain far deeper Lake. Whereupon it pleased kind Heaven to send them the Prophet Moses, with an instructive word of warning, out of which might have sprung "remedial measures" not a few. But no: the men of the Dead Sea discovered, as the valet-species always does in heroes or prophets, no comeliness in Moses; listened with real tedium to Moses, with light grinning, or with splenetic sniffs and sneers, affecting even to yawn; and signified, in short, that they found him a humbug, and even a bore. Such was the candid theory these men of the Asphalt Lake formed to themselves of Moses, That probably he was a humbug, that certainly he was a bore.

'Moses withdrew; but Nature and her rigorous veracities did not withdraw. The men of the Dead Sea, when we next went to visit them, were all "changed into Apes"; * sitting on the trees there, grinning now in the most *un*affected manner; gibbering and chattering very genuine nonsense; finding the whole Universe now a most indisputable Humbug.'

* Sale's *Koran* (Introduction). [Carlyle's note.]

there, all Heaven shut to them, to the end of the world. The unfortunates! Oh, what is dying of hunger, with honest tools in your hand, with a manful purpose in your heart, and much real labour lying round you done, in comparison? You honestly quit your tools; quit a most muddy confused coil of sore work, short rations, of sorrows, dispiritments and contradictions, having now honestly done with it all; — and await, not entirely in a distracted manner, what the Supreme Powers, and the Silences and the Eternities may have to say to you.

A second thing I know: This lesson will have to be learned, — under penalties! England will either learn it, or England also will cease to exist among Nations. England will either learn to reverence its Heroes, and discriminate them from its Sham-Heroes and Valets and gaslighted Histrios; and to prize them as the audible God's-voice, amid all inane jargons and temporary market-cries, and say to them with heart-loyalty, 'Be ye King and Priest, and Gospel and Guidance for us': or else England will continue to worship new and ever-new forms of Quackhood, — and so, with what resiliences and reboundings matters little, go down to the Father of Quacks! Can I dread such things of England? Wretched, thick-eyed, gross-hearted mortals, why will ye worship lies, and 'Stuffed Clothes-suits, created by the ninth-parts of men!'[25] It is not your purses that suffer; your farm-rents, your commerces, your mill-revenues, loud as ye lament over these; no, it is not these alone, but a far deeper than these: it is your souls that lie dead, crushed down under despicable Nightmares, Atheisms, Brain-fumes; and are not souls at all, but mere succedanea for *salt* to keep your bodies and their appetites from putrefying! Your cotton-spinning and thrice-miraculous mechanism, what is this too, by itself, but a larger kind of Animalism? Spiders can spin, Beavers can build and show contrivance: the Ant lays up accumulation of capital, and has, for aught I know, a Bank of Antland. If there is no soul in man higher than all that, did it reach to sailing on the cloud-rack and spinning sea-sand; then I say, man is but an animal, a more cunning kind of brute: he has no soul, but only a succedaneum for salt. Whereupon, seeing himself to be truly of the beasts that perish, he ought to admit it, I think; — and also straightway universally to kill himself; and so, in a manlike manner, at least, *end*, and wave these brute-worlds *his* dignified farewell! —

25. Allusion to the old proverb that 'nine tailors make a man.' See *Sartor*, Book III, Chapter xi.

BOOK IV — HOROSCOPE

CHAPTER IV

Captains of Industry

IF I believed that Mammonism with its adjuncts was to continue henceforth the one serious principle of our existence, I should reckon it idle to solicit remedial measures from any Government, the disease being insusceptible of remedy. Government can do much, but it can in no wise do all. Government, as the most conspicuous object in Society, is called upon to give signal of what shall be done; and, in many ways, to preside over, further, and command the doing of it. But the Government cannot do, by all its signalling and commanding, what the Society is radically indisposed to do. In the long-run every Government is the exact symbol of its People, with their wisdom and unwisdom; we have to say, Like People like Government. — The main substance of this immense Problem of Organizing Labour, and first of all of Managing the Working Classes, will, it is very clear, have to be solved by those who stand practically in the middle of it; by those who themselves work and preside over work. Of all that can be enacted by any Parliament in regard to it, the germs must already lie potentially extant in those two

Classes, who are to obey such enactment. A Human Chaos *in* which there is no light, you vainly attempt to irradiate by light shed *on* it: order never can arise there.

But it is my firm conviction that the 'Hell of England' will *cease* to be that of 'not making money'; that we shall get a nobler Hell and a nobler Heaven! I anticipate light *in* the Human Chaos, glimmering, shining more and more; under manifold true signals from without That light shall shine. Our deity no longer being Mammon, — O Heavens, each man will then say to himself: 'Why such deadly haste to make money? I shall not go to Hell, even if I do not make money! There is another Hell, I am told!' Competition, at railway-speed, in all branches of commerce and work will then abate: — good felt-hats for the head, in every sense, instead of seven-feet lath-and-plaster hats on wheels, will then be discoverable! Bubble-periods, with their panics and commercial crises, will again become infrequent; steady modest industry will take the place of gambling speculation. To be a noble Master, among noble Workers, will again be the first ambition with some few; to be a rich Master only the second. How the Inventive Genius of England, with the whirr of its bobbins and billy-rollers shoved somewhat into the backgrounds of the brain, will contrive and devise, not cheaper produce exclusively, but fairer distribution of the produce at its present cheapness! By degrees, we shall again have a Society with something of Heroism in it, something of Heaven's Blessing on it; we shall again have, as my German friend[1] asserts, 'instead of Mammon-Feudalism with unsold cotton-shirts and Preservation of the Game, noble just Industrialism and Government by the Wisest!'

It is with the hope of awakening here and there a British man to know himself for a man and divine soul, that a few words of parting admonition, to all persons to whom the Heavenly Powers have lent power of any kind in this land, may now be addressed. And first to those same Master-Workers, Leaders of Industry; who stand nearest, and in fact powerfullest, though not most prominent, being as yet in too many senses a Virtuality rather than an Actuality.

The Leaders of Industry, if Industry is ever to be led, are virtually the Captains of the World; if there be no nobleness in them, there will never be an Aristocracy more. But let the Captains of Industry consider: once again, are they born of other clay than the old Captains of Slaughter; doomed for ever to be not Chivalry, but a mere gold-plated *Doggery*, — what the French well name *Canaille*, 'Doggery' with more or less gold carrion at its disposal? Captains of Industry are the true Fighters, henceforth recognizable as the only true ones: Fighters against Chaos, Necessity and the Devils and Jötuns;[2] and lead on Mankind in that great, and alone true, and universal warfare; the stars in their courses fighting for them, and all Heaven and all Earth saying audibly, Well done! Let the Captains of Industry retire into their own hearts, and ask solemnly, If there is nothing but vulturous hunger for fine wines, valet reputation and gilt carriages, discoverable there? Of hearts made by the Almighty God I will not believe such a thing. Deep-hidden under wretchedest god-forgetting Cants, Epicurisms, Dead-Sea Apisms; forgotten as under foullest fat Lethe mud and weeds, there is yet, in all hearts born into this God's-World, a spark of the Godlike slumbering. Awake, O nightmare sleepers; awake, arise, or be for ever fallen! This is not playhouse poetry; it is sober fact. Our England, our world cannot live as it is. It will connect itself with a God again, or go down with nameless throes and fire-consummation to the Devils. Thou who feelest aught of such a Godlike stirring

1. Teufelsdröckh or Sauerteig.

2. The giants of Scandinavian mythology. See *Heroes and Hero-Worship*, Lecture I.

in thee, any faintest intimation of it as through heavy-laden dreams, follow *it*, I conjure thee. Arise, save thyself, be one of those that save thy country.

Bucaniers, Chactaw Indians, whose supreme aim in fighting is that they may get the scalps, the money, that they may amass scalps and money; out of such came no Chivalry, and never will! Out of such came only gore and wreck, infernal rage and misery; desperation quenched in annihilation. Behold it, I bid thee, behold there, and consider! What is it that thou have a hundred thousand-pound bills laid up in thy strong-room, a hundred scalps hung up in thy wigwam? I value not them or thee. Thy scalps and thy thousand-pound bills are as yet nothing, if no nobleness from within irradiate them; if no Chivalry, in action, or in embryo ever struggling towards birth and action, be there.

Love of men cannot be bought by cash-payment; and without love, men cannot endure to be together. You cannot lead a Fighting World without having it regimented, chivalried: the thing, in a day, becomes impossible; all men in it, the highest at first, the very lowest at last, discern consciously, or by a noble instinct, this necessity. And can you any more continue to lead a Working World unregimented, anarchic? I answer, and the Heavens and Earth are now answering, No! The thing becomes not 'in a day' impossible; but in some two generations it does. Yes, when fathers and mothers, in Stockport hunger-cellars, begin to eat their children, and Irish widows have to prove their relationship by dying of typhus-fever; and amid Governing 'Corporations of the Best and Bravest,' busy to preserve their game by 'bushing,' dark millions of God's human creatures start up in mad Chartisms, impracticable Sacred-Months, and Manchester Insurrections; — and there is a virtual Industrial Aristocracy as yet only half-alive, spell-bound amid money-bags and ledgers; and an actual Idle Aristocracy seemingly near dead in somnolent delusions, in trespasses and double-barrels; 'sliding,' as on inclined-planes, which every new year they *soap* with new Hansard's-jargon [3] under God's sky, and so are 'sliding' ever faster, towards a 'scale' and balance-scale whereon is written *Thou art found Wanting*: [4] — in such days, after a generation or two, I say, it does become, even to the low and simple, very palpably impossible! No Working World, any more than a Fighting World, can be led on without a noble Chivalry of Work, and laws and fixed rules which follow out of that, — far nobler than any Chivalry of Fighting was. As an anarchic multitude on mere Supply-and-demand, it is becoming inevitable that we dwindle in horrid suicidal convulsion, and self-abrasion, frightful to the imagination, into *Chactaw* Workers. With wigwams and scalps, — with palaces and thousand-pound bills; with savagery, depopulation, chaotic desolation! Good Heavens, will not one French Revolution and Reign of Terror suffice us, but must there be two? There will be two if needed; there will be twenty if needed; there will be precisely as many as are needed. The Laws of Nature will have themselves fulfilled. That is a thing certain to me.

Your gallant battle-hosts and work-hosts, as the others did, will need to be made loyally yours; they must and will be regulated, methodically secured in their just share of conquest under you; — joined with you in veritable brotherhood, sonhood, by quite other and deeper ties than those of temporary day's wages! How would mere redcoated regiments, to say nothing of chivalries, fight for you, if you could discharge them on the evening of the battle, on payment of the stipulated shillings, — and they discharge you on the morning of it! Chelsea Hospitals,[5] pensions, promotions, rigorous lasting cove-

3. Parliamentary debate. Luke Hansard (1752–1828) began printing the 'House of Commons Journals' in 1774.

5. Chelsea Hospital, for disabled soldiers, was founded by Charles II.

nant on the one side and on the other, are indispensable even for a hired fighter. The Feudal Baron, much more, — how could he subsist with mere temporary mercenaries round him, at sixpence a day; ready to go over to the other side, if sevenpence were offered? He could not have subsisted; — and his noble instinct saved him from the necessity of even trying! The Feudal Baron had a Man's Soul in him; to which anarchy, mutiny, and the other fruits of temporary mercenaries, were intolerable: he had never been a Baron otherwise, but had continued a Chactaw and Bucanier. He felt it precious, and at last it became habitual, and his fruitful enlarged existence included it as a necessity, to have men round him who in heart loved him; whose life he watched over with rigour yet with love; who were prepared to give their life for him, if need came. It was beautiful; it was human! Man lives not otherwise, nor can live contented, anywhere or anywhen. Isolation is the sum-total of wretchedness to man. To be cut off, to be left solitary: to have a world alien, not your world; all a hostile camp for you; not a home at all, of hearts and faces who are yours, whose you are! It is the frightfullest enchantment; too truly a work of the Evil One. To have neither superior, nor inferior, nor equal, united manlike to you. Without father, without child, without brother. Man knows no sadder destiny. 'How is each of us,' exclaims Jean Paul, 'so lonely in the wide bosom of the All!'[6] Encased each as in his transparent 'ice-palace'; our brother visible in his, making signals and gesticulations to us; — visible, but for ever unattainable: on his bosom we shall never rest, nor he on ours. It was not a God that did this; no!

Awake, ye noble Workers, warriors in the one true war: all this must be remedied. It is you who are already half-alive, whom I will welcome into life; whom I will conjure in God's name to shake off your enchanted sleep, and live wholly! Cease to count scalps, gold-purses; not in these lies your or our salvation. Even these, if you count only these, will not be left. Let bucaniering be put far from you; alter, speedily abrogate all laws of the bucaniers, if you would gain any victory that shall endure. Let God's justice, let pity, nobleness and manly valour, with more gold-purses or with fewer, testify themselves in this your brief Life-transit to all the Eternities, the Gods and Silences. It is to you I call; for ye are not dead, ye are already half-alive: there is in you a sleepless dauntless energy, the prime-matter of all nobleness in man. Honour to you in your kind. It is to you I call: ye know at least this, That the mandate of God to His creature man is: Work! The future Epic of the World rests not with those that are near dead, but with those that are alive, and those that are coming into life.

Look around you. Your world-hosts are all in mutiny, in confusion, destitution; on the eve of fiery wreck and madness! They will not march farther for you, on the sixpence a day and supply-and-demand principle: they will not; nor ought they, nor can they. Ye shall reduce them to order, begin reducing them. To order, to just subordination; noble loyalty in return for noble guidance. Their souls are driven nigh mad; let yours be sane and ever saner. Not as a bewildered bewildering mob; but as a firm regimented mass, with real captains over them, will these men march any more. All human interests, combined human endeavours, and social growths in this world, have, at a certain stage of their development, required organizing: and Work, the grandest of human interests, does now require it.

God knows, the task will be hard: but no noble task was ever easy. This task will wear away your lives, and the lives of your sons and grandsons: but for what pur-

6. Quoted from Jean Paul Friedrich Richter (1763–1825), German romantic humorist, whom Carlyle admired. See the quotation from the vision of the Dead Christ in Carlyle's *Essays*, II,155–58.

pose, if not for tasks like this, were lives given to men? Ye shall cease to count your thousand-pound scalps, the noble of you shall cease! Nay, the very scalps, as I say, will not long be left if you count on these. Ye shall cease wholly to be barbarous vulturous Chactaws, and become noble European Nineteenth-Century Men. Ye shall know that Mammon, in never such gigs [7] and flunkey 'respectabilities,' is not the alone God; that of himself he is but a Devil, and even a Brute-god.

Difficult? Yes, it will be difficult. The short-fibre cotton; that too was difficult. The waste cotton-shrub, long useless, disobedient, as the thistle by the wayside, — have ye not conquered it; made it into beautiful bandana webs; white woven shirts for men; bright-tinted air-garments wherein flit goddesses? Ye have shivered mountains asunder, made the hard iron pliant to you as soft putty: the Forest-giants, Marsh-jötuns bear sheaves of golden grain; Aegir the Sea-demon himself stretches his back for a sleek highway to you, and on Firehorses and Windhorses ye career. Ye are most strong. Thor red-bearded, with his blue sun-eyes, with his cheery heart and strong thunder-hammer, he and you have prevailed. Ye are most strong, ye Sons of the icy North, of the far East, — far marching from your rugged Eastern Wildernesses, hitherward from the grey Dawn of Time! Ye are Sons of the *Jötun*-land; the land of Difficulties Conquered. Difficult? You must try this thing. Once try it with the understanding that it will and shall have to be done. Try it as ye try the paltrier thing, making of money! I will bet on you once more, against all Jötuns, Tailor-gods,[8] Double-barrelled Lawwards, and Denizens of Chaos whatsoever!

7. The word 'gig' — and Carlyle's coinage, 'gigmanity' — represented for Carlyle the new standards of the time, namely 'respectability.' At the trial of the notorious murderer, Thurtell, when a witness was asked why he regarded a Mr. Weare as respectable, he replied, 'He kept a gig.' See *Ess.*,II,130,n.; III,71,n.

8. *Tailor-gods*. false gods: fashioned by man, the tailor, as described and discussed in *Sartor Resartus*.

SHOOTING NIAGARA: AND AFTER?

I

THERE probably never was since the Heptarchy [1] ended, or almost since it began, so hugely critical an epoch in the history of England as this we have now entered upon, with universal self-congratulation and flinging-up of caps; nor one in which, — with no Norman Invasion now ahead, to lay hold of it, to bridle and regulate it for us (little thinking it was *for us*), and guide it into higher and wider regions, — the question of utter death or of nobler new life for the poor Country was so uncertain. Three things seem to be agreed upon by gods and men, at least by English men and gods; certain to happen, and are now in visible course of fulfilment.

1° *Democracy* to complete itself; to go the full length of its course, towards the Bottomless or into it, no power now extant to prevent it or even considerably retard it, — till we have seen where it will lead us to, and whether there will *then* be any return possible, or none. Complete 'liberty' to all persons; Count of Heads to be the Divine Court of Appeal on every question and interest of mankind; Count of Heads to choose a Parliament according to its own heart at last, and sit with Penny Newspapers zealously watching the same; said Parliament, so chosen and so watched, to do what trifle of legislating and administering may still be needed in such an England, with its hundred-and-fifty mil-

1. The seven kingdoms reckoned to have been established in Britain by the Angles and Saxons between the 5th and 9th centuries.

lions 'free' more and more to follow each his own nose, by way of guide-post in this intricate world.

2° That, in a limited time, say fifty years hence, the Church, all Churches and so-called religions, the Christian Religion itself, shall have deliquesced, — into 'Liberty of Conscience,' Progress of Opinion, Progress of Intellect, Philanthropic Movement, and other aqueous residues, of a vapid badly-scented character; — and shall, like water spilt upon the ground, trouble nobody considerably thenceforth, but evaporate at its leisure.

3° That, in lieu thereof, there shall be Free Trade, in all senses, and to all lengths: unlimited Free Trade, — which some take to mean, 'Free racing, ere long with unlimited speed, in the career of *Cheap and Nasty*';[2] — this beautiful career, not in shop-goods only, but in all things temporal, spiritual and eternal, to be flung generously open, wide as the portals of the Universe; so that everybody shall start free, and everywhere, 'under enlightened popular suffrage,' the race shall be to the swift, and the high office shall fall to him who is ablest if not to do it, at least to get elected for doing it.

These are three altogether new and very considerable achievements, lying visibly ahead of us, not far off, — and so extremely considerable, that every thinking English creature is tempted to go into manifold reflections and inquiries upon them. My own have not been wanting, any time these thirty years past, but they have not been of a joyful or triumphant nature; not prone to utter themselves; indeed expecting, till lately, that they might with propriety lie unuttered altogether. But the series of events comes swifter and swifter, at a strange rate; and hastens unexpectedly, — 'velocity increasing' (if you will consider, for this too is as when the little stone has been loosened, which sets the whole mountain-side in motion) 'as the *square* of the time': — so that the wisest Prophecy finds it was quite wrong as to date; and, patiently, or even indolently waiting, is astonished to see itself fulfilled, not in centuries as anticipated, but in decades and years. It was a clear prophecy, for instance, that Germany would either become honourably Prussian or go to gradual annihilation: but who of us expected that we ourselves, instead of our children's children, should live to behold it; that a magnanimous and fortunate Herr von Bismarck,[3] whose dispraise was in all the Newspapers, would, to his own amazement, find the thing now doable; and would do it, do the essential of it, in a few of the current weeks? That England would have to take the Niagara leap[4] of completed Democracy one day, was also a plain prophecy, though uncertain as to time. . . .

III

Inexpressibly delirious seems to me, at present in my solitude, the puddle of Parliament and Public upon what it calls the 'Reform Measure'; that is to say, The calling in of new supplies of blockheadism, gullibility, bribeability, amenability to beer

2. *Cf.* the title of Charles Kingsley's *Cheap Clothes and Nasty* (1850), one of a series of tracts published by the Christian Socialists. The expression *cheap and nasty*, the tailors' slang for sweat-shop conditions and products, became current among Victorians to refer to the products and values of unregulated and unscrupulous competition in industry.

3. Prince Otto von Bismarck (1815–98) became Prussian prime minister in 1862, and under his administration were fought the wars against Denmark (1864) and against Austria (1866). The constitution of the newly founded North German Federation was completed in the summer in which Carlyle wrote *Shooting Niagara* (1867). Though Bismarck was the object of much European dispraise, Carlyle admired his effort to unite Germany and to oppose Liberalism and Democracy.

4. *i.e.* the passing of the second Reform Bill (1867), which granted the right to vote to all householders who paid the poor rates and all lodgers of one year's residence whose annual rent was £10; and in the counties, to all owners of land of £5 annual value and all occupying tenants whose rental was £12.

and balderdash, by way of amending the woes we have had from our previous supplies of that bad article. The intellect of a man who believes in the possibility of 'improvement' by such a method is to me a finished-off and shut-up intellect, with which I would not argue: mere waste of wind between us to exchange words on that class of topics. It is not Thought, this which my reforming brother utters to me with such emphasis and eloquence; it is mere 'reflex and reverberation,' repetition of what he has always heard others imagining to think, and repeating as orthodox, indisputable, and the gospel of our salvation in this world. Does not all Nature groan everywhere, and lie in bondage, till you give it a Parliament? Is one a man at all unless one have a suffrage to Parliament? These are axioms admitted by all English creatures for the last two hundred years. If you have the misfortune not to believe in them at all, but to believe the contrary for a long time past, the inferences and inspirations drawn from them, and the '*swarmeries*'[5] and enthusiasms of mankind thereon, will seem to you not a little marvellous! —

Meanwhile the *good* that lies in this delirious 'new Reform Measure,' as there lies something of good in almost everything, — is perhaps not inconsiderable. It accelerates notably what I have long looked upon as inevitable; — pushes us at once into the Niagara Rapids: irresistibly propelled, with ever-increasing velocity, we shall now arrive; who knows how *soon*! For a generation past, it has been growing more and more evident that there was only this issue; but now the issue itself has become imminent, the distance of it to be guessed by years. Traitorous Politicians, grasping at votes, even votes from the rabble, have brought it on; — one cannot but consider them traitorous; and for one's own poor share, would rather have been shot than been concerned in it. And yet, after all my silent indignation and disgust, I cannot pretend to be clearly sorry that such a consummation is expedited. I say to myself, 'Well, perhaps the sooner such a mass of hypocrisies, universal mismanagements and brutal platitudes and infidelities *ends*, — if not in some improvement, then in death and finis, — may it not be the better? The sum of our sins, increasing steadily day by day, will at least be less, the sooner the settlement is!' Nay have not I a kind of secret satisfaction, of the malicious or even of the judiciary kind (*schadenfreude*, 'mischief-joy,' the Germans call it, but really it is *justice*-joy withal), that he they call 'Dizzy'[6] is to do it; that other jugglers, of an unconscious and deeper type, having sold their poor Mother's body for a mess of Official Pottage, this clever conscious juggler steps in, 'Soft you, my honourable friends; I will weigh-out the corpse of your Mother (mother of mine she never was, but only stepmother and milk-cow); — and you sha'n't have the pottage: not yours, you observe, but mine!' This really is a pleasing trait of its sort. Other traits there are abundantly ludicrous, but they are too lugubrious to be even momentarily pleasant. A superlative Hebrew Conjuror, spell-binding all the great Lords, great Parties, great Interests of England, to his hand in this manner, and leading them by the nose, like helpless mesmerised somnambulant cattle, to such issue, — did the world ever see a *flebile ludibrium*[7] of such magnitude before? Lath-sword and

5. From the German *Schwärmerei* (swarming), used by Coleridge, and adopted by Carlyle to refer to the modern tendency to put one's trust in the opinion of majorities; also to refer to any manifestation of mob-mindedness.

6. Benjamin Disraeli (created Earl of Beaconsfield in 1876) (1804–81), who, as chancellor of the exchequer in Lord Derby's third ministry, was responsible, with the assistance of Bright and Gladstone, for the passing of the Reform Bill. It is noteworthy that this 'superlative Hebrew conjuror' (Disraeli was a Jew) later offered Carlyle a pension and the Grand Cross of the Bath, both of which Carlyle declined.

7. 'lamentable mockery.'

Scissors of Destiny; Pickleherring [8] and the Three *Parcæ* [9] alike busy in it. This too, I suppose, we had deserved. The end of our poor Old England (such an England as we had at last made of it) to be not a tearful Tragedy, but an ignominious Farce as well! —

Perhaps the consummation may be now nearer than is thought. It seems to me sometimes as if everybody had privately now given-up serious notion of resisting it. Beales [10] and his ragamuffins pull down the railings of Her Majesty's Park, when Her Majesty refuses admittance; Home-Secretary Walpole [11] (representing England's Majesty) listens to a Colonel Dickson talking of 'barricades,' 'improvised pikes,' etc.; does *not* order him to be conducted, and if necessary to be kicked, down stairs, with injunction never to return, in case of worse; and when Beales says, 'I will see that the Queen's Peace is kept,' Queen (by her Walpole) answers, 'Will you, then; God bless *you*!' and bursts into tears. Those 'tears' are certainly an epoch in England; nothing seen, or dreamt of, like them in the History of poor England till now. . . .

V

I almost think, when once we have made the Niagara leap, the better kind of Nobility, perhaps after experimenting, will more and more withdraw themselves from the Parliamentary, Oratorical or Political element; leaving that to such Cleon the Tanner [12] and Company as it rightfully belongs to; and be far more chary of their speech than now. Speech issuing in no deed is hateful and contemptible: — how can a man have any nobleness who knows not that? In God's name, let us find out what of noble and profitable we can *do*; if it be nothing, let us at least keep silence, and bear gracefully our strange lot! —

The English Nobleman has still left in him, after such sorrowful erosions, something considerable of chivalry and magnanimity: polite he is, in the finest form; politeness, modest, simple, veritable, ineradicable, dwells in him to the bone; I incline to call him the politest kind of nobleman or man (especially his wife the politest and gracefulest kind of woman) you will find in any country. An immense endowment this, if you consider it well! A very great and indispensable help to whatever other faculties of *kingship* a man may have. Indeed it springs from them all (its sources, every kingly faculty lying in you); and is as the beautiful natural skin, and visible sanction, index and outcome of them all. No king can rule without it; none but potential kings can really have it. In the crude, what we call unbred or *Orson* [13] form, all 'men of genius' have it; but see what it avails some of them, — your Samuel Johnson, for instance, — in that crude form, who was so rich in it, too, in the crude way!

Withal it is perhaps a fortunate circumstance, that the population has no wild

8. The fool or merry-andrew in an early 17th-century German comedy; the chief actor in a series of 'Pickelhäringsspiele.'
9. In Roman religion, the three Fates.
10. Edmond Beales (1803–81), lawyer and political agitator; he was president of the Reform League at the time of the Hyde Park riots, July 1866, to which Carlyle is alluding. The riot had been caused by the Government's denial of permission to hold a Reform meeting inside; in their rage the crowd pulled down the railings of the Park. It was the only violence used, but it created considerable public discussion.
11. Spencer Horatio Walpole (1806–98), who was driven from office by popular clamor at his management of the Hyde Park monster meetings.
12. Greek demagogue of the 5th century B.C.; originally a tanner, he came forward in public as an opponent of Pericles, and, after the latter's death, became for a time the favorite of the people.
13. In an early French romance, Orson and Valentine are the sons of Bellisant, sister of King Pepin. A bear carries away Orson, who is reared as a wild man; Valentine is reared by Pepin. Hence Carlyle's allusion to Orson as the 'unbred' nobleman. — The story is the subject of a ballad in Percy's *Reliques*.

notions, no political enthusiasms of a 'New Era' or the like. This, though in itself a dreary and ignoble item, in respect of the revolutionary Many, may nevertheless be for good, if the Few *shall* be really high and brave, as things roll on.

Certain it is, there is nothing but vulgarity in our People's expectations, resolutions or desires, in this Epoch. It is all a peaceable mouldering or tumbling down from mere rottenness and decay; whether slowly mouldering or rapidly tumbling, there will be nothing found of real or true in the rubbish-heap, but a most true desire of making money easily, and of eating it pleasantly. A poor ideal for 'reformers,' sure enough. But it is the fruit of long antecedents, too; and from of old, our habits in regard to 'reformation,' or repairing what went wrong (as something is always doing), have been strangely didactic! And to such length have we at last brought it, by our wilful, conscious, and now long-continued method of using *varnish*, instead of actual repair by honest *carpentry*, of what we all knew and saw to have gone undeniably wrong in our procedures and affairs! Method deliberately, steadily, and even solemnly continued, with much admiration of it from ourselves and others, as the best and only good one, for above two hundred years.

Ever since that *annus mirabilis* of 1660, when Oliver Cromwell's dead clay was hung on the gibbet, and a much easier 'reign of Christ' under the divine gentleman called Charles II. was thought the fit thing, this has been our steady method: varnish, varnish; if a thing have grown so rotten that it yawns palpable, and is so inexpressibly ugly that the eyes of the very populace discern it and detest it, — bring out a new pot of varnish, with the requisite supply of putty; and lay it on handsomely. Don't spare varnish; how well it will all look in a few days, if laid on well! Varnish alone is cheap and is safe; avoid carpentering, chiselling, sawing and hammering on the old quiet House; — dry-rot is in it, who knows how deep; don't disturb the old beams and junctures; varnish, varnish, if you will be blessed by gods and men! This is called the Constitutional System, Conservative System, and other fine names; and this at last has its fruits, — such as we see. Mendacity hanging in the very air we breathe; all men become, unconsciously or half or wholly consciously, *liars* to their own souls and to other men's; grimacing, finessing, periphrasing, in continual hypocrisy of *word*, by way of varnish to continual past, present, future misperformance of *thing*: — clearly sincere about nothing whatever, except in silence, about the appetites of their own huge belly, and the readiest method of assuaging these. From a Population of that sunk kind, ardent only in pursuits that are low and in industries that are sensuous and *beaverish*, there is little peril of *human* enthusiasms, or revolutionary transports, such as occurred in 1789, for instance. A low-minded *pecus*[14] all that; essentially torpid and *ignavum*,[15] on all that is high or nobly human in revolutions.

It is true there is in such a population, of itself, no *help* at all towards reconstruction of the wreck of your Niagara plunge; of themselves they, with whatever cry of 'liberty' in their mouths, are inexorably marked by Destiny as *slaves*; and not even the immortal gods could make them free, — except by making them anew and on a different pattern. No help in them at all, to your model Aristocrat, or to any noble man or thing. But then likewise there is no hindrance, or a minimum of it! Nothing there in *bar* of the noble Few, who we always trust will be born to us, generation after generation; and on whom and whose living of a noble and valiantly cosmic life amid the worst impediments and hugest anarchies, the whole of our hope depends. Yes, on them only! If amid the thickest welter of surrounding gluttony and baseness, and what must be reckoned bottom-

14. 'herd.'
15. 'slothful.'

less anarchy from shore to shore, there be found no man, no small but invincible minority of men, capable of keeping themselves free from all that, and of living a heroically human life, while the millions round them are noisily living a mere beaverish or doglike one, then truly all hope is gone. But we always struggle to believe Not. Aristocracy by title, by fortune and position, who can doubt but there are still precious possibilities among the chosen of that class? And if that fail us, there is still, we hope, the unclassed Aristocracy by nature, not inconsiderable in numbers, and supreme in faculty, in wisdom, human talent, nobleness and courage, 'who derive their patent of nobility direct from Almighty God.' . . .

VI

What we can expect this Aristocracy of Nature to do for us? They are of two kinds: the Speculative, speaking or vocal; and the Practical or industrial, whose function is silent. These are of brother quality; but they go very different roads: 'men of *genius*' they all emphatically are, the 'inspired Gift of God' lodged in each of them. . . .

Nevertheless it is not of these I mean to speak at present; the topic is far too wide, nor is the call to it so immediately pressing. These Sons of Wisdom, gifted to speak as with hallowed lips a real God's-message to us, — I don't much expect they will be numerous, for a long while yet, nor even perhaps appear at all in this time of swarmeries, or be disposed to speak their message to such audience as there is. And if they did, I know well it is not from my advice, or any mortal's, that they could learn their feasible way of doing it. For a great while yet, most of them will fly off into 'Literature,' into what they call Art, Poetry and the like; and will mainly waste themselves in that inane region, — fallen so inane in our mad era. Alas, though born Sons of Wisdom, they are not exempt from all our 'Swarmeries,' but only from the grosser kinds of them. This of 'Art,' 'Poetry' and so forth, is a refined Swarmery; the most refined now going; and comes to us, in venerable form, from a distance of above a thousand years. . . .

To write the History of England as a kind of BIBLE (or in parts and snatches, to *sing* it if you could), this were work for the highest Aristos [16] or series of Aristoi in Sacred Literature (really a sacred kind, this); and to be candid, I discover hitherto no incipiencies of this; and greatly desire that there were some! Some I do expect (too fondly perhaps, but they seem to me a *sine quâ non*) [17] from the Writing and Teaching Heroes that will yet be born to us. For England too (equally with any Judah whatsoever) has a History that is Divine; an Eternal Providence presiding over every step of it, now in sunshine and soft tones, now in thunder and storm, audible to millions of awe-struck valiant hearts in the ages that are gone; guiding England forward to *its* goal and work, which too has been highly considerable in the world! The 'interpretation' of all which, in the present ages, has (what is the root of all our woes) fallen into such a set of hands! Interpretation scandalously ape-like, I must say; impious, blasphemous; — totally incredible withal. Which Interpretation will have to become pious and human again, or else — or else vanish into the Bottomless Pit and carry us and our England along with it! This, some incipiences of this, I gradually expect from the Heroes that are coming. And in fact *this*, taken in full compass, is the one thing needed from them; and all other things are but branches of this.

For example, I expect, as almost the first thing, new definitions of LIBERTY from them; gradual extinction, slow but steady, of the stupid '*swarmeries*' of mankind on this matter, and at length a complete change of their notions on it. 'Superstí-

16. *aristo*: Greek for 'best.' Hence: 'chief' or 'leader,' as in *aristocrat*.

17. 'indispensable thing, or condition.'

tion and idolatry,' sins real and grievous, sins ultimately ruinous, wherever found, — this is now our English, our Modern European form of them; Political, not Theological now! England, Modern Europe, will have to quit them or die. They are sins of a fatal slow-poisonous nature; not permitted in this Universe. The poison of them is not intellectual dimness chiefly, but torpid unveracity of heart: not mistake of road, but want of pious earnestness in seeking your road. Insincerity, unfaithfulness, impiety: — careless tumbling and buzzing about, in blind, noisy, pleasantly companionable 'swarms,' instead of solitary questioning of yourself and of the Silent Oracles, which is a sad, sore and painful duty, though a much incumbent one upon a man. The meaning of LIBERTY, what it veritably signifies in the speech of men and gods, will gradually begin to appear again? Were that once got, the eye of England were *couched*; poor honest England would again *see*, — I will fancy with what horror and amazement, — the thing she had grown to in this interim of *swarmeries*. To show this poor well-meaning England, Whom it were desirable to furnish with a 'suffrage,' and Whom with a *dog-muzzle* (and plenty of fresh water on the streets), against rabidity in the hot weather: — what a work for our Hero speakers that are coming! —

I hope also they will attack earnestly, and at length extinguish and eradicate, this idle habit of 'accounting for the Moral Sense,' as they phrase it. A most singular problem: — instead of bending every thought to *have* more and ever more of 'Moral Sense,' and therewith to irradiate your own poor soul, and all its work, into something of divineness, as the one thing needful to you in this world! A very futile problem that other, my friends; futile, idle, and far worse; leading to what Moral *Ruin* you little dream of! The Moral Sense, thank God, is a thing you never will 'account for'; that, if you could think of it, is the perennial Miracle of Man; in all times, visibly connecting poor transitory Man here on this bewildered Earth with his Maker, who is Eternal in the Heavens. By no Greatest Happiness Principle, Greatest Nobleness Principle, or any Principle whatever, will you make that in the least clearer than it already is; — forbear, I say; or you may *darken* it away from you altogether! 'Two things,' says the memorable Kant, deepest and most logical of Metaphysical Thinkers, 'Two things strike me dumb: the infinite Starry Heaven; and the Sense of Right and Wrong in Man.'[18] *Visible* Infinities, both; *say* nothing of them; don't try to 'account for them'; for you can say nothing wise.

On the whole, I hope our Hero will, by heroic word, and heroic thought and *act*, make manifest to mankind that 'Reverence for God and for Man' is not yet extinct, but only fallen into disastrous comatose sleep, and hideously dreaming; that the 'Christian Religion itself is not dead,' that the soul of it is alive forevermore, — and only the dead and rotting *body* of it is now getting burial. The noblest of modern Intellects, by far the noblest we have had since Shakspeare left us, has said of this Religion: 'It is a Height to which the HUMAN SPECIES were fitted and destined to attain; and from which, having once attained it, they can never retrograde.'[19] Permanently, never. Never, *they*; — though individual Nations of them fatally *can*; of

18. 'Zwei Dinge erfullen das Gemuth mit immer neuer und zunehmender Bewunderung und Ehrfurcht, je öfter und anhaltender sich das Nachdenken damit beschäftigt: *der bestirnte Himmel über mir*, und *das moralische Gesetz in mir*,' . . . *u. s. w.* Kant's *Sämmtliche Werke* (Rosenkranz and Schubert's edition, Leipzig, 1838), viii,312. [Carlyle's note. — Carlyle's translation is not literal, and does not accurately express Kant's meaning.]

19. See Goethe, *Wilhelm Meister* (Carlyle's transl.), II,x: 'This religion being now attained, the human species cannot retrograde; and we may say, that the Christian religion having once appeared, cannot again vanish; having once assumed its divine shape, can be subject to no dissolution.'

which I hope poor England is not one? Though, here as elsewhere, the *burial*-process does offer ghastly enough phenomena: Ritualisms, Puseyisms,[20] Arches-Court Lawsuits, Cardinals of Westminster, etc., etc.; — making night hideous![21] For a time and times and half a time, as the old Prophets used to say.

One of my hoping friends, yet more sanguine than I fully dare to be, has these zealous or enthusiast words: 'A very great "work," surely, is going on in these days, — has been *begun*, and is silently proceeding, and cannot easily *stop*, under all the flying dungheaps of this new "Battle of the Giants" flinging their *Dung*-Pelion on their Dung-Ossa,[22] in these ballot-boxing, Nigger-emancipating, empty, dirt-eclipsed days: — no less a "work" than that of restoring GOD and whatever was Godlike in the traditions and recorded doings of Mankind; dolefully forgotten, or sham-remembered, as it has been, for long degraded and degrading hundreds of years, latterly! Actually this, if you understand it well. The essential, still awful and ever-blessed Fact of all that was meant by "God and the Godlike" to men's souls is again struggling to become clearly revealed; will extricate itself from what some of us, too irreverently in our impatience, call "Hebrew old-clothes";[23] and will again bless the Nations; and heal them from their basenesses, and unendurable woes, and wanderings in the company of madness! This Fact lodges, not exclusively or specially in Hebrew Garnitures, Old or New; but in the Heart of Nature and of Man forevermore. And is not less certain, here at this hour, than it ever was at any Sinai whatsoever. Kant's "Two things that strike me *dumb*"; — these are perceptible at Königsberg in Prussia, or at Charing-cross in London. And all eyes shall yet see them *better*; and the heroic Few, who are the salt of the earth, shall at length see them *well*. With results for everybody. A great "work" indeed; the greatness of which beggars all others!'

20. Activities of the Tractarians and their adherents. See Newman's *Apologia*.

21. *Cf. Hamlet*, I,iv,54.

22. Pelion and Ossa, mountains in Thessaly, which the Giants piled upon each other in their endeavor to reach heaven.

23. Carlyle's satirical allusion to religious orthodoxy, the creed, institutional Christianity, etc.

VII

Of the second, or silent Industrial Hero, I may now say something, as more within my limits and the reader's.

This Industrial hero, here and there recognisable and known to me, as developing himself, and as an opulent and dignified kind of man, is already almost an Aristocrat by class. And if his chivalry is still somewhat in the *Orson* form, he is already by intermarriage and otherwise coming into contact with the Aristocracy by title; and by degrees will acquire the fit *Valentinism*,[24] and other more important advantages there. He cannot do better than unite with this naturally noble kind of Aristocrat by title; the Industrial noble and this one are brothers born; called and impelled to coöperate and go together. Their united result is what we want from both. And the Noble of the Future, — if there be any such, as I well discern there must, — will have grown out of both. A new 'Valentine'; and perhaps a considerably improved, — by such *re*contact with his wild Orson kinsman, and with the earnest veracities this latter has learned in the Woods and the Dens of Bears.

The Practical 'man of genius' will probably *not* be altogether absent from the Reformed Parliament: — his *Make-believe*, the vulgar millionaire (truly a 'bloated' specimen, this!), is sure to be frequent there; and along with the multitude of *brass* guineas, it will be very salutary to have a *gold* one or two! — In or out of Parliament, our Practical hero will find no end of work ready for him. It is he that has to recivilise, out of its now utter savagery, the world of Industry; — think what

24. See note 13.

a set of items: To change *nomadic* contract into *permanent*; to annihilate the soot and dirt and squalid horror now defacing this England, once so clean and comely while it was poor; matters sanitary (and that not to the *body* only) for his people; matters governmental for them; matters etc., etc.: — no want of work for this Hero, through a great many generations yet! . . .

And now, if this is the fact, that you are not to purchase, to make or to vend any ware or product of the 'cheap and nasty' genus, and cannot in any case do it without sin, and even treason against the Maker of you, — consider what a *quantity* of sin, of treason, petty and high, must be accumulating in poor England every day! . . .

Take one small example only. London bricks are reduced to dry clay again in the course of sixty years, or sooner. *Bricks*, burn them rightly, build them faithfully, with mortar faithfully tempered, they will stand, I believe, barring earthquakes and cannon, for 6000 years if you like! Etruscan Pottery (*baked clay*, but rightly baked) is some 3000 years of age, and still fresh as an infant. Nothing I know of is more lasting than a well-made brick; — we have them here, at the head of this Garden (wall once of a Manor Park), which are in their third or fourth century (Henry Eighth's time, I was told), and still perfect in every particular.

Truly the state of London houses and London house-building, at this time, who shall express how detestable it is, how frightful! 'Not a house this of mine,' said one indignant gentleman, who had searched the London Environs all around for any bit of Villa, 'Alpha'-cottage or Omega, which were less inhuman, but found none: 'Not a built house, but a congeries of plastered bandboxes; shambling askew in all joints and corners of it; creaking, quaking under every step; — filling you with disgust and despair!' For there lies in it not the Physical mischief only, but the Moral too, which is far more. I have often sadly thought of this. That a fresh human soul should be born in such a place; born in the midst of a concrete mendacity; taught at every moment not to abhor a lie, but to think a lie all proper, the fixed custom and general law of man, and to twine its young affections round that sort of object!

England needs to be *rebuilt* once every seventy years. Build it once *rightly*, the expense will be, say, fifty per cent. more; but it will stand till the Day of Judgment. Every seventy years we shall save the expense of building all England over again! Say nine-tenths of the expense, say three-fourths of it (allowing for the changes necessary or permissible in the change of things); and in rigorous arithmetic, such is the saving possible to you; lying under your nose there; soliciting you to pick it up, — by the mere act of behaving like sons of Adam, and not like scandalous esurient Phantasms and sons of Bel and the Dragon.[25]

Here is a thrift of money, if you want money! The money-saving would (you can compute in what short length of time) pay your National Debt for you; bridge the ocean for you; wipe away your smoky nuisances, your muddy ditto, your miscellaneous ditto, and make the face of England clean again. . . .

IX

I always fancy there might much be done in the way of military Drill withal. Beyond all other schooling, and as supplement or even as succedaneum[26] for all other, one often wishes the entire Population could be thoroughly drilled; into co-operative movement, into individual behavior, correct, precise, and at once habit-

25. *Bel and the Dragon*: one of the apocryphal books of the Old Testament, detached from the Book of Daniel. Bel (Baal) was an idol worshipped by the Babylonians. The dragon was a living animal, which was also worshipped, but which burst asunder when Daniel fed it pitch, fat, and hair.

26. 'substitute.'

ual and orderly as mathematics, in all or in very many points, — and ultimately in the point of actual *Military Service*, should such be required of it!

That of commanding and obeying, were there nothing more, is it not the basis of all human culture; ought not all to have it; and how many ever do? I often say, The one Official Person, royal, sacerdotal, scholastic, governmental, of our times, who is still thoroughly a truth and a reality, and *not* in great part a hypothesis and worn-out humbug, proposing and attempting a duty which he fails to do, — is the Drill-Sergeant who is master of his work, and who will perform it. By Drill-Sergeant understand, not the man in three stripes alone; understand him as meaning all such men, up to the Turenne,[27] to the Friedrich of Prussia; [28] — *he* does his function, he is genuine; and from the highest to the lowest no one else does. Ask your poor King's Majesty, Captain-General of England, Defender of the Faith, and so much else; ask your poor Bishop, sacred Overseer of souls; your poor Lawyer, sacred Dispenser of justice; your poor Doctor, ditto of health: they will all answer, 'Alas, no, worthy sir, we are all of us unfortunately fallen not a little, some of us altogether, into the imaginary or quasi-humbug condition, and cannot help ourselves; he alone of the three stripes, or of the gorget and baton, *does* what he pretends to!' That is the melancholy fact; well worth considering at present. — Nay, I often consider farther, If, in any Country, the Drill-Sergeant himself fall into the partly imaginary or humbug condition (as is my frightful apprehension of him here in England, on survey of him in his marvellous Crimean expeditions,[29] marvellous Court-martial revelations, Newspaper controversies, and the like), what is to become of that Country and its thrice-miserable Drill-Sergeant? Reformed Parliament, I hear, has decided on a 'thorough Army reform,' as one of the first things. So that we shall at length have a perfect Army, field-worthy and correct in all points, thinks Reformed Parliament? Alas, yes; — and if the sky fall, we shall catch larks, too! —

But now, what is to hinder the acknowledged King in all corners of his territory, to introduce wisely a universal system of Drill, not military only, but human in all kinds; so that no child or man born in *his* territory might miss the benefit of it, — which would be immense to man, woman and child? I would begin with it, in mild, soft forms, so soon almost as my children were able to stand on their legs; and I would never wholly remit it till they had done with the world and me. Poor Wilderspin [30] knew something of this; the great Goethe [31] evidently knew a great deal! This of outwardly combined and plainly consociated Discipline, in simultaneous movement and action, which may be practical, symbolical, artistic, mechanical in all degrees and modes, — is one of the noblest capabilities of man (most sadly undervalued hitherto); and one he takes the greatest pleasure in exercising and unfolding, not to mention at all the invaluable benefit it would afford him if unfolded. From correct marching in line, to rhythmic dancing in cotillon or minuet, — and to infinitely higher degrees (that of symboling in concert your 'first reverence,' for instance, supposing reverence and sym-

28. See Carlyle's *History of Friedrich II. of Prussia Called the Great* (1858–65).

29. Allusion to the Crimean War (1854–56), especially to the two unsuccessful expeditions to the Baltic and to the seaport of Kamchatka in the north Pacific, in 1854.

30. Samuel Wilderspin (1792?–1866), advocate of the infant school system, who spent his life in developing the system throughout the United Kingdom; author of works on the education of the young.

31. Many of Carlyle's ideas on education were derived from Goethe's *Wilhelm Meister's Travels*, Chapters x and xi.

bol of it to be both sincere!) — there is a natural charm in it; the fulfilment of a deep-seated, universal desire, to all rhythmic social creatures! In man's heaven-born Docility, or power of being Educated, it is estimable as perhaps the deepest and richest element; or the next to that of music, of Sensibility to Song, to Harmony and Number, which some have reckoned the deepest of all. A richer mine than any in California for poor human creatures; richer by what a multiple; and hitherto as good as never opened, — worked only for the Fighting purpose. Assuredly I would not neglect the Fighting purpose; no, from sixteen to sixty, not a son of mine but should know the Soldier's function too, and be able to defend his native soil and self, in best perfection, when need came. But I should not begin with this; I should carefully end with this, after careful travel in innumerable fruitful fields by the way leading to this.

It is strange to me, stupid creatures of routine as we mostly are, how in all education of mankind, this of simultaneous Drilling into combined rhythmic action, for almost all good purposes, has been overlooked and left neglected by the elaborate and many-sounding Pedagogues and Professorial Persons we have had, for the long centuries past! It really should be set on foot a little; and developed gradually into the multiform opulent results it holds for us. As might well be done by an acknowledged king in his own territory, if he were wise. To all children of men it is such an entertainment, when you set them to it. I believe the vulgarest Cockney crowd, flung out millionfold on a Whit-Monday, with nothing but beer and dull folly to depend on for amusement, would at once kindle into something human, if you set them to do almost any regulated act in common. And would dismiss their beer and dull foolery, in the silent charm of rhythmic human companionship, in the practical feeling, probably new, that all of us are made on one pattern, and are, in an unfathomable way, brothers to one another.

Soldier-Drill, for fighting purposes, as I have said, would be the last or finishing touch of all these sorts of Drilling; and certainly the acknowledged king would reckon it not the least important to him, but even perhaps the most so, in these peculiar times. Anarchic Parliaments and Penny Newspapers might perhaps grow jealous of him; in any case, he would have to be cautious, punctilious, severely correct, and obey to the letter whatever laws and regulations they emitted on the subject. But that done, how could the most anarchic Parliament, or Penny Editor, think of forbidding any fellow-citizen such a manifest improvement on all the human creatures round him? Our wise hero Aristocrat, or acknowledged king in his own territory, would by no means think of employing his superlative private Field-regiment in levy of war against the most anarchic Parliament; but, on the contrary, might and would loyally help said Parliament in warring-down much anarchy worse than its own, and so gain steadily new favour from it. From it, and from all men and gods! And would have silently the consciousness, too, that with every new Disciplined Man he was widening the arena of *Anti*-Anarchy, of God-appointed *Order* in this world and Nation, — and was looking forward to a day, very distant probably, but certain as Fate. . . .

X

These are a kind of enterprises, hypothetical as yet, but possible evidently more or less, and, in all degrees of them, tending towards noble benefit to oneself and to all one's fellow-creatures; which a man born noble by title and by nature, with ample territories and revenues, and a life to dispose of as he pleased, might go into, and win honour by, even in the England that now is. To my fancy, they are bright little potential breaks, and *up*turnings, of

that disastrous cloud which now overshadows his best capabilities and him; — as every blackest cloud in this world has withal a 'silver lining'; and is, full surely, beshone by the Heavenly lights, if we *can* get to that other side of it! More of such fine possibilities I might add: that of 'Sanitary regulations,' for example; To see the divinely-appointed laws and conditions of Health, at last, *humanly* appointed as well; year after year, more exactly ascertained, rendered valid, habitually practised, in one's own Dominion; and the old adjective 'Healthy' once more becoming synonymous with 'Holy,' — what a conquest there! But I forbear; feeling well enough how visionary these things look; and how aerial, high and spiritual they *are*; little capable of seriously tempting, even for moments, any but the highest kinds of men. Few Noble Lords, I may believe, will think of taking this course; indeed not many, as Noble Lords now are, could do much good in it. Dilettantism will avail nothing in any of these enterprises; the law of them is, grim labour, earnest and continual; certainty of many contradictions, disappointments; a life, not of ease and pleasure, but of noble and sorrowful toil; the reward of it far off, — fit only for heroes! . . .

The Aristocracy, as a class, has as yet no thought of giving-up the game, or ceasing to be what in the language of flattery is called 'Governing Class'; nor should, till it have seen farther. In the better heads among them are doubtless grave misgivings; serious enough reflections rising, — perhaps not sorrowful altogether; for there must be questions withal, 'Was it so very blessed a function, then, that of "Governing" on the terms given?' But beyond doubt the vulgar Noble Lord intends fully to continue the game, — with doubly severe study of the new rules issued on it; — and will still, for a good while yet, go as heretofore into Electioneering, Parliamentary Engineering; and hope against hope to keep weltering atop by some method or other, and to make a fit existence for himself in that miserable old way. An existence filled with labour and anxiety, with disappointments and disgraces and futilities I can promise him, but with little or nothing else. Let us hope he will be wise to discern, and not continue the experiment too long!

He has lost his place in that element; nothing but services of a sordid and dishonourable nature, betrayal of his own Order, and of the noble interests of England, can gain him even momentary favour there. He cannot bridle the wild horse of a Plebs [32] any longer: — for a generation past, he has not even tried to bridle it; but has run panting and trotting meanly by the side of it, patting its stupid neck; slavishly plunging with it into any 'Crimean' or other slough of black platitudes it might reel towards, — anxious he, only not to be kicked away, not just yet; oh, not yet for a little while! Is this an existence for a man of any honour; for a man ambitious of more honour? I should say, not. And he still thinks to hang by the bridle, now when his Plebs is getting into the gallop? Hanging by its bridle, through what steep brambly places (scratching out the very *eyes* of him, as is often enough observable), through what malodorous quagmires and ignominious pools will the wild horse drag him, — till he quit hold! Let him quit, in Heaven's name. Better he should go yachting to Algeria, and shoot lions for an occupied existence: — or stay at home, and hunt rats? Why not? Is not, in strict truth, the Ratcatcher our one *real* British Nimrod [33] now! — Game-preserving, Highland deer-stalking, and the like, will soon all have ceased in this over-crowded Country; and I can see no other business for the vulgar Noble Lord, if he will continue vulgar! —

32. *Plebs*: the common people, the populace.

33. Nimrod 'was a mighty hunter before the Lord' (*Genesis*, x,9).

Thomas Babington Macaulay
1800–1859

MILTON

TOWARDS the close of the year 1823, Mr. Lemon, deputy keeper of the state papers, in the course of his researches among the presses of his office, met with a large Latin manuscript. With it were found corrected copies of the foreign despatches written by Milton while he filled the office of Secretary,[1] and several papers relating to the Popish Trials and the Rye-house Plot.[2] The whole was wrapped up in an envelope, superscribed *To Mr. Skinner, Merchant.*[3] On examination, the large manuscript proved to be the long-lost Essay on the Doctrines of Christianity, which, according to Wood and Toland,[4] Milton finished after the Restoration, and deposited with Cyriac Skinner. Skinner, it is well known, held the same political opinions with his illustrious friend. It is therefore probable, as Mr. Lemon conjectures, that he may have fallen under the suspicions of the Government during that persecution of the Whigs which followed the dissolution of the Oxford parliament,[5] and that, in consequence of a general seizure of his papers, this work may have been brought to the office in which it has been found. But whatever the adventures of the manuscript may have been, no doubt can exist that it is a genuine relic of the great poet.

Mr. Sumner who was commanded by his Majesty to edit and translate the treatise, has acquitted himself of his task in a manner honourable to his talents and to his character. His version is not indeed very easy or elegant; but it is entitled to the praise of clearness and fidelity. His notes abound with interesting quotations, and have the rare merit of really elucidating the text. The preface is evidently the work of a sensible and candid man, firm in his own religious opinions, and tolerant towards those of others.

The book itself will not add much to the fame of Milton. It is, like all his Latin works, well written, though not exactly in the style of the prize essays of Oxford and Cambridge. There is no elaborate imitation of classical antiquity, no scrupulous purity, none of the ceremonial cleanness which characterises the diction of our academical Pharisees. The author does not attempt to polish and brighten his composition into the Ciceronian gloss and brilliancy. He does not in short sacrifice sense and spirit to pedantic refinements. The nature of his subject compelled him to use many words

> 'That would have made Quintilian stare and gasp.'[6]

1 On the establishment of the Commonwealth in 1649, Milton became Latin Secretary, or Secretary of Foreign Tongues

2 The Popish Trials (1678), following the allegations of Titus Oates, and the Rye house plot (1683) belong to the reign of Charles II and occurred after Milton's death. See Macaulay's *History*, Chapter III, notes 56 and 58.

3 See Milton's sonnet *To Mr. Cyriack Skinner upon his Blindness*. The despatches were really bestowed upon Daniel, nephew of Cyriack.

4 Anthony à Wood (1632-95), antiquarian and historian. — John Toland (1670-1722), deistic thinker and writer, edited Milton's prose works (1698).

5 At the end of the Popish Trials, the Oxford Parliament was dissolved, marking the end of Whig efforts to exclude the Catholic James II and his children from the throne. Later, when a group of Whigs attempted to seize Charles II at Rye House (1683), adherents to the Whig party suffered considerable persecution.

6. The line quoted is from Milton's sonnet 'On the Detraction which has followed upon my writing certain Treatises.' — Quintilian was the most celebrated of Roman rhetoricians (fl. 1st century A.D.), author of *Institutiones Oratoriae*. — Milton's Latin prose included many non-classical words.

But he writes with as much ease and freedom as if Latin were his mother tongue; and, where he is least happy, his failure seems to arise from the carelessness of a native, not from the ignorance of a foreigner. We may apply to him what Denham with great felicity says of Cowley: 'He wears the garb, but not the clothes of the ancients.' [7]

Throughout the volume are discernible the traces of a powerful and independent mind, emancipated from the influence of authority, and devoted to the search of truth. Milton professes to form his system from the Bible alone; and his digest of scriptural texts is certainly among the best that have appeared. But he is not always so happy in his inferences as in his citations.

Some of the heterodox doctrines which he avows seemed to have excited considerable amazement, particularly his Arianism, and his theory on the subject of polygamy.[8] Yet we can scarcely conceive that any person could have read the *Paradise Lost* without suspecting him of the former; nor do we think that any reader, acquainted with the history of his life, ought to be much startled at the latter. The opinions which he has expressed respecting the nature of the Deity, the eternity of matter, and the observation of the Sabbath, might, we think, have caused more just surprise.[9]

But we will not go into the discussion of these points. The book, were it far more orthodox or far more heretical than it is, would not much edify or corrupt the present generation. The men of our time are not to be converted or perverted by quartos. A few more days, and this essay will follow the *Defensio Populi* [10] to the dust and silence of the upper shelf. The name of its author, and the remarkable circumstances attending its publication, will secure to it a certain degree of attention. For a month or two it will occupy a few minutes of chat in every drawing-room, and a few columns in every magazine; and it will then, to borrow the elegant language of the playbills, be withdrawn to make room for the forthcoming novelties.

We wish, however, to avail ourselves of the interest, transient as it may be, which this work has excited. The dexterous Capuchins [11] never choose to preach on the life and miracles of a saint, until they have awakened the devotional feelings of their auditors by exhibiting some relic of him, a thread of his garment, a lock of his hair, or a drop of his blood. On the same principle, we intend to take advantage of the late interesting discovery, and, while this memorial of a great and good man is still in the hands of all, to say something of his moral and intellectual qualities. Nor, we are convinced, will the severest of our readers blame us if, on an occasion like the present, we turn for a short time from the topics of the day, to commemorate, in all love and reverence, the genius and virtues of John Milton, the poet, the statesman, the philosopher, the glory of English literature, the champion and the martyr of English liberty.

It is by his poetry that Milton is best known; and it is of his poetry that we wish first to speak. By the general suffrage of the civilised world, his place has been assigned among the greatest masters of the art. His detractors, however, though outvoted, have not been silenced. There are many critics, and some of great name, who contrive in the same breath to extol the poems and to

7. See Sir John Denham (1615–69), *On Mr. Abraham Cowley* (1618–67), line 38.

8. The Arians, heretics of the 4th century, denied the Trinity, and held that Christ was merely the noblest of created beings and not the divine Son of God. — For Milton's ideas on marriage, see his pamphlet on *The Doctrine and Discipline of Divorce* (1643), and other tracts.

9. See *Paradise Lost*, vi,699ff.; vii,163ff.; x,68ff.; xi,20ff.

10. The tract which Milton published, while Latin Secretary, in 1651, vindicating the English people for the execution of Charles I.

11. Franciscan monks of the austere branch established in 1526, so called from the long, pointed cowl, or capuche, adopted as being the original form worn by St. Francis.

decry the poet. The works they acknowledge, considered in themselves, may be classed among the noblest productions of the human mind. But they will not allow the author to rank with those great men who, born in the infancy of civilisation, supplied, by their own powers, the want of instruction, and, though destitute of models themselves, bequeathed to posterity models which defy imitation. Milton, it is said, inherited what his predecessors created; he lived in an enlightened age; he received a finished education, and we must therefore, if we would form a just estimate of his powers, make large deductions in consideration of these advantages.

We venture to say, on the contrary, paradoxical as the remark may appear, that no poet has ever had to struggle with more unfavourable circumstances than Milton. He doubted, as he has himself owned, whether he had not been born 'an age too late.'[12] For this notion Johnson has thought fit to make him the butt of much clumsy ridicule. The poet, we believe, understood the nature of his art better than the critic. He knew that his poetical genius derived no advantage from the civilisation which surrounded him, or from the learning which he had acquired; and he looked back with something like regret to the ruder age of simple words and vivid impressions.

We think that, as civilisation advances, poetry almost necessarily declines. Therefore, though we fervently admire those great works of imagination which have appeared in dark ages, we do not admire them the more because they have appeared in dark ages. On the contrary, we hold that the most wonderful and splendid proof of genius is a great poem produced in a civilised age. We cannot understand why those who believe in that most orthodox article of literary faith, that the earliest poets are generally the best, should wonder at the rule as if it were the exception. Surely the uniformity of the phænomenon indicates a corresponding uniformity in the cause.

The fact is, that common observers reason from the progress of the experimental sciences to that of imitative arts. The improvement of the former is gradual and slow. Ages are spent in collecting materials, ages more in separating and combining them. Even when a system has been formed, there is still something to add, to alter, or to reject. Every generation enjoys the use of a vast hoard bequeathed to it by antiquity, and transmits that hoard, augmented by fresh acquisitions, to future ages. In these pursuits, therefore, the first speculators lie under great disadvantages, and, even when they fail, are entitled to praise. Their pupils, with far inferior intellectual powers, speedily surpass them in actual attainments. Every girl who has read Mrs. Marcet's[13] little dialogues on Political Economy could teach Montague or Walpole many lessons in finance.[14] Any intelligent man may now, by resolutely applying himself for a few years to mathematics, learn more than the great Newton[15] knew after half a century of study and meditation.

But it is not thus with music, with painting, or with sculpture. Still less is it thus with poetry. The progress of refinement rarely supplies these arts with better objects of imitation. It may indeed improve the instruments which are necessary to the mechanical operations of the musician, the sculptor, and the painter. But language, the machine[16] of the poet, is best fitted

12. See *Paradise Lost*, ix,41-46.

13. Mrs. Jane Marcet (1769–1858), of Swiss birth, writer for the young, author of popular scientific textbooks. Macaulay admired her *Conversations on Political Economy* (1816).

14. Charles Montagu, Earl of Halifax (1661-1715), and Sir Robert Walpole (1676–1745), eminent statesmen of the reigns of William III and Anne, and George I and George II, respectively, were great students of finance.

15. Sir Isaac Newton (1642–1727), greatest mathematician of his day, especially famous for his formulation of the theory of gravitation.

16. *i.e.* the instrument.

for his purpose in its rudest state. Nations, like individuals, first perceive, and then abstract. They advance from particular images to general terms. Hence the vocabulary of an enlightened society is philosophical, that of a half-civilised people is poetical.

This change in the language of men is partly the cause and partly the effect of a corresponding change in the nature of their intellectual operations, of a change by which science gains and poetry loses. Generalisation is necessary to the advancement of knowledge; but particularity is indispensable to the creations of the imagination. In proportion as men know more and think more, they look less at individuals and more at classes. They therefore make better theories and worse poems. They give us vague phrases instead of images, and personified qualities instead of men. They may be better able to analyse human nature than their predecessors. But analysis is not the business of the poet. His office is to portray, not to dissect. He may believe in a moral sense, like Shaftesbury; [17] he may refer all human actions to self-interest, like Helvetius; [18] or he may never think about the matter at all. His creed on such subjects will no more influence his poetry, properly so called, than the notions which a painter may have conceived respecting the lacrymal glands, or the circulation of the blood will affect the tears of his Niobe,[19] or the blushes of his Aurora.[20]

17. Anthony Ashley Cooper, 3rd Earl of Shaftesbury (1671–1713), moral philosopher, possibly the originator of the phrase 'moral sense' in its philosophical signification; opponent of the 'selfish' theory of conduct advocated by Hobbes; author of *Characteristics of Men, Manners, Opinions, Times* (1711, 1713).

18. Claude Adrien Helvetius (1715–71), French philosopher and literary man, whose *De l'Esprit* was condemned as immoral because it maintained that enlightened selfishness is a sufficient basis for morality.

19. Daughter of Amphion, King of Thebes, mother of numerous children who were slain by Apollo and Artemis, Leto's children, when their mother grew jealous of Niobe.

20. Goddess of the morning.

If Shakespeare had written a book on the motives of human actions, it is by no means certain that it would have been a good one. It is extremely improbable that it would have contained half so much able reasoning on the subject as is to be found in the *Fable of the Bees*.[21] But could Mandeville have created an Iago? Well as he knew how to resolve characters into their elements, would he have been able to combine those elements in such a manner as to make up a man, a real, living, individual man?

Perhaps no person can be a poet, or can even enjoy poetry, without a certain unsoundness of mind, if anything which gives so much pleasure ought to be called unsoundness. By poetry we mean not all writing in verse, nor even all good writing in verse. Our definition excludes many metrical compositions which, on other grounds, deserve the highest praise. By poetry we mean the art of employing words in such a manner as to produce an illusion on the imagination, the art of doing by means of words what the painter does by means of colours. Thus the greatest of poets has described it, in lines universally admired for the vigour and felicity of their diction, and still more valuable on account of the just notion which they convey of the art in which he excelled:

'As the imagination bodies forth
The forms of things unknown, the poet's pen
Turns them to shapes, and gives to airy nothing
A local habitation and a name.' [22]

These are the fruits of the 'fine frenzy' which he ascribes to the poet — a fine frenzy doubtless, but still a frenzy. Truth, indeed, is essential to poetry; but it is the

21. By Bernard de Mandeville (1670?–1733), in whose poem vice is represented as beneficial to society, *e.g.* private luxury, because it makes business for others, is a public benefit. Mandeville and Shaftesbury represent the two extremes of popular philosophy in their day.

22. See *A Midsummer-Night's Dream*, V,i,14–17.

truth of madness. The reasonings are just; but the premises are false. After the first suppositions have been made, everything ought to be consistent; but those first suppositions require a degree of credulity which almost amounts to a partial and temporary derangement of the intellect. Hence of all people children are the most imaginative. They abandon themselves without reserve to every illusion. Every image which is strongly presented to their mental eye produces on them the effect of reality. No man, whatever his sensibility may be, is ever affected by *Hamlet* or *Lear*, as a little girl is affected by the story of poor Red Riding-hood. She knows that it is all false, that wolves cannot speak, that there are no wolves in England. Yet in spite of her knowledge she believes; she weeps; she trembles; she dares not go into a dark room lest she should feel the teeth of the monster at her throat. Such is the despotism of the imagination over uncultivated minds.

In a rude state of society men are children with a greater variety of ideas. It is therefore in such a state of society that we may expect to find the poetical temperament in its highest perfection. In an enlightened age there will be much intelligence, much science, much philosophy, abundance of just classification and subtle analysis, abundance of wit and eloquence, abundance of verses, and even of good ones; but little poetry. Men will judge and compare; but they will not create. They will talk about the old poets, and comment on them, and to a certain degree enjoy them. But they will scarcely be able to conceive the effect which poetry produced on their ruder ancestors, the agony, the ecstasy, the plenitude of belief. The Greek Rhapsodists,[23] according to Plato, could scarce recite Homer without falling into convulsions. The Mohawk hardly feels the scalping knife while he shouts his death-song. The power which the ancient bards of Wales and Germany exercised over their auditors seems to modern readers almost miraculous. Such feelings are very rare in a civilised community, and most rare among those who participate most in its improvements. They linger longest amongst the peasantry.

Poetry produces an illusion on the eye of the mind, as a magic lantern produces an illusion on the eye of the body. And, as the magic lantern acts best in a dark room, poetry effects its purpose most completely in a dark age. As the light of knowledge breaks in upon its exhibitions, as the outlines of certainty become more and more definite, and the shades of probability more and more distinct, the hues and lineaments of the phantoms which the poet calls up grow fainter and fainter. We cannot unite the incompatible advantages of reality and deception, the clear discernment of truth and the exquisite enjoyment of fiction.

He who, in an enlightened and literary society, aspires to be a great poet must first become a little child, he must take to pieces the whole web of his mind. He must unlearn much of that knowledge which has perhaps constituted hitherto his chief title to superiority. His very talents will be a hindrance to him. His difficulties will be proportioned to his proficiency in the pursuits which are fashionable among his contemporaries; and that proficiency will in general be proportioned to the vigour and activity of his mind. And it is well if, after all his sacrifices and exertions, his works do not resemble a lisping man or a modern ruin. We have seen in our own time great talents, intense labour, and long meditation, employed in this struggle against the spirit of the age, and employed, we will not say absolutely in vain, but with dubious success and feeble applause.[24]

If these reasonings be just, no poet has ever triumphed over greater difficulties than Milton. He received a learned educa-

24. Allusion to Wordsworth, Coleridge, and Southey, for whose work Macaulay had a limited appreciation.

tion: he was a profound and elegant classical scholar: he had studied all the mysteries of Rabbinical literature: [25] he was intimately acquainted with every language of modern Europe, from which either pleasure or information was then to be derived. He was perhaps the only great poet of later times who has been distinguished by the excellence of his Latin verse. The genius of Petrarch [26] was scarcely of the first order; and his poems in the ancient language, though much praised by those who have never read them, are wretched compositions. Cowley,[27] with all his admirable wit and ingenuity, had little imagination: nor indeed do we think his classical diction comparable to that of Milton. The authority of Johnson is against us on this point. But Johnson had studied the bad writers of the middle ages till he had become utterly insensible to the Augustan elegance,[28] and was as ill qualified to judge between two Latin styles as a habitual drunkard to set up for a wine-taster.

Versification in a dead language is an exotic, a far-fetched, costly, sickly, imitation of that which elsewhere may be found in healthful and spontaneous perfection. The soils on which this rarity flourishes are in general as ill suited to the production of vigorous native poetry as the flower-pots of a hot-house to the growth of oaks. That the author of the *Paradise Lost* should have written the *Epistle to Manso* [29] was truly wonderful. Never before were such marked originality and such exquisite mimicry found together. Indeed in all the Latin poems of Milton the artificial manner indispensable to such works is admirably preserved, while, at the same time, his genius gives to them a peculiar charm, an air of nobleness and freedom, which distinguishes them from all other writings of the same class. They remind us of the amusements of those angelic warriors who composed the cohort of Gabriel:

'About him exercised heroic games
The unarmed youth of heaven. But o'er their heads
Celestial armoury, shields, helms, and spears
Hung high, with diamond flaming, and with gold.' [30]

We cannot look upon the sportive exercises for which the genius of Milton ungirds itself, without catching a glimpse of the gorgeous and terrible panoply which it is accustomed to wear. The strength of his imagination triumphed over every obstacle. So intense and ardent was the fire of his mind, that it not only was not suffocated beneath the weight of fuel, but penetrated the whole superincumbent mass with its own heat and radiance.

It is not our intention to attempt anything like a complete examination of the poetry of Milton. The public has long been agreed as to the merit of the most remarkable passages, the incomparable harmony of the numbers, and the excellence of that style, which no rival has been able to equal, and no parodist to degrade, which displays in their highest perfection the idiomatic powers of the English tongue, and to which every ancient and every modern language has contributed something of grace, of energy, or of music. In the vast field of criticism on which we are entering, innumerable reapers have already put their sickles. Yet the harvest is so abundant that

27. Abraham Cowley (1618–67), one of the 'metaphysical poets,' introduced the fashion of the rhetorical ode. His reputation at one time rivalled that of Milton.
28. *i.e.* the literary elegance of the reign of the Emperor Augustus (63 B.C.–A.D. 14), in Horace, Virgil, and Cicero.
29. Milton's Latin epistle, written at the end of his visit to Italy (1638–39), to Giovanni Battista Manso, Marquis of Villa, a distinguished man of letters who had shown Milton much kindness.
30. Quoted, somewhat inaccurately, from *Paradise Lost*, iv,551–54.

the negligent search of a straggling gleaner may be rewarded with a sheaf.

The most striking characteristic of the poetry of Milton is the extreme remoteness of the associations by means of which it acts on the reader. Its effect is produced, not so much by what it expresses, as by what it suggests; not so much by the ideas which it directly conveys, as by other ideas which are connected with them. He electrifies the mind through conductors. The most unimaginative man must understand the *Iliad*. Homer gives him no choice, and requires from him no exertion, but takes the whole upon himself, and sets the images in so clear a light, that it is impossible to be blind to them. The works of Milton cannot be comprehended or enjoyed, unless the mind of the reader co-operate with that of the writer. He does not paint a finished picture, or play for a mere passive listener. He sketches, and leaves others to fill up the outline. He strikes the keynote, and expects his hearer to make out the melody.

We often hear of the magical influence of poetry. The expression in general means nothing: but, applied to the writings of Milton, it is most appropriate. His poetry acts like an incantation. Its merit lies less in its obvious meaning than in its occult power. There would seem, at first sight, to be no more in his words than in other words. But they are words of enchantment. No sooner are they pronounced, than the past is present and the distant near. New forms of beauty start at once into existence, and all the burial-places of the memory give up their dead. Change the structure of the sentence, substitute one synonym for another, and the whole effect is destroyed. The spell loses its power: and he who should then hope to conjure with it would find himself as much mistaken as Cassim in the Arabian tale, when he stood crying, 'Open Wheat,' 'Open Barley,' to the door which obeyed no sound but 'Open Sesame.'[31] The miserable failure of Dryden in his attempt to translate into his own diction some parts of the *Paradise Lost*, is a remarkable instance of this.[32]

In support of these observations we may remark, that scarcely any passages in the poems of Milton are more generally known or more frequently repeated than those which are little more than muster-rolls of names. They are not always more appropriate or more melodious than other names. Every one of them is the first link in a long chain of associated ideas. Like the dwelling-place of our infancy revisited in manhood, like the song of our country heard in a strange land, they produce upon us an effect wholly independent of their intrinsic value. One transports us back to a remote period of history. Another places us among the novel scenes and manners of a distant region. A third evokes all the dear classical recollections of childhood, the schoolroom, the dog-eared Virgil, the holiday, and the prize. A fourth brings before us the splendid phantoms of chivalrous romance, the trophied lists, the embroidered housings, the quaint devices, the haunted forests, the enchanted gardens, the achievements of enamoured knights, and the smiles of rescued princesses.

In none of the works of Milton is his peculiar manner more happily displayed than in the *Allegro* and the *Penseroso*. It is impossible to conceive that the mechanism of language can be brought to a more exquisite degree of perfection. These poems differ from others, as attar of roses differs from ordinary rose water, the close packed essence from the thin diluted mixture. They are indeed not so much poems,

31. See the *Arabian Nights*, 'Ali Baba and the Forty Thieves.'—'Open Sesame' was the magic phrase which opened the robbers' cave, which was full of plunder. Sesame is a seed-bearing plant which grows in the East. Cassim, Ali's brother, had forgotten the magic words, and fumbled with 'Open Wheat,' 'Open Barley,' etc.

32. Dryden, as Poet Laureate, obtained Milton's permission to turn *Paradise Lost* into an opera, in rhymed couplets, *The State of Innocence and the Fall of Man* (printed in 1677, but never acted).

as collections of hints, from each of which the reader is to make out a poem for himself. Every epithet is a text for a stanza.

The *Comus* and the *Samson Agonistes* are works which, though of very different merit, offer some marked points of resemblance. Both are lyric poems in the form of plays. There are perhaps no two kinds of composition so essentially dissimilar as the drama and the ode. The business of the dramatist is to keep himself out of sight, and to let nothing appear but his characters. As soon as he attracts notice to his personal feelings, the illusion is broken. The effect is as unpleasant as that which is produced on the stage by the voice of a prompter or the entrance of a scene-shifter. Hence it was, that the tragedies of Byron were his least successful performances. They resemble those pasteboard pictures invented by the friend of children, Mr. Newbery,[33] in which a single moveable head goes round twenty different bodies, so that the same face looks out upon us successively, from the uniform of a hussar, the furs of a judge, and the rags of a beggar. In all the characters, patriots and tyrants, haters and lovers, the frown and sneer of Harold[34] were discernible in an instant. But this species of egotism, though fatal to the drama, is the inspiration of the ode. It is the part of the lyric poet to abandon himself, without reserve, to his own emotions.

Between these hostile elements many great men have endeavoured to effect an amalgamation, but never with complete success. The Greek Drama, on the model of which the *Samson* was written, sprang from the Ode. The dialogue was ingrafted on the chorus, and naturally partook of its character. The genius of the greatest of the Athenian dramatists[35] co-operated with the circumstances under which tragedy made its first appearance. Æschylus was, head and heart, a lyric poet. In his time, the Greeks had far more intercourse with the East than in the days of Homer; and they had not yet acquired that immense superiority in war, in science, and in the arts, which, in the following generation, led them to treat the Asiatics with contempt. From the narrative of Herodotus[36] it should seem that they still looked up, with the veneration of disciples, to Egypt and Assyria. At this period, accordingly, it was natural that the literature of Greece should be tinctured with the Oriental style. And that style, we think, is discernible in the works of Pindar[37] and Æschylus. The latter often reminds us of the Hebrew writers. The book of Job, indeed, in conduct and diction, bears a considerable resemblance to some of his dramas. Considered as plays, his works are absurd; considered as choruses, they are above all praise. If, for instance, we examine the address of Clytemnestra to Agamemnon on his return, or the description of the seven Argive chiefs,[38] by the principles of dramatic writing, we shall instantly condemn them as monstrous. But if we forget the characters, and think only of the poetry, we shall admit that it has never been surpassed in energy and magnificence. Sophocles made the Greek Drama as dramatic as was consistent with its original form. His portraits of men have a sort of similarity; but it is the similarity

33. John Newbery (1713–67), publisher and originator of children's books; friend of Dr. Johnson, Goldsmith, Christopher Smart.

34. *i.e.* Childe Harold, the chief figure in Byron's partly autobiographical poem *Childe Harold's Pilgrimage.*

35. The three great writers of Greek tragedy were, of course, Aeschylus (525–456 B.C.), Sophocles (495–406 B.C.), and Euripides (480–406 B.C.).

36. Herodotus (484?–?425 B.C.), 'the father of History,' wrote a narrative of the struggle between the Greeks and their Eastern enemies digressing freely into the history and legends of Egypt and the East.

37. Pindar (522–442 B.C.), contemporary of Aeschylus, and the greatest of the Greek lyric poets.

38. Allusion to Aeschylus's *Agamemnon* and *The Seven against Thebes.*

not of a painting, but of a bas-relief. It suggests a resemblance; but it does not produce an illusion. Euripides attempted to carry the reform further. But it was a task far beyond his powers, perhaps beyond any powers. Instead of correcting what was bad, he destroyed what was excellent. He substituted crutches for stilts, bad sermons for good odes.

Milton, it is well known, admired Euripides highly, much more highly than, in our opinion, Euripides deserved. Indeed the caresses which this partiality leads our countrymen to bestow on 'sad Electra's poet,'[39] sometimes remind us of the beautiful Queen of Fairy-land kissing the long ears of Bottom.[40] At all events, there can be no doubt that this veneration for the Athenian, whether just or not, was injurious to the *Samson Agonistes*. Had Milton taken Æschylus for his model, he would have given himself up to the lyric inspiration, and poured out profusely all the treasures of his mind, without bestowing a thought on those dramatic proprieties which the nature of the work rendered it impossible to preserve. In the attempt to reconcile things in their own nature inconsistent he has failed, as every one else must have failed. We cannot identify ourselves with the characters, as in a good play. We cannot identify ourselves with the poet, as in a good ode. The conflicting ingredients, like an acid and an alkali mixed, neutralise each other. We are by no means insensible to the merits of this celebrated piece, to the severe dignity of the style, the graceful and pathetic solemnity of the opening speech, or the wild and barbaric melody which gives so striking an effect to the choral passages. But we think it, we confess, the least successful effort of the genius of Milton.

The *Comus* is framed on the model of the Italian Masque,[41] as the *Samson* is framed on the model of the Greek Tragedy. It is certainly the noblest performance of the kind which exists in any language. It is as far superior to the *Faithful Shepherdess*[42] as the *Faithful Shepherdess* is to the *Aminta*, or the *Aminta* to the *Pastor Fido*. It was well for Milton that he had here no Euripides to mislead him. He understood and loved the literature of modern Italy. But he did not feel for it the same veneration which he entertained for the remains of Athenian and Roman poetry, consecrated by so many lofty and endearing recollections. The faults, moreover, of his Italian predecessors were of a kind to which his mind had a deadly antipathy. He could stoop to a plain style, sometimes even to a bald style; but false brilliancy was his utter aversion. His muse had no objection to a russet attire; but she turned with disgust from the finery of Guarini, as tawdry and as paltry as the rags of a chimney-sweeper on May-day. Whatever ornaments she wears are of massive gold, not only dazzling to the sight, but capable of standing the severest test of the crucible.

Milton attended in the *Comus* to the distinction which he afterwards neglected in the *Samson*. He made his Masque what it ought to be, essentially lyrical, and dramatic only in semblance. He has not attempted a fruitless struggle against a defect inherent in the nature of that species

39. A phrase from Milton's sonnet, 'When the Assault was Intended to the City': the allusion is to Euripides, author of *Electra*.

40. See *A Midsummer-Night's Dream*, III,i; IV,i; etc.

41. A form of dramatic performance, introduced into England during the 16th century, combining music, song, and dancing, with appropriate scenery and dress; usually based on some ancient classical tale or myth; employed as a private theatrical for festive and ceremonial celebrations. The chief appeal was to the eye, though the spoken parts grew in importance, and the scenery grew more elaborate. Milton wrote *Comus* for the Earl of Bridgewater, to celebrate his entry upon the presidency of Wales and the Marches.

42. By John Fletcher (1579–1625). *The Faithful Shepherdess* (c.1609) owes something to *Pastor Fido* (by Guarini [1537–1612]), which in turn is indebted to *Aminta* (by Tasso [1544–95]). All were pastoral plays of the conventional type.

of composition; and he has therefore succeeded, wherever success was not impossible. The speeches must be read as majestic soliloquies; and he who so reads them will be enraptured with their eloquence, their sublimity, and their music. The interruptions of the dialogue, however, impose a constraint upon the writer, and break the illusion of the reader. The finest passages are those which are lyric in form as well as in spirit. 'I should much commend,' says the excellent Sir Henry Wotton [43] in a letter to Milton, 'the tragical part [44] if the lyrical did not ravish me with a certain Dorique delicacy [45] in your songs and odes, whereunto, I must plainly confess to you, I have seen yet nothing parallel in our language.' The criticism was just. It is when Milton escapes from the shackles of the dialogue, when he is discharged from the labour of uniting two incongruous styles, when he is at liberty to indulge his choral raptures without reserve, that he rises even above himself. Then, like his own good Genius [46] bursting from the earthly form and weeds of Thyrsis, he stands forth in celestial freedom and beauty; he seems to cry exultingly,

> 'Now my task is smoothly done,
> I can fly or I can run,' [47]

to skim the earth, to soar above the clouds, to bathe in the Elysian dew of the rainbow, and to inhale the balmy smells of nard and cassia, which the musky winds of the zephyr scatter through the cedared alleys of the Hesperides.[48]

There are several of the minor poems of Milton on which we would willingly make a few remarks. Still more willingly would we enter into a detailed examination of that admirable poem, the *Paradise Regained*, which, strangely enough, is scarcely ever mentioned except as an instance of the blindness of the parental affection which men of letters bear towards the offspring of their intellects. That Milton was mistaken in preferring this work, excellent as it is, to the *Paradise Lost*, we readily admit. But we are sure that the superiority of the *Paradise Lost* to the *Paradise Regained* is not more decided, than the superiority of the *Paradise Regained* to every poem which has since made its appearance. Our limits, however, prevent us from discussing the point at length. We hasten on to that extraordinary production which the general suffrage of critics has placed in the highest class of human compositions.

The only poem of modern times which can be compared with the *Paradise Lost* is the *Divine Comedy*. The subject of Milton, in some points, resembled that of Dante; but he has treated it in a widely different manner. We cannot, we think, better illustrate our opinion respecting our own great poet, than by contrasting him with the father of Tuscan literature.[49]

The poetry of Milton differs from that of Dante, as the hieroglyphics of Egypt differed from the picture-writing of Mexico. The images which Dante employs speak for themselves; they stand simply for what they are. Those of Milton have a signification which is often discernible

43. Sir Henry Wotton (1568–1639), diplomatist and poet, friend and patron of men of letters.
44. *i.e.* the dialogue.
45. Delicacy such as that of Theocritus (3rd century B.C.), first and greatest of pastoral poets, who wrote in the Doric dialect of Greek.
46. The attendant spirit in *Comus*.
47. Quoted from the final song of *Comus*.
48. *nard*: a fragrant ointment from a plant of the same name; used in the East. — *cassia*: bark of the cassia shrub or tree, very fragrant, somewhat like cinnamon in odor. (See *Psalms*, xlv,8; *Mark*, xiv,3.) — *Hesperides*: the celebrated guardians of the golden apples which Ge (Earth) gave to Juno on her marriage with Jupiter; the term sometimes is used to refer to the garden in which the apples grew. — The phrases with which Macaulay's paragraph ends are taken from the final song of *Comus*.
49. The *Divina Commedia* of Dante (1265–1321) was begun about 1300, and was the first great poem written in his native tongue, making the poet, as Macaulay says, the 'father of Tuscan literature.'

only to the initiated. Their value depends less on what they directly represent than on what they remotely suggest. However strange, however grotesque, may be the appearance which Dante undertakes to describe, he never shrinks from describing it. He gives us the shape, the colour, the sound, the smell, the taste; he counts the numbers; he measures the size. His similes are the illustrations of a traveller. Unlike those of other poets, and especially of Milton, they are introduced in a plain, business-like manner; not for the sake of any beauty in the objects from which they are drawn; not for the sake of any ornament which they may impart to the poem; but simply in order to make the meaning of the writer as clear to the reader as it is to himself. The ruins of the precipice which led from the sixth to the seventh circle of hell were like those of the rock which fell into the Adige on the south of Trent. The cataract of Phlegethon was like that of Aqua Cheta at the monastery of St. Benedict. The place where the heretics were confined in burning tombs resembled the vast cemetery of Arles.[50]

Now let us compare with the exact details of Dante the dim intimations of Milton. We will cite a few examples. The English poet has never thought of taking the measure of Satan. He gives us merely a vague idea of vast bulk. In one passage the fiend lies stretched out huge in length, floating many a rood, equal in size to the earth-born enemies of Jove, or to the sea-monster which the mariner mistakes for an island. When he addresses himself to battle against the guardian angels, he stands like Teneriffe or Atlas: his stature reaches the sky.[51] Contrast with these descriptions the lines in which Dante has described the gigantic spectre of Nimrod.[52] 'His face seemed to me as long and as broad as the ball of St. Peter's at Rome; and his other limbs were in proportion; so that the bank, which concealed him from the waist downwards, nevertheless showed so much of him, that three tall Germans would in vain have attempted to reach to his hair.'[53] We are sensible that we do no justice to the admirable style of the Florentine poet. But Mr. Cary's translation is not at hand; and our version, however rude, is sufficient to illustrate our meaning.[54]

Once more, compare the lazar-house in the eleventh book of the *Paradise Lost* with the last ward of Malebolge in Dante. Milton avoids the loathsome details, and takes refuge in indistinct but solemn and tremendous imagery. Despair hurrying from couch to couch to mock the wretches with his attendance, Death shaking his dart over them, but, in spite of supplications, delaying to strike. What says Dante? 'There was such a moan there as there would be if all the sick who, between July and September, are in the hospitals of Valdichiana, and of the Tuscan swamps, and of Sardinia, were in one pit together; and such a stench was issuing forth as is wont to issue from decayed limbs.'[55]

We will not take upon ourselves the invidious office of settling precedency be-

50. Allusions to Dante's *Inferno*, xii,4–10; xvi,94–104; ix,112–16. — Trent is on the Adige River in northern Italy. — Phlegethon was the River of Fire in Hades (Greek mythology). — Aqua Cheta is the name given to the upper waters of the river Montone, which later flows a little south of Ravenna, where Dante spent the last years of his life. — *Arles*: a town on the Rhone, situated in south-east France, with a Roman cemetery.

51. Allusions, in turn, to *Paradise Lost*, i,194–209; iv,987–88. — *the sea-monster*: see the story of Sinbad, in the *Arabian Nights*. — *Teneriffe*: a volcano in the Canary Islands. — *Atlas*: the legendary solitary mountain which bore up the heavens.

52. Nimrod, the 'mighty hunter.' See *Genesis*, x,8–10.

53. The *Inferno*, xxi,58–64.

54. Henry Francis Cary (1772–1844) published his blank-verse translation of the three parts of the *Divine Comedy* in 1805 and 1812; it is still widely read and admired.

55. See *Paradise Lost*, xi,477–93; the *Inferno*, xxix,46–51. — *Lazar house*: hospital for lepers. — *Malebolge*: the eighth circle in Dante's Hell, where the fraudulent or treacherous were punished.

tween two such writers. Each in his own department is incomparable; and each, we may remark, has wisely, or fortunately, taken a subject adapted to exhibit his peculiar talent to the greatest advantage. The *Divine Comedy* is a personal narrative. Dante is the eye-witness and ear-witness of that which he relates. He is the very man who has heard the tormented spirits crying out for the second death, who has read the dusky characters on the portal within which there is no hope, who has hidden his face from the terrors of the Gorgon, who has fled from the hooks and the seething pitch of Barbariccia and Draghignazzo. His own hands have grasped the shaggy sides of Lucifer. His own feet have climbed the mountain of expiation.[56] His own brow has been marked by the purifying angel. The reader would throw aside such a tale in incredulous disgust, unless it were told with the strongest air of veracity, with a sobriety even in its horrors, with the greatest precision and multiplicity in its details. The narrative of Milton in this respect differs from that of Dante, as the adventures of Amadis [57] differ from those of Gulliver.[58] The author of Amadis would have made his book ridiculous if he had introduced those minute particulars which give such a charm to the work of Swift, the nautical observations, the affected delicacy about names, the official documents transcribed at full length, and all the unmeaning gossip and scandal of the court, springing out of nothing, and tending to nothing. We are not shocked at being told that a man who lived, nobody knows when, saw many very strange sights, and we can easily abandon ourselves to the illusion of the romance. But when Lemuel Gulliver, surgeon, resident at Rotherhithe, tells us of pygmies and giants, flying islands, and philosophising horses, nothing but such circumstantial touches could produce for a single moment a deception on the imagination.

Of all the poets who have introduced into their works the agency of supernatural beings, Milton has succeeded best. Here Dante decidedly yields to him: and as this is a point on which many rash and ill-considered judgments have been pronounced, we feel inclined to dwell on it a little longer. The most fatal error which a poet can possibly commit in the management of his machinery, is that of attempting to philosophise too much. Milton has been often censured for ascribing to spirits many functions of which spirits must be incapable. But these objections, though sanctioned by eminent names,[59] originate, we venture to say, in profound ignorance of the art of poetry.

What is spirit? What are our own minds, the portion of spirit with which we are best acquainted? We observe certain phænomena. We cannot explain them into material causes. We therefore infer that there exists something which is not material. But of this something we have no idea. We can define it only by negatives. We can reason about it only by symbols. We use the word; but we have no image of the thing; and the business of poetry is with images, and not with words. The poet uses words indeed; but they are merely the instruments of his art, not its objects. They are the materials which he is to dispose in such a manner as to present a picture to the mental eye. And if they are not so disposed, they are no more entitled to be called poetry than a bale of canvas and a box of colours to be called a painting.

Logicians may reason about abstractions. But the great mass of men must have images. The strong tendency of the

56. See the *Inferno*, i,117; iii,9; ix,52–60; xxi and xxii; xxxiv,70–80; ix,112–14. — *Gorgon*: or the Medusa, who turned to stone all who looked on her. — *Barbariccia and Draghignazzo*: the two demons who, with hooks and forks, drove the guilty into Malebolge.

57. Amadis of Gaul, knight-errant, hero of famous medieval romances.

58. Of Swift's *Gulliver's Travels* (1726).

59. Such as that of Dr. Johnson in his *Life of Milton*.

multitude in all ages and nations to idolatry can be explained on no other principle. The first inhabitants of Greece, there is reason to believe, worshipped one invisible Deity. But the necessity of having something more definite to adore produced, in a few centuries, the innumerable crowd of Gods and Goddesses. In like manner the ancient Persians thought it impious to exhibit the Creator under a human form. Yet even these transferred to the Sun the worship which, in speculation, they considered due only to the Supreme Mind. The history of the Jews is the record of a continued struggle between pure Theism,[60] supported by the most terrible sanctions, and the strangely fascinating desire of having some visible and tangible object of adoration. Perhaps none of the secondary causes which Gibbon has assigned for the rapidity with which Christianity spread over the world,[61] while Judaism scarcely ever acquired a proselyte, operated more powerfully than this feeling. God, the uncreated, the incomprehensible, the invisible, attracted few worshippers. A philosopher might admire so noble a conception; but the crowd turned away in disgust from words which presented no image to their minds. It was before Deity embodied in a human form, walking among men, partaking of their infirmities, leaning on their bosoms, weeping over their graves, slumbering in the manger, bleeding on the cross, that the prejudices of the Synagogue,[62] and the doubts of the Academy, and the pride of the Portico,[63] and the fasces of the Lictor,[64] and the swords of thirty legions, were humbled in the dust. Soon after Christianity had achieved its triumph,[65] the principle which had assisted it began to corrupt it. It became a new Paganism. Patron saints assumed the offices of household gods. St. George [66] took the place of Mars. St. Elmo [67] consoled the mariner for the loss of Castor and Pollux. The Virgin Mother and Cecilia [68] succeeded to Venus and the Muses. The fascination of sex and loveliness was again joined to that of celestial dignity; and the homage of chivalry was blended with that of religion. Reformers have often made a stand against these feelings; but never with more than apparent and partial success. The men who demolished the images in cathedrals have not always been able to demolish those which were enshrined in their minds. It would not be difficult to show that in politics the same rule holds good. Doctrines, we are afraid, must generally be embodied before they can excite a strong public feeling. The multitude is more easily interested for the most unmeaning badge, or the most insignificant name, than for the most important principle.

From these considerations, we infer that no poet, who should affect that metaphysical accuracy for the want of which Milton has been blamed, would escape a disgraceful failure. Still, however, there was another extreme which, though far less dangerous, was also to be avoided. The imaginations of men are in a great measure under the control of their opinions. The most exquisite art of poetical colouring can produce no illusion, when it is employed to represent that which is at once perceived to be incongruous and absurd. Milton wrote in an age of philosophers and theo-

60. Belief in the existence of a God.
61. See the famous fifteenth chapter in Gibbon's *Decline and Fall of the Roman Empire.*
62. *i.e.* the Jewish Church.
63. *Academy, Portico*: the Platonic and the Stoic schools, respectively.
64. *fasces of the Lictor*: a bundle of rods (the *fasces*) was borne by the lictors (attendants on chief magistrates); emblem of Roman dominion.
65. Christianity was formally recognized in 313, by the Emperor Constantine the Great, as the religion of the Roman Empire.
66. Patron Saint of chivalry; and of England.
67. Patron Saint of sailors. — Castor and Pollux were the two sons of Jupiter who especially protected sailors.
68. A Roman lady who suffered martyrdom in the 3rd century; later regarded as the patron saint of music.

logians. It was necessary, therefore, for him to abstain from giving such a shock to their understanding as might break the charm which it was his object to throw over their imaginations. This is the real explanation of the indistinctness and inconsistency with which he has often been reproached. Dr. Johnson acknowledges that it was absolutely necessary that the spirit should be clothed with material forms. 'But,' says he, 'the poet should have secured the consistency of his system by keeping immateriality out of sight, and seducing the reader to drop it from his thoughts.' This is easily said; but what if Milton could not seduce his readers to drop immateriality from their thoughts? What if the contrary opinion had taken so full a possession of the minds of men as to leave no room even for the half belief which poetry requires? Such we suspect to have been the case. It was impossible for the poet to adopt altogether the material or the immaterial system. He therefore took his stand on the debatable ground. He left the whole in ambiguity. He has doubtless, by so doing, laid himself open to the charge of inconsistency. But, though philosophically in the wrong, we cannot but believe that he was poetically in the right. This task, which almost any other writer would have found impracticable, was easy to him. The peculiar art which he possessed of communicating his meaning circuitously through a long succession of associated ideas, and of intimating more than he expressed, enabled him to disguise those incongruities which he could not avoid.

Poetry which relates to the beings of another world ought to be at once mysterious and picturesque. That of Milton is so. That of Dante is picturesque indeed beyond any that ever was written. Its effect approaches to that produced by the pencil or the chisel. But it is picturesque to the exclusion of all mystery. This is a fault on the right side, a fault inseparable from the plan of Dante's poem, which, as we have already observed, rendered the utmost accuracy of description necessary. Still it is a fault. The supernatural agents excite an interest; but it is not the interest which is proper to supernatural agents. We feel that we could talk to the ghosts and dæmons, without any emotion of unearthly awe. We could, like Don Juan, ask them to supper, and eat heartily in their company.[69] Dante's angels are good men with wings. His devils are spiteful ugly executioners. His dead men are merely living men in strange situations. The scene which passes between the poet and Farinata is justly celebrated. Still, Farinata in the burning tomb is exactly what Farinata would have been at an *auto da fé*.[70] Nothing can be more touching than the first interview of Dante and Beatrice. Yet what is it, but a lovely woman chiding, with sweet austere composure, the lover for whose affection she is grateful, but whose vices she reprobates? The feelings which give the passage its charm would suit the streets of Florence as well as the summit of the Mount of Purgatory.[71]

The spirits of Milton are unlike those of almost all other writers. His fiends, in particular, are wonderful creations. They are not metaphysical abstractions. They are not wicked men. They are not ugly beasts. They have no horns, no tails, none of the fee-faw-fum of Tasso[72] and Klopstock.[73] They have just enough in common with human nature to be intelligible to human beings. Their characters are, like their

69. According to legend, Don Juan, a profligate nobleman of Seville, invited to supper the statue of a man he had murdered; an evil spirit gave life to the statue, which thereupon seized Don Juan and carried him off to Hell. See Molière's *Festin de Pierre* (1665).

70. See the *Inferno*, x. — *Auto-da-fé* ('act of faith'): the ceremony accompanying the pronouncement of judgment by the Inquisition, which was followed by the execution.

73. German poet (1724–1803), who imitated Milton in his epic, the *Messias*.

forms, marked by a certain dim resemblance to those of men, but exaggerated to gigantic dimensions, and veiled in mysterious gloom.

Perhaps the gods and dæmons of Æschylus may best bear a comparison with the angels and devils of Milton. The style of the Athenian had, as we have remarked, something of the Oriental character; and the same peculiarity may be traced in his mythology. It has nothing of the amenity and elegance which we generally find in the superstitions of Greece. All is rugged, barbaric, and colossal. The legends of Æschylus seem to harmonise less with the fragrant groves and graceful porticoes in which his countrymen paid their vows to the God of Light and Goddess of Desire,[74] than with those huge and grotesque labyrinths of eternal granite [75] in which Egypt enshrined her mystic Osiris,[76] or in which Hindustan still bows down to her seven-headed idols. His favourite gods are those of the elder generation, the sons of heaven and earth, compared with whom Jupiter himself was a stripling and an upstart, the gigantic Titans,[77] and the inexorable Furies.[78] Foremost among his creations of this class stands Prometheus,[79] half fiend, half redeemer, the friend of man, the sullen and implacable enemy of Heaven. Prometheus bears undoubtedly a considerable resemblance to the Satan of Milton. In both we find the same impatience of control, the same ferocity, the same unconquerable pride. In both characters also are mingled, though in very different proportions, some kind and generous feelings. Prometheus, however, is hardly superhuman enough. He talks too much of his chains and his uneasy posture: he is rather too much depressed and agitated. His resolution seems to depend on the knowledge which he possesses that he holds the fate of his torturer in his hands, and that the hour of his release will surely come. But Satan is a creature of another sphere. The might of his intellectual nature is victorious over the extremity of pain. Amidst agonies which cannot be conceived without horror, he deliberates, resolves, and even exults. Against the sword of Michael, against the thunder of Jehovah, against the flaming lake, and the marl burning with solid fire, against the prospect of an eternity of unintermitted misery, his spirit bears up unbroken, resting on its own innate energies, requiring no support from anything external, nor even from hope itself.

To return for a moment to the parallel which we have been attempting to draw between Milton and Dante, we would add that the poetry of these great men has in a considerable degree taken its character from their moral qualities. They are not egotists. They rarely obtrude their idiosyncrasies on their readers. They have nothing in common with those modern beggars for fame, who extort a pittance from the compassion of the inexperienced by exposing the nakedness and sores of their minds. Yet it would be difficult to name two writers whose works have been more completely, though undesignedly, coloured by their personal feelings.

The character of Milton was peculiarly distinguished by loftiness of spirit: that of Dante by intensity of feeling. In every line of the *Divine Comedy* we discern the asperity which is produced by pride struggling with misery. There is perhaps no work in the world so deeply and uniformly sorrowful. The melancholy of Dante was no fantastic caprice. It was not, as far as at this distance of time can be judged, the ef-

79. Son of one of the Titans; he stole fire from Heaven, offending Zeus (Jupiter), and was chained to a rock in the Caucasus, where a vulture gnawed at his liver.

fect of external circumstances. It was from within. Neither love nor glory, neither the conflicts of earth nor the hope of heaven could dispel it. It turned every consolation and every pleasure into its own nature. It resembled that noxious Sardinian soil of which the intense bitterness is said to have been perceptible even in its honey.[80] His mind was, in the noble language of the Hebrew poet, 'a land of darkness, as darkness itself, and where the light was as darkness.'[81] The gloom of his character discolours all the passions of men, and all the face of nature, and tinges with its own livid[82] hue the flowers of Paradise and the glories of the eternal throne. All the portraits of him are singularly characteristic. No person can look on the features, noble even to ruggedness, the dark furrows of the cheek, the haggard and woeful stare of the eye, the sullen and contemptuous curve of the lip, and doubt that they belong to a man too proud and too sensitive to be happy.

Milton was, like Dante, a statesman and a lover; and, like Dante, he had been unfortunate in ambition and in love. He had survived his health and his sight, the comforts of his home, and the prosperity of his party. Of the great men by whom he had been distinguished at his entrance into life, some had been taken away from the evil to come; some had carried into foreign climates their unconquerable hatred of oppression; some were pining in dungeons; and some had poured forth their blood on scaffolds. Venal and licentious scribblers, with just sufficient talent to clothe the thoughts of a pandar in the style of a bellman, were now the favourite writers of the Sovereign and of the public. It was a loathsome herd, which could be compared to nothing so fitly as to the rabble of Comus, grotesque monsters, half bestial, half human, dropping with wine, bloated with gluttony, and reeling in obscene dances. Amidst these that fair Muse was placed, like the chaste lady of the Masque, lofty, spotless, and serene, to be chattered at, and pointed at, and grinned at, by the whole rout of Satyrs[83] and Goblins. If ever despondency and asperity could be excused in any man, they might have been excused in Milton. But the strength of his mind overcame every calamity. Neither blindness, nor gout, nor age, nor penury, nor domestic afflictions, nor political disappointments, nor abuse, nor proscription, nor neglect, had power to disturb his sedate and majestic patience. His spirits do not seem to have been high, but they were singularly equable. His temper was serious, perhaps stern; but it was a temper which no sufferings could render sullen or fretful. Such as it was when, on the eve of great events, he returned from his travels,[84] in the prime of health and manly beauty, loaded with literary distinctions, and glowing with patriotic hopes, such it continued to be when, after having experienced every calamity which is incident to our nature, old, poor, sightless and disgraced, he retired to his hovel to die.

Hence it was that, though he wrote the *Paradise Lost* at a time of life when images of beauty and tenderness are in general beginning to fade, even from those minds in which they have not been effaced by anxiety and disappointment, he adorned it with all that is most lovely and delightful in the physical and in the moral world. Neither Theocritus[85] nor Ariosto[86] had a finer or a more healthful sense of the pleasantness of external objects, or loved better to luxuriate amidst sunbeams and flowers, the songs of nightingales, the juice of summer fruits, and the coolness of shady fountains. His conception of love unites all the

80. The honey was reputed to be bitter; that the *soil* contributed to its bitterness seems to be an addition of Macaulay's.

voluptuousness of the Oriental haram, and all the gallantry of the chivalric tournament, with all the pure and quiet affection of an English fireside. His poetry reminds us of the miracles of Alpine scenery. Nooks and dells, beautiful as fairyland, are embosomed in its most rugged and gigantic elevations. The roses and myrtles bloom unchilled on the verge of the avalanche.

Traces, indeed, of the peculiar character of Milton may be found in all his works; but it is most strongly displayed in the Sonnets. Those remarkable poems have been undervalued by critics who have not understood their nature. They have no epigrammatic point. There is none of the ingenuity of Filicaja [87] in the thought, none of the hard and brilliant enamel of Petrarch [88] in the style. They are simple but majestic records of the feelings of the poet; as little tricked out for the public eye as his diary would have been. A victory, an unexpected attack upon the city, a momentary fit of depression or exultation, a jest thrown out against one of his books, a dream which for a short time restored to him that beautiful face over which the grave had closed for ever, led him to musings, which without effort shaped themselves into verse. The unity of sentiment and severity of style which characterise these little pieces remind us of the Greek Anthology,[89] or perhaps still more of the Collects [90] of the English Liturgy. The noble poem on the Massacres of Piedmont [91] is strictly a collect in verse.

The Sonnets are more or less striking, according as the occasions which gave birth to them are more or less interesting. But they are, almost without exception, dignified by a sobriety and greatness of mind to which we know not where to look for a parallel. It would, indeed, be scarcely safe to draw any decided inferences as to the character of a writer from passages directly egotistical. But the qualities which we have ascribed to Milton, though perhaps most strongly marked in those parts of his works which treat of his personal feelings, are distinguishable in every page, and impart to all his writings, prose and poetry, English, Latin, and Italian, a strong family likeness.

His public conduct was such as was to be expected from a man of a spirit so high and of an intellect so powerful. He lived at one of the most memorable eras in the history of mankind, at the very crisis of the great conflict between Oromasdes and Arimanes,[92] liberty and despotism, reason and prejudice. That great battle was fought for no single generation, for no single land. The destinies of the human race were staked on the same cast with the freedom of the English people. Then were first proclaimed those mighty principles which have since worked their way into the depths of the American forests,[93] which have roused Greece from the slavery and degradation of two thousand years,[94] and which, from one end of Europe to the other, have kindled an unquenchable fire in the hearts of the oppressed, and loosed the knees of the oppressors with an unwonted fear.

Of those principles, then struggling for their infant existence, Milton was the most devoted and eloquent literary champion. We need not say how much we admire his public conduct. But we cannot disguise from ourselves that a large portion of his countrymen still think it unjustifiable. The

civil war, indeed, has been more discussed, and is less understood, than any event in English history. The friends of liberty laboured under the disadvantage of which the lion in the fable complained so bitterly.[95] Though they were the conquerors, their enemies were the painters. As a body, the Roundheads [96] had done their utmost to decry and ruin literature; and literature was even with them, as, in the long-run, it always is with its enemies. The best book on their side of the question is the charming narrative of Mrs. Hutchinson.[97] May's [98] *History of the Parliament* is good; but it breaks off at the most interesting crisis of the struggle. The performance of Ludlow [99] is foolish and violent; and most of the later writers who have espoused the same cause, Oldmixon [100] for instance, and Catherine Macaulay,[101] have, to say the least, been more distinguished by zeal than either by candour or by skill. On the other side are the most authoritative and the most popular historical works in our language, that of Clarendon, and that of Hume.[102] The former is not only ably written and full of valuable information, but has also an air of dignity and sincerity which makes even the prejudices and errors with which it abounds respectable. Hume, from whose fascinating narrative the great mass of the reading public are still contented to take their opinions, hated religion so much that he hated liberty for having been allied with religion, and has pleaded the cause of tyranny with the dexterity of an advocate, while affecting the impartiality of a judge.

The public conduct of Milton must be approved or condemned according as the resistance of the people to Charles the First shall appear to be justifiable or criminal. We shall therefore make no apology for dedicating a few pages to the discussion of that interesting and most important question. We shall not argue it on general grounds. We shall not recur to those primary principles from which the claim of any government to the obedience of its subjects is to be deduced. We are entitled to that vantage ground; but we will relinquish it. We are, on this point, so confident of superiority, that we are not unwilling to imitate the ostentatious generosity of those ancient knights, who vowed to joust without helmet or shield against all enemies, and to give their antagonists the advantage of sun and wind. We will take the naked constitutional question. We confidently affirm, that every reason which can be urged in favour of the Revolution of 1688 may be urged with at least equal force in favour of what is called the Great Rebellion.

In one respect, only, we think, can the warmest admirers of Charles venture to say that he was a better sovereign than his son. He was not, in name and profession, a Papist; we say in name and profession, because both Charles himself and his creature Laud,[103] while they abjured the innocent badges of Popery, retained all its worst

96. The Puritans, so called by the Royalists from their close-cropped hair.

97. Lucy Hutchinson (b.1620) wrote the *Life of Colonel Hutchinson* (regicide), which was not published until 1806. It is a masterpiece of its kind.

98. Thomas May (1595–1650), Secretary to Parliament during the Civil War; author of *History of the Long Parliament* (1647).

99. Edmund Ludlow (1617?–92), general and regicide, author of *Memoirs* (1698–99), a narrative still valuable for its light on the fall of the Commonwealth.

100. John Oldmixon (1673–1742), Whig historian and pamphleteer; attacked Clarendon's *History of the Rebellion*; was placed in Pope's *Dunciad*.

101. Catherine Macaulay (1731–91), historian and controversialist, wrote from a strongly radical and republican standpoint. Not related to Thomas Babington Macaulay.

102. Edward Hyde, Earl of Clarendon (1609–74), whose *History of the Rebellion* is written from the Royalist standpoint. — David Hume (1711–76) wrote a *History of England* from the Tory standpoint.

103. William Laud (1573–1645), Archbishop of Canterbury, and one of Charles' advisers.

vices, a complete subjection of reason to authority, a weak preference of form to substance, a childish passion for mummeries, an idolatrous veneration for the priestly character, and, above all, a merciless intolerance. This, however, we waive. We will concede that Charles was a good Protestant; but we say that his Protestantism does not make the slightest distinction between his case and that of James.

The principles of the Revolution have often been grossly misrepresented, and never more than in the course of the present year.[104] There is a certain class of men,[105] who, while they profess to hold in reverence the great names and great actions of former times, never look at them for any other purpose than in order to find in them some excuse for existing abuses. In every venerable precedent they pass by what is essential, and take only what is accidental: they keep out of sight what is beneficial, and hold up to public imitation all that is defective. If, in any part of any great example, there be any thing unsound, these flesh-flies detect it with an unerring instinct, and dart upon it with a ravenous delight. If some good end has been attained in spite of them, they feel, with their prototype, that

> 'Their labour must be to pervert that end,
> And out of good still to find means of evil.'[106]

To the blessings which England has derived from the Revolution these people are utterly insensible. The expulsion of a tyrant, the solemn recognition of popular rights, liberty, security, toleration, all go for nothing with them. One sect[107] there was, which, from unfortunate temporary causes, it was thought necessary to keep under close restraint. One part of the empire[108] there was so unhappily circumstanced, that at that time its misery was necessary to our happiness, and its slavery to our freedom. These are the parts of the Revolution which the politicians of whom we speak love to contemplate, and which seem to them not indeed to vindicate, but in some degree to palliate, the good which it has produced. Talk to them of Naples, of Spain, or of South America.[109] They stand forth zealots for the doctrine of Divine Right which has now come back to us, like a thief from transportation, under the *alias* of Legitimacy.[110] But mention the miseries of Ireland. Then William is a hero. Then Somers and Shrewsbury are great men.[111] Then the Revolution is a glorious era. The very same persons, who, in this country never omit an opportunity of reviving every wretched Jacobite slander respecting the Whigs of that period, have no sooner crossed St. George's Channel,[112] than they begin to fill their bumpers to the glorious and immortal memory.[113] They may truly boast that they look not at men, but at measures. So that evil be done, they care not who does it; the arbitrary Charles, or the liberal William, Ferdinand the Catholic,[114] or Frederic the Protestant.[115]

104. *i.e.* in 1825, when Catholic Emancipation was being bitterly debated.
105. The Tories of Macaulay's day. Macaulay's ardent Whiggism makes his whole discussion little more than a brilliant partisan outburst.

114. Ferdinand I of Naples, overthrown in 1820, because of his tyranny.
115. The allusion here is not clear. Possibly

On such occasions their deadliest opponents may reckon upon their candid construction. The bold assertions of these people have of late impressed a large portion of the public with an opinion that James the Second was expelled simply because he was a Catholic, and that the Revolution was essentially a Protestant Revolution.

But this certainly was not the case; nor can any person who has acquired more knowledge of the history of those times than is to be found in Goldsmith's *Abridgement*[116] believe that, if James had held his own religious opinions without wishing to make proselytes, or if, wishing even to make proselytes, he had contented himself with exerting only his constitutional influence for that purpose, the Prince of Orange would ever have been invited over. Our ancestors, we suppose, knew their own meaning; and, if we may believe them, their hostility was primarily not to popery, but to tyranny. They did not drive out a tyrant because he was a Catholic; but they excluded Catholics from the crown, because they thought them likely to be tyrants. The ground on which they, in their famous resolution,[117] declared the throne vacant, was this, 'that James had broken the fundamental laws of the kingdom.' Every man, therefore, who approves of the Revolution of 1688 must hold that the breach of fundamental laws on the part of the sovereign justifies resistance. The question, then, is this: Had Charles the First broken the fundamental laws of England?

No person can answer in the negative, unless he refuses credit, not merely to all the accusations brought against Charles by his opponents, but to the narratives of the warmest Royalists, and to the confessions of the King himself. If there be any truth in any historian of any party, who has related the events of that reign, the conduct of Charles, from his accession to the meeting of the Long Parliament, had been a continued course of oppression and treachery. Let those who applaud the Revolution and condemn the Rebellion, mention one act of James the Second to which a parallel is not to be found in the history of his father. Let them lay their fingers on a single article in the Declaration of Right, presented by the two Houses to William and Mary, which Charles is not acknowledged to have violated. He had, according to the testimony of his own friends, usurped the functions of the legislature, raised taxes without the consent of parliament, and quartered troops on the people in the most illegal and vexatious manner. Not a single session of parliament had passed without some unconstitutional attack on the freedom of debate; the right of petition was grossly violated; arbitrary judgments, exorbitant fines, and unwarranted imprisonments were grievances of daily occurrence. If these things do not justify resistance, the Revolution was treason; if they do, the Great Rebellion was laudable.

But it is said, why not adopt milder measures? Why, after the King had consented to so many reforms, and renounced so many oppressive prerogatives, did the Parliament continue to rise in their demands at the risk of provoking a civil war? The ship-money[118] had been given up.

Macaulay means the contemporary King of Prussia, father of Wilhelm who became the first Kaiser of the Empire; or Frederick V (1596–1632), Prince Palatine, for a short time King of Bohemia and the head of the Protestant princes of Germany, in the earlier half of the Thirty Years' War (1618–48).

116. A hack-work abridgement of a *History of England*, prepared by Goldsmith or John Newbery. See note 33.

117. Passed by the House of Commons in 1689; declaring that the king had not only violated the fundamental laws, but had withdrawn himself out of the kingdom, and had therefore abdicated. Macaulay's partisanship prevents his presenting the case with much accuracy.

118. The ancient tax levied in time of war on the ports and maritime towns and counties to provide ships for the king's service; it was revived by Charles I, and was one cause of the Civil War.

The Star-Chamber [119] had been abolished. Provision had been made for the frequent convocation and secure deliberation of parliaments. Why not pursue an end confessedly good by peaceable and regular means? We recur again to the analogy of the Revolution. Why was James driven from the throne? Why was he not retained upon conditions? He too had offered to call a free parliament and to submit to its decision all the matters in dispute. Yet we are in the habit of praising our forefathers, who preferred a revolution, a disputed succession, a dynasty of strangers, twenty years of foreign and intestine war, a standing army, and a national debt, to the rule, however restricted, of a tried and proved tyrant. The Long Parliament acted on the same principle, and is entitled to the same praise. They could not trust the King. He had no doubt passed salutary laws; but what assurance was there that he would not break them? He had renounced oppressive prerogatives; but where was the security that he would not resume them? The nation had to deal with a man whom no tie could bind, a man who made and broke promises with equal facility, a man whose honour had been a hundred times pawned, and never redeemed.

Here, indeed, the Long Parliament stands on still stronger ground than the Convention of 1688. No action of James can be compared to the conduct of Charles with respect to the Petition of Right. The Lords and Commons present him with a bill in which the constitutional limits of his power are marked out. He hesitates; he evades; at last he bargains to give his assent for five subsidies. The bill receives his solemn assent; the subsidies are voted; but no sooner is the tyrant relieved, than he returns at once to all the arbitrary measures which he had bound himself to abandon, and violates all the clauses of the very Act which he had been paid to pass.

For more than ten years the people had seen the rights which were theirs by a double claim, by immemorial inheritance and by recent purchase, infringed by the perfidious king who had recognised them. At length circumstances compelled Charles to summon another parliament: another chance was given to our fathers: were they to throw it away as they had thrown away the former? Were they again to be cozened by *le Roi le veut*? [120] Were they again to advance their money on pledges which had been forfeited over and over again? Were they to lay a second Petition of Right at the foot of the throne, to grant another lavish aid in exchange for another unmeaning ceremony, and then to take their departure, till, after ten years more of fraud and oppression, their prince should again require a supply, and again repay it with a perjury? They were compelled to choose whether they would trust a tyrant or conquer him. We think that they chose wisely and nobly.

The advocates of Charles, like the advocates of other malefactors against whom overwhelming evidence is produced, generally decline all controversy about the facts, and content themselves with calling testimony to character. He had so many private virtues! And had James the Second no private virtues? Was Oliver Cromwell, his bitterest enemies themselves being judges, destitute of private virtues? And what, after all, are the virtues ascribed to Charles? A religious zeal, not more sincere than that of his son, and fully as weak and narrow-minded, and a few of the ordinary household decencies which half the tombstones in England claim for those who lie beneath them. A good father! A good husband! Ample apologies indeed for fifteen

119. The arbitrary and oppressive tribunal which, under James I and Charles I, led to Civil War. So called because it had met since the 14th century in an apartment in the royal palace of Westminster with a ceiling containing gilt stars. Originally the apartment had been used as a meeting place for the king's council.

120. 'The King wills it.' The form of words by which the king indicated his assent to bill, passed by Parliament.

years of persecution, tyranny, and falsehood!

We charge him with having broken his coronation oath; and we are told that he kept his marriage vow! We accuse him of having given up his people to the merciless inflictions of the most hot-headed and hard-hearted of prelates; and the defence is, that he took his little son on his knee and kissed him! We censure him for having violated the articles of the Petition of Right, after having, for good and valuable consideration, promised to observe them; and we are informed that he was accustomed to hear prayers at six o'clock in the morning! It is to such considerations as these, together with his Vandyck dress, his handsome face, and his peaked beard, that he owes, we verily believe, most of his popularity with the present generation.[121]

For ourselves, we own that we do not understand the common phrase, a good man, but a bad king. We can as easily conceive a good man and an unnatural father, or a good man and a treacherous friend. We cannot, in estimating the character of an individual, leave out of our consideration his conduct in the most important of all human relations; and if in that relation we find him to have been selfish, cruel, and deceitful, we shall take the liberty to call him a bad man, in spite of all his temperance at table, and all his regularity at chapel.

We cannot refrain from adding a few words respecting a topic on which the defenders of Charles are fond of dwelling. If, they say, he governed his people ill, he at least governed them after the example of his predecessors. If he violated their privileges, it was because those privileges had not been accurately defined. No act of oppression has ever been imputed to him which has not a parallel in the annals of the Tudors. This point Hume has laboured, with an art which is as discreditable in a historical work as it would be admirable in a forensic address.[122] The answer is short, clear, and decisive. Charles had assented to the Petition of Right. He had renounced the oppressive powers said to have been exercised by his predecessors, and he had renounced them for money. He was not entitled to set up his antiquated claims against his own recent release.

These arguments are so obvious, that it may seem superfluous to dwell upon them. But those who have observed how much the events of that time are misrepresented and misunderstood will not blame us for stating the case simply. It is a case of which the simplest statement is the strongest.

The enemies of the Parliament, indeed, rarely choose to take issue on the great points of the question. They content themselves with exposing some of the crimes and follies to which public commotions necessarily give birth. They bewail the unmerited fate of Strafford.[123] They execrate the lawless violence of the army. They laugh at the Scriptural names of the preachers. Major-generals [124] fleecing their districts; soldiers revelling on the spoils of a ruined peasantry; upstarts, enriched by the public plunder, taking possession of the hospitable firesides and hereditary trees of the old gentry; boys smashing the beautiful windows of cathedrals; Quakers riding naked through the market-place; [125] Fifth-monarchy-men [126] shouting for King

121. Sir Anthony Van Dyck (1599–1641), famous Dutch painter, had painted several portraits of Charles I. The 'peaked beard,' the picturesque dress, and the King's features, as presented in the pictures, had become very familiar.

122. *i.e.* in a court of law.

123. Thomas Wentworth, 1st Earl of Strafford (1593–1641), Charles' ablest minister; he was impeached by the Long Parliament, and executed.

124. Officials who, under Cromwell, ruled with virtually unlimited powers over the ten districts into which England had been newly divided.

125. See Macaulay's *History of England*, Chapter xvii.

126. According to many Puritans, there had been four great world-empires: Assyria, Persia, Greece, and Rome. And from *Daniel*, ii,31–45, they believed that the fifth reign was

Jesus; agitators lecturing from the tops of tubs on the fate of Agag;[127] — all these, they tell us, were the offspring of the Great Rebellion.

Be it so. We are not careful to answer in this matter. These charges, were they infinitely more important, would not alter our opinion of an event which alone has made us to differ from the slaves who crouch beneath despotic sceptres. Many evils, no doubt, were produced by the civil war. They were the price of our liberty. Has the acquisition been worth the sacrifice? It is the nature of the Devil of tyranny to tear and rend the body which he leaves.[128] Are the miseries of continued possession less horrible than the struggles of the tremendous exorcism?[129]

If it were possible that a people brought up under an intolerant and arbitrary system could subvert that system without acts of cruelty and folly, half the objections to despotic power would be removed. We should, in that case, be compelled to acknowledge that it at least produces no pernicious effects on the intellectual and moral character of a nation. We deplore the outrages which accompany revolutions. But the more violent the outrages, the more assured we feel that a revolution was necessary. The violence of those outrages will always be proportioned to the ferocity and ignorance of the people; and the ferocity and ignorance of the people will be proportioned to the oppression and degradation under which they have been accustomed to live. Thus it was in our civil war. The heads of the church and state reaped only that which they had sown. The Government had prohibited free discussion: it had done its best to keep the people unacquainted with their duties and their rights. The retribution was just and natural. If our rulers suffered from popular ignorance, it was because they had themselves taken away the key of knowledge. If they were assailed with blind fury, it was because they had exacted an equally blind submission.

It is the character of such revolutions that we always see the worst of them at first. Till men have been some time free, they know not how to use their freedom. The natives of wine countries are generally sober. In climates where wine is a rarity intemperance abounds. A newly liberated people may be compared to a northern army encamped on the Rhine or the Xeres.[130] It is said that, when soldiers in such a situation first find themselves able to indulge without restraint in such a rare and expensive luxury, nothing is to be seen but intoxication. Soon, however, plenty teaches discretion; and, after wine has been for a few months their daily fare, they become more temperate than they had ever been in their own country. In the same manner, the final and permanent fruits of liberty are wisdom, moderation, and mercy. Its immediate effects are often atrocious crimes, conflicting errors, scepticism on points the most clear, dogmatism on points the most mysterious. It is just at this crisis that its enemies love to exhibit it. They pull down the scaffolding from the half-finished edifice: they point to the flying dust, the falling bricks, the comfortless rooms, the frightful irregularity of the whole appearance; and then ask in scorn where the promised splendour and comfort is to be found. If such miserable sophisms were to prevail, there would never be a good house or a good government in the world.

Ariosto tells a pretty story of a fairy,[131] who, by some mysterious law of her nature, was condemned to appear at certain seasons in the form of a foul and poison-

now imminent: Christ and his saints would soon rule the world.

127. See *1 Samuel*, xv,8–33.

128. See *Mark*, ix,18; *Luke*, ix,39.

129. The driving of evil spirits out of the body by use of magic spells or by the Holy Name.

130. Or Jeres, an important town of Spain, in the province of Cadiz, noted for its wines. From Xeres is derived the word *sherry*. (Macaulay blunders here, in suggesting that Xeres is a river, and not a town.)

131. See *Orlando Furioso*, xliii,72.

ous snake. Those who injured her during the period of her disguise were for ever excluded from participation in the blessings which she bestowed. But to those who, in spite of her loathsome aspect, pitied and protected her, she afterwards revealed herself in the beautiful and celestial form which was natural to her, accompanied their steps, granted all their wishes, filled their houses with wealth, made them happy in love and victorious in war. Such a spirit is Liberty. At times she takes the form of a hateful reptile. She grovels, she hisses, she stings. But woe to those who in disgust shall venture to crush her! And happy are those who, having dared to receive her in her degraded and frightful shape, shall at length be rewarded by her in the time of her beauty and her glory!

There is only one cure for the evils which newly acquired freedom produces; and that cure is freedom. When a prisoner first leaves his cell he cannot bear the light of day: he is unable to discriminate colours, or recognise faces. But the remedy is, not to remand him into his dungeon, but to accustom him to the rays of the sun. The blaze of truth and liberty may at first dazzle and bewilder nations which have become half blind in the house of bondage. But let them gaze on, and they will soon be able to bear it. In a few years men learn to reason. The extreme violence of opinion subsides. Hostile theories correct each other. The scattered elements of truth cease to contend, and begin to coalesce. And at length a system of justice and order is educed out of the chaos.

Many politicians of our time are in the habit of laying it down as a self-evident proposition, that no people ought to be free till they are fit to use their freedom. The maxim is worthy of the fool in the old story who resolved not to go into the water till he had learnt to swim. If men are to wait for liberty till they become wise and good in slavery, they may indeed wait for ever.

Therefore it is that we decidedly approve of the conduct of Milton and the other wise and good men who, in spite of much that was ridiculous and hateful in the conduct of their associates, stood firmly by the cause of Public Liberty. We are not aware that the poet has been charged with personal participation in any of the blameable excesses of that time. The favourite topic of his enemies is the line of conduct which he pursued with regard to the execution of the King. Of that celebrated proceeding we by no means approve. Still we must say, in justice to the many eminent persons who concurred in it, and in justice more particularly to the eminent person who defended it, that nothing can be more absurd than the imputations which, for the last hundred and sixty years, it has been the fashion to cast upon the Regicides. We have, throughout, abstained from appealing to first principles. We will not appeal to them now. We recur again to the parallel case of the Revolution. What essential distinction can be drawn between the execution of the father and the deposition of the son? What constitutional maxim is there which applies to the former and not to the latter? The King can do no wrong. If so, James was as innocent as Charles could have been. The minister only ought to be responsible for the acts of the Sovereign. If so, why not impeach Jeffreys [132] and retain James? The person of a king is sacred. Was the person of James considered sacred at the Boyne? [133] To discharge cannon against an army in which a king is known to be posted is to approach pretty near to regicide. Charles, too, it should always be remembered, was put to death by men who had been exasperated by the hos-

132. Or Jeffries, George Baron Jeffries of Wem (1648–89), notorious for his cruelty as Lord High Chancellor, under James II, during the 'Bloody Assizes,' by which the participants in Monmouth's Rebellion were put down.

133. James II, after his flight from England (1688), crossed from France to Ireland, supported by French troops, and was defeated by William at the Battle of the Boyne River (July 1, 1690).

tilities of several years, and who had never been bound to him by any other tie than that which was common to them with all their fellow-citizens. Those who drove James from his throne, who seduced his army, who alienated his friends, who first imprisoned him in his palace, and then turned him out of it, who broke in upon his very slumbers by imperious messages, who pursued him with fire and sword from one part of the empire to another, who hanged, drew, and quartered his adherents, and attainted [134] his innocent heir, were his nephew and his two daughters.[135] When we reflect on all these things, we are at a loss to conceive how the same persons who, on the fifth of November,[136] thank God for wonderfully conducting his servant William, and for making all opposition fall before him until he became our King and Governor, can, on the thirtieth of January,[137] contrive to be afraid that the blood of the Royal Martyr may be visited on themselves and their children.

We disapprove, we repeat, of the execution of Charles; not because the constitution exempts the King from responsibility, for we know that all such maxims, however excellent, have their exceptions; nor because we feel any peculiar interest in his character, for we think that his sentence describes him with perfect justice as 'a tyrant, a traitor, a murderer, and a public enemy'; but because we are convinced that the measure was most injurious to the cause of freedom. He whom it removed was a captive and a hostage: his heir, to whom the allegiance of every Royalist was instantly transferred, was at large. The Presbyterians could never have been perfectly reconciled to the father: they had no such rooted enmity to the son.[138] The great body of the people, also, contemplated that proceeding with feelings which, however unreasonable, no government could safely venture to outrage.

But though we think the conduct of the Regicides blameable, that of Milton appears to us in a very different light. The deed was done. It could not be undone. The evil was incurred; and the object was to render it as small as possible. We censure the chiefs of the army for not yielding to the popular opinion; but we cannot censure Milton for wishing to change that opinion. The very feeling which would have restrained us from committing the act would have led us, after it had been committed, to defend it against the ravings of servility and superstition. For the sake of public liberty, we wish that the thing had not been done, while the people disapproved of it. But, for the sake of public liberty, we should also have wished the people to approve of it when it was done. If anything more were wanting to the justification of Milton, the book of Salmasius [139] would furnish it. That miserable performance is now with justice considered only as a beacon to word-catchers, who wish to become statesmen. The celebrity of the man who refuted it, the 'Æneæ magni dextra,' [140] gives it all its fame with the present generation. In that age the state of things was different. It was not then

134. Dispossessing the heirs of one accused of high treason and condemned to execution, by a Bill of Attainder brought before Parliament.

135. William III was the son of James' oldest sister, and he married Mary, one of James' daughters. The other daughter, Anne, joined William soon after his landing.

136. The anniversary of the Gunpowder Plot (1605), and of the landing of William in 1688.

137. The anniversary of the execution of Charles I in 1649.

138. Charles I had refused to subscribe to the Scottish Covenant; Charles II did so readily. Under Cromwell, the Scotch Presbyterians increasingly distrusted the Independents because of their tyrannies, and finally, on Cromwell's death, went over wholly to the side of Charles II.

139. Claudius Salmasius (Claude Saumaise) (1588–1653), French classical scholar, author of a vindication of Charles I, *Defensio regia pro Carlo I* (1649), which provoked Milton's famous *Defensio Populi* (1651).

140. 'The right hand of the mighty Aeneas.' *Aeneid*, x,830.

fully understood how vast an interval separates the mere classical scholar from the political philosopher. Nor can it be doubted that a treatise which, bearing the name of so eminent a critic, attacked the fundamental principles of all free governments, must, if suffered to remain unanswered, have produced a most pernicious effect on the public mind.

We wish to add a few words relative to another subject, on which the enemies of Milton delight to dwell, his conduct during the administration of the Protector. That an enthusiastic votary of liberty should accept office under a military usurper seems, no doubt, at first sight, extraordinary. But all the circumstances in which the country was then placed were extraordinary. The ambition of Oliver was of no vulgar kind. He never seems to have coveted despotic power. He at first fought sincerely and manfully for the Parliament, and never deserted it, till it had deserted its duty. If he dissolved it by force, it was not till he found that the few members who remained after so many deaths, secessions, and expulsions, were desirous to appropriate to themselves a power which they held only in trust, and to inflict upon England the curse of a Venetian oligarchy.[141] But even when thus placed by violence at the head of affairs, he did not assume unlimited power. He gave the country a constitution far more perfect than any which had at that time been known in the world. He reformed the representative system in a manner which has extorted praise even from Lord Clarendon. For himself he demanded indeed the first place in the commonwealth; but with powers scarcely so great as those of a Dutch stadtholder,[142] or an American president. He gave the parliament a voice in the appointment of ministers, and left to it the whole legislative authority, not even reserving to himself a veto on its enactments; and he did not require that the chief magistracy should be hereditary in his family. Thus far, we think, if the circumstances of the time and the opportunities which he had of aggrandising himself be fairly considered, he will not lose by comparison with Washington or Bolivar.[143] Had his moderation been met by corresponding moderation, there is no reason to think that he would have overstepped the line which he had traced for himself. But when he found that his parliaments questioned the authority under which they met, and that he was in danger of being deprived of the restricted power which was absolutely necessary to his personal safety, then, it must be acknowledged, he adopted a more arbitrary policy.

Yet, though we believe that the intentions of Cromwell were at first honest, though we believe that he was driven from the noble course which he had marked out for himself by the almost irresistible force of circumstances, though we admire, in common with all men of all parties, the ability and energy of his splendid administration, we are not pleading for arbitrary and lawless power, even in his hands. We know that a good constitution is infinitely better than the best despot. But we suspect, that at the time of which we speak, the violence of religious and political enmities rendered a stable and happy settlement next to impossible. The choice lay, not between Cromwell and liberty, but between Cromwell and the Stuarts. That Milton chose well, no man can doubt who fairly compares the events of the Protectorate with those of the thirty years which succeeded it, the darkest and most disgraceful in the English annals. Cromwell was evidently laying, though in an irregular manner, the foundations of an admirable

141. *oligarchy*: government by a few, as in Venice until it was conquered by Napoleon in 1797.

142. Chief executive officer of the United Provinces of the Netherlands.

143. Simon Bolivar (1783–1830), leader of the revolt by which such South American colonies as Peru and Bolivia got their freedom (1820).

system. Never before had religious liberty and the freedom of discussion been enjoyed in a greater degree.[144] Never had the national honour been better upheld abroad, or the seat of justice better filled at home. And it was rarely that any opposition which stopped short of open rebellion provoked the resentment of the liberal and magnanimous usurper. The institutions which he had established, as set down in the Instrument of Government, and the Humble Petition and Advice, were excellent. His practice, it is true, too often departed from the theory of these institutions. But, had he lived a few years longer, it is probable that his institutions would have survived him, and that his arbitrary practice would have died with him. His power had not been consecrated by ancient prejudices. It was upheld only by his great personal qualities. Little, therefore, was to be dreaded from a second protector, unless he were also a second Oliver Cromwell. The events which followed his decease are the most complete vindication of those who exerted themselves to uphold his authority. His death dissolved the whole frame of society. The army rose against the Parliament, the different corps of the army against each other. Sect raved against sect. Party plotted against party. The Presbyterians, in their eagerness to be revenged on the Independents, sacrificed their own liberty, and deserted all their old principles. Without casting one glance on the past, or requiring one stipulation for the future, they threw down their freedom at the feet of the most frivolous and heartless of tyrants.

Then came those days, never to be recalled without a blush, the days of servitude without loyalty and sensuality without love, of dwarfish talents and gigantic vices, the paradise of cold hearts and narrow minds, the golden age of the coward, the bigot, and the slave. The King cringed to his rival[145] that he might trample on his people, sank into a viceroy of France, and pocketed, with complacent infamy, her degrading insults, and her more degrading gold. The caresses of harlots, and the jests of buffoons, regulated the policy of the State. The Government had just ability enough to deceive, and just religion enough to persecute. The principles of liberty were the scoff of every grinning courtier, and the Anathema[146] Maranatha of every fawning dean. In every high place, worship was paid to Charles and James, Belial[147] and Moloch;[148] and England propitiated those obscene and cruel idols with the blood of her best and bravest children. Crime succeeded to crime, and disgrace to disgrace, till the race accursed of God and man was a second time driven forth, to wander on the face of the earth, and to be a by-word[149] and a shaking of the head to the nations.

Most of the remarks which we have hitherto made on the public character of Milton, apply to him only as one of a large body. We shall proceed to notice some of the peculiarities which distinguished him from his contemporaries. And, for that purpose, it is necessary to take a short survey of the parties into which the political world was at that time divided. We must premise, that our observations are intended to apply only to those who adhered, from a sincere preference, to one or to the other side. In days of public commotion, every faction, like an Oriental army, is attended by a crowd of

144. A misleading and exaggerated statement. Toleration was accorded to all Puritan bodies, of course; but worship by the forms of the Church of England was soon suppressed, and for Roman Catholicism there was no toleration at all.

145. *i.e.* to Louis XIV.

146. 'A thing accursed' (*I Corinthians*, xvi,22). *Maranatha* meant 'the Lord will come.' Macaulay mistakenly assumed the latter word to belong with the former.

147. Literally 'the wicked one' (not an idol as Macaulay suggests). See *Paradise Lost*, i,400; ii,108–18.

148. God of the Phoenicians, to whom human sacrifices were made; hence a symbol of tyranny and cruelty.

149. See *Psalms*, xliv,14,15.

camp-followers, an useless and heartless rabble, who prowl round its line of march in the hope of picking up something under its protection, but desert it in the day of battle, and often join to exterminate it after a defeat. England, at the time of which we are treating, abounded with fickle and selfish politicians, who transferred their support to every government as it rose, who kissed the hand of the King in 1640, and spat in his face in 1649, who shouted with equal glee when Cromwell was inaugurated [150] in Westminster Hall, and when he was dug up [151] to be hanged at Tyburn,[152] who dined on calves' heads,[153] or stuck-up oak-branches,[154] as circumstances altered, without the slightest shame or repugnance. These we leave out of the account. We take our estimate of parties from those who really deserved to be called partisans.

We would speak first of the Puritans, the most remarkable body of men, perhaps, which the world has ever produced. The odious and ridiculous parts of their character lie on the surface. He that runs may read them; [155] nor have there been wanting attentive and malicious observers to point them out. For many years after the Restoration, they were the theme of unmeasured invective and derision. They were exposed to the utmost licentiousness of the press and of the stage, at the time when the press and the stage were most licentious. They were not men of letters; they were, as a body, unpopular; they could not defend themselves; and the public would not take them under its protection. They were therefore abandoned, without reserve, to the tender mercies of the satirists and dramatists. The ostentatious simplicity of their dress, their sour aspect, their nasal twang, their stiff posture, their long graces, their Hebrew names, the Scriptural phrases which they introduced on every occasion, their contempt of human learning, their detestation of polite amusements, were indeed fair game for the laughers. But it is not from the laughers alone that the philosophy of history is to be learnt. And he who approaches this subject should carefully guard against the influence of that potent ridicule which has already misled so many excellent writers.

'Ecco il fonte del riso, ed ecco il rio
Che mortali perigli in so contiene:
Hor qui tener a fren nostro desio,
Ed esser cauti molto a noi conviene.' [156]

Those who roused the people to resistance, who directed their measures through a long series of eventful years, who formed, out of the most unpromising materials, the finest army that Europe had ever seen, who trampled down King, Church, and Aristocracy, who, in the short intervals of domestic sedition and rebellion, made the name of England terrible to every nation on the face of the earth, were no vulgar fanatics. Most of their absurdities were mere external badges, like the signs of freemasonry, or the dresses of friars. We regret that these badges were not more attractive. We regret that a body to whose courage

150. *i.e.* installed in office as Lord Protector, in 1653.

151. At the Restoration (1660).

152. Where traitors were executed by hanging. Located a few yards from where Marble Arch now stands.

153. The calf's head was the anti-Royalists' emblem representing Charles I. The Calf's Head Club dined annually on the 30th of January (anniversary of King Charles's execution), eating calves' heads and toasting the regicides.

154. The oak branch became the symbol of Charles II, who in escaping from England had to remain hidden for some hours in an oak tree. After the Restoration in 1660, it was set up on the 29th of May (his birthday and the anniversary of his entrance into London), with festivities similar to those of May Day.

155. *Cf. Habakkuk*, ii,2.

156. Quoted from Tasso's *Jerusalem Delivered*, xv,57. Hoole's translation is as follows:

Behold the fatal spring where laughter dwells,
Dire poison lurking in its secret cells:
Here let us guard our thoughts, our passions rein,
And every loose desire in bonds detain.

and talents mankind has owed inestimable obligations had not the lofty elegance which distinguished some of the adherents of Charles the First, or the easy good-breeding for which the court of Charles the Second was celebrated. But, if we must make our choice, we shall, like Bassanio in the play,[157] turn from the specious caskets which contain only the Death's head and the Fool's head, and fix on the plain leaden chest which conceals the treasure.

The Puritans were men whose minds had derived a peculiar character from the daily contemplation of superior beings and eternal interests. Not content with acknowledging, in general terms, an overruling Providence, they habitually ascribed every event to the will of the Great Being, for whose power nothing was too vast, for whose inspection nothing was too minute. To know him, to serve him, to enjoy him, was with them the great end of existence. They rejected with contempt the ceremonious homage which other sects substituted for the pure worship of the soul. Instead of catching occasional glimpses of the Deity through an obscuring veil, they aspired to gaze full on his intolerable brightness, and to commune with him face to face. Hence originated their contempt for terrestrial distinctions. The difference between the greatest and the meanest of mankind seemed to vanish, when compared with the boundless interval which separated the whole race from him on whom their own eyes were constantly fixed. They recognised no title to superiority but his favour; and, confident of that favour, they despised all the accomplishments and all the dignities of the world. If they were unacquainted with the works of philosophers and poets, they were deeply read in the oracles of God. If their names were not found in the registers of heralds,[158] they were recorded in the Book of Life. If their steps were not accompanied by a splendid train of menials, legions of ministering angels had charge over them.[159] Their palaces were houses not made with hands;[160] their diadems crowns of glory[161] which should never fade away. On the rich and the eloquent, on nobles and priests, they looked down with contempt: for they esteemed themselves rich in a more precious treasure, and eloquent in a more sublime language, nobles by the right of an earlier creation, and priests by the imposition of a mightier hand.[162] The very meanest of them was a being to whose fate a mysterious and terrible importance belonged, on whose slightest action the spirits of light and darkness looked with anxious interest, who had been destined, before heaven and earth were created, to enjoy a felicity which should continue when heaven and earth should have passed away. Events which shortsighted politicians ascribed to earthly causes, had been ordained on his account. For his sake empires had risen, and flourished, and decayed. For his sake the Almighty had proclaimed his will by the pen of the evangelist, and the harp of the prophet. He had been wrested by no common deliverer from the grasp of no common foe. He had been ransomed by the sweat of no vulgar agony, by the blood of no earthly sacrifice. It was for him that the sun had been darkened, that the rocks had been rent, that the dead had risen, that all nature had shuddered at the sufferings of her expiring God.

Thus the Puritan was made up of two different men, the one all self-abasement, penitence, gratitude, passion; the other proud, calm, inflexible, sagacious. He prostrated himself in the dust before his Maker: but he set his foot on the neck of his king. In his devotional retirement, he prayed with convulsions, and groans, and tears. He was half-maddened by glorious

or terrible illusions. He heard the lyres of angels or the tempting whispers of fiends. He caught a gleam of the Beatific Vision,[168] or woke screaming from dreams of everlasting fire. Like Vane,[164] he thought himself intrusted with the sceptre of the millennial year.[165] Like Fleetwood,[166] he cried in the bitterness of his soul that God had hid his face from him. But when he took his seat in the council, or girt on his sword for war, these tempestuous workings of the soul had left no perceptible trace behind them. People who saw nothing of the godly but their uncouth visages, and heard nothing from them but their groans and their whining hymns, might laugh at them. But those had little reason to laugh who encountered them in the hall of debate or in the field of battle. These fanatics brought to civil and military affairs a coolness of judgment and an immutability of purpose which some writers have thought inconsistent with their religious zeal, but which were in fact the necessary effects of it. The intensity of their feelings on one subject made them tranquil on every other. One overpowering sentiment had subjected to itself pity and hatred, ambition and fear. Death had lost its terrors and pleasure its charms. They had their smiles and their tears, their raptures and their sorrows, but not for the things of this world. Enthusiasm[167] had made them Stoics,[168] had cleared their minds from every vulgar passion and prejudice, and raised them above the influence of danger and of corruption. It sometimes might lead them to pursue unwise ends, but never to choose unwise means. They went through the world, like Sir Artegal's iron man Talus with his flail,[169] crushing and trampling down oppressors, mingling with human beings, but having neither part nor lot in human infirmities, insensible to fatigue, to pleasure, and to pain, not to be pierced by any weapon, not to be withstood by any barrier.

Such we believe to have been the character of the Puritans. We perceive the absurdity of their manners. We dislike the sullen gloom of their domestic habits. We acknowledge that the tone of their minds was often injured by straining after things too high for mortal reach: and we know that, in spite of their hatred of Popery, they too often fell into the worst vices of that bad system, intolerance and extravagant austerity, that they had their anchorites and their crusades, their Dunstans and their De Montforts, their Dominics and their Escobars.[170] Yet, when all circumstances are taken into consideration, we do not hesitate to pronounce them a brave, a wise, an honest, and an useful body.

The Puritans espoused the cause of civil liberty mainly because it was the cause of

163. 'The immediate sight of God in the glory of heaven, as enjoyed by the blessed dead.' (*Webster's New Intern. Dict.*)
164. Sir Henry Vane (the younger) (1613–62) was prominent in Parliament and one of the fifth-monarchy men.
165. The thousand-year period when Christ will reign on earth, according to *Revelation*, xx,6.
166. Charles Fleetwood (d.1692), parliamentarian, Cromwell's son-in-law, and an able general in Cromwell's army.
167. Zeal, or fanaticism.
168. The original Stoics were followers of Zeno (3rd century B.C.), holding that man's highest good was virtue and indifference to the things of this world.
169. See *The Faerie Queene*, V,i,14. Sir Artegal typifies justice.
170. *St. Dunstan* (924–88): Archbishop of Canterbury, and a great statesman as well as an able ecclesiastic; noted for his strictness of life and of church discipline. Macaulay evidently names him as a type of 'austerity.' — *De Montfort* (c.1150–1218), father of Simon De Montfort, is alluded to here, for his 'crusade,' which was really a persecution of the Albigenses in France, who had rejected the authority of the Pope and much of the doctrine of the Church of Rome. — *St. Dominic* (1170–1221): founder of the Dominicans, or preaching friars; a zealous and austere churchman who persecuted heretics. — *Escobar*: a Spanish Jesuit of the 17th century, famous not only for his austerity but also for his system of casuistry, which came to mean 'proving that wrong is right.'

religion. There was another party, by no means numerous, but distinguished by learning and ability, which acted with them on very different principles. We speak of those whom Cromwell was accustomed to call the Heathens, men who were, in the phraseology of that time, doubting Thomases or careless Gallios [171] with regard to religious subjects, but passionate worshippers of freedom. Heated by the study of ancient literature, they set up their country as their idol, and proposed to themselves the heroes of Plutarch [172] as their examples. They seem to have borne some resemblance to the Brissotines [173] of the French Revolution. But it is not very easy to draw the line of distinction between them and their devout associates, whose tone and manner they sometimes found it convenient to affect, and sometimes, it is probable, imperceptibly adopted.

We now come to the Royalists. We shall attempt to speak of them, as we have spoken of their antagonists, with perfect candour. We shall not charge upon a whole party the profligacy and baseness of the horseboys, gamblers and bravoes, whom the hope of licence and plunder attracted from all the dens of Whitefriars [174] to the standard of Charles, and who disgraced their associates by excesses which, under the stricter discipline of the Parliamentary armies, were never tolerated. We will select a more favourable specimen. Thinking as we do that the cause of the King was the cause of bigotry and tyranny, we yet cannot refrain from looking with complacency on the character of the honest old Cavaliers. We feel a national pride in comparing them with the instruments which the despots of other countries are compelled to employ, with the mutes who throng their ante-chambers, and the Janissaries [175] who mount guard at their gates. Our royalist countrymen were not heartless dangling courtiers, bowing at every step, and simpering at every word. They were not mere machines for destruction dressed up in uniforms, caned into skill, intoxicated into valour, defending without love, destroying without hatred. There was a freedom in their subserviency, a nobleness in their very degradation. The sentiment of individual independence was strong within them. They were indeed misled, but by no base or selfish motive. Compassion and romantic honour, the prejudices of childhood, and the venerable names of history, threw over them a spell potent as that of Duessa; [176] and, like the Red-Cross Knight, they thought that they were doing battle for an injured beauty, while they defended a false and loathsome sorceress. In truth they scarcely entered at all into the merits of the political question. It was not for a treacherous king or an intolerant church that they fought, but for the old banner which had waved in so many battles over the heads of their fathers, and for the altars at which they had received the hands of their brides. Though nothing could be more erroneous than their political opinions, they possessed, in a far greater degree than their adversaries, those qualities

171. See *John*, xx.24–29; *Acts*, xviii,17.

172. *Plutarch*: Greek author of the 1st century A.D., who wrote lives of famous Greek and Roman soldiers and statesmen.

173. The moderate republicans of the early days of the Revolution, so called from their leader Jacques Pierre Brissot (1754–93); better known as 'Girondists,' because their chief leaders came from the Gironde district.

174. The district in London just east of the Temple, so called from the church of the Carmelites, or 'White Friars.' Debtors were there exempt from arrest; hence it became the shelter for all sorts of lawless and desperate characters. See Macaulay's *History*, Chapter iii.

175. The famous body-guard of the Sultans of Turkey; originally personal slaves of the Sultans, later slaves, conscripts, and the sons of subject Christians seized as tribute. At the time Macaulay was writing this essay, the Janissaries were attracting much public attention by their hostility to the reigning Sultan; and a year later (1826) they were suppressed, through massacre or banishment.

176. 'The False One' — the witch in *The Faerie Queene*, I,ii.

which are the grace of private life. With many of the vices of the Round Table,[177] they had also many of its virtues, courtesy, generosity, veracity, tenderness, and respect for women. They had far more both of profound and of polite learning than the Puritans. Their manners were more engaging, their tempers more amiable, their tastes more elegant, and their households more cheerful.

Milton did not strictly belong to any of the classes which we have described. He was not a Puritan. He was not a freethinker. He was not a Royalist. In his character the noblest qualities of every party were combined in harmonious union. From the Parliament and from the Court, from the conventicle[178] and from the Gothic cloister,[179] from the gloomy and sepulchral circles of the Roundheads, and from the Christmas revel of the hospitable Cavalier, his nature selected and drew to itself whatever was great and good, while it rejected all the base and pernicious ingredients by which those finer elements were defiled. Like the Puritans, he lived

'As ever in his great taskmaster's eye.'[180]

Like them, he kept his mind continually fixed on an Almighty Judge and an eternal reward. And hence he acquired their contempt of external circumstances, their fortitude, their tranquillity, their inflexible resolution. But not the coolest sceptic or the most profane scoffer was more perfectly free from the contagion of their frantic delusions, their savage manners, their ludicrous jargon, their scorn of science, and their aversion to pleasure. Hating tyranny with a perfect hatred, he had nevertheless all the estimable and ornamental qualities which were almost entirely monopolised by the party of the tyrant. There was none who had a stronger sense of the value of literature, a finer relish for every elegant amusement, or a more chivalrous delicacy of honour and love. Though his opinions were democratic, his tastes and his associations were such as harmonise best with monarchy and aristocracy. He was under the influence of all the feelings by which the gallant Cavaliers were misled. But of those feelings he was the master and not the slave. Like the hero of Homer, he enjoyed all the pleasures of fascination; but he was not fascinated. He listened to the song of the Syrens; yet he glided by without being seduced to their fatal shore. He tasted the cup of Circe;[181] but he bore about him a sure antidote against the effects of its bewitching sweetness. The illusions which captivated his imagination never impaired his reasoning powers. The statesman was proof against the splendour, the solemnity, and the romance which enchanted the poet. Any person who will contrast the sentiments expressed in his treatises on Prelacy with the exquisite lines on ecclesiastical architecture and music in the *Penseroso*,[182] which was published about the same time,[183] will understand our meaning. This is an inconsistency which, more than anything else, raises his character in our estimation, because it shows how many private tastes and feelings he sacrificed, in order to do what he considered his duty to mankind. It is the very struggle of the noble Othello. His heart relents; but his hand is firm. He does nought in hate, but all in honour. He kisses the beautiful deceiver before he destroys her.[184]

That from which the public character of Milton derives its great and peculiar splendour, still remains to be mentioned. If he exerted himself to overthrow a forsworn king and a persecuting hierarchy, he ex-

erted himself in conjunction with others. But the glory of the battle which he fought for the species of freedom which is the most valuable, and which was then the least understood, the freedom of the human mind, is all his own. Thousands and tens of thousands among his contemporaries raised their voices against Ship-money and the Star-Chamber. But there were few indeed who discerned the more fearful evils of moral and intellectual slavery, and the benefits which would result from the liberty of the press and the unfettered exercise of private judgment. These were the objects which Milton justly conceived to be the most important. He was desirous that the people should think for themselves as well as tax themselves, and should be emancipated from the dominion of prejudice as well as from that of Charles. He knew that those who, with the best intentions, overlooked these schemes of reform, and contented themselves with pulling down the King and imprisoning the malignants, acted like the heedless brothers in his own poem,[185] who in their eagerness to disperse the train of the sorcerer, neglected the means of liberating the captive. They thought only of conquering when they should have thought of disenchanting.

'Oh, ye mistook! Ye should have snatch'd
his wand
And bound him fast. Without the rod reversed,
And backward mutters of dissevering
power,
We cannot free the lady that sits here
Bound in strong fetters fix'd and motionless.'[186]

To reverse the rod, to spell the charm backward, to break the ties which bound a stupefied people to the seat of enchantment, was the noble aim of Milton. To this all his public conduct was directed. For this he joined the Presbyterians; for this he forsook them. He fought their perilous battle; but he turned away with disdain from their insolent triumph. He saw that they, like those whom they had vanquished, were hostile to the liberty of thought. He therefore joined the Independents, and called upon Cromwell to break the secular chain,[187] and to save free conscience from the paw of the Presbyterian wolf. With a view to the same great object, he attacked the licensing system,[188] in that sublime treatise[189] which every statesman should wear as a sign upon his hand and as frontlets[190] between his eyes. His attacks were, in general, directed less against particular abuses than against those deeply-seated errors on which almost all abuses are founded, the servile worship of eminent men and the irrational dread of innovation.

That he might shake the foundations of these debasing sentiments more effectually, he always selected for himself the boldest literary services. He never came up in the rear, when the outworks had been carried and the breach entered. He pressed into the forlorn hope. At the beginning of the changes, he wrote with incomparable energy and eloquence against the bishops. But, when his opinion seemed likely to prevail, he passed on to other subjects, and abandoned prelacy to the crowd of writers who now hastened to insult a falling party. There is no more hazardous enterprise than that of bearing the torch of truth into those dark and infected recesses in which no light has ever shone. But it was the choice and the pleasure of Milton to penetrate the noisome vapours, and to brave the terrible explosion. Those who most disapprove of his opinions must re-

spect the hardihood with which he maintained them. He, in general, left to others the credit of expounding and defending the popular parts of his religious and political creed. He took his own stand upon those which the great body of his countrymen reprobated as criminal, or derided as paradoxical. He stood up for divorce [191] and regicide. He attacked the prevailing systems of education. His radiant and beneficent career resembled that of the god of light and fertility.

'Nitor in adversum; nec me, qui cætera, vincit
Impetus, et rapido contrarius evehor orbi.' [192]

It is to be regretted that the prose writings of Milton should, in our time, be so little read. As compositions, they deserve the attention of every man who wishes to become acquainted with the full power of the English language. They abound with passages compared with which the finest declamations of Burke sink into insignificance.[193] They are a perfect field of cloth-of-gold.[194] The style is stiff with gorgeous embroidery. Not even in the earlier books of the *Paradise Lost* has the great poet ever risen higher than in those parts of his controversial works in which his feelings, excited by conflict, find a vent in bursts of devotional and lyric rapture. It is, to borrow his own majestic language, 'a sevenfold chorus of hallelujahs and harping symphonies.' [195]

We had intended to look more closely at these performances, to analyse the peculiarities of the diction, to dwell at some length on the sublime wisdom of the *Areopagitica* and the nervous rhetoric of the *Iconoclast*, and to point out some of those magnificent passages which occur in the *Treatise of Reformation*, and the *Animadversions on the Remonstrant*. But the length to which our remarks have already extended renders this impossible.

We must conclude. And yet we can scarcely tear ourselves away from the subject. The days immediately following the publication of this relic of Milton [196] appear to be peculiarly set apart, and consecrated to his memory. And we shall scarcely be censured if, on this his festival, we be found lingering near his shrine, how worthless soever may be the offering which we bring to it. While this book lies on our table, we seem to be contemporaries of the writer. We are transported a hundred and fifty years back. We can almost fancy that
30 we are visiting him in his small lodging; that we see him sitting at the old organ beneath the faded green hangings; that we can catch the quick twinkle of his eyes, rolling in vain to find the day; that we are reading in the lines of his noble countenance the proud and mournful history of his glory and his affliction. We image to

191. In his *Treatise on the Doctrine and Discipline of Divorce* (1643).

193. Edmund Burke (1729–97), great statesman and orator of the reign of George III, had entered Parliament as a Whig but had passed over at the time of the French Revolution to Toryism; hence Macaulay's curious estimate of Burke's merits in comparison with Milton's.

194. Allusion to interview between Henry VIII of England and Francis I of France in 1520, on the plain between Ardres and Guînes, celebrated for its magnificent display.

195. Quoted from Milton's *Reason of Church-Government urged against Prelaty*, one of five anti-episcopal pamphlets, of which two others are the *Treatise of Reformation* and *Animadversions on the Remonstrant*, mentioned in the next paragraph. — *Iconoclast* (or *Eikonoklastes*) was written as a reply to a book entitled *Eikon Basilike* (*i.e.* Royal Image), pretending to be the king's meditations and prayers.

196. *i.e.* the *Treatise on Christian Doctrine*, which provided Macaulay with an occasion for writing his essay.

ourselves the breathless silence in which we should listen to his slightest word, the passionate veneration with which we should kneel to kiss his hand and weep upon it, the earnestness with which we should endeavour to console him, if indeed such a spirit could need consolation, for the neglect of an age unworthy of his talents and his virtues, the eagerness with which we should contest with his daughters, or with his Quaker friend Elwood, the privilege of reading Homer to him, or of taking down the immortal accents which flowed from his lips.[197]

These are perhaps foolish feelings. Yet we cannot be ashamed of them; nor shall we be sorry if what we have written shall in any degree excite them in other minds. We are not much in the habit of idolising either the living or the dead. And we think that there is no more certain indication of a weak and ill-regulated intellect than that propensity which, for want of a better name, we will venture to christen Boswellism.[198] But there are a few characters which have stood the closest scrutiny and the severest tests, which have been tried in the furnace and have proved pure, which have been weighed in the balance and have not been found wanting, which have been declared sterling by the general consent of mankind, and which are visibly stamped with the image and superscription of the Most High. These great men we trust that we know how to prize; and of these was Milton. The sight of his books, the sound of his name, are pleasant to us. His thoughts resemble those celestial fruits and flowers which the Virgin Martyr of Massinger[199] sent down from the gardens of Paradise to the earth, and which were distinguished from the productions of other soils, not only by superior bloom and sweetness, but by miraculous efficacy to invigorate and to heal. They are powerful, not only to delight, but to elevate and purify. Nor do we envy the man who can study either the life or the writings of the great poet and patriot, without aspiring to emulate, not indeed the sublime works with which his genius has enriched our literature, but the zeal with which he laboured for the public good, the fortitude with which he endured every private calamity, the lofty disdain with which he looked down on temptations and dangers, the deadly hatred which he bore to bigots and tyrants, and the faith which he so sternly kept with his country and with his fame.

197. Thomas Ellwood (or Elwood) (1639–1713) read to Milton each day. It was owing to a suggestion by Ellwood that Milton decided to write *Paradise Regained*.

199. See *The Virgin Martyr* (printed 1622), by Philip Massinger (1583–1640) and Thomas Dekker (1570?–1632), based upon the story of St. Dorothea, who was martyred during the reign of the Emperor Diocletian at the close of the 3rd century and the beginning of the 4th.

SOUTHEY'S COLLOQUIES

. . . Mr. Southey's political system is just what we might expect from a man who regards politics, not as matter of science, but as matter of taste and feeling. All his schemes of government have been inconsistent with themselves. In his youth he was a republican; yet, as he tells us in his preface to these *Colloquies*, he was even then opposed to the Catholic Claims.[1] He is now a violent Ultra-Tory. Yet, while he maintains, with vehemence approaching to ferocity, all the sterner and harsher parts

1. See Southey's *Colloquies*, Preface, xiii: 'My opinions respecting the Roman Catholic claims to seats in Parliament and certain offices in the state have always been the same.'

of the Ultra-Tory theory of government, the baser and dirtier part of that theory disgusts him. Exclusion, persecution, severe punishments for libellers and demagogues, proscriptions, massacres, civil war, if necessary, rather than any concession to a discontented people; these are the measures which he seems inclined to recommend. A severe and gloomy tyranny, crushing opposition, silencing remonstrance, drilling the minds of the people into unreasoning obedience, has in it something of grandeur which delights his imagination. But there is nothing fine in the shabby tricks and jobs of office; and Mr. Southey, accordingly, has no toleration for them. When a Jacobin,[2] he did not perceive that his system led logically, and would have led practically, to the removal of religious distinctions. He now commits a similar error. He renounces the abject and paltry part of the creed of his party, without perceiving that it is also an essential part of that creed. He would have tyranny and purity together; though the most superficial observation might have shown him that there can be no tyranny without corruption.

It is high time, however, that we should proceed to the consideration of the work which is our more immediate subject, and which, indeed, illustrates in almost every page our general remarks on Mr. Southey's writings. In the preface, we are informed that the author, notwithstanding some statements to the contrary, was always opposed to the Catholic Claims. We fully believe this; both because we are sure that Mr. Southey is incapable of publishing a deliberate falsehood, and because his assertion is in itself probable. We should have expected that, even in his wildest paroxysms of democratic enthusiasm, Mr. Southey would have felt no wish to see a simple remedy applied to a great practical evil. We should have expected that the only measure which all the great statesmen of two generations have agreed with each other in supporting would be the only measure which Mr. Southey would have agreed with himself in opposing. He has passed from one extreme of political opinion to another, as Satan in Milton went round the globe, contriving constantly to 'ride with darkness.'[3] Wherever the thickest shadow of the night may at any moment chance to fall, there is Mr. Southey. It is not everybody who could have so dexterously avoided blundering on the daylight in the course of a journey to the antipodes.

Mr. Southey has not been fortunate in the plan of any of his fictitious narratives. But he has never failed so conspicuously as in the work before us; except, indeed, in the wretched *Vision of Judgment*.[4] In November 1817, it seems the Laureate was sitting over his newspaper, and meditating about the death of the Princess Charlotte.[5] An elderly person of very dignified aspect makes his appearance, announces himself as a stranger from a distant country, and apologises very politely for not having provided himself with letters of introduction. Mr. Southey supposes his visitor to be some American gentleman who has come to see the lakes and the lake-poets, and accordingly proceeds to perform, with that grace, which only long practice can give, all the

2. Originally the name of a political club established in Paris, 1789, to maintain the principles of extreme democracy and absolute equality. In England, the name was applied, in the late 18th and early 19th centuries, to any political reformer. Southey and Coleridge were at one time, in their early years, devoted to the Revolutionary cause.

3. *Paradise Lost*, ix,62–64:

> . . . thence full of anguish driv'n
> The space of seven continu'd Nights he rode
> With darkness. . .

4. A poem in hexameters, published in 1821; in a vision, Southey sees George III rise from the tomb, proceed to the gate of Heaven, and in spite of the Devil, accompanied by Wilkes, gain admission to Heaven on the testimonial of Washington! The poem was parodied by Byron in a poem with the same title.

5. Princess Charlotte Augusta, only child of George, Prince of Wales, afterwards George IV; she died in childbirth, Nov. 19, 1817.

duties which authors owe to starers. He assures his guest that some of the most agreeable visits which he has received have been from Americans, and that he knows men among them whose talents and virtues would do honour to any country. In passing we may observe, to the honour of Mr. Southey, that, though he evidently has no liking for the American institutions, he never speaks of the people of the United States with that pitiful affectation of contempt by which some members of his party have done more than wars or tariffs can do to excite mutual enmity between two communities formed for mutual fellowship. Great as the faults of his mind are, paltry spite like this has no place in it. Indeed it is scarcely conceivable that a man of his sensibility and his imagination should look without pleasure and national pride on the vigorous and splendid youth of a great people, whose veins are filled with our blood, whose minds are nourished with our literature, and on whom is entailed the rich inheritance of our civilisation, our freedom, and our glory.

But we must return to Mr. Southey's study at Keswick. The visitor informs the hospitable poet that he is not an American but a spirit. Mr. Southey, with more frankness than civility, tells him that he is a very queer one. The stranger holds out his hand. It has neither weight nor substance. Mr. Southey upon this becomes more serious; his hair stands on end; and he adjures the spectre to tell him what he is, and why he comes. The ghost turns out to be Sir Thomas More.[6] The traces of martyrdom, it seems, are worn in the other world, as stars and ribands are worn in this. Sir Thomas shows the poet a red streak round his neck, brighter than a ruby, and informs him that Cranmer[7] wears a suit of flames in Paradise, the right hand glove, we suppose, of peculiar brilliancy.

Sir Thomas pays but a short visit on this occasion, but promises to cultivate the new acquaintance which he has formed, and, after begging that his visit may be kept secret from Mrs. Southey, vanishes into air.

The rest of the book consists of conversations between Mr. Southey and the spirit about trade, currency, Catholic emancipation,[8] periodical literature, female nunneries, butchers, snuff, bookstalls, and a hundred other subjects. Mr. Southey very hospitably takes an opportunity to escort the ghost round the lakes, and directs his attention to the most beautiful points of view. Why a spirit was to be evoked for the purpose of talking over such matters and seeing such sights, why the vicar of the parish, a blue-stocking from London, or an American, such as Mr. Southey at first supposed the aerial visitor to be, might not have done as well, we are unable to conceive. Sir Thomas tells Mr. Southey nothing about future events, and indeed absolutely disclaims the gifts of prescience. He has learned to talk modern English. He has read all the new publications, and loves a jest as well as when he jested with the executioner, though we cannot say that the quality of his wit has materially improved in Paradise. His powers of reasoning, too, are by no means in as great vigour as when he sate on the woolsack; and though he

6. Sir Thomas More (1478–1535), lord chancellor, and author; he was privy councillor under Henry VIII, and enjoyed great royal favor until he refused to take any oath that would impugn the pope's authority or assume the justice of the king's divorce from Queen Catherine, whereupon he was committed to the Tower, and beheaded in 1535. Admirers and adherents of More considered him a martyr.

7. Thomas Cranmer (1489–1556), Archbishop of Canterbury, favored Henry VIII's divorce from Queen Catherine, and maintained the King's claim to be the supreme head of the Church of England. Under the reign of (Catholic) Mary, in spite of his repudiation of his former position, he was burned at the stake, having at the last repudiated, in turn, his admissions to Mary, and holding in the flames his right hand, with which he had made his first recantation.

8. By which Act civil disabilities were removed from Roman Catholics in 1829.

boasts that he is 'divested of all those passions which cloud the intellects and warp the understandings of men,' we think him, we must confess, far less stoical than formerly. As to revelations, he tells Mr. Southey at the outset to expect none from him. The Laureate [9] expresses some doubts, which assuredly will not raise him in the opinion of our modern millennarians,[10] as to the divine authority of the Apocalypse.[11] But the ghost preserves an impenetrable silence. As far as we remember, only one hint about the employment of disembodied spirits escapes him. He encourages Mr. Southey to hope that there is a Paradise Press, at which all the valuable publications of Mr. Murray and Mr. Colburn [12] are reprinted as regularly as at Philadelphia; and delicately insinuates that *Thalaba* and the *Curse of Kehama* [13] are among the number. What a contrast does this absurd fiction present to those charming narratives which Plato and Cicero prefixed to their dialogues! What cost in machinery, yet what poverty of effect! A ghost brought in to say what any man might have said! The glorified spirit of a great statesman and philosopher dawdling, like a bilious old nabob at a watering-place, over quarterly reviews and novels, dropping in to pay long calls, making excursions in search of the picturesque! The scene of St. George and St. Dennis in the *Pucelle* is hardly more ridiculous.[14] We know what Voltaire meant. Nobody, however, can suppose that Mr. Southey means to make game of the mysteries of a higher state of existence. The fact is that, in the work before us, in the *Vision of Judgment*, and in some of his other pieces, his mode of treating the most solemn subjects differs from that of open scoffers only as the extravagant representations of sacred persons and things in some grotesque Italian paintings differ from the caricatures which Carlile [15] exposes in the front of his shop. We interpret the particular act by the general character. What in the window of a convicted blasphemer we call blasphemous, we call only absurd and ill-judged in an altar-piece.

We now come to the conversations which pass between Mr. Southey and Sir Thomas More, or rather between two Southeys, equally eloquent, equally angry, equally unreasonable, and equally given to talking about what they do not understand. Perhaps we could not select a better instance of the spirit which pervades the whole book than the passages in which Mr. Southey gives his opinion of the manufacturing system. There is nothing which he hates so bitterly. It is, according to him, a system more tyrannical than that of the feudal ages, a system of actual servitude, a system which destroys the bodies and degrades the minds of those who are engaged in it. He expresses a hope that the competition of other nations may drive us out of the field; that our foreign trade may decline; and that we may thus enjoy a restoration of national sanity and strength. But he seems to think that the extermination of the whole manufacturing population would be a blessing, if the evil could be removed in no other way.

Mr. Southey does not bring forward a single fact in support of these views; and, as it seems to us, there are facts which lead to a very different conclusion. In the first place, the poor-rate is very decidedly lower in the manufacturing than in the agricultural districts. If Mr. Southey will look over the Parliamentary returns on this sub-

9. Southey was made Poet Laureate in 1813.

10. Believers in the literal and imminent fulfillment of the prophecy in *Revelation* xx concerning the thousand-year period during which holiness will triumph and evil be punished.

11. The prophecy in *Revelation*.

12. Eminent publishers of the day.

13. Ambitious narrative poems, of Oriental settings, published by Southey, 1801 and 1810, respectively.

14. Voltaire's *La Pucelle* (The Maid, *i.e.* Joan of Arc) was a burlesque epic, published in 1762.

15. Richard Carlile (1790–1843), freethinker, printer and author of freethought papers and tracts; editor of *The Republican*; disciple and publisher of Tom Paine.

ject, he will find that the amount of parochial relief required by the labourers in the different counties of England is almost exactly in inverse proportion to the degree in which the manufacturing system has been introduced into those counties. The returns for the years ending in March 1825, and in March 1828, are now before us. In the former year we find the poor-rate highest in Sussex, about twenty shillings to every inhabitant. Then come Buckinghamshire, Essex, Suffolk, Bedfordshire, Huntingdonshire, Kent, and Norfolk. In all these the rate is above fifteen shillings a head. We will not go through the whole. Even in Westmoreland and the North Riding of Yorkshire, the rate is at more than eight shillings. In Cumberland and Monmouthshire, the most fortunate of all the agricultural districts, it is at six shillings. But in the West Riding of Yorkshire, it is as low as five shillings: and when we come to Lancashire, we find it at four shillings, one-fifth of what it is in Sussex. The returns of the year ending in March 1828 are a little, and but a little, more unfavourable to the manufacturing districts. Lancashire, even in that season of distress, required a smaller poor-rate than any other district, and little more than one-fourth of the poor-rate raised in Sussex. Cumberland alone, of the agricultural districts, was as well off as the West Riding of Yorkshire. These facts seem to indicate that the manufacturer is both in a more comfortable and in a less dependent situation than the agricultural labourer.

As to the effect of the manufacturing system on the bodily health, we must beg leave to estimate it by a standard far too low and vulgar for a mind so imaginative as that of Mr. Southey, the proportion of births and deaths. We know that, during the growth of this atrocious system, this new misery, to use the phrases of Mr. Southey, this new enormity, this birth of a portentous age, this pest which no man can approve whose heart is not seared or whose understanding has not been darkened, there has been a great diminution of mortality, and that this diminution has been greater in the manufacturing towns than anywhere else. The mortality still is, as it always was, greater in towns than in the country. But the difference has diminished in an extraordinary degree. There is the best reason to believe that the annual mortality of Manchester, about the middle of the last century, was one in twenty-eight. It is now reckoned at one in forty-five. In Glasgow and Leeds a similar improvement has taken place. Nay, the rate of mortality in those three great capitals of the manufacturing districts is now considerably less than it was, fifty years ago, over England and Wales, taken together, open country and all. We might with some plausibility maintain that the people live longer because they are better fed, better lodged, better clothed, and better attended in sickness, and that these improvements are owing to that increase of national wealth which the manufacturing system has produced.

Much more might be said on this subject. But to what end? It is not from bills of mortality and statistical tables that Mr. Southey has learned his political creed. He cannot stoop to study the history of the system which he abuses, to strike the balance between the good and evil which it has produced, to compare district with district, or generation with generation. We will give his own reason for his opinion, the only reason which he gives for it, in his own words: —

'We remained a while in silence looking upon the assemblage of dwellings below. Here, and in the adjoining hamlet of Millbeck, the effects of manufactures and of agriculture may be seen and compared. The old cottages are such as the poet and the painter equally delight in beholding. Substantially built of the native stone without mortar, dirtied with no white lime, and their long low roofs covered with slate, if they had been raised by the magic of some

indigenous Amphion's [16] music, the materials could not have adjusted themselves more beautifully in accord with the surrounding scene; and time has still further harmonized them with weather stains, lichens, and moss, short grasses, and short fern, and stone-plants of various kinds. The ornamented chimneys, round or square, less adorned than those which, like little turrets, crest the houses of the Portuguese peasantry, and yet not less happily suited to their place; the hedge of clipt box beneath the windows, the rose-bushes beside the door, the little patch of flower-ground, with its tall hollyhocks in front; the garden beside, the bee-hives, and the orchard with its bank of daffodils and snow-drops, the earliest and the profusest in these parts, indicate in the owners some portion of ease and leisure, some regard to neatness and comfort, some sense of natural, and innocent, and healthful enjoyment. The new cottages of the manufacturers are upon the manufacturing pattern — naked, and in a row.

'"How is it," said I, "that everything which is connected with manufactures presents such features of unqualified deformity? From the largest of Mammon's [17] temples down to the poorest hovel in which his helotry are stalled, these edifices have all one character. Time will not mellow them; nature will neither clothe nor conceal them; and they will remain always as offensive to the eye as to the mind."'

Here is wisdom. Here are the principles on which nations are to be governed. Rose-bushes and poor-rates, rather than steam-engines and independence. Mortality and cottages with weather-stains, rather than health and long life with edifices which time cannot mellow. We are told, that our age has invented atrocities beyond the imagination of our fathers; that society has been brought into a state compared with which extermination would be a blessing; and all because the dwellings of cotton-spinners are naked and rectangular. Mr. Southey has found out a way, he tells us, in which the effects of manufactures and agriculture may be compared. And what is this way? To stand on a hill, to look at a cottage and a factory, and to see which is the prettier. Does Mr. Southey think that the body of the English peasantry live, or ever lived, in substantial or ornamented cottages, with box-hedges, flower-gardens, bee-hives, and orchards? If not, what is his parallel worth? We despise those mock philosophers, who think that they serve the cause of science by depreciating literature and the fine arts. But if anything could excuse their narrowness of mind, it would be such a book as this. It is not strange that, when one enthusiast makes the picturesque the test of political good, another should feel inclined to proscribe altogether the pleasures of taste and imagination.

Thus it is that Mr. Southey reasons about matters with which he thinks himself perfectly conversant. We cannot, therefore, be surprised to find that he commits extraordinary blunders when he writes on points of which he acknowledges himself to be ignorant. He confesses that he is not versed in political economy, and that he has neither liking nor aptitude for it; and he then proceeds to read the public a lecture concerning it which fully bears out his confession.

'All wealth,' says Sir Thomas More, 'in former times was tangible. It consisted in land, money, or chattels, which were either of real or conventional value.'

Montesinos, as Mr. Southey somewhat affectedly calls himself,[18] answers thus: —

'Jewels, for example, and pictures, as in

16. Amphion had received a lyre from the god Hermes, on which he played with such magic skill that the walls of Thebes built themselves to the accompaniment of his music.

17. In the New Testament, riches; hence the god of desire or greed.

18. Montesinos was the name of a legendary Spanish hero of the chivalry ballads and romances; his name was given to a cavern in La Mancha, immortalized in Cervantes' *Don Quixote*. — The name, as adopted by Southey, is to indicate his Tory-romantic point of view

Holland, where indeed at one time tulip bulbs answered the same purpose.'

'That bubble,' says Sir Thomas, 'was one of those contagious insanities to which communities are subject. All wealth was real, till the extent of commerce rendered a paper currency necessary; which differed from precious stones and pictures in this important point, that there was no limit to its production.'

'We regard it,' says Montesinos, 'as the representative of real wealth; and, therefore, limited always to the amount of what it represents.'

'Pursue that notion,' answers the ghost, 'and you will be in the dark presently. Your provincial banknotes, which constitute almost wholly the circulating medium of certain districts, pass current to-day. To-morrow tidings may come that the house which issued them has stopt payment, and what do they represent then? You will find them the shadow of a shade.'

We scarcely know at which end to begin to disentangle this knot of absurdities. We might ask, why it should be a greater proof of insanity in men to set a high value on rare tulips than on rare stones, which are neither more useful nor more beautiful? We might ask how it can be said that there is no limit to the production of paper money, when a man is hanged if he issues any in the name of another, and is forced to cash what he issues in his own? But Mr. Southey's error lies deeper still. 'All wealth,' says he, 'was tangible and real till paper currency was introduced.' Now, was there ever, since men emerged from a state of utter barbarism, an age in which there were no debts? Is not a debt, while the solvency of the debtor is undoubted, always reckoned as part of the wealth of the creditor? Yet is it tangible and real wealth? Does it cease to be wealth, because there is the security of a written acknowledgment for it? And what else is paper currency? Did Mr. Southey ever read a banknote? If he did, he would see that it is a written acknowledgment of a debt, and a promise to pay that debt. The promise may be violated: the debt may remain unpaid: those to whom it was due may suffer: but this is a risk not confined to cases of paper currency: it is a risk inseparable from the relation of debtor and creditor. Every man who sells goods for anything but ready money runs the risk of finding that what he considered as part of his wealth one day is nothing at all the next day. Mr. Southey refers to the picture-galleries of Holland. The pictures were undoubtedly real and tangible possessions. But surely it might happen that a burgomaster might owe a picture-dealer a thousand guilders for a Teniers.[19] What in this case corresponds to our paper money is not the picture, which is tangible, but the claim of the picture-dealer on his customer for the price of the picture; and this claim is not tangible. Now, would not the picture-dealer consider this claim as part of his wealth? Would not a tradesman who knew of the claim give credit to the picture-dealer the more readily on account of the claim? The burgomaster might be ruined. If so, would not those consequences follow which, as Mr. Southey tells us, were never heard of till paper money came into use? Yesterday this claim was worth a thousand guilders.[20] To-day what is it? The shadow of a shade.

It is true that, the more readily claims of this sort are transferred from hand to hand, the more extensive will be the injury produced by a single failure. The laws of all nations sanction, in certain cases, the transfer of rights not yet reduced into possession. Mr. Southey would scarcely wish, we should think, that all indorsements of bills and notes should be declared invalid. Yet even if this were done, the transfer of claims would imperceptibly take place, to

19. David Teniers (1582–1649); son by the same name (1610–90): famous Flemish painters.

20. Dutch golden or silver coins, each worth, at par, about $.40.

a very great extent. When the baker trusts the butcher, for example, he is in fact, though not in form, trusting the butcher's customers. A man who owes large bills to tradesmen, and fails to pay them, almost always produces distress through a very wide circle of people with whom he never dealt.

In short, what Mr. Southey takes for a difference in kind is only a difference of form and degree. In every society men have claims on the property of others. In every society there is a possibility that some debtors may not be able to fulfil their obligations. In every society, therefore, there is wealth which is not tangible, and which may become the shadow of a shade.

Mr. Southey then proceeds to a dissertation on the national debt, which he considers in a new and most consolatory light, as a clear addition to the income of the country.

'You can understand,' says Sir Thomas, 'that it constitutes a great part of the national wealth.'

'So large a part,' answers Montesinos, 'that the interest amounted, during the prosperous times of agriculture, to as much as the rental of all the land in Great Britain; and at present to the rental of all lands, all houses, and all other fixed property put together.'

The Ghost and Laureate agree that it is very desirable that there should be so secure and advantageous a deposit for wealth as the funds afford. Sir Thomas then proceeds: —

'Another and far more momentous benefit must not be overlooked; the expenditure of an annual interest, equalling, as you have stated, the present rental of all fixed property.'

'That expenditure,' quoth Montesinos, 'gives employment to half the industry in the kingdom, and feeds half the mouths. Take, indeed, the weight of the national debt from this great and complicated social machine, and the wheels must stop.'

From this passage we should have been inclined to think that Mr. Southey supposes the dividends to be a free gift periodically sent down from heaven to the fundholders, as quails and manna were sent to the Israelites; [21] were it not that he has vouchsafed, in the following question and answer, to give the public some information which, we believe, was very little needed.

'Whence comes the interest?' says Sir Thomas.

'It is raised,' answers Montesinos, 'by taxation.'

Now, has Mr. Southey ever considered what would be done with this sum if it were not paid as interest to the national creditor? If he would think over this matter for a short time, we suspect that the 'momentous benefit' of which he talks would appear to him to shrink strangely in amount. A fundholder, we will suppose, spends dividends amounting to five hundred pounds a year; and his ten nearest neighbours pay fifty pounds each to the tax-gatherer, for the purpose of discharging the interest of the national debt. If the debt were wiped out, a measure, be it understood, which we by no means recommend, the fundholder would cease to spend his five hundred pounds a year. He would no longer give employment to industry, or put food into the mouths of labourers. This Mr. Southey thinks a fearful evil. But is there no mitigating circumstance? Each of the ten neighbours of our fundholder has fifty pounds a year more than formerly. Each of them will, as it seems to our feeble understandings, employ more industry and feed more mouths than formerly. The sum is exactly the same. It is in different hands. But on what grounds does Mr. Southey call upon us to believe that it is in the hands of men who will spend it less liberally or less judiciously? He seems to think that nobody but a fundholder can employ the poor; that, if a tax is remitted, those who formerly used to pay it proceed immediately

21. See *Exodus*, xvi.

to dig holes in the earth, and to bury the sum which the Government had been accustomed to take; that no money can set industry in motion till such money has been taken by the tax-gatherer out of one man's pocket and put into another man's pocket. We really wish that Mr. Southey would try to prove this principle, which is indeed the foundation of his whole theory of finance: for we think it right to hint to him that our hard-hearted and unimaginative generation will expect some more satisfactory reason than the only one with which he has yet favoured it, namely, a similitude touching evaporation and dew.

Both the theory and the illustration, indeed, are old friends of ours. In every season of distress which we can remember, Mr. Southey has been proclaiming that it is not from economy, but from increased taxation, that the country must expect relief; and he still, we find, places the undoubting faith of a political Diafoirus, in his

'Resaignare, repurgare, et reclysterizare.' [22]

'A people,' he tells us, 'may be too rich, but a government cannot be so.'

'A state,' says he, 'cannot have more wealth at its command than may be employed for the general good, a liberal expenditure in national works being one of the surest means of promoting national prosperity; and the benefit being still more obvious, of an expenditure directed to the purposes of national improvement. But a people may be too rich.'

We fully admit that a state cannot have at its command more wealth than may be employed for the general good. But neither can individuals, or bodies of individuals, have at their command more wealth than may be employed for the general good. If there be no limit to the sum which may be usefully laid out in public works and national improvement, then wealth, whether in the hands of private men or of the Government, may always, if the possessors choose to spend it usefully, be usefully spent. The only ground, therefore, on which Mr. Southey can possibly maintain that a government cannot be too rich, but that a people may be too rich, must be this, that governments are more likely to spend their money on good objects than private individuals.

But what is useful expenditure? 'A liberal expenditure in national works,' says Mr. Southey, 'is one of the surest means for promoting national prosperity.' What does he mean by national prosperity? Does he mean the wealth of the State? If so, his reasoning runs thus: The more wealth a state has the better; for the more wealth a state has the more wealth it will have. This is surely something like that fallacy, which is ungallantly termed a lady's reason. If by national prosperity he means the wealth of the people, of how gross a contradiction is Mr. Southey guilty. A people, he tells us, may be too rich: a government cannot: for a government can employ its riches in making the people richer. The wealth of the people is to be taken from them, because they have too much, and laid out in works, which will yield them more.

We are really at a loss to determine whether Mr. Southey's reason for recommending large taxation is that it will make the people rich, or that it will make them poor. But we are sure that, if his object is to make them rich, he takes the wrong course. There are two or three principles respecting public works, which, as an experience of vast extent proves, may be trusted in almost every case.

It scarcely ever happens that any private man or body of men will invest property in a canal, a tunnel, or a bridge, but from an expectation that the outlay will be profitable to them. No work of this sort can be profitable to private speculators, unless the

22. Molière's *Le malade imaginaire* (1673); see the 3rd Interlude in the play, which is composed in a mixture of Latin, dog-Latin, Italian, and French. Diafoirus is the doctor in the play. The words quoted by Macaulay make little or no sense, and are meant to express the unthinking faith of a bigot.

public be willing to pay for the use of it. The public will not pay of their own accord for what yields no profit or convenience to them. There is thus a direct and obvious connection between the motive which induces individuals to undertake such a work, and the utility of the work.

Can we find any such connection in the case of a public work executed by a government? If it is useful, are the individuals who rule the country richer? If it is useless, are they poorer? A public man may be solicitous for his credit. But is not he likely to gain more credit by an useless display of ostentatious architecture in a great town than by the best road or the best canal in some remote province? The fame of public works is a much less certain test of their utility than the amount of toll collected at them. In a corrupt age, there will be direct embezzlement. In the purest age, there will be abundance of jobbing. Never were the statesmen of any country more sensitive to public opinion, and more spotless in pecuniary transactions, than those who have of late governed England. Yet we have only to look at the buildings recently erected in London for a proof of our rule. In a bad age, the fate of the public is to be robbed outright. In a good age, it is merely to have the dearest and the worst of everything.

Buildings for State purposes the State must erect. And here we think that, in general, the State ought to stop. We firmly believe that five hundred thousand pounds subscribed by individuals for rail-roads or canals would produce more advantage to the public than five millions voted by Parliament for the same purpose. There are certain old saws about the master's eye and about everybody's business, in which we place very great faith.

There is, we have said, no consistency in Mr. Southey's political system. But if there be in his political system any leading principle, any one error which diverges more widely and variously than any other, it is that of which his theory about national works is a ramification. He conceives that the business of the magistrate is, not merely to see that the persons and property of the people are secure from attack, but that he ought to be a jack-of-all-trades, architect, engineer, schoolmaster, merchant, theologian, a Lady Bountiful in every parish,[23] a Paul Pry in every house, spying, eavesdropping, relieving,[24] admonishing, spending our money for us, and choosing our opinions for us. His principle is, if we understand it rightly, that no man can do anything so well for himself as his rulers, be they who they may, can do it for him, and that a government approaches nearer and nearer to perfection, in proportion as it interferes more and more with the habits and notions of individuals.

He seems to be fully convinced that it is in the power of government to relieve all the distresses under which the lower orders labour. Nay, he considers doubt on this subject as impious. We cannot refrain from quoting his argument on this subject. It is a perfect jewel of logic: —

'"Many thousands in your metropolis," says Sir Thomas More, "rise every morning without knowing how they are to subsist during the day; as many of them, where they are to lay their heads at night. All men, even the vicious themselves, know that wickedness leads to misery: but many, even among the good and the wise, have yet to learn that misery is almost as often the cause of wickedness."

'"There are many," says Montesinos, "who know this, but believe that it is not in the power of human institutions to prevent this misery. They see the effect, but regard the causes as inseparable from the condition of human nature."

'"As surely as God is good," replies Sir

23. See Farquhar's *The Beaux' Stratagem*; Lady Bountiful, a country gentlewoman, cures all her neighbors of their distempers, and lays out half her income in charitable uses.

24. *Cf. Paul Pry*, a farce by John Poole (1786?–1872), produced in 1825; Paul Pry is an inquisitive and meddlesome character.

Thomas, " so surely there is no such thing as necessary evil. For, by the religious mind, sickness, and pain, and death, are not to be accounted evils." '

Now if sickness, pain, and death, are not evils, we cannot understand why it should be an evil that thousands should rise without knowing how they are to subsist. The only evil of hunger is that it produces first pain, then sickness, and finally death. If it did not produce these, it would be no calamity. If these are not evils, it is no calamity. We will propose a very plain dilemma: either physical pain is an evil, or it is not an evil. If it is an evil, then there is necessary evil in the universe: if it is not, why should the poor be delivered from it?

Mr. Southey entertains as exaggerated a notion of the wisdom of governments as of their power. He speaks with the greatest disgust of the respect now paid to public opinion. That opinion is, according to him, to be distrusted and dreaded; its usurpation ought to be vigorously resisted; and the practice of yielding to it is likely to ruin the country. To maintain police is, according to him, only one of the ends of government. The duties of a ruler are patriarchal and paternal. He ought to consider the moral discipline of the people as his first object, to establish a religion, to train the whole community in that religion, and to consider all dissenters as his own enemies.

' " Nothing," says Sir Thomas, " is more certain, than that religion is the basis upon which civil government rests; that from religion power derives its authority, laws their efficacy, and both their zeal and sanction; and it is necessary that this religion be established as for the security of the state, and for the welfare of the people, who would otherwise be moved to and fro with every wind of doctrine. A state is secure in proportion as the people are attached to its institutions; it is, therefore, the first and plainest rule of sound policy, that the people be trained up in the way they should go. The state that neglects this prepares its own destruction; and they who train them in any other way are undermining it. Nothing in abstract science can be more certain than these positions are."

' " All of which," answers Montesinos, " are nevertheless denied by our professors of the arts Babblative and Scribblative: some in the audacity of evil designs, and others in the glorious assurance of impenetrable ignorance." '

The greater part of the two volumes before us is merely an amplification of these paragraphs. What does Mr. Southey mean by saying that religion is demonstrably the basis of civil government? He cannot surely mean that men have no motives except those derived from religion for establishing and supporting civil government, that no temporal advantage is derived from civil government, that men would experience no temporal inconvenience from living in a state of anarchy? If he allows, as we think he must allow, that it is for the good of mankind in this world to have civil government, and that the great majority of mankind have always thought it for their good in this world to have civil government, we then have a basis for government quite distinct from religion. It is true that the Christian religion sanctions government, as it sanctions everything which promotes the happiness and virtue of our species. But we are at a loss to conceive in what sense religion can be said to be the basis of government, in which religion is not also the basis of the practices of eating, drinking, and lighting fires in cold weather. Nothing in history is more certain than that government has existed, has received some obedience, and has given some protection, in times in which it derived no support from religion, in times in which there was no religion that influenced the hearts and lives of men. It was not from dread of Tar-

tarus,[25] or from belief in the Elysian fields,[26] that an Athenian wished to have some institutions which might keep Orestes from filching his cloak, or Midias from breaking his head.[27] 'It is from religion,' says Mr. Southey, 'that power derives its authority, and laws their efficacy.' From what religion does our power over the Hindoos derive its authority, or the law in virtue of which we hang Brahmins[28] its efficacy? For thousands of years civil government has existed in almost every corner of the world, in ages of priestcraft, in ages of fanaticism, in ages of Epicurean indifference, in ages of enlightened piety. However pure or impure the faith of the people might be, whether they adored a beneficent or a malignant power, whether they thought the soul mortal or immortal, they have, as soon as they ceased to be absolute savages, found out their need of civil government, and instituted it accordingly. It is as universal as the practice of cookery. Yet, it is as certain, says Mr. Southey, as anything in abstract science, that government is founded on religion. We should like to know what notion Mr. Southey has of the demonstrations of abstract science. A very vague one, we suspect.

The proof proceeds. As religion is the basis of government, and as the State is secure in proportion as the people are attached to public institutions, it is therefore, says Mr. Southey, the first rule of policy, that the government should train the people in the way in which they should go; and it is plain that those who train them in any other way are undermining the State.

Now it does not appear to us to be the first object that people should always believe in the established religion and be attached to the established government. A religion may be false. A government may be oppressive. And whatever support government gives to false religions, or religion to oppressive governments, we consider as a clear evil.

The maxim, that governments ought to train the people in the way in which they should go, sounds well. But is there any reason for believing that a government is more likely to lead the people in the right way than the people to fall into the right way of themselves? Have there not been governments which were blind leaders of the blind? Are there not still such governments? Can it be laid down as a general rule that the movement of political and religious truth is rather downwards from the government to the people than upwards from the people to the government? These are questions which it is of importance to have clearly resolved. Mr. Southey declaims against public opinion, which is now, he tells us, usurping supreme power. Formerly, according to him, the laws governed; now public opinion governs. What are laws but expressions of the opinion of some class which has power over the rest of the community? By what was the world ever governed but by the opinion of some person or persons? By what else can it ever be governed? What are all systems, religious, political, or scientific, but opinions resting on evidence more or less satisfactory? The question is not between human opinion and some higher and more certain mode of arriving at truth, but between opinion and opinion, between the opinions of one man and another, or of one class and another, or of one generation and another. Public opinion is not infallible; but can Mr. Southey construct any institutions which shall secure to us the guidance of an infallible opinion? Can Mr. Southey select any family, any profession, any class, in short, distinguished by any plain badge from the rest of the community, whose opinion is more likely to be just than this much abused public opinion? Would he choose the peers, for example?

25. The lower region in Hades, or Hell.
26. In Greek mythology and religion, Heaven.
27. Macaulay is evidently using the names Orestes and Midias as representative Greek names, not in allusion to Greek literature or mythology.
28. A Brahmin (or Brahman) is a member of the highest or priestly caste among the Hindus.

Or the two hundred tallest men in the country? Or the poor Knights of Windsor? [29] Or children who are born with cauls? [30] Or the seventh sons of seventh sons? We cannot suppose that he would recommend popular election; for that is merely an appeal to public opinion. And to say that society ought to be governed by the opinion of the wisest and best, though true, is useless. Whose opinion is to decide who are the wisest and best?

Mr. Southey and many other respectable people seem to think that, when they have once proved the moral and religious training of the people to be a most important object, it follows, of course, that it is an object which the government ought to pursue. They forget that we have to consider, not merely the goodness of the end, but also the fitness of the means. Neither in the natural nor in the political body have all members the same office. There is surely no contradiction in saying that a certain section of the community may be quite competent to protect the persons and property of the rest, yet quite unfit to direct our opinions, or to superintend our private habits.

So strong is the interest of a ruler to protect his subjects against all depredations and outrages except his own, so clear and simple are the means by which this end is to be effected, that men are probably better off under the worst governments in the world than they would be in a state of anarchy. Even when the appointment of magistrates has been left to chance, as in the Italian Republics, things have gone on far better than if there had been no magistrates at all, and if every man had done what seemed right in his own eyes. But we see no reason for thinking that the opinions of the magistrate on speculative questions are more likely to be right than those of any other man. None of the modes by which a magistrate is appointed, popular election, the accident of the lot, or the accident of birth, affords, as far as we can perceive, much security for his being wiser than any of his neighbours. The chance of his being wiser than all his neighbours together is still smaller. Now we cannot understand how it can be laid down that it is the duty and the right of one class to direct the opinions of another, unless it can be proved that the former class is more likely to form just opinions than the latter.

The duties of government would be, as Mr. Southey says that they are, paternal, if a government were necessarily as much superior in wisdom to a people as the most foolish father, for a time, is to the most intelligent child, and if a government loved a people as fathers generally love their children. But there is no reason to believe that a government will have either the paternal warmth of affection or the paternal superiority of intellect. Mr. Southey might as well say that the duties of the shoemaker are paternal, and that it is an usurpation in any man not of the craft to say that his shoes are bad and to insist on having better. The division of labour would be no blessing, if those by whom a thing is done were to pay no attention to the opinion of those for whom it is done. The shoemaker, in the *Relapse*, tells Lord Foppington that his Lordship is mistaken in supposing that his shoe pinches. 'It does not pinch; it cannot pinch; I know my business; and I never made a better shoe.' [31] This is the way in which Mr. Southey would have a government treat a people who usurp the privilege of thinking. Nay, the shoemaker of Vanbrugh has the advantage in the comparison. He contented himself with regulating his customer's shoes, about which he had peculiar means of information, and did not presume to dictate about the coat and hat. But Mr. Southey would have the

29. Members of an order of military pensioners, quartered within the precincts of Windsor Castle.

30. *caul*: the membrane which sometimes covers the head of the child at its birth.

31. See Van Brugh's *The Relapse, or Virtue in Danger* (produced in 1696), I,iii.

rulers of a country prescribe opinions to the people, not only about politics, but about matters concerning which a government has no peculiar sources of information, and concerning which any man in the streets may know as much and think as justly as the King, namely religion and morals.

Men are never so likely to settle a question rightly as when they discuss it freely. A government can interfere in discussion only by making it less free than it would otherwise be. Men are most likely to form just opinions when they have no other wish than to know the truth, and are exempt from all influence, either of hope or fear. Government, as government, can bring nothing but the influence of hopes and fears to support its doctrines. It carries on controversy, not with reasons, but with threats and bribes. If it employs reasons, it does so, not in virtue of any powers which belong to it as a government. Thus, instead of a contest between argument and argument, we have a contest between argument and force. Instead of a contest in which truth, from the natural constitution of the human mind, has a decided advantage over falsehood, we have a contest in which truth can be victorious only by accident.

And what, after all, is the security which this training gives to governments? Mr. Southey would scarcely propose that discussion should be more effectually shackled, that public opinion should be more strictly disciplined into conformity with established institutions, than in Spain and Italy. Yet we know that the restraints which exist in Spain and Italy have not prevented atheism from spreading among the educated classes, and especially among those whose office it is to minister at the altars of God. All our readers know how, at the time of the French Revolution, priest after priest came forward to declare that his doctrine, his ministry, his whole life, had been a lie, a mummery during which he could scarcely compose his countenance sufficiently to carry on the imposture. This was the case of a false, or at least of a grossly corrupted religion. Let us take then the case of all others most favourable to Mr. Southey's argument. Let us take that form of religion which he holds to be the purest, the system of the Arminian [32] part of the Church of England. Let us take the form of government which he most admires and regrets, the government of England in the time of Charles the First.[33] Would he wish to see a closer connection between Church and State than then existed? Would he wish for more powerful ecclesiastical tribunals? for a more zealous King? for a more active primate? Would he wish to see a more complete monopoly of public instruction given to the Established Church? Could any government do more to train the people in the way in which he would have them go? And in what did all this training end? The Report of the state of the Province of Canterbury, delivered by Laud [34] to his master at the close of 1639, represents the Church of England as in the highest and most palmy state. So effectually had the Government pursued that policy which Mr. Southey wishes to see revived that there was scarcely the least appearance of dissent. Most of the bishops stated that all was well among their flocks. Seven or eight

32. Arminianism, the doctrine of James Arminius (d.1609), a Dutch theologian, was opposed to the severe doctrines of Calvinism, especially on predestination, refusing to hold God responsible for evil. It was condemned by the Synod of Dort in 1618–19, but rapidly spread to large sections of the Reformed Churches.

33. Charles I (1600–49) was executed because he was unable to accede to the demands of Parliament for reforms in taxation, in the power of the throne, etc.

34. William Laud (1573–1645), Archbishop of Canterbury, became predominant in the Church of England under Charles I, supporting the King in his struggle with the Commons. He was impeached of high treason by the Long Parliament, condemned, and beheaded in 1645. He defended the Anglican Church against the claims of both the Church of Rome and the Puritans.

persons in the diocese of Peterborough had seemed refractory to the Church, but had made ample submission. In Norfolk and Suffolk all whom there had been reason to suspect had made profession of conformity, and appeared to observe it strictly. It is confessed that there was a little difficulty in bringing some of the vulgar in Suffolk to take the sacrament at the rails in the chancel. This was the only open instance of nonconformity which the vigilant eye of Laud could detect in all the dioceses of his twenty-one suffragans,[35] on the very eve of a revolution in which primate, and Church, and monarch, and monarchy were to perish together.

At which time would Mr. Southey pronounce the constitution more secure: in 1639, when Laud presented this Report to Charles; or now, when thousands of meetings openly collect millions of dissenters, when designs against the tithes[36] are openly avowed, when books attacking not only the Establishment,[37] but the first principles of Christianity, are openly sold in the streets? The signs of discontent, he tells us, are stronger in England now than in France when the States-General[38] met: and hence he would have us infer that a revolution like that of France may be at hand. Does he not know that the danger of states is to be estimated, not by what breaks out of the public mind, but by what stays in it? Can he conceive anything more terrible than the situation of a government which rules without apprehension over a people of hypocrites, which is flattered by the press and cursed in the inner chambers, which exults in the attachment and obedience of its subjects, and knows not that those subjects are leagued against it in a free-masonry of hatred, the sign of which is every day conveyed in the glance of ten thousand eyes, the pressure of ten thousand hands, and the tone of ten thousand voices? Profound and ingenious policy! Instead of curing the disease, to remove those symptoms by which alone its nature can be known! To leave the serpent his deadly sting, and deprive him only of his warning rattle!

When the people whom Charles had so assiduously trained in the good way had rewarded his paternal care by cutting off his head, a new kind of training came into fashion. Another government arose[39] which, like the former, considered religion as its surest basis, and the religious discipline of the people as its first duty. Sanguinary laws were enacted against libertinism; profane pictures were burned; drapery was put on indecorous statues; the theatres were shut up; fast-days were numerous; and the Parliament resolved that no person should be admitted into any public employment, unless the House should be first satisfied of his vital godliness. We know what was the end of this training. We know that it ended in impiety, in filthy and heartless sensuality, in the dissolution of all ties of honour and morality. We know that at this very day scriptural phrases, scriptural names, perhaps some scriptural doctrines excite disgust and ridicule, solely because they are associated with the austerity of that period.

Thus has the experiment of training the people in established forms of religion been twice tried in England on a large scale, once by Charles and Laud, and once by the Puritans. The High Tories of our time still entertain many of the feelings and opinions of Charles and Laud, though in a mitigated form; nor is it difficult to see that the heirs of the Puritans are still amongst us. It would be desirable that each of these parties should remember how little advantage or honour it formerly derived from the closest alliance with power,

35. Bishops who assist the bishop of a diocese.

36. Church taxes.

37. *i.e.* the Church of England.

38. In France, before the Revolution, the assembly of the three orders, or estates (the clergy, the nobility, and the 'third estate' or the nation at large).

39. Allusion, of course, to the Commonwealth, founded under Cromwell, and lasting from 1649 until 1660.

that it fell by the support of rulers and rose by their opposition, that of the two systems that in which the people were at any time drilled was always at that time the unpopular system, that the training of the High Church ended in the reign of the Puritans, and that the training of the Puritans ended in the reign of the harlots.

This was quite natural. Nothing is so galling to a people not broken in from the birth as a paternal, or, in other words, a meddling government, a government which tells them what to read, and say, and eat, and drink, and wear. Our fathers could not bear it two hundred years ago; and we are not more patient than they. Mr. Southey thinks that the yoke of the Church is dropping off because it is loose. We feel convinced that it is borne only because it is easy, and that, in the instant in which an attempt is made to tighten it, it will be flung away. It will be neither the first nor the strongest yoke that has been broken asunder and trampled under foot in the day of the vengeance of England.

How far Mr. Southey would have the Government carry its measures for training the people in the doctrines of the Church, we are unable to discover. In one passage Sir Thomas More asks with great vehemence,

'Is it possible that your laws should suffer the unbelievers to exist as a party? Vetitum est adeo sceleris nihil?'[40]

Montesinos answers: 'They avow themselves in defiance of the laws. The fashionable doctrine which the press at this time maintains is, that this is a matter in which the laws ought not to interfere, every man having a right, both to form what opinion he pleases upon religious subjects, and to promulgate that opinion.'

It is clear, therefore, that Mr. Southey would not give full and perfect toleration to infidelity. In another passage, however, he observes with some truth, though too sweepingly, that 'any degree of intolerance short of that full extent which the Papal Church exercises where it has the power, acts upon the opinions which it is intended to suppress, like pruning upon vigorous plants; they grow the stronger for it.' These two passages, put together, would lead us to the conclusion that, in Mr. Southey's opinion, the utmost severity ever employed by the Roman Catholic Church in the days of its greatest power ought to be employed against unbelievers in England; in plain words, that Carlile and his shopmen ought to be burned in Smithfield, and that every person who, when called upon, should decline to make a solemn profession of Christianity ought to suffer the same fate. We do not, however, believe that Mr. Southey would recommend such a course, though his language would, according to all the rules of logic, justify us in supposing this to be his meaning. His opinions form no system at all. He never sees, at one glance, more of a question than will furnish matter for one flowing and well-turned sentence; so that it would be the height of unfairness to charge him personally with holding a doctrine merely because that doctrine is deducible, though by the closest and most accurate reasoning, from the premises which he has laid down. We are, therefore, left completely in the dark as to Mr. Southey's opinions about toleration. Immediately after censuring the Government for not punishing infidels, he proceeds to discuss the question of the Catholic disabilities, now, thank God, removed, and defends them on the ground that the Catholic doctrines tend to persecution, and that the Catholics persecuted when they had power.

'They must persecute,' says he, 'if they believe their own creed, for conscience-sake; and if they do not believe it, they must persecute for policy; because it is only by intolerance that so corrupt and injurious a system can be upheld.'

That unbelievers should not be persecuted is an instance of national depravity

40. 'Is wickedness so completely unforbidden?'

at which the glorified spirits stand aghast. Yet a sect of Christians is to be excluded from power, because those who formerly held the same opinions were guilty of persecution. We have said that we do not very well know what Mr. Southey's opinion about toleration is. But, on the whole, we take it to be this, that everybody is to tolerate him, and that he is to tolerate nobody.

We will not be deterred by any fear of misrepresentation from expressing our hearty approbation of the mild, wise, and eminently Christian manner in which the Church and the Government have lately acted with respect to blasphemous publications. We praise them for not having thought it necessary to encircle a religion pure, merciful, and philosophical, a religion to the evidence of which the highest intellects have yielded, with the defences of a false and bloody superstition. The ark of God was never taken till it was surrounded by the arms of earthly defenders.[41] In captivity, its sanctity was sufficient to vindicate it from insult, and to lay the hostile fiend prostrate on the threshold of his own temple. The real security of Christianity is to be found in its benevolent morality, in its exquisite adaptation to the human heart, in the facility with which its scheme accommodates itself to the capacity of every human intellect, in the consolation which it bears to the house of mourning, in the light with which it brightens the great mystery of the grave. To such a system it can bring no addition of dignity or of strength, that it is part and parcel of the common law. It is not now for the first time left to rely on the force of its own evidences and the attractions of its own beauty. Its sublime theology confounded the Grecian schools in the fair conflict of reason with reason. The bravest and wisest of the Cæsars found their arms and their policy unavailing, when opposed to the weapons that were not carnal and the kingdom that was not of this world. The victory which Porphyry and Diocletian failed to gain[42] is not, to all appearance, reserved for any of those who have in this age, directed their attacks against the last restraint of the powerful and the last hope of the wretched. The whole history of Christianity shows, that she is in far greater danger of being corrupted by the alliance of power, than of being crushed by its opposition. Those who thrust temporal sovereignty upon her treat her as their prototypes treated her author. They bow the knee, and spit upon her; they cry 'Hail!' and smite her on the cheek; they put a sceptre in her hand, but it is a fragile reed; they crown her, but it is with thorns; they cover with purple the wounds which their own hands have inflicted on her; and inscribe magnificent titles over the cross on which they have fixed her to perish in ignominy and pain.

The general view which Mr. Southey takes of the prospects of society is very gloomy; but we comfort ourselves with the consideration that Mr. Southey is no prophet. He foretold, we remember, on the very eve of the abolition of the Test and Corporation Acts,[43] that these hateful laws were immortal, and that pious minds would long be gratified by seeing the most solemn religious rite of the Church profaned for the purpose of upholding her political supremacy. In the book before us, he says that Catholics cannot possibly be admitted into Parliament until those whom Johnson called 'the bottomless Whigs'

41. See *I Samuel*, iii,iv,etc.

42. Intellectual and physical attacks, respectively, against early Christianity. Porphyry was a Greek philosopher of the Neo-Platonic school in the 3rd century A.D.; he published a treatise against the Christian religion which was publicly burnt by the emperor Theodosius. Diocletian (A.D. 245–313), Roman Emperor, conducted a fierce persecution of the Christians in the year 303.

43. The Test and Corporation Acts had prohibited Dissenters from holding national or municipal office; the acts were abolished in March 1828.

come into power.[44] While the book was in the press, the prophecy was falsified; and a Tory of the Tories, Mr. Southey's own favourite hero, won and wore that noblest wreath, 'Ob cives servatos.'[45]

The signs of the times, Mr. Southey tells us, are very threatening. His fears for the country would decidedly preponderate over his hopes, but for a firm reliance on the mercy of God. Now, as we know that God has once suffered the civilised world to be overrun by savages, and the Christian religion to be corrupted by doctrines which made it, for some ages, almost as bad as Paganism, we cannot think it inconsistent with his attributes that similar calamities should again befall mankind.

We look, however, on the state of the world, and of this kingdom in particular, with much greater satisfaction and with better hopes. Mr. Southey speaks with contempt of those who think the savage state happier than the social. On this subject, he says, Rousseau never imposed on him even in his youth. But he conceives that a community which has advanced a little way in civilisation is happier than one which has made greater progress. The Britons in the time of Cæsar were happier, he suspects, than the English of the nineteenth century. On the whole, he selects the generation which preceded the Reformation as that in which the people of this country were better off than at any time before or since.

This opinion rests on nothing, as far as we can see, except his own individual associations. He is a man of letters; and a life destitute of literary pleasures seems insipid to him. He abhors the spirit of the present generation, the severity of its studies, the boldness of its inquiries, and the disdain with which it regards some old prejudices by which his own mind is held in bondage. He dislikes an utterly unenlightened age; he dislikes an investigating and reforming age. The first twenty years of the sixteenth century would have exactly suited him. They furnished just the quantity of intellectual excitement which he requires. The learned few read and wrote largely. A scholar was held in high estimation. But the rabble did not presume to think; and even the most inquiring and independent of the educated classes paid more reverence to authority, and less to reason, than is usual in our time. This is a state of things in which Mr. Southey would have found himself quite comfortable; and, accordingly, he pronounces it the happiest state of things ever known in the world.

The savages were wretched, says Mr. Southey; but the people in the time of Sir Thomas More were happier than either they or we. Now we think it quite certain that we have the advantage over the contemporaries of Sir Thomas More, in every point in which they had any advantage over savages.

Mr. Southey does not even pretend to maintain that the people in the sixteenth century were better lodged or clothed than at present. He seems to admit that in these respects there has been some little improvement. It is indeed a matter about which scarcely any doubt can exist in the most perverse mind that the improvements of machinery have lowered the price of manufactured articles, and have brought within the reach of the poorest some conveniences which Sir Thomas More or his master could not have obtained at any price.

The labouring classes, however, were, according to Mr. Southey, better fed three hundred years ago than at present. We be-

44. 'Another day I spoke of one of our friends, of whom he, as well as I, had a very high opinion. He expatiated in his praise; but added, "Sir, he is a cursed Whig, a *bottomless* Whig, as they all are now." ' (Italics in original.) (Boswell's *Life of Johnson*, Oxf.Stand. Ed., II,497.)

45. Literally 'In consideration of the delivered citizens.' Allusion to the 'deliverance' of the Roman Catholics by the Duke of Wellington, (the 'Tory of the Tories,' and Southey's hero) in the passing of the Catholic Emancipation Act (1829).

lieve that he is completely in error on this point. The condition of servants in noble and wealthy families, and of scholars at the Universities, must surely have been better in those times than that of day-labourers; and we are sure that it was not better than that of our workhouse paupers. From the household book of the Northumberland family, we find that in one of the greatest establishments of the kingdom the servants lived very much as common sailors live now. In the reign of Edward the Sixth [46] the state of the students at Cambridge is described to us, on the very best authority, as most wretched. Many of them dined on pottage made of a farthing's worth of beef with a little salt and oatmeal, and literally nothing else. This account we have from a contemporary master of St. John's. Our parish poor now eat wheaten bread. In the sixteenth century the labourer was glad to get barley, and was often forced to content himself with poorer fare. In Harrison's introduction to Holinshed [47] we have an account of the state of our working population in the 'golden days,' as Mr. Southey calls them, 'of good Queen Bess.' 'The gentilitie,' says he, 'commonly provide themselves sufficiently of wheat for their own tables, whylest their household and poore neighbours in some shires are inforced to content themselves with rye or barleie; yea, and in time of dearth, many with bread made eyther of beanes, peason, or otes, or of altogether, and some acornes among. I will not say that this extremity is oft so well to be seen in time of plentie as of dearth; but if I should I could easily bring my trial: for albeit there be much more grounde eared nowe almost in everye place then hathe beene of late yeares, yet such a price of corne continueth in eache towne and markete, without any just cause, that the artificer and poore labouring man is not able to reach unto it, but is driven to content himself with horse-corne.' We should like to see what the effect would be of putting any parish in England now on allowance of 'horse-corne.' The helotry of Mammon [48] are not, in our day, so easily enforced to content themselves as the peasantry of that happy period, as Mr. Southey considers it, which elapsed between the fall of the feudal and the rise of the commercial tyranny.

'The people,' says Mr. Southey, 'are worse fed than when they were fishers.' And yet in another place he complains that they will not eat fish. 'They have contracted,' says he, 'I know not how, some obstinate prejudice against a kind of food at once wholesome and delicate, and everywhere to be obtained cheaply and in abundance, were the demand for it as general as it ought to be.' It is true that the lower orders have an obstinate prejudice against fish. But hunger has no such obstinate prejudices. If what was formerly a common diet is now eaten only in times of severe pressure, the inference is plain. The people must be fed with what they at least think better food than that of their ancestors.

The advice and medicine which the poorest labourer can now obtain, in disease, or after an accident, is far superior to what Henry the Eighth could have commanded. Scarcely any part of the country is out of the reach of practitioners, who are probably not so far inferior to Sir Henry Halford [49] as they are superior to Dr. Butts.[50] That there has been a great improvement in this respect, Mr. Southey allows. Indeed he could not well have denied it. 'But,' says he, 'the evils for which these sciences are the palliative, have increased since the

46. Edward VI ruled from 1547 to 1553.

47. William Harrison (1534–93), topographer and chronologist, canon of Windsor, was the author of a 'Description of England,' published with Holinshed's *Chronicles* in 1577. Harrison's contribution to the volume is an invaluable survey of the condition of England under Elizabeth.

50. Sir William Butts (d.1545), physician to Henry VIII and his court.

time of the Druids,[51] in a proportion that heavily overweighs the benefit of improved therapeutics.' We know nothing either of the diseases or the remedies of the Druids. But we are quite sure that the improvement of medicine has far more than kept pace with the increase of disease during the last three centuries. This is proved by the best possible evidence. The term of human life is decidedly longer in England than in any former age, respecting which we possess any information on which we can rely. All the rants in the world about picturesque cottages and temples of Mammon will not shake this argument. No test of the physical well-being of society can be named so decisive as that which is furnished by bills of mortality. That the lives of the people of this country have been gradually lengthening during the course of several generations, is as certain as any fact in statistics; and that the lives of men should become longer and longer, while their bodily condition during life is becoming worse and worse, is utterly incredible.

Let our readers think over these circumstances. Let them take into the account the sweating sickness and the plague. Let them take into the account that fearful disease which first made its appearance in the generation to which Mr. Southey assigns the palm of felicity, and raged through Europe with a fury at which the physician stood aghast, and before which the people were swept away by myriads. Let them consider the state of the northern counties, constantly the scene of robberies, rapes, massacres, and conflagrations. Let them add to all this the fact that seventy-two thousand persons suffered death by the hands of the executioner during the reign of Henry the Eighth, and judge between the nineteenth and the sixteenth century.

We do not say that the lower orders in England do not suffer severe hardships. But, in spite of Mr. Southey's assertions, and in spite of the assertions of a class of politicians, who, differing from Mr. Southey in every other point, agree with him in this, we are inclined to doubt whether the labouring classes here really suffer greater physical distress than the labouring classes of the most flourishing countries of the Continent.

It will scarcely be maintained that the lazzaroni[52] who sleep under the porticoes of Naples, or the beggars who besiege the convents of Spain, are in a happier situation than the English commonalty. The distress which has lately been experienced in the northern part of Germany, one of the best governed and most prosperous regions of Europe, surpasses, if we have been correctly informed, anything which has of late years been known among us. In Norway and Sweden the peasantry are constantly compelled to mix bark with their bread; and even this expedient has not always preserved whole families and neighbourhoods from perishing together of famine. An experiment has lately been tried in the kingdom of the Netherlands, which has been cited to prove the possibility of establishing agricultural colonies on the waste lands of England, but which proves to our minds nothing so clearly as this, that the rate of subsistence to which the labouring classes are reduced in the Netherlands is miserably low, and very far inferior to that of the English paupers. No distress which the people here have endured for centuries approaches to that which has been felt by the French in our own time. The beginning of the year 1817 was a time of great distress in this island. But the state of the lowest classes here was luxury compared with that of the people of France. We find in Magendie's[53] *Journal de Physiologie Expérimentale* a paper on a point of physiology connected with the distress of that season. It appears that the inhabitants of six departments, Aix,

51. Members of a religious order among the ancient Celts of Gaul and Britain.

52. Beggars.

53. François Magendie (1783–1855) was a well-known physiologist of the day.

Jura, Doubs, Haute Saone, Vosges, and Saone-et-Loire, were reduced first to oatmeal and potatoes, and at last to nettles, beanstalks, and other kinds of herbage fit only for cattle; that when the next harvest enabled them to eat barley-bread, many of them died from intemperate indulgence in what they thought an exquisite repast; and that a dropsy of a peculiar description was produced by the hard fare of the year. Dead bodies were found on the roads and in the fields. A single surgeon dissected six of these, and found the stomach shrunk, and filled with the unwholesome aliments which hunger had driven men to share with beasts. Such extremity of distress as this is never heard of in England, or even in Ireland. We are, on the whole, inclined to think, though we would speak with diffidence on a point on which it would be rash to pronounce a positive judgment without a much longer and closer investigation than we have bestowed upon it, that the labouring classes of this island, though they have their grievances and distresses, some produced by their own improvidence, some by the errors of their rulers, are on the whole better off as to physical comforts than the inhabitants of an equally extensive district of the old world. For this very reason, suffering is more acutely felt and more loudly bewailed here than elsewhere. We must take into the account the liberty of discussion, and the strong interest which the opponents of a ministry always have to exaggerate the extent of the public disasters. There are countries in which the people quietly endure distress that here would shake the foundations of the State, countries in which the inhabitants of a whole province turn out to eat grass with less clamour than one Spitalfields [54] weaver would make here, if the overseers were to put him on barley-bread. In those new commonwealths in which a civilised population has at its command a boundless extent of the richest soil, the condition of the labourer is probably happier than in any society which has lasted for many centuries. But in the old world we must confess ourselves unable to find any satisfactory record of any great nation, past or present, in which the working classes have been in a more comfortable situation than in England during the last thirty years. When this island was thinly peopled, it was barbarous: there was little capital; and that little was insecure. It is now the richest and most highly civilised spot in the world; but the population is dense. Thus we have never known that golden age which the lower orders in the United States are now enjoying. We have never known an age of liberty, of order, and of education, an age in which the mechanical sciences were carried to a great height, yet in which the people were not sufficiently numerous to cultivate even the most fertile valleys. But, when we compare our own condition with that of our ancestors, we think it clear that the advantages arising from the progress of civilisation have far more than counterbalanced the disadvantages arising from the progress of population. While our numbers have increased tenfold, our wealth has increased a hundredfold. Though there are so many more people to share the wealth now existing in the country than there were in the sixteenth century, it seems certain that a greater share falls to almost every individual than fell to the share of any of the corresponding class in the sixteenth century. The King keeps a more splendid court. The establishments of the nobles are more magnificent. The esquires are richer; the merchants are richer; the shopkeepers are richer. The serving-man, the artisan, and the husbandman, have a more copious and palatable supply of food, better clothing, and better furniture. This is no reason for tolerating abuses, or for neglecting any means of ameliorating the condition of

54. A district in London which takes its name from a hospital founded in 1197 for Canons regular. French Protestant silk-weavers settled in the district after the revocation of the Edict of Nantes (1685) and founded the English silk industry.

our poorer countrymen. But it is a reason against telling them, as some of our philosophers are constantly telling them, that they are the most wretched people who ever existed on the face of the earth.

We have already adverted to Mr. Southey's amusing doctrine about national wealth. A state, says he, cannot be too rich; but a people may be too rich. His reason for thinking this is extremely curious.

'A people may be too rich, because it is the tendency of the commercial, and more especially of the manufacturing system, to collect wealth rather than to diffuse it. Where wealth is necessarily employed in any of the speculations of trade, its increase is in proportion to its amount. Great capitalists become like pikes in a fish-pond who devour the weaker fish; and it is but too certain, that the poverty of one part of the people seems to increase in the same ratio as the riches of another. There are examples of this in history. In Portugal, when the high tide of wealth flowed in from the conquests in Africa and the East, the effect of that great influx was not more visible in the augmented splendour of the court, and the luxury of the higher ranks, than in the distress of the people.'

Mr. Southey's instance is not a very fortunate one. The wealth which did so little for the Portuguese was not the fruit either of manufactures or of commerce carried on by private individuals. It was the wealth, not of the people, but of the Government and its creatures, of those who, as Mr. Southey thinks, can never be too rich. The fact is, that Mr. Southey's proposition is opposed to all history, and to the phænomena which surround us on every side. England is the richest country in Europe, the most commercial country, and the country in which manufactures flourish most. Russia and Poland are the poorest countries in Europe. They have scarcely any trade, and none but the rudest manufactures. Is wealth more diffused in Russia and Poland than in England? There are individuals in Russia and Poland whose incomes are probably equal to those of our richest countrymen. It may be doubted whether there are not, in those countries, as many fortunes of eighty thousand a year as here. But are there as many fortunes of two thousand a year, or of one thousand a year? There are parishes in England which contain more people of between three hundred and three thousand pounds a year than could be found in all the dominions of the Emperor Nicholas. The neat and commodious houses which have been built in London and its vicinity, for people of this class, within the last thirty years, would of themselves form a city larger than the capitals of some European kingdoms. And this is the state of society in which the great proprietors have devoured a smaller!

The cure which Mr. Southey thinks that he has discovered is worthy of the sagacity which he has shown in detecting the evil. The calamities arising from the collection of wealth in the hands of a few capitalists are to be remedied by collecting it in the hands of one great capitalist, who has no conceivable motive to use it better than other capitalists, the all-devouring State.

It is not strange that, differing so widely from Mr. Southey as to the past progress of society, we should differ from him also as to its probable destiny. He thinks, that to all outward appearance, the country is hastening to destruction; but he relies firmly on the goodness of God. We do not see either the piety or the rationality of thus confidently expecting that the Supreme Being will interfere to disturb the common succession of causes and effects. We, too, rely on his goodness, on his goodness as manifested, not in extraordinary interpositions, but in those general laws which it has pleased him to establish in the physical and in the moral world. We rely on the natural tendency of the human intellect to truth, and on the natural tendency of society to improvement. We know no well-authenticated instance of a

people which has decidedly retrograded in civilisation and prosperity, except from the influence of violent and terrible calamities, such as those which laid the Roman Empire in ruins, or those which, about the beginning of the sixteenth century, desolated Italy. We know of no country which, at the end of fifty years of peace and tolerably good government, has been less prosperous than at the beginning of that period. The political importance of a state may decline, as the balance of power is disturbed by the introduction of new forces. Thus the influence of Holland and of Spain is much diminished. But are Holland and Spain poorer than formerly? We doubt it. Other countries have outrún them. But we suspect that they have been positively, though not relatively, advancing. We suspect that Holland is richer than when she sent her navies up the Thames,[55] that Spain is richer than when a French king was brought captive to the footstool of Charles the Fifth.[56]

History is full of the signs of this natural progress of society. We see in almost every part of the annals of mankind how the industry of individuals, struggling up against wars, taxes, famines, conflagrations, mischievous prohibitions, and more mischievous protections, creates faster than governments can squander, and repairs whatever invaders can destroy. We see the wealth of nations increasing, and all the arts of life approaching nearer and nearer to perfection, in spite of the grossest corruption and the wildest profusion on the part of rulers.

The present moment is one of great distress.[57] But how small will that distress appear when we think over the history of the last forty years;[58] a war, compared with which all other wars sink into insignificance; taxation, such as the most heavily taxed people of former times could not have conceived; a debt larger than all the public debts that ever existed in the world added together; the food of the people studiously rendered dear; the currency imprudently debased, and imprudently restored. Yet is the country poorer than in 1790? We firmly believe that, in spite of all the misgovernment of her rulers,[59] she has been almost constantly becoming richer and richer. Now and then there has been a stoppage, now and then a short retrogression; but as to the general tendency there can be no doubt. A single breaker may recede; but the tide is evidently coming in.

If we were to prophesy that in the year 1930 a population of fifty millions, better fed, clad, and lodged than the English of our time, will cover these islands, that Sussex and Huntingdonshire will be wealthier than the wealthiest parts of the West Riding of Yorkshire now are, that cultivation, rich as that of a flower-garden, will be carried up to the very tops of Ben Nevis and Helvellyn,[60] that machines constructed on principles yet undiscovered will be in every house, that there will be no highways but railroads, no travelling but by steam, that our debt, vast as it seems to us, will appear to our great-grandchildren a trifling encumbrance, which might easily be paid off

55. This happened in the War with Holland, during the Restoration, when, after several months of plague, followed by a fire, the English watched the Dutch fleet advance unopposed up the Thames to Gravesend (1667).

56. Charles V, Emperor of the Holy Roman Empire, or Charles I, King of Spain (1500–58), captured his great rival, Francis I (1494–1547), King of France, in the battle of Pavia (Feb. 25, 1525), and held him prisoner until 1526.

57. 1830 was a year of great political and economic unrest; agitation for the Reform Bill was increasing month by month.

58. *i.e.* since about 1790, since which time the English had witnessed the French Revolution and had participated in the Napoleonic wars.

59. Probably an allusion to the 'black reactionism' of the Tories who dominated the government throughout the period to which Macaulay is referring. Macaulay as a Whig would naturally regard much of the Tories' government as a 'misgovernment.'

60. Mountains in Scotland and England, respectively.

in a year or two, many people would think us insane. We prophesy nothing; but this we say: If any person had told the Parliament which met in perplexity and terror after the crash in 1720 that in 1830 the wealth of England would surpass all their wildest dreams, that the annual revenue would equal the principal of that debt which they considered as an intolerable burden, that for one man of ten thousand pounds then living there would be five men of fifty thousand pounds, that London would be twice as large and twice as populous, and that nevertheless the rate of mortality would have diminished to one-half of what it then was, that the post-office would bring more into the exchequer than the excise and customs had brought in together under Charles the Second, that stage coaches would run from London to York in twenty-four hours, that men would be in the habit of sailing without wind, and would be beginning to ride without horses, our ancestors would have given as much credit to the prediction as they gave to *Gulliver's Travels*. Yet the prediction would have been true; and they would have perceived that it was not altogether absurd, if they had considered that the country was then raising every year a sum which would have purchased the fee-simple [61] of the revenue of the Plantagenets,[62] ten times what supported the Government of Elizabeth, three times what, in the time of Cromwell, had been thought intolerably oppressive. To almost all men the state of things under which they have been used to live seems to be the necessary state of things. We have heard it said that five per cent. is the natural interest of money, that twelve is the natural number of a jury, that forty shillings is the natural qualification of a county voter. Hence it is that, though in every age everybody knows that up to his own time progressive improvement has been taking place, nobody seems to reckon on any improvement during the next generation. We cannot absolutely prove that those are in error who tell us that society has reached a turning point, that we have seen our best days. But so said all who came before us, and with just as much apparent reason. 'A million a year will beggar us,' said the patriots of 1640. 'Two millions a year will grind the country to powder,' was the cry in 1660.[63] 'Six millions a year, and a debt of fifty millions!' exclaimed Swift, 'the high allies have been the ruin of us.' [64] 'A hundred and forty millions of debt!' said Junius; [65] 'well may we say that we owe Lord Chatham more than we shall ever pay, if we owe him such a load as this.' 'Two hundred and forty millions of debt!' cried all the statesmen of 1783 [66] in chorus; 'what abilities, or what economy on the part of a minister, can save a country so burdened?' We know that if, since 1783, no fresh debt had been incurred, the increased resources of the country would have enabled us to defray that debt at which Pitt, Fox, and Burke stood aghast, nay, to defray it over and over again, and that with much lighter taxation than what we have actually borne. On what principle is it that, when we see nothing but improvement behind us, we are to expect nothing but deterioration before us?

It is not by the intermeddling of Mr.

61. An estate of inheritance in land, that is absolutely free without limitation to any particular class of heirs or restrictions upon alienation.

62. The Plantagenet family (or house) occupied the English throne from 1154 to 1485.

63. After the costly period of the Puritan Revolution and the Commonwealth. The return of the Stuarts (*i.e.* Charles II), in 1660, enabled England to estimate her losses.

64. In the War of the Spanish Succession (1701–12), in which Marlborough and Eugene of Savoy brought victory to England, Holland, and Austria over France and Spain.

65. Junius was the pseudonym of the author of a series of letters which appeared in the *Public Advertiser* from 1769 to 1771; they were written from a Whig standpoint, and attacked with bitter scorn and invective Lord North, the Duke of Bedford, and George III.

66. *i.e.* Pitt, Fox, Burke, as mentioned below. England had won in the struggle with France but had lost the American colonies.

Southey's idol, the omniscient and omnipotent State, but by the prudence and energy of the people, that England has hitherto been carried forward in civilisation; and it is to the same prudence and the same energy that we now look with comfort and good hope. Our rulers will best promote the improvement of the nation by strictly confining themselves to their own legitimate duties, by leaving capital to find its most lucrative course, commodities their fair price, industry and intelligence their natural reward, idleness and folly their natural punishment, by maintaining peace, by defending property, by diminishing the price of law, and by observing strict economy in every department of the State. Let the Government do this: the People will assuredly do the rest.

SAMUEL JOHNSON

. . . THE *Life of Johnson* is assuredly a great, a very great work. Homer is not more decidedly the first of heroic poets, Shakspeare is not more decidedly the first of dramatists, Demosthenes is not more decidedly the first of orators, than Boswell is the first of biographers. He has no second. He has distanced all his competitors so decidedly that it is not worth while to place them. Eclipse is first, and the rest nowhere.[1]

We are not sure that there is in the whole history of the human intellect so strange a phænomenon as this book. Many of the greatest men that ever lived have written biography. Boswell was one of the smallest men that ever lived, and he has beaten them all. He was, if we are to give any credit to his own account or to the united testimony of all who knew him, a man of the meanest and feeblest intellect. Johnson described him as a fellow who had missed his only chance of immortality by not having been alive when the *Dunciad*[2] was written. Beauclerk[3] used his name as a proverbial expression for a bore. He was the laughing-stock of the whole of that brilliant society which has owed to him the greater part of its fame. He was always laying himself at the feet of some eminent man, and begging to be spit upon and trampled upon. He was always earning some ridiculous nickname, and then 'binding it as a crown unto him,' not merely in metaphor, but literally. He exhibited himself, at the Shakspeare Jubilee, to all the crowd which filled Stratford-on-Avon, with a placard round his hat bearing the inscription of Corsica Boswell.[4] In his *Tour*,[5] he proclaimed to all the world that at Edinburgh he was known by the appellation of Paoli Boswell. Servile and impertinent, shallow and pedantic, a bigot and a sot, bloated with family pride, and eternally blustering about the dignity of a born gentleman, yet stooping to be a talebearer, an eavesdropper, a common butt in the taverns of London, so curious to know everybody who was talked about, that, Tory and High Churchman as he was, he manœuvered, we have been told,

1. This sentence, now become proverbial, was uttered by Captain Dennis O'Kelly (1720?–87), owner of the racehorse Eclipse, at a horse race at Epsom Downs, May 3, 1769.
2. The satire (1728) by Pope, in which many minor contemporary men of letters were ridiculed into immortality.
3. Topham Beauclerk (1739–80) was a member of Johnson's circle largely by virtue of his charm and wit.
4. Boswell met General Pasquale Paoli (1725–1807) while on a continental tour in 1765–66; he became so absorbed in the Corsican struggle for independence from the French that he published an *Account of Corsica* (1768), and occasionally wore a Corsican costume. The derisive names of 'Corsica' and 'Paoli' Boswell, by which his friends accosted him, led him to adopt the names with pride.
5. See Boswell's *Journal of a Tour to the Hebrides* (1785).

for an introduction to Tom Paine,[6] so vain of the most childish distinctions, that when he had been to Court, he drove to the office where his book was printing without changing his clothes, and summoned all the printer's devils to admire his new ruffles and sword; such was this man, and such he was content and proud to be. Everything which another man would have hidden, everything the publication of which would have made another man hang himself, was matter of gay and clamorous exultation to his weak and diseased mind. What silly things he said, what bitter retorts he provoked, how at one place he was troubled with evil presentiments which came to nothing, how at another place, on waking from a drunken dose, he read the prayer-book and took a hair of the dog that had bitten him,[7] how he went to see men hanged and came away maudlin, how he added five hundred pounds to the fortune of one of his babies because she was not scared at Johnson's ugly face, how he was frightened out of his wits at sea, and how the sailors quieted him as they would have quieted a child, how tipsy he was at Lady Cork's [8] one evening and how much his merriment annoyed the ladies, how impertinent he was to the Duchess of Argyll [9] and with what stately contempt she put down his impertinence, how Colonel Macleod sneered to his face at his impudent obtrusiveness,[10] how his father and the very wife of his bosom laughed and fretted at his fooleries; all these things he proclaimed to all the world, as if they had been subjects for pride and ostentatious rejoicing. All the caprices of his temper, all the illusions of his vanity, all his hypochondriac whimsies, all his castles in the air, he displayed with a cool self-complacency, a perfect unconsciousness that he was making a fool of himself, to which it is impossible to find a parallel in the whole history of mankind. He has used many people ill; but assuredly he has used nobody so ill as himself.

That such a man should have written one of the best books in the world is strange enough. But this is not all. Many persons who have conducted themselves foolishly in active life, and whose conversation has indicated no superior powers of mind, have left us valuable works. Goldsmith was very justly described by one of his contemporaries as an inspired idiot, and by another as a being

> 'Who wrote like an angel, and talked like poor Poll.' [11]

La Fontaine was in society a mere simpleton.[12] His blunders would not come in amiss among the stories of Hierocles.[13] But these men attained literary eminence in spite of their weaknesses. Boswell attained it by reason of his weaknesses. If he had not been a great fool, he would never have been a great writer. Without all the qualities which made him the jest and the torment of those among whom he lived, without the officiousness, the inquisitiveness, the effrontery, the toad-eating, the insensi-

6. Thomas Paine (1737–1809), freethinker, republican, and revolutionary; author of the *Rights of Man* (1790, 1792), *Age of Reason* (1793), etc.
7. Proverbial for 'took another drink.'
8. Mary Monckton, Countess of Cork and Orrery (1746–1840), a 'blue-stocking' whose house was the rendezvous of persons of genius and talent.
9. Wife of the 3rd Duke of Argyle (1682–1761); she heartily disliked Boswell. See the *Tour*, October 25.
10. See the *Tour*, September 16.
11. One day in February 1774, at the St.James Coffee House, when Goldsmith was absent, his friends wrote jocular epitaphs on him, among them the following by Garrick:

    Here lies Poet Goldsmith, for shortness called Noll,
    Who wrote like an angel, but talked like poor Poll.
12. Jean de la Fontaine (1621–95), a French poet, notorious for his absent-mindedness.
13. Hierocles of Alexandria (fl. c. A.D. 430), pupil of Plutarch, long thought to have been the author of some 260 witticisms (ἀστεῖα).

bility to all reproof, he never could have produced so excellent a book. He was a slave, proud of his servitude, a Paul Pry,[14] convinced that his own curiosity and garrulity were virtues, an unsafe companion who never scrupled to repay the most liberal hospitality by the basest violation of confidence, a man without delicacy, without shame, without sense enough to know when he was hurting the feelings of others or when he was exposing himself to derision; and because he was all this, he has, in an important department of literature, immeasurably surpassed such writers as Tacitus, Clarendon, Alfieri, and his own idol Johnson.[15]

Of the talents which ordinarily raise men to eminence as writers, Boswell had absolutely none. There is not in all his books a single remark of his own on literature, politics, religion, or society, which is not either commonplace or absurd. His dissertations on hereditary gentility, on the slave-trade, and on the entailing of landed estates, may serve as examples. To say that these passages are sophistical would be to pay them an extravagant compliment. They have no pretence to argument, or even to meaning. He has reported innumerable observations made by himself in the course of conversation. Of those observations we do not remember one which is above the intellectual capacity of a boy of fifteen. He has printed many of his own letters, and in these letters he is always ranting or twaddling. Logic, eloquence, wit, taste, all those things which are generally considered as making a book valuable, were utterly wanting to him. He had, indeed, a quick observation and a retentive memory. These qualities, if he had been a man of sense and virtue, would scarcely of themselves have sufficed to make him conspicuous; but because he was a dunce, a parasite, and a coxcomb, they have made him immortal.

Those parts of his book which, considered abstractedly, are most utterly worthless, are delightful when we read them as illustrations of the character of the writer. Bad in themselves, they are good dramatically, like the nonsense of Justice Shallow, the clipped English of Dr. Caius, or the misplaced consonants of Fluellen.[16] Of all confessors, Boswell is the most candid. Other men who have pretended to lay open their own hearts, Rousseau, for example, and Lord Byron, have evidently written with a constant view to effect, and are to be then most distrusted when they seem to be most sincere. There is scarcely any man who would not rather accuse himself of great crimes and of dark and tempestuous passions than proclaim all his little vanities and wild fancies. It would be easier to find a person who would avow actions like those of Cæsar Borgia, or Danton, than one who would publish a day-dream like those of Alnaschar and Malvolio.[17] Those weaknesses which most men keep covered up in the most secret places of the mind, not to be disclosed to the eye of friendship or of love, were precisely the weaknesses which Boswell paraded before all the world. He was perfectly frank, because the weakness of his understanding and the tumult of his spirits prevented him from knowing when he made himself ridiculous. His book resembles nothing so

14. An inquisitive or meddlesome person; the chief character in John Poole's farce of the same name (1825).

15. C. Cornelius Tacitus (A.D. c.55–120), Roman historian, author of a *Life of Agricola*. — Edward Hyde, Earl of Clarendon (1609–74), English historian, and Vittorio Alfieri (1749–1803) wrote autobiographies. Johnson wrote the *Lives of the Poets* (1779–81).

16. See *The Merry Wives of Windsor* and *Henry V*.

17. Cesare Borgia (1476–1507), Italian cardinal, notorious for his crimes. — Georges Jacques Danton (1759–94), French revolutionary leader, especially violent in his leadership during the war against the Allies, and throughout the Terror. — *Alnaschar:* a character in the *Arabian Nights*. — *Malvolio*: the self-loving, self-deceiving butt of several jokes in Shakespeare's *Twelfth Night*.

much as the conversation of the inmates of the Palace of Truth.[18]

His fame is great; and it will, we have no doubt, be lasting; but it is fame of a peculiar kind, and indeed marvellously resembles infamy. We remember no other case in which the world has made so great a distinction between a book and its author. In general, the book and the author are considered as one. To admire the book is to admire the author. The case of Boswell is an exception, we think the only exception, to this rule. His work is universally allowed to be interesting, instructive, eminently original: yet it has brought him nothing but contempt. All the world reads it, all the world delights in it: yet we do not remember ever to have read or ever to have heard any expression of respect and admiration for the man to whom we owe so much instruction and amusement. While edition after edition of his book was coming forth, his son, as Mr. Croker tells us, was ashamed of it, and hated to hear it mentioned. This feeling was natural and reasonable. Sir Alexander saw that in proportion to the celebrity of the work, was the degradation of the author. The very editors of this unfortunate gentleman's books have forgotten their allegiance, and, like those Puritan casuists who took arms by the authority of the king against his person, have attacked the writer while doing homage to the writings. Mr. Croker, for example, has published two thousand five hundred notes on the life of Johnson, and yet scarcely ever mentions the biographer, whose performance he has taken such pains to illustrate, without some expression of contempt.

An ill-natured man Boswell certainly was not. Yet the malignity of the most malignant satirist could scarcely cut deeper than his thoughtless loquacity. Having himself no sensibility to derision and contempt, he took it for granted that all others were equally callous. He was not ashamed to exhibit himself to the whole world as a common spy, a common tattler, a humble companion without the excuse of poverty, and to tell a hundred stories of his own pertness and folly, and of the insults which his pertness and folly brought upon him. It was natural that he should show little discretion in cases in which the feelings or the honour of others might be concerned. No man, surely, ever published such stories respecting persons whom he professed to love and revere. He would infallibly have made his hero as contemptible as he has made himself, had not his hero really possessed some moral and intellectual qualities of a very high order. The best proof that Johnson was really an extraordinary man is that his character, instead of being degraded, has, on the whole, been decidedly raised by a work in which all his vices and weaknesses are exposed more unsparingly than they ever were exposed by Churchill [19] or by Kenrick.[20]

Johnson grown old, Johnson in the fulness of his fame and in the enjoyment of a competent fortune, is better known to us than any other man in history. Everything about him, his coat, his wig, his figure, his face, his scrofula, his St. Vitus's dance, his rolling walk, his blinking eye, the outward signs which too clearly marked his approbation of his dinner, his insatiable appetite for fish-sauce and veal-pie with plums, his inextinguishable thirst for tea, his trick of touching the posts as he walked, his mysterious practice of treasuring up scraps of orange-peel, his morning slumbers, his midnight disputations, his contortions, his

18. Allusion to *Le palais de la vérité* by Madame de Genlis (1746–1830), in which characters are under a charm forcing them to speak the truth.

19. Charles Churchill (1731–64), satirist, who ridiculed Johnson in a poem, the *Ghost*, after the Cock Lane ghost episode.

20. William Kenrick (1725?–79), miscellaneous writer who libeled almost every successful author and actor of his day, including Garrick, Fielding, Johnson, and Colman.

mutterings, his gruntings, his puffings, his vigorous, acute, and ready eloquence, his sarcastic wit, his vehemence, his insolence, his fits of tempestuous rage, his queer inmates, old Mr. Levett and blind Mrs. Williams, the cat Hodge and the negro Frank, all are as familiar to us as the objects by which we have been surrounded from childhood. But we have no minute information respecting those years of Johnson's life during which his character and his manners became immutably fixed. We know him, not as he was known to the men of his own generation, but as he was known to men whose father he might have been. That celebrated club of which he was the most distinguished member contained few persons who could remember a time when his fame was not fully established and his habits completely formed. He had made himself a name in literature while Reynolds [21] and the Wartons [22] were still boys. He was about twenty years older than Burke, Goldsmith, and Gerard Hamilton,[23] about thirty years older than Gibbon, Beauclerk, and Langton,[24] and about forty years older than Lord Stowell,[25] Sir William Jones,[26] and Windham.[27] Boswell and Mrs. Thrale, the two writers from whom we derive most of our knowledge respecting him, never saw him till long after he was fifty years old, till most of his great works had become classical, and till the pension bestowed on him by the Crown had placed him above poverty. Of those eminent men who were his most intimate associates towards the close of his life, the only one, as far as we remember, who knew him during the first ten or twelve years of his residence in the capital, was David Garrick; and it does not appear that, during those years, David Garrick saw much of his fellow-townsman.

Johnson came up to London precisely at the time when the condition of a man of letters was most miserable and degraded. It was a dark night between two sunny days. The age of patronage had passed away. The age of general curiosity and intelligence had not arrived. The number of readers is at present so great that a popular author may subsist in comfort and opulence on the profits of his works. In the reigns of William the Third, of Anne, and of George the First, even such men as Congreve [28] and Addison [29] would scarcely have been able to live like gentlemen by the mere sale of their writings. But the deficiency of the natural demand for literature was, at the close of the seventeenth and at the beginning of the eighteenth century, more than made up by artificial encouragement, by a vast system of bounties and premiums. There was, perhaps, never a time at which the rewards of literary merit were so splendid, at which men who could write well found such easy admittance into the most distinguished society, and to the highest honours of the State. The chiefs of both the great parties into which the kingdom was divided, patronised literature with emulous munificence. Congreve, when he had scarcely attained his majority, was rewarded for his first

21. Sir Joshua Reynolds (1723–92), portrait painter and member of Johnson's circle; founded the Club in 1764.

22. Joseph Warton (1722–1800) and Thomas Warton (1728–90) were brothers; both were clergymen, teachers, historians of English poetry, and poets.

23. William Gerard Hamilton (1729–96), politician, known as 'Single-speech' Hamilton because his maiden speech in Parliament was his best. Dr. Johnson praised his conversational powers.

24. Bennet Langton (1737–1801), famous Greek scholar, professor of ancient literature at the Royal Academy. Member of the Literary Club in 1764.

25. William Scott, Baron Stowell (1745–1836), maritime and international lawyer, on intimate terms with Johnson.

26. Sir William Jones (1746–94), Orientalist and jurist.

27. William Windham (1750–1810), a politician.

28. William Congreve (1670–1729), greatest writer of comedy in his time.

29. Joseph Addison (1672–1719), essayist, poet, statesman, and great literary arbiter of the age.

comedy with places which made him independent for life. Smith,[30] though his *Hippolytus and Phædra* failed, would have been consoled with three hundred a year but for his own folly. Rowe [31] was not only Poet Laureate, but also land-surveyor of the customs in the port of London, clerk of the council to the Prince of Wales, and secretary of the Presentations to the Lord Chancellor. Hughes [32] was secretary to the Commissions of the Peace. Ambrose Philips [33] was judge of the Prerogative Court in Ireland. Locke [34] was Commissioner of Appeals and of the Board of Trade. Newton [35] was Master of the Mint. Stepney [36] and Prior [37] were employed in embassies of high dignity and importance. Gay,[38] who commenced life as apprentice to a silk mercer, became a secretary of legation at five-and-twenty. It was to a poem on the death of Charles the Second, and to the *City and Country Mouse*, that Montague owed his introduction into public life, his earldom, his garter, and his Auditorship of the Exchequer. Swift,[39] but for the unconquerable prejudice of the queen, would have been a bishop. Oxford,[40] with his white staff in his hand, passed through the crowd of his suitors to welcome Parnell,[41] when that ingenious writer deserted the Whigs. Steele [42] was a commissioner of stamps and a member of Parliament. Arthur Mainwaring [43] was a commissioner of the customs, and auditor of the imprest. Tickell [44] was secretary to the Lords Justices of Ireland. Addison was Secretary of State.

This liberal patronage was brought into fashion, as it seems, by the magnificent Dorset,[45] almost the only noble versifier in the Court of Charles the Second who possessed talents for composition which were independent of the aid of a coronet. Montague owed his elevation to the favour of Dorset, and imitated through the whole course of his life the liberality to which he was himself so greatly indebted. The Tory leaders, Harley [46] and Bolingbroke [47] in

30. Edmund Smith (1672–1710) dedicated his *Phaedra and Hippolytus* to Lord Halifax, but failed to receive a promised pension of £300 because Smith did not present the dedication in person.
31. Nicholas Rowe (1674–1718), dramatist (*The Fair Penitent*, 1703; *Jane Shore*, 1714; etc.); editor of Shakespeare.
32. John Hughes (1677–1720), author of a successful play (*The Siege of Damascus*, 1720); contributor to *The Tatler* and *The Spectator*.
33. Ambrose Philips (1675?–1749), poet, member of Addison's circle; adapted Racine's *Andromaque* as *The Distressed Mother* (1712).
34. John Locke (1632–1704), philosopher of empiricism, famous for his *Essay concerning Human Understanding* (1690).
35. Sir Isaac Newton (1642–1727), the celebrated scientist.
36. George Stepney (1663–1707), diplomatist and poet, translator of Juvenal, contributor to Dryden's *Miscellany Poems*.
37. Matthew Prior (1664–1721), poet, epigrammatist, diplomatist; author, with Charles Montague (Lord Halifax), of *The Town and Country Mouse* in answer to Dryden's *The Hind and the Panther*; assisted at the Treaty of Utrecht, popularly called 'Matt's peace.'
38. John Gay (1685–1732), poet, now best known for his musical play, *The Beggar's Opera* (1728).
39. Jonathan Swift (1667–1745), Dean of St Patrick's, Dublin; and satirist (*A Tale of a Tub*, and *Gulliver's Travels*, etc.)
40. Robert Harley, 1st Earl of Oxford (1661–1724), Chancellor of the Exchequer and head of the Tory ministry, 1710. The 'white staff' was the symbol of his office.
    Thomas Parnell (1679–1718), an Anglo-Irish poet; contributed to the *Spectator*, aided Pope with the *Iliad*; became a Tory in 1711.
42. Richard Steele (1672–1729), author, politician, editor (*The Tatler*, *The Spectator*, etc.)
43. Arthur Mainwaring (1668–1712), editor and politician. — *Auditor of the imprest*: auditor of money or loans advanced to soldiers, sailors, or government officials.
44. Thomas Tickell (1686–1740), minor poet, contributor to the *Spectator*, editor of Addison's works; made Secretary to the Lords Justices of Ireland, 1724.
45. Charles Sackville, 6th Earl of Dorset (1638–1706), poet, wit, and profligate; published poetry with that of Sir Charles Sedley (1639?–1701) in the latter's *Collection of Poems* (1701).
46. *i.e.* the Earl of Oxford. See note 40.
47. Henry St. John, 1st Viscount Bolingbroke (1678–1751), founded the 'Brothers Club' to direct patronage of literature and to rival

particular, vied with the chiefs of the Whig party in zeal for the encouragement of letters. But soon after the accession of the House of Hanover a change took place.[48] The supreme power passed to a man who cared little for poety or eloquence. The importance of the House of Commons was constantly on the increase. The Government was under the necessity of bartering for Parliamentary support much of that patronage which had been employed in fostering literary merit; and Walpole[49] was by no means inclined to divert any part of the fund of corruption to purposes which he considered as idle. He had eminent talents for governments and for debate. But he had paid little attention to books, and felt little respect for authors. One of the coarse jokes of his friend, Sir Charles Hanbury Williams,[50] was far more pleasing to him than Thomson's *Seasons*[51] or Richardson's *Pamela*.[52] He had observed that some of the distinguished writers whom the favour of Halifax[53] had turned into statesmen had been mere incumbrances to their party, dawdlers in office and mutes in Parliament. During the whole course of his administration, therefore, he scarcely befriended a single man of genius. The best writers of the age gave all their support to the Opposition, and contributed to excite that discontent which, after plunging the nation into a foolish and unjust war, overthrew the Minister to make room for men less able and equally immoral. The Opposition could reward its eulogists with little more than promises and caresses. St. James's[54] would give nothing: Leicester House[55] had nothing to give.

Thus, at the time when Johnson commenced his literary career, a writer had little to hope from the patronage of powerful individuals. The patronage of the public did not yet furnish the means of comfortable subsistence. The prices paid by booksellers to authors were so low that a man of considerable talents and unremitting industry could do little more than provide for the day which was passing over him. The lean kine had eaten up the fat kine. The thin and withered ears had devoured the good ears.[56] The season of rich harvest was over, and the period of famine had begun. All that is squalid and miserable might now be summed up in the word Poet. That word denoted a creature dressed like a scarecrow, familiar with compters and spunging-houses,[57] and perfectly qualified to decide on the comparative merits of the Common Side in the King's Bench prison and of Mount Scoundrel in the Fleet.[58] Even the poorest pitied him; and they well might pity him. For if their condition was equally abject, their aspirings were not equally high, nor their sense of insult equally acute. To lodge in a garret up four pair of stairs, to dine in a cellar among footmen out of place, to translate ten hours a day for the wages of a ditcher, to be hunted by bailiffs from one haunt of beggary and pestilence to another, from

the Whigs' 'Kit-Cat Club,' 1711; author of writings on literature, philosophy, and politics

48. With the accession of George I in 1714.

49. Sir Robert Walpole, 1st Earl of Orford (1676–1745), was made Prime Minister in 1715; noted for his abilities in the financial and commercial side of statesmanship.

50. Sir Charles Hanbury Williams (1708–59), satirical writer and diplomatist.

51. James Thomson's *The Seasons* appeared in 1726–30.

52. Samuel Richardson's *Pamela* appeared in 1740.

53. Charles Montagu, Earl of Halifax (1661–1715), had, for example, given a commissionership to Addison, and the mastership of the Mint to Newton. Addison was a 'mute in Parliament.'

54. *i.e.* the court.

55. *i.e.* the residence of Frederick, Prince of Wales.

56. See *Genesis*, xli.

57. *compters*: counters, or prisons. — *spunging-houses*: houses where debtors were kept before being sent to prison.

58. *Common Side*: the general prisoners'-room in the King's Bench Prison. — *Mount Scoundrel*: the worst section of Fleet Prison in Farringdon Street.

Grub Street [59] to St. George's Fields, and from St. George's Fields to the alleys behind St. Martin's church, to sleep on a bulk [60] in June and amidst the ashes of a glass-house [61] in December, to die in an hospital, and to be buried in a parish vault, was the fate of more than one writer who, if he had lived thirty years earlier, would have been admitted to the sittings of the Kitcat [62] or the Scriblerus Club,[63] would have sat in Parliament, and would have been intrusted with embassies to the High Allies; [64] who, if he had lived in our time, would have found encouragement scarcely less munificent in Albemarle Street or in Paternoster Row.[65]

As every climate has its peculiar diseases, so every walk of life has its peculiar temptations. The literary character, assuredly, has always had its share of faults, vanity, jealousy, morbid sensibility. To these faults were now superadded the faults which are commonly found in men whose livelihood is precarious, and whose principles are exposed to the trial of severe distress. All the vices of the gambler and of the beggar were blended with those of the author. The prizes in the wretched lottery of bookmaking were scarcely less ruinous than the blanks. If good fortune came, it came in such a manner that it was almost certain to be abused. After months of starvation and despair, a full third night [66] or a well-received dedication filled the pocket of the lean, ragged, unwashed poet with guineas. He hastened to enjoy those luxuries with the images of which his mind had been haunted while he was sleeping amidst the cinders and eating potatoes at the Irish ordinary [67] in Shoe Lane. A week of taverns soon qualified him for another year of night-cellars. Such was the life of Savage,[68] of Boyse,[69] and of a crowd of others. Sometimes blazing in gold-laced hats and waistcoats; sometimes lying in bed because their coats had gone to pieces, or wearing paper cravats because their linen was in pawn; sometimes drinking Champagne and Tokay with Betty Careless; [70] sometimes standing at the window of an eating-house in Porridge island, to snuff up the scent of what they could not afford to taste; they knew luxury; they knew beggary; but they never knew comfort. These men were irreclaimable. They looked on a regular and frugal life with the same aversion which an old gipsy or a Mohawk hunter feels for a stationary abode, and for the restraints and securities of civilised communities. They were as untameable, as much wedded to their desolate freedom, as the wild ass. They could no more be broken in to the offices of social man than the unicorn could be trained to serve and abide by the crib. It was well if they did not, like beasts of a still fiercer race, tear the hands which ministered to their necessities. To assist them was impossible; and the most benevolent of mankind at length became weary of giving relief which was dissipated with the wildest profusion as soon as it had been received. If a sum was bestowed on the wretched adventurer, such as, properly husbanded, might have supplied him for six months, it was instantly spent in strange freaks of sensuality, and, before forty-eight hours had elapsed, the poet was again pestering all his acquaintance for twopence to get a plate of shin of beef at a subter-

62. Famous Whig club of the time of Addison.
63. The Tory club, founded by Pope, Swift, and Arbuthnot.
64. Austria, Prussia, the Netherlands, and England, in the War of the Spanish Sucession (1701–13).
65. Headquarters of the London book trade.
66. In the 18th century the proceeds of the third night's performance of a play were given to the author.
67. A restaurant or eating-place.
68. Richard Savage (d.1743), minor poet and dramatist, whose *Life* Johnson wrote, and who died in prison.
69. Samuel Boyse, or Boyce (1708–49), poet, at times in such poverty that he had to stay in bed for lack of clothes.
70. A well-known courtesan of the time.

raneous cookshop. If his friends gave him an asylum in their houses, those houses were forthwith turned into bagnios [71] and taverns. All order was destroyed; all business was suspended. The most good-natured host began to repent of his eagerness to serve a man of genius in distress when he heard his guest roaring for fresh punch at five o'clock in the morning.

A few eminent writers were more fortunate. Pope had been raised above poverty by the active patronage which, in his youth, both the great political parties had extended to his Homer. Young had received the only pension ever bestowed, to the best of our recollection, by Sir Robert Walpole, as the reward of mere literary merit.[72] One or two of the many poets who attached themselves to the Opposition, Thomson [73] in particular and Mallet,[74] obtained, after much severe suffering, the means of subsistence from their political friends. Richardson,[75] like a man of sense, kept his shop; and his shop kept him, which his novels, admirable as they are, would scarcely have done. But nothing could be more deplorable than the state even of the ablest men, who at that time depended for subsistence on their writings. Johnson, Collins,[76] Fielding,[77] and Thomson, were certainly four of the most distinguished persons that England produced during the eighteenth century. It is well known that they were all four arrested for debt.

Into calamities and difficulties such as these Johnson plunged in his twenty-eighth year. From that time, till he was three or four and fifty, we have little information respecting him; little, we mean, compared with the full and accurate information which we possess respecting his proceedings and habits towards the close of his life. He emerged at length from cock-lofts and sixpenny ordinaries into the society of the polished and the opulent. His fame was established. A pension sufficient for his wants had been conferred on him: [78] and he came forth to astonish a generation with which he had almost as little in common as with Frenchmen or Spaniards.

In his early years he had occasionally seen the great; but he had seen them as a beggar. He now came among them as a companion. The demand for amusement and instruction had, during the course of twenty years, been gradually increasing. The price of literary labour had risen; and those rising men of letters with whom Johnson was henceforth to associate, were for the most part persons widely different from those who had walked about with him all night in the streets for want of a lodging. Burke, Robertson,[79] the Wartons, Gray, Mason,[80] Gibbon, Adam Smith, Beattie,[81] Sir William Jones,[82] Goldsmith, and Churchill,[83] were the most distinguished writers of what may be called the second generation of the Johnsonian age. Of these men Churchill was the only one in

71. *bagnio*: originally a bathhouse (Italian and Turkish); later a brothel.
72. Edward Young (1683–1765), author of *Night Thoughts*, received from Walpole a pension of £200 a year.
73. James Thomson (1700–48), author of the *Seasons* and the *Castle of Indolence*, received, after years of poverty, a sinecure as Surveyor General of the Leeward Islands with £300 a year.
74. David Mallet (1705?–65), reputed author of the song 'Rule Britannia,' was made undersecretary to the Prince of Wales in 1742.
75. Samuel Richardson (1689–1761) was both a novelist (*Pamela, Clarissa Harlowe*, etc.) and a printer. Much admired by Macaulay.
76. William Collins (1721–59), best known for his 'Ode to Evening,' was probably never actually in prison.
77. Henry Fielding (1707–54), author of *Tom Jones* and other novels; one of the great literary figures of the time, and often in debt.
78. A pension of £300 a year was granted to Johnson by Lord Bute in 1762.
79. William Robertson (1721–93), a Scotch historian (*History of Scotland*, 1759; *History of Charles V*, 1769), very popular in his time.
80. William Mason (1724–97), minor poet, now remembered chiefly for his biography of his friend Thomas Gray.
81. James Beattie (1735–1803), Scotch poet, now remembered for his *The Minstrel* (1771, 1774).
82. See note 26.
83. See note 19.

whom we can trace the stronger lineaments of that character which, when Johnson first came up to London, was common among authors. Of the rest, scarcely any had felt the pressure of severe poverty. Almost all had been early admitted into the most respectable society on an equal footing. They were men of quite a different species from the dependents of Curll and Osborne.[84]

Johnson came among them the solitary specimen of a past age, the last survivor of the genuine race of Grub Street hacks; the last of that generation of authors whose abject misery and whose dissolute manners had furnished inexhaustible matter to the satirical genius of Pope. From nature he had received an uncouth figure, a diseased constitution, and an irritable temper. The manner in which the earlier years of his manhood had been passed had given to his demeanour, and even to his moral character, some peculiarities appalling to the civilised beings who were the companions of his old age. The perverse irregularity of his hours, the slovenliness of his person, his fits of strenuous exertion, interrupted by long intervals of sluggishness, his strange abstinence, and his equally strange voracity, his active benevolence, contrasted with the constant rudeness and the occasional ferocity of his manners in society, made him, in the opinion of those with whom he lived during the last twenty years of his life, a complete original. An original he was, undoubtedly, in some respects. But if we possessed full information concerning those who shared his early hardships, we should probably find that what we call his singularities of manner were, for the most part, failings which he had in common with the class to which he belonged. He ate at Streatham Park [85] as he had been used to eat behind the screen at St. John's Gate, when he was ashamed to show his ragged clothes. He ate as it was natural that a man should eat, who, during a great part of his life, had passed the morning in doubt whether he should have food for the afternoon. The habits of his early life had accustomed him to bear privation with fortitude, but not to taste pleasure with moderation. He could fast; but, when he did not fast, he tore his dinner like a famished wolf, with the veins swelling on his forehead, and the perspiration running down his cheeks. He scarcely ever took wine. But when he drank it, he drank it greedily and in large tumblers. These were, in fact, mitigated symptoms of that same moral disease which raged with such deadly malignity in his friends Savage and Boyse. The roughness and violence which he showed in society were to be expected from a man whose temper, not naturally gentle, had been long tried by the bitterest calamities, by the want of meat, of fire, and of clothes, by the importunity of creditors, by the insolence of booksellers, by the derision of fools, by the insincerity of patrons, by that bread which is the bitterest of all food, by those stairs which are the most toilsome of all paths, by that deferred hope which makes the heart sick.[86] Through all these things the ill-dressed, coarse, ungainly pedant had struggled manfully up to eminence and command. It was natural that, in the exercise of his power, he should be 'eo immitior, quia toleraverat,'[87] that, though his heart was undoubtedly generous and humane, his demeanour in society should be harsh and despotic. For severe distress he had sympathy, and not

84. Edmund Curll (1675–1747) and Thomas Osborne (d.1767) were London booksellers (and publishers); the former was accused by Pope of forging Pope's letters, the latter was beaten by Johnson for impertinence.

85. The home of Henry Thrale, at Streatham, in Surrey, near London. Mrs. Thrale and Johnson were very good friends, and for some time Johnson had an apartment in the Thrale house. In his earlier years, soon after 1744, he lived with his publisher, Edward Cave, at St. John's Gate, and ate behind a screen because his clothes were too shabby to be seen by guests.

86. See *Proverbs*, xiii,12.

87. 'All the less gentle because he had borne much.'

only sympathy, but munificent relief. But for the suffering which a harsh word inflicts upon a delicate mind he had no pity; for it was a kind of suffering which he could scarcely conceive. He would carry home on his shoulders a sick and starving girl from the streets. He turned his house into a place of refuge for a crowd of wretched old creatures who could find no other asylum; nor could all their peevishness and ingratitude weary out his benevolence. But the pangs of wounded vanity seemed to him ridiculous: and he scarcely felt sufficient compassion even for the pangs of wounded affection. He had seen and felt so much of sharp misery, that he was not affected by paltry vexations; and he seemed to think that everybody ought to be as much hardened to those vexations as himself. He was angry with Boswell for complaining of a headache, with Mrs. Thrale for grumbling about the dust on the road, or the smell of the kitchen. These were, in his phrase, 'foppish lamentations,' which people ought to be ashamed to utter in a world so full of sin and sorrow. Goldsmith crying because *The Good-natured Man* had failed, inspired him with no pity. Though his own health was not good, he detested and despised valetudinarians. Pecuniary losses, unless they reduced the loser absolutely to beggary, moved him very little. People whose hearts had been softened by prosperity might weep, he said, for such events; but all that could be expected of a plain man was not to laugh. He was not much moved even by the spectacle of Lady Tavistock dying of a broken heart for the loss of her lord.[88] Such grief he considered as a luxury reserved for the idle and the wealthy. A washerwoman, left a widow with nine small children, would not have sobbed herself to death.

A person who troubled himself so little about small or sentimental grievances was not likely to be very attentive to the feelings of others in the ordinary intercourse of society. He could not understand how a sarcasm or a reprimand could make any man really unhappy. 'My dear doctor,' said he to Goldsmith, 'what harm does it do to a man to call him Holofernes?'[89] 'Pooh, ma'am,' he exclaimed, to Mrs. Carter, 'who is the worse for being talked of uncharitably?'[90] Politeness has been well defined as benevolence in small things. Johnson was impolite, not because he wanted benevolence, but because small things appeared smaller to him than to people who had never known what it was to live for fourpence halfpenny a day.

The characteristic peculiarity of his intellect was the union of great powers with low prejudices. If we judged of him by the best parts of his mind, we should place him almost as high as he was placed by the idolatry of Boswell; if by the worst parts of his mind, we should place him even below Boswell himself. Where he was not under the influence of some strange scruple, or some domineering passion, which prevented him from boldly and fairly investigating a subject, he was a wary and acute reasoner, a little too much inclined to scepticism, and a little too fond of paradox. No man was less likely to be imposed upon by fallacies in argument, or by exaggerated statements of fact. But if, while he was beating down sophisms and exposing false testimony, some childish prejudices, such as would excite laughter in a well-managed nursery, came across him, he was smitten as if by enchantment. His mind dwindled away under the spell from gigantic elevation to dwarfish littleness. Those who had lately been admiring its amplitude and its force were now as

89. Johnson and Goldsmith had been referred to in the newspapers as Holofernes and Dull, respectively (see *Love's Labor's Lost*). See Mrs. Piozzi's *Anecdotes*, p.118.

90. Elizabeth Carter (1717–1806), minor poet, translator, contributor to the *Gentleman's Magazine*, a friend of Johnson's for fifty years. See Boswell's *Life of Johnson* (Oxf.Stand. Ed.), II,405 (April 20, 1781).

much astonished at its strange narrowness and feebleness as the fisherman in the Arabian tale, when he saw the Genie, whose stature had overshadowed the whole seacoast, and whose might seemed equal to a contest with armies, contract himself to the dimensions of his small prison, and lie there the helpless slave of the charm of Solomon.

Johnson was in the habit of sifting with extreme severity the evidence for all stories which were merely odd. But when they were not only odd but miraculous, his severity relaxed. He began to be credulous precisely at the point where the most credulous people begin to be sceptical. It is curious to observe, both in his writings and in his conversation, the contrast between the disdainful manner in which he rejects unauthenticated anecdotes, even when they are consistent with the general laws of nature, and the respectful manner in which he mentions the wildest stories relating to the invisible world. A man who told him of a water-spout, or a meteoric stone, generally had the lie direct given him for his pains. A man who told him of a prediction or a dream wonderfully accomplished was sure of a courteous hearing. 'Johnson,' observed Hogarth,[91] 'like King David, says in his haste that all men are liars.'[92] 'His incredulity,' says Mrs. Thrale, 'amounted almost to disease.' She tells us how he browbeat a gentleman, who gave him an account of a hurricane in the West Indies, and a poor Quaker who related some strange circumstance about the red-hot balls fired at the siege of Gibraltar. 'It is not so. It cannot be true. Don't tell that story again. You cannot think how poor a figure you make in telling it.'[93] He once said, half jestingly, we suppose, that for six months he refused to credit the fact of the earthquake at Lisbon, and that he still believed the extent of the calamity to be greatly exaggerated.[94] Yet he related with a grave face how old Mr. Cave of St. John's Gate saw a ghost, and how this ghost was something of a shadowy being. He went himself on a ghost-hunt to Cock Lane,[95] and was angry with John Wesley for not following up another scent of the same kind with proper spirit and perseverance. He rejects the Celtic genealogies and poems[96] without the least hesitation; yet he declares himself willing to believe the stories of the second sight. If he had examined the claims of the Highland seers with half the severity with which he sifted the evidence for the genuineness of *Fingal*, he would, we suspect, have come away from Scotland with a mind fully made up. In his *Lives of the Poets*, we find that he is unwilling to give credit to the accounts of Lord Roscommon's[97] early proficiency in his studies: but he tells with great solemnity an absurd romance about some intelligence preternaturally impressed on the mind of that nobleman. He avows himself to be in great doubt about the truth of the story, and ends by warning his readers not wholly to slight such impressions.

Many of his sentiments on religious subjects are worthy of a liberal and enlarged mind. He could discern clearly enough the folly and meanness of all bigotry except his own. When he spoke of the scruples of the Puritans, he spoke like a person who had

91. William Hogarth (1697–1764), great painter and engraver, excellent at pictorial satire, tragic and humorous, with ethical intent.

92. See *Psalms*, cxvi,11.

93. Related in Mrs. Piozzi's *Anecdotes*, p.91.

94. Lisbon suffered its greatest earthquake on November 1, 1755; the greater part of the city was reduced to a heap of ruins, and between 10,000 and 20,000 lives were lost.

95. The ghost finally proved to be the eleven-year-old daughter of the tenant of the house in which rappings had been heard. It was Johnson who was responsible for showing the 'ghost' to be an impostor.

96. Allusion to the pretended translations from Ossian by James Macpherson (1736–96). The chief 'translation' was *Fingal: an Ancient Epic in Six Books* (1762).

97. See Macaulay's essay on Bunyan, in the present collection, note 31.

really obtained an insight into the divine philosophy of the New Testament, and who considered Christianity as a noble scheme of government, tending to promote the happiness and to elevate the moral nature of man. The horror which the sectaries felt for cards, Christmas ale, plum-porridge, mince-pies, and dancing-bears, excited his contempt. To the arguments urged by some very worthy people against showy dress he replied with admirable sense and spirit, 'Let us not be found, when our Master calls us, stripping the lace off our waistcoats, but the spirit of contention from our souls and tongues. Alas! sir, a man who cannot get to heaven in a green coat will not find his way thither the sooner in a grey one.' Yet he was himself under the tyranny of scruples as unreasonable as those of Hudibras or Ralpho,[98] and carried his zeal for ceremonies and for ecclesiastical dignities to lengths altogether inconsistent with reason or with Christian charity. He has gravely noted down in his diary that he once committed the sin of drinking coffee on Good Friday. In Scotland, he thought it his duty to pass several months without joining in public worship, solely because the ministers of the kirk had not been ordained by bishops. His mode of estimating the piety of his neighbours was somewhat singular. 'Campbell,'[99] said he, 'is a good man, a pious man. I am afraid he has not been in the inside of a church for many years: but he never passes a church without pulling off his hat; this shows he has good principles.' Spain and Sicily must surely contain many pious robbers and well-principled assassins. Johnson could easily see that a Roundhead[100] who named all his children after Solomon's singers, and talked in the House of Commons about seeking the Lord, might be an unprincipled villain, whose religious mummeries only aggravated his guilt. But a man who took off his hat when he passed a church episcopally consecrated must be a good man, a pious man, a man of good principles. Johnson could easily see that those persons who looked on a dance or a laced waistcoat as sinful, deemed most ignobly of the attributes of God and of the ends of revelation. But with what a storm of invective he would have overwhelmed any man who had blamed him for celebrating the redemption of mankind with sugarless tea and butterless buns.

Nobody spoke more contemptuously of the cant of patriotism. Nobody saw more clearly the error of those who regarded liberty, not as a means, but as an end, and who proposed to themselves, as the object of their pursuit, the prosperity of the State as distinct from the prosperity of the individuals who compose the State. His calm and settled opinion seems to have been that forms of government have little or no influence on the happiness of society. This opinion, erroneous as it is, ought at least to have preserved him from all intemperance on political questions. It did not, however, preserve him from the lowest, fiercest, and most absurd extravagances of party spirit, from rants which, in everything but the diction, resembled those of Squire Western.[101] He was, as a politician, half ice and half fire. On the side of his intellect he was a mere Pococurante,[102] far too apathetic about public affairs, far too sceptical as to the good or evil tendency of any form of polity. His passions, on the contrary, were violent even to slaying against all who leaned to Whiggish principles. The well-known lines which he inserted in Goldsmith's *Traveller* express

98. See Samuel Butler's *Hudibras*, 1.163–70. Ralpho is squire to Hudibras, the burlesque knight-errant.

what seems to have been his deliberate judgment:

'How small, of all that human hearts endure,
That part which kings or laws can cause or cure!'[103]

He had previously put expressions very similar into the mouth of Rasselas.[104] It is amusing to contrast these passages with the torrents of raving abuse which he poured forth against the Long Parliament and the American Congress. In one of the conversations reported by Boswell this inconsistency displays itself in the most ludicrous manner.

'Sir Adam Ferguson,'[105] says Boswell, 'suggested that luxury corrupts a people, and destroys the spirit of liberty. JOHNSON: "Sir, that is all visionary. I would not give half a guinea to live under one form of government rather than another. It is of no moment to the happiness of an individual. Sir, the danger of the abuse of power is nothing to a private man. What Frenchman is prevented passing his life as he pleases?" SIR ADAM: "But, sir, in the British constitution it is surely of importance to keep up a spirit in the people, so as to preserve a balance against the Crown." JOHNSON: "Sir, I perceive you are a vile Whig. Why all this childish jealousy of the power of the Crown? The Crown has not power enough."'

One of the old philosophers, Lord Bacon tells us, used to say that life and death were just the same to him. 'Why, then,' said an objector, 'do you not kill yourself?' The philosopher answered, 'Because it is just the same.' If the difference between two forms of government be not worth half a guinea, it is not easy to see how Whiggism can be viler than Toryism, or how the Crown can have too little power. If the happiness of individuals is not affected by political abuses, zeal for liberty is doubtless ridiculous. But zeal for monarchy must be equally so. No person could have been more quicksighted than Johnson to such a contradiction as this in the logic of an antagonist.

The judgments which Johnson passed on books were, in his own time, regarded with superstitious veneration, and, in our time, are generally treated with indiscriminate contempt. They are the judgments of a strong but enslaved understanding. The mind of the critic was hedged round by an uninterrupted fence of prejudices and superstitions. Within his narrow limits, he displayed a vigour and an activity which ought to have enabled him to clear the barrier that confined him.

How it chanced that a man who reasoned on his premises so ably, should assume his premises so foolishly, is one of the great mysteries of human nature. The same inconsistency may be observed in the schoolmen of the middle ages.[106] Those writers show so much acuteness and force of mind in arguing on their wretched data, that a modern reader is perpetually at a loss to comprehend how such minds came by such data. Not a flaw in the superstructure of the theory which they are rearing escapes their vigilance. Yet they are blind to the obvious unsoundness of the foundation. It is the same with some eminent lawyers. Their legal arguments are intellectual prodigies, abounding with the happiest analogies and the most refined distinctions. The principles of their arbitrary science being once admitted, the statute-book and

105. Adam Ferguson (1723–1816), professor of philosophy at Edinburgh, author of an *Essay on Civil Society*, and other works; visited Voltaire at Ferney; regarded Macpherson's *Ossian* as genuine.

106. Philosophers writing from about the 11th to the 15th centuries, treating logic, metaphysics, and theology, as taught in the 'schools' or universities of Italy, France, Germany, and England. They tried to harmonize Aristotle and the Christian fathers, sometimes engaging in hair-splitting discussions. The greater Schoolmen were Peter Lombard, Abelard, Aquinas, Duns Scotus, Ockham.

the reports being once assumed as the foundations of reasoning, these men must be allowed to be perfect masters of logic. But if a question arises as to the postulates on which their whole system rests, if they are called upon to vindicate the fundamental maxims of that system which they have passed their lives in studying, these very men often talk the language of savages or of children. Those who have listened to a man of this class in his own court, and who have witnessed the skill with which he analyses and digests a vast mass of evidence, or reconciles a crowd of precedents which at first sight seem contradictory, scarcely know him again when, a few hours later, they hear him speaking on the other side of Westminster Hall in his capacity of legislator. They can scarcely believe that the paltry quirks which are faintly heard through a storm of coughing, and which do not impose on the plainest country gentleman, can proceed from the same sharp and vigorous intellect which had excited their admiration under the same roof, and on the same day.

Johnson decided literary questions like a lawyer, not like a legislator. He never examined foundations where a point was already ruled. His whole code of criticism rested on pure assumption, for which he sometimes quoted a precedent or an authority, but rarely troubled himself to give a reason drawn from the nature of things. He took it for granted that the kind of poetry which flourished in his own time, which he had been accustomed to hear praised from his childhood, and which he had himself written with success, was the best kind of poetry. In his biographical work he has repeatedly laid it down as an undeniable proposition that during the latter part of the seventeenth century, and the earlier part of the eighteenth, English poetry had been in a constant progress of improvement. Waller,[107] Denham,[108] Dryden, and Pope, had been, according to him, the great reformers. He judged of all works of the imagination by the standard established among his own contemporaries. Though he allowed Homer to have been a greater man than Virgil, he seems to have thought the *Æneid* a greater poem than the *Iliad*. Indeed, he well might have thought so; for he preferred Pope's *Iliad* to Homer's. He pronounced that, after Hoole's translation of Tasso, Fairfax's would hardly be reprinted.[109] He could see no merit in our fine old English ballads, and always spoke with the most provoking contempt of Percy's[110] fondness for them. Of the great original works of imagination which appeared during his time, Richardson's novels alone excited his admiration. He could see little or no merit in *Tom Jones*, in *Gulliver's Travels*, or in *Tristram Shandy*. To Thomson's *Castle of Indolence* he vouchsafed only a line of cold commendation, of commendation much colder than what he has bestowed on the *Creation* of that portentous bore, Sir Richard Blackmore.[111] Gray was, in his dialect, a barren rascal.[112] Churchill was a blockhead. The contempt which he felt for the

107. Edmund Waller (1606–87), at one time greatly admired for his lyrics which, except for 'Go, lovely Rose,' and a few others, have greatly lost their charm. Waller made the heroic couplet popular and led to its perfection by Dryden and Pope.

108 Sir John Denham (1615–69), satirist, and forerunner of the neo-classical poets; greatly admired by Dryden and Pope.

109. John Hoole (1727–1803), translated Tasso's *Jerusalem Delivered* (1763) and Ariosto's *Orlando Furioso* (1783). — Edward Fairfax (d.1635) translated Tasso's great poem into the eight-lined Italian stanza, now considered a superior performance to Hoole's commonplace heroic couplets.

110. Thomas Percy (1729–1811), Bishop of Dromore, editor of the *Reliques of Ancient English Poetry* (1765), the first great collection of English ballads.

111. Sir Richard Blackmore (d.1729) was a physician, and author of a religious poem, *Creation* (1712), a reply to the atheism of Hobbes and Spinoza, on the basis of John Locke. Johnson admired it highly.

112. It was Fielding to whom 'barren rascal' was applied; Gray was a 'dull fellow.' (See *Life*, April 6, 1772; and March 27, 1775.)

trash of Macpherson was indeed just; but it was, we suspect, just by chance. He despised the *Fingal* for the very reason which led many men of genius to admire it. He despised it, not because it was essentially commonplace, but because it had a superficial air of originality.

He was undoubtedly an excellent judge of compositions fashioned on his own principles. But when a deeper philosophy was required, when he undertook to pronounce judgment on the works of those great minds which 'yield homage only to eternal laws,' his failure was ignominious. He criticised Pope's *Epitaphs* excellently. But his observations on Shakspeare's plays and Milton's poems seem to us for the most part as wretched as if they had been written by Rymer [113] himself, whom we take to have been the worst critic that ever lived.

Some of Johnson's whims on literary subjects can be compared only to that strange nervous feeling which made him uneasy if he had not touched every post between the Mitre tavern and his own lodgings. His preference of Latin epitaphs to English epitaphs is an instance. An English epitaph, he said, would disgrace Smollett. He declared that he would not pollute the walls of Westminster Abbey with an English epitaph on Goldsmith. What reason there can be for celebrating a British writer in Latin, which there was not for covering the Roman arches of triumph with Greek inscriptions, or for commemorating the deeds of the heroes of Thermoplyæ in Egyptian hieroglyphics, we are utterly unable to imagine.

On men and manners, at least on the men and manners of a particular place and a particular age, Johnson had certainly looked with a most observant and discriminating eye. His remarks on the education of children, on marriage, on the economy of families, on the rules of society, are always striking, and generally sound. In his writings, indeed, the knowledge of life which he possessed in an eminent degree is very imperfectly exhibited. Like those unfortunate chiefs of the middle ages who were suffocated by their own chain-mail and cloth of gold, his maxims perish under that load of words which was designed for their defence and their ornament. But it is clear from the remains of his conversation, that he had more of that homely wisdom which nothing but experience and observation can give than any writer since the time of Swift. If he had been content to write as he talked, he might have left books on the practical art of living superior to the *Directions to Servants*.

Yet even his remarks on society, like his remarks on literature, indicate a mind at least as remarkable for narrowness as for strength. He was no master of the great science of human nature. He had studied, not the genus man, but the species Londoner. Nobody was ever so thoroughly conversant with all the forms of life and of all the shades of moral and intellectual character which were to be seen from Islington to the Thames, and from Hyde Park Corner to Mile-End Green. But his philosophy stopped at the first turnpike-gate. Of the rural life of England he knew nothing; and he took it for granted that everybody who lived in the country was either stupid or miserable. 'Country gentlemen,' said he, 'must be unhappy; for they have not enough to keep their lives in motion'; as if all those peculiar habits and associations which made Fleet Street and Charing Cross the finest views in the world to himself had been essential parts of human nature. Of remote countries and past times he talked with wild and ignorant presumption. 'The Athenians of the age of Demosthenes,' he said to Mrs. Thrale, 'were a people of brutes, a barbarous people.' In conversation with Sir Adam Ferguson he

113. Thomas Rymer (1641–1713), historiographer and archeologist, who published *Tragedies of the Last Age Consider'd* (1678) and *A Short View of Tragedy* (1692); in the latter he severely criticized Shakespeare and Ben Jonson, and omitted Milton from his account of English epic poetry.

used similar language. 'The boasted Athenians,' he said, 'were barbarians. The mass of every people must be barbarous where there is no printing.' The fact was this: he saw that a Londoner who could not read was a very stupid and brutal fellow: he saw that great refinement of taste and activity of intellect were rarely found in a Londoner who had not read much; and, because it was by means of books that people acquired almost all their knowledge in the society with which he was acquainted, he concluded, in defiance of the strongest and clearest evidence, that the human mind can be cultivated by means of books alone. An Athenian citizen might possess very few volumes; and the largest library to which he had access might be much less valuable than Johnson's bookcase in Bolt Court. But the Athenian might pass every morning in conversation with Socrates, and might hear Pericles speak four or five times every month. He saw the plays of Sophocles and Aristophanes; he walked amidst the friezes of Phidias[114] and the paintings of Zeuxis;[115] he knew by heart the choruses of Æschylus: he heard the rhapsodist at the corner of the streets reciting the *Shield of Achilles* or the *Death of Argus*:[116] he was a legislator, conversant with high questions of alliance, revenue, and war: he was a soldier, trained under a liberal and generous discipline: he was a judge compelled every day to weigh the effect of opposite arguments. These things were in themselves an education, an education eminently fitted, not, indeed, to form exact or profound thinkers, but to give quickness to the perceptions, delicacy to the taste, fluency to the expression, and politeness to the manners. All this was overlooked. An Athenian who did not improve his mind by reading was, in Johnson's opinion, much such a person as a Cockney[117] who made his mark, much such a person as black Frank before he went to school, and far inferior to a parish clerk or a printer's devil.

Johnson's friends have allowed that he carried to a ridiculous extreme his unjust contempt for foreigners. He pronounced the French to be a very silly people, much behind us, stupid, ignorant creatures. And this judgment he formed after having been at Paris about a month, during which he would not talk French, for fear of giving the natives an advantage over him in conversation. He pronounced them, also, to be an indelicate people, because a French footman touched the sugar with his fingers. That ingenious and amusing traveller, M. Simond, has defended his countrymen very successfully against Johnson's accusations, and has pointed out some English practices which, to an impartial spectator, would seem at least as inconsistent with physical cleanliness and social decorum as those which Johnson so bitterly reprehended. To the sage, as Boswell loves to call him, it never occurred to doubt that there must be something eternally and immutably good in the usages to which he had been accustomed. In fact, Johnson's remarks on society beyond the bills of mortality, are generally of much the same kind with those of honest Tom Dawson, the English footman in Dr. Moore's *Zeluco*.[118] 'Suppose the King of France has no sons, but only a daughter, then, when the king dies, this here daughter, according to that there law, cannot be made queen, but the next near relative, provided he is a man, is made king, and not the last king's daughter, which, to be sure, is very unjust. The French footguards are dressed in blue, and all the marching regiments in white, which

115. Most famous of ancient Greek painters (fl. 424–380 B.C.)
116. Allusion to some of the greatest passages in the *Iliad* and the *Odyssey*.
117. A Cockney was traditionally anyone born within the range of sound of the bells of Bow Church, London; anyone residing in the East End of the city, and talking with a certain twang or dialect.
118. *Zeluco* (1786) was a novel by Dr. John Moore (1729–1802). Macaulay is quoting from Chapter lxxiii.

has a very foolish appearance for soldiers; and as for blue regimentals, it is only fit for the blue horse or the artillery.'

Johnson's visit to the Hebrides introduced him to a state of society completely new to him; and a salutary suspicion of his own deficiencies seems on that occasion to have crossed his mind for the first time. He confessed, in the last paragraph of his *Journey*, that his thoughts on national manners were the thoughts of one who had seen but little, of one who had passed his time almost wholly in cities. This feeling, however, soon passed away. It is remarkable that to the last he entertained a fixed contempt for all those modes of life and those studies which tend to emancipate the mind from the prejudices of a particular age or a particular nation. Of foreign travel and of history he spoke with the fierce and boisterous contempt of ignorance. 'What does a man learn by travelling? Is Beauclerk the better for travelling? What did Lord Charlemont [119] learn in his travels, except that there was a snake in one of the pyramids of Egypt?' History was, in his opinion, to use the fine expression of Lord Plunkett,[120] an old almanack; historians could, as he conceived, claim no higher dignity than that of almanack-makers; and his favourite historians were those who, like Lord Hailes,[121] aspired to no higher dignity. He always spoke with contempt of Robertson. Hume he would not even read. He affronted one of his friends for talking to him about Catiline's conspiracy, and declared that he never desired to hear of the Punic war again as long as he lived.

Assuredly one fact which does not directly affect our own interests, considered in itself, is no better worth knowing than another fact. The fact that there is a snake in a pyramid, or the fact that Hannibal crossed the Alps, are in themselves as unprofitable to us as the fact that there is a green blind in a particular house in Threadneedle Street, or the fact that a Mr. Smith comes into the city every morning on the top of one of the Blackwall stages. But it is certain that those who will not crack the shell of history will never get at the kernel. Johnson, with hasty arrogance, pronounced the kernel worthless, because he saw no value in the shell. The real use of travelling to distant countries and of studying the annals of past times is to preserve men from the contraction of mind which those can hardly escape whose whole communion is with one generation and one neighbourhood, who arrive at conclusions by means of an induction not sufficiently copious, and who therefore constantly confound exceptions with rules, and accidents with essential properties. In short, the real use of travelling and of studying history is to keep men from being what Tom Dawson [122] was in fiction, and Samuel Johnson in reality.

Johnson, as Mr. Burke most justly observed, appears far greater in Boswell's books than in his own. His conversation appears to have been quite equal to his writings in matter, and far superior to them in manners. When he talked, he clothed his wit and his sense in forcible and natural expressions. As soon as he took his pen in his hand to write for the public, his style became systematically vicious. All his books are written in a learned language, in a language which nobody hears from his mother or his nurse, in a language in which nobody ever quarrels, or drives bargains, or makes love, in a language in which nobody ever thinks. It is clear that Johnson himself did not think in the dialect in which he wrote. The expressions which came first to his tongue were simple, energetic, and picturesque. When he wrote for publication, he did his sentences out

119. James Caulfield, 1st Earl of Charlemont (1728–99), Irish statesman, member of the Club.

120. William Conyngham, 1st Baron Plunket (1764–1854), Lord Chancellor of Ireland.

121. Sir David Dalrymple, Lord Hailes (1726–92), Scotch judge, author of the *Annals of Scotland* (1776), which Johnson greatly admired.

122. See note 118.

of English into Johnsonese. His letters from the Hebrides to Mrs. Thrale are the original of that work of which the *Journey to the Hebrides* is the translation; and it is amusing to compare the two versions. 'When we were taken upstairs,' says he in one of his letters, 'a dirty fellow bounced out of the bed on which one of us was to lie.' This incident is recorded in the *Journey* as follows: 'Out of one of the beds on which we were to repose started up, at our entrance, a man black as a Cyclops [123] from the forge.' Sometimes Johnson translated aloud. '*The Rehearsal*,' [124] he said, very unjustly, 'has not wit enough to keep it sweet'; then, after a pause, 'it has not vitality enough to preserve it from putrefaction.'

Mannerism is pardonable, and is sometimes even agreeable, when the manner, though vicious, is natural. Few readers, for example, would be willing to part with the mannerism of Milton or of Burke. But a mannerism which does not sit easy on the mannerist, which has been adopted on principle, and which can be sustained only by constant effort, is always offensive. And such is the mannerism of Johnson.

The characteristic faults of his style are so familiar to all our readers, and have been so often burlesqued, that it is almost superfluous to point them out. It is well known that he made less use than any other eminent writer of those strong plain words, Anglo-Saxon or Norman-French, of which the roots lie in the inmost depths of our language; and that he felt a vicious partiality for terms which, long after our own speech had been fixed, were borrowed from the Greek and Latin, and which, therefore, even when lawfully naturalised, must be considered as born aliens, not entitled to rank with the king's English. His constant practice of padding out a sentence with useless epithets, till it became as stiff as the bust of an exquisite, his antithetical forms of expression, constantly employed even where there is no opposition in the ideas expressed, his big words wasted on little things, his harsh inversions so widely different from those graceful and easy inversions which give variety, spirit, and sweetness to the expression of our great old writers, all these peculiarities have been imitated by his admirers and parodied by his assailants, till the public have become sick of the subject.

Goldsmith said to him, very wittily, and very justly, 'If you were to write a fable about little fishes, doctor, you would make the little fishes talk like whales.' No man surely ever had so little talent for personation as Johnson. Whether he wrote in the character of a disappointed legacy-hunter or an empty town fop, of a crazy virtuoso or a flippant coquette, he wrote in the same pompous and unbending style. His speech, like Sir Piercy Shafton's [125] Euphuistic eloquence, bewrayed him under every disguise. Euphelia and Rhodoclea talk as finely as Imlac [126] the poet, or Seged,[127] Emperor of Ethiopia. The gay Cornelia describes her reception at the country-house of her relations, in such terms as these: 'I was surprised, after the civilities of my first reception, to find, instead of the leisure and tranquillity which a rural life always promises, and, if well conducted, might always afford, a confused wildness of care, and a tumultuous hurry of diligence, by which every face was clouded, and every motion agitated.' The gentle Tranquilla informs

123. One of the race of giants, with one eye in the middle of the forehead; employed as workmen for Vulcan in forging the thunderbolts of Jupiter.

124. A farcical comedy attributed to George Villiers, 2nd Duke of Buckingham, but probably written by him in collaboration with others; it was designed to satirize the heroic tragedies of the day, and was printed in 1672.

125. The courtier in Scott's *Monastery*, whose affected language betrayed him when he attempted to make an escape disguised as a milkmaid.

126. In Johnson's *Rasselas*.

127. See *The Rambler*, Nos.204,205. — The feminine proper names in this paragraph refer to supposed authors of various numbers of *The Rambler* (42,51,62,119,etc.).

us, that she 'had not passed the earlier part of life without the flattery of courtship, and the joys of triumph; but had danced the round of gaiety amidst the murmurs of envy and the gratulations of applause, had been attended from pleasure to pleasure by the great, the sprightly, and the vain, and had seen her regard solicited by the obsequiousness of gallantry, the gaiety of wit, and the timidity of love.' Surely Sir John Falstaff himself did not wear his petticoats with a worse grace. The reader may well cry out with honest Sir Hugh Evans, 'I like not when a 'oman has a great peard: I spy a great peard under her muffler.'[128]

We had something more to say. But our article is already too long; and we must close it. We would fain part in good humour from the hero, from the biographer, and even from the editor, who, ill as he has performed his task, has at least this claim to our gratitude, that he has induced us to read Boswell's book again. As we close it, the club-room is before us, and the table on which stands the omelet for Nugent,[129] and the lemons for Johnson. There are assembled those heads which live for ever on the canvas[130] of Reynolds. There are the spectacles of Burke and the tall thin form of Langton, the courtly sneer of Beauclerk and the beaming smile of Garrick, Gibbon tapping his snuff-box and Sir Joshua with his trumpet in his ear. In the foreground is that strange figure which is as familiar to us as the figures of those among whom we have been brought up, the gigantic body, the hugh massy face, seamed with the scars of disease, the brown coat, the black worsted stockings, the grey wig with the scorched foretop, the dirty hands, the nails bitten and pared to the quick. We see the eyes and mouth moving with convulsive twitches; we see the heavy form rolling; we hear it puffing; and then comes the 'Why, sir!' and 'What then, sir?' and the 'No, sir!' and the 'You don't see your way through the question, sir!'

What a singular destiny has been that of this remarkable man! To be regarded in his own age as a classic, and in ours as a companion. To receive from his contemporaries that full homage which men of genius have in general received only from posterity! To be more intimately known to posterity than other men are known to their contemporaries! That kind of fame which is commonly the most transient is, in his case, the most durable. The reputation of those writings, which he probably expected to be immortal, is every day fading; while those peculiarities of manner and that careless table-talk the memory of which, he probably thought, would die with him, are likely to be remembered as long as the English language is spoken in any quarter of the globe.

128. See *The Merry Wives of Windsor* (Oxf. Stand.Ed.), IV,ii.206–09.

129. Christopher Nugent (d.1775), physician; an original member of the Club. As a Roman Catholic, Nugent took an omelet instead of meat at the Friday dinners.

130. More properly: 'canvases.'

JOHN BUNYAN

. . . THE characteristic peculiarity of the *Pilgrim's Progress* is that it is the only work of its kind which possesses a strong human interest. Other allegories only amuse the fancy. The allegory of Bunyan has been read by many thousands with tears. There are some good allegories in Johnson's works, and some of still higher merit by Addison. In these performances there is, perhaps, as much wit and ingenuity as in the *Pilgrim's Progress*. But the pleasure which is produced by the *Vision of Mirza*,[1] the *Vision of Theodore*,[2] the

1. See *The Spectator*, No.159.

2. By Samuel Johnson, contributed to *The Preceptor* in 1748.

Genealogy of Wit, or the *Contest between Rest and Labour*,[3] is exactly similar to the pleasure which we derive from one of Cowley's odes,[4] or from a canto of *Hudibras*.[5] It is a pleasure which belongs wholly to the understanding, and in which the feelings have no part whatever. Nay, even Spenser himself, though assuredly one of the greatest poets that ever lived, could not succeed in the attempt to make allegory interesting. It was in vain that he lavished the riches of his mind on the House of Pride and the House of Temperance. One unpardonable fault, the fault of tediousness, pervades the whole of the *Fairy Queen*. We become sick of cardinal virtues and deadly sins, and long for the society of plain men and women. Of the persons who read the first canto, not one in ten reaches the end of the first book, and not one in a hundred perseveres to the end of the poem. Very few and very weary are those who are in at the death of the Blatant Beast.[6] If the last six books, which are said to have been destroyed in Ireland, had been preserved, we doubt whether any heart less stout than that of a commentator would have held out to the end.

It is not so with the *Pilgrim's Progress*. That wonderful book, while it obtains admiration from the most fastidious critics, is loved by those who are too simple to admire it. Dr. Johnson, all whose studies were desultory, and who hated, as he said, to read books through, made an exception in favour of the *Pilgrim's Progress*. That work was one of the two or three works which he wished longer.[7] It was by no common merit that the illiterate sectary extracted praise like this from the most pedantic of critics and the most bigoted of Tories. In the wildest parts of Scotland the *Pilgrim's Progress* is the delight of the peasantry. In every nursery the *Pilgrim's Progress* is a greater favourite than *Jack the Giant-killer*. Every reader knows the straight and narrow path as well as he knows a road in which he has gone backward and forward a hundred times. This is the highest miracle of genius, that things which are not should be as though they were, that the imaginations of one mind should become the personal recollections of another. And this miracle the tinker has wrought. There is no ascent, no declivity, no resting-place, no turn-stile, with which we are not perfectly acquainted. The wicket-gate, and the desolate swamp which separates it from the City of Destruction, the long line of road, as straight as a rule can make it, the Interpreter's house and all its fair shows, the prisoner in the iron cage, the palace, at the doors of which armed men kept guard, and on the battlements of which walked persons clothed all in gold, the cross, and the sepulchre, the steep hill and the pleasant arbour, the stately front of the House Beautiful by the wayside, the chained lions crouching in the porch, the low green valley of Humiliation, rich with grass and covered with flocks, all are as well known to us as the sights of our own street. Then we come to the narrow place where Apollyon strode right across the whole breadth of the way, to stop the journey of Christian, and where, afterwards, the pillar was set up to testify how bravely the pilgrim had fought the good fight. As we advance, the valley becomes deeper and deeper. The shade of the precipices on both sides falls blacker and blacker. The clouds gather overhead. Doleful voices, the clanking of chains, and the rush of many feet to and fro, are heard through the darkness. The way, hardly discernible in gloom, runs close by the mouth of the burning pit, which sends forth its flames, its noisome smoke, and its hideous shapes to terrify the adventurer. Thence he goes on, amidst the

snares and pitfalls, with the mangled bodies of those who have perished lying in the ditch by his side. At the end of the long dark valley he passes the dens in which the old giants dwelt, amidst the bones of those whom they had slain.

Then the road passes straight on through a waste moor, till at length the towers of a distant city appear before the traveller; and soon he is in the midst of the innumerable multitudes of Vanity Fair. There are the jugglers and the apes, the shops and the puppet-shows. There are Italian Row, and French Row, and Spanish Row, and British Row, with their crowds of buyers, sellers, and loungers, jabbering all the languages of the earth.

Thence we go on by the little hill of the silver mine, and through the meadow of lilies, along the bank of that pleasant river which is bordered on both sides by fruit-trees. On the left branches off the path leading to the horrible castle, the courtyard of which is paved with the skulls of pilgrims; and right onward are the sheepfolds and orchards of the Delectable Mountains.

From the Delectable Mountains, the way lies through the fogs and briars of the Enchanted Ground, with here and there a bed of soft cushions spread under a green arbour. And beyond is the land of Beulah, where the flowers, the grapes, and the songs of birds never cease, and where the sun shines night and day. Thence are plainly seen the golden pavements and streets of pearl, on the other side of that black and cold river over which there is no bridge.

All the stages of the journey, all the forms which cross or overtake the pilgrims, giants, and hobgoblins, ill-favoured ones, and shining ones, the tall, comely, swarthy Madam Bubble, with her great purse by her side, and her fingers playing with the money, the black man in the bright vesture, Mr. Worldly-Wiseman and my Lord Hategood, Mr. Talkative, and Mrs. Timorous, all are actually existing beings to us. We follow the travellers through their allegorical progress with interest not inferior to that with which we follow Elizabeth from Siberia to Moscow,[8] or Jeanie Deans from Edinburgh to London.[9] Bunyan is almost the only writer who ever gave to the abstract the interest of the concrete. In the works of many celebrated authors, men are mere personifications. We have not a jealous man, but jealousy; not a traitor, but perfidy; not a patriot, but patriotism. The mind of Bunyan, on the contrary, was so imaginative that personifications, when he dealt with them, became men. A dialogue between two qualities, in his dream, has more dramatic effect than a dialogue between two human beings in most plays. In this respect the genius of Bunyan bore a great resemblance to that of a man who had very little else in common with him, Percy Bysshe Shelley. The strong imagination of Shelley made him an idolater in his own despite. Out of the most indefinite terms of a hard, cold, dark, metaphysical system, he made a gorgeous Pantheon,[10] full of beautiful, majestic, and life-like forms. He turned atheism itself into a mythology, rich with visions as glorious as the gods that live in the marble of Phidias,[11] or the virgin saints that smile on us from the canvas of Murillo.[12] The Spirit of Beauty, the Principle of Good, the Principle of Evil, when he treated of them, ceased to be abstractions. They took shape and colour. They were no longer mere words; but 'intelligible forms'; 'fair humanities'; objects of love, of adoration, or

8. In the novel *La jeune Sibérienne* (1825) by Xavier de Maistre (1763–1852), the heroine Elizabeth walks from Siberia to Moscow to seek a pardon for her father.
9. Jeanie Deans, the heroine of Scott's *The Heart of Midlothian* (1818) walks from Edinburgh to London to ask Queen Caroline to pardon her sister.

of fear. As there can be no stronger sign of a mind destitute of the poetical faculty than that tendency which was so common among the writers of the French school to turn images into abstractions, Venus for example, into Love, Minerva into Wisdom, Mars into War, and Bacchus into Festivity, so there can be no stronger sign of a mind truly poetical than a disposition to reverse this abstracting process, and to make individuals out of generalities. Some of the metaphysical and ethical theories of Shelley were certainly most absurd and pernicious. But we doubt whether any modern poet has possessed in an equal degree some of the highest qualities of the great ancient masters. The words bard and inspiration, which seem so cold and affected when applied to other modern writers, have a perfect propriety when applied to him. He was not an author, but a bard. His poetry seems not to have been an art, but an inspiration. Had he lived to the full age of man, he might not improbably have given to the world some great work of the very highest rank in design and execution. But, alas!

ὁ Δάφνις ἔβα ῥόον' ἔκλινσε δίνα
τὸν Μώσαις φίλον ἄνδρα, τὸν οὐ Νύμφαισιν
ἀπεχθῆ.[13]

But we must return to Bunyan. The *Pilgrim's Progress* undoubtedly is not a perfect allegory. The types are often inconsistent with each other; and sometimes the allegorical disguise is altogether thrown off. The river, for example, is emblematic of death; and we are told that every human being must pass through the river. But Faithful does not pass through it. He is martyred, not in shadow, but in reality, at Vanity Fair. Hopeful talks to Christian about Esau's birthright[14] and about his own convictions of sin as Bunyan might have talked with one of his own congregation. The damsels at the House Beautiful catechise Christiana's boys, as any good ladies might catechise any boys at a Sunday School. But we do not believe that any man, whatever might be his genius, and whatever his good luck, could long continue a figurative history without falling into many inconsistencies. We are sure that inconsistencies, scarcely less gross than the worst into which Bunyan has fallen, may be found in the shortest and most elaborate allegories of the *Spectator* and the *Rambler*. The *Tale of a Tub* and the *History of John Bull*[15] swarm with similar errors, if the name of error can be properly applied to that which is unavoidable. It is not easy to make a simile go on all-fours. But we believe that no human ingenuity could produce such a centipede as a long allegory in which the correspondence between the outward sign and the thing signified should be exactly preserved. Certainly no writer, ancient or modern, has yet achieved the adventure. The best thing, on the whole, that an allegorist can do, is to present to his readers a succession of analogies, each of which may separately be striking and happy, without looking very nicely to see whether they harmonise with each other. This Bunyan has done; and, though a minute scrutiny may detect inconsistencies in every page of his tale, the general effect which the tale produces on all persons, learned and unlearned, proves that he has done well. The passages which it is most difficult to defend are those in which he altogether drops the allegory, and puts into the mouth of his pilgrims religious ejaculations and disquisitions better suited to his own pulpit at Bedford or Reading than to the Enchanted Ground or to the

13. 'For the thread was spun and the days were done and Daphnis gone to the River,
And the Nymphs' good friend and the Muses' fere was whelmed i' the whirl for ever.'

14. See *Genesis*, xxv,33.

15. A collection of pamphlets by John Arbuthnot (1667–1735), issued in 1712.

Interpreter's Garden. Yet even these passages, though we will not undertake to defend them against the objections of critics, we feel that we could ill spare. We feel that the story owes much of its charm to these occasional glimpses of solemn and affecting subjects, which will not be hidden, which force themselves through the veil, and appear before us in their native aspect. The effect is not unlike that which is said to have been produced on the ancient stage, when the eyes of the actor were seen flaming through his mask, and giving life and expression to what would else have been an inanimate and uninteresting disguise.

It is very amusing and very instructive to compare the *Pilgrim's Progress* with the *Grace Abounding*. The latter work is indeed one of the most remarkable pieces of autobiography in the world. It is a full and open confession of the fancies which passed through the mind of an illiterate man, whose affections were warm, whose nerves were irritable, whose imagination was ungovernable, and who was under the influence of the strongest religious excitement. In whatever age Bunyan had lived, the history of his feelings would, in all probability, have been very curious. But the time in which his lot was cast was the time of a great stirring of the human mind. A tremendous burst of public feeling, produced by the tyranny of the hierarchy, menaced the old ecclesiastical institutions with destruction. To the gloomy regularity of one intolerant Church had succeeded the licence of innumerable sects, drunk with the sweet and heady must of their new liberty. Fanaticism, engendered by persecution, and destined to engender persecution in turn, spread rapidly through society. Even the strongest and most commanding minds were not proof against this strange taint. Any time might have produced George Fox [16] and James Naylor.[17] But to one time alone belong the fanatic delusions of such a statesman as Vane,[18] and the hysterical tears of such a soldier as Cromwell.[19]

The history of Bunyan is the history of a most excitable mind in an age of excitement. By most of his biographers he has been treated with gross injustice. They have understood in a popular sense all those strong terms of self-condemnation which he employed in a theological sense. They have, therefore, represented him as an abandoned wretch, reclaimed by means almost miraculous, or, to use their favourite metaphor, 'as a brand plucked from the burning.' Mr. Ivimey [20] calls him the depraved Bunyan and the wicked tinker of Elstow. Surely Mr. Ivimey ought to have been too familiar with the bitter accusations which the most pious people are in the habit of bringing against themselves, to understand literally all the strong expressions which are to be found in the *Grace Abounding*. It is quite clear, as Mr. Southey most justly remarks, that Bunyan never was a vicious man. He married very early; and he solemnly declares that he was strictly faithful to his wife. He does not appear to have been a drunkard. He owns, indeed, that, when a boy, he never spoke without an oath. But a single admonition cured him of this bad habit for life; and the cure must have been wrought early; for at eighteen he was in the army of the Parliament; and if he had carried the vice of profaneness into that service, he would doubtless have received something more than an admonition from Serjeant Bind-

16. George Fox (1624–91), founder of the Society of Friends (Quakers).

17. James Naylor (1617?–60), a Quaker fanatic, who preached, was imprisoned, pilloried, and otherwise persecuted.

18. Sir Henry Vane, the younger (1613–62), religious enthusiast (or fanatic), was a leading man in all affairs of the Commonwealth, but disagreed with Cromwell; he was imprisoned at the Restoration, condemned and executed on Tower Hill.

19. Until the publication of Carlyle's *Oliver Cromwell's Letters and Speeches* in 1845, Cromwell was widely considered as having been little more than a religious fanatic.

20. Joseph Ivimey (1773–1834), a Baptist clergyman, was the author of a *Life of Mr. John Bunyan* (1825).

their-kings-in-chains, or Captain Hew-Agag-in-pieces-before-the-Lord.[21] Bell-ringing and playing at hockey on Sundays seem to have been the worst vices of this depraved tinker. They would have passed for virtues with Archbishop Laud.[22] It is quite clear that, from a very early age, Bunyan was a man of a strict life and of a tender conscience. 'He had been,' says Mr. Southey, 'a blackguard.' Even this we think too hard a censure. Bunyan was not, we admit, so fine a gentleman as Lord Digby;[23] but he was a blackguard no otherwise than as every labouring man that ever lived has been a blackguard. Indeed Mr. Southey acknowledges this. 'Such he might have been expected to be by his birth, breeding, and vocation. Scarcely, indeed, by possibility, could he have been otherwise.' A man whose manners and sentiments are decidedly below those of his class deserves to be called a blackguard. But it is surely unfair to apply so strong a word of reproach to one who is only what the great mass of every community must inevitably be.

Those horrible internal conflicts which Bunyan has described with so much power of language prove, not that he was a worse man than his neighbours, but that his mind was constantly occupied by religious considerations, that his fervour exceeded his knowledge, and that his imagination exercised despotic power over his body and mind. He heard voices from heaven. He saw strange visions of distant hills, pleasant and sunny as his own Delectable Mountains. From those abodes he was shut out, and placed in a dark and horrible wilderness, where he wandered through ice and snow, striving to make his way into the happy region of light. At one time he was seized with an inclination to work miracles. At another time he thought himself actually possessed by the devil. He could distinguish the blasphemous whispers. He felt his infernal enemy pulling at his clothes behind him. He spurned with his feet and struck with his hands at the destroyer. Sometimes he was tempted to sell his part in the salvation of mankind. Sometimes a violent impulse urged him to start up from his food, to fall on his knees, and to break forth into prayer. At length he fancied that he had committed the unpardonable sin. His agony convulsed his robust frame. He was, he says, as if his breastbone would split; and this he took for a sign that he was destined to burst asunder like Judas. The agitation of his nerves made all his movements tremulous; and this trembling, he supposed, was a visible mark of his reprobation, like that which had been set on Cain. At one time, indeed, an encouraging voice seemed to rush in at the window, like the noise of wind, but very pleasant, and commanded, as he says, a great calm in his soul. At another time, a word of comfort 'was spoke loud unto him; it showed a great word; it seemed to be writ in great letters.' But these intervals of ease were short. His state, during two years and a half, was generally the most horrible that the human mind can imagine. 'I walked,' says he, with his own peculiar eloquence, 'to a neighbouring town; and sat down upon a settle in the street, and fell into a very deep pause about the most fearful state my sin had brought me to; and, after long musing, I lifted up my head; but methought I saw as if the sun that shineth in the heavens did grudge to give me light; and as if the very stones in the street, and tiles upon the houses, did band themselves against me. Methought that they all combined together to banish me out of the world. I was abhorred of them, and unfit to dwell among them,

21. There were indeed such strange and fantastic names among the religious zealots of Cromwell's time.

22. William Laud (1573–1645), Archbishop of Canterbury, supported the King against the Commons, and defended the Anglican Church against both the Roman Catholics and the Puritans. He was tried by the Long Parliament for high treason, and beheaded.

23. George Digby, 2nd Earl of Bristol (1612–77), an accomplished courtier and supporter of Charles I, secretary of state to Charles II.

because I had sinned against the Saviour. Oh, how happy now was every creature over I! for they stood fast, and kept their station. But I was gone and lost.' Scarcely any madhouse could produce an instance of delusion so strong, or of misery so acute.

It was through this Valley of the Shadow of Death, overhung by darkness, peopled with devils, resounding with blasphemy and lamentation, and passing amidst quagmires, snares, and pitfalls, close by the very mouth of hell, that Bunyan journeyed to that bright and fruitful land of Beulah,[24] in which he sojourned during the latter period of his pilgrimage. The only trace which his cruel sufferings and temptations seem to have left behind them was an affectionate compassion for those who were still in the state in which he had once been. Religion has scarcely ever worn a form so calm and soothing as in his allegory. The feeling which predominates through the whole book is a feeling of tenderness for weak, timid, and harassed minds. The character of Mr. Fearing, of Mr. Feeble-Mind, of Mr. Despondency and his daughter Miss Much-afraid, the account of poor Little-faith who was robbed by the three thieves, of his spending money, the description of Christian's terror in the dungeons of Giant Despair and in his passage through the river, all clearly show how strong a sympathy Bunyan felt, after his own mind had become clear and cheerful, for persons afflicted with religious melancholy.

Mr. Southey, who has no love for the Calvinists, admits that, if Calvinism had never worn a blacker appearance than in Bunyan's works, it would never have become a term of reproach. In fact, those works of Bunyan with which we are acquainted are by no means more Calvinistic than the articles and homilies of the Church of England. The moderation of his opinions on the subject of predestination gave offence to some zealous persons. We have seen an absurd allegory, the heroine of which is named Hephzibah, written by some raving supralapsarian preacher who was dissatisfied with the mild theology of the *Pilgrim's Progress*. In this foolish book, if we recollect rightly, the Interpreter is called the Enlightener, and the House Beautiful is Castle Strength. Mr. Southey tells us that the Catholics had also their *Pilgrim's Progress*, without a Giant Pope, in which the Interpreter is the Director, and the House Beautiful Grace's Hall. It is surely a remarkable proof of the power of Bunyan's genius, that two religious parties, both of which regarded his opinions as heterodox, should have had recourse to him for assistance.

There are, we think, some characters and scenes in the *Pilgrim's Progress*, which can be fully comprehended and enjoyed only by persons familiar with the history of the times through which Bunyan lived. The character of Mr. Great-heart, the guide, is an example. His fighting is, of course, allegorical; but the allegory is not strictly preserved. He delivers a sermon on imputed righteousness to his companions; and, soon after, he gives battle to Giant Grim, who had taken upon him to back the lions. He expounds the fifty-third chapter of Isaiah to the household and guests of Gaius; and then he sallies out to attack Slay-good, who was of the nature of flesh-eaters, in his den. These are inconsistencies; but they are inconsistencies which add, we think, to the interest of the narrative. We have not the least doubt that Bunyan had in view some stout old Great-heart of Naseby and Worcester,[25] who prayed with his men before he drilled them, who knew the spiritual state of every dragoon in his troop, and who, with the praises of God in his mouth, and a two-edged sword in his hand, had turned to flight, on many fields of battle,

24. Hebrew *be'ulah*, allegorically applied to Israel. See *Isaiah*, lxii,4.

25. Great battles of the Puritan Revolution, June 14, 1645 and Sept. 3, 1651, respectively, in which Cromwell triumphed over the Royalists.

the swearing, drunken bravoes of Rupert [26] and Lunsford.[27]

Every age produces such men as By-ends. But the middle of the seventeenth century was eminently prolific of such men. Mr. Southey thinks that the satire was aimed at some particular individual; and this seems by no means improbable. At all events, Bunyan must have known many of those hypocrites who followed religion only when religion walked in silver slippers, when the sun shone, and when the people applauded. Indeed he might have easily found all the kindred of By-ends among the public men of his time. He might have found among the peers my Lord Turn-about, my Lord Time-server, and my Lord Fair-speech; in the House of Commons, Mr. Smooth-man, Mr. Anything, and Mr. Facing both-ways; nor would 'the parson of the parish, Mr. Two-tongues,' have been wanting. The town of Bedford probably contained more than one politician who, after contriving to raise an estate by seeking the Lord during the reign of the saints, contrived to keep what he had got by persecuting the saints during the reign of the strumpets, and more than one priest who, during repeated changes in the discipline and doctrines of the Church, had remained constant to nothing but his benefice.

One of the most remarkable passages in the *Pilgrim's Progress* is that in which the proceedings against Faithful are described. It is impossible to doubt that Bunyan intended to satirise the mode in which state trials were conducted under Charles the Second. The licence given to the witnesses for the prosecution, the shameless partiality and ferocious insolence of the judge, the precipitancy and the blind rancour of the jury, remind us of those odious mummeries which, from the Restoration to the Revolution, were merely forms preliminary to hanging, drawing, and quartering. Lord Hate-good performs the office of counsel for the prisoners as well as Scroggs [28] himself could have performed it.

'JUDGE. Thou runagate, heretic, and traitor, hast thou heard what these honest gentlemen have witnessed against thee?

'FAITHFUL. May I speak a few words in my own defence?

'JUDGE. Sirrah, sirrah! thou deservest to live no longer, but to be slain immediately upon the place; yet, that all men may see our gentleness towards thee, let us hear what thou, vile runagate, hast to say.'

No person who knows the state trials can be at a loss for parallel cases. Indeed, write what Bunyan would, the baseness and cruelty of the lawyers of those times 'sinned up to it still,' and even went beyond it. The imaginary trial of Faithful, before a jury composed of personified vices, was just and merciful, when compared with the real trial of Alice Lisle [29] before that tribunal where all the vices sat in the person of Jeffreys.

The style of Bunyan is delightful to every reader, and invaluable as a study to every person who wishes to obtain a wide command over the English language. The vocabulary is the vocabulary of the common people. There is not an expression, if we except a few technical terms of theology, which would puzzle the rudest peasant. We have observed several pages which do not contain a single word of more than two syllables. Yet no writer has said more exactly what he meant to say.

26. Prince Rupert (1619–82), son of Elizabeth, Queen of Bohemia, and Frederick V, Elector of Palatine; he served the Royalist cause in the Puritan Revolution.

27. Sir Thomas Lunsford (1610?–53), Royalist colonel, fought for Charles I; made prisoner at Edgehill, he was released in 1644, and died in Virginia.

28. Sir William Scroggs (1623?–83), lawyer, was made lord chief justice in 1678, and presided at trials of several victims of Titus Oates's plot, showing brutal zeal for the Protestant cause.

29. Alice Lisle (1614?–85), victim of a judicial murder, was tried before Judge Jeffreys in the notorious 'Bloody Assize,' for sheltering Monmouth's supporters at her house; she was found guilty and beheaded at Winchester.

For magnificence, for pathos, for vehement exhortation, for subtle disquisition, for every purpose of the poet, the orator, and the divine, this homely dialect, the dialect of plain working men, was perfectly sufficient. There is no book in our literature on which we would so readily stake the fame of the old unpolluted English language, no book which shows so well how rich that language is in its own proper wealth, and how little it has been improved by all that it has borrowed.

Cowper said, forty or fifty years ago, that he dared not name John Bunyan in his verse, for fear of moving a sneer.[30] To our refined forefathers, we suppose, Lord Roscommon's *Essay on Translated Verse*,[31] and the Duke of Buckinghamshire's *Essay on Poetry*,[32] appeared to be compositions infinitely superior to the allegory of the preaching tinker. We live in better times; and we are not afraid to say, that, though there were many clever men in England during the latter half of the seventeenth century, there were only two minds which possessed the imaginative faculty in a very eminent degree. One of those minds produced the *Paradise Lost*, the other the *Pilgrim's Progress*.

30. See William Cowper (1731–1800), *Tirocinium*, 141–46.

31. Published in 1684, by Wentworth Dillon, 4th Earl of Roscommon (1633?–85).

32. Published anonymously in 1682, by John Sheffield, 1st Duke of Buckingham (often called the Duke of Buckinghamshire) (1648–1721), patron of Dryden and the friend of Pope. The *Essay on Poetry*, written in heroic couplets, seems to have suggested Pope's *Essay on Criticism*; enlarged in 1691, it received the praises of Roscommon, Dryden, and Pope.

FRANCIS BACON

. . . THE chief peculiarity of Bacon's philosophy seems to us to have been this, that it aimed at things altogether different from those which his predecessors had proposed to themselves. This was his own opinion. 'Finis scientiarum,' says he, 'a nemine adhuc bene positus est.'[1] And again, 'Omnium gravissimus error in deviatione ab ultimo doctrinarum fine consistit.'[2] 'Nec ipsa meta,' says he elsewhere, 'adhuc ulli, quod sciam, mortalium posita est et defixa.'[3] The more carefully his works are examined, the more clearly, we think, it will appear that this is the real clue to his whole system, and that he used means different from those used by other philosophers, because he wished to arrive at an end altogether different from theirs.

What then was the end which Bacon proposed to himself? It was, to use his own emphatic expression, 'fruit.' It was the multiplying of human enjoyments and the mitigating of human sufferings. It was 'the relief of man's estate.' It was 'commodis humanis inservire.'[4] It was 'efficaciter operari ad sublevanda vitæ humanæ incommoda.'[5] It was 'dotare vitam humanum novis inventis et copiis.'[6] It was 'genus humanam novis operibus et potestatibus continuo dotare.'[7] This was the ob-

1. 'The end of the sciences has not as yet been well placed.' (*Novum Organum*, Lib.1. Aph. 81.) (Throughout this essay, Macaulay's footnote documentation has been omitted, except for the titles which follow the translations in the footnotes.)

2. 'The most serious error of all consists in deviation from the ultimate end of learning.' (*De Augmentis*, Lib.1.)

3. 'Nor has the limit itself been set and established up to now by any among mortals, so far as I know.' (*Cogitata et Visa.*)

4. 'to advance human comforts.' (*De Augmentis*, Lib.7. Cap.1.)

5. 'to work effectually to remove the discomforts of human life.' (*De Augmentis*, Lib.2. Cap.2.)

6. 'to endow human life with new discoveries and powers.' (*Novum Organum*, Lib.1. Aph. 81.)

7. 'ever anew to endow mankind with new achievements and powers.' (*Cogitata et Visa.*)

ject of all his speculations in every department of science, in natural philosophy, in legislation, in politics, in morals.

Two words form the key of the Baconian doctrine, Utility and Progress. The ancient philosophy disdained to be useful, and was content to be stationary. It dealt largely in theories of moral perfection, which were so sublime that they never could be more than theories; in attempts to solve insoluble enigmas; in exhortations to the attainment of unattainable frames of mind. It could not condescend to the humble office of ministering to the comfort of human beings. All the schools contemned that office as degrading; some censured it as immoral. Once indeed Posidonius,[8] a distinguished writer of the age of Cicero and Cæsar, so far forgot himself as to enumerate, among the humbler blessings which mankind owed to philosophy, the discovery of the principle of the arch, and the introduction of the use of metals. This eulogy was considered as an affront, and was taken up with proper spirit. Seneca[9] vehemently disclaims these insulting compliments. Philosophy, according to him, has nothing to do with teaching men to rear arched roofs over their heads. The true philosopher does not care whether he has an arched roof or any roof. Philosophy has nothing to do with teaching men the uses of metals. She teaches us to be independent of all material substances, of all mechanical contrivances. The wise man lives according to nature. Instead of attempting to add to the physical comforts of his species, he regrets that his lot was not cast in that golden age when the human race had no protection against the cold but the skins of wild beasts, no screen from the sun but a cavern. To impute to such a man any share in the invention or improvement of a plough, a ship, or a mill is an insult. 'In my own time,' says Seneca, 'there have been inventions of this sort, transparent windows, tubes for diffusing warmth equally through all parts of a building, shorthand, which has been carried to such a perfection that a writer can keep pace with the most rapid speaker. But the inventing of such things is drudgery for the lowest slaves; philosophy lies deeper. It is not her office to teach men how to use their hands. The object of her lessons is to form the soul. *Non est, inquam, instrumentorum ad usus necessarios opifex.*'[10] If the *non* were left out, this last sentence would be no bad description of the Baconian philosophy, and would, indeed, very much resemble several expressions in the *Novum Organum*. 'We shall next be told,' exclaims Seneca, 'that the first shoemaker was a philosopher.' For our own part, if we are forced to make our choice between the first shoemaker and the author of the three books 'On Anger,' we pronounce for the shoemaker. It may be worse to be angry than to be wet. But shoes have kept millions from being wet; and we doubt whether Seneca ever kept anybody from being angry.

It is very reluctantly that Seneca can be brought to confess that any philosopher had ever paid the smallest attention to anything that could possibly promote what vulgar people would consider as the well-being of mankind. He labours to clear Democritus[11] from the disgraceful imputation of having made the first arch, and Anacharsis[12] from the charge of having contrived the potter's wheel. He is forced to own that such a thing might happen;

8. A distinguished Stoic philosopher of the 2nd century B.C.; instructor of Cicero, friend of Pompey, etc.

9. Lucius Annaeus Seneca (c.4 B.C.–A.D. 65), Roman Stoic philosopher, tutor of Nero, author of *De Beneficiis*.

10. 'She is not, I say, the maker of instruments for necessary purposes.'

11. Celebrated Greek philosopher of 5th–4th century B.C.; founder of the 'atomic theory'; learned in the natural sciences, mathematics, grammar, music, and mechanics.

12. A Scythian prince of the 6th century B.C., who came to Athens in search of knowledge, made the acquaintance of Solon, and excited general admiration by his talents and acute observations.

and it may also happen, he tells us, that a philosopher may be swift of foot. But it is not in his character of philosopher that he either wins a race or invents a machine. No, to be sure. The business of a philosopher was to declaim in praise of poverty with two millions sterling out at usury, to meditate epigrammatic conceits about the evils of luxury, in gardens which moved the envy of sovereigns, to rant about liberty, while fawning on the insolent and pampered freedmen of a tyrant, to celebrate the divine beauty of virtue with the same pen which had just before written a defence of the murder of a mother by a son.

From the cant of this philosophy, a philosophy meanly proud of its own unprofitableness, it is delightful to turn to the lessons of the great English teacher. We can almost forgive all the faults of Bacon's life when we read that singularly graceful and dignified passage: 'Ego certe, ut de me ipso, quod res est, loquar, et in iis quæ nunc edo, et in iis quæ in posterum meditor, dignitatem ingenii et nominis mei, si qua sit, sæpius sciens et volens projicio, dum commodis humanis inserviam; quique architectus fortasse in philosophia et scientiis esse debeam, etiam operarius, et bajulus, et quidvis demum fio, cum haud pauca quæ omnino fieri necesse sit, alii autem ob innatum superbiam subterfugiant, ipsi sustineam et exsequar.'[13] This *philanthropia*, which, as he said in one of the most remarkable of his early letters, 'was so fixed in his mind, as it could not be removed,' this majestic humility, this persuasion that nothing can be too insignificant for the attention of the wisest, which is not too insignificant to give pleasure or pain to the meanest, is the great characteristic distinction, the essential spirit of the Baconian philosophy. We trace it in all that Bacon has written on Physics, on Laws, on Morals. And we conceive that from this peculiarity all the other peculiarities of his system directly and almost necessarily sprang.

The spirit which appears in the passage of Seneca to which we have referred tainted the whole body of the ancient philosophy from the time of Socrates downwards, and took possession of intellects with which that of Seneca cannot for a moment be compared. It pervades the dialogues of Plato. It may be distinctly traced in many parts of the works of Aristotle. Bacon has dropped hints from which it may be inferred that, in his opinion, the prevalence of this feeling was in a great measure to be attributed to the influence of Socrates. Our great countryman evidently did not consider the revolution which Socrates effected in philosophy as a happy event, and constantly maintained that the earlier Greek speculators, Democritus in particular, were, on the whole, superior to their more celebrated successors.

Assuredly if the tree which Socrates planted and Plato watered is to be judged of by its flowers and leaves, it is the noblest of trees. But if we take the homely test of Bacon, if we judge of the tree by its fruits, our opinion of it may perhaps be less favourable. When we sum up all the useful truths which we owe to that philosophy, to what do they amount? We find, indeed, abundant proofs that some of those who cultivated it were men of the first order of intellect. We find among their writings incomparable specimens both of dialectical and rhetorical art. We have no doubt that the ancient controversies were of use, in so

13. 'But I, to say how the matter stands with myself alone, both in respect to what I am now producing and in what I intend hereafter, often advisedly and deliberately throw aside the dignity of my name and wit, if I have any, in my endeavor to advance human comforts; and being one who should properly, perhaps, be an architect in philosophy and the sciences, I turn common laborer, hodman, anything that is wanted; taking upon myself the burden and execution of many things that must needs be done, and that others, through an inborn pride, shrink from and decline.' (*De Augmentis*, Lib.7. Cap.1.)

far as they served to exercise the faculties of the disputants; for there is no controversy so idle that it may not be of use in this way. But, when we look for something more, for something which adds to the comforts or alleviates the calamities of the human race, we are forced to own ourselves disappointed. We are forced to say with Bacon that this celebrated philosophy ended in nothing but disputation, that it was neither a vineyard nor an olive-ground, but an intricate wood of briars and thistles, from which those who lost themselves in it brought back many scratches and no food.

We readily acknowledge that some of the teachers of this unfruitful wisdom were among the greatest men that the world has ever seen. If we admit the justice of Bacon's censure, we admit it with regret, similar to that which Dante felt when he learned the fate of those illustrious heathens who were doomed to the first circle of Hell:

'Gran duol mi prese al quando lo 'ntesi,
Perocché gente di molto valore
Conobbi che 'n quel limbo eran sospesi.'[14]

But in truth the very admiration which we feel for the eminent philosophers of antiquity forces us to adopt the opinion that their powers were systematically misdirected. For how else could it be that such powers should effect so little for mankind? A pedestrian may show as much muscular vigour on a treadmill as on the highway road. But on the road his vigour will assuredly carry him forward; and on the treadmill he will not advance an inch. The ancient philosophy was a treadmill, not a path. It was made up of revolving questions, of controversies which were always beginning again. It was a contrivance for having much exertion and no progress. We must acknowledge that more than once, while contemplating the doctrines of the Academy and the Portico,[15] even as they appear in the transparent splendour of Cicero's incomparable diction, we have been tempted to mutter with the surly centurion in Persius, 'Cur quis non prandeat hoc est?'[16] What is the highest good, whether pain be an evil, whether all things be fated, whether we can be certain of anything, whether we can be certain that we are certain of nothing, whether a wise man can be unhappy, whether all departures from right be equally reprehensible: these, and other questions of the same sort, occupied the brains, the tongues, and the pens of the ablest men in the civilised world during several centuries. This sort of philosophy, it is evident, could not be progressive. It might indeed sharpen and invigorate the minds of those who devoted themselves to it; and so might the disputes of the orthodox Lilliputians and the heretical Blefuscudians about the big ends and the little ends of eggs.[17] But such disputes could add nothing to the stock of knowledge. The human mind accordingly, instead of marching, merely marked time. It took as much trouble as would have sufficed to carry it forward; and yet remained on the same spot. There was no accumulation of truth, no heritage of truth acquired by the labour of one generation and bequeathed to another, to be again transmitted with large additions to a third. Where this philosophy was in the time of Cicero, there it continued to be in the time

14. 'Sore grief assail'd
My heart at hearing this, for well I knew
Suspended in that Limbo many a soul
Of mighty worth.'
— *Inferno*, iv,39–42. (Cary's transl.)

15. Allusion to the Platonic and the Stoic schools of philosophers, respectively, in ancient Greece. Cicero (106–43 B.C.) belonged to the 'New Academy,' which carried on Plato's doctrines after Plato's death.

16. Persius (34–62), a Roman satiric poet. The quotation, 'Is it for this that one should not dine?' is from *Satire* iii,85.

17. See Swift, *Gulliver's Travels*, I,iv.

of Seneca, and there it continued to be in the time of Favorinus.[18] The same sects were still battling with the same unsatisfactory arguments, about the same interminable questions. There had been no want of ingenuity, of zeal, of industry. Every trace of intellectual cultivation was there, except a harvest. There had been plenty of ploughing, harrowing, reaping, threshing. But the garners contained only smut and stubble.

The ancient philosophers did not neglect natural science; but they did not cultivate it for the purpose of increasing the power and ameliorating the condition of man. The taint of barrenness had spread from ethical to physical speculations. Seneca wrote largely on natural philosophy, and magnified the importance of that study. But why? Not because it tended to assuage suffering, to multiply the conveniences of life, to extend the empire of man over the material world; but solely because it tended to raise the mind above low cares, to separate it from the body, to exercise its subtilty in the solution of very obscure questions. Thus natural philosophy was considered in the light merely of a mental exercise. It was made subsidiary to the art of disputation; and it consequently proved altogether barren of useful discoveries.

There was one sect which, however absurd and pernicious some of its doctrines may have been, ought, it should seem, to have merited an exception from the general censure which Bacon has pronounced on the ancient schools of wisdom. The Epicurean, who referred all happiness to bodily pleasure, and all evil to bodily pain, might have been expected to exert himself for the purpose of bettering his own physical condition and that of his neighbours. But the thought seems never to have occurred to any member of that school. Indeed their notion, as reported by their great poet, was, that no more improvements were to be expected in the arts which conduce to the comfort of life.

'Ad victum quæ flagitat usus
Omnia jam ferme mortalibus esse parata.'[19]

This contented despondency, this disposition to admire what has been done, and to expect that nothing more will be done, is strongly characteristic of all the schools which preceded the school of Fruit and Progress. Widely as the Epicurean and the Stoic differed on most points, they seem to have quite agreed in their contempt for pursuits so vulgar as to be useful. The philosophy of both was a garrulous, declaiming, canting, wrangling philosophy. Century after century they continued to repeat their hostile war-cries, Virtue and Pleasure; and in the end it appeared that the Epicurean had added as little to the quantity of pleasure as the Stoic to the quantity of virtue. It is on the pedestal of Bacon, not on that of Epicurus, that those noble lines ought to be inscribed:

'O tenebris tantis tam clarum extollere lumen
Qui primus potuisti, illustrans commoda vitæ.'[20]

In the fifth century Christianity had conquered Paganism, and Paganism had infected Christianity. The Church was now victorious and corrupt. The rites of the Pantheon[21] had passed into her worship, the subtilties of the Academy into her creed. In an evil day, though with great pomp and solemnity, — we quote the language of Bacon, — was the ill-starred alliance stricken between the old philosophy

18. Favorinus, a Greek sophist and philosopher, lived in the 2nd century A.D.

19. 'That mortals had ready for them nearly all that need demands for living.' (Lucretius, *De Rerum Natura*. Tr. W.H.D.Rouse.)

20. 'O thou, who first from so great a darkness wert able to raise aloft a light so clear, illumining the blessings of life!' (Lucretius, *De Rerum Natura*.)

21. A celebrated temple at Rome, built by Agrippa in 27 B.C.; later used as a Christian church.

and the new faith. Questions widely different from those which had employed the ingenuity of Pyrrho[22] and Carneades,[23] but just as subtle, just as interminable, and just as unprofitable, exercised the minds of the lively and voluble Greeks. When learning began to revive in the West, similar trifles occupied the sharp and vigorous intellects of the Schoolmen.[24] There was another sowing of the wind, and another reaping of the whirlwind. The great work of improving the condition of the human race was still considered as unworthy of a man of learning. Those who undertook that task, if what they effected could be readily comprehended, were despised as mechanics; if not, they were in danger of being burned as conjurers.

There cannot be a stronger proof of the degree in which the human mind had been misdirected than the history of the two greatest events which took place during the middle ages. We speak of the invention of Gunpowder and of the invention of Printing. The dates of both are unknown. The authors of both are unknown. Nor was this because men were too rude and ignorant to value intellectual superiority. The inventor of gunpowder appears to have been contemporary with Petrarch and Boccaccio. The inventor of printing was certainly contemporary with Nicholas the Fifth, with Cosmo de' Medici, and with a crowd of distinguished scholars. But the human mind still retained that fatal bent which it had received two thousand years earlier. George of Trebisond and Marsilio Ficino would not easily have been brought to believe that the inventor of the printing-press had done more for mankind than themselves, or than those ancient writers of whom they were the enthusiastic votaries.[25]

At length the time arrived when the barren philosophy which had, during so many ages, employed the faculties of the ablest of men, was destined to fall. It had worn many shapes. It had mingled itself with many creeds. It had survived revolutions in which empires, religions, languages, races, had perished. Driven from its ancient haunts, it had taken sanctuary in that Church which it had persecuted, and had, like the daring fiends of the poet, placed its seat

> ' next the seat of God,
> And with its darkness dared affront his light.' [26]

Words, and more words, and nothing but words, had been all the fruit of all the toil of all the most renowned sages of sixty generations. But the days of this sterile exuberance were numbered.

Many causes predisposed the public mind to a change. The study of a great variety of ancient writers, though it did not give a right direction to philosophical research, did much towards destroying that blind reverence for authority which had prevailed when Aristotle ruled alone. The

22. Founder of the Skeptical or Pyrrhonian school of philosophy, in the 3rd–4th century B.C.

23. c.213–219 B.C.; a skeptical philosopher who founded the Third or New Academy at Athens; a strenuous opponent of the Stoics.

24. The scholastic philosophers from about the 11th to the 15th century, treating of logic, metaphysics, and theology, as taught in the universities or 'schools' of France, Germany, and England; inclined to indulge in hair-splitting distinctions and unreal discussions.

25. Gunpowder is now thought to have been invented (c.1330) by Berthold Schwartz (c. 1300–50), a German monk. The invention of printing is generally accredited to Johann Gutenberg (c.1398–1468), of Mainz, or to Johann Fust (c.1400–66), his partner. — Petrarch (1304–74), Italian poet and humanist; Boccaccio (1313?–75), Italian novelist, poet, and humanist. — Pope Nicholas V (1398–1455) and Cosmo de' Medici (1389–1464) were both great patrons of art and letters. — George of Trebizond (1395–1484) was a noted translator of the Greek and Latin classics, a humanist, and a follower of Aristotle's philosophy; Marsilio Ficino (1433–99) was an Italian translator and expositor of Plato, among the scholars who gathered about Cosmo de' Medici.

26. *Paradise Lost*, i,383,391. (Adapted and slightly altered.)

rise of the Florentine sect of Platonists, a sect to which belonged some of the finest minds of the fifteenth century, was not an unimportant event. The mere substitution of the Academic for the Peripatetic philosophy would indeed have done little good.[27] But anything was better than the old habit of unreasoning servility. It was something to have a choice of tyrants. 'A spark of freedom,' as Gibbon has justly remarked, 'was produced by this collision of adverse servitude.'

Other causes might be mentioned. But it is chiefly to the great reformation of religion that we owe the great reformation of philosophy. The alliance between the Schools and the Vatican had for ages been so close that those who threw off the dominion of the Vatican could not continue to recognise the authority of the Schools. Most of the chiefs of the schism treated the Peripatetic philosophy with contempt, and spoke of Aristotle as if Aristotle had been answerable for all the dogmas of Thomas Aquinas. 'Nullo apud Lutheranos philosophiam esse in pretio,'[28] was a reproach which the defenders of the Church of Rome loudly repeated, and which many of the Protestant leaders considered as a compliment. Scarcely any text was more frequently cited by the reformers than that in which St. Paul cautions the Colossians not to let any man spoil them by philosophy.[29] Luther,[30] almost at the outset of his career, went so far as to declare that no man could be at once a proficient in the school of Aristotle and in that of Christ. Zwingli, Bucer, Peter Martyr, Calvin, held similar language.[31] In some of the Scotch universities, the Aristotelian system was discarded for that of Ramus.[32] Thus, before the birth of Bacon, the empire of the scholastic philosophy had been shaken to its foundations. There was in the intellectual world an anarchy resembling that which in the political world often follows the overthrow of an old and deeply rooted Government. Antiquity, prescription, the sound of great names, have ceased to awe mankind. The dynasty which had reigned for ages was at an end; and the vacant throne was left to be struggled for by pretenders.

The first effect of this great revolution was, as Bacon most justly observed, to give for a time an undue importance to the mere graces of style. The new breed of scholars, the Aschams and Buchanans,[33] nourished with the finest compositions of the Augustan age, regarded with loathing the dry, crabbed, and barbarous diction of respondents and opponents. They were far less studious about the matter of their writing than about the manner. They succeeded in reforming Latinity; but they never even aspired to effect a reform in Philosophy.

At this time Bacon appeared. It is altogether incorrect to say, as has often been said, that he was the first man who rose up against the Aristotelian philosophy when in the height of his power. The authority of that philosophy had, as we have

27. *Academic*: the Platonic school of philosophy. — *Peripatetic*: walking about; itinerant. A term applied to Aristotle's followers, who walked about as he lectured in the Lyceum in Athens.

28. 'Among the Lutherans, philosophy has no value.'

29. See *Colossians*, ii,8.

30. Martin Luther (1483–1546), leader of the Reformation in Germany, had visited Rome while still a monk, and had been shocked at the moral and intellectual libertinism of the Italian Renaissance.

31. Ulrich Zwingli (1484–1531), Martin Bucer (1491–1551), Peter Martyr (Pietro Martire Vermigli) (1500–62), and John Calvin (1509–64) were, respectively, Swiss, German, Italian, and French founders and preachers of the Protestant Reformation.

32. Petrus Ramus (1515–72) was a vigorous opponent to the philosophy of Aristotle; he was the author of *Dialectica*, introduced into Great Britain in the latter part of the 16th century, and influential especially in Cambridge. Ramus fell a victim of the massacre of St Bartholomew.

33. Allusion to such scholars as Roger Ascham (1515–68), tutor of Queen Elizabeth, and writer on education; and George Buchanan (1506–82), tutor of James VI and I, and writer of Latin poetry, *e.g. De Sphaera*.

shown, received a fatal blow long before he was born. Several speculators, among whom Ramus is the best known, had recently attempted to form new sects. Bacon's own expressions about the state of public opinion in the time of Luther are clear and strong: 'Accedebat,' says he, 'odium et contemptus, illis ipsis temporibus ortus erga Scholasticos.'[34] And again, 'Scholasticorum doctrina despectui prorsus haberi cœpit tanquam aspera et barbara.'[35] The part which Bacon played in this great change was the part, not of Robespierre, but of Bonaparte.[36] The ancient order of things had been subverted. Some bigots still cherished with devoted loyalty the remembrance of the fallen monarchy, and exerted themselves to effect a restoration. But the majority had no such feeling. Freed, yet not knowing how to use their freedom, they pursued no determinate course, and had found no leader capable of conducting them.

That leader at length arose. The philosophy which he taught was essentially new. It differed from that of the celebrated ancient teachers, not merely in method, but also in object. Its object was the good of mankind, in the sense in which the mass of mankind always have understood and always will understand the word good. 'Meditor,' said Bacon, 'instaurationem philosophiæ ejusmodi quæ nihil inanis aut abstracti habeat, quæque vitæ humanæ conditiones in melius provehat.'[37]

The difference between the philosophy of Bacon and that of his predecessors cannot, we think, be better illustrated than by comparing his views on some important subjects with those of Plato. We select Plato, because we conceive that he did more than any other person towards giving to the minds of speculative men that bent which they retained till they received from Bacon a new impulse in a diametrically opposite direction.

It is curious to observe how differently these great men estimated the value of every kind of knowledge. Take Arithmetic for example. Plato, after speaking slightly of the convenience of being able to reckon and compute in the ordinary transactions of life, passes to what he considers as a far more important advantage. The study of the properties of numbers, he tells us, habituates the mind to the contemplation of pure truth, and raises us above the material universe. He would have his disciples apply themselves to this study, not that they may be able to buy or sell, not that they may qualify themselves to be shopkeepers or travelling merchants, but that they may learn to withdraw their minds from the ever-shifting spectacle of this visible and tangible world, and to fix them on the immutable essences of things.

Bacon, on the other hand, valued this branch of knowledge, only on account of its uses with reference to that visible and tangible world which Plato so much despised. He speaks with scorn of the mystical arithmetic of the later Platonists, and laments the propensity of mankind to employ, on mere matters of curiosity, powers the whole exertion of which is required for purposes of solid advantage. He advises arithmeticians to leave these trifles, and to employ themselves in framing convenient expressions, which may be of use in physical researches.

The same reasons which led Plato to recommend the study of arithmetic led him to recommend also the study of mathematics. The vulgar crowd of geometricians, he says, will not understand him. They have practice always in view. They

34. 'It befell that hate and contempt rose against the Schoolmen in their own times.' (*De Augmentis*, Lib.1.)

35. 'The doctrine of the Schoolmen, in short, began to be held a contemptible spectacle, as well as harsh and barbarous.' (*De Augmentis*, Lib.1.)

36. *i.e.* not of mere destroyer, but of builder of an empire (of science and knowledge).

37. 'I intend a renewal of philosophy of a sort which shall have nothing abstract or empty, and which shall carry ahead the conditions of human life to something better.' (*Redargutio Philosophiarum.*)

do not know that the real use of the science is to lead men to the knowledge of abstract, essential, eternal truth. Indeed, if we are to believe Plutarch, Plato carried this feeling so far that he considered geometry as degraded by being applied to any purpose of vulgar utility. Archytas, it seems, had framed machines of extraordinary power on mathematical principles.[38] Plato remonstrated with his friend, and declared that this was to degrade a noble intellectual exercise into a low craft, fit only for carpenters and wheelwrights. The office of geometry, he said, was to discipline the mind, not to minister to the base wants of the body. His interference was successful; and from that time, according to Plutarch, the science of mechanics was considered as unworthy of the attention of a philosopher.

Archimedes in a later age imitated and surpassed Archytas. But even Archimedes was not free from the prevailing notion that geometry was degraded by being employed to produce anything useful. It was with difficulty that he was induced to stoop from speculation to practice. He was half ashamed of those inventions which were the wonder of hostile nations, and always spoke of them slightingly as mere amusements, as trifles in which a mathematician might be suffered to relax his mind after intense application to the higher parts of his science.

The opinion of Bacon on this subject was diametrically opposed to that of the ancient philosophers. He valued geometry chiefly, if not solely, on account of those uses, which to Plato appeared so base. And it is remarkable that the longer Bacon lived the stronger this feeling became. When in 1605 he wrote the two books on the *Advancement of Learning*, he dwelt on the advantages which mankind derived from mixed mathematics; but he at the same time admitted that the beneficial effect produced by mathematical study on the intellect, though a collateral advantage, was 'no less worthy than that which was principal and intended.' But it is evident that his views underwent a change. When, near twenty years later, he published the *De Augmentis*, which is the *Treatise on the Advancement of Learning*, greatly expanded and carefully corrected, he made important alterations in the part which related to mathematics. He condemned with severity the high pretensions of the mathematicians, 'delicias et fastum mathematicorum.'[39] Assuming the well-being of the human race to be the end of knowledge, he pronounced that mathematical science could claim no higher rank than that of an appendage or auxiliary to other sciences. Mathematical science, he says, is the handmaid of natural philosophy; she ought to demean herself as such; and he declares that he cannot conceive by what ill chance it has happened that she presumes to claim precedence over her mistress. He predicts — a prediction which would have made Plato shudder — that as more and more discoveries are made in physics, there will be more and more branches of mixed mathematics. Of that collateral advantage the value of which, twenty years before, he rated so highly, he says not one word. This omission cannot have been the effect of mere inadvertence. His own treatise was before him. From that treatise he deliberately expunged whatever was favourable to the study of pure mathematics, and inserted several keen reflections on the ardent votaries of that study. This fact, in our opinion, admits of only one explanation. Bacon's love of those pursuits which directly tend to improve the condition of mankind, and his jealousy of all pursuits merely curious, had grown upon him, and had, it may be, become immoderate. He was afraid of using any expression which might have the effect of inducing any man

38. Archytas, of Tarentum, was a distinguished philosopher, mathematician, general, and statesman of the 5th century B.C. He belonged to the Pythagorean school of thinkers, and invented mechanical devices, including a kind of flying machine.

39. 'the arrogant dallying of the mathematicians.'

of talents to employ in speculations, useful only to the mind of the speculator, a single hour which might be employed in extending the empire of man over matter. If Bacon erred here, we must acknowledge that we greatly prefer his error to the opposite error of Plato. We have no patience with a philosophy which, like those Roman matrons who swallowed abortives in order to preserve their shapes, takes pains to be barren for fear of being homely.

Let us pass to astronomy. This was one of the sciences which Plato exhorted his disciples to learn, but for reasons far removed from common habits of thinking. 'Shall we set down astronomy,' says Socrates, 'among the subjects of study?' 'I think so,' answers his young friend Glaucon: 'to know something about the seasons, the months, and the years is of use for military purposes, as well as for agriculture and navigation.' 'It amuses me,' says Socrates, 'to see how afraid you are, lest the common herd of people should accuse you of recommending useless studies.' He then proceeds, in that pure and magnificent diction which, as Cicero said, Jupiter would use if Jupiter spoke Greek, to explain, that the use of astronomy is not to add to the vulgar comforts of life, but to assist in raising the mind to the contemplation of things which are to be perceived by the pure intellect alone. The knowledge of the actual motions of the heavenly bodies Socrates considers as of little value. The appearances which make the sky beautiful at night are, he tells us, like the figures which a geometrician draws on the sand, mere examples, mere helps to feeble minds. We must get beyond them; we must neglect them; we must attain to an astronomy which is as independent of the actual stars as geometrical truth is independent of the lines of an ill-drawn diagram. This is, we imagine, very nearly, if not exactly, the astronomy which Bacon compared to the ox of Prometheus, a sleek, well-shaped hide, stuffed with rubbish, goodly to look at, but containing nothing to eat. He complained that astronomy had, to its great injury, been separated from natural philosophy, of which it was one of the noblest provinces, and annexed to the domain of mathematics. The world stood in need, he said, of a very different astronomy, of a living astronomy, of an astronomy which should set forth the nature, the motion, and the influences of the heavenly bodies, as they really are.

On the greatest and most useful of all human inventions, the invention of alphabetical writing, Plato did not look with much complacency. He seems to have thought that the use of letters had operated on the human mind as the use of the go-cart in learning to walk, or of corks in learning to swim, is said to operate on the human body. It was a support which, in his opinion, soon became indispensable to those who used it, which made vigorous exertion first unnecessary and then impossible. The powers of the intellect would, he conceived, have been more fully developed without this delusive aid. Men would have been compelled to exercise the understanding and the memory, and, by deep and assiduous meditation, to make truth thoroughly their own. Now, on the contrary, much knowledge is traced on paper, but little is engraved in the soul. A man is certain that he can find information at a moment's notice when he wants it. He therefore suffers it to fade from his mind. Such a man cannot in strictness be said to know anything. He has the show without the reality of wisdom. These opinions Plato has put into the mouth of an ancient king of Egypt.[40] But it is evident from the context that they were his own; and so they were understood to be by Quinctilian.[41] Indeed they are in perfect accordance with the whole Platonic system.

Bacon's views, as may easily be supposed, were widely different. The powers

40. See Plato's *Phaedrus*, 274–75.

41. Or Quintilian (A.D. 40–c.118), famous Roman orator and rhetorician, author of *Institutiones Oratoriae*.

of the memory, he observes, without the help of writing, can do little towards the advancement of any useful science. He acknowledges that the memory may be disciplined to such a point as to be able to perform very extraordinary feats. But on such feats he sets little value. The habits of his mind, he tells us, are such that he is not disposed to rate highly any accomplishment, however rare, which is of no practical use to mankind. As to these prodigious achievements of the memory, he ranks them with the exhibitions of rope-dancers and tumblers. 'These two performances,' he says, 'are much of the same sort. The one is an abuse of the powers of the body; the other is an abuse of the powers of the mind. Both may perhaps excite our wonder; but neither is entitled to our respect.'

To Plato, the science of medicine appeared to be of very disputable advantages. He did not indeed object to quick cures for acute disorders, or for injuries produced by accidents. But the art which resists the slow sap of a chronic disease, which repairs frames enervated by lust, swollen by gluttony, or inflamed by wine, which encourages sensuality by mitigating the natural punishment of the sensualist, and prolongs existence when the intellect has ceased to retain its entire energy, had no share of his esteem. A life protracted by medical skill he pronounced to be a long death. The exercise of the art of medicine ought, he said, to be tolerated, so far as that art may serve to cure the occasional distempers of men whose constitutions are good. As to those who have bad constitutions, let them die; and the sooner the better. Such men are unfit for war, for magistracy, for the management of their domestic affairs, for severe study and speculation. If they engage in any vigorous mental exercise, they are troubled with giddiness and fulness of the head, all which they lay to the account of philosophy. The best thing that can happen to such wretches is to have done with life at once. He quotes mythical authority in support of this doctrine; and reminds his disciples that the practice of the sons of Æsculapius,[42] as described by Homer, extended only to the cure of external injuries.

Far different was the philosophy of Bacon. Of all the sciences, that which he seems to have regarded with the greatest interest was the science which, in Plato's opinion, would not be tolerated in a well-regulated community. To make men perfect was no part of Bacon's plan. His humble aim was to make imperfect men comfortable. The beneficence of his philosophy resembled the beneficence of the common Father, whose sun rises on the evil and the good, whose rain descends for the just and the unjust. In Plato's opinion man was made for philosophy; in Bacon's opinion philosophy was made for man; it was a means to an end; and that end was to increase the pleasures and to mitigate the pains of millions who are not and cannot be philosophers. That a valetudinarian who took great pleasure in being wheeled along his terrace, who relished his boiled chicken and his weak wine and water, and who enjoyed a hearty laugh over the Queen of Navarre's tales,[43] should be treated as a *caput lupinum*[44] because he could not read the *Timæus*[45] without a headache, was a notion which the humane spirit of the English school of wisdom altogether rejected. Bacon would not have thought it beneath the dignity of a philosopher to contrive an improved garden chair for such a valetudinarian, to devise some way of rendering his medicines more pal-

42. Aesculapius, in Homer, is not a divinity, but simply the 'blameless physician.' His sons, Machaon and Podalirius, were the physicians in the Greek army in the war with Troy.

atable, to invent repasts which he might enjoy, and pillows on which he might sleep soundly; and this though there might not be the smallest hope that the mind of the poor invalid would ever rise to the contemplation of the ideal beautiful and the ideal good. As Plato had cited the religious legends of Greece to justify his contempt for the more recondite parts of the heart of healing, Bacon vindicated the dignity of that art by appealing to the example of Christ, and reminded men that the great Physician of the soul did not disdain to be also the physician of the body.

When we pass from the science of medicine to that of legislation, we find the same difference between the systems of these two great men. Plato, at the commencement of the *Dialogue on Laws*, lays it down as a fundamental principle that the end of legislation is to make men virtuous. It is unnecessary to point out the extravagant conclusions to which such a proposition leads. Bacon well knew to how great an extent the happiness of every society must depend on the virtue of its members; and he also knew what legislators can and what they cannot do for the purpose of promoting virtue. The view which he has given of the end of legislation, and of the principal means for the attainment of that end, has always seemed to us eminently happy, even among the many happy passages of the same kind with which his works abound. 'Finis et scopus quem leges intueri atque ad quem jussiones et sanctiones suas dirigere debent, non alius est quam ut cives feliciter degant. Id fiet si pietate et religione recte instituti, moribus honesti, armis adversus hostes externos tuti, legum auxilio adversus seditiones et privatas injurias muniti, imperio et magistratibus obsequentes, copiis et opibus locupletes et florentes fuerint.'[46] The end is the well-being of the people. The means are the imparting of moral and religious education; the providing of everything necessary for defence against foreign enemies; the maintaining of internal order; the establishing of a judicial financial, and commercial system, under which wealth may be rapidly accumulated and securely enjoyed.

Even with respect to the form in which laws ought to be drawn, there is a remarkable difference of opinion between the Greek and the Englishman. Plato thought a preamble essential; Bacon thought it mischievous. Each was consistent with himself. Plato, considering the moral improvement of the people as the end of legislation, justly inferred that a law which commanded and threatened, but which neither convinced the reason, nor touched the heart, must be a most imperfect law. He was not content with deterring from theft a man who still continued to be a thief at heart, with restraining a son who hated his mother from beating his mother. The only obedience on which he set much value was the obedience which an enlightened understanding yields to reason, and which a virtuous disposition yields to precepts of virtue. He really seems to have believed that, by prefixing to every law an eloquent and pathetic exhortation, he should, to a great extent, render penal enactments superfluous. Bacon entertained no such romantic hopes; and he well knew the practical inconveniences of the course which Plato recommended. 'Neque nobis,' says he, 'prologi legum qui inepti olim habiti sunt, et leges introducunt disputantes non jubentes, utique placerent, si priscos mores ferre possemus. . . . Quantum fieri potest

46. 'The end and scope that laws should have in view and to which they should direct their decrees and sanctions is no other than that the citizens should live happily. This will come to pass if the citizens be rightly trained in piety and religion, sound in morality, protected by arms against foreign enemies, defended by the aid of the laws against civil discords and private enemies, obedient to the government and the magistrates, and rich and flourishing in good things and wealth.' (*De Augmentis*, Lib.8. Cap.3. Aph.5.)

prologi evitentur, et lex incipiat a jussi-

Each of the great men whom we have compared intended to illustrate his system by a philosophical romance; and each left his romance imperfect. Had Plato lived to finish the *Critias*, a comparison between that noble fiction and the new *Atlantis* would probably have furnished us with still more striking instances than any which we have given. It is amusing to think with what horror he would have seen such an institution as Solomon's House [48] rising in his republic: with what vehemence he would have ordered the brew-houses, the perfume-houses, and the dispensatories to be pulled down; and with what inexorable rigour he would have driven beyond the frontier all the Fellows of the College, Merchants of Light and Depredators, Lamps and Pioneers.

To sum up the whole, we should say that the aim of the Platonic philosophy was to exalt man into a god. The aim of the Baconian philosophy was to provide man with what he requires while he continues to be man. The aim of the Platonic philosophy was to raise us far above vulgar wants. The aim of the Baconian philosophy was to supply our vulgar wants. The former aim was noble; but the latter was attainable. Plato drew a good bow; but, like Acestes in Virgil, he aimed at the stars; and therefore, though there was no want of strength or skill, the shot was thrown away. His arrow was indeed followed by a track of dazzling radiance, but it struck nothing.

47. 'Nor do we approve at all of the preambles to the laws, which were formerly deemed impertinent, and which represent laws disputing and not commanding, if only we could support the ancient practices. But so far as may be, let preambles be avoided, and let the law commence with an enactment.' (*De Augmentis*, Lib.8. Cap.3. Aph.69.)

48. Solomon's House, the ideal institution described near the end of Bacon's *New Atlantis*, was a college of natural philosophy 'dedicated to the study of the works and creatures of God.'

'Volans liquidis in nubibus arsit arundo
Signavitque viam flammis, tenuisque recessit
Consumpta in ventos.' [49]

Bacon fixed his eye on a mark which was placed on the earth, and within bow-shot, and hit it in the white. The philosophy of Plato began in words and ended in words, noble words indeed, words such as were to be expected from the finest of human intellects exercising boundless dominion over the finest of human languages. The philosophy of Bacon began in observations and ended in arts.

The boast of the ancient philosophers was that their doctrine formed the minds of men to a high degree of wisdom and virtue. This was indeed the only practical good which the most celebrated of those teachers even pretended to effect: and undoubtedly, if they had effected this, they would have deserved far higher praise than if they had discovered the most salutary medicines or constructed the most powerful machines. But the truth is that, in those very matters in which alone they professed to do any good to mankind, in those very matters for the sake of which they neglected all the vulgar interests of mankind, they did nothing, or worse than nothing. They promised what was impracticable: they despised what was practicable; they filled the world with long words and long beards; and they left it as wicked and as ignorant as they found it.

An acre in Middlesex is better than a principality in Utopia. The smallest actual good is better than the most magnificent promises of impossibilities. The wise man of the Stoics would, no doubt, be a grander object than a steam-engine. But there are steam-engines. And the wise man of the Stoics is yet to be born. A philosophy which should enable a man to feel perfectly happy

49. 'For, as through cloud and rain the arrow was flying, it kindled, Marking its track with fire: then vanished from sight in the heavens. Wholly consumed.' (*Aeneid*, v.525–28. Conington's transl.)

while in agonies of pain would be better than a philosophy which assuages pain. But we know that there are remedies which will assuage pain; and we know that the ancient sages liked the toothache just as little as their neighbours. A philosophy which should extinguish cupidity would be better than a philosophy which should devise laws for the security of property. But it is possible to make laws which shall, to a very great extent, secure property. And we do not understand how any motives which the ancient philosophy furnished could extinguish cupidity. We know indeed that the philosophers were no better than other men. From the testimony of friends as well as of foes, from the confessions of Epictetus and Seneca,[50] as well as from the sneers of Lucian and the fierce invectives of Juvenal,[51] it is plain that these teachers of virtue had all the vices of their neighbours, with the additional vice of hypocrisy. Some people may think the object of the Baconian philosophy a low object, but they cannot deny that, high or low, it has been attained. They cannot deny that every year makes an addition to what Bacon called 'fruit.' They cannot deny that mankind have made, and are making, great and constant progress in the road which he pointed out to them. Was there any such progressive movement among the ancient philosophers? After they had been declaiming eight hundred years, had they made the world better than when they began? Our belief is that, among the philosophers themselves, instead of a progressive improvement there was a progressive degeneracy. An abject superstition which Democritus or Anaxagoras[52] would have rejected with scorn, added the last disgrace to the long dotage of the Stoic and Platonic schools. Those unsuccessful attempts to articulate which are so delightful and interesting in a child shock and disgust in an aged paralytic; and in the same way, those wild and mythological fictions which charm us, when we hear them lisped by Greek poetry in its infancy, excite a mixed sensation of pity and loathing, when mumbled by Greek philosophy in its old age. We know that guns, cutlery, spy-glasses, clocks, are better in our time than they were in the time of our fathers, and were better in the time of our fathers than they were in the time of our grandfathers. We might, therefore, be inclined to think that, when a philosophy which boasted that its object was the elevation and purification of the mind, and which for this object neglected the sordid office of ministering to the comforts of the body, had flourished in the highest honour during many hundreds of years, a vast moral amelioration must have taken place. Was it so? Look at the schools of this wisdom four centuries before the Christian era and four centuries after that era. Compare the men whom those schools formed at those two periods. Compare Plato and Libanius.[53] Compare Pericles and Julian.[54] This philosophy con-

50. Epictetus (1st century A.D.), Stoic philosopher, whose ideas and sayings appear in the *Discourses of Epictetus* and the *Encheiridion* (Handbook), compiled by his disciple Arrian. — Seneca (1st century A.D.), Roman philosopher, tutor to Nero, author of *De Beneficiis*. — Macaulay underrates the virtues of both these philosophers; many of Epictetus's doctrines closely approximate some of those in Christianity.

51. Lucian (2nd century A.D.), a Greek writer whose *Dialogues of the Gods* and *Dialogues of the Dead* satirized the mythology, philosophy, and society of his time. — Juvenal (c. A.D. 60–c.130), Roman satirist who disparaged the teachers and philosophers of the age.

52. Democritus (5th century B.C.) and Anaxagoras (c.500–428 B.C.) were early Greek philosophers, the former propounding an atomic theory of reality, the latter a rational metaphysical principle.

53. Libanius (A.D. 314–c.395), a distinguished Greek sophist and rhetorician, friend of the emperor Julian, a commentator rather than a thinker.

54. Julian (A.D. 331–63), emperor of Rome in its decadence, last champion of paganism, devotee to Greek literature and philosophy, opponent of Christianity. — Macaulay contrasts Julian with Pericles, the great Athenian

fessed, nay boasted, that for every end but one it was useless. Had it attained that one end?

Suppose that Justinian,[55] when he closed the schools of Athens, had called on the last few sages who still haunted the Portico, and lingered round the ancient plane-trees, to show their title to public veneration: suppose that he had said: 'A thousand years have elapsed since, in this famous city, Socrates posed Protagoras and Hippias;[56] during those thousand years a large proportion of the ablest men of every generation has been employed in constant efforts to bring to perfection the philosophy which you teach, that philosophy has been munificently patronised by the powerful; its professors have been held in the highest esteem by the public; it has drawn to itself almost all the sap and vigour of the human intellect: and what has it effected? What profitable truth has it taught us which we should not equally have known without it? What has it enabled us to do which we should not have been equally able to do without it?' Such questions, we suspect, would have puzzled Simplicius and Isidore.[57] Ask a follower of Bacon what the new philosophy, as it was called in the time of Charles the Second, has effected for mankind, and his answer is ready; 'It has lengthened life; it has mitigated pain; it has extinguished diseases; it has increased the fertility of the soil; it has given new securities to the mariner; it has furnished new arms to the warrior; it has spanned great rivers and estuaries with bridges of form unknown to our fathers; it has guided the thunderbolt innocuously from heaven to earth; it has lighted up the night with the splendour of day; it has extended the range of the human vision; it has multiplied the power of the human muscles; it has accelerated motion; it has annihilated distance; it has facilitated intercourse, correspondence, all friendly offices, all despatch of business; it has enabled man to descend to the depths of the sea, to soar into the air, to penetrate securely into the noxious recesses of the earth, to traverse the land in cars which whirl along without horses, and the ocean in ships which run ten knots an hour against the wind. These are but a part of its fruits, and of its first fruits. For it is a philosophy which never rests, which has never attained, which is never perfect. Its law is progress. A point which yesterday was invisible is its goal to-day, and will be its starting-post to-morrow.'

Great and various as the powers of Bacon were, he owes his wide and durable fame chiefly to this, that all those powers received their direction from common sense. His love of the vulgar useful, his strong sympathy with the popular notions of good and evil, and the openness with which he avowed that sympathy, are the secret of his influence. There was in his system no cant, no illusion. He had no anointing for broken bones, no fine theories *de finibus*,[58] no arguments to persuade men out of their senses. He knew that men and philosophers as well as other men do actually love life, health, comfort, honour, security, the society of friends, and do actually dislike death, sickness, pain, poverty, disgrace, danger, separation from those to whom they are attached. He knew that religion, though it often regulates and moderates these feelings, sel-

statesman (5th century B.C.) under whom Athens reached the summit of her power, and the Parthenon and Propylaea were built.

55. The emperor Justinian (6th century A.D.) closed the Academy at Athens in 529 and thus brought to an end the school of Greek philosophy.

56. 'Characters' in Plato's dialogue entitled *Protagoras*.

57. Simplicius and Isidore (6th century A.D.) were among the last of the Neo-Platonists (or mystics, followers of Plotinus and other developers of the spiritual side of Plato's thought); the former was a teacher in the Academy when Justinian disendowed it, the latter had been the head of the school in succession to Marinus.

58. Concerning ends, or purposes (ideals).

dom eradicates them; nor did he think it desirable for mankind that they should be eradicated. The plan of eradicating them by conceits like those of Seneca, or syllogisms like those of Chrysippus,[59] was too preposterous to be for a moment entertained by a mind like his. He did not understand what wisdom there could be in changing names where it was impossible to change things; in denying that blindness, hunger, the gout, the rack, were evils, and calling them ἀποπροηγμένα;[60] in refusing to acknowledge that health, safety, plenty, were good things, and dubbing them by the name of ἀδιάφορα.[61] In his opinions on all these subjects, he was not a Stoic, nor an Epicurean, nor an Academic, but what would have been called by Stoics, Epicureans, and Academics a mere ἰδιώτης, a mere common man. And it was precisely because he was so that his name makes so great an era in the history of the world. It was because he dug deep that he was able to pile high. It was because, in order to lay his foundations, he went down into those parts of human nature which lie low, but which are not liable to change, that the fabric which he reared has risen to so stately an elevation, and stands with such immovable strength.

We have sometimes thought that an amusing fiction might be written, in which a disciple of Epictetus and a disciple of Bacon should be introduced as fellow-travellers. They come to a village where the small-pox has just begun to rage, and find houses shut up, intercourse suspended, the sick abandoned, mothers weeping in terror over their children. The Stoic assures the dismayed population that there is nothing bad in the small-pox, and that to a wise man disease, deformity, death, the loss of friends, are not evils. The Baconian takes out a lancet and begins to vaccinate. They find a body of miners in great dismay. An explosion of noisome vapours has just killed many of those who were at work; and the survivors are afraid to venture into the cavern. The Stoic assures them that such an accident is nothing but a mere ἀποπροηγμένον.[62] The Baconian, who has no such fine word at his command, contents himself with devising a safety-lamp. They find a shipwrecked merchant wringing his hands on the shore. His vessel with an inestimable cargo has just gone down, and he is reduced in a moment from opulence to beggary. The Stoic exhorts him not to seek happiness in things which lie without himself, and repeats the whole chapter of Epictetus πρὸς τοὺς τὴν ἀπορίαν δεδοικότας.[63] The Baconian constructs a diving-bell, goes down in it, and returns with the most precious effects from the wreck. It would be easy to multiply illustrations of the difference between the philosophy of thorns and the philosophy of fruit, the philosophy of words and the philosophy of works.

Bacon has been accused of overrating the importance of those sciences which minister to the physical well-being of man, and of underrating the importance of moral philosophy; and it cannot be denied that persons who read the *Novum Organum* and the *De Augmentis*, without adverting to the circumstances under which those works were written, will find much that may seem to countenance the accusation. It is certain, however, that, though in practice he often went very wrong, and though, as his historical work and his essays prove, he did not hold, even in theory, very strict opinions on points of political morality, he was far too wise a man not to know how much our well-being depends on the regulation of our minds. The world for which he wished was not, as some people seem

to imagine, a world of water-wheels, power-looms, steam-carriages, sensualists, and knaves. He would have been as ready as Zeno himself [64] to maintain that no bodily comforts which could be devised by the skill and labour of a hundred generations would give happiness to a man whose mind was under the tyranny of licentious appetite, of envy, of hatred, or of fear. If he sometimes appeared to ascribe importance too exclusively to the arts which increase the outward comforts of our species, the reason is plain. Those arts had been most unduly depreciated. They had been represented as unworthy of the attention of a man of liberal education. 'Cogitavit,' says Bacon of himself, 'eam esse opinionem sive æstimationem humidam et damnosam, minui nempe majestatem mentis humanæ, si in experimentis et rebus particularibus, sensui subjectis, et in materia terminatis, diu ac multum versetur: præsertim cum hujusmodi res ad inquirendum laboriosæ, ad meditandum ignobiles, ad discendum asperæ, ad practicam illiberales, numero infinitæ, et subtilitate pusillæ videri soleant, et ob hujusmodi conditiones, gloriæ artium minus sint accommodatæ.' [65] This opinion seemed to him 'omnia in familia humana turbasse.' [66] It had undoubtedly caused many arts which were of the greatest utility, and which were susceptible of the greatest improvements, to be neglected by speculators, and abandoned to joiners, masons, smiths, weavers, apothecaries. It was necessary to assert the dignity of those arts, to bring them prominently forward, to proclaim that, as they have a most serious effect on human happiness, they are not unworthy of the attention of the highest human intellects. Again, it was by illustrations drawn from these arts that Bacon could most easily illustrate his principles. It was by improvements effected in these arts that the soundness of his principles could be most speedily and decisively brought to the test, and made manifest to common understandings. He acted like a wise commander who thins every other part of his line to strengthen a point where the enemy is attacking with peculiar fury, and on the fate of which the event of the battle seems likely to depend. In the *Novum Organum*, however, he distinctly and most truly declares that his philosophy is no less a Moral than a Natural Philosophy, that, though his illustrations are drawn from physical science, the principles which those illustrations are intended to explain are just as applicable to ethical and political inquiries as to inquiries into the nature of heat and vegetation.

He frequently treated of moral subjects; and he brought to those subjects that spirit which was the essence of his whole system. He has left us many admirable practicable observations on what he somewhat quaintly called the Georgics of the mind,[67] on the mental culture which tends to produce good dispositions. Some persons, he said, might accuse him of spending labour on a matter so simple that his predecessors had passed it by with contempt. He desired such persons to remember that he had from the first announced the objects of his search to be not the splendid and the surprising, but the useful and the true, not the deluding dreams which go forth through the

64. Zeno of Citium, in Cyprus (close of the 4th century B.C.), was the founder of the Stoic school of philosophy at Athens, which taught the doctrines mentioned by Macaulay.

65. 'He thought that notion or opinion obscure and injurious, and indeed, the majesty of the human mind to be diminished, if it should be occupied long and continually in experiments and detailed matters capable of perception and limited in material; especially since matters of this sort usually seem laborious to inquire into, not worth thinking about, hard to learn, unrewarding when practiced, infinite in number, and trivial in their subtlety; and because of such conditions, ill suited to the glory of the arts.' (*Cogitata et Visa.*)

66. 'to have thrown everything in the human family into confusion.'

67. After Virgil's didactic poem *The Georgics*, on agriculture. The allusion is to the original meaning of the word *georgic*, or *tillage*.

shining portal of ivory, but the humbler realities of the gate of horn.[68]

True to this principle, he indulged in no rants about the fitness of things, the all-sufficiency of virtue, and the dignity of human nature. He dealt not at all in resounding nothings, such as those with which Bolingbroke [69] pretended to comfort himself in exile, and in which Cicero vainly sought consolation after the loss of Tullia.[70] The casuistical subtilties which occupied the attention of the keenest spirits of his age had, it should seem, no attractions for him. The doctors whom Escobar [71] afterwards compared to the four beasts and the four-and-twenty elders in the Apocalypse Bacon dismissed with most contemptuous brevity. 'Inanes plerumque evadunt et futiles.' [72] Nor did he ever meddle with those enigmas which have puzzled hundreds of generations, and will puzzle hundreds more. He said nothing about the grounds of moral obligation, or the freedom of the human will. He had no inclination to employ himself in labours resembling those of the damned in the Grecian Tartarus,[73] to spin for ever on the same wheel round the same pivot, to gape for ever after the same deluding clusters, to pour water for ever into the same bottomless buckets, to pace for ever to and fro on the same wearisome path after the same recoiling stone. He exhorted his disciples to prosecute researches of a very different description, to consider moral science as a practical science, a science of which the object was to cure the diseases and perturbations of the mind, and which could be improved only by a method analogous to that which has improved medicine and surgery. Moral philosophers ought, he said, to set themselves vigorously to work for the purpose of discovering what are the actual effects produced on the human character by particular modes of education, by the indulgence of particular habits, by the study of particular books, by society, by emulation, by imitation. Then we might hope to find out what mode of training was most likely to preserve and restore moral health.

What he was as a natural philosopher and a moral philosopher, that he was also as a theologian. He was, we are convinced, a sincere believer in the divine authority of the Christian revelation. Nothing can be found in his writings, or in any other writings, more eloquent and pathetic than some passages which were apparently written under the influence of strong devotional feeling. He loved to dwell on the power of the Christian religion to effect much that the ancient philosophers could only promise. He loved to consider that religion as the bond of charity, the curb of evil passions, the consolation of the wretched, the support of the timid, the hope of the dying. But controversies on speculative points of theology seem to have engaged scarcely any portion of his attention. In what he wrote on Church Government he showed, as far as he dared, a tolerant and charitable spirit. He troubled himself not at all about Homoousians and Homoiousians, Monothelites and Nestorians.[74] He lived in an age in which disputes

73. Hell.

74. *Homoousians and Homoiousians*: in the 4th century, the former sect held that Christ is of the same essence or substance with the Father; the latter held that Christ had only an essential *likeness* to the Father. — *Monothelites*, in the 7th century, held that Christ had two natures (human and divine) but one will. —

on the most subtle points of divinity excited an intense interest throughout Europe, and nowhere more than in England. He was placed in the very thick of the conflict. He was in power at the time of the Synod of Dort,[75] and must for months have been daily deafened with talk about election, reprobation, and final perseverance. Yet we do not remember a line in his works from which it can be inferred that he was either a Calvinist or an Arminian. While the world was resounding with the noise of a disputatious philosophy and a disputatious theology, the Baconian school, like Allworthy seated between Square and Thwackum,[76] preserved a calm neutrality, half scornful, half benevolent, and content with adding to the sum of practical good, left the war of words to those who liked it.

We have dwelt long on the end of the Baconian philosophy, because from this peculiarity all the other peculiarities of that philosophy necessarily arose. Indeed, scarcely any person who proposed to himself the same end with Bacon could fail to hit upon the same means.

The vulgar notion about Bacon we take to be this, that he invented a new method of arriving at truth, which method is called Induction, and that he detected some fallacy in the syllogistic reasoning which had been in vogue before his time. This notion is about as well founded as that of the people who, in the middle ages, imagined that Virgil was a great conjurer. Many who are far too well-informed to talk such extravagant nonsense entertain what we think incorrect notions as to what Bacon really effected in this matter.

The inductive method has been practised ever since the beginning of the world by every human being. It is constantly practised by the most ignorant clown, by the most thoughtless schoolboy, by the very child at the breast. That method leads the clown to the conclusion that if he sows barley he shall not reap wheat. By that method the schoolboy learns that a cloudy day is the best for catching trout. The very infant, we imagine, is led by induction to expect milk from his mother or nurse, and none from his father.

Not only is it not true that Bacon invented the inductive method; but it is not true that he was the first person who correctly analysed that method and explained its uses. Aristotle had long before pointed out the absurdity of supposing that syllogistic reasoning could ever conduct men to the discovery of any new principle, had shown that such discoveries must be made by induction, and by induction alone, and had given the history of the inductive process, concisely indeed, but with great perspicuity and precision.

Again, we are not inclined to ascribe much practical value to that analysis of the inductive method which Bacon has given in the second book of the *Novum Organum*. It is indeed an elaborate and correct analysis. But it is an analysis of that which we are all doing from morning to night, and which we continue to do even in our dreams. A plain man finds his stomach out of order. He never heard Lord Bacon's name. But he proceeds in the strictest conformity with the rules laid down in the second book of the *Novum Organum*, and satisfies himself that minced pies have done the mischief. 'I ate minced pies on Monday and Wednesday, and I was kept awake by indigestion all night.' This is the *comparentia ad intellectum instantiarum convenientium*. 'I did not eat any on Tuesday and Friday, and I was quite well.' This

Nestorians, in the 5th century, held that in Christ a divine person (the Logos) and a human person were joined in perfect harmony of action but not in the unity of a single individual.

75. The Synod of Dort, an assembly of the Dutch Reformed Church, met in 1618–19 to settle the theological differences between the Arminians and the Calvinists on such matters as atonement, grace, election, total depravity, reprobation, final perseverance of the saints, etc.

76. In Fielding's *Tom Jones*, Allworthy is the benevolent country squire, Square the amateur (and somewhat hypocritical) philosopher, and Thwackum the tutor and narrow-minded pedant.

is the *comparentia instantiarum in proximo quæ natura data privantur.* 'I ate very sparingly of them on Sunday, and was very slightly indisposed in the evening. But on Christmas-day I almost dined on them, and was so ill that I was in great danger.' This is the *comparentia instantiarum secundum magis et minus.* 'It cannot have been the brandy which I took with them. For I have drunk brandy daily for years without being the worse for it.' This is the *rejectio naturarum.* Our invalid then proceeds to what is termed by Bacon the *Vindemiatio*, and pronounces that minced pies do not agree with him.

We repeat that we dispute neither the ingenuity nor the accuracy of the theory contained in the second book of the *Novum Organum*; but we think that Bacon greatly overrated its utility. We conceive that the inductive process, like many other processes, is not likely to be better performed merely because men know how they perform it. William Tell would not have been one whit more likely to cleave the apple if he had known that his arrow would describe a parabola under the influence of the attraction of the earth. Captain Barclay [77] would not have been more likely to walk a thousand miles in a thousand hours, if he had known the place and name of every muscle in his legs. Monsieur Jourdain [78] probably did not pronounce D and F more correctly after he had been apprised that D is pronounced by touching the teeth with the end of the tongue, and F by putting the upper teeth on the lower lip. We cannot perceive that the study of grammar makes the smallest difference in the speech of people who have always lived in good society. Not one Londoner in ten thousand can lay down the rules for the proper use of *will* and *shall.* Yet not one Londoner in a million ever misplaces his *will* and *shall.* Dr. Robertson [79] could, undoubtedly, have written a luminous dissertation on the use of those words. Yet, even in his latest work, he sometimes misplaced them ludicrously. No man uses figures of speech with more propriety because he knows that one figure is called a metonymy and another a synecdoche. A drayman in a passion calls out, 'You are a pretty fellow,' without suspecting that he is uttering irony, and that irony is one of the four primary tropes. The old systems of rhetoric were never regarded by the most experienced and discerning judges as of any use for the purpose of forming an orator. 'Ego hanc vim intelligo,' said Cicero, 'esse in præceptis omnibus, non ut ea secuti oratores eloquentiæ laudem sint adepti, sed quæ sua sponte homines eloquentes facerent, ea quosdam observasse, atque id egisse; sic esse non eloquentiam ex artificio, sed artificium ex eloquentia natum.' [80] We must own that we entertain the same opinion concerning the study of Logic which Cicero entertained concerning the study of Rhetoric. A man of sense syllogises in *celarent* and *cesare* all day long without suspecting it; and, though he may not know what an *ignoratio elenchi* [81] is, has no difficulty in exposing it whenever he falls in with it; which is likely to be as often as he falls in with a Reverend Master of Arts nourished on mode and figure in the cloisters of Ox-

77. Robert Barclay Allardice (1779–1854), commonly called Captain Barclay, was a British officer and a famous pedestrian, who claimed to have walked a mile in each of a thousand successive hours.

78. A middle-class character in Molière's comedy *Le bourgeois gentilhomme* (The shopkeeper turned gentleman), who tries to imitate the nobility, and hires a professor of philosophy to educate him.

79. William Robertson (1721–93), Scotch historian, who was said never to have learned how to speak and write like a Londoner.

80. 'I realize that this is the power that resides in all precepts: not that orators who have followed them may have attained praise for their eloquence: but that the things eloquent men do of their own accord have been observed and imitated by others; thus eloquence is not engendered by art, but art by eloquence.'

81. The three italicized expressions are used in the study of logic, to refer to types of syllogisms, and to a conclusion which has only an apparent relevancy.

ford. Considered merely as an intellectual feat, the *Organum* of Aristotle can scarcely be admired too highly. But the more we compare individual with individual, school with school, nation with nation, generation with generation, the more do we lean to the opinion that the knowledge of the theory of logic has no tendency whatever to make men good reasoners.

What Aristotle did for the syllogistic process Bacon has, in the second book of the *Novum Organum*, done for the inductive process; that is to say, he has analysed it well. His rules are quite proper, but we do not heed them, because they are drawn from our own constant practice.

But, though everybody is constantly performing the process described in the second book of the *Novum Organum*, some men perform it well and some perform it ill. Some are led by it to truth, and some to error. It led Franklin to discover the nature of lightning. It led thousands, who had less brains than Franklin, to believe in animal magnetism. But this was not because Franklin went through the process described by Bacon, and the dupes of Mesmer[82] through a different process. The *comparentiæ* and *rejectiones* of which we have given examples will be found in the most unsound inductions. We have heard that an eminent judge of the last generation was in the habit of jocosely propounding after dinner a theory, that the cause of the prevalence of Jacobinism[83] was the practice of bearing three names. He quoted on the one side Charles James Fox, Richard Brinsley Sheridan, John Horne Tooke, John Philpot Curran, Samuel Taylor Coleridge, Theobald Wolfe Tone.[84] These were *instantiæ convenientes*. He then proceeded to cite instances *absentiæ in proximo*, William Pitt, John Scott, William Windham, Samuel Horsley, Henry Dundas, Edmund Burke.[85] He might have gone on to instances *secundum magis et minus*. The practice of giving children three names has been for some time a growing practice, and Jacobinism has also been growing. The practice of giving children three names is more common in America than in England. In England we still have a King and a House of Lords; but the Americans are Republicans. The *rejectiones* are obvious. Burke and Theobald Wolfe Tone are both Irishmen; therefore the being an Irishman is not the cause of Jacobinism. Horsley and Horne Tooke are both clergymen; therefore the being a clergyman is not the cause of Jacobinism. Fox and Windham were both educated at Oxford; therefore the being educated at Oxford is not the cause of Jacobinism. Pitt and Horne Tooke were both educated at Cambridge; therefore the being educated at Cambridge is not the cause of Jacobinism. In this way, our inductive philosopher arrives at what Bacon calls the Vintage,

82. Friedrich Anton Mesmer (1733–1815), Austrian physician, whose experiments with hypnotism, magnets, etc., led to a widespread interest in animal magnetism and hypnotism.

83. The contemporary term equivalent to 'radicalism,' or 'revolutionism.'

84. Charles James Fox (1749–1806), famous Whig statesman; John Horne Tooke (1736–1812), politician and philologist, friend of Wilkes, Voltaire, etc.; John Philpot Curran (1750–1817), Irish judge, vigorous supporter of political reforms; Coleridge (1772–1834) had been an ardent sympathizer with the French Revolutionists in his earlier years, Theobald Wolfe Tone (1763–98), United Irishman, lawyer, and ardent republican. All of these men favored, in greater or less degree, social and political reform. Sheridan the dramatist (1751–1816) supported Fox, and as a statesman upheld the liberty of the press and the cause of the American Colonies.

85. Some readers may wish to exclude from this list both the older and the younger Pitt (1708–78; 1759–1806), since neither ever took the reactionary position of Burke (1729–97) or the stubborn Tory outlook of Dundas (1742–1811). John Scott, 1st Earl of Eldon (1751–1838), lawyer and statesman, actively opposed the Reform Bill. William Windham (1750–1810), statesman, friend of Dr. Johnson and Burke, was a steady conservative. Samuel Horsley (1733–1806), Anglican Bishop, member of the Johnson club, preached an impressive sermon on revolution before the House of Lords.

and pronounces that the having three names is the cause of Jacobinism.

Here is an induction corresponding with Bacon's analysis and ending in a monstrous absurdity. In what then does this induction differ from the induction which leads us to the conclusion that the presence of the sun is the cause of our having more light by day than by night? The difference evidently is not in the kind of instances, but in the number of instances; that is to say, the difference is not in that part of the process for which Bacon has given precise rules, but in a circumstance for which no precise rule can possibly be given. If the learned author of the theory about Jacobinism had enlarged either of his tables a little, his system would have been destroyed. The names of Tom Paine and William Wyndham Grenville would have been sufficient to do the work.

It appears to us, then, that the difference between a sound and unsound induction does not lie in this, that the author of the sound induction goes through the process analysed in the second book of the *Novum Organum*, and the author of the unsound induction through a different process. They both perform the same process. But one performs it foolishly or carelessly; the other performs it with patience, attention, sagacity, and judgment. Now precepts can do little towards making men patient and attentive, and still less towards making them sagacious and judicious. It is very well to tell men to be on their guard against prejudices, not to believe facts on slight evidence, not to be content with a scanty collection of facts, to put out of their minds the *idola* which Bacon has so finely described.[86] But these rules are too general to be of much practical use. The question is, What is a prejudice? How long does the incredulity with which I hear a new theory propounded continue to be a wise and salutary incredulity? When does it become an *idolum specus*, the unreasonable pertinacity of a too sceptical mind? What is slight evidence? What collection of facts is scanty? Will ten instances do, or fifty, or a hundred? In how many months would the first human beings who settled on the shores of the ocean have been justified in believing that the moon had an influence on the tides? After how many experiments would Jenner have been justified in believing that he had discovered a safeguard against the small-pox?[87] These are questions to which it would be most desirable to have a precise answer; but, unhappily, they are questions to which no precise answer can be returned.

We think, then, that it is possible to lay down accurate rules, as Bacon has done, for the performing of that part of the inductive process which all men perform alike; but that these rules, though accurate, are not wanted, because in truth they only tell us to do what we are all doing. We think that it is impossible to lay down any precise rule for the performing of that part of the inductive process which a great experimental philosopher performs in one way, and a superstitious old woman in another.

On this subject, we think, Bacon was in an error. He certainly attributed to his rules a value which did not belong to them. He went so far as to say, that, if his method of making discoveries were adopted, little would depend on the degree of force or acuteness of any intellect; that all minds would be reduced to one level, that his

86. The mind is subject to defects, or false notions, which Bacon classifies under four heads or *Idola* (Idols): (1) *idols of the tribe*, which have their origin in the limitations of human nature; (2) *idols of the cave*, originating in the peculiar constitution and circumstances of the individual; (3) *idols of the marketplace*, verbal fictions and confusions arising from the association of men with one another; and (4) *idols of the theater*, errors arising from accepting philosophical systems, which, like theatrical productions, represent worlds of their own after an unreal and scenic fashion.

87. Edward Jenner (1749–1823), physician, discoverer of vaccination, first vaccinated from cow-pox in 1796.

philosophy resembled a compass or a rule which equalises all hands, and enables the most unpractised person to draw a more correct circle or line than the best draftsmen can produce without such aid. This really seems to us as extravagant as it would have been in Lindley Murray [88] to announce that everybody who should learn his *Grammar* would write as good English as Dryden, or in that very able writer, the Archbishop of Dublin,[89] to promise that all the readers of his *Logic* would reason like Chillingworth,[90] and that all the readers of his *Rhetoric* would speak like Burke. That Bacon was altogether mistaken as to this point will now hardly be disputed. His philosophy has flourished during two hundred years, and has produced none of this levelling. The interval between a man of talents and a dunce is as wide as ever; and is never more clearly discernible than when they engage in researches which require the constant use of induction.

It will be seen that we do not consider Bacon's ingenious analysis of the inductive method as a very useful performance. Bacon was not, as we have already said, the inventor of the inductive method. He was not even the person who first analysed the inductive method correctly, though he undoubtedly analysed it more minutely than any who preceded him. He was not the person who first showed that by the inductive method alone new truth could be discovered. But he was the person who first turned the minds of speculative men, long occupied in verbal disputes, to the discovery of new and useful truth; and, by doing so, he at once gave to the inductive method an importance and dignity which had never before belonged to it. He was not the maker of that road; he was not the discoverer of that road; he was not the person who first surveyed and mapped that road. But he was the person who first called the public attention to an inexhaustible mine of wealth, which had been utterly neglected, and which was accessible by that road alone. By doing so he caused that road, which had previously been trodden only by peasants and higglers, to be frequented by a higher class of travellers.

That which was eminently his own in his system was the end which he proposed to himself. The end being given, the means, as it appears to us, could not well be mistaken. If others had aimed at the same object with Bacon, we hold it to be certain that they would have employed the same method with Bacon. It would have been hard to convince Seneca that the inventing of a safety-lamp was an employment worthy of a philosopher. It would have been hard to persuade Thomas Aquinas [91] to descend from the making of syllogisms to the making of gunpowder. But Seneca would never have doubted for a moment that it was only by means of a series of experiments that a safety-lamp could be invented. Thomas Aquinas would never have thought that his *barbara* and *baralipton* [92] would enable him to ascertain the proportion which charcoal ought to bear to saltpetre in a pound of gunpowder. Neither common sense nor Aristotle would have suffered him to fall into such an absurdity.

By stimulating men to the discovery of new truth, Bacon stimulated them to employ the inductive method, the only method, even the ancient philosophers and

88. Lindley Murray (1745–1826), American grammarian, whose *English Grammar* (1795) was used in the schools of America and England for fifty years, to the exclusion of others.

89. Allusion to Archbishop Richard Whately (1787–1863), whose textbooks on *Logic* and *Rhetoric* were widely used.

90. William Chillingworth (1602–44), Anglican divine, famous for his skill in disputation.

91. Thomas Aquinas (c.1225–74), greatest of the scholastic philosophers, his *Summa Totius Philosophiae*, in its attempt to harmonize faith and reason, forming the culmination of scholastic philosophy, and the intellectual framework of the Roman Catholic faith.

92. *barbara and baralipton*: mnemonic terms, assisting the memory in constructing syllogisms in scholastic logic.

the schoolmen themselves being judges, by which new truth can be discovered. By stimulating men to the discovery of useful truth, he furnished them with a motive to perform the inductive process well and carefully. His predecessors had been, in his phrase, not interpreters, but anticipators of nature. They had been content with the first principles at which they had arrived by the most scanty and slovenly induction. And why was this? It was, we conceive, because their philosophy proposed to itself no practical end, because it was merely an exercise of the mind. A man who wants to contrive a new machine or a new medicine has a strong motive to observe accurately and patiently, and to try experiment after experiment. But a man who merely wants a theme for disputation or declamation has no such motive. He is therefore content with premises grounded on assumption, or on the most scanty and hasty induction. Thus, we conceive, the schoolmen acted. On their foolish premises they often argued with great ability; and as their object was 'assensum subjugare, non res,' to be victorious in controversy not to be victorious over nature, they were consistent. For just as much logical skill could be shown in reasoning on false as on true premises. But the followers of the new philosophy, proposing to themselves the discovery of useful truth as their object, must have altogether failed of attaining that object if they had been content to build theories on superficial induction.

Bacon has remarked that, in ages when philosophy was stationary, the mechanical arts went on improving. Why was this? Evidently because the mechanic was not content with so careless a mode of induction as served the purpose of the philosopher. And why was the philosopher more easily satisfied than the mechanic? Evidently because the object of the mechanic was to mould things, whilst the object of the philosopher was only to mould words. Careful induction is not at all necessary to the making of a good syllogism. But it is indispensable to the making of a good shoe. Mechanics, therefore, have always been, as far as the range of their humble but useful callings extended, not anticipators but interpreters of nature. And when a philosophy arose, the object of which was to do on a large scale what the mechanic does on a small scale, to extend the power and to supply the wants of man, the truth of the premises, which logically is a matter altogether unimportant, became a matter of the highest importance; and the careless induction with which men of learning had previously been satisfied gave place, of necessity, to an induction far more accurate and satisfactory.

What Bacon did for inductive philosophy may, we think, be fairly stated thus. The objects of preceding speculators were objects which could be attained without careful induction. Those speculators, therefore, did not perform the inductive process carefully. Bacon stirred up men to pursue an object which could be attained only by induction, and by induction carefully performed; and consequently induction was more carefully performed. We do not think that the importance of what Bacon did for inductive philosophy has ever been overrated. But we think that the nature of his services is often mistaken, and was not fully understood even by himself. It was not by furnishing philosophers with rules for performing the inductive process well, but by furnishing them with a motive for performing it well, that he conferred so vast a benefit on society.

To give to the human mind a direction which it shall retain for ages is the rare prerogative of a few imperial spirits. It cannot, therefore, be uninteresting to inquire what was the moral and intellectual constitution which enabled Bacon to exercise so vast an influence on the world.

In the temper of Bacon, — we speak of Bacon the philosopher, not of Bacon the lawyer and politician, — there was a singular union of audacity and sobriety. The promises which he made to mankind

might, to a superficial reader, seem to resemble the rants which a great dramatist has put into the mouth of an Oriental conqueror half-crazed by good fortune and by violent passions:

'He shall have chariots easier than air,
Which I will have invented; and thyself
That art the messenger shall ride before him,
On a horse cut out of an entire diamond,
That shall be made to go with golden wheels,
I know not how yet.' [93]

But Bacon performed what he promised. In truth, Fletcher would not have dared to make Arbaces promise, in his wildest fits of excitement, the tithe of what the Baconian philosophy has performed.

The true philosophical temperament may, we think, be described in four words, much hope, little faith; a disposition to believe that anything, however extraordinary, may be done; an indisposition to believe that anything extraordinary has been done. In these points the constitution of Bacon's mind seems to us to have been absolutely perfect. He was at once the Mammon and the Surly of his friend Ben.[94] Sir Epicure did not indulge in visions more magnificent and gigantic. Surly did not sift evidence with keener and more sagacious incredulity.

Closely connected with this peculiarity of Bacon's temper was a striking peculiarity of his understanding. With great minuteness of observation, he had an amplitude of comprehension such as has never yet been vouchsafed to any other human being. The small fine mind of Labruyère [95] had not a more delicate tact than the large intellect of Bacon. The *Essays* contain abundant proofs that no nice feature of character, no peculiarity in the ordering of a house, a garden, or a court-masque, would escape the notice of one whose mind was capable of taking in the whole world of knowledge. His understanding resembled the tent which the fairy Paribanou gave to Prince Ahmed. Fold it; and it seemed a toy for the hand of a lady. Spread it; and the armies of powerful Sultans might repose beneath its shade.[96]

In keenness of observation he has been equalled, though perhaps never surpassed. But the largeness of his mind was all his own. The glance with which he surveyed the intellectual universe resembled that which the Archangel, from the golden threshold of heaven, darted down into the new creation:

'Round he surveyed, — and well might, where he stood
So high above the circling canopy
Of night's extended shade, — from eastern point
Of Libra, to the fleecy star which bears
Andromeda far off Atlantic seas
Beyond the horizon.' [97]

His knowledge differed from that of other men, as a terrestrial globe differs from an Atlas which contains a different country on every leaf. The towns and roads of England, France, and Germany are better laid down in the Atlas than on the globe. But while we are looking at England we see nothing of France; and while we are looking at France we see nothing of Germany. We may go to the Atlas to learn the bearings and distances of York and Bristol, or of Dresden and Prague. But it is useless if we want to know the bearings and distances of France and Martinique, or of England and Canada. On the globe we

shall not find all the market towns in our own neighbourhood; but we shall learn from it the comparative extent and the relative position of all the kingdoms of the earth. 'I have taken,' said Bacon, in a letter written when he was only thirty-one, to his uncle Lord Burleigh, 'I have taken all knowledge to be my province.' In any other young man, indeed in any other man, this would have been a ridiculous flight of presumption. There have been thousands of better mathematicians, astronomers, chemists, physicians, botanists, mineralogists, than Bacon. No man would go to Bacon's works to learn any particular science or art, any more than he would go to a twelve-inch globe in order to find his way from Kennington turnpike to Clapham Common. The art which Bacon taught was the art of inventing arts. The knowledge in which Bacon excelled all men was a knowledge of the mutual relations of all departments of knowledge.

The mode in which he communicated his thoughts was peculiar to him. He had no touch of that disputatious temper which he often censured in his predecessors. He effected a vast intellectual revolution in opposition to a vast mass of prejudices; yet he never engaged in any controversy: nay, we cannot at present recollect, in all his philosophical works, a single passage of a controversial character. All those works might with propriety have been put into the form which he adopted in the work entitled *Cogitata et visa*: 'Franciscus Baconus sic cogitavit.' These are thoughts which have occurred to me: weigh them well: and take them or leave them.

Borgia said of the famous expedition of Charles the Eighth, that the French had conquered Italy, not with steel, but with chalk;[98] for that the only exploit which they had found necessary for the purpose of taking military occupation of any place had been to mark the doors of the houses where they meant to quarter. Bacon often quoted this saying, and loved to apply it to the victories of his own intellect. His philosophy, he said, came as a guest, not as an enemy. She found no difficulty in gaining admittance, without a contest, into every understanding fitted, by its structure and by its capacity, to receive her. In all this we think that he acted most judiciously; first, because, as he has himself remarked, the difference between his school and other schools was a difference so fundamental that there was hardly any common ground on which a controversial battle could be fought; and, secondly, because his mind, eminently observant, preeminently discursive and capacious, was, we conceive, neither formed by nature nor disciplined by habit for dialectical combat.

Though Bacon did not arm his philosophy with the weapons of logic, he adorned her profusely with all the decorations of rhetoric. His eloquence, though not untainted with the vicious taste of his age, would alone have entitled him to a high rank in literature. He had a wonderful talent for packing thought close, and rendering it portable. In wit, if by wit be meant the power of perceiving analogies between things which appear to have nothing in common, he never had an equal, not even Cowley, not even the author of *Hudibras*.[99] Indeed, he possessed this faculty, or rather this faculty possessed him, to a morbid degree. When he abandoned himself to it without reserve, as he did in the *Sapientia Veterum*, and at the end of the second book of the *De Augmentis*, the feats which he performed were not merely admirable,

98. Borgia (Pope Alexander VI [1431–1503]) said this of Charles VIII (1470–98), King of France, when the latter became King of Naples without military effort, 1495.

99. Abraham Cowley (1618–67) was one of the 'metaphysical poets,' who delighted in 'witty conceits,' analogies, far-fetched imagery, etc. — Samuel Butler (1612–80), whose *Hudibras*, a mock-heroic poem in octosyllabic couplets, wittily satirizes the hypocrisy and self-seeking of the Presbyterians and Independents.

but portentous, and almost shocking. On those occasions we marvel at him as clowns on a fair-day marvel at a juggler, and can hardly help thinking that the devil must be in him.

These, however, were freaks in which his ingenuity now and then wantoned, with scarcely any other object than to astonish and amuse. But it occasionally happened that, when he was engaged in grave and profound investigations, his wit obtained the mastery over all his other faculties, and led him into absurdities into which no dull man could possibly have fallen. We will give the most striking instance which at present occurs to us. In the third book of the *De Augmentis* he tells us that there are some principles which are not peculiar to one science, but are common to several. That part of philosophy which concerns itself with these principles is, in his nomenclature, designated as *philosophia prima*. He then proceeds to mention some of the principles with which this *philosophia prima* is conversant. One of them is this. An infectious disease is more likely to be communicated while it is in progress than when it has reached its height. This, says he, is true in medicine. It is also true in morals; for we see that the example of very abandoned men injures public morality less than the example of men in whom vice has not yet extinguished all good qualities. Again, he tells us that in music a discord ending in a concord is agreeable, and that the same thing may be noted in the affections. Once more, he tells us, that in physics the energy with which a principle acts is often increased by the antiperistasis of its opposite; and that it is the same in the contests of factions. If the making of ingenious and sparkling similitudes like these be indeed the *philosophia prima*, we are quite sure that the greatest philosophical work of the nineteenth century is Mr. Moore's *Lalla Rookh*.[100] The similitudes which we have cited are very happy similitudes. But that a man like Bacon should have taken them for more, that he should have thought the discovery of such resemblances as these an important part of philosophy, has always appeared to us one of the most singular facts in the history of letters.

The truth is that his mind was wonderfully quick in perceiving analogies of all sorts. But, like several eminent men whom we could name, both living and dead, he sometimes appeared strangely deficient in the power of distinguishing rational from fanciful analogies, analogies which are arguments from analogies which are mere illustrations, analogies like that which Bishop Butler[101] so ably pointed out, between natural and revealed religion, from analogies like that which Addison discovered, between the series of Grecian gods carved by Phidias and the series of English kings painted by Kneller.[102] This want of discrimination has led to many strange political speculations. Sir William Temple[103] deduced a theory of government from the properties of the pyramid. Mr. Southey's[104] whole system of finance is grounded on the phænomena of evaporation and rain. In theology, this perverted

100. *Lalla Rookh* by Thomas Moore (1779–1852) is a series of Oriental tales in verse, connected by a story in prose, the whole richly ornamented with description and rhetorical figures.

101. Joseph Butler (1692–1752), an Anglican bishop, defended the Christian religion against the Deists in his *The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature* (1736).

102. See Addison's poem *To Sir Godfrey Kneller on his Picture of the King*. Kneller (1646–1723) painted the portraits of Charles II, James II, Queen Anne, George I.

103. Sir William Temple (1628–99) in his *Essay upon the Original and Nature of Government* (1672) draws an analogy between the safety and firmness of a frame of government and that of the pyramids.

104. Robert Southey (1774–1843) in his *Colloquies on the Progress and Prospects of Society* (1829) compares the effect of taxation upon a nation with the effect of evaporation upon fields. (See Macaulay's review of Southey's *Colloquies*.)

ingenuity has made still wilder work. From the time of Irenæus [105] and Origen [106] down to the present day, there has not been a single generation in which great divines have not been led into the most absurd expositions of Scripture, by mere incapacity to distinguish analogies proper, to use the scholastic phrase, from analogies metaphorical. It is curious that Bacon has himself mentioned this very kind of delusion among the *idola specus*; and has mentioned it in language which, we are inclined to think, shows that he knew himself to be subject to it. It is the vice, he tells us, of subtle minds to attach too much importance to slight distinctions; it is the vice, on the other hand, of high and discursive intellects to attach too much importance to slight resemblances; and he adds that, when this last propensity is indulged to excess, it leads men to catch at shadows instead of substances.

Yet we cannot wish that Bacon's wit had been less luxuriant. For, to say nothing of the pleasure which it affords, it was in the vast majority of cases employed for the purpose of making obscure truth plain, of making repulsive truth attractive, of fixing in the mind for ever truth which might otherwise have left but a transient impression.

The poetical faculty was powerful in Bacon's mind, but not, like his wit, so powerful as occasionally to usurp the place of his reason, and to tyrannise over the whole man. No imagination was ever at once so strong and so thoroughly subjugated. It never stirred but at a signal from good sense. It stopped at the first check from good sense. Yet, though disciplined to such obedience, it gave noble proofs of its vigour. In truth, much of Bacon's life was passed in a visionary world, amidst things as strange as any that are described in the Arabian Tales, or in those romances on which the curate and barber of Don Quixote's village performed so cruel an *auto-de-fé*,[107] amidst buildings more sumptuous than the palace of Aladdin, fountains more wonderful than the golden water of Parizade, conveyances more rapid than the hippogryph of Ruggiero, arms more formidable than the lance of Astolfo, remedies more efficacious than the balsam of Fierabras.[108] Yet in his magnificent day-dreams there was nothing wild, nothing but what sober reason sanctioned. He knew that all the secrets feigned by poets to have been written in the books of enchanters are worthless when compared with the mighty secrets which are really written in the book of nature, and which, with time and patience, will be read there. He knew that all the wonders wrought by all the talismans in fable were trifles when compared to the wonders which might reasonably be expected from the philosophy of fruit, and that, if his words sank deep into the minds of men, they would produce effects such as superstition had never ascribed to the incantations of Merlin and Michael Scott.[109] It was here that he loved to let his imagination loose. He loved to picture to himself the world as it would be when his philosophy should, in his own noble phrase, 'have enlarged the bounds of human empire.' We might refer to many instances. But we

108. Ruggiero and Astolfo are characters in Ariosto's *Orlando Furioso*: the former traveled on a hippogryph (half horse and half griffin) to rescue Angelica; the latter had a lance of extraordinary powers. — Fierabras, the Saracen hero in two romances of Charlemagne, had a balsam which alone would heal wounds made by his weapons.

109. Michael Scott (1175?–1234?), a Scottish scholar, about whom there gathered legends of his power as a magician.

will content ourselves with the strongest, the description of the House of Solomon in the *New Atlantis*. By most of Bacon's contemporaries, and by some people of our time, this remarkable passage would, we doubt not, be considered as an ingenious rodomontade, a counterpart to the adventures of Sinbad or Baron Munchausen.[110] The truth is, that there is not to be found in any human composition a passage more eminently distinguished by profound and serene wisdom. The boldness and originality of the fiction is far less wonderful than the nice discernment which carefully excluded from that long list of prodigies everything that can be pronounced impossible, everything that can be proved to lie beyond the mighty magic of induction and time. Already some parts, and not the least startling parts, of this glorious prophecy have been accomplished, even according to the letter; and the whole, construed according to the spirit, is daily accomplishing all around us.

One of the most remarkable circumstances in the history of Bacon's mind is the order in which its powers expanded themselves. With him the fruit came first and remained till the last: the blossoms did not appear till late. In general, the development of the fancy is to the development of the judgment what the growth of a girl is to the growth of a boy. The fancy attains at an earlier period to the perfection of its beauty, its power, and its fruitfulness; and, as it is first to ripen, it is also first to fade. It has generally lost something of its bloom and freshness before the sterner faculties have reached maturity; and is commonly withered and barren while those faculties still retain all their energy. It rarely happens that the fancy and the judgment grow together. It happens still more rarely that the judgment grows faster than the fancy. This seems, however, to have been the case with Bacon. His boyhood and youth appear to have been singularly sedate. His gigantic scheme of philosophical reform is said by some writers to have been planned before he was fifteen, and was undoubtedly planned while he was still young. He observed as vigilantly, meditated as deeply, and judged as temperately when he gave his first work to the world as at the close of his long career. But in eloquence, in sweetness and variety of expression, and in richness of illustration, his later writings are far superior to those of his youth. In this respect the history of his mind bears some resemblance to the history of the mind of Burke. The treatise on the Sublime and Beautiful,[111] though written on a subject which the coldest metaphysician could hardly treat without being occasionally betrayed into florid writing, is the most unadorned of all Burke's works. It appeared when he was twenty-five or twenty-six. When, at forty, he wrote the *Thoughts on the Causes of the existing Discontents*,[112] his reason and his judgment had reached their full maturity: but his eloquence was still in its splendid dawn. At fifty, his rhetoric was quite as rich as good taste would permit: and when he died, at almost seventy, it had become ungracefully gorgeous. In his youth he wrote on the emotions produced by mountains and cascades, by the masterpieces of painting and sculpture, by the faces and necks of beautiful women, in the style of a Parliamentary report. In his old age he discussed treaties and tariffs in the most fervid and brilliant language of romance. It is strange that the *Essay on the Sublime and Beautiful*, and the *Letter to*

110. The adventures of Sinbad the Sailor are narrated in the *Arabian Nights*. — *Baron Munchausen, a Narrative of his Marvellous Travels*, by Rudolph Erich Raspe, was published in 1785. The original Baron Munchausen is said to have lived in 1720–97, to have served in the Russian army against the Turks, and to have told tall stories of his experiences. Raspe, a German adventurer who fled to England to escape the consequences of theft, sought an income by publishing in English a version of the Baron's stories.

a Noble Lord,[118] should be the productions of one man. But it is far more strange that the *Essay* should have been a production of his youth, and the *Letter* of his old age.

We will give very short specimens of Bacon's two styles. In 1597, he wrote thus: 'Crafty men contemn studies; simple men admire them; and wise men use them; for they teach not their own use: that is a wisdom without them, and won by observation. Read not to contradict, nor to believe, but to weigh and consider. Some books are to be tasted, others to be swallowed, and some few to be chewed and digested. Reading maketh a full man, conference a ready man, and writing an exact man. And therefore if a man write little, he had need have a great memory; if he confer little, have a present wit; and if he read little, have much cunning to seem to know that he doth not. Histories make men wise, poets witty, the mathematics subtle, natural philosophy deep, morals grave, logic and rhetoric able to contend.' It will hardly be disputed that this is a passage to be 'chewed and digested.' We do not believe that Thucydides[114] himself has anywhere compressed so much thought into so small a space.

In the additions which Bacon afterwards made to the *Essays*, there is nothing superior in truth or weight to what we have quoted. But his style was constantly becoming richer and softer. The following passage, first published in 1625, will show the extent of the change: 'Prosperity is the blessing of the Old Testament; adversity is the blessing of the New, which carrieth the greater benediction and the clearer evidence of God's favour. Yet, even in the Old Testament, if you listen to David's harp you shall hear as many hearse-like airs as carols; and the pencil of the Holy Ghost hath laboured more in describing the afflictions of Job than the felicities of Solomon. Prosperity is not without many fears and distastes; and adversity is not without comforts and hopes. We see in needle-works and embroideries it is more pleasing to have a lively work upon a sad and solemn ground, than to have a dark and melancholy work upon a lightsome ground. Judge therefore of the pleasure of the heart by the pleasure of the eye. Certainly virtue is like precious odours, most fragrant when they are incensed or crushed; for prosperity doth best discover vice, but adversity doth best discover virtue.'

It is by the *Essays* that Bacon is best known to the multitude. The *Novum Organum* and the *De Augmentis* are much talked of, but little read. They have produced indeed a vast effect on the opinions of mankind; but they have produced it through the operation of intermediate agents. They have moved the intellects which have moved the world. It is in the *Essays* alone that the mind of Bacon is brought into immediate contact with the minds of ordinary readers. There he opens an exoteric school, and talks to plain men, in language which everybody understands, about things in which everybody is interested. He has thus enabled those who must otherwise have taken his merits on trust to judge for themselves; and the great body of readers have, during several generations, acknowledged that the man who has treated with such consummate ability questions with which they are familiar may well be supposed to deserve all the praise bestowed on him by those who have sat in his inner-school.

Without any disparagement to the admirable treatise *De Augmentis*, we must say that, in our judgment, Bacon's greatest performance is the first book of the *Novum Organum*. All the peculiarities of his extraordinary mind are found there in the highest perfection. Many of the aphorisms, but particularly those in which he gives

113. Published in 1796.

114. The great Athenian historian (c.471–c.401 B.C.), whose history of the war between Athens and Sparta is concise sometimes to the point of obscurity.

examples of the influence of the *idola*, show a nicety of observation that has never been surpassed. Every part of the book blazes with wit, but with wit which is employed only to illustrate and decorate truth. No book ever made so great a revolution in the mode of thinking, overthrew so many prejudices, introduced so many new opinions. Yet no book was ever written in a less contentious spirit. It truly conquers with chalk and not with steel. Proposition after proposition enters into the mind, is received not as an invader, but as a welcome friend, and, though previously unknown, becomes at once domesticated. But what we most admire is the vast capacity of that intellect which, without effort, takes in at once all the domains of science, all the past, the present, and the future, all the errors of two thousand years, all the encouraging signs of the passing times, all the bright hopes of the coming age. Cowley, who was among the most ardent, and not among the least discerning followers of the new philosophy, has, in one of his finest poems, compared Bacon to Moses standing on Mount Pisgah.[115] It is to Bacon, we think, as he appears in the first book of the *Novum Organum*, that the comparison applies with peculiar felicity. There we see the greater Lawgiver looking round from his lonely elevation on an infinite expanse; behind him a wilderness of dreary sands and bitter waters in which successive generations have sojourned, always moving, yet never advancing, reaping no harvest, and building no abiding city; before him a goodly land, a land of promise, a land flowing with milk and honey. While the multitude below saw only the flat sterile desert in which they had so long wandered, bounded on every side by a near horizon, or diversified only by some deceitful mirage, he was gazing from a far higher stand on a far lovelier country, following with his eye the long course of fertilising rivers, through ample pastures, and under the bridges of great capitals, measuring the distances of marts and havens, and portioning out all those wealthy regions from Dan to Beersheba.

It is painful to turn back from contemplating Bacon's philosophy to contemplate his life. Yet without so turning back it is impossible fairly to estimate his powers. He left the University at an earlier age than that at which most people repair thither. While yet a boy he was plunged into the midst of diplomatic business. Thence he passed to the study of a vast technical system of law, and worked his way up through a succession of laborious offices to the highest post in his profession. In the meantime he took an active part in every Parliament; he was an adviser of the Crown: he paid court with the greatest assiduity and address to all whose favour was likely to be of use to him; he lived much in society; he noted the slightest peculiarities of character and the slightest changes of fashion. Scarcely any man has led a more stirring life than that which Bacon led from sixteen to sixty. Scarcely any man has been better entitled to be called a thorough man of the world. The founding of a new philosophy, the imparting of a new direction to the minds of speculators, this was the amusement of his leisure, the work of hours occasionally stolen from the Woolsack [116] and the Council Board. This consideration, while it increases the admiration with which we regard his intellect, increases also our regret that such an intellect should so often have been unworthily employed. He well knew the better course, and had, at one time, resolved to pursue it. 'I confess,' said he in a letter written when he was still young, 'that I have as vast contemplative ends as I have moderate civil ends.' Had his civil ends continued to be moderate, he would have

115. See Cowley's ode *To the Royal Society*. — It was from Mount Pisgah that Moses viewed the Promised Land. (*Deuteronomy*, iii,27; xxxiv,1; etc.)

116. The seat of the English Lord Chancellor in the House of Lords, a sack of wool in shape like a divan.

been, not only the Moses, but the Joshua of philosophy.[117] He would have fulfilled a large part of his own magnificent predictions. He would have led his followers, not only to the verge, but into the heart of the promised land. He would not merely have pointed out, but would have divided the spoil. Above all, he would have left, not only a great, but a spotless name. Mankind would then have been able to esteem their illustrious benefactor. We should not then be compelled to regard his character with mingled contempt and admiration, with mingled aversion and gratitude. We should not then regret that there should be so many proofs of the narrowness and selfishness of a heart, the benevolence of which was large enough to take in all races and all ages. We should not then have to blush for the disingenuousness of the most devoted worshipper of speculative truth, for the servility of the boldest champion of intellectual freedom. We should not then have seen the same man at one time far in the van, and at another time far in the rear of his generation. We should not then be forced to own that he who first treated legislation as a science was among the last Englishmen who used the rack, that he who first summoned philosophers to the great work of interpreting nature was among the last Englishmen who sold justice. And we should conclude our survey of a life placidly, honourably, beneficently passed, 'in industrious observations, grounded conclusions, and profitable inventions and discoveries,'[118] with feelings very different from those with which we now turn away from the checkered spectacle of so much glory and so much shame.

117. *i.e.* not only the man of vision but also the practical leader.

118. From a Letter of Bacon to Lord Burleigh. [Macaulay's note.]

LORD CLIVE

We have always thought it strange that, while the history of the Spanish empire in America is familiarly known to all the nations of Europe, the great actions of our countrymen in the East should, even among ourselves, excite little interest. Every schoolboy knows who imprisoned Montezuma, and who strangled Atahualpa.[1] But we doubt whether one in ten, even among English gentlemen of highly cultivated minds, can tell who won the battle of Buxar, who perpetrated the massacre of Patna, whether Sujah Dowlah ruled in Oude or in Travancore, or whether Holkar was a Hindoo or a Mussulman.[2] Yet the victories of Cortes were gained over savages who had no letters, who were ignorant of the use of metals, who had not broken in a single animal to labour, who wielded no better weapons than those which could be made out of sticks, flints, and fish-bones, who regarded a horse-soldier as a monster, half man and half beast, who took a harquebusier for a sorcerer, able to scatter the thunder and lightning of the skies. The people of India, when we subdued them, were ten times as numerous as the Americans whom the Spaniards vanquished, and were at the same time quite as highly civilised as the victorious Spaniards. They had reared cities larger and fairer than Saragossa or Toledo, and buildings more beautiful and costly than the cathedral of Seville. They

1. Montezuma, Emperor of Mexico, was seized by Cortez in 1519; Atahualpa, King of Peru, was captured and put to death by Pizarro in 1532.

2. In the battle of Buxar, Sir Hector Munro (1726–1805) defeated Sujah Dowlah and Meer Cossim in 1764. Patna, an important center of commerce in India, had been seized in 1763 by an English agent; in the war which followed, the nawab of Bengal recaptured the city, and had nearly 200 English prisoners massacred by one of his officers, an Alsatian named Reinhardt. Holkar was a Mahratta chief whose headquarters were at Indore.

could show bankers richer than the richest firms of Barcelona or Cadiz, viceroys whose splendour far surpassed that of Ferdinand the Catholic,[3] myriads of cavalry and long trains of artillery which would have astonished the Great Captain.[4] It might have been expected, that every Englishman who takes any interest in any part of history would be curious to know how a handful of his countrymen, separated from their home by an immense ocean, subjugated, in the course of a few years, one of the greatest empires in the world. Yet, unless we greatly err, this subject is, to most readers, not only insipid, but positively distasteful.

Perhaps the fault lies partly with the historians. Mr. Mill's book,[5] though it has undoubtedly great and rare merit, is not sufficiently animated and picturesque to attract those who read for amusement. Orme,[6] inferior to no English historian in style and power of painting, is minute even to tediousness. In one volume he allots, on an average, a closely printed quarto page to the events of every forty-eight hours. The consequence is, that his narrative, though one of the most authentic and one of the most finely written in our language, has never been very popular, and is now scarcely ever read.

We fear that the volumes before us will not much attract those readers whom Orme and Mill have repelled. The materials placed at the disposal of Sir John Malcolm by the late Lord Powis were indeed of great value. But we cannot say that they have been very skilfully worked up. It would, however, be unjust to criticise with severity a work which, if the author had lived to complete and revise it, would probably have been improved by condensation and by a better arrangement. We are more disposed to perform the pleasing duty of expressing our gratitude to the noble family to which the public owes so much useful and curious information.

The effect of the book, even when we make the largest allowance for the partiality of those who have furnished and of those who have digested the materials, is, on the whole, greatly to raise the character of Lord Clive. We are far indeed from sympathising with Sir John Malcolm, whose love passes the love of biographers, and who can see nothing but wisdom and justice in the actions of his idol. But we are at least equally far from concurring in the severe judgment of Mr. Mill, who seems to us to show less discrimination in his account of Clive than in any other part of his valuable work. Clive, like most men who are born with strong passions and tried by strong temptations, committed great faults. But every person who takes a fair and enlightened view of his whole career must admit that our island, so fertile in heroes and statesmen, has scarcely ever produced a man more truly great either in arms or in council.

The Clives had been settled, ever since the twelfth century, on an estate of no great value, near Market-Drayton, in Shropshire. In the reign of George the First this moderate but ancient inheritance was possessed by Mr. Richard Clive, who seems to have been a plain man of no great tact or capacity. He had been bred to the law, and divided his time between professional business and the avocations of a small proprietor. He married a lady from Manchester, of the name of Gaskill, and became the father of a very numerous family. His eldest son, Robert, the founder of the British empire in India, was born

3. 1452–1516; founder of the Spanish monarchy. The five cities mentioned were great and flourishing cities during Spain's commercial and maritime prosperity between the 15th and 18th centuries.
4. *El Gran Capitán*, Hernandez Gonsalvo de Córdoba (1453–1515) won renown through his exploits in the recovery of Naples from the French, with soldiers equipped with sword, buckler, and crossbow.
5. James Mill's *History of India* (1818).
6. Robert Orme (1728–1801), author of a *History of the Military Transactions of the British Nation in Indostan from 1745* (1763, 1778); historiographer of the East India Company.

at the old seat of his ancestors on the twenty-ninth of September, 1725.

Some lineaments of the character of the man were early discerned in the child. There remain letters written by his relations when he was in his seventh year; and from these letters it appears that, even at that early age, his strong will and his fiery passions, sustained by a constitutional intrepidity which sometimes seemed hardly compatible with soundness of mind, had begun to cause great uneasiness to his family. 'Fighting,' says one of his uncles, 'to which he is out of measure addicted, gives his temper such a fierceness and imperiousness, that he flies out on every trifling occasion.' The old people of the neighbourhood still remember to have heard from their parents how Bob Clive climbed to the top of the lofty steeple of Market-Drayton, and with what terror the inhabitants saw him seated on a stone spout near the summit. They also relate how he formed all the idle lads of the town into a kind of predatory army, and compelled the shopkeepers to submit to a tribute of apples and half pence, in consideration of which he guaranteed the security of their windows. He was sent from school to school, making very little progress in his learning, and gaining for himself everywhere the character of an exceedingly naughty boy. One of his masters, it is said, was sagacious enough to prophesy that the idle lad would make a great figure in the world. But the general opinion seems to have been that poor Robert was a dunce, if not a reprobate. His family expected nothing good from such slender parts and such a headstrong temper. It is not strange therefore, that they gladly accepted for him, when he was in his eighteenth year, a writership in the service of the East India Company,[7] and shipped him off to make a fortune or to die of a fever at Madras.

7. The company of merchants trading to the East Indies, incorporated in 1660, and, from 1773 to 1858, providing the chief political administration of Hindustan.

Far different were the prospects of Clive from those of the youths whom the East India College now annually sends to the Presidencies of our Asiatic empire. The Company was then purely a trading corporation. Its territory consisted of a few square miles, for which rent was paid to the native governments. Its troops were scarcely numerous enough to man the batteries of three or four ill-constructed forts, which had been erected for the protection of the warehouses. The natives, who composed a considerable part of these little garrisons, had not yet been trained in the discipline of Europe, and were armed, some with swords and shields, some with bows and arrows. The business of the servant of the Company was not, as now, to conduct the judicial, financial, and diplomatic business of a great country, but to take stock, to make advances to weavers, to ship cargoes, and above all to keep an eye on private traders who dared to infringe the monopoly. The younger clerks were so miserably paid that they could scarcely subsist without incurring debt; the elder enriched themselves by trading on their own account; and those who lived to rise to the top of the service often accumulated considerable fortunes.

Madras, to which Clive had been appointed, was, at this time, perhaps, the first in importance of the Company's settlements. In the preceding century Fort St. George had arisen on a barren spot beaten by a raging surf; and in the neighbourhood a town, inhabited by many thousands of natives, had sprung up, as towns spring up in the East, with the rapidity of the prophet's gourd. There were already in the suburbs many white villas, each surrounded by its garden, whither the wealthy agents of the Company retired, after the labours of the desk and the warehouse, to enjoy the cool breeze which springs up at sunset from the Bay of Bengal. The habits of these mercantile grandees appear to have been more profuse, luxurious, and ostentatious, than those of the high judicial and

political functionaries who have succeeded them. But comfort was far less understood. Many devices which now mitigate the heat of the climate, preserve health, and prolong life, were unknown. There was far less intercourse with Europe than at present. The voyage by the Cape, which in our time has often been performed within three months, was then very seldom accomplished in six, and was sometimes protracted to more than a year. Consequently, the Anglo-Indian was then much more estranged from his country, much more addicted to Oriental usages, and much less fitted to mix in society after his return to Europe, than the Anglo-Indian of the present day.

Within the fort and its precinct, the English exercised, by permission of the native government, an extensive authority, such as every great Indian landowner exercised within his own domain. But they had never dreamed of claiming independent power. The surrounding country was ruled by the Nabob of the Carnatic, a deputy of the Viceroy of the Deccan, commonly called the Nizam, who was himself only a deputy of the mighty prince designated by our ancestors as the Great Mogul. Those names, once so august and formidable, still remain. There is still a Nabob of the Carnatic, who lives on a pension allowed to him by the English out of the revenues of the provinces which his ancestors ruled. There is still a Nizam, whose capital is overawed by a British cantonment, and to whom a British resident gives, under the name of advice, commands which are not to be disputed. There is still a Mogul, who is permitted to play at holding courts and receiving petitions, but who has less power to help or hurt than the youngest civil servant of the Company.

Clive's voyage was unusually tedious even for that age. The ship remained some months at the Brazils, where the young adventurer picked up some knowledge of Portuguese, and spent all his pocket-money. He did not arrive in India till more than a year after he had left England. His situation at Madras was most painful. His funds were exhausted. His pay was small. He had contracted debts. He was wretchedly lodged, no small calamity in a climate which can be made tolerable to an European only by spacious and well placed apartments. He had been furnished with letters of recommendation to a gentleman who might have assisted him; but when he landed at Fort St. George he found that this gentleman had sailed for England. The lad's shy and haughty disposition withheld him from introducing himself to strangers. He was several months in India before he became acquainted with a single family. The climate affected his health and spirits. His duties were of a kind ill-suited to his ardent and daring character. He pined for his home, and in his letters to his relations expressed his feelings in language softer and more pensive than we should have expected either from the waywardness of his boyhood, or from the inflexible sternness of his later years. 'I have not enjoyed,' says he, 'one happy day since I left my native country'; and again, 'I must confess, at intervals, when I think of my dear native England, it affects me in a very peculiar manner. . . . If I should be so far blest as to revisit again my own country, but more especially Manchester, the centre of all my wishes, all that I could hope or desire for would be presented before me in one view.'

One solace he found of the most respectable kind. The Governor possessed a good library, and permitted Clive to have access to it. The young man devoted much of his leisure to reading, and acquired at this time almost all the knowledge of books that he ever possessed. As a boy he had been too idle, as a man he soon became too busy, for literary pursuits.

But neither climate nor poverty, neither study nor the sorrows of a home-sick exile, could tame the desperate audacity of his spirit. He behaved to his official superiors as he had behaved to his schoolmasters,

and he was several times in danger of losing his situation. Twice, while residing in the Writers' Buildings, he attempted to destroy himself; and twice the pistol which he snapped at his own head failed to go off. This circumstance, it is said, affected him as a similar escape affected Wallenstein.[8] After satisfying himself that the pistol was really well loaded, he burst forth into an exclamation that surely he was reserved for something great.

About this time an event which at first seemed likely to destroy all his hopes in life suddenly opened before him a new path to eminence. Europe had been, during some years, distracted by the war of the Austrian succession.[9] George the Second was the steady ally of Maria Theresa. The house of Bourbon took the opposite side. Though England was even then the first of maritime powers, she was not, as she has since become, more than a match on the sea for all the nations of the world together; and she found it difficult to maintain a contest against the united navies of France and Spain. In the eastern seas France obtained the ascendency. Labourdonnais,[10] governor of Mauritius, a man of eminent talents and virtues, conducted an expedition to the continent of India in spite of the opposition of the British fleet, landed, assembled an army, appeared before Madras, and compelled the town and fort to capitulate. The keys were delivered up; the French colours were displayed on Fort St. George; and the contents of the Company's warehouses were seized as prize of war by the conquerors. It was stipulated by the capitulation that the English inhabitants should be prisoners of war on parole, and that the town should remain in the hands of the French till it should be ransomed. Labourdonnais pledged his honour that only a moderate ransom should be required.

But the success of Labourdonnais had awakened the jealousy of his countryman, Dupleix, governor of Pondicherry.[11] Dupleix, moreover, had already begun to revolve gigantic schemes, with which the restoration of Madras to the English was by no means compatible. He declared that Labourdonnais had gone beyond his powers; that conquests made by the French arms on the continent of India were at the disposal of the governor of Pondicherry alone; and that Madras should be razed to the ground. Labourdonnais was compelled to yield. The anger which the breach of the capitulation excited among the English was increased by the ungenerous manner in which Dupleix treated the principal servants of the Company. The Governor and several of the first gentlemen of Fort St. George were carried under a guard to Pondicherry, and conducted through the town in a triumphal procession under the eyes of fifty thousand spectators. It was with reason thought that this gross violation of public faith absolved the inhabitants of Madras from the engagements into which they had entered with Labourdonnais. Clive fled from the town by night in the disguise of a Mussulman, and took refuge at Fort St. David, one of the small English settlements subordinate to Madras.

8. Albrecht von Wallenstein (1583–1634), Austrian general, under Emperor Ferdinand II, in the Thirty Years' War. According to a legend, Wallenstein, while dreaming, threw himself from a parapet, but escaped unhurt, and interpreted the incident as revealing a protective Power ruling over him.

9. In this war, the Elector of Bavaria and Maria Theresa both claimed the throne of Charles VI, Emperor of Germany, on his death in 1740. England and Holland sided with Maria Theresa, daughter of the Emperor; France (the house of Bourbon) and Spain sided with the Elector.

10. Bertrand, Count Mahé de la Bourdonnais (1699–1753), French naval commander, entered the French East India Company, and became governor of the Ile de France, an island in the Indian Ocean, later called Mauritius.

11. Joseph François Dupleix (1697–1763), Governor General of the French establishment in India, had made several voyages to America and India, and in 1720 was named a member of the superior council at Pondicherry.

The circumstances in which he was now placed naturally led him to adopt a profession better suited to his restless and intrepid spirit than the business of examining packages and casting accounts. He solicited and obtained an ensign's commission in the service of the Company, and at twenty-one entered on his military career. His personal courage, of which he had, while still a writer, given signal proof by a desperate duel with a military bully who was the terror of Fort St. David, speedily made him conspicuous even among hundreds of brave men. He soon began to show in his new calling other qualities which had not before been discerned in him, judgment, sagacity, deference to legitimate authority. He distinguished himself highly in several operations against the French, and was particularly noticed by Major Lawrence, who was then considered as the ablest British officer in India.

Clive had been only a few months in the army when intelligence arrived that peace had been concluded between Great Britain and France. Dupleix was in consequence compelled to restore Madras to the English Company; and the young ensign was at liberty to resume his former business. He did indeed return for a short time to his desk. He again quitted it in order to assist Major Lawrence in some petty hostilities with the natives, and then again returned to it. While he was thus wavering between a military and a commercial life, events took place which decided his choice. The politics of India assumed a new aspect. There was peace between the English and French Crowns; but there arose between the English and French Companies trading to the East a war most eventful and important, a war in which the prize was nothing less than the magnificent inheritance of the house of Tamerlane.[12]

The empire which Baber and his Moguls reared in the sixteenth century was long one of the most extensive and splendid in the world. In no European kingdom was so large a population subject to a single prince, or so large a revenue poured into the treasury. The beauty and magnificence of the buildings erected by the sovereigns of Hindostan amazed even travellers who had seen St. Peter's. The innumerable retinues and gorgeous decorations which surrounded the throne of Delhi dazzled even eyes which were accustomed to the pomp of Versailles. Some of the great viceroys who held their posts by virtue of commissions from the Mogul ruled as many subjects as the King of France or the Emperor of Germany. Even the deputies of these deputies might well rank, as to extent of territory and amount of revenue, with the Grand Duke of Tuscany, or the Elector of Saxony.

There can be little doubt that this great empire, powerful and prosperous as it appears on a superficial view, was yet, even in its best days, far worse governed than the worst governed parts of Europe now are. The administration was tainted with all the vices of Oriental despotism, and with all the vices inseparable from the domination of race over race. The conflicting pretensions of the princes of the royal house produced a long series of crimes and public disasters. Ambitious lieutenants of the sovereign sometimes aspired to independence. Fierce tribes of Hindoos, impatient of a foreign yoke, frequently withheld tribute, repelled the armies of the government from the mountain fastnesses, and poured down in arms on the cultivated plains. In spite, however, of much constant maladministration, in spite of occasional convulsions which shook the whole frame of society, this great monarchy, on the whole, retained, during some generations, an outward appearance of unity, majesty, and energy. But, throughout the long reign of Aurungzebe,[13] the state, notwith-

12. The Tartar who invaded India in 1398, and whose descendant, Baber, founded the Mogul dynasty.

13. Aurungzebe (1618–1707), one of the greatest of the Mogul emperors of Hindustan, dethroned and succeeded Shah Jehan in 1658.

standing all that the vigour and policy of the prince could effect, was hastening to dissolution. After his death, which took place in the year 1707, the ruin was fearfully rapid. Violent shocks from without co-operated with an incurable decay which was fast proceeding within; and in a few years the empire had undergone utter decomposition.

The history of the successors of Theodosius [14] bears no small analogy to that of the successors of Aurungzebe. But perhaps the fall of the Carlovingians furnishes the nearest parallel to the fall of the Moguls. Charlemagne [15] was scarcely interred when the imbecility and the disputes of his descendants began to bring contempt on themselves and destruction on their subjects. The wide dominion of the Franks was severed into a thousand pieces. Nothing more than a nominal dignity was left to the abject heirs of an illustrious name, Charles the Bald, and Charles the Fat, and Charles the Simple. Fierce invaders, differing from each other in race, language, and religion, flocked, as if by concert, from the farthest corners of the earth, to plunder provinces which the government could no longer defend. The pirates of the Northern Sea extended their ravages from the Elbe to the Pyrenees, and at length fixed their seat in the rich valley of the Seine. The Hungarian, in whom the trembling monks fancied that they recognised the Gog or Magog [16] of prophecy, carried back the plunder of the cities of Lombardy to the depths of the Pannonian forests. The Saracen ruled in Sicily, desolated the fertile plains of Campania, and spread terror even to the walls of Rome.

14. Theodosius the Great (c.346–95). Roman emperor who divided his empire between his sons, who failed to check the advance of the Goths and Vandals.

15. Charlemagne (742–814). King of the Franks (768) and emperor of the West (800), on whose death the empire was disrupted

16. The nations of the earth that are deceived by Satan, and are hostile to the chosen people. See *Revelation*, xx,7–9.

In the midst of these sufferings, a great internal change passed upon the empire. The corruption of death began to ferment into new forms of life. While the great body, as a whole, was torpid and passive, every separate member began to feel with a sense and to move with an energy all its own. Just here, in the most barren and dreary tract of European history, all feudal privileges, all modern nobility, take their source. It is to this point, that we trace the power of those princes who, nominally vassals, but really independent, long governed, with the titles of dukes, marquesses, and counts, almost every part of the dominions which had obeyed Charlemagne.

Such or nearly such was the change which passed on the Mogul empire during the forty years which followed the death of Aurungzebe. A succession of nominal sovereigns, sunk in indolence and debauchery, sauntered away life in secluded palaces, chewing bang,[17] fondling concubines, and listening to buffoons. A succession of ferocious invaders descended through the western passes, to prey on the defenceless wealth of Hindostan. A Persion conqueror crossed the Indus, marched through the gates of Delhi, and bore away in triumph those treasures of which the magnificence had astounded Roe and Bernier, the Peacock Throne, on which the richest jewels of Golconda had been disposed by the most skilful hands of Europe, and the inestimable Mountain of Light, which, after many strange vicissitudes, lately shone in the bracelet of Runjeet Sing, and is now destined to adorn the hideous idol of Orissa.[18] The Afghan soon followed to

17. Or *bhang*, a narcotic and intoxicant made of dried hemp leaves and twigs.

18. Nadir Shah (1688–1747) who invaded India in 1739. *The Peacock Throne*: so named because of two peacocks, in precious stones, standing behind it, with spreading tails. — *Golconda*: the city in India, famous for its mines. — *Mountain of Light*: the Koh-i-noor diamond, now among the English crown jewels. — *hideous idol*: the Juggernaut in the temple of Puri, at Orissa. — Sir Thomas Roe (c.1581–1644) was lord ambassador to the

complete the work of the devastation which the Persian had begun. The warlike tribes of Rajpootana threw off the Mussulman yoke. A band of mercenary soldiers occupied Rohilcund. The Seiks ruled on the Indus. The Jauts spread dismay along the Jumna. The highlands which border on the western sea-coast of India poured forth a yet more formidable race, a race which was long the terror of every native power, and which, after many desperate and doubtful struggles, yielded only to the fortune and genius of England. It was under the reign of Aurungzebe that this wild clan of plunderers first descended from their mountains; and soon after his death, every corner of his wide empire learned to tremble at the mighty name of the Mahrattas. Many fertile viceroyalties were entirely subdued by them. Their dominions stretched across the peninsula from sea to sea. Mahratta captains reigned at Poonah, at Gualior, in Guzerat, in Berar, and in Tanjore. Nor did they, though they had become great sovereigns, therefore cease to be freebooters. They still retained the predatory habits of their forefathers. Every region which was not subject to their rule was wasted by their incursions. Wherever their kettle-drums were heard, the peasant threw his bag of rice on his shoulder, hid his small savings in his girdle, and fled with his wife and children to the mountains or the jungles, to the milder neighbourhood of the hyæna and the tiger. Many provinces redeemed their harvests by the payment of an annual ransom. Even the wretched phantom who still bore the imperial title stooped to pay this ignominious black-mail. The camp-fires of one rapacious leader were seen from the walls of the palace of Delhi. Another, at the head of his innumerable cavalry, descended year after year on the rice-fields of Bengal. Even the European factors trembled for their magazines. Less than a hundred years ago, it was thought necessary to fortify Calcutta against the horsemen of Berar, and the name of the Mahratta ditch still preserves the memory of the danger.

court of Jehângîr, Mogul emperor of Hindustan, and through the commercial treaty of 1615–18, laid the foundation of greatness of British India. — François Bernier (1620–88), French court physician to Aurungzebe, who described the Mogul's palace in his *Travels*.

Wherever the viceroys of the Mogul retained authority they became sovereigns. They might still acknowledge in words the superiority of the house of Tamerlane; as a Count of Flanders or a Duke of Burgundy might have acknowledged the superiority of the most helpless driveller among the later Carlovingians. They might occasionally send to their titular sovereign a complimentary present, or solicit from him a title of honour. In truth, however, they were no longer lieutenants removable at pleasure, but independent hereditary princes. In this way originated those great Mussulman houses which formerly ruled Bengal and the Carnatic, and those which still, though in a state of vassalage, exercise some of the powers of royalty at Lucknow and Hyderabad.

In what was this confusion to end? Was the strife to continue during centuries? Was it to terminate in the rise of another great monarchy? Was the Mussulman or the Mahratta to be the Lord of India? Was another Baber to descend from the mountains, and to lead the hardy tribes of Cabul and Chorasan against a wealthier and less warlike race? None of these events seemed improbable. But scarcely any man, however sagacious, would have thought it possible that a trading company, separated from India by fifteen thousand miles of sea, and possessing in India only a few acres for purposes of commerce, would, in less than a hundred years, spread its empire from Cape Comorin to the eternal snow of the Himalayas; would compel Mahratta and Mahommedan to forget their mutual feuds in common subjection; would tame down even those wild races which had resisted the most powerful of the Moguls; and, having united under its laws a hundred millions of subjects, would carry its

victorious arms far to the east of the Burrampooter, and far to the west of the Hydaspes, dictate terms of peace at the gates of Ava, and seat its vassal on the throne of Candahar.

The man who first saw that it was possible to found an European empire on the ruins of the Mogul monarchy was Dupleix. His restless, capacious, and inventive mind had formed this scheme, at a time when the ablest servants of the English Company were busied only about invoices and bills of lading. Nor had he only proposed to himself the end. He had also a just and distinct view of the means by which it was to be attained. He clearly saw that the greatest force which the princes of India could bring into the field would be no match for a small body of men trained in the discipline, and guided by the tactics, of the West. He saw also that the natives of India might, under European commanders, be formed into armies, such as Saxe or Frederic would be proud to command.[19] He was perfectly aware that the most easy and convenient way in which an European adventurer could exercise sovereignty in India, was to govern the motions, and to speak through the mouth of some glittering puppet dignified by the title of Nabob or Nizam. The arts both of war and policy, which a few years later were employed with such signal success by the English, were first understood and practised by this ingenious and aspiring Frenchman.

The situation of India was such that scarcely any aggression could be without a pretext, either in old laws or in recent practice. All rights were in a state of utter uncertainty; and the Europeans who took part in the disputes of the natives confounded the confusion, by applying to Asiatic politics the public law of the West, and analogies drawn from the feudal system. If it was convenient to treat a Nabob as an independent prince, there was an excellent plea for doing so. He was independent, in fact. If it was convenient to treat him as a mere deputy of the Court of Delhi, there was no difficulty; for he was so in theory. If it was convenient to consider his office as an hereditary dignity, or as a dignity held during life only, or as a dignity held only during the good pleasure of the Mogul, arguments and precedents might be found for every one of those views. The party who had the heir of Baber in their hands, represented him as the undoubted, the legitimate, the absolute sovereign, whom all subordinate authorities were bound to obey. The party against whom his name was used did not want plausible pretexts for maintaining that the empire was in fact dissolved, and that though it might be decent to treat the Mogul with respect, as a venerable relic of an order of things which had passed away, it was absurd to regard him as the real master of Hindostan.

In the year 1748, died one of the most powerful of the new masters of India, the great Nizam al Mulk, Viceroy of the Deccan. His authority descended to his son, Nazir Jung. Of the provinces subject to this high functionary, the Carnatic was the wealthiest and the most extensive. It was governed by an ancient Nabob, whose name the English corrupted into Anaverdy Khan.

But there were pretenders to the government both of the viceroyalty and of the subordinate province. Mirzapha Jung, a grandson of Nizam al Mulk, appeared as the competitor of Nazir Jung. Chunda Sahib, son-in-law of a former Nabob of the Carnatic, disputed the title of Anaverdy Khan. In the unsettled state of Indian law it was easy for both Mirzapha Jung and Chunda Sahib to make out something like a claim of right. In a society altogether disorganised, they had no difficulty in finding greedy adventurers to follow their standards. They united their interests, invaded the Carnatic, and applied for assistance to

19. Hermann Maurice, Count de Saxe (1696–1750), greatest of the French generals in the War of the Austrian Succession. — Frederic the Great (1712–86), King of Prussia, and one of the greatest military geniuses of the 18th century.

the French, whose fame had been raised by their success against the English in a recent war on the coast of Coromandel.

Nothing could have happened more pleasing to the subtle and ambitious Dupleix. To make a Nabob of the Carnatic, to make a Viceroy of the Deccan, to rule under their names the whole of Southern India; this was indeed an attractive prospect. He allied himself with the pretenders, and sent four hundred French soldiers, and two thousand sepoys, disciplined after the European fashion, to the assistance of his confederates. A battle was fought. The French distinguished themselves greatly. Anaverdy Khan was defeated and slain. His son, Mahommed Ali, who was afterwards well known in England as the Nabob of Arcot, and who owes to the eloquence of Burke a most unenviable immortality, fled with a scanty remnant of his army to Trichinopoly; and the conquerors became at once masters of almost every part of the Carnatic.

This was but the beginning of the greatness of Dupleix. After some months of fighting, negotiation and intrigue, his ability and good fortune seemed to have prevailed everywhere. Nazir Jung perished by the hands of his own followers; Mirzapha Jung was master of the Deccan; and the triumph of French arms and French policy was complete. At Pondicherry all was exultation and festivity. Salutes were fired from the batteries, and *Te Deum* sung in the churches. The new Nizam came thither to visit his allies; and the ceremony of his installation was performed there with great pomp. Dupleix, dressed in the garb worn by Mahommedans of the highest rank, entered the town in the same palanquin with the Nizam, and, in the pageant which followed, took precedence of all the court. He was declared Governor of India from the river Kristna to Cape Comorin, a country about as large as France, with authority superior even to that of Chunda Sahib. He was intrusted with the command of seven thousand cavalry. It was announced that no mint would be suffered to exist in the Carnatic except that at Pondicherry. A large portion of the treasures which former viceroys of the Deccan had accumulated had found its way into the coffers of the French governor. It was rumoured that he had received two hundred thousand pounds sterling in money, besides many valuable jewels. In fact, there could scarcely be any limit to his gains. He now ruled thirty millions of people with almost absolute power. No honour or emolument could be obtained from the government but by his intervention. No petition, unless signed by him, was perused by the Nizam.

Mirzapha Jung survived his elevation only a few months. But another prince of the same house was raised to the throne by French influence, and ratified all the promises of his predecessor. Dupleix was now the greatest potentate in India. His countrymen boasted that his name was mentioned with awe even in the chambers of the palace of Delhi. The native population looked with amazement on the progress which, in the short space of four years, an European adventurer had made towards dominion in Asia. Nor was the vainglorious Frenchman content with the reality of power. He loved to display his greatness with arrogant ostentation before the eyes of his subjects and of his rivals. Near the spot where his policy had obtained its chief triumph, by the fall of Nazir Jung, and the elevation of Mirzapha, he determined to erect a column, on the four sides of which four pompous inscriptions, in four languages, should proclaim his glory to all the nations of the East. Medals stamped with emblems of his successes were buried beneath the foundations of his stately pillar, and round it arose a town bearing the haughty name of Dupleix Fatihabad, which is, being interpreted, the City of the Victory of Dupleix.

The English had made some feeble and irresolute attempts to stop the rapid and brilliant career of the rival Company, and

continued to recognise Mahommed Ali as Nabob of the Carnatic. But the dominions of Mahommed Ali consisted of Trichinopoly alone: and Trichinopoly was now invested by Chunda Sahib and his French auxiliaries. To raise the siege seemed impossible. The small force which was then at Madras had no commander. Major Lawrence had returned to England; and not a single officer of established character remained in the settlement. The natives had learned to look with contempt on the mighty nation which was soon to conquer and to rule them. They had seen the French colours flying on Fort St. George; they had seen the chiefs of the English factory led in triumph through the streets of Pondicherry; they had seen the arms and counsels of Dupleix everywhere successful, while the opposition which the authorities of Madras had made to his progress, had served only to expose their own weakness, and to heighten his glory. At this moment, the valour and genius of an obscure English youth suddenly turned the tide of fortune.

Clive was now twenty-five years old. After hesitating for some time between a military and a commercial life, he had at length been placed in a post which partook of both characters, that of commissary to the troops, with the rank of captain. The present emergency called forth all his powers. He represented to his superiors that unless some vigorous effort were made, Trichinopoly would fall, the house of Anaverdy Khan would perish, and the French would become the real masters of the whole peninsula of India. It was absolutely necessary to strike some daring blow. If an attack were made on Arcot, the capital of the Carnatic, and the favourite residence of the Nabobs, it was not impossible that the siege of Trichinopoly would be raised. The heads of the English settlement, now thoroughly alarmed by the success of Dupleix, and apprehensive that, in the event of a new war between France and Great Britain, Madras would be instantly taken and destroyed, approved of Clive's plan, and intrusted the execution of it to himself. The young captain was put at the head of two hundred English soldiers, and three hundred sepoys,[20] armed and disciplined after the European fashion. Of the eight officers who commanded this little force under him, only two had ever been in action, and four of the eight were factors of the Company, whom Clive's example had induced to offer their services. The weather was stormy; but Clive pushed on, through thunder, lightning, and rain, to the gates of Arcot. The garrison, in a panic, evacuated the fort, and the English entered it without a blow.

But Clive well knew that he should not be suffered to retain undisturbed possession of his conquest. He instantly began to collect provisions, to throw up works, and to make preparations for sustaining a siege. The garrison, which had fled at his approach, had now recovered from its dismay, and, having been swelled by large reinforcements from the neighbourhood to a force of three thousand men, encamped close to the town. At dead of night, Clive marched out of the fort, attacked the camp by surprise, slew great numbers, dispersed the rest, and returned to his quarters without having lost a single man.

The intelligence of these events was soon carried to Chunda Sahib, who, with his French allies, was besieging Trichinopoly. He immediately detached four thousand men from his camp, and sent them to Arcot. They were speedily joined by the remains of the force which Clive had lately scattered. They were further strengthened by two thousand men from Vellore, and by a still more important reinforcement of a hundred and fifty French soldiers whom Dupleix despatched from Pondicherry. The whole of his army, amounting to about ten thousand men, was under the command of Rajah Sahib, son of Chunda Sahib.

20. *sepoy*: a native of India employed as a soldier by a European power.

Rajah Sahib proceeded to invest the fort of Arcot, which seemed quite incapable of sustaining a siege. The walls were ruinous, the ditches dry, the ramparts too narrow to admit the guns, the battlements too low to protect the soldiers. The little garrison had been greatly reduced by casualties. It now consisted of a hundred and twenty Europeans and two hundred sepoys. Only four officers were left; the stock of provisions was scanty; and the commander, who had to conduct the defence under circumstances so discouraging, was a young man of five-and-twenty, who had been bred a bookkeeper.

During fifty days the siege went on. During fifty days the young captain maintained the defence, with a firmness, vigilance, and ability, which would have done honour to the oldest marshal in Europe. The breach, however, increased day by day. The garrison began to feel the pressure of hunger. Under such circumstances, any troops so scantily provided with officers might have been expected to show signs of insubordination; and the danger was peculiarly great in a force composed of men differing widely from each other in extraction, colour, language, manners, and religion. But the devotion of the little band to its chief surpassed anything that is related of the Tenth Legion of Cæsar, or of the Old Guard of Napoleon.[21] The sepoys came to Clive, not to complain of their scanty fare, but to propose that all the grain should be given to the Europeans, who required more nourishment than the natives of Asia. The thin gruel, they said, which was strained away from the rice, would suffice for themselves. History contains no more touching instance of military fidelity, or of the influence of a commanding mind.

21. Caesar regarded the Tenth as the most dependable of his legions (see *Commentaries*, i,40). — The Old Guard of Napoleon was that part of the Imperial Guard (organized in 1804) which had served in at least four campaigns, and on which Napoleon depended at critical moments in battle.

An attempt made by the government of Madras to relieve the place had failed. But there was hope from another quarter. A body of six thousand Mahrattas, half soldiers, half robbers, under the command of a chief named Morari Row, had been hired to assist Mahommed Ali; but thinking the French power irresistible, and the triumph of Chunda Sahib certain, they had hitherto remained inactive on the frontiers of the Carnatic. The fame of the defence of Arcot roused them from their torpor. Morari Row declared that he had never before believed that Englishmen could fight, but that he would willingly help them since he saw that they had spirit to help themselves. Rajah Sahib learned that the Mahrattas were in motion. It was necessary for him to be expeditious. He first tried negotiation. He offered large bribes to Clive, which were rejected with scorn. He vowed that, if his proposals were not accepted, he would instantly storm the fort, and put every man in it to the sword. Clive told him in reply, with characteristic haughtiness, that his father was an usurper, that his army was a rabble, and that he would do well to think twice before he sent such poltroons into a breach defended by English soldiers.

Rajah Sahib determined to storm the fort. The day was well suited to a bold military enterprise. It was the great Mahommedan festival[22] which is sacred to the memory of Hosein, the son of Ali. The history of Islam contains nothing more touching than the event which gave rise to that solemnity. The mournful legend relates how the chief of the Fatimites, when all his brave followers had perished round him, drank his latest draught of water, and uttered his latest prayer, how the assassins

22. Held on September 14, in memory of Hosein, second son of Ali (c.602–61), who was Mohammed's cousin and who married the prophet's daughter Fatima. Hosein was slain by the soldiers of the Caliph Yazid (the 'tyrant' referred to in the next few lines), when the Fatimites planned to make Ali's children the rulers of Islam.

carried his head in triumph, how the tyrant smote the lifeless lips with his staff, and how a few old men recollected with tears that they had seen those lips pressed to the lips of the Prophet of God. After the lapse of near twelve centuries, the recurrence of this solemn season excites the fiercest and saddest emotions in the bosoms of the devout Moslem of India. They work themselves up to such agonies of rage and lamentation that some, it is said, have given up the ghost from the mere effect of mental excitement. They believe that, whoever, during this festival, falls in arms against the infidels, atones by his death for all the sins of his life, and passes at once to the garden of the Houris.[23] It was at this time that Rajah Sahib determined to assault Arcot. Stimulating drugs were employed to aid the effect of religious zeal, and the besiegers, drunk with enthusiasm, drunk with bang, rushed furiously to the attack.

Clive had received secret intelligence of the design, had made his arrangements, and, exhausted by fatigue, had thrown himself on his bed. He was awakened by the alarm, and was instantly at his post. The enemy advanced, driving before them elephants whose foreheads were armed with iron plates. It was expected that the gates would yield to the shock of these living battering-rams. But the huge beasts no sooner felt the English musket-balls than they turned round, and rushed furiously away, trampling on the multitude which had urged them forward. A raft was launched on the water which filled one part of the ditch. Clive, perceiving that his gunners at that post did not understand their business, took the management of a piece of artillery himself, and cleared the raft in a few minutes. When the moat was dry the assailants mounted with great boldness; but they were received with a fire so heavy and so well directed, that it soon quelled the courage even of fanaticism and of intoxication. The rear ranks of the English kept the front ranks supplied with a constant succession of loaded muskets, and every shot told on the living mass below. After three desperate onsets, the besiegers retired behind the ditch.

The struggle lasted about an hour. Four hundred of the assailants fell. The garrison lost only five or six men. The besieged passed an anxious night, looking for a renewal of the attack. But when the day broke, the enemy were no more to be seen. They had retired, leaving to the English several guns and a large quantity of ammunition.

The news was received at Fort St. George with transports of joy and pride. Clive was justly regarded as a man equal to any command. Two hundred English soldiers and seven hundred sepoys were sent to him, and with this force he instantly commenced offensive operations. He took the fort of Timery, effected a junction with a division of Morari Row's army, and hastened, by forced marches, to attack Rajah Sahib, who was at the head of about five thousand men, of whom three hundred were French. The action was sharp; but Clive gained a complete victory. The military chest of Rajah Sahib fell into the hands of the conquerors. Six hundred sepoys, who had served in the enemy's army, came over to Clive's quarters, and were taken into the British service. Conjeveram surrendered without a blow. The governor of Arnee deserted Chunda Sahib, and recognised the title of Mahommed Ali.

Had the entire direction of the war been intrusted to Clive, it would probably have been brought to a speedy close. But the timidity and incapacity which appeared in all the movements of the English, except where he was personally present, protracted the struggle. The Mahrattas muttered that his soldiers were of a different race from the British whom they found elsewhere. The effect of this languor was that in no long time Rajah Sahib, at the head of a considerable army, in which were four hundred French troops, appeared al-

23. The Mohammedan paradise.

most under the guns of Fort St. George, and laid waste the villas and gardens of the gentlemen of the English settlement. But he was again encountered and defeated by Clive. More than a hundred of the French were killed or taken, a loss more serious than that of thousands of natives. The victorious army marched from the field of battle to Fort St. David. On the road lay the City of the Victory of Dupleix, and the stately monument which was designed to commemorate the triumphs of France in the East. Clive ordered both the city and the monument to be razed to the ground. He was induced, we believe, to take this step, not by personal or national malevolence, but by a just and profound policy. The town and its pompous name, the pillar and its vaunting inscriptions, were among the devices by which Dupleix had laid the public mind of India under a spell. This spell it was Clive's business to break. The natives had been taught that France was confessedly the first power in Europe, and that the English did not presume to dispute her supremacy. No measure could be more effectual for the removing of this delusion than the public and solemn demolition of the French trophies.

The government of Madras, encouraged by these events, determined to send a strong detachment, under Clive, to reinforce the garrison of Trichinopoly. But just at this conjuncture, Major Lawrence arrived from England, and assumed the chief command. From the waywardness and impatience of control which had characterized Clive, both at school and in the counting-house, it might have been expected that he would not, after such achievements, act with zeal and good humour in a subordinate capacity. But Lawrence had early treated him with kindness; and it is bare justice to Clive to say that, proud and overbearing as he was, kindness was never thrown away upon him. He cheerfully placed himself under the orders of his old friend, and exerted himself as strenuously in the second post as he could have done in the first. Lawrence well knew the value of such assistance. Though himself gifted with no intellectual faculty higher than plain good sense, he fully appreciated the powers of his brilliant coadjutor. Though he had made a methodical study of military tactics, and, like all men regularly bred to a profession, was disposed to look with disdain on interlopers, he had yet liberality enough to acknowledge that Clive was an exception to common rules. 'Some people,' he wrote, 'are pleased to term Captain Clive fortunate and lucky; but, in my opinion, from the knowledge I have of the gentleman, he deserved and might expect from his conduct everything as it fell out; — a man of an undaunted resolution, of a cool temper, and of a presence of mind which never left him in the greatest danger — born a soldier; for, without a military education of any sort, or much conversing with any of the profession, from his judgment and good sense, he led on an army like an experienced officer and a brave soldier, with a prudence that certainly warranted success.'

The French had no commander to oppose to the two friends. Dupleix, not inferior in talents for negotiation and intrigue to any European who has borne a part in the revolutions of India, was ill qualified to direct in person military operations. He had not been bred a soldier, and had no inclination to become one. His enemies accused him of personal cowardice; and he defended himself in a strain worthy of Captain Bobadil.[24] He kept away from shot, he said, because silence and tranquillity were propitious to his genius, and he found it difficult to pursue his meditations amidst the noise of fire-arms. He was thus under the necessity of intrusting to others the execution of his great warlike designs; and he bitterly complained that he was ill served. He had indeed been assisted by one

24. The vain, boastful, and cowardly old soldier in Ben Jonson's comedy, *Everyman in his Humor* (1598).

officer of eminent merit, the celebrated Bussy.[25] But Bussy had marched northward with the Nizam, and was fully employed in looking after his own interests, and those of France, at the court of that prince. Among the officers who remained with Dupleix, there was not a single man of capacity; and many of them were boys, at whose ignorance and folly the common soldiers laughed.

The English triumphed everywhere. The besiegers of Trichinopoly were themselves besieged and compelled to capitulate. Chunda Sahib fell into the hands of the Mahrattas, and was put to death, at the instigation probably of his competitor, Mahommed Ali. The spirit of Dupleix, however, was unconquerable, and his resources inexhaustible. From his employers in Europe he no longer received help or countenance. They condemned his policy. They gave him no pecuniary assistance. They sent him for troops only the sweepings of the galleys. Yet still he persisted, intrigued, bribed, promised, lavished his private fortune, strained his credit, procured new diplomas [26] from Delhi, raised up new enemies to the government of Madras on every side, and found tools even among the allies of the English Company. But all was in vain. Slowly, but steadily, the power of Britain continued to increase, and that of France to decline.

The health of Clive had never been good during his residence in India; and his constitution was now so much impaired that he determined to return to England. Before his departure he undertook a service of considerable difficulty, and performed it with his usual vigour and dexterity. The forts of Covelong and Chingleput were occupied by French garrisons. It was determined to send a force against them. But the only force available for this purpose was of such a description that no officer but Clive would risk his reputation by commanding it. It consisted of five hundred newly levied sepoys and two hundred recruits who had just landed from England, and who were the worst and lowest wretches that the Company's crimps [27] could pick up in the flash-houses [28] of London. Clive, ill and exhausted as he was, undertook to make an army of this undisciplined rabble, and marched with them to Covelong. A shot from the fort killed one of these extraordinary soldiers; on which all the rest faced about and ran away, and it was with the greatest difficulty that Clive rallied them. On another occasion, the noise of a gun terrified the sentinels so much that one of them was found, some hours later, at the bottom of a well. Clive gradually accustomed them to danger, and, by exposing himself constantly in the most perilous situations, shamed them into courage. He at length succeeded in forming a respectable force out of his unpromising materials. Covelong fell. Clive learned that a strong detachment was marching to relieve it from Chingleput. He took measures to prevent the enemy from learning that they were too late, laid an ambuscade for them on the road, killed a hundred of them with one fire, took three hundred prisoners, pursued the fugitives to the gates of Chingleput, laid siege instantly to that fastness, reputed one of the strongest in India, made a breach, and was on the point of storming, when the French commandant capitulated and retired with his men.

Clive returned to Madras victorious, but in a state of health which rendered it impossible for him to remain there long. He married at this time a young lady of the name of Maskelyne, sister of the eminent mathematician, who long held the post of Astronomer Royal. She is described as

25. Charles Joseph Patissier, Marquis de Bussy-Castlenau (1718–85), one of Dupleix's ablest lieutenants.

26. Charters.

27. Men whose business was to lure or force men into enlisting in military or sea service against their will.

28. *flash*: of or pertaining to thieves, tramps, etc. Thus flash-house = a house frequented by flash people.

handsome and accomplished; and her husband's letters, it is said, contain proofs that he was devotedly attached to her.

Almost immediately after the marriage, Clive embarked with his bride for England. He returned a very different person from the poor slighted boy who had been sent out ten years before to seek his fortune. He was only twenty-seven; yet his country already respected him as one of her first soldiers. There was then general peace in Europe. The Carnatic was the only part of the world where the English and French were in arms against each other. The vast schemes of Dupleix had excited no small uneasiness in the city of London; and the rapid turn of fortune, which was chiefly owing to the courage and talents of Clive, had been hailed with great delight. The young captain was known at the India House by the honourable nickname of General Clive, and was toasted by that appellation at the feasts of the Directors. On his arrival in England, he found himself an object of general interest and admiration. The East India Company thanked him for his services in the warmest terms, and bestowed on him a sword set with diamonds. With rare delicacy, he refused to receive this token of gratitude, unless a similar compliment were paid to his friend and commander, Lawrence.

It may easily be supposed that Clive was most cordially welcomed home by his family, who were delighted by his success, though they seem to have been hardly able to comprehend how their naughty idle Bobby had become so great a man. His father had been singularly hard of belief. Not until the news of the defence of Arcot arrived in England was the old gentleman heard to growl out that, after all, the booby had something in him. His expressions of approbation became stronger and stronger as news arrived of one brilliant exploit after another; and he was at length immoderately fond and proud of his son.

Clive's relations had very substantial reasons for rejoicing at his return. Considerable sums of prize money had fallen to his share; and he had brought home a moderate fortune, part of which he expended in extricating his father from pecuniary difficulties, and in redeeming the family estate. The remainder he appears to have dissipated in the course of about two years. He lived splendidly, dressed gaily even for those times, kept a carriage and saddle-horses, and, not content with these ways of getting rid of his money, resorted to the most speedy and effectual of all modes of evacuation, a contested election followed by a petition.

At the time of the general election of 1754, the Government was in a very singular state. There was scarcely any formal opposition. The Jacobites had been cowed by the issue of the last rebellion.[29] The Tory party had fallen into utter contempt.[30] It had been deserted by all the men of talents who had belonged to it, and had scarcely given a symptom of life during some years. The small faction which had been held together by the influence and promises of Prince Frederic,[31] had been dispersed by his death. Almost every public man of distinguished talents in the kingdom, whatever his early connections might have been, was in office, and called himself a Whig. But this extraordinary appearance of concord was quite delusive. The administration itself was distracted by bitter enmities and conflicting pretensions. The chief object of its members was to depress and supplant each other. The Prime Minister, Newcastle,[32] weak, timid, jealous, and per

29. The Jacobites, partisans or adherents to the cause of James II and his descendants, had attempted a rebellion in 1715 and later in 1745; both attempts failed.

30 The Jacobites were Tories, being opponents to the Hanoverian kings (the Georges), who were supported by the Whigs.

31 Frederick Louis (1707–51), eldest son of George II, and father of George III; he had sided with the Tories in opposition to the foreign wars.

32 Thomas Pelham Holles, Duke of Newcastle (1693–1768), Whig statesman, in control of English politics for some thirty years.

fidious, was at once detested and despised by some of the most important members of his Government, and by none more than by Henry Fox, the Secretary-at-War.[33] This able, daring, and ambitious man seized every opportunity of crossing the First Lord of the Treasury, from whom he well knew that he had little to dread and little to hope; for Newcastle was through life equally afraid of breaking with men of parts and of promoting them.

Newcastle had set his heart on returning two members for St. Michael, one of those wretched Cornish boroughs which were swept away by the Reform Act of 1832. He was opposed by Lord Sandwich,[34] whose influence had long been paramount there: and Fox exerted himself strenuously in Sandwich's behalf. Clive, who had been introduced to Fox, and very kindly received by him, was brought forward on the Sandwich interest, and was returned. But a petition was presented against the return, and was backed by the whole influence of the Duke of Newcastle.

The case was heard, according to the usage of that time, before a committee of the whole House. Questions respecting elections were then considered merely as party questions. Judicial impartiality was not even affected. Sir Robert Walpole[35] was in the habit of saying openly that, in election battles, there ought to be no quarter. On the present occasion the excitement was great. The matter really at issue was, not whether Clive had been properly or improperly returned, but whether Newcastle or Fox was to be master of the new House of Commons, and consequently first minister. The contest was long and obstinate, and success seemed to lean sometimes to one side and sometimes to the other. Fox put forth all his rare powers of debate, beat half the lawyers in the House at their own weapons, and carried division after division against the whole influence of the Treasury. The committee decided in Clive's favour. But when the resolution was reported to the House, things took a different course. The remnant of the Tory Opposition, contemptible as it was, had yet sufficient weight to turn the scale between the nicely balanced parties of Newcastle and Fox. Newcastle the Tories could only despise. Fox they hated, as the boldest and most subtle politician and the ablest debater among the Whigs, as the steady friend of Walpole, as the devoted adherent of the Duke of Cumberland.[36] After wavering till the last moment, they determined to vote in a body with the Prime Minister's friends. The consequence was that the House, by a small minority, rescinded the decision of the committee, and Clive was unseated.

Ejected from Parliament, and straitened in his means, he naturally began to look again towards India. The Company and the Government were eager to avail themselves of his services. A treaty favourable to England had indeed been concluded in the Carnatic. Dupleix had been superseded, and had returned with the wreck of his immense fortune to Europe, where calumny and chicanery soon hunted him to his grave. But many signs indicated that a war between France and Great Britain was at hand; and it was therefore thought desirable to send an able commander to the Company's settlements in India. The Directors appointed Clive governor of Fort St. David. The King gave him the commission of a lieutenant-colonel in the

33. Henry Fox, Baron Holland (1705–74), an eminent Whig statesman and orator, unscrupulous and unpopular.

34. John Montagu, 4th Earl of Sandwich (1718–92), one of the most corrupt and unpopular politicians of his time.

35. Sir Robert Walpole, 1st Earl of Orford (1676–1745), cynical but brilliant leader of the Whigs, who laid the foundations of Britain's colonial policy.

36. The Duke of Cumberland (1721–65), third son of George II, earned the title of 'the Butcher' by the ferocity with which he vanquished the adherents of the Pretender in the Jacobite rebellion of 1745, at Culloden. It was his only victory. See note 47.

British army, and in 1755 he again sailed for Asia.

The first service on which he was employed after his return to the East was the reduction of the stronghold of Gheriah. This fortress, built on a craggy promontory, and almost surrounded by the ocean, was the den of a pirate named Angria, whose barks had long been the terror of the Arabian Gulf. Admiral Watson, who commanded the English squadron in the Eastern seas, burned Angria's fleet, while Clive attacked the fastness by land. The place soon fell, and a booty of a hundred and fifty thousand pounds sterling was divided among the conquerors.

After this exploit, Clive proceeded to his government of Fort St. David. Before he had been there two months, he received intelligence which called forth all the energy of his bold and active mind.

Of the provinces which had been subject to the house of Tamerlane, the wealthiest was Bengal. No part of India possessed such natural advantages both for agriculture and for commerce. The Ganges, rushing through a hundred channels to the sea, has formed a vast plain of rich mould which, even under the tropical sky, rivals the verdure of an English April. The rice-fields yield an increase such as is elsewhere unknown. Spices, sugar, vegetable oils, are produced with marvellous exuberance. The rivers afford an inexhaustible supply of fish. The desolate islands along the sea-coast, overgrown by noxious vegetation, and swarming with deer and tigers, supply the cultivated districts with abundance of salt. The great stream which fertilises the soil is, at the same time, the chief highway of Eastern commerce. On its banks, and on those of its tributary waters, are the wealthiest marts, the most splendid capitals, and the most sacred shrines of India. The tyranny of man had for ages struggled in vain against the overflowing bounty of nature. In spite of the Mussulman despot and of the Mahratta freebooter, Bengal was known through the East as the garden of Eden, as the rich kingdom. Its population multiplied exceedingly. Distant provinces were nourished from the overflowing of its granaries; and the noble ladies of London and Paris were clothed in the delicate produce of its looms. The race by whom this rich tract was peopled, enervated by a soft climate and accustomed to peaceful employments, bore the same relation to other Asiatics which the Asiatics generally bear to the bold and energetic children of Europe. The Castilians have a proverb, that in Valencia the earth is water and the men women; and the description is at least equally applicable to the vast plain of the Lower Ganges. Whatever the Bengalee does he does languidly. His favourite pursuits are sedentary. He shrinks from bodily exertion; and, though voluble in dispute, and singularly pertinacious in the war of chicane, he seldom engages in a personal conflict, and scarcely ever enlists as a soldier. We doubt whether there be a hundred genuine Bengalees in the whole army of the East India Company. There never, perhaps, existed a people so thoroughly fitted by nature and by habit for a foreign yoke.

The great commercial companies of Europe had long possessed factories in Bengal. The French was settled, as they still are, at Chandernagore on the Hoogley. Higher up the stream the Dutch held Chinsurah. Nearer to the sea, the English had built Fort William. A church and ample warehouses rose in the vicinity. A row of spacious houses, belonging to the chief factors of the East India Company, lined the banks of the river; and in the neighbourhood had sprung up a large and busy native town, where some Hindoo merchants of great opulence had fixed their abode. But the tract now covered by the palaces of Chowringhee [37] contained only a few miserable huts thatched with straw. A jungle, abandoned to water-fowl and alligators, covered the site of the present Citadel, and the

37. Pronounced *cho ring' hē*; suburb of Calcutta, in which were located the Governor's palace, the City Hall, and the Court of Justice.

Course, which is now daily crowded at sunset with the gayest equipages of Calcutta. For the ground on which the settlement stood, the English, like other great landholders, paid rent to the Government; and they were, like other great landholders, permitted to exercise a certain jurisdiction within their domain.

The great province of Bengal, together with Orissa and Bahar, had long been governed by a viceroy, whom the English called Aliverdy Khan, and who, like the other viceroys of the Mogul, had become virtually independent. He died in 1756, and the sovereignty descended to his grandson, a youth under twenty years of age, who bore the name of Surajah Dowlah. Oriental despots are perhaps the worst class of human beings; and this unhappy boy was one of the worst specimens of his class. His understanding was naturally feeble, and his temper naturally unamiable. His education had been such as would have enervated even a vigorous intellect, and perverted even a generous disposition. He was unreasonable, because nobody ever dared to reason with him, and selfish, because he had never been made to feel himself dependent on the goodwill of others. Early debauchery had unnerved his body and his mind. He indulged immoderately in the use of ardent spirits, which inflamed his weak brain almost to madness. His chosen companions were flatterers sprung from the dregs of the people, and recommended by nothing but buffoonery and servility. It is said that he had arrived at the last stage of human depravity, when cruelty becomes pleasing for its own sake, when the sight of pain as pain, where no advantage is to be gained, no offence punished, no danger averted, is an agreeable excitement. It had early been his amusement to torture beasts and birds; and, when he grew up, he enjoyed with still keener relish the misery of his fellow-creatures.

From a child Surajah Dowlah had hated the English. It was his whim to do so; and his whims were never opposed. He had also formed a very exaggerated notion of the wealth which might be obtained by plundering them; and his feeble and uncultivated mind was incapable of perceiving that the riches of Calcutta, had they been even greater than he imagined, would not compensate him for what he must lose, if the European trade, of which Bengal was a chief seat, should be driven by his violence to some other quarter. Pretexts for a quarrel were readily found. The English, in expectation of a war with France, had begun to fortify their settlement without special permission from the Nabob. A rich native, whom he longed to plunder, had taken refuge at Calcutta, and had not been delivered up. On such grounds as these Surajah Dowlah marched with a great army against Fort William.

The servants of the Company at Madras had been forced by Dupleix to become statesmen and soldiers. Those in Bengal were still mere traders, and were terrified and bewildered by the approaching danger. The governor, who had heard much of Surajah Dowlah's cruelty, was frightened out of his wits, jumped into a boat, and took refuge in the nearest ship. The military commandant thought that he could not do better than follow so good an example. The fort was taken after a feeble resistance: and great numbers of the English fell into the hands of the conquerors. The Nabob seated himself with regal pomp in the principal hall of the factory, and ordered Mr. Holwell, the first in rank among the prisoners, to be brought before him. His Highness talked about the insolence of the English, and grumbled at the smallness of the treasure which he had found, but promised to spare their lives, and retired to rest.

Then was committed that great crime,[38] memorable for its singular atrocity, memorable for the tremendous retribution by which it was followed. The English captives were left to the mercy of the guards,

38. On June 20, 1756.

and the guards determined to secure them for the night in the prison of the garrison, a chamber known by the fearful name of the Black Hole. Even for a single European malefactor, that dungeon would, in such a climate, have been too close and narrow. The space was only twenty feet square. The air-holes were small and obstructed. It was the summer solstice, the season when the fierce heat of Bengal can scarcely be rendered tolerable to natives of England by lofty halls and by the constant waving of fans. The number of the prisoners was one hundred and forty-six. When they were ordered to enter the cell, they imagined that the soldiers were joking; and, being in high spirits on account of the promise of the Nabob to spare their lives, they laughed and jested at the absurdity of the notion. They soon discovered their mistake. They expostulated; they entreated; but in vain. The guards threatened to cut down all who hesitated. The captives were driven into the cell at the point of the sword, and the door was instantly shut and locked upon them.

Nothing in history or fiction, not even the story which Ugolino told in the sea of everlasting ice, after he had wiped his bloody lips on the scalp of his murderer, approaches the horrors which were recounted by the few survivors of that night.[39] They cried for mercy. They strove to burst the door. Holwell who, even in that extremity, retained some presence of mind, offered large bribes to the gaolers. But the answer was that nothing could be done without the Nabob's orders, that the Nabob was asleep, and that he would be angry if anybody woke him. Then the prisoners went mad with despair. They trampled each other down, fought for the places at the windows, fought for the pittance of water with which the cruel mercy of the murderers mocked their agonies, raved, prayed, blasphemed, implored the guards to fire among them. The gaolers in the meantime held lights to the bars, and shouted with laughter at the frantic struggles of their victims. At length the tumult died away in low gaspings and moanings. The day broke. The Nabob had slept off his debauch, and permitted the door to be opened. But it was some time before the soldiers could make a lane for the survivors, by piling up on each side the heaps of corpses on which the burning climate had already begun to do its loathsome work. When at length a passage was made, twenty-three ghastly figures, such as their own mothers would not have known, staggered one by one out of the charnel-house. A pit was instantly dug. The dead bodies, a hundred and twenty-three in number, were flung into it promiscuously and covered up.

But these things — which, after the lapse of more than eighty years, cannot be told or read without horror — awakened neither remorse nor pity in the bosom of the savage Nabob. He inflicted no punishment on the murderers. He showed no tenderness to the survivors. Some of them, indeed, from whom nothing was to be got, were suffered to depart; but those from whom it was thought that anything could be extorted were treated with execrable cruelty. Holwell, unable to walk, was carried before the tyrant, who reproached him, threatened him, and sent him up the country in irons, together with some other gentlemen who were suspected of knowing more than they chose to tell about the treasures of the Company. These persons, still bowed down by the sufferings of that great agony, were lodged in miserable sheds, and fed only with grain and water,

39. See Dante's *Inferno*, xxxii–xxxiii. Count Ugolino de' Gherardeschi (c.1220–89), an Italian Guelph leader who by treachery had made himself master of Pisa, was finally overthrown, and with his two sons and two of his grandsons was imprisoned and starved to death. He is pictured by Dante as frozen in the ninth circle of the Inferno, gnawing at the skull of his murderer, the Archbishop Ruggieri.

till at length the intercessions of the female relations of the Nabob procured their release. One Englishwoman had survived that night. She was placed in the harem of the Prince at Moorshedabad.

Surajah Dowlah, in the meantime, sent letters to his nominal sovereign at Delhi, describing the late conquest in the most pompous language. He placed a garrison in Fort William, forbade Englishmen to dwell in the neighbourhood, and directed that, in memory of his great actions, Calcutta should thenceforward be called Alinagore, that is to say, the Port of God.

In August the news of the fall of Calcutta reached Madras, and excited the fiercest and bitterest resentment. The cry of the whole settlement was for vengeance. Within forty-eight hours after the arrival of the intelligence it was determined that an expedition should be sent to the Hoogley, and that Clive should be at the head of the land forces. The naval armament was under the command of Admiral Watson. Nine hundred English infantry, fine troops and full of spirit, and fifteen hundred sepoys, composed the army which sailed to punish a Prince who had more subjects than Lewis the Fifteenth or the Empress Maria Theresa. In October the expedition sailed; but it had to make its way against adverse winds and did not reach Bengal till December.

The Nabob was revelling in fancied security at Moorshedabad. He was so profoundly ignorant of the state of foreign countries that he often used to say that there were not ten thousand men in all Europe; and it had never occurred to him as possible that the English would dare to invade his dominions. But, though undisturbed by any fear of their military power, he began to miss them greatly. His revenues fell off; and his ministers succeeded in making him understand that a ruler may sometimes find it more profitable to protect traders in the open enjoyment of their gains than to put them to the torture for the purpose of discovering hidden chests of gold and jewels. He was already disposed to permit the Company to resume its mercantile operations in his country, when he received the news that an English armament was in the Hoogley. He instantly ordered all his troops to assemble at Moorshedabad, and marched towards Calcutta.

Clive had commenced operations with his usual vigour. He took Budge-budge, routed the garrison of Fort William, recovered Calcutta, stormed and sacked Hoogley. The Nabob, already disposed to make some concessions to the English, was confirmed in his pacific disposition by these proofs of their power and spirit. He accordingly made overtures to the chiefs of the invading armament, and offered to restore the factory, and to give compensation to those whom he had despoiled.

Clive's profession was war; and he felt that there was something discreditable in an accommodation with Surajah Dowlah. But his power was limited. A committee, chiefly composed of servants of the Company who had fled from Calcutta, had the principal direction of affairs; and these persons were eager to be restored to their posts and compensated for their losses. The government of Madras, apprised that war had commenced in Europe, and apprehensive of an attack from the French, became impatient for the return of the armament. The promises of the Nabob were large, the chances of a contest doubtful; and Clive consented to treat, though he expressed his regret that things should not be concluded in so glorious a manner as he could have wished.

With this negotiation commences a new chapter in the life of Clive. Hitherto he had been merely a soldier carrying into effect, with eminent ability and valour, the plans of others. Henceforth he is to be chiefly regarded as a statesman; and his military movements are to be considered as subordinate to his political designs. That in his new capacity he displayed great ability,

and obtained great success, is unquestionable. But it is also unquestionable that the transactions in which he now began to take a part have left a stain on his moral character.

We can by no means agree with Sir John Malcolm, who is obstinately resolved to see nothing but honour and integrity in the conduct of his hero. But we can as little agree with Mr. Mill, who has gone so far as to say that Clive was a man 'to whom deception, when it suited his purpose, never cost a pang.' Clive seems to us to have been constitutionally the very opposite of a knave, bold even to temerity, sincere even to indiscretion, hearty in friendship, open in enmity. Neither in his private life, nor in those parts of his public life in which he had to do with his countrymen, do we find any signs of a propensity to cunning. On the contrary, in all the disputes in which he was engaged as an Englishman against Englishmen, from his boxing-matches at school to those stormy altercations at the India House and in Parliament amidst which his later years were passed, his very faults were those of a high and magnanimous spirit. The truth seems to have been that he considered Oriental politics as a game in which nothing was unfair. He knew that the standard of morality among the natives of India differed widely from that established in England. He knew that he had to deal with men destitute of what in Europe is called honour, with men who would give any promise without hesitation, and break any promise without shame, with men who would unscrupulously employ corruption, perjury, forgery, to compass their ends. His letters show that the great difference between Asiatic and European morality was constantly in his thoughts. He seems to have imagined, most erroneously in our opinion, that he could effect nothing against such adversaries, if he was content to be bound by ties from which they were free, if he went on telling truth, and hearing none, if he fulfilled, to his own hurt, all his engagements with confederates who never kept an engagement that was not to their advantage. Accordingly this man, in the other parts of his life an honourable English gentleman and a soldier, was no sooner matched against an Indian intriguer, than he became himself an Indian intriguer, and descended, without scruple, to falsehood, to hypocritical caresses, to the substitution of documents, and to the counterfeiting of hands.

The negotiations between the English and the Nabob were carried on chiefly by two agents, Mr. Watts, a servant of the Company, and a Bengalee of the name of Omichund.[40] This Omichund had been one of the wealthiest native merchants resident at Calcutta, and had sustained great losses in consequence of the Nabob's expedition against that place. In the course of his commercial transactions, he had seen much of the English, and was peculiarly qualified to serve as a medium of communication between them and a native court. He possessed great influence with his own race, and had in large measure the Hindoo talents, quick observation, tact, dexterity, perseverance, and the Hindoo vices, servility, greediness, and treachery.

The Nabob behaved with all the faithlessness of an Indian statesman, and with all the levity of a boy whose mind had been enfeebled by power and self-indulgence. He promised, retracted, hesitated, evaded. At one time he advanced with his army in a threatening manner towards Calcutta; but when he saw the resolute front which the English presented, he fell back in alarm, and consented to make peace with them on their own terms. The treaty was no sooner concluded than he formed new designs against them. He intrigued with the French authorities at Chandernagore. He invited Bussy to march from the Deccan to the Hoogley, and to drive the English out of Bengal. All this was well

40. Omichund, whose real name was Amir Chand, was a Sikh, not a Bengali, and died in 1767.

known to Clive and Watson. They determined accordingly to strike a decisive blow, and to attack Chandernagore, before the force there could be strengthened by new arrivals, either from the south of India, or from Europe. Watson directed the expedition by water, Clive by land. The success of the combined movements was rapid and complete. The fort, the garrison, the artillery, the military stores, all fell into the hands of the English. Near five hundred European troops were among the prisoners.

The Nabob had feared and hated the English, even while he was still able to oppose to them their French rivals. The French were now vanquished; and he began to regard the English with still greater fear and still greater hatred. His weak and unprincipled mind oscillated between servility and insolence. One day he sent a large sum to Calcutta, as part of the compensation due for the wrongs which he had committed. The next day he sent a present of jewels to Bussy, exhorting that distinguished officer to hasten to protect Bengal 'against Clive, the daring in war, on whom,' says his Highness, 'may all bad fortune attend.' He ordered his army to march against the English. He countermanded his orders. He tore Clive's letters. He then sent answers in the most florid language of compliment. He ordered Watts out of his presence, and threatened to impale him. He again sent for Watts, and begged pardon for the insult. In the meantime, his wretched maladministration, his folly, his dissolute manners, and his love of the lowest company, had disgusted all classes of his subjects, soldiers, traders, civil functionaries, the proud and ostentatious Mahommedans, the timid, supple, and parsimonious Hindoos. A formidable confederacy was formed against him, in which were included Roydullub, the minister of finance, Meer Jaffier, the principal commander of the troops, and Jugget Seit, the richest banker in India. The plot was confided to the English agents, and a communication was opened between the malcontents at Moorshedabad and the committee at Calcutta.

In the committee there was much hesitation; but Clive's voice was given in favour of the conspirators, and his vigour and firmness bore down all opposition. It was determined that the English should lend their powerful assistance to depose Surajah Dowlah, and to place Meer Jaffier on the throne of Bengal. In return, Meer Jaffier promised ample compensation to the Company and its servants, and a liberal donative to the army, the navy, and the committee. The odious vices of Surajah Dowlah, the wrongs which the English had suffered at his hands, the dangers to which our trade must have been exposed, had he continued to reign, appear to us fully to justify the resolution of deposing him. But nothing can justify the dissimulation which Clive stooped to practise. He wrote to Surajah Dowlah in terms so affectionate that they for a time lulled that weak prince into perfect security. The same courier who carried this 'soothing letter,' as Clive calls it, to the Nabob, carried to Mr. Watts a letter in the following terms: 'Tell Meer Jaffier to fear nothing. I will join him with five thousand men who never turned their backs. Assure him I will march night and day to his assistance, and stand by him as long as I have a man left.'

It was impossible that a plot which had so many ramifications should long remain entirely concealed. Enough reached the ears of the Nabob to arouse his suspicions. But he was soon quieted by the fictions and artifices which the inventive genius of Omichund produced with miraculous readiness. All was going well; the plot was nearly ripe; when Clive learned that Omichund was likely to play false. The artful Bengalee had been promised a liberal compensation for all that he had lost at Calcutta. But this would not satisfy him. His services had been great. He held the thread of the whole intrigue. By one word breathed in the ear of Surajah Dowlah, he

could undo all that he had done. The lives of Watts, of Meer Jaffier, of all the conspirators, were at his mercy; and he determined to take advantage of his situation and to make his own terms. He demanded three hundred thousand pounds sterling as the price of his secrecy and of his assistance. The committee, incensed by the treachery and appalled by the danger, knew not what course to take. But Clive was more than Omichund's match in Omichund's own arts. The man, he said, was a villain. Any artifice which would defeat such knavery was justifiable. The best course would be to promise what was asked. Omichund would soon be at their mercy; and then they might punish him by withholding from him, not only the bribe which he now demanded, but also the compensation which all the other sufferers of Calcutta were to receive.

His advice was taken. But how was the wary and sagacious Hindoo to be deceived? He had demanded that an article touching his claims should be inserted in the treaty between Meer Jaffier and the English, and he would not be satisfied unless he saw it with his own eyes. Clive had an expedient ready. Two treaties were drawn up, one on white paper, the other on red, the former real, the latter fictitious. In the former Omichund's name was not mentioned; the latter, which was to be shown to him, contained a stipulation in his favour.

But another difficulty arose. Admiral Watson had scruples about signing the red treaty. Omichund's vigilance and acuteness were such that the absence of so important a name would probably awaken his suspicions. But Clive was not a man to do anything by halves. We almost blush to write it. He forged Admiral Watson's name.

All was now ready for action. Mr. Watts fled secretly from Moorshedabad. Clive put his troops in motion, and wrote to the Nabob in a tone very different from that of his previous letters. He set forth all the wrongs which the British had suffered, offered to submit the points in dispute to the arbitration of Meer Jaffier, and concluded by announcing that, as the rains were about to set in, he and his men would do themselves the honour of waiting on his Highness for an answer.

Surajah Dowlah instantly assembled his whole force, and marched to encounter the English. It had been agreed that Meer Jaffier should separate himself from the Nabob, and carry over his division to Clive. But, as the decisive moment approached, the fears of the conspirator overpowered his ambition. Clive had advanced to Cossimbuzar; the Nabob lay with a mighty power a few miles off at Plassey; and still Meer Jaffier delayed to fulfil his engagements, and returned evasive answers to the earnest remonstrances of the English general.

Clive was in a painfully anxious situation. He could place no confidence in the sincerity or in the courage of his confederate; and, whatever confidence he might place in his own military talents, and in the valour and discipline of his troops, it was no light thing to engage an army twenty times as numerous as his own. Before him lay a river over which it was easy to advance, but over which, if things went ill, not one of his little band would ever return. On this occasion, for the first and for the last time, his dauntless spirit, during a few hours, shrank from the fearful responsibility of making a decision. He called a council of war. The majority pronounced against fighting; and Clive declared his concurrence with the majority. Long afterwards, he said that he had never called but one council of war, and that, if he had taken the advice of that council, the British would never have been masters of Bengal. But scarcely had the meeting broken up when he was himself again. He retired alone under the shade of some trees, and passed near an hour there in thought. He came back determined to put everything to

the hazard, and gave orders that all should be in readiness for passing the river on the morrow.

The river was passed; and, at the close of a toilsome day's march, the army, long after sunset, took up its quarters in a grove of mango-trees near Plassey, within a mile of the enemy. Clive was unable to sleep; he heard, through the whole night, the sound of drums and cymbals from the vast camp of the Nabob. It is not strange that even his stout heart should now and then have sunk, when he reflected against what odds, and for what a prize, he was in a few hours to contend.

Nor was the rest of Surajah Dowlah more peaceful. His mind, at once weak and stormy, was distracted by wild and horrible apprehensions. Appalled by the greatness and nearness of the crisis, distrusting his captains, dreading every one who approached him, dreading to be left alone, he sat gloomily in his tent, haunted, a Greek poet would have said, by the furies of those who had cursed him with their last breath in the Black Hole.

The day broke, the day which was to decide the fate of India. At sunrise the army of the Nabob, pouring through many openings of the camp, began to move towards the grove where the English lay. Forty thousand infantry, armed with firelocks, pikes, swords, bows and arrows, covered the plain. They were accompanied by fifty pieces of ordnance of the largest size, each tugged by a long team of white oxen, and each pushed on from behind by an elephant. Some smaller guns, under the direction of a few French auxiliaries, were perhaps more formidable. The cavalry were fifteen thousand, drawn, not from the effeminate population of Bengal, but from the bolder race which inhabits the northern provinces; and the practised eye of Clive could perceive that both the men and the horses were more powerful than those of the Carnatic. The force which he had to oppose to this great multitude consisted of only three thousand men. But of these nearly a thousand were English; and all were led by English officers, and trained in the English discipline. Conspicuous in the ranks of the little army were the men of the Thirty-Ninth Regiment, which still bears on its colours, amidst many honourable additions won under Wellington in Spain and Gascony, the name of Plassey, and the proud motto, *Primus in Indis*.

The battle commenced with a cannonade in which the artillery of the Nabob did scarcely any execution, while the few field-pieces of the English produced great effect. Several of the most distinguished officers in Surajah Dowlah's service fell. Disorder began to spread through his ranks. His own terror increased every moment. One of the conspirators urged on him the expediency of retreating. The insidious advice, agreeing as it did with what his own terrors suggested, was readily received. He ordered his army to fall back, and this order decided his fate. Clive snatched the moment, and ordered his troops to advance. The confused and dispirited multitude gave way before the onset of disciplined valour. No mob attacked by regular soldiers was ever more completely routed. The little band of Frenchmen, who alone ventured to confront the English, were swept down the stream of fugitives. In an hour the forces of Surajah Dowlah were dispersed, never to reassemble. Only five hundred of the vanquished were slain. But their camp, their guns, their baggage, innumerable waggons, innumerable cattle, remained in the power of the conquerors. With the loss of twenty-two soldiers killed and fifty wounded, Clive had scattered an army of near sixty thousand men, and subdued an empire larger and more populous than Great Britain.

Meer Jaffier had given no assistance to the English during the action. But, as soon as he saw that the fate of the day was decided, he drew off his division of the army, and, when the battle was over, sent his con-

gratulations to his ally. The next morning he repaired to the English quarters, not a little uneasy as to the reception which awaited him there. He gave evident signs of alarm when a guard was drawn out to receive him with the honours due to his rank. But his apprehensions were speedily removed, Clive came forward to meet him, embraced him, saluted him as Nabob of the three great provinces of Bengal, Bahar, and Orissa, listened graciously to his apologies, and advised him to march without delay to Moorshedabad.

Surajah Dowlah had fled from the field of battle with all the speed with which a fleet camel could carry him, and arrived at Moorshedabad in little more than twenty-four hours. There he called his councillors round him. The wisest advised him to put himself into the hands of the English, from whom he had nothing worse to fear than deposition and confinement. But he attributed this suggestion to treachery. Others urged him to try the chance of war again. He approved the advice, and issued orders accordingly. But he wanted spirit to adhere even during one day to a manly resolution. He learned that Meer Jaffier had arrived, and his terrors became insupportable. Disguised in a mean dress, with a casket of jewels in his hand, he let himself down at night from a window of his palace, and accompanied by only two attendants, embarked on the river for Patna.

In a few days Clive arrived at Moorshedabad, escorted by two hundred English soldiers and three hundred sepoys. For his residence had been assigned a palace, which was surrounded by a garden so spacious that all the troops who accompanied him could conveniently encamp within it. The ceremony of the installation of Meer Jaffier was instantly performed. Clive led the new Nabob to the seat of honour, placed him on it, presented to him, after the immemorial fashion of the East, an offering of gold, and then, turning to the natives who filled the hall, congratulated them on the good fortune which had freed them from a tyrant. He was compelled on this occasion to use the services of an interpreter; for it is remarkable that, long as he resided in India, intimately acquainted as he was with Indian politics and with the Indian character, and adored as he was by his Indian soldiery, he never learned to express himself with facility in any Indian language. He is said indeed to have been sometimes under the necessity of employing, in his intercourse with natives of India, the smattering of Portuguese which he had acquired, when a lad, in Brazil.

The new sovereign was now called upon to fulfil the engagements into which he had entered with his allies. A conference was held at the house of Jugget Seit, the great banker, for the purpose of making the necessary arrangements. Omichund came thither, fully believing himself to stand high in the favour of Clive, who, with dissimulation surpassing even the dissimulation of Bengal, had up to that day treated him with undiminished kindness. The white treaty was produced and read. Clive then turned to Mr. Scrafton, one of the servants of the Company, and said in English, 'It is now time to undeceive Omichund.' 'Omichund,' said Mr. Scrafton in Hindostanee, 'the red treaty is a trick. You are to have nothing.' Omichund fell back insensible into the arms of his attendants. He revived; but his mind was irreparably ruined. Clive, who, though little troubled by scruples of conscience in his dealings with Indian politicians, was not inhuman, seems to have been touched. He saw Omichund a few days later, spoke to him kindly, advised him to make a pilgrimage to one of the great temples of India, in the hope that change of scene might restore his health, and was even disposed, notwithstanding all that had passed, again to employ him in the public service. But from the moment of that sudden shock, the unhappy man sank gradually into idiocy. He who had formerly been distinguished by the strength of his understanding and the simplicity of his habits, now squandered

the remains of his fortune on childish trinkets, and loved to exhibit himself dressed in rich garments, and hung with precious stones. In this abject state he languished a few months, and then died.

We should not think it necessary to offer any remarks for the purpose of directing the judgment of our readers, with respect to this transaction, had not Sir John Malcolm undertaken to defend it in all its parts. He regrets, indeed, that it was necessary to employ means so liable to abuse as forgery; but he will not admit that any blame attaches to those who deceived the deceiver. He thinks that the English were not bound to keep faith with one who kept no faith with them, and that, if they had fulfilled their engagements with the wily Bengalee, so signal an example of successful treason would have produced a crowd of imitators. Now, we will not discuss this point on any rigid principles of morality. Indeed, it is quite unnecessary to do so: for, looking at the question as a question of expediency in the lowest sense of the word, and using no arguments but such as Machiavelli might have employed in his conferences with Borgia,[41] we are convinced that Clive was altogether in the wrong, and that he committed, not merely a crime, but a blunder. That honesty is the best policy is a maxim which we firmly believe to be generally correct, even with respect to the temporal interest of individuals; but with respect to societies, the rule is subject to still fewer exceptions, and that for this reason, that the life of societies is longer than the life of individuals. It is possible to mention men who have owed great worldly prosperity to breaches of private faith; but we doubt whether it be possible to mention a state which has on the whole been a gainer by a breach of public faith. The entire history of British India is an illustration of the great truth, that it is not prudent to oppose perfidy to perfidy, and that the most efficient weapon with which men can encounter falsehood is truth. During a long course of years, the English rulers of India, surrounded by allies and enemies whom no engagement could bind, have generally acted with sincerity and uprightness; and the event has proved that sincerity and uprightness are wisdom. English valour and English intelligence have done less to extend and to preserve our Oriental empire than English veracity. All that we could have gained by imitating the doublings, the evasions, the fictions, the perjuries which have been employed against us, is as nothing, when compared with what we have gained by being the one power in India on whose word reliance can be placed. No oath which superstition can devise, no hostage however precious, inspires a hundredth part of the confidence which is produced by the 'yea, yea,' and 'nay, nay,' of a British envoy. No fastness, however strong by art or nature, gives to its inmates a security like that enjoyed by the chief who, passing through the territories of powerful and deadly enemies, is armed with the British guarantee. The mightiest princes of the East can scarcely, by the offer of enormous usury, draw forth any portion of the wealth which is concealed under the hearths of their subjects. The British Government offers little more than four per cent.; and avarice hastens to bring forth tens of millions of rupees from its most secret repositories. A hostile monarch may promise mountains of gold to our sepoys, on condition that they will desert the standard of the Company. The Company promises only a moderate pension after a long service. But every sepoy knows that the promise of the Company will be kept; he knows that if he lives a hundred years his rice and salt are as secure as the salary of the Governor-General: and he knows that there is not another state in India which would not, in spite of the most solemn

41. Niccolò di Bernardo dei Machiavelli (1469–1527), Florentine statesman and philosopher, who was sent to Cesare Borgia, Duke of Valentinois, to wait upon and watch him, and who conceived a strong admiration for Cesare's combination of audacity and diplomatic prudence.

vows, leave him to die of hunger in a ditch as soon as he had ceased to be useful. The greatest advantage which a government can possess is to be the one trustworthy government in the midst of governments which nobody can trust. This advantage we enjoy in Asia. Had we acted during the last two generations on the principles which Sir John Malcolm appears to have considered as sound, had we as often as we had to deal with people like Omichund, retaliated by lying and forging, and breaking faith, after their fashion, it is our firm belief that no courage or capacity could have upheld our empire.

Sir John Malcolm admits that Clive's breach of faith could be justified only by the strongest necessity. As we think that breach of faith not only unnecessary, but most inexpedient, we need hardly say that we altogether condemn it.

Omichund was not the only victim of the revolution. Surajah Dowlah was taken a few days after his flight, and was brought before Meer Jaffier. There he flung himself on the ground in convulsions of fear, and with tears and loud cries implored the mercy which he had never shown. Meer Jaffier hesitated; but his son Meeran, a youth of seventeen, who in feebleness of brain and savageness of nature greatly resembled the wretched captive, was implacable. Surajah Dowlah was led into a secret chamber, to which in a short time the ministers of death were sent. In this act the English bore no part; and Meer Jaffier understood so much of their feelings that he thought it necessary to apologise to them for having avenged them on their most malignant enemy.

The shower of wealth now fell copiously on the Company and its servants. A sum of eight hundred thousand pounds sterling, in coined silver, was sent down the river from Moorshedabad to Fort William. The fleet which conveyed this treasure consisted of more than a hundred boats, and performed its triumphal voyage with flags flying and music playing. Calcutta, which a few months before had been desolate, was now more prosperous than ever. Trade revived; and the signs of affluence appeared in every English house. As to Clive, there was no limit to his acquisitions but his own moderation. The treasury of Bengal was thrown open to him. There were piled up, after the usage of Indian princes, immense masses of coin, among which might not seldom be detected the florins and byzants with which, before any European ship had turned the Cape of Good Hope, the Venetians purchased the stuffs and spices of the East. Clive walked between heaps of gold and silver, crowned with rubies and diamonds, and was at liberty to help himself. He accepted between two and three hundred thousand pounds.

The pecuniary transactions between Meer Jaffier and Clive were sixteen years later condemned by the public voice, and severely criticised in Parliament. They are vehemently defended by Sir John Malcolm. The accusers of the victorious general represented his gains as the wages of corruption, or as plunder extorted at the point of the sword from a helpless ally. The biographer, on the other hand, considers these great acquisitions as free gifts, honourable alike to the donor and to the receiver, and compares them to the rewards bestowed by foreign powers on Marlborough, on Nelson, and on Wellington.[42] It had always, he says, been customary in the East to give and receive presents; and there was, as yet, no Act of Parliament positively prohibiting English functionaries in India from profiting by this Asiatic usage. This reasoning, we own, does not quite satisfy us. We do not suspect Clive of selling the interests of his employers or his country; but we cannot acquit him of having done

42. The Emperor Joseph I made Marlborough Prince of Mindelheim after his great victory at Blenheim in 1705; after the battle of the Nile, Nelson was made Duke of Bronte, in Sicily, in 1798; Wellington was made Duke of Victoria by the Spanish Cortes, after the battle at Vittoria in 1813, and later was made Prince of Waterloo by the Dutch.

what, if not in itself evil, was yet of evil example. Nothing is more clear than that a general ought to be the servant of his own government, and of no other. It follows that whatever rewards he receives for his services ought to be given either by his own government, or with the full knowledge and approbation of his own government. This rule ought to be strictly maintained even with respect to the merest bauble, with respect to a cross, a medal, or a yard of coloured riband. But how can any government be well served, if those who command its forces are at liberty, without its permission, without its privity, to accept princely fortunes from its allies? It is idle to say that there was then no Act of Parliament prohibiting the practice of taking presents from Asiatic sovereigns. It is not on the Act which was passed at a later period for the purpose of preventing any such taking of presents, but on grounds which were valid before that Act was passed, on grounds of common law and common sense, that we arraign the conduct of Clive. There is no Act that we know of, prohibiting the Secretary of State for Foreign Affairs from being in the pay of continental powers, but it is not the less true that a Secretary who should receive a secret pension from France would grossly violate his duty, and would deserve severe punishment. Sir John Malcolm compares the conduct of Clive with that of the Duke of Wellington. Suppose, — and we beg pardon for putting such a supposition even for the sake of argument, — that the Duke of Wellington had, after the campaign of 1815, and while he commanded the army of occupation in France, privately accepted two hundred thousand pounds from Lewis the Eighteenth, as a mark of gratitude for the great services which his Grace had rendered to the House of Bourbon; what would be thought of such a transaction? Yet the statute-book no more forbids the taking of presents in Europe now than it forbade the taking of presents in Asia then.

At the same time, it must be admitted that, in Clive's case, there were many extenuating circumstances. He considered himself as the general, not of the Crown, but of the Company. The Company had, by implication at least, authorised its agents to enrich themselves by means of the liberality of the native princes, and by other means still more objectionable. It was hardly to be expected that the servant should entertain stricter notions of his duty than were entertained by his masters. Though Clive did not distinctly acquaint his employers with what had taken place and request their sanction, he did not, on the other hand, by studied concealment, show that he was conscious of having done wrong. On the contrary, he avowed with the greatest openness that the Nabob's bounty had raised him to affluence. Lastly, though we think that he ought not in such a way to have taken anything, we must admit that he deserves praise for having taken so little. He accepted twenty lacs of rupees.[43] It would have cost him only a word to make the twenty forty. It was a very easy exercise of virtue to declaim in England against Clive's rapacity; but not one in a hundred of his accusers would have shown so much self-command in the treasury of Moorshedabad.

Meer Jaffier could be upheld on the throne only by the hand which had placed him on it. He was not, indeed, a mere boy; nor had he been so unfortunate as to be born in the purple. He was not therefore quite so imbecile or quite so depraved as his predecessor had been. But he had none of the talents or virtues which his post required; and his son and heir, Meeran, was another Surajah Dowlah. The recent revolution had unsettled the minds of men. Many chiefs were in open insurrection against the new Nabob. The viceroy of the rich and powerful province of Oude, who, like the other viceroys of the Mogul was now in truth an independent sover-

43. *lac* = 100,000 rupees (at the time worth £10,000, or about $50,000).

eign, menaced Bengal with invasion. Nothing but the talents and authority of Clive could support the tottering government. While things were in this state, a ship arrived with despatches which had been written at the India House before the news of the battle of Plassey had reached London. The Directors had determined to place the English settlements in Bengal under a government constituted in the most cumbrous and absurd manner; and to make the matter worse, no place in the arrangement was assigned to Clive. The persons who were selected to form this new government, greatly to their honour, took on themselves the responsibility of disobeying these preposterous orders, and invited Clive to exercise the supreme authority. He consented; and it soon appeared that the servants of the Company had only anticipated the wishes of their employers. The Directors, on receiving news of Clive's brilliant success, instantly appointed him governor of their possessions in Bengal, with the highest marks of gratitude and esteem. His power was now boundless, and far surpassed even that which Dupleix had attained in the south of India. Meer Jaffier regarded him with slavish awe. On one occasion, the Nabob spoke with severity to a native chief of high rank, whose followers had been engaged in a brawl with some of the Company's sepoys. 'Are you yet to learn,' he said, 'who that Colonel Clive is, and in what station God has placed him?' The chief, who, as a famous jester and an old friend of Meer Jaffier, could venture to take liberties, answered, 'I affront the Colonel! I, who never get up in the morning without making three low bows to his jackass!' This was hardly an exaggeration. Europeans and natives were alike at Clive's feet. The English regarded him as the only man who could force Meer Jaffier to keep his engagements with them. Meer Jaffier regarded him as the only man who could protect the new dynasty against turbulent subjects and encroaching neighbours.

It is but justice to say that Clive used his power ably and vigorously for the advantage of his country. He sent forth an expedition against the tract lying to the north of the Carnatic. In this tract the French still had the ascendency; and it was important to dislodge them. The conduct of the enterprise was intrusted to an officer of the name of Forde,[44] who was then little known, but in whom the keen eye of the governor had detected military talents of a high order. The success of the expedition was rapid and splendid.

While a considerable part of the army of Bengal was thus engaged at a distance, a new and formidable danger menaced the western frontier. The Great Mogul was a prisoner at Delhi in the hands of a subject. His eldest son, named Shah Alum, destined to be, during many years, the sport of adverse fortune, and to be a tool in the hands, first of the Mahrattas, and then of the English, had fled from the palace of his father. His birth was still revered in India. Some powerful princes, the Nabob of Oude in particular, were inclined to favour him. Shah Alum found it easy to draw to his standard great numbers of the military adventurers with whom every part of the country swarmed. An army of forty thousand men, of various races and religions, Mahrattas, Rohillas, Jauts, and Afghans, were speedily assembled round him; and he formed the design of overthrowing the upstart whom the English had elevated to a throne, and of establishing his own authority throughout Bengal, Orissa, and Bahar.

Meer Jaffier's terror was extreme; and the only expedient which occurred to him was to purchase, by the payment of a large sum of money, an accommodation with Shah Alum. This expedient had been repeatedly employed by those who, before him, had ruled the rich and unwarlike provinces near the mouth of the Ganges.

44. Francis Forde (d.1770), second in command to Clive in Bengal in 1758; he took Masulipatam with a small force and drove the French from the Deccan in 1759.

But Clive treated the suggestion with a scorn worthy of his strong sense and dauntless courage. 'If you do this,' he wrote, 'you will have the Nabob of Oude, the Mahrattas, and many more, come from all parts of the confines of your country, who will bully you out of money till you have none left in your treasury. I beg your Excellency will rely on the fidelity of the English, and of those troops which are attached to you.' He wrote in a similar strain to the governor of Patna, a brave native soldier whom he highly esteemed. 'Come to no terms; defend your city to the last. Rest assured that the English are staunch and firm friends, and that they never desert a cause in which they have once taken a part.'

He kept his word. Shah Alum had invested Patna, and was on the point of proceeding to storm, when he learned that the Colonel was advancing by forced marches. The whole army which was approaching consisted of only four hundred and fifty Europeans and two thousand five hundred sepoys. But Clive and his Englishmen were now objects of dread over all the East. As soon as his advance guard appeared, the besiegers fled before him. A few French adventurers who were about the person of the prince advised him to try the chance of battle; but in vain. In a few days this great army, which had been regarded with so much uneasiness by the court of Moorshedabad, melted away before the mere terror of the British name.

The conqueror returned in triumph to Fort William. The joy of Meer Jaffier was as unbounded as his fears had been, and led him to bestow on his preserver a princely token of gratitude. The quit-rent which the East India Company were bound to pay to the Nabob for the extensive lands held by them to the south of Calcutta amounted to near thirty thousand pounds sterling a year. The whole of this splendid estate, sufficient to support with dignity the highest rank of the British peerage, was now conferred on Clive for life.

This present we think Clive justified in accepting. It was a present which, from its very nature, could be no secret. In fact, the Company itself was his tenant, and, by its acquiescence, signified its approbation of Meer Jaffier's grant.

But the gratitude of Meer Jaffier did not last long. He had for some time felt that the powerful ally who had set him up, might pull him down, and had been looking round for support against the formidable strength by which he had himself been hitherto supported. He knew that it would be impossible to find among the natives of India any force which would look the Colonel's little army in the face. The French power in Bengal was extinct. But the fame of the Dutch had anciently been great in the Eastern seas; and it was not yet distinctly known in Asia how much the power of Holland had declined in Europe. Secret communications passed between the court of Moorshedabad and the Dutch factory at Chinsurah; and urgent letters were sent from Chinsurah, exhorting the government of Batavia [45] to fit out an expedition which might balance the power of the English in Bengal. The authorities of Batavia, eager to extend the influence of their country, and still more eager to obtain for themselves a share of the wealth which had recently raised so many English adventurers to opulence, equipped a powerful armament. Seven large ships from Java arrived unexpectedly in the Hoogley. The military force on board amounted to fifteen hundred men, of whom about one half were Europeans. The enterprise was well timed. Clive had sent such large detachments to oppose the French in the Carnatic that his army was now inferior in number to that of the Dutch. He knew that Meer Jaffier secretly favoured the invaders. He knew that he took on himself a serious responsibility if he attacked the forces of a friendly power; that the English ministers could not wish to see a war with Holland added to that

45. The capital of Java, under Dutch control.

in which they were already engaged with France; that they might disavow his acts; that they might punish him. He had recently remitted a great part of his fortune to Europe, through the Dutch East India Company; and he had therefore a strong interest in avoiding any quarrel. But he was satisfied that, if he suffered the Batavian armament to pass up the river and to join the garrison of Chinsurah, Meer Jaffier would throw himself into the arms of these new allies, and that the English ascendency in Bengal would be exposed to most serious danger. He took his resolution with characteristic boldness, and was most ably seconded by his officers, particularly by Colonel Forde, to whom the most important part of the operations was intrusted. The Dutch attempted to force a passage. The English encountered them both by land and water. On both elements the enemy had a great superiority of force. On both they were signally defeated. Their ships were taken. Their troops were put to a total rout. Almost all the European soldiers, who constituted the main strength of the invading army, were killed or taken. The conquerors sat down before Chinsurah; and the chiefs of that settlement, now thoroughly humbled, consented to the terms which Clive dictated. They engaged to build no fortifications, and to raise no troops beyond a small force necessary for the police of their factories; and it was distinctly provided that any violation of these covenants should be punished with instant expulsion from Bengal.

Three months after this great victory, Clive sailed for England. At home, honours and rewards awaited him, not indeed equal to his claims or to his ambition, but still such as, when his age, his rank in the army, and his original place in society are considered, must be pronounced rare and splendid. He was raised to the Irish peerage, and encouraged to expect an English title. George the Third, who had just ascended the throne, received him with great distinction. The ministers paid him marked attention; and Pitt, whose influence in the House of Commons and in the country was unbounded, was eager to mark his regard for one whose exploits had contributed so much to the lustre of that memorable period. The great orator had already in Parliament described Clive as a heaven-born general, as a man who, bred to the labour of the desk, had displayed a military genius which might excite the admiration of the King of Prussia. There were then no reporters in the gallery; but these words, emphatically spoken by the first statesman of the age, had passed from mouth to mouth, had been transmitted to Clive in Bengal, and had greatly delighted and flattered him. Indeed, since the death of Wolfe,[46] Clive was the only English general of whom his countrymen had much reason to be proud. The Duke of Cumberland had been generally unfortunate; and his single victory, having been gained over his countrymen and used with merciless severity, had been more fatal to his popularity than his many defeats.[47] Conway,[48] versed in the learning of his profession, and personally courageous, wanted vigour and capacity. Granby,[49] honest, generous, and brave as a lion, had neither science nor genius. Sackville,[50] inferior in knowledge and abilities to none of his contemporaries, had incurred, unjustly

46. James Wolfe (1727–59) was killed during the capture of Quebec.

47. See note 36.

48. Henry Seymour Conway (1721–95) became field-marshal in 1793, but never distinguished himself as a leader.

49. John Manners, Marquis of Granby (1721–70) became Commander-in-Chief of the army in 1766, and was an able and popular officer in the Seven Years' War.

50. George, Viscount Sackville (1716–85), as commander of a British contingent with Prince Ferdinand, failed to lead the British cavalry in pursuit of the French at the battle of Minden, and thus was declared by a court martial as unfit for military duty.—The 'foreign general,' Ferdinand, Duke of Brunswick (1721–92), was a Prussian field-marshal.

as we believe, the imputation most fatal to the character of a soldier. It was under the command of a foreign general that the British had triumphed at Minden and Warburg. The people therefore, as was natural, greeted with pride and delight a captain of their own, whose native courage and self-taught skill had placed him on a level with the great tacticians of Germany.

The wealth of Clive was such as enabled him to vie with the first grandees of England. There remains proof that he had remitted more than a hundred and eighty thousand pounds through the Dutch East India Company, and more than forty thousand pounds through the English Company. The amount which he had sent home through private houses was also considerable. He had invested great sums in jewels, then a very common mode of remittance from India. His purchases of diamonds, at Madras alone, amounted to twenty-five thousand pounds. Besides a great mass of ready money, he had his Indian estate, valued by himself at twenty-seven thousand a year. His whole annual income, in the opinion of Sir John Malcolm, who is desirous to state it as low as possible, exceeded forty thousand pounds; and incomes of forty thousand pounds at the time of the accession of George the Third were at least as rare as incomes of a hundred thousand pounds now. We may safely affirm that no Englishman who started with nothing has ever, in any line of life, created such a fortune at the early age of thirty-four.

It would be unjust not to add that Clive made a creditable use of his riches. As soon as the battle of Plassey had laid the foundation of his fortune, he sent ten thousand pounds to his sisters, bestowed as much more on other poor friends and relations, ordered his agent to pay eight hundred a year to his parents, and to insist that they should keep a carriage, and settled five hundred a year on his old commander Lawrence, whose means were very slender. The whole sum which Clive expended in this manner may be calculated at fifty thousand pounds.

He now set himself to cultivate Parliamentary interest. His purchases of land seem to have been made in a great measure with that view, and, after the general election of 1761, he found himself in the House of Commons, at the head of a body of dependants whose support must have been important to any administration. In English politics, however, he did not take a prominent part. His first attachments, as we have seen, were to Mr. Fox; at a later period he was attracted by the genius and success of Mr. Pitt [51]; but finally he connected himself in the closest manner with George Grenville.[52] Early in the session of 1764, when the illegal and impolitic persecution of that worthless demagogue Wilkes had strongly excited the public mind, the town was amused by an anecdote, which we have seen in some unpublished memoirs of Horace Walpole. Old Mr. Richard Clive, who, since his son's elevation, had been introduced into society for which his former habits had not well fitted him, presented himself at the levée. The King asked him where Lord Clive was. 'He will be in town very soon,' said the old gentleman, loud enough to be heard by the whole circle, 'and then your Majesty will have another vote.'

But in truth all Clive's views were directed towards the country in which he had so eminently distinguished himself as a soldier and a statesman; and it was by considerations relating to India that his conduct as a public man in England was regulated. The power of the Company, though an anomaly, is in our time, we are firmly persuaded, a beneficial anomaly. In the time of Clive, it was not merely an anom-

52. George Grenville (1712–70), prime minister, 1763–65; he led the proceedings against John Wilkes, and was instrumental in the passage of the Stamp Act which stirred the American colonies to open resistance.

aly, but a nuisance. There was no Board of Control.[53] The Directors were for the most part mere traders, ignorant of general politics, ignorant of the peculiarities of the empire which had strangely become subject to them. The Court of Proprietors,[54] wherever it chose to interfere, was able to have its way. That Court was more numerous, as well as more powerful, than at present; for then every share of five hundred pounds conferred a vote. The meetings were large, stormy, even riotous, the debates indecently virulent. All the turbulence of a Westminster election,[55] all the trickery and corruption of a Grampound [56] election, disgraced the proceedings of this assembly on questions of the most solemn importance. Fictitious votes were manufactured on a gigantic scale. Clive himself laid out a hundred thousand pounds in the purchase of stock, which he then divided among nominal proprietors on whom he could depend, and whom he brought down in his train to every discussion and every ballot. Others did the same, though not to quite so enormous an extent.

The interest taken by the public of England in Indian questions was then far greater than at present, and the reason is obvious. At present a writer enters the service young; he climbs slowly; he is fortunate if, at forty-five, he can return to his country with an annuity of a thousand a year, and with savings amounting to thirty thousand pounds. A great quantity of wealth is made by English functionaries in India; but no single functionary makes a very large fortune, and what is made is slowly, hardly, and honestly earned. Only four or five high political offices are reserved for public men from England. The residencies, the secretaryships, the seats in the boards of revenue and in the Sudder courts [57] are all filled by men who have given the best years of life to the service of the Company; nor can any talents however splendid or any connections however powerful obtain those lucrative posts for any person who has not entered by the regular door, and mounted by the regular gradations. Seventy years ago, less money was brought home from the East than in our time. But it was divided among a very much smaller number of persons, and immense sums were often accumulated in a few months. Any Englishman, whatever his age might be, might hope to be one of the lucky emigrants. If he made a good speech in Leadenhall Street,[58] or published a clever pamphlet in defence of the chairman, he might be sent out in the Company's service, and might return in three or four years as rich as Pigot [59] or as Clive. Thus the India House was a lottery-office, which invited everybody to take a chance, and held out ducal fortunes as the prizes destined for the lucky few. As soon as it was known that there was a part of the world where a lieutenant-colonel had one morning received as a present an estate as large as that of the Earl of Bath or the Marquess of Rockingham, and where it seemed that such a trifle as ten or twenty thousand pounds was to be had by any British functionary for the asking, society

53. A Board of Control was later (in 1784) provided for in Pitt's India Bill; as a department of the government, it superintended the political, military, and financial activities of British India.

54. This court was composed of those men whose investment in the East India Company was at least £500.

55. The Westminster elections were exceptionally popular in character in the age of rotten boroughs, partly because of their neighborhood to the Court and Parliament; the constituency was numerous, and the elections usually turbulent.

56. A corrupt and 'rotten' borough in Cornwall, so notorious that it was disfranchised eleven years before the Reform Bill.

57. The supreme courts in the various presidencies of India; they were maintained by the Company, which also appointed the judges. (French and Sanders)

58. The street in London in which the offices of the East India Company were formerly located.

59. Baron George Pigot (1719–77), Governor of Madras, was said to have acquired a fortune of £400,000 (about $2,000,000) in India.

began to exhibit all the symptoms of the South Sea year,[60] a feverish excitement, an ungovernable impatience to be rich, a contempt for slow, sure, and moderate gains.

At the head of the preponderating party in the India House, had long stood a powerful, able, and ambitious director of the name of Sulivan. He had conceived a strong jealousy of Clive, and remembered with bitterness the audacity with which the late governor of Bengal had repeatedly set at nought the authority of the distant Directors of the Company. An apparent reconciliation took place after Clive's arrival; but enmity remained deeply rooted in the hearts of both. The whole body of Directors was then chosen annually. At the election of 1763, Clive attempted to break down the power of the dominant faction. The contest was carried on with a violence which he describes as tremendous. Sulivan was victorious, and hastened to take his revenge. The grant of rent which Clive had received from Meer Jaffier was, in the opinion of the best English lawyers, valid. It had been made by exactly the same authority from which the Company had received their chief possessions in Bengal, and the Company had long acquiesced in it. The Directors, however, most unjustly determined to confiscate it, and Clive was forced to file a bill in chancery against them.

But a great and sudden turn in affairs was at hand. Every ship from Bengal had for some time brought alarming tidings. The internal misgovernment of the province had reached such a point that it could go no further. What, indeed, was to be expected from a body of public servants exposed to temptation such that, as Clive once said, flesh and blood could not bear it, armed with irresistible power, and responsible only to the corrupt, turbulent, distracted, ill-informed Company, situated at such a distance that the average interval between the sending of a despatch and the receipt of an answer was above a year and a half? Accordingly, during the five years which followed the departure of Clive from Bengal, the misgovernment of the English was carried to a point such as seems hardly compatible with the very existence of society. The Roman proconsul, who, in a year or two, squeezed out of a province the means of rearing marble palaces and baths on the shores of Campania, of drinking from amber, of feasting on singing birds, of exhibiting armies of gladiators and flocks of camelopards; the Spanish viceroy, who, leaving behind him the curses of Mexico or Lima, entered Madrid with a long train of gilded coaches, and of sumpter-horses trapped and shod with silver, were now outdone. Cruelty, indeed, properly so called, was not among the vices of the servants of the Company. But cruelty itself could hardly have produced greater evils than sprang from their unprincipled eagerness to be rich. They pulled down their creature, Meer Jaffier. They set up in his place another Nabob, named Meer Cossim. But Meer Cossim had parts and a will; and, though sufficiently inclined to oppress his subjects himself, he could not bear to see them ground to the dust by oppressions which yielded him no profit, nay, which destroyed his revenue in the very source. The English accordingly pulled down Meer Cossim, and set up Meer Jaffier again; and Meer Cossim, after revenging himself by a massacre surpassing in atrocity that of the Black Hole, fled to the dominions of the Nabob of Oude. At every one of these revolutions, the new prince divided among his foreign masters whatever could be scraped together in the treasury of his fallen predecessor. The immense population of his dominions was given up as a prey to those who had made him a sovereign, and who could unmake him. The servants of the Company obtained, not for their employers, but for themselves, a

60. 1720, the year in which speculation, after the rise and failure of the South Sea Company, had promoted impossible projects, only to collapse with widespread ruin in what was later called the South Sea Bubble.

monopoly of almost the whole internal trade. They forced the natives to buy dear and to sell cheap. They insulted with impunity the tribunals, the police, and the fiscal authorities of the country. They covered with their protection a set of native dependants who ranged through the provinces, spreading desolation and terror wherever they appeared. Every servant of a British factor was armed with all the power of his master; and his master was armed with all the power of the Company. Enormous fortunes were thus rapidly accumulated at Calcutta, while thirty millions of human beings were reduced to the extremity of wretchedness. They had been accustomed to live under tyranny, but never under tyranny like this. They found the little finger of the Company thicker than the loins of Surajah Dowlah. Under their old masters they had at least one resource: when the evil became insupportable, the people rose and pulled down the government. But the English government was not to be so shaken off. That government, oppressive as the most oppressive form of barbarian despotism, was strong with all the strength of civilisation. It resembled the government of evil Genii, rather than the government of human tyrants. Even despair could not inspire the soft Bengalee with courage to confront men of English breed, the hereditary nobility of mankind, whose skill and valour had so often triumphed in spite of tenfold odds. The unhappy race never attempted resistance. Sometimes they submitted in patient misery. Sometimes they fled from the white man, as their fathers had been used to fly from the Mahratta; and the palanquin of the English traveller was often carried through silent villages and towns, which the report of his approach had made desolate.

The foreign lords of Bengal were naturally objects of hatred to all the neighbouring powers; and to all the haughty race presented a dauntless front. The English armies, everywhere outnumbered, were everywhere victorious. A succession of commanders, formed in the school of Clive, still maintained the fame of their country. 'It must be acknowledged,' says the Mussulman historian of those times,[61] 'that this nation's presence of mind, firmness of temper, and undaunted bravery, are past all question. They join the most resolute courage to the most cautious prudence; nor have they their equals in the art of ranging themselves in battle array and fighting in order. If to so many military qualifications they knew how to join the arts of government, if they exerted as much ingenuity and solicitude in relieving the people of God, as they do in whatever concerns their military affairs, no nation in the world would be preferable to them, or worthier of command. But the people under their dominion groan everywhere, and are reduced to poverty and distress. Oh God! come to the assistance of thine afflicted servants, and deliver them from the oppressions which they suffer.'

It was impossible, however, that even the military establishment should long continue exempt from the vices which pervaded every other part of the government. Rapacity, luxury, and the spirit of insubordination spread from the civil service to the officers of the army, and from the officers to the soldiers. The evil continued to grow till every mess-room became the seat of conspiracy and cabal, and till the sepoys could be kept in order only by wholesale executions.

At length the state of things in Bengal began to excite uneasiness at home. A succession of revolutions; a disorganised administration; the natives pillaged, yet the Company not enriched; every fleet bringing back fortunate adventurers who were able to purchase manors and to build stately dwellings, yet bringing back also alarming accounts of the financial pros-

61. Ghulam Husain Khan, who wrote a history of modern India to 1781. The quotation is from the second volume. (French and Sanders.)

pects of the government; war on the frontiers; disaffection in the army; the national character disgraced by excesses resembling those of Verres [62] and Pizarro; such was the spectacle which dismayed those who were conversant with Indian affairs. The general cry was that Clive, and Clive alone, could save the empire which he had founded.

This feeling manifested itself in the strongest manner at a very full General Court of Proprietors. Men of all parties, forgetting their feuds and trembling for their dividends, exclaimed that Clive was the man whom the crisis required, that the oppressive proceedings which had been adopted respecting his estate ought to be dropped, and that he ought to be entreated to return to India.

Clive rose. As to his estate, he said, he would make such propositions to the Directors, as would, he trusted, lead to an amicable settlement. But there was a still greater difficulty. It was proper to tell them that he never would undertake the government of Bengal while his enemy Sulivan was chairman of the Company. The tumult was violent. Sulivan could scarcely obtain a hearing. An overwhelming majority of the assembly was on Clive's side. Sulivan wished to try the result of a ballot. But, according to the bye-laws of the Company, there can be no ballot except on a requisition signed by nine proprietors; and, though hundreds were present, nine persons could not be found to set their hands to such a requisition.

Clive was in consequence nominated Governor and Commander-in-chief of the British possessions in Bengal. But he adhered to his declaration, and refused to enter on his office till the event of the next election of Directors should be known. The contest was obstinate; but Clive triumphed. Sulivan, lately absolute master of the India House, was within a vote of losing his own seat; and both the chairman and the deputy-chairman were friends of the new governor.

Such were the circumstances under which Lord Clive sailed for the third and last time to India In May 1765, he reached Calcutta; and he found the whole machine of government even more fearfully disorganised than he had anticipated. Meer Jaffier, who had some time before lost his eldest son Meeran, had died while Clive was on his voyage out. The English functionaries at Calcutta had already received from home strict orders not to accept presents from the native princes. But, eager for gain, and unaccustomed to respect the commands of their distant, ignorant, and negligent masters, they again set up the throne of Bengal to sale. About one hundred and forty thousand pounds sterling was distributed among nine of the most powerful servants of the Company; and, in consideration of this bribe, an infant son of the deceased Nabob was placed on the seat of his father. The news of the ignominious bargain met Clive on his arrival. In a private letter, written immediately after his landing, to an intimate friend, he poured out his feelings in language, which, proceeding from a man so daring, so resolute, and so little given to theatrical display of sentiment, seems to us singularly touching. 'Alas!' he says, 'how is the English name sunk! I could not avoid paying the tribute of a few tears to the departed and lost fame of the British nation — irrecoverably so, I fear. However, I do declare, by that great Being who is the searcher of all hearts, and to whom we must be accountable if there be a hereafter, that I am come out with a mind superior to all corruption, and that I am determined to destroy these great and growing evils, or perish in the attempt.'

The Council met, and Clive stated to them his full determination to make a thorough reform, and to use for that purpose the whole of the ample authority,

62. Gaius Verres (c.120–43 B.C.), as praetor of Sicily, engaged so ruthlessly in extortions and exactions that he was brought to trial in Rome and prosecuted by Cicero.

civil and military, which had been confided to him. Johnstone, one of the boldest and worst men in the assembly, made some show of opposition. Clive interrupted him, and haughtily demanded whether he meant to question the power of the new government. Johnstone was cowed, and disclaimed any such intention. All the faces round the board grew long and pale; and not another syllable of dissent was uttered.

Clive redeemed his pledge. He remained in India about a year and a half; and in that short time effected one of the most extensive, difficult, and salutary reforms that ever was accomplished by any statesman. This was the part of his life on which he afterwards looked back with most pride. He had it in his power to triple his already splendid fortune; to connive at abuses while pretending to remove them; to conciliate the goodwill of all the English in Bengal, by giving up to their rapacity a helpless and timid race, who knew not where lay the island which sent forth their oppressors, and whose complaints had little chance of being heard across fifteen thousand miles of ocean. He knew that if he applied himself in earnest to the work of reformation, he should raise every bad passion in arms against him. He knew how unscrupulous, how implacable, would be the hatred of those ravenous adventurers who, having counted on accumulating in a few months fortunes sufficient to support peerages, should find all their hopes frustrated. But he had chosen the good part; and he called up all the force of his mind for a battle far harder than that of Plassey. At first success seemed hopeless; but soon all obstacles began to bend before that iron courage and that vehement will. The receiving of presents from the natives was rigidly prohibited. The private trade of the servants of the Company was put down. The whole settlement seemed to be set, as one man, against these measures. But the inexorable governor declared that, if he could not find support at Fort William, he would procure it elsewhere, and sent for some civil servants from Madras to assist him in carrying on the administration. The most factious of his opponents he turned out of their offices. The rest submitted to what was inevitable; and in a very short time all resistance was quelled.

But Clive was far too wise a man not to see that the recent abuses were partly to be ascribed to a cause which could not fail to produce similar abuses, as soon as the pressure of his strong hand was withdrawn. The Company had followed a mistaken policy with respect to the remuneration of its servants. The salaries were too low to afford even those indulgences which are necessary to the health and comfort of Europeans in a tropical climate. To lay by a rupee from such scanty pay was impossible. It could not be supposed that men of even average abilities would consent to pass the best years of life in exile, under a burning sun, for no other consideration than these stinted wages. It had accordingly been understood, from a very early period, that the Company's agents were at liberty to enrich themselves by their private trade. This practice had been seriously injurious to the commercial interests of the corporation. That very intelligent observer, Sir Thomas Roe, in the reign of James the First, strongly urged the Directors to apply a remedy to the abuse. 'Absolutely prohibit the private trade,' said he; 'for your business will be better done. I know this is harsh. Men profess they come not for bare wages. But you will take away this plea if you give great wages to their content; and then you know what you part from.'

In spite of this excellent advice, the Company adhered to the old system, paid low salaries, and connived at the indirect gains of the agents. The pay of a member of Council was only three hundred pounds a year. Yet it was notorious that such a functionary could not live in India for less than ten times that sum; and it could not be expected that he would be content to live

even handsomely in India without laying up something against the time of his return to England. This system, before the conquest of Bengal, might affect the amount of the dividends payable to the proprietors, but could do little harm in any other way. But the Company was now a ruling body. Its servants might still be called factors, junior merchants, senior merchants. But they were in truth proconsuls, proprætors, procurators, of extensive regions. They had immense power. Their regular pay was universally admitted to be insufficient. They were, by the ancient usage of the service, and by the implied permission of their employers, warranted in enriching themselves by indirect means; and this had been the origin of the frightful oppression and corruption which had desolated Bengal. Clive saw clearly that it was absurd to give men power, and to require them to live in penury. He justly concluded that no reform could be effectual which should not be coupled with a plan for liberally remunerating the civil servants of the Company. The Directors, he knew, were not disposed to sanction any increase of the salaries out of their own treasury. The only course which remained open to the governor was one which exposed him to much misrepresentation, but which we think him fully justified in adopting. He appropriated to the support of the service the monopoly of salt, which has formed, down to our own time, a principal head of Indian revenue; and he divided the proceeds according to a scale which seems to have been not unreasonably fixed. He was in consequence accused by his enemies, and has been accused by historians, of disobeying his instructions, of violating his promises, of authorising that very abuse which it was his special mission to destroy, namely, the trade of the Company's servants. But every discerning and impartial judge will admit, that there was really nothing in common between the system which he set up and that which he was sent to destroy. The monopoly of salt had been a source of revenue to the Government of India before Clive was born. It continued to be so long after his death. The civil servants were clearly entitled to a maintenance out of the revenue; and all that Clive did was to charge a particular portion of the revenue with their maintenance. He thus, while he put an end to the practices by which gigantic fortunes had been rapidly accumulated, gave to every British functionary employed in the East the means of slowly, but surely, acquiring a competence. Yet, such is the injustice of mankind, that none of those acts which are the real stains of his life has drawn on him so much obloquy as this measure, which was in truth a reform necessary to the success of all his other reforms.

He had quelled the opposition of the civil servants: that of the army was more formidable. Some of the retrenchments which had been ordered by the Directors affected the interests of the military service; and a storm arose, such as even Cæsar would not willingly have faced. It was no light thing to encounter the resistance of those who held the power of the sword, in a country governed only by the sword. Two hundred English officers engaged in a conspiracy against the government, and determined to resign their commissions on the same day, not doubting that Clive would grant any terms, rather than see the army, on which alone the British empire in the East rested, left without commanders. They little knew the unconquerable spirit with which they had to deal. Clive had still a few officers round his person on whom he could rely. He sent to Fort St. George for a fresh supply. He gave commissions even to mercantile agents who were disposed to support him at this crisis; and he sent orders that every officer who resigned should be instantly brought up to Calcutta. The conspirators found that they had miscalculated. The governor was inexorable. The troops were steady. The sepoys, over whom Clive had always possessed extraordinary influence, stood by

him with unshaken fidelity. The leaders in the plot were arrested, tried, and cashiered. The rest, humbled and dispirited, begged to be permitted to withdraw their resignations. Many of them declared their repentance even with tears. The younger offenders Clive treated with lenity. To the ringleaders he was inflexibly severe; but his severity was pure from all taint of private malevolence. While he sternly upheld the just authority of his office, he passed by personal insults and injuries with magnanimous disdain. One of the conspirators was accused of having planned the assassination of the governor; but Clive would not listen to the charge. 'The officers,' he said, 'are Englishmen, not assassins.'

While he reformed the civil service and established his authority over the army, he was equally successful in his foreign policy. His landing on Indian ground was the signal for immediate peace. The Nabob of Oude, with a large army, lay at that time on the frontier of Bahar. He had been joined by many Afghans and Mahrattas, and there was no small reason to expect a general coalition of all the native powers against the English. But the name of Clive quelled in an instant all opposition. The enemy implored peace in the humblest language, and submitted to such terms as the new governor chose to dictate.

At the same time, the Government of Bengal was placed on a new footing. The power of the English in that province had hitherto been altogether undefined. It was unknown to the ancient constitution of the empire, and it had been ascertained by no compact. It resembled the power which, in the last decrepitude of the Western Empire, was exercised over Italy by the great chiefs of foreign mercenaries, the Ricimers [63] and the Odoacers,[64] who put up and pulled down at their pleasure a succession of insignificant princes, dignified with the names of Cæsar and Augustus. But as in Italy, so in India, the warlike strangers at length found it expedient to give to a domination which had been established by arms the sanction of law and ancient prescription. Theodoric [65] thought it politic to obtain from the distant Court of Byzantium a commission appointing him ruler of Italy; and Clive, in the same manner, applied to the Court of Delhi for a formal grant of the powers of which he already possessed the reality. The Mogul was absolutely helpless; and, though he murmured, had reason to be well pleased that the English were disposed to give solid rupees, which he never could have extorted from them, in exchange for a few Persian characters which cost him nothing. A bargain was speedily struck; and the titular sovereign of Hindostan issued a warrant, empowering the Company to collect and administer the revenues of Bengal, Orissa, and Bahar.

There was still a Nabob, who stood to the British authorities in the same relation in which the last drivelling Chilperics and Childerics of the Merovingian line stood to their able and vigorous Mayors of the Palace, to Charles Martel, and to Pepin.[66] At one time Clive had almost made up his mind to discard this phantom altogether; but he afterwards thought that it might be convenient still to use the name of the Nabob, particularly in dealings with other

63. Ricimer (d.472), the Roman 'King-Maker,' son of a Suevian chief, deposed the emperor Avitus, and raised and then assassinated his three succeeding choices; he took Rome by storm in 472, and died a few days later.

64. Odoacer (c.434–93), King of the Heruli, leader of the barbarians who overthrew the Western empire in 476, took the title of King of Italy, reigning until overthrown by Theodoric, King of the Goths, A.D. 493.

65. Theodoric (c.454–526), King of the Ostrogoths, slew and succeeded Odoacer, and ruled Italy for thirty-three years under a commission obtained from Zeno, emperor of the Eastern empire, at Constantinople.

66. Between c.700 and 750, Charles Martel and his son Pepin III, as mayors of the palace, usurped the powers of the Merovingian kings, and finally Pepin, after forcing Childeric III to retire to a monastery, became king himself

European nations. The French, the Dutch, and the Danes, would, he conceived, submit far more readily to the authority of the native Prince, whom they had always been accustomed to respect, than to that of a rival trading corporation. This policy may, at that time, have been judicious. But the pretence was soon found to be too flimsy to impose on anybody; and it was altogether laid aside. The heir of Meer Jaffier still resides at Moorshedabad, the ancient capital of his house, still bears the title of Nabob, is still accosted by the English as 'Your Highness,' and is still suffered to retain a portion of the regal state which surrounded his ancestors. A pension of a hundred and sixty thousand pounds a year is annually paid to him by the government. His carriage is surrounded by guards, and preceded by attendants with silver maces. His person and his dwelling are exempted from the ordinary authority of the ministers of justice. But he has not the smallest share of political power, and is, in fact, only a noble and wealthy subject of the Company.

It would have been easy for Clive, during his second administration in Bengal, to accumulate riches such as no subject in Europe possessed. He might indeed, without subjecting the rich inhabitants of the province to any pressure beyond that to which their mildest rulers had accustomed them, have received presents to the amount of three hundred thousand pounds a year. The neighbouring princes would gladly have paid any price for his favour. But he appears to have strictly adhered to the rules which he had laid down for the guidance of others. The Rajah of Benares offered him diamonds of great value. The Nabob of Oude pressed him to accept a large sum of money and a casket of costly jewels. Clive courteously, but peremptorily refused; and it should be observed that he made no merit of his refusal, and that the facts did not come to light till after his death. He kept an exact account of his salary, of his share of the profits accruing from the trade in salt, and of those presents which, according to the fashion of the East, it would be churlish to refuse. Out of the sum arising from these resources, he defrayed the expenses of his situation. The surplus he divided among a few attached friends who had accompanied him to India. He always boasted, and as far as we can judge, he boasted with truth, that this last administration diminished instead of increasing his fortune.

One large sum indeed he accepted. Meer Jaffier had left him by will above sixty thousand pounds sterling in specie and jewels: and the rules which had been recently laid down extended only to presents from the living, and did not affect legacies from the dead. Clive took the money, but not for himself. He made the whole over to the Company, in trust for officers and soldiers invalided in their service. The fund which still bears his name owes its origin to this princely donation.

After a stay of eighteen months, the state of his health made it necessary for him to return to Europe. At the close of January 1767, he quitted for the last time the country, on whose destinies he had exercised so mighty an influence.

His second return from Bengal was not, like his first, greeted by the acclamations of his countrymen. Numerous causes were already at work which embittered the remaining years of his life, and hurried him to an untimely grave. His old enemies at the India House were still powerful and active; and they had been reinforced by a large band of allies whose violence far exceeded their own. The whole crew of pilferers and oppressors from whom he had rescued Bengal persecuted him with the implacable rancour which belongs to such abject natures. Many of them even invested their property in India stock, merely that they might be better able to annoy the man whose firmness had set bounds to their rapacity. Lying newspapers were set

up for no purpose but to abuse him; and the temper of the public mind was then such, that these arts, which under ordinary circumstances would have been ineffectual against truth and merit, produced an extraordinary impression.

The great events which had taken place in India had called into existence a new class of Englishmen, to whom their countrymen gave the name of Nabobs. These persons had generally sprung from families neither ancient nor opulent; they had generally been sent at an early age to the East; and they had there acquired large fortunes, which they had brought back to their native land. It was natural that, not having had much opportunity of mixing with the best society, they should exhibit some of the awkwardness and some of the pomposity of upstarts. It was natural that, during their sojourn in Asia, they should have acquired some tastes and habits surprising, if not disgusting, to persons who never had quitted Europe. It was natural that, having enjoyed great consideration in the East, they should not be disposed to sink into obscurity at home; and as they had money, and had not birth or high connection, it was natural that they should display a little obtrusively the single advantage which they possessed. Wherever they settled there was a kind of feud between them and the old nobility and gentry, similar to that which raged in France between the farmer-general [67] and the marquess. This enmity to the aristocracy long continued to distinguish the servants of the Company. More than twenty years after the time of which we are now speaking, Burke pronounced that among the Jacobins might be reckoned 'the East Indians almost to a man, who cannot bear to find that their present importance does not bear a proportion to their wealth.'

The Nabobs soon became a most unpopular class of men. Some of them had in the East displayed eminent talents, and rendered great services to the state; but at home their talents were not shown to advantage, and their services were little known. That they had sprung from obscurity, that they had acquired great wealth, that they exhibited it insolently, that they spent it extravagantly, that they raised the price of everything in their neighbourhood, from fresh eggs to rotten boroughs, that their liveries outshone those of dukes, that their coaches were finer than that of the Lord Mayor, that the examples of their large and ill-governed households corrupted half the servants in the country, that some of them, with all their magnificence, could not catch the tone of good society, but, in spite of the stud and the crowd of menials, of the plate and the Dresden china, of the venison and the Burgundy, were still low men; these were things which excited, both in the class from which they had sprung and in the class into which they attempted to force themselves, the bitter aversion which is the effect of mingled envy and contempt. But when it was also rumoured that the fortune which had enabled its possessor to eclipse the Lord Lieutenant [68] on the race-ground, or to carry the county against the head of a house as old as Domesday Book, had been accumulated by violating public faith, by deposing legitimate princes, by reducing whole provinces to beggary, all the higher and better as well as all the low and evil parts of human nature were stirred against the wretch who had obtained by guilt and dishonour the riches which he now lavished with arrogant and inelegant profusion. The unfortunate Nabob seemed to be made up of those foibles against which comedy has pointed the most merciless ridicule, and of those crimes which have thrown the deepest gloom over tragedy, of Turcaret and Nero, of

67. The tax-gatherer in France, prior to the Revolution; he contracted with the Government for the right to collect or 'farm' the taxes, and often became so wealthy as to stir the animosity of the nobility.

68. A county deputy of the Crown who had extensive military powers.

Monsieur Jourdain and Richard the Third.[69] A tempest of execration and derision, such as can be compared only to that outbreak of public feeling against the Puritans which took place at the time of the Restoration, burst on the servants of the Company. The humane man was horror-struck at the way in which they had got their money, the thrifty man at the way in which they spent it. The Dilettante sneered at their want of taste. The Macaroni[70] black-balled them as vulgar fellows. Writers the most unlike in sentiment and style, Methodists and libertines, philosophers and buffoons, were for once on the same side. It is hardly too much to say that, during a space of about thirty years, the whole lighter literature of England was coloured by the feelings which we have described. Foote[71] brought on the stage an Anglo-Indian chief, dissolute, ungenerous, and tyrannical, ashamed of the humble friends of his youth, hating the aristocracy, yet childishly eager to be numbered among them, squandering his wealth on pandars and flatterers, tricking out his chairmen with the most costly hothouse flowers, and astounding the ignorant with jargon about rupees, lacs, and jaghires.[72] Mackenzie, with more delicate humour, depicted a plain country family raised by the Indian acquisitions of one of its members to sudden opulence, and exciting derision by an awkward mimicry of the manners of the great.[73] Cowper, in that lofty expostulation which glows with the very spirit of the Hebrew poets, placed the oppression of India foremost in the list of those national crimes for which God had punished England with years of disastrous war, with discomfiture in her own seas, and with the loss of her transatlantic empire.[74] If any of our readers will take the trouble to search in the dusty recesses of circulating libraries for some novel published sixty years ago, the chance is that the villain or sub-villain of the story will prove to be a savage old Nabob, with an immense fortune, a tawny complexion, a bad liver, and a worse heart.

Such, as far as we can now judge, was the feeling of the country respecting Nabobs in general. And Clive was eminently the Nabob, the ablest, the most celebrated, the highest in rank, the highest in fortune, of all the fraternity. His wealth was exhibited in a manner which could not fail to excite odium. He lived with great magnificence in Berkeley Square. He reared one palace in Shropshire and another at Claremont. His parliamentary influence might vie with that of the greatest families. But in all this splendour and power envy found something to sneer at. On some of his relations wealth and dignity seem to have sat as awkwardly as on Mackenzie's Margery Mushroom.[75] Nor was he himself, with all his great qualities, free from those weaknesses which the satirists of that age represented as characteristic of his whole class. In the field, indeed, his habits were remarkably simple. He was constantly on horseback, was never seen but in his uniform, never wore silk, never entered a palanquin, and was content with

69. *Turcaret* (1709) was a comedy by Le Sage, satirizing the plutocratic ba[illegible] of society; Nero appears in a number of plays, e.g. Racine's tragedy *Britannicus*; Mon sieur Jourdain, the newly rich merchant who tries to acquire the manners of a nobleman, is the 'Shopkeeper turned gentleman' in Moliere's comedy *Le bourgeois gentilhomme*; on the crimes of Richard the Third, see Shakespeare's tragedy of that name.
Maccaroni: fops or dandies of the time who affected foreign ways; the term came into use in England about 1760.

71. Samuel Foote (1720–77), actor and dramatist, produced *The Nabob* (1772), a play in which the chief character, Sir Matthew Mite, is portrayed as Macaulay indicates.

the plainest fare. But when he was no longer at the head of an army, he laid aside this Spartan temperance for the ostentatious luxury of a Sybarite.[76] Though his person was ungraceful, and though his harsh features were redeemed from vulgar ugliness only by their stern, dauntless, and commanding expression, he was fond of rich and gay clothing, and replenished his wardrobe with absurd profusion. Sir John Malcolm gives us a letter worthy of Sir Matthew Mite, in which Clive orders 'two hundred shirts, the best and finest that can be got for love or money.' A few follies of this description, grossly exaggerated by report, produced an unfavourable impression on the public mind. But this was not the worst. Black stories, of which the greater part were pure inventions, were circulated touching his conduct in the East. He had to bear the whole odium, not only of those bad acts to which he had once or twice stooped, but of all the bad acts of all the English in India, of bad acts committed when he was absent, nay, of bad acts which he had manfully opposed and severely punished. The very abuses against which he had waged an honest, resolute, and successful war were laid to his account. He was, in fact, regarded as the personification of all the vices and weaknesses which the public, with or without reason, ascribed to the English adventurers in Asia. We have ourselves heard old men, who knew nothing of his history, but who still retained the prejudices conceived in their youth, talk of him as an incarnate fiend. Johnson always held this language. Brown, whom Clive employed to lay out his pleasure grounds, was amazed to see in the house of his noble employer a chest which had once been filled with gold from the treasury of Moorshedabad, and could not understand how the conscience of the criminal could suffer him to sleep with such an object so near to his bedchamber. The peasantry of Surrey looked with mysterious horror on the stately house which was rising at Claremont, and whispered that the great wicked lord had ordered the walls to be made so thick in order to keep out the devil, who would one day carry him away bodily. Among the gaping clowns who drank in this frightful story was a worthless ugly lad of the name of Hunt, since widely known as William Huntington, S.S.[77]; and the superstition which was strangely mingled with the knavery of that remarkable impostor seems to have derived no small nutriment from the tales which he heard of the life and character of Clive.

In the meantime, the impulse which Clive had given to the administration of Bengal was constantly becoming fainter and fainter. His policy was to a great extent abandoned; the abuses which he had suppressed began to revive; and at length the evils which a bad government had engendered were aggravated by one of those fearful visitations which the best government cannot avert. In the summer of 1770, the rains failed; the earth was parched up; the tanks were empty; the rivers shrank within their beds; and a famine, such as is known only in countries where every household depends for support on its own little patch of cultivation, filled the whole valley of the Ganges with misery and death. Tender and delicate women, whose veils had never been lifted before the public gaze, came forth from the inner chambers in which Eastern jealousy had kept watch over their beauty, threw themselves on the earth before the passers-by, and, with loud wailings, implored a handful of rice for their children. The Hoogley every day rolled down thousands of

76. *Sybarite*: one who, like the inhabitants of Sybaris (an ancient Greek city in southern Italy), is noted for his love of luxury and pleasure; a voluptuary.

77. William Huntington (1745–1813), coal-heaver and preacher, who used after his names the letters S.S. to mean 'sinner saved'; he lived near Clive, and believed and helped circulate the stories about Clive.

corpses close to the porticoes and gardens of the English conquerors. The very streets of Calcutta were blocked up by the dying and the dead. The lean and feeble survivors had not energy enough to bear the bodies of their kindred to the funeral pile or to the holy river, or even to scare away the jackals and vultures, who fed on human remains in the face of day. The extent of the mortality was never ascertained; but it was popularly reckoned by millions. This melancholy intelligence added to the excitement which already prevailed in England on Indian subjects. The proprietors of East India stock were uneasy about their dividends. All men of common humanity were touched by the calamities of our unhappy subjects; and indignation soon began to mingle itself with pity. It was rumoured that the Company's servants had created the famine by engrossing all the rice of the country; that they had sold grain for eight, ten, twelve times the price at which they had bought it; that one English functionary who, the year before, was not worth a hundred guineas, had, during that season of misery, remitted sixty thousand pounds to London. These charges we believe to have been unfounded. That servants of the Company had ventured, since Clive's departure, to deal in rice, is probable. That, if they dealt in rice, they must have gained by the scarcity, is certain. But there is no reason for thinking that they either produced or aggravated an evil which physical causes sufficiently explain. The outcry which was raised against them on this occasion was, we suspect, as absurd as the imputations which, in times of dearth at home, were once thrown by statesmen and judges, and are still thrown by two or three old women, on the corn factors.[78] It was, however, so loud and so general that it appears to have imposed even on an intellect raised so high above vulgar prejudices as that of Adam Smith.[79] What was still more extraordinary, these unhappy events greatly increased the unpopularity of Lord Clive. He had been some years in England when the famine took place. None of his acts had the smallest tendency to produce such a calamity. If the servants of the Company had traded in rice, they had done so in direct contravention of the rule which he had laid down, and, while in power, had resolutely enforced. But, in the eyes of his countrymen, he was, as we have said, the Nabob, the Anglo-Indian character personified; and, while he was building and planting in Surrey, he was held responsible for all the effects of a dry season in Bengal.

Parliament had hitherto bestowed very little attention on our Eastern possessions. Since the death of George the Second, a rapid succession of weak administrations, each of which was in turn flattered and betrayed by the Court, had held the semblance of power. Intrigues in the palace, riots in the capital, and insurrectionary movements in the American colonies, had left the advisers of the Crown little leisure to study Indian politics. When they did interfere, their interference was feeble and irresolute. Lord Chatham,[80] indeed, during the short period of his ascendency in the councils of George the Third, had meditated a bold attack on the Company. But his plans were rendered abortive by the strange malady which about that time began to overcloud his splendid genius.

At length, in 1772, it was generally felt that Parliament could no longer neglect the affairs of India. The Government was stronger than any which had held power since the breach between Mr. Pitt and the great Whig connection in 1761. No pressing question of domestic or European pol-

78. *corn factors*: mercantile agents who bought and sold grain for others on commission.

79. Adam Smith (1723–90) in his *Wealth of Nations* (IV.iii.7) put the blame on the system, rather than on the individuals, involved in the monopolies.

80. William Pitt. See note 51. His last years were darkened by some sort of mental illness.

icy required the attention of public men. There was a short and delusive lull between two tempests. The excitement produced by the Middlesex election was over [81]; the discontents of America did not yet threaten civil war; the financial difficulties of the Company brought on a crisis; the Ministers were forced to take up the subject; and the whole storm, which had long been gathering, now broke at once on the head of Clive.

His situation was indeed singularly unfortunate. He was hated throughout the country, hated at the India House, hated, above all, by those wealthy and powerful servants of the Company, whose rapacity and tyranny he had withstood. He had to bear the double odium of his bad and of his good actions, of every Indian abuse and of every Indian reform. The state of the political world was such that he could count on the support of no powerful connection. The party to which he had belonged, that of George Grenville, had been hostile to the Government, and yet had never cordially united with the other sections of the Opposition, with the little band which still followed the fortunes of Lord Chatham, or with the large and respectable body of which Lord Rockingham [82] was the acknowledged leader. George Grenville was now dead: his followers were scattered; and Clive, unconnected with any of the powerful factions which divided the Parliament, could reckon only on the votes of those members who were returned by himself. His enemies, particularly those who were the enemies of his virtues, were unscrupulous, ferocious, implacable. Their malevolence aimed at nothing less than the utter ruin of his fame and fortune. They wished to see him expelled from Parliament, to see his spurs chopped off,[83] to see his estate confiscated; and it may be doubted whether even such a result as this would have quenched their thirst for revenge.

Clive's parliamentary tactics resembled his military tactics. Deserted, surrounded, outnumbered, and with everything at stake, he did not even deign to stand on the defensive, but pushed boldly forward to the attack. At an early stage of the discussions on Indian affairs he rose, and in a long and elaborate speech vindicated himself from a large part of the accusations which had been brought against him. He is said to have produced a great impression on his audience. Lord Chatham who, now the ghost of his former self, loved to haunt the scene of his glory, was that night under the gallery of the House of Commons, and declared that he had never heard a finer speech. It was subsequently printed under Clive's direction, and, when the fullest allowance has been made for the assistance which he may have obtained from literary friends, proves him to have possessed, not merely strong sense and a manly spirit, but talents both for disquisition and declamation which assiduous culture might have improved into the highest excellence. He confined his defence on this occasion to the measures of his last administration, and succeeded so far that his enemies thenceforth thought it expedient to direct their attacks chiefly against the earlier part of his life.

The earlier part of his life unfortunately presented some assailable points to their hostility. A committee was chosen by ballot to inquire into the affairs of India; and by this committee the whole history of that great revolution which threw down Surajah Dowlah and raised Meer Jaffier was sifted with malignant care. Clive was subjected to the most unsparing examination and cross-examination, and afterwards bitterly complained that he, the Baron of Plassey, had been treated like a

81 In the Middlesex election (1768) there was much rioting because John Wilkes, who had been elected to Parliament, was thrice prevented by the Committee from taking his seat.

82. Charles Watson-Wentworth, 2nd Marquis of Rockingham (1730–82), was leader of the opposition in the House of Lords from 1768 to 1781, and was prime minister in 1782.

83. *i.e.* to degrade him from his knighthood.

sheep-stealer. The boldness and ingenuousness of his replies would alone suffice to show how alien from his nature were the frauds to which, in the course of his Eastern negotiations, he had sometimes descended. He avowed the arts which he had employed to deceive Omichund, and resolutely said that he was not ashamed of them, and that, in the same circumstances, he would again act in the same manner. He admitted that he had received immense sums from Meer Jaffier; but he denied that, in doing so, he had violated any obligation of morality or honour. He laid claim, on the contrary, and not without some reason, to the praise of eminent disinterestedness. He described in vivid language the situation in which his victory had placed him: great princes dependent on his pleasure; an opulent city afraid of being given up to plunder; wealthy bankers bidding against each other for his smiles; vaults piled with gold and jewels thrown open to him alone. 'By God, Mr. Chairman,' he exclaimed, 'at this moment I stand astonished at my own moderation.'

The inquiry was so extensive that the Houses rose before it had been completed. It was continued in the following session. When at length the committee had concluded its labours, enlightened and impartial men had little difficulty in making up their minds as to the result. It was clear that Clive had been guilty of some acts which it is impossible to vindicate without attacking the authority of all the most sacred laws which regulate the intercourse of individuals and of states. But it was equally clear that he had displayed great talents, and even great virtues; that he had rendered eminent services both to his country and to the people of India; and that it was in truth not for his dealings with Meer Jaffier, nor for the fraud which he had practised on Omichund, but for his determined resistance to avarice and tyranny, that he was now called in question.

Ordinary criminal justice knows nothing of set-off. The greatest desert cannot be pleaded in answer to a charge of the slightest transgression. If a man has sold beer on a Sunday morning, it is no defence that he has saved the life of a fellow-creature at the risk of his own. If he has harnessed a Newfoundland dog to his little child's carriage, it is no defence that he was wounded at Waterloo. But it is not in this way that we ought to deal with men who, raised far above ordinary restraints, and tried by far more than ordinary temptations, are entitled to a more than ordinary measure of indulgence. Such men should be judged by their contemporaries as they will be judged by posterity. Their bad actions ought not indeed to be called good; but their good and bad actions ought to be fairly weighed; and if on the whole the good preponderate, the sentence ought to be one, not merely of acquittal, but of approbation. Not a single great ruler in history can be absolved by a judge who fixes his eye inexorably on one or two unjustifiable acts. Bruce the deliverer of Scotland,[84] Maurice the deliverer of Germany,[85] William the deliverer of Holland,[86] his great descendant the deliverer of England,[87] Murray the good regent,[88]

84. Robert I, 'The Bruce' (1274–1329), king and liberator of Scotland, who suspected John Comyn of treachery, and therefore lured him into a church and stabbed him.

85. Maurice (1521–53), who by turns deserted the Protestant cause (and was therefore made Elector of Saxony) and championed Protestantism by turning against Charles V.

86. William the Silent (1533–84), 'Deliverer of Holland' from Spanish rule, was suspected of poisoning his wife.

87. William III (1650–1702) was a 'deliverer of England' in that his acceptance of the invitation to assume the English throne put an end (in 1688) to the turbulence and revolution under the Stuart kings; yet his memory is darkened by his order (1692) for the 'Massacre of Glencoe.' (See Macaulay's *History of England*, Chapter xviii.)

88. James Stuart, Earl of Murray (c.1531–70) plotted against his half-sister Mary, Queen of Scots, and helped bring about the murder of her husband, Lord Darnley.

Cosmo the father of his country,[89] Henry the Fourth of France,[90] Peter the Great of Russia,[91] how would the best of them pass such a scrutiny? History takes wider views; and the best tribunal for great political cases is the tribunal which anticipates the verdict of history.

Reasonable and moderate men of all parties felt this in Clive's case. They could not pronounce him blameless; but they were not disposed to abandon him to that low-minded and rancorous pack who had run him down and were eager to worry him to death. Lord North,[92] though not very friendly to him, was not disposed to go to extremities against him. While the inquiry was still in progress, Clive, who had some years before been created a Knight of the Bath, was installed with great pomp in Henry the Seventh's Chapel. He was soon after appointed Lord Lieutenant of Shropshire. When he kissed hands,[93] George the Third, who had always been partial to him, admitted him to a private audience, talked to him half an hour on Indian politics, and was visibly affected when the persecuted general spoke of his services and of the way in which they had been requited.

At length the charges came in a definite form before the House of Commons. Burgoyne,[94] chairman of the committee, a man of wit, fashion, and honour, an agreeable dramatic writer, an officer whose courage was never questioned, and whose skill was at that time highly esteemed, appeared as the accuser. The members of the administration took different sides; for in that age all questions were open questions, except such as were brought forward by the Government, or such as implied censure on the Government. Thurlow,[95] the Attorney-General, was among the assailants. Wedderburne,[96] the Solicitor-General, strongly attached to Clive, defended his friend with extraordinary force of argument and language. It is a curious circumstance that, some years later, Thurlow was the most conspicuous champion of Warren Hastings,[97] while Wedderburne was among the most unrelenting persecutors of that great though not faultless statesman. Clive spoke in his own defence at less length and with less art than in the preceding year, but with much energy and pathos. He recounted his great actions and his wrongs; and, after bidding his hearers remember, that they were about to decide not only on his honour but on their own, he retired from the House.

30 The Commons resolved that acquisitions made by the arms of the State belong to the State alone, and that it is illegal in the servants of the State to appropriate such acquisitions to themselves. They resolved that this wholesome rule appeared to have been systematically violated by the English functionaries in Bengal. On a subsequent day they went a step further, and resolved that Clive had, by

89. Cosmo de' Medici (1389–1464) was both a great patron of art and letters in Florence, and an unscrupulous politician and military leader.

90. Henry IV (1553–1610), though great as King of France, was also licentious, and willing to adopt or repudiate religious doctrines as political interest dictated.

91. Peter the Great (1672–1725), though great as the founder of Russia's political power, had his son put to death on a fabricated charge of conspiracy.

92. Frederick North, 2nd Earl of Guilford (1732–92) was prime minister from 1770 to 1782, but was in reality only the agent of George III, who directed the policy of the ministry.

93. *i.e.* accepted the appointment with the usual ceremony on such occasions.

94. John Burgoyne (1722–92), whose esteem was considerably lessened by his surrender to General Gates at Saratoga in 1777.

95. Edward Thurlow, 1st Baron Thurlow (1731–1806), eminent as a jurist and constitutional ist, and as a Tory leader.

96. Alexander Wedderburn, 1st Earl of Rosslyn (1733–1805) was made Solicitor-General in 1771.

97. Warren Hastings (1732–1818), first Governor General of India, was impeached on the ground of corruption and cruelty, but was acquitted (1795). (See Macaulay's essay on Hastings.)

means of the power which he possessed as commander of the British forces in India, obtained large sums from Meer Jaffier. Here the Commons stopped. They had voted the major and minor of Burgoyne's syllogism; but they shrank from drawing the logical conclusion. When it was moved that Lord Clive had abused his powers, and set an evil example to the servants of the public, the previous question was put and carried. At length, long after the sun had risen on an animated debate, Wedderburne moved that Lord Clive had at the same time rendered great and meritorious services to his country; and this motion passed without a division.

The result of this memorable inquiry appears to us, on the whole, honourable to the justice, moderation, and discernment of the Commons. They had indeed no great temptation to do wrong. They would have been very bad judges of an accusation brought against Jenkinson[98] or against Wilkes. But the question respecting Clive was not a party question; and the House accordingly acted with the good sense and good feeling which may always be expected from an assembly of English gentlemen, not blinded by faction.

The equitable and temperate proceedings of the British Parliament were set off to the greatest advantage by a foil. The wretched government of Lewis the Fifteenth had murdered, directly or indirectly, almost every Frenchman who had served his country with distinction in the East. Labourdonnais was flung into the Bastile, and, after years of suffering, left it only to die. Dupleix, stripped of his immense fortune, and broken-hearted by humiliating attendance in ante-chambers, sank into an obscure grave. Lally[99] was dragged to the common place of execution with a gag between his lips. The Commons of England, on the other hand, treated their living captain with that discriminating justice which is seldom shown except to the dead. They laid down sound general principles; they delicately pointed out where he had deviated from those principles; and they tempered the gentle censure with liberal eulogy. The contrast struck Voltaire, always partial to England, and always eager to expose the abuses of the Parliaments of France. Indeed he seems, at this time, to have meditated a history of the conquest of Bengal. He mentioned his design to Dr. Moore,[100] when that amusing writer visited him at Ferney. Wedderburne took great interest in the matter, and pressed Clive to furnish materials. Had the plan been carried into execution, we have no doubt that Voltaire would have produced a book containing much lively and picturesque narrative, many just and humane sentiments poignantly expressed, many grotesque blunders, many sneers at the Mosaic chronology, much scandal about the Catholic missionaries, and much sublime theo-philanthropy, stolen from the New Testament, and put into the mouths of virtuous and philosophical Brahmins.

Clive was now secure in the enjoyment of his fortune and his honours. He was surrounded by attached friends and relations; and he had not yet passed the season of vigorous bodily and mental exertion. But clouds had long been gathering over his mind, and now settled on it in thick darkness. From early youth he had been subject to fits of that strange melancholy 'which rejoiceth exceedingly and is glad when it can find the grave.' While still a writer at Madras, he had twice at-

98. Charles Jenkinson, 1st Earl of Liverpool (1727–1808), leader of the 'King's Friends,' a group headed by George III, and therefore unpopular in Parliament.

99. Thomas Arthur, Comte de Lally (1702–66), French general who had been sent on an expedition to India, during the war with England; he lost Pondicherry to the English (1761), was brought to England as a prisoner, and was later tried in France for treachery, and beheaded.

100. Dr. John Moore (1729–1802), physician, traveler, and man of letters, author of a popular novel, *Zeluco* (1786).

tempted to destroy himself. Business and prosperity had produced a salutary effect on his spirits. In India, while he was occupied by great affairs, in England, while wealth and rank had still the charm of novelty, he had borne up against his constitutional misery. But he had now nothing to do, and nothing to wish for. His active spirit in an inactive situation drooped and withered like a plant in an uncongenial air. The malignity with which his enemies had pursued him, the indignity with which he had been treated by the committee, the censure, lenient as it was, which the House of Commons had pronounced, the knowledge that he was regarded by a large portion of his countrymen as a cruel and perfidious tyrant, all concurred to irritate and depress him. In the meantime, his temper was tried by acute physical suffering. During his long residence in tropical climates, he had contracted several painful distempers. In order to obtain ease he called in the help of opium; and he was gradually enslaved by this treacherous ally. To the last, however, his genius occasionally flashed through the gloom. It was said that he would sometimes, after sitting silent and torpid for hours, rouse himself to the discussion of some great question, would display in full vigour all the talents of the soldier and the statesman, and would then sink back into his melancholy repose.

The disputes with America had now become so serious that an appeal to the sword seemed inevitable; and the Ministers were desirous to avail themselves of the services of Clive. Had he still been what he was when he raised the siege of Patna and annihilated the Dutch army and navy at the mouth of the Ganges, it is not improbable that the resistance of the colonists would have been put down, and that the inevitable separation would have been deferred for a few years. But it was too late. His strong mind was fast sinking under many kinds of suffering. On the twenty-second of November, 1774, he died by his own hand. He had just completed his forty-ninth year.

In the awful close of so much prosperity and glory, the vulgar saw only a confirmation of all their prejudices; and some men of real piety and genius so far forgot the maxims both of religion and of philosophy as confidently to ascribe the mournful event to the just vengeance of God, and to the horrors of an evil conscience. It is with very different feelings that we contemplate the spectacle of a great mind ruined by the weariness of satiety, by the pangs of wounded honour, by fatal diseases, and more fatal remedies.

Clive committed great faults; and we have not attempted to disguise them. But his faults, when weighed against his merits, and viewed in connection with his temptations, do not appear to us to deprive him of his right to an honourable place in the estimation of posterity.

From his first visit to India dates the renown of the English arms in the East. Till he appeared, his countrymen were despised as mere pedlars, while the French were revered as a people formed for victory and command. His courage and capacity dissolved the charm. With the defence of Arcot commences that long series of Oriental triumphs which closes with the fall of Ghizni. Nor must we forget that he was only twenty-five years old when he approved himself ripe for military command. This is a rare if not a singular distinction. It is true that Alexander, Condé, and Charles the Twelfth, won great battles at a still earlier age; but those princes were surrounded by veteran generals of distinguished skill, to whose suggestions must be attributed the victories of the Granicus, of Rocroi and of Narva.[101] Clive, an inexperienced youth,

101. Alexander the Great (356–23 B.C.) won his first great victory, at the battle of Granicus, when he was but twenty-two; Louis II de Bourbon, Prince of Condé (1621–86) de-

had yet more experience than any of those who served under him. He had to form himself, to form his officers, and to form his army. The only man, as far as we recollect, who at an equally early age ever gave equal proof of talents for war, was Napoleon Bonaparte.

From Clive's second visit to India dates the political ascendency of the English in that country. His dexterity and resolution realised, in the course of a few months, more than all the gorgeous visions which had floated before the imagination of Dupleix. Such an extent of cultivated territory, such an amount of revenue, such a multitude of subjects, was never added to the dominion of Rome by the most successful proconsul. Nor were such wealthy spoils ever borne under arches of triumph, down the Sacred Way,[102] and through the crowded Forum, to the threshold of Tarpeian Jove. The fame of those who subdued Antiochus and Tigranes grows dim when compared with the splendour of the exploits which the young English adventurer achieved at the head of an army not equal in numbers to one half of a Roman legion.[103]

From Clive's third visit to India dates the purity of the administration of our Eastern empire. When he landed in Calcutta in 1765, Bengal was regarded as a place to which Englishmen were sent only to get rich, by any means, in the shortest possible time. He first made dauntless and unsparing war on that gigantic system of oppression, extortion, and corruption. In that war he manfully put to hazard his ease, his fame, and his splendid fortune. The same sense of justice which forbids us to conceal or extenuate the faults of his earlier days compels us to admit that those faults were nobly repaired. If the reproach of the Company and of its servants has been taken away, if in India the yoke of foreign masters, elsewhere the heaviest of all yokes, has been found lighter than that of any native dynasty, if to that gang of public robbers, which formerly spread terror through the whole plain of Bengal, has succeeded a body of functionaries not more highly distinguished by ability and diligence than by integrity, disinterestedness, and public spirit, if we now see such men as Munro, Elphinstone, and Metcalfe,[104] after leading victorious armies, after making and deposing kings, return, proud of their honourable poverty, from a land which once held out to every greedy factor the hope of boundless wealth, the praise is in no small measure due to Clive. His name stands high on the roll of conquerors. But it is found in a better list, in the list of those who have done and suffered much for the happiness of mankind. To the warrior, history will assign a place in the same rank with Lucullus and Trajan.[105] Nor will she deny to the reformer

feated the Spaniards at the battle of Rocroy when he was twenty-two, and won his place among the great captains of modern times; Charles XII (1682–1718) became King of Sweden in 1697, and when but eighteen crushingly defeated the Russian army at Narva.

102. The principal street in ancient Rome, which ran past the Forum to the Capitoline Hill, on which stood a shrine to Jupiter. — *Tarpeian*: from the rocky cliff of the Capitoline Hill.

103. Lucius Corn. Scipio Asiaticus defeated Antiochus the Great (c.223–187 B.C.) King of Syria, at Mt. Sipylus in 190; Pompey the Great (106–48 B.C.) defeated Tigranes (c. 140–55 B.C.), King of Armenia, in 66 B.C.

104. Sir Thomas Munro (1761–1827) was nominated Governor of Madras in 1819; Mountstuart Elphinstone (1779–1859) was Governor of Bombay, 1819–27, and was an able and conscientious administrator; Charles Theophilus Metcalfe, 1st Baron Metcalfe (1785–1846) was provisional Governor General of India, 1835–36.

105. Lucius Licinius Lucullus (d.56 B.C.), Roman consul and general, was celebrated as the conqueror of Mithridates VI, King of Pontus; Trajan (A.D. 52–117), Roman emperor, who defeated the Dacians, and extended his kingdom to the Persian Gulf.

a share of that veneration with which France cherishes the memory of Turgot,[106] and with which the latest generations of Hindoos will contemplate the statue of Lord William Bentinck.[107]

106. Anne Robert Jacques Turgot (1727–81), Comptroller General under Louis XVI; his proposed reforms, if accepted, might have prevented the French Revolution.

107. Lord William Bentinck (1774–1839) became Governor General of India in 1833, and effected a number of important reforms.

FREDERIC THE GREAT

THIS work,* which has the high honour of being introduced to the world by the author of *Lochiel* and *Hohenlinden*, is not wholly unworthy of so distinguished a *chaperon*. It professes, indeed, to be no more than a compilation; but it is an exceedingly amusing compilation, and we shall be glad to have more of it. The narrative comes down at present only to the commencement of the Seven Years' War,[1] and therefore does not comprise the most interesting portion of Frederic's reign.

It may not be unacceptable to our readers that we should take this opportunity of presenting them with a slight sketch of the life of the greatest king that has, in modern times, succeeded by right of birth to a throne. It may, we fear, be impossible to compress so long and eventful a story within the limits which we must prescribe to ourselves. Should we be compelled to break off, we may perhaps, when the continuation of this work appears, return to the subject.

The Prussian monarchy, the youngest of the great European states, but in population and revenue the fifth among them, and in art, science, and civilisation entitled to the third, if not to the second place, sprang from a humble origin. About the beginning of the fifteenth century, the marquisate of Brandenburg was bestowed by the Emperor Sigismund [2] on the noble family of Hohenzollern. In the sixteenth century that family embraced the Lutheran doctrines. It obtained from the King of Poland, early in the seventeenth century, the investiture of the duchy of Prussia. Even after this accession of territory, the chiefs of the house of Hohenzollern hardly ranked with the Electors of Saxony and Bavaria. The soil of Brandenburg was for the most part sterile. Even round Berlin, the capital of the province, and round Potsdam, the favourite residence of the Margraves, the country was a desert. In some places, the deep sand could with difficulty be forced by assiduous tillage to yield thin crops of rye and oats. In other places, the ancient forests, from which the conquerors of the Roman Empire had descended on the Danube, remained untouched by the hand of man. Where the soil was rich it was generally marshy, and its insalubrity repelled the cultivators whom its fertility attracted. Frederic William, called the Great Elector,[3] was the prince to whose policy his successors have agreed to ascribe their greatness. He acquired by the peace of Westphalia several valuable possessions, and among them the rich city and district of Magdeburg; and he left to his son Frederic a principality as considerable as any which was not called a kingdom.

* *Frederic the Great and his Times.* Edited, with an Introduction, by THOMAS CAMPBELL, Esq. 2 vols. 8vo. London: 1842 [Macaulay's notation.]

1. Which lasted from 1756 to 1763.

2. Sigismund of Luxemburg (1368–1437), second son of the Emperor Charles IV, received the Mark (district or region) of Brandenburg from his father in 1378. He transferred the Mark to his friend and supporter Frederic of Hohenzollern, Burgrave of Nuremberg, in exchange for assistance in becoming elected Emperor in 1411.

3. 1620–88; he became Elector (one of the princes qualified to elect the emperor of the Holy Roman Empire) in 1640.

Frederic [4] aspired to the style of royalty. Ostentatious and profuse, negligent of his true interests and of his high duties, insatiably eager for frivolous distinctions, he added nothing to the real weight of the state which he governed; perhaps he transmitted his inheritance to his children impaired rather than augmented in value; but he succeeded in gaining the great object of his life, the title of King. In the year 1700 he assumed this new dignity. He had on that occasion to undergo all the mortifications which fall to the lot of ambitious upstarts. Compared with the other crowned heads of Europe, he made a figure resembling that which a Nabob [5] or a Commissary,[6] who had bought a title, would make in the Company of Peers whose ancestors had been attainted for treason against the Plantagenets. The envy of the class which Frederic quitted, and the civil scorn of the class into which he intruded himself, were marked in very significant ways. The Elector of Saxony at first refused to acknowledge the new Majesty. Lewis the Fourteenth looked down on his brother King with an air not unlike that with which the Count in Molière's play regards Monsieur Jourdain,[7] just fresh from the mummery of being made a gentleman. Austria exacted large sacrifices in return for her recognition, and at last gave it ungraciously.

Frederic was succeeded by his son, Frederic William,[8] a prince who must be allowed to have possessed some talents for administration, but whose character was disfigured by odious vices, and whose eccentricities were such as had never before been seen out of a madhouse. He was exact and diligent in the transacting of business; and he was the first who formed the design of obtaining for Prussia a place among the European powers, altogether out of proportion to her extent and population, by means of a strong military organisation. Strict economy enabled him to keep up a peace establishment of sixty thousand troops. These troops were disciplined in such a manner, that, placed beside them, the household regiments of Versailles and St. James's would have appeared an awkward squad. The master of such a force could not but be regarded by all his neighbours as a formidable enemy and a valuable ally.

But the mind of Frederic William was so ill regulated, that all his inclinations became passions, and all his passions partook of the character of moral and intellectual disease. His parsimony degenerated into sordid avarice. His taste for military pomp and order became a mania, like that of a Dutch burgomaster for tulips, or that of a member of the Roxburghe Club [9] for Caxtons. While the envoys of the Court of Berlin were in a state of such squalid poverty as moved the laughter of foreign capitals, while the food placed before the princes and princesses of the blood-royal of Prussia was too scanty to appease hunger, and so bad that even hunger loathed it, no price was thought too extravagant for tall recruits. The ambition of the King was to form a brigade of giants, and every country was ransacked by his agents for men above the ordinary stature. These re-

4. Frederic I (1657–1713) succeeded as Elector of Brandenburg, and assumed the title of 'King of Prussia' in Jan. 1701, with the consent of Emperor Leopold I. (The *consent* was given in 1700.)

5. Originally the governor of a province in India; later anyone who returned from the East with great riches.

6. Representative, or deputy (as the Nabob was often a native deputy or viceroy in India).

7. See Molière's *Le bourgeois gentilhomme*, III, iv.

8. 1688–1740; father of Frederic the Great, succeeded as King of Prussia in 1713. Through developing and organizing the army and the internal administration of the Hohenzollern territories, he founded the greatness of Prussia. Macaulay's portrait of Frederic William is considerably exaggerated.

9. A bibliophile club, the first of its kind, founded in 1812, and named after John Ker, 3rd Duke of Roxburghe (1740–1804), a great book-collector and owner of an unrivaled collection of books from Caxton's press.

searches were not confined to Europe. No head that towered above the crowd in the bazaars of Aleppo, of Cairo, or of Surat, could escape the crimps of Frederic William. One Irishman more than seven feet high, who was picked up in London by the Prussian ambassador, received a bounty of near thirteen hundred pounds sterling, very much more than the ambassador's salary. This extravagance was the more absurd, because a stout youth of five feet eight, who might have been procured for a few dollars, would in all probability have been a much more valuable soldier. But to Frederic William, this huge Irishman was what a brass Otho,[10] or a Vinegar Bible,[11] is to a collector of a different kind.

It is remarkable, that though the main end of Frederic William's administration was to have a great military force, though his reign forms an important epoch in the history of military discipline, and though his dominant passion was the love of military display, he was yet one of the most pacific of princes. We are afraid that his aversion to war was not the effect of humanity, but was merely one of his thousand whims. His feeling about his troops seems to have resembled a miser's feeling about his money. He loved to collect them, to count them, to see them increase; but he could not find it in his heart to break in upon the precious hoard. He looked forward to some future time when his Patagonian battalions[12] were to drive hostile infantry before them like sheep; but this future time was always receding; and it is probable that, if his life had been prolonged thirty years, his superb army would never have seen any harder service than a sham fight in the fields near Berlin. But the great military means which he had collected were destined to be employed by a spirit far more daring and inventive than his own.

Frederic, surnamed the Great, son of Frederic William, was born in January 1712. It may safely be pronounced that he had received from nature a strong and sharp understanding, and a rare firmness of temper and intensity of will. As to the other parts of his character, it is difficult to say whether they are to be ascribed to nature, or to the strange training which he underwent. The history of his boyhood is painfully interesting. Oliver Twist in the parish workhouse, Smike at Dotheboys Hall,[13] were petted children when compared with this heir apparent of a crown. The nature of Frederic William was hard and bad, and the habit of exercising arbitrary power had made him frightfully savage. His rage constantly vented itself to right and left in curses and blows. When his Majesty took a walk, every human being fled before him, as if a tiger had broken loose from a menagerie. If he met a lady in the street, he gave her a kick, and told her to go home and mind her brats. If he saw a clergyman staring at the soldiers, he admonished the reverend gentleman to betake himself to study and prayer, and enforced this pious advice by a sound caning, administered on the spot. But it was in his own house that he was most unreasonable and ferocious. His palace was hell, and he the most execrable of fiends, a cross between Moloch[14] and Puck.[15] His son Frederic and his daughter Wilhelmina, afterwards Margravine of Bareuth, were in an especial manner objects of his aversion. His own mind was uncultivated. He despised literature. He hated infidels, papists, and metaphysicians,

10. A brass coin of the Roman Emperor Otho (A.D. 32–69), very rare since Otho's reign lasted only a few months.

11. The edition printed at Oxford in 1716–17, which misprinted 'vinegar' for 'vineyard' in the heading of *Luke*, xx.

12. Notable for their height.

13. See Dickens's *Nicholas Nickleby*: Smike was a pupil at the private school 'Dotheboys Hall.'

14. The name of a Semitic deity to whom children were sacrificed as burnt offerings. (*Leviticus*, xviii.21; *II Kings*, xxiii.10; etc.)

15. A malicious spirit, or demon, in early popular superstition; in the 16th century he was a tricksy sprite or goblin.

and did not very well understand in what they differed from each other. The business of life, according to him, was to drill and to be drilled. The recreations suited to a prince, were to sit in a cloud of tobacco smoke, to sip Swedish beer between the puffs of the pipe, to play backgammon for three halfpence a rubber, to kill wild hogs, and to shoot partridges by the thousand. The Prince Royal[16] showed little inclination either for the serious employments or for the amusements of his father. He shirked the duties of the parade; he detested the fume of tobacco; he had no taste either for backgammon or for field sports. He had an exquisite ear, and performed skilfully on the flute. His earliest instructors had been French refugees, and they had awakened in him a strong passion for French literature and French society. Frederic William regarded these tastes as effeminate and contemptible, and, by abuse and persecution, made them still stronger. Things became worse when the Prince Royal attained that time of life at which the great revolution in the human mind and body takes place. He was guilty of some youthful indiscretions, which no good and wise parent would regard with severity. At a later period he was accused, truly or falsely, of vices from which History averts her eyes, and which even Satire blushes to name, vices such that, to borrow the energetic language of Lord Keeper Coventry,[17] 'the depraved nature of man, which of itself carrieth man to all other sin, abhorreth them.' But the offences of his youth were not characterised by any peculiar turpitude. They excited, however, transports of rage in the King, who hated all faults except those to which he was himself inclined, and who conceived that he made ample atonement to Heaven for his brutality, by holding the softer passions in detestation. The Prince Royal, too, was not one of those who are content to take their religion on trust. He asked puzzling questions, and brought forward arguments which seemed to savour of something different from pure Lutheranism. The King suspected that his son was inclined to be a heretic of some sort or other, whether Calvinist or Atheist his Majesty did not very well know. The ordinary malignity of Frederic William was bad enough. He now thought malignity a part of his duty as a Christian man, and all the conscience that he had stimulated his hatred. The flute was broken: the French books were sent out of the palace: the Prince was kicked and cudgelled, and pulled by the hair. At dinner the plates were hurled at his head: sometimes he was restricted to bread and water: sometimes he was forced to swallow food so nauseous that he could not keep it on his stomach. Once his father knocked him down, dragged him along the floor to a window, and was with difficulty prevented from strangling him with the cord of the curtain. The Queen, for the crime of not wishing to see her son murdered, was subjected to the grossest indignities. The Princess Wilhelmina, who took her brother's part, was treated almost as ill as Mrs. Brownrigg's apprentices.[18] Driven to despair, the unhappy youth tried to run away. Then the fury of the old tyrant rose to madness. The Prince was an officer in the army: his flight was therefore desertion; and, in the moral code of Frederic William, desertion was the highest of all crimes. 'Desertion,' says this royal theologian, in one of his half-crazy letters, 'is from hell. It is a work of the children of the Devil. No child of God could possibly

16. *i.e.*, of course, the crown prince, later Frederic the Great.

17. Thomas, 1st Baron Coventry (1578–1640), Lord Keeper (1625); he tried to mediate between Charles I and Parliament.

18. Elizabeth Brownrigg (d.1767), a midwife, was hanged at Tyburn for barbarously murdering her apprentice. She became the subject of popular songs and ballads, later of a narrative, 'Elizabeth Brownrigge,' in *Fraser's Magazine* for August and September 1832, which has been attributed to Thackeray, and which Macaulay very probably read.

be guilty of it.' An accomplice of the Prince, in spite of the recommendation of a court martial, was mercilessly put to death. It seemed probable that the Prince himself would suffer the same fate. It was with difficulty that the intercession of the States of Holland, of the Kings of Sweden and Poland, and of the Emperor of Germany, saved the House of Brandenburg from the stain of an unnatural murder. After months of cruel suspense, Frederic learned that his life would be spared. He remained, however, long a prisoner; but he was not on that account to be pitied. He found in his gaolers a tenderness which he had never found in his father; his table was not sumptuous, but he had wholesome food in sufficient quantity to appease hunger: he could read the *Henriade* [19] without being kicked, and could play on his flute without having it broken over his head.

When his confinement terminated he was a man. He had nearly completed his twenty-first year, and could scarcely be kept much longer under the restraints which had made his boyhood miserable. Suffering had matured his understanding, while it had hardened his heart and soured his temper. He had learnt self-command and dissimulation; he affected to conform to some of his father's views, and submissively accepted a wife, who was a wife only in name, from his father's hand. He also served with credit, though without any opportunity of acquiring brilliant distinction, under the command of Prince Eugene,[20] during a campaign marked by no extraordinary events. He was now permitted to keep a separate establishment, and was therefore able to indulge with caution his own tastes. Partly in order to conciliate the King, and partly, no doubt, from inclination, he gave up a portion of his time to military and political business, and thus gradually acquired such an aptitude for affairs as his most intimate associates were not aware that he possessed.

His favourite abode was at Rheinsberg, near the frontier which separates the Prussian dominions from the Duchy of Mecklenburg. Rheinsberg is a fertile and smiling spot, in the midst of the sandy waste of the Marquisate. The mansion, surrounded by woods of oak and beech, looks out upon a spacious lake. There Frederic amused himself by laying out gardens in regular alleys and intricate mazes, by building obelisks, temples, and conservatories, and by collecting rare fruits and flowers. His retirement was enlivened by a few companions, among whom he seems to have preferred those who, by birth or extraction, were French. With these intimates he dined and supped well, drank freely, and amused himself sometimes with concerts, and sometimes with holding chapters of a fraternity which he called the Order of Bayard; [21] but literature was his chief resource.

His education had been entirely French. The long ascendency which Lewis the Fourteenth had enjoyed, and the eminent merit of the tragic and comic dramatists, of the satirists, and of the preachers who had flourished under that magnificent prince, had made the French language predominant in Europe. Even in countries which had a national literature, and which could boast of names greater than those of Racine, of Molière, and of Massillon, in the country of Dante, in the country of Cervantes, in the country of Shakspeare and Milton, the intellectual fashions of Paris had been to a great extent adopted. Germany had not yet produced a

19. An epic poem in ten cantos, by Voltaire, exalting Henri IV; published in 1723.

20. Famous to English readers because he was the colleague of Marlborough at the great battles of Blenheim, Oudenarde, and Malplaquet, in the War of the Spanish Succession (1701–12), against France and Spain. The campaign alluded to here was that of 1735 on the Rhine.

21. After Pierre du Terrail, Seigneur de Bayard (1476–1524), the knight 'without fear and without reproach,' who fought for Charles VIII, Francis I, etc.

single masterpiece of poetry or eloquence. In Germany, therefore, the French taste reigned without rival and without limit. Every youth of rank was taught to speak and write French. That he should speak and write his own tongue with politeness, or even with accuracy and facility, was regarded as comparatively an unimportant object. Even Frederic William, with all his rugged Saxon prejudices, thought it necessary that his children should know French, and quite unnecessary that they should be well versed in German. The Latin was positively interdicted. 'My son,' his Majesty wrote, 'shall not learn Latin; and, more than that, I will not suffer anybody even to mention such a thing to me.' One of the preceptors ventured to read the *Golden Bull* [22] in the original with the Prince Royal. Frederic William entered the room, and broke out in his usual kingly style.

'Rascal, what are you at there?'

'Please your Majesty,' answered the preceptor, 'I was explaining the *Golden Bull* to his Royal Highness.'

'I'll Golden Bull you, you rascal!' roared the Majesty of Prussia. Up went the King's cane; away ran the terrified instructor; and Frederic's classical studies ended for ever. He now and then affected to quote Latin sentences, and produced such exquisitely Ciceronian phrases as these: — 'Stante pede morire,' — 'De gustibus non est disputandus,' — 'Tot verbas tot spondera.' [23] Of Italian, he had not enough to read a page of Metastasio [24] with ease; and of the Spanish and English, he did not, as far as we are aware, understand a single word.

As the highest human compositions to which he had access were those of the French writers, it is not strange that his admiration for those writers should have been unbounded. His ambitious and eager temper early prompted him to imitate what he admired. The wish, perhaps, dearest to his heart was, that he might rank among the masters of French rhetoric and poetry. He wrote prose and verse as indefatigably as if he had been a starving hack of Cave or Osborn; [25] but Nature, which had bestowed on him, in a large measure, the talents of a captain and of an administrator, had withheld from him those higher and rarer gifts, without which industry labours in vain to produce immortal eloquence and song. And, indeed, had he been blessed with more imagination, wit, and fertility of thought, than he appears to have had, he would still have been subject to one great disadvantage, which would, in all probability, have for ever prevented him from taking a high place among men of letters. He had not the full command of any language. There was no machine of thought which he could employ with perfect ease, confidence, and freedom. He had German enough to scold his servants, or to give the word of command to his grenadiers; but his grammar and pronunciation were extremely bad. He found it difficult to make out the meaning even of the simplest German poetry. On one occasion a version of Racine's *Iphigénie* was read to him.[26] He held the French original in his hand; but was forced to own that, even with such help, he could not understand the translation. Yet, though he had neglected his mother tongue in order to bestow all his attention on French, his French was, after all, the French of a for-

22. The edict of Charles IV, issued in 1356, which laid down the regulations settling the composition of the College of Electors and their method of electing the emperor.

23. All of these 'Ciceronian phrases' contain errors of the most elementary sort.

24. The name assumed by the Italian poet, Pietro Bonaventura Trapassi (1698–1782), writer of operas.

25. Edward Cave (1691–1754) and Thomas Osborne (d.1767) were booksellers (and publishers) who gave employment to struggling authors: the latter was beaten by Samuel Johnson for impertinence.

26. Racine's great tragedy *Iphigénie* appeared in 1674.

eigner. It was necessary for him to have always at his beck some men of letters from Paris to point out the solecisms and false rhymes of which, to the last, he was frequently guilty. Even had he possessed the poetic faculty, of which, as far as we can judge, he was utterly destitute, the want of a language would have prevented him from being a great poet. No noble work of imagination, as far as we recollect, was ever composed by any man, except in a dialect which he had learned without remembering how or when, and which he had spoken with perfect ease before he had ever analysed its structure. Romans of great abilities wrote Greek verses; but how many of those verses have deserved to live? Many men of eminent genius have, in modern times, written Latin poems; but, as far as we are aware, none of those poems, not even Milton's, can be ranked in the first class of art, or even very high in the second. It is not strange, therefore, that, in the French verses of Frederic, we can find nothing beyond the reach of any man of good parts and industry, nothing above the level of Newdigate and Seatonian poetry.[27] His best pieces may perhaps rank with the worst in Dodsley's collection.[28] In history, he succeeded better. We do not, indeed, find, in any of his voluminous *Memoirs*, either deep reflection or vivid painting. But the narrative is distinguished by clearness, conciseness, good sense, and a certain air of truth and simplicity, which is singularly graceful in a man who, having done great things, sits down to relate them. On the whole, however, none of his writings are so agreeable to us as his *Letters*, particularly those which are written with earnestness, and are not embroidered with verses.

It is not strange that a young man devoted to literature, and acquainted only with the literature of France, should have looked with profound veneration on the genius of Voltaire.[29] 'A man who has never seen the sun,' says Calderón,[30] in one of his charming comedies, 'cannot be blamed for thinking that no glory can exceed that of the moon. A man who has seen neither moon nor sun, cannot be blamed for talking of the unrivalled brightness of the morning star.' Had Frederic been able to read Homer and Milton or even Virgil and Tasso,[31] his admiration of the *Henriade* would prove that he was utterly destitute of the power of discerning what is excellent in art. Had he been familiar with Sophocles or Shakspeare, we should have expected him to appreciate *Zaire* more justly. Had he been able to study Thucydides and Tacitus in the original Greek and Latin, he would have known that there were heights in the eloquence of history far beyond the reach of the author of the *Life of Charles the Twelfth*. But the finest heroic poem, several of the most powerful tragedies, and the most brilliant and picturesque historical work that Frederic had ever read, were Voltaire's. Such high and various excellence moved the young Prince almost to adoration. The opinions of Voltaire on religious and philosophical questions had not yet been fully exhibited to the public. At a later period, when an exile from his country, and at open war with the Church, he spoke out. But when Frederic was at Rheinsberg, Voltaire was still a courtier; and, though he could not always curb his petulant wit, he had as yet published noth-

27. *i.e.* academic prize poetry, given, respectively, at Oxford and Cambridge; the prizes were established by Sir Roger Newdigate (1719–1806) and Thomas Seaton (1684–1741).

28. Robert Dodsley (1703–64) was a poet and bookseller, publisher of Pope, Johnson, Goldsmith, Gray, and others; he published a *Select Collection of Old Plays* (1744) and *A Collection of Poems by Several Hands* (1748–58).

29. François Marie Arouet de Voltaire (1694–1778) was best known at this time for his *Henriade*, *Zaïre*, and the *Life of Charles XII*.

30. Calderón de la Barca (1600–81), great Spanish dramatist.

31. Torquato Tasso (1544–95), chief Italian poet of the 16th century.

ing that could exclude him from Versailles, and little that a divine of the mild and generous school of Grotius [32] and Tillotson might not read with pleasure. In the *Henriade*, in *Zaire*, and in *Alzire*, Christian piety is exhibited in the most amiable form; and, some years after the period of which we are writing, a Pope condescended to accept the dedication of *Mahomet*.[33] The real sentiments of the poet, however, might be clearly perceived by a keen eye through the decent disguise with which he veiled them, and could not escape the sagacity of Frederic, who held similar opinions, and had been accustomed to practise similar dissimulation.

The Prince wrote to his idol in the style of a worshipper; and Voltaire replied with exquisite grace and address. A correspondence followed, which may be studied with advantage by those who wish to become proficients in the ignoble art of flattery. No man ever paid compliments better than Voltaire. His sweetest confectionery had always a delicate, yet stimulating flavour, which was delightful to palates wearied by the coarse preparations of inferior artists. It was only from his hand that so much sugar could be swallowed without making the swallower sick. Copies of verses, writing desks, trinkets of amber, were exchanged between the friends. Frederic confided his writings to Voltaire; and Voltaire applauded, as if Frederic had been Racine and Bossuet in one.[34] One of his Royal Highness's performances was a refutation of Machiavelli.[35] Voltaire undertook to convey it to the press. It was entitled the *Anti-Machiavel*, and was an edifying homily against rapacity, perfidy, arbitrary government, unjust war, in short, against almost everything for which its author is now remembered among men.

The old King uttered now and then a ferocious growl at the diversions of Rheinsberg. But his health was broken; his end was approaching; and his vigour was impaired. He had only one pleasure left, that of seeing tall soldiers. He could always be propitiated by a present of a grenadier of six feet four or six feet five; and such presents were from time to time judiciously offered by his son.

Early in the year 1740, Frederic William met death with a firmness and dignity worthy of a better and wiser man; and Frederic, who had just completed his twenty-eighth year, became King of Prussia. His character was little understood. That he had good abilities, indeed, no person who had talked with him, or corresponded with him, could doubt. But the easy Epicurean life which he had led, his love of good cookery and good wine, of music, of conversation, of light literature, led many to regard him as a sensual and intellectual voluptuary. His habit of canting about moderation, peace, liberty, and the happiness which a good mind derives from the happiness of others, had imposed on some who should have known better. Those who thought best of him, expected a Telemachus after Fénelon's pattern.[36]

32. Hugo Grotius (1583–1645), Dutch statesman and jurist, won fame not only for his formulation of the principles of international law, but also for his attempts at mediating between Protestants and Catholics, in such works as *De Veritate Religionis Christianae* (1627). — John Tillotson (1630–94) was a 'latitudinarian' who became Archbishop of Canterbury.

33. A drama by Voltaire, produced in Paris in 1742, and dedicated to Pope Benedict XIV.

34. *i.e.* as if Frederic combined the dramatic genius of Racine (1639–99) and the eloquence of a great divine and preacher such as Jacques Bénigne Bossuet (1627–1704).

35. Refuting, that is, the shockingly realistic and cynical principles of statecraft set forth in *The Prince* (written in Paris, 1513) by Niccolò di Bernardo dei Machiavelli (1469–1527). (See Macaulay's essay on Machiavelli.) — Frederic was later to apply some of Machiavelli's principles, *e.g.* in the taking of Silesia.

36. François de Fénelon (1651–1715), French divine, Archbishop of Cambrai, author of the *Aventures de Télémaque* (1699), written for the instruction of his pupil, the Duc de Bourgogne, in the principles of enlightened statesmanship ('kings exist for the sake of their

Others predicted the approach of a Medicean age, an age propitious to learning and art, and not unpropitious to pleasure.[37] Nobody had the least suspicion that a tyrant of extraordinary military and political talents, of industry more extraordinary still, without fear, without faith, and without mercy, had ascended the throne.

The disappointment of Falstaff at his old boon-companion's coronation[38] was not more bitter than that which awaited some of the inmates of Rheinsberg. They had long looked forward to the accession of their patron, as to the event from which their own prosperity and greatness was to date. They had at last reached the promised land, the land which they had figured to themselves as flowing with milk and honey; and they found it a desert. 'No more of these fooleries,' was the short, sharp admonition given by Frederic to one of them. It soon became plain that, in the most important points, the new sovereign bore a strong family likeness to his predecessor. There was indeed a wide difference between the father and the son as respected extent and vigour of intellect, speculative opinions, amusements, studies, outward demeanour. But the groundwork of the character was the same in both. To both were common the love of order, the love of business, the military taste, the parsimony, the imperious spirit, the temper irritable even to ferocity, the pleasure in the pain and humiliation of others. But these propensities had in Frederic William partaken of the general unsoundness of his mind, and wore a very different aspect when found in company with the strong and cultivated understanding of his successor. Thus, for example, Frederic was as anxious as any prince could be about the efficiency of his army. But this anxiety never degenerated into a monomania, like that which led his father to pay fancy prices for giants. Frederic was as thrifty about money as any prince or any private man ought to be. But he did not conceive, like his father, that it was worth while to eat unwholesome cabbages for the purpose of saving four or five rixdollars[39] in the year. Frederic was, we fear, as malevolent as his father; but Frederic's wit enabled him often to show his malevolence in ways more decent than those to which his father resorted, and to inflict misery and degradation by a taunt instead of a blow. Frederic, it is true, by no means relinquished his hereditary privilege of kicking and cudgelling. His practice, however, as to that matter, differed in some important respects from his father's. To Frederic William, the mere circumstance that any persons whatever, men, women, or children, Prussians or foreigners, were within reach of his toes and of his cane, appeared to be a sufficient reason for proceeding to belabour them. Frederic required provocation as well as vicinity; nor was he ever known to inflict this paternal species of correction on any but his born subjects; though on one occasion M. Thiébault[40] had reason, during a few seconds, to anticipate the high honour of being an exception to this general rule.

The character of Frederic was still very imperfectly understood either by his subjects or by his neighbours, when events occurred which exhibited it in a strong light. A few months after his accession died Charles the Sixth, Emperor of Germany,[41] the last descendant, in the male line, of the House of Austria.

Charles left no son, and had, long before

subjects, not subjects for the sake of their king').

37. The earlier Medici were great patrons of art and literature as well as rulers of Florence; chief among them were Cosmo (1389–1464) and Lorenzo the Magnificent (c.1449–92).

38. See *Henry IV*, Part I.

39. From German *Reichsthaler*, 'dollar of the realm or empire,' varying in value, but generally worth about one dollar.

40. A Frenchman who was for some time professor in the Military School.

41. Charles VI (1685–1740) was really 'Holy Roman Emperor Elect and Archduke of Austria,' rather than 'Emperor of Germany.'

his death, relinquished all hopes of male issue. During the latter part of his life, his principal object had been to secure to his descendants in the female line the many crowns of the House of Hapsburg. With this view, he had promulgated a new law of succession, widely celebrated throughout Europe under the name of the Pragmatic Sanction. By virtue of this law, his daughter, the Archduchess Maria Theresa, wife of Francis of Lorraine, succeeded to the dominions of her ancestors.[42]

No sovereign has ever taken possession of a throne by a clearer title. All the politics of the Austrian cabinet had, during twenty years, been directed to one single end, the settlement of the succession. From every person whose rights could be considered as injuriously affected, renunciations in the most solemn form had been obtained. The new law had been ratified by the Estates of all the kingdoms and principalities which made up the great Austrian monarchy. England, France, Spain, Russia, Poland, Prussia, Sweden, Denmark, the Germanic body, had bound themselves by treaty to maintain the Pragmatic Sanction. That instrument was placed under the protection of the public faith of the whole civilised world.

Even if no positive stipulations on this subject had existed, the arrangement was one which no good man would have been willing to disturb. It was a peaceable arrangement. It was an arrangement acceptable to the great population whose happiness was chiefly concerned. It was an arrangement which made no change in the distribution of power among the states of Christendom. It was an arrangement which could be set aside only by means of a general war; and, if it were set aside, the effect would be, that the equilibrium of Europe would be deranged, that the loyal and patriotic feelings of millions would be cruelly outraged, and that great provinces which had been united for centuries would be torn from each other by main force.

The sovereigns of Europe were, therefore, bound by every obligation which those who are intrusted with power over their fellow-creatures ought to hold most sacred, to respect and defend the rights of the Archduchess. Her situation and her personal qualities were such as might be expected to move the mind of any generous man to pity, admiration, and chivalrous tenderness. She was in her twenty-fourth year. Her form was majestic, her features beautiful, her countenance sweet and animated, her voice musical, her deportment gracious and dignified. In all domestic relations she was without reproach. She was married to a husband whom she loved, and was on the point of giving birth to a child, when death deprived her of her father. The loss of a parent, and the new cares of empire, were too much for her in the delicate state of her health. Her spirits were depressed, and her cheek lost its bloom. Yet it seemed that she had little cause for anxiety. It seemed that justice, humanity, and the faith of treaties would have their due weight, and that the settlement so solemnly guaranteed would be quietly carried into effect. England, Russia, Poland, and Holland, declared in form their intention to adhere to their engagements. The French ministers made a verbal declaration to the same effect. But from no quarter did the young Queen of Hungary receive stronger assurances of friendship and support than from the King of Prussia.

Yet the King of Prussia, the Anti-Machiavel, had already fully determined to commit the great crime of violating his plighted faith, of robbing the ally whom he was bound to defend, and of plunging all Europe into a long, bloody, and desolating war; and all this for no end whatever, except that he might extend his dominions, and see his name in the gazettes.

42. Maria Theresa (1717–80) was the eldest daughter of Charles VI; she married Francis I (1708–65), Grand Duke of Tuscany, also Duke of Lorraine in succession to his father.

He determined to assemble a great army with speed and secrecy, to invade Silesia before Maria Theresa should be apprised of his design, and to add that rich province to his kingdom.

We will not condescend to refute at length the pleas which the compiler of the Memoirs before us has copied from Doctor Preuss.[43] They amount to this, that the House of Brandenburg had some ancient pretensions to Silesia, and had in the previous century been compelled, by hard usage on the part of the Court of Vienna, to waive those pretensions. It is certain that, whoever might originally have been in the right, Prussia had submitted. Prince after prince of the House of Brandenburg had acquiesced in the existing arrangement. Nay, the Court of Berlin had recently been allied with that of Vienna,[44] and had guaranteed the integrity of the Austrian states. Is it not perfectly clear that, if antiquated claims are to be set up against recent treaties and long possession, the world can never be at peace for a day? The laws of all nations have wisely established a time of limitation, after which titles, however illegitimate in their origin, cannot be questioned. It is felt by everybody, that to eject a person from his estate on the ground of some injustice committed in the time of the Tudors [45] would produce all the evils which result from arbitrary confiscation, and would make all property insecure. It concerns the commonwealth — so runs the legal maxim — that there be an end of litigation. And surely this maxim is at least equally applicable to the great commonwealth of states; for in that commonwealth litigation means the devastation of provinces, the suspension of trade and industry, sieges like those of Badajoz and St. Sebastian, pitched fields like those of Eylau and Borodino.[46] We hold that the transfer of Norway from Denmark to Sweden [47] was an unjustifiable proceeding; but would the King of Denmark be therefore justified in landing, without any new provocation in Norway, and commencing military operations there? The King of Holland thinks, no doubt, that he was unjustly deprived of the Belgian provinces. Grant that it were so. Would he, therefore, be justified in marching with an army on Brussels? The case against Frederic was still stronger, inasmuch as the injustice of which he complained had been committed more than a century before. Nor must it be forgotten that he owed the highest personal obligations to the House of Austria. It may be doubted whether his life had not been preserved by the intercession of the prince whose daughter he was about to plunder.

To do the King justice, he pretended to no more virtue than he had. In manifestoes he might, for form's sake, insert some idle stories about his antiquated claim on Silesia; but in his conversations and *Mem-*

43. See Preuss' *Friedrich der Grosse, eine Lebensgeschichte* (5 vols., Berlin, 1832–34). 'The Herr Doctor J.D.E.Preuss, "Historiographer of Brandenburg," [was] a meritoriously exact man: acquainted with the outer details of Friedrich's Biography . . . as few men ever were or will be.' (Carlyle's *History of Friedrich II. of Prussia, Called the Great* [Cent. ed.], I,324n.)

44. In 1726, Frederic William II had aided in the guarantee of the Pragmatic Sanction by joining the League of Vienna.

45. The reigning members (1485–1603) of the Tudor family were Henry VII, Henry VIII, Edward VI, Mary, and Elizabeth.

46. *Badajoz*: capital of the Spanish province of that name; Wellington besieged it in 1811, and took it on April 6, 1812, but only after 5,000 casualties. — *St. Sebastian*: seaport and capital of the Spanish province of Guipúzco, besieged by Wellington, and captured on Sept. 9, 1813, at a cost of 2,500 casualties. — *Eylau*: a town in east Prussia, where Napoleon won a 'Pyrrhic' victory in Feb. 1807, over the Russians and Prussians, each side suffering very heavy losses. — *Borodino*: a village in Russia, 70 miles from Moscow, where Napoleon was successful on Sept. 7, 1812, but at a cost of 28,000 casualties.

47. At the Congress of Vienna in 1815, when Norway was taken from Denmark, which had been faithful to Napoleon, and was given to Sweden.

oirs he took a very different tone. His own words are: 'Ambition, interest, the desire of making people talk about me, carried the day; and I decided for war.'

Having resolved on his course, he acted with ability and vigour. It was impossible wholly to conceal his preparations; for throughout the Prussian territories regiments, guns, and baggage were in motion. The Austrian envoy at Berlin apprised his court of these facts, and expressed a suspicion of Frederic's designs; but the ministers of Maria Theresa refused to give credit to so black an imputation on a young prince who was known chiefly by his high professions of integrity and philanthropy. 'We will not,' they wrote, 'we cannot, believe it.'

In the meantime the Prussian forces had been assembled. Without any declaration of war, without any demand for reparation, in the very act of pouring forth compliments and assurances of goodwill, Frederic commenced hostilities. Many thousands of his troops were actually in Silesia before the Queen of Hungary knew that he had set up any claim to any part of her territories. At length he sent her a message which could be regarded only as an insult. If she would but let him have Silesia, he would, he said, stand by her against any power which should try to deprive her of other dominions; as if he was not already bound to stand by her, or as if his new promise could be of more value than the old one.

It was the depth of winter.[48] The cold was severe, and the roads heavy with mire. But the Prussians pressed on. Resistance was impossible. The Austrian army was then neither numerous nor efficient. The small portion of that army which lay in Silesia was unprepared for hostilities. Glogau was blockaded; Breslau opened its gates; Ohlau was evacuated. A few scattered garrisons still held out; but the whole open country was subjugated: no enemy ventured to encounter the King in the field; and, before the end of January 1741, he returned to receive the congratulations of his subjects at Berlin.

Had the Silesian question been merely a question between Frederic and Maria Theresa, it would be impossible to acquit the Prussian King of gross perfidy. But when we consider the effects which his policy produced, and could not fail to produce, on the whole community of civilised nations, we are compelled to pronounce a condemnation still more severe. Till he began the war, it seemed possible, even probable, that the peace of the world would be preserved. The plunder of the great Austrian heritage was indeed a strong temptation; and in more than one cabinet ambitious schemes were already meditated. But the treaties by which the Pragmatic Sanction had been guaranteed were express and recent. To throw all Europe into confusion for a purpose clearly unjust, was no light matter. England was true to her engagements. The voice of Fleury[49] had always been for peace. He had a conscience. He was now in extreme old age, and was unwilling, after a life which, when his situation was considered, must be pronounced singularly pure, to carry the fresh stain of a great crime before the tribunal of his God. Even the vain and unprincipled Belle-Isle,[50] whose whole life was one wild day-dream of conquest and spoliation, felt that France, bound as she was by solemn stipulations, could not, without disgrace, make a direct attack on the Austrian dominions. Charles, Elector of Bavaria, pretended that he had a right to a large part of the inheritance which the Pragmatic Sanction gave to the Queen of Hungary; but he was not suffi-

48. Dec. 1740.

49. Cardinal Fleury (1653–1743) sought peace not only from an aversion to war but also from a fear that war would promote the prestige of his chief rival, Belle-Isle.

50. Charles Fouquet, Duc de Belle-Isle and Marshal of France (1684–1761), leader of the war-party. His retreat from Prague in 1742 was one of the most remarkable achievements of the French army in the campaign.

ciently powerful to move without support. It might, therefore, not unreasonably be expected that, after a short period of restlessness, all the potentates of Christendom would acquiesce in the arrangements made by the late Emperor. But the selfish rapacity of the King of Prussia gave the signal to his neighbours. His example quieted their sense of shame. His success led them to underrate the difficulty of dismembering the Austrian monarchy. The whole world sprang to arms. On the head of Frederic is all the blood which was shed in a war which raged during many years and in every quarter of the globe, the blood of the column of Fontenoy,[51] the blood of the mountaineers who were slaughtered at Culloden.[52] The evils produced by his wickedness were felt in lands where the name of Prussia was unknown; and, in order that he might rob a neighbour whom he had promised to defend, black men fought on the coast of Coromandel,[53] and red men scalped each other by the Great Lakes of North America.

Silesia had been occupied without a battle; but the Austrian troops were advancing to the relief of the fortresses which still held out. In the spring Frederic rejoined his army. He had seen little of war, and had never commanded any great body of men in the field. It is not, therefore, strange that his first military operations showed little of that skill which, at a later period, was the admiration of Europe. What connoisseurs say of some pictures painted by Raphael[54] in his youth, may be said of this campaign. It was in Frederic's early bad manner. Fortunately for him, the generals to whom he was opposed were men of small capacity. The discipline of his own troops, particularly of the infantry, was unequalled in that age; and some able and experienced officers were at hand to assist him with their advice. Of these, the most distinguished was Field-Marshal Schwerin,[55] a brave adventurer of Pomeranian extraction, who had served half the governments in Europe, had borne the commissions of the States-General of Holland and of the Duke of Mecklenburg, had fought under Marlborough at Blenheim, and had been with Charles the Twelfth at Bender.[56]

Frederic's first battle was fought at Molwitz;[57] and never did the career of a great commander open in a more inauspicious manner. His army was victorious. Not only, however, did he not establish his title to the character of an able general; but he was so unfortunate as to make it doubtful whether he possessed the vulgar courage of a soldier. The cavalry, which he commanded in person, was put to flight. Unaccustomed to the tumult and carnage of a field of battle, he lost his self-possession, and listened too readily to those who urged him to save himself. His English grey carried him many miles from the field, while Schwerin, though wounded in two places, manfully upheld the day. The skill of the old Field-Marshal and the steadiness of the Prussian battalions prevailed; and the Austrian army was driven from the field with the loss of eight thousand men.

The news was carried late at night to a mill in which the King had taken shelter. It gave him a bitter pang. He was

51. The battle of Fontenoy, on May 11, 1745, in which the British and Hanoverian infantry engaged the French, involved, strictly speaking, no column formation, though the narrow space available prevented the usual battle line.
52. The battle of Culloden (April 1746) meant the final defeat of the Scottish Jacobites (adherents to the Stuart line of kings). It was only very indirectly connected with the activities of Frederic.
53. The eastern seaboard of India.
54. Santi Raffaello (1483–1520), Italian painter.
55. Christoph von Schwerin (1684–1757), one of Frederic's greatest and most dependable subordinates.
56. Marlborough and Prince Eugene defeated the French at Blenheim on Aug. 13, 1704. — At Bender, in Bessarabia, Charles XII took refuge after his defeat at Poltawa in June 1709.
57. On April 10, 1741.

successful; but he owed his success to dispositions which others had made, and to the valour of men who had fought while he was flying. So unpromising was the first appearance of the greatest warrior of that age.

The battle of Molwitz was the signal for a general explosion throughout Europe. Bavaria took up arms. France, not yet declaring herself a principal in the war, took part in it as an ally of Bavaria. The two great statesmen to whom mankind had owed many years of tranquillity, disappeared about this time from the scene, but not till they had both been guilty of the weakness of sacrificing their sense of justice and their love of peace to the vain hope of preserving their power. Fleury, sinking under age and infirmity, was borne down by the impetuosity of Belle-Isle. Walpole retired from the service of his ungrateful country to his woods and paintings at Houghton;[58] and his power devolved on the daring and eccentric Carteret.[59] As were the ministers, so were the nations. Thirty years during which Europe had, with few interruptions, enjoyed repose, had prepared the public mind for great military efforts. A new generation had grown up, which could not remember the siege of Turin[60] or the slaughter of Malplaquet;[61] which knew war by nothing but its trophies; and which, while it looked with pride on the tapestries at Blenheim,[62] or the statue in the Place of Victories,[63] little thought by what privations, by what waste of private fortunes, by how many bitter tears, conquests must be purchased.

For a time fortune seemed adverse to the Queen of Hungary. Frederic invaded Moravia. The French and Bavarians penetrated into Bohemia, and were there joined by the Saxons. Prague was taken. The Elector of Bavaria was raised by the suffrages of his colleagues to the Imperial throne, a throne which the practice of centuries had almost entitled the House of Austria to regard as a hereditary possession.

Yet was the spirit of the haughty daughter of the Cæsars[64] unbroken. Hungary was still hers by an unquestionable title; and although her ancestors had found Hungary the most mutinous of all their kingdoms, she resolved to trust herself to the fidelity of a people, rude indeed, turbulent, and impatient of oppression, but brave, generous, and simple-hearted. In the midst of distress and peril she had given birth to a son, afterwards the Emperor Joseph the Second.[65] Scarcely had she arisen from her couch, when she hastened to Presburg. There, in the sight of an innumerable multitude, she was crowned with the crown and robed with the robe of St. Stephen.[66] No spectator could restrain his tears when the beautiful young mother, still weak from child-bear-

58. Sir Robert Walpole (1676–1745) retired in Feb. 1742. Houghton was his residence in Norfolk.

59. John Carteret (1690–1763) was especially competent in foreign affairs; he was Secretary of State from 1742 to 1744.

60. By the French, in 1706, during the War of the Spanish Succession.

61. The battle of Malplaquet, won by Marlborough on Sept. 11, 1709, was probably the most costly battle of the Spanish Succession War; there were over 30,000 casualties out of about 200,000 combatants.

62. Allusion to the tapestries in the *palace* of Blenheim, presented to the nation by Marlborough in gratitude for the brilliant victory of the battle of Blenheim (Aug. 13, 1704). The palace is at Woodstock, a few miles northwest of Oxford. The tapestries depict Marlborough's victories.

63. The 'square' in Paris where a column was erected to commemorate the victories of Louis XIV. The column was destroyed during the French Revolution.

64. *i.e.* daughter of the emperors of the Holy Roman Empire.

65. 1741–90; Holy Roman Emperor elect, joint ruler with Maria Theresa from 1765, sole ruler after 1780.

66. 977–1038; made King of Hungary in 998; he consolidated the Hungarian kingdom, and converted the Magyars to Christianity.

ing, rode, after the fashion of her fathers, up the Mount of Defiance, unsheathed the ancient sword of state, shook it towards north and south, east and west, and, with a glow on her pale face, challenged the four corners of the world to dispute her rights and those of her boy. At the first sitting of the Diet she appeared clad in deep mourning for her father, and in pathetic and dignified words implored her people to support her just cause. Magnates and deputies sprang up, half drew their sabres, and with eager voices vowed to stand by her with their lives and fortunes. Till then, her firmness had never once forsaken her before the public eye; but at that shout she sank down upon her throne, and wept aloud. Still more touching was the sight when, a few days later, she came again before the Estates of her realm, and held up before them the little Archduke in her arms. Then it was that the enthusiasm of Hungary broke forth into that war-cry which soon resounded throughout Europe, 'Let us die for our King, Maria Theresa!'[67]
