In the meantime, Frederic was meditating a change of policy. He had no wish to raise France to supreme power on the Continent, at the expense of the House of Hapsburg. His first object was to rob the Queen of Hungary. His second object was that, if possible, nobody should rob her but himself. He had entered into engagements with the powers leagued against Austria; but these engagements were in his estimation of no more force than the guarantee formerly given to the Pragmatic Sanction. His plan now was to secure his share of the plunder by betraying his accomplices. Maria Theresa was little inclined to listen to any such compromise; but the English Government represented to her so strongly the necessity of buying off Frederic, that she agreed to negotiate. The negotiation would not, however, have ended in a treaty, had not the arms of Frederic been crowned with a second victory. Prince Charles of Lorraine, brother-in-law to Maria Theresa, a bold and active, though unfortunate general, gave battle to the Prussians at Chotusitz, and was defeated.[68] The King was still only a learner of the military art. He acknowledged, at a later period, that his success on this occasion was to be attributed, not at all to his own generalship, but solely to the valour and steadiness of his troops. He completely effaced, however, by his personal courage and energy, the stain which Molwitz had left on his reputation.

A peace, concluded under the English mediation,[69] was the fruit of this battle. Maria Theresa ceded Silesia: Frederic abandoned his allies: Saxony followed his example; and the Queen was left at liberty to turn her whole force against France and Bavaria. She was everywhere triumphant. The French were compelled to evacuate Bohemia, and with difficulty effected their escape. The whole line of their retreat might be tracked by the corpses of thousands who had died of cold, fatigue, and hunger. Many of those who reached their country carried with them the seeds of death. Bavaria was overrun by bands of ferocious warriors from that bloody debatable land which lies on the frontier between Christendom and Islam. The terrible names of the Pandoor,[70] the Croat,[71] and the Hussar,[72] then first became familiar to Western Europe. The unfortunate Charles of Bavaria, vanquished by Austria, betrayed by Prussia, driven from his

hereditary states, and neglected by his allies, was hurried by shame and remorse to an untimely end. An English army appeared in the heart of Germany, and defeated the French at Dettingen.[73] The Austrian captains already began to talk of completing the work of Marlborough and Eugene, and of compelling France to relinquish Alsace and the three Bishoprics.[74]

The Court of Versailles, in this peril, looked to Frederic for help. He had been guilty of two great treasons: perhaps he might be induced to commit a third. The Duchess of Chateauroux then held the chief influence over the feeble Lewis.[75] She determined to send an agent to Berlin; and Voltaire was selected for the mission. He eagerly undertook the task; for, while his literary fame filled all Europe, he was troubled with a childish craving for political distinction. He was vain, and not without reason, of his address, and of his insinuating eloquence; and he flattered himself that he possessed boundless influence over the King of Prussia. The truth was that he knew, as yet, only one corner of Frederic's character. He was well acquainted with all the petty vanities and affectations of the poetaster; but was not aware that these foibles were united with all the talents and vices which lead to success in active life, and that the unlucky versifier who pestered him with reams of middling Alexandrines,[76] was the most vigilant, suspicious, and severe of politicians.

Voltaire was received with every mark of respect and friendship, was lodged in the palace, and had a seat daily at the royal table. The negotiation was of an extraordinary description. Nothing can be conceived more whimsical than the conferences which took place between the first literary man and the first practical man of the age, whom a strange weakness had induced to exchange their parts. The great poet would talk of nothing but treaties and guarantees, and the great King of nothing but metaphors and rhymes. On one occasion Voltaire put into his Majesty's hands a paper on the state of Europe, and received it back with verses scrawled on the margin. In secret they both laughed at each other. Voltaire did not spare the King's poems; and the King has left on record his opinion of Voltaire's diplomacy. 'He had no credentials,' says Frederic, 'and the whole mission was a joke, a mere farce.'

But what the influence of Voltaire could not effect, the rapid progress of the Austrian arms effected. If it should be in the power of Maria Theresa and George the Second to dictate terms of peace to France, what chance was there that Prussia would long retain Silesia? Frederic's conscience told him that he had acted perfidiously and inhumanly towards the Queen of Hungary. That her resentment was strong she had given ample proof; and of her respect for treaties he judged by his own. Guarantees, he said, were mere filigree, pretty to look at, but too brittle to bear the slightest pressure. He thought it his safest course to ally himself closely to France, and again to attack the Empress Queen. Accordingly, in the autumn of 1744, without notice, without any decent pretext, he recommenced hostilities, marched through the electorate of Saxony without troubling himself about the permission of the Elector, invaded Bohemia, took Prague, and even menaced Vienna.

It was now that, for the first time, he experienced the inconstancy of fortune. An Austrian army under Charles of Lorraine threatened his communications with Sile-

sia. Saxony was all in arms behind him. He found it necessary to save himself by a retreat. He afterwards owned that his failure was the natural effect of his own blunders. No general, he said, had ever committed greater faults. It must be added, that to the reverses of this campaign he always ascribed his subsequent successes. It was in the midst of difficulty and disgrace that he caught the first clear glimpse of the principles of the military art.

The memorable year 1745 followed. The war raged by sea and land, in Italy, in Germany, and in Flanders; and even England, after many years of profound internal quiet, saw, for the last time, hostile armies set in battle array against each other. This year is memorable in the life of Frederic, as the date at which his noviciate in the art of war may be said to have terminated. There have been great captains whose precocious and self-taught military skill resembled intuition. Condé, Clive, and Napoleon are examples.[77] But Frederic was not one of these brilliant portents. His proficiency in military science was simply the proficiency which a man of vigorous faculties makes in any science to which he applies his mind with earnestness and industry. It was at Hohenfriedberg [78] that he first proved how much he had profited by his errors, and by their consequences. His victory on that day was chiefly due to his skilful dispositions, and convinced Europe that the prince who, a few years before, had stood aghast in the rout of Molwitz, had attained in the military art a mastery equalled by none of his contemporaries, or equalled by Saxe alone.[79] The victory of Hohenfriedberg was speedily followed by that of Sorr.[80]

In the meantime, the arms of France had been victorious in the Low Countries. Frederic had no longer reason to fear that Maria Theresa would be able to give law to Europe, and he began to meditate a fourth breach of his engagements. The Court of Versailles was alarmed and mortified. A letter of earnest expostulation, in the handwriting of Lewis, was sent to Berlin; but in vain. In the autumn of 1745, Frederic made peace with England, and, before the close of the year, with Austria also.[81] The pretensions of Charles of Bavaria could present no obstacle to an accommodation. That unhappy prince was no more; and Francis of Lorraine, the husband of Maria Theresa, was raised, with the general assent of the Germanic body, to the Imperial throne.

Prussia was again at peace; but the European war lasted till, in the year 1748, it was terminated by the treaty of Aix-la-Chapelle. Of all the powers that had taken part in it, the only gainer was Frederic. Not only had he added to his patrimony the fine province of Silesia: he had, by his unprincipled dexterity, succeeded so well in alternately depressing the scale of Austria and that of France, that he was generally regarded as holding the balance of Europe, a high dignity for one who ranked lowest among kings, and whose great-grandfather had been no more than a Margrave. By the public, the King of Prussia was considered as a politician destitute alike of morality and decency, insatiably rapacious, and shamelessly false; nor

77. Louis II. de Bourbon, Prince of Condé (1621–86), often called the great Condé, was a military genius, 'equally brilliant in his first battle and in his last.' He was one of the glories of the reign of Louis XIV. — Clive, Robert Clive, Baron (1725–74), statesman and general who founded the empire of British India, was indeed, as Macaulay says, a man of brilliant intuition. Napoleon, however, in addition to intuition, had the benefit of a careful and diligent study of the art of war.

79. Maurice, Comte de Saxe (1696–1750), Marshal of France, was the victor at Fontenoy, and was one of the great generals of his time.

80. Or Sohr, or Soor, in Bohemia, where Frederic, intercepted by the Austrians in his retreat from Bohemia, won a battle, on Sept. 29, 1745, showing considerable tactical skill.

81. In the Treaty of Dresden, Dec. 25, 1745.

was the public much in the wrong. He was at the same time allowed to be a man of parts, a rising general, a shrewd negotiator and administrator. Those qualities wherein he surpassed all mankind, were as yet unknown to others or to himself; for they were qualities which shine out only on a dark ground. His career had hitherto, with little interruption, been prosperous; and it was only in adversity, in adversity which seemed without hope or resource, in adversity which would have overwhelmed even men celebrated for strength of mind, that his real greatness could be shown.

He had, from the commencement of his reign, applied himself to public business after a fashion unknown among kings. Lewis the Fourteenth, indeed, had been his own prime minister, and had exercised a general superintendence over all the departments of the Government: but this was not sufficient for Frederic. He was not content with being his own prime minister: he would be his own sole minister. Under him there was no room, not merely for a Richelieu or a Mazarin,[82] but for a Colbert, a Louvois, or a Torcy.[83] A love of labour for its own sake, a restless and insatiable longing to dictate, to intermeddle, to make his power felt, a profound scorn and distrust of his fellow-creatures, made him unwilling to ask counsel, to confide important secrets, to delegate ample powers. The highest functionaries under his government were mere clerks, and were not so much trusted by him as valuable clerks are often trusted by the heads of departments. He was his own treasurer, his own commander-in-chief, his own intendant of public works, his own minister for trade and justice, for home affairs and foreign affairs, his own master of the horse, steward, and chamberlain. Matters of which no chief of an office in any other government would ever hear, were, in this singular monarchy, decided by the King in person. If a traveller wished for a good place to see a review, he had to write to Frederic, and received next day, from a royal messenger, Frederic's answer signed by Frederic's own hand. This was an extravagant, a morbid activity. The public business would assuredly have been better done if each department had been put under a man of talents and integrity, and if the King had contented himself with a general control. In this manner the advantages which belong to unity of design, and the advantages which belong to the division of labour, would have been to a great extent combined. But such a system would not have suited the peculiar temper of Frederic. He could tolerate no will, no reason, in the State, save his own. He wished for no abler assistance than that of penmen who had just understanding enough to translate and transcribe, to make out his scrawls, and to put his concise Yes and No into an official form. Of the higher intellectual faculties, there is as much in a copying machine, or a lithographic press, as he required from a secretary of the cabinet.

His own exertions were such as were hardly to be expected from a human body or a human mind. At Potsdam, his ordinary residence, he rose at three in summer and four in winter. A page soon appeared, with a large basket full of all the letters which had arrived for the King by the last courier, despatches from ambassadors, reports from officers of revenue, plans of buildings, proposals for draining marshes, complaints from persons who thought themselves aggrieved, applications from persons who wanted titles, military commissions, and civil situations. He examined the seals with a keen eye; for he was

82. A.J. du Plessis, Duc de Richelieu (1585–1642), and Jules Mazarin (1602–61) were great cardinals and statesmen under Louis XIII and Louis XIV, respectively.

83. Colbert, Louvois, and Torcy were ministers of Louis XIV, none of them enjoying the authority exercised by Richelieu and Mazarin. Frederic's ministers had, of course, even less authority.

never for a moment free from the suspicion that some fraud might be practised on him. Then he read the letters, divided them into several packets, and signified his pleasure, generally by a mark, often by two or three words, now and then by some cutting epigram. By eight he had generally finished this part of his task. The adjutant-general was then in attendance, and received instructions for the day as to all the military arrangements of the kingdom. Then the King went to review his guards, not as kings ordinarily review their guards, but with the minute attention and severity of an old drill-sergeant. In the meantime the four cabinet secretaries had been employed in answering the letters on which the King had that morning signified his will. These unhappy men were forced to work all the year round like negro slaves in the time of the sugar-crop. They never had a holiday. They never knew what it was to dine. It was necessary that, before they stirred, they should finish the whole of their work. The King, always on his guard against treachery, took from the heap a handful of letters at random, and looked into them to see whether his instructions had been exactly followed. This was no bad security against foul play on the part of the secretaries: for if one of them were detected in a trick, he might think himself fortunate if he escaped with five years of imprisonment in a dungeon. Frederic then signed the replies, and all were sent off the same evening.

The general principles on which this strange government was conducted, deserve attention. The policy of Frederic was essentially the same as his father's; but Frederic, while he carried that policy to lengths to which his father never thought of carrying it, cleared it at the same time from the absurdities with which his father had encumbered it. The King's first object was to have a great, efficient, and well-trained army. He had a kingdom which in extent and population was hardly in the second rank of European powers; and yet he aspired to a place not inferior to that of the sovereigns of England, France, and Austria. For that end it was necessary that Prussia should be all sting. Lewis the Fifteenth, with five times as many subjects as Frederic, and more than five times as large a revenue, had not a more formidable army. The proportion which the soldiers in Prussia bore to the people seems hardly credible. Of the males in the vigour of life, a seventh part were probably under arms; and this great force had, by drilling, by reviewing, and by the unsparing use of cane and scourge, been taught to form all evolutions with a rapidity and a precision which would have astonished Villars or Eugene. The elevated feelings which are necessary to the best kind of army were then wanting to the Prussian service. In those ranks were not found the religious and political enthusiasm which inspired the pikemen of Cromwell, the patriotic ardour, the thirst of glory, the devotion to a great leader, which inflamed the Old Guard of Napoleon. But in all the mechanical parts of the military calling, the Prussians were as superior to the English and French troops of that day as the English and French troops to a rustic militia.

Though the pay of the Prussian soldier was small, though every rixdollar of extraordinary charge was scrutinised by Frederic with a vigilance and suspicion such as Mr. Joseph Hume [84] never brought to the examination of an army estimate, the expense of such an establishment was, for the means of the country, enormous. In order that it might not be utterly ruinous, it was necessary that every other expense should be cut down to the lowest possible point. Accordingly Frederic, though his dominions bordered on the sea, had no navy. He neither had nor wished to have colonies. His judges, his fiscal officers, were meanly paid. His min-

isters at foreign courts walked on foot, or drove shabby old carriages till the axletrees gave way. Even to his highest diplomatic agents, who resided at London and Paris, he allowed less than a thousand pounds sterling a year. The royal household was managed with a frugality unusual in the establishments of opulent subjects, unexampled in any other palace. The King loved good eating and drinking, and during great part of his life took pleasure in seeing his table surrounded by guests; yet the whole charge of his kitchen was brought within the sum of two thousand pounds sterling a year. He examined every extraordinary item with a care which might be thought to suit the mistress of a boarding-house better than a great prince. When more than four rixdollars were asked of him for a hundred oysters, he stormed as if he had heard that one of his generals had sold a fortress to the Empress Queen. Not a bottle of champagne was uncorked without his express order. The game of the royal parks and forests, a serious head of expenditure in most kingdoms, was to him a source of profit. The whole was farmed out; and though the farmers were almost ruined by their contract, the King would grant them no remission. His wardrobe consisted of one fine gala dress, which lasted him all his life; of two or three old coats fit for Monmouth Street,[85] of yellow waistcoats soiled with snuff, and of huge boots embrowned by time. One taste alone sometimes allured him beyond the limits of parsimony, nay, even beyond the limits of prudence, the taste for building. In all other things his economy was such as we might call by a harsher name, if we did not reflect that his funds were drawn from a heavily taxed people, and that it was impossible for him, without excessive tyranny, to keep up at once a formidable army and a splendid court.

Considered as an administrator, Frederic had undoubtedly many titles to praise. Order was strictly maintained throughout his dominions. Property was secure. A great liberty of speaking and of writing was allowed. Confident in the irresistible strength derived from a great army, the King looked down on malcontents and libellers with a wise disdain; and gave little encouragement to spies and informers. When he was told of the disaffection of one of his subjects, he merely asked, 'How many thousand men can he bring into the field?' He once saw a crowd staring at something on a wall. He rode up and found that the object of curiosity was a scurrilous placard against himself. The placard had been posted up so high that it was not easy to read it. Frederic ordered his attendants to take it down and put it lower. 'My people and I,' he said, 'have come to an agreement which satisfies us both. They are to say what they please, and I am to do what I please.' No person would have dared to publish in London satires on George the Second approaching to the atrocity of those satires on Frederic, which the booksellers at Berlin sold with impunity. One bookseller sent to the palace a copy of the most stinging lampoon that perhaps was ever written in the world, the *Memoirs of Voltaire*, published by Beaumarchais,[86] and asked for his Majesty's orders. 'Do not advertise it in an offensive manner,' said the King; 'but sell it by all means. I hope it will pay you well.' Even among statesmen accustomed to the licence of a free press, such steadfastness of mind as this is not very common.

It is due also to the memory of Frederic to say that he earnestly laboured to secure to his people the great blessing of cheap and speedy justice. He was one of the first rulers who abolished the cruel and absurd

85. A quarter in London, noted for its dealers in old clothes. *Cf.* Carlyle's *Sartor Resartus*, Book III, Chapter vi.

86. P.A.C. de Beaumarchais (1732–99), author of comedies and satires, *Le barbier de Seville* (1775), *Le mariage de Figaro* (1784). At one time he was very popular at the court of Louis XV.

practice of torture. No sentence of death, pronounced by the ordinary tribunals, was executed without his sanction; and his sanction, except in cases of murder, was rarely given. Towards his troops he acted in a very different manner. Military offences were punished with such barbarous scourging that to be shot was considered by the Prussian soldier as a secondary punishment. Indeed, the principle which pervaded Frederic's whole policy was this, that the more severely the army is governed, the safer it is to treat the rest of the community with lenity.

Religious persecution was unknown under his government, unless some foolish and unjust restrictions which lay upon the Jews may be regarded as forming an exception. His policy with respect to the Catholics of Silesia presented an honourable contrast to the policy which, under very similar circumstances, England long followed with respect to the Catholics of Ireland. Every form of religion and irreligion found an asylum in the States. The scoffer whom the parliaments of France had sentenced to a cruel death, was consoled by a commission in the Prussian service. The Jesuit who could show his face nowhere else,[87] who in Britain was still subject to penal laws, who was proscribed by France, Spain, Portugal, and Naples, who had been given up even by the Vatican, found safety and the means of subsistence in the Prussian dominions.

Most of the vices of Frederic's administration resolve themselves into one vice, the spirit of meddling. The indefatigable activity of his intellect, his dictatorial temper, his military habits, all inclined him to this great fault. He drilled his people as he drilled his grenadiers. Capital and industry were diverted from their natural direction by a crowd of preposterous regulations. There was a monopoly of coffee, a monopoly of tobacco, a monopoly of refined sugar. The public money, of which the King was generally so sparing, was lavishly spent in ploughing bogs, in planting mulberry trees amidst the sand, in bringing sheep from Spain to improve the Saxon wool, in bestowing prizes for fine yarn, in building manufactories of porcelain, manufactories of carpets, manufactories of hardware, manufactories of lace. Neither the experience of other rulers, nor his own, could ever teach him that something more than an edict and a grant of public money was required to create a Lyons, a Brussels, or a Birmingham.

For his commercial policy, however, there was some excuse. He had on his side illustrious examples and popular prejudice. Grievously as he erred, he erred in company with his age. In other departments his meddling was altogether without apology. He interfered with the course of justice as well as with the course of trade; and set up his own crude notions of equity against the law as expounded by the unanimous voice of the gravest magistrates. It never occurred to him that men whose lives were passed in adjudicating on questions of civil right were more likely to form correct opinions on such questions than a prince whose attention was divided among a thousand objects, and who had never read a law-book through. The resistance opposed to him by the tribunals inflamed him to fury. He reviled his Chancellor. He kicked the shins of his Judges. He did not, it is true, intend to act unjustly. He firmly believed that he was doing right, and defending the cause of the poor against the wealthy. Yet this well meant meddling probably did far more harm than all the explosions of his evil passions during the whole of his long reign. We could make shift to live under a debauchee or a tyrant; but to be ruled by a busybody is more than human nature can bear.

The same passion for directing and regulating appeared in every part of the King's policy. Every lad of a certain station in life was forced to go to certain schools

87. A Papal Bull suppressing the Order had been issued in August 1773.

within the Prussian dominions. If a young Prussian repaired, though but for a few weeks, to Leyden or Göttingen [88] for the purpose of study, the offence was punished with civil disabilities, and sometimes with the confiscation of property. Nobody was to travel without the royal permission. If the permission were granted, the pocket-money of the tourist was fixed by royal ordinance. A merchant might take with him two hundred and fifty rixdollars in gold, a noble was allowed to take four hundred; for it may be observed, in passing, that Frederic studiously kept up the old distinction between the nobles and the community. In speculation, he was a French philosopher, but in action, a German prince. He talked and wrote about the privileges of blood in the style of Sieyès; [89] but in practice no chapter in the empire looked with a keener eye to genealogies and quarterings.[90]

Such was Frederic the Ruler. But there was another Frederic, the Frederic of Rheinsberg, the fiddler and flute-player, the poetaster and metaphysician. Amidst the cares of State the King had retained his passion for music, for reading, for writing, for literary society. To these amusements he devoted all the time that he could snatch from the business of war and government; and perhaps more light is thrown on his character by what passed during his hours of relaxation, than by his battles or his laws.

It was the just boast of Schiller [91] that, in his country, no Augustus, no Lorenzo, had watched over the infancy of poetry. The rich and energetic language of Luther, driven by the Latin from the schools of pedants, and by the French from the palaces of kings, had taken refuge among the people. Of the powers of that language Frederic had no notion. He generally spoke of it, and of those who used it, with the contempt of ignorance. His library consisted of French books; at his table nothing was heard but French conversation. The associates of his hours of relaxation were, for the most part, foreigners. Britain furnished to the royal circle two distinguished men, born in the highest rank, and driven by civil dissensions from the land to which, under happier circumstances, their talents and virtues might have been a source of strength and glory. George Keith,[92] Earl Marischal of Scotland, had taken arms for the House of Stuart in 1715; and his younger brother James, then only seventeen years old, had fought gallantly by his side. When all was lost they retired together to the Continent, roved from country to country, served under various standards, and so bore themselves as to win the respect and good-will of many who had no love for the Jacobite cause. Their long wanderings terminated at Potsdam; nor had Frederic any associates who deserved or obtained so large a share of his esteem. They were not only accomplished men, but nobles and warriors, capable of serving him in war and diplomacy, as well as of amusing him at supper. Alone of all his companions they appear never to have had reason to com-

89. Emmanuel Joseph Sieyès (1748–1836), politician and writer of the period of the French Revolution, author of an *Essai sur les privilèges*.

90. In heraldry, divisions of an escutcheon containing different coats of arms.

91. Johann Christoph Friedrich von Schiller (1759–1805), great German poet, dramatist, critic, and philosopher. — During the reign of the Roman Emperor Augustus, *i.e.* 27 B.C.–A.D. 14, Virgil, Horace, and Ovid were the chief literary glories; the reign of Lorenzo de' Medici (c.1449–92) was noted for its patronage of literature, though the previous century had seen the rise of greater figures, such as Dante, Petrarch, and Boccaccio

92. George Keith (1693?–1778), 10th Earl Marischal of Scotland, Jacobite and favorite of Frederic the Great, had taken a leading part in the Jacobite rising of 1715; but was pardoned by George II in 1759, having had no part in the rising of 1745. His younger brother (1696–1758) was made a field-marshal of Frederic the Great in 1747, and died in the *camisade* of Hochkirch.

plain of his demeanour towards them. Some of those who knew the palace best pronounced that the Lord Marischal was the only human being whom Frederic ever really loved.

Italy sent to the parties at Potsdam the ingenious and amiable Algarotti, and Bastiani,[93] the most crafty, cautious, and servile of Abbés. But the greater part of the society which Frederic had assembled round him, was drawn from France. Maupertuis[94] had acquired some celebrity by the journey which he had made to Lapland, for the purpose of ascertaining, by actual measurement, the shape of our planet. He was placed in the chair of the Academy of Berlin, a humble imitation of the renowned academy of Paris. Baculard D'Arnaud,[95] a young poet, who was thought to have given promise of great things, had been induced to quit his country, and to reside at the Prussian Court. The Marquess D'Argens[96] was among the King's favourite companions, on account, as it should seem, of the strong opposition between their characters. The parts of D'Argens were good, and his manners those of a finished French gentleman; but his whole soul was dissolved in sloth, timidity, and self-indulgence. He was one of that abject class of minds which are superstitious without being religious. Hating Christianity with a rancour which made him incapable of rational inquiry, unable to see in the harmony and beauty of the universe the traces of divine power and wisdom, he was the slave of dreams and omens, would not sit down to table with thirteen in company, turned pale if the salt fell towards him, begged his guests not to cross their knives and forks on their plates, and would not for the world commence a journey on Friday. His health was a subject of constant anxiety to him. Whenever his head ached, or his pulse beat quick, his dastardly fears and effeminate precautions were the jest of all Berlin. All this suited the King's purpose admirably. He wanted somebody by whom he might be amused, and whom he might despise. When he wished to pass half an hour in easy polished conversation, D'Argens was an excellent companion; when he wanted to vent his spleen and contempt, D'Argens was an excellent butt.

With these associates, and others of the same class, Frederic loved to spend the time which he could steal from public cares. He wished his supper parties to be gay and easy. He invited his guests to lay aside all restraint, and to forget that he was at the head of a hundred and sixty thousand soldiers, and was absolute master of the life and liberty of all who sat at meat with him. There was, therefore, at these parties the outward show of ease. The wit and learning of the company were ostentatiously displayed. The discussions on history and literature were often highly interesting. But the absurdity of all the religions known among men was the chief topic of conversation; and the audacity with which doctrines and names venerated throughout Christendom were treated on these occasions startled even persons accustomed to the society of French and English freethinkers. Real liberty, however, or real affection, was in this brilliant society not to be found. Absolute

93. Francesco de Algarotti (1712–64), an Italian writer on art and philosophy. — Bastiani (d.1787), an adventurer; secretary to the Bishop of Breslau; later very influential with Frederic.

94. P.L.Moreau de Maupertuis (1698-1759), French mathematician and astronomer, was the chief of an expedition sent in 1736 by Louis XV into Lapland to measure the length of a degree of the meridian. He was the author of several works in astronomy, *e.g. Sur la figure de la terre* (1738), *Discours sur la figure des astres* (1742), etc.

95. Baculard D'Arnaud (1718–1805), a French poet and dramatist.

96. Jean Baptiste de Boyer, Marquis D'Argens (1704–71), after a dissipated and adventurous youth, settled at Amsterdam and wrote, among other works, his *Mémoires secrets de la république des lettres* (1743–48). For some years he acted as Director of Frederic's Literary Academy.

kings seldom have friends: and Frederic's faults were such as, even where perfect equality exists, make friendship exceedingly precarious. He had indeed many qualities which, on a first acquaintance were captivating. His conversation was lively; his manners, to those whom he desired to please, were even caressing. No man could flatter with more delicacy. No man succeeded more completely in inspiring those who approached him with vague hopes of some great advantage from his kindness. But under this fair exterior he was a tyrant, suspicious, disdainful, and malevolent. He had one taste which may be pardoned in a boy, but which, when habitually and deliberately indulged by a man of mature age and strong understanding, is almost invariably the sign of a bad heart — a taste for severe practical jokes. If a courtier was fond of dress, oil was flung over his richest suit. If he was fond of money, some prank was invented to make him disburse more than he could spare. If he was hypochondriacal, he was made to believe that he had the dropsy. If he had particularly set his heart on visiting a place, a letter was forged to frighten him from going thither. These things, it may be said, are trifles. They are so; but they are indications, not to be mistaken, of a nature to which the sight of human suffering and human degradation is an agreeable excitement.

Frederic had a keen eye for the foibles of others, and loved to communicate his discoveries. He had some talent for sarcasm, and considerable skill in detecting the sore places where sarcasm would be most acutely felt. His vanity, as well as his malignity, found gratification in the vexation and confusion of those who smarted under his caustic jests. Yet in truth his success on these occasions belonged quite as much to the king as to the wit. We read that Commodus [97] descended, sword in hand, into the arena, against a wretched gladiator, armed only with a foil of lead, and, after shedding the blood of the helpless victim, struck medals to commemorate the inglorious victory. The triumphs of Frederic in the war of repartee were of much the same kind. How to deal with him was the most puzzling of questions. To appear constrained in his presence was to disobey his commands, and to spoil his amusement. Yet if his associates were enticed by his graciousness to indulge in the familiarity of a cordial intimacy, he was certain to make them repent of their presumption by some cruel humiliation. To resent his affronts was perilous; yet not to resent them was to deserve and to invite them. In his view, those who mutinied were insolent and ungrateful; those who submitted were curs made to receive bones and kickings with the same fawning patience. It is, indeed, difficult to conceive how anything short of the rage of hunger should have induced men to bear the misery of being the associates of the Great King. It was no lucrative post. His Majesty was as severe and economical in his friendships as in the other charges of his establishment, and as unlikely to give a rixdollar too much for his guests as for his dinners. The sum which he allowed to a poet or a philosopher was the very smallest sum for which such poet or philosopher could be induced to sell himself into slavery; and the bondsman might think himself fortunate, if what had been so grudgingly given was not, after years of suffering, rudely and arbitrarily withdrawn.

Potsdam was, in truth, what it was called by one of its most illustrious inmates, the Palace of Alcina.[98] At the first glance it seemed to be a delightful spot, where every intellectual and physical enjoyment awaited the happy adventurer.

97. L. Aurelius Commodus, Roman emperor (A.D. 180–192), son of Marcus Aurelius, famous for his licentiousness.

98. Alcina was a witch in Ariosto's *Orlando Furioso* (1532), who was mistress of an enchanted garden wherein her lovers were changed into beasts, stones, or trees.

Every new comer was received with eager hospitality, intoxicated with flattery, encouraged to expect prosperity and greatness. It was in vain that a long succession of favourites who had entered that abode with delight and hope, and who, after a short term of delusive happiness, had been doomed to expiate their folly by years of wretchedness and degradation, raised their voices to warn the aspirant who approached the charmed threshold. Some had wisdom enough to discover the truth early, and spirit enough to fly without looking back; others lingered on to a cheerless and unhonoured old age. We have no hesitation in saying that the poorest author of that time in London, sleeping on a bulk,[99] dining in a cellar, with a cravat of paper, and a skewer for a shirt-pin, was a happier man than any of the literary inmates of Frederic's Court.

But of all who entered the enchanted garden in the inebriation of delight, and quitted it in agonies of rage and shame, the most remarkable was Voltaire. Many circumstances had made him desirous of finding a home at a distance from his country. His fame had raised him up enemies. His sensibility gave them a formidable advantage over him. They were, indeed, contemptible assailants. Of all that they wrote against him, nothing has survived except what he has himself preserved. But the constitution of his mind resembled the constitution of those bodies in which the slightest scratch of a bramble, or the bite of a gnat, never fails to fester. Though his reputation was rather raised than lowered by the abuse of such writers as Fréron [100] and Desfontaines,[101] though the vengeance which he took on Fréron and Desfontaines was such, that scourging, branding, pillorying, would have been a trifle to it, there is reason to believe that they gave him far more pain than he ever gave them. Though he enjoyed during his own lifetime the reputation of a classic, though he was extolled by his contemporaries above all poets, philosophers, and historians, though his works were read with as much delight and admiration at Moscow and Westminster, at Florence and Stockholm, as at Paris itself, he was yet tormented by that restless jealousy which should seem to belong only to minds burning with the desire of fame, and yet conscious of impotence. To men of letters who could by no possibility be his rivals, he was, if they behaved well to him, not merely just, not merely courteous, but often a hearty friend and a munificent benefactor. But to every writer who rose to a celebrity approaching his own, he became either a disguised or an avowed enemy. He slily depreciated Montesquieu [102] and Buffon.[103] He publicly, and with violent outrage, made war on Rousseau. Nor had he the art of hiding his feelings under the semblance of good humour or of contempt. With all his great talents, and all his long experience of the world, he had no more self-command than a petted child, or a hysterical woman. Whenever he was mortified, he exhausted the whole rhetoric of anger and sorrow to express his mortification. His torrents of bitter words, his stamping and cursing, his grimaces and his tears of rage, were a rich feast to those abject natures, whose delight is in the agonies of powerful spirits

99. The hold or cargo of a ship; also — and perhaps Macaulay's meaning — a framework projecting from a shop-front, hence a stall.

100. Élie Catherine Fréron (1719–76) is now remembered almost solely because of his attacks on Voltaire and the Encyclopædists, and by the retaliation they provoked from Voltaire.

101. P.F. Guyot Desfontaines (1685–1745), a literary Jesuit who collaborated with Fréron, Destrées, and others, in journalism, and who at one time carried on a literary feud with Voltaire.

102. C.L. de Secondat, Baron de Brede et de Montesquieu (1689–1755), French philosophical historian, author of *Esprit des lois* (1748).

103. Georges Louis L. de Buffon (1707–88), great French naturalist, author of *Histoire naturelle* (1749–1804).

and in the abasement of immortal names. These creatures had now found out a way of galling him to the very quick. In one walk, at least, it had been admitted by envy itself that he was without a living competitor. Since Racine [104] had been laid among the great men whose dust made the holy precinct of Port-Royal [105] holier, no tragic poet had appeared who could contest the palm with the author of *Zaire*, of *Alzire*, and of *Merope*. At length a rival was announced. Old Crébillon, who, many years before, had obtained some theatrical success,[106] and who had long been forgotten, came forth from his garret in one of the meanest lanes near the Rue St. Antoine, and was welcomed by the acclamations of envious men of letters, and of a capricious populace. A thing called *Catiline*, which he had written in his retirement, was acted with boundless applause. Of this execrable piece it is sufficient to say, that the plot turns on a love affair, carried on in all the forms of Scudéry,[107] between Catiline, whose confidant is the Prætor Lentulus, and Tullia, the daughter of Cicero. The theatre resounded with acclamations. The King pensioned the successful poet; and the coffee houses pronounced that Voltaire was a clever man, but that the real tragic inspiration, the celestial fire which had glowed in Corneille and Racine, was to be found in Crébillon alone.

The blow went to Voltaire's heart. Had his wisdom and fortitude been in proportion to the fertility of his intellect, and to the brilliancy of his wit, he would have seen that it was out of the power of all the puffers and detractors in Europe to put *Catiline* above *Zaire*; but he had none of the magnanimous patience with which Milton and Bentley [108] left their claims to the unerring judgment of time. He eagerly engaged in an undignified competition with Crébillon, and produced a series of plays on the same subjects which his rival had treated. These pieces were coolly received. Angry with the court, angry with the capital, Voltaire began to find pleasure in the prospect of exile. His attachment for Madame du Châtelet [109] long prevented him from executing his purpose. Her death set him at liberty; and he determined to take refuge at Berlin.

To Berlin he was invited by a series of letters, couched in terms of the most enthusiastic friendship and admiration. For once the rigid parsimony of Frederic seemed to have relaxed. Orders, honourable offices, a liberal pension, a well-served table, stately apartments under a royal roof, were offered in return for the pleasure and honour which were expected from the society of the first wit of the age. A thousand louis were remitted for the charges of the journey. No ambassador setting out from Berlin for a court of the first rank, had ever been more amply supplied. But Voltaire was not satisfied. At a later period, when he possessed an ample fortune, he was one of the most liberal of men; but till his means had become equal to his wishes, his greediness for lucre was unrestrained either by justice or by shame.

104. Jean Racine (1639–99), great dramatist of the age of Louis XIV.

105. Originally a Cistercian nunnery, later (in 1636) a place of retreat for pious and learned men holding the Jansenist doctrine, where they devoted themselves to prayer, writing, study; it became a center of education, and influenced Pascal and Racine

106. Prosper Jolyot de Crébillon (1674–1762), one of the many inferior tragic poets of the first half of the 18th century in France. His *Catiline* was presented before the French court in 1748, with great success.

107. *i.e.* with the stilted heroics and sentimentalism of the romances of Madame de Scudéry (1607–1701), whose works were extremely popular in the 17th century.

108. Richard Bentley (1662–1742), celebrated Cambridge scholar and critic, won fame in his exposure of the *Letters of Phalaris* as a forgery. — The 'magnanimous patience' of Milton and Bentley, especially of the former, when in the throes of controversy, may be a matter of debate.

109. The Marquise du Châtelet was for many years Voltaire's mistress. She died in 1749.

He had the effrontery to ask for a thousand louis [110] more, in order to enable him to bring his niece, Madame Denis, the ugliest of coquettes, in his company. The indelicate rapacity of the poet produced its natural effect on the severe and frugal King. The answer was a dry refusal. 'I did not,' said his Majesty, 'solicit the honour of the lady's society.' On this, Voltaire went off into a paroxysm of childish rage. 'Was there ever such avarice? He has hundreds of tubs full of dollars in his vaults, and haggles with me about a poor thousand louis.' It seemed that the negotiation would be broken off; but Frederic, with great dexterity, affected indifference, and seemed inclined to transfer his idolatry to Baculard D'Arnaud.[111] His Majesty even wrote some bad verses, of which the sense was, that Voltaire was a setting sun, and that D'Arnaud was rising. Good-natured friends soon carried the lines to Voltaire. He was in his bed. He jumped out in his shirt, danced about the room with rage, and sent for his passport and his post-horses. It was not difficult to foresee the end of a connection which had such a beginning.

It was in the year 1750 that Voltaire left the great capital, which he was not to see again till, after the lapse of near thirty years, he returned bowed down by extreme old age, to die in the midst of a splendid and ghastly triumph. His reception in Prussia was such as might well have elated a less vain and excitable mind. He wrote to his friends at Paris, that the kindness and the attention with which he had been welcomed surpassed description, that the King was the most amiable of men, that Potsdam was the paradise of philosophers. He was created chamberlain, and received, together with his gold key, the cross of an order, and a patent ensuring to him a pension of eight hundred pounds sterling a year for life. A hundred and sixty pounds a year were promised to his niece if she survived him. The royal cooks and coachmen were put at his disposal. He was lodged in the same apartments in which Saxe had lived, when, at the height of power and glory, he visited Prussia. Frederic, indeed, stooped for a time even to use the language of adulation. He pressed to his lips the meagre hand of the little grinning skeleton, whom he regarded as the dispenser of immortal renown. He would add, he said, to the titles which he owed to his ancestors and his sword, another title, derived from his last and proudest acquisition. His style should run thus: Frederic, King of Prussia, Margrave of Brandenburg, Sovereign Duke of Silesia, Possessor of Voltaire. But even amidst the delights of the honeymoon, Voltaire's sensitive vanity began to take alarm. A few days after his arrival, he could not help telling his niece that the amiable King had a trick of giving a sly scratch with one hand while patting and stroking with the other. Soon came hints not the less alarming, because mysterious. 'The supper parties are delicious. The King is the life of the company. But — I have operas and comedies, reviews and concerts, my studies and books. But — but — Berlin is fine, the princesses charming, the maids of honour handsome. But — —'

This eccentric friendship was fast cooling. Never had there met two persons so exquisitely fitted to plague each other. Each of them had exactly the fault of which the other was most impatient; and they were, in different ways, the most impatient of mankind. Frederic was frugal, almost niggardly. When he had secured his plaything he began to think that he had bought it too dear. Voltaire, on the other hand, was greedy, even to the extent of imprudence and knavery; and conceived that the favourite of a monarch who had barrels full of gold and silver laid up in cellars ought to make a fortune which a receiver-general might envy. They soon

110. *louis* (or *louis d'or*): a French gold coin, first struck in 1640, varying in value from about $4 to $4.79.

111. See note 95.

discovered each other's feelings. Both were angry; and a war began, in which Frederic stooped to the part of Harpagon, and Voltaire to that of Scapin.[112] It is humiliating to relate, that the great warrior and statesman gave orders that his guest's allowance of sugar and chocolate should be curtailed. It is, if possible, a still more humiliating fact, that Voltaire indemnified himself by pocketing the wax candles in the royal antechamber. Disputes about money, however, were not the most serious disputes of these extraordinary associates. The sarcasms of the King soon galled the sensitive temper of the poet. D'Arnaud and D'Argens, Guichard[113] and La Métrie,[114] might, for the sake of a morsel of bread, be willing to bear the insolence of a master: but Voltaire was of another order. He knew that he was a potentate as well as Frederic, that his European reputation, and his incomparable power of covering whatever he hated with ridicule, made him an object of dread even to the leaders of armies and the rulers of nations. In truth, of all the intellectual weapons which have ever been wielded by man, the most terrible was the mockery of Voltaire. Bigots and tyrants, who had never been moved by the wailing and cursing of millions, turned pale at his name. Principles unassailable by reason, principles which had withstood the fiercest attacks of power, the most valuable truths, the most generous sentiments, the noblest and most graceful images, the purest reputations, the most august institutions, began to look mean and loathsome as soon as that withering smile was turned upon them. To every opponent, however strong in his cause and his talents, in his station and his character, who ventured to encounter the great scoffer, might be addressed the caution which was given of old to the Archangel: —

> 'I forewarn thee, shun
> His deadly arrow: neither vainly hope
> To be invulnerable in those bright arms,
> Though temper'd heavenly; for that fatal dint,
> Save Him who reigns above, none can resist.'

We cannot pause to recount how often that rare talent was exercised against rivals worthy of esteem; how often it was used to crush and torture enemies worthy only of silent disdain; how often it was perverted to the more noxious purpose of destroying the last solace of earthly misery, and the last restraint on earthly power. Neither can we pause to tell how often it was used to vindicate justice, humanity, and toleration, the principles of sound philosophy, the principles of free government. This is not the place for a full character of Voltaire.

Causes of quarrel multiplied fast. Voltaire, who, partly from love of money, and partly from love of excitement, was always fond of stock-jobbing, became implicated in transactions of at least a dubious character. The King was delighted at having such an opportunity to humble his guest; and bitter reproaches and complaints were exchanged. Voltaire, too, was soon at war with the other men of letters who surrounded the King; and this irritated Frederic, who, however, had himself chiefly to blame: for, from that love of tormenting which was in him a ruling passion, he perpetually lavished extravagant praises on small men and bad books, merely in order that he might enjoy the mortification and rage which on such occasions Voltaire took no pains to conceal. His Majesty, however, soon had reason to

112 Harpagon and Scapin are characters in Molière's *L'Avare* and *Les fourberies*, respectively, the former a niggardly miser, the latter a roguish servant.

113. Charles Théophile Guichard was a French author patronized by Frederic.

114. Julian Offray de Lamettrie (or La Métrie) (1709–51), French physician, and philosopher of materialism, author of *L'Homme machine* (Eng. tr. 1750); compelled to leave France, he became court reader for Frederic.

regret the pains which he had taken to kindle jealousy among the members of his household. The whole palace was in a ferment with literary intrigues and cabals. It was to no purpose that the imperial voice, which kept a hundred and sixty thousand soldiers in order, was raised to quiet the contention of the exasperated wits. It was far easier to stir up such a storm than to lull it. Nor was Frederic, in his capacity of wit, by any means without his own share of vexations. He had sent a large quantity of verses to Voltaire, and requested that they might be returned, with remarks and corrections. 'See,' exclaimed Voltaire, 'what a quantity of his dirty linen the King has sent me to wash!' Talebearers were not wanting to carry the sarcasm to the royal ear; and Frederic was as much incensed as a Grub Street writer who had found his name in the *Dunciad*.[115]

This could not last. A circumstance which, when the mutual regard of the friends was in its first glow, would merely have been matter for laughter, produced a violent explosion. Maupertuis enjoyed as much of Frederic's goodwill as any man of letters. He was President of the Academy of Berlin; and he stood second to Voltaire, though at an immense distance, in the literary society which had been assembled at the Prussian Court. Frederic had, by playing for his own amusement on the feelings of the two jealous and vainglorious Frenchmen, succeeded in producing a bitter enmity between them. Voltaire resolved to set his mark, a mark never to be effaced, on the forehead of Maupertuis, and wrote the exquisitely ludicrous *Diatribe of Doctor Akakia*.[116] He showed this little piece to Frederic, who had too much taste and too much malice not to relish such delicious pleasantry. In truth, even at this time of day, it is not easy for any person who has the least perception of the ridiculous to read the jokes on the Latin city, the Patagonians, and the hole to the centre of the earth, without laughing till he cries. But though Frederic was diverted by this charming pasquinade, he was unwilling that it should get abroad. His self-love was interested. He had selected Maupertuis to fill the chair of his Academy. If all Europe were taught to laugh at Maupertuis, would not the reputation of the Academy, would not even the dignity of its royal patron, be in some degree compromised? The King, therefore, begged Voltaire to suppress this performance. Voltaire promised to do so, and broke his word. The *Diatribe* was published, and received with shouts of merriment and applause by all who could read the French language. The King stormed. Voltaire, with his usual disregard of truth, asserted his innocence, and made up some lie about a printer or an amanuensis. The King was not to be so imposed upon. He ordered the pamphlet to be burned by the common hangman, and insisted upon having an apology from Voltaire, couched in the most abject terms. Voltaire sent back to the King his cross, his key, and the patent of his pension. After this burst of rage, the strange pair began to be ashamed of their violence, and went through the forms of reconciliation. But the breach was irreparable; and Voltaire took his leave of Frederic for ever. They parted with cold civility; but their hearts were big with resentment. Voltaire had in his keeping a volume of the King's poetry, and forgot to return it. This was, we believe, merely one of the oversights which men setting out upon a journey often commit. That Voltaire could have meditated plagiarism is quite incredible. He would not, we are confident, for the half of Frederic's kingdom, have consented to father

115. Pope's great satire, published anonymously in 1728, enlarged in 1729, acknowledged in 1735. — *Grub Street writer*: hack writer living in Grub Street, near Moorfields, London.

116. Published in 1752. It is said that Voltaire obtained Frederic's permission to publish the lampoon by getting the king to endorse a totally different pamphlet on its last leaf, and by affixing that last leaf to *Akakia*!

Frederic's verses. The King, however, who rated his own writings much above their value, and who was inclined to see all Voltaire's actions in the worst light, was enraged to think that his favourite compositions were in the hands of an enemy, as thievish as a daw and as mischievous as a monkey. In the anger excited by this thought, he lost sight of reason and decency, and determined on committing an outrage at once odious and ridiculous.

Voltaire had reached Frankfort. His niece, Madame Denis, came thither to meet him. He conceived himself secure from the power of his late master, when he was arrested by order of the Prussian resident. The precious volume was delivered up. But the Prussian agents had, no doubt, been instructed not to let Voltaire escape without some gross indignity. He was confined twelve days in a wretched hovel. Sentinels with fixed bayonets kept guard over him. His niece was dragged through the mire by the soldiers. Sixteen hundred dollars were extorted from him by his insolent gaolers. It is absurd to say that this outrage is not to be attributed to the King. Was anybody punished for it? Was anybody called in question for it? Was it not consistent with Frederic's character? Was it not of a piece with his conduct on other similar occasions? Is it not notorious that he repeatedly gave private directions to his officers to pillage and demolish the houses of persons against whom he had a grudge, charging them at the same time to take their measures in such a way that his name might not be compromised? He acted thus towards Count Brühl [117] in the Seven Years' War. Why should we believe that he would have been more scrupulous with regard to Voltaire?

When at length the illustrious prisoner regained his liberty, the prospect before him was but dreary. He was an exile both from the country of his birth and from the country of his adoption. The French Government had taken offence at his journey to Prussia, and would not permit him to return to Paris; and in the vicinity of Prussia it was not safe for him to remain.

He took refuge on the beautiful shores of Lake Leman.[118] There, loosed from every tie which had hitherto restrained him, and having little to hope or to fear from courts and churches, he began his long war against all that, whether for good or evil, had authority over man; for what Burke said of the Constituent Assembly,[119] was eminently true of this its great forerunner: Voltaire could not build: he could only pull down: he was the very Vitruvius of ruin.[120] He has bequeathed to us not a single doctrine to be called by his name, not a single addition to the stock of our positive knowledge. But no human teacher ever left behind him so vast and terrible a wreck of truths and falsehoods, of things noble and things base, of things useful and things pernicious. From the time when his sojourn beneath the Alps commenced, the dramatist, the wit, the historian, was merged in a more important character. He was now the patriarch, the founder of a sect, the chief of a conspiracy, the prince of a wide intellectual commonwealth. He often enjoyed a pleasure dear to the better part of his nature, the pleasure of vindicating innocence which had no other helper, of repairing cruel wrongs, of punishing tyranny in high places. He had also the satisfaction, not less acceptable to his ravenous vanity, of hearing ter-

rified Capuchins[121] call him the Antichrist. But whether employed in works of benevolence, or in works of mischief, he never forgot Potsdam and Frankfort; and he listened anxiously to every murmur which indicated that a tempest was gathering in Europe, and that his vengeance was at hand.

He soon had his wish. Maria Theresa had never for a moment forgotten the great wrong which she had received at the hand of Frederic. Young and delicate, just left an orphan, just about to be a mother, she had been compelled to fly from the ancient capital of her race; she had seen her fair inheritance dismembered by robbers, and of those robbers he had been the foremost. Without a pretext, without a provocation, in defiance of the most sacred engagements, he had attacked the helpless ally whom he was bound to defend. The Empress Queen had the faults as well as the virtues which are connected with quick sensibility and a high spirit. There was no peril which she was not ready to brave, no calamity which she was not ready to bring on her subjects, or on the whole human race, if only she might once taste the sweetness of a complete revenge. Revenge, too, presented itself, to her narrow and superstitious mind, in the guise of duty. Silesia had been wrested not only from the House of Austria, but from the Church of Rome. The conqueror had indeed permitted his new subjects to worship God after their own fashion; but this was not enough. To bigotry it seemed an intolerable hardship that the Catholic Church, having long enjoyed ascendency, should be compelled to content itself with equality. Nor was this the only circumstance which led Maria Theresa to regard her enemy as the enemy of God. The profaneness of Frederic's writings and conversation, and the frightful rumours which were circulated respecting the immorality of his private life, naturally shocked a woman who believed with the firmest faith all that her confessor told her, and who, though surrounded by temptations, though young and beautiful, though ardent in all her passions, though possessed of absolute power, had preserved her fame unsullied even by the breath of slander.

To recover Silesia, to humble the dynasty of Hohenzollern to the dust, was the great object of her life. She toiled during many years for this end, with zeal as indefatigable as that which the poet ascribed to the stately goddess[122] who tired out her immortal horses in the work of raising the nations against Troy, and who offered to give up to destruction her darling Sparta and Mycenæ, if only she might once see the smoke going up from the palace of Priam. With e spirit did the proud Austrian Juno strive to array against her foe a coalition such as Europe had never seen. Nothing would content her but that the whole civilised world, from the White Sea to the Adriatic, from the Bay of Biscay to the pastures of the wild horses of the Tanais,[123] should be combined in arms against one petty State.

She early succeeded by various arts in obtaining the adhesion of Russia. An ample share of spoil was promised to the King of Poland; prince, governed by his favourite, Count Bruhl, readily promised the assistance of the Saxon forces. The great difficulty was with France. That the Houses of Bourbon and of Hapsburg should ever cordially co-operate in any great scheme of European policy, had long been thought, to use the strong expression of Frederic, just as impossible as that fire and water should amalgamate. The whole history of the Continent, during two centuries and a half, had been the history of the mutual jealousies and enmities of France and Aus-

ıria. Since the administration of Richelieu, above all, it had been considered as the plain policy of the Most Christian King[124] to thwart on all occasions the Court of Vienna, and to protect every member of the Germanic body who stood up against the dictation of the Cæsars. Common sentiments of religion had been unable to mitigate this strong antipathy. The rulers of France, even while clothed in the Roman purple, even while persecuting the heretics of Rochelle and Auvergne,[125] had still looked with favour on the Lutheran and Calvinistic princes who were struggling against the chief of the empire. If the French ministers paid any respect to the traditional rules handed down to them through many generations, they would have acted towards Frederic as the greatest of their predecessors acted towards Gustavus Adolphus.[126] That there was deadly enmity between Prussia and Austria was of itself a sufficient reason for close friendship between Prussia and France. With France Frederic could never have any serious controversy. His territories were so situated that his ambition, greedy and unscrupulous as it was, could never impel him to attack her of his own accord. He was more than half a Frenchman: he wrote, spoke, read nothing but French: he delighted in French society: the admiration of the French he proposed to himself as the best reward of all his exploits. It seemed incredible that any French Government, however notorious for levity or stupidity, could spurn away such an ally.

The Court of Vienna, however, did not despair. The Austrian diplomatists propounded a new scheme of politics, which, it must be owned, was not altogether without plausibility. The great powers, according to this theory, had long been under a delusion. They had looked on each other as natural enemies, while in truth they were natural allies. A succession of cruel wars had devastated Europe, had thinned the population, had exhausted the public resources, had loaded governments with an immense burden of debt; and when, after two hundred years of murderous hostility or of hollow truce, the illustrious Houses whose enmity had distracted the world sat down to count their gains, to what did the real advantage on either side amount? Simply to this, that they had kept each other from thriving. It was not the King of France, it was not the Emperor, who had reaped the fruits of the Thirty Years' War, or of the War of the Pragmatic Sanction. Those fruits had been pilfered by states of the second and third rank, which, secured against jealousy by their insignificance, had dexterously aggrandised themselves while pretending to serve the animosity of the great chiefs of Christendom. While the lion and tiger were tearing each other, the jackal had run off into the jungle with the prey. The real gainer by the Thirty Years' War had been neither France nor Austria, but Sweden. The real gainer by the War of the Pragmatic Sanction had been neither France nor Austria, but the upstart of Brandenburg. France had made great efforts, had added largely to her military glory, and largely to her public burdens; and for what end? Merely that Frederic might rule Silesia. For this and this alone one French army, wasted by sword and famine, had perished in Bohemia; and another had purchased with floods of the noblest blood, the barren glory of Fontenoy. And this prince, for whom France had suffered so much, was he a grateful, was he even an honest ally? Had he not been as false to the Court of Versailles as to the Court of Vienna? Had he not played, on a large scale, the same part which, in private life, is played by the vile

125. *i.e.* the Huguenots, or French Protestants.

126 Gustavus Adolphus (1594–1632), King of Sweden, whose intervention in the Thirty Years' War in 1630 on behalf of the Protestants was facilitated by Richelieu, who concluded a peace between Sweden and Poland, and thus freed Gustavus's hands.

agent of chicane who sets his neighbours quarrelling, involves them in costly and interminable litigation, and betrays them to each other all round, certain that, whoever may be ruined, he shall be enriched? Surely the true wisdom of the great powers was to attack, not each other, but this common barrator,[127] who, by inflaming the passions of both, by pretending to serve both, and by deserting both, had raised himself above the station to which he was born. The great object of Austria was to regain Silesia; the great object of France was to obtain an accession of territory on the side of Flanders. If they took opposite sides, the result would probably be that, after a war of many years, after the slaughter of many thousands of brave men, after the waste of many millions of crowns, they would lay down their arms without having achieved either object; but, if they came to an understanding, there would be no risk, and no difficulty. Austria would willingly make in Belgium such cessions as France could not expect to obtain by ten pitched battles. Silesia would easily be annexed to the monarchy of which it had long been a part. The union of two such powerful governments would at once overawe the King of Prussia. If he resisted, one short campaign would settle his fate. France and Austria, long accustomed to rise from the game of war both losers, would, for the first time, both be gainers. There could be no room for jealousy between them. The power of both would be increased at once; the equilibrium between them would be preserved; and the only sufferer would be a mischievous and unprincipled buccaneer, who deserved no tenderness from either.

These doctrines, attractive from their novelty and ingenuity, soon became fashionable at the supper-parties and in the coffee-houses of Paris, and were espoused by every gay marquis and every facetious abbé who was admitted to see Madame de Pompadour's[128] hair curled and powdered. It was not, however, to any political theory that the strange coalition between France and Austria owed its origin. The real motive which induced the great continental powers to forget their old animosities and their old state maxims was personal aversion to the King of Prussia. This feeling was strongest in Maria Theresa; but it was by no means confined to her. Frederic, in some respects a good master, was emphatically a bad neighbour. That he was hard in all dealings, and quick to take all advantages, was not his most odious fault. His bitter and scoffing speech had inflicted keener wounds than his ambition. In his character of wit he was under less restraint than even in his character of ruler. Satirical verses against all the princes and ministers of Europe were ascribed to his pen. In his letters and conversation he alluded to the greatest potentates of the age in terms which would have better suited Collé,[129] in a war of repartee with young Crébillon[130] at Pelletier's table,[131] than a great sovereign speaking of great sovereigns. About women he was in the habit of expressing himself in a manner which it was impossible for the meekest of women to forgive; and, unfortunately for him, almost the whole Continent was then governed by women who were by no means conspicuous for meekness. Maria Theresa herself had not escaped his scurrilous jests. The Empress Elizabeth of Russia[132] knew that her gallantries afforded him a favourite theme for

127. *barrator*: legal term for one who excites, encourages, or maintains lawsuits or quarrels.

128. Marquise de Pompadour (1721–64), mistress of Louis XV, of great — though exaggerated — political influence.

129. Charles Collé (1709–83), French dramatist and song-writer.

130. Claude Prosper de Crébillon (the younger) (1707–77), writer of romances.

131. The Pelletier family in the 18th century penetrated so many circles of public servants and literary men that Macaulay's allusion is rather vague.

132. Elizabeth (1709–62), younger daughter of Peter the Great by Catherine I, of considerable ability but lazy and sensual.

ribaldry and invective. Madame de Pompadour, who was really the head of the French Government, had been even more keenly galled. She had attempted, by the most delicate flattery, to propitiate the King of Prussia; but her messages had drawn from him only dry and sarcastic replies. The Empress Queen took a very different course. Though the haughtiest of princesses, though the most austere of matrons, she forgot in her thirst for revenge both the dignity of her race and the purity of her character, and condescended to flatter the low-born and low-minded concubine, who, having acquired influence by prostituting herself, retained it by prostituting others. Maria Theresa actually wrote with her own hand a note, full of expressions of esteem and friendship to her dear cousin, the daughter of the butcher Poisson, the wife of the publican D'Etioles, the kidnapper of young girls for the harem of an old rake, a strange cousin for the descendant of so many Emperors of the West! The mistress was completely gained over, and easily carried her point with Lewis, who had, indeed, wrongs of his own to resent. His feelings were not quick, but contempt, says the Eastern proverb, pierces even through the shell of the tortoise; and neither prudence nor decorum had ever restrained Frederic from expressing his measureless contempt for the sloth, the imbecility, and the baseness of Lewis. France was thus induced to join the coalition; and the example of France determined the conduct of Sweden, then completely subject to French influence.

The enemies of Frederic were surely strong enough to attack him openly; but they were desirous to add to all their other advantages the advantage of a surprise. He was not, however, a man to be taken off his guard. He had tools in every Court; and he now received from Vienna, from Dresden, and from Paris, accounts so circumstantial and so consistent, that he could not doubt of his danger. He learnt, that he was to be assailed at once by France, Austria, Russia, Saxony, Sweden, and the Germanic body;[133] that the greater part of his dominions was to be portioned out among his enemies; that France, which from her geographical position could not directly share in his spoils, was to receive an equivalent in the Netherlands; that Austria was to have Silesia, and the Czarina East Prussia; that Augustus of Saxony expected Magdeburg; and that Sweden would be rewarded with part of Pomerania. If these designs succeeded, the House of Brandenburg would at once sink in the European system to a place lower than that of the Duke of Würtemberg or the Margrave of Baden.

And what hope was there that these designs would fail? No such union of the continental powers had been seen for ages. A less formidable confederacy had in a week conquered all the provinces of Venice, when Venice was at the height of power, wealth, and glory.[134] A less formidable confederacy had compelled Lewis the Fourteenth to bow down his haughty head to the very earth.[135] A less formidable confederacy has, within our own memory, subjugated a still mightier empire, and abused a still prouder name.[136] Such odds had never been heard of in war. The people whom Frederic ruled were not five millions. The population of the countries which were leagued against him amounted to a hundred millions. The disproportion in wealth was at least equally great. Small communities, actuated by strong sentiments of patriotism or loyalty, have sometimes made head against great monarchies weakened by factions and dis-

contents. But small as was Frederic's kingdom, it probably contained a greater number of disaffected subjects than were to be found in all the states of his enemies. Silesia formed a fourth part of his dominions; and from the Silesians, born under Austrian princes, the utmost that he could expect was apathy. From the Silesian Catholics he could hardly expect anything but resistance.

Some states have been enabled, by their geographical position, to defend themselves with advantage against immense force. The sea has repeatedly protected England against the fury of the whole Continent. The Venetian Government, driven from its possessions on the land, could still bid defiance to the confederates of Cambray from the arsenal amidst the lagoons. More than one great and well appointed army, which regarded the shepherds of Switzerland as an easy prey, has perished in the passes of the Alps. Frederic had no such advantage. The form of his states, their situation, the nature of the ground, all were against him. His long, scattered, straggling territory seemed to have been shaped with an express view to the convenience of invaders, and was protected by no sea, by no chain of hills. Scarcely any corner of it was a week's march from the territory of the enemy. The capital itself, in the event of war, would be constantly exposed to insult. In truth there was hardly a politician or a soldier in Europe who doubted that the conflict would be terminated in a very few days by the prostration of the House of Brandenburg.

Nor was Frederic's own opinion very different. He anticipated nothing short of his own ruin, and of the ruin of his family. Yet there was still a chance, a slender chance, of escape. His states had at least the advantage of a central position; his enemies were widely separated from each other, and could not conveniently unite their overwhelming forces on one point. They inhabited different climates, and it was probable that the season of the year which would be best suited to the military operations of one portion of the League, would be unfavourable to those of another portion. The Prussian monarchy, too, was free from some infirmities which were found in empires far more extensive and magnificent. Its effective strength for a desperate struggle was not to be measured merely by the number of square miles or the number of people. In that spare but well-knit and well-exercised body, there was nothing but sinew, and muscle and bone. No public creditors looked for dividends. No distant colonies required defence. No Court, filled with flatterers and mistresses, devoured the pay of fifty battalions. The Prussian army, though far inferior in number to the troops which were about to be opposed to it, was yet strong out of all proportion to the extent of the Prussian dominions. It was also admirably trained and admirably officered, accustomed to obey and accustomed to conquer. The revenue was not only unincumbered by debt, but exceeded the ordinary outlay in time of peace. Alone of all the European princes, Frederic had a treasure laid up for a day of difficulty. Above all, he was one, and his enemies were many. In their camps would certainly be found the jealousy, the dissension, the slackness inseparable from coalitions; on his side was the energy, the unity, the secrecy of a strong dictatorship. To a certain extent the deficiency of military means might be supplied by the resources of military art. Small as the King's army was, when compared with the six hundred thousand men whom the confederates could bring into the field, celerity of movement might in some degree compensate for deficiency of bulk. It was thus just possible that genius, judgment, resolution, and good luck united, might protract the struggle during a campaign or two; and to gain even a month was of importance. It could not be long before the vices which are found in all extensive confederacies would begin to show them-

selves. Every member of the League would think his own share of the war too large, and his own share of the spoils too small. Complaints and recriminations would abound. The Turk might stir on the Danube; the statesmen of France might discover the error which they had committed in abandoning the fundamental principles of their national policy. Above all, death might rid Prussia of its most formidable enemies. The war was the effect of the personal aversion with which three or four sovereigns regarded Frederic; and the decease of any one of those sovereigns might produce a complete revolution in the state of Europe.

In the midst of a horizon generally dark and stormy, Frederic could discern one bright spot. The peace which had been concluded between England and France in 1748,[137] had been in Europe no more than an armistice; and had not even been an armistice in the other quarters of the globe. In India the sovereignty of the Carnatic was disputed between two great Mussulman houses; Fort Saint George had taken one side, Pondicherry the other; and in a series of battles and sieges the troops of Lawrence and Clive had been opposed to those of Dupleix.[138] A struggle less important in its consequences, but not less likely to produce irritation, was carried on between those French and English adventurers, who kidnapped negroes and collected gold dust on the coast of Guinea. But it was in North America that the emulation and mutual aversion of the two nations were most conspicuous. The French attempted to hem in the English colonists by a chain of military posts, extending from the Great Lakes to the mouth of the Mississippi. The English took arms. The wild aboriginal tribes appeared on each side mingled with the Pale-Faces. Battles were fought; forts were stormed; and hideous stories about stakes, scalpings, and death-songs reached Europe, and inflamed that national animosity which the rivalry of ages had produced. The disputes between France and England came to a crisis at the very time when the tempest which had been gathering was about to burst on Prussia. The tastes and interests of Frederic would have led him, if he had been allowed an option, to side with the House of Bourbon. But the folly of the Court of Versailles left him no choice. France became the tool of Austria; and Frederic was forced to become the ally of England. He could not, indeed, expect that a power which covered the sea with its fleets, and which had to make war at once on the Ohio and the Ganges, would be able to spare a large number of troops for operations in Germany. But England, though poor compared with the England of our time, was far richer than any country on the Continent. The amount of her revenue, and the resources which she found in her credit, though they may be thought small by a generation which has seen her raise a hundred and thirty millions in a single year, appeared miraculous to the politicians of that age. A very moderate portion of her wealth, expended by an able and economical prince, in a country where prices were low, would be sufficient to equip and maintain a formidable army.

Such was the situation in which Frederic found himself. He saw the whole extent of his peril. He saw that there was still a faint possibility of escape; and, with prudent temerity, he determined to strike the first blow. It was in the month of August 1756, that the great war of the Seven Years commenced. The King demanded of the Empress Queen a distinct explanation of her intentions, and plainly told her that he should consider a refusal as a declaration of war. 'I want,' he said, 'no answer in the style of an oracle.' He received an answer at once haughty and

138. See Macaulay's essay on 'Lord Clive.'

evasive. In an instant the rich electorate of Saxony was overflowed by sixty thousand Prussian troops. Augustus with his army occupied a strong position at Pirna.[139] The Queen of Poland was at Dresden. In a few days Pirna was blockaded and Dresden was taken. The first object of Frederic was to obtain possession of the Saxon State papers; for those papers, he well knew, contained ample proofs that, though apparently an aggressor, he was really acting in self-defence. The Queen of Poland, as well acquainted as Frederic with the importance of those documents, had packed them up, had concealed them in her bed-chamber, and was about to send them off to Warsaw, when a Prussian officer made his appearance. In the hope that no soldier would venture to outrage a lady, a queen, a daughter of an emperor, the mother-in-law of a dauphin, she placed herself before the trunk, and at length sat down on it. But all resistance was vain. The papers were carried to Frederic, who found in them, as he expected, abundant evidence of the designs of the coalition. The most important documents were instantly published, and the effect of the publication was great. It was clear that, of whatever sins the King of Prussia might formerly have been guilty, he was now the injured party, and had merely anticipated a blow intended to destroy him.

The Saxon camp at Pirna was in the meantime closely invested; but the besieged were not without hopes of succour. A great Austrian army under Marshal Brown[140] was about to pour through the passes which separate Bohemia from Saxony. Frederic left at Pirna a force sufficient to deal with the Saxons, hastened into Bohemia, encountered Brown at Lowositz,[141] and defeated him. This battle decided the fate of Saxony. Augustus and his favourite Brühl fled to Poland. The whole army of the Electorate capitulated. From that time till the end of the war, Frederic treated Saxony as a part of his dominions, or, rather, he acted towards the Saxons in a manner which may serve to illustrate the whole meaning of that tremendous sentence, 'subjectos tanquam suos, viles tanquam alienos.'[142] Saxony was as much in his power as Brandenburg; and he had no such interest in the welfare of Saxony as he had in the welfare of Brandenburg. He accordingly levied troops and exacted contributions throughout the enslaved province, with far more rigour than in any part of his own dominions. Seventeen thousand men who had been in the camp at Pirna were half compelled, half persuaded to enlist under their conqueror. Thus, within a few weeks from the commencement of hostilities, one of the confederates had been disarmed, and his weapons were now pointed against the rest.

The winter put a stop to military operations. All had hitherto gone well. But the real tug of war was still to come. It was easy to foresee that the year 1757 would be a memorable era in the history of Europe.

The King's scheme for the campaign was simple, bold, and judicious. The Duke of Cumberland[143] with an English and Hanoverian army was in Western Germany, and might be able to prevent the French troops from attacking Prussia. The Russians, confined by their

141. Or Lobositz. The defeat (October 1, 1756) was not a decisive victory for Frederic; nor did it 'decide the fate of Saxony.' (Atkinson.)

142. *i.e.* 'he seizes our property as if we were his own, he treats us with contempt as though belonging to another.' *Cf.* Tacitus, *Histories*, I,xxxvii. (Atkinson.)

143. William Augustus, Duke of Cumberland (1721–65), second son of George II.

snows, would probably not stir till the spring was far advanced. Saxony was prostrated. Sweden could do nothing very important. During a few months Frederic would have to deal with Austria alone. Even thus the odds were against him. But ability and courage have often triumphed against odds still more formidable.

Early in 1757 the Prussian army in Saxony began to move. Through four defiles in the mountains they came pouring into Bohemia. Prague was the King's first mark; but the ulterior object was probably Vienna. At Prague lay Marshal Brown with one great army. Daun,[144] the most cautious and fortunate of the Austrian captains, was advancing with another. Frederic determined to overwhelm Brown before Daun should arrive. On the sixth of May was fought, under those walls which, a hundred and thirty years before, had witnessed the victory of the Catholic league and the flight of the unhappy Palatine,[145] a battle more bloody than any which Europe saw during the long interval between Malplaquet and Eylau. The King and Prince Ferdinand of Brunswick were distinguished on that day by their valour and exertions. But the chief glory was with Schwerin. When the Prussian infantry wavered, the stout old marshal snatched the colours from an ensign, and, waving them in the air, led back his regiment to the charge. Thus at seventy-two years of age he fell in the thickest battle, still grasping the standard which bears the black eagle on the field argent. The victory remained with the King; but it had been dearly purchased. Whole columns of his bravest warriors had fallen. He admitted that he had lost eighteen thousand men. Of the enemy, twenty-four thousand had been killed, wounded, or taken.[146]

Part of the defeated army was shut up in Prague. Part fled to join the troops which, under the command of Daun, were now close at hand. Frederic determined to play over the same game which had succeeded at Lowositz. He left a large force to besiege Prague, and at the head of thirty thousand men he marched against Daun. The cautious Marshal, though he had a great superiority in numbers, would risk nothing. He occupied at Kolin a position almost impregnable, and awaited the attack of the King.

It was the eighteenth of June, a day which, if the Greek superstition still retained its influence, would be held sacred to Nemesis,[147] a day on which the two greatest princes of modern times were taught, by a terrible experience, that neither skill nor valour can fix the inconstancy of fortune. The battle [148] began before noon; and part of the Prussian army maintained the contest till after the midsummer sun had gone down. But at length the King found that his troops, having been repeatedly driven back with frightful carnage, could no longer be led to the charge. He was with difficulty persuaded to quit the field. The officers of

144. Count Leopold Joseph von Daun (1705–66), skillful and cautious Austrian field-marshal, lacking decision and energy; he won distinction in the Italian campaign of 1733. He was not actually in command of the detachment to which Macaulay refers.

145. Allusion to the 'Battle of the White Mountain' (Nov. 8, 1619) where the Catholic League, commanded by the veteran Tilly, defeated Frederic V (1596–1632), elector palatine of the Rhine and King of Bohemia, and head of the Evangelical Union, founded to protect the interests of Protestants.

146. These figures are exaggerated; the Prussian loss was about 13,000, the Austrian 15,000, while some 50,000 were cooped up in Prague. (Atkinson.)

147. In Greek mythology, the goddess who measures out to mortals happiness and misery; later regarded as the punisher of crimes.

148. The battle of Kolin, on the Upper Elbe, south of Königgrätz, was fought on June 18, 1757. Daun's position was very strong, and his men numbered about 54,000. Frederic attempted to maneuver under fire, and thus disorganized his men at the critical moment; his men numbered only about 33,000.

his personal staff were under the necessity of expostulating with him, and one of them took the liberty to say, 'Does your Majesty mean to storm the batteries alone?' Thirteen thousand of his bravest followers had perished. Nothing remained for him but to retreat in good order, to raise the siege of Prague, and to hurry his army by different routes out of Bohemia.

This stroke seemed to be final. Frederic's situation had at best been such, that only an uninterrupted run of good luck could save him, as it seemed, from ruin. And now, almost in the outset of the contest he had met with a check which, even in a war between equal powers, would have been felt as serious. He had owed much to the opinion which all Europe entertained of his army. Since his accession, his soldiers had in many successive battles been victorious over the Austrians. But the glory had departed from his arms. All whom his malevolent sarcasms had wounded, made haste to avenge themselves by scoffing at the scoffer. His soldiers had ceased to confide in his star. In every part of his camp his dispositions were severely criticised. Even in his own family he had detractors. His next brother, William, heir-presumptive, or rather, in truth, heir-apparent to the throne, and great-grandfather of the present King, could not refrain from lamenting his own fate and that of the House of Hohenzollern, once so great and so prosperous, but now, by the rash ambition of its chief, made a by-word to all nations. These complaints, and some blunders which William committed during the retreat from Bohemia, called forth the bitter displeasure of the inexorable King. The prince's heart was broken by the cutting reproaches of his brother; he quitted the army, retired to a country seat, and in a short time died of shame and vexation.

It seemed that the King's distress could hardly be increased. Yet at this moment another blow not less terrible than that of Kolin fell upon him. The French under Marshal D'Estrées[149] had invaded Germany. The Duke of Cumberland had given them battle at Hastembeck,[150] and had been defeated. In order to save the Electorate of Hanover from entire subjugation, he had made, at Closter Seven, an arrangement with the French Generals, which left them at liberty to turn their arms against the Prussian dominions.

That nothing might be wanting to Frederic's distress, he lost his mother just at this time; and he appears to have felt the loss more than was to be expected from the hardness and severity of his character. In truth, his misfortunes had now cut to the quick. The mocker, the tyrant, the most rigorous, the most imperious, the most cynical of men, was very unhappy. His face was so haggard, and his form so thin, that when on his return from Bohemia he passed through Leipsic, the people hardly knew him again. His sleep was broken; the tears, in spite of himself, often started into his eyes; and the grave began to present itself to his agitated mind as the best refuge from misery and dishonour. His resolution was fixed never to be taken alive, and never to make peace on condition of descending from his place among the powers of Europe. He saw nothing left for him except to die; and he deliberately chose his mode of death. He always carried about with him a sure and speedy poison in a small glass case; and to the few in whom he placed confidence, he made no mystery of his resolution.

But we should very imperfectly describe the state of Frederic's mind, if we left out of view the laughable peculiarities which contrasted so singularly with the gravity, energy, and harshness of his character. It is difficult to say whether the tragic or the

149. L.C.C.Letellier, Marquis de Courtanvaux, Duc D'Estrées (1697–1774), served under Belle-Isle in 1741–44, and aided in the victory of Fontenoy, 1748.

150. Or Hastenbeck, fought on July 26, 1757. Cumberland was outnumbered.

comic predominated in the strange scene which was then acting. In the midst of all the great King's calamities, his passion for writing indifferent poetry grew stronger and stronger. Enemies all round him, despair in his heart, pills of corrosive sublimate hidden in his clothes, he poured forth hundreds upon hundreds of lines, hateful to gods and men, the insipid dregs of Voltaire's Hippocrene,[151] the faint echo of the lyre of Chaulieu.[152] It is amusing to compare what he did during the last months of 1757, with what he wrote during the same time. It may be doubted whether any equal portion of the life of Hannibal, of Cæsar, or of Napoleon, will bear a comparison with that short period, the most brilliant in the history of Prussia and of Frederic. Yet at this very time the scanty leisure of the illustrious warrior was employed in producing odes and epistles, a little better than Cibber's,[153] and a little worse than Hayley's.[154] Here and there a manly sentiment which deserves to be in prose makes its appearance in company with Prometheus and Orpheus, Elysium and Acheron, the Plaintive Philomel, the poppies of Morpheus, and all the other trippery[155] which, like a robe tossed by a proud beauty to her waiting woman, has long been contemptuously abandoned by genius to mediocrity. We hardly know any instance of the strength and weakness of human nature so striking, and so grotesque, as the character of this haughty, vigilant, resolute, sagacious blue-stocking, half Mithridates[156] and half Trissotin,[157] bearing up against a world in arms, with an ounce of poison in one pocket and a quire of bad verses in the other.

Frederic had some time before made advances towards a reconciliation with Voltaire; and some civil letters had passed between them. After the battle of Kolin their epistolary intercourse became, at least in seeming, friendly and confidential. We do not know any collection of Letters which throws so much light on the darkest and most intricate parts of human nature, as the correspondence of these strange beings after they had exchanged forgiveness. Both felt that the quarrel had lowered them in the public estimation. They admired each other. They stood in need of each other. The great King wished to be handed down to posterity by the great Writer. The great Writer felt himself exalted by the homage of the great King. Yet the wounds which they had inflicted on each other were too deep to be effaced, or even perfectly healed. Not only did the scars remain; the sore places often festered and bled afresh. The letters consisted for the most part of compliments, thanks, offers of service, assurances of attachment. But if anything brought back to Frederic's recollection the cunning and

151. *Hippocrene*: a fountain in Mt Helicon in Boeotia, sacred to the Muses, said to have been produced by the horse Pegasus striking the ground with his feet

152. Guillaume de Chaulieu (1639–1720), celebrated French poet and wit

153. Colley Cibber (1671–1757), actor and dramatist, fiercely attacked by other writers on his appointment as poet laureate in 1730.

154. William Hayley (1745–1820), a poet who was ridiculed in Byron's *English Bards and Scotch Reviewers*.

155. Allusions to familiar stories in classical mythology. *Prometheus* stole fire from heaven and was punished by being chained to a rock while vultures gnawed at his liver. *Orpheus*, as a poet and singer, could move trees and rocks and wild beasts with his lute. *Elysium* and *Acheron* were the heavenly and the infernal regions of the abode of the dead (Acheron being specifically one of the rivers in Hades). *Philomel* (or Philomela), daughter of a king of Athens, on being dishonored by Tereus, her brother-in-law, was metamorphosed into a nightingale. *Morpheus* was the god of sleep and dreams.

156. Mithridates VI, King of Pontus, 120–63 B.C.; a man of great energy and ability; extended his empire by the conquest of neighboring nations; at length measured his strength with Rome, and was defeated by Pompey the Great (66 B.C.). Alluded to here as a type of tyrant.

157. A character in Molière's *Les femmes savantes* (1672), who insists on reading his literary compositions to his friends; typical of the would-be literary man.

mischievous pranks by which Voltaire had provoked him, some expression of contempt and displeasure broke forth in the midst of eulogy. It was much worse when anything recalled to the mind of Voltaire the outrages which he and his kinswoman had suffered at Frankfort. All at once his flowing penegyric was turned into invective. 'Remember how you behaved to me. For your sake I have lost the favour of my native King. For your sake I am an exile from my country. I loved you. I trusted myself to you. I had no wish but to end my life in your service. And what was my reward? Stripped of all that you had bestowed on me, the key, the order, the pension, I was forced to fly from your territories. I was hunted as if I had been a deserter from your grenadiers. I was arrested, insulted, plundered. My niece was dragged through the mud of Frankfort by your soldiers, as if she had been some wretched follower of your camp. You have great talents. You have good qualities. But you have one odious vice. You delight in the abasement of your fellow-creatures. You have brought disgrace on the name of philosopher. You have given some colour to the slanders of the bigots, who say that no confidence can be placed in the justice or humanity of those who reject the Christian faith.' Then the King answers, with less heat but equal severity — 'You know that you behaved shamefully in Prussia. It was well for you that you had to deal with a man so indulgent to the infirmities of genius as I am. You richly deserved to see the inside of a dungeon. Your talents are not more widely known than your faithlessness and your malevolence. The grave itself is no asylum from your spite. Maupertuis is dead; but you still go on calumniating and deriding him, as if you had not made him miserable enough while he was living. Let us have no more of this. And, above all, let me hear no more of your niece. I am sick to death of her name. I can bear with your faults for the sake of your merits; but she has not written *Mahomet* or *Merope*.'

An explosion of this kind, it might be supposed, would necessarily put an end to all amicable communication. But it was not so. After every outbreak of ill humour this extraordinary pair became more loving than before, and exchanged compliments and assurances of mutual regard with a wonderful air of sincerity.

It may well be supposed that men who wrote thus to each other, were not very guarded in what they said of each other. The English ambassador, Mitchell,[158] who knew that the King of Prussia was constantly writing to Voltaire with the greatest freedom on the most important subjects, was amazed to hear his Majesty designate this highly favoured correspondent as a bad-hearted fellow, the greatest rascal on the face of the earth. And the language which the poet held about the King was not much more respectful.

It would probably have puzzled Voltaire himself to say what was his real feeling towards Frederic. It was compounded of all sentiments, from enmity to friendship, and from scorn to admiration; and the proportions in which these elements were mixed, changed every moment. The old patriarch resembled the spoiled child who screams, stamps, cuffs, laughs, kisses, and cuddles within one quarter of an hour. His resentment was not extinguished; yet he was not without sympathy for his old friend. As a Frenchman, he wished success to the arms of his country. As a philosopher, he was anxious for the stability of a throne on which a philosopher sat. He longed both to save and to humble Frederic. There was one way, and only one, in which all his conflicting feelings could at once be gratified. If Frederic

158. Sir Andrew Mitchell (1708–71), diplomatist, was made British envoy to Frederic in 1756, and accompanied him during the Seven Years' War.

were preserved by the interference of France, if it were known that for that interference he was indebted to the mediation of Voltaire, this would indeed be delicious revenge; this would indeed be to heap coals of fire on that haughty head. Nor did the vain and restless poet think it impossible that he might, from his hermitage near the Alps, dictate peace to Europe. D'Estrées had quitted Hanover, and the command of the French army had been intrusted to the Duke of Richelieu,[159] a man whose chief distinction was derived from his success in gallantry. Richelieu was in truth the most eminent of that race of seducers by profession, who furnished Crébillon the younger and La Clos[160] with models for their heroes. In his earlier days the royal house itself had not been secure from his presumptuous love. He was believed to have carried his conquests into the family of Orleans; and some suspected that he was not unconcerned in the mysterious remorse which embittered the last hours of the charming mother of Lewis the Fifteenth. But the Duke was now sixty years old. With a heart deeply corrupted by vice, a head long accustomed to think only on trifles, an impaired constitution, an impaired fortune, and, worst of all, a very red nose, he was entering on a dull, frivolous, and unrespected old age. Without one qualification for military command, except that personal courage which was common between him and the whole nobility of France, he had been placed at the head of the army of Hanover; and in that situation he did his best to repair, by extortion and corruption, the injury which he had done to his property by a life of dissolute profusion.

The Duke of Richelieu to the end of his life hated the philosophers as a sect, not for those parts of their system which a good and wise man would have condemned, but for their virtues, for their spirit of free inquiry, and for their hatred of those social abuses of which he was himself the personification. But he, like many of those who thought with him, excepted Voltaire from the list of proscribed writers. He frequently sent flattering letters to Ferney.[161] He did the patriarch the honour to borrow money of him, and even carried this condescending friendship so far as to forget to pay the interest. Voltaire thought that it might be in his power to bring the Duke and the King of Prussia into communication with each other. He wrote earnestly to both; and he so far succeeded that a correspondence between them was commenced.

But it was to very different means that Frederic was to owe his deliverance. At the beginning of November, the net seemed to have closed completely round him. The Russians were in the field, and were spreading devastation through his eastern provinces. Silesia was overrun by the Austrians. A great French army was advancing from the west under the command of Marshal Soubise, a prince of the great Armorican house of Rohan.[162] Ber-

159. Louis François Armand du Plessis, Duc de Richelieu (1697–1788), of the same family as the Cardinal; more noted for laziness and self-indulgence than for military efficiency. His failure to enforce discipline and his neglect to follow up his success over Cumberland contributed to Frederic's eventual success.

160. P.A.François Choderlos de Laclos (1741–1803), general and litterateur, author of *Liaisons dangereuses*, brilliant officer, intimate friend and subordinate of Égalité Orléans, notorious profligate, etc.

161. The village near Geneva, within the French frontier, where Voltaire spent the last twenty years of his life.

162. Charles de Rohan, Prince de Soubise (1715–87), in command of about 24,000 Frenchmen, had joined the Army of the Empire in August. This force, some 32,000 men, was under Prince Joseph of Saxe-Hildburghausen; but, undisciplined and unorganized, it had very little military value. Soubise was an officer of considerable ability, not, as Macaulay says, a 'dunce.' — By 'Armorican' Macaulay alludes to Brittany, of which the old name was Armorica.

lin itself had been taken and plundered by the Croatians. Such was the situation from which Frederic extricated himself, with dazzling glory, in the short space of thirty days.

He marched first against Soubise. On the fifth of November the armies met at Rosbach.[163] The French were two to one; but they were ill-disciplined, and their general was a dunce. The tactics of Frederic, and the well-regulated valour of the Prussian troops obtained a complete victory. Seven thousand of the invaders were made prisoners. Their guns, their colours, their baggage, fell into the hands of the conquerors. Those who escaped fled as confusedly as a mob scattered by cavalry. Victorious in the West, the King turned his arms towards Silesia. In that quarter everything seemed to be lost. Breslau had fallen; and Charles of Lorraine, with a mighty power, held the whole province. On the fifth of December, exactly one month after the battle of Rosbach, Frederic, with forty thousand men, and Prince Charles, at the head of not less than sixty thousand, met at Leuthen, hard by Breslau.[164] The King, who was, in general, perhaps too much inclined to consider the common soldier as a mere machine, resorted, on this great day, to means resembling those which Bonaparte afterwards employed with such signal success for the purpose of stimulating military enthusiasm. The principal officers were convoked. Frederic addressed them with great force and pathos; and directed them to speak to their men as he had spoken to them. When the armies were set in battle array, the Prussian troops were in a state of fierce excitement; but their excitement showed itself after the fashion of a grave people. The columns advanced to the attack chanting, to the sound of drums and fifes, the rude hymns of the old Saxon Sternholds.[165] They had never fought so well; nor had the genius of their chief ever been so conspicuous. 'That battle,' said Napoleon, 'was a masterpiece. Of itself it is sufficient to entitle Frederic to a place in the first rank among generals.' The victory was complete. Twenty-seven thousand Austrians were killed, wounded, or taken; fifty stand of colours, a hundred guns, four thousand waggons, fell into the hands of the Prussians. Breslau opened its gates; Silesia was reconquered; Charles of Lorraine retired to hide his shame and sorrow at Brussels; and Frederic allowed his troops to take some repose in winter quarters, after a campaign, to the vicissitudes of which it will be difficult to find any parallel in ancient or modern history.

The King's fame filled all the world. He had during the last year, maintained a contest, on terms of advantage, against three powers, the weakest of which had more than three times his resources. He had fought four great pitched battles against superior forces. Three of these battles he had gained: and the defeat of Kolin, repaired as it had been, rather raised than lowered his military renown. The victory of Leuthen is, to this day, the proudest on the roll of Prussian fame.

163. The battle of Rosbach (or Rossbach) (Nov. 5, 1757) was one of the great battles of the war. Frederic had about 22,000, the Allies about 42,000 men. The Prussian victory was owing to the magnificent unison with which Frederic's men managed their movements. The battle lasted less than an hour and a half.

164. The battle of Leuthen (Dec. 5, 1757) was one of Frederic's most brilliant battles; in it he used his famous 'oblique order,' feinting against the Austrians' right to distract their attention, then suddenly attacking the changing enemy front. Frederic had about 33,000 men, the Austrians over 80,000. The latter lost 10,000 in the field; 21,000 were taken prisoners. The battle cost Frederic over 6,000 men. For a dramatic account of the battles of Rossbach and Leuthen, see Carlyle's *Frederick the Great*, Book XVIII, Chapters viii and x.

165. Allusion to Thomas Sternhold (d.1549), joint versifier of the *Psalms* with John Hopkins (d.1570).

Leipsic [166] indeed, and Waterloo,[167] produced consequences more important to mankind. But the glory of Leipsic must be shared by the Prussians with the Austrians and Russians; and at Waterloo the British infantry bore the burden and heat of the day. The victory of Rosbach was, in a military point of view, less honourable than that of Leuthen; for it was gained over an incapable general, and a disorganised army; but the moral effect which it produced was immense. All the preceding triumphs of Frederic had been triumphs over Germans, and could excite no emotions of national pride among the German people. It was impossible that a Hessian or a Hanoverian could feel any patriotic exultation at hearing that Pomeranians had slaughtered Moravians, or that Saxon banners had been hung in the churches of Berlin. Indeed, though the military character of the Germans justly stood high throughout the world, they could boast of no great day which belonged to them as a people; of no Agincourt,[168] of no Bannockburn.[169] Most of their victories had been gained over each other; and their most splendid exploits against foreigners had been achieved under the command of Eugene, who was himself a foreigner. The news of the battle of Rosbach [170] stirred the blood of the whole of the mighty population from the Alps to the Baltic, and from the borders of Courland to those of Lorraine. Westphalia and Lower Saxony had been deluged by a great host of strangers, whose speech was unintelligible, and whose petulant and licentious manners had excited the strongest feelings of disgust and hatred. That great host had been put to flight by a small band of German warriors, led by a prince of German blood on the side of father and mother, and marked by the fair hair and the clear blue eye of Germany. Never since the dissolution of the empire of Charlemagne, had the Teutonic race won such a field against the French. The tidings called forth a general burst of delight and pride from the whole of the great family which spoke the various dialects of the ancient language of Arminius.[171] The fame of Frederic began to supply, in some degree, the place of a common government and of a common capital. It became a rallying point for all true Germans, a subject of mutual congratulation to the Bavarian and the Westphalian, to the citizen of Nuremberg. Then first it was manifest that the Germans were truly a nation. Then first was discernible that patriotic spirit which, in 1813, achieved the great deliverance of central Europe, and which still guards, and long will guard, against foreign ambition the old freedom of the Rhine.

Nor were the effects produced by that celebrated day merely political. The greatest masters of German poetry and eloquence have admitted that, though the great King neither valued nor understood his native language, though he looked on France as the only seat of taste and philosophy, yet, in his own despite, he did

166. Fought on October 16-19, 1813, sometimes called the 'Battle of the Nations.' It led to Napoleon's evacuation of Germany.

167. Which ended Napoleon's military career, June 18, 1815.

168. The battle of Agincourt (Oct. 14, 1415), under Henry V's leadership, was a decisive victory of the English over the French.

169. The battle of Bannockburn (June 24, 1314) was a great national victory, in which Robert Bruce utterly routed the English under Edward II and all Scotland was lost to the latter.

170. From this point to the end of the paragraph, Macaulay indulges in characteristic exaggeration. There was less nationalist sentiment expressed, and less German unity achieved, than Macaulay leads us to believe. A large part of the army beaten at Rossbach belonged to the Army of the Empire, and there were German regiments fighting in the army of the French. (Atkinson.)

171. Arminius, chief of the tribe of the Cherusci living north of the Hartz mountains, led a revolt against the Romans, A.D. 9, annihilating Quintilius Varus and his three legions.

much to emancipate the genius of his countrymen from the foreign yoke; and that, in the act of vanquishing Soubise, he was, unintentionally, rousing the spirit which soon began to question the literary precedence of Boileau [172] and Voltaire. So strangely do events confound all the plans of man. A prince who read only French, who wrote only French, who aspired to rank as a French classic, became, quite unconsciously, the means of liberating half the Continent from the dominion of that French criticism of which he was himself, to the end of his life, a slave. Yet even the enthusiasm of Germany in favour of Frederic hardly equalled the enthusiasm of England. The birthday of our ally was celebrated with as much enthusiasm as that of our own sovereign; and at night the streets of London were in a blaze with illuminations. Portraits of the Hero of Rosbach, with his cocked hat and long pigtail, were in every house. An attentive observer will, at this day, find in the parlours of old-fashioned inns, and in the portfolios of print-sellers, twenty portraits of Frederic for one of George the Second. The sign-painters were everywhere employed in touching up Admiral Vernon [173] into the King of Prussia. This enthusiasm was strong among religious people, and especially among the Methodists, who knew that the French and Austrians were Papists, and supposed Frederic to be the Joshua or Gideon [174] of the Reformed Faith. One of Whitefield's [175] hearers, on the day on which thanks for the battle of Leuthen were returned at the Tabernacle, made the following exquisitely ludicrous entry in a diary, part of which has come down to us: 'The Lord stirred up the King of Prussia and his soldiers to pray. They kept three fast days, and spent about an hour praying and singing psalms before they engaged the enemy. O! how good it is to pray and fight!' Some young Englishmen of rank proposed to visit Germany as volunteers, for the purpose of learning the art of war under the greatest of commanders. This last proof of British attachment and admiration, Frederic politely but firmly declined. His camp was no place for amateur students of military science. The Prussian discipline was rigorous even to cruelty. The officers, while in the field, were expected to practise an abstemiousness and self-denial such as was hardly surpassed by the most rigid monastic orders. However noble their birth, however high their rank in the service, they were not permitted to eat from anything better than pewter. It was a high crime even in a count and field-marshal to have a single silver spoon among his baggage. Gay young Englishmen of twenty thousand a year, accustomed to liberty and luxury, would not easily submit to these Spartan restraints. The King could not venture to keep them in order as he kept his own subjects in order. Situated as he was with respect to England, he could not well imprison or shoot refractory Howards and Cavendishes.[176] On the other hand, the example of a few fine gentlemen, attended by chariots and livery servants, eating in plates, and drinking champagne and Tokay, was enough to corrupt his whole army. He thought it best to make a stand at first, and civilly refused to admit such dangerous companions among his troops.

The help of England was bestowed in a manner far more useful and more ac-

ceptable. An annual subsidy of near seven hundred thousand pounds enabled the King to add probably more than fifty thousand men to his army. Pitt, now at the height of power and popularity, undertook the task of defending Western Germany against France, and asked Frederic only for the loan of a general. The general selected was Prince Ferdinand of Brunswick,[177] who had attained high distinction in the Prussian service. He was put at the head of an army, partly English, partly Hanoverian, partly composed of mercenaries hired from the petty princes of the empire. He soon vindicated the choice of the two allied Courts, and proved himself the second general of the age.

Frederic passed the winter at Breslau, in reading, writing, and preparing for the next campaign. The havoc which the war had made among his troops was rapidly repaired; and in the spring of 1758 he was again ready for the conflict. Prince Ferdinand kept the French in check. The King in the meantime, after attempting against the Austrians some operations which led to no very important result, marched to encounter the Russians, who, slaying, burning, and wasting wherever they turned, had penetrated into the heart of his realm. He gave them battle at Zorndorf,[178] near Frankfort on the Oder. The fight was long and bloody. Quarter was neither given nor taken; for the Germans and Scythians [179] regarded each other with bitter aversion, and the sight of the ravages committed by the half savage invaders, had incensed the King and his army. The Russians were overthrown with great slaughter; and for a few months no further danger was to be apprehended from the east.

A day of thanksgiving was proclaimed by the King, and was celebrated with pride and delight by his people. The rejoicings in England were not less enthusiastic or less sincere. This may be selected as the point of time at which the military glory of Frederic reached the zenith. In the short space of three quarters of a year he had won three great battles over the armies of three mighty and warlike monarchies, France, Austria, and Russia.

But it was decreed that the temper of that strong mind should be tried by both extremes of fortune in rapid succession. Close upon this series of triumphs came a series of disasters, such as would have blighted the fame and broken the heart of almost any other commander. Yet Frederic, in the midst of his calamities, was still an object of admiration to his subjects, his allies, and his enemies. Overwhelmed by adversity, sick of life, he still maintained the contest, greater in defeat, in flight, and in what seemed hopeless ruin, than on the fields of his proudest victories.

Having vanquished the Russians, he hastened into Saxony to oppose the troops of the Empress Queen, commanded by Daun, the most cautious, and Laudohn,[180] the most inventive and enterprising of her generals. These two celebrated commanders agreed on a scheme, in which the prudence of the one and the vigour of the other seem to have been happily combined. At dead of night they surprised the King in his camp at Hochkirchen.[181] His

177. 1721–92: a general of high abilities, and of great service to Frederic.

178. Fought on August 25, 1758; the Russians had about 40,000 men, Frederic about 37,000. Not a decisive battle.

179. *Scythians*: here the name means Russians, though in different centuries it was applied to various countries north of the Mediterranean.

180. Gideon Ernest von Laudohn (or Loudoun) (1716–90), of Scotch extraction, was the most capable of Austrian commanders, and had served in the Russian army before entering that of Austria. Frederic's victory was owing to Daun's being in chief command, and given to his characteristic caution and lack of enterprise.

181. The surprise attack occurred about 5 o'clock in the morning of Oct. 14, 1758. Frederic narrowly escaped complete annihilation. (The reader will remember that Carlyle's Andreas Futteral, foster-father of Diogenes

presence of mind saved his troops from destruction; but nothing could save them from defeat and severe loss. Marshal Keith was among the slain. The first roar of the guns roused the noble exile from his rest, and he was instantly in the front of the battle. He received a dangerous wound, but refused to quit the field, and was in the act of rallying his broken troops, when an Austrian bullet terminated his chequered and eventful life.

The misfortune was serious. But of all generals Frederic understood best how to repair defeat, and Daun understood least how to improve victory. In a few days the Prussian army was as formidable as before the battle. The prospect was, however, gloomy. An Austrian army under General Harsch had invaded Silesia, and invested the fortress of Neisse. Daun, after his success at Hochkirchen, had written to Harsch in very confident terms: — 'Go on with your operations against Neisse. Be quite at ease as to the King. I will give a good account of him.' In truth, the position of the Prussians was full of difficulties. Between them and Silesia lay the victorious army of Daun. It was not easy for them to reach Silesia at all. If they did reach it, they left Saxony exposed to the Austrians. But the vigour and activity of Frederic surmounted every obstacle. He made a circuitous march of extraordinary rapidity, passed Daun, hastened into Silesia, raised the siege of Neisse, and drove Harsch into Bohemia. Daun availed himself of the King's absence to attack Dresden. The Prussians defended it desperately. The inhabitants of that wealthy and polished capital begged in vain for mercy from the garrison within, and from the besiegers without. The beautiful suburbs were burned to the ground. It was clear that the town, if won at all, would be won street by street by the bayonet. At this conjuncture came news, that Frederic, having cleared Silesia of his enemies, was returning by forced marches into Saxony. Daun retired from before Dresden, and fell back into the Austrian territories. The King, over heaps of ruins, made his triumphant entry into the unhappy metropolis, which had so cruelly expiated the weak and perfidious policy of its sovereign. It was now the twentieth of November. The cold weather suspended military operations; and the King again took up his winter quarters at Breslau.

The third of the seven terrible years was over; and Frederic still stood his ground. He had been recently tried by domestic as well as by military disasters. On the fourteenth of October, the day on which he was defeated at Hochkirchen, the day on the anniversary of which, forty-eight years later, a defeat far more tremendous laid the Prussian monarchy in the dust,[182] died Wilhelmina, Margravine of Bareuth. From the accounts which we have of her, by her own hand, and by the hands of the most discerning of her contemporaries, we should pronounce her to have been coarse, indelicate, and a good hater, but not destitute of kind and generous feelings. Her mind, naturally strong and observant, had been highly cultivated; and she was, and deserved to be, Frederic's favourite sister. He felt the loss as much as it was in his iron nature to feel the loss of anything but a province or a battle.

At Breslau, during the winter, he was indefatigable in his poetical labours. The most spirited lines, perhaps, that he ever wrote, are to be found in a bitter lampoon on Lewis and Madame de Pompadour, which he composed at this time, and sent to Voltaire. The verses were, indeed, so good, that Voltaire was afraid that he might himself be suspected of having written them, or at least of having corrected

Teufelsdröckh, had been 'left for dead in the camisade of Hochkirch' (*Sartor Resartus*, II,i, 'Genesis,' and note 9.)

182. *i.e.* Napoleon's double victory of Jena and Auerstädt over the Prussians and their Saxon allies on October 14, 1806.

them; and partly from fright, partly, we fear from love of mischief, sent them to the Duke of Choiseul,[188] then prime minister of France. Choiseul very wisely determined to encounter Frederic at Frederic's own weapons, and applied for assistance to Palissot,[184] who had some skill as a versifier, and some little talent for satire. Palissot produced some very stinging lines on the moral and literary character of Frederic, and these lines the Duke sent to Voltaire. This war of couplets, following close on the carnage of Zorndorf and the conflagration of Dresden, illustrates well the strangely compounded character of the King of Prussia.

At this moment he was assailed by a new enemy. Benedict the Fourteenth, the best and wisest of the two hundred and fifty successors of St. Peter, was no more. During the short interval between his reign and that of his disciple Ganganelli,[185] the chief seat in the Church of Rome was filled by Rezzonico, who took the name of Clement the Thirteenth. This absurd priest determined to try what the weight of his authority could effect in favour of the orthodox Maria Theresa against a heretic king. At the high mass on Christmas-day, a sword with a rich belt and scabbard, a hat of crimson velvet lined with ermine, and a dove of pearls, the mystic symbol of the Divine Comforter, were solemnly blessed by the supreme pontiff, and were sent with great ceremony to Marshal Daun, the conqueror of Kolin and Hochkirchen. This mark of favour had more than once been bestowed by the Popes on the great champions of the faith. Similar honours had been paid, more than six centuries earlier, by Urban the Second[186] to Godfrey of Bouillon.[187] Similar honours had been conferred on Alba[188] for destroying the liberties of the Low Countries, and on John Sobiesky[189] after the deliverance of Vienna. But the presents which were received with profound reverence by the Baron of the Holy Sepulchre in the eleventh century, and which had not wholly lost their value even in the seventeenth century, appeared inexpressibly ridiculous to a generation which read Montesquieu and Voltaire. Frederic wrote sarcastic verses on the gifts, the giver, and the receiver. But the public wanted no prompter; and an universal roar of laughter from Petersburg to Lisbon reminded the Vatican that the age of crusades was over.

The fourth campaign, the most disastrous of all the campaigns of this fearful war, had now opened. The Austrians filled Saxony and menaced Berlin. The Russians defeated the King's generals on the Oder, threatened Silesia, effected a junction with Laudohn, and intrenched themselves strongly at Kunersdorf.[190] Frederic hastened to attack them. A great battle was fought. During the earlier part of the day everything yielded to the impetuosity of the Prussians, and to the skill

183. Étienne François de Choiseul (1719–85) had served in the Austrian Succession War, and was made Foreign Minister of France in 1758.

184. Charles Palissot de Montenoy (1730–1814), whose comedy *Les philosophes* was a brilliant satire on the philosophical writers of the day.

185. Giovanni Antonio Ganganelli was elected Pope as Clement XIV in 1769, in succession to Clement XIII (Carlo Rezzonico).

186. Otto, Bishop of Ostia, Pope from 1088 to 1099.

187. Leader of the First Crusade and 'Protector of the Holy Sepulchre' (1099). He was Duke of Lower Lorraine. Died in 1100.

188. Fernando Alvarez de Toledo, 3rd Duke of Alva (1508–83), Spanish general, Governor of the Netherlands under Philip II of Spain; notorious for his crushing of the liberties in the Low Countries, and for his cruelties.

189. John Sobiesky (1624–96), King of Poland, won fame for delivering Vienna from the Turks in 1683.

190. At the battle Kunersdorf (August 12, 1759) Frederic received one of the most crushing defeats in the annals of war. His 43,000 men fought about 50,000 Russians (including Cossacks) and some 18,000 Austrians. Only the failure of his enemies to follow up their victory permitted Frederic to recover from the defeat.

of their chief. The lines were forced. Half the Russian guns were taken. The King sent off a courier to Berlin with two lines, announcing a complete victory. But, in the meantime, the stubborn Russians, defeated yet unbroken, had taken up their stand in an almost impregnable position, on an eminence where the Jews of Frankfort were wont to bury their dead. Here the battle recommenced. The Prussian infantry, exhausted by six hours of hard fighting under a sun which equalled the tropical heat, were yet brought up repeatedly to the attack, but in vain. The King led three charges in person. Two horses were killed under him. The officers of his staff fell all round him. His coat was pierced by several bullets. All was in vain. His infantry was driven back with frightful slaughter. Terror began to spread fast from man to man. At that moment, the fiery cavalry of Laudohn, still fresh, rushed on the wavering ranks. Then followed an universal rout. Frederic himself was on the point of falling into the hands of the conquerors, and was with difficulty saved by a gallant officer, who, at the head of a handful of Hussars, made good a diversion of a few minutes. Shattered in body, shattered in mind, the King reached that night a village which the Cossacks [191] had plundered; and there, in a ruined and deserted farm-house, flung himself on a heap of straw. He had sent to Berlin a second despatch very different from the first: — 'Let the royal family leave Berlin. Send the archives to Potsdam. The town may make terms with the enemy.'

The defeat was, in truth, overwhelming. Of fifty thousand men who had that morning marched under the black eagles, not three thousand remained together. The King bethought him again of his corrosive sublimate, and wrote to bid adieu to his friends, and to give directions as to the measures to be taken in the event of his death: — 'I have no resource left' — such is the language of one of his letters — 'all is lost. I will not survive the ruin of my country. Farewell for ever.'

But the mutual jealousies of the confederates prevented them from following up their victory. They lost a few days in loitering and squabbling; and a few days, improved by Frederic, were worth more than the years of other men. On the morning after the battle, he had got together eighteen thousand of his troops. Very soon his force amounted to thirty thousand. Guns were procured from the neighbouring fortresses; and there was again an army. Berlin was for the present safe; but calamities came pouring on the King in uninterrupted succession. One of his generals, with a large body of troops, was taken at Maxen; [192] another was defeated at Meissen; [193] and when at length the campaign of 1759 closed, in the midst of a rigorous winter, the situation of Prussia appeared desperate. The only consoling circumstance was, that, in the West, Ferdinand of Brunswick had been more fortunate than his master; and by a series of exploits, of which the battle of Minden [194] was the most glorious, had removed all apprehension of danger on the side of France.

The fifth year was now about to commence. It seemed impossible that the Prussian territories, repeatedly devastated by hundreds of thousands of invaders, could longer support the contest. But the King carried on war as no Euro-

191. Warlike, pastoral people, skilled in horsemanship, inhabiting various parts of the Russian empire, and employed in cavalry and field artillery.

192. On November 20, 1759, General Finck with a detachment of 14,000 men had been sent by Frederic to force the Austrians to retire into Bohemia; but the Austrians overwhelmed them and forced a complete surrender.

193. This was General Dierecke, who lost but 1,500 men and eight guns. (December 3–4, 1759.)

194. Fought on August 1, 1759; the most brilliant and famous of Ferdinand of Brunswick's victories. The French retreated out of Hanover.

pean power has ever carried on war, except the Committee of Public Safety during the great agony of the French Revolution.[195] He governed his kingdom as he would have governed a besieged town, not caring to what extent property was destroyed, or the pursuits of civil life suspended, so that he did but make head against the enemy. As long as there was a man left in Prussia, that man might carry a musket; as long as there was a horse left, that horse might draw artillery. The coin was debased, the civil functionaries were left unpaid; in some provinces civil government altogether ceased to exist. But there was still rye-bread and potatoes; there was still lead and gunpowder; and, while the means of sustaining and destroying life remained, Frederic was determined to fight it out to the very last.

The earlier part of the campaign of 1760 was unfavourable to him. Berlin was again occupied by the enemy. Great contributions were levied on the inhabitants, and the royal palace was plundered. But at length, after two years of calamity, victory came back to his arms. At Lignitz [196] he gained a great battle over Laudohn; at Torgau,[197] after a day of horrible carnage, he triumphed over Daun. The fifth year closed, and still the event was in suspense. In the countries where the war had raged, the misery and exhaustion were more appalling than ever; but still there were left men and beasts, arms and food, and still Frederic fought on. In truth he had now been baited into savageness. His heart was ulcerated with hatred. The implacable resentment with which his enemies persecuted him, though originally provoked by his own unprincipled ambition, excited in him a thirst for vengeance which he did not even attempt to conceal. 'It is hard,' he says in one of his letters, 'for a man to bear what I bear. I begin to feel that, as the Italians say, revenge is a pleasure for the gods. My philosophy is worn out by suffering. I am no saint, like those of whom we read in the legends; and I will own that I should die content if only I could first inflict a portion of the misery which I endure.'

Borne up by such feelings, he struggled with various success, but constant glory, through the campaign of 1761. On the whole the result of this campaign was disastrous to Prussia. No great battle was gained by the enemy; but, in spite of the desperate bounds of the hunted tiger, the circle of pursuers was fast closing round him. Laudohn had surprised the important fortress of Schweidnitz.[198] With that fortress half of Silesia, and the command of the most important defiles through the mountains had been transferred to the Austrians. The Russians had overpowered the King's generals in Pomerania. The country was so completely desolated that he began, by his own confession, to look round him with blank despair, unable to imagine where recruits, horses, or provisions were to be found.

Just at this time, two great events brought on a complete change in the relations of almost all the powers of Europe. One of those events was the retirement of Mr. Pitt from office; the other was the death of the Empress Elizabeth of Russia.

The retirement of Pitt [199] seemed to be

195. *i.e.* in 1793, when the French under the Committee of Public Safety oragnized thirteen armies (totaling about 750,000 men), and fought the English, the Hanoverians, and the Austrians to protect the achievements and the future of the Revolution.

196. Or Liegnitz, where on August 15, 1760, Frederic managed an 'escape rather than a victory,' and gained very little advantage.

197. Victory at Torgau (November 3, 1760) was possible for Frederic only by the unexpected return of a Prussian column which had been beaten off earlier in the action and thus turned imminent defeat into victory.

198. On the night of September 30–October 1, 1761.

199. Pitt retired on October 5, 1761, owing partly to George III's determination to get rid of him, and partly to his own colleagues' resenting his dictatorial manner toward them.

an omen of utter ruin to the House of Brandenburg. His proud and vehement nature was incapable of anything that looked like either fear or treachery. He had often declared that, while he was in power, England should never make a peace of Utrecht, should never, for any selfish object, abandon an ally even in the last extremity of distress. The Continental war was his own war. He had been bold enough, he who in former times had attacked, with irresistible powers of oratory, the Hanoverian policy of Carteret, and the German subsidies of Newcastle, to declare that Hanover ought to be as dear to us as Hampshire, and that he would conquer America in Germany. He had fallen; and the power which he had exercised, not always with discretion, but always with vigour and genius, had devolved on a favourite who was the representative of the Tory party,[200] of the party which had thwarted William, which had persecuted Marlborough, which had given up the Catalans [201] to the vengeance of Philip of Anjou.[202] To make peace with France, to shake off, with all, or more than all, the speed compatible with decency, every Continental connection, these were among the chief objects of the new Minister. The policy then followed inspired Frederic with an unjust, but deep and bitter aversion to the English name, and produced effects which are still felt throughout the civilised world. To that policy it was owing that, some years later, England could not find on the whole Continent a single ally to stand by her, in her extreme need, against the House of Bourbon. To that policy it was owing that Frederic, alienated from England, was compelled to connect himself closely, during his later years, with Russia, and was induced to assist in that great crime, the fruitful parent of other great crimes, the first partition of Poland.

Scarcely had the retreat of Mr. Pitt deprived Prussia of her only friend, when the death of Elizabeth produced an entire revolution in the politics of the North. The Grand Duke Peter,[203] her nephew, who now ascended the Russian throne, was not merely free from the prejudices which his aunt had entertained against Frederic, but was a worshipper, a servile imitator of the great King. The days of the new Czar's government were few and evil, but sufficient to produce a change in the whole state of Christendom. He set the Prussian prisoners at liberty, fitted them out decently, and sent them back to their master; he withdrew his troops from the provinces which Elizabeth had decided on incorporating with her dominions; and he absolved all those Prussian subjects, who had been compelled to swear fealty to Russia, from their engagements.

Not content with concluding peace on terms favourable to Prussia, he solicited rank in the Prussian service, dressed himself in a Prussian uniform, wore the Black Eagle of Prussia on his breast, made preparations for visiting Prussia, in order to have an interview with the object of his idolatry, and actually sent fifteen thousand excellent troops to reinforce the shattered army of Frederic. Thus strengthened, the King speedily repaired the losses of the preceding year, reconquered Silesia, defeated Daun at Buckersdorf,[204] invested and retook Schweidnitz, and, at the close of the year, presented to the forces of Maria Theresa a front as formidable as before the great reverses of 1759. Before the end of the campaign, his friend, the Emperor Peter, having, by a series of ab-

200. John Stuart, 3rd Earl of Bute (1713–92), who had become very influential over George III; he was made Secretary of State in 1761, and proposed a withdrawal of the Prussian subsidy in the next year.

201. The Catalonians, in southern Spain, who had been England's allies in the War of the Spanish Succession, had received no concessions at the Peace of Utrecht (1713) which ended the war.

202. *i.e.* Philip V of Spain.

203. Peter III, grandson of Peter the Great. Through his father, Charles Frederick Holstein-Gottorp, he had German blood in him

204. On July 21, 1762.

surd insults to the institutions, manners, and feelings of his people, united them in hostility to his person and government, was deposed and murdered.[205] The Empress, who, under the title of Catherine the Second,[206] now assumed the supreme power, was, at the commencement of her administration, by no means partial to Frederic, and refused to permit her troops to remain under his command. But she observed the peace made by her husband; and Prussia was no longer threatened by danger from the East.

England and France at the same time paired off together. They concluded a treaty,[207] by which they bound themselves to observe neutrality with respect to the German war. Thus the coalitions on both sides were dissolved; and the original enemies, Austria and Prussia, remained alone confronting each other.

Austria had undoubtedly far greater means than Prussia, and was less exhausted by hostilities; yet it seemed hardly possible that Austria could effect alone what she had in vain attempted to effect when supported by France on the one side, and by Russia on the other. Danger also began to menace the Imperial house from another quarter. The Ottoman Porte held threatening language, and a hundred thousand Turks were mustered on the frontiers of Hungary. The proud and revengeful spirit of the Empress Queen at length gave way; and, in February 1763, the peace of Hubertsburg put an end to the conflict which had, during seven years, devastated Germany. The King ceded nothing. The whole Continent in arms had proved unable to tear Silesia from that iron grasp.

The war was over. Frederic was safe. His glory was beyond the reach of envy. If he had not made conquests as vast as those of Alexander, of Cæsar, and of Napoleon, if he had not, on fields of battle, enjoyed the constant success of Marlborough and Wellington, he had yet given an example unrivalled in history of what capacity and resolution can effect against the greatest superiority of power, and the utmost spite of fortune. He entered Berlin in triumph, after an absence of more than six years. The streets were brilliantly lighted up; and, as he passed along in an open carriage, with Ferdinand of Brunswick at his side, the multitude saluted him with loud praises and blessings. He was moved by those marks of attachment, and repeatedly exclaimed 'Long live my dear people! Long live my children!' Yet, even in the midst of that gay spectacle, he could not but perceive everywhere the traces of destruction and decay. The city had been more than once plundered. The population had considerably diminished. Berlin, however, had suffered little when compared with most parts of the kingdom. The ruin of private fortunes, the distress of all ranks, was such as might appal the firmest mind. Almost every province had been the seat of war, and of war conducted with merciless ferocity. Clouds of Croatians had descended on Silesia. Tens of thousands of Cossacks had been let loose on Pomerania and Brandenburg. The mere contributions levied by the invaders amounted, it was said, to more than a hundred millions of dollars; and the value of what they extorted was probably much less than the value of what they destroyed. The fields lay uncultivated. The very seed-corn had been devoured in the madness of hunger. Famine, and contagious maladies produced by famine, had swept

205. Peter had been deposed on July 9, and murdered on July 19, largely because of his unconditional restoration to Frederic of East Prussia which had been in Russian hands since 1758.

206. 1729–96; she had been Princess Sophie of Anhalt-Zerbst, but on marrying Grand Duke Peter in 1745 had taken the name of Catherine. After much conspiracy, in which she was deeply involved, her husband was deposed, and she became empress (1762).

207. In October 1762. The Treaty of Paris, which definitely ended the war, was signed in February 1763, the month in which Austria and Prussia concluded the Peace of Hubertusburg.

away the herds and flocks; and there was reason to fear that a great pestilence among the human race was likely to follow in the train of that tremendous war. Near fifteen thousand houses had been burned to the ground. The population of the kingdom had in seven years decreased to the frightful extent of ten per cent. A sixth of the males capable of bearing arms had actually perished on the field of battle. In some districts, no labourers, except women, were seen in the fields at harvest-time. In others, the traveller passed shuddering through a succession of silent villages, in which not a single inhabitant remained. The currency had been debased; the authority of laws and magistrates had been suspended; the whole social system was deranged. For, during that convulsive struggle, everything that was not military violence was anarchy. Even the army was disorganised. Some great generals, and a crowd of excellent officers, had fallen, and it had been impossible to supply their place. The difficulty of finding recruits had, towards the close of the war, been so great, that selection and rejection were impossible. Whole battalions were composed of deserters or of prisoners. It was hardly to be hoped that thirty years of repose and industry would repair the ruin produced by seven years of havoc. One consolatory circumstance, indeed, there was. No debt had been incurred. The burdens of the war had been terrible, almost insupportable; but no arrear was left to embarrass the finances in time of peace.

Here, for the present, we must pause. We have accompanied Frederic to the close of his career as a warrior. Possibly, when these *Memoirs* are completed, we may resume the consideration of his character, and give some account of his domestic and foreign policy, and of his private habits, during the many years of tranquillity which followed the Seven Years' War.

HISTORY OF ENGLAND

Chapter III *

[*State of England in 1685*]

I INTEND, in this chapter, to give a description of the state in which England was at the time when the crown passed from Charles the Second to his brother.[1] Such a description, composed from scanty and dispersed materials, must necessarily be very imperfect. Yet it may perhaps correct some false notions which would make the subsequent narrative unintelligible or uninstructive.

If we would study with profit the history of our ancestors, we must be constantly on our guard against that delusion which the well-known names of families, places, and offices naturally produce, and must never forget that the country of which we read was a very different country from that in which we live. In every experimental science there is a tendency towards perfection. In every human being

* All footnotes not enclosed in square brackets are Macaulay's original notes, of which only the more interesting and significant have been here retained. Though this chapter is highly allusive, not all of the allusions present any difficulty; only such notes have been added, therefore, which will assist in a ready understanding of the text. — Ed.

1. [Allusion to the reigns of English sovereigns since Queen Elizabeth are so numerous in this chapter that the following dates of these reigns may prove helpful to the reader: Elizabeth, 1558–1603; James I, 1603–25; Charles I, 1625–49; The Commonwealth, 1649–53; Oliver Cromwell, Lord Protector, 1653–58; Richard Cromwell, Lord Protector, September 3, 1658–May 25, 1659; Charles II, 1660–85; James II, 1685–88; William III, Prince of Orange, and Mary II, joint sovereigns, 1689–1702; Anne, 1702–14; George I, 1714–27; George II, 1727–60; George III, 1760–1820; George IV, 1820–30; William IV, 1830–37; Victoria, 1837–1901.]

there is a wish to ameliorate his own condition. These two principles have often sufficed, even when counteracted by great public calamities and by bad institutions, to carry civilisation rapidly forward. No ordinary misfortune, no ordinary misgovernment, will do so much to make a nation wretched, as the constant progress of physical knowledge and the constant effort of every man to better himself will do to make a nation prosperous. It has often been found that profuse expenditure, heavy taxation, absurd commercial restrictions, corrupt tribunals, disastrous wars, seditions, persecutions, conflagrations, inundations, have not been able to destroy capital so fast as the exertions of private citizens have been able to create it. It can easily be proved that, in our own land, the national wealth has, during at least six centuries, been almost uninterruptedly increasing; that it was greater under the Tudors than under the Plantagenets;[2] that it was greater under the Stuarts than under the Tudors; that, in spite of battles, sieges, and confiscations, it was greater on the day of the Restoration[3] than on the day when the Long Parliament[4] met; that, in spite of maladministration, of extravagance, of public bankruptcy, of two costly and unsuccessful wars, of the pestilence and of the fire,[5] it was greater on the day of the death of Charles the Second than on the day of his Restoration. This progress, having continued during many ages, became at length, about the middle of the eighteenth century, portentously rapid, and has proceeded, during the nineteenth, with accelerated velocity. In consequence partly of our geographical and partly of our moral position, we have, during several generations, been exempt from evils which have elsewhere impeded the efforts and destroyed the fruits of industry. While every part of the Continent, from Moscow to Lisbon, has been the theatre of bloody and devastating wars, no hostile standard has been seen here but as a trophy. While revolutions have taken place all around us, our government has never once been subverted by violence. During more than a hundred years there has been in our island no tumult of sufficient importance to be called an insurrection; nor has the law been once borne down either by popular fury or by regal tyranny: public credit has been held sacred: the administration of justice has been pure: even in times which might by Englishmen be justly called evil times, we have enjoyed what almost every other nation in the world would have considered as an ample measure of civil and religious freedom. Every man has felt entire confidence that the state would protect him in the possession of what had been earned by his diligence and hoarded by his selfdenial. Under the benignant influence of peace and liberty, science has flourished, and has been applied to practical purposes on a scale never before known.

The consequence is that a change to which the history of the old world furnishes no parallel has taken place in our country. Could the England of 1685 be, by some magical process, set before our eyes, we should not know one landscape in a hundred or one building in ten thousand. The country gentleman would not recognise his own fields. The inhabitant of the town would not recognise his own street. Everything has been changed, but the great features of nature, and a few massive and durable works of human art. We might find out Snowdon and Windermere, the Cheddar Cliffs and Beachy Head. We might find out here and there a Norman minister, or a castle which wit-

nessed the wars of the Roses.[6] But, with such rare exceptions, everything would be strange to us. Many thousands of square miles which are now rich corn land and meadow, intersected by green hedgerows, and dotted with villages and pleasant country seats, would appear as moors overgrown with furze, or fens abandoned to wild ducks. We should see straggling huts built of wood and covered with thatch, where we now see manufacturing towns and seaports renowned to the farthest ends of the world. The capital itself would shrink to dimensions not much exceeding those of its present suburb on the south of the Thames. Not less strange to us would be the garb and manners of the people, the furniture and the equipages, the interior of the shops and dwellings. Such a change in the state of a nation seems to be at least as well entitled to the notice of a historian as any change of the dynasty or of the ministry.[7]

One of the first objects of an inquirer, who wishes to form a correct notion of the state of a community at a given time, must be to ascertain of how many persons that community then consisted. Unfortunately the population of England in 1685 cannot be ascertained with perfect accuracy. For no great state had then adopted the wise course of periodically numbering the people. All men were left to conjecture for themselves; and, as they generally conjectured without examining facts, and under the influence of strong passions and prejudices, their guesses were often ludicrously absurd. Even intelligent Londoners ordinarily talked of London as containing several millions of souls. It was confidently asserted by many that, during the thirty-five years which had elapsed between the accession of Charles the First and the Restoration, the population of the City had increased by two millions.[8] Even while the ravages of the plague and fire were recent, it was the fashion to say that the capital still had a million and a half of inhabitants.[9] Some persons, disgusted by these exaggerations, ran violently into the opposite extreme. Thus Isaac Vossius, a man of undoubted parts and learning, strenuously maintained that there were only two millions of human beings in England, Scotland, and Ireland taken together.[10]

We are not, however, left without the means of correcting the wild blunders into which some minds were hurried by national vanity and others by a morbid love of paradox. There are extant three computations which seem to be entitled to peculiar attention. They are entirely independent of each other: they proceed on different principles; and yet there is little difference in the results.

One of these computations was made in the year 1696 by Gregory King, Lancaster herald, a political arithmetician of great acuteness and judgment. The basis of his calculations was the number of houses returned in 1690 by the officers who made the last collection of the hearth money. The conclusion at which he ar-

7. During the interval which has elapsed since this chapter was written, England has continued to advance rapidly in material prosperity. I have left my text nearly as it originally stood; but I have added a few notes which may enable the reader to form some notion of the progress which has been made during the last nine years; and, in general, I would desire him to remember that there is scarcely a district which is not more populous, or a source of wealth which is not more productive, at present than in 1848. (1857.)

rived was that the population of England was nearly five millions and a half.[11]

About the same time King William the Third was desirous to ascertain the comparative strength of the religious sects into which the community was divided. An inquiry was instituted; and reports were laid before him from all the dioceses of the realm. According to these reports the number of his English subjects must have been about five million two hundred thousand.[12]

Lastly, in our own days, Mr. Finlaison, an actuary of eminent skill, subjected the ancient parochial registers of baptisms, marriages, and burials, to all the tests which the modern improvements in statistical science enabled him to apply. His opinion was, that, at the close of the seventeenth century, the population of England was a little under five million two hundred thousand souls.[13]

Of these three estimates, framed without concert by different persons from different sets of materials, the highest, which is that of King, does not exceed the lowest, which is that of Finlaison, by one twelfth. We may, therefore, with confidence pronounce that, when James the Second reigned, England contained between five million and five million five hundred thousand inhabitants. On the very highest supposition she then had less than one third of her present population, and less than three times the population which is now collected in her gigantic capital. . . .

We should be much mistaken if we pictured to ourselves the squires of the seventeenth century as men bearing a close resemblance to their descendants, the county members and chairmen of quarter sessions[14] with whom we are familiar. The modern country gentleman generally receives a liberal education, passes from a distinguished school to a distinguished college, and has ample opportunity to become an excellent scholar. He has generally seen something of foreign countries. A considerable part of his life has generally been passed in the capital; and the refinements of the capital follow him into the country. There is perhaps no class of dwellings so pleasing as the rural seats of the English gentry. In the parks and pleasure grounds, nature, dressed yet not disguised by art, wears her most alluring form. In the buildings, good sense and good taste combine to produce a happy union of the comfortable and the graceful. The pictures, the musical instruments, the library, would in any other country be considered as proving the owner to be an eminently polished and accomplished man. A country gentleman who witnessed the Revolution was probably in receipt of about a fourth part of the rent[15] which his acres now yield to his posterity. He was, therefore, as compared with his posterity, a poor man, and was generally under the necessity of residing, with little interruption, on his estate. To travel on the Continent, to maintain an establishment in London, or even to visit London frequently, were pleasures in which only the great proprietors could indulge. It may be confidently affirmed that of the squires whose names were then

11. King's Natural and Political Observations, 1696. This valuable treatise, which ought to be read as the author wrote it, and not as garbled by Davenant, will be found in some editions of Chalmers's Estimate.

12. Dalrymple's Appendix to Part II. Book I. The practice of reckoning the population by sects was long fashionable. Gulliver says of the King of Brobdingnag: 'He laughed at my odd arithmetic, as he was pleased to call it, in reckoning the numbers of our people by a computation drawn from the several sects among us in religion and politics.'

in the Commissions of Peace [16] and Lieutenancy [17] not one in twenty went to town once in five years, or had ever in his life wandered so far as Paris. Many lords of manors had received an education differing little from that of their menial servants. The heir of an estate often passed his boyhood and youth at the seat of his family with no better tutors than grooms and gamekeepers, and scarce attained learning enough to sign his name to a Mittimus.[18] If he went to school and to college, he generally returned before he was twenty to the seclusion of the old hall, and there, unless his mind were very happily constituted by nature, soon forgot his academical pursuits in rural business and pleasures. His chief serious employment was the care of his property. He examined samples of grain, handled pigs, and, on market days, made bargains over a tankard with drovers and hop merchants. His chief pleasures were commonly derived from field sports and from an unrefined sensuality. His language and pronunciation were such as we should now expect to hear only from the most ignorant clowns. His oaths, coarse jests, and scurrilous terms of abuse, were uttered with the broadest accent of his province. It was easy to discern, from the first words which he spoke, whether he came from Somersetshire or Yorkshire. He troubled himself little about decorating his abode, and, if he attempted decoration, seldom produced anything but deformity. The litter of a farmyard gathered under the windows of his bedchamber, and the cabbages and gooseberry bushes grew close to his hall door. His table was loaded with coarse plenty; and guests were cordially welcomed to it. But, as the habit of drinking to excess was general in the class to which he belonged, and as his fortune did not enable him to intoxicate large assemblies daily with claret or canary, strong beer was the ordinary beverage. The quantity of beer consumed in those days was indeed enormous. For beer then was to the middle and lower classes, not only all that beer now is, but all that wine, tea, and ardent spirits now are. It was only at great houses, or on great occasions, that foreign drink was placed on the board. The ladies of the house, whose business it had commonly been to cook the repast, retired as soon as the dishes had been devoured, and left the gentlemen to their ale and tobacco. The coarse jollity of the afternoon was often prolonged till the revellers were laid under the table.

It was very seldom that the country gentleman caught glimpses of the great world; and what he saw of it tended rather to confuse than to enlighten his understanding. His opinions respecting religion, government, foreign countries and former times, having been derived, not from study, from observation, or from conversation with enlightened companions, but from such traditions as were current in his own small circle, were the opinions of a child. He adhered to them, however, with the obstinacy which is generally found in ignorant men accustomed to be fed with flattery. His animosities were numerous and bitter. He hated Frenchmen and Italians, Scotchmen and Irishmen, Papists and Presbyterians, Independents and Baptists, Quakers and Jews. Towards London and Londoners he felt an aversion which more than once produced important political effects. His wife and daughter were in tastes and acquirements below a housekeeper or a stillroom maid of the present day. They stitched and spun, brewed gooseberry wine, cured marigolds, and made the crust for the venison pasty.

From this description it might be supposed that the English esquire of the sev-

16. [Commissions constituting one or more persons justices of the peace.]

18. [A writ formerly used in England for directing the trial of a cause in a county; or a warrant of commitment to prison.]

enteenth century did not materially differ from a rustic miller or alehouse keeper of our time. There are, however, some important parts of his character still to be noted, which will greatly modify this estimate. Unlettered as he was and unpolished, he was still in some most important points a gentleman. He was a member of a proud and powerful aristocracy, and was distinguished by many both of the good and of the bad qualities which belong to aristocrats. His family pride was beyond that of a Talbot or a Howard. He knew the genealogies and coats of arms of all his neighbours, and could tell which of them had assumed supporters without any right, and which of them were so unfortunate as to be greatgrandsons of aldermen. He was a magistrate, and, as such, administered gratuitously to those who dwelt around him a rude patriarchal justice, which, in spite of innumerable blunders and of occasional acts of tyranny, was yet better than no justice at all. He was an officer of the trainbands;[19] and his military dignity, though it might move the mirth of gallants who had served a campaign in Flanders, raised his character in his own eyes and in the eyes of his neighbours. Nor indeed was his soldiership justly a subject of derision. In every county there were elderly gentlemen who had seen service which was no child's play. One had been knighted by Charles the First, after the battle of Edgehill. Another still wore a patch over the scar which he had received at Naseby.[20] A third had defended his old house till Fairfax had blown in the door with a petard. The presence of these old Cavaliers, with their old swords and holsters, and with their old stories about Goring and Lunsford,[21] gave to the musters of militia an earnest and warlike aspect which would otherwise have been wanting. Even those country gentlemen who were too young to have themselves exchanged blows with the cuirassiers of the Parliament had, from childhood, been surrounded by the traces of recent war, and fed with stories of the martial exploits of their fathers and uncles. Thus the character of the English esquire of the seventeenth century was compounded of two elements which we seldom or never find united. His ignorance and uncouthness, his low tastes and gross phrases, would, in our time, be considered as indicating a nature and a breeding thoroughly plebeian. Yet he was essentially a patrician, and had, in large measure, both the virtues and the vices which flourish among men set from their birth in high place, and used to respect themselves and to be respected by others. It is not easy for a generation accustomed to find chivalrous sentiments only in company with liberal studies and polished manners to image to itself a man with the deportment, the vocabulary, and the accent of a carter, yet punctilious on matters of genealogy and precedence, and ready to risk his life rather than see a stain cast on the honour of his house. It is however only by thus joining together things seldom or never found together in our own experience, that we can form a just idea of that rustic aristocracy which constituted the main strength of the armies of Charles the First, and which long supported, with strange fidelity, the interest of his descendants.

The gross, uneducated, untravelled country gentleman was commonly a Tory: but, though devotedly attached to hereditary

19 [Bands of trained citizen soldiers first raised in the counties and London in the 16th century. They later developed into the militia.]

20. [Edgehill and Naseby were great battles of the Puritan Revolution, fought, respectively, on October 23, 1642, and June 14, 1645.]

21. [George, Baron Goring (1608–57) and his father, George Goring, Earl of Norwich (1583?–1663), were both notorious for intrigues and vigorous activities on the Royalist side. — Sir Thomas Lunsford (1610?–53), Royalist colonel, committed a murderous assault upon Sir Thomas Pelham, 1633; was outlawed, pardoned; joined the army of Charles I; after a stormy career, he died in Virginia.]

monarchy, he had no partiality for courtiers and ministers. He thought, not without reason, that Whitehall [22] was filled with the most corrupt of mankind, and that of the great sums which the House of Commons had voted to the crown since the Restoration part had been embezzled by cunning politicians, and part squandered on buffoons and foreign courtesans. His stout English heart swelled with indignation at the thought that the government of his country should be subject to French dictation.[23] Being himself generally an old Cavalier, or the son of an old Cavalier, he reflected with bitter resentment on the ingratitude with which the Stuarts had requited their best friends. Those who heard him grumble at the neglect with which he was treated, and at the profusion with which wealth was lavished on the bastards of Nell Gwynn and Madam Carwell,[24] would have supposed him ripe for rebellion. But all this ill humour lasted only till the throne was really in danger. It was precisely when those whom the sovereign had loaded with wealth and honours shrank from his side that the country gentlemen, so surly and mutinous in the season of his prosperity, rallied round him in a body. Thus, after murmuring twenty years at the misgovernment of Charles the Second, they came to his rescue in his extremity,[25] when his own Secretaries of State and the Lords of his own Treasury had deserted him, and enabled him to gain a complete victory over the opposition; nor can there be any doubt that they would have shown equal loyalty to his brother James, if James would, even at the last moment, have refrained from outraging their strongest feeling. For there was one institution, and one only, which they prized even more than hereditary monarchy; and that institution was the Church of England. Their love of the Church was not, indeed, the effect of study or meditation. Few among them could have given any reason, drawn from Scripture or ecclesiastical history, for adhering to her doctrines, her ritual, and her polity; nor were they, as a class, by any means strict observers of that code of morality which is common to all Christian sects. But the experience of many ages proves that men may be ready to fight to the death, and to persecute without pity, for a religion whose creed they do not understand, and whose precepts they habitually disobey.[26]

The rural clergy were even more vehement in Toryism than the rural gentry, and were a class scarcely less important. It is to be observed, however, that the individual clergyman, as compared with the individual gentleman, then ranked much lower than in our days. The main support of the Church was derived from the tithe; and the tithe bore to the rent a much smaller ratio than at present. King [27] estimated the whole income of the parochial and collegiate clergy at only four hundred and eighty thousand pounds a year; Dave-

25. [When the Whigs, under Shaftesbury and other leaders, were attempting to pass through parliament an Exclusion Bill whereby Charles' brother (later James II) would be excluded from the right to the throne owing to his being a Papist. The right of Parliament to alter the succession to the throne was vigorously protested by all the Stuarts.]

26. My notion of the country gentleman of the seventeenth century has been derived from sources too numerous to be recapitulated. I must leave my description to the judgment of those who have studied the history and the lighter literature of that age.

27. [Gregory King (1648–1712), herald, genealogist, and statesman, published *Natural and Political Observations and Conclusions upon the State and Condition of England* in 1696.]

nant[28] at only five hundred and forty-four thousand a year. It is certainly now more than seven times as great as the larger of these two sums. The average rent of the land has not, according to any estimate, increased proportionally. It follows that the rectors and vicars must have been, as compared with the neighbouring knights and squires, much poorer in the seventeenth than in the nineteenth century.

The place of the clergyman in society had been completely changed by the Reformation. Before that event, ecclesiastics had formed the majority of the House of Lords, had, in wealth and splendour, equalled, and sometimes outshone, the greatest of the temporal barons, and had generally held the highest civil offices. Many of the Treasurers, and almost all the Chancellors of the Plantagenets were Bishops. The Lord Keeper of the Privy Seal[29] and the Master of the Rolls[30] were ordinarily churchmen. Churchmen transacted the most important diplomatic business. Indeed, all that large portion of the administration which rude and warlike nobles were incompetent to conduct was considered as especially belonging to divines. Men, therefore, who were averse to the life of camps, and who were, at the same time, desirous to rise in the state, commonly received the tonsure.[31] Among them were sons of all the most illustrious families, and near kinsmen of the throne, Scroops and Nevilles, Bourchiers, Staffords, and Poles. To the religious houses belonged the rents of immense domains, and all that large portion of the tithe which is now in the hands of laymen. Down to the middle of the reign of Henry the Eighth,[32] therefore, no line of life was so attractive to ambitious and covetous natures as the priesthood. Then came a violent revolution. The abolition of the monasteries deprived the Church at once of the greater part of her wealth, and of her predominance in the Upper House of Parliament. There was no longer an Abbot of Glastonbury or an Abbot of Reading seated among the peers, and possessed of revenues equal to those of a powerful Earl. The princely splendour of William of Wykeham and of William of Waynflete had disappeared. The scarlet hat of the Cardinal, the silver cross of the Legate, were no more. The clergy had also lost the ascendancy which is the natural reward of superior mental cultivation. Once the circumstance that a man could read had raised a presumption that he was in orders. But, in an age which produced such laymen as William Cecil and Nicholas Bacon, Roger Ascham and Thomas Smith, Walter Mildmay and Francis Walsingham, there was no reason for calling away prelates from their dioceses to negotiate treaties, to superintend the finances, or to administer justice. The spiritual character not only ceased to be a qualification for high civil office, but began to be regarded as a disqualification. Those worldly motives, therefore, which had formerly induced so many able, aspiring, and high born youths to assume the ecclesiastical habit, ceased to operate. Not one parish in two hundred then afforded what a man of family considered as a maintenance. There were still indeed prizes in the Church: but they were few; and even the highest were mean, when compared with the glory which had once surrounded the princes of the hierarchy. The state kept by Parker and Grindal seemed beggarly to those who remembered the imperial pomp of Wol-

32. [*i.e.* through the first quarter of the 16th century.]

sey,[33] his palaces, which had become the favourite abodes of royalty, Whitehall and Hampton Court,[34] the three sumptuous tables daily spread in his refectory, the forty-four gorgeous copes in his chapel, his running footmen in rich liveries, and his body guards with gilded poleaxes. Thus the sacerdotal office lost its attraction for the higher classes. During the century which followed the accession of Elizabeth, scarce a single person of noble descent took orders. At the close of the reign of Charles the Second, two sons of peers were Bishops; four or five sons of peers were priests, and held valuable preferment: but these rare exceptions did not take away the reproach which lay on the body. The clergy were regarded as, on the whole, a plebeian class.[35] And, indeed, for one who made the figure of a gentleman, ten were mere menial servants. A large proportion of those divines who had no benefices, or whose benefices were too small to afford a comfortable revenue, lived in the houses of laymen. It had long been evident that this practice tended to degrade the priestly character. Laud[36] had exerted himself to effect a change; and Charles the First had repeatedly issued positive orders that none but men of high rank should presume to keep domestic chaplains. But these injunctions had become obsolete. Indeed, during the domination of the Puritans, many of the ejected ministers of the Church of England could obtain bread and shelter only by attaching themselves to the households of royalist gentlemen; and the habits which had been formed in those times of trouble continued long after the re-establishment of monarchy and episcopacy. In the mansions of men of liberal sentiments and cultivated understandings, the chaplain was doubtless treated with urbanity and kindness. His conversation, his literary assistance, his spiritual advice, were considered as an ample return for his food, his lodging, and his stipend. But this was not the general feeling of the country gentlemen. The coarse and ignorant squire, who thought that it belonged to his dignity to have grace said every day at his table by an ecclesiastic in full canonicals, found means to reconcile dignity with economy. A young Levite — such was the phrase then in use — might be had for his board, a small garret, and ten pounds a year, and might not only perform his own professional functions, might not only be the most patient of butts and of listeners, might not only be always ready in fine weather for bowls, and in rainy weather for shovel-board,[37] but might also save the expense of a gardener, or of a groom. Sometimes the reverend man nailed up the apricots; and sometimes he curried the coach horses. He cast up the farrier's bills. He walked ten miles with a message or a parcel. He was permitted to dine with the family; but he was expected to content himself with the plainest fare. He might fill himself with the corned beef and the carrots: but, as

33. [Matthew Parker (1504–75), Edmund Grindal (1519–83), Archbishops of Canterbury. Thomas Wolsey (1475?–1530) had been made Archbishop of Canterbury c.1501.]

34. [Hampton Court, on the Thames, is some twelve miles west of the center of London. It was built by Wolsey, and ceded by him to Henry VIII. For two centuries it was the favorite residence of the English sovereigns.]

35. In the eighteenth century the great increase in the value of benefices produced a change. The younger sons of the nobility were allured back to the clerical profession. Warburton in a letter to Hurd, dated the 5th of July 1752, mentions this change, which was then recent. 'Our grandees have at last found their way back into the Church. I only wonder they have been so long about it. But be assured that nothing but a new religious revolution, to sweep away the fragments that Henry the Eighth left after banqueting his courtiers, will drive them out again.'

36. [William Laud (1573–1645) became Archbishop of Canterbury in 1633.]

37. [A game similar to present-day shuffle-board, played by driving or pushing with the hand or fingers pieces of metal or money to reach certain marks.]

soon as the tarts and cheesecakes made their appearance, he quitted his seat, and stood aloof till he was summoned to return thanks for the repast, from a great part of which he had been excluded.[38]

Perhaps, after some years of service, he was presented to a living sufficient to support him: but he often found it necessary to purchase his preferment by a species of Simony,[39] which furnished an inexhaustible subject of pleasantry to three or four generations of scoffers. With his cure he was expected to take a wife. The wife had ordinarily been in the patron's service; and it was well if she was not suspected of standing too high in the patron's favour. Indeed, the nature of the matrimonial connections which the clergymen of that age were in the habit of forming is the most certain indication of the place which the order held in the social system. An Oxonian, writing a few months after the death of Charles the Second, complained bitterly, not only that the country attorney and the country apothecary looked down with disdain on the country clergyman, but that one of the lessons most earnestly inculcated on every girl of honourable family was to give no encouragement to a lover in orders, and that, if any young lady forgot this precept, she was almost as much disgraced as by an illicit amour. Clarendon,[40] who assuredly bore no ill will to the priesthood, mentions it as a sign of the confusion of ranks which the great rebellion had produced, that some damsels of noble families had bestowed themselves on divines. A waiting woman was generally considered as the most suitable helpmate for a parson. Queen Elizabeth, as head of the Church, had given what seemed to be a formal sanction to this prejudice, by issuing special orders that no clergyman should presume to espouse a servant girl, without the consent of the master or mistress.[41] During several generations accordingly the relation between divines and handmaidens was a theme for endless jest; nor would it be easy to find, in the comedy of the seventeenth century, a single instance of a clergyman who wins a spouse above the rank of a cook.[42] Even so late as the time of George the Second, the keenest of all observers of life and manners, himself a priest, remarked that, in a great household, the chaplain was the resource of a lady's maid whose character had been blown upon, and who was therefore forced to give up hopes of catching the steward.[43]

In general the divine who quitted his chaplainship for a benefice and a wife found that he had only exchanged one class of vexations for another. Hardly one living in fifty enabled the incumbent to bring up a family comfortably. As children multiplied and grew, the household of the priest became more and more beggarly. Holes appeared more and more plainly in the thatch of his parsonage and in his single cassock. Often it was only by

38. Eachard, Causes of the Contempt of the Clergy; Oldham, Satire addressed to a Friend about to leave the University; Tatler, 255.258. That the English clergy were a lowborn class, is remarked in the Travels of the Grand Duke Cosmo, Appendix A.

39. [*i.e.* by the buying or selling of ecclesiastical preferment.]

40. [Edward Hyde, Earl of Clarendon (1609–74), Royalist, Lord Chancellor and chief minister to Charles II, author of the *History of the Rebellion and Civil Wars in England* (1702–04) and his *Life* (1759).]

41. See the Injunctions of 1559, in Bishop Sparrow's Collection. Jeremy Collier, in his Essay on Pride, speaks of this injunction with a bitterness which proves that his own pride had not been effectually tamed.

42. Roger and Abigail in Fletcher's Scornful Lady, Bull and the Nurse in Vanbrugh's Relapse, Smirk and Susan in Shadwell's Lancashire Witches, are instances.

43. Swift's Directions to Servants. I may add that Swift, in his Essay on the Fates of Clergymen, has elaborately traced the career of two divines, Eugenius and Corusodes, the man of parts and the dunce. Differing in everything else, they both marry low women. Eugenius has to take up with a farmer's widow, and Corusodes with a cast-off mistress.

toiling on his glebe,[44] by feeding swine, and by loading dungcarts, that he could obtain daily bread; nor did his utmost exertions always prevent the bailiffs from taking his concordance and his inkstand in execution. It was a white day on which he was admitted into the kitchen of a great house, and regaled by the servants with cold meat and ale. His children were brought up like the children of the neighbouring peasantry. His boys followed the plough; and his girls went out to service.[45] Study he found impossible: for the advowson [46] of his living would hardly have sold for a sum sufficient to purchase a good theological library; and he might be considered as unusually lucky if he had ten or twelve dog-eared volumes among the pots and pans on his shelves. Even a keen and strong intellect might be expected to rust in so unfavourable a situation.

Assuredly there was at that time no lack in the English Church of ministers distinguished by abilities and learning. But it is to be observed that these ministers were not scattered among the rural population. They were brought together at a few places where the means of acquiring knowledge were abundant, and where the opportunities of vigorous intellectual exercise were frequent.[47] At such places were to be found divines qualified by parts, by eloquence, by wide knowledge of literature, of science, and of life, to defend their Church victoriously against heretics and sceptics, to command the attention of frivolous and worldly congregations, to guide the deliberations of senates, and to make religion respectable, even in the most dissolute of courts. Some laboured to fathom the abysses of metaphysical theology: some were deeply versed in biblical criticism; and some threw light on the darkest parts of ecclesiastical history. Some proved themselves consummate masters of logic. Some cultivated rhetoric with such assiduity and success that their discourses are still justly valued as models of style. These eminent men were to be found, with scarcely a single exception, at the Universities, at the great Cathedrals, or in the capital. Barrow had lately died at Cambridge; and Pearson had gone thence to the episcopal bench. Cudworth and Henry More were still living there. South and Pococke, Jane and Aldrich, were at Oxford. Prideaux was in the close of Norwich, and Whitby in the close of Salisbury. But it was chiefly by the London clergy, who were always spoken of as a class apart, that the fame of their profession for learning and eloquence was upheld. The principal pulpits of the metropolis were occupied about this time by a crowd of distinguished men, from among whom was selected a large proportion of the rulers of the Church. Sherlock preached at the Temple, Tillotson at Lincoln's Inn, Wake and Jeremy Collier at Gray's Inn, Burnet at the Rolls, Stillingfleet at Saint Paul's Cathedral, Patrick at Saint Paul's in Covent Garden, Fowler at Saint Giles's, Cripplegate, Sharp at Saint Giles's in the Fields, Tenison at Saint Martin's, Sprat at Saint Margaret's, Beveridge at Saint Peter's in Cornhill. Of these twelve men, all of high note in ecclesiastical history, ten became Bishops, and four Archbishops. Meanwhile almost the only important theological works which came forth from a rural parsonage were those of George Bull, afterwards Bishop of Saint David's; and Bull never would have produced those works, had he not inherited an estate, by the sale

44. [Field, or plot of cultivated ground.]

45. Even in Tom Jones, published two generations later, Mrs. Seagrim, the wife of a gamekeeper, and Mrs. Honour, a waitingwoman, boast of their descent from clergymen. 'It is to be hoped,' says Fielding, 'such instances will in future ages, when some provision is made for the families of the inferior clergy, appear stranger than they can be thought at present.'

46. [The patronage of a church living.]

47. This distinction between country clergy and town clergy is strongly marked by Eachard, and cannot but be observed by every person who has studied the ecclesiastical history of that age.

of which he was enabled to collect a library, such as probably no other country clergyman in England possessed.[48]

Thus the Anglican priesthood was divided into two sections, which, in acquirements, in manners, and in social position, differed widely from each other. One section trained for cities and courts, comprised men familiar with all ancient and modern learning; men able to encounter Hobbes or Bossuet [49] at all the weapons of controversy; men who could, in their sermons, set forth the majesty and beauty of Christianity with such justness of thought, and such energy of language, that the indolent Charles roused himself to listen, and the fastidious Buckingham [50] forgot to sneer; men whose address, politeness, and knowledge of the world qualified them to manage the consciences of the wealthy and noble; men with whom Halifax [51] loved to discuss the interests of empires, and from whom Dryden was not ashamed to own that he had learned to write.[52] The other section was destined to ruder and humbler service. It was dispersed over the country, and consisted chiefly of persons not at all wealthier, and not much more refined, than small farmers or upper servants. Yet it was in these rustic priests, who derived but a scanty subsistence from their tithe sheaves and tithe pigs, and who had not the smallest chance of ever attaining high professional honours, that the professional spirit was strongest. Among those divines who were the boast of the Universities and the delight of the capital, and who had attained, or might reasonably expect to attain, opulence and lordly rank, a party, respectable in numbers, and more respectable in character, leaned towards constitutional principles of government, lived on friendly terms with Presbyterians, Independents, and Baptists, would gladly have seen a full toleration granted to all Protestant sects, and would even have consented to make alterations in the Liturgy, for the purpose of conciliating honest and candid Nonconformists. But such latitudinarianism was held in horror by the country parson. He took, indeed, more pride in his ragged gown than his superiors in their lawn and their scarlet hoods. The very consciousness that there was little in his worldly circumstances to distinguish him from the villagers to whom he preached led him to hold immoderately high the dignity of that sacerdotal office which was his single title to reverence. Having lived

48 [Of the clergymen mentioned in this paragraph, the most noteworthy are Isaac Barrow (1630–77), Robert South (1634–1716), and John Tillotson (1630–94), all famous in their time for eloquence and mastery of English prose, and long studied as models of excellence. Ralph Cudworth (1617–88) and Henry More (1614–87) belonged to the little group of Platonist thinkers and theologians at Cambridge. Gilbert Burnet (1643–1715), Bishop of Salisbury, was a close adviser to William III. Thomas Sprat (1635–1713), divine, was one of the founders of the Royal Society. George Bull (1634–1710), Anglican theologian, was the author of *Judicium Ecclesiae Catholicae* (1694). Jeremy Collier (1650–1726), nonjuror, was widely known for his *Short View of the Immorality and Profaneness of the English Stage* (1698), which caused Congreve and D'Urfey to be prosecuted, and Betterton and Mrs. Bracegirdle to be fined, but which failed to check the continued success of the type of play that he inveighed against.]

49. [Thomas Hobbes (1588–1679), English philosopher, master of English prose and of adroit, economic, and effective argument; author of *Leviathan* (1651). — Jacques Bénigne Bossuet (1627–1704), famous French divine and preacher, noted for his eloquence and his ability in controversy.]

50. [George Villiers, Duke of Buckingham (1628–87), witty profligate, and intimate of Charles II.]

51. [George Savile, Marquis of Halifax (1633–95), Lord Privy Seal under James II and later under William and Mary, author of *Character of a Trimmer*, defending the support of a political party most advantageous to the public interest.]

52. 'I have frequently heard him (Dryden) own with pleasure, that if he had any talent for English prose it was owing to his having often read the writings of the great Archbishop Tillotson.' — Congreve's Dedication of Dryden's Plays.

in seclusion, and having had little opportunity of correcting his opinions by reading or conversation, he held and taught the doctrines of indefeasible hereditary right, of passive obedience, and of non-resistance, in all their crude absurdity. Having been long engaged in a petty war against the neighbouring dissenters, he too often hated them for the wrong which he had done them, and found no fault with the Five Mile Act [53] and the Conventicle Act,[54] except that those odious laws had not a sharper edge. Whatever influence his office gave him was exerted with passionate zeal on the Tory side; and that influence was immense. It would be a great error to imagine, because the country rector was in general not regarded as a gentleman, because he could not dare to aspire to the hand of one of the young ladies at the manor house, because he was not asked into the parlours of the great, but was left to drink and smoke with grooms and butlers, that the power of the clerical body was smaller than at present. The influence of a class is by no means proportioned to the consideration which the members of that class enjoy in their individual capacity. A Cardinal is a much more exalted personage than a begging friar: but it would be a grievous mistake to suppose that the College of Cardinals has exercised a greater dominion over the public mind of Europe than the Order of Saint Francis. In Ireland, at present, a peer holds a far higher station in society than a Roman Catholic priest: yet there are in Munster and Connaught few counties where a combination of priests would not carry an election against a combination of peers. In the seventeenth century the pulpit was to a large portion of the population what the periodical press now is. Scarce any of the clowns who came to the parish church ever saw a Gazette or a political pamphlet. Ill informed as their spiritual pastor might be, he was yet better informed than themselves: he had every week an opportunity of haranguing them; and his harangues were never answered. At every important conjuncture, invectives against the Whigs and exhortations to obey the Lord's anointed resounded at once from many thousands of pulpits; and the effect was formidable indeed. Of all the causes which, after the dissolution of the Oxford Parliament,[55] produced the violent reaction against the Exclusionists,[56] the most potent seems to have been the oratory of the country clergy.

The power which the country gentlemen and the country clergymen exercised in the rural districts was in some measure counterbalanced by the power of the yeomanry, an eminently manly and truehearted race. The petty proprietors who cultivated their own fields with their own hands, and enjoyed a modest competence, without affecting to have scutcheons and crests, or aspiring to sit on the bench of justice, then formed a much more important part of the nation than at present. If we may trust the best statistical writers of that age, not less than a hundred and sixty thousand proprietors, who with their families must have made up more than a seventh of the whole population, derived their subsistence from little freehold estates. The average income of these small landholders, an income made up of rent, profit, and wages, was estimated at between sixty and seventy pounds a year.

53. [By which Act (1665), any clergyman who had been driven out by the Act of Uniformity and had refused to hold it unlawful to alter the government of Church or State was prevented from going within five miles of any borough or of any other place where he had formerly ministered.]

54. [The Conventicle Act (1664) provided for punishment of persons meeting in groups of more than five for the purpose of any religious worship but that of the Common Prayer.]

55. [In 1681.]

56. [The Whigs who were determined to restrict the royal right of proroguing and dissolving Parliament, and to exclude Roman Catholic heirs to the throne, thus to prevent Charles II's brother James from retaining his right to the Crown.]

It was computed that the number of persons who tilled their own land was greater than the number of those who farmed the land of others.[57] A large portion of the yeomanry had, from the time of the Reformation, leaned towards Puritanism, had, in the civil war, taken the side of the Parliament, had, after the Restoration, persisted in hearing Presbyterian and Independent preachers, had, at elections, strenuously supported the Exclusionists, and had continued, even after the discovery of the Rye House plot [58] and the proscription of the Whig leaders, to regard Popery and arbitrary power with unmitigated hostility. . . .

Great as has been the change in the rural life of England since the Revolution, the change which has come to pass in the cities is still more amazing. At present above a sixth part of the nation is crowded into provincial towns of more than thirty thousand inhabitants. In the reign of Charles the Second no provincial town in the kingdom contained thirty thousand inhabitants; and only four provincial towns contained so many as ten thousand inhabitants. . . .

The position of London, relatively to the other towns of the empire, was, in the time of Charles the Second, far higher than at present. For at present the population of London is little more than six times the population of Manchester or of Liverpool. In the days of Charles the Second the population of London was more than seventeen times the population of Bristol or of Norwich. It may be doubted whether any other instance can be mentioned of a great kingdom in which the first city was more than seventeen times as large as the second. There is reason to believe that, in 1685, London had been, during about half a century, the most populous capital in Europe. The inhabitants, who are now at least nineteen hundred thousand, were then probably little more than half a million.[59] London had in the world only one commercial rival, now long ago outstripped, the mighty and opulent Amsterdam. English writers boasted of the forest of masts and yardarms which covered the river from the Bridge to the Tower, and of the stupendous sums which were collected at the Custom House in Thames Street. There is, indeed, no doubt that the trade of the metropolis then bore a far greater proportion than at present to the whole trade of the country; yet to our generation the honest vaunting of our ancestors must appear almost ludicrous. The shipping which they thought incredibly great appears not to have exceeded seventy thousand tons. This was, indeed, then more than a third of the whole tonnage of the kingdom, but is now less than a fourth of the tonnage of Newcastle, and is nearly equalled by the tonnage of the steam vessels of the Thames. The customs of London amounted, in 1685, to about three hundred and thirty thousand pounds a year. In our time the net duty paid annually, at the same place, exceeds ten millions.[60]

Whoever examines the maps of London which were published towards the

57. I have taken Davenant's estimate, which is a little lower than King's.

58. [The conspiracy in 1683 among some of the more violent Parliamentary Whigs, followers of Shaftesbury, to seize Charles II and his brother on their return from Newmarket at the Rye House in Hertfordshire, and to compel him to summon Parliament. By 'the proscription of the Whig leaders' Macaulay alludes to the execution of Lord William Russell and Algernon Sidney for being implicated in this plot.]

59. According to King 530,000. (1848.) In 1851 the population of London exceeded 2,300,000. (1857.)

60. Macpherson's History of Commerce; Chalmers's Estimate; Chamberlayne's State of England, 1684. The tonnage of the steamers belonging to the port of London was, at the end of 1847, about 60,000 tons. The customs of the port, from 1842 to 1845, very nearly averaged 11,000,000*l.* (1848.) In 1854 the tonnage of the steamers of the port of London amounted to 138,000 tons, without reckoning vessels of less than fifty tons. (1857.)

close of the reign of Charles the Second will see that only the nucleus of the present capital then existed. The town did not, as now, fade by imperceptible degrees into the country. No long avenues of villas, embowered in lilacs and laburnums, extended from the great centre of wealth and civilisation almost to the boundaries of Middlesex and far into the heart of Kent and Surrey. In the east, no part of the immense line of warehouses and artificial lakes which now stretches from the Tower to Blackwall had even been projected. On the west, scarcely one of those stately piles of building which are inhabited by the noble and wealthy was in existence; and Chelsea, which is now peopled by more than forty thousand human beings, was a quiet country village with about a thousand inhabitants. On the north, cattle fed, and sportsmen wandered with dogs and guns, over the site of the borough of Marylebone, and over far the greater part of the space now covered by the boroughs of Finsbury and of the Tower Hamlets. Islington was almost a solitude; and poets loved to contrast its silence and repose with the din and turmoil of the monster London. On the south the capital is now connected with its suburb by several bridges, not inferior in magnificence and solidity to the noblest works of the Caesars. In 1685, a single line of irregular arches, overhung by piles of mean and crazy houses, and garnished, after a fashion worthy of the naked barbarians of Dahomy,[61] with scores of mouldering heads, impeded the navigation of the river.

Of the metropolis, the City, properly so called,[62] was the most important division. At the time of the Restoration it had been built for the most part, of wood and plaster; the few bricks that were used were ill baked; the booths where goods were exposed to sale projected far into the streets, and were overhung by the upper stories. A few specimens of this architecture may still be seen in those districts which were not reached by the great fire. That fire had, in a few days, covered a space of little less than a square mile with the ruins of eighty-nine churches and of thirteen thousand houses. But the City had risen again with a celerity which had excited the admiration of neighbouring countries. Unfortunately, the old lines of the streets had been to a great extent preserved; and those lines, originally traced in an age when even princesses performed their journeys on horseback, were often too narrow to allow wheeled carriages to pass each other with ease, and were therefore ill adapted for the residence of wealthy persons in an age when a coach and six was a fashionable luxury. The style of building was, however, far superior to that of the City which had perished. The ordinary material was brick, of much better quality than had formerly been used. On the sites of the ancient parish churches had arisen a multitude of new domes, towers, and spires which bore the mark of the fertile genius of Wren.[63] In every place save one the traces of the great devastation had been completely effaced. But the crowds of workmen, the scaffolds, and the masses of hewn stone were still to be seen where the noblest of Protestant temples was slowly rising on the ruins of the old Cathedral of Saint Paul.[64]

61. [A state in West Africa.]

62. [*i.e.* the district originally included within the City Wall; now the financial district of London, where are situated the Bank of England and the Royal Exchange.]

63. [Sir Christopher Wren (1632–1723), architect and scientist, who built fifty-two churches and otherwise rebuilt London after the fire of 1666.]

64. The fullest and most trustworthy information about the state of the buildings of London at this time is to be derived from the maps and drawings in the British Museum and in the Pepysian Library. The badness of the bricks in the old buildings of London is particularly mentioned in the Travels of the Grand Duke Cosmo. There is an account of the works at Saint Paul's in Ward's London Spy. I am almost ashamed to quote such nauseous balderdash; but I have been forced to descend even lower, if possible, in search of materials.

The whole character of the City has, since that time, undergone a complete change. At present the bankers, the merchants, and the chief shopkeepers repair thither on six mornings of every week for the transaction of business: but they reside in other quarters of the metropolis, or at suburban country seats surrounded by shrubberies and flower gardens. This revolution in private habits has produced a political revolution of no small importance. The City is no longer regarded by the wealthiest traders with that attachment which every man naturally feels for his home. It is no longer associated in their minds with domestic affections and endearments. The fireside, the nursery, the social table, the quiet bed are not there. Lombard Street and Threadneedle Street [65] are merely places where men toil and accumulate. They go elsewhere to enjoy and to expend. On a Sunday, or in an evening after the hours of business, some courts and alleys, which a few hours before had been alive with hurrying feet and anxious faces, are as silent as the glades of a forest. The chiefs of the mercantile interest are no longer citizens. They avoid, they almost contemn, municipal honours and duties. Those honours and duties are abandoned to men who, though useful and highly respectable, seldom belong to the princely commercial houses of which the names are renowned throughout the world.

In the seventeenth century the City was the merchant's residence. Those mansions of the great old burghers which still exist have been turned into counting houses and warehouses: but it is evident that they were originally not inferior in magnificence to the dwellings which were then inhabited by the nobility. They sometimes stand in retired and gloomy courts, and are accessible only by inconvenient passages: but their dimensions are ample, and their aspect stately. The entrances are decorated with richly carved pillars and canopies. The staircases and landing places are not wanting in grandeur. The floors are sometimes of wood, tessellated after the fashion of France. The palace of Sir Robert Clayton, in the Old Jewry, contained a superb banqueting room wainscoted with cedar, and adorned with battles of gods and giants in fresco.[66] Sir Dudley North expended four thousand pounds, a sum which would then have been important to a Duke, on the rich furniture of his reception rooms in Basinghall Street. In such abodes, under the last Stuarts, the heads of the great firms lived splendidly and hospitably. To their dwelling place they were bound by the strongest ties of interest and affection. There they had passed their youth, had made their friendships, had courted their wives, had seen their children grow up, had laid the remains of their parents in the earth, and expected that their own remains would be laid. That intense patriotism which is peculiar to the members of societies congregated within a narrow space was, in such circumstances, strongly developed. London was, to the Londoner, what Athens was to the Athenian of the age of Pericles, what Florence was to the Florentine of the fifteenth century. The citizen was proud of the grandeur of his city, punctilious about her claims to respect, ambitious of her offices, and zealous for her franchises.

At the close of the reign of Charles the Second the pride of the Londoners was smarting from a cruel mortification. The old charter had been taken away; and the magistracy had been remodelled. All the civic functionaries were Tories: and the Whigs, though in numbers and in wealth superior to their opponents, found themselves excluded from every local dignity. Nevertheless, the external splendour of the municipal government was not diminished, nay, was rather increased by this change. For, under the administration of

65. [Famous thoroughfares in 'the City,' or financial district of London.]

66. Evelyn's Diary, Sept. 20. 1672.

some Puritans who had lately borne rule, the ancient fame of the City for good cheer had declined: but under the new magistrates, who belonged to a more festive party, and at whose boards guests of rank and fashion from beyond Temple Bar were often seen, the Guildhall and the halls of the great companies were enlivened by many sumptuous banquets. During these repasts, odes, composed by the poet laureate of the corporation, in praise of the King, the Duke, and the Mayor, were sung to music. The drinking was deep, the shouting loud. An observant Tory, who had often shared in these revels, has remarked that the practice of huzzaing after drinking healths dates from this joyous period.[67]

The magnificence displayed by the first civic magistrate was almost regal. The gilded coach, indeed, which is now annually admired by the crowd, was not yet a part of his state. On great occasions he appeared on horseback, attended by a long cavalcade inferior in magnificence only to that which, before a coronation, escorted the sovereign from the Tower to Westminster. The Lord Mayor was never seen in public without his rich robe, his hood of black velvet, his gold chain, his jewel, and a great attendance of harbingers and guards. Nor did the world find anything ludicrous in the pomp which constantly surrounded him. For it was not more than became the place which, as wielding the strength and representing the dignity of the City of London, he was entitled to occupy in the state. That City, being then not only without equal in the country, but without second, had, during five and forty years, exercised almost as great an influence on the politics of England as Paris has, in our own time, exercised on the politics of France. In intelligence London was greatly in advance of every other part of the kingdom. A government, supported and trusted by London, could in a day obtain such pecuniary means as it would have taken months to collect from the rest of the island. Nor were the military resources of the capital to be despised. The power which the Lord Lieutenants exercised in other parts of the kingdom was in London entrusted to a Commission of eminent citizens. Under the orders of this Commission were twelve regiments of foot and two regiments of horse. An army of drapers' apprentices and journeymen tailors, with common councilmen for captains and aldermen for colonels, might not indeed have been able to stand its ground against regular troops; but there were then very few regular troops in the kingdom. A town, therefore, which could send forth, at an hour's notice, thousands of men, abounding in natural courage, provided with tolerable weapons, and not altogether untinctured with martial discipline, could not but be a valuable ally and a formidable enemy. It was not forgotten that Hampden and Pym [68] had been protected from lawless tyranny by the London trainbands; that, in the great crisis of the civil war, the London trainbands had marched to raise the siege of Gloucester; or that, in the movement against the military tyrants which followed the downfall of Richard Cromwell, the London trainbands had borne a signal part. In truth, it is no exaggeration to say that, but for the hostility of the City, Charles the First would never have been vanquished, and that, without the help of the City, Charles the Second could scarcely have been restored.

These considerations may serve to explain why, in spite of that attraction which had, during a long course of years, gradually drawn the aristocracy westward, a few

67. North's Examen. This amusing writer has preserved a specimen of the sublime raptures in which the Pindar of the City indulged: —

'The worshipful Sir John Moor!
After age that name adore!'

68. [John Hampden (1594–1643) and John Pym (1584–1643) were great champions of freedom in opposition to Stuart absolutism, in the Puritan Revolution.]

men of high rank had continued, till a very recent period, to dwell in the vicinity of the Exchange and of the Guildhall. Shaftesbury and Buckingham, while engaged in bitter and unscrupulous opposition to the government, had thought that they could nowhere carry on their intrigues so conveniently or so securely as under the protection of the City magistrates and the City militia. Shaftesbury had therefore lived in Aldersgate Street, at a house which may still be easily known by pilasters and wreaths, the graceful work of Inigo. Buckingham had ordered his mansion near Charing Cross, once the abode of the Archbishops of York, to be pulled down; and, while streets and alleys which are still named after him were rising on that site, chose to reside in Dowgate.

These, however, were rare exceptions. Almost all the noble families of England had long migrated beyond the walls. The district where most of their town houses stood lies between the City and the regions which are now considered as fashionable. A few great men still retained their hereditary hotels[69] in the Strand. The stately dwellings on the south and west of Lincoln's Inn Fields, the Piazza of Covent Garden, Southampton Square, which is now called Bloomsbury Square, and King's Square in Soho Fields, which is now called Soho Square, were among the favourite spots. Foreign princes were carried to see Bloomsbury Square, as one of the wonders of England.[70] Soho Square, which had just been built, was to our ancestors a subject of pride with which their posterity will hardly sympathise. Monmouth Square had been the name while the fortunes of the Duke of Monmouth flourished; and on the southern side towered his mansion. The front, though ungraceful, was lofty and richly adorned. The walls of the principal apartments were finely sculptured with fruit, foliage, and armorial bearings, and were hung with embroidered satin.[71] Every trace of this magnificence has long disappeared; and no aristocratical mansion is to be found in that once aristocratical quarter. A little way north from Holborn, and on the verge of the pastures and cornfields, rose two celebrated palaces, each with an ample garden. One of them, then called Southampton House, and subsequently Bedford House, was removed about fifty years ago to make room for a new city, which now covers, with its squares, streets, and churches, a vast area, renowned in the seventeenth century for peaches and snipes. The other, Montague House, celebrated for its frescoes and furniture, was, a few months after the death of Charles the Second, burned to the ground, and was speedily succeeded by a more magnificent Montague House, which, having been long the respository of such various and precious treasures of art, science, and learning as were scarcely ever before assembled under a single roof, has now given place to an edifice more magnificent still.[72]

Nearer to the Court, on a space called Saint James's Fields, had just been built Saint James's Square and Jermyn Street. Saint James's Church had recently been opened for the accommodation of the inhabitants of this new quarter.[73] Golden Square, which was in the next generation inhabited by lords and ministers of state, had not yet been begun. Indeed the only dwellings to be seen on the north of Piccadilly were three or four isolated and almost rural mansions, of which the most celebrated was the costly pile erected by Clarendon, and nicknamed Dunkirk House. It had been purchased after its founder's downfall by the Duke of Albe-

marle. The Clarendon Hotel and Albemarle Street still preserve the memory of the site.

He who then rambled to what is now the gayest and most crowded part of Regent Street found himself in a solitude, and was sometimes so fortunate as to have a shot at a woodcock.[74] On the north the Oxford road ran between hedges. Three or four hundred yards to the south were the garden walls of a few great houses which were considered as quite out of town. On the west was a meadow renowned for a spring from which, long afterwards, Conduit Street was named. On the east was a field not to be passed without a shudder by any Londoner of that age. There, as in a place far from the haunts of men, had been dug, twenty years before, when the great plague was raging, a pit into which the dead carts had nightly shot corpses by scores. It was popularly believed that the earth was deeply tainted with infection, and could not be disturbed without imminent risk to human life. No foundations were laid there till two generations had passed without any return of the pestilence, and till the ghastly spot had long been surrounded by buildings.[75]

We should greatly err if we were to suppose that any of the streets and squares then bore the same aspect as at present. The great majority of the houses, indeed, have, since that time, been wholly, or in great part, rebuilt. If the most fashionable parts of the capital could be placed before us, such as they then were, we should be disgusted by their squalid appearance, and poisoned by their noisome atmosphere.

In Covent Garden a filthy and noisy market was held close to the dwellings of the great. Fruit women screamed, carters fought, cabbage stalks and rotten apples accumulated in heaps at the thresholds of the Countess of Berkshire and of the Bishop of Durham.[76]

The centre of Lincoln's Inn Fields was an open space where the rabble congregated every evening, within a few yards of Cardigan House and Winchester House, to hear mountebanks harangue, to see bears dance, and to set dogs at oxen. Rubbish was shot in every part of the area. Horses were exercised there. The beggars were as noisy and importunate as in the worst governed cities of the Continent. A Lincoln's Inn mumper[77] was a proverb. The whole fraternity knew the arms and liveries of every charitably disposed grandee in the neighbourhood, and, as soon as his lordship's coach and six appeared, came hopping and crawling in crowds to persecute him. These disorders lasted, in spite of many accidents, and of some legal proceedings, till, in the reign of George the Second, Sir Joseph Jekyll, Master of the Rolls, was knocked down and nearly killed in the middle of the square. Then at length palisades were set up, and a pleasant garden laid out.

Saint James's Square was a receptacle for all the offal and cinders, for all the dead cats and dead dogs of Westminster. At one time a cudgel player[78] kept the ring there. At another time an impudent squatter settled himself there, and built a shed for rubbish under the windows of the gilded saloons in which the first magnates of the realm, Norfolk, Ormond, Kent, and Pembroke, gave banquets and balls. It was not till these nuisances had lasted through a whole generation, and till much had been written about them,

that the inhabitants applied to Parliament for permission to put up rails, and to plant trees.

When such was the state of the region inhabited by the most luxurious portion of society, we may easily believe that the great body of the population suffered what would now be considered as insupportable grievances. The pavement was detestable: all foreigners cried shame upon it. The drainage was so bad that in rainy weather the gutters soon became torrents. Several facetious poets have commemorated the fury with which these black rivulets roared down Snow Hill and Ludgate Hill, bearing to Fleet Ditch a vast tribute of animal and vegetable filth from the stalls of butchers and greengrocers. This flood was profusely thrown to right and left by coaches and carts. To keep as far from the carriage road as possible was therefore the wish of every pedestrian. The mild and timid gave the wall. The bold and athletic took it. If two roisterers met, they cocked their hats in each other's faces, and pushed each other about till the weaker was shoved towards the kennel. If he was a mere bully he sneaked off, muttering that he should find a time. If he was pugnacious, the encounter probably ended in a duel behind Montague House.[79]

The houses were not numbered. There would indeed have been little advantage in numbering them; for of the coachmen, chairmen, porters, and errand boys of London, a very small proportion could read. It was necessary to use marks which the most ignorant could understand. The shops were therefore distinguished by painted or sculptured signs, which gave a gay and grotesque aspect to the streets. The walk from Charing Cross to Whitechapel lay through an endless succession of Saracens' Heads, Royal Oaks, Blue Bears, and Golden Lambs, which disappeared when they were no longer required for the direction of the common people.

When the evening closed in, the difficulty and danger of walking about London became serious indeed. The garret windows were opened, and pails were emptied, with little regard to those who were passing below. Falls, bruises, and broken bones were of constant occurrence. For, till the last year of the reign of Charles the Second, most of the streets were left in profound darkness. Thieves and robbers plied their trade with impunity: yet they were hardly so terrible to peaceable citizens as another class of ruffians. It was a favourite amusement of dissolute young gentlemen to swagger by night about the town, breaking windows, upsetting sedans, beating quiet men, and offering rude caresses to pretty women. Several dynasties of these tyrants had, since the Restoration, domineered over the streets. The Muns and Tityre Tus had given place to the Hectors, and the Hectors had been recently succeeded by the Scourers. At a later period arose the Nicker, the Hawcubite, and the yet more dreaded name of Mohawk.[80]

The machinery for keeping the peace was utterly contemptible. There was an Act of Common Council which provided that more than a thousand watchmen

79. Lettres sur les Anglois, written early in the reign of William the Third; Swift's City Shower; Gay's Trivia. Johnson used to relate a curious conversation which he had with his mother about giving and taking the wall.

80. Oldham's Imitation of the 3rd Satire of Juvenal, 1682; Shadwell's Scourers, 1690. Many other authorities will readily occur to all who are acquainted with the popular literature of that and the succeeding generation. It may be suspected that some of the Tityre Tus, like good Cavaliers, broke Milton's windows shortly after the Restoration. I am confident that he was thinking of those pests of London when he dictated the noble lines: —

'And in luxurious cities, when the noise
Of riot ascends above their loftiest towers,
And injury and outrage, and when night
Darkens the streets, then wander forth the sons
Of Belial, flown with insolence and wine.'

should be constantly on the alert in the city, from sunset to sunrise, and that every inhabitant should take his turn of duty. But this Act was negligently executed. Few of those who were summoned left their homes; and those few generally found it more agreeable to tipple in alehouses than to pace the streets.

It ought to be noticed that, in the last year of the reign of Charles the Second, began a great change in the police of London, a change which has perhaps added as much to the happiness of the body of the people as revolutions of much greater fame. An ingenious projector, named Edward Heming, obtained letters patent conveying to him, for a term of years, the exclusive right of lighting up London. He undertook, for a moderate consideration, to place a light before every tenth door, on moonless nights, from Michaelmas to Lady Day,[81] and from six to twelve of the clock. Those who now see the capital all the year round, from dusk to dawn, blazing with a splendour beside which the illuminations for La Hogue and Blenheim [82] would have looked pale, may perhaps smile to think of Heming's lanterns, which glimmered feebly before one house in ten during a small part of one night in three. But such was not the feeling of his contemporaries. His scheme was enthusiastically applauded, and furiously attacked. The friends of improvement extolled him as the greatest of all the benefactors of his city. What, they asked, were the boasted inventions of Archimedes, when compared with the achievement of the man who had turned the nocturnal shades into noon day? In spite of these eloquent eulogies the cause of darkness was not left undefended. There were fools in that age who opposed the introduction of what was called the new light as strenuously as fools in our age have opposed the introduction of vaccination and railroads, as strenuously as the fools of an age anterior to the dawn of history doubtless opposed the introduction of the plough and of alphabetical writing. Many years after the date of Heming's patent there were extensive districts in which no lamp was seen.

We may easily imagine what, in such times, must have been the state of the quarters of London which were peopled by the outcasts of society. Among those quarters one had attained a scandalous pre-eminence. On the confines of the City and the Temple had been founded, in the thirteenth century, a House of Carmelite Friars, distinguished by their white hoods. The precinct of this house had, before the Reformation, been a sanctuary for criminals, and still retained the privilege of protecting debtors from arrest. Insolvents consequently were to be found in every dwelling, from cellar to garret. Of these a large proportion were knaves and libertines, and were followed to their asylum by women more abandoned than themselves. The civil power was unable to keep order in a district swarming with such inhabitants; and thus Whitefriars became the favourite resort of all who wished to be emancipated from the restraints of the law. Though the immunities legally belonging to the place extended only to cases of debt, cheats, false witnesses, forgers, and highwaymen found refuge there. For amidst a rabble so desperate no peace officer's life was in safety. At the cry of 'Rescue,' bullies with swords and cudgels, and termagant hags with spits and broomsticks, poured forth by hundreds; and the intruder was fortunate if he escaped back into Fleet Street, hustled, stripped, and jumped upon. Even the warrant of the Chief Justice of England could not be executed without the help of a company of musketeers. Such relics of the barbarism of the darkest ages were to be found

81. [*i.e.* from September 29 to March 25. Lady Day was also formerly December 8 (Conception of the Virgin), September 8 (the Nativity), and August 15 (the Assumption).]

82. [La Hogue and Blenheim were great English victories over the French, in 1692 and 1704, respectively.]

within a short walk of the chambers where Somers [83] was studying history and law, of the chapel where Tillotson [84] was preaching, of the coffee house where Dryden was passing judgment on poems and plays, and of the hall where the Royal Society was examining the astronomical system of Isaac Newton.[85]

Each of the two cities which made up the capital of England had its own centre of attraction. In the metropolis of commerce the point of convergence was the Exchange; in the metropolis of fashion the Palace. But the Palace did not retain its influence so long as the Exchange. The Revolution completely altered the relations between the Court and the higher classes of society. It was by degrees discovered that the King, in his individual capacity, had very little to give: that coronets and garters, bishoprics and embassies, lordships of the Treasury and tellerships of the Exchequer, nay, even charges in the royal stud and bedchamber, were really bestowed, not by him, but by his advisers. Every ambitious and covetous man perceived that he would consult his own interest far better by acquiring the dominion of a Cornish borough, and by rendering good service to the ministry during a critical session, than by becoming the companion, or even the minion, of his prince. It was therefore in the antechambers, not of George the First and of George the Second, but of Walpole [86] and of Pelham,[87] that the daily crowd of courtiers was to be found. It is also to be remarked that the same Revolution, which made it impossible that our Kings should use the patronage of the state merely for the purpose of gratifying their personal predilections, gave us several Kings unfitted by their education and habits to be gracious and affable hosts. They had been born and bred on the Continent. They never felt themselves at home in our island. If they spoke our language, they spoke it inelegantly and with effort. Our national character they never fully understood. Our national manners they hardly attempted to acquire. The most important part of their duty they performed better than any ruler who had preceded them: for they governed strictly according to law: but they could not be the first gentlemen of the realm, the heads of polite society. If ever they unbent, it was in a very small circle where hardly an English face was to be seen; and they were never so happy as when they could escape for a summer to their native land. They had indeed their days of reception for our nobility and gentry; but the reception was mere matter of form, and became at last as solemn a ceremony as a funeral.

Not such was the court of Charles the Second. Whitehall, when he dwelt there, was the focus of political intrigue and of fashionable gaiety. Half the jobbing and half the flirting of the metropolis went on under his roof. Whoever could make himself agreeable to the prince, or could secure the good offices of the mistress, might hope to rise in the world without rendering any service to the government, without being even known by sight to any minister of state. This courtier got a frigate, and that a company; a third, the pardon of a rich offender; a fourth, a lease of crown land on easy terms. If the King notified his pleasure that a briefless lawyer should be made a judge, or that a libertine baronet should be made a peer, the gravest counsellors, after a little murmuring, submitted. Interest, therefore, drew a con-

stant press of suitors to the gates of the palace; and those gates always stood wide. The King kept open house every day, and all day long, for the good society of London, the extreme Whigs only excepted. Hardly any gentleman had any difficulty in making his way to the royal presence. The levee was exactly what the word imports. Some men of quality came every morning to stand round their master, to chat with him while his wig was combed and his cravat tied, and to accompany him in his early walk through the Park. All persons who had been properly introduced might, without any special invitation, go to see him dine, sup, dance, and play at hazard,[88] and might have the pleasure of hearing him tell stories, which indeed he told remarkably well, about his flight from Worcester,[89] and about the misery which he had endured when he was a state prisoner in the hands of the canting meddling preachers of Scotland. Bystanders whom His Majesty recognized often came in for a courteous word. This proved a far more successful kingcraft than any that his father or grandfather had practised. It was not easy for the most austere republican of the school of Marvel [90] to resist the fascination of so much goodhumour and affability: and many a veteran Cavalier, in whose heart the remembrance of unrequited sacrifices and services had been festering during twenty years, was compensated in one moment for wounds and sequestrations by his sovereign's kind nod, and 'God bless you, my old friend!'

Whitehall naturally became the chief staple of news. Whenever there was a rumour that anything important had happened or was about to happen, people hastened thither to obtain intelligence from the fountain head. The galleries presented the appearance of a modern club room at an anxious time. They were full of people enquiring whether the Dutch mail was in, what tidings the express from France had brought, whether John Sobiesky [91] had beaten the Turks, whether the Doge of Genoa was really at Paris. These were matters about which it was safe to talk aloud. But there were subjects concerning which information was asked and given in whispers. Had Halifax got the better of Rochester? Was there to be a Parliament? Was the Duke of York really going to Scotland? Had Monmouth really been summoned from the Hague? [92] Men tried to read the countenance of every minister as he went through the throng to and from the royal closet. All sorts of auguries were drawn from the tone in which His Majesty spoke to the Lord President, or from the laugh with which His Majesty honoured a jest of the Lord Privy Seal; and in a few hours the hopes and fears inspired by such slight indications had spread to all the coffee houses from Saint James's to the Tower.[93]

The coffee house must not be dismissed with a cursory mention. It might indeed at that time have been not improperly called a most important political institution. No Parliament had sat for years. The municipal council of the City had ceased to speak the sense of the citizens. Public meetings, harangues, resolutions, and the rest of the modern machinery of agitation had not yet come into fashion. Nothing resembling the modern newspa-

93. The sources from which I have drawn my information about the state of the Court are too numerous to recapitulate. Among them are the Despatches of Barillon, Van Citters, Ronquillo, and Adda, the Travels of the Grand Duke Cosmo, the works of Roger North, the Diaries of Pepys, Evelyn, and Teonge, and the Memoirs of Grammont and Reresby.

per existed. In such circumstances the coffee houses were the chief organs through which the public opinion of the metropolis vented itself.

The first of these establishments had been set up, in the time of the Commonwealth, by a Turkey merchant, who had acquired among the Mahometans a taste for their favourite beverage. The convenience of being able to make appointments in any part of the town, and of being able to pass evenings socially at a very small charge, was so great that the fashion spread fast. Every man of the upper or middle class went daily to his coffee house to learn the news and to discuss it. Every coffee house had one or more orators to whose eloquence the crowd listened with admiration, and who soon became, what the journalists of our time have been called, a fourth Estate of the realm. The Court had long seen with uneasiness the growth of this new power in the state. An attempt had been made, during Danby's administration,[94] to close the coffee houses. But men of all parties missed their usual places of resort so much that there was an universal outcry. The government did not venture, in opposition to a feeling so strong and general, to enforce a regulation of which the legality might well be questioned. Since that time ten years had elapsed, and during those years the number and influence of the coffee houses had been constantly increasing. Foreigners remarked that the coffee house was that which especially distinguished London from all other cities; that the coffee house was the Londoner's home, and that those who wished to find a gentleman commonly asked, not whether he lived in Fleet Street or Chancery Lane, but whether he frequented the Grecian or the Rainbow. Nobody was excluded from these places who laid down his penny at the bar. Yet every rank and profession, and every shade of religious and political opinion, had its own head-quarters. There were houses near Saint James's Park where fops congregated, their heads and shoulders covered with black or flaxen wigs, not less ample than those which are now worn by the Chancellor and by the Speaker of the House of Commons. The wig came from Paris; and so did the rest of the fine gentleman's ornaments, his embroidered coat, his fringed gloves, and the tassel which upheld his pantaloons. The conversation was in that dialect which, long after it had ceased to be spoken in fashionable circles, continued, in the mouth of Lord Foppington, to excite the mirth of theatres.[95] The atmosphere was like that of a perfumer's shop. Tobacco in any other form than that of richly scented snuff was held in abomination. If any clown, ignorant of the usages of the house, called for a pipe, the sneers of the whole assembly and the short answers of the waiters soon convinced him that he had better go somewhere else. Nor, indeed, would he have had far to go. For, in general, the coffee rooms reeked with tobacco like a guardroom; and strangers sometimes expressed their surprise that so many people should leave their own firesides to sit in the midst of eternal fog and stench. Nowhere was the smoking more constant than at Will's. That celebrated house, situated between Covent Garden and Bow Street, was sacred to polite letters. There the talk was about poetical justice and the unities of place and time. There was a faction for Perrault[96] and the moderns, a

94. [Sir Thomas Osborne, Earl of Danby (1631–1712), was Lord Treasurer from 1673 to 1678 during the ascendancy of the Cavalier Parliament.]

95. The chief peculiarity of this dialect was that, in a large class of words, the O was pronounced like A. Thus Lord was pronounced like Lard. See Vanbrugh's Relapse. Lord Sunderland was a great master of this court tune, as Roger North calls it; and Titus Oates affected it in the hope of passing for a fine gentleman, Examen, 77. 254.

96. [Charles Perrault (1628–1703), French poet, critic, and member of the Academy, now rebered for his fairy tales, and for the dispute

faction for Boileau[97] and the ancients. One group debated whether Paradise Lost ought not to have been in rhyme. To another an envious poetaster demonstrated that Venice Preserved[98] ought to have been hooted from the stage. Under no roof was a greater variety of figures to be seen. There were Earls in stars and garters, clergymen in cassocks and bands, pert Templars,[99] sheepish lads from the Universities, translators and indexmakers in ragged coats of frieze. The great press was to get near the chair where John Dryden sate. In winter that chair was always in the warmest nook by the fire; in summer it stood in the balcony. To bow to the Laureate, and to hear his opinion of Racine's last tragedy or of Bossu's[100] treatise on epic poetry, was thought a privilege. A pinch from his snuff-box was an honour sufficient to turn the head of a young enthusiast. There were coffee houses where the first medical men might be consulted. Doctor John Radcliffe, who, in the year 1685, rose to the largest practice in London, came daily, at the hour when the Exchange was full, from his house in Bow Street, then a fashionable part of the capital, to Garraway's, and was to be found, surrounded by surgeons and apothecaries, at a particular table. There were Puritan coffee houses where no oath was heard, and where lankhaired men discussed election and reprobation through their noses; Jew coffee houses where dark-eyed money changers from Venice and from Amsterdam greeted each other; and Popish coffee houses where, as good Protestants believed, Jesuits planned, over their cups, another great fire, and cast silver bullets to shoot the King.[101]

These gregarious habits had no small share in forming the character of the Londoner of that age. He was, indeed, a different being from the rustic Englishman. There was not then the intercourse which now exists between the two classes. Only very great men were in the habit of dividing the year between town and country. Few esquires came to the capital thrice in their lives. Nor was it yet the practice of all citizens in easy circumstances to breathe the fresh air of the fields and woods during some weeks of every summer. A cockney, in a rural village, was stared at as much as if he had intruded into a Kraal of Hottentots. On the other hand, when the lord of a Lincolnshire or Shropshire manor appeared in Fleet Street, he was as easily distinguished from the resident population as a Turk or a Lascar.[102] His dress, his gait, his accent, the manner in which he gazed at the shops, stumbled into the gutters, ran against the porters, and stood under the waterspouts, marked him out as an excellent subject for the operations of swindlers and banterers. Bullies jostled him into the kennel.[103] Hackney coachmen splashed him from head to foot. Thieves explored with per-

over the ancients and moderns which arose from his poem on the *Siècle de Louis le Grand* (1687), in which he championed the modern writers.]

97. [Nicolas Boileau-Despréaux (1636–1711), French critic and poet, who championed the ancients, hotly contesting Perrault's position.]

98. [A tragedy in blank verse by Thomas Otway (1652–85), produced in 1682. With Betteron as Jaffier and Mrs. Barry as Belvidera, the play was very well received.]

fect security the huge pockets of his horseman's coat, while he stood entranced by the splendour of the Lord Mayor's show. Moneydroppers,[104] sore from the cart's tail,[105] introduced themselves to him, and appeared to him the most honest friendly gentlemen that he had ever seen. Painted women, the refuse of Lewkner Lane and Whetstone Park, passed themselves on him for countesses and maids of honour. If he asked his way to Saint James's, his informants sent him to Mile End. If he went into a shop, he was instantly discerned to be a fit purchaser of everything that nobody else would buy, of second-hand embroidery, copper rings, and watches that would not go. If he rambled into any fashionable coffee house, he became a mark for the insolent derision of fops and the grave waggery of Templars. Enraged and mortified, he soon returned to his mansion, and there, in the homage of his tenants and the conversation of his boon companions, found consolation for the vexations and humiliations which he had undergone. There he was once more a great man, and saw nothing above himself except when at the assizes[106] he took his seat on the bench near the Judge, or when at the muster of the militia he saluted the Lord Lieutenant.

The chief cause which made the fusion of the different elements of society so imperfect was the extreme difficulty which our ancestors found in passing from place to place. Of all inventions, the alphabet and the printing press alone excepted, those inventions which abridge distance have done most for the civilisation of our species. Every improvement of the means of locomotion benefits mankind morally and intellectually as well as materially, and not only facilitates the interchange of the various productions of nature and art, but tends to remove national and provincial antipathies, and to bind together all the branches of the great human family. In the seventeenth century the inhabitants of London were, for almost every practical purpose, farther from Reading than they now are from Edinburgh, and farther from Edinburgh than they now are from Vienna.

The subjects of Charles the Second were not, it is true, quite unacquainted with that principle which has, in our own time, produced an unprecedented revolution in human affairs, which has enabled navies to advance in face of wind and tide, and brigades of troops, attended by all their baggage and artillery, to traverse kingdoms at a pace equal to that of the fleetest race horse. The Marquess of Worcester had recently observed the expansive power of moisture rarefied by heat. After many experiments he had succeeded in constructing a rude steam engine, which he called a fire water work, and which he pronounced to be an admirable and most forcible instrument of propulsion. But the Marquess was suspected to be a madman, and known to be a Papist. His inventions, therefore, found no favourable reception. His fire water work might, perhaps, furnish matter for conversation at a meeting of the Royal Society, but was not applied to any practical purpose. There were no railways, except a few made of timber, on which coals were carried from the mouths of the Northumbrian pits to the banks of the Tyne. There was very little internal communication by water. A few attempts had been made to deepen and embank the natural streams, but with slender success. Hardly a single navigable canal had been even projected. The English of that day were in the habit of talking with mingled admiration and despair of the immense trench by which Lewis the Fourteenth had made a junction between the Atlantic and the Mediterranean. They little thought that their country would, in the course of a

104. [Confidence men who offered their dupes money which they pretended to have found.]

105. [Allusion to the old practice of tying a public offender to the tail of a cart and whipping him as he was dragged along.]

106. [The periodical sessions of the judges of the superior courts in the counties of England.]

few generations, be intersected, at the cost of private adventurers, by artificial rivers making up more than four times the length of the Thames, the Severn, and the Trent together.

It was by the highways that both travellers and goods generally passed from place to place; and those highways appear to have been far worse than might have been expected from the degree of wealth and civilisation which the nation had even then attained. On the best lines of communication the ruts were deep, the descents precipitous, and the way often such as it was hardly possible to distinguish, in the dusk, from the unenclosed heath and fen which lay on both sides. Ralph Thoresby, the antiquary, was in danger of losing his way on the great North road, between Barnby Moor and Tuxford, and actually lost his way between Doncaster and York. Pepys and his wife, travelling in their own coach, lost their way between Newbury and Reading. In the course of the same tour they lost their way near Salisbury, and were in danger of having to pass the night on the plain. It was only in fine weather that the whole breadth of the road was available for wheeled vehicles. Often the mud lay deep on the right and the left; and only a narrow track of firm ground rose above the quagmire. At such times obstructions and quarrels were frequent, and the path was sometimes blocked up during a long time by carriers, neither of whom would break the way. It happened, almost every day, that coaches stuck fast, until a team of cattle could be procured from some neighbouring farm, to tug them out of the slough. But in bad seasons the traveller had to encounter inconveniences still more serious. Thoresby, who was in the habit of travelling between Leeds and the capital, has recorded, in his Diary, such a series of perils and disasters as might suffice for a journey to the Frozen Ocean or to the Desert of Sahara. On one occasion he learned that the floods were out between Ware and London, that passengers had to swim for their lives, and that a higgler[107] had perished in the attempt to cross. In consequence of these tidings he turned out of the high road, and was conducted across some meadows, where it was necessary for him to ride to the saddle skirts in water. In the course of another journey he narrowly escaped being swept away by an inundation of the Trent. He was afterwards detained at Stamford four days, on account of the state of the roads, and then ventured to proceed only because fourteen members of the House of Commons, who were going up in a body to Parliament with guides and numerous attendants, took him into their company. On the roads of Derbyshire, travellers were in constant fear for their necks, and were frequently compelled to alight and lead their beasts. The great route through Wales to Holyhead was in such a state that, in 1685, a viceroy, going to Ireland, was five hours in travelling fourteen miles, from Saint Asaph to Conway. Between Conway and Beaumaris he was forced to walk great part of the way; and his lady was carried in a litter. His coach was, with much difficulty, and by the help of many hands, brought after him entire. In general, carriages were taken to pieces at Conway, and borne, on the shoulders of stout Welsh peasants, to the Menai Straits. In some parts of Kent and Sussex, none but the strongest horses could, in winter, get through the bog, in which, at every step, they sank deep. The markets were often inaccessible during several months. It is said that the fruits of the earth were sometimes suffered to rot in one place, while in another place, distant only a few miles, the supply fell far short of the demand. The wheeled carriages were, in this district, generally pulled by oxen. When Prince George of Denmark visited the stately mansion of Petworth in wet weather, he was six hours in going nine miles; and it was necessary that a body of

107. [Peddler.]

sturdy hinds should be on each side of his coach, in order to prop it. Of the carriages which conveyed his retinue several were upset and injured. A letter from one of the party has been preserved, in which the unfortunate courtier complains that, during fourteen hours, he never once alighted, except when his coach was overturned or stuck fast in the mud.

One chief cause of the badness of the roads seems to have been the defective state of the law. Every parish was bound to repair the highways which passed through it. The peasantry were forced to give their gratuitous labour six days in the year. If this was not sufficient, hired labour was employed, and the expense was met by a parochial rate. That a route connecting two great towns, which have a large and thriving trade with each other, should be maintained at the cost of the rural population scattered between them is obviously unjust; and this injustice was peculiarly glaring in the case of the great North road, which traversed very poor and thinly inhabited districts, and joined very rich and populous districts. Indeed it was not in the power of the parishes of Huntingdonshire to mend a highway worn by the constant traffic between the West Riding of Yorkshire and London. Soon after the Restoration this grievance attracted the notice of Parliament; and an act, the first of our many turnpike acts, was passed, imposing a small toll on travellers and goods, for the purpose of keeping some parts of this important line of communication in good repair. This innovation, however, excited many murmurs; and the other great avenues to the capital were long left under the old system. A change was at length effected, but not without much difficulty. For unjust and absurd taxation to which men are accustomed is often borne far more willingly than the most reasonable impost which is new. It was not till many toll bars had been violently pulled down, till the troops had in many districts been forced to act against the people, and till much blood had been shed, that a good system was introduced. By slow degrees reason triumphed over prejudice; and our island is now crossed in every direction by near thirty thousand miles of turnpike road.

On the best highways heavy articles were, in the time of Charles the Second, generally conveyed from place to place by stage waggons. In the straw of these vehicles nestled a crowd of passengers, who could not afford to travel by coach or on horseback, and who were prevented by infirmity, or by the weight of their luggage, from going on foot. The expense of transmitting heavy goods in this way was enormous. From London to Birmingham the charge was seven pounds a ton; from London to Exeter twelve pounds a ton. This was about fifteen pence a ton for every mile, more by a third than was afterwards charged on turnpike roads, and fifteen times what is now demanded by railway companies. The cost of conveyance amounted to a prohibitory tax on many useful articles. Coal in particular was never seen except in the districts where it was produced, or in the districts to which it could be carried by sea, and was indeed always known in the south of England by the name of sea coal.

On byroads, and generally throughout the country north of York and west of Exeter, goods were carried by long trains of packhorses. These strong and patient beasts, the breed of which is now extinct, were attended by a class of men who seem to have borne much resemblance to the Spanish muleteers. A traveller of humble condition often found it convenient to perform a journey mounted on a packsaddle between two baskets, under the care of these hardy guides. The expense of this mode of conveyance was small. But the caravan moved at a foot's pace; and in winter the cold was often insupportable.

The rich commonly travelled in their own carriages, with at least four horses. Cotton, the facetious poet, attempted to

go from London to the Peak with a single pair, but found at Saint Albans that the journey would be insupportably tedious, and altered his plan. A coach and six is in our time never seen, except as part of some pageant. The frequent mention therefore of such equipages in old books is likely to mislead us. We attribute to magnificence what was really the effect of a very disagreeable necessity. People, in the time of Charles the Second, travelled with six horses, because with a smaller number there was great danger of sticking fast in the mire. Nor were even six horses always sufficient. Vanbrugh, in the succeeding generation, described with great humour the way in which a country gentleman, newly chosen a member of Parliament, went up to London. On that occasion all the exertions of six beasts, two of which had been taken from the plough, could not save the family coach from being embedded in a quagmire.

Public carriages had recently been much improved. During the years which immediately followed the Restoration, a diligence ran between London and Oxford in two days. The passengers slept at Beaconsfield. At length, in the spring of 1669, a great and daring innovation was attempted. It was anounced that a vehicle, described as the Flying Coach, would perform the whole journey between sunrise and sunset. This spirited undertaking was solemnly considered and sanctioned by the Heads of the University, and appears to have excited the same sort of interest which is excited in our own time by the opening of a new railway. The Vicechancellor, by a notice affixed in all public places, prescribed the hour and place of departure. The success of the experiment was complete. At six in the morning the carriage began to move from before the ancient front of All Souls College; and at seven in the evening the adventurous gentlemen who had run the first risk were safely deposited at their inn in London. The emulation of the sister University was moved; and soon a diligence was set up which in one day carried passengers from Cambridge to the capital. At the close of the reign of Charles the Second, flying carriages ran thrice a week from London to the chief towns. But no stage coach, indeed no stage waggon, appears to have proceeded further north than York, or further west than Exeter. The ordinary day's journey of a flying coach was about fifty miles in the summer; but in winter, when the ways were bad and the nights long, little more than thirty. The Chester coach, the York coach, and the Exeter coach generally reached London in four days during the fine season, but at Christmas not till the sixth day. The passengers, six in number, were all seated in the carriage. For accidents were so frequent that it would have been most perilous to mount the roof. The ordinary fare was about twopence halfpenny [108] a mile in summer, and somewhat more in winter.

This mode of travelling, which by Englishmen of the present day would be regarded as insufferably slow, seemed to our ancestors wonderfully and indeed alarmingly rapid. In a work published a few months before the death of Charles the Second, the flying coaches are extolled as far superior to any similar vehicles ever known in the world. Their velocity is the subject of special commendation, and is triumphantly contrasted with the sluggish pace of the continental posts. But with boasts like these was mingled the sound of complaint and invective. The interests of large classes had been unfavourably affected by the establishment of the new diligences; and, as usual, many persons were, from mere stupidity and obstinacy, disposed to clamour against the innovation, simply because it was an innovation. It was vehemently argued that this mode of conveyance would be fatal to the breed of horses and to the noble art of horsemanship; that the Thames, which had long been an important nursery of seamen,

108. [About five cents.]

would cease to be the chief thoroughfare from London up to Windsor and down to Gravesend; that saddlers and spurriers would be ruined by hundreds; that numerous inns, at which mounted travellers had been in the habit of stopping, would be deserted, and would no longer pay any rent; that the new carriages were too hot in summer and too cold in winter; that the passengers were grievously annoyed by invalids and crying children; that the coach sometimes reached the inn so late that it was impossible to get supper, and sometimes started so early that it was impossible to get breakfast. On these grounds it was gravely recommended that no public coach should be permitted to have more than four horses, to start oftener than once a week, or to go more than thirty miles a day. It was hoped that, if this regulation were adopted, all except the sick and the lame would return to the old mode of travelling. Petitions embodying such opinions as these were presented to the King in council from several companies of the City of London, from several provincial towns, and from the justices of several counties. We smile at these things. It is not impossible that our descendants, when they read the history of the opposition offered by cupidity and prejudice to the improvements of the nineteenth century, may smile in their turn.[109]

In spite of the attractions of the flying coaches, it was still usual for men who enjoyed health and vigour, and who were not encumbered by much baggage, to perform long journeys on horseback. If the traveller wished to move expeditiously he rode post. Fresh saddle horses and guides were to be procured at convenient distances along all the great lines of road. The charge was threepence a mile for each horse, and fourpence a stage for the guide. In this manner, when the ways were good, it was possible to travel, for a considerable time, as rapidly as by any conveyance known in England, till vehicles were propelled by steam. There were as yet no post chaises; nor could those who rode in their own coaches ordinarily procure a change of horses. The King, however, and the great officers of state were able to command relays. Thus Charles commonly went in one day from Whitehall to Newmarket, a distance of about fifty-five miles through a level country; and this was thought by his subjects a proof of great activity. Evelyn performed the same journey in company with the Lord Treasurer Clifford. The coach was drawn by six horses, which were changed at Bishop Stortford and again at Chesterford. The travellers reached Newmarket at night. Such a mode of conveyance seems to have been considered as a rare luxury confined to princes and ministers.

Whatever might be the way in which a journey was performed, the travellers, unless they were numerous and well armed, ran considerable risk of being stopped and plundered. The mounted highwayman, a marauder known to our generation only from books, was to be found on every main road. The waste tracts which lay on the great routes near London were especially haunted by plunderers of this class. Hounslow Heath, on the great Western Road, and Finchley Common, on the great Northern Road, were perhaps the most celebrated of these spots. The Cambridge scholars trembled when they approached Epping Forest, even in broad daylight. Seamen who had just been paid off at Chatham were often compelled to deliver their purses on Gadshill, celebrated near a hundred years earlier by the greatest of poets as the scene of the depredations of Falstaff.[110] The public authorities seem to have been often at a loss how to deal with the plunderers.

109. John Cresset's Reasons for suppressing Stage Coaches, 1672. These reason were afterwards inserted in a tract, entitled 'The Grand Concern of England explained, 1673.' Cresset's attack on stage coaches called forth some answers which I have consulted.

110. [See *Henry IV, Part I*, II,ii.]

At one time it was announced in the Gazette,[111] that several persons, who were strongly suspected of being highwaymen, but against whom there was not sufficient evidence, would be paraded at Newgate in riding dresses: their horses would also be shown; and all gentlemen who had been robbed were invited to inspect this singular exhibition. On another occasion a pardon was publicly offered to a robber if he would give up some rough diamonds, of immense value, which he had taken when he stopped the Harwich mail. A short time after appeared another proclamation, warning the innkeepers that the eye of the government was upon them. Their criminal connivance, it was affirmed, enabled banditti to infest the roads with impunity. That these suspicions were not without foundation, is proved by the dying speeches of some penitent robbers of that age, who appear to have received from the innkeepers services much resembling those which Farquhar's Boniface rendered to Gibbet.[112]

It was necessary to the success and even to the safety of the highwayman that he should be a bold and skilful rider, and that his manners and appearance should be such as suited the master of a fine horse. He therefore held an aristocratical position in the community of thieves, appeared at fashionable coffee houses and gaming houses, and betted with men of quality on the race ground.[113] Sometimes, indeed, he was a man of good family and education. A romantic interest therefore attached, and perhaps still attaches, to the names of freebooters of this class. The vulgar eagerly drank in tales of their ferocity and audacity, of their occasional acts of generosity and good nature, of their amours, of their miraculous escapes, of their desperate struggles, and of their manly bearing at the bar and in the cart. Thus it was related of William Nevison, the great robber of Yorkshire, that he levied a quarterly tribute on all the northern drovers, and, in return, not only spared them himself, but protected them against all other thieves; that he demanded purses in the most courteous manner; that he gave largely to the poor what he had taken from the rich; that his life was once spared by the royal clemency, but that he again tempted his fate, and at length died, in 1685, on the gallows of York.[114] It was related how Claude Duval, the French page of the Duke of Richmond, took to the road, became captain of a formidable gang, and had the honour to be named first in a royal proclamation against notorious offenders; how at the head of his troop he stopped a lady's coach, in which there was a booty of four hundred pounds; how he took only one hundred, and suffered the fair owner to ransom the rest by dancing a coranto[115] with him on the heath; how his vivacious gallantry stole away the hearts of all women; how his dexterity at sword and pistol made him a terror to all men; how, at length, in the year 1670, he was seized when overcome by wine; how dames of high rank visited him in prison, and with tears interceded for his life; how the King would have granted a pardon, but for the interference of Judge Morton, the terror of highwaymen, who threatened to resign his office unless the law were carried into full effect; and how, after the execution, the corpse lay in state with all

113. *Aimwell.* Pray sir, han't I seen your face at Will's coffeehouse? *Gibbet.* Yes, sir, and at White's too. Beaux' Stratagem.

114. Gent's History of York. Another marauder of the same description, named Biss, was hanged at Salisbury in 1695. In a ballad which is in the Pepysian Library, he is represented as defending himself thus before the Judge:

> 'What say you now, my honoured Lord,
> What harm was there in this?
> Rich, wealthy misers were abhorred
> By brave, freehearted Biss.'

115. [Or courante, a dance with quick running steps; popular in the 17th century.]

the pomp of scutcheons, wax lights, black hangings and mutes, till the same cruel Judge, who had intercepted the mercy of the crown, sent officers to disturb the obsequies. In these anecdotes there is doubtless a large mixture of fable; but they are not on that account unworthy of being recorded; for it is both an authentic and an important fact that such tales, whether false or true, were heard by our ancestors with eagerness and faith.

All the various dangers by which the traveller was beset were greatly increased by darkness. He was therefore commonly desirous of having the shelter of a roof during the night; and such shelter it was not difficult to obtain. From a very early period the inns of England had been renowned. Our first great poet had described the excellent accommodation which they afforded to the pilgrims of the fourteenth century. Nine and twenty persons, with their horses, found room in the wide chambers and stables of the Tabard in Southwark. The food was of the best, and the wines such as drew the company on to drink largely. Two hundred years later, under the reign of Elizabeth, William Harrison gave a lively description of the plenty and comfort of the great hostelries. The Continent of Europe, he said, could show nothing like them. There were some in which two or three hundred people, with their horses, could without difficulty be lodged and fed. The bedding, the tapestry, above all, the abundance of clean and fine linen was matter of wonder. Valuable plate was often set on the tables. Nay, there were signs which had cost thirty or forty pounds. In the seventeenth century England abounded with excellent inns of every rank. The traveller sometimes, in a small village, lighted on a public house such as Walton [116] has described, where the brick floor was swept clean, where the walls were stuck round with ballads, where the sheets smelt of lavender, and where a blazing fire, a cup of good ale, and a dish of trouts fresh from the neighbouring brook, were to be procured at small charge. At the larger houses of entertainment were to be found beds hung with silk, choice cookery, and claret equal to the best which was drunk in London.[117] The innkeepers too, it was said, were not like other innkeepers. On the Continent the landlord was the tyrant of those who crossed the threshold. In England he was a servant. Never was an Englishman more at home than when he took his ease in his inn. Even men of fortune, who might in their own mansions have enjoyed every luxury, were often in the habit of passing their evenings in the parlour of some neighbouring house of public entertainment. They seem to have thought that comfort and freedom could in no other place be enjoyed in equal perfection. This feeling continued during many generations to be a national peculiarity. The liberty and jollity of inns long furnished matter to our novelists and dramatists. Johnson declared that a tavern chair was the throne of human felicity; and Shenstone gently complained that no private roof, however friendly, gave the wanderer so warm a welcome as that which was to be found at an inn.

Many conveniences, which were unknown at Hampton Court and Whitehall in the seventeenth century are in all modern hotels. Yet on the whole it is certain that the improvement of our houses of public entertainment has by no means kept pace with the improvement of our roads and of our conveyances. Nor is this strange; for it is evident that, all other circumstances being supposed equal, the inns will be best where the means of locomotion are worst. The quicker the rate

116. [See Izaak Walton (1593–1683), *The Compleat Angler*, Chap.v.]

117. See the prologue to the Canterbury Tales, Harrison's Historical Description of the Island of Great Britain, and Pepys's account of his tour in the summer of 1668. The excellence of the English inns is noticed in the Travels of the Grand Duke Cosmo.

of travelling, the less important is it that there should be numerous agreeable resting places for the traveller. A hundred and sixty years ago a person who came up to the capital from a remote county generally required, by the way, twelve or fifteen meals, and lodging for five or six nights. If he were a great man, he expected the meals and lodging to be comfortable, and even luxurious. At present we fly from York or Exeter to London by the light of a single winter's day. At present, therefore, a traveller seldom interrupts his journey merely for the sake of rest and refreshment. The consequence is that hundreds of excellent inns have fallen into utter decay. In a short time no good houses of that description will be found, except at places where strangers are likely to be detained by business or pleasure.

The mode in which correspondence was carried on between distant places may excite the scorn of the present generation; yet it was such as might have moved the admiration and envy of the polished nations of antiquity, or of the contemporaries of Raleigh and Cecil. A rude and imperfect establishment of posts for the conveyance of letters had been set up by Charles the First, and had been swept away by the civil war. Under the Commonwealth the design was resumed. At the Restoration the proceeds of the Post Office, after all expenses had been paid, were settled on the Duke of York. On most lines of road the mails went out and came in only on the alternate days. In Cornwall, in the fens of Lincolnshire, and among the hills and lakes of Cumberland, letters were received only once a week. During a royal progress a daily post was despatched from the capital to the place where the court sojourned. There was also daily communication between London and the Downs; and the same privilege was sometimes extended to Tunbridge Wells and Bath at the seasons when those places were crowded by the great. The bags were carried on horseback day and night at the rate of about five miles an hour.

The revenue of this establishment was not derived solely from the charge for the transmission of letters. The Post Office alone was entitled to furnish post horses; and, from the care with which this monopoly was guarded, we may infer that it was found profitable. If, indeed, a traveller had waited half an hour without being supplied, he might hire a horse wherever he could.

To facilitate correspondence between one part of London and another was not originally one of the objects of the Post Office. But, in the reign of Charles the Second, an enterprising citizen of London, William Dockwray, set up, at great expense, a penny post, which delivered letters and parcels six or eight times a day in the busy and crowded streets near the Exchange, and four times a day in the outskirts of the capital. This improvement was, as usual, strenuously resisted. The porters complained that their interests were attacked, and tore down the placards in which the scheme was announced to the public. The excitement caused by Godfrey's death,[118] and by the discovery of Coleman's papers, was then at the height.[119] A cry was therefore raised that the penny post was a Popish contrivance The great Doctor Oates,[120] it was affirmed, had hinted a suspicion that the Jesuits were at the bottom of the scheme.

118. [Sir Edmund Berry Godfrey (1621–78), Justice of the Peace for Westminster, received the first depositions of Titus Oates, and was found dead on Primrose Hill a month later, believed murdered by Roman Catholics.]

119. [Edward Coleman (d.1678), conspirator who aided English Catholics, was accused by Titus Oates; his papers were seized on September 29, and he was executed on December 3, 1678.]

120. [Titus Oates (1649–1705) had no academical degree; he was the fabricator of the 'popish plot,' whereby Charles II was to be killed and the country administered by the Jesuits; as a result of his allegations, about thirty-five men were judicially murdered.]

and that the bags, if examined, would be found full of treason. The utility of the enterprise was, however, so great and obvious that all opposition proved fruitless. As soon as it became clear that the speculation would be lucrative, the Duke of York complained of it as an infraction of his monopoly; and the courts of law decided in his favour.

The revenue of the Post Office was from the first constantly increasing. In the year of the Restoration a committee of the House of Commons, after strict enquiry, had estimated the net receipt at about twenty thousand pounds. At the close of the reign of Charles the Second, the net receipt was little short of fifty thousand pounds; and this was then thought a stupendous sum. The gross receipt was about seventy thousand pounds. The charge for conveying a single letter was twopence for eighty miles, and threepence for a longer distance. The postage increased in proportion to the weight of the packet. At present a single letter is carried to the extremity of Scotland or of Ireland for a penny; and the monopoly of post horses has long ceased to exist. Yet the gross annual receipts of the department amount to more than eighteen hundred thousand pounds, and the net receipts to more than seven hundred thousand pounds. It is, therefore, scarcely possible to doubt that the number of letters now conveyed by mail is seventy times the number which was so conveyed at the time of the accession of James the Second.[121]

No part of the load which the old mails carried out was more important than the newsletters. In 1685 nothing like the London daily paper of our time existed, or could exist. Neither the necessary capital nor the necessary skill was to be found. Freedom too was wanting, a want as fatal as that of either capital or skill. The press was not indeed at that moment under a general censorship. The licensing act, which had been passed soon after the Restoration, had expired in 1679. Any person might therefore print, at his own risk, a history, a sermon, or a poem, without the previous approbation of any officer; but the Judges were unanimously of opinion that this liberty did not extend to Gazettes,[122] and that, by the common law of England, no man, not authorised by the crown, had a right to publish political news. While the Whig party was still formidable, the government thought it expedient occasionally to connive at the violation of this rule. During the great battle of the Exclusion Bill,[123] many newspapers were suffered to appear, the Protestant Intelligence, the Current Intelligence, the Domestic Intelligence, the True News, the London Mercury.[124] None of these was published oftener than twice a week. None exceeded in size a single small leaf. The quantity of matter which one of them contained in a year was not more than is often found in two numbers of the Times. After the defeat of the Whigs it was no longer necessary for the King to be sparing in the use of that which all his Judges had pronounced to be his undoubted prerogative. At the close of his reign no newspaper was suffered to appear without his allowance: and his allowance was given exclusively to the London Gazette. The London Gazette came out only on Mondays and Thursdays. The contents generally were a royal proclamation, two or three Tory addresses, notices of two or three promotions, an account of a skirmish between the imperial troops and the Janissaries[125] on the Danube, a description of a highwayman, an announcement

121. I have left the text as it stood in 1848. In the year 1856 the gross receipt of the Post Office was more than 2,800,000*l.*; and the net receipt was about 1,200,000*l.* The number of letters conveyed by post was 478,000,000 (1857).

122. [The official announcements of governmental activities and of general public news.]

123. [See notes 25 and 56 of the present chapter.]

124. There is a very curious, and, I should think, unique collection of these papers in the British Museum.

125. [Turkish infantry.]

of a grand cockfight between two persons of honour, and an advertisement offering a reward for a strayed dog. The whole made up two pages of moderate size. Whatever was communicated respecting matters of the highest moment was communicated in the most meagre and formal style. Sometimes, indeed, when the government was disposed to gratify the public curiosity respecting an important transaction, a broadside was put forth giving fuller details than could be found in the Gazette: but neither the Gazette nor any supplementary broadside printed by authority ever contained any intelligence which it did not suit the purposes of the Court to publish. The most important parliamentary debates, the most important state trials, recorded in our history, were passed over in profound silence.[126] In the capital the coffee houses supplied in some measure the place of a journal. Thither the Londoners flocked, as the Athenians of old flocked to the market place, to hear whether there was any news. There men might learn how brutally a Whig had been treated the day before in Westminster Hall, what horrible accounts the letters from Edinburgh gave of the torturing of Covenanters, how grossly the Navy Board had cheated the crown in the victualling of the fleet, and what grave charges the Lord Privy Seal had brought against the Treasury in the matter of the hearth money.[127]

But people who lived at a distance from the great theatre of political contention could be kept regularly informed of what was passing there only by means of newsletters. To prepare such letters became a calling in London, as it now is among the natives of India. The newswriter rambled from coffee room to coffee room, collecting reports, squeezed himself into the Sessions House at the Old Bailey [128] if there was an interesting trial, nay, perhaps obtained admission to the gallery of Whitehall, and noticed how the King and Duke looked. In this way he gathered materials for weekly epistles destined to enlighten some county town or some bench of rustic magistrates. Such were the sources from which the inhabitants of the largest provincial cities, and the great body of the gentry and clergy, learned almost all that they knew of the history of their own time. We must suppose that at Cambridge there were as many persons curious to know what was passing in the world as at almost any place in the kingdom, out of London. Yet at Cambridge, during a great part of the reign of Charles the Second, the Doctors of Laws and the Masters of Arts had no regular supply of news except through the London Gazette. At length the services of one of the collectors of intelligence in the capital were employed. That was a memorable day on which the first newsletter from London was laid on the table of the only coffee room in Cambridge. At the seat of a man of fortune in the country the newsletter was impatiently expected. Within a week after it had arrived it had been thumbed by twenty families. It furnished the neighbouring squires with matter for talk over their October,[129] and the neighbouring rectors with topics for sharp sermons against Whiggery or Popery. Many of these curious journals might doubtless still be detected by a diligent search in the archives of old families. Some are to be found in our public libraries; and one series, which is not the least valuable part of the literary treas-

126. For example, there is not a word in the Gazette about the important parliamentary proceedings of November 1685, or about the trial and acquittal of the seven Bishops.

127. [A tax laid on hearths, each hearth (in all houses paying the church and poor rates) being taxed at two shillings. This tax, a great hardship on the poor, was abolished under William and Mary, in 1689.]

ures collected by Sir James Mackintosh, will be occasionally quoted in the course of this work.

It is scarcely necessary to say that there were then no provincial newspapers. Indeed, except in the capital and at the two Universities, there was scarcely a printer in the kingdom. The only press in England north of Trent appears to have been at York.[130]

It was not only by means of the London Gazette that the government undertook to furnish political instruction to the people. That journal contained a scanty supply of news without comment. Another journal, published under the patronage of the court, consisted of comment without news. This paper, called the Observator, was edited by an old Tory pamphleteer named Roger Lestrange. Lestrange was by no means deficient in readiness and shrewdness; and his diction, though coarse, and disfigured by a mean and flippant jargon which then passed for wit in the green room and the tavern, was not without keenness and vigour. But his nature, at once ferocious and ignoble, showed itself in every line that he penned. When the first Observators appeared there was some excuse for his acrimony. For the Whigs were then powerful; and he had to contend against numerous adversaries, whose unscrupulous violence might seem to justify unsparing retaliation. But in 1685 all opposition had been crushed. A generous spirit would have disdained to insult a party which could not reply, and to aggravate the misery of prisoners, of exiles, of bereaved families: but from the malice of Lestrange the grave was no hiding place, and the house of mourning no sanctuary. In the last month of the reign of Charles the Second, William Jenkyn, an aged dissenting pastor of great note, who had been cruelly persecuted for no crime but that of worshipping God according to the fashion generally followed throughout Protestant Europe, died of hardships and privations in Newgate. The outbreak of popular sympathy could not be repressed. The corpse was followed to the grave by a train of a hundred and fifty coaches. Even courtiers looked sad. Even the unthinking King showed some signs of concern. Lestrange alone set up a howl of savage exultation, laughed at the weak compassion of the Trimmers,[131] proclaimed that the blasphemous old impostor had met with a most righteous punishment, and vowed to wage war, not only to the death, but after death, with all the mock saints and martyrs. Such was the spirit of the paper which was at this time the oracle of the Tory party, and especially of the parochial clergy.

Literature which could be carried by the post bag then formed the greater part of the intellectual nutriment ruminated by the country divines and country justices. The difficulty and expense of conveying large packets from place to place was so great, that an extensive work was longer in making its way from Paternoster Row[132] to Devonshire or Lancashire than it now is in reaching Kentucky. How scantily a rural parsonage was then furnished, even with books the most necessary to a theologian, has already been remarked. The houses of the gentry were not more plentifully supplied. Few knights of the shire had libraries so good as may now perpetually be found in a servants' hall, or in the back parlour of a small shopkeeper. An esquire passed among his

130. Life of Thomas Gent. A complete list of all printing houses in 1724 will be found in Nichol's Literary Anecdotes of the eighteenth century. There had then been a great increase within a few years in the number of presses; and yet there were thirty-four counties in which there was no printer, one of these counties being Lancashire.

131. [Those who held a middle course between opposing political parties, sometimes for selfish purposes, sometimes in order to 'keep even the ship of state.']

neighbours for a great scholar, if Hudibras[133] and Baker's Chronicle,[134] Tarlton's Jests[135] and the Seven Champions of Christendom,[136] lay in his hall window among the fishing rods and fowling pieces. No circulating library, no book society, then existed even in the capital: but in the capital those students who could not afford to purchase largely had a resource. The shops of the great booksellers, near Saint Paul's Churchyard, were crowded every day and all day long with readers; and a known customer was often permitted to carry a volume home. In the country there was no such accommodation; and every man was under the necessity of buying whatever he wished to read.[137]

As to the lady of the manor and her daughters, their literary stores generally consisted of a prayer book and a receipt book. But in truth they lost little by living in rural seclusion. For, even in the highest ranks, and in those situations which afforded the greatest facilities for mental improvement, the English women of that generation were decidedly worse educated than they have been at any other time since the revival of learning. At an earlier period they had studied the masterpieces of ancient genius. In the present day they seldom bestow much attention on the dead languages; but they are familiar with the tongue of Pascal and Molière, with the tongue of Dante and Tasso, with the tongue of Goethe and Schiller; nor is there any purer or more graceful English than that which accomplished women now speak and write. But, during the latter part of the seventeenth century, the culture of the female mind seems to have been almost entirely neglected. If a damsel had the least smattering of literature she was regarded as a prodigy. Ladies highly born, highly bred, and naturally quick witted, were unable to write a line in their mother tongue without solecisms and faults of spelling such as a charity girl would now be ashamed to commit.[138]

The explanation may easily be found. Extravagant licentiousness, the natural effect of extravagant austerity, was now the mode; and licentiousness had produced its ordinary effect, the moral and intellectual degradation of women. To their personal beauty, it was the fashion to pay rude and impudent homage. But the admiration and desire which they inspired were seldom mingled with respect, with affection, or with any chivalrous sentiment. The qualities which fit them to be companions, advisers, confidential friends, rather repelled than attracted the libertines of Whitehall. In that court a maid of honour, who dressed in such a manner as to do full justice to a white bosom, who ogled

135. [Richard Tarlton (d.1588), actor, who attained immense popularity by his comic acting, improvisations, doggerels ('Tarltonizing'), etc.; possibly the original of Shakespeare's Yorick; many fictitious anecdotes connected with him were published, notably *Tarlton's Jests* (1592?–1611?), in three parts.]

136. [A romance by Richard Johnson (1573–1659?), printed about 1597; relating the legends of St.George of England and six other national champions of Christianity.]

137. Cotton seems, from his Angler, to have found room for his whole library in his hall window; and Cotton was a man of letters. Even when Franklin first visited London in 1724, circulating libraries were unknown there. The crowd at the booksellers' shops in Little Britain is mentioned by Roger North in his life of his brother John.

138. One instance will suffice. Queen Mary, the daughter of James, had excellent natural abilities, had been educated by a Bishop, was fond of history and poetry, and was regarded by very eminent men as a superior woman. There is, in the library at the Hague, a superb English Bible which was delivered to her when she was crowned in Westminster Abbey. In the titlepage are these words in her own hand, 'This book was given the King and I, at our crownation. Marie R.'

significantly, who danced voluptuously, who excelled in pert repartee, who was not ashamed to romp with Lords of the Bedchamber and Captains of the Guards, to sing sly verses with sly expression, or to put on a page's dress for a frolic, was more likely to be followed and admired, more likely to be honoured with royal attentions, more likely to win a rich and noble husband than Jane Grey [139] or Lucy Hutchinson [140] would have been. In such circumstances the standard of female attainments was necessarily low; and it was more dangerous to be above that standard than to be beneath it. Extreme ignorance and frivolity were thought less unbecoming in a lady than the slightest tincture of pedantry. Of the too celebrated women whose faces we still admire on the walls of Hampton Court, few indeed were in the habit of reading anything more valuable than acrostics, lampoons, and translations of the Clelia and the Grand Cyrus.[141]

The literary acquirements, even of the accomplished gentlemen of that generation, seem to have been somewhat less solid and profound than at an earlier or a later period. Greek learning, at least, did not flourish among us in the days of Charles the Second, as it had flourished before the civil war, or as it again flourished long after the Revolution. There were undoubtedly scholars to whom the whole Greek literature, from Homer to Photius,[142] was familiar: but such scholars were to be found almost exclusively among the clergy resident at the Universities, and even at the Universities were few, and were not fully appreciated. At Cambridge it was not thought by any means necessary that a divine should be able to read the Gospels in the original.[148] Nor was the standard at Oxford higher. When, in the reign of William the Third, Christ Church rose up as one man to defend the genuineness of the Epistles of Phalaris,[144] that great college, then considered as the first seat of philology in the kingdom, could not muster such a stock of Attic learning as is now possessed by several youths at every great public school. It may easily be supposed that a dead language, neglected at the Universities, was not much studied by men of the world. In a former age the poetry and eloquence of Greece had been the delight of Raleigh and Falkland. In a later age the poetry and eloquence of Greece were the delight of Pitt and Fox, of Windham and Grenville. But during the latter part of the seventeenth century there was in England scarcely one eminent statesman who could read with enjoyment a page of Sophocles or Plato.

Good Latin scholars were numerous. The language of Rome, indeed, had not altogether lost its imperial prerogatives, and was still, in many parts of Europe, almost indispensable to a traveller or a negotiator. To speak it well was therefore a much more common accomplishment than in our time; and neither Oxford nor Cambridge wanted poets who, on a great occasion, could lay at the foot of the

throne happy imitations of the verses in which Virgil and Ovid had celebrated the greatness of Augustus.

Yet even the Latin was giving way to a younger rival. France united at that time almost every species of ascendancy.[145] Her military glory was at the height. She had vanquished mighty coalitions. She had dictated treaties. She had subjugated great cities and provinces. She had forced the Castilian pride to yield her the precedence. She had summoned Italian princes to prostrate themselves at her footstool. Her authority was supreme in all matters of good breeding, from a duel to a minuet. She determined how a gentleman's coat must be cut, how long his peruke must be, whether his heels must be high or low, and whether the lace on his hat must be broad or narrow. In literature she gave law to the world. The fame of her great writers filled Europe. No other country could produce a tragic poet equal to Racine, a comic poet equal to Molière, a trifler so agreeable as La Fontaine, a rhetorician so skilful as Bossuet. The literary glory of Italy and of Spain had set; that of Germany had not yet dawned. The genius, therefore, of the eminent men who adorned Paris shone forth with a splendour which was set off to full advantage by contrast. France, indeed, had at that time an empire over mankind, such as even the Roman Republic never attained. For, when Rome was politically dominant, she was in arts and letters the humble pupil of Greece. France had, over the surrounding countries, at once the ascendancy which Rome had over Greece, and the ascendancy which Greece had over Rome. French was fast becoming the universal language, the language of fashionable society, the language of diplomacy. At several courts princes and nobles spoke it more accurately and politely than their mother tongue. In our island there was less of this servility than on the Continent. Neither our good nor our bad qualities were those of imitators. Yet even here homage was paid, awkwardly indeed and sullenly, to the literary supremacy of our neighbours. The melodious Tuscan,[146] so familiar to the gallants and ladies of the court of Elizabeth, sank into contempt. A gentleman who quoted Horace or Terence was considered in good company as a pompous pedant. But to garnish his conversation with scraps of French was the best proof which he could give of his parts and attainments.[147] New canons of criticism, new models of style came into fashion. The quaint ingenuity which had deformed the verses of Donne, and had been a blemish on those of Cowley, disappeared from our poetry. Our prose became less majestic, less artfully involved, less variously musical than that of an earlier age, but more lucid, more easy, and better fitted for controversy and narrative. In these changes it is impossible not to recognise the influence of French precept and of French example. Great masters of our language, in their most dignified compositions, affected to use French words, when English words, quite as expressive and sonorous, were at hand:[148] and from France was imported the tragedy in rhyme, an exotic which, in our soil, drooped, and speedily died.

It would have been well if our writers had also copied the decorum which their

145. [The rest of the paragraph describes the glories of the age of Louis XIV.]

146. [Macaulay alludes to Petrarch, though both Petrarch and Dante adopted the language of Tuscany for their literary productions.]

147. Butler, in a satire of great asperity, says,

> 'For, though to smatter words of Greek
> And Latin be the rhetorique
> Of pedants counted, and vainglorious,
> To smatter French is meritorious.'

148. The most offensive instance which I remember is in a poem on the coronation of Charles the Second by Dryden, who certainly could not plead poverty as an excuse for borrowing words from any foreign tongue: —

> 'Hither in summer evenings you repair
> To taste the fraicheur of the cooler air.'

great French contemporaries, with few exceptions, preserved; for the profligacy of the English plays, satires, songs, and novels of that age is a deep blot on our national fame. The evil may easily be traced to its source. The wits and the Puritans had never been on friendly terms. There was no sympathy between the two classes. They looked on the whole system of human life from different points and in different lights. The earnest of each was the jest of the other. The pleasures of each were the torments of the other. To the stern precisian even the innocent sport of the fancy seemed a crime. To light and festive natures the solemnity of the zealous brethren furnished copious matter of ridicule. From the Reformation to the civil war, almost every writer, gifted with a fine sense of the ludicrous, had taken some opportunity of assailing the straight-haired, snuffling, whining saints, who christened their children out of the Book of Nehemiah, who groaned in spirit at the sight of Jack in the Green,[149] and who thought it impious to taste plum porridge on Christmas day. At length a time came when the laughers began to look grave in their turn. The rigid, ungainly zealots, after having furnished much good sport during two generations, rose up in arms, conquered, ruled, and, grimly smiling, trod down under their feet the whole crowd of mockers. The wounds inflicted by gay and petulant malice were retaliated with the gloomy and implacable malice peculiar to bigots who mistake their own rancour for virtue. The theatres were closed.[150] The players were flogged. The press was put under the guardianship of austere licensers. The Muses were banished from their own favourite haunts, Cambridge and Oxford. Cowley, Crashaw, and Cleveland were ejected from their fellowships.[151] The young candidate for academical honours was no longer required to write Ovidian epistles or Virgilian pastorals, but was strictly interrogated by a synod of lowering Supralapsarians[152] as to the day and hour when he experienced the new birth. Such a system was of course fruitful of hypocrites. Under sober clothing and under visages composed to the expression of austerity lay hid during several years the intense desire of license and of revenge. At length that desire was gratified. The Restoration emancipated thousands of minds from a yoke which had become insupportable. The old fight recommenced, but with an animosity altogether new. It was now not a sportive combat, but a war to the death. The Roundhead had no better quarter to expect from those whom he had persecuted than a cruel slavedriver can expect from insurgent slaves still bearing the marks of his collars and his scourges.

The war between wit and Puritanism soon became a war between wit and morality. The hostility excited by a grotesque caricature of virtue did not spare virtue herself. Whatever the canting Roundhead had regarded with reverence was insulted. Whatever he had proscribed was favoured. Because he had been scrupulous about trifles, all scruples were treated with derision. Because he had covered his failings with the mask of devotion, men were encouraged to obtrude

149. [A man or boy enclosed in a framework covered with leaves and boughs, a prominent character in the May-day games.]

150 [In 1642.]

151. [Abraham Cowley (1618–67) had a poetical reputation exceeding even that of Milton; Richard Crashaw (1613?–49) was a Roman Catholic 'religious lyrist'; John Cleveland (1613–58) was a Cavalier poet and satirist. All three were 'ejected from their fellowships' because of their sympathies with the Royalist cause.]

152. [Those Calvinists who believed that God's decree of election determined that man should fall, that the opportunity might be furnished of the redemption of a part of the race, the decree of salvation being conceived of as formed *before* the fall and not *after* the lapse, or fall.]

with Cynic impudence all their most scandalous vices on the public eye. Because he had punished illicit love with barbarous severity, virgin purity and conjugal fidelity were made a jest. To that sanctimonious jargon which was his Shibboleth, was opposed another jargon not less absurd and much more odious. As he never opened his mouth except in scriptural phrase, the new breed of wits and fine gentlemen never opened their mouths without uttering ribaldry of which a porter would now be ashamed, and without calling on their Maker to curse them, sink them, confound them, blast them, and damn them.

It is not strange, therefore, that our polite literature, when it revived with the revival of the old civil and ecclesiastical polity, should have been profoundly immoral. A few eminent men, who belonged to an earlier and better age, were exempt from the general contagion. The verse of Waller[153] still breathed the sentiments which had animated a more chivalrous generation. Cowley, distinguished as a loyalist and as a man of letters, raised his voice courageously against the immorality which disgraced both letters and loyalty. A mightier poet, tried at once by pain, danger, poverty, obloquy, and blindness, meditated, undisturbed by the obscene tumult which raged all around him, a song so sublime and so holy that it would not have misbecome the lips of those ethereal Virtues whom he saw, with that inner eye which no calamity could darken, flinging down on the jasper pavement their crowns of amaranth and gold. The vigorous and fertile genius of Butler, if it did not altogether escape the prevailing infection, took the disease in a mild form. But these were men whose minds had been trained in a world which had passed away. They gave place in no long time to a younger generation of wits; and of that generation, from Dryden down to Durfey,[154] the common characteristic was hardhearted, shameless, swaggering licentiousness, at once inelegant and inhuman. The influence of these writers was doubtless noxious, yet less noxious than it would have been had they been less depraved. The poison which they administered was so strong that it was, in no long time, rejected with nausea. None of them understood the dangerous art of associating images of unlawful pleasure with all that is endearing and ennobling. None of them was aware that a certain decorum is essential even to voluptuousness, that drapery may be more alluring than exposure, and that the imagination may be far more powerfully moved by delicate hints which impel it to exert itself, than by gross descriptions which it takes in passively.

The spirit of the Antipuritan reaction pervades almost the whole polite literature of the reign of Charles the Second. But the very quintessence of that spirit will be found in the comic drama. The playhouses, shut by the meddling fanatic in the day of his power, were again crowded. To their old attractions new and more powerful attractions had been added. Scenery, dresses, and decorations, such as would now be thought mean or absurd, but such as would have been esteemed incredibly magnificent by those who, early in the seventeenth century, sat on the filthy benches of the Hope,[155] or under the thatched roof of the Rose,[156] dazzled the eyes of the multitude. The fascination of sex was called in to aid the fascination of

153. [Edmund Waller (1606–87) was a precocious poet, writing probably as early as 1625. Like Dryden, he made his peace with successive political victors, with Cromwell, Charles II, etc.]

154. [Thomas D'Urfey (1653–1723), poet and dramatist, writer of burlesque poems and songs, etc.]

155. [The Hope Theater, on Bankside, Southwark, was built in 1613 by Henslowe; Ben Jonson's *Bartholomew Fair* was acted there in 1614.]

156. [The Rose Theater was opened in 1592, and was managed by Henslowe. Shakespeare acted there.]

art: and the young spectator saw, with emotions unknown to the contemporaries of Shakespeare and Jonson, tender and sprightly heroines personated by lovely women. From the day on which the theatres were reopened they became seminaries of vice; and the evil propagated itself. The profligacy of the representations soon drove away sober people. The frivolous and dissolute who remained required every year stronger and stronger stimulants. Thus the artists corrupted the spectators, and the spectators the artists, till the turpitude of the drama became such as must astonish all who are not aware that extreme relaxation is the natural effect of extreme restraint, and that an age of hypocrisy is, in the regular course of things, followed by an age of impudence.

Nothing is more characteristic of the times than the care with which the poets contrived to put all their loosest verses into the mouths of women. The compositions in which the greatest license was taken were the epilogues. They were almost always recited by favourite actresses; and nothing charmed the depraved audience so much as to hear lines grossly indecent repeated by a beautiful girl, who was supposed to have not yet lost her innocence.[157]

Our theatre was indebted in that age for many plots and characters to Spain, to France, and to the old English masters: but whatever our dramatists touched they tainted. In their imitations the houses of Calderón's[158] stately and high-spirited Castilian gentlemen became sties of vice, Shakespeare's Viola a procuress, Molière's Misanthrope a ravisher, Molière's Agnes an adulteress. Nothing could be so pure or so heroic but that it became foul and ignoble by transfusion through those foul and ignoble minds.

Such was the state of the drama; and the drama was the department of polite literature in which a poet had the best chance of obtaining a subsistence by his pen. The sale of books was so small that a man of the greatest name could hardly expect more than a pittance for the copyright of the best performance. There cannot be a stronger instance than the fate of Dryden's last production, the Fables. That volume was published when he was universally admitted to be the chief of living English poets. It contains about twelve thousand lines. The versification is admirable, the narratives and descriptions full of life. To this day Palamon and Arcite, Cymon and Iphigenia, Theodore and Honoria, are the delight both of critics and of schoolboys. The collection includes Alexander's Feast, the noblest ode in our language. For the copyright Dryden received two hundred and fifty pounds, less than in our days has sometimes been paid for two articles in a review. Nor does the bargain seem to have been a hard one. For the book went off slowly; and the second edition was not required till the author had been ten years in his grave. By writing for the theatre it was possible to earn a much larger sum with much less trouble. Southern made seven hundred pounds by one play. Otway was raised from beggary to temporary affluence by the success of his Don Carlos. Shadwell cleared a hundred and thirty pounds by a single representation of the Squire of Alsatia. The consequence was that every man who had to live by his wit wrote plays, whether he had any internal vocation to write plays or not. It was thus with Dryden. As a satirist he has rivalled Juvenal. As a didactic poet he perhaps might, with care and meditation, have rivalled Lucretius. Of lyric poets he is, if not the most sublime, the most brilliant and spirit-stirring. But nature, profuse to him of many rare gifts, had withheld from him the dramatic faculty. Nevertheless all the energies of his best years were wasted on dramatic composition. He had too much judgment not

157. Jeremy Collier has censured this odious practice with his usual force and keenness.

158. [Pedro de la Barca Calderón (1600–81), famous Spanish poet and playwright, much admired by Dryden.]

to be aware that in the power of exhibiting character by means of dialogue he was deficient. That deficiency he did his best to conceal, sometimes by surprising and amusing incidents, sometimes by stately declamation, sometimes by harmonious numbers, sometimes by ribaldry but too well suited to the taste of a profane and licentious pit. Yet he never obtained any theatrical success equal to that which rewarded the exertions of some men far inferior to him in general powers. He thought himself fortunate if he cleared a hundred guineas by a play; a scanty remuneration, yet apparently larger than he could have earned in any other way by the same quantity of labour.

The recompense which the wits of that age could obtain from the public was so small, that they were under the necessity of eking out their incomes by levying contributions on the great. Every rich and goodnatured lord was pestered by authors with a mendicancy so importunate, and a flattery so abject, as may in our time seem incredible. The patron to whom a work was inscribed was expected to reward the writer with a purse of gold. The fee paid for the dedication of a book was often much larger than the sum which any publisher would give for the copyright. Books were therefore frequently printed merely that they might be dedicated. This traffic in praise produced the effect which might have been expected. Adulation pushed to the verge, sometimes of nonsense, and sometimes of impiety, was not thought to disgrace a poet. Independence, veracity, self-respect, were things not required by the world from him. In truth, he was in morals something between a pander and a beggar.

To the other vices which degraded the literary character was added, towards the close of the reign of Charles the Second, the most savage intemperance of party spirit. The wits, as a class, had been impelled by their old hatred of Puritanism to take the side of the court, and had been found useful allies. Dryden, in particular, had done good service to the government. His Absalom and Achitophel, the greatest satire of modern times, had amazed the town, had made its way with unprecedented rapidity even into rural districts, and had, wherever it appeared, bitterly annoyed the Exclusionists, and raised the courage of the Tories. But we must not, in the admiration which we naturally feel for noble diction and versification, forget the great distinctions of good and evil. The spirit by which Dryden and several of his compeers were at this time animated against the Whigs deserves to be called fiendish. The servile Judges and Sheriffs of those evil days could not shed blood so fast as the poets cried out for it. Calls for more victims, hideous jests on hanging, bitter taunts on those who, having stood by the King in the hour of danger, now advised him to deal mercifully and generously by his vanquished enemies, were publicly recited on the stage, and, that nothing might be wanting to the guilt and the shame, were recited by women, who, having long been taught to discard all modesty, were now taught to discard all compassion.

It is a remarkable fact that, while the lighter literature of England was thus becoming a nuisance and a national disgrace, the English genius was effecting in science a revolution which will, to the end of time, be reckoned among the highest achievements of the human intellect. Bacon had sown the good seed in a sluggish soil and an ungenial season. He had not expected an early crop, and in his last testament had solemnly bequeathed his fame to the next age. During a whole generation his philosophy had, amidst tumults, wars, and proscriptions, been slowly ripening in a few well constituted minds. While factions were struggling for dominion over each other, a small body of sages had turned away with benevolent disdain from the conflict, and had devoted themselves to the nobler work of extend-

ing the dominion of man over matter. As soon as tranquillity was restored, these teachers easily found attentive audience. For the discipline through which the nation had passed had brought the public mind to a temper well fitted for the reception of the Verulamian [159] doctrine. The civil troubles had stimulated the faculties of the educated classes, and had called forth a restless activity and an insatiable curiosity, such as had not before been known among us. Yet the effect of those troubles was that schemes of political and religious reform were generally regarded with suspicion and contempt. During twenty years the chief employment of busy and ingenious men had been to frame constitutions with first magistrates, without first magistrates, with hereditary senates, with senates appointed by lot, with annual senates, with perpetual senates. In these plans nothing was omitted. All the detail, all the nomenclature, all the ceremonial of the imaginary government was fully set forth. Polemarchs and Phylarchs, Tribes and Galaxies, the Lord Archon and the Lord Strategus. Which ballot boxes were to be green and which red, which balls were to be of gold and which of silver, which magistrates were to wear hats and which black velvet caps with peaks, how the mace was to be carried and when the heralds were to uncover, these, and a hundred more such trifles, were gravely considered and arranged by men of no common capacity and learning. But the time for these visions had gone by; and, if any steadfast republican still continued to amuse himself with them, fear of public derision and of a criminal information generally induced him to keep his fancies to himself. It was now unpopular and unsafe to mutter a word against the fundamental laws of the monarchy: but daring and ingenious men might indemnify themselves by treating with disdain what had lately been considered as the fundamental laws of nature. The torrent which had been dammed up in one channel rushed violently into another. The revolutionary spirit, ceasing to operate in politics, began to exert itself with unprecedented vigour and hardihood in every department of physics. The year 1660, the era of the restoration of the old constitution, is also the era from which dates the ascendancy of the new philosophy. In that year the Royal Society, destined to be a chief agent in a long series of glorious and salutary reforms, began to exist. In a few months experimental science became all the mode. The transfusion of blood, the ponderation of air, the fixation of mercury, succeeded to that place in the public mind which had been lately occupied by the controversies of the Rota.[160] Dreams of perfect forms of government made way for dreams of wings with which men were to fly from the Tower to the Abbey, and of double-keeled ships which were never to founder in the fiercest storm. All classes were hurried along by the prevailing sentiment. Cavalier and Roundhead, Churchman and Puritan, were for once allied. Divines, jurists, statesmen, nobles, princes, swelled the triumph of the Baconian philosophy. Poets sang with emulous fervour the approach of the golden age. Cowley, in lines weighty with thought and resplendent with wit, urged the chosen seed to take possession of the promised land flowing with milk and honey, that land which their great deliverer and lawgiver had seen, as from the summit of Pisgah, but had not been permitted to enter.[161] Dryden, with more zeal than knowledge, joined his voice to the general acclamation, and foretold things which neither he nor anybody else understood. The Royal Society, he predicted, would soon lead us to the extreme verge of the globe, and there

delight us with a better view of the moon.[162] Two able and aspiring prelates, Ward, Bishop of Salisbury, and Wilkins, Bishop of Chester, were conspicuous among the leaders of the movement. Its history was eloquently written by a younger divine, who was rising to high distinction in his profession, Thomas Sprat, afterwards Bishop of Rochester. Both Chief Justice Hale and Lord Keeper Guildford stole some hours from the business of their courts to write on hydrostatics. Indeed it was under the immediate direction of Guildford that the first barometers ever exposed to sale in London were constructed. Chemistry divided, for a time, with wine and love, with the stage and the gaming table, with the intrigues of a courtier and the intrigues of a demagogue, the attention of the fickle Buckingham. Rupert has the credit of having invented mezzotinto; and from him is named that curious bubble of glass[163] which has long amused children and puzzled philosophers. Charles himself had a laboratory at Whitehall, and was far more active and attentive there than at the council board. It was almost necessary to the character of a fine gentleman to have something to say about air-pumps and telescopes; and even fine ladies, now and then, thought it becoming to affect a taste for science, went in coaches and six to visit the Gresham curiosities, and broke forth into cries of delight at finding that a magnet really attracted a needle, and that a microscope really made a fly look as large as a sparrow.[164]

In this, as in every great stir of the human mind, there was doubtless something which might well move a smile. It is the universal law that whatever pursuit, whatever doctrine, becomes fashionable, shall lose a portion of that dignity which it had possessed while it was confined to a small but earnest minority, and was loved for its own sake alone. It is true that the follies of some persons who, without any real aptitude for science, professed a passion for it, furnished matter of contemptuous mirth to a few malignant satirists who belonged to the preceding generation, and were not disposed to unlearn the lore of their youth.[165] But it is not less true that the great work of interpreting nature was performed by the English of that age as it had never before been performed in any age by any nation. The spirit of Francis Bacon was abroad, a spirit admirably compounded of audacity and sobriety. There was a strong persuasion that the whole world was full of secrets of high moment to the happiness of man, and that man had, by his Maker, been entrusted with the key which, rightly used, would give access to them. There was at the same time a conviction that in physics it was impossible to arrive at the knowledge of general laws except by the careful observation of particular facts. Deeply impressed with these great truths, the professors of the new philosophy applied themselves to their task, and, before a quarter of a century had expired, they had given ample earnest of what has since been achieved. Already a reform of agriculture had been commenced. New vegetables were cultivated. New implements of husbandry were employed. New manures

He was the inventor of Rupert's Drops, pear-shaped pieces of glass, made by dropping molten glass into water, which burst into fragments when the slender tail was broken.]

164. Pepys's Diary, May 30, 1667.

165. Butler was, I think, the only man of real genius who, between the Restoration and the Revolution, showed a bitter enmity to the new philosophy, as it was then called. See the Satire on the Royal Society, and the Elephant in the Moon.

were applied to the soil.[166] Evelyn had, under the formal sanction of the Royal Society, given instruction to his countrymen in planting. Temple, in his intervals of leisure, had tried many experiments in horticulture, and had proved that many delicate fruits, the natives of more favoured climates, might, with the help of art, be grown on English ground. Medicine, which in France was still in abject bondage, and afforded an inexhaustible subject of just ridicule to Molière, had in England become an experimental and progressive science, and every day made some new advance, in defiance of Hippocrates and Galen.[167] The attention of speculative men had been, for the first time, directed to the important subject of sanitary police. The great plague of 1665 induced them to consider with care the defective architecture, draining, and ventilation of the capital. The great fire of 1666 afforded an opportunity for effecting extensive improvements. The whole matter was diligently examined by the Royal Society; and to the suggestions of that body must be partly attributed the changes which, though far short of what the public welfare required, yet made a wide difference between the new and the old London, and probably put a final close to the ravages of pestilence in our country.[168] At the same time one of the founders of the Society, Sir William Petty,[169] created the science of political arithmetic, the humble but indispensable handmaid of political philosophy. No kingdom of nature was left unexplored. To that period belong the chemical discoveries of Boyle, and the earliest botanical researches of Sloane. It was then that Ray made a new classification of birds and fishes, and that the attention of Woodward was first drawn towards fossils and shells. One after another phantoms which had haunted the world through ages of darkness fled before the light. Astrology and alchemy became jests. Soon there was scarcely a county in which some of the Quorum[170] did not smile contemptuously when an old woman was brought before them for riding on broomsticks or giving cattle the murrain. But it was in those noblest and most arduous departments of knowledge in which induction and mathematical demonstration co-operate for the discovery of truth, that the English genius won in that age the most memorable triumphs. John Wallis placed the whole system of statics on a new foundation. Edmund Halley investigated the properties of the atmosphere, the ebb and flow of the sea, the laws of magnetism, and the course of the comets; nor did he shrink from toil, peril, and exile in the cause of science. While he, on the rock of Saint Helena, mapped the constellations of the southern hemisphere, our national observatory was rising at Greenwich; and John Flamsteed, the first Astronomer Royal, was commencing that long series of observations which is never mentioned without respect and gratitude in any part of the globe. But the glory of these men, eminent as they were, is cast into the shade by the transcendent lustre of one immortal name. In Isaac Newton two kinds of intellectual power, which have little in common, and which are not often found together in a very high degree of vigour, but which nevertheless are equally necessary in the most sublime departments of physics, were united as they have never been united before or since. There may have been minds as happily constituted as his for the cultivation of pure mathematical science, there may have been minds as happily constituted

166. The eagerness with which the agriculturists of that age tried experiments and introduced improvements is well described by Aubrey. See the Natural History of Wiltshire, 1685.

for the cultivation of science purely experimental: but in no other mind have the demonstrative faculty and the inductive faculty coexisted in such supreme excellence and perfect harmony. Perhaps in the days of Scotists and Thomists [171] even his intellect might have run to waste, as many intellects ran to waste which were inferior only to his. Happily the spirit of the age on which his lot was cast, gave the right direction to his mind; and his mind reacted with tenfold force on the spirit of the age. In the year 1685 his fame, though splendid, was only dawning; but his genius was in the meridian. His great work, that work which effected a revolution in the most important provinces of natural philosophy, had been completed, but was not yet published, and was just about to be submitted to the consideration of the Royal Society. . . .

Chapter V

[*Execution of Monmouth*]

. . . It was ten o'clock. The coach of the Lieutenant of the Tower was ready. Monmouth [1] requested his spiritual advisers to accompany him to the place of execution; and they consented: but they told him that, in their judgement, he was about to die in a perilous state of mind, and that, if they attended him, it would be their duty to exhort him to the last. As he passed along the ranks of the guards he saluted them with a smile, and mounted the scaffold with a firm tread. Tower Hill was covered up to the chimney tops with an innumerable multitude of gazers, who, in awful silence, broken only by sighs and the noise of weeping, listened for the last accents of the darling of the people. 'I shall say little,' he began. 'I come here, not to speak, but to die. I die a Protestant of the Church of England.' The Bishops interrupted him, and told him that, unless he acknowledged resistance to be sinful, he was no member of their church. He went on to speak of his Henrietta.[2] She was, he said, a young lady of virtue and honour. He loved her to the last, and he could not die without giving utterance to his feelings. The Bishops again interfered, and begged him not to use such language. Some altercation followed. The divines have been accused of dealing harshly with the dying man. But they appear to have only discharged what, in their view, was a sacred duty. Monmouth knew their principles, and, if he wished to avoid their importunity, should have dispensed with their attendance. Their general arguments against resistance had no effect on him. But when they reminded him of the ruin which he had brought on his brave and loving followers, of the blood which had been shed, of the souls which had been sent unprepared to the great account, he was touched, and said, in a softened voice, 'I do own that. I am sorry that it ever happened.' They prayed with him long and fervently; and he joined in their petitions till they invoked a blessing on the

171 [*i.e.* in the days of the Schoolmen. The Scotists were followers of Joannes Duns Scotus (1265?–1308?), a Franciscan scholastic philosopher who challenged the harmony of faith and reason which Thomas Aquinas (c.1225–75), the Italian philosopher and Dominican monk, had worked out in his *Summa Totius Philosophiae*, and had bequeathed to his followers, the Thomists.]

James Scott, Duke of Monmouth (1649–85) was the natural son of Charles II. He identified himself with the Protestant movement in England, and joined Russell, Essex, and Sidney in a plot to murder Charles II (the Rye House Plot), but was pardoned by the king when he revealed the details of the conspiracy. In 1685, after the death of Charles II, Monmouth headed a rebellion against James II, claiming the throne by royal blood, but was defeated at Sedgemoor. He escaped from the battlefield, was captured two days later, and was executed in the Tower on July 15, 1685.

2. Henrietta Maria, Baroness Wentworth (1657?–86), Monmouth's mistress (his wife was Anne Scott, Duchess of Buccleuch, whose surname Monmouth adopted in 1663); the baroness went with him into exile in Holland, and later supplied funds for his attempt at gaining the throne.

King. He remained silent. 'Sir,' said one of the Bishops, 'do you not pray for the King with us?' Monmouth paused some time, and after an internal struggle, exclaimed 'Amen.' But it was in vain that the prelates implored him to address to the soldiers and to the people a few words on the duty of obedience to the government. 'I will make no speeches,' he exclaimed. 'Only ten words, my Lord.' He turned away, called his servant, and put into the man's hand a toothpick case, the last token of ill-starred love. 'Give it,' he said, 'to that person.' He then accosted John Ketch [3] the executioner, a wretch who had butchered many brave and noble victims, and whose name has, during a century and a half, been vulgarly given to all who have succeeded him in his odious office. 'Here,' said the Duke, 'are six guineas for you. Do not hack me as you did my Lord Russell.[4] I have heard that you struck him three or four times. My servant will give you some more gold if you do the work well.' He then undressed, felt the edge of the axe, expressed some fear that it was not sharp enough, and laid his head on the block. The divines in the meantime continued to ejaculate with great energy; 'God accept your repentance! God accept your imperfect repentance!'

The hangman addressed himself to his office. But he had been disconcerted by what the Duke had said. The first blow inflicted only a slight wound. The Duke struggled, rose from the block, and looked reproachfully at the executioner. The head sank down once more. The stroke was repeated again and again; but still the neck was not severed, and the body continued to move. Yells of rage and horror rose from the crowd. Ketch flung down the axe with a curse. 'I cannot do it,' he said; 'my heart fails me.' 'Take up the axe, man,' cried the sheriff. 'Fling him over the rails,' roared the mob. At length the axe was taken up. Two more blows extinguished the last remains of life; but a knife was used to separate the head from the shoulders. The crowd was wrought up to such an ecstasy of rage that the executioner was in danger of being torn in pieces, and was conveyed away under a strong guard.

In the meantime many handkerchiefs were dipped in the Duke's blood; for, by a large part of the multitude he was regarded as a martyr who had died for the Protestant religion. The head and body were placed in a coffin covered with black velvet, and were laid privately under the communion table of St. Peter's Chapel in the Tower. Within four years the pavement of the chancel was again disturbed, and hard by the remains of Monmouth were laid the remains of Jeffreys.[5] In truth there is no sadder spot on the earth than that little cemetery. Death is there associated, not, as in Westminster Abbey and Saint Paul's, with genius and virtue, with public veneration and with imperishable renown; not, as in our humblest churches and churchyards, with everything that is most endearing in social and domestic charities; but with whatever is darkest in human nature and in human destiny, with the savage triumph of implacable enemies, with the inconstancy, the ingratitude, the cowardice of friends, with all the miseries of fallen greatness and of blighted fame. Thither have been carried, through successive ages, by the rude hands of jailers, without one mourner following, the bleeding relics of men who had been the captains of armies, the leaders of parties, the oracles of senates, and the ornaments of courts. Thither was

3. John Ketch (d.1686), commonly known as Jack Ketch, whose name by 1702 was identified with the office of executioner; notorious for his excessive barbarity.

4. *i.e.* William, Lord Russell (1639–83), convicted and executed on the charge of complicity in the Rye House Plot.

5. George, 1st Baron Jeffreys of Wem (1648–89), notorious judge of the 'Bloody Assize' after the suppression of Monmouth's rebellion. — See next selection.

borne, before the window where Jane Grey[6] was praying, the mangled corpse of Guilford Dudley.[7] Edward Seymour, Duke of Somerset,[8] and Protector of the realm, reposes there by the brother whom he murdered. There has mouldered away the headless trunk of John Fisher,[9] Bishop of Rochester and Cardinal of Saint Vitalis, a man worthy to have lived in a better age, and to have died in a better cause. There are laid John Dudley,[10] Duke of Northumberland, Lord High Admiral, and Thomas Cromwell,[11] Earl of Essex, Lord High Treasurer. There, too, is another Essex,[12] on whom nature and fortune had lavished all their bounties in vain, and whom valour, grace, genius, royal favour, popular applause, conducted to an early and ignominious doom. Not far off sleep two chiefs of the great house of Howard — Thomas, fourth Duke of Norfolk,[13] and Philip, eleventh Earl of Arundel.[14] Here and there, among the thick graves of unquiet and aspiring statesmen, lie more delicate sufferers; Margaret of Salisbury,[15] the last of the proud name of Plantagenet, and those two fair Queens who perished by the jealous rage of Henry.[16] Such was the dust with which the dust of Monmouth mingled. . . .

6. Lady Jane Grey Dudley (1537–54), was proclaimed queen in 1553; her short and unsought sovereignty was ruined on the dispersion of the troops under her father-in-law, Northumberland, and she was executed after Wyatt's rebellion in 1554. (*D.N.B.*)
7. Lady Jane's husband, whom she had married in his pursuance of a plot for altering the succession from the Tudor to the Dudley family; he was beheaded in 1554.
8. 1506?–52; a powerful statesman of the reign of Henry VIII, on whose death he became Protector of the Realm; he had his brother, Thomas, Baron Seymour of Sudley (1508?–49) executed without trial, for treasonable acts.
9. 1459–1535; professor of divinity at Oxford, brought Erasmus to England; was beheaded for refusing to acknowledge the king as the supreme head of the Church.
10. 1502?–53; father-in-law of Lady Jane Grey; executed for resisting actively the succession of Mary to the throne, 1553.
11. 1485?–1540; statesman of the reign of Henry VIII, actively aiding the king in dissolving the monasteries and in negotiating the king's marriage with Anne of Cleves; accused of treason by the Duke of Norfolk and executed, the king, not satisfied with Anne of Cleves, not interposing.
12. Robert Devereux, 2nd Earl of Essex (1566–1601), whom Queen Elizabeth had executed for contriving a plot to dismiss her counsellors, and attempting rebellion, through the raising of citizens in London.
13. 1536–72; involved in a plot to overturn Queen Elizabeth's government with the aid of the Spanish army; executed for treason.
14. 1557–95; imprisoned in the Tower for saying mass for the success of the Armada; although not executed, he remained in the Tower till death.
15. Margaret Pole, Countess of Salisbury (1473–1541), beheaded by order of Henry VIII, who sought to destroy the family, for the opposition by some of its members to his Church policy.
16. Anne Boleyn (1507–36) and Catherine Howard (d 1542), the second and fifth queens of Henry VIII, were executed.

Chapter X

[*Arrest of Judge Jeffreys*[1]]

. . . In spite, however, of the well meant efforts of the provisional government, the agitation grew hourly more formidable. It was heightened by an event which, even at this distance of time, can hardly be related without a feeling of vindictive pleas-

1. Jeffreys had thrown in his lot with the Court, against Parliament; had been made Lord Chief Justice of the King's Bench, had presided over the trials arising from the Rye House Plot, and had passed sentence on Titus Oates for perjury in the 'popish plot' trials. But it was in 1685, at the Winchester assizes, that Jeffreys branded his name with infamy, when with excessive brutality he passed sentence upon great numbers of people for complicity in Monmouth's rebellion. His merciless severity, however, did not exceed the wishes of James II, and, in many respects, he was but the tool of the court party. When James fled in 1688, Jeffreys attempted to escape, disguised as a common seaman, but he was arrested and imprisoned in the Tower, where he died from ill health. 'Judge Jeffreys' and the 'bloody assizes' became bywords for generations after the end of the Jacobean period.

ure. A scrivener who lived at Wapping, and whose trade was to furnish the seafaring men there with money at high interest, had some time before lent a sum on bottomry. The debtor applied to equity for relief against his own bond; and the case came before Jeffreys. The counsel for the borrower, having little else to say, said that the lender was a Trimmer.[2] The Chancellor instantly fired. 'A Trimmer! where is he? Let me see him. I have heard of that kind of monster. What is it made like?' The unfortunate creditor was forced to stand forth. The Chancellor glared fiercely on him, stormed at him, and sent him away half dead with fright. 'While I live,' the poor man said, as he tottered out of the court, 'I shall never forget that terrible countenance.' And now the day of retribution had arrived. The Trimmer was walking through Wapping, when he saw a well known face looking out of the window of an alehouse. He could not be deceived. The eyebrows, indeed, had been shaved away. The dress was that of a common sailor from Newcastle, and was black with coal dust: but there was no mistaking the savage eye and mouth of Jeffreys. The alarm was given. In a moment the house was surrounded by hundreds of people shaking bludgeons and bellowing curses. The fugitive's life was saved by a company of the trainbands; and he was carried before the Lord Mayor. The Mayor was a simple man who had passed his whole life in obscurity, and was bewildered by finding himself an important actor in a mighty revolution. The events of the last twenty-four hours, and the perilous state of the city which was under his charge, had disordered his mind and his body. When the great man, at whose frown, a few days before, the whole kingdom had trembled, was dragged into the justice room begrimed with ashes, half dead with fright, and followed by a raging multitude, the agitation of the unfortunate Mayor rose to the height. He fell into fits, and was carried to his bed, whence he never rose. Meanwhile the throng without was constantly becoming more numerous and more savage. Jeffreys begged to be sent to prison. An order to that effect was procured from the Lords who were sitting at Whitehall;[3] and he was conveyed in a carriage to the Tower. Two regiments of militia were drawn out to escort him, and found the duty a difficult one. It was repeatedly necessary for them to form, as if for the purpose of repelling a charge of cavalry, and to present a forest of pikes to the mob. The thousands who were disappointed of their revenge pursued the coach, with howls of rage, to the gate of the Tower, brandishing cudgels, and holding up halters full in the prisoner's view. The wretched man meantime was in convulsions of terror. He wrung his hands: he looked wildly out, sometimes at one window, sometimes at the other, and was heard even above the tumult, crying 'Keep them off, gentlemen! For God's sake keep them off!' At length, having suffered far more than the bitterness of death, he was safely lodged in the fortress where some of his most illustrious victims had passed their last days, and where his own life was destined to close in unspeakable ignominy and horror. . . .

2. *Trimmer*: one who trims or modifies his policy or position in respect to opposing political parties, either for his own advantages or for 'keeping even the ship of state.' Lord Halifax in his *Character of a Trimmer* (1688) accepted the nickname in this latter sense.

Chapter XIV

[*Last Days of Jeffreys*]

. . . Among the many offenders whose names were mentioned in the course of these inquiries, was one who stood alone and unapproached in guilt and infamy, and whom Whigs and Tories were equally willing to leave to the extreme rigour of the law. On that terrible day which

3. The royal palace in London.

was succeeded by the Irish Night,[1] the roar of a great city disappointed of its revenge had followed Jeffreys to the drawbridge of the Tower. His imprisonment was not strictly legal: but he at first accepted with thanks and blessings the protection which those dark walls, made famous by so many crimes and sorrows, afforded him against the fury of the multitude. Soon, however, he became sensible that his life was still in imminent peril. For a time he flattered himself with the hope that a writ of Habeas Corpus would liberate him from his confinement, and that he should be able to steal away to some foreign country, and to hide himself with part of his illgotten wealth from the detestation of mankind: but, till the government was settled, there was no Court competent to grant a writ of Habeas Corpus; and, as soon as the government had been settled, the Habeas Corpus Act was suspended. Whether the legal guilt of murder could be brought home to Jeffreys may be doubted. But he was morally guilty of so many murders that, if there had been no other way of reaching his life, a retrospective Act of Attainder[2] would have been clamorously demanded by the whole nation. A disposition to triumph over the fallen has never been one of the besetting sins of Englishmen: but the hatred of which Jeffreys was the object was without a parallel in our history, and partook but too largely of the savageness of his own nature. The people, where he was concerned, were as cruel as himself, and exulted in his misery as he had been accustomed to exult in the misery of convicts listening to the sentence of death, and of families clad in mourning. The rabble congregated before his deserted mansion in Duke Street, and read on the door, with shouts of laughter, the bills which announced the sale of his property. Even delicate women, who had tears for highwaymen and housebreakers, breathed nothing but vengeance against him. The lampoons on him which were hawked about the town were distinguished by an atrocity rare even in those days. Hanging would be too mild a death for him: a grave under the gibbet too respectable a resting place: he ought to be whipped to death at the cart's tail: he ought to be tortured like an Indian: he ought to be devoured alive. The street poets portioned out all his joints with cannibal ferocity, and computed how many pounds of steaks might be cut from his well fattened carcass. Nay, the rage of his enemies was such that, in language seldom heard in England, they proclaimed their wish that he might go to the place of wailing and gnashing of teeth, to the worm that never dies, to the fire that is never quenched. They exhorted him to hang himself in his garters, and to cut his throat with his razor. They put up horrible prayers that he might not be able to repent, that he might die the same hardhearted, wicked Jeffreys that he had lived. His spirit, as mean in adversity as insolent and inhuman in prosperity, sank down under the load of public abhorrence. His constitution, originally bad, and much impaired by intemperance, was completely broken by distress and anxiety. He was tormented by a cruel internal disease, which the most skilful surgeons of that age were seldom able to relieve. One solace was left to him, brandy. Even when he had causes to try and councils to attend, he had seldom gone to bed sober. Now, when he had nothing to occupy his mind save terrible recollections and terrible forebodings, he abandoned himself without reserve to his favourite vice. Many believed him to be bent on shortening his life by excess. He thought it better, they said, to go off in a drunken fit than to be hacked by Ketch, or torn limb from limb by the populace.

1. On which all London remained awake and on guard against the Irish who were rumored to be about to march on London and massacre the population.
2. By which, on the sentence of death, Jeffreys' civil rights and capacities as a person would have been abolished.

Once he was roused from a state of abject despondency by an agreeable sensation, speedily followed by a mortifying disappointment. A parcel had been left for him at the Tower. It appeared to be a barrel of Colchester oysters, his favourite dainties. He was greatly moved: for there are moments when those who least deserve affection are pleased to think that they inspire it. 'Thank God,' he exclaimed, 'I have still some friends left.' He opened the barrel; and from among a heap of shells out tumbled a stout halter.

It does not appear that one of the flatterers or buffoons whom he had enriched out of the plunder of his victims came to comfort him in the day of trouble. But he was not left in utter solitude. John Tutchin,[3] whom he had sentenced to be flogged every fortnight for seven years, made his way into the Tower, and presented himself before the fallen oppressor. Poor Jeffreys, humbled to the dust, behaved with abject civility, and called for wine. 'I am glad, sir,' he said, 'to see you.' 'And I am glad,' answered the resentful Whig, 'to see Your Lordship in this place.' 'I served my master,' said Jeffreys: 'I was bound in conscience to do so.' 'Where was your conscience,' said Tutchin, 'when you passed that sentence on me at Dorchester?' 'It was set down in my instructions,' answered Jeffreys, fawningly, 'that I was to show no mercy to men like you, men of parts and courage. When I went back to court I was reprimanded for my lenity.' Even Tutchin, acrimonious as was his nature, and great as were his wrongs, seems to have been a little mollified by the pitiable spectacle which he had at first contemplated with vindictive pleasure. He always denied the truth of the report that he was the person who sent the Colchester barrel to the Tower.

A more benevolent man, John Sharp,[4] the excellent Dean of Norwich, forced himself to visit the prisoner. It was a painful task: but Sharp had been treated by Jeffreys, in old times, as kindly as it was in the nature of Jeffreys to treat any body, and had once or twice been able, by patiently waiting till the storm of curses and invectives had spent itself, and by dexterously seizing the moment of good humour, to obtain for unhappy families some mitigation of their sufferings. The prisoner was surprised and pleased. 'What,' he said, 'dare you own me now?' It was in vain, however, that the amiable divine tried to give salutary pain to that seared conscience. Jeffreys, instead of acknowledging his guilt, exclaimed vehemently against the injustice of mankind. 'People call me a murderer for doing what at the time was applauded by some who are now high in public favour. They call me a drunkard because I take punch to relieve me in my agony.' He would not admit that, as President of the High Commission, he had done any thing that deserved reproach. His colleagues, he said, were the real criminals; and now they threw all the blame on him. He spoke with peculiar asperity of Sprat,[5] who had undoubtedly been the most humane and moderate member of the board.

It soon became clear that the wicked judge was fast sinking under the weight of bodily and mental suffering. Doctor John Scott,[6] prebendary of Saint Paul's, a clergyman of great sanctity, and author of the Christian Life, a treatise once widely renowned, was summoned, probably on the recommendation of his intimate friend

3. 1661?–1707; a Whig pamphleteer, who had taken part in Monmouth's rebellion, and was sentenced to seven years' imprisonment, by Jeffreys, who was afterwards bribed to recommend pardon.

4. 1645–1714; he had been chaplain in ordinary to James II, and later became Archbishop of York.

5. Thomas Sprat (1635–1713), one of the founders of the Royal Society, a noted preacher, Bishop of Rochester, 1684.

6. 1639–95; he had held rectories in London, and was canon of St. Paul's, 1685–95.

Sharp, to the bedside of the dying man. It was in vain, however, that Scott spoke, as Sharp had already spoken, of the hideous butcheries of Dorchester and Taunton. To the last Jeffreys continued to repeat that those who thought him cruel did not know what his orders were, that he deserved praise instead of blame, and that his clemency had drawn on him the extreme displeasure of his master.

Disease, assisted by strong drink and by misery, did its work fast. The patient's stomach rejected all nourishment. He dwindled in a few weeks from a portly and even corpulent man to a skeleton. On the eighteenth of April [7] he died, in the forty-first year of his age. He had been Chief Justice of the King's Bench at thirty-five, and Lord Chancellor at thirty-seven. In the whole history of the English bar there is no other instance of so rapid an elevation, or of so terrible a fall. The emaciated corpse was laid, with all privacy, next to the corpse of Monmouth in the chapel of the Tower. . . .

7. 1689.

John Henry Newman

THE TAMWORTH READING ROOM

Secular Knowledge not a Direct Means of Moral Improvement

THERE are two Schools of philosophy, in high esteem, at this day, as at other times, neither of them accepting Christian principles as the guide of life, yet both of them unhappily patronized by many whom it would be the worst and most cruel uncharitableness to suspect of unbelief. Mr. Bentham is the master of the one; [1] and Sir Robert Peel is a disciple of the other.[2]

Mr. Bentham's system has nothing ideal about it; he is a stern realist, and he limits his realism to things which he can see, hear, taste, touch, and handle. He does not acknowledge the existence of anything which he cannot ascertain for himself. Exist it may nevertheless, but till it makes itself felt, to him it exists not; till it comes down right before him, and he is very short-sighted, it is not recognized by him as having a co-existence with himself, any more than the Emperor of China is received into the European family of Kings. With him a being out of sight is a being simply out of mind; nay, he does not allow the traces or glimpses of facts to have any claim on his regard, but with him to have a little and not much, is to have nothing at all. With him to speak truth is to be ready with a definition, and to imagine, to guess, to doubt, or to falter, is much the same as to lie. What opinion

1. Jeremy Bentham (1748–1832) was the leading exponent of the Utilitarian school of thought, which held that utility, or the greatest happiness of the greatest number, is the foundation of morals, that pleasure and pain are the 'sovereign masters' governing man's conduct, that the motive of an act is always self-interest, and that it is the business of law and education to induce the individual to subordinate his happiness to that of the community.

2. Sir Robert Peel (1788–1850), Tory statesman, prime minister in 1841; a liberal in many respects, he favored the emancipation of the Jews, free-trade principles, the pacification of Ireland, etc. Newman refers to Peel's general 'middle class' faith in the substitution of science and education for orthodox religion. In contrast with Bentham, Peel urged the importance of awe, reverence, and religious feeling, whereas the great Utilitarian would sweep away all but reason and the natural tendencies of man to pursue pleasure and avoid pain. Pure Benthamism was too shocking for many 'middle class' admirers and followers of the Utilitarian doctrine.

will such an iron thinker entertain of Cicero's 'glory,'[3] or Lord Brougham's[4] 'truth,' or Sir Robert's 'scientific consolations,' and all those other airy nothings which are my proper subject of remark, and which I have in view when, by way of contrast, I make mention of the philosophy of Bentham? And yet the doctrine of the three eminent orators, whom I have ventured to criticise, has in it much that is far nobler than Benthamism: their misfortune being, not that they look for an excellence above the beaten path of life, but that whereas Christianity has told us what that excellence is, Cicero lived before it was given to the world, and Lord Brougham and Sir Robert Peel prefer his involuntary error to their own inherited truth. Surely, there is something unearthly and superhuman in spite of Bentham; but it is not glory, or knowledge, or any abstract idea of virtue, but great and good tidings which need not here be particularly mentioned, and the pity is, that these Christian statesmen cannot be content with what is divine without as a supplement hankering after what was heathen.

Now, independent of all other considerations, the great difference, in a practical light, between the object of Christianity and of heathen belief, is this — that glory, science, knowledge, and whatever other fine names we use, never healed a wounded heart, nor changed a sinful one; but the Divine Word is with power. The ideas which Christianity brings before us are in themselves full of influence, and they are attended with a supernatural gift over and above themselves, in order to meet the special exigencies of our nature. Knowledge is not 'power,' nor is glory 'the first and only fair'; but 'Grace,'[5] or the 'Word,' by whichever name we call it, has been from the first a quickening, renovating, organizing principle. It has new created the individual, and transferred and knit him into a social body, composed of members each similarly created. It has cleansed man of his moral diseases, raised him to hope and energy, given him to propagate a brotherhood among his fellows, and to found a family or rather a kingdom of saints all over the earth; — it introduced a new force into the world, and the impulse which it gave continues in its original vigour down to this day. Each one of us has lit his lamp from his neighbour, or received it from his fathers, and the lights thus transmitted are at this time as strong and as clear as if 1800 years had not passed since the kindling of the sacred flame. What has glory or knowledge been able to do like this? Can it raise the dead? can it create a polity? can it do more than testify man's need and typify God's remedy?

And yet, in spite of this, when we have an instrument given us, capable of changing the whole man, great orators and statesmen are busy, forsooth, with their heathen charms and nostrums, their sedatives, correctives, or restoratives; as preposterously as if we were to build our men-of-war, or conduct our iron-works, on the principles approved in Cicero's day. The utmost that Lord Brougham seems to propose to himself in the educa-

3. Allusion to a passage in section 2 of *The Tamworth Reading Room*, in which Newman states that 'Cicero handed the recipe [for developing and strengthening human character] to Brougham, and Brougham has passed it on to Peel. If we examine the old Roman's meaning in "*O philosophia, vitae dux* [O philosophy, the guide of life]," it was neither more nor less than this: — that . . . if a man was in grief, he was to be amused; . . . if in love, to be aroused to the pursuit of glory. No inward change was contemplated, but a change of external objects. . . . When Cicero was outwitted by Caesar, he solaced himself with Plato; when he lost his daughter, he wrote a treatise on Consolation.'

4 Henry Peter, Baron Brougham and Vaux (1778–1868), prominent Whig statesman and reformer, founder of the Society for Diffusion of Useful Knowledge, author of *Observations on Education of the People* (1825), and of an essay on 'The Pleasures and Advantages of Science,' one of a series published by the Society he founded.

5. See Newman's sermon on 'Nature and Grace.'

tion of the mind, is to keep out bad thoughts by means of good — a great object, doubtless, but not so great in philosophical conception, as is the destruction of the bad in Christian fact. 'If it can be a pleasure,' he says, in his Discourse upon the Objects and Advantages of Science, 'if it can be a *pleasure to gratify curiosity*, to know what we were ignorant of, to have our *feelings of wonder* called forth, *how pure a delight of this very kind* does natural science hold out to its students! How wonderful are the laws that regulate the motions of fluids! Is there anything in all the idle books of tales and horrors, more truly astonishing than the fact, that a few pounds of water may, by mere pressure, without any machinery, by merely being placed in one particular way, produce very irresistible force? What can be more strange, than that an ounce weight should balance hundreds of pounds by the intervention of a few bars of thin iron? Can anything surprise us more than to find that the colour white is a mixture of all others? that water should be chiefly composed of an inflammable substance? Akin to this pleasure of contemplating new and extraordinary truths is the *gratification of a more learned curiosity*, by tracing resemblances and relations between things which to common apprehension seem widely different,' etc., etc. And in the same way Sir Robert tells us even of a *devout* curiosity. In all cases *curiosity* is the means, *diversion* of mind the highest end; and though of course I will not assert that Lord Brougham, and certainly not that Sir Robert Peel, denies any higher kind of morality, yet when the former rises above Benthamism, in which he often indulges, into what may be called *Broughamism proper*, he commonly grasps at nothing more real and substantial than these Ciceronian ethics.

In morals, as in physics, the stream cannot rise higher than its source. Christianity raises men from earth, for it comes from heaven; but human morality creeps, struts, or frets upon the earth's level, without wings to rise. The Knowledge School does not contemplate raising man above himself; it merely aims at disposing of his existing powers and tastes, as is most convenient, or is practicable under circumstances. It finds him, like the victims of the French Tyrant, doubled up in a cage in which he can neither lie, stand, sit, nor kneel and its highest desire is to find an attitude in which his unrest may be least. Or it finds him like some musical instrument, of great power and compass, but imperfect; from its very structure some keys must ever be out of tune, and its object, when ambition is highest, is to throw the *fault* of its nature where least it will be observed. It leaves man where it found him — man, and not an Angel — a sinner, not a Saint; but it tries to make him look as much like what he is not as ever it can. The poor indulge in low pleasures; they use bad language, swear loudly and recklessly, laugh at coarse jests, and are rude and boorish. Sir Robert would open on them a wider range of thought and more intellectual objects, by teaching them science; but what warrant will he give us that, if his object could be achieved, what they would gain in decency they would not lose in natural humility and faith? If so, he has exchanged a gross fault for a more subtle one. 'Temperance topics' stop drinking; let us suppose it; but will much be gained, if those who give up spirits take to opium? *Naturam expellas furcâ, tamen usque recurret*,[6] is at least a heathen truth, and universities and libraries which recur to heathenism may reclaim it from the heathen for their motto.

Nay, everywhere, so far as human nature remains hardly or partially Christianized, the heathen law remains in force; as is felt in a measure even in the most religious places and societies. Even there, where Christianity has power, the venom

6. 'Drive out nature with a fork, nevertheless she will continually return.' (Horace.)

of the old Adam [7] is not subdued. Those who have to do with our Colleges give us their experience, that in the case of the young committed to their care, external discipline may change the fashionable excess, but cannot allay the principle of sinning. Stop cigars, they will take to drinking parties; stop drinking, they gamble; stop gambling, and a worse license follows. You do not get rid of vice by human expedients; you can but use them according to circumstances, and in their place, as making the best of a bad matter. You must go to a higher source for renovation of the heart and of the will. You do but play a sort of 'hunt the slipper' with the fault of our nature, till you go to Christianity.

I say, you must use human methods *in their place*, and there they are useful; but they are worse than useless out of their place. I have no fanatical wish to deny to any whatever subject of thought or method of reason a place altogether, if it chooses to claim it, in the cultivation of the mind. Mr. Bentham may despise verse-making, or Mr. Dugald Stewart [8] logic, but the great and true maxim is to sacrifice none — to combine, and therefore to adjust, all. All cannot be first, and therefore each has its place, and the problem is to find it. It is at least not a lighter mistake to make what is secondary first, than to leave it out altogether. Here then it is that the Knowledge Society, Gower Street College,[9] Tamworth Reading-room, Lord Brougham and Sir Robert Peel, are all so deplorably mistaken. Christianity, and nothing short of it, must be made the element and principle of all education. Where it has been laid as the first stone, and acknowledged as the governing spirit, it will take up into itself, assimilate, and give a character to literature and science. Where Revealed Truth has given the aim and direction to Knowledge, Knowledge of all kinds will minister to Revealed Truth. The evidences of Religion, natural theology, metaphysics, — or, again, poetry, history, and the classics, — or physics and mathematics, may all be grafted into the mind of a Christian, and give and take by the grafting. But if in education we begin with nature before grace, with evidences before faith, with science before conscience, with poetry before practice, we shall be doing much the same as if we were to indulge the appetites and passions, and turn a deaf ear to the reason. In each case we misplace what in its place is a divine gift. If we attempt to effect a moral improvement by means of poetry, we shall but mature into a mawkish, frivolous, and fastidious sentimentalism; — if by means of argument, into a dry, unamiable longheadedness; — if by good society, into a polished outside, with hollowness within, in which vice has lost its grossness, and perhaps increased its malignity; — if by experimental science, into an uppish, supercilious temper, much inclined to scepticism. But reverse the order of things: put Faith first and Knowledge second; let the University minister to the Church, and then classical poetry becomes the type of Gospel truth, and physical science a comment on Genesis or Job, and Aristotle changes into Butler, and Arcesilaus into Berkeley.[10]

7. Original sin, natural human frailty.

8. Dugald Stewart (1753–1828). Scotch philosopher, widely read and admired in the early 19th century.

9. A satirical allusion to London University. In section 1 of the present work, Newman wrote that a casual glance at Peel's address would lead the reader to picture 'the scene Gower Street, the speaker Mr. Brougham or Dr. Lushington, and the occasion, the laying the first stone, or the inauguration, of the then-called London University.' The University, projected by Brougham, Joseph Hume, and influential Dissenters, and powerfully supported by such liberals as Zachary Macaulay, George Grote, and James Mill, aroused much antagonism from political and religious conservatives.

10. On the supremacy of each science in its own field of thought, and the encroachments upon it of other sciences, *vide* the author's 'University Education,' Disc.3, 2nd ed., and 'University Subjects,' Nos.6,7, and 10. [New-

Far from recognizing this principle, the teachers of the Knowledge School would educate from Natural Theology up to Christianity, and would amend the heart through literature and philosophy. Lord Brougham, as if faith came from science, gives out that 'henceforth nothing shall prevail over us to praise or to blame any one for' his belief, 'which he can no more change than he can the hue of his skin, or the height of his stature.' And Sir Robert, whose profession and life give the lie to his philosophy, founds a library into which 'no works of controversial divinity shall enter,' that is, no Christian doctrine at all; and he tells us that 'an increased sagacity will make men not merely believe in the cold doctrines of Natural Religion, but that it will *so prepare and temper the spirit* and understanding that they will be better *qualified to comprehend the great scheme of human redemption*.' And again, Lord Brougham considers that 'the pleasures of science tend not only to make our lives more agreeable, but better'; and Sir Robert responds, that 'he entertains the hope that there will be the means afforded of useful occupation and rational recreation; that men will prefer the pleasures of knowledge above the indulgence of sensual appetite, and that there is a prospect of contributing to the intellectual and moral improvement of the neighbourhood.'

Can the nineteenth century produce no more robust and creative philosophy than this?

Secular Knowledge not a Principle of Social Unity

Sir Robert Peel proposes to establish a Library which 'shall be open to all persons of all descriptions, without reference to political opinions or to religious creed.' He invites those who are concerned in manufactories, or who have many workmen, 'without distinction of party, political opinions, *or* religious profession.' He promises that 'in the selection of subjects for public lectures everything calculated to excite religious *or* political animosity shall be excluded.' Nor is any 'discussion on matters connected with religion, politics, *or* local party differences' to be permitted in the reading-room. And he congratulates himself that he has 'laid the foundation of an edifice in which men of all political opinions *and* of all religious feelings may unite in furtherance of Knowledge, without the asperities of party feeling.' In these statements religious differences are made synonymous with 'party feeling'; and, whereas the tree is 'known by its fruit,' their characteristic symptoms are felicitously described as 'asperities,' and 'animosities.' And, in order to teach us more precisely what these differences are worth, they are compared to differences between Whig and Tory — nay, even to '*local* party differences'; such, I suppose, as about a municipal election, or a hole-and-corner meeting, or a parish job, or a bill in Parliament for a railway.

But, to give him the advantage of the more honourable parallel of the two, are religious principles to be put upon a level even with political? Is it as bad to be a republican as an unbeliever? Is it as magnanimous to humour a scoffer as to spare an opponent in the House? Is a difference about the Reform Bill all one with a difference about the Creed? Is it as polluting to hear arguments for Lord Melbourne as to hear a scoff against the Apostles? To a statesman, indeed, like Sir Robert, to abandon one's party is a far greater sacrifice than to unparliamentary men; and it would be uncandid to doubt that he is rather magnifying politics than degrading Religion in throwing them together; but

man's note. — Arcesilaus was a Greek philosopher of the 3rd century B.C. George Berkeley (1685–1753), Bishop of Cloyne, and philosopher, who aimed at discrediting materialism, was the author of a *Treatise Concerning Human Knowledge* (1710), *Dialogues between Hylas and Philonous* (1713), etc.]

still, when he advocates concessions in theology *and* politics, he must be plainly told to make presents of things that belong to him, nor seek to be generous with other people's substance. There are entails in more matters than parks and old places. He made his politics for himself, but Another made theology.

Christianity is faith, faith implies a doctrine, a doctrine propositions, propositions yes or no, yes or no differences. Differences, then, are the natural attendants on Christianity, and you cannot have Christianity, and not have differences. When, then, Sir Robert Peel calls such differences points of 'party feeling,' what is this but to insult Christianity? Yet so cautious, so correct a man, cannot have made such a sacrifice for nothing; nor does he long leave us in doubt what is his inducement. He tells us that his great aim is the peace and good order of the community, and the easy working of the national machine. With this in view, any price is cheap, everything is marketable; all impediments are a nuisance. He does not undo for undoing's sake; he gains more than an equivalent. It is a mistake, too, to say that he considers all differences of opinion as equal in importance; no, they are only equally in the way. He only compares them together where they *are* comparable, —in their common inconvenience to a minister of State. They may be as little homogeneous as chalk is to cheese, or Macedon to Monmouth, but they agree in interfering with social harmony; and, since that harmony is the first of goods and the end of life, what is left us but to discard all that disunites us, and to cultivate all that may amalgamate?

Could Sir Robert have set a more remarkable example of self-sacrifice than in thus becoming the disciple of his political foe, accepting from Lord Brougham his new principle of combination, rejecting Faith for the fulcrum of Society, and proceeding to rest it upon Knowledge?

'I cannot help thinking,' he exclaims at Tamworth, 'that *by bringing together in an institution of this kind* intelligent men of all classes and conditions of life, by uniting together, in the committee of this institution, the gentleman of ancient family and great landed possessions with the skilful mechanic and artificer of good character, I cannot help believing that we are *harmonising* the gradations of society, and binding men together by a *new* bond, which will have *more than ordinary* strength on account of the object which unites us.' The old bond, he seems to say, was Religion; Lord Brougham's is Knowledge. Faith, once the soul of social union, is now but the spirit of division. Not a single doctrine but is 'controversial divinity'; not an abstraction can be imagined (could abstractions constrain), not a comprehension projected (could comprehensions connect), but will leave out one or other portion or element of the social fabric. We must abandon Religion, if we aspire to be statesmen. Once, indeed, it was a living power, kindling hearts, leavening them with one idea, moulding them on one model, developing them into one polity. Ere now it has been the life of morality: it has given birth to heroes; it has wielded empire. But another age has come in, and Faith is effete; let us submit to what we cannot change; let us not hang over our dead, but bury it out of sight. Seek we out some young and vigorous principle, rich in sap, and fierce in life, to give form to elements which are fast resolving into their inorganic chaos; and where shall we find such a principle but in Knowledge?

Accordingly, though Sir Robert somewhat chivalrously battles for the appointment upon the Book Committee of what he calls two 'public ministers of religion, holding prominent and responsible offices, endowed by the State,' and that *ex officio*,[1] yet he is untrue to his new principle only in appearance: for he couples his concession with explanations, restric-

1. 'By virtue or because of an office.'

tions, and safeguards quite sufficient to prevent old Faith becoming insurgent against young Knowledge. First he takes his Vicar and Curate as 'conversant with literary subjects and with literary works,' and then as having duties 'immediately connected with the moral condition and improvement' of the place. Further he admits 'it is perfectly right to be *jealous* of all power held by such a tenure': and he insists on the 'fundamental' condition that these sacred functionaries shall permit no doctrinal works to be introduced or lectures to be delivered. Lastly, he reserves in the general body the power of withdrawing this indulgence 'if the existing checks be not sufficient, and the power be *abused*,' — abused, that is, by the vicar and curate; also he desires to secure Knowledge from being *perverted* to '*evil* or *immoral* purposes' — such perversion of course, if attempted, being the natural antithesis, or *pendant*, to the vicar's contraband introduction of the doctrines of Faith.

Lord Brougham will make all this clearer to us. A work of high interest and varied information, to which I have already referred, is attributed to him, and at least is of his school, and in which the ingenious author, whoever he is, shows how Knowledge can do for Society what has hitherto been supposed the prerogative of Faith. As to Faith and its preachers, he had already complimented them at Glasgow, as 'the evil spirits of tyranny and persecution,' and had bid them good morning as the scared and dazzled creatures of the 'long night now gone down the sky.'

'The great truth,' he proclaimed in language borrowed from the records of faith (for after parsons no men quote Scripture more familiarly than Liberals and Whigs), 'has finally *gone forth to all the ends of the earth*, that man shall no more render account to man for his belief, over which he has himself no control. Henceforth nothing shall prevail on us to *praise or to blame* any one for that which he can no more change than he can the hue of his skin or the height of his stature.' And then he or his scholar proceeds to his new *Vitae Sanctorum*,[2] or, as he calls it, 'Illustrations of the Pursuit of Knowledge'; and, whereas the badge of Christian saintliness is conflict, he writes of the 'Pursuit of Knowledge *under difficulties*';[3] and, whereas this Knowledge is to stand in the place of Religion, he assumes a hortatory tone, a species of eloquence in which decidedly he has no rival but Sir Robert. 'Knowledge,' he says, 'is happiness, as well as power and virtue'; and he demands 'the dedication of our faculties' to it. 'The *struggle*,' he gravely observes, which its disciple 'has to wage may be a protracted, but it ought not to be a *cheerless* one: for, if he do not *relax his exertions*, every movement he makes is necessarily a *step forward*, if not towards that distinction which intellectual attainments sometimes confer, at least to that *inward satisfaction and enjoyment* which is always their reward. No one stands in the way of another, or can deprive him of any part of his chance, we should rather say of his certainty, of success; on the contrary, they are all *fellow-workers*, and may materially *help each other* forward.' And he enumerates in various places the virtues which adorn the children of Knowledge — ardour united to humility, childlike alacrity, teachableness, truthfulness, patience, concentration of attention, husbandry of time, self-denial, self-command, and heroism.

Faith, viewed in its history through past ages, presents us with the fulfilment of one great idea in particular — that, namely, of an aristocracy of exalted spirits, drawn together out of all countries,

2. 'Lives of the Saints.'

3. In section 1, Newman, in a footnote, corrects his statement that a work by this title was written by Brougham. The author was George Lillie Craik (1798–1866).

ranks, and ages, raised above the condition of humanity, specimens of the capabilities of our race, incentives to rivalry and patterns for imitation. This Christian idea Lord Brougham has borrowed for his new Pantheon, which is equally various in all attributes and appendages of mind, with this one characteristic in all its specimens, — the pursuit of Knowledge. Some of his worthies are low born, others of high degree; some are in Europe, others in the Antipodes; some in the dark ages, others in the ages of light; some exercise a voluntary, others an involuntary toil; some give up riches, and others gain them; some are fixtures, and others adventure much; some are profligate, and others ascetic; and some are believers, and others are infidels.

Alfred,[4] severely good and Christian, takes his place in this new hagiology [5] beside the gay and graceful Lorenzo de Medicis; [6] for did not the one 'import civilization into England,' and was not the other 'the wealthy and munificent patron of all the liberal arts'? Edward VI.[7] and Haroun al Raschid,[8] Dr. Johnson and Dr. Franklin, Newton and Protagoras,[9] Pascal [10] and Julian the Apostate,[11] Joseph Milner [12] and Lord Byron, Cromwell and Ovid, Bayle [13] and Boyle,[14] Adrian pope and Adrian emperor,[15] Lady Jane Grey and Madame Roland,[16] — human beings who agreed in nothing but in their humanity and in their love of Knowledge, are all admitted by this writer to one beatification, in proof of the Catholic character of his substitute for Faith.

The persecuting Marcus [17] is a 'good and enlightened emperor,' and a 'delightful' spectacle, when 'mixing in the religious processions and ceremonies' of Athens, 're-building and re-endowing the schools,' whence St. Paul was driven in derision. The royal Alphery,[18] on the contrary, 'preferred his humble parsonage' to the throne of the Czars. West [19] was 'nurtured among the quiet and gentle affections of a Quaker family.' Kirke White's [20] 'feelings became ardently devotional, and he determined to give up his life to the preaching of Christianity.' Roger Bacon [21] was 'a brother of the

5. 'history or lives of the saints.'
6. Lorenzo 'the Magnificent' (c.1449–92), great Renaissance patron of letters; noted for his luxurious worldliness.
7. 1537–53; son of Henry VIII; an accomplished scholar; crowned in 1547; encouraged the growth of grammar schools and charitable institutions.
8. 763–809; Caliph of Bagdad, who figures in many tales of *The Arabian Nights*.
9. Celebrated Greek philosopher, of the Sophist school, 5th century B.C.
10. Blaise Pascal (1623–62), French mathematician, physicist, moralist, and mystic.
11. Julian the Apostate (331–63), Roman emperor, who, though brought up as a Christian, attempted to restore pagan worship.
12. Joseph Milner (1744–97) was an Evangelical divine, and author of *The History of the Church of Christ* (1794–97).
13. Pierre Bayle (1647–1706), French skeptical philosopher, author of the *Dictionnaire Historique et Critique* (1697–1702).
14. Robert Boyle (1627–91), natural philosopher and chemist, formulator of 'Boyle's Law.'
15. Adrian was the name of six popes, the first in the 8th century, the last in the 16th. — Hadrian (or Adrian) was emperor of Rome from A.D. 117 to 138.
16. Lady Jane Grey (1537–54), Greek scholar and humanist. — Madame Jeanne Roland (1754–93), wife of one of the leading Girondists in the French Revolution; executed in 1793; famous for her remark: 'O liberty, what crimes are committed in thy name!'
17. Marcus Aurelius, Roman emperor from A.D. 161 to 180, was also a Stoic moralist, and, though of an elevated and enlightened character, persecuted the Christians.
18. Nikephor Alphery (fl.1618–60), divine, rector of Woolley.
19. Benjamin West (1738–1820), English historical and portrait-painter, born in Springfield, Pennsylvania, of Quaker parents; he settled in London under the special patronage of George III.
20. Henry Kirke White (1785–1806), poet, author of *Clifton Grove* (1803), *The Christiad*, etc.
21. Roger Bacon (1214?–94), philosopher, author of many treatises on the sciences.

Franciscan Order, at that time the great support and ornament of both Universities.' Belzoni[22] seized 'the opportunity' of Bonaparte's arrival in Italy to 'throw off his monastic habit,' 'its idleness and obscurity,' and to engage himself as a performer at Astley's. Duval,[23] 'a very able antiquarian of the last century,' began his studies as a peasant boy, and finished them in a Jesuits' College. Mr. Davy,[24] 'having written a system of divinity,' effected the printing of it in thirteen years 'with a press of his own construction,' and the assistance of his female servant, working off page by page for twenty-six volumes 8vo, of nearly 500 pages each. Raleigh, in spite of 'immoderate ambition,' was 'one of the very chief glories of an age crowded with towering spirits.'

Nothing comes amiss to this author; saints and sinners, the precious and the vile, are torn from their proper homes and recklessly thrown together under the category of Knowledge. 'Tis a pity he did not extend his view, as Christianity has done, to beings out of sight of man. Milton could have helped him to some angelic personages, as patrons and guardians of his intellectual temple, who of old time, before faith had birth,

> 'Apart sat on a hill retired
> In thoughts more elevate, and reasoned high
> Of providence, foreknowledge, will, and fate,
> Passion and apathy, and glory, and shame, —
> Vain wisdom all, and false philosophy.'[25]

And, indeed, he does make some guesses that way, speaking most catholically of being 'admitted to a fellowship with those loftier minds' who 'by universal consent *held a station apart*,' and are 'spoken of *reverently*,' as if their names were not those 'of mortal men'; and he speaks of these 'benefactors of mankind, when they *rest* from their *pious* labours, looking down' upon the blessings with which their '*toils and sufferings* have clothed the scene of their former existence.'

Such is the oratory which has fascinated Sir Robert; yet we must recollect that in the year 1832, even the venerable Society for Promoting Christian Knowledge herself, catching its sound, and hearing something about sublimity, and universality, and brotherhood, and effort, and felicity, was beguiled into an admission of this singularly irreligious work into the list of publications which she had delegated to a Committee to select *in usum laicorum*.[26]

That a Venerable Society should be caught by the vision of a Church Catholic is not wonderful; but what could possess philosophers and statesmen to dazzle her with it, but man's need of some such support, and the divine excellence and sovereign virtue of that which Faith once created?

6.

Secular Knowledge not a Principle of Action.

PEOPLE say to me, that it is but a dream to suppose that Christianity should regain the organic power in human society which once it possessed. I cannot help that; I never said it could. I am not a politician; I am proposing no measures, but expos-

22. Giovanni Battista Belzoni (1778–1823), Italian explorer of Egyptian antiquities; in 1803 he and his wife moved to London, where they relieved their poverty by performing at Astley's circus.

23. Valentin Jameray Duval (1695–1775), Jesuit, numismatist, and savant, librarian to Leopold, Duke of Lorraine, etc.

24. William Davy (1743–1826), divine, author of a *System of Divinity* (26 vols. 1795–1807), printed by himself on a machine of his own construction.

25. *Paradise Lost*, ii,557–59, 564–65.

26. 'for the use of the laity.'

ing a fallacy, and resisting a pretence. Let Benthamism reign, if men have no aspirations; but do not tell them to be romantic, and then solace them with glory; do not attempt by philosophy what once was done by religion. The ascendency of Faith may be impracticable, but the reign of Knowledge is incomprehensible. The problem for statesmen of this age is how to educate the masses, and literature and science cannot give the solution.

Not so deems Sir Robert Peel; his firm belief and hope is, 'that an increased sagacity will administer to an exalted faith; that it will make men not merely believe in the cold doctrines of Natural Religion, but that it will so prepare and temper the spirit and understanding, that they will be better qualified to comprehend the great scheme of human redemption.' He certainly thinks that scientific pursuits have some considerable power of impressing religion upon the mind of the multitude. I think not, and will now say why.

Science gives us the grounds or premisses from which religious truths are to be inferred; but it does not set about inferring them, much less does it reach the inference; — that is not its province. It brings before us phenomena, and it leaves us, if we will, to call them works of design, wisdom, or benevolence; and further still, if we will, to proceed to confess an Intelligent Creator. We have to take its facts, and to give them a meaning, and to draw our own conclusions from them. First comes Knowledge, then a view, then reasoning, and then belief. This is why Science has so little of a religious tendency; deductions have no power of persuasion. The heart is commonly reached, not through the reason, but through the imagination, by means of direct impressions, by the testimony of facts and events, by history, by description. Persons influence us, voices melt us, looks subdue us, deeds inflame us. Many a man will live and die upon a dogma: no man will be a martyr for a conclusion. A conclusion is but an opinion; it is not a thing which *is*, but which *we are 'certain about'*; and it has often been observed, that we never say we are certain without implying that we doubt. To say that a thing *must* be, is to admit that it *may not* be. No one, I say, will die for his own calculations; he dies for realities. This is why a literary religion is so little to be depended upon; it looks well in fair weather, but its doctrines are opinions, and, when called to suffer for them, it slips them between its folios, or burns them at its hearth. And this again is the secret of the distrust and raillery with which moralists have been so commonly visited. They say and do not. Why? Because they are contemplating the fitness of things, and they live by the square, when they should be realizing their high maxims in the concrete. Now Sir Robert thinks better of natural history, chemistry, and astronomy, than of such ethics; but they too, what are they more than divinity *in posse*?[1] He protests against 'controversial divinity': is *inferential* much better?

I have no confidence, then, in philosophers who cannot help being religious, and are Christians by implication. They sit at home, and reach forward to distances which astonish us; but they hit without grasping, and are sometimes as confident about shadows as about realities. They have worked out by a calculation the lie of a country which they never saw, and mapped it by means of a gazetteer; and like blind men, though they can put a stranger on his way, they cannot walk straight themselves, and do not feel it quite their business to walk at all.

Logic makes but a sorry rhetoric with the multitude; first shoot round corners, and you may not despair of converting by a syllogism. Tell men to gain notions of a Creator from His works, and, if they were to set about it (which nobody does),

1. 'potential.'

they would be jaded and wearied by the labyrinth they were tracing. Their minds would be gorged and surfeited by the logical operation. Logicians are more set upon concluding rightly, than on right conclusions. They cannot see the end for the process. Few men have that power of mind which may hold fast and firmly a variety of thoughts. We ridicule 'men of one idea'; but a great many of us are born to be such, and we should be happier if we knew it. To most men argument makes the point in hand only more doubtful, and considerably less impressive. After all man is *not* a reasoning animal; he is a seeing, feeling, contemplating, acting animal. He is influenced by what is direct and precise. It is very well to freshen our impressions and convictions from physics, but to create them we must go elsewhere. Sir Robert Peel 'never can think it possible that a mind can be so constituted, that, after being familiarized with the wonderful discoveries which have been made in every part of experimental science, it can retire from such contemplations without more enlarged conceptions of God's providence, and a higher reverence for His name.' If he speaks of religious minds, he perpetrates a truism; if of irreligious, he insinuates a paradox.

Life is not long enough for a religion of inferences; we shall never have done beginning, if we determine to begin with proof. We shall ever be laying out foundations; we shall turn theology into evidences, and divines into textuaries. We shall never get at our first principles. Resolve to believe nothing, and you must prove your proofs and analyse your elements, sinking further and further, and finding 'in the lowest depth a lower deep,' till you come to the broad bosom of scepticism. I would rather be bound to defend the reasonableness of assuming that Christianity is true, than to demonstrate a moral governance from the physical world. Life is for action. If we insist on proofs for everything, we shall never come to action: to act you must assume, and that assumption is faith.

Let no one suppose that in saying this I am maintaining that all proofs are equally difficult, and all propositions equally debatable. Some assumptions are greater than others, and some doctrines involve postulates larger than others, and more numerous. I only say that impressions lead to action, and that reasonings lead from it. Knowledge of premisses, and inferences upon them, — this is not to *live*. It is very well as a matter of liberal curiosity and of philosophy to analyse our modes of thought; but let this come second, and when there is leisure for it, and then our examinations will in many ways even be subservient to action. But if we commence with scientific knowledge and argumentative proof, or lay any great stress upon it as the basis of personal Christianity, or attempt to make man moral and religious by Libraries and Museums, let us in consistency take chemists for our cooks, and mineralogists for our masons.

Now I wish to state all this as matter of fact, to be judged by the candid testimony of any persons whatever. Why we are so constituted that Faith, not Knowledge or Argument, is our principle of action, is a question with which I have nothing to do: but I think it is a fact, and if it be such, we must resign ourselves to it as best we may, unless we take refuge in the intolerable paradox, that the mass of men are created for nothing, and are meant to leave life as they entered it. So well has this practically been understood in all ages of the world, that no Religion has yet been a Religion of physics or of philosophy. It has ever been synonymous with Revelation. It never has been a deduction from what we know: it has ever been an assertion of what we are to believe. It has never lived in a conclusion; it has ever been a message, or a history, or a vision. No legislator or priest ever dreamed of educating our moral nature by science or by argu-

ment. There is no difference here between true Religions and pretended. Moses was instructed, not to reason from the creation, but to work miracles. Christianity is a history supernatural, and almost scenic: it tells us what its Author is, by telling us what He has done. I have no wish at all to speak otherwise than respectfully of conscientious Dissenters, but I have heard it said by those who were not their enemies, and who had known much of their preaching, that they had often heard narrow-minded and bigoted clergymen, and often Dissenting ministers of a far more intellectual cast; but that Dissenting teaching came to nothing, — that it was dissipated in thoughts which had no point, and inquiries which converged to no centre, that it ended as it began, and sent away its hearers as it found them; — whereas the instruction in the Church, with all its defects and mistakes, comes to some end, for it started from some beginning. Such is the difference between the dogmatism of faith and the speculations of logic.

Lord Brougham himself, as we have already seen, has recognized the force of this principle. He has not left his philosophical religion to argument; he has committed it to the keeping of the imagination. Why should he depict a great republic of letters, and an intellectual Pantheon,[2] but that he feels that instances and patterns, not logical reasonings, are the living conclusions which alone have a hold over the affections, or can form the character?

7.

Secular Knowledge without Personal Religion Tends to Unbelief

When Sir Robert Peel assures us from the Town-hall at Tamworth that physical science must lead to religion, it is no compliment to him to say that he is unreal. He speaks of what he knows nothing about. To a religious man like him, Science has ever suggested religious thoughts; he colours the phenomena of physics with the hues of his own mind, and mistakes an interpretation for a deduction. 'I am sanguine enough to believe,' he says, 'that that superior sagacity which is most conversant with the course and constitution of Nature will be first to turn a deaf ear to objections and presumptions against Revealed Religion, and to acknowledge the complete harmony of the Christian Dispensation with all that Reason, assisted by Revelation, tells us of the course and constitution of Nature.' Now, considering that we are all of us educated as Christians from infancy, it is not easy to decide at this day whether Science creates Faith, or only confirms it; but we have this remarkable fact in the history of heathen Greece against the former supposition, that her most eminent empirical philosophers were atheists, and that it was their atheism which was the cause of their eminence. 'The natural philosophies of Democritus and others,' says Lord Bacon, '*who allow no God or mind* in the frame of things, but attribute the structure of the universe to infinite essays and trials of nature, or what they call fate or fortune, and assigned the causes of particular things to the necessity of matter, *without any intermixture of final causes*, seem, as far as we can judge from the remains of their philosophy, *much more solid*, and to have *gone deeper into nature*, with regard to physical causes, than the philosophies of Aristotle or Plato: and this only because they *never meddled with final causes*, which the others were perpetually inculcating.'[1]

Lord Bacon gives us both the fact and the reason for it. Physical philosophers are ever inquiring *whence* things are, not *why*; referring them to nature, not to mind; and

2. The Pantheon was originally a temple dedicated to all the gods, especially that at Rome built by Agrippa about 25 B.C. The name is now applied to any building honoring the illustrious dead of a nation.

1. In *The Advancement of Learning*, ii.

thus they tend to make a system a substitute for a God. Each pursuit or calling has its own dangers, and each numbers among its professors men who rise superior to them. As the soldier is tempted to dissipation, and the merchant to acquisitiveness, and the lawyer to the sophistical, and the statesman to the expedient, and the country clergyman to ease and comfort, yet there are good clergymen, statesmen, lawyers, merchants, and soldiers notwithstanding; so there are religious experimentalists, though physics, taken by themselves, tend to infidelity; but to have recourse to physics to *make* men religious is like recommending a canonry as a cure for the gout, or giving a youngster a commission as a penance for irregularities.

The whole framework of Nature is confessedly a tissue of antecedents and consequents; we may refer all things forwards to design, or backwards on a physical cause. La Place [2] is said to have considered he had a formula which solved all the motions of the solar system; shall we say that those motions came from this formula or from a Divine Fiat? Shall we have recourse for our theory to physics or to theology? Shall we assume Matter and its necessary properties to be eternal, or Mind with its divine attributes? Does the sun shine to warm the earth, or is the earth warmed because the sun shines? The one hypothesis will solve the phenomena as well as the other. Say not it is but a puzzle in argument, and that no one ever felt it in fact. So far from it, I believe that the study of Nature, when religious feeling is away, leads the mind, rightly or wrongly, to acquiesce in the atheistic theory, as the simplest and easiest. It is but parallel to that tendency in anatomical studies, which no one will deny, to solve all the phenomena of the human frame into material elements and powers, and to dispense with the soul. To those who are conscious of matter, but not conscious of mind, it seems more rational to refer all things to one origin, such as they know, than to assume the existence of a second origin such as they know not. It is Religion, then, which suggests to Science its true conclusions; the facts come from Knowledge, but the principles come of Faith.[3]

There are two ways, then, of reading Nature — as a machine and as a work. If we come to it with the assumption that it is a creation, we shall study it with awe; if assuming it to be a system, with mere curiosity. Sir Robert does not make this distinction. He subscribes to the belief that the man 'accustomed to such contemplations, *struck with awe* by the manifold proofs of infinite power and infinite wisdom, will yield more ready and hearty assent — yes, the assent of the heart, and not only of the understanding, to the pious exclamation, "O Lord, how glorious are Thy works!" ' He considers that greater insight into Nature will lead a man to say, 'How great and wise is the Creator, who has done this!' True: but it is possible that his thoughts may take the form of 'How clever is the creature who has discovered it!' and self-conceit may stand proxy for adoration. This is no idle apprehension. Sir Robert himself, religious as he is, gives cause for it; for the first reflection that rises in his mind, as expressed in the above passage, *before* his notice of Divine Power and Wisdom, is, that 'the man accustomed to such contemplations will feel the *moral dignity of his nature exalted*.' But Lord Brougham speaks out. 'The delight,' he says, 'is inexpressible of

2. Pierre Simon, Marquis de Laplace (1749–1827), French mathematician and astronomer, author of the *Mécanique Célèste* (1799–1825).

3. This is too absolute, if it is to be taken to mean that the legitimate, and what may be called the objective, conclusion from the fact of Nature viewed in the concrete is not in favour of the being and providence of God. — *Vide* 'Essay on Assent,' pp.336,345,369, and 'Univ. Serm.' p.194. [Newman's note.]

being able to follow, as it were, with our eyes, the marvellous works of the Great Architect of Nature.' And more clearly still: 'One of the most *gratifying treats* which science affords us is *the knowledge of the extraordinary powers* with which the human mind is endowed. No man, unless he has studied philosophy, can have a just idea of the great things for which Providence has fitted his understanding, the extraordinary disproportion which there is between his natural strength and the powers of his mind, and the force which he derives from these powers. When we survey the marvellous truths of astronomy, we are first of all lost in the feeling of immense space, and of the comparative insignificance of this globe and its inhabitants. But there soon arises a *sense of gratification and of new wonder* at perceiving how so insignificant a creature has been *able to reach such a knowledge* of the unbounded system of the universe.' So, this is the religion we are to gain from the study of Nature; how miserable! The god we attain is our own mind; our veneration is even professedly the worship of self.

The truth is that the system of Nature is just as much connected with Religion, where minds are not religious, as a watch or a steam-carriage. The material world, indeed, is infinitely more wonderful than any human contrivance; but wonder is not religion, or we should be worshipping our railroads. What the physical creation presents to us in itself is a piece of machinery, and when men speak of a Divine Intelligence as its Author, this god of theirs is not the Living and True, unless the spring is the god of a watch, or steam the creator of the engine. Their idol, taken at advantage (though it is *not* an idol, for they do not worship it), is the animating principle of a vast and complicated system; it is subjected to laws, and it is connatural and co-extensive with matter. Well does Lord Brougham call it 'the great architect of nature'; it is an instinct, or a soul of the world, or a vital power; it is not the Almighty God.[4]

It is observable that Lord Brougham does not allude to any *relation* as existing between his *god* and ourselves. He is filled with awe, it seems, at the powers of the human mind, as displayed in their analysis of the vast creation. Is not this a fitting time to say a word about gratitude towards Him who gave them? Not a syllable. What we gain from his contemplation of Nature is 'a gratifying treat,' the knowledge of the 'great things for which Providence has fitted man's understanding'; our admiration terminates in man; it passes on to no prototype.[5] I am not quarrelling with his result as illogical or unfair; it is but consistent with the principles with which he started. Take the system of Nature by itself, detached from the axioms of Religion, and I am willing to confess — nay, I have been expressly urging — that it does not force us to take it for *more* than a system; but why, then, persist in calling the study of it religious, when it can be treated, and is treated, thus atheistically? Say that Religion hallows the study, not that the study is a true ground of Religion. The essence of Religion is the idea of a Moral Governor, and a particular Providence; now let me ask, is the doctrine of moral governance and a particular providence conveyed to us through the physical sciences at all? Would they be physical sciences if they treated of morals? Can physics teach moral matters without ceasing to be physics? But are not virtue and vice, and responsibility, and reward and punishment, anything else than moral matters, and are *they* not of the essence of Religion? In what department, then, of physics are they to be found? Can the problems and

4. *Vide* 'University Education,' Disc.I (2nd Ed.) [Newman's note.]

5. *Vide* 'Essays,' vol.i.p.37, etc. [Newman's note.]

principles they involve be expressed in the differential calculus? Is the galvanic battery a whit more akin to conscience and will, than the mechanical powers? What we seek is what concerns us, the traces of a Moral Governor; even religious minds cannot discern these in the physical sciences; astronomy witnesses divine power, and physics divine skill; and all of them divine beneficence; but which teaches of divine holiness, truth, justice, or mercy? Is that much of a Religion which is silent about duty, sin, and its remedies? Was there ever a Religion which was without the idea of an expiation?

Sir Robert Peel tells us, that physical science imparts 'pleasure and *consolation*' on a death-bed. Lord Brougham confines himself to the 'gratifying treat'; but Sir Robert ventures to speak of 'consolation.' Now, if we are on trial in this life, and if death be the time when our account is gathered in, is it at all serious or real to be talking of 'consoling' ourselves at such a time with scientific subjects? Are these topics to suggest to us the thought of the Creator or not? If not, are they better than story books, to beguile the mind from what lies before it? But, if they are to speak of Him, can a dying man find rest in the mere notion of his Creator, when he knows Him also so awfully as His Moral Governor and his Judge? Meditate indeed on the wonders of Nature on a death-bed! Rather stay your hunger with corn grown in Jupiter, and warm yourself by the Moon.

But enough on this most painful portion of Sir Robert's Address. As I am coming to an end, I suppose I ought to sum up in a few words what I have been saying. I consider, then, that intrinsically excellent and noble as are scientific pursuits, and worthy of a place in a liberal education, and fruitful in temporal benefits to the community, still they are not, and cannot be, ***the instrument*** of an ethical training; that physics do not supply a basis, but only materials for religious sentiment; that knowledge does but occupy, does not form the mind; that apprehension of the unseen is the only known principle capable of subduing moral evil, educating the multitude, and organizing society; and that, whereas man is born for action, action flows not from inferences, but from impressions, — not from reasonings, but from Faith.

That Sir Robert would deny these propositions I am far from contending; I do not even contend that he has asserted the contrary at Tamworth. It matters little to me whether he spoke boldly and intelligibly, as the newspapers represent, or guarded his strong sayings with the contradictory matter with which they are intercalated in his own report. In either case the drift and the effect of his Address are the same. He has given his respected name to a sophistical School, and condescended to mimic the gestures and tones of Lord Brougham. How melancholy is it that a man of such exemplary life, such cultivated tastes, such political distinction, such Parliamentary tact, and such varied experience, should have so little confidence in himself, so little faith in his own principles, so little hope of sympathy in others, so little heart for a great venture, so little of romantic aspiration, and of firm resolve, and stern dutifulness to the Unseen! How sad that he who might have had the affections of many, should have thought, in a day like this, that a Statesman's praise lay in preserving the mean, not in aiming at the high; that to be safe was his first merit, and to kindle enthusiasm his most disgraceful blunder! How pitiable that such a man should not have understood that a body without a soul has no life, and a political party without an idea, no unity!

DISCOURSES ADDRESSED TO MIXED CONGREGATIONS

Discourse VIII

Nature and Grace.

In the Parable of the Good Shepherd our Lord sets before us a dispensation or state of things, which is very strange in the eyes of the world. He speaks of mankind as consisting of two bodies, distinct from each other, divided by as real a line of demarcation as the fence which encloses the sheepfold. 'I am the Door,' He says, 'by Me if any man shall have entered in, he shall be saved: and he shall go in and go out, and shall find pastures. My sheep hear My voice, and I know them, and they follow Me, and I give them life everlasting; and they shall not perish for ever, and no man shall snatch them out of My Hand.' [1] And in His last prayer for His disciples to His Eternal Father, He says, 'I have manifested Thy Name to the men whom Thou hast given Me out of the world. Thine they were, and Thou hast given them to Me, and they have kept Thy word. I pray for them, I pray not for the world, but for those whom Thou hast given Me, for they are Thine. Holy Father, keep them in Thy Name whom Thou hast given Me, that they may be one, as We also.' [2] Nor are these passages solitary or singular; 'Fear not, little flock,' [3] He says by another Evangelist, 'for it hath pleased your Father to give you the kingdom.' And again, 'I thank Thee, Father, Lord of heaven and earth, that Thou hast hid these things from the wise and prudent, and hast revealed them unto little ones'; [4] and again, 'How narrow is the gate, and strait the way which leadeth to life, and few there are who find it!' [5] St. Paul repeats and insists on this doctrine of his Lord, 'Ye were once darkness, but now are light in the Lord'; 'He hath delivered us from the power of darkness, and hath translated us into the kingdom of the Son of His love.' [6] And St. John, 'Greater is He that is in you than he that is in the world. They are of the world, we are of God.' [7] Thus there are two parties on this earth, and two only, if we view men in their religious aspect; those, the few, who hear Christ's words and follow Him, who are in the light, and walk in the narrow way, and have the promise of heaven; and those, on the other hand, who are the many, for whom Christ prays not, though He has died for them, who are wise and prudent in their own eyes, who are possessed by the Evil One, and are subject to his rule.

And such is the view taken of mankind, as by their Maker and Redeemer, so also by the small company in whom He lives and is glorified; but far differently does the larger body, the world itself, look upon mankind at large, upon its own vast multitudes, and upon those whom God has taken out of it for His own special inheritance. It considers that all men are pretty much on a level, or that, differ though they may, they differ by such fine shades from each other, that it is impossible, because forsooth it would be untrue and unjust, to divide them into two bodies, or to divide them at all. 'Each man is like himself and no one else; each man has his own opinions, his own rule of faith and conduct, his own worship; if a number join together in a religious form, this is an accident, for the sake of convenience;

1. This quotation (from *John*, x,9,27–29), like many others in the present sermon and in the succeeding one, is not wholly exact. The phrasing in Newman's Biblical quotations often appears to be given from memory, and sometimes seems to draw from both the Douay and the King James version of the Bible.
2. See *John*, xvii,6ff.
3. *Luke*, xii,32, etc.
4. *Matthew*, xi,25, etc.
5. *Matthew*, vii,14, etc.
6. See *Acts*, xxvi,18; *I Peter*, ii,9, etc.
7. *I John*, iv,4ff.

for each is complete in himself; religion is simply a personal concern; there is no such thing really as a common or joint religion, that is, one in which a number of men, strictly speaking, partake; it is all matter of private judgment. Hence, as they sometimes proceed even to avow, there is no such thing as a true religion or a false; that is true to each, which each sincerely believes to be true; and what is true to one, is not true to his neighbour. There are no special doctrines, necessary to be believed in order to salvation; it is not very difficult to be saved; and most men may take it for granted that they shall be saved. All men are in God's favour, except so far as, and while, they commit acts of sin; but when the sin is over, they get back into His favour again, naturally and as a thing of course, no one knows how, owing to God's infinite indulgence, unless indeed they persevere and die in a course of sin, and perhaps even then. There is no such place as hell, or at least punishment is not eternal. Predestination, election, grace, perseverance, faith, sanctity, unbelief, and reprobation are strange ideas, and, as they think, very false ones.' This is the cast of opinion of men in general, in proportion as they exercise their minds on the subject of religion, and think for themselves; and if in any respect they depart from the easy, cheerful, and tranquil temper of mind which it expresses, it is when they are led to think of those who presume to take the contrary view, that is, who take the view set forth by Christ and His Apostles. On these they are commonly severe, that is, on the very persons whom God acknowledges as His, and is training heavenward, — on Catholics, who are the witnesses and preachers of those awful doctrines of grace, which condemn the world and which the world cannot endure.

In truth the world does not know of the existence of grace; nor is it wonderful, for it is ever contented with itself, and has never turned to account the supernatural aids bestowed upon it. Its highest idea of man lies in the order of nature; its pattern man is the natural man; it thinks it wrong to be anything else than a natural man. It sees that nature has a number of tendencies, inclinations, and passions; and because these are natural, it thinks that each of them may be indulged for its own sake, so far as it does no harm to others, or to a person's bodily, mental, and temporal well-being. It considers that want of moderation, or excess, is the very definition of sin, if it goes so far as to recognize that word. It thinks that he is the perfect man who eats, and drinks, and sleeps, and walks, and diverts himself, and studies, and writes, and attends to religion, in moderation. The devotional feeling and the intellect, and the flesh, have each its claim upon us, and each must have play, if the Creator is to be duly honoured. It does not understand, it will not admit, that impulses and propensities, which are found in our nature, as God created it, may nevertheless, if indulged, become sins, on the ground that He has subjected them to higher principles, whether these principles be in our nature, or be superadded to our nature. Hence it is very slow to believe that evil thoughts are really displeasing to God, and incur punishment. Works, indeed, tangible actions, which are seen and which have influence, it will allow to be wrong; but it will not believe even that deeds are sinful, or that they are more than reprehensible, if they are private or personal; and it is blind utterly to the malice of thoughts, of imaginations, of wishes, and of words. Because the wild emotions of anger, lust, greediness, craft, cruelty, are no sin in the brute creation, which has neither the means nor the command to repress them, therefore they are no sins in a being who has a diviner sense and a controlling power. Concupiscence, it considers, may be indulged, because it is in its first elements natural.

Behold here the true origin and fountain-head of the warfare between the

Church and the world; here they join issue, and diverge from each other. The Church is built upon the doctrine that impurity is hateful to God, and that concupiscence is its root; with the Prince of the Apostles, her visible Head, she denounces 'the corruption of concupiscence which is in the world,' or, that corruption in the world which comes of concupiscence; whereas the corrupt world defends, nay, I may even say, sanctifies that very concupiscence which is the world's corruption. Just as its bolder teachers, as you know, my brethren, hold that the laws of this physical creation are so supreme, as to allow of their utterly disbelieving in the existence of miracles, so, in like manner, it deifies and worships human nature and its impulses, and denies the power and the grant of grace. This is the source of the hatred which the world bears to the Church; it finds a whole catalogue of sins brought into light and denounced, which it would fain believe to be no sins at all; it finds itself, to its indignation and impatience, surrounded with sin, morning, noon, and night; it finds that a stern law lies against it in matters where it believed it was its own master and need not think of God; it finds guilt accumulating upon it hourly which nothing can prevent, nothing remove, but a higher power, the grace of God. It finds itself in danger of being humbled to the earth as a rebel, instead of being allowed to indulge its self-dependence and self-complacency. Hence it takes its stand on nature, and denies or rejects divine grace. Like the proud spirit in the beginning, it wishes to find its supreme good in its own self, and nothing above it; it undertakes to be sufficient for its own happiness; it has no desire for the supernatural, and therefore does not believe in it. And because nature cannot rise above nature, it will not believe that the narrow way is possible; it hates those who enter upon it as if pretenders and hyprocrites, or laughs at their aspirations as romance and fanaticism; lest it should have to believe in the existence of grace.

Now you may think, my brethren, from the way in which I have been contrasting nature and grace, that they cannot possibly be mistaken for each other; but I wish to show you, in the next place, how grace may be mistaken for nature, and nature mistaken for grace. And in explaining this very grave matter, I wish, lest I should be misunderstood, first to say distinctly, that I am merely comparing and contrasting nature and grace one with another in their several characters, and by no means presuming to apply what I shall say of them to actual individuals, or to judge what persons, living or dead, are specimens of the one or of the other. This then being my object, I repeat that, contrary to what might be thought, they may easily be mistaken for each other, because, as it is plain from what I have said, the difference is in a great measure an inward, and therefore a secret one. Grace is lodged in the heart; it purifies the thoughts and motives, it raises the soul to God, it sanctifies the body, it corrects and exalts human nature in regard to those sins of which men are ashamed, and do not make a public display. Accordingly, in outward show, in single actions, in word, in profession, in teaching, in the social and political virtues, in striking and heroical exploits, on the public transitory scene of things, nature may counterfeit grace, nay even to the deception of the man himself in whom the counterfeit occurs. Recollect that it is by nature, not by grace, that man has the gifts of reason and conscience; and mere reason and conscience will lead him to discover, and in a measure pursue, objects which are, properly speaking, supernatural and divine. From the things which are seen, from the voice of tradition, from the existence of the soul, and from the necessity of the case, the natural reason can infer the existence of God. The natural heart can burst forth by fits and starts into emotions of love towards Him;

the natural imagination can depict the beauty and glory of His attributes; the natural conscience may ascertain and put in order the truths of the great moral law, nay even to the condemnation of that concupiscence, which it is too weak to subdue, and is therefore persuaded to tolerate. The natural will can do many things really good and praiseworthy; nay, in particular cases, or at particular seasons, when temptation is away, it may seem to have a strength which it has not, and to be imitating the austerity and purity of a Saint. One man has no temptation to this sin, nor another to that; hence human nature may often show to great advantage; and, as seen in its happier specimens, it may become quite a trial to faith, seeing that in its best estate it has really no relationship to the family of Christ, and no claim whatever to a heavenly reward, — though it can talk of Christ and heaven too, read Scripture, and 'do many things willingly' in consequence of reading it, and can exercise a certain sort of belief, however different from that faith which is imparted to us by grace.

For instance, it is a most mournful, often quite a piercing thought, to contemplate the conduct and the character of those who have never received the elementary grace of God in the Sacrament of Baptism. They may be in fact, so benevolent, so active and untiring in their benevolence; they may be so wise and so considerate; they may have so much in them to engage the affections of those who see them! Well, let us leave them to God; His grace is over all the earth; if that grace comes to good effect and bears fruit in the hearts of the unbaptized, He will reward it; but, where grace is not, there doubtless what looks so fair has its reward in this world, such good as is in it having no better claim on a heavenly reward than skill in any art or science, than eloquence or wit. And moreover, it often happens, that, where there is much that is specious and amiable, there is also much that is sinful, and frightfully so. Men show their best face in the world; but for the greater part of their time, the many hours of the day and the night, they are shut up in their own thoughts. They are their own witnesses, none see them besides, save God and His Angels; therefore in such cases we can only judge of what we actually see, and can only admire what is in itself good, without having any means of determining the real moral condition of those who display it. Just as children are caught by the mere good-nature and familiarity with which they are treated by some grown man, and have no means or thought of forming a judgment about him in other respects, and may be surprised, when they grow up, to find how unworthy he is of their respect or affection; as the uneducated, who have seen very little of the world, have no faculties for distinguishing between one rank of men and another, and consider all persons on a level who are respectably dressed, whatever be their accent, their carriage, or their countenance; so all of us, not children only or the uncultivated, are but novices, or less than novices, in the business of deciding what is the real state in God's sight of this or that man, who is external to the Church, yet in character or conduct resembles her true sons.

Not entering then upon this point, which is beyond us, so much we even can see and are sure of, that human nature is, in a degree beyond all words, inconsistent, and that we must not take for granted that it can do anything at all more than it actually does, or that those, in whom it shows most plausibly, are a whit better than they look. We see the best, and (as far as moral excellence goes) the whole of them. We cannot argue from what we see in favour of what we do not see; we cannot take what we see as a specimen of what they really are. Sad, then, as the spectacle of such a man is to a Catholic, he is no difficulty to him. He may have many virtues, yet he may have nothing of a spe-

cial Christian cast about him, humility, purity, or devotion. He may like his own way intensely, have a great opinion of his own powers, scoff at faith and religious fear, and seldom or never have said a prayer in his life. Nay, even outward gravity of deportment is no warrant that there is not within an habitual indulgence of evil thoughts, and secret offences odious to Almighty God. We admire, for instance, whatever is excellent in the ancient heathen; we acknowledge without jealousy whatever they have done virtuous and praiseworthy, but we understand as little of the character or destiny of the being in whom that goodness is found, as we understand the nature of the material substances which present themselves to us under the outward garb of shape and colour. They are to us as unknown causes which have influenced or disturbed the world, and which manifest themselves in certain great effects, political, social, or ethical; they are to us as pictures, which appeal to the eye, but not to the touch. We do not know that they would prove to be more real than a painting, if we could touch them. Thus much we know, that, if they have attained to heaven, it has been by the grace of God and their co-operation with it; if they have lived without using that grace which is given to all, they have no hope of life; and, if they have lived and died in mortal sin, they are in the state of bad Catholics, and have the prospect of never-ending death.

Yet, if we allow ourselves to take the mere outward appearance of things, and the happier, though partial and occasional, efforts of human nature, how great it is, how amiable, how brilliant, — that is, if we may pretend to the power of viewing it distinct from the supernatural influences which have ever haunted it! How great are the old Greek lawgivers and statesmen, whose histories and works are known to some of us, and whose names to many more! How great are those stern Roman heroes, who conquered the world, and prepared the way for Christ! How wise, how profound, are those ancient teachers and sages! what power of imagination, what a semblance of prophecy, is manifest in their poets! The present world is in many respects not so great as in that old time, but even now there is enough in it to show both the strength of human nature in this respect, and its weakness. Consider the solidity of our own political fabric at home, and the expansion of our empire abroad, and you will have matter enough spread out before you to occupy many a long day in admiration of the genius, the virtues, and the resources of human nature. Take a second meditation upon it; alas! you will find nothing of faith there, but mainly expedience as the measure of right and wrong, and temporal well-being as the end of action.

Again, many are the tales and poems written now-a-days, expressing high and beautiful sentiments; I dare say some of you, my brethren, have fallen in with them, and perhaps you have thought to yourselves, that he must be a man of deep religious feeling and high religious profession who could write so well. Is it so in fact, my brethren? it is not so; why? because after all it is *but* poetry, not religion; it is human nature exerting the powers of imagination and reason, which it has, till it seems also to have powers which it has not. There are, you know, in the animal world various creatures, which are able to imitate the voice of man; nature in like manner is often a mockery of grace. The truth is, the natural man sees this or that principle to be good or true from the light of conscience; and then, since he has the power of reasoning, he knows that, if this be true, many other things are true likewise; and then, having the power of imagination, he pictures to himself those other things as true, though he does not really understand them. And then he brings to his aid what he has read and gained from others who *have* had grace, and thus he completes his sketch;

and then he throws his feelings and his heart into it, meditates on it, and kindles in himself a sort of enthusiasm, and thus he is able to write beautifully and touchingly about what to others indeed may be a reality, but to him is nothing more than a fiction. Thus some can write about the early Martyrs, and others describe some great Saint of the Middle Ages, not exactly as a Catholic would, but as if they had a piety and a seriousness to which really they are strangers. So, too, actors on a stage can excite themselves till they think they are the persons they represent; and, as you know, prejudiced persons, who wish to quarrel with another, impute something to him, which at first they scarcely believe themselves; but they wish to believe it and act as if it were true, and raise and cherish anger at the thought of it, till at last they come simply to believe it. So it is, I say, in the case of many an author in verse and prose; readers are deceived by his fine writing; they not only praise this or that sentiment, or argument, or description, in what they read, which happens to be true, but they put faith in the writer himself; and they believe sentiments or statements which are false on the credit of the true. Thus it is that people are led away into false religions and false philosophies; a preacher or speaker, who is in a state of nature, or has fallen from grace, is able to say many things to touch the heart of a sinner or to strike his conscience, whether from his natural powers, or from what he has read in books; and the latter forthwith takes him for his prophet and guide, on the warrant of these accidental truths which it required no supernatural gifts to discover and enforce.

Scripture provides us an instance of such a prophet (nay, of one far more favoured and honoured than any false teacher is now), who nevertheless was the enemy of God; I mean the prophet Balaam. He went forth to curse the chosen people in spite of an express prohibition from heaven, and that for money; and at length he died fighting against them in battle. Such was he in his life and in his death; such were his deeds; but what were his words? most religious, most conscientious, most instructive. 'If Balac,' he says, 'shall give me his house full of silver and gold, I cannot alter the word of the Lord my God.' Again, 'Let my soul die the death of the just, and let my end be like to theirs!' And again, 'I will show thee, O man, what is good, and what the Lord requireth of thee; to do judgment and to love mercy, and to walk heedfully with thy God.'[8] Here is a man, who is not in a state of grace, speaking so religiously, that at first sight you might have thought he was to be followed in whatever he said, and that your soul would have been safe with his.

And thus it often happens, that those who seem so amiable and good, and so trustworthy, when we only know them from their writings, disappoint us so painfully, if at length we come to have a personal acquaintance with them. We do not recognize in the living being the eloquence or the wisdom which so much enchanted us. He is rude, perhaps, and unfeeling; he is selfish, he is dictatorial, he is sensual, he is empty-minded and frivolous; while we in our simplicity had antecedently thought him the very embodiment of purity and tenderness, or an oracle of heavenly truth.

Now, my dear brethren, I have been engaged in bringing before you what human nature can do, and what it can appear, without being reconciled to God, without any hope of heaven, without any security against sin, without any pardon of the original curse, nay, in the midst of mortal sin; but it is a state which has never existed in fact, without great modifications. No one has ever been deprived of the assistance of grace, both for illumination and conversion; even the heathen world as a whole had to a certain extent

8. See *Numbers*, xxii–xxiv.

its darkness relieved by these fitful and recurrent gleams of light; but I have thought it useful to get you to contemplate what human nature is, viewed in itself, for various reasons. It explains how it is that men look so like each other as they do, — grace being imitated, and, as it were, rivalled by nature, both in society at large, and in the hearts of particular persons. Hence the world will not believe the separation really existing between it and the Church, and the smallness of the flock of Christ. And hence too it is, that numbers who have heard the Name of Christ, and profess to believe in the Gospel, will not be persuaded as regards themselves that they are exterior to the Church, and do not enjoy her privileges; merely because they do their duty in some general way, or because they are conscious to themselves of being benevolent or upright. And this is a point which concerns Catholics too, as I now proceed to show you.

Make yourselves quite sure then, my brethren, of the matter of fact, before you go away with the belief, that you are not confusing, in your own case, nature and grace, and taking credit to yourselves for supernatural works, which merit heaven, when you are but doing the works of a heathen, are unforgiven, and lie under an eternal sentence. O, it is a dreadful thought, that a man may deceive himself with the notion that he is secure, merely because he is a Catholic, and because he has some kind of love and fear of God, whereas he may be no better than many a Protestant round about him, who either never was baptized, or threw himself once for all out of grace on coming to years of understanding. This idea is entirely conceivable; it is well if it be not true in matter of fact. You know, it is one opinion entertained among divines and holy men, that the number of Catholics that are to be saved will on the whole be small. Multitudes of those who never knew the Gospel will rise up in the judgment against the children of the Church, and will be shown to have done more with scantier opportunities. Our Lord speaks of His people as a small flock, as I cited His words when I began: He says, 'Many are called, few are chosen.'[9] St. Paul, speaking in the first instance of the Jews, says that but 'a remnant is saved according to the election of grace.'[10] He speaks even of the possibility of his own reprobation. What a thought in an Apostle! yet it is one with which Saints are familiar; they fear both for themselves and for others. It is related in the history of my own dear Patron, St. Philip Neri,[11] that some time after his death he appeared to a holy religious, and bade him take a message of consolation to his children, the Fathers of the Oratory. The consolation was this, that, by the grace of God, up to that day not one of the Congregation had been lost. 'None of them lost!' a man may cry out; 'well, had his consolation for his children been, that they were all in paradise, having escaped the dark lake of purgatory, that would have been something worth telling; but all he had to say was, that none of them were in hell! Strange if they were! Here was a succession of men, who had given up the world for a religious life, who had given up self for God and their neighbour, who had

9. *Matthew*, xx,16; xxii,14.

10. *Romans*, xi,5.

11 St. Philip Neri (1515–95), an Italian churchman, began his career by laboring among the sick and poor in Rome, engaging all types of men in the city in religious argument (in the manner of Socrates), and instituting an 'Oratory' for evening meetings, with prayers, discussions, and music. Eventually Neri formally organized, under papal permission, the Congregation of the Oratory, in 1575; he desired that all congregations organized outside Rome should be, like the original, entirely autonomous; this desire was officially recognized in 1622. Neri's character, his intellectual virtues, and the nature of the Oratory, as he founded it, had a strong appeal for Newman, who founded an Oratory at Birmingham in 1847 and another in London in 1850. Neri was beatified in 1600, and canonized in 1622

passed their days in prayer and good works, who had died happily with the last Sacraments, and it is revealed about them, as a great consolation, that not even one of them was lost!' Still such after all is our holy Father's consolation; and, that it should be such, only proves that salvation is not so easy a matter, or so cheap a possession, as we are apt to suppose. It is not obtained by the mere wishing. And, if it was a gift so to be coveted by men, who had made sacrifices for Christ, and were living in sanctity, how much more rare and arduous of attainment is it in those who have confessedly loved the world more than God, and have never dreamed of doing any duty to which the Church did not oblige them!

Tell me, what is the state of your souls and the rule of your lives? You come to Confession, once a year; — four times a year; — at the Indulgences; — you communicate as often; you do not miss Mass on days of obligation; you are not conscious of any great sin. — There you come to an end; you have nothing more to say. What? do you not take God's name in vain? only when you are angry; that is, I suppose, you are subject to fits of violent passion, in which you use every shocking word which the devil puts into your mouth, and abuse and curse, and perhaps strike the objects of your anger? — Only now and then, you say, when you are in liquor. Then it seems you are given to intoxication? — you answer, you never drink so much as not to know what you are doing. Do you really mean that for an excuse! Well, have you improved in these respects in the course of several years past? You cannot say you have, but such sins are not mortal at the most. Then, I suppose, you have not lately fallen into mortal sin at all? You pause, and then you are obliged to confess that you have, and that once and again; and the more I question you, perhaps the longer becomes the catalogue of offences which have separated you from God. But this is not all; your sole idea of sin is, the sinning in act and in deed; sins of habit, which cling so close to you that they are difficult to detect, and manifest themselves in slight but continual influences on your thoughts, words, and works, do not engage your attention at all. You are selfish, and obstinate, and worldly, and self-indulgent; you neglect your children; you are fond of idle amusements; you scarcely ever think of God from day to day, for I cannot call your hurried prayers morning and night any thinking of Him at all. You are friends with the world, and live a good deal among those who have no sense of religion.

Now what have you to tell me which will set against this? what good have you done? in what is your hope of heaven? whence do you gain it? You perhaps answer me, that the Sacrament of Penance reconciles you from time to time to God; that you live in the world; that you are not called to the religious state? that it is true you love the world more than God, but that you love God sufficiently for salvation, and that you rely in the hour of death upon the powerful intercession of the Blessed Mother of God. Then besides, you have a number of good points, which you go through, and which are to you signs that you *are* in the grace of God; you conceive that your state at worst is one of tepidity. Tepidity! I tell you, you have no marks of tepidity; do you wish to know what a tepid person is? one who has begun to lead almost the life of a Saint, and has fallen from his fervour; one who retains his good practices, but does them without devotion; one who does so much, that we only blame him for not doing more. No, you need not confess tepidity, my brother; — do you wish to have the judgment which I am led to form about you? it is, that probably you are not in the grace of God at all. The probability is, that for a long while past you have gone to Confession without the proper dispositions, without real grief, and without sincere pur-

pose of amendment for your sins. You are probably such, that were you to die this night, you would be lost for ever. What do you do more than nature does? You do certain good things; 'what reward have ye? do not even the publicans so? what do ye more than others? do not even the heathen so?'[12] You have the ordinary virtues of human nature, or some of them; you are what nature made you, and care not to be better. You may be naturally kind-hearted, and then you do charitable actions to others; you have a natural strength of character, — if so, you are able to bring your passions under the power of reason; you have a natural energy, and you labour for your family; you are naturally mild, and so you do not quarrel; you have a dislike of intemperance, and therefore you are sober. You have the virtues of your Protestant neighbours, and their faults too; what are you better than they?

Here is another grave matter against you, that you are so well with the Protestants about you; I do not mean to say that you are not bound to cultivate peace with all men, and to do them all the offices of charity in your power. Of course you are, and if they respect, esteem, and love you, it redounds to your praise and will gain you a reward; but I mean more than this; I mean they do *not* respect you, but they like you, because they think of you as of themselves, they see no difference between themselves and you. This is the very reason why they so often take your part, and assert or defend your political rights. Here again, there is a sense of course in which our civil rights may be advocated by Protestants without any reflection on us, and with honour to them. We are like others in this, that we are men; that we are members of the same state with them, subjects, contented subjects, of the same Sovereign, that we have a dependence on them, and have them dependent on us; that, like them, we feel pain when ill-used, and are grateful when well-treated. We need not be ashamed of a fellowship like this, and those who recognize it in us are generous in doing so. But we have much cause to be ashamed, and much cause to be anxious what God thinks of us, if we gain their support by giving them a false impression in our persons of what the Catholic Church is and what Catholics are bound to be, what bound to believe, and to do; and is not this the case often, my brethren, that the world takes up your interests, because you share its sins?

Nature is one with nature, grace with grace; the world then witnesses against you by being good friends with you; you could not have got on with the world so well, without surrendering something which was precious and sacred. The world likes you, all but your professed creed; distinguishes you from your creed in its judgment of you, and would fain separate you from it in fact. Men say, 'These persons are better than their Church; we have not a word to say for their Church; but Catholics are not what they were, they are very much like other men now. Their Creed certainly is bigoted and cruel, but what would you have of them? You cannot expect them to confess this; let them change quietly, no one changes in public, — be satisfied that they are changed. They are as fond of the world as we are; they take up political objects as warmly; they like their own way just as well; they do not like strictness a whit better; they hate spiritual thraldom, and they are half ashamed of the Pope and his Councils. They hardly believe any miracles now, and are annoyed when their own brethren confess that there are such; they never speak of purgatory; they are sore about images; they avoid the subject of Indulgences;[13] and they will not commit them-

12. *Matthew*, v,46,47, etc.

13. *Indulgences*: remissions of the temporal punishments due to sins, after the guilt of sin has been remitted by sincere repentance; it is considered as the payment of the debt of justice to God by the application of the merits of Christ and his Saints to the contrite soul through the Church.

selves to the doctrine of exclusive salvation. The Catholic doctrines are now mere badges of party. Catholics think for themselves and judge for themselves, just as we do; they are kept in their Church by a point of honour, and a reluctance at seeming to abandon a fallen cause.'

Such is the judgment of the world, and you, my brethren, are shocked to hear it; —but may it not be, that the world knows more about you than you know about yourselves? 'If ye had been of the world,'[14] says Christ, 'the world would love its own; but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you.' So speaks Christ of His Apostles. How run His words when applied to you? 'If ye be of the world, the world will love its own; therefore ye are of the world, and I have not chosen you out of the world, because the world doth love you.' Do not complain of the world's imputing to you more than is true; those who live as the world lives give countenance to those who think them of the world, and seem to form but one party with them. In proportion as you put off the yoke of Christ, so does the world by a sort of instinct recognize you, and think well of you accordingly. Its highest compliment is to tell you that you disbelieve. O my brethren, there is an eternal enmity between the world and the Church. The Church declares by the mouth of an Apostle, 'Whoso will be a friend of the world, becomes an enemy of God';[15] and the world retorts, and calls the Church apostate, sorceress, Beelzebub, and Antichrist. She is the image and the mother of the predestinate, and, if you would be found among her children when you die, you must have part in her reproach while you live. Does not the world scoff at all that is glorious, all that is majestic, in our holy religion? Does it not speak against the special creations of God's grace? Does it not disbelieve the possibility of purity and chastity? Does it not slander the profession of celibacy? Does it not deny the virginity of Mary? Does it not cast out her very name as evil? Does it not scorn her as 'a dead woman,' whom you know to be the Mother of all the living, and the great Intercessor of the faithful? Does it not ridicule the Saints? Does it not make light of their relics? Does it not despise the Sacraments? Does it not blaspheme the awful Presence which dwells upon our altars, and mock bitterly and fiercely at our believing that what it calls bread and wine is that very same Body and Blood of the Lamb, which lay in Mary's womb and hung on the Cross? What are we, that we should be better treated than our Lord, and His Mother, and His servants, and His works? Nay, what are we, if we *be* better treated, but friends of those who thus treat us well, and who ill-treat Him?

O my dear brethren, be children of grace, not of nature; be not seduced by this world's sophistries and assumptions; it pretends to be the work of God, but in reality it comes of Satan. 'I know My sheep,'[16] says our Lord, 'and Mine know Me, and they follow Me.' 'Show me, O Thou whom my soul loveth,' says the Bride in the Canticle, 'where Thou feedest, where Thou restest at noon': and He answers her, 'Go forth, and follow after the steps of the flocks, and feed thy kids beside the shepherds' tents.' Let us follow the Saints, as they follow Christ; so that, when He comes in judgment, and the wretched world sinks to perdition, 'on us sinners, His servants, hoping in the multitude of His mercies, He may vouchsafe to bestow some portion and fellowship with His Holy Apostles and Martyrs, with John, Stephen, Matthias, Barnabas, Ignatius, Alexander, Marcellinc, Peter, Felicity, Perpetua, Agatha, Lucy, Agnes, Cicely, Anastasia, and all His Saints, not

14. *John*, xv,18–19, etc.

15. *James*, iv,4.

16. See *John*, x,14, etc.

for the value of our merit, but according to the bounty of His pardon, through the same Christ our Lord.'

Discourse X

Faith and Private Judgment

When we consider the beauty, the majesty, the completeness, the resources, the consolations, of the Catholic Religion, it may strike us with wonder, my brethren, that it does not convert the multitude of those who come in its way. Perhaps you have felt this surprise yourselves; especially those of you who have been recently converted, and can compare it, from experience, with those religions which the millions of this country choose instead of it. You know, from experience, how barren, unmeaning, and baseless those religions are; what poor attractions they have, and how little they have to say for themselves. Multitudes, indeed, are of no religion at all; and you may not be surprised that those who cannot even bear the thought of God, should not feel drawn to His Church; numbers, too, hear very little about Catholicism, or a great deal of abuse and calumny against it, and you may not be surprised that they do not all at once become Catholics; but what may fairly surprise those who enjoy the fulness of Catholic blessings is, that those who see the Church ever so distantly, who see even gleams or the faint lustre of her majesty, nevertheless should not be so far attracted by what they see as to seek to see more, — should not at least put themselves in the way to be led on to the Truth, which of course is not ordinarily recognized in its divine authority except by degrees. Moses, when he saw the burning bush, turned aside to see 'that great sight';[1] Nathanael, though he thought no good could come out of Nazareth, at least followed Philip to Christ, when Philip said to him, 'Come and see';[2] but the multitudes about us see and hear, in some measure, surely, — many in ample measure, — and yet are not persuaded thereby to see and hear more, are not moved to act upon their knowledge. Seeing they see not, and hearing they hear not; they are contented to remain as they are; they are not drawn to inquire, or at least not drawn on to embrace.

Many explanations may be given of this difficulty; I will proceed to suggest to you one, which will sound like a truism, but yet has a meaning in it. Men do not become Catholics, because they have not faith. Now you may ask me, how this is saying more than that men do not believe the Catholic Church *because* they do not believe it; which is saying nothing at all. Our Lord, for instance, says, 'He who cometh to Me shall not hunger, and he who believeth in Me shall never thirst';[3] — to believe then and to come are the same thing. If they had faith, of course they would join the Church, for the very meaning, the very exercise of faith, is joining the Church. But I mean something more than this: faith is a state of mind, it is a particular mode of thinking and acting, which is exercised, always indeed towards God, but in very various ways. Now I mean to say, that the multitude of men in this country have not this habit or character of mind. We could conceive, for instance, their believing in their own religions, even if they did not believe in the Church; this would be faith, though a faith improperly directed; but they do not believe even their own religions; they do not believe in anything at all. It is a definite defect in their minds: as we might say that a person had not the virtue of meekness, or of liberality, or of prudence, quite independently of this or that exercise of the virtue, so there is such a religious virtue as faith, and there is such a defect as

1. *Exodus*, iii,3.

2. *John*, i,45–46.

3. *John*, iv,14.

the absence of it. Now I mean to say that the great mass of men in this country have not this particular virtue called faith, have not this virtue at all. As a man might be without eyes or without hands, so they are without faith; it is a distinct want or fault in their soul; and what I say is, that *since* they have not this faculty of religious belief, no wonder they do not embrace that, which cannot really be embraced without it. They do not believe any teaching at all in any true sense; and therefore they do not believe the Church in particular.

Now, in the first place, what is faith? it is assenting to a doctrine as true, which we do not see, which we cannot prove, because God says it is true, who cannot lie. And further than this, since God says it is true, not with His own voice, but by the voice of His messengers, it is assenting to what man says, not simply viewed as a man, but to what he is commissioned to declare, as a messenger, prophet, or ambassador from God. In the ordinary course of this world we account things true either because we see them, or because that we can perceive that they follow and are deducible from what we do see; that is, we gain truth by sight or by reason, not by faith. You will say indeed, that we accept a number of things which we cannot prove or see, on the word of others; certainly; but then we accept what they say only as the word of man; and we have not commonly that absolute and unreserved confidence in them, which nothing can shake. We know that man is open to mistake, and we are always glad to find some confirmation of what he says, from other quarters, in any important matter; or we receive his information with negligence and unconcern, as something of little consequence, as a matter of opinion; or, if we act upon it, it is as a matter of prudence, thinking it best and safest to do so. We take his word for what it is worth, and we use it either according to our necessity, or its probability. We keep the decision in our own hands, and reserve to ourselves the right of re-opening the question whenever we please. This is very different from divine faith; he who believes that God is true, and that this is His word, which He has committed to man, has no doubt at all. He is as certain that the doctrine taught is true, as that God is true; and he is certain, *because* God is true, *because* God has spoken, not because he sees its truth or can prove its truth. That is, faith has two peculiarities; — it is most certain, decided, positive, immovable in its assent, and it gives this assent not because it sees with eye, or sees with the reason, but because it receives the tidings from one who comes from God.

This is what faith was in the time of the Apostles, as no one can deny: and what it was then, it must be now, else it ceases to be the same thing. I say, it certainly was this in the Apostles' time, for you know they preached to the world that Christ was the Son of God, that He was born of a Virgin, that He had ascended on high, that He would come again to judge all, the living and the dead. Could the world see all this? could it prove it? how then were men to receive it? why did so many embrace it? on the word of the Apostles, who were, as their powers showed, messengers from God. Men were told to submit their reason to a living authority. Moreover, whatever an Apostle said, his converts were bound to believe; when they entered the Church, they entered it in order to learn. The Church was their teacher; they did not come to argue, to examine, to pick and choose, but to accept whatever was put before them. No one doubts, no one can doubt this, of those primitive times A Christian was bound to take without doubting all that the Apostles declared to be revealed; if the Apostles spoke, he had to yield an internal assent of his mind; it would not be enough to keep silence, it would not be enough not to oppose: it was not allowable to credit in a measure; it was not allowable to doubt. No; if a convert had his own private thoughts of

what was said, and only kept them to himself, if he made some secret opposition to the teaching, if he waited for farther proof before he believed it, this would be a proof that he did not think the Apostles were sent from God to reveal His will; it would be a proof that he did not in any true sense believe at all. Immediate, implicit submission of the mind was, in the lifetime of the Apostles, the only, the necessary token of faith; then there was no room whatever for what is now called private judgment. No one could say, 'I will choose my religion for myself, I will believe this, I will not believe that; I will pledge myself to nothing; I will believe just as long as I please and no longer; what I believe today I will reject tomorrow, if I choose. I will believe what the Apostles have as yet said, but I will not believe what they shall say in time to come.' No; either the Apostles were from God, or they were not; if they were, everything that they preached was to be believed by their hearers; if they were not, there was nothing for their hearers to believe. To believe a little, to believe more or less, was impossible; it contradicted the very notion of believing: if one part was to be believed, every part was to be believed; it was an absurdity to believe one thing and not another; for the word of the Apostles, which made the one true, made the other true too; they were nothing in themselves, they were all things, they were an infallible authority, as coming from God. The world had either to become Christian, or to let it alone; there was no room for private tastes and fancies, no room for private judgment.

Now surely this is quite clear from the nature of the case; but is also clear from the words of Scripture. 'We give thanks to God,' says St. Paul, 'without ceasing, because when ye had received from us the word of hearing, which is of God, ye received it, not as the word of men, but (as it is indeed) the word of God.'[4] Here you see St. Paul expresses what I have said above; that the word comes from God, that it is spoken by men, that it must be received, not as man's word, but as God's word. So in another place he says, 'He who despiseth these things, despiseth not man, but God, who hath also given in us His Holy Spirit.'[5] Our Saviour had made a like declaration already, 'He that heareth you, heareth Me; and he that despiseth you, despiseth Me; and he that despiseth Me, despiseth Him that sent Me.'[6] Accordingly St. Peter on the day of Pentecost said, 'Men of Israel, *hear* these words, God hath raised up this Jesus, whereof *we* are *witnesses*. Let all the house of Israel *know most certainly* that God hath made this Jesus, whom you have crucified, both Lord and Christ.'[7] At another time he said, 'We ought to obey God, rather than man; we are *witnesses* of these things, and so *is the Holy Ghost*, whom God has given to all who obey Him.'[8] And again, 'He commanded us to preach to the people, and to testify that it is He (Jesus) who hath been appointed by God to be the Judge of the living and of the dead.'[9] And you know that the persistent declaration of the first preachers was, 'Believe and thou shalt be saved': they do not say, 'prove our doctrine by your own reason,' nor 'wait till you see before you believe'; but, 'believe without seeing and without proving, because our word is not our own, but God's word.' Men might indeed use their reason in inquiring into the pretensions of the Apostles; they might inquire whether or not they did miracles; they might inquire whether they were predicted in the Old Testament as coming from God; but when they had ascertained this fairly in whatever way, they were to take all the Apostles said for granted without proof;

4. See *I Thessalonians*, ii,13.
5. See *I Thessalonians*, iv,8.
6. See *Luke*, x,16.
7. See *Acts*, x,34–43.
8. *Acts*, v,32.
9. *Acts*, x,42.

they were to exercise their faith, they were to be saved by hearing. Hence, as you perhaps observed, St. Paul significantly calls the revealed doctrine 'the word of hearing,' in the passage I quoted; men came to hear, to accept, to obey, not to criticize what was said; and in accordance with this he asks elsewhere, 'How shall they believe Him, whom they have not heard? and how shall they hear without a preacher? Faith cometh by hearing, and hearing by the word of Christ.'[10]

Now, my dear brethren, consider, are not these two states or acts of mind quite distinct from each other; — to believe simply what a living authority tells you; and to take a book, such as Scripture, and to use it as you please, to master it, that is, to make yourself the master of it, to interpret it for yourself, and to admit just what you choose to see in it, and nothing more? Are not these two procedures distinct in this, that in the former you submit, in the latter you judge? At this moment I am not asking you which is the better, I am not asking whether this or that is practicable now, but are they not two ways of taking up a doctrine, and not one? is not submission quite contrary to judging? Now, is it not certain that faith in the time of the Apostles consisted in submitting? and is it not certain that it did not consist in judging for one's self? It is in vain to say that the man who judges from the Apostles' writings, does submit to those writings in the first instance, and therefore has faith in them; else why should he refer to them at all? There is, I repeat, an essential difference between the act of submitting to a living oracle, and to his written words; in the former case there is no appeal from the speaker, in the latter the final decision remains with the reader. Consider how different is the confidence with which you report another's words in his presence and in his absence. If he be absent, you boldly say that he holds so and so, or said so and so; but let him come into the room in the midst of the conversation, and your tone is immediately changed. It is then, 'I *think* I have heard you say something *like* this, or what I *took* to be this'; or you modify considerably the statement of the fact to which you originally pledged him, dropping one-half of it for safety-sake, or retrenching the most startling portions of it; and then after all you wait with some anxiety to see whether he will accept any portion of it at all. The same sort of process takes place in the case of the written document of a person now dead. I can fancy a man magisterially expounding St. Paul's Epistle to the Galatians or to the Ephesians, who would be better content with the writer's absence than his sudden reappearance among us; lest the Apostle should take his own meaning out of his commentator's hands and explain it for himself. In a word, though he says he has faith in St. Paul's writings, he confessedly has no faith in St. Paul; and though he may speak much about truth as found in Scripture, he has no wish at all to be like one of these Christians whose names and deeds occur in it.

I think I may assume that this virtue, which was exercised by the first Christians, is not known at all among Protestants now; or at least if there are instances of it, it is exercised towards those, I mean their own teachers and divines, who expressly disclaim that they are fit objects of it, and who exhort their people to judge for themselves. Protestants, generally speaking, have not faith, in the primitive meaning of that word; this is clear from what I have been saying, and here is a confirmation of it. If men believed now, as they did in the times of the Apostles, they could not doubt nor change. No one can doubt whether a word spoken by God is to be believed; of course it is; whereas any one, who is modest and humble, may easily be brought to doubt of his own inferences and deductions. Since men now-a-days deduce from Scripture, instead of

10. See *Romans*, x,14–17.

believing a teacher, you may expect to see them waver about; they will feel the force of their own deductions more strongly at one time than at another, they will change their minds about them, or perhaps deny them altogether; whereas this cannot be, while a man has faith, that is, belief that what a preacher says to him comes from God. This is what St. Paul especially insists on, telling us that Apostles, prophets, evangelists, pastors, and teachers, are given us that, 'we may all attain to unity of faith,' and, on the contrary, in order 'that we be *not* as children tossed to and fro, and carried about by every gale of doctrine.'[11] Now, in matter of fact, do not men in this day change about in their religious opinions without any limit? Is not this, then, a proof that they have not that faith which the Apostles demanded of their converts? If they had faith, they would not change. Once believe that God has spoken, and you are sure He cannot unsay what He has already said; He cannot deceive; He cannot change; you have received it once for all; you will believe it ever.

Such is the only rational, consistent account of faith; but so far are Protestants from professing it, that they laugh at the very notion of it. They laugh at the notion itself of men pinning their faith (as they express themselves) upon Pope or Council; they think it simply superstitious and narrow-minded, to profess to believe just what the Church believes, and to assent to whatever she shall say in time to come on matters of doctrine. That is, they laugh at the bare notion of doing what Christians undeniably did in the time of the Apostles. Observe, they do not merely ask whether the Catholic Church has a claim to teach, has authority, has the gifts; — this is a reasonable question; — no, they think that the very state of mind, which such a claim involves in those who admit it, namely, the disposition to accept without reserve or question, that this is slavish. They call it priestcraft to insist on this surrender of the reason, and superstition to make it. That is, they quarrel with the very state of mind which all Christians had in the age of the Apostles; nor is there any doubt (who will deny it?) that those who thus boast of not being led blindfold, of judging for themselves, of believing just as much and just as little as they please, of hating dictation, and so forth, would have found it an extreme difficulty to hang on the lips of the Apostles, had they lived at their date, or rather would have simply resisted the sacrifice of their own liberty of thought, would have thought life eternal too dearly purchased at such a price, and would have died in their unbelief. And they would have defended themselves on the plea that it was absurd and childish to ask them to believe without proof, to bid them give up their education, and their intelligence, and their science, and, in spite of all those difficulties which reason and sense find in the Christian doctrine, in spite of its mysteriousness, its obscurity, its strangeness, its unacceptableness, its severity, to require them to surrender themselves to the teaching of a few unlettered Galilaeans, or a learned indeed but fanatical Pharisee. This is what they would have said then; and if so, is it wonderful they do not become Catholics now? The simple account of their remaining as they are, is, that they lack one thing, — they have not faith; it is a state of mind, it is a virtue, which they do not recognize to be praiseworthy, which they do not aim at possessing.

What they feel now, my brethren, is just what both Jew and Greek felt before them in the time of the Apostles, and what the natural man has felt ever since. The great and wise men of the day looked down upon faith, then as now, as if it were unworthy the dignity of human nature. 'See your vocation, brethren, that there are not,' among you 'many wise according to the flesh, not many mighty, not many noble; but the foolish things of the

11. See *Ephesians*, iv,14.

world hath God chosen to confound the strong, and the mean things of the world, and the things that are contemptible, hath God chosen, and things that are not, that He might destroy the things that are, that no flesh might glory in His sight.'[12] Hence the same Apostle speaks of 'the foolishness of preaching.' Similar to this is what our Lord had said in His prayer to the Father; 'I thank Thee, Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto little ones.'[13] Now is it not plain that men of this day have just inherited the feelings and traditions of these falsely wise and fatally prudent persons in our Lord's day? They have the same obstruction in their hearts to entering the Catholic Church, which Pharisees and Sophists had before them; it goes against them to believe her doctrine, not so much for want of evidence that she is from God, as because, if so, they shall have to submit their minds to living men, who have not their own cultivation or depth of intellect, and because they must receive a number of doctrines, whether they will or no, which are strange to their imagination and difficult to their reason. The very characteristic of the Catholic teaching and of the Catholic teacher is to them a preliminary objection to their becoming Catholics, so great, as to throw into the shade any argument however strong, which is producible in behalf of the mission of those teachers and the origin of that teaching. In short, they have not faith.

They have not in them the principle of faith; and I repeat, it is nothing to the purpose to urge that at least they firmly believe Scripture to be the word of God. In truth, it is much to be feared that their acceptance of Scripture itself is nothing better than a prejudice or inveterate feeling impressed on them when they were children. A proof of it is this; that, while they profess to be so shocked at Catholic miracles, and are not slow to call them 'lying wonders,' they have no difficulty at all about Scripture narratives, which are quite as difficult to the reason as any miracles recorded in the history of the Saints. I have heard on the contrary of Catholics who have been startled at first reading in Scripture the narratives of the ark in the deluge, of the tower of Babel, of Balaam and Balac, of the Israelites' flight from Egypt and entrance into the promised land, and of Esau's and Saul's rejection;[14] which the bulk of Protestants receive without any effort of mind. How, then, do these Catholics accept them? by faith? They say, 'God is true, and every man a liar.' How come Protestants so easily to receive them? by faith? Nay, I conceive that in most cases there is no submission of the reason at all; simply they are so familiar with the passages in question, that the narrative presents no difficulties to their imagination; they have nothing to overcome. If, however, they *are* led to contemplate these passages in themselves, and to try them in the balance of probability, and to begin to question about them, as will happen when their intellect is cultivated, then there is nothing to bring them back to their former habitual or mechanical belief; they know nothing of submitting to authority, that is, they know nothing of faith; for they have no authority to submit to. They either remain in a state of doubt without any great trouble of mind, or they go on to ripen into utter disbelief on the subjects in question, though they may say nothing about it. Neither before they doubt, nor when they doubt, is there any token of the presence in them of a power subjecting reason to the word of God. No; what looks like faith, is a mere hereditary persuasion, not a personal principle; it is a habit which they have learned in the nursery, which

12. See *I Corinthians*, i,26–29.
13. See *Matthew*, xi,25.
14. See *Genesis*, xi; *Numbers*, xxii–xxiv; *Numbers* and *Deuteronomy*; *Genesis*, xxxii–xxxvi; *I Samuel*, xv.

has never changed into anything higher, and which is scattered and disappears, like a mist, before the light, such as it is, of reason. If, however, there are Protestants, who are not in one or other of these two states, either of credulity or of doubt, but who firmly believe in spite of all difficulties, they certainly have some claim to be considered under the influence of faith; but there is nothing to show that such persons, where they are found, are not in the way to become Catholics, and perhaps they are already called so by their friends, showing in their own examples the logical, indisputable connexion which exists between possessing faith and joining the Church.

If, then, faith be now the same faculty of mind, the same sort of habit or act, which it was in the days of the Apostles, I have made good what I set about showing. But it must be the same; it cannot mean two things; the word cannot have changed its meaning. Either say that faith is not necessary now at all, or take it to be what the Apostles meant by it, but do not say that you have it, and then show me something quite different, which you have put in the place of it. In the Apostles' days the peculiarity of faith was submission to a living authority; this is what made it so distinctive; this is what made it an act of submission at all; this is what destroyed private judgment in matters of religion. If you will not look out for a living authority, and will bargain for private judgment, then say at once that you have not Apostolic faith. And in fact you have it not; the bulk of this nation has it not; confess you have it not; and then confess that this is the reason why you are not Catholics. You are not Catholics because you have not faith. Why do not blind men see the sun? because they have no eyes; in like manner it is vain to discourse upon the beauty, the sanctity, the sublimity of the Catholic doctrine and worship, where men have no faith to accept it as divine. They may confess its beauty, sublimity, and sanctity, without believing it; they may acknowledge that the Catholic religion is noble and majestic; they may be struck with its wisdom, they may admire its adaptation to human nature, they may be penetrated by its tender and winning bearing, they may be awed by its consistency. But to commit themselves to it, that is another matter; to choose it for their portion, to say with the favoured Moabitess, 'Whithersoever thou shalt go, I will go! and where thou shalt dwell, I will dwell; thy people shall be my people, and thy God my God,'[15] this is the language of faith. A man may revere, a man may extol, who has no tendency whatever to obey, no notion whatever of professing. And this often happens in fact: men are respectful to the Catholic religion; they acknowledge its services to mankind, they encourage it and its professors; they like to know them, they are interested in hearing of their movements, but they are not, and never will be Catholics. They will die as they have lived, out of the Church, because they have not possessed themselves of that faculty by which the Church is to be approached. Catholics who have not studied them or human nature, will wonder they remain where they are: nay, they themselves, alas for them! will sometimes lament they cannot become Catholics. They will feel so intimately the blessedness of being a Catholic, that they will cry out, 'O, what would I give to be a Catholic! O, that I could believe what I admire! but I do not, and I can no more believe merely because I wish to do so, than I can leap over a mountain. I should be much happier were I a Catholic; but I am not; it is no use deceiving myself; I am what I am; I revere, I cannot accept.'

Oh, deplorable state! deplorable because it is utterly and absolutely their own fault, and because such great stress is laid in Scripture, as they know, on the necessity of faith for salvation. Faith is there made

15. See *Ruth*, i,16–17.

the foundation and commencement of all acceptable obedience. It is described as the 'argument' or 'proof of things not seen'; by faith men have understood that God is, that He made the world, that He is a rewarder of those who seek Him, that the flood was coming, that their Saviour was to be born. 'Without faith it is impossible to please God'; 'by faith we stand'; 'by faith we walk'; 'by faith we overcome the world.' When our Lord gave to the Apostles their commission to preach all over the world, He continued, 'He that believeth and is baptised, shall be saved; but he that believeth not, shall be condemned.'[16] And He declared to Nicodemus, 'He that believeth in the Son, is not judged; but he that doth not believe is already judged, because he believeth not in the Name of the Only-begotten Son of God.'[17] He said to the Pharisees, 'If you believe not that I am He, ye shall die in your sins.'[18] To the Jews, 'Ye believe not, because ye are not of My sheep.'[19] And you may recollect that before His miracles, He commonly demands faith of the supplicant; 'All things are possible,' He says, 'to him that believeth';[20] and we find in one place 'He could not do any miracle,' on account of the unbelief of the inhabitants.

Has faith changed its meaning, or is it less necessary now? Is it not still what it was in the Apostles' day, the very characteristic of Christianity, the special instrument of renovation, the first disposition for justification, one out of the three theological virtues? God might have renewed us by other means, by sight, by reason, by love, but he has chosen to 'purify our hearts by faith'; it has been His will to select an instrument which the world despises, but which is of immense power. He preferred it, in His infinite wisdom, to every other; and if men have it not, they have not the very element and rudiment, out of which are formed, on which are built, the Saints and Servants of God. And they have it not, they are living, they are dying, without the hopes, without the aids, of the Gospel, because, in spite of so much that is good in them, in spite of their sense of duty, their tenderness of conscience on many points, their benevolence, their uprightness, their generosity, they are under the dominion (I must say it) of a proud fiend; they have this stout spirit within them, they determine to be their own masters in matters of thought, about which they know so little; they consider their own reason better than any one's else; they will not admit that any one comes from God who contradicts their own view of truth. What! is none their equal in wisdom anywhere? is there none other whose word is to be taken on religion? is there none to wrest from them their ultimate appeal to themselves? Have they in no possible way the occasion or opportunity of faith? Is it a virtue, which, in consequence of their transcendent sagacity, their prerogative of omniscience, they must give up hope of exercising? If the pretensions of the Catholic Church do not satisfy them, let them go somewhere else, if they can. If they are so fastidious that they cannot trust her as the oracle of God, let them find another more certainly from Him than the House of His own institution, which has ever been called by His Name, has ever maintained the same claims, has ever taught one substance of doctrine, and has triumphed over those who preached any other. Since Apostolic faith was in the beginning reliance on man's word as being God's word, since what faith was then such it is now, since faith is necessary for salvation, let them attempt to exercise it towards another, if they will not accept the Bride of the Lamb. Let them, if they can, put faith in some of those religions which have lasted a whole two or three centuries in a corner of the

16. See *Mark*, xvi,16.
17. See *John*, iii,18.
18. See *John*, viii,21,24.
19. See *John*, x,26.
20. See *Mark*, ix,23.

earth. Let them stake their eternal prospects on kings and nobles and parliaments and soldiery, let them take some mere fiction of the law, or abortion of the schools, or idol of a populace, or upstart of a crisis, or oracle of lecture-rooms, as the prophet of God. Alas! they are hardly bestead if they must possess a virtue, which they have no means of exercising, — if they must make an act of faith, they know not on whom, and know not why!

What thanks ought we to render to Almighty God, my dear brethren, that He has made us what we are! It is a matter of grace. There are, to be sure, many cogent arguments to lead one to join the Catholic Church, but they do not force the will. We may know them, and not be moved to act upon them. We may be convinced without being persuaded. The two things are quite distinct from each other, seeing you ought to believe, and believing; reason, if left to itself, will bring you to the conclusion that you have sufficient grounds for believing, but belief is the gift of grace. You are then what you are, not from any excellence or merit of your own, but by the grace of God who has chosen you to believe. You might have been as the barbarian of Africa, or the freethinker of Europe, with grace sufficient to condemn you, because it had not furthered your salvation. You might have had strong inspirations of grace and have resisted them, and then additional grace might not have been given to overcome your resistance. God gives not the same measure of grace to all. Has He not visited you with over abundant grace? and was it not necessary for your hard hearts to receive more than other people? Praise and bless Him continually for the benefit; do not forget, as time goes on, that it is of grace; do not pride yourselves upon it; pray ever not to lose it; and do your best to make others partakers of it.

And you, my brethren, also, if such be present, who are not as yet Catholics, but who by your coming hither seem to show your interest in our teaching, and your wish to know more about it, you too remember, that though you may not yet have faith in the Church, still God has brought you into the way of obtaining it. You are under the influence of His grace; He has brought you a step on your journey; He wishes to bring you farther, He wishes to bestow on you the fulness of His blessings, and to make you Catholics. You are still in your sins; probably you are laden with the guilt of many years, the accumulated guilt of many a deep mortal offence, which no contrition has washed away, and to which no Sacrament has been applied. You at present are troubled with an uneasy conscience, a dissatisfied reason, an unclean heart, and a divided will; you need to be converted. Yet now the first suggestions of grace are working in your souls, and are to issue in pardon for the past and sanctity for the future. God is moving you to acts of faith, hope, love, hatred of sin, repentance; do not disappoint Him, do not thwart Him, concur with Him, obey Him. You look up, and you see, as it were, a great mountain to be scaled; you say, 'How can I possibly find a path over these giant obstacles, which I find in the way of my becoming Catholic? I do not comprehend this doctrine, and I am pained at that; a third seems impossible; I never can be familiar with one practice, I am afraid of another; it is one maze and discomfort to me, and I am led to sink down in despair.' Say not so, my dear brethren, look up in hope, trust in Him who calls you forward. 'Who art thou, O great mountain, before Zorobabel? but a plain.'[21] He will lead you forward step by step, as He has led forward many a one before you. He will make the crooked straight and the rough plain. He will turn the streams, and dry up the rivers, which lie in your path. 'He shall strengthen your feet like harts' feet, and set you up on high places. He shall widen your steps under you, and your tread shall

21. See *Zachariah*, iv,7.

not be weakened.' [22] 'There is no God like the God of the righteous; He that mounts the heaven is thy Helper; by His mighty working the clouds disperse. His dwelling is above, and underneath are the everlasting arms; He shall cast out the enemy from before thee, and shall say, Crumble away.' [23] 'The young shall faint, and youths shall fall; but they that hope in the Lord shall be new-fledged in strength, they shall take feathers like eagles, they shall run and not labour, they shall walk and not faint.' [24]

LECTURES ON THE PRESENT POSITION OF CATHOLICS IN ENGLAND

The Protestant View of the Catholic Church

And here I might conclude my subject, which has proposed to itself nothing more than to suggest, to those whom it concerns, that they would have more reason to be confident in their view of the Catholic religion, if it ever had struck them that it needed some proof, if there ever had occurred to their minds at least the possibility of truth being maligned, and Christ being called Beelzebub; [1] but I am tempted, before concluding, to go on to try whether something of a monster indictment, similarly frightful and similarly fantastical to that which is got up against Catholicism, might not be framed against some other institution or power, of parallel greatness and excellence, in its degree and place, to the communion of Rome. For this purpose I will take the British Constitution, which is so specially the possession, and so deservedly the glory, of our own people; and in taking it I need hardly say, I take it for the very reason that it is so rightfully the object of our wonder and veneration. I should be but a fool for my pains, if I laboured to prove it otherwise; it is one of the greatest of human works, as admirable in its own line, to take the productions of genius in very various departments, as the Pyramids, as the wall of China, as the paintings of Raphael, as the Apollo Belvedere, as the plays of Shakespeare, as the Newtonian theory, and as the exploits of Napoleon. It soars, in its majesty, far above the opinions of men, and will be a marvel, almost a portent, to the end of time; but for that very reason it is more to my purpose, when I would show you how even it, the British Constitution, would fare, when submitted to the intellect of Exeter Hall,[2] and handled by practitioners, whose highest effort at dissection is to chop and to mangle.

I will suppose, then, a speaker, and an audience too, who never saw England, never saw a member of parliament, a policeman, a queen, or a London mob; who never read the English history, nor studied any one of our philosophers, jurists, moralists, or poets; but who has dipped into Blackstone [3] and several English writers, and has picked up facts at third or fourth hand, and has got together a crude farrago of ideas, words, and instances, a little truth, a deal of falsehood, a deal of misrepresentation, a deal of nonsense, and a deal

1. Prince of devils.

2. Exeter Hall was a large building in the Strand, London, opened in 1831, for meetings of religious and philanthropic bodies, concerts, etc. Its name became synonymous with Evangelical Protestantism, middle-class philanthropy, anti-Catholic propaganda, etc.

3. Sir William Blackstone (1723–80), judge, and first professor of English law, Oxford, published his *Commentaries on the Laws of England* (4 vols., 1765–69), a comprehensive account of the English law and constitution as a single organic structure.

of invention. And most fortunately for my purpose, here is an account transmitted express by the private correspondent of a morning paper, of a great meeting held about a fortnight since at Moscow, under sanction of the Czar, on occasion of an attempt made by one or two Russian noblemen to spread British ideas in his capital. It seems the emperor thought it best in the present state of men's minds, when secret societies are so rife, to put down the movement by argument rather than by a military force; and so he instructed the governor of Moscow to connive at the project of a great public meeting which should be opened to the small faction of Anglo-maniacs, or John-Bullists, as they are popularly termed, as well as to the mass of the population. As many as ten thousand men, as far as the writer could calculate, were gathered together in one of the largest *places* of the city; a number of spirited and impressive speeches were made, in all of which, however, was illustrated the fable of the 'Lion and the Man,'[4] the man being the Russ, and the lion our old friend the British; but the most successful of all is said to have been the final harangue, by a member of a junior branch of the Potemkin family,[5] once one of the imperial aides-de-camp, who has spent the last thirty years in the wars of the Caucasus. This distinguished veteran, who has acquired the title of Blood-sucker, from his extraordinary gallantry in combat with the Circassian tribes,[6] spoke at great length; and the express contains a portion of his highly inflammatory address, of which, and of certain consequences which followed it, the British minister is said already to have asked an explanation of the cabinet of St. Petersburg: I transcribe it as it may be supposed to stand in the morning print:

The Count began by observing that the events of every day, as it came, called on his countrymen more and more importunately to choose their side, and to make a firm stand against a perfidious power, which arrogantly proclaims that there is nothing like the British Constitution in the whole world, and that no country can prosper without it; which is yearly aggrandizing itself in East, West, and South, which is engaged in one enormous conspiracy against all States, and which was even aiming at modifying the old institutions of the North, and at dressing up the army, navy, legislature, and executive of his own country in the livery of Queen Victoria. 'Insular in situation,' he exclaimed, 'and at the back gate of the world, what has John Bull to do with continental matters, or with the political traditions of our holy Russia?' And yet there were men in that very city who were so far the dupes of insidious propagandists and insolent traitors to their emperor, as to maintain that England had been a civilised country longer than Russia. On the contrary, he maintained, and he would shed the last drop of his blood in maintaining, that, as for its boasted Constitution, it was a crazy, old-fashioned piece of furniture, and an eyesore in the nineteenth century, and would not last a dozen years. He had the best information for saying so. He could understand those who had never crossed out of their island, listening to the songs about 'Rule Britannia,' and *'Rosbif,'* and 'Poor Jack,' and the 'Old English Gentleman'; he understood and he pitied them; but that Russians, that the conquerors of Napoleon, that the heirs of a paternal government, should bow the knee, and kiss the hand, and walk backwards, and perform other antics before the face of a limited monarch, this was the incomprehensible foolery which certain Russians had viewed with so much tender-

ness. He repeated, there were in that city educated men, who had openly professed a reverence for the atheistical tenets and fiendish maxims of John-Bullism.

Here the speaker was interrupted by one or two murmurs of dissent, and a foreigner, supposed to be a partner in a Scotch firm, was observed in the extremity of the square, making earnest attempts to obtain a hearing. He was put down, however, amid enthusiastic cheering, and the Count proceeded with a warmth of feeling which increased the effect of the terrible invective which followed. He said he had used the words 'atheistical' and 'fiendish' most advisedly, and he would give his reasons for doing so. What was to be said to any political power which claimed the attribute of Divinity? Was any term too strong for such a usurpation? Now, no one would deny Antichrist would be such a power: an Antichrist was contemplated, was predicted in Scripture,[7] it was to come in the last times, it was to grow slowly, it was to manifest itself warily and craftily, and then to have a mouth speaking great things against the Divinity and against His attributes. This prediction was most literally and exactly fulfilled in the British Constitution. Antichrist was not only to usurp, but to profess to usurp the arms of heaven — he was to arrogate its titles. This was the special mark of the beast, and where was it fulfilled but in John-Bullism? 'I hold in my hand,' continued the speaker, 'a book which I have obtained under very remarkable circumstances. It is not known to the British people, it is circulated only among the lawyers, merchants, and aristocracy, and its restrictive use is secured only by the most solemn oaths, the most fearful penalties, and the utmost vigilance of the police. I procured it after many years of anxious search by the activity of an agent, and the co-operation of an English bookseller, and it cost me an enormous sum to make it my own. It is called *Blackstone's Commentaries on the Laws of England*, and I am happy to make known to the universe its odious and shocking mysteries, known to few Britons, and certainly not known to the deluded persons whose vagaries have been the occasion of this meeting. I am sanguine in thinking that when they come to know the real tenets of John Bull, they will at once disown his doctrines with horror, and break off all connexion with his adherents.

'Now, I should say, gentlemen, that this book, while it is confined to certain classes, is of those classes, on the other hand, of judges, and lawyers, and privy councillors, and justices of the peace, and police magistrates, and clergy, and country gentlemen, the guide, and I may say, the gospel. I open the book, gentlemen, and what are the first words which meet my eyes? "*The King can do no wrong.*" I beg you to attend, gentlemen, to this most significant assertion; one was accustomed to think that no child of man had the gift of impeccability; one had imagined that, simply speaking, impeccability was a divine attribute; but this British Bible, as I may call it, distinctly ascribes an absolute sinlessness to the King of Great Britain and Ireland. Observe, I am using no words of my own, I am still but quoting what meets my eyes in this remarkable document. The words run thus: "It is an axiom of the law of the land that the *King himself can do no wrong.*" Was I wrong, then, in speaking of the atheistical maxims of John-Bullism? But this is far from all: the writer goes on actually to ascribe to the Sovereign (I tremble while I pronounce the words) *absolute perfection*; for he speaks thus: "The law ascribes to the King in his political capacity ABSOLUTE PERFECTION; the *King can do no wrong!*" — (groans). One had thought that no human power could thus be described; but the British legislature, judicature, and jurisprudence, have had the unspeakable effrontery to impute to their crowned and sceptred idol, to their

7. See, for instance, *I John*, iv,3.

doll,'—here cries of 'shame, shame,' from the same individual who had distinguished himself in an earlier part of the speech—'to this doll, this puppet whom they have dressed up with a lion and a unicorn, the attribute of ABSOLUTE PERFECTION!' Here the individual who had several times interrupted the speaker sprung up, in spite of the efforts of persons about him to keep him down, and cried out, as far as his words could be collected, 'You cowardly liar, our dear good little Queen,' when he was immediately saluted with a cry of 'Turn him out,' and soon made his exit from the meeting.

Order being restored, the Count continued: 'Gentlemen, I could wish you would have suffered this emissary of a foreign potentate (immense cheering), who is insidiously aiming at forming a political party among us, to have heard to the end that black catalogue of charges against his Sovereign, which as yet I have barely commenced. Gentlemen, I was saying that the Queen of England challenges the divine attribute of ABSOLUTE PERFECTION! but, as if this were not enough, this Blackstone continues, "The King, moreover, is not only incapable of *doing* wrong, but even of *thinking* wrong!! *he can never do an improper thing; in him is no* FOLLY *or* WEAKNESS"!!!' (Shudders and cheers from the vast assemblage, which lasted alternately some minutes.) At the same time a respectably dressed gentleman below the platform begged permission to look at the book; it was immediately handed to him; after looking at the passages, he was observed to inspect carefully the title-page and binding; he then returned it without a word.

The Count, in resuming his speech, observed that he courted and challenged investigation, he should be happy to answer any question, and he hoped soon to publish, by subscription, a translation of the work, from which he had been quoting. Then, resuming the subject where he had left it, he made some most forcible and impressive reflections on the miserable state of those multitudes, who, in spite of their skill in the mechanical arts, and their political energy, were in the leading-strings of so foul a superstition. The passage he had quoted was the first and mildest of a series of blasphemies so prodigious, that he really feared to proceed, not only from disgust at the necessity of uttering them, but lest he should be taxing the faith of his hearers beyond what appeared reasonable limits. Next, then, he drew attention to the point that the English Sovereign distinctly claimed, according to the same infamous work, to be the '*fount* of justice'; and, that there might be no mistake in the matter, the author declared, 'that she *is never bound in justice to do anything*.' What, then, is her method of acting? Unwilling as he was to defile his lips with so profane a statement, he must tell them that this abominable writer coolly declared that the Queen, a woman, only did acts of reparation and restitution as a matter of *grace*! He was not a theologian, he had spent his life in the field, but he knew enough of his religion to be able to say that grace was a word especially proper to the appointment and decrees of Divine Sovereignty. All his hearers knew perfectly well that nature was one thing, grace another; and yet here was a poor child of clay claiming to be the fount, not only of justice, but of grace. She was making herself a first cause of not merely natural, but spiritual excellence, and doing nothing more or less than simply emancipating herself from her Maker. The Queen, it seemed, never obeyed the law on compulsion, according to Blackstone; that is, her Maker could not compel her. This was no mere deduction of his own, as directly would be seen. Let it be observed, the Apostle called the predicted Antichrist 'the wicked one,' or, as it might be more correctly translated, 'the lawless,' because he was to be the proud despiser of all law; now, wonderful

to say, this was the very assumption of the British Parliament. 'The Power of Parliament,' said Sir Edward Coke,[8] 'is so transcendent and absolute, that it cannot be *confined* within any bounds!! It has sovereign and uncontrollable authority!!' Moreover, the Judges had declared that 'it is so high and mighty in its nature, that it *may make law*, and THAT WHICH IS LAW IT MAY MAKE NO LAW!' Here verily was the mouth speaking great things; but there was more behind, which, but for the atrocious sentiments he had already admitted into his mouth, he really should not have the courage, the endurance to utter. It was sickening to the soul, and intellect, and feelings of a Russ, to form the words on his tongue, and the ideas in his imagination. He would say what must be said as quickly as he could, and without comment. The gallant speaker then delivered the following passage from Blackstone's volume, in a very distinct and articulate whisper: 'Some have not scrupled to call its power — the OMNIPOTENCE of Parliament'! No one can conceive the thrilling effect of these words; they were heard all over the immense assemblage; every man turned pale; a dead silence followed; one might have heard a pin drop. A pause of some minutes followed.

The speaker continued, evidently labouring under intense emotion: — 'Have you not heard enough, my dear compatriots, of this hideous system of John-Bullism? was I wrong in using the words fiendish and atheistical, when I entered upon this subject? and need I proceed further with blasphemous details, which cannot really add to the monstrous bearing of the passages I have already read to you? If the Queen "cannot do wrong," if she "cannot even think wrong," if she is "absolute perfection," if she has "no folly, no weakness," if she is the "fount of justice," if she is "the fount of grace," if she is simply "above law," if she is "omnipotent," what wonder that the lawyers of John-Bullism should also call her "sacred"! what wonder that they should speak of her as "majesty"! what wonder that they should speak of her as a "superior being"! Here again I am using the words of the book I hold in my hand. "The people" (my blood runs cold while I repeat them) "are led to consider their Sovereign *in the light of a* SUPERIOR BEING." "Every one is under him," says Bracton,[9] "and he is under no one." Accordingly, the law-books call him "Vicarius Dei in terrâ," "The Vicar of God on earth"; a most astonishing fulfilment, you observe, of the prophecy, for Antichrist is a Greek word, which means "Vicar of Christ." What wonder, under these circumstances, that Queen Elizabeth, assuming the attribute of the Creator, once said to one of her Bishops: "Proud Prelate, *I made you, and I can unmake you*!" What wonder that James the First had the brazen assurance to say, that "As it is atheism and blasphemy in a creature to dispute the Deity, so it is presumption and sedition in a subject to dispute a King in the height of his power"! Moreover, his subjects called him the "breath of their nostrils"; and my Lord Clarendon, the present Lord Lieutenant of Ireland,[10] in his celebrated *History of the Rebellion*, declares that the same haughty monarch actually on one occasion called himself "a god"; and in his great legal digest, commonly called the *Constitutions of Claren-*

8. 1552–1634; judge and law writer, author of *The Institutes of the Laws of England* (1628, 1642, 1644), commonly called 'Coke upon Littleton.'

9. Henry de Bracton (d.1268), ecclesiastic and judge, author of *De Legibus et Consuetudinibus Angliae* (1st complete ed., 1569), the earliest attempt to treat the whole extent of the law in a manner at once systematic and practical.

10. Newman is purposely, and ironically, erring here. The author of the *History of the Rebellion* was Edward Hyde, Earl of Clarendon (1609–74); the 'present Lord Lieutenant of Ireland' in Newman's day was George William Frederick Villiers, 4th Earl of Clarendon (1800–70), who held that post from 1847 to 1852.

don, he gives us the whole account of the King's banishing the Archbishop, St. Thomas of Canterbury, for refusing to do him homage. Lord Bacon, too, went nearly as far when he called him "Deaster quidam," "some sort of little god." Alexander Pope, too, calls Queen Anne a goddess: and Addison, with a servility only equalled by his profaneness, cries out, "Thee, goddess, thee Britannia's isle adores." Nay, even at this very time, when public attention has been drawn to the subject, Queen Victoria causes herself to be represented on her coins as the goddess of the seas, with a pagan trident in her hand.

'Gentlemen, can it surprise you to be told, after such an exposition of the blasphemies of England, that, astonishing to say, Queen Victoria is distinctly pointed out in the Book of Revelation as having the number of the beast! You may recollect that number is 666;[11] now, she came to the throne in the year thirty-seven, at which date she was eighteen years old. Multiply then 37 by 18, and you have the very number 666, which is the mystical emblem of the lawless King!!!

'No wonder then, with such monstrous pretensions, and such awful auguries, that John-Bullism is, in act and deed, as savage and profligate, as in profession it is saintly and innocent. Its annals are marked with blood and corruption. The historian, Hallam,[12] though one of the ultra-bullist party, in his *Constitutional History*, admits that the English tribunals are "disgraced by the brutal manners and iniquitous partiality of the bench." "The general behaviour of the bench," he says elsewhere, "has covered it with infamy." Soon after, he tells us that the dominant faction inflicted on the High Church Clergy "the disgrace and remorse of perjury." The English Kings have been the curse and shame of human nature. Richard the First boasted that the evil spirit was the father of his family; of Henry the Second St. Bernard said, "From the devil he came, and to the devil he will go"; William the Second was killed by the enemy of man, to whom he had sold himself, while hunting in one of his forests; Henry the First died of eating lampreys; John died of eating peaches; Clarence, a king's brother, was drowned in a butt of malmsey wine; Richard the Third put to death his Sovereign, his Sovereign's son, his two brothers, his wife, two nephews, and half-a-dozen friends. Henry the Eighth successively married and murdered no less than six hundred women. I quote the words of the *Edinburgh Review*, that, according to Hollinshed, no less than 70,000 persons died under the hand of the executioner in his reign. Sir John Fortescue[13] tells us that in his day there were more persons executed for robbery in England in one year, than in France in seven. Four hundred persons a year were executed in the reign of Queen Elizabeth. Even so late as the last century, in spite of the continued protests of foreign nations, in the course of seven years there were 428 capital convictions in London alone. Burning of children, too, is a favourite punishment with John Bull, as may be seen in this same Blackstone, who notices the burning of a girl of thirteen given by Sir Matthew Hale.[14] The valets always assassinate their masters; lovers uniformly strangle their sweethearts; the farmers and the farmers' wives universally beat their apprentices to death; and their lawyers in the inns of court strip and starve their servants, as

11. See *Revelation*, xiii,18.

12. Henry Hallam (1777–1859), historian, barrister, author of a *Constitutional History of England from Henry VII's Accession to the Death of George II* (1827).

13. 1394?–1476?; Lord Chief Justice of the King's Bench, and author; published *De Laudibus Legum Angliae* (1537), and *On the Governance of the Kingdom of England (De Dominio Regali et Politico)* (first publ. 1714).

14. 1609–76; judge, member of parliament; presided at conviction of two women for witchcraft; author of scientific, religious, and legal works.

has appeared from remarkable investigations in the law courts during the last year. Husbands sell their wives by public auction with a rope round their necks. An intelligent Frenchman, M. Pellet, who visited London in 1815, deposes that he saw a number of sculls on each side of the river Thames, and he was told they were found especially thick at the landing-places among the watermen. But why multiply instances, when the names of those two-legged tigers, Rush, Thistlewood, Thurtell, the Mannings, Colonel Kirk, Claverhouse, Simon de Montfort, Strafford, the Duke of Cumberland, Warren Hastings, and Judge Jeffreys,[15] are household words all over the earth? John-Bullism, through a space of 800 years is *semper idem*,[16] unchangeable in evil. One hundred and sixty offences are punishable with death. It is death to live with gipsies for a month; and Lord Hale mentions thirteen persons as having, in his day, suffered death thereon at one assize. It is death to steal a sheep, death to rob a warren, death to steal a letter, death to steal a handkerchief, death to cut down a cherry-tree. And, after all, the excesses of John-Bullism at home are mere child's play to the oceans of blood it has shed abroad. It has been the origin of all the wars which have desolated Europe; it has fomented national jealousy, and the antipathy of castes in every part of the world; it has plunged flourishing states into the abyss of revolution. The Crusades, the Sicilian Vespers,[17] the wars of the Reformation, the Thirty Years' War, the War of Succession, the Seven Years' War, the American War, the French Revolution, all are simply owing to John-Bull ideas; and to take one definite instance, in the course of the last war,[18] the deaths of two mil-

15. Notorious examples of cruelty and crime. James Bloomfield Rush (d.1849) shot his landlord, his landlord's son, and wounded the son's wife and housemaid. — Arthur Thistlewood (1770–1820) was involved in the Cato Street conspiracy to assassinate the Cabinet ministers in 1820, was convicted of high treason, and hanged. — Thurtell. See p.43, note 14. — Marie (de Roux) Manning (1821–49) and her husband Frederick George, murdered a guest at dinner and buried his body under the kitchen; both were hanged. Mademoiselle Hortense of *Bleak House* is said to have been suggested by Mrs. Manning. — Percy Kirke (1646?–91), Lieutenant-General, colonel of 'Kirke's Lambs,' notoriously cruel to the rebels in Monmouth's rebellion, 1685. — John Graham, of Claverhouse, 1st Viscount Dundee (1649?–89), military leader of Royalists in Scotland, under Charles II and James II, executing the severities of the government against Covenanters and other anti-Royalist groups; figures prominently in Scott's *Old Mortality*. — Simon de Montfort, Earl of Leicester (1208?–65), statesman, crusader, high-handed and severe in his control of the government of Gascony, under the English King, Henry III. — Sir Thomas Wentworth, 1st Earl of Strafford (1593–1641), nicknamed 'Black Tom Tyrant,' chief adviser of Charles I, urging the invasion of Scotland and the imprisonment of the Long Parliament; he was executed after an impeachment by the House of Commons. — Prince Rupert, afterwards Duke of Cumberland (1619–82), military commander under Charles I, very effective in some of the great battles of the Puritan Revolution, severely defeating the parliamentarians. He had a long-standing (and partly undeserved) reputation for barbarity. — Warren Hastings (1732–1818), Governor-General of India, was impeached and tried (but acquitted) on the grounds of corruption and cruelty in his administration — Judge Jeffreys. See p.528.

16. 'always the same.'

17. The massacre of the French in Sicily in 1282, of which the signal was the tolling of the bell for vespers; provoked by the cruelty of the government of Charles I of Anjou, owing to popular support of the house of Hohenstaufen.

18. More of Newman's irony. The 'last war' referred to is evidently the Russian-Turkish war of 1787–91, in which the foreign policy of Pitt was to induce Catherine to come to terms with the Turks on the basis of the *status quo*; the result was that Russia was able to arrange a peace on her own terms, August 1791. In making Potemkin ascribe the war to 'John-Bullism,' Newman is seeking a parallel to the practice of ascribing national and international disturbances to the forces of Catholicism.

lions of the human race lie at his door; for the Whigs themselves, from first to last, and down to this day, admit and proclaim, without any hesitation or limitation, that that war was simply and entirely the work of John-Bullism, and needed not, and would not have been, but for its influence, and its alone.

'Such is that "absolute perfection, without folly and without weakness," which, revelling in the blood of man, is still seeking out her victims, and scenting blood all over the earth. It is that woman Jezebel,[19] who fulfils the prophetic vision, and incurs the prophetic denunciation. And, strange to say, a prophet of her own has not scrupled to apply to her that very appellation. Dead to good and evil, the children of Jezebel glory in the name; and ten years have not passed since, by a sort of infatuation, one of the very highest Tories in the land, a minister, too, of the established religion, hailed the blood-stained Monarchy under the very title of the mystical sorceress. Jezebel surely is her name, and Jezebel is her nature; for drunk with the spiritual wine-cup of wrath, and given over to believe a lie, at length she has ascended to heights which savour rather of madness than of pride; she babbles absurdities, and she thirsts for impossibilities. Gentlemen, I am speaking the words of sober seriousness; I can prove what I say to the letter; the extravagance is not in me but in the object of my denunciation. Once more I appeal to the awful volume I hold in my hands. I appeal to it, I open it, I cast it from me. Listen, then, once again; it is a fact; Jezebel has declared her own *omnipresence*. "A consequence of the royal prerogatives," says the antichristian author, "is the legal UBIQUITY of the King"! "His Majesty is always *present* in all his courts: his judges are the *mirror* by which the King's image is reflected"; and further, "From this *ubiquity*" (you see he is far from shrinking from the word), "from this *ubiquity* it follows that the Sovereign can never be NONSUIT"!![20] Gentlemen, the sun would set before I told you one hundredth part of the enormity of this child of Molloch and Belial. Inebriated with the cup of insanity, and flung upon the stream of recklessness, she dashes down the cataract of nonsense, and whirls amid the pools of confusion. Like the Roman emperor, she actually has declared herself immortal! she has declared her eternity! Again, I am obliged to say it, these are no words of mine; the tremendous sentiment confronts me in black and crimson characters in this diabolical book. "In the law," says Blackstone, "the Sovereign is said *never to die*"! Again, with still more hideous expressiveness, "The law ascribes to the Sovereign an ABSOLUTE IMMORTALITY. THE KING NEVER DIES."

'And now, gentlemen, your destiny is in your own hands. If you are willing to succumb to a power which has never been contented with what she was, but has been for centuries extending her conquests in both hemispheres, then the humble individual who has addressed you will submit to the necessary consequence; will resume his military dress, and return to the Caucasus; but if, on the other hand, as I believe, you are resolved to resist unflinchingly this flood of satanical imposture and foul ambition, and force it back into the ocean; if, not from hatred to the English — far from it — from *love* to them (for a distinction must ever be drawn between the nation and its dominant John-Bullism); if, I say, from love to them as brothers, from a generous determination to fight their battles, from an intimate consciousness that they are in their secret hearts *Russians*, that they are champing the bit of their iron lot, and are longing

19. See *I Kings* and *II Kings*.

20. *Nonsuit*: in law, a judgment given against a plaintiff because of his failure to prosecute his case or his inability to establish a prima-facie case at the trial.

for you as their deliverers; if, from these lofty notions as well as from a burning patriotism, you will form the high resolve to annihilate this dishonour of humanity; if you loathe its sophisms, "De minimis non curat lex," and "Malitia supplet ætatem," and "Tres faciunt collegium," and "Impotentia excusat legem," [21] and "Possession is nine parts of the law," and "The greater the truth, the greater the libel" — principles which sap the very foundations of morals; if you wage war to the knife with its blighting superstitions of primogeniture, gavelkind, mortmain,[22] and contingent remainders; if you detest, abhor, and adjure the tortuous maxims and perfidious provisions of its *habeas corpus*, *quare impedit*,[23] and *qui tam* [24] (hear, hear); if you scorn the mummeries of its wigs and bands, and coifs, and ermine (vehement cheering); if you trample and spit upon its accursed fee simple and fee tail, villanage, and free soccage,[25] fiefs,[26] heriots,[27] seizins,[28] feuds (a burst of cheers, the whole meeting in commotion); its shares, its premiums, its post-obits,[29] its percentages, its tariffs, its broad and narrow gauge' — Here the cheers became frantic, and drowned the speaker's voice, and a most extraordinary scene of enthusiasm followed. One half of the meeting was seen embracing the other half; till, as if by the force of a sudden resolution, they all poured out of the square, and proceeded to break the windows of all the British residents. They then formed into procession, and directing their course to the great square before the Kremlin, they dragged through the mud, and then solemnly burnt, an effigy of John Bull which had been provided beforehand by the managing committee, a lion and unicorn, and a Queen Victoria. These being fully consumed, they dispersed quietly; and by ten o'clock at night the streets were profoundly still, and the silver moon looked down in untroubled lustre on the city of the Czars.

Now, my Brothers of the Oratory, I protest to you my full conviction that I have not caricatured this parallel at all. Were I, indeed, skilled in legal matters, I could have made it far more natural, plausible, and complete; but, as for its extravagance, I say deliberately, and have means of knowing what I say, having once been a Protestant, and being now a Catholic — knowing what is said and thought of Catholics, on the one hand, and, on the other, knowing what they really *are* — I deliberately assert that no absurdities contained in the above sketch can equal — nay, that no conceivable absurdities can surpass — the absurdities which are firmly believed of Catholics by sensible, kind-hearted, well-intentioned Protestants. Such is the consequence of having looked at things all on one side, and shutting the eyes to the other.

21. Though it is not necessary to know the meaning of these Latin expressions in order to appreciate Newman's humor and irony, they may be translated as follows: 'The law is not concerned with very small matters.' 'Malice makes up for want of age,' *i.e.* youth does not exonerate one in his evil intentions. 'Three make up a college.' 'Inability to enforce it invalidates the law.'

22. *primogeniture*: an exclusive right of inheritance belonging to the first-born. — *gavelkind*: the custom of dividing an intestate's estate equally among the sons, or other heirs. — *mortmain*: the right of possession of ecclesiastical property or corporations, ecclesiastics being in the early law deemed civilly dead.

23. 'wherefore does it hinder?'

24. 'who thus?'

25. Freeholding, or tenure.

26. Feudal estates; fees.

27. Feudal duties or tributes due to a lord upon the death of the tenant.

28. Possessions of freehold estates.

29. Bonds payable after the death of some person

THE IDEA OF A UNIVERSITY

Discourse V

Knowledge Its Own End

A University may be considered with reference either to its Students or to its Studies; and the principle, that all Knowledge is a whole and the separate Sciences parts of one, which I have hitherto been using in behalf of its studies, is equally important when we direct our attention to its students. Now then I turn to the students, and shall consider the education which, by virtue of this principle, a University will give them; and thus I shall be introduced, Gentlemen, to the second question, which I proposed to discuss, viz. whether and in what sense its teaching, viewed relatively to the taught, carries the attribute of Utility along with it.

I have said that all branches of knowledge are connected together, because the subject-matter of knowledge is intimately united in itself, as being the acts and the work of the Creator. Hence it is that the Sciences, into which our knowledge may be said to be cast, have multiplied bearings one on another, and an internal sympathy, and admit, or rather demand, comparison and adjustment. They complete, correct, balance each other. This consideration, if well-founded, must be taken into account, not only as regards the attainment of truth, which is their common end, but as regards the influence which they exercise upon those whose education consists in the study of them. I have said already, that to give undue prominence to one is to be unjust to another; to neglect or supersede these is to divert those from their proper object. It is to unsettle the boundary lines between science and science, to disturb their action, to destroy the harmony which binds them together. Such a proceeding will have a corresponding effect when introduced into a place of education. There is no science but tells a different tale, when viewed as a portion of a whole, from what it is likely to suggest when taken by itself, without the safeguard, as I may call it, of others.

Let me make use of an illustration. In the combination of colours, very different effects are produced by a difference in their selection and juxtaposition; red, green, and white change their shades, according to the contrast to which they are submitted. And, in like manner, the drift and meaning of a branch of knowledge varies with the company in which it is introduced to the student. If his reading is confined simply to one subject, however such division of labour may favour the advancement of a particular pursuit, a point into which I do not here enter, certainly it has a tendency to contract his mind. If it is incorporated with others, it depends on those others as to the kind of influence which it exerts upon him. Thus the Classics, which in England are the means of refining the taste, have in France subserved the spread of revolutionary and deistical doctrines. In Metaphysics, again, Butler's [1] *Analogy of Religion*, which has had so much to do with the conversion to the Catholic faith of members of the University of Oxford, appeared to Pitt and others, who had received a different training, to operate only in the direction of infidelity. And so again, Wat-

1. Joseph Butler (1692–1752), Anglican divine, whose *Analogy of Religion* (1736) maintained that the frame of nature shows a moral governor revealed through conscience. This work may be said to have had 'much to do with the conversion to the Catholic faith of members of the University of Oxford' only through the interpretation given to it by Newman as leader of the Oxford Movement. For Newman's views on it, see the *Apologia*, first chapter.

son, Bishop of Llandaff,[2] as I think he tells us in the narrative of his life, felt the science of Mathematics to indispose the mind to religious belief, while others see in its investigations the best parallel, and thereby defence, of the Christian Mysteries. In like manner, I suppose, Arcesilaus [3] would not have handled logic as Aristotle, nor Aristotle have criticized poets as Plato; yet reasoning and poetry are subject to scientific rules.

It is a great point then to enlarge the range of studies which a University professes, even for the sake of the students; and, though they cannot pursue every subject which is open to them, they will be the gainers by living among those and under those who represent the whole circle. This I conceive to be the advantage of a seat of universal learning, considered as a place of education. An assemblage of learned men, zealous for their own sciences, and rivals of each other, are brought, by familiar intercourse and for the sake of intellectual peace, to adjust together the claims and relations of their respective subjects of investigation. They learn to respect, to consult, to aid each other. Thus is created a pure and clear atmosphere of thought, which the student also breathes, though in his own case he only pursues a few sciences out of the multitude. He profits by an intellectual tradition, which is independent of particular teachers, which guides him in his choice of subjects, and duly interprets for him those which he chooses. He apprehends the great outlines of knowledge, the principles on which it rests, the scale of its parts, its lights and its shades, its great points and its little, as he otherwise cannot apprehend them. Hence it is that his education is called 'Liberal.' A habit of mind is formed which lasts through life, of which the attributes are, freedom, equitableness, calmness, moderation, and wisdom; or what in a former Discourse I have ventured to call a philosophical habit. This then I would assign as the special fruit of the education furnished at a University, as contrasted with other places of teaching or modes of teaching. This is the main purpose of a University in its treatment of its students.

And now the question is asked me, What is the *use* of it? and my answer will constitute the main subject of the Discourses which are to follow.

Cautious and practical thinkers, I say, will ask of me, what, after all, is the gain of this Philosophy, of which I make such account, and from which I promise so much. Even supposing it to enable us to exercise the degree of trust exactly due to every science respectively, and to estimate precisely the value of every truth which is anywhere to be found, how are we better for this master view of things, which I have been extolling? Does it not reverse the principle of the division of labour? will practical objects be obtained better or worse by its cultivation? to what then does it lead? where does it end? what does it do? how does it profit? what does it promise? Particular sciences are respectively the basis of definite arts, which carry on to results tangible and beneficial the truths which are the subjects of the knowledge attained; what is the Art of this science of sciences? what is the fruit of such a Philosophy? what are we proposing to effect, what inducements do we hold out to the Catholic community, when we set about the enterprise of founding a University?

I am asked what is the end of University Education, and of the Liberal or Philosophical Knowledge which I conceive it to impart: I answer, that what I have already said has been sufficient to show that

2. Richard Watson (1737–1816) wrote a notable *Apology for Christianity* (1776) in reply to Gibbon, and an *Apology for the Bible* (1796) in reply to Tom Paine.

3. A Greek philosopher of the 3rd century B.C., founder of the second, or middle, academy at Athens.

it has a very tangible, real, and sufficient end, though the end cannot be divided from that knowledge itself. Knowledge is capable of being its own end. Such is the constitution of the human mind, that any kind of knowledge, if it be really such, is its own reward. And if this is true of all knowledge, it is true also of that special Philosophy, which I have made to consist in a comprehensive view of truth in all its branches, of the relations of science to science, of their mutual bearings, and their respective values. What the worth of such an acquirement is, compared with other objects which we seek, — wealth or power or honour or the conveniences and comforts of life, I do not profess here to discuss; but I would maintain, and mean to show, that it is an object, in its own nature so really and undeniably good, as to be the compensation of a great deal of thought in the compassing, and a great deal of trouble in the attaining.

Now, when I say that Knowledge is, not merely a means to something beyond it, or the preliminary of certain arts into which it naturally resolves, but an end sufficient to rest in and to pursue for its own sake, surely I am uttering no paradox, for I am stating what is both intelligible in itself, and has ever been the common judgment of philosophers and the ordinary feeling of mankind. I am saying what at least the public opinion of this day ought to be slow to deny, considering how much we have heard of late years, in opposition to Religion, of entertaining, curious, and various knowledge. I am but saying what whole volumes have been written to illustrate, viz. by a 'selection from the records of Philosophy, Literature, and Art, in all ages and countries, of a body of examples, to show how the most unpropitious circumstances have been unable to conquer an ardent desire for the acquisition of knowledge.'[4] That further advantages accrue to us and redound to others by its possession, over and above what it is in itself, I am very far indeed from denying; but, independent of these, we are satisfying a direct need of our nature in its very acquisition; and, whereas our nature, unlike that of the inferior creation, does not at once reach its perfection, but depends, in order to it, on a number of external aids and appliances, Knowledge, as one of the principal of these, is valuable for what its very presence in us does for us after the manner of a habit, even though it be turned to no further account, nor subserve any direct end.

Hence it is that Cicero, in enumerating the various heads of mental excellence, lays down the pursuit of Knowledge for its own sake, as the first of them. 'This pertains most of all to human nature,' he says, 'for we are all of us drawn to the pursuit of Knowledge; in which to excel we consider excellent, whereas to mistake, to err, to be ignorant, to be deceived, is both an evil and a disgrace.'[5] And he considers Knowledge the very first object to which we are attracted, after the supply of our physical wants. After the calls and duties of our animal existence, as they may be termed, as regards ourselves, our family, and our neighbours, follows, he tells us, 'the search after truth. Accordingly, as soon as we escape from the pressure of necessary cares, forthwith we desire to see, to hear, and to learn; and consider the knowledge of what is hidden or is wonderful a condition of our happiness.'

This passage, though it is but one of many similar passages in a multitude of authors, I take for the very reason that it is so familiarly known to us; and I wish you to observe, Gentlemen, how distinctly it separates the pursuit of Knowledge from those ulterior objects to which certainly it can be made to conduce, and which are, I suppose, solely contemplated

4. *Pursuit of Knowledge under Difficulties.* Introd. [Newman's note. The quotation is from the work by George Lillie Craik (1798–1866).]

5. Cicero. *Offic. init.* [Newman's note.]

by the persons who would ask of me the use of a University or Liberal Education. So far from dreaming of the cultivation of Knowledge directly and mainly in order to our physical comfort and enjoyment, for the sake of life and person, of health, of the conjugal and family union, of the social tie and civil security, the great Orator implies, that it is only after our physical and political needs are supplied, and when we are 'free from necessary duties and cares,' that we are in a condition for 'desiring to see, to hear, and to learn.' Nor does he contemplate in the least degree the reflex or subsequent action of Knowledge, when acquired, upon those material goods which we set out by securing before we seek it; on the contrary, he expressly denies its bearing upon social life altogether, strange as such a procedure is to those who live after the rise of the Baconian philosophy,[6] and he cautions us against such a cultivation of it as will interfere with our duties to our fellow-creatures. 'All these methods,' he says, 'are engaged in the investigation of truth; by the pursuit of which to be carried off from public occupations is a transgression of duty. For the praise of virtue lies altogether in action; yet intermissions often occur, and then we recur to such pursuits; not to say that the incessant activity of the mind is vigorous enough to carry us on in the pursuit of knowledge, even without any exertion of our own.' The idea of benefiting society by means of 'the pursuit of science and knowledge,' did not enter at all into the motives which he would assign for their cultivation.

This was the ground of the opposition which the elder Cato[7] made to the introduction of Greek Philosophy among his countrymen, when Carneades[8] and his companions, on occasion of their embassy, were charming the Roman youth with their eloquent expositions of it. The fit representative of a practical people, Cato estimated everything by what it produced; whereas the Pursuit of Knowledge promised nothing beyond Knowledge itself. He despised that refinement or enlargement of mind of which he had no experience.

Things, which can bear to be cut off from everything else and yet persist in living, must have life in themselves; pursuits, which issue in nothing, and still maintain their ground for ages, which are regarded as admirable, though they have not as yet proved themselves to be useful, must have their sufficient end in themselves, whatever it turn out to be. And we are brought to the same conclusion by considering the force of the epithet, by which the knowledge under consideration is popularly designated. It is common to speak of '*liberal* knowledge,' of the '*liberal* arts and studies,' and of a '*liberal* education,' as the especial characteristic or property of a University and of a gentleman; what is really meant by the word? Now, first, in its grammatical sense it is opposed to *servile*; and by 'servile work' is understood, as our catechisms inform us, bodily labour, mechanical employment, and the like, in which the mind has little or no part. Parallel to such servile works are those arts, if they deserve the name, of which the poet speaks,[9] which owe their origin and their method to hazard, not to skill; as, for instance, the practice and operations of an empiric. As far as this contrast may be considered as a guide into the meaning of the word, lib-

6. See Macaulay's essay on Bacon, the present collection.

7. Great Roman statesman (234–149 B.C.).

8. Celebrated skeptic philosopher, born at Cyrene, about 213 B.C. He taught that man has no criterion of truth. During a diplomatic mission at Rome, he delivered several eloquent addresses, applying his adroit reasoning first on one side of a question, then upon its opposite, with equal effect. Cato had Carneades sent back to Athens, lest his eloquent sophistries corrupt Roman youth.

9. Τέχνη τύχην ἐστερξε καὶ τύχη τέχνην. Vid. Arist. *Nic.Ethic.* vi. [Newman's note. 'Art loves fate, and fate loves art.']

eral education and liberal pursuits are exercises of mind, of reason, of reflection.

But we want something more for its explanation, for there are bodily exercises which are liberal, and mental exercises which are not so. For instance, in ancient times the practitioners in medicine were commonly slaves; yet it was an art as intellectual in its nature, in spite of the pretence, fraud, and quackery with which it might then, as now, be debased, as it was heavenly in its aim. And so in like manner, we contrast a liberal education with a commercial education or a professional; yet no one can deny that commerce and the professions afford scope for the highest and most diversified powers of mind. There is then a great variety of intellectual exercises, which are not technically called 'liberal'; on the other hand, I say, there are exercises of the body which do receive that appellation. Such, for instance, was the palæstra,[10] in ancient times; such the Olympic games, in which strength and dexterity of body as well as of mind gained the prize. In Xenophon[11] we read of the young Persian nobility being taught to ride on horseback and to speak the truth; both being among the accomplishments of a gentleman. War, too, however rough a profession, has ever been accounted liberal, unless in cases when it becomes heroic, which would introduce us to another subject.

Now comparing these instances together, we shall have no difficulty in determining the principle of this apparent variation in the application of the term which I am examining. Manly games, or games of skill, or military prowess, though bodily, are, it seems, accounted liberal; on the other hand, what is merely professional, though highly intellectual, nay, though liberal in comparison of trade and manual labour, is not simply called liberal, and mercantile occupations are not liberal at all. Why this distinction? because that alone is liberal knowledge, which stands on its own pretensions, which is independent of sequel, expects no complement, refuses to be *informed* (as it is called) by any end, or absorbed into any art, in order duly to present itself to our contemplation. The most ordinary pursuits have this specific character, if they are self-sufficient and complete; the highest lose it, when they minister to something beyond them. It is absurd to balance, in point of worth and importance, a treatise on reducing fractures with a game of cricket or a fox-chase; yet of the two the bodily exercise has that quality which we call 'liberal,' and the intellectual has not. And so of the learned professions altogether, considered merely as professions; although one of them be the most popularly beneficial, and another the most politically important, and the third the most intimately divine of all human pursuits, yet the very greatness of their end, the health of the body, or of the commonwealth, or of the soul, diminishes, not increases, their claim to the appellation 'liberal,' and that still more, if they are cut down to the strict exigencies of that end. If, for instance, Theology instead of being cultivated as a contemplation, be limited to the purposes of the pulpit or be represented by the catechism, it loses, — not its usefulness, not its divine character, not its meritoriousness, (rather it gains a claim upon these titles by such charitable condescension), — but it does lose the particular attribute which I am illustrating; just as a face worn by tears and fasting loses its beauty, or a labourer's hand loses its delicateness; — for Theology thus exercised is not simple knowledge, but rather is an art or a business making use of Theology. And thus it appears that even what is supernatural need not be liberal, nor need a hero be a gentleman, for the plain reason that one idea is not another idea. And in like manner the Baconian Philosophy, by using its physical sciences in the service of man, does thereby

10. Wrestling-school.

11. Greek historian of the 5th century B.C.

transfer them from the order of Liberal Pursuits to, I do not say the inferior, but the distinct class of the Useful. And, to take a different instance, hence again, as is evident, whenever personal gain is the motive, still more distinctive an effect has it upon the character of a given pursuit; thus racing, which was a liberal exercise in Greece, forfeits its rank in times like these, so far as it is made the occasion of gambling.

All that I have been now saying is summed up in a few characteristic words of the great Philosopher. 'Of possessions,' he says, 'those rather are useful, which bear fruit; those *liberal, which tend to enjoyment.* By fruitful, I mean, which yield revenue; by enjoyable, where *nothing accrues of consequence beyond the using.*' [12]

Do not suppose, that in thus appealing to the ancients, I am throwing back the world two thousand years, and fettering Philosophy with the reasonings of paganism. While the world lasts, will Aristotle's doctrine on these matters last, for he is the oracle of nature and of truth. While we are men, we cannot help, to a great extent, being Aristotelians, for the great Master does but analyze the thoughts, feelings, views, and opinions of human kind. He has told us the meaning of our own words and ideas, before we were born. In many subject-matters, to think correctly, is to think like Aristotle; and we are his disciples whether we will or no, though we may not know it. Now, as to the particular instance before us, the word 'liberal' as applied to Knowledge and Education, expresses a specific idea, which ever has been, and ever will be, while the nature of man is the same, just as the idea of the Beautiful is specific, or of the Sublime, or of the Ridiculous, or of the Sordid. It is in the world now, it was in the world then; and, as in the case of the dogmas of faith, it is illustrated by a continuous historical tradition, and never was out of the world, from the time it came into it. There have indeed been differences of opinion from time to time, as to what pursuits and what arts came under that idea, but such differences are but an additional evidence of its reality. That idea must have a substance in it, which has maintained its ground amid these conflicts and changes, which has ever served as a standard to measure things withal, which has passed from mind to mind unchanged, when there was so much to colour, so much to influence any notion or thought whatever, which was not founded in our very nature. Were it a mere generalization, it would have varied with the subjects from which it was generalized: but though its subjects vary with the age, it varies not itself. The palæstra may seem a liberal exercise to Lycurgus,[13] and illiberal to Seneca; [14] coach-driving and prize-fighting may be recognized in Elis,[15] and be condemned in England; music may be despicable in the eyes of certain moderns, and be in the highest place with Aristotle and Plato, — (and the case is the same in the particular application of the idea of Beauty, or of Goodness, or of Moral Virtue, there is a difference of tastes, a difference of judgments) — still these variations imply, instead of discrediting, the archetypal idea, which is but a previous hypothesis or condition, by means of which issue is joined between contending opinions and without which there would be nothing to dispute about.

I consider, then, that I am chargeable

12. Aristotle, *Rhet.* i.5. [Newman's note.]

13. The celebrated Spartan lawgiver, who lived probably at the end of the 9th century B.C. He remodelled the constitution, and strengthened the severity of the Spartan's natural tendency toward austere discipline.

14. Roman philosopher, who died A.D. 65. (See Macaulay's essay on Bacon for observations on Seneca's moral philosophy.)

15. A country on the west coast of Peloponnesus, which in ancient times owed its importance to the worship of Zeus at Olympia, in honor of whom a splendid festival was held every four years. (*Cf.* Olympic games.)

with no paradox, when I speak of a Knowledge which is its own end, when I call it liberal knowledge, or a gentleman's knowledge, when I educate for it, and make it the scope of a University. And still less am I incurring such a charge, when I make this acquisition consist, not in Knowledge in a vague and ordinary sense, but in that Knowledge which I have especially called Philosophy, or, in an extended sense of the word, Science; for whatever claims Knowledge has to be considered as a good, these it has in a higher degree when it is viewed not vaguely, not popularly, but precisely and transcendently as Philosophy. Knowledge, I say, is then especially liberal, or sufficient for itself, apart from every external and ulterior object, when and so far as it is philosophical, and this I proceed to show.

Now bear with me, Gentlemen, if what I am about to say, has at first sight a fanciful appearance. Philosophy, then, or Science, is related to Knowledge in this way: — Knowledge is called by the name of Science or Philosophy, when it is acted upon, informed, or if I may use a strong figure, impregnated by Reason. Reason is the principle of that intrinsic fecundity of Knowledge, which, to those who possess it, is its especial value, and which dispenses with the necessity of their looking abroad for any end to rest upon external to itself. Knowledge, indeed, when thus exalted into a scientific form, is also power; not only is it excellent in itself, but whatever such excellence may be, it is something more, it has a result beyond itself. Doubtless; but that is a further consideration, with which I am not concerned. I only say that, prior to its being a power, it is a good; that it is, not only an instrument, but an end. I know well it may resolve itself into an art, and terminate in a mechanical process, and in tangible fruit; but it also may fall back upon that Reason which informs it, and resolve itself into Philosophy. In one case it is called Useful Knowledge, in the other Liberal. The same person may cultivate it in both ways at once; but this again is a matter foreign to my subject; here I do but say that there are two ways of using Knowledge, and in matter of fact those who use it in one way are not likely to use it in the other, or at least in a very limited measure. You see, then, here are two methods of Education; the end of the one is to be philosophical, of the other to be mechanical; the one rises towards general ideas, the other is exhausted upon what is particular and external. Let me not be thought to deny the necessity, or to decry the benefit, of such attention to what is particular and practical, as belongs to the useful or mechanical arts; life could not go on without them; we owe our daily welfare to them; their exercise is the duty of the many, and we owe to the many a debt of gratitude for fulfilling that duty. I only say that Knowledge, in proportion as it tends more and more to be particular, ceases to be Knowledge. It is a question whether Knowledge can in any proper sense be predicated of the brute creation; without pretending to metaphysical exactness of phraseology, which would be unsuitable to an occasion like this, I say, it seems to me improper to call that passive sensation, or perception of things, which brutes seem to possess, by the name of Knowledge. When I speak of Knowledge, I mean something intellectual, something which grasps what it perceives through the senses; something which takes a view of things; which sees more than the senses convey; which reasons upon what it sees, and while it sees; which invests it with an idea. It expresses itself, not in a mere enunciation, but by an enthymeme:[16] it is of the nature of science

16. An argument in which one of the propositions, usually a premise, is understood but not stated; or one consisting of only two propositions, an antecedent and its consequent: as He is without guidance, therefore he should be cautious.

from the first, and in this consists its dignity. The principle of real dignity in Knowledge, its worth, its desirableness, considered irrespectively of its results, is this germ within it of a scientific or a philosophical process. This is how it comes to be an end in itself; this is why it admits of being called Liberal. Not to know the relative disposition of things is the state of slaves or children; to have mapped out the Universe is the boast, or at least the ambition, of Philosophy.

Moreover, such knowledge is not a mere extrinsic or accidental advantage, which is ours to-day and another's to-morrow, which may be got up from a book, and easily forgotten again, which we can command or communicate at our pleasure, which we can borrow for the occasion, carry about in our hand, and take into the market; it is an acquired illumination, it is a habit, a personal possession, and an inward endowment. And this is the reason, why it is more correct, as well as more usual, to speak of a University as a place of education, than of instruction, though, when knowledge is concerned, instruction would at first sight have seemed the more appropriate word. We are instructed, for instance, in manual exercises, in the fine and useful arts, in trades, and in ways of business; for these are methods, which have little or no effect upon the mind itself, are contained in rules committed to memory, to tradition, or to use, and bear upon an end external to themselves. But education is a higher word; it implies an action upon our mental nature, and the formation of a character; it is something individual and permanent, and is commonly spoken of in connexion with religion and virtue. When, then, we speak of the communication of Knowledge as being Education, we thereby really imply that that Knowledge is a state or condition of mind; and since cultivation of mind is surely worth seeking for its own sake, we are thus brought once more to the conclusion, which the word 'Liberal' and the word 'Philosophy' have already suggested, that there is a Knowledge, which is desirable, though nothing come of it, as being of itself a treasure, and a sufficient remuneration of years of labour.

This, then, is the answer which I am prepared to give to the question with which I opened this Discourse. Before going on to speak of the object of the Church in taking up Philosophy, and the uses to which she puts it, I am prepared to maintain that Philosophy is its own end, and, as I conceive, I have now begun the proof of it. I am prepared to maintain that there is a knowledge worth possessing for what it is, and not merely for what it does; and what minutes remain to me today I shall devote to the removal of some portion of the indistinctness and confusion with which the subject may in some minds be surrounded.

It may be objected then, that, when we profess to seek Knowledge for some end or other beyond itself, whatever it be, we speak intelligibly; but that, whatever men may have said, however obstinately the idea may have kept its ground from age to age, still it is simply unmeaning to say that we seek Knowledge for its own sake, and for nothing else; for that it ever leads to something beyond itself, which therefore is its end, and the cause why it is desirable; — moreover, that this end is twofold, either of this world or of the next: that all knowledge is cultivated either for secular objects or for eternal; that if it is directed to secular objects, it is called Useful Knowledge, if to eternal, Religious or Christian Knowledge; — in consequence, that if, as I have allowed, this Liberal Knowledge does not benefit the body or estate, it ought to benefit the soul; but if the fact be really so, that it is neither a physical or a secular good on the one hand, nor a moral good on the other, it

cannot be a good at all, and is not worth the trouble which is necessary for its acquisition.

And then I may be reminded that the professors of this Liberal or Philosophical Knowledge have themselves, in every age, recognized this exposition of the matter, and have submitted to the issue in which it terminates; for they have ever been attempting to make men virtuous; or, if not, at least have assumed that refinement of mind was virtue, and that they themselves were the virtuous portion of mankind. This they have professed on the one hand; and on the other, they have utterly failed in their professions, so as ever to make themselves a proverb among men, and a laughing-stock both to the grave and the dissipated portion of mankind, in consequence of them. Thus they have furnished against themselves both the ground and the means of their own exposure, without any trouble at all to anyone else. In a word, from the time that Athens was the University of the world, what has Philosophy taught men, but to promise without practising, and to aspire without attaining? What has the deep and lofty thought of its disciples ended in but eloquent words? Nay, what has its teaching ever meditated, when it was boldest in its remedies for human ill, beyond charming us to sleep by its lessons, that we might feel nothing at all? like some melodious air, or rather like those strong and transporting perfumes, which at first spread their sweetness over everything they touch, but in a little while do but offend in proportion as they once pleased us. Did Philosophy support Cicero under the disfavour of the fickle populace, or nerve Seneca to oppose an imperial tyrant? It abandoned Brutus,[17] as he sorrowfully confessed, in his greatest need, and it forced Cato,[18] as his panegyrist strangely boasts, into the false position of defying heaven. How few can be counted among its professors, who, like Polemon,[19] were thereby converted from a profligate course, or like Anaxagoras,[20] thought the world well lost in exchange for its possession? The philosopher in *Rasselas*[21] taught a superhuman doctrine, and then succumbed without an effort to a trial of human affection.

'He discoursed,' we are told, 'with great energy on the government of the passions. His look was venerable, his action graceful, his pronunciation clear, and his diction elegant. He showed, with great strength of sentiment and variety of illustration, that human nature is degraded and debased, when the lower faculties predominate over the higher. He communicated the various precepts given, from time to time, for the conquest of passion, and displayed the happiness of those who had obtained the important victory, after which man is no longer the slave of fear, nor the fool of hope. . . . He enumerated many examples of heroes immovable by pain or pleasure, who looked with indifference on those modes or accidents to which the vulgar give the names of good and evil.'

Rasselas in a few days found the philosopher in a room half darkened, with his eyes misty, and his face pale. 'Sir,' said he, 'you have come at a time when all human friendship is useless; what I suffer cannot be remedied, what I have lost cannot be supplied. My daughter, my only daughter, from whose tenderness I expected all the comforts of my age, died last night of

18. Marcus Porcius Cato (95–46 B.C.), great-grandson of Cato the Elder; the panegyrist was Cicero, in his *Cato*.

19. Platonic philosopher of Athens, who turned from profligacy on bursting into the school of Xenocrates, at the head of a band of revellers, and was irresistibly attracted to the discourse; he died in 273 B.C.

20. Greek philosopher of the Ionian school, 5th century B.C.

21. See Johnson's *Rasselas*, Chapter xviii.

a fever.' 'Sir,' said the prince, 'mortality is an event by which a wise man can never be surprised; we know that death is always near, and it should therefore always be expected.' 'Young man,' answered the philosopher, 'you speak like one who has never felt the pangs of separation.' 'Have you, then, forgot the precept,' said Rasselas, 'which you so powerfully enforced? . . . consider that external things are naturally variable, but truth and reason are always the same.' 'What comfort,' said the mourner, 'can truth and reason afford me? Of what effect are they now, but to tell me that my daughter will not be restored?'

8

Better, far better, to make no professions, you will say, than to cheat others with what we are not, and to scandalize them with what we are. The sensualist, or the man of the world, at any rate, is not the victim of fine words, but pursues a reality and gains it. The Philosophy of Utility, you will say, Gentlemen, has at least done its work; and I grant it, — it aimed low, but it has fulfilled its aim. If that man of great intellect who has been its Prophet in the conduct of life played false to his own professions,[22] he was not bound by his philosophy to be true to his friend or faithful in his trust. Moral virtue was not the line in which he undertook to instruct men; and though, as the poet calls him, he were the 'meanest' of mankind,[23] he was so in what may be called his private capacity and without any prejudice to the theory of induction. He had a right to be so, if he chose, for anything that the Idols[24] of the den or the theatre had to say to the contrary. His mission was the increase of physical enjoyment and social comfort;[25] and most wonderfully, most awfully has he fufilled his conception and his design. Almost day by day have we fresh and fresh shoots, and buds, and blossoms, which are to ripen into fruit, on that magical tree of Knowledge which he planted, and to which none of us perhaps, except the very poor, but owes, if not his present life, at least his daily food, his health, and general well-being. He was the divinely provided minister of temporal benefits to all of us so great, that, whatever I am forced to think of him as a man, I have not the heart, from mere gratitude, to speak of him severely. And, in spite of the tendencies of his philosophy, which are, as we see at this day, to depreciate, or to trample on Theology, he has himself, in his writings, gone out of his way, as if with a prophetic misgiving of those tendencies, to insist on it as the instrument of that beneficent Father,[26] who, when He came on earth in visible form, took on Him first and most prominently the office of assuaging the bodily wounds of human nature. And truly, like the old mediciner in the tale, 'he sat diligently at his work, and hummed, with cheerful countenance, a pious song'; and then in turn 'went out singing into the meadows so gaily, that

22. *i.e.* Sir Francis Bacon, who as Lord Chancellor was charged before the House of Lords with bribery; Bacon confessed to corruption and neglect but denied that he had ever perverted justice.

23. See Pope, *Essay on Man*, iv,281–82:

'If Parts allure thee, think how Bacon shin'd,
The wisest, brightest, meanest of mankind.'

24. On the 'Idols,' see Macaulay's essay on Bacon, in the present collection, note 86.

25. It will be seen that on the whole I agree with Lord Macaulay in his Essay on Bacon's Philosophy. I do not know whether he would agree with me. [Newman's note.]

26. *De Augment.* iv.2, vid. Macaulay's Essay; vid. also 'In principio operis ad Deum Patrem, Deum Verbum, Deum Spiritum, preces fundimus humillimas et ardentissimas, ut humani generis ærumnarum memores, et peregrinationis istius vitæ, in quâ dies paucos et malos terimus, *novis suis eleemosynis, per manus nostras*, familiam humanam dotare dignentur. Atque illud insuper supplices rogamus, ne *humana divinis officiant*; neve *ex reseratione viarum sensûs*, et accensione majore luminis naturalis, *aliquid incredulitatis* et noctis, animis nostris erga divina mysteria oboriatur,' etc., *Præf.* Instaur. Magn. [Newman's note.]

those who had seen him from afar might well have thought it was a youth gathering flowers for his beloved, instead of an old physician gathering healing herbs in the morning dew.' [27]

Alas, that men, in the action of life or in their heart of hearts, are not what they seem to be in their moments of excitement, or in their trances or intoxications of genius, — so good, so noble, so serene! Alas, that Bacon too in his own way should after all be but the fellow of those heathen philosophers who in their disadvantages had some excuse for their inconsistency, and who surprise us rather in what they did say than in what they did not do! Alas, that he too, like Socrates or Seneca, must be stripped of his holyday coat, which looks so fair, and should be but a mockery amid his most majestic gravity of phrase; and, for all his vast abilities, should, in the littleness of his own moral being, but typify the intellectual narrowness of his school! However, granting all this, heroism after all was not his philosophy: — I cannot deny he has abundantly achieved what he proposed. His is simply a Method whereby bodily discomforts and temporal wants are to be most effectually removed from the greatest number; and already, before it has shown any signs of exhaustion, the gifts of nature, in their most artificial shapes and luxurious profusion and diversity, from all quarters of the earth, are, it is undeniable, by its means brought even to our doors, and we rejoice in them.

Useful Knowledge then, I grant, has done its work; and Liberal Knowledge as certainly has not done its work, — that is, supposing, as the objectors assume, its direct end, like Religious Knowledge, is to make men better; but this, I will not for an instant allow, and, unless I allow it, those objectors have said nothing to the purpose. I admit, rather I maintain, what they have been urging, for I consider Knowledge to have its end in itself. For all its friends, or its enemies, may say, I insist upon it, that it is as real a mistake to burden it with virtue or religion as with the mechanical arts. Its direct business is not to steel the soul against temptation or to console it in affliction, any more than to set the loom in motion, or to direct the steam carriage; be it ever so much the means or the condition of both material and moral advancement, still, taken by and in itself, it as little mends our hearts as it improves our temporal circumstances. And if its eulogists claim for it such a power, they commit the very same kind of encroachment on a province not their own as the political economist who should maintain that his science educated him for casuistry or diplomacy. Knowledge is one thing, virtue is another; good sense is not conscience, refinement is not humility, nor is largeness and justness of view faith. Philosophy, however enlightened, however profound, gives no command over the passions, no influential motives, no vivifying principles. Liberal Education makes not the Christian, not the Catholic, but the gentleman. It is well to be a gentleman, it is well to have a cultivated intellect, a delicate taste, a candid, equitable, dispassionate mind, a noble and courteous bearing in the conduct of life; — these are the connatural qualities of a large knowledge; they are the objects of a University; I am advocating, I shall illustrate and insist upon them; but still, I repeat, they are no guarantee for sanctity or even for conscientiousness, they may attach to the man of the world, to the profligate, to the heartless, — pleasant, alas, and attractive as he shows when decked out in them. Taken by themselves, they do but seem to be what they are not; they look like virtue at a distance, but they are detected by close observers, and on the long run; and hence it is that they are popularly accused of pretence and hypocrisy, not, I repeat,

27. Fouqué's *Unknown Patient.* [Newman's note.]

from their own fault, but because their professors and their admirers persist in taking them for what they are not, and are officious in arrogating for them a praise to which they have no claim. Quarry the granite rock with razors, or moor the vessel with a thread of silk; then may you hope with such keen and delicate instruments as human knowledge and human reason to contend against those giants, the passion and the pride of man.

Surely we are not driven to theories of this kind, in order to vindicate the value and dignity of Liberal Knowledge. Surely the real grounds on which its pretensions rest are not so very subtle or abstruse, so very strange or improbable. Surely it is very intelligible to say, and that is what I say here, that Liberal Education, viewed in itself, is simply the cultivation of the intellect, as such, and its object is nothing more or less than intellectual excellence. Everything has its own perfection, be it higher or lower in the scale of things; and the perfection of one is not the perfection of another. Things animate, inanimate, visible, invisible, all are good in their kind, and have a *best* of themselves, which is an object of pursuit. Why do you take such pains with your garden or your park? You see to your walks and turf and shrubberies; to your trees and drives; not as if you meant to make an orchard of the one, or corn or pasture land of the other, but because there is a special beauty in all that is goodly in wood, water, plain, and slope, brought all together by art into one shape, and grouped into one whole. Your cities are beautiful, your palaces, your public buildings, your territorial mansions, your churches; and their beauty leads to nothing beyond itself. There is a physical beauty and a moral: there is a beauty of person, there is a beauty of our moral being, which is natural virtue; and in like manner there is a beauty, there is a perfection, of the intellect. There is an ideal perfection in these various subject-matters, towards which individual instances are seen to rise, and which are the standards for all instances whatever. The Greek divinities and demigods, as the statuary has moulded them, with their symmetry of figure and their high forehead and their regular features, are the perfection of physical beauty. The heroes, of whom history tells, Alexander, or Cæsar, or Scipio,[28] or Saladin,[29] are the representatives of that magnanimity or self-mastery which is the greatness of human nature. Christianity too has its heroes, and in the supernatural order, and we call them Saints. The artist puts before him beauty of feature and form; the poet, beauty of mind; the preacher, the beauty of grace: then intellect too, I repeat, has its beauty, and it has those who aim at it. To open the mind, to correct it, to refine it, to enable it to know, and to digest, master, rule, and use its knowledge, to give it power over its own faculties, application, flexibility, method, critical exactness, sagacity, resource, address, eloquent expression, is an object as intelligible (for here we are inquiring, not what the object of a Liberal Education is worth, nor what use the Church makes of it, but what it is in itself), I say, an object as intelligible as the cultivation of virtue, while, at the same time, it is absolutely distinct from it.

This indeed is but a temporal object, and a transitory possession: but so are other things in themselves which we make much of and pursue. The moralist will tell us that man, in all his functions, is but a flower which blossoms and fades, except so far as a higher principle breathes

28. Allusion to almost any of the members of the illustrious Roman patrician family of the Cornelia gens, probably especially to Publius Cornelius Scipio Africanus Major (237?–183? B.C.), conqueror of Spain, and of Hannibal.

upon him, and makes him and what he is immortal. Body and mind are carried on into an eternal state of being by the gifts of Divine Munificence; but at first they do but fail in a failing world; and if the powers of intellect decay, the powers of the body have decayed before them, and, as an Hospital or an Almshouse, though its end be ephemeral, may be sanctified to the service of religion, so surely may a University, even were it nothing more than I have as yet described it. We attain to heaven by using this world well, though it is to pass away; we perfect our nature, not by undoing it, but by adding to it what is more than nature, and directing it towards aims higher than its own.

Discourse VI

Knowledge Viewed in Relation to Learning

It were well if the English, like the Greek language, possessed some definite word to express, simply and generally, intellectual proficiency or perfection, such as 'health,' as used with reference to the animal frame, and 'virtue,' with reference to our moral nature. I am not able to find such a term; — talent, ability, genius, belong distinctly to the raw material, which is the subject-matter, not to that excellence which is the result of exercise and training. When we turn, indeed, to the particular kinds of intellectual perfection, words are forthcoming for our purpose, as, for instance, judgment, taste, and skill; yet even these belong, for the most part, to powers or habits bearing upon practice or upon art, and not to any perfect condition of the intellect, considered in itself. Wisdom, again, is certainly a more comprehensive word than any other, but it has a direct relation to conduct and to human life. Knowledge, indeed, and Science express purely intellectual ideas, but still not a state or quality of the intellect; for knowledge, in its ordinary sense, is but one of its circumstances, denoting a possession or a habit; and science has been appropriated to the subject-matter of the intellect, instead of belonging in English, as it ought to do, to the intellect itself.[1] The consequence is that, on an occasion like this, many words are necessary, in order, first, to bring out and convey what surely is no difficult idea in itself, — that of the cultivation of the intellect as an end; next, in order to recommend what surely is no unreasonable object; and lastly, to describe and make the mind realize the particular perfection in which that object consists. Every one knows practically what are the constituents of health or of virtue; and every one recognizes health and virtue as ends to be pursued; it is otherwise with intellectual excellence, and this must be my excuse, if I seem to any one to be bestowing a good deal of labour on a preliminary matter.

In default of a recognized term, I have called the perfection or virtue of the intellect by the name of philosophy, philosophical knowledge, enlargement of mind, or illumination; terms which are not uncommonly given to it by writers of this day; but, whatever name we bestow on it, it is, I believe, as a matter of history, the business of a University to make this intellectual culture its direct scope, or to employ itself in the education of the intellect, — just as the work of a Hospital lies in healing the sick or wounded, of a Riding or Fencing School, or of a Gymnasium, in exercising the limbs, of an Almshouse, in aiding and solacing the old, of an Orphanage, in protecting innocence, of a Penitentiary, in restoring the guilty. I say, a University, taken in its bare idea, and before we view it as an instrument of the Church, has this object and this mission; it contemplates neither moral impression nor mechanical production; it professes to exercise the mind neither in art nor in duty; its function is intellectual culture;

1. That is, since the word *science* is derived from *sciens*, the present participle of the Latin verb, *scio*, meaning to know or to understand.

here it may leave its scholars, and it has done its work when it has done as much as this. It educates the intellect to reason well in all matters, to reach out towards truth, and to grasp it.

This, I said in my foregoing Discourse, was the object of a University, viewed in itself, and apart from the Catholic Church, or from the State, or from any other power which may use it; and I illustrated this in various ways. I said that the intellect must have an excellence of its own, for there was nothing which had not its specific good; that the word 'educate' would not be used of intellectual culture, as it is used, had not the intellect had an end of its own; that, had it not such an end, there would be no meaning in calling certain intellectual exercises 'liberal,' in contrast with 'useful,' as is commonly done; that the very notion of a philosophical temper implied it, for it threw us back upon research and system as ends in themselves, distinct from effects and works of any kind; that a philosophical scheme of knowledge, or system of sciences, could not, from the nature of the case, issue in any one definite art or pursuit, as its end; and that, on the other hand, the discovery and contemplation of truth, to which research and systematizing led, were surely sufficient ends, though nothing beyond them were added, and that they had ever been accounted sufficient by mankind.

Here then I take up the subject; and, having determined that the cultivation of the intellect is an end distinct and sufficient in itself, and that, so far as words go it is an enlargement or illumination, I proceed to inquire what this mental breadth, or power, or light, or philosophy consists in. A Hospital heals a broken limb or cures a fever: what does an Institution effect, which professes the health, not of the body, not of the soul, but of the intellect? What is this good, which in former times, as well as our own, has been found worth the notice, the appropriation, of the Catholic Church?

I have then to investigate, in the Discourses which follow, those qualities and characteristics of the intellect in which its cultivation issues or rather consists; and, with a view of assisting myself in this undertaking, I shall recur to certain questions which have already been touched upon. These questions are three: viz. the relation of intellectual culture, first, to *mere* knowledge; secondly, to *professional* knowledge; and thirdly, to *religious* knowledge. In other words, are *acquirements* and *attainments* the scope of a University Education? or *expertness in particular arts and pursuits*? or *moral and religious proficiency*? or something besides these three? These questions I shall examine in succession, with the purpose I have mentioned; and I hope to be excused, if, in this anxious undertaking, I am led to repeat what, either in these Discourses or elsewhere, I have already put upon paper. And first, of *Mere Knowledge*, or Learning, and its connexion with intellectual illumination or Philosophy.

I suppose the *primâ-facie* view which the public at large would take of a University, considering it as a place of Education, is nothing more or less than a place for acquiring a great deal of knowledge on a great many subjects. Memory is one of the first developed of the mental faculties; a boy's business when he goes to school is to learn, that is, to store up things in his memory. For some years his intellect is little more than an instrument for taking in facts, or a receptacle for storing them; he welcomes them as fast as they come to him; he lives on what is without; he has his eyes ever about him; he has a lively susceptibility of impressions; he imbibes information of every kind; and little does he make his own in a true sense of the word, living rather upon his

neighbours all around him. He has opinions, religious, political, and literary, and, for a boy, is very positive in them and sure about them; but he gets them from his schoolfellows, or his masters, or his parents, as the case may be. Such as he is in his other relations, such also is he in his school exercises; his mind is observant, sharp, ready, retentive; he is almost passive in the acquisition of knowledge. I say this in no disparagement of the idea of a clever boy. Geography, chronology, history, language, natural history, he heaps up the matter of these studies as treasures for a future day. It is the seven years of plenty with him: he gathers in by handfuls, like the Egyptians,[2] without counting; and though, as time goes on, there is exercise for his argumentative powers in the Elements of Mathematics, and for his taste in the Poets and Orators, still, while at school, or at least, till quite the last years of his time, he acquires, and little more; and when he is leaving for the University, he is mainly the creature of foreign influences and circumstances, and made up of accidents, homogeneous or not, as the case may be. Moreover, the moral habits, which are a boy's praise, encourage and assist this result; that is, diligence, assiduity, regularity, despatch, persevering application; for these are the direct conditions of acquisition, and naturally lead to it. Acquirements, again, are emphatically producible, and at a moment; they are a something to show, both for master and scholar; an audience, even though ignorant themselves of the subjects of an examination, can comprehend when questions are answered and when they are not. Here again is a reason why mental culture is in the minds of men identified with the acquisition of knowledge.

The same notion possesses the public mind, when it passes on from the thought of a school to that of a University: and with the best of reasons so far as this, that there is no true culture without acquirements, and that philosophy presupposes knowledge. It requires a great deal of reading, or a wide range of information, to warrant us in putting forth our opinions on any serious subject; and without such learning the most original mind may be able indeed to dazzle, to amuse, to refute, to perplex, but not to come to any useful result or any trustworthy conclusion. There are indeed persons who profess a different view of the matter, and even act upon it. Every now and then you will find a person of vigorous or fertile mind, who relies upon his own resources, despises all former authors, and gives the world, with the utmost fearlessness, his views upon religion, or history, or any other popular subject. And his works may sell for a while; he may get a name in his day; but this will be all. His readers are sure to find in the long run that his doctrines are mere theories, and not the expression of facts, that they are chaff instead of bread, and then his popularity drops as suddenly as it rose.

Knowledge, then, is the indispensable condition of expansion of mind, and the instrument of attaining to it; this cannot be denied, it is ever to be insisted on; I begin with it as a first principle; however, the very truth of it carries men too far, and confirms to them the notion that it is the whole of the matter. A narrow mind is thought to be that which contains little knowledge; and an enlarged mind, that which holds a great deal; and what seems to put the matter beyond dispute is, the fact of the great number of studies which are pursued in a University, by its very profession. Lectures are given on every kind of subject; examinations are held; prizes awarded. There are moral, metaphysical, physical Professors; Professors of languages, of history, of mathematics, of experimental science. Lists of questions are published, wonderful for their range and depth, variety and difficulty; treatises are written, which carry upon their very face the evidence of extensive reading or

2. See *Genesis*, xli,47,48.

multifarious information; what then is wanting for mental culture to a person of large reading and scientific attainments? what is grasp of mind but acquirement? where shall philosophical repose be found, but in the consciousness and enjoyment of large intellectual possessions?

And yet this notion is, I conceive, a mistake, and my present business is to show that it is one, and that the end of a Liberal Education is not mere knowledge, or knowledge considered in its *matter*; and I shall best attain my object, by actually setting down some cases, which will be generally granted to be instances of the process of enlightenment or enlargement of mind, and others which are not, and thus, by the comparison, you will be able to judge for yourselves, Gentlemen, whether Knowledge, that is, acquirement, is after all the real principle of the enlargement, or whether that principle is not rather something beyond it.

For instance,[3] let a person, whose experience has hitherto been confined to the more calm and unpretending scenery of these islands, whether here or in England, go for the first time into parts where physical nature puts on her wilder and more awful forms, whether at home or abroad, as into mountainous districts; or let one, who has ever lived in a quiet village, go for the first time to a great metropolis, — then I suppose he will have a sensation which perhaps he never had before. He has a feeling not in addition or increase of former feelings, but of something different in its nature. He will perhaps be borne forward, and find for a time that he has lost his bearings. He has made a certain progress, and he has a consciousness of mental enlargement; he does not stand where he did, he has a new centre, and a range of thoughts to which he was before a stranger.

Again, the view of the heavens which the telescope opens upon us, if allowed to fill and possess the mind, may almost whirl it round and make it dizzy. It brings in a flood of ideas, and is rightly called an intellectual enlargement, whatever is meant by the term.

And so again, the sight of beasts of prey and other foreign animals, their strangeness, the originality (if I may use the term) of their forms and gestures and habits and their variety and independence of each other, throw us out of ourselves into another creation, and as if under another Creator, if I may so express the temptation which may come on the mind. We seem to have new faculties, or a new exercise for our faculties, by this addition to our knowledge; like a prisoner, who, having been accustomed to wear manacles or fetters, suddenly finds his arms and legs free.

Hence Physical Science generally, in all its departments, as bringing before us the exuberant riches and resources, yet the orderly course, of the Universe, elevates and excites the student, and at first, I may say, almost takes away his breath, while in time it exercises a tranquilizing influence upon him.

Again, the study of history is said to enlarge and enlighten the mind, and why? because, as I conceive, it gives it a power of judging of passing events, and of all events, and a conscious superiority over them, which before it did not possess.

And in like manner, what is called seeing the world, entering into active life, going into society, travelling, gaining acquaintance with the various classes of the community, coming into contact with the principles and modes of thought of various parties, interests, and races, their views, aims, habits and manners, their

3. The pages which follow are taken almost *verbatim* from the author's 14th (Oxford) University Sermon, which, at the time of writing this Discourse, he did not expect ever to reprint. [Newman's note.]

religious creeds and forms of worship, — gaining experience how various yet how alike men are, how low-minded, how bad, how opposed, yet how confident in their opinions; all this exerts a perceptible influence upon the mind, which it is impossible to mistake, be it good or be it bad, and is popularly called its enlargement.

And then again, the first time the mind comes across the arguments and speculations of unbelievers, and feels what a novel light they cast upon what he has hitherto accounted sacred; and still more, if it gives in to them and embraces them, and throws off as so much prejudice what it has hitherto held, and, as if waking from a dream, begins to realize to its imagination that there is now no such thing as law and the transgression of law, that sin is a phantom, and punishment a bugbear, that it is free to sin, free to enjoy the world and the flesh; and still further, when it does enjoy them, and reflects that it may think and hold just what it will, that 'the world is all before it where to choose,'[4] and what system to build up as its own private persuasion; when this torrent of wilful thoughts rushes over and inundates it, who will deny that the fruit of the tree of knowledge, or what the mind takes for knowledge, has made it one of the gods, with a sense of expansion and elevation, — an intoxication in reality, still, so far as the subjective state of the mind goes, an illumination? Hence the fanaticism of individuals or nations, who suddenly cast off their Maker. Their eyes are opened; and, like the judgment-stricken king in the Tragedy,[5] they see two suns, and a magic universe, out of which they look back upon their former state of faith and innocence with a sort of contempt and indignation, as if they were then but fools, and the dupes of imposture.

On the other hand, Religion has its own enlargement, and an enlargement, not of tumult, but of peace. It is often remarked of uneducated persons, who have hitherto thought little of the unseen world, that, on their turning to God, looking into themselves, regulating their hearts, reforming their conduct, and meditating on death and judgment, heaven and hell, they seem to become, in point of intellect, different beings from what they were. Before, they took things as they came, and thought no more of one thing than another. But now every event has a meaning; they have their own estimate of whatever happens to them; they are mindful of times and seasons, and compare the present with the past; and the world, no longer dull, monotonous, unprofitable, and hopeless, is a various and complicated drama, with parts and an object, and an awful moral.

Now from these instances, to which many more might be added, it is plain, first, that the communication of knowledge certainly is either a condition or the means of that sense of enlargement or enlightenment, of which at this day we hear so much in certain quarters: this cannot be denied; but next, it is equally plain, that such communication is not the whole of the process. The enlargement consists, not merely in the passive reception into the mind of a number of ideas hitherto unknown to it, but in the mind's energetic and simultaneous action upon and towards and among those new ideas, which are rushing in upon it. It is the action of a formative power, reducing to order and meaning the matter of our acquirements; it is a making the objects of our knowledge subjectively our own, or, to use a familiar word, it is a digestion of what we receive, into the substance of our previous state of thought; and without this no enlargement is said to follow. There is no enlargement, unless there be a comparison of ideas one with another, as they come

4. See *Paradise Lost*, xii,646.

5. Allusion to the King in Euripides's *Bacchae*?

before the mind, and a systematizing of them. We feel our minds to be growing and expanding *then*, when we not only learn, but refer what we learn to what we know already. It is not the mere addition to our knowledge that is the illumination; but the locomotion, the movement onwards, of that mental centre, to which both what we know, and what we are learning, the accumulating mass of our acquirements, gravitates. And therefore a truly great intellect, and recognized to be such by the common opinion of mankind, such as the intellect of Aristotle, or of St. Thomas, or of Newton, or of Goethe, (I purposely take instances within and without the Catholic pale, when I would speak of the intellect as such,) is one which takes a connected view of old and new, past and present, far and near, and which has an insight into the influence of all these one on another; without which there is no whole, and no centre. It possesses the knowledge, not only of things, but also of their mutual and true relations; knowledge, not merely considered as acquirement, but as philosophy.[6]

Accordingly, when this analytical, distributive, harmonizing process is away, the mind experiences no enlargement, and is not reckoned as enlightened or comprehensive, whatever it may add to its knowledge. For instance, a great memory, as I have already said, does not make a philosopher, any more than a dictionary can be called a grammar. There are men who embrace in their minds a vast multitude of ideas, but with little sensibility about their real relations towards each other. These may be antiquarians, annalists, naturalists; they may be learned in the law; they may be versed in statistics; they are most useful in their own place; I should shrink from speaking disrespectfully of them; still, there is nothing in such attainments to guarantee the absence of narrowness of mind. If they are nothing more than well-read men, or men of information, they have not what specially deserves the name of culture of mind, or fulfils the type of Liberal Education.

In like manner, we sometimes fall in with persons who have seen much of the world, and of the men who, in their day, have played a conspicuous part in it, but who generalize nothing, and have no observation, in the true sense of the word. They abound in information in detail, curious and entertaining, about men and things; and, having lived under the influence of no very clear or settled principles, religious or political, they speak of every one and every thing, only as so many phenomena, which are complete in themselves, and lead to nothing, not discussing them, or teaching any truth, or instructing the hearer, but simply talking. No one would say that these persons, well informed as they are, had attained to any great culture of intellect or to philosophy.

The case is the same still more strikingly where the persons in question are beyond dispute men of inferior powers and deficient education. Perhaps they have been much in foreign countries, and they receive, in a passive, otiose, unfruitful way, the various facts which are forced upon them there. Seafaring men, for example, range from one end of the earth to the other; but the multiplicity of external objects, which they have encountered, forms no symmetrical and consistent picture upon their imagination; they see the tapestry of human life, as it were on the wrong side, and it tells no story. They sleep, and they rise up, and they find themselves, now in Europe, now in Asia; they see visions of great cities and wild regions; they are in the marts of commerce, or amid the islands of the South; they gaze on Pompey's Pillar,[7] or on the

6. *Cf.* Macaulay's essay on Bacon, in the present collection, note 91.

7. The Corinthian column of red granite, erected at Alexandria, A.D. 302, in honor of the emperor Diocletian. It has no connection with Pompey.

Andes; and nothing which meets them carries them forward or backward, to any idea beyond itself. Nothing has a drift or relation; nothing has a history or a promise. Every thing stands by itself, and comes and goes in its turn, like the shifting scenes of a show, which leave the spectator where he was. Perhaps you are near such a man on a particular occasion, and expect him to be shocked or perplexed at something which occurs; but one thing is much the same to him as another, or, if he is perplexed, it is as not knowing what to say, whether it is right to admire, or to ridicule, or to disapprove, while conscious that some expression of opinion is expected from him; for in fact he has no standard of judgment at all, and no landmarks to guide him to a conclusion. Such is mere acquisition, and, I repeat, no one would dream of calling it philosophy.

Instances, such as these, confirm, by the contrast, the conclusion I have already drawn from those which preceded them. That only is true enlargement of mind which is the power of viewing many things at once as one whole, of referring them severally to their true place in the universal system, of understanding their respective values, and determining their mutual dependence. Thus is that form of Universal Knowledge, of which I have on a former occasion spoken, set up in the individual intellect, and constitutes its perfection. Possessed of this real illumination, the mind never views any part of the extended subject-matter of Knowledge without recollecting that it is but a part, or without the associations which spring from this recollection. It makes every thing in some sort lead to every thing else; it would communicate the image of the whole to every separate portion, till that whole becomes in imagination like a spirit, every where pervading and penetrating its component parts, and giving them one definite meaning. Just as our bodily organs, when mentioned, recall their function in the body, as the word 'creation' suggests the Creator, and 'subjects' a sovereign, so, in the mind of the Philosopher, as we are abstractedly conceiving of him, the elements of the physical and moral world, sciences, arts, pursuits, ranks, offices, events, opinions, individualities, are all viewed as one, with correlative functions and as gradually by successive combinations converging, one and all, to the true centre.

To have even a portion of this illuminative reason and true philosophy is the highest state to which nature can aspire, in the way of intellect; it puts the mind above the influences of chance and necessity, above anxiety, suspense, unsettlement, and superstition, which is the lot of the many. Men, whose minds are possessed with some one object, take exaggerated views of its importance, are feverish in the pursuit of it, make it the measure of things which are utterly foreign to it, and are startled and despond if it happens to fail them. They are ever in alarm or in transport. Those, on the other hand, who have no object or principle whatever to hold by, lose their way, every step they take. They are thrown out, and do not know what to think or say, at every fresh juncture; they have no view of persons, or occurrences, or facts, which come suddenly upon them, and they hang upon the opinion of others, for want of internal resources. But the intellect, which has been disciplined to the perfection of its powers, which knows, and thinks while it knows, which has learned to leaven the dense mass of facts and events with the elastic force of reason, such an intellect cannot be partial, cannot be exclusive, cannot be impetuous, cannot be at a loss, cannot but be patient, collected, and majestically calm, because it discerns the end in every beginning, the origin in every end, the law in every interruption, the limit in each delay; because it ever knows where it stands, and how its path lies from one point to an

other. It is the τετράγωνος[8] of the Peripatetic,[9] and has the 'nil admirari'[10] of the Stoic, —

Felix qui potuit rerum cognoscere causas,
Atque metus omnes, et inexorabile fatum
Subjecit pedibus, strepitumque Acherontis avari.[11]

There are men who, when in difficulties, originate at the moment vast ideas or dazzling projects; who, under the influence of excitement, are able to cast a light, almost as if from inspiration, on a subject or course of action which comes before them; who have a sudden presence of mind equal to any emergency, rising with the occasion, and an undaunted magnanimous bearing, and an energy and keenness which is but made intense by opposition. This is genius, this is heroism; it is the exhibition of a natural gift, which no culture can teach, at which no Institution can aim; here, on the contrary, we are concerned, not with mere nature, but with training and teaching. That perfection of the Intellect, which is the result of Education, and its *beau idéal*, to be imparted to individuals in their respective measures, is the clear, calm, accurate vision and comprehension of all things, as far as the finite mind can embrace them, each in its place, and with its own characteristics upon it. It is almost prophetic from its knowledge of history; it is almost heart-searching from its knowledge of human nature; it has almost supernatural charity from its freedom from littleness and prejudice; it has almost the repose of faith, because nothing can startle it; it has almost the beauty and harmony of heavenly contemplation, so intimate is it with the eternal order of things and the music of the spheres.

8. Square, or (symbolically) perfectly developed.
9. The Peripatetics were the pupils of Aristotle, so called because Aristotle taught while walking in the shady avenues of the Lyceum at Athens.
10. Meaning 'to be astonished at nothing,' a rule of the ancient Stoic philosophers of Greece.
11. See Virgil, *Georgics*, ii,492–95: 'Blest was that man whose vision could explore The world's prime causes, conquering for man His horde of fears, his certain doom of death Inexorable, and the measure loud Of hungry Acheron.' (Tr. Theodore Williams.)

7

And now, if I may take for granted that the true and adequate end of intellectual training and of a University is not Learning or Acquirement, but rather, is Thought or Reason exercised upon Knowledge, or what may be called Philosophy, I shall be in a position to explain the various mistakes which at the present day beset the subject of University Education.

I say then, if we would improve the intellect, first of all, we must ascend; we cannot gain real knowledge on a level; we must generalize, we must reduce to method, we must have a grasp of principles, and group and shape our acquisitions by means of them. It matters not whether our field of operation be wide or limited; in every case, to command it, is to mount above it. Who has not felt the irritation of mind and impatience created by a deep, rich country, visited for the first time, with winding lanes, and high hedges, and green steeps, and tangled woods, and every thing smiling indeed, but in a maze? The same feeling comes upon us in a strange city, when we have no map of its streets. Hence you hear of practised travellers, when they first come into a place, mounting some high hill or church tower, by way of reconnoitring its neighbourhood. In like manner, you must be above your knowledge, not under it, or it will oppress you; and the more you have of it, the greater will be the load. The learning of a Salmasius[12] or a Burman,[13]

12. Claude de Saumaise (1588–1653), eminent French scholar and professor at Leyden University, famous for his defense of Charles II which drew a reply from Milton.
13. The name of two celebrated Dutch classical scholars: Pieter the Elder (1668–1741), and Pieter the Younger (1714–78), nephew to the former. The name, properly, was spelled Burmann.

unless you are its master, will be your tyrant. 'Imperat aut servit;'[14] if you can wield it with a strong arm, it is a great weapon; otherwise,

> Vis consili expers
> Mole ruit suâ.[15]

You will be overwhelmed, like Tarpeia,[16] by the heavy wealth which you have exacted from tributary generations.

Instances abound; there are authors who are as pointless as they are inexhaustible in their literary resources. They measure knowledge by bulk, as it lies in the rude block, without symmetry, without design. How many commentators are there on the Classics, how many on Holy Scripture, from whom we rise up, wondering at the learning which has passed before us, and wondering why it passed! How many writers are there of Ecclesiastical History, such as Mosheim[17] or Du Pin,[18] who, breaking up their subject into details, destroy its life, and defraud us of the whole by their anxiety about the parts! The Sermons, again, of the English Divines in the seventeenth century, how often are they mere repertories of miscellaneous and officious learning! Of course Catholics also may read without thinking; and in their case, equally as with Protestants, it holds good, that such knowledge is unworthy of the name, knowledge which they have not thought through, and thought out. Such readers are only possessed by their knowledge, not possessed of it; nay, in matter of fact they are often even carried away by it, without any volition of their own. Recollect, the Memory can tyrannize, as well as the Imagination. Derangement, I believe, has been considered as a loss of control over the sequence of ideas. The mind, once set in motion, is henceforth deprived of the power of initiation, and becomes the victim of a train of associations, one thought suggesting another, in the way of cause and effect, as if by a mechanical process, or some physical necessity. No one, who has had experience of men of studious habits, but must recognize the existence of a parallel phenomenon in the case of those who have overstimulated the Memory. In such persons Reason acts almost as feebly and as impotently as in the madman; once fairly started on any subject whatever, they have no power of self-control; they passively endure the succession of impulses which are evolved out of the original exciting cause; they are passed on from one idea to another and go steadily forward, plodding along one line of thought in spite of the amplest concessions of the hearer, or wandering from it in endless digression in spite of his remonstrances. Now, if, as is very certain, no one would envy the madman the glow and originality of his conceptions, why must we extol the cultivation of that intellect, which is the prey, not indeed of barren fancies but of barren facts, of random intrusions from without, though not of morbid imaginations from within? And in thus speaking, I am not denying that a strong and ready memory is in itself a real treasure; I am not disparaging a well-stored mind, though it be nothing besides, provided it be sober, any more than I would despise a bookseller's shop: — it is of great value to others, even when not so to the owner. Nor am I banishing, far from it, the possessors

14. 'It is either your master or your servant.'
15. See Horace, *Carmina*, III.iv.65: 'Strength without wisdom falls by its own weight.'
16. Tarpeia, the daughter of Tarpeius, the governor of the Roman citadel, afterwards called the Capitoline, promised to open the gates to the Sabines if they would give whatever they carried in their left hands. On entering, to punish her perfidy, the Sabines threw their shields upon her, crushing her to death.
17. Johann Lorenz von Mosheim (1693–1755), German Lutheran divine and historian, established his reputation by publishing his *Institutionum Historiae Ecclesiasticae Libri IV* (1726).
18. Louis Ellies Dupin (1657–1719), French ecclesiastical historian, famous for his *Bibliothèque universelle de tous les auteurs ecclésiastiques* (1686), and other comprehensive works.

of deep and multifarious learning from my ideal University; they adorn it in the eyes of men; I do but say that they constitute no type of the results at which it aims; that it is no great gain to the intellect to have enlarged the memory at the expense of faculties which are indisputably higher.

8

Nor, indeed, am I supposing that there is any great danger, at least in this day, of over-education; the danger is on the other side. I will tell you, Gentlemen, what has been the practical error of the last twenty years, — not to load the memory of the student with a mass of undigested knowledge, but to force upon him so much that he has rejected all. It has been the error of distracting and enfeebling the mind by an unmeaning profusion of subjects; of implying that a smattering in a dozen branches of study is not shallowness, which it really is, but enlargement, which it is not; of considering an acquaintance with the learned names of things and persons, and the possession of clever duodecimos, and attendance on eloquent lecturers, and membership with scientific institutions, and the sight of the experiments of a platform and the specimens of a museum, that all this was not dissipation of mind, but progress. All things now are to be learned at once, not first one thing, then another, not one well, but many badly. Learning is to be without exertion, without attention, without toil; without grounding, without advance, without finishing. There is to be nothing individual in it; and this, forsooth, is the wonder of the age. What the steam engine does with matter, the printing press is to do with mind; it is to act mechanically, and the population is to be passively, almost unconsciously enlightened, by the mere multiplication and dissemination of volumes. Whether it be the school boy, or the school girl, or the youth at college, or the mechanic in the town, or the politician in the senate, all have been the victims in one way or other of this most preposterous and pernicious of delusions. Wise men have lifted up their voices in vain; and at length, lest their own institutions should be outshone and should disappear in the folly of the hour, they have been obliged, as far as they could with a good conscience, to humour a spirit which they could not withstand, and make temporizing concessions at which they could not but inwardly smile.

It must not be supposed that, because I so speak, therefore I have some sort of fear of the education of the people: on the contrary, the more education they have, the better, so that it is really education. Nor am I an enemy to the cheap publication of scientific and literary works, which is now in vogue: on the contrary, I consider it a great advantage, convenience, and gain; that is, to those to whom education has given a capacity for using them. Further, I consider such innocent recreations as science and literature are able to furnish will be a very fit occupation of the thoughts and the leisure of young persons, and may be made the means of keeping them from bad employments and bad companions. Moreover, as to that superficial acquaintance with chemistry, and geology, and astronomy, and political economy, and modern history, and biography, and other branches of knowledge, which periodical literature and occasional lectures and scientific institutions diffuse through the community, I think it a graceful accomplishment, and a suitable, nay, in this day a necessary accomplishment, in the case of educated men. Nor, lastly, am I disparaging or discouraging the thorough acquisition of any one of these studies, or denying that, as far as it goes, such thorough acquisition is a real education of the mind. All I say is, call things by their right names, and do not confuse together ideas which are essentially different. A thorough knowledge of one science and a superficial acquaintance with many, are not the same thing; a smattering of a

hundred things or a memory for detail, is not a philosophical or comprehensive view. Recreations are not education; accomplishments are not education. Do not say, the people must be educated, when, after all, you only mean, amused, refreshed, soothed, put into good spirits and good humour, or kept from vicious excesses. I do not say that such amusements, such occupations of mind, are not a great gain; but they are not education. You may as well call drawing and fencing education, as a general knowledge of botany or conchology. Stuffing birds or playing stringed instruments is an elegant pastime, and a resource to the idle, but it is not education; it does not form or cultivate the intellect. Education is a high word: it is the preparation for knowledge, and it is the imparting of knowledge in proportion to that preparation. We require intellectual eyes to know withal, as bodily eyes for sight. We need both objects and organs intellectual; we cannot gain them without setting about it; we cannot gain them in our sleep, or by hap-hazard. The best telescope does not dispense with eyes; the printing press or the lecture room will assist us greatly, but we must be true to ourselves, we must be parties in the work. A University is, according to the usual designation, an Alma Mater, knowing her children one by one, not a foundry, or a mint, or a treadmill.

I protest to you, Gentlemen, that if I had to choose between a so-called University, which dispensed with residence and tutorial superintendence, and gave its degrees to any person who passed an examination in a wide range of subjects, and a University which had no professors or examinations at all, but merely brought a number of young men together for three or four years, and then sent them away as the University of Oxford is said to have done some sixty years since, if I were asked which of these two methods was the better discipline of the intellect, — mind, I do not say which is *morally* the better, for it is plain that compulsory study must be a good and idleness an intolerable mischief, — but if I must determine which of the two courses was the more successful in training, moulding, enlarging the mind, which sent out men the more fitted for their secular duties, which produced better public men, men of the world, men whose names would descend to posterity, I have no hesitation in giving the preference to that University which did nothing, over that which exacted of its members an acquaintance with every science under the sun. And, paradox as this may seem, still if results be the test of systems, the influence of the public schools and colleges of England, in the course of the last century, at least will bear out one side of the contrast as I have drawn it. What would come, on the other hand, of the ideal systems of education which have fascinated the imagination of this age, could they ever take effect, and whether they would not produce a generation frivolous, narrow-minded, and resourceless, intellectually considered, is a fair subject for debate; but so far is certain, that the Universities and scholastic establishments, to which I refer, and which did little more than bring together first boys and then youths in large numbers, these institutions, with miserable deformities on the side of morals, with a hollow profession of Christianity, and a heathen code of ethics, — I say, at least they can boast of a succession of heroes and statesmen, of literary men and philosophers, of men conspicuous for great natural virtues, for habits of business, for knowledge of life, for practical judgment, for cultivated tastes, for accomplishments, who have made England what it is, — able to subdue the earth, able to domineer over Catholics.

How is this to be explained? I suppose as follows: When a multitude of young men, keen, open-hearted, sympathetic, and observant, as young men are,

come together and freely mix with each other, they are sure to learn one from another, even if there be no one to teach them; the conversation of all is a series of lectures to each, and they gain for themselves new ideas and views, fresh matter of thought, and distinct principles for judging and acting, day by day. An infant has to learn the meaning of the information which its senses convey to it, and this seems to be its employment. It fancies all that the eye presents to it to be close to it, till it actually learns the contrary, and thus by practice does it ascertain the relations and uses of those first elements of knowledge which are necessary for its animal existence. A parallel teaching is necessary for our social being, and it is secured by a large school or a college; and this effect may be fairly called in its own department an enlargement of mind. It is seeing the world on a small field with little trouble; for the pupils or students come from very different places, and with widely different notions, and there is much to generalize, much to adjust, much to eliminate, there are inter-relations to be defined, and conventional rules to be established, in the process, by which the whole assemblage is moulded together, and gains one tone and one character.

Let it be clearly understood, I repeat it, that I am not taking into account moral or religious considerations; I am but saying that that youthful community will constitute a whole, it will embody a specific idea, it will represent a doctrine, it will administer a code of conduct, and it will furnish principles of thought and action. It will give birth to a living teaching, which in course of time will take the shape of a self-perpetuating tradition, or a *genius loci*,[19] as it is sometimes called; which haunts the home where it has been born, and which imbues and forms, more or less, and one by one, every individual who is successively brought under its shadow. Thus it is that, independent of direct instruction on the part of Superiors, there is a sort of self-education in the academic institutions of Protestant England; a characteristic tone of thought, a recognized standard of judgment is found in them, which, as developed in the individual who is submitted to it, becomes a twofold source of strength to him, both from the distinct stamp it impresses on his mind, and from the bond of union which it creates between him and others, — effects which are shared by the authorities of the place, for they themselves have been educated in it, and at all times are exposed to the influence of its ethical atmosphere. Here then is a real teaching, whatever be its standards and principles, true or false; and it at least tends towards cultivation of the intellect; it at least recognizes that knowledge is something more than a sort of passive reception of scraps and details; it is a something, and it does a something, which never will issue from the most strenuous efforts of a set of teachers, with no mutual sympathies and no inter-communion, of a set of examiners with no opinions which they dare profess, and with no common principles, who are teaching or questioning a set of youths who do not know them, and do not know each other, on a large number of subjects, different in kind, and connected by no wide philosophy, three times a week, or three times a year, or once in three years, in chill lecture-rooms or on a pompous anniversary.

10

Nay, self-education in any shape, in the most restricted sense, is preferable to a system of teaching which, professing so much, really does so little for the mind. Shut your College gates against the votary of knowledge, throw him back upon the searchings and the efforts of his own mind; he will gain by being spared an entrance into your Babel. Few, indeed, there are who can dispense with the stimulus and support of instructors, or will do anything at all, if left to themselves. And

19. 'guardian spirit of a place.'

fewer still (though such great minds are to be found), who will not, from such unassisted attempts, contract a self-reliance and a self-esteem, which are not only moral evils, but serious hindrances to the attainment of truth. And next to none, perhaps, or none, who will not be reminded from time to time of the disadvantage under which they lie, by their imperfect grounding, by the breaks, deficiencies, and irregularities of their knowledge, by the eccentricity of opinion and the confusion of principle which they exhibit. They will be too often ignorant of what every one knows and takes for granted, of that multitude of small truths which fall upon the mind like dust, impalpable and ever accumulating; they may be unable to converse, they may argue perversely, they may pride themselves on their worst paradoxes or their grossest truisms, they may be full of their own mode of viewing things, unwilling to be put out of their way, slow to enter into the minds of others; — but, with these and whatever other liabilities upon their heads, they are likely to have more thought, more mind, more philosophy, more true enlargement, than those earnest but ill-used persons, who are forced to load their minds with a score of subjects against an examination, who have too much on their hands to indulge themselves in thinking or investigation, who devour premiss and conclusion together with indiscriminate greediness, who hold whole sciences on faith, and commit demonstrations to memory, and who too often, as might be expected, when their period of education is passed, throw up all they have learned in disgust, having gained nothing really by their anxious labours, except perhaps the habit of application.

Yet such is the better specimen of the fruit of that ambitious system which has of late years been making way among us: for its result on ordinary minds, and on the common run of students, is less satisfactory still; they leave their place of education simply dissipated and relaxed by the multiplicity of subjects, which they have never really mastered, and so shallow as not even to know their shallowness. How much better, I say, is it for the active and thoughtful intellect, where such is to be found, to eschew the College and the University altogether, than to submit to drudgery so ignoble, a mockery so contumelious! How much more profitable for the independent mind, after the mere rudiments of education, to range through a library at random, taking down books as they meet him, and pursuing the trains of thought which his mother wit suggests! How much healthier to wander into the fields, and there with the exiled Prince to find 'tongues in the trees, books in the running brooks'![20] How much more genuine an education is that of the poor boy in the Poem[21] — a Poem, whether in conception or in execution, one of the most touching in our language — who, not in the wide world, but ranging day by day around his widowed mother's home, 'a dexterous gleaner' in a narrow field, and with only such slender outfit

> as the village school and books a few
> Supplied,

contrived from the beach, and the quay, and the fisher's boat, and the inn's fireside, and the tradesman's shop, and the shepherd's walk, and the smuggler's hut, and the mossy moor, and the screaming gulls, and the restless waves, to fashion for himself a philosophy and a poetry of his own!

But in a large subject, I am exceeding my necessary limits. Gentlemen, I must

20. See *As You Like It*, II,i,12–17.

21. Crabbe's *Tales of the Hall*. This Poem, let me say, I read on its first publication, above thirty years ago, with extreme delight, and have never lost my love of it; and on taking it up lately, found I was even more touched by it than heretofore. A work which can please in youth and age, seems to fulfil (in logical language) the *accidental definition* of a Classic. [A further course of twenty years has past, and I bear the same witness in favour of this Poem.] [Newman's note.]

conclude abruptly; and postpone any summing up of my argument, should that be necessary, to another day.

Discourse VII

Knowledge Viewed in Relation to Professional Skill

I have been insisting, in my two preceding Discourses, first, on the cultivation of the intellect, as an end which may reasonably be pursued for its own sake; and next, on the nature of that cultivation, or what that cultivation consists in. Truth of whatever kind is the proper object of the intellect; its cultivation then lies in fitting it to apprehend and contemplate truth. Now the intellect in its present state, with exceptions which need not here be specified, does not discern truth intuitively, or as a whole. We know, not by a direct and simple vision, not at a glance, but, as it were, by piecemeal and accumulation, by a mental process, by going round an object, by the comparision, the combination, the mutual correction, the continual adaptation, of many partial notions, by the employment, concentration, and joint action of many faculties and exercises of mind. Such a union and concert of the intellectual powers, such an enlargement and development, such a comprehensiveness, is necessarily a matter of training. And again, such a training is a matter of rule; it is not mere application, however exemplary, which introduces the mind to truth, nor the reading many books, nor the getting up many subjects, nor the witnessing many experiments, nor the attending many lectures. All this is short of enough; a man may have done it all, yet be lingering in the vestibule of knowledge: — he may not realize what his mouth utters; he may not see with his mental eye what confronts him; he may have no grasp of things as they are; or at least he may have no power at all of advancing one step forward of himself, in consequence of what he has already acquired, no power of discriminating between truth and falsehood, of sifting out the grains of truth from the mass, of arranging things according to their real value, and, if I may use the phrase, of building up ideas. Such a power is the result of a scientific formation of mind; it is an acquired faculty of judgment, of clear-sightedness, of sagacity, of wisdom, of philosophical reach of mind, and of intellectual self-possession and repose, — qualities which do not come of mere acquirement. The bodily eye, the organ for apprehending material objects, is provided by nature; the eye of the mind, of which the object is truth, is the work of discipline and habit.

This process of training, by which the intellect, instead of being formed or sacrificed to some particular or accidental purpose, some specific trade or profession, or study or science, is disciplined for its own sake, for the perception of its own proper object, and for its own highest culture, is called Liberal Education; and though there is no one in whom it is carried as far as is conceivable, or whose intellect would be a pattern of what intellects should be made, yet there is scarcely any one but may gain an idea of what real training is, and at least look towards it, and make its true scope and result, not something else, his standard of excellence; and numbers there are who may submit themselves to it, and secure it to themselves in good measure. And to set forth the right standard, and to train according to it, and to help forward all students towards it according to their various capacities, this I conceive to be the business of a University.

Now this is what some great men are very slow to allow; they insist that Education should be confined to some particular and narrow end, and should issue in some definite work, which can be weighed and measured. They argue as if every-

thing, as well as every person, had its price; and that where there has been a great outlay, they have a right to expect a return in kind. This they call making Education and Instruction 'useful,' and 'Utility' becomes their watchword. With a fundamental principle of this nature, they very naturally go on to ask, what there is to show for the expense of a University; what is the real worth in the market of the article called 'a Liberal Education,' on the supposition that it does not teach us definitely how to advance our manufactures, or to improve our lands, or to better our civil economy; or again, if it does not at once make this man a lawyer, that an engineer, and that a surgeon; or at least if it does not lead to discoveries in chemistry, astronomy, geology, magnetism, and science of every kind.

This question, as might have been expected, has been keenly debated in the present age, and formed one main subject of the controversy, to which I referred in the Introduction to the present Discourses, as having been sustained in the first decade of this century by a celebrated Northern Review on the one hand, and defenders of the University of Oxford on the other.[1] Hardly had the authorities of that ancient seat of learning, waking from their long neglect, set on foot a plan for the education of the youth committed to them, than the representatives of science and literature in the city, which has sometimes been called the Northern Athens,[2] remonstrated, with their gravest arguments and their most brilliant satire, against the direction and shape which the reform was taking. Nothing would content them, but that the University should be set to rights on the basis of the philosophy of Utility; a philosophy, as they seem to have thought, which needed but to be proclaimed in order to be embraced. In truth, they were little aware of the depth and force of the principles on which the academical authorities were proceeding, and, this being so, it was not to be expected that they would be allowed to walk at leisure over the field of controversy which they had selected. Accordingly they were encountered in behalf of the University by two men of great name and influence in their day, of very different minds, but united, as by Collegiate ties, so in the clear-sighted and large view which they took of the whole subject of Liberal Education; and the defence thus provided for the Oxford studies has kept its ground to this day. . . .

Now, I am not at present concerned with the specific question of classical education; else, I might reasonably question the justice of calling an intellectual discipline, which embraces the study of Aristotle, Thucydides, and Tacitus, which involves Scholarship and Antiquities, *imaginative*; still so far I readily grant, that the cultivation of the 'understanding,' of a 'talent for speculation and original inquiry,' and of 'the habit of pushing things up to their first principles,' is a principal portion of a *good* or *liberal* education. If then the Reviewers consider such cultivation the characteristic of a *useful* education, as they seem to do in the foregoing passage,[3] it follows, that what they mean

1. See Newman's essay on 'Liberalism,' in the present collection, note 3. 'The most scientific, the most critical, and the most witty, of that literary company,' writes Newman in section 3 of the present Discourse, '[were] Professor Playfair, Lord Jeffrey, and the Rev. Sydney Smith.' It was these critics. in the *Edinburgh Review*, who launched the attack on Oxford's 'classical education.'

2. Edinburgh.

3. Newman alludes to the last paragraph of the preceding section, no.4: 'The present state of classical education,' they say, 'cultivates the *imagination* a great deal too much, and other *habits of mind* a great deal too little, and trains up many young men in a style of elegant imbecility, utterly unworthy of the talents with which nature has endowed them. . . The matter of fact is, that a classical scholar of twenty-three or twenty-four is a man principally con-

by 'useful' is just what I mean by 'good' or 'liberal': and Locke's question becomes a verbal one.[4] Whether youths are to be taught Latin or verse-making will depend on the *fact*, whether these studies tend to mental culture; but, however this is determined, so far is clear, that in that mental culture consists what I have called a liberal or non-professional, and what the Reviewers call a useful education.

This is the obvious answer which may be made to those who urge upon us the claims of Utility in our plans of Education; but I am not going to leave the subject here: I mean to take a wider view of it. Let us take 'useful,' as Locke takes it, in its proper and popular sense, and then we enter upon a large field of thought, to which I cannot do justice in one Discourse, though to-day's is all the space that I can give to it. I say, let us take 'useful' to mean, not what is simply good, but what *tends* to good, or is the *instrument* of good; and in this sense also, Gentlemen, I will show you how a liberal education is truly and fully a useful, though it be not a professional, education. 'Good' indeed means one thing, and 'useful' means another; but I lay it down as a principle, which will save us a great deal of anxiety, that, though the useful is not always good, the good is always useful. Good is not only good, but reproductive of good; this is one of its attributes; nothing is excellent, beautiful, perfect, desirable for its own sake, but it overflows, and spreads the likeness of itself all around it. Good is prolific; it is not only good to the eye, but to the taste; it not only attracts us, but it communicates itself; it excites first our admiration and love, then our desire and our gratitude, and that, in proportion to its intenseness and fulness in particular instances. A great good will impart great good. If then the intellect is so excellent a portion of us, and its cultivation so excellent, it is not only beautiful, perfect, admirable, and noble in itself, but in a true and high sense it must be useful to the possessor and to all around him; not useful in any low, mechanical, mercantile sense, but as diffusing good, or as a blessing, or a gift, or power, or a treasure, first to the owner, then through him to the world. I say then, if a liberal education be good, it must necessarily be useful too.

You will see what I mean by the parallel of bodily health. Health is a good in itself, though nothing came of it, and is especially worth seeking and cherishing; yet, after all, the blessings which attend its presence are so great, while they are so close to it and so redound back upon it and encircle it, that we never think of it except as useful as well as good, and praise and prize it for what it does, as well as for what it is, though at the same time we cannot point out any definite and distinct work or production which it can be said to effect. And so as regards intellectual culture, I am far from denying utility in this large sense as the end of Education. when I lay it down, that the culture of the

versant with works of imagination. His feelings are quick, his fancy lively, and his taste good. Talents for *speculation* and *original inquiry* he has none, nor has he formed the invaluable *habit of pushing things up to their first principles*, or of collecting dry and unamusing facts as the materials for reasoning. All the solid and masculine parts of his *understanding* are left wholly without *cultivation*; he hates the pain of thinking, and suspects every man whose boldness and originality call upon him to defend his opinions and prove his assertions.'

4. Locke's question is quoted by Newman, again in section 4, as follows: '"Could it be believed, unless we have every where amongst us examples of it, that a child should be forced to learn the rudiments of a language which *he is never to use in the course of life that he is designed to*, and neglect all the while the writing a good hand, and casting accounts, which are of great advantage in all conditions of life, and to most trades indispensably necessary?"' The work to which Newman alludes is *Some Thoughts Concerning Education* (1693), by John Locke (1632–1704), the celebrated and very influential English Philosopher.

intellect is a good in itself and its own end; I do not exclude from the idea of intellectual culture what it cannot but be, from the very nature of things; I only deny that we must be able to point out, before we have any right to call it useful, some art, or business, or profession, or trade, or work, as resulting from it, and as its real and complete end. The parallel is exact: — As the body may be sacrificed to some manual or other toil, whether moderate or oppressive, so may the intellect be devoted to some specific profession; and I do not call *this* the culture of the intellect. Again, as some member or organ of the body may be inordinately used and developed, so may memory, or imagination, or the reasoning faculty; and *this* again is not intellectual culture. On the other hand, as the body may be tended, cherished, and exercised with a simple view to its general health, so may the intellect also be generally exercised in order to its perfect state; and this *is* its cultivation.

Again, as health ought to precede labour of the body, and as a man in health can do what an unhealthy man cannot do, and as of his health the properties are strength, energy, agility, graceful carriage and action, manual dexterity, and endurance of fatigue, so in like manner general culture of mind is the best aid to professional and scientific study, and educated men can do what illiterate cannot; and the man who has learned to think and to reason and to compare and to discriminate and to analyse, who has refined his taste, and formed his judgment, and sharpened his mental vision, will not indeed at once be a lawyer, or a pleader, or an orator, or a statesman, or a physician, or a good landlord, or a man of business, or a soldier, or an engineer, or a chemist, or a geologist, or an antiquarian, but he will be placed in that state of intellect in which he can take up any one of the sciences or callings I have referred to, or any other for which he has a taste or special talent, with an ease, a grace, a versatility, and a success, to which another is a stranger. In this sense then, and as yet I have said but a very few words on a large subject, mental culture is emphatically *useful*.

If then I am arguing, and shall argue, against Professional or Scientific knowledge as the sufficient end of a University Education, let me not be supposed, Gentlemen, to be disrespectful towards particular studies, or arts, or vocations, and those who are engaged in them. In saying that Law or Medicine is not the end of a University course, I do not mean to imply that the University does not teach Law or Medicine. What indeed can it teach at all, if it does not teach something particular? It teaches *all* knowledge by teaching all *branches* of knowledge, and in no other way. I do but say that there will be this distinction as regards a Professor of Law, or of Medicine, or of Geology, or of Political Economy, in a University and out of it, that out of a University he is in danger of being absorbed and narrowed by his pursuit, and of giving Lectures which are the Lectures of nothing more than a lawyer, physician, geologist, or political economist; whereas in a University he will just know where he and his science stand, he has come to it, as it were, from a height, he has taken a survey of all knowledge, he is kept from extravagance by the very rivalry of other studies, he has gained from them a special illumination and largeness of mind and freedom and self-possession, and he treats his own in consequence with a philosophy and a resource, which belongs not to the study itself, but to his liberal education.

This then is how I should solve the fallacy, for so I must call it, by which Locke and his disciples would frighten us from cultivating the intellect, under the notion that no education is useful which does not teach us some temporal calling, or some mechanical art, or some physical secret. I say that a cultivated intellect, because it is a good in itself, brings with it a power and a grace to every work and oc-

cupation which it undertakes, and enables us to be more useful, and to a greater number. There is a duty we owe to human society as such, to the state to which we belong, to the sphere in which we move, to the individuals towards whom we are variously related, and whom we successively encounter in life; and that philosophical or liberal education, as I have called it, which is the proper function of a University, if it refuses the foremost place to professional interests, does but postpone them to the formation of the citizen, and, while it subserves the larger interests of philanthropy, prepares also for the successful prosecution of those merely personal objects, which at first sight it seems to disparage. . . .

10

But I must bring these extracts [5] to an end. Today I have confined myself to saying that that training of the intellect, which is best for the individual himself, best enables him to discharge his duties to society. The Philosopher, indeed, and the man of the world differ in their very notion, but the methods, by which they are respectively formed, are pretty much the same. The Philosopher has the same command of matters of thought, which the true citizen and gentleman has of matters of business and conduct. If then a practical end must be assigned to a University course, I say it is that of training good members of society. Its art is the art of social life, and its end is fitness for the world. It neither confines its views to particular professions on the one hand, nor creates heroes or inspires genius on the other. Works indeed of genius fall under no art; heroic minds come under no rule; a University is not a birthplace of poets or of immortal authors, of founders of schools, leaders of colonies, or conquerors of nations. It does not promise a generation of Aristotles or Newtons, of Napoleons or Washingtons, of Raphaels or Shakespeares, though such miracles of nature it has before now contained within its precincts. Nor is it content on the other hand with forming the critic or the experimentalist, the economist or the engineer, though such too it includes within its scope. But a University training is the great ordinary means to a great but ordinary end; it aims at raising the intellectual tone of society, at cultivating the public mind, at purifying the national taste, at supplying true principles to popular enthusiasm and fixed aims to popular aspiration, at giving enlargement and sobriety to the ideas of the age, at facilitating the exercise of political power, and refining the intercourse of private life. It is the education which gives a man a clear conscious view of his own opinions and judgments, a truth in developing them, an eloquence in expressing them, and a force in urging them. It teaches him to see things as they are, to go right to the point, to disentangle a skein of thought, to detect what is sophistical, and to discard what is irrelevant. It prepares him to fill any post with credit, and to master any subject with facility. It shows him how to accommodate himself to others, how to throw himself into their state of mind, how to bring before them his own, how to influence them, how to come to an understanding with them, how to bear with them. He is at home in any society, he has common ground with every class; he knows when to speak and when to be silent; he is able to converse, he is able to listen; he can ask a question pertinently, and gain a lesson seasonably, when he has nothing to impart himself; he is ever ready, yet never in the way; he is a pleasant companion, and a comrade you can depend upon; he knows when to be serious and when to trifle, and he has a sure tact which enables him to trifle with gracefulness and to be serious with effect. He has the repose of a mind which lives in

5. From the writings of John Davison, quoted in sections 8 and 9, in reply to the Edinburgh reviewers.

itself, while it lives in the world, and which has resources for its happiness at home when it cannot go abroad. He has a gift which serves him in public, and supports him in retirement, without which good fortune is but vulgar, and with which failure and disappointment have a charm. The art which tends to make a man all this, is in the object which it pursues as useful as the art of wealth or the art of health, though it is less susceptible of method, and less tangible, less certain, less complete in its result.

Discourse VIII

Knowledge Viewed in Relation to Religion

Now, on opening the subject, we see at once a momentous benefit which the philosopher is likely to confer on the pastors of the Church. It is obvious that the first step which they have to effect in the conversion of man and the renovation of his nature, is his rescue from that fearful subjection to sense which is his ordinary state. To be able to break through the meshes of that thraldom, and to disentangle and to disengage its ten thousand holds upon the heart, is to bring it, I might almost say, half way to Heaven. Here, even divine grace, to speak of things according to their appearances, is ordinarily baffled, and retires, without expedient or resource, before this giant fascination. Religion seems too high and unearthly to be able to exert a continued influence upon us: its effort to rouse the soul, and the soul's effort to co-operate, are too violent to last. It is like holding out the arm at full length, or supporting some great weight, which we manage to do for a time, but soon are exhausted and succumb. Nothing can act beyond its own nature; when then we are called to what is supernatural, though those extraordinary aids from Heaven are given us, with which obedience becomes possible, yet even with them it is of transcendent difficulty. We are drawn down to earth every moment with the ease and certainty of a natural gravitation, and it is only by sudden impulses and, as it were, forcible plunges that we attempt to mount upwards. Religion indeed enlightens, terrifies, subdues; it gives faith, it inflicts remorse, it inspires resolutions, it draws tears, it inflames devotion, but only for the occasion. I repeat, it imparts an inward power which ought to effect more than this; I am not forgetting either the real sufficiency of its aids, nor the responsibility of those in whom they fail. I am not discussing theological questions at all, I am looking at phenomena as they lie before me, and I say that, in matter of fact, the sinful spirit repents, and protests it will never sin again, and for a while is protected by disgust and abhorrence from the malice of its foe. But that foe knows too well that such seasons of repentance are wont to have their end: he patiently waits, till nature faints with the effort of resistance, and lies passive and hopeless under the next access of temptation. What we need then is some expedient or instrument, which at least will obstruct and stave off the approach of our spiritual enemy, and which is sufficiently congenial and level with our nature to maintain as firm a hold upon us as the inducements of sensual gratification. It will be our wisdom to employ nature against itself. Thus sorrow, sickness, and care are providential antagonists to our inward disorders; they come upon us as years pass on, and generally produce their natural effects on us, in proportion as we are subjected to their influence. These, however, are God's instruments, not ours; we need a similar remedy, which we can make our own, the object of some legitimate faculty, or the aim of some natural affection, which is capable of resting on the mind, and taking up its familiar lodging with it, and engrossing it, and which thus becomes a match for the besetting power of sensuality, and a sort

of homœopathic medicine for the disease. Here then I think is the important aid which intellectual cultivation furnishes to us in rescuing the victims of passion and self-will. It does not supply religious motives; it is not the cause or proper antecedent of any thing supernatural; it is not meritorious of heavenly aid or reward; but it does a work, at least *materially* good (as theologians speak), whatever be its real and formal character. It expels the excitements of sense by the introduction of those of the intellect.

This then is the *primâ facie* advantage of the pursuit of Knowledge; it is the drawing the mind off from things which will harm it to subjects which are worthy a rational being; and, though it does not raise it above nature, nor has any tendency to make us pleasing to our Maker, yet is it nothing to substitute what is in itself harmless for what is, to say the least, inexpressibly dangerous? is it a little thing to exchange a circle of ideas which are certainly sinful, for others which are certainly not so? You will say, perhaps, in the words of the Apostle? 'Knowledge puffeth up':[1] and doubtless this mental cultivation, even when it is successful for the purpose for which I am applying it, may be from the first nothing more than the substitution of pride for sensuality. I grant it, I think I shall have something to say on this point presently; but this is not a necessary result, it is but an incidental evil, a danger which may be realized or may be averted, whereas we may in most cases predicate guilt, and guilt of a heinous kind, where the mind is suffered to run wild and indulge its thoughts without training or law of any kind; and surely to turn away a soul from mortal sin is a good and a gain so far, whatever comes of it. And therefore, if a friend in need is twice a friend, I conceive that intellectual employments, though they do no more than occupy the mind with objects naturally noble or innocent, have a special claim upon our consideration and gratitude.

1. *Cf.* St. Paul in *I Corinthians*, viii,1: 'Knowledge puffeth up, but charity edifieth.'

4

Nor is this all: Knowledge, the discipline by which it is gained, and the tastes which it forms, have a natural tendency to refine the mind, and to give it an indisposition, simply natural, yet real, nay, more than this, a disgust and abhorrence, towards excesses and enormities of evil, which are often or ordinarily reached at length by those who are not careful from the first to set themselves against what is vicious and criminal. It generates within the mind a fastidiousness, analogous to the delicacy or daintiness which good nurture or a sickly habit induces in respect of food; and this fastidiousness, though arguing no high principle, though no protection in the case of violent temptation, nor sure in its operation, yet will often or generally be lively enough to create an absolute loathing of certain offences, or a detestation and scorn of them as ungentlemanlike, to which ruder natures, nay, such as have far more of real religion in them, are tempted, or even betrayed. Scarcely can we exaggerate the value, in its place, of a safeguard such as this, as regards those multitudes who are thrown upon the open field of the world, or are withdrawn from its eye and from the restraint of public opinion. In many cases, where it exists, sins, familiar to those who are otherwise circumstanced, will not even occur to the mind: in others, the sense of shame and the quickened apprehension of detection will act as a sufficient obstacle to them, when they do present themselves before it. Then, again, the fastidiousness I am speaking of will create a simple hatred of that miserable tone of conversation which, obtaining as it does in the world, is a constant fuel of evil, heaped up round about the soul: moreover, it will create an irresolution and indecision in doing wrong, which will act as a *remora*[2] till

2. 'hindrance' or 'delay.'

the danger is past away. And though it has no tendency, I repeat, to mend the heart, or to secure it from the dominion in other shapes of those very evils which it repels in the particular modes of approach by which they prevail over others, yet cases may occur when it gives birth, after sins have been committed, to so keen a remorse and so intense a self-hatred, as are even sufficient to cure the particular moral disorder, and to prevent its accesses ever afterwards; — as the spendthrift in the story, who, after gazing on his lost acres from the summit of an eminence, came down a miser, and remained a miser to the end of his days.

And all this holds good in a special way, in an age such as ours, when, although pain of body and mind may be rife as heretofore, yet other counteractions of evil, of a penal character, which are present at other times, are away. In rude and semi-barbarous periods, at least in a climate such as our own, it is the daily, nay, the principal business of the senses, to convey feelings of discomfort to the mind, as far as they convey feelings at all. Exposure to the elements, social disorder and lawlessness, the tyranny of the powerful, and the inroads of enemies, are a stern discipline, allowing brief intervals, or awarding a sharp penance, to sloth and sensuality. The rude food, the scanty clothing, the violent exercise, the vagrant life, the military constraint, the imperfect pharmacy, which now are the trials of only particular classes of the community, were once the lot more or less of all. In the deep woods or the wild solitudes of the medieval era, feelings of religion or superstition were naturally present to the population, which in various ways co-operated with the missionary or pastor, in retaining it in a noble simplicity of manners. But, when in the advancement of society men congregate in towns, and multiply in contracted spaces, and law gives them security, and art gives them comforts, and good government robs them of courage and manliness, and monotony of life throws them back upon themselves, who does not see that diversion or protection from evil they have none, that vice is the mere reaction of unhealthy toil, and sensual excess the holyday of resourceless ignorance? This is so well understood by the practical benevolence of the day, that it has especially busied itself in plans for supplying the masses of our town population with intellectual and honourable recreations. Cheap literature, libraries of useful and entertaining knowledge, scientific lectureships, museums, zoological collections, buildings and gardens to please the eye and to give repose to the feelings, external objects of whatever kind, which may take the mind off itself, and expand and elevate it in liberal contemplations, these are the human means, wisely suggested, and good as far as they go, for at least parrying the assaults of moral evil, and keeping at bay the enemies, not only of the individual soul, but of society at large.

Such are the instruments by which an age of advanced civilization combats those moral disorders, which Reason as well as Revelation denounces; and I have not been backward to express my sense of their serviceableness to Religion. Moreover, they are but the foremost of a series of influences, which intellectual culture exerts upon our moral nature, and all upon the type of Christianity, manifesting themselves in veracity, probity, equity, fairness, gentleness, benevolence, and amiableness; so much so, that a character more noble to look at, more beautiful, more winning, in the various relations of life and in personal duties, is hardly conceivable, than may, or might be, its result, when that culture is bestowed upon a soil naturally adapted to virtue. If you would obtain a picture for contemplation which may seem to fulfil the ideal, which the Apostle has delineated under the name of charity,[3] in its sweetness and harmony, its generosity, its

3. *Cf. I Corinthians*, xiii.

courtesy to others, and its depreciation of self, you could not have recourse to a better furnished *studio* than to that of Philosophy, with the specimens of it, which with greater or less exactness are scattered through society in a civilized age. It is enough to refer you, Gentlemen, to the various Biographies and Remains of contemporaries and others, which from time to time issue from the press, to see how striking is the action of our intellectual upon our moral nature, where the moral material is rich, and the intellectual cast is perfect. Individuals will occur to all of us, who deservedly attract our love and admiration, and whom the world almost worships as the work of its own hands. Religious principle, indeed, — that is, faith, — is, to all appearance, simply away; the work is as certainly not supernatural as it is certainly noble and beautiful. This must be insisted on that the Intellect may have its due; but it also must be insisted on for the sake of conclusions to which I wish to conduct our investigation. The radical difference indeed of this mental refinement from genuine religion, in spite of its seeming relationship, is the very cardinal point on which my present discussion turns; yet, on the other hand, such refinement may readily be assigned to a Christian origin by hasty or distant observers, or by those who view it in a particular light. And as this is the case, I think it advisable, before proceeding with the delineation of its characteristic features, to point out to you distinctly the elementary principles on which its morality is based.

8

Taking these passages [4] as specimens of what I call the Religion of Philosophy, it is obvious to observe that there is no doctrine contained in them which is not in a certain sense true; yet, on the other hand, that almost every statement is perverted and made false, because it is not the whole truth. They are exhibitions of truth under one aspect, and therefore insufficient; conscience is most certainly a moral sense, but it is more; vice again, is a deformity, but it is worse. Lord Shaftesbury may insist, if he will, that simple and solitary fear cannot effect a moral conversion, and we are not concerned to answer him; but he will have a difficulty in proving that any real conversion follows from a doctrine which makes virtue a mere point of good taste, and vice vulgar and ungentlemanlike.

Such a doctrine is essentially superficial, and such will be its effects. It has no better measure of right and wrong than that of visible beauty and tangible fitness. Conscience indeed inflicts an acute pang, but that pang, forsooth, is irrational, and to reverence it is an illiberal superstition. But, if we will make light of what is deepest within us, nothing is left but to pay homage to what is more upon the surface, to *seem* becomes to *be*; what looks fair will be good, what causes offence will be evil; virtue will be what pleases, vice what pains. As well may we measure virtue by utility as by such a rule. Nor is this an imaginary apprehension; we all must recollect the celebrated sentiment into which a great and wise man was betrayed, in the glowing eloquence of his valediction

4. Passages quoted in sections 6 and 7, from the twenty-fourth chapter of Gibbon's *Decline and Fall of the Roman Empire* and from Lord Shaftesbury's *Characteristics of Men, Manners, Opinions, Views*. Edward Gibbon (1734–94), famous historian, presents in the early chapters of his history an ironically skeptical account of the early progress of Christianity. Newman quotes the panegyrist of Julian the Apostate (A.D. 331–63), who though reared in the Christian faith, renounced the Christian religion upon his accession, and attempted to revive the worship of the old gods, and who nevertheless was 'one of the most eminent specimens of pagan virtue which the world has ever seen,' and an admirable example of the 'Religion of Philosophy.' From Anthony Ashley Cooper (1671–1713), 3rd Earl of Shaftesbury, Newman quotes passages, in section 7, to illustrate the 'Religion of Taste,' ridicule as the test of truth, and the 'moral sense' as innate.

to the spirit of chivalry. 'It is gone,' cries Mr. Burke; 'that sensibility of principle, that chastity of honour, which felt a stain like a wound; which inspired courage, while it mitigated ferocity; which ennobled whatever it touched, and under which *vice lost half its evil by losing all its grossness*.'[5] In the last clause of this beautiful sentence we have too apt an illustration of the ethical temperament of a civilized age. It is detection, not the sin, which is the crime; private life is sacred, and inquiry into it is intolerable; and decency is virtue. Scandals, vulgarities, whatever shocks, whatever disgusts, are offences of the first order. Drinking and swearing, squalid poverty, improvidence, laziness, slovenly disorder, make up the idea of profligacy: poets may say anything, however wicked, with impunity; works of genius may be read without danger or shame, whatever their principles; fashion, celebrity, the beautiful, the heroic, will suffice to force any evil upon the community. The splendours of a court, and the charms of good society, wit, imagination, taste, and high breeding, the *prestige* of rank, and the resources of wealth are a screen, an instrument, and an apology for vice and irreligion. And thus at length we find, surprising as the change may be, that that very refinement of Intellectualism, which began by repelling sensuality, ends by excusing it. Under the shadow indeed of the Church, and in its due development, Philosophy does service to the cause of morality; but, when it is strong enough to have a will of its own, and is lifted up with an idea of its own importance, and attempts to form a theory, and to lay down a principle, and to carry out a system of ethics, and undertakes the moral education of the man, then it does but abet evils to which at first it seemed instinctively opposed. True Religion is slow in growth, and, when once planted, is difficult of dislodgement; but its intellectual counterfeit has no root in itself: it springs up suddenly, it suddenly withers. It appeals to what is in nature, and it falls under the dominion of the old Adam. Then, like dethroned princes, it keeps up a state and majesty, when it has lost the real power. Deformity is its abhorrence; accordingly, since it cannot dissuade men from vice, therefore in order to escape the sight of its deformity, it embellishes it. It 'skins and films the ulcerous place,' which it cannot probe or heal,

> 'Whiles rank corruption, mining all within,
> Infects unseen.'[6]

And from this shallowness of philosophical Religion it comes to pass that its disciples seem able to fulfil certain precepts of Christianity more readily and exactly than Christians themselves. St. Paul, as I have said, gives us a pattern of evangelical perfection; he draws the Christian character in its most graceful form, and its most beautiful hues. He discourses of that charity which is patient and meek, humble and single-minded, disinterested, contented, and persevering. He tells us to prefer each the other before himself, to give way to each other, to abstain from rude words and evil speech, to avoid self-conceit, to be calm and grave, to be cheerful and happy, to observe peace with all men, truth and justice, courtesy and gentleness, all that is modest, amiable, virtuous, and of good repute. Such is St. Paul's exemplar of the Christian in his external relations; and, I repeat, the school of the world seems to send out living copies of this typical excellence with greater success than the Church. At this day the 'gentleman' is the creation, not of Christianity, but of civilization. But the reason is obvious. The world is content with setting right the surface of things; the Church aims at regenerating the very depths of

5. See the famous passage in Burke's *Reflections on the Revolution in France* (1790), beginning: 'But the age of chivalry is gone . . .'

6. *Hamlet*, III,iv,147–49.

the heart. She ever begins with the beginning; and, as regards the multitude of her children, is never able to get beyond the beginning, but is continually employed in laying the foundation. She is engaged with what is essential, as previous and as introductory to the ornamental and the attractive. She is curing men and keeping them clear of mortal sin; she is 'treating of justice and chastity, and the judgment to come:' she is insisting on faith and hope, and devotion, and honesty, and the elements of charity; and has so much to do with precept, that she almost leaves it to inspirations from Heaven to suggest what is of counsel and perfection. She aims at what is necessary rather than at what is desirable. She is for the many as well as for the few. She is putting souls in the way of salvation, that they may then be in a condition, if they shall be called upon, to aspire to the heroic, and to attain the full proportions, as well as the rudiments, of the beautiful.

10

Hence it is that it is almost a definition of a gentleman to say he is one who never inflicts pain.[7] This description is both refined and, as far as it goes, accurate. He is mainly occupied in merely removing the obstacles which hinder the free and unembarrassed action of those about him; and he concurs with their movements rather than takes the initiative himself. His benefits may be considered as parallel to what are called comforts or conveniences in arrangements of a personal nature: like an easy chair or a good fire, which do their part in dispelling cold and fatigue, though nature provides both means of rest and animal heat without them. The true gentleman in like manner carefully avoids whatever may cause a jar or a jolt in the minds of those with whom he is cast; — all clashing of opinion, or collision of feeling, all restraint, or suspicion, or gloom, or resentment; his great concern being to make every one at their ease and at home. He has his eyes on all his company; he is tender towards the bashful, gentle towards the distant, and merciful towards the absurd; he can recollect to whom he is speaking; he guards against unseasonable allusions, or topics which may irritate; he is seldom prominent in conversation, and never wearisome. He makes light of favours while he does them, and seems to be receiving when he is conferring. He never

7. Newman's famous definition of a gentleman, of which this is the first sentence, is almost universally misunderstood, and frequently attacked, because few readers view it in relation to the last paragraphs of the preceding section (9). The opening sentence of section 10, in which a gentleman is said to be a man 'who never inflicts pain,' takes on its proper meaning when it is seen to be an extension of Newman's discussion of 'pride' and 'self-respect' and 'modesty' as the virtues of the gentleman as idealized by Lord Shaftesbury. Refined by civilization, 'self-respect infuses into the mind an intense horror of exposure, and a keen sensitiveness of notoriety and ridicule. It becomes the enemy of extravagances of any kind; it shrinks from what are called scenes; it has no mercy on the mock-heroic, on pretence or egotism, on verbosity in language, or what is called prosiness in conversation. . . It teaches men to suppress their feelings, and to control their tempers, and to mitigate both the severity and the tone of their judgments. As Lord Shaftesbury would desire, it prefers playful wit and satire in putting down what is objectionable, as a more refined and good-natured, as well as a more effectual method, than the expedient which is natural to uneducated minds. It is from this impatience of the tragic and the bombastic that it is now quietly but energetically opposing itself to the unchristian practice of duelling, which it brands as simply out of taste, and as a remnant of a barbarous age; and certainly it seems likely to effect what Religion has aimed at abolishing in vain.' It is from this standpoint that Newman begins the next section of his Discourse, and the entire definition of the gentleman as Newman conceives of him is framed on the eighteenth-century model as suggested by Lord Shaftesbury. In his conception of the gentleman, as in his conception of reason, faith, probability, miracles, Biblical criticism, and even of prose style, Newman shows in what a remarkable degree he is not a Victorian but a contemporary of Lord Chesterfield and Bishop Butler.

speaks of himself except when compelled, never defends himself by a mere retort, he has no ears for slander or gossip, is scrupulous in imputing motives to those who interfere with him, and interprets everything for the best. He is never mean or little in his disputes, never takes unfair advantage, never mistakes personalities or sharp sayings for arguments, or insinuates evil which he dare not say out. From a long-sighted prudence, he observes the maxim of the ancient sage, that we should ever conduct ourselves towards our enemy as if he were one day to be our friend. He has too much good sense to be affronted at insults, he is too well employed to remember injuries, and too indolent to bear malice. He is patient, forbearing, and resigned, on philosophical principles; he submits to pain, because it is inevitable, to bereavement, because it is irreparable, and to death, because it is his destiny. If he engages in controversy of any kind, his disciplined intellect preserves him from the blundering discourtesy of better, though less educated minds; who, like blunt weapons, tear and hack instead of cutting clean, who mistake the point in argument, waste their strength on trifles, misconceive their adversary, and leave the question more involved than they find it. He may be right or wrong in his opinion, but he is too clear-headed to be unjust; he is as simple as he is forcible, and as brief as he is decisive. Nowhere shall we find greater candour, consideration, indulgence: he throws himself into the minds of his opponents, he accounts for their mistakes. He knows the weakness of human reason as well as its strength, its province and its limits. If he be an unbeliever, he will be too profound and large-minded to ridicule religion or to act against it; he is too wise to be a dogmatist or fanatic in his infidelity. He respects piety and devotion; he even supports institutions as venerable, beautiful, or useful, to which he does not assent; he honours the ministers of religion, and he is contented to decline its mysteries without assailing or denouncing them. He is a friend of religious toleration, and that, not only because his philosophy has taught him to look on all forms of faith with an impartial eye, but also from the gentleness and effeminacy of feeling, which is the attendant on civilisation.

Not that he may not hold a religion too, in his own way, even when he is not a Christian. In that case his religion is one of imagination and sentiment; it is the embodiment of those ideas of the sublime, majestic, and beautiful, without which there can be no large philosophy. Sometimes he acknowledges the being of God, sometimes he invests an unknown principle or quality with the attributes of perfection. And this deduction of his reason, or creation of his fancy, he makes the occasion of such excellent thoughts, and the starting-point of so varied and systematic a teaching, that he even seems like a disciple of Christianity itself. From the very accuracy and steadiness of his logical powers, he is able to see what sentiments are consistent in those who hold any religious doctrine at all, and he appears to others to feel and to hold a whole circle of theological truths which exist in his mind no otherwise than as a number of deductions.

Such are some of the lineaments of the ethical character, which the cultivated intellect will form, apart from religious principle. They are seen within the pale of the Church and without it, in holy men and in profligate; they form the *beau-idéal* of the world; they partly assist and partly distort the development of the Catholic. They may subserve the education of a St. Francis de Sales[8] or a Cardinal Pole;[9] they may be the limits of the virtue of a

8. 1567–1622; Bishop of Geneva, author of *Traité de l'amour de Dieu*, etc.; famous as a mystic and saint; canonized in 1665.

9. Reginald Cardinal Pole (1500–58), Archbishop of Canterbury under Queen Mary — 'bloody Mary'; active in the persecution of Protestants. Newman mentions him here to contrast Pole's severities with St. Francis de Sales' mercifulness.

Shaftesbury or a Gibbon. Basil [10] and Julian were fellow-students at the schools of Athens; and one became the Saint and Doctor of the Church, the other her scoffing and relentless foe.

10. Basil the Great (c.330–79), Bishop of Caesarea, and founder of monastic institutions; one of the greatest of the early Church Fathers, and a defender of the Orthodox Church against the Arian heresy.

THE RISE AND PROGRESS OF UNIVERSITIES

What Is a University?

If I were asked to describe as briefly and popularly as I could, what a University was, I should draw my answer from its ancient designation of a *Studium Generale*, or 'School of University Learning.' This description implies the assemblage of strangers from all parts in one spot; — *from all parts*; else, how will you find professors and students for every department of knowledge? and *in one spot*; else, how can there be any school at all? Accordingly, in its simple and rudimental form, it is a school of knowledge of every kind, consisting of teachers and learners from every quarter. Many things are requisite to complete and satisfy the idea embodied in this description; but such as this a University seems to be in its essence, a place for the communication and circulation of thought, by means of personal intercourse, through a wide extent of country.

There is nothing far-fetched or unreasonable in the idea thus presented to us; and if this be a University, then a University does but contemplate a necessity of our nature, and is but one specimen in a particular medium, out of many which might be adduced in others, of a provision for that necessity. Mutual education, in a large sense of the word, is one of the great and incessant occupations of human society, carried on partly with set purpose, and partly not. One generation forms another; and the existing generation is ever acting and reacting upon itself in the persons of its individual members. Now, in this process, books, I need scarcely say, that is, the *litera scripta*,[1] are one special instrument. It is true; and emphatically so in this age. Considering the prodigious powers of the press, and how they are developed at this time in the never-intermitting issue of periodicals, tracts, pamphlets, works in series, and light literature, we must allow there never was a time which promised fairer for dispensing with every other means of information and instruction. What can we want more, you will say, for the intellectual education of the whole man, and for every man, than so exuberant and diversified and persistent a promulgation of all kinds of knowledge? Why, you will ask, need we go up to knowledge, when knowledge comes down to us? The Sibyl [2] wrote her prophecies upon the leaves of the forest, and wasted them; but here such careless profusion might be prudently indulged, for it can be afforded without loss, in consequence of the almost fabulous fecundity of the instrument which these latter ages have invented. We have sermons in stones, and books in the running brooks; [3] works larger and more comprehensive than those which have gained for ancients an immortality, issue forth every morning, and are projected onwards to the ends of the earth at the rate of hundreds of miles a day. Our seats are strewed, our pavements are powdered, with swarms of little tracts; and the very bricks of our city walls preach wisdom, by informing us by their placards where we can at once cheaply purchase it.

I allow all this, and much more; such

3. See *As You Like It*, II,i,12–17.

certainly is our popular education, and its effects are remarkable. Nevertheless, after all, even in this age, whenever men are really serious about getting what, in the language of trade, is called 'a good article,' when they aim at something precise, something refined, something really luminous, something really large, something choice, they go to another market; they avail themselves, in some shape or other, of the rival method, the ancient method, of oral instruction, of present communication between man and man, of teachers instead of learning, of the personal influence of a master, and the humble initiation of a disciple, and, in consequence, of great centres of pilgrimage and throng, which such a method of education necessarily involves. This, I think, will be found to hold good in all those departments or aspects of society, which possess an interest sufficient to bind men together, or to constitute what is called 'a world.' It holds in the political world, and in the high world, and in the religious world; and it holds also in the literary and scientific world.

If the actions of men may be taken as any test of their convictions, then we have reason for saying this, viz.: that the province and the inestimable benefit of the *litera scripta* is that of being a record of truth, and an authority of appeal, and an instrument of teaching in the hands of a teacher; but that, if we wish to become exact and fully furnished in any branch of knowledge which is diversified and complicated, we must consult the living man and listen to his living voice. I am not bound to investigate the cause of this, and anything I may say will, I am conscious, be short of its full analysis; — perhaps we may suggest, that no books can get through the number of minute questions which it is possible to ask on any extended subject, or can hit upon the very difficulties which are severally felt by each reader in succession. Or again, that no book can convey the special spirit and delicate peculiarities of its subject with that rapidity and certainty which attend on the sympathy of mind with mind, through the eyes, the look, the accent, and the manner, in casual expressions thrown off at the moment, and the unstudied turns of familiar conversation. But I am already dwelling too long on what is but an incidental portion of my main subject. Whatever be the cause, the fact is undeniable. The general principles of any study you may learn by books at home; but the detail, the colour, the tone, the air, the life which makes it live in us, you must catch all these from those in whom it lives already. You must imitate the student in French or German, who is not content with his grammar, but goes to Paris or Dresden: you must take example from the young artist, who aspires to visit the great Masters in Florence and in Rome. Till we have discovered some intellectual daguerreotype, which takes off the course of thought, and the form, lineaments, and features of truth, as completely and minutely, as the optical instrument reproduces the sensible object, we must come to the teachers of wisdom to learn wisdom, we must repair to the fountain, and drink there. Portions of it may go from thence to the ends of the earth by means of books; but the fulness is in one place alone. It is in such assemblages and congregations of intellect that books themselves, the masterpieces of human genius, are written, or at least originated.

The principle on which I have been insisting is so obvious, and instances in point are so ready, that I should think it tiresome to proceed with the subject, except that one or two illustrations may serve to explain my own language about it, which may not have done justice to the doctrine which it has been intended to enforce.

For instance, the polished manners and high-bred bearing which are so difficult of attainment, and so strictly personal when attained, — which are so much admired in society, from society are acquired. All

that goes to constitute a gentleman, — the carriage, gait, address, gestures, voice; the ease, the self-possession, the courtesy, the power of conversing, the talent of not offending; the lofty principle, the delicacy of thought, the happiness of expression, the taste and propriety, the generosity and forbearance, the candour and consideration, the openness of hand; — these qualities, some of them come by nature, some of them may be found in any rank, some of them are a direct precept of Christianity; but the full assemblage of them, bound up in the unity of an individual character, do we expect they can be learned from books? are they not necessarily acquired, where they are to be found, in high society? The very nature of the case leads us to say so; you cannot fence without an antagonist, nor challenge all comers in disputation before you have supported a thesis; and in like manner, it stands to reason, you cannot learn to converse till you have the world to converse with; you cannot unlearn your natural bashfulness, or awkwardness, or stiffness, or other besetting deformity, till you serve your time in some school of manners. Well, and is it not so in matter of fact? The metropolis, the court, the great houses of the land, are the centres to which at stated times the country comes up, as to shrines of refinement and good taste; and then in due time the country goes back again home, enriched with a portion of the social accomplishments, which those very visits serve to call out and heighten in the gracious dispensers of them. We are unable to conceive how the 'gentlemanlike' can otherwise be maintained; and maintained in this way it is.

And now a second instance: and here, too, I am going to speak without personal experience of the subject I am introducing. I admit I have not been in Parliament, any more than I have figured in the *beau monde*;[4] yet I cannot but think that statesmanship, as well as high breeding, is learned, not by books, but in certain centres of education. If it be not presumption to say so, Parliament puts a clever man *au courant*[5] with politics and affairs of state in a way surprising to himself. A member of the Legislature, if tolerably observant, begins to see things with new eyes, even though his views undergo no change. Words have a meaning now, and ideas a reality, such as they had not before. He hears a vast deal in public speeches and private conversation, which is never put into print. The bearings of measures and events, the action of parties, and the persons of friends and enemies, are brought out to the man who is in the midst of them with a distinctness, which the most diligent perusal of newspapers will fail to impart to them. It is access to the fountainheads of political wisdom and experience, it is daily intercourse, of one kind or another, with the multitude who go up to them, it is familiarity with business, it is access to the contributions of fact and opinion thrown together by many witnesses from many quarters, which does this for him. However, I need not account for a fact, to which it is sufficient to appeal; that the Houses of Parliament and the atmosphere around them are a sort of University of politics.

As regards the world of science, we find a remarkable instance of the principle which I am illustrating, in the periodical meetings for its advance, which have arisen in the course of the last twenty years, such as the British Association.[6] Such gatherings would to many persons appear at first sight simply preposterous. Above all subjects of study, Science is conveyed, is propagated, by books, or by private teaching; experiments and inves-

5. 'well informed' or 'up to date.'

6. *i.e.* The British Association for the Advancement of Science. It held its first meeting at York in 1831. Its object is the promotion and diffusion of science, and the encouragement of intercourse of scientists of the British Empire with one another and with foreign scientists and philosophers.

tigations are conducted in silence; discoveries are made in solitude. What have philosophers to do with festive celebrities, and panegyrical solemnities with mathematical and physical truth? Yet on a closer attention to the subject, it is found that not even scientific thought can dispense with the suggestions, the instruction, the stimulus, the sympathy, the intercourse with mankind on a large scale, which such meetings secure. A fine time of year is chosen, when days are long, skies are bright, the earth smiles, and all nature rejoices; a city or town is taken by turns, of ancient name or modern opulence, where buildings are spacious and hospitality hearty. The novelty of place and circumstance, the excitement of strange, or the refreshment of well-known faces, the majesty of rank or of genius, the amiable charities of men pleased both with themselves and with each other; the elevated spirits, the circulation of thought, the curiosity; the morning sections, the outdoor exercise, the well-furnished, well-earned board, the not ungraceful hilarity, the evening circle; the brilliant lecture, the discussions or collisions or guesses of great men one with another, the narratives of scientific processes, of hopes, disappointments, conflicts, and successes, the splendid eulogistic orations; these and the like constituents of the annual celebration are considered to do something real and substantial for the advance of knowledge which can be done in no other way. Of course they can but be occasional; they answer to the annual Act or Commencement, or Commemoration, of a University, not to its ordinary condition; but they are of a University nature; and I can well believe in their utility. They issue in the promotion of a certain living and, as it were, bodily communication of knowledge from one to another, of a general interchange of ideas, and a comparison and adjustment of science with science, of an enlargement of mind, intellectual and social, of an ardent love of the particular study, which may be chosen by each individual, and a noble devotion to its interests.

Such meetings, I repeat, are but periodical, and only partially represent the idea of a University. The bustle and whirl which are their usual concomitants, are in ill keeping with the order and gravity of earnest intellectual education. We desiderate means of instruction which involve no interruption of our ordinary habits; nor need we seek it long, for the natural course of things brings it about, while we debate over it. In every great country, the metropolis itself becomes a sort of necessary University, whether we will or no. As the chief city is the seat of the court, of high society, of politics, and of law, so as a matter of course is it the seat of letters also; and at this time, for a long term of years, London and Paris are in fact and in operation Universities, though in Paris its famous University is no more, and in London a University scarcely exists except as a board of administration.[7] The newspapers, magazines, reviews, journals, and periodicals of all kinds, the publishing trade, the libraries, museums, and academies there found, the learned and scientific societies, necessarily invest it with the functions of a University; and that atmosphere of intellect, which in a former age hung over Oxford or Bologna or Salamanca, has, with the change of times, moved away to the centre of civil government. Thither come up youths from all parts of the country, the students of law, medicine, and the fine arts, and the *employés* and *attachés* of literature. There they live, as chance determines; and they are satisfied with their temporary home, for they find in it all that was promised to

7. London University was founded in 1827, and incorporated by royal charter in 1836. Owing to the nonsectarian nature of University College as it was founded in 1827, much bitter opposition was encountered; and the University of London was for several decades little more than a body with examining functions and degree-giving powers.

them there. They have not come in vain, as far as their own object in coming is concerned. They have not learned any particular religion, but they have learned their own particular profession well. They have, moreover, become acquainted with the habits, manners, and opinions of their place of sojourn, and done their part in maintaining the tradition of them. We cannot then be without virtual Universities; a metropolis is such: the simple question is, whether the education sought and given should be based on principle, formed upon rule, directed to the highest ends, or left to the random succession of masters and schools, one after another, with a melancholy waste of thought and an extreme hazard of truth.

Religious teaching itself affords us an illustration of our subject to a certain point. It does not, indeed, seat itself merely in centres of the world; this is impossible from the nature of the case. It is intended for the many, not the few; its subject-matter is truth necessary for us, not truth recondite and rare; but it concurs in the principle of a University so far as this, that its great instrument, or rather organ, has ever been that which nature prescribes in all education, the personal presence of a teacher, or, in theological language, Oral Tradition. It is the living voice, the breathing form, the expressive countenance, which preaches, which catechises. Truth, a subtle, invisible, manifold spirit, is poured into the mind of the scholar by his eyes and ears, through his affections, imagination, and reason; it is poured into his mind and is sealed up there in perpetuity, by propounding and repeating it, by questioning and requestioning, by correcting and explaining, by progressing and then recurring to first principles, by all those ways which are implied in the word 'catechising.' In the first ages, it was a work of long time; months, sometimes years, were devoted to the arduous task of disabusing the mind of the incipient Christian of its pagan errors, and of moulding it upon the Christian faith. The Scriptures, indeed, were at hand for the study of those who could avail themselves of them; but St. Irenæus [8] does not hesitate to speak of whole races, who had been converted to Christianity, without being able to read them. To be unable to read or write was in those times no evidence of want of learning: the hermits of the deserts were, in this sense of the word, illiterate; yet the great St. Anthony,[9] though he knew not letters, was a match in disputation for the learned philosophers who came to try him. Didymus [10] again, the great Alexandrian theologian, was blind. The ancient discipline, called the *Disciplina Arcani*,[11] involved the same principle. The more sacred doctrines of Revelation were not committed to books but passed on by successive tradition. The teaching on the Blessed Trinity and the Eucharist appears to have been so handed down for some hundred years; and when at length reduced to writing, it has filled many folios, yet has not been exhausted.

But I have said more than enough in illustration; I end as I began; — a University is a place of concourse, whither students come from every quarter for every kind of knowledge. You cannot have the best of every kind everywhere; you must go to some great city or emporium for it. There you have all the choicest productions of nature and art all together, which you find each in its own separate place elsewhere. All the riches of the land, and of the earth, are carried up thither; there are the best markets, and there the best workmen. It is the centre of trade, the supreme court of fashion, the

umpire of rival talents, and the standard of things rare and precious. It is the place for seeing galleries of first-rate pictures, and for hearing wonderful voices and performers of transcendent skill. It is the place for great preachers, great orators, great nobles, great statesmen. In the nature of things, greatness and unity go together; excellence implies a centre. And such, for the third or fourth time, is a University; I hope I do not weary out the reader by repeating it. It is the place to which a thousand schools make contributions; in which the intellect may safely range and speculate, sure to find its equal in some antagonist activity, and its judge in the tribunal of truth. It is a place where inquiry is pushed forward, and discoveries verified and perfected, and rashness rendered innocuous, and error exposed, by the collision of mind with mind, and knowledge with knowledge. It is the place where the professor becomes eloquent, and is a missionary and a preacher, displaying his science in its most complete and most winning form, pouring it forth with the zeal of enthusiasm, and lighting up his own love of it in the breasts of his hearers. It is the place where the catechist makes good his ground as he goes, treading in the truth day by day into the ready memory, and wedging and tightening it into the expanding reason. It is a place which wins the admiration of the young by its celebrity, kindles the affections of the middle-aged by its beauty, and rivets the fidelity of the old by its associations. It is a seat of wisdom, a light of the world, a minister of the faith, an Alma Mater of the rising generation. It is this and a great deal more, and demands a somewhat better head and hand than mine to describe it well.

Such is a University in its idea and in its purpose; such in good measure has it before now been in fact. Shall it ever be again? We are going forward in the strength of the Cross, under the patronage of the Blessed Virgin, in the name of St. Patrick, to attempt it.

APOLOGIA PRO VITA SUA

PART III. HISTORY OF MY RELIGIOUS OPINIONS

It may easily be conceived how great a trial it is to me to write the following history of myself; but I must not shrink from the task. The words 'Secretum meum mihi,'[1] keep ringing in my ears; but as men draw towards their end, they care less for disclosures. Nor is it the least part of my trial, to anticipate that my friends may, upon first reading what I have written, consider much in it irrelevant to my purpose; yet I cannot help thinking that, viewed as a whole, it will effect what I wish it to do.

I was brought up from a child to take great delight in reading the Bible; but I had no formed religious convictions till I was fifteen. Of course I had perfect knowledge of my Catechism.

After I was grown up, I put on paper such recollections as I had of my thoughts and feelings on religious subjects, at the time that I was a child and a boy. Out of these I select two, which are at once the most definite among them, and also have a bearing on my later convictions.

In the paper to which I have referred, written either in the long vacation of 1820, or in October 1823, the following notices of my school days were sufficiently prominent in my memory for me to consider them worth recording: — 'I used to wish the Arabian Tales were true: my imagination ran on unknown influences, on magical powers, and talismans. . . . I thought life might be a dream, or I an Angel, and

1. Literally 'My secret for me,' meaning 'My private history is my own concern.'

all this world a deception, my fellow-angels by a playful device concealing themselves from me, and deceiving me with the semblance of a material world.'

Again, 'Reading in the Spring of 1816 a sentence from [Dr. Watts's][2] "Remnants of Time," entitled "the Saints unknown to the world," to the effect, that "there is nothing in their figure or countenance to distinguish them," etc., etc., I supposed he spoke of Angels who lived in the world, as it were disguised.'

The other remark is this: 'I was very superstitious, and for some time previous to my conversion' [when I was fifteen] 'used constantly to cross myself on going into the dark.'

Of course I must have got this practice from some external source or other; but I can make no sort of conjecture whence; and certainly no one had ever spoken to me on the subject of the Catholic religion, which I only knew by name. The French master was an *émigré*[3] priest, but he was simply made a butt, as French masters too commonly were in that day, and spoke English very imperfectly. There was a Catholic family in the village, old maiden ladies we used to think; but I knew nothing but their name. I have of late years heard that there were one or two Catholic boys in the school; but either we were carefully kept from knowing this, or the knowledge of it made simply no impression on our minds. My brother will bear witness how free the school was from Catholic ideas.

I had once been into Warwick Street Chapel, with my father, who, I believe, wanted to hear some piece of music; all that I bore away from it was the recollection of a pulpit and a preacher and a boy swinging a censer.

When I was at Littlemore,[4] I was looking over old copybooks of my school days, and I found among them my first Latin verse-book; and in the first page of it there was a device which almost took my breath away with surprise. I have the book before me now, and have just been showing it to others. I have written in the first page, in my schoolboy hand, 'John H. Newman, February 11th, 1811, Verse Book'; then follow my first verses. Between 'Verse' and 'Book' I have drawn the figure of a solid cross upright, and next to it is, what may indeed be meant for a necklace, but what I cannot make out to be anything else than a set of beads suspended, with a little cross attached. At this time I was not quite ten years old. I suppose I got the idea from some romance, Mrs. Radcliffe's or Miss Porter's;[5] or from some religious picture; but the strange thing is, how, among the thousand objects which meet a boy's eyes, these in particular should so have fixed themselves in my mind, that I made them thus practically my own. I am certain there was nothing in the churches I attended, or the prayer books I read, to suggest them. It must be recollected that churches and prayer books were not decorated in those days as I believe they are now.

When I was fourteen, I read Paine's tracts against the Old Testament, and found pleasure in thinking of the objections which were contained in them.[6] Also, I read some of Hume's essays; and perhaps that on Miracles.[7] So at least I

2. Isaac Watts (1674–1748), writer of hymns and works of popular theology.
3. One of the Royalist fugitives at the time of the French Revolution.
4. The tiny village near Oxford and within the parish of St.Mary's, where Newman had a cottage and a chapel, and where, after Tract XC had met with a storm of disapproval, Newman retired, on April 19, 1842, to remain there until he joined the Roman Catholic Church in 1845.
5. Ann Radcliffe (1764–1823), author of Gothic romances, such as *The Mysteries of Udolpho* (1794) and *The Italian* (1797). — Jane Porter (1776–1850), author of romances, such as *Thaddeus of Warsaw* (1803) and *The Scottish Chiefs* (1810).
6. See Paine's *The Age of Reason*.
7. See the essay 'Of Miracles,' in *Enquiry Concerning Human Understanding* by David Hume (1711–76), philosopher and historian

gave my father to understand; but perhaps it was a brag. Also, I recollect copying out some French verses, perhaps Voltaire's, against the immortality of the soul, and saying to myself something like 'How dreadful, but how plausible!'

When I was fifteen (in the autumn of 1816) a great change of thought took place in me. I fell under the influences of a definite creed, and received into my intellect impressions of dogma, which, through God's mercy, have never been effaced or obscured. Above and beyond the conversations and sermons of the excellent man, long dead, who was the human means of this beginning of divine faith in me, was the effect of the books which he put into my hands, all of the school of Calvin. One of the first books I read was a work of Romaine's; [8] I neither recollect the title nor the contents, except one doctrine, which of course I do not include among those which I believe to have come from a divine source, viz. the doctrine of final perseverance. I received it at once, and believed that the inward conversion of which I was conscious (and of which I still am more certain than that I have hands and feet) would last into the next life, and that I was elected to eternal glory. I have no consciousness that this belief had any tendency whatever to lead me to be careless about pleasing God. I retained it till the age of twenty-one, when it gradually faded away; but I believe that it had some influence on my opinions, in the direction of those childish imaginations which I have already mentioned, viz. in isolating me from the objects which surrounded me, in confirming me in my mistrust of the reality of material phenomena, and making me rest in the thought of two and two only supreme and luminously self-evident beings, myself and my Creator; — for while I considered myself predestined to salvation, I thought others simply passed over, not predestined to eternal death. I only thought of the mercy to myself.

The detestable doctrine last mentioned is simply denied and abjured, unless my memory strangely deceives me, by the writer who made a deeper impression on my mind than any other, and to whom (humanly speaking) I almost owe my soul — Thomas Scott of Aston Sandford.[9] I so admired and delighted in his writings, that, when I was an undergraduate, I thought of making a visit to his parsonage, in order to see a man whom I so deeply revered. I hardly think I could have given up the idea of this expedition, even after I had taken my degree; for the news of his death in 1821 came upon me as a disappointment as well as a sorrow. I hung upon the lips of Daniel Wilson,[10] afterwards Bishop of Calcutta, as in two sermons at St. John's Chapel he gave the history of Scott's life and death. I had been possessed of his essays from a boy; his commentary I bought when I was an undergraduate.

What, I suppose, will strike any reader of Scott's history and writings, is his bold unworldliness and vigorous independence of mind. He followed truth wherever it led him, beginning with Unitarianism, and ending in a zealous faith in the Holy Trinity. It was he who first planted deep in my mind that fundamental truth of religion. With the assistance of Scott's essays, and the admirable work of Jones of Nayland,[11] I made a collection of Scripture texts in proof of the doctrine, with remarks (I think) of my own upon them, before I was sixteen; and a few months later I drew up a series of texts in support

8. Possibly William Romaine (1714–95), divine, author of religious treatises and pamphlets.

9. Thomas Scott (1747–1821), rector of Aston Sanford (1801–21), produced in 1788–92, in weekly parts, a commentary on the Bible, which became widely popular and influential during the early and middle parts of the 19th century.

10. Daniel Wilson (1778–1858), Evangelical preacher, author of religious works.

11. William Jones, of Nayland, Suffolk (1726–1800), divine, published in 1756 *The Catholic Doctrine of the Trinity.*

of each verse of the Athanasian Creed.[12] These papers I have still.

Besides his unworldliness, what I also admired in Scott was his resolute opposition to Antinomianism,[13] and the minutely practical character of his writings. They show him to be a true Englishman, and I deeply felt his influence; and for years I used almost as proverbs what I considered to be the scope and issue of his doctrine, 'Holiness before peace,' and 'Growth is the only evidence of life.'

Calvinists make a sharp separation between the elect and the world; there is much in this that is parallel or cognate to the Catholic doctrine; but they go on to say, as I understand them, very differently from Catholicism, — that the converted and the unconverted can be discriminated by man, that the justified are conscious of their state of justification, and that the regenerate cannot fall away. Catholics on the other hand shade and soften the awful antagonism between good and evil, which is one of their dogmas, by holding that there are different degrees of justification, that there is a great difference in point of gravity between sin and sin, that there is the possibility and the danger of falling away, and that there is no certain knowledge given to any one that he is simply in a state of grace, and much less that he is to persevere to the end: — of the Calvinistic tenets the only one which took root in my mind was the fact of heaven and hell, divine favour and divine wrath, of the justified and the unjustified. The notion that the regenerate and the justified were one and the same, and that the regenerate, as such, had the gift of perseverance, remained with me not many years, as I have said already.

This main Catholic doctrine of the warfare between the city of God and the powers of darkness was also deeply impressed upon my mind by a work of a very opposite character, Law's 'Serious Call.'[14]

From this time I have given a full inward assent and belief to the doctrine of eternal punishment, as delivered by our Lord Himself, in as true a sense as I hold that of eternal happiness; though I have tried in various ways to make that truth less terrible to the reason.

Now I come to two other works, which produced a deep impression on me in the same autumn of 1816, when I was fifteen years old, each contrary to each, and planting in me the seeds of an intellectual inconsistency which disabled me for a long course of years. I read Joseph Milner's Church History,[15] and was nothing short of enamoured of the long extracts from St. Augustine and the other Fathers which I found there. I read them as being the religion of the primitive Christians: but simultaneously with Milner I read Newton on the Prophecies,[16] and in consequence became most firmly convinced that the Pope was the Antichrist predicted by Daniel, St. Paul, and St. John.[17] My imagination was stained by the effects of this doctrine up to the year 1843; it had been obliterated from my reason and judgment at an earlier date; but the thought remained upon me as a sort of false conscience. Hence came that conflict of mind, which so many have felt besides myself;

12. See, in the present collection, 'Liberalism,' note 19.

13. The belief that the moral law is of no use or obligation, on the ground that faith alone is necessary to salvation, under the 'law of grace.' In England, since the Commonwealth, 'high Calvinists' had maintained that an 'elect' person, being predestined to salvation, was absolved from the moral law and was not called upon to repent.

14. See William Law (1686–1761), *Serious Call to a Devout and Holy Life* (1728), widely popular for its powerful logic and eloquent expression.

15. Joseph Milner (1744–97), Evangelical divine, published his *History of the Church of Christ* in 1794–97; it was edited and continued by his brother Isaac.

16. Thomas Newton (1704–82), Bishop of Bristol, published his *Dissertation on the Prophecies* in 1754.

17. See *Daniel*, xi,36; *II Thessalonians*, ii,4; *I John*, ii,18,22, iv,3; *II John*, 7; etc.

— leading some men to make a compromise between two ideas, so inconsistent with each other — driving others to beat out the one idea or the other from their minds — and ending in my own case, after many years of intellectual unrest, in the gradual decay and extinction of one of them — I do not say in its violent death, for why should I not have murdered it sooner, if I murdered it at all?

I am obliged to mention, though I do it with great reluctance, another deep imagination, which at this time, the autumn of 1816, took possession of me — there can be no mistake about the fact; — viz. that it was the will of God that I should lead a single life. This anticipation, which has held its ground almost continuously ever since — with the break of a month now and a month then, up to 1829, and, after that date, without any break at all — was more or less connected, in my mind, with the notion that my calling in life would require such a sacrifice as celibacy involved; as, for instance, missionary work among the heathen, to which I had a great drawing for some years. It also strengthened my feeling of separation from the visible world, of which I have spoken above.

In 1822 I came under very different influences from those to which I had hitherto been subjected. At that time, Mr. Whately,[18] as he was then, afterwards Archbishop of Dublin, for the few months he remained in Oxford, which he was leaving for good, showed great kindness to me. He renewed it in 1825, when he became Principal of Alban Hall, making me his vice-principal and tutor. Of Dr. Whately I will speak presently, for from 1822 to 1825 I saw most of the present Provost of Oriel, Dr. Hawkins,[19] at that time Vicar of St. Mary's; and, when I took orders in 1824 and had a curacy at Oxford, then, during the long vacations, I was especially thrown into his company. I can say with a full heart that I love him, and have never ceased to love him; and I thus preface what otherwise might sound rude, that in the course of the many years in which we were together afterwards, he provoked me very much from time to time, though I am perfectly certain that I have provoked him a great deal more. Moreover, in me such provocation was unbecoming, both because he was the head of my college, and because in the first years that I knew him, he had been in many ways of great service to my mind.

He was the first who taught me to weigh my words, and to be cautious in my statements. He led me to that mode of limiting and clearing my sense in discussion and in controversy, and of distinguishing between cognate ideas, and of obviating mistakes by anticipation, which to my surprise has been since considered, even in quarters friendly to me, to savour of the polemics of Rome. He is a man of most exact mind himself, and he used to snub me severely, on reading, as he was kind enough to do, the first sermons that I wrote, and other compositions which I was engaged upon.

Then as to doctrine, he was the means of great additions to my belief. As I have noticed elsewhere, he gave me the 'Treatise on Apostolical Preaching,' by Sumner,[20] afterwards Archbishop of Canterbury, from which I learned to give up my remaining Calvinism, and to receive the doctrine of Baptismal Regeneration. In many other ways too he was of use to me, on subjects semi-religious and semi-scholastic.

It was Dr. Hawkins too who taught me to anticipate that, before many years were over, there would be an attack made upon the books and the canon of Scripture. I was brought to the same belief by the conversation of Mr. Blanco White,[21] who also

18. Richard Whately (1787–1863).
19. Edward Hawkins (1789–1882).
20. John Bird Sumner (1780–1862).
21. Joseph Blanco White (1775–1841), theological writer, settled at Oriel College in 1826.

led me to have freer views on the subject of inspiration than were usual in the Church of England at the time.

There is one other principle, which I gained from Dr. Hawkins, more directly bearing upon Catholicism, than any that I have mentioned; and that is the doctrine of Tradition. When I was an undergraduate, I heard him preach in the University pulpit his celebrated sermon on the subject, and recollect how long it appeared to me, though he was at that time a very striking preacher; but, when I read it and studied it as his gift, it made a most serious impression upon me. He does not go one step, I think, beyond the high Anglican doctrine, nay he does not reach it; but he does his work thoroughly, and his view was original with him, and his subject was a novel one at the time. He lays down a proposition, self-evident as soon as stated, to those who have at all examined the structure of Scripture, viz. that the sacred text was never intended to teach doctrine, but only to prove it, and that, if we would learn doctrine, we must have recourse to the formularies of the Church; for instance to the Catechism, and to the Creeds. He considers, that, after learning from them the doctrines of Christianity, the inquirer must verify them by Scripture. This view, most true in its outline, most fruitful in its consequences, opened upon me a large field of thought. Dr. Whately held it too. One of its effects was to strike at the root of the principle on which the Bible Society was set up. I belonged to its Oxford Association; it became a matter of time when I should withdraw my name from its subscription-list, though I did not do so at once.

It is with pleasure that I pay here a tribute to the memory of the Rev. William James, then Fellow of Oriel; who, about the year 1823, taught me the doctrine of Apostolical Succession, in the course of a walk, I think, round Christ Church meadow: I recollect being somewhat impatient on the subject at the time.

It was at about this date, I suppose, that I read Bishop Butler's Analogy;[22] the study of which has been to so many, as it was to me, an era in their religious opinions. Its inculcation of a visible church, the oracle of truth and a pattern of sanctity, of the duties of external religion, and of the historical character of revelation, are characteristics of this great work which strike the reader at once; for myself, if I may attempt to determine what I most gained from it, it lay in two points, which I shall have an opportunity of dwelling on in the sequel; they are the underlying principles of a great portion of my teaching. First, the very idea of an analogy between the separate works of God leads to the conclusion that the system which is of less importance is economically or sacramentally connected with the more momentous system,[23] and of this conclusion the theory, to which I was inclined as a boy, viz. the unreality of material phenomena, is an ultimate resolution. At this time I did not make the distinction between matter itself and its phenomena, which is so necessary and so obvious in discussing the subject. Secondly, Butler's doctrine that probability is the guide of life, led me, at least under the teaching to which a few years later I was introduced, to the question of the logical cogency of faith, on which I have written so much.[24] Thus to Butler I trace those two principles of my teaching,

22. Joseph Butler (1692–1752), Bishop of Durham, published his *Analogy of Religion* in 1736, maintaining, against the Deists, that, assuming that there is an intelligent Author of Nature, and natural Governor of the world, one may argue by analogy that there is a larger and more general government beyond it.

23. It is significant that Butler begins his work with a quotation from Origen. [Newman's note.]

24. See, for example, Newman's *Oxford University Sermons* (1843).

which have led to a charge against me both of fancifulness and of scepticism.

And now as to Dr. Whately. I owe him a great deal. He was a man of generous and warm heart. He was particularly loyal to his friends, and to use the common phrase, 'all his geese were swans.' While I was still awkward and timid in 1822, he took me by the hand, and acted the part to me of a gentle and encouraging instructor. He, emphatically, opened my mind, and taught me to think and to use my reason. After being first noticed by him in 1822, I became very intimate with him in 1825, when I was his vice-principal at Alban Hall. I gave up that office in 1826, when I became tutor of my college, and his hold upon me gradually relaxed. He had done his work towards me or nearly so, when he had taught me to see with my own eyes and to walk with my own feet. Not that I had not a good deal to learn from others still, but I influenced them as well as they me, and co-operated rather than merely concurred with them. As to Dr. Whately, his mind was too different from mine for us to remain long on one line. I recollect how dissatisfied he was with an article of mine in the *London Review*,[25] which Blanco White, good-humouredly, only called platonic. When I was diverging from him (which he did not like), I thought of dedicating my first book to him, in words to the effect that he had not only taught me to think, but to think for myself. He left Oxford in 1831; after that, as far as I can recollect, I never saw him but twice — when he visited the University; once in the street, once in a room. From the time that he left, I have always felt a real affection for what I must call his memory; for thenceforward he made himself dead to me. My reason told me that it was impossible that we could have got on together longer; yet I loved him too much to bid him farewell without pain. After a few years had passed, I began to believe that his influence on me in a higher respect than intellectual advance (I will not say through his fault) had not been satisfactory. I believe that he has inserted sharp things in his later works about me. They have never come in my way, and I have not thought it necessary to seek out what would pain me so much in the reading.

What he did for me in point of religious opinion, was first to teach me the existence of the Church, as a substantive body or corporation; next to fix in me those anti-Erastian views of Church polity,[26] which were one of the most prominent features of the Tractarian Movement. On this point, and, as far as I know, on this point alone, he and Hurrell Froude[27] intimately sympathised, though Froude's development of opinion here was of a later date. In the year 1826, in the course of a walk he said much to me about a work then just published, called 'Letters on the Church by an Episcopalian.' He said that it would make my blood boil. It was certainly a most powerful composition. One of our common friends told me, that, after reading it, he could not keep still, but went on walking up and down his room. It was ascribed at once to Whately; I gave eager expression to the contrary opinion; but I found the belief of Oxford in the affirmative to be too strong for me; rightly or wrongly I yielded to the general voice; and I have never heard, then

25. Allusion to Newman's essay on *Poetry, with Reference to Aristotle's Poetics*, published in the first number of the *London Review*, 1829, under the editorship of Blanco White. Newman reprinted the essay in *Essays Critical and Historical*.

26. *i.e.* views opposed to the Erastian doctrine of the supremacy of the state in ecclesiastical affairs. *Cf.* Thomas Erastus, 17th-century theologian, whose name has become associated — not altogether justly — with the doctrine.

27. Richard Hurrell Froude (1803–36), brother of James Anthony Froude, fellow of Oriel College, intimate friend of Newman and a powerful influence upon the Tractarians.

or since, of any disclaimer of authorship on the part of Dr. Whately.[28]

The main positions of this able essay are these; first that Church and State should be independent of each other: — he speaks of the duty of protesting 'against the profanation of Christ's kingdom, by that *double usurpation*, the interference of the Church in temporals, of the State in spirituals' (p. 191); and, secondly, that the Church may justly and by right retain its property, though separated from the State. 'The clergy,' he says, p. 133, 'though they ought not to be the hired servants of the Civil Magistrate, may justly retain their revenues; and the State, though it has no right of interference in spiritual concerns, not only is justly entitled to support from the ministers of religion, and from all other Christians, but would, under the system I am recommending, obtain it much more effectually.' The author of this work, whoever he may be, argues out both these points with great force and ingenuity, and with a thorough-going vehemence, which perhaps we may refer to the circumstance, that he wrote, not *in propriâ personâ*,[29] but in the professed character of a Scotch Episcopalian. His work had a gradual, but a deep effect on my mind.

I am not aware of any other religious opinion which I owe to Dr. Whately. For his special theological tenets I had no sympathy. In the next year, 1827, he told me he considered that I was Arianising.[30] The case was this: though at that time I had not read Bishop Bull's *Defensio* nor the Fathers,[31] I was just then very strong for that ante-Nicene view of the Trinitarian doctrine, which some writers, both Catholic and non-Catholic, have accused of wearing a sort of Arian exterior. This is the meaning of a passage in Froude's Remains,[32] in which he seems to accuse me of speaking against the Athanasian Creed. I had contrasted the two aspects of the Trinitarian doctrine, which are respectively presented by the Athanasian Creed and the Nicene.[33] My criticisms were to the effect that some of the verses of the former Creed were unnecessarily scientific. This is a specimen of a certain disdain for antiquity which had been growing on me now for several years. It showed itself in some flippant language against the Fathers in the Encyclopædia Metropolitana,[34] about whom I knew little at the time, except what I had learnt as a boy from Joseph Milner. In writing on the Scripture Miracles in 1825-6, I had read Middleton[35] on the Miracles of the early Church, and had imbibed a portion of his spirit.

The truth is, I was beginning to prefer intellectual excellence to moral; I was drifting in the direction of liberalism. I was rudely awakened from my dream at the end of 1827 by two great blows — illness and bereavement.

In the beginning of 1829, came the

28. The authorship of the work has been generally attributed to Whately.
29. 'in his own person.'
30. *i.e.* tending to deny, with the early Arians (4th century A.D.), the doctrine that Christ was the eternal Son of God, and of the same substance with the Father.
31. George Bull (1634–1710), Anglican theologian, whose *Defensio Fidei Nicænae* appeared in 1685.
32. Froude's *Remains* was published in 1837–39, and included such strictures on the Reformation as to arouse public hostility to the Tractarian Movement.
33. The Nicene Creed is the summary of Christian faith, compiled and adopted by the Council of Nicæa, A.D. 325, and approved by the second ecumenical council, held at Constantinople, A.D. 381.
34. In 1824, Whately asked Newman to write for the *Enclopaedia Metropolitana*, to which he himself was at the time contributing. For the *Encyclopaedia*, Newman wrote an article on Cicero, a life of *Apollonius of Tyana* (1824), etc.
35. Conyers Middleton (1683–1750), divine, created much excitement by his latitudinarian (liberal) treatise on *Miracles* (1748).

formal break between Dr. Whately and me; Mr. Peel's attempted re-election was the occasion of it.[36] I think in 1828 or 1827 I had voted in the minority, when the petition to Parliament against the Catholic claims was brought into Convocation. I did so mainly on the views suggested to me by the theory of the Letters of an Episcopalian. Also I disliked the bigoted 'two bottle orthodox,'[37] as they were invidiously called. I took part against Mr. Peel, on a simple academical, not at all an ecclesiastical or a political ground; and this I professed at the time. I considered that Mr. Peel had taken the University by surprise, that he had no right to call upon us to turn round on a sudden, and to expose ourselves to the imputation of time-serving, and that a great university ought not to be bullied even by a great Duke of Wellington. Also by this time I was under the influence of Keble and Froude; who, in addition to the reasons I have given, disliked the duke's change of policy as dictated by liberalism.

Whately was considerably annoyed at me, and he took a humorous revenge, of which he had given me due notice beforehand. As head of a house, he had duties of hospitality to men of all parties; he asked a set of the least intellectual men in Oxford to dinner, and men most fond of port; he made me one of the party; placed me between Provost this, and Principal that, and then asked me if I was proud of my friends. However, he had a serious meaning in his act; he saw, more clearly than I could do, that I was separating from his own friends for good and all.

Dr. Whately attributed my leaving his *clientela* to a wish on my part to be the head of a party myself. I do not think that it was deserved. My habitual feeling then and since has been, that it was not I who sought friends, but friends who sought me. Never man had kinder or more indulgent friends than I have had, but I expressed my own feeling as to the mode in which I gained them, in this very year 1829, in the course of a copy of verses. Speaking of my blessings, I said, 'Blessings of friends, which to my door, *unasked, unhoped*, have come.' They have come, they have gone; they came to my great joy, they went to my great grief. He who gave, took away. Dr. Whately's impression about me, however, admits of this explanation: —

During the first years of my residence at Oriel, though proud of my college, I was not at home there. I was very much alone, and I used often to take my daily walk by myself. I recollect once meeting Dr. Copleston,[38] then provost, with one of the fellows. He turned round, and with the kind courteousness which sat so well on him, made me a bow and said 'Nunquam minus solus, quàm cùm solus.'[39] At that time indeed (from 1823) I had the intimacy of my dear and true friend Dr. Pusey,[40] and could not fail to admire and revere a soul so devoted to the cause of religion, so full of good works, so faithful in his affections; but he left residence when I was getting to know him well. As to Dr. Whately himself, he was too much

36 During the Wellington-Peel ministry (1828–30) the bill for Catholic Emancipation was passed. Feeling ran very high, especially at Oxford, where liberalism, as represented by any tolerance of the Catholic Claims, was extremely unpopular. Peel failed to be re-elected as a member from Oxford, but won his seat as a member from Westbury. In 1827–28, however, Newman was 'liberal' enough to vote in the minority when the petition to Parliament against the Catholic Claims was brought to Convocation.

37. Tories whose orthodoxy in politics and religion was as regular as their consumption of two bottles of wine after dinner.

38. Edward Copleston (1776–1849), Provost of Oriel (1814–28), Bishop of Llandaff and Dean of St. Paul's (1828–49).

39. 'Never less alone than when alone.'

40. Edward Bouverie Pusey (1800–82), Regius Professor of Hebrew at Oxford, and Canon of Christ Church; associate of Newman and Froude in starting the Tractarian Movement.

my superior to allow of my being at my ease with him; and to no one in Oxford at this time did I open my heart fully and familiarly. But things changed in 1826. At that time I became one of the tutors of my college, and this gave me position; besides, I had written one or two essays which had been well received. I began to be known. I preached my first University sermon. Next year I was one of the public examiners for the B.A. degree. It was to me like the feeling of spring weather after winter; and, if I may so speak, I came out of my shell; I remained out of it till 1841.

The two persons who knew me best at that time are still alive, beneficed clergymen, no longer my friends. They could tell better than any one else what I was in those years. From this time my tongue was, as it were, loosened, and I spoke spontaneously and without effort. A shrewd man, who knew me at this time, said, 'Here is a man who, when he is silent, will never begin to speak; and when he once begins to speak, will never stop.' It was at this time that I began to have influence, which steadily increased for a course of years. I gained upon my pupils, and was in particular intimate and affectionate with two of our probationer fellows, Robert I. Wilberforce [41] (afterwards archdeacon) and Richard Hurrell Froude. Whately then, an acute man, perhaps saw around me the signs of an incipient party of which I was not conscious myself. And thus we discern the first elements of that movement afterwards called Tractarian.

The true and primary author of it, however, as is usual with great motive-powers, was out of sight. Having carried off as a mere boy the highest honours of the university, he had turned from the admiration which haunted his steps, and sought for a better and holier satisfaction in pastoral work in the country. Need I say that I am speaking of John Keble? [42] The first time that I was in a room with him was on occasion of my election to a fellowship at Oriel, when I was sent for into the tower, to shake hands with the provost and fellows. How is that hour fixed in my memory after the changes of forty-two years, forty-two this very day on which I write! I have lately had a letter in my hands, which I sent at the time to my great friend, John Bowden,[43] with whom I passed almost exclusively my undergraduate years. 'I had to hasten to the tower,' I say to him, 'to receive the congratulations of all the fellows. I bore it till Keble took my hand, and then felt so abashed and unworthy of the honour done me, that I seemed desirous of quite sinking into the ground.' His had been the first name which I had heard spoken of, with reverence rather than admiration, when I came up to Oxford. When one day I was walking in High Street with my dear earliest friend just mentioned, with what eagerness did he cry out, 'There's Keble!' and with what awe did I look at him! Then at another time I heard a master of arts of my college give an account how he had just then had occasion to introduce himself on some business to Keble, and how gentle, courteous, and unaffected Keble had been, so as almost to put him out of countenance. Then too it was reported, truly or falsely, how a rising man of brilliant reputation, the present Dean of St. Paul's, Dr. Milman,[44] admired and loved him, adding, that somehow he was unlike any one else. However, at the time when I was elected Fellow of Oriel he was not in resi-

41. Robert Isaac Wilberforce (1802–57), second son of William Wilberforce, the great Evangelical philanthropist; eventually (in 1854) he joined the Roman Catholic Church.

42. John Keble (1792–1866), divine and poet, wrote seven of the *Tracts for the Times*; his saintly character gave great weight and prestige to the Tractarian Movement.

43. John William Bowden (1798–1844), a zealous partisan in the Movement; author of a *Life of Gregory VII* (1840).

44. Henry Hart Milman (1791–1868) was Professor of Poetry at Oxford from 1821 to 1831, as the predecessor of Keble.

dence, and he was shy of me for years in consequence of the marks which I bore upon me of the evangelical and liberal schools. At least so I have ever thought. Hurrell Froude brought us together about 1828: it is one of the sayings preserved in his 'Remains,' — 'Do you know the story of the murderer who had done one good thing in his life? Well; if I was ever asked what good deed I had ever done, I should say that I had brought Keble and Newman to understand each other.'

The Christian Year made its appearance in 1827.[45] It is not necessary, and scarcely becoming, to praise a book which has already become one of the classics of the language. When the general tone of religious literature was so nerveless and impotent, as it was at that time, Keble struck an original note and woke up in the hearts of thousands a new music, the music of a school, long unknown in England. Nor can I pretend to analyse, in my own instance, the effect of religious teaching so deep, so pure, so beautiful. I have never till now tried to do so; yet I think I am not wrong in saying, that the two main intellectual truths which it brought home to me, were the same two, which I had learned from Butler, though recast in the creative mind of my new master. The first of these was what may be called, in a large sense of the word, the sacramental system; that is, the doctrine that material phenomena are both the types and the instruments of real things unseen, — a doctrine, which embraces, not only what Anglicans, as well as Catholics, believe about sacraments properly so called; but also the article of 'the Communion of Saints' in its fullness; and likewise the mysteries of the faith. The connection of this philosophy of religion with what is sometimes called 'Berkeleyism' has been mentioned above; I knew little of Berkeley[46] at this time except by name; nor have I ever studied him.

On the second intellectual principle which I gained from Mr. Keble, I could say a great deal; if this were the place for it. It runs through very much that I have written, and has gained for me many hard names. Butler teaches us that probability is the guide of life. The danger of this doctrine, in the case of many minds, is, its tendency to destroy in them absolute certainty, leading them to consider every conclusion as doubtful, and resolving truth into an opinion, which it is safe to obey or to profess, but not possible to embrace with full internal assent. If this were to be allowed, then the celebrated saying, 'O God, if there be a God, save my soul, if I have a soul;' would be the highest measure of devotion: — but who can really pray to a being, about whose existence he is seriously in doubt?

I considered that Mr. Keble met this difficulty by ascribing the firmness of assent which we give to religious doctrine, not to the probabilities which introduced it, but to the living power of faith and love which accepted it. In matters of religion, he seemed to say, it is not merely probability which makes us intellectually certain, but probability as it is put to account by faith and love. It is faith and love which give to probability a force which it has not in itself. Faith and love are directed towards an object; in the vision of that object they live; it is that object, received in faith and love, which renders it reasonable to take probability as sufficient for internal conviction. Thus the argument about probability, in the matter of

45. Keble's *The Christian Year* was published anonymously, and attained extraordinary success, as the expression, in poetry, of the religious experiences and convictions of the Church of England. It supplied a poem for each Sunday and for each Saint's day and festival observed by the Church.

46. George Berkeley (1685–1753), Bishop of Cloyne, aimed at discrediting materialism by showing the impossibility of our knowledge of an object beyond what our senses tell us. He was the author of a *Treatise Concerning Human Knowledge* (1710), *Dialogues between Hylas and Philonous* (1713), etc.

religion, became an argument from personality, which in fact is one form of the argument from authority.

In illustration, Mr. Keble used to quote the words of the psalm: 'I will guide thee with mine *eye*. Be ye not like to horse and mule, which have no understanding; whose mouths must be held with bit and bridle, lest they fall upon thee.'[47] This is the very difference, he used to say, between slaves, and friends or children. Friends do not ask for literal commands; but, from their knowledge of the speaker, they understand his half-words, and from love of him they anticipate his wishes. Hence it is, that in his poem for St. Bartholomew's Day, he speaks of the 'Eye of God's word'; and in the note quotes Mr. Miller, of Worcester College, who remarks, in his Bampton lectures, on the special power of Scripture, as having 'this eye, like that of a portrait, uniformly fixed upon us, turn where we will.' The view thus suggested by Mr. Keble, is brought forward in one of the earliest of the 'Tracts for the Times.' In No. 8 I say, 'The Gospel is a Law of Liberty. We are treated as sons, not as servants; not subjected to a code of formal commandments, but addressed as those who love God, and wish to please Him.'

I did not at all dispute this view of the matter, for I made use of it myself; but I was dissatisfied, because it did not go to the root of the difficulty. It was beautiful and religious, but it did not even profess to be logical; and accordingly I tried to complete it by considerations of my own, which are implied in my University sermons, Essay on Ecclesiastical Miracles, and Essay on Development of Doctrine. My argument is in outline as follows: that that absolute certitude which we were able to possess, whether as to the truths of natural theology, or as to the fact of a revelation, was the result of an *assemblage* of concurring and converging probabilities, and that, both according to the constitution of the human mind and the will of its Maker; that certitude was a habit of mind, that certainty was a quality of propositions; that probabilities which did not reach to logical certainty, might create a mental certitude; that the certitude thus created might equal in measure and strength the certitude which was created by the strictest scientific demonstration; and that to have such certitude might in given cases and to given individuals be a plain duty, though not to others in other circumstances: —

Moreover, that as there were probabilities which sufficed to create certitude, so there were other probabilities which were legitimately adapted to create opinion; that it might be quite as much a matter of duty in given cases and to given persons to have about a fact an opinion of a definite strength and consistency, as in the case of greater or of more numerous probabilities it was a duty to have a certitude; that accordingly we were bound to be more or less sure, on a sort of (as it were) graduated scale of assent, viz. according as the probabilities attaching to a professed fact were brought home to us, and, as the case might be, to entertain about it a pious belief, or a pious opinion, or a religious conjecture, or at least, a tolerance of such belief, or opinion, or conjecture in others; that on the other hand, as it was a duty to have a belief, of more or less strong texture, in given cases, so in other cases it was a duty not to believe, not to opine, not to conjecture, not even to tolerate the notion that a professed fact was true, inasmuch as it would be credulity or superstition, or some other moral fault, to do so. This was the region of private judgment in religion; that is, of a private judgment, not formed arbitrarily and according to one's fancy or liking, but conscientiously, and under a sense of duty.

Considerations such as these throw a new light on the subject of Miracles, and

47. *Psalms*, xxxii,8,9.

they seem to have led me to reconsider the view which I took of them in my essay in 1825–6.[48] I do not know what was the date of this change in me, nor of the train of ideas on which it was founded. That there had been already great miracles, as those of Scripture, as the Resurrection, was a fact establishing the principle that the laws of nature had sometimes been suspended by their Divine Author; and since what had happened once might happen again, a certain probability, at least no kind of improbability, was attached to the idea, taken in itself, of miraculous intervention in later times, and miraculous accounts were to be regarded in connection with the verisimilitude, scope, instrument, character, testimony, and circumstances, with which they presented themselves to us; and, according to the final result of those various considerations, it was our duty to be sure, or to believe, or to opine, or to surmise, or to tolerate, or to reject, or to denounce. The main difference between my essay on Miracles in 1826 and my essay in 1842 [49] is this: that in 1826 I considered that miracles were sharply divided into two classes, those which were to be received, and those which were to be rejected; whereas in 1842 I saw that they were to be regarded according to their greater or less probability, which was in some cases sufficient to create certitude about them, in other cases only belief or opinion.

Moreover, the argument from analogy, on which this view of the question was founded, suggested to me something besides, in recommendation of the ecclesiastical miracles. It fastened itself upon the theory of church history which I had learned as a boy from Joseph Milner. It is Milner's doctrine, that upon the visible Church come down from above, from time to time, large and temporary *Effusions* of divine grace. This is the leading idea of his work. He begins by speaking of the Day of Pentecost,[50] as marking 'the first of those *Effusions* of the Spirit of God, which from age to age have visited the earth since the coming of Christ' (vol.i. p.3). In a note he adds that 'in the term "Effusion" there is not here included the idea of the miraculous or extraordinary operations of the Spirit of God'; but still it was natural for me, admitting Milner's general theory, and applying to it the principle of analogy, not to stop short at his abrupt *ipse dixit*,[51] but boldly to pass forward to the conclusion, on other grounds plausible, that, as miracles accompanied the first effusion of grace, so they might accompany the later. It is surely a natural and on the whole, a true anticipation (though of course there are exceptions in particular cases), that gifts and graces go together; now, according to the ancient Catholic doctrine, the gift of miracles was viewed as the attendant and shadow of transcendent sanctity: and moreover, as such sanctity was not of every day's occurrence, nay further, as one period of church history differed widely from another, and, as Joseph Milner would say, there had been generations or centuries of degeneracy or disorder, and times of revival, and as one region might be in the mid-day of religious fervour, and another in twilight or gloom, there was no force in the popular argument, that, because we did not see miracles with our own eyes, miracles had not happened in former times, or were not now at this very time taking place in distant places: — but

51. 'he himself has said it' (an assertion made but not proved).

I must not dwell longer on a subject, to which in a few words it is impossible to do justice.[52]

Hurrell Froude was a pupil of Keble's, formed by him, and in turn reacting upon him. I knew him first in 1826, and was in the closest and most affectionate friendship with him from about 1829 till his death in 1836. He was a man of the highest gifts — so truly many-sided, that it would be presumptuous in me to attempt to describe him, except under those aspects, in which he came before me. Nor have I here to speak of the gentleness and tenderness of nature, the playfulness, the free elastic force and graceful versatility of mind, and the patient winning considerateness in discussion, which endeared him to those to whom he opened his heart; for I am all along engaged upon matters of belief and opinion, and am introducing others into my narrative, not for their own sake, or because I love and have loved them, so much as because, and so far as, they have influenced my theological views. In this respect then, I speak of Hurrell Froude — in his intellectual aspect — as a man of high genius, brimful and overflowing with ideas and views, in him original, which were too many and strong even for his bodily strength, and which crowded and jostled against each other in their effort after distinct shape and expression. And he had an intellect as critical and logical as it was speculative and bold. Dying prematurely, as he did, and in the conflict and transition-state of opinion, his religious views never reached their ultimate conclusion, by the very reason of their multitude and their depth. His opinions arrested and influenced me, even when they did not gain my assent. He professed openly his admiration of the Church of Rome, and his hatred of the reformers. He delighted in the notion of an hierarchical system, of sacerdotal power and of full ecclesiastical liberty. He felt scorn of the maxim, 'The Bible and the Bible only is the religion of Protestants'; and he gloried in accepting tradition as a main instrument of religious teaching. He had a high severe idea of the intrinsic excellence of virginity; and he considered the Blessed Virgin its great pattern. He delighted in thinking of the saints; he had a keen appreciation of the idea of sanctity, its possibility and its heights; and he was more than inclined to believe a large amount of miraculous interference as occurring in the early and middle ages. He embraced the principle of penance and mortification. He had a deep devotion to the Real Presence, in which he had a firm faith. He was powerfully drawn to the medieval church, but not to the primitive. He had a keen insight into abstract truth; but he was an Englishman to the backbone in his severe adherence to the real and the concrete. He had a most classical taste, and a genius for philosophy and art; and he was fond of historical inquiry, and the politics of religion. He had no turn for theology as such. He had no appreciation of the writings of the Fathers, of the detail or development of doctrine, of the definite traditions of the Church viewed in their matter, of the teaching of the ecumenical councils, or of the controversies out of which they arose. He took an eager, courageous view of things on the whole. I should say that his power of entering into the minds of others did not equal his other gifts; he could not believe, for instance, that I really held the Roman Church to be Antichristian. On many points he would not believe but that I agreed with him, when I did not. He seemed not to understand my difficulties. His were of a different kind, the contrariety between theory and fact. He was a high Tory of the cavalier stamp, and was disgusted with the Toryism of the opponents of the Reform Bill. He was smitten with the love of the theocratic church; he went abroad and was shocked by the de-

52. Vide note B, *Ecclesiastical Miracles*, at the end of the volume. [Newman's note, in reference to the *Apologia*.]

generacy which he thought he saw in the Catholics of Italy.

It is difficult to enumerate the precise additions to my theological creed which I derived from a friend to whom I owe so much. He made me look with admiration towards the Church of Rome, and in the same degree to dislike the Reformation. He fixed deep in me the idea of devotion to the Blessed Virgin, and he led me gradually to believe in the Real Presence.[53]

There is one remaining source of my opinions to be mentioned, and that far from the least important. In proportion as I moved out of the shadow of liberalism which had hung over my course, my early devotion towards the fathers returned; and in the long vacation of 1828 I set about to read them chronologically, beginning with St. Ignatius and St. Justin.[54] About 1830 a proposal was made to me by Mr. Hugh Rose,[55] who with Mr. Lyall [56] (afterwards Dean of Canterbury) was providing writers for a theological library, to furnish them with a history of the principal councils. I accepted it, and at once set to work on the Council of Nicæa. It was launching myself on an ocean with currents innumerable; and I was drifted back first to the ante-Nicene history, and then to the Church of Alexandria. The work at last appeared under the title of 'The Arians of the Fourth Century'; and of its 422 pages, the first 117 consisted of introductory matter, and the Council of Nicæa did not appear till the 254th, and then occupied at most twenty pages.

I do not know when I first learnt to consider that antiquity was the true exponent of the doctrines of Christianity and the basis of the Church of England; but I take it for granted that Bishop Bull, whose works at this time I read, was my chief introduction to this principle. The course of reading which I pursued in the composition of my work was directly adapted to develop it in my mind. What principally attracted me in the ante-Nicene period was the great Church of Alexandria, the historical centre of teaching in those times. Of Rome for some centuries comparatively little is known. The battle of Arianism was first fought in Alexandria; Athanasius, the champion of the truth, was Bishop of Alexandria; and in his writings he refers to the great religious names of an earlier date, to Origen,[57] Dionysius,[58] and others who were the glory of its see, or of its school. The broad philosophy of Clement [59] and Origen carried me away; the philosophy, not the theological doctrine; and I have drawn out some features of it in my volume, with the zeal and freshness, but with the partiality of a neophyte. Some portions of their teaching, magnificent in themselves, came like music to my inward ear, as if the response to ideas, which, with little external to encourage them, I had cherished so long. These were based on the mystical or sacramental principle, and spoke of the various economies or dispensations of the eternal. I understood them to mean that the exterior world, physical and historical, was but the outward manifestation of real-

55. Hugh James Rose (1795–1838), theologian, in whose parsonage at Hadleigh, in Suffolk, between the 25th and 29th of July 1833, the first steps of the Oxford Movement were taken, in the decision to produce the *Tracts for the Times*.

56. William Rowe Lyall (1788–1857) reorganized the *Encyclopaedia Metropolitana* in 1820, and edited the *Theological Library* from 1832 to 1846.

57. Second-century Christian thinker and scholar of Alexandria, some of whose doctrines were rejected by the Church.

58. Dionysius the Great (c.190–265), Bishop of Alexandria, who studied under Origen.

59. Clement of Alexandria (born c. A.D. 150), a Greek father of the Church, the first to apply Greek culture and philosophy to the exposition of Christian faith.

ities greater than itself. Nature was a parable: Scripture was an allegory: pagan literature, philosophy, and mythology, properly understood, were but a preparation for the Gospel. The Greek poets and sages were in a certain sense prophets; for 'thoughts beyond their thought to those high bards were given.' There had been a divine dispensation granted to the Jews; there had been in some sense a dispensation carried on in favour of the Gentiles. He who had taken the seed of Jacob for His elect people, had not therefore cast the rest of mankind out of His sight. In the fullness of time both Judaism and Paganism had come to nought; the outward framework, which concealed yet suggested the living truth, had never been intended to last, and it was dissolving under the beams of the sun of justice behind it and through it. The process of change had been slow; it had been done not rashly, but by rule, and measure, 'at sundry times and in divers manners,' first one disclosure and then another, till the whole was brought into full manifestation. And thus room was made for the anticipation of further and deeper disclosures, of truths still under the veil of the letter, and in their season to be revealed. The visible world still remains without its divine interpretation; Holy Church in her sacraments and her hierarchical appointments, will remain even to the end of the world, only a symbol of those heavenly facts which fill eternity. Her mysteries are but the expressions in human language of truths to which the human mind is unequal. It is evident how much there was in all this in correspondence with the thoughts which had attracted me when I was young, and with the doctrine which I have already connected with the Analogy and the Christian Year.

I suppose it was to the Alexandrian school and to the early church that I owe in particular what I definitely held about the angels. I viewed them, not only as the ministers employed by the Creator in the Jewish and Christian dispensations, as we find on the face of Scripture, but as carrying on, as Scripture also implies, the economy of the visible world. I considered them as the real causes of motion, light, and life, and of those elementary principles of the physical universe, which, when offered in their developments to our senses, suggest to us the notion of cause and effect, and of what are called the laws of nature. I have drawn out this doctrine in my sermon for Michaelmas day, written not later than 1834. I say of the angels, 'Every breath of air and ray of light and heat, every beautiful prospect is, as it were, the skirts of their garments, the waving of the robes of those whose faces see God.' Again, I ask what would be the thoughts of a man who, 'when examining a flower, or a herb, or a pebble, or a ray of light, which he treats as something so beneath him in the scale of existence, suddenly discovered that he was in the presence of some powerful being who was hidden behind the visible things he was inspecting, who, though concealing his wise hand, was giving them their beauty, grace, and perfection, as being God's instrument for the purpose, nay, whose robe and ornaments those objects were, which he was so eager to analyse?' and I therefore remark that 'we may say with grateful and simple hearts with the Three Holy Children, "O all ye works of the Lord, etc., etc., bless ye the Lord, praise Him, and magnify Him for ever."'

Also, besides the hosts of evil spirits, I considered there was a middle race, *δαιμόνια*, neither in heaven, nor in hell; partially fallen, capricious, wayward; noble or crafty, benevolent or malicious, as the case might be. They gave a sort of inspiration or intelligence to races, nations, and classes of men. Hence the action of bodies politic and associations, which is so different often from that of the individuals who compose them. Hence the character and the instinct of states and

governments, of religious communities and communions. I thought they were inhabited by unseen intelligences. My preference of the personal to the abstract would naturally lead me to this view. I thought it countenanced by the mention of 'the Prince of Persia' in the Prophet Daniel;[60] and I think I considered that it was of such intermediate beings that the Apocalypse spoke, when it introduced 'the Angels of the Seven Churches.'[61]

In 1837 I made a further development of this doctrine. I said to my great friend, Samuel Francis Wood, in a letter which came into my hands on his death, 'I have an idea. The mass of the Fathers (Justin, Athenagoras,[62] Irenæus,[63] Clement, Tertullian,[64] Origen, Lactantius,[65] Sulpicius,[66] Ambrose,[67] Nazianzen[68]), hold that, though Satan fell from the beginning, the Angels fell before the deluge, falling in love with the daughters of men. This has lately come across me as a remarkable solution of a notion which I cannot help holding. Daniel speaks as if each nation had its guardian Angel. I cannot but think that there are beings with a great deal of good in them, yet with great defects, who are the animating principles of certain institutions, etc., etc. . . . Take England, with many high virtues, and yet a low Catholicism. It seems to me that John Bull is a spirit neither of heaven nor hell. . . . Has not the Christian Church, in its parts, surrendered itself to one or other of these simulations of the truth? . . . How are we to avoid Scylla and Charybdis[69] and go straight on to the very image of Christ?' etc., etc.

I am aware that what I have been saying will, with many men, be doing credit to my imagination at the expense of my judgment — 'Hippoclides doesn't care';[70] I am not setting myself up as a pattern of good sense or of anything else: I am but vindicating myself from the charge of dishonesty. — There is indeed another view of the economy brought out, in the course of the same dissertation on the subject, in my History of the Arians, which has afforded matter for the latter imputation; but I reserve it for the concluding portion of my reply.

While I was engaged in writing my work upon the Arians, great events were happening at home and abroad, which brought out into form and passionate expression the various beliefs which had so gradually been winning their way into my mind. Shortly before, there had been a revolution in France; the Bourbons had been dismissed:[71] and I believed that it was unchristian for nations to cast off their governors, and, much more, sovereigns who had the divine right of inheritance. Again, the great Reform agitation was going on around me as I wrote. The

68. St. Gregory of Nazianzus (c.329–c.389), one of the four great fathers of the Eastern Church, who won renown and high ecclesiastical position as a champion of the orthodox against the Arian claims.
69. Scylla was the monster in the sea between Italy and Sicily, opposite the whirlpool of Charybdis (who had been changed from an avaricious woman into a whirlpool by Zeus, for having stolen the oxen of Hercules). The passage of the straits is the theme of the 12th Book of the *Odyssey*.
70. An expression from Herodotus, vi, 128, spoken by Hippoclides when he was told by his intended father-in-law that his ridiculous conduct had lost him his bride.
71. In the French Revolution of July 27–29, 1830, Charles X was dethroned, and Louis Philippe was proclaimed the 'Citizen King.'

Whigs had come into power; Lord Grey had told the bishops to set their house in order, and some of the prelates had been insulted and threatened in the streets of London. The vital question was how were we to keep the Church from being liberalised? there was such apathy on the subject in some quarters, such imbecile alarm in others; the true principles of churchmanship seemed so radically decayed, and there was such distraction in the councils of the clergy. The Bishop of London of the day, an active and open-hearted man, had been for years engaged in diluting the high orthodoxy of the Church by the introduction of the Evangelical body into places of influence and trust. He had deeply offended men who agreed with myself, by an off-hand saying (as it was reported) to the effect that belief in the Apostolical succession [72] had gone out with the non-jurors.[73] 'We can count you,' he said to some of the gravest and most venerated persons of the old school. And the Evangelical party itself seemed, with their late successes, to have lost that simplicity and unworldliness which I admired so much in Milner and Scott. It was not that I did not venerate such men as the then Bishop of Lichfield, and others of similar sentiments, who were not yet promoted out of the ranks of the clergy, but I thought little of them as a class. I thought they played into the hands of the Liberals. With the establishment thus divided and threatened, thus ignorant of its true strength, I compared that fresh vigorous power of which I was reading in the first centuries. In her triumphant zeal on behalf of that primeval mystery, to which I had had so great a devotion from my youth, I recognised the movement of my Spiritual Mother. 'Incessu patuit Dea.' [74] The self-conquest of her ascetics, the patience of her martyrs, the irresistible determination of her bishops, the joyous swing of her advance, both exalted and abashed me. I said to myself, 'Look on this picture and on that;' [75] I felt affection for my own Church, but not tenderness; I felt dismay at her prospects, anger and scorn at her do-nothing perplexity. I thought that if Liberalism once got a footing within her, it was sure of the victory in the event. I saw that Reformation principles were powerless to rescue her. As to leaving her, the thought never crossed my imagination; still I ever kept before me that there was something greater than the Established Church, and that that was the Church Catholic and Apostolic, set up from the beginning, of which she was but the local presence and organ. She was nothing, unless she was this. She must be dealt with strongly, or she would be lost. There was need of a second Reformation.

At this time I was disengaged from college duties, and my health had suffered from the labour involved in the composition of my volume. It was ready for the press in July 1832, though not published till the end of 1833. I was easily persuaded to join Hurrell Froude and his father, who were going to the south of Europe for the health of the former.

We set out in December 1832. It was during this expedition that my verses which are in the Lyra Apostolica [76] were written; — a few indeed before it, but not more than one or two of them after it. Exchanging, as I was, definite tutorial la-

72. The doctrine of the uninterrupted succession or descent from the Apostles by regular and successive ordinations of bishops, held to be a fact and to be necessary for valid administration of the sacraments, transmission of orders, etc., by the Roman Catholic and Eastern Churches and largely by the churches of the Anglican Communion.

73. Those beneficed clergy in England and Scotland who refused to take the oath of allegiance to William and Mary, or to their successors, after the Revolution of 1688.

74. 'The goddess stood revealed by her walk.'

75. See *Hamlet*, III,iv,53.

76. This collection of sacred poems, originally contributed to the *British Magazine* by Keble, Newman, Froude, Robert Isaac Wilberforce, and Isaac Williams, was reprinted in a separate volume in 1836.

bours, and the literary quiet and pleasant friendships of the last six years, for foreign countries and an unknown future, I naturally was led to think that some inward changes, as well as some larger course of action, was coming upon me. At Whitchurch, while waiting for the down mail to Falmouth, I wrote the verses about my Guardian Angel, which begin with these words: 'Are these the tracks of some unearthly Friend?' and go on to speak of 'the vision' which haunted me: — that vision is more or less brought out in the whole series of these compositions.

I went to various coasts of the Mediterranean, parted with my friends at Rome; went down for the second time to Sicily, at the end of April, and got back to England by Palermo in the early part of July. The strangeness of foreign life threw me back into myself; I found pleasure in historical sites and beautiful scenes, not in men and manners. We kept clear of Catholics throughout our tour. I had a conversation with the Dean of Malta, a most pleasant man, lately dead; but it was about the fathers, and the library of the great church. I knew the Abbate Santini, at Rome, who did no more than copy for me the Gregorian tones. Froude and I made two calls upon Monsignore (now Cardinal) Wiseman [77] at the Collegio Inglese, shortly before we left Rome. I do not recollect being in a room with any other ecclesiastics, except a priest at Castro-Giovanni in Sicily, who called on me when I was ill, and with whom I wished to hold a controversy. As to church services, we attended the Tenebræ,[78] at the Sestine,[79] for the sake of the Miserere; [80] and that was all. My general feeling was, 'All, save the spirit of man, is divine.' I saw nothing but what was external; of the hidden life of Catholics I knew nothing. I was still more driven back into myself, and felt my isolation. England was in my thoughts solely, and the news from England came rarely and imperfectly. The Bill for the Suppression of the Irish Sees was in progress, and filled my mind. I had fierce thoughts against the Liberals.

It was the success of the Liberal cause which fretted me inwardly. I became fierce against its instruments and its manifestations. A French vessel was at Algiers; I would not even look at the tricolour. On my return, though forced to stop a day in Paris, I kept indoors the whole time, and all that I saw of that beautiful city, was what I saw from the diligence. The Bishop of London had already sounded me as to my filling one of the Whitehall preacherships, which he had just then put on a new footing; but I was indignant at the line which he was taking, and from my steamer I had sent home a letter declining the appointment by anticipation, should it be offered to me. At this time I was specially annoyed with Dr. Arnold,[81] though it did not last into later years. Some one, I think, asked in conversation at Rome, whether a certain interpretation of Scripture was Christian? it was answered that Dr. Arnold took it; I interposed, 'But is *he* a Christian?' The subject went out of my head at once; when afterwards I was taxed with it I could say no more in explanation, than that I thought I must have been alluding to some free views of Dr. Arnold about the Old Testament: — I thought I must have meant, 'But who is to answer for Arnold?' It was at Rome too that we began the Lyra Apostolica which appeared

monthly in the *British Magazine*. The motto shows the feeling of both Froude and myself at the time: we borrowed from M. Bunsen [82] a Homer, and Froude chose the words in which Achilles, on returning to the battle, says, 'You shall know the difference, now that I am back again.'

Especially when I was left by myself, the thought came upon me that deliverance is wrought, not by the many but by the few, not by bodies but by persons. Now it was, I think, that I repeated to myself the words, which had ever been dear to me from my school days, 'Exoriare aliquis!' [83] — now too, that Southey's beautiful poem of Thalaba, for which I had an immense liking, came forcibly to my mind. I began to think that I had a mission. There are sentences of my letters to my friends to this effect, if they are not destroyed. When we took leave of Monsignore Wiseman, he had courteously expressed a wish that we might make a second visit to Rome; I said with great gravity, 'We have a work to do in England.' I went down at once to Sicily, and the presentiment grew stronger. I struck into the middle of the island, and fell ill of a fever at Leonforte. My servant thought that I was dying, and begged for my last directions. I gave them, as he wished; but I said, 'I shall not die.' I repeated, 'I shall not die, for I have not sinned against light, I have not sinned against light.' I never have been able to make out at all what I meant.

I got to Castro-Giovanni, and was laid up there for nearly three weeks. Towards the end of May I set off for Palermo, taking three days for the journey. Before starting from my inn in the morning of May 26th or 27th, I sat down on my bed, and began to sob bitterly. My servant, who had acted as my nurse, asked what ailed me. I could only answer, 'I have a work to do in England.'

I was aching to get home; yet for want of a vessel I was kept at Palermo for three weeks. I began to visit the churches, and they calmed my impatience, though I did not attend any services. I knew nothing of the presence of the Blessed Sacrament there. At last I got off in an orange boat, bound for Marseilles. We were becalmed a whole week in the Straits of Bonifacio. Then it was that I wrote the lines, 'Lead, kindly light,' which have since become well known. I was writing verses the whole time of my passage. At length I got to Marseilles, and set off for England. The fatigue of travelling was too much for me, and I was laid up for several days at Lyons. At last I got off again, and did not stop night or day till I reached England, and my mother's house. My brother had arrived from Persia only a few hours before.[84] This was on the Tuesday. The following Sunday, July 14th, Mr. Keble preached the assize sermon in the University pulpit. It was published under the title of 'National Apostasy.' I have ever considered and kept the day as the start of the religious movement of 1833.

PART VII. GENERAL ANSWER TO MR. KINGSLEY

From the time that I became a Catholic, of course I have no further history of my religious opinions to narrate. In saying this, I do not mean to say that my mind has been idle, or that I have given up thinking on theological subjects; but that I have had no changes to record, and have had no anxiety of heart whatever. I have

82. Christian Charles Josias, Baron von Bunsen (1791–1860), Prussian diplomat and scholar, envoy to the papal court, secretary to the historian Niebuhr; in 1817 he married Frances Waddington of Llanover, Monmouthshire, and, during his services at the papal court, was especially helpful to Englishmen visiting Italy.

83. 'May someone arise!'

84. Francis William Newman (1805–97), scholar and man of letters, was at this time a classical tutor at Bristol College. He later excited much controversy by publishing his *Phases of Faith* (1850), an autobiographical account which reflected the skeptical tendencies of the day.

been in perfect peace and contentment. I never have had one doubt. I was not conscious to myself, on my conversion, of any difference of thought or of temper from what I had before. I was not conscious of firmer faith in the fundamental truths of revelation, or of more self-command; I had not more fervour; but it was like coming into port after a rough sea; and my happiness on that score remains to this day without interruption.

Nor had I any trouble about receiving those additional articles which are not found in the Anglican Creed. Some of them I believed already, but not any one of them was a trial to me. I made a profession of them upon my reception with the greatest ease, and I have the same ease in believing them now. I am far of course from denying that every article of the Christian Creed, whether as held by Catholics or by Protestants, is beset with intellectual difficulties; and it is simple fact that, for myself, I cannot answer those difficulties. Many persons are very sensitive of the difficulties of religion; I am as sensitive as any one; but I have never been able to see a connection between apprehending those difficulties, however keenly, and multiplying them to any extent, and doubting the doctrines to which they are attached. Ten thousand difficulties do not make one doubt, as I understand the subject; difficulty and doubt are incommensurate. There of course may be difficulties in the evidence; but I am speaking of difficulties intrinsic to the doctrines, or to their compatibility with each other. A man may be annoyed that he cannot work out a mathematical problem, of which the answer is or is not given to him, without doubting that it admits of an answer, or that a particular answer is the true one. Of all points of faith, the being of a God is, to my own apprehension, encompassed with most difficulty, and borne in upon our minds with most power.

People say that the doctrine of Transubstantiation [1] is difficult to believe; I did not believe the doctrine till I was a Catholic. I had no difficulty in believing it as soon as I believed that the Catholic Roman Church was the oracle of God, and that she had declared this doctrine to be part of the original revelation. It is difficult, impossible to imagine, I grant — but how is it difficult to believe? Yet Macaulay [2] thought it so difficult to believe, that he had need of a believer in it of talents as eminent as Sir Thomas More,[3] before he could bring himself to conceive that the Catholics of an enlightened age could resist 'the overwhelming force of the argument against it.' 'Sir Thomas More,' he says, 'is one of the choice specimens of wisdom and virtue; and the doctrine of transubstantiation is a kind of proof charge. A faith which stands that test, will stand any test.' But for myself, I cannot indeed prove it, I cannot tell *how* it is; but I say, 'Why should it not be? What's to hinder it? What do I know of substance or matter? just as much as the greatest philosophers, and that is nothing at all'; — so much is this the case, that there is a rising school of philosophy now, which considers phenomena to constitute the whole of our knowledge in physics. The Catholic doctrine leaves phenomena alone. It does not say that the phenomena go; on the contrary, it says that they remain: nor does it say that the same phenomena are in several places at once. It deals with what no one on earth knows anything about, the material substances themselves. And, in like manner, of that majestic article of the Anglican as well as of the

1. The doctrine of the change by, and at, the consecration of the elements of the Eucharist, of the substance of the bread and wine into the body and blood of Christ, only the appearances of the bread and wine remaining.
2. In his essay on Ranke's *History of the Popes*; see the 8th paragraph.
3. Sir Thomas More (1478–1535), Lord Chancellor, opposed Henry VIII's divorce from Queen Catherine and the King's assumption of authority over the Church; was the author of *Utopia*.

Catholic Creed — the doctrine of the Trinity in Unity. What do I know of the essence of the Divine Being? I know that my abstract idea of three is simply incompatible with my idea of one; but when I come to the question of concrete fact, I have no means of proving that there is not a sense in which one and three can equally be predicated of the Incommunicable God.

But I am going to take upon myself the responsibility of more than the mere creed of the Church; as the parties accusing me are determined I shall do. They say, that now, in that I am a Catholic, though I may not have offences of my own against honesty to answer for, yet, at least, I am answerable for the offences of others, of my co-religionists, of my brother priests, of the Church herself. I am quite willing to accept the responsibility; and, as I have been able, as I trust, by means of a few words, to dissipate, in the minds of all those who do not begin with disbelieving me, the suspicion with which so many Protestants start, in forming their judgment of Catholics, viz. that our creed is actually set up in inevitable superstition and hypocrisy, as the original sin of Catholicism; so now I will go on, as before, identifying myself with the Church and vindicating it — not of course denying the enormous mass of sin and ignorance which exists of necessity in that world-wide multiform communion — but going to the proof of this one point, that its system is in no sense dishonest, and that therefore the upholders and teachers of that system, as such, have a claim to be acquitted in their own persons of that odious imputation.

Starting then with the being of a God (which, as I have said, is as certain to me as the certainty of my own existence,[4] though when I try to put the grounds of that certainty into logical shape I find a difficulty in doing so in mood and figure to my satisfaction), I look out of myself into the world of men, and there I see a sight which fills me with unspeakable distress. The world seems simply to give the lie to that great truth, of which my whole being is so full; and the effect upon me is, in consequence, as a matter of necessity, as confusing as if it denied that I am in existence myself. If I looked into a mirror, and did not see my face, I should have the sort of feeling which actually comes upon me, when I look into this living busy world, and see no reflexion of its Creator. This is, to me, one of the great difficulties of this absolute primary truth, to which I referred just now. Were it not for this voice, speaking so clearly in my conscience and my heart, I should be an atheist, or a pantheist, or a polytheist when I looked into the world. I am speaking for myself only; and I am far from denying the real force of the arguments in proof of a God, drawn from the general facts of human society, but these do not warm me or enlighten me; they do not take away the winter of my desolation, or make the buds unfold and the leaves grow within me, and my moral being rejoice. The sight of the world is nothing else than the prophet's scroll, full of 'lamentations, and mourning, and woe.'[5]

To consider the world in its length and breadth, its various history, the many races of man, their starts, their fortunes, their mutual alienation, their conflicts; and then their ways, habits, governments, forms of worship; their enterprises, their aimless courses, their random achievements and acquirements, the impotent conclusion of long-standing facts, the tokens so faint and broken, of a superintending design, the blind evolution of what turn out to be great powers or truth, the progress of things, as if from unreasoning elements, not towards final causes, the

4. See Part III of the *Apologia*, where Newman, writing of his early years, mentions his 'distrust of the reality of material phenomena' which made him 'rest in the thought of two and two only absolute and luminously self-evident beings, myself and my Creator.'

5. See *Ezekiel*, ii,10.

greatness and littleness of man, his far-reaching aims, his short duration, the curtain hung over his futurity, the disappointments of life, the defeat of good, the success of evil, physical pain, mental anguish, the prevalence and intensity of sin, the pervading idolatries, the corruptions, the dreary hopeless irreligion, that condition of the whole race, so fearfully yet exactly described in the Apostle's words, 'having no hope and without God in the world'[6] — all this is a vision to dizzy and appal; and inflicts upon the mind the sense of a profound mystery, which is absolutely beyond human solution.

What shall be said to this heart-piercing, reason-bewildering fact? I can only answer, that either there is no Creator, or this living society of men is in a true sense discarded from His presence. Did I see a boy of good make and mind, with the tokens on him of a refined nature, cast upon the world without provision, unable to say whence he came, his birthplace or his family connexions, I should conclude that there was some mystery connected with his history, and that he was one, of whom, from one cause or other, his parents were ashamed. Thus only should I be able to account for the contrast between the promise and condition of his being. And so I argue about the world; — *if* there be a God, *since* there is a God, the human race is implicated in some terrible aboriginal calamity. It is out of joint with the purposes of its Creator. This is a fact, a fact as true as the fact of its existence; and thus the doctrine of what is theologically called original sin becomes to me almost as certain as that the world exists, and as the existence of God.

And now, supposing it were the blessed and loving will of the Creator to interfere in this anarchical condition of things, what are we to suppose would be the methods which might be necessarily or naturally involved in His object of mercy? Since the world is in so abnormal a state, surely it would be no surprise to me, if the interposition were of necessity equally extraordinary — or what is called miraculous. But that subject does not directly come into the scope of my present remarks. Miracles as evidence, involve an argument; and of course I am thinking of some means which does not immediately run into argument. I am rather asking what must be the face-to-face antagonist, by which to withstand and baffle the fierce energy of passion and the all-corroding, all-dissolving scepticism of the intellect in religious inquiries? I have no intention at all to deny, that truth is the real object of our reason, and that, if it does not attain to truth, either the premiss or the process is in fault; but I am not speaking of right reason, but of reason as it acts in fact and concretely in fallen man. I know that even the unaided reason, when correctly exercised, leads to a belief in God, in the immortality of the soul, and in a future retribution; but I am considering it actually and historically; and in this point of view, I do not think I am wrong in saying that its tendency is towards a simple unbelief in matters of religion. No truth, however sacred, can stand against it, in the long run; and hence it is that in the pagan world, when our Lord came, the last traces of the religious knowledge of former times were all but disappearing from those portions of the world in which the intellect had been active and had had a career.

And in these latter days, in like manner, outside the Catholic Church things are tending, with far greater rapidity than in that old time from the circumstance of the age, to atheism in one shape or other. What a scene, what a prospect, does the whole of Europe present at this day! and not only Europe, but every government and every civilisation through the world, which is under the influence of the European mind! Especially, for it most concerns us, how sorrowful, in the view of religion, even taken in its most elementary,

6. See *Ephesians*, ii,12.

most attenuated form, is the spectacle presented to us by the educated intellect of England, France, and Germany! Lovers of their country and of their race, religious men, external to the Catholic Church, have attempted various expedients to arrest fierce wilful human nature in its onward course, and to bring it into subjection. The necessity of some form of religion for the interests of humanity, has been generally acknowledged: but where was the concrete representative of things invisible, which would have the force and the toughness necessary to be a breakwater against the deluge? Three centuries ago the establishment of religion, material, legal, and social, was generally adopted as the best expedient for the purpose, in those countries which separated from the Catholic Church; and for a long time it was successful; but now the crevices of those establishments are admitting the enemy. Thirty years ago, education was relied upon: [7] ten years ago there was a hope that wars would cease for ever, under the influence of commercial enterprise and the reign of the useful and fine arts; [8] but will any one venture to say that there is anything anywhere on this earth, which will afford a fulcrum for us, whereby to keep the earth from moving onwards?

The judgment, which experience passes on establishments or education, as a means of maintaining religious truth in this anarchical world, must be extended even to Scripture, though Scripture be divine. Experience proves surely that the Bible does not answer a purpose, for which it was never intended. It may be accidentally the means of the conversion of individuals; but a book, after all, cannot make a stand against the wild living intellect of man, and in this day it begins to testify, as regards its own structure and contents, to the power of that universal solvent, which is so successfully acting upon religious establishments.

Supposing then it to be the Will of the Creator to interfere in human affairs, and to make provisions for retaining in the world a knowledge of Himself, so definite and distinct as to be proof against the energy of human scepticism, in such a case — I am far from saying that there was no other way — but there is nothing to surprise the mind, if He should think fit to introduce a power into the world, invested with the prerogative of infallibility in religious matters. Such a provision would be a direct, immediate, active, and prompt means of withstanding the difficulty; it would be an instrument suited to the need; and, when I find that this is the very claim of the Catholic Church, not only do I feel no difficulty in admitting the idea, but there is a fitness in it, which recommends it to my mind. And thus I am brought to speak of the church's infallibility, as a provision, adapted by the mercy of the Creator, to preserve religion in the world, and to restrain that freedom of thought, which of course in itself is one of the greatest of our natural gifts, and to rescue it from its own suicidal excesses. And let it be observed that, neither here nor in what follows, shall I have occasion to speak directly of the revealed body of truths, but only as they bear upon the defence of natural religion. I say, that a power, possessed of infallibility in religious teaching, is happily adapted to be a working instrument, in the course of human affairs, for smiting hard and throwing back the immense energy of the aggressive intellect: — and in saying this, as

7. *i.e.* in the early 1830's, when the age of Reform was exuberantly optimistic about the 'march of mind,' 'improvement of the species,' etc., largely through education. See the last chapters of Carlyle's *Sartor Resartus* (publ. in *Fraser's*, Nov. 1833–Aug. 1834), where even Carlyle advocated education as a hope for the future.

8. Allusion to the early 1850's: to 1851, and the Great Exhibition at the Crystal Palace, where international commerce seemed to promise international peace; and to the Crimean War (1854–56), which, by its very mismanagement and horror, encouraged Europe to hope for a way to abolish war.

in the other things that I have to say, it must still be recollected that I am all along bearing in mind my main purpose, which is a defence of myself.

I am defending myself here from a plausible charge brought against Catholics, as will be seen better as I proceed. The charge is this: — that I, as a Catholic, not only make profession to hold doctrines which I cannot possibly believe in my heart, but that I also believe in the existence of a power on earth, which at its own will imposes upon men any new set of *credenda*,[9] when it pleases, by a claim to infallibility; in consequence, that my own thoughts are not my own property; that I cannot tell that tomorrow I may not have to give up what I hold today, and that the necessary effect of such a condition of mind must be a degrading bondage, or a bitter inward rebellion relieving itself in secret infidelity, or the necessity of ignoring the whole subject of religion in a sort of disgust, and of mechanically saying everything that the Church says, and leaving to others the defence of it. As then I have above spoken of the relation of my mind towards the Catholic Creed, so now I shall speak of the attitude which it takes up in the view of the Church's infallibility.

And first, the initial doctrine of the infallible teacher must be an emphatic protest against the existing state of mankind. Man had rebelled against his Maker. It was this that caused the divine interposition: and the first act of the divinely accredited messenger must be to proclaim it. The Church must denounce rebellion as of all possible evils the greatest. She must have no terms with it; if she would be true to her Master, she must ban and anathematise it. This is the meaning of a statement which has furnished matter for one of those special accusations to which I am at present replying: I have, however, no fault at all to confess in regard to it; I have nothing to withdraw, and in consequence I here deliberately repeat it. I said, 'The Catholic Church holds it better for the sun and moon to drop from heaven, for the earth to fail, and for all the many millions on it to die of starvation in extremest agony, as far as temporal affliction goes, than that one soul, I will not say, should be lost, but should commit one single venial sin, should tell one wilful untruth, or should steal one poor farthing without excuse.'[10] I think the principle here enunciated to be the mere preamble in the formal credentials of the Catholic Church, as an Act of Parliament might begin with a '*Whereas*.' It is because of the intensity of the evil which has possession of mankind, that a suitable antagonist has been provided against it; and the initial act of that divinely-commissioned power is of course to deliver her challenge and to defy the enemy. Such a preamble then gives a meaning to her position in the world, and an interpretation to her whole course of teaching and action.

In like manner she has ever put forth, with most energetic distinctness, those other great elementary truths, which either are an explanation of her mission or give a character to her work. She does not teach that human nature is irreclaimable, else wherefore should she be sent? not that it is to be shattered and reversed, but to be extricated, purified, and restored; not that it is a mere mass of evil, but that it has the promise of great things, and even now has a virtue and a praise proper to itself. But in the next place she knows and she preaches that such a restoration, as she aims at effecting in it, must be brought about, not simply through any outward provision of preaching and teaching, even though it be her own, but from a certain inward spiritual power or grace

9. *credenda*: plural of *credendum*, or thing to be believed, an article of faith, as distinct from *agendum*, or thing (ritual, liturgy) to be *done*.

10. See Newman's *Lectures on Difficulties of Anglicans* (1850), Lecture VIII. The passage is quoted in Kingsley's pamphlet, 'What, then, Does Dr. Newman Mean?'

imparted directly from above, and which is in her keeping. She has it in charge to rescue human nature from its misery, but not simply by raising it upon its own level, but by lifting it up to a higher level than its own. She recognises in it real moral excellence though degraded, but she cannot set it free from earth except by exalting it towards heaven. It was for this end that a renovating grace was put into her hands, and therefore from the nature of the gift, as well as from the reasonableness of the case, she goes on, as a further point, to insist, that all true conversion must begin with the first springs of thought, and to teach that each individual man must be in his own person one whole and perfect temple of God, while he is also one of the living stones which build up a visible religious community. And thus the distinctions between nature and grace, and between outward and inward religion, become two further articles in what I have called the preamble of her divine commission.

Such truths as these she vigorously reiterates, and pertinaciously inflicts upon mankind; as to such she observes no half-measures, no economical reserve,[11] no delicacy or prudence. 'Ye must be born again,'[12] is the simple, direct form of words which she uses after her Divine Master; 'your whole nature must be reborn, your passions, and your affections, and your aims, and your conscience, and your will, must all be bathed in a new element, and reconsecrated to your Maker, and, the last not the least, your intellect.' It was for repeating these points of her teaching in my own way, that certain passages of one of my volumes have been brought into the general accusation which has been made against my religious opinions. The writer has said that I was demented if I believed, and unprincipled if I did not believe, in my statement that a lazy, ragged, filthy, story-telling beggar-woman, if chaste, sober, cheerful, and religious, had a prospect of heaven, which was absolutely closed to an accomplished statesman, or lawyer, or noble, be he ever so just, upright, generous, honourable, and conscientious, unless he had also some portion of the divine Christian grace;[13] yet I should have thought myself defended from criticism by the words which our Lord used to the chief priests, 'The publicans and harlots go into the kingdom of God before you.'[14] And I was subjected again to the same alternative of imputations, for having ventured to say that consent to an unchaste wish was indefinitely more heinous than any lie viewed apart from its causes, its motives, and its consequences; though a lie, viewed under the limitation of these conditions, is a random utterance, an almost outward act, not directly from the heart, however disgraceful it may be, whereas we have the express words of our Lord to the doctrine that 'whoso looketh on a woman to lust after her, hath committed adultery with her already in his heart.'[15] On the strength of these texts I have surely as much right to believe in these doctrines as to believe in the doctrine of original sin, or that there is a supernatural revelation, or that a Divine Person suffered, or that punishment is eternal.

Passing now from what I have called the preamble of that grant of power, with which the Church is invested, to that power itself, Infallibility, I make two brief remarks: on the one hand, I am not here

11. See Note on 'The Economy' in the *Apologia*: 'The principle of the Economy is this; that out of various courses, in religious conduct or statement, all and each *allowable antecedently and in themselves*, that ought to be taken which is most expedient and most suitable at the time for the object in hand.' Or: A 'cautious dispensation of the truth, after the manner of a discreet and vigilant steward, is denoted by the word "economy."'

12. See *John*, iii,7.

13. See Lecture VIII on *Difficulties of Anglicans*; the passage is quoted in Kingsley's pamphlet, 'What, then, Does Dr. Newman Mean?'

14. See *Matthew*, xxi,31.

15. See *Matthew*, v,28.

determining anything about the essential seat of that power, because that is a question doctrinal, not historical and practical; nor, on the other hand, am I extending the direct subject-matter, over which that power has jurisdiction, beyond religious opinion: — and now as to the power itself.

This power, viewed in its fullness, is as tremendous as the giant evil which has called for it. It claims, when brought into exercise in the legitimate manner, for otherwise of course it is but dormant, to have for itself a sure guidance into the very meaning of every portion of the divine message in detail, which was committed by our Lord to His apostles. It claims to know its own limits, and to decide what it can determine absolutely and what it cannot. It claims, moreover, to have a hold upon statements not directly religious, so far as this, to determine whether they indirectly relate to religion, and, according to its own definitive judgment, to pronounce whether or not, in a particular case, they are consistent with revealed truth. It claims to decide magisterially, whether infallibly or not, that such and such statements are or are not prejudicial to the apostolic *depositum* of faith, in their spirit or in their consequences, and to allow them, or condemn and forbid them, accordingly. It claims to impose silence at will on any matters, or controversies, of doctrine, which on its own *ipse dixit* [16] it pronounces to be dangerous, or inexpedient, or inopportune. It claims that whatever may be the judgment of Catholics upon such acts, these acts should be received by them with those outward marks of reverence, submission, and loyalty, which Englishmen, for instance, pay to the presence of their sovereign, without public criticism on them, as being in their matter inexpedient, or in their manner violent or harsh. And lastly, it claims to have the right of inflicting spiritual punishment, of cutting off from the ordinary channels of the divine life, and of simply excommunicating, those who refuse to submit themselves to its formal declarations. Such is the infallibility lodged in the Catholic Church, viewed in the concrete, as clothed and surrounded by the appendages of its high sovereignty: it is, to repeat what I said above, a supereminent prodigious power sent upon earth to encounter and master a giant evil.

And now, having thus described it, I profess my own absolute submission to its claim. I believe the whole revealed dogma as taught by the apostles, as committed by the apostles to the Church, and as declared by the Church to me. I receive it, as it is infallibly interpreted by the authority to whom it is thus committed, and (implicitly) as it shall be, in like manner, further interpreted by that same authority till the end of time. I submit, moreover, to the universally received traditions of the Church, in which lies the matter of those new dogmatic definitions which are from time to time made, and which in all times are the clothing and the illustration of the Catholic dogma as already defined. And I submit myself to those other decisions of the holy see, theological or not, through the organs which it has itself appointed, which, waiving the question of their infallibility, on the lowest ground come to me with a claim to be accepted and obeyed. Also, I consider that, gradually and in the course of ages, Catholic inquiry has taken certain definite shapes, and has thrown itself into the form of a science, with a method and a phraseology of its own, under the intellectual handling of great minds, such as St. Athanasius, St. Augustine, and St. Thomas; [17] and I feel

16. Assertion (without proof).

17. St. Athanasius (c.298–373), Bishop of Alexandria, was the leading defender of the Church against the Arian heresy, which held that Christ was not the eternal Son of God, nor of the same substance. — St. Augustine (354–430), Bishop of Hippo, was a great controversialist, combating many early heresies; author of the *City of God*; founder of much in the dogmatic theology of the Church. — St. Thomas Aquinas (c.1225–74), Italian

no temptation at all to break in pieces the great legacy of thought thus committed to us for these latter days.

All this being considered to be a profession *ex animo*,[18] as on my own part, so also on the part of the Catholic body, as far as I know it, it will at first sight be said that the restless intellect of our common humanity is utterly weighed down to the repression of all independent effort and action whatever, so that, if this is to be the mode of bringing it into order, it is brought into order only to be destroyed. But this is far from the result, far from what I conceive to be the intention of that high Providence who has provided a great remedy for a great evil — far from borne out by the history of the conflict between infallibility and reason in the past, and the prospect of it in the future. The energy of the human intellect 'does from opposition grow'; it thrives and is joyous, with a tough elastic strength, under the terrible blows of the divinely-fashioned weapon, and is never so much itself as when it has lately been overthrown. It is the custom with Protestant writers to consider that, whereas there are two great principles in action in the history of religion, authority and private judgment, they have all the private judgment to themselves, and we have the full inheritance and the superincumbent oppression of authority. But this is not so; it is the vast Catholic body itself, and it only, which affords an arena for both combatants in that awful, never-dying duel. It is necessary for the very life of religion, viewed in its large operations and its history, that the warfare should be incessantly carried on. Every exercise of infallibility is brought out into act by an intense and varied operation of the reason, from within and without, and provokes again a reaction of reason against it; and, as in a civil polity the state exists and endures by means of the rivalry and collision, the encroachments and defeats of its constituent parts, so in like manner Catholic Christendom is no simple exhibition of religious absolutism, but it presents a continuous picture of authority and private judgment alternately advancing and retreating as the ebb and flow of the tide; — it is a vast assemblage of human beings with wilful intellects and wild passions, brought together into one by the beauty and the majesty of a superhuman power — into what may be called a large reformatory or training-school, not to be sent to bed, not to be buried alive, but for the melting, refining, and moulding, as in some moral factory, by an incessant noisy process (if I may proceed to another metaphor), of the raw material of human nature, so excellent, so dangerous, so capable of divine purposes.

St. Paul says in one place that his apostolical power is given him to edification, and not to destruction.[19] There can be no better account of the infallibility of the Church. It is a supply for a need, and it does not go beyond that need. Its object is, and its effect also, not to enfeeble the freedom or vigour of human thought in religious speculation, but to resist and control its extravagance. What have been its great works? All of them in the distinct province of theology: — to put down Arianism, Eutychianism, Pelagianism, Manichæism, Lutheranism, Jansenism.[20]

philosopher and Dominican monk, whose *Summa Totius Philosophiae* was the culmination of the scholastic philosophy, and a vast synthesis of the moral and political sciences, within a framework of theology and metaphysics.

18. *ex animo*: from the heart.

19. See *II Corinthians*, x.8.

20. The Eutychians (5th century) believed that the divine and human in the person of Christ so blended as to constitute one nature. — The Pelagians (4th and 5th centuries) denied the Catholic doctrines of original sin, baptismal regeneration, damnation of unbaptized infants, and the hereditary taint of Adam's sin; affirmed salvation through man's own efforts, in perfect freedom of the will, without the aid of divine grace to set him right. — The Manichaeans (3rd to 5th centuries) taught a dualism derived from the Persian

Such is the broad result of its action in the past; — and now as to the securities which are given us that so it ever will act in time to come.

First, infallibility cannot act outside of a definite circle of thought, and it must in all its decisions, or *definitions*, as they are called, profess to be keeping within it. The great truths of the moral law, of natural religion, and of apostolical faith, are both its boundary and its foundation. It must not go beyond them, and it must ever appeal to them. Both its subject-matter, and its articles in that subject-matter, are fixed. Thus, in illustration, it does not extend to statements, however sound and evident, which are mere logical conclusions from the articles of the apostolic *depositum*; again, it can pronounce nothing about the persons of heretics, whose works fall within its legitimate province. It must ever profess to be guided by Scripture and by tradition. It must refer to the particular apostolic truth which it is enforcing, or (what is called) *defining*. Nothing, then, can be presented to me, in time to come, as part of the faith, but what I ought already to have received, and have not actually received, (if not) merely because it has not been told me. Nothing can be imposed upon me different in kind from what I hold already — much less contrary to it. The new truth which is promulgated, if it is to be called new, must be at least homogeneous, cognate, implicit, viewed relatively to the old truth. It must be what I may even have guessed, or wished, to be included in the apostolic revelation; and at least it will be of such a character, that my thoughts readily concur in it or coalesce with it, as soon as I hear it. Perhaps I and others actually have always believed it, and the only question which is now decided in my behalf, is that I am henceforth to believe that I have only been holding what the apostles held before me. . . .

religion (Zoroastrianism) that man's body (evil and darkness) is in continual warfare with his spirit (sprung from the Kingdom of Light), and that only the spiritual Christ was divine, the historical Christ evil. — The Jansenists (17th and 18th centuries) maintained that in his fallen state man is equally unable to help himself or to resist divine grace, through accession of which alone is salvation possible. — All of the heresies mentioned by Newman have been vigorously combated by the Catholic Church.

Note A.

Liberalism

I have been asked to explain more fully what it is I mean by 'Liberalism,' because merely to call it the Anti-dogmatic Principle is to tell very little about it. An explanation is the more necessary, because such good Catholics and distinguished writers as Count Montalembert [1] and Father Lacordaire [2] use the word in a favourable sense, and claim to be Liberals themselves. 'The only singularity,' says the former of the two in describing his friend, 'was his Liberalism. By a phenomenon, at that time unheard of, this convert, this seminarist, this confessor of nuns, was just as stubborn a liberal, as in the days when he was a student and a barrister.' — Life (transl.), p.19.

I do not believe that it is possible for me to differ in any important matter from two men whom I so highly admire. In

1. Charles Forbes René de Montalembert (1810–70), French publicist, historian, and academician, was a liberal in the English sense but was unable to support the liberal government of Louis Philippe on religious grounds. He wished to see education and the Church free from the control of the State; yet he attacked the Church for opposing new ideas. He collaborated with Lamennais and Lacordaire in editing the newspaper *l'Avenir*, and aroused the enmity of the Ultramontane (deeply conservative) party of the Church.
2. Jean Baptiste Henri Lacordaire (1802–61), French ecclesiastic and orator, stood for the following liberal principles: separation of Catholicism from dynastic politics; liberty, equality, and fraternity; freedom of education from either Church or State domination; popular sovereignty in civil life (the Pope's sovereignty in religious life); republicanism.

their general line of thought and conduct I enthusiastically concur, and consider them to be before their age. And it would be strange indeed if I did not read with a special interest, in M. de Montalembert's beautiful volume, of the unselfish aims, the thwarted projects, the unrequited toils, the grand and tender resignation of Lacordaire. If I hesitate to adopt their language about Liberalism, I impute the necessity of such hesitation to some differences between us in the use of words or in the circumstances of country; and thus I reconcile myself to remaining faithful to my own conception of it, though I cannot have their voices to give force to mine. Speaking then in my own way, I proceed to explain what I meant as a Protestant by Liberalism, and to do so in connexion with the circumstances under which that system of opinion came before me at Oxford.

If I might presume to contrast Lacordaire and myself, I should say, that we had been both of us inconsistent, — he, a Catholic, in calling himself a Liberal; I, a Protestant, in being an Anti-liberal; and moreover, that the cause of this inconsistency had been in both cases one and the same. That is, we were both of us such good conservatives, as to take up with what we happened to find established in our respective countries, at the time when we came into active life. Toryism was the creed of Oxford; he inherited, and made the best of, the French Revolution.

When, in the beginning of the present century, not very long before my own time, after many years of moral and intellectual declension, the University of Oxford woke up to a sense of its duties, and began to reform itself,[3] the first instruments of this change, to whose zeal and courage we all owe so much, were naturally thrown together for mutual support, against the numerous obstacles which lay in their path, and stood out in relief from the body of residents, who, though many of them men of talent themselves, cared little for the object which the others had at heart. These Reformers, as they may be called, were for some years members of scarcely more than three or four Colleges; and their own Colleges, as being under their direct influence, of course had the benefit of those stricter views of discipline and teaching, which they themselves were urging on the University. They had, in no long time, enough of real progress in their several spheres of exertion, and enough of reputation out of doors, to warrant them in considering themselves the *élite* of the place; and it is not wonderful if they were in consequence led to look down upon the majority of Colleges, which had not kept pace with the reform, or which had been hostile to it. And, when those rivalries of one man with another arose, whether personal or collegiate, which befall literary and scientific societies, such disturbances did but tend to raise in their eyes the value which they had already set upon academical distinction, and increase their zeal in pursuing it. Thus was formed an intellectual circle or class in the University, — men, who felt they had a career before them, as soon as the pupils, whom they were forming, came into public life; men, whom non-residents, whether country parsons or preachers of the Low Church, on coming up from time to time to the old place,

3. Oxford at the beginning of the century was untouched by the new social and industrial forces, but rested at ease in its wealth, privilege, and perfunctory educational routine (offering the elements of religion, a little mathematics, a few Greek and Roman classics). It had been severely criticized by Adam Smith in *The Wealth of Nations*, and later by a series of articles in the *Edinburgh Review* from 1808 to 1810. A *Reply to the Calumnies of the Edinburgh Review* was published in 1810 by Edward Coplestone, Professor of Poetry at Oxford, and reviewed by John Davison in the *Quarterly*, defending the University. But the spirit of reform had nevertheless been aroused, and soon reformers began to nationalize, secularize, and modernize the method and outlook of Oxford, later drawing fire from the Tractarians.

would look at, partly with admiration, partly with suspicion, as being an honour indeed to Oxford, but withal exposed to the temptation of ambitious views, and to the spiritual evils signified in what is called the 'pride of reason.'

Nor was this imputation altogether unjust; for, as they were following out the proper idea of a University, of course they suffered more or less from the moral malady incident to such a pursuit. The very object of such great institutions lies in the cultivation of the mind and the spread of knowledge; if this object, as all human objects, has its dangers at all times, much more would these exist in the case of men, who were engaged in a work of reformation, and had the opportunity of measuring themselves, not only with those who were their equals in intellect, but with the many, who were below them. In this select circle or class of men, in various Colleges, the direct instruments and the choice fruit of real University Reform, we see the rudiments of the Liberal party.

Whenever men are able to act at all, there is the chance of extreme and intemperate action; and therefore, when there is exercise of mind, there is the chance of wayward or mistaken exercise. Liberty of thought is in itself a good; but it gives an opening to false liberty. Now by Liberalism I mean false liberty of thought, or the exercise of thought upon matters, in which, from the constitution of the human mind, thought cannot be brought to any successful issue, and therefore is out of place. Among such matters are first principles of whatever kind; and of these the most sacred and momentous are especially to be reckoned the truths of Revelation. Liberalism then is the mistake of subjecting to human judgment those revealed doctrines which are in their nature beyond and independent of it, and of claiming to determine on intrinsic grounds the truth and value of propositions which rest for their reception simply on the external authority of the Divine Word.

Now certainly the party of whom I have been speaking, taken as a whole, were of a character of mind out of which Liberalism might easily grow up, as in fact it did; certainly they breathed around an influence which made men of religious seriousness shrink into themselves. But, while I say as much as this, I have no intention whatever of implying that the talent of the University, in the years before and after 1820, was liberal in its theology, in the sense in which the bulk of the educated classes through the country are liberal now. I would not for the world be supposed to detract from the Christian earnestness, and the activity in religious works, above the average of men, of many of the persons in question. They would have protested against their being supposed to place reason before faith, or knowledge before devotion; yet I do consider that they unconsciously encouraged and successfully introduced into Oxford a licence of opinion which went far beyond them. In their day they did little more than take credit to themselves for enlightened views, largeness of mind, liberality of sentiment, without drawing the line between what was just and what was inadmissible in speculation, and without seeing the tendency of their own principles; and engrossing, as they did, the mental energy of the University, they met for a time with no effectual hindrance to the spread of their influence, except (what indeed at the moment was most effectual, but not of an intellectual character) the thorough-going Toryism and traditionary Church-of-Englandism of the great body of the Colleges and Convocation.[4]

Now and then a man of note appeared

4. *Convocation*: the assembly of the masters of arts and doctors of the higher faculties, which has final control over all acts and business of the university. — It should be remembered that in Oxford the word 'college' refers to an individual corporation consisting of a head, fellows (forming the governing body), scholars, and 'commoners' (who receive either no emolument or a scholarship).

in the Pulpit or Lecture Rooms of the University, who was a worthy representative of the more religious and devout Anglicans. These belonged chiefly to the High-Church party; for the party called Evangelical never has been able to breathe freely in the atmosphere of Oxford,[5] and at no time has been conspicuous, as a party, for talent or learning. But of the old High Churchmen several exerted some sort of Anti-liberal influence in the place, at least from time to time, and that influence of an intellectual nature. Among these especially may be mentioned Mr. John Miller, of Worcester College, who preached the Bampton Lecture in the year 1817. But, as far as I know, he who turned the tide, and brought the talent of the University round to the side of the old theology, and against what was familiarly called 'march-of-mind,' was Mr. Keble.[6] In and from Keble the mental activity of Oxford took that contrary direction which issued in what was called Tractarianism.

Keble was young in years, when he became a University celebrity, and younger in mind. He had the purity and simplicity of a child. He had few sympathies with the intellectual party, who sincerely welcomed him as a brilliant specimen of young Oxford. He instinctively shut up before literary display, and pomp and donnishness of manner, faults which always will beset academical notabilities. He did not respond to their advances. His collision with them (if it may be so called) was thus described by Hurrell Froude[7] in his own way. 'Poor Keble!' he used gravely to say, 'he was asked to join the aristocracy of talent, but he soon found his level.' He went into the country, but his instance serves to prove that men need not, in the event, lose that influence which is rightly theirs, because they happen to be thwarted in the use of the channels natural and proper to its exercise. He did not lose his place in the minds of men because he was out of their sight.

Keble was a man who guided himself and formed his judgments, not by processes of reason, by inquiry or by argument, but, to use the word in a broad sense, by authority. Conscience is an authority; the Bible is an authority; such is the Church; such is Antiquity; such are the words of the wise; such are hereditary lessons; such are ethical truths; such are historical memories, such are legal saws and state maxims; such are proverbs; such are sentiments, presages, and prepossessions. It seemed to me as if he ever felt happier, when he could speak or act under some such primary or external sanction; and could use argument mainly as a means of recommending or explaining what had claims on his reception prior to proof. He even felt a tenderness, I think, in spite of Bacon, for the Idols of the Tribe and the Den, of the Market and the Theatre.[8] What he hated instinctively was heresy, insubordination, resistance to things established, claims of independence, disloyalty, innovation, a critical, censorious spirit. And such was the main principle of the school which in the course of years was formed around him; nor is it easy to set limits to its influence in its day; for multitudes of men, who did not profess its teaching, or accept its peculiar doctrines,

5. The Evangelicals in the Church of England regarded the essence of the gospel as mainly its doctrines of man's fallen condition, the atonement of Christ, the necessity of a new birth, and redemption by faith. In contrast, the High-Churchmen emphasize the doctrine of apostolic succession, the sacramental presence of Christ in the Eucharist, baptismal regeneration, and the sole validity of episcopal ordination. They attach much importance to ceremonies and symbols. They have been in general anti-liberal.

6. John Keble (1792–1866), whose sermon on 'National Apostasy' initiated the Oxford Movement; co-leader with Newman and Hurrell Froude of that movement.

7. See *Apologia*, Part III, note 27.

8. See Macaulay's essay on Bacon, in the present collection, note 86.

were willing nevertheless, or found it to their purpose, to act in company with it.

Indeed for a time it was practically the champion and advocate of the political doctrines of the great clerical interest through the country, who found in Mr. Keble and his friends an intellectual, as well as moral support to their cause, which they looked for in vain elsewhere. His weak point, in their eyes, was his consistency; for he carried his love of authority and old times so far, as to be more than gentle towards the Catholic Religion, with which the Toryism of Oxford and of the Church of England had no sympathy. Accordingly, if my memory be correct, he never could get himself to throw his heart into the opposition made to Catholic Emancipation,[9] strongly as he revolted from the politics and the instruments by means of which that Emancipation was won. I fancy he would have had no difficulty in accepting Dr. Johnson's saying about 'the first Whig';[10] and it grieved and offended him that the 'Via prima salutis'[11] should be opened to the Catholic body from the Whig quarter. In spite of his reverence for the Old Religion, I conceive that on the whole he would rather have kept its professors beyond the pale of the Constitution with the Tories, than admit them on the principles of the Whigs. Moreover, if the Revolution of 1688[12] was too lax in principle for him and his friends, much less, as is very plain, could they endure to subscribe to the revolutionary doctrines of 1776 and 1789,[13] which they felt to be absolutely and entirely out of keeping with theological truth.

The Old Tory or Conservative party in Oxford had in it no principle or power of development, and that from its very nature and constitution: it was otherwise with the Liberals. They represented a new idea, which was but gradually learning to recognise itself, to ascertain its characteristics and external relations, and to exert an influence upon the University. The party grew, all the time that I was in Oxford, even in numbers, certainly in breadth and definiteness of doctrine, and in power. And, what was a far higher consideration, by the accession of Dr. Arnold's[14] pupils, it was invested with an elevation of character which claimed the respect even of its opponents. On the other hand, in proportion as it became more earnest and less self-applauding, it became more free-spoken; and members of it might be found who, from the mere circumstance of remaining firm to their original professions, would in the judgment of the world, as to their public acts, seem to have left it for the Conservative camp. Thus, neither in its component parts nor in its policy, was it the same in 1832, 1836, and 1841, as it was in 1845.

These last remarks will serve to throw light upon a matter personal to myself, which I have introduced into my Narrative, and to which my attention has been pointedly called, now that my Volume is coming to a second edition.

It has been strongly urged upon me to re-consider the following passages which occur in it: 'The men who had driven me from Oxford were distinctly the Liberals, it was they who had opened the attack

9. The movement for restoring to Roman Catholics the civil liberties and abilities enjoyed by Protestants. Enacted in 1829.

10. Johnson: 'And I have always said, the first Whig was the Devil.' Boswell's *Life of Johnson* (*sub ann.* April 28, 1778).

11. *Via prima salutis*: 'The main road to salvation.'

12. The Puritan Revolution. See, in the present collection, Macaulay's essay on Milton, and Chapter iii of his *History of England*.

13. *i.e.* the American and the French Revolutions.

14. Dr. Thomas Arnold (1795–1842), father of Matthew Arnold; headmaster of Rugby; he published *Principles of Church Reform* in 1833; his pupils were stamped with his liberal outlook on matters of theology, church reform, etc., as, for instance, in Matthew Arnold and Arthur Hugh Clough.

upon Tract 90,' vol.ii. p.63, and 'I found no fault with the Liberals; they had beaten me in a fair field,' vol.ii. p.74.[15]

I am very unwilling to seem ungracious, or to cause pain in any quarter; still I am sorry to say I cannot modify these statements. It is surely a matter of historical fact that I left Oxford upon the University proceedings of 1841; and in those proceedings, whether we look to the Heads of Houses or the resident Masters, the leaders, if intellect and influence make men such, were members of the Liberal party. Those who did not lead, concurred or acquiesced in them, — I may say, felt a satisfaction. I do not recollect any Liberal who was on my side on that occasion. Excepting the Liberal, no other party as a party, acted against me. I am not complaining of them; I deserved nothing else at their hands. They could not undo in 1845,[16] even had they wished it, (and there is no proof they did), what they had done in 1841.[17] In 1845, when I had already given up the contest for four years, and my part in it had passed into the hands of others, then some of those who were prominent against me in 1841, feeling (what they had not felt in 1841) the danger of driving a number of my followers to Rome, and joined by younger friends who had come into University importance since 1841 and felt kindly towards me, adopted a course more consistent with their principles, and proceeded to shield from the zeal of the Hebdomadal Board,[18] not me, but professedly, all parties through the country, — Tractarians, Evangelicals, Liberals in general, — who had to subscribe to the Anglican formularies,[19] on the ground that those formularies, rigidly taken, were, on some point or other, a difficulty to all parties alike. . . .

I conclude this notice of Liberalism in Oxford, and the party which was antagonistic to it, with some propositions in detail, which, as a member of the latter, and together with the High Church, I earnestly denounced and abjured.

1. No religious tenet is important, unless reason shows it to be so.

Therefore, *e.g.* the doctrine of the Athanasian Creed[20] is not to be insisted on, unless it tends to convert the soul; and the doctrine of the Atonement is to be insisted on, if it does convert the soul.

2. No one can believe what he does not understand.

Therefore, *e.g.* there are no mysteries in true religion.

3. No theological doctrine is any thing more than an opinion which happens to be held by bodies of men.

Therefore, *e.g.*, no creed, as such, is necessary for salvation.

4. It is dishonest in a man to make an act of faith in what he has not had brought home to him by actual proof.

15. Newman gives here the page numbers of the first edition of the *Apologia*. The passages occur in Part VI, 'History of My Religious Opinions from 1841 to 1845.'

16. The year in which Newman was received into the Roman Catholic Church.

17. The year in which *Tract XC* brought the Oxford (or Tractarian) Movement under the official ban, and which caused Newman's retirement to Littlemore in the following year.

18. The council, consisting of seven members (***hebdomadal***: from Greek for 'seven,' ἑβδομάς), which took the initiative in promulgating, discussing, and submitting to convocation all the legislation of the university, and controlled its general business and its policy.

19. The Thirty-nine Articles, the statements of the tenets or doctrines of the Church of England.

20. The formulary or confession or exposition of faith, formerly supposed to have been drawn up by St. Athanasius (d.373), commonly called the ***Quicunque vult*** from its first two words in Latin; it is used in the Church of England on certain feasts; and it asserts the homoousian doctrine that the Son and the Father are of one substance (as against the Arians who held that the Son [Jesus Christ] was merely the noblest of created beings, and that he was not the Eternal Son of God, etc.). Newman means, of course, that the Athanasian Creed puts a severe strain on our faith if we rest on reason alone.

Therefore, *e.g.* the mass of men ought not absolutely to believe in the divine authority of the Bible.

5. It is immoral in a man to believe more than he can spontaneously receive as being congenial to his moral and mental nature.

Therefore, *e.g.* a given individual is not bound to believe in eternal punishment.

6. No revealed doctrines or precepts may reasonably stand in the way of scientific conclusions.

Therefore, *e.g.* Political Economy may reverse our Lord's declarations about poverty and riches, or a system of Ethics may teach that the highest condition of body is ordinarily essential to the highest state of mind.

7. Christianity is necessarily modified by the growth of civilization, and the exigencies of times.

Therefore, *e.g.* the Catholic priesthood, though necessary in the Middle Ages, may be superseded now.

8. There is a system of religion more simply true than Christianity as it has ever been received.

Therefore, *e.g.* we may advance that Christianity is the 'corn of wheat' which has been dead for 1800 years, but at length will bear fruit; and that Mahometanism is the manly religion, and existing Christianity the womanish.

9. There is a right of Private Judgment: that is, there is no existing authority on earth competent to interfere with the liberty of individuals in reasoning and judging for themselves about the Bible and its contents, as they severally please.

Therefore, *e.g.* religious establishments requiring subscription are Anti-christian.

10. There are rights of conscience such, that every one may lawfully advance a claim to profess and teach what is false and wrong in matters, religious, social, and moral, provided that to his private conscience it seems absolutely true and right.

Therefore, *e.g.* individuals have a right to preach and practise fornication and polygamy.

11. There is no such thing as a national or state conscience.

Therefore, *e.g.* no judgments can fall upon a sinful or infidel nation.

12. The civil power has no positive duty, in a normal state of things, to maintain religious truth.

Therefore, *e.g.* blasphemy and sabbath-breaking are not rightly punishable by law.

13. Utility and expedience are the measure of political duty.

Therefore, *e.g.* no punishment may be enacted, on the ground that God commands it: *e.g.* on the text, 'Whoso sheddeth man's blood, by man shall his blood be shed.'[21]

14. The Civil Power may dispose of Church property without sacrilege.

Therefore, *e.g.* Henry VIII. committed no sin in his spoliations.[22]

15. The Civil Power has the right of ecclesiastical jurisdiction and administration.

Therefore, *e.g.* Parliament may impose articles of faith on the Church or suppress Dioceses.

16. It is lawful to rise in arms against legitimate princes.

Therefore, *e.g.* the Puritans in the seventeenth century, and the French in the eighteenth, were justified in their Rebellion and Revolution respectively.

17. The people are the legitimate source of power.

Therefore, *e.g.* Universal Suffrage is among the natural rights of man.

18. Virtue is the child of knowledge, and vice of ignorance.

Therefore, *e.g.* education, periodical literature, railroad travelling, ventilation, drainage, and the arts of life, when fully carried out, serve to make a population moral and happy.

21. *Genesis*, ix,6.

22. Allusion, of course, to the dissolution of the monasteries under Henry VIII.

All of these propositions, and many others too, were familiar to me thirty years ago,[23] as in the number of the tenets of Liberalism, and, while I gave in to none of them except No. 12, and perhaps No. 11, and partly No. 1, before I began to publish, so afterwards I wrote against most of them in some part or other of my Anglican works. . . .

I need hardly say that the above Note is mainly historical. How far the Liberal party of 1830–40 really held the above eighteen Theses, which I attributed to them, and how far and in what sense I should oppose those Theses now, could scarcely be explained without a separate Dissertation.

23. *i.e.* in 1833–34, when the Tractarian Movement was beginning to gain momentum in its fight against liberalism, especially in matters of faith and theology.

AN ESSAY IN AID OF A GRAMMAR OF ASSENT

PART I

CHAPTER V

Apprehension and Assent in the Matter of Religion

1. BELIEF IN ONE GOD

THERE is one God, such and such in Nature and Attributes.

I say 'such and such,' for, unless I explain what I mean by 'one God,' I use words which may mean any thing or nothing. I may mean a mere *anima mundi*;[1] or an initial principle which once was in action and now is not; or collective humanity. I speak then of the God of the Theist and of the Christian: a God who is numerically One, who is Personal; the Author, Sustainer, and Finisher of all things, the life of Law and Order, the Moral Governor; One who is Supreme and Sole; like Himself, unlike all things besides Himself which all are but His creatures; distinct from, independent of them all; One who is self-existing, absolutely infinite, who has ever been and ever will be, to whom nothing is past or future; who is all perfection, and the fulness and archetype of every possible excellence, the Truth Itself, Wisdom, Love, Justice, Holiness; One who is All-powerful, All-knowing, Omnipresent, Incomprehensible. These are some of the distinctive prerogatives which I ascribe unconditionally and unreservedly to the great Being whom I call God.

This being what Theists mean when they speak of God, their assent to this truth admits without difficulty of being what I have called a notional assent. It is an assent following upon acts of inference, and other purely intellectual exercises; and it is an assent to a large development of predicates, correlative to each other, or at least intimately connected together, drawn out as if on paper, as we might map a country which we had never seen, or construct mathematical tables, or master the methods of discovery of Newton or Davy,[2] without being geographers, mathematicians, or chemists ourselves.

So far is clear; but the question follows, Can I attain to any more vivid assent to the Being of a God, than that which is given merely to notions of the intellect? Can I enter with a personal knowledge into the circle of truths which make up that great thought? Can I rise to what I have called an imaginative apprehension of it? Can I believe as if I saw? Since such a high assent requires a present experience or memory of the fact, at first sight it would seem as if the answer must be in

1. 'soul of the world.'

2. Sir Humphrey Davy (1778–1829), natural philosopher, professor of chemistry at the Royal Institution, greatly advanced the knowledge of chemistry and galvinism; invented the miner's safety-lamp, etc.

the negative; for how can I assent as if I saw, unless I have seen? but no one in this life can see God. Yet I conceive a real assent is possible, and I proceed to show how.

When it is said that we cannot see God, this is undeniable; but still in what sense have we a discernment of His creatures, of the individual beings which surround us? The evidence which we have of their presence lies in the phenomena which address our senses, and our warrant for taking these for evidence is our instinctive certitude that they are evidence. By the law of our nature we associate those sensible phenomena or impressions with certain units, individuals, substances, whatever they are to be called, which are outside and out of the reach of sense, and we picture them to ourselves in those phenomena. The phenomena are as if pictures; but at the same time they give us no exact measure or character of the unknown things beyond them; — for who will say there is any uniformity between the impressions which two of us would respectively have of some third thing, supposing one of us had only the sense of touch, and the other only the sense of hearing? Therefore, when we speak of our having a picture of the things which are perceived through the senses, we mean a certain representation, true as far as it goes, but not adequate.

And so of those intellectual and moral objects which are brought home to us through our senses: — that they exist, we know by instinct; that they are such and such, we apprehend from the impressions which they leave upon our minds. Thus the life and writings of Cicero or Dr. Johnson, of St. Jerome [3] or St. Chrysostom,[4] leave upon us certain impressions of the intellectual and moral character of each of them, *sui generis*,[5] and unmistakable. We take up a passage of Chrysostom or a passage of Jerome; there is no possibility of confusing the one with the other; in each case we see the man in his language. And so of any great man whom we may have known: that he is not a mere impression on our senses, but a real being, we know by instinct; that he is such and such, we know by the matter or quality of that impression.

Now certainly the thought of God, as Theists entertain it, is not gained by an instinctive association of His presence with any sensible phenomena; but the office which the senses directly fulfil as regards creation that devolves indirectly on certain of our mental phenomena as regards the Creator. Those phenomena are found in the sense of moral obligation. As from a multitude of instinctive perceptions, acting in particular instances, of something beyond the senses, we generalize the notion of an external world, and then picture that world in and according to those particular phenomena from which we started, so from the perceptive power which identifies the intimations of conscience with the reverberations or echoes (so to say) of an external admonition, we proceed on to the notion of a Supreme Ruler and Judge, and then again we image Him and His attributes in those recurring intimations, out of which, as mental phenomena, our recognition of His existence was originally gained. And, if the impressions which His creatures make on us through our senses oblige us to regard those creatures as *sui generis* respectively, it is not wonderful that the notices, which He indirectly gives us through our conscience, of His own nature are such as to make us understand that He is like Himself and like nothing else.

I have already said I am not proposing here to prove the Being of a God; yet I

3. St.Jerome (c.340–420), one of the early saints of the Church, whose great work was his Latin version of the Bible, known as the Vulgate, completed in 405.

4. St. John Chrysostom (c.345–407), an early Christian Father, eloquent preacher, and voluminous writer and commentator on the Scriptures.

5. 'of its own kind'; 'in a class by itself.'

have found it impossible to avoid saying where I look for the proof of it. For I am looking for that proof in the same quarter as that from which I would commence a proof of His attributes and character, — by the same means as those by which I show how we apprehend Him, not merely as a notion, but as a reality. The last indeed of these three investigations alone concerns me here, but I cannot altogether exclude the two former from my consideration. However, I repeat, what I am directly aiming at, is to explain how we gain an image of God and give a real assent to the proposition that He exists. And next, in order to do this, of course I must start from some first principle; — and that first principle, which I assume and shall not attempt to prove, is that which I should also use as a foundation in those other two inquiries, viz. that we have by nature a conscience.

I assume, then, that Conscience has a legitimate place among our mental acts; as really so, as the action of memory, of reasoning, of imagination, or as the sense of the beautiful; that, as there are objects which, when presented to the mind, cause it to feel grief, regret, joy, or desire, so there are things which excite in us approbation or blame, and which we in consequence call right or wrong; and which, experienced in ourselves, kindle in us that specific sense of pleasure or pain, which goes by the name of a good or bad conscience. This being taken for granted, I shall attempt to show that in this special feeling, which follows on the commission of what we call right or wrong, lie the materials for the real apprehension of a Divine Sovereign and Judge.

The feeling of conscience (being, I repeat, a certain keen sensibility, pleasant or painful, — self-approval and hope, or compunction and fear, — attendant on certain of our actions, which in consequence we call right or wrong) is twofold: — it is a moral sense, and a sense of duty; a judgment of the reason and a magisterial dictate. Of course its act is indivisible; still it has these two aspects, distinct from each other, and admitting of a separate consideration. Though I lost my sense of the obligation which I lie under to abstain from acts of dishonesty, I should not in consequence lose my sense that such actions were an outrage offered to my moral nature. Again; though I lost my sense of their moral deformity, I should not therefore lose my sense that they were forbidden to me. Thus conscience has both a critical and a judicial office, and though its promptings, in the breasts of the millions of human beings to whom it is given, are not in all cases correct, that does not necessarily interfere with the force of its testimony and of its sanction: its testimony that there is a right and a wrong, and its sanction to that testimony conveyed in the feelings which attend on right or wrong conduct. Here I have to speak of conscience in the latter point of view, not as supplying us, by means of its various acts, with the elements of morals, such as may be developed by the intellect into an ethical code, but simply as the dictate of an authoritative monitor bearing upon the details of conduct as they come before us, and complete in its several acts, one by one.

Let us then thus consider conscience, not as a rule of right conduct, but as a sanction of right conduct. This is its primary and most authoritative aspect; it is the ordinary sense of the word. Half the world would be puzzled to know what was meant by the moral sense; but every one knows what is meant by a good or bad conscience. Conscience is ever forcing on us by threats and by promises that we must follow the right and avoid the wrong; so far it is one and the same in the mind of every one, whatever be its particular errors in particular minds as to the acts which it orders to be done or to be avoided; and in this respect it corresponds to our perception of the beautiful and deformed. As we have naturally a sense of the beautiful and graceful in nature and

art, though tastes proverbially differ, so we have a sense of duty and obligation, whether we all associate it with the same certain actions in particular or not. Here, however, Taste and Conscience part company: for the sense of beautifulness, as indeed the Moral Sense, has no special relations to persons, but contemplates objects in themselves; conscience, on the other hand, is concerned with persons primarily, and with actions mainly as viewed in their doers, or rather with self alone and one's own actions, and with others only indirectly and as if in association with self. And further, taste is its own evidence, appealing to nothing beyond its own sense of the beautiful or the ugly, and enjoying the specimens of the beautiful simply for their own sake; but conscience does not repose on itself, but vaguely reaches forward to something beyond self, and dimly discerns a sanction higher than self for its decisions, as is evidenced in that keen sense of obligation and responsibility which informs them. And hence it is that we are accustomed to speak of conscience as a voice, a term which we should never think of applying to the sense of the beautiful; and moreover a voice, or the echo of a voice, imperative and constraining, like no other dictate in the whole of our experience.

And again, in consequence of this prerogative of dictating and commanding, which is of its essence, Conscience has an intimate bearing on our affections and emotions, leading us to reverence and awe, hope and fear, especially fear, a feeling which is foreign for the most part, not only to Taste, but even to the Moral Sense, except in consequence of accidental associations. No fear is felt by any one who recognizes that his conduct has not been beautiful, though he may be mortified at himself, if perhaps he has thereby forfeited some advantage; but, if he has been betrayed into any kind of immorality, he has a lively sense of responsibility and guilt, though the act be no offence against society, — of distress and apprehension, even though it may be of present service to him, — of compunction and regret, though in itself it be most pleasurable, — of confusion of face, though it may have no witnesses. These various perturbations of mind which are characteristic of a bad conscience, and may be very considerable, — self-reproach, poignant shame, haunting remorse, chill dismay at the prospect of the future, — and their contraries, when the conscience is good, as real though less forcible, self-approval, inward peace, lightness of heart, and the like, — these emotions constitute a specific difference between conscience and our other intellectual senses, — common sense, good sense, sense of expedience, taste, sense of honour, and the like, — as indeed they would also constitute between conscience and the moral sense, supposing these two were not aspects of one and the same feeling, exercised upon one and the same subject-matter.

So much for the characteristic phenomena, which conscience presents, nor is it difficult to determine what they imply. I refer once more to our sense of the beautiful. This sense is attended by an intellectual enjoyment, and is free from whatever is of the nature of emotion, except in one case, viz. when it is excited by personal objects; then it is that the tranquil feeling of admiration is exchanged for the excitement of affection and passion. Conscience too, considered as a moral sense, an intellectual sentiment, is a sense of admiration and disgust, of approbation and blame: but it is something more than a moral sense; it is always, what the sense of the beautiful is only in certain cases; it is always emotional. No wonder then that it always implies what that sense only sometimes implies; that it always involves the recognition of a living object, towards which it is directed. Inanimate things cannot stir our affections; these are correlative with persons. If, as is the case, we feel responsibility, are

ashamed, are frightened, at transgressing the voice of conscience, this implies that there is One to whom we are responsible, before whom we are ashamed, whose claims upon us we fear. If, on doing wrong, we feel the same tearful, broken-hearted sorrow which overwhelms us on hurting a mother; if, on doing right, we enjoy the same sunny serenity of mind, the same soothing, satisfactory delight which follows on our receiving praise from a father, we certainly have within us the image of some person, to whom our love and veneration look, in whose smile we find our happiness, for whom we yearn, towards whom we direct our pleadings, in whose anger we are troubled and waste away. These feelings in us are such as require for their exciting cause an intelligent being: we are not affectionate towards a stone, nor do we feel shame before a horse or a dog; we have no remorse or compunction on breaking mere human law: yet, so it is, conscience excites all these painful emotions, confusion, foreboding, self-condemnation; and on the other hand it sheds upon us a deep peace, a sense of security, a resignation, and a hope, which there is no sensible, no earthly object to elicit. 'The wicked flees, when no one pursueth';[6] then why does he flee? whence his terror? Who is it that he sees in solitude, in darkness, in the hidden chambers of his heart? If the cause of these emotions does not belong to this visible world, the Object to which his perception is directed must be Supernatural and Divine; and thus the phenomena of Conscience, as a dictate, avail to impress the imagination with the picture of a Supreme Governor, a Judge, holy, just, powerful, all-seeing, retributive, and is the creative principle of religion, as the Moral Sense is the principle of ethics. . . .

To a mind thus carefully formed upon the basis of its natural conscience, the world, both of nature and of man, does but give back a reflection of those truths about the One Living God, which have been familiar to it from childhood. Good and evil meet us daily as we pass through life, and there are those who think it philosophical to act towards the manifestations of each with some sort of impartiality, as if evil had as much right to be there as good, or even a better, as having more striking triumphs and a broader jurisdiction. And because the course of things is determined by fixed laws, they consider that those laws preclude the present agency of the Creator in the carrying out of particular issues. It is otherwise with the theology of a religious imagination. It has a living hold on truths which are really to be found in the world, though they are not upon the surface. It is able to pronounce by anticipation, what it takes a long argument to prove — that good is the rule, and evil the exception. It is able to assume that, uniform as are the laws of nature, they are consistent with a particular Providence. It interprets what it sees around it by this previous inward teaching, as the true key of that maze of vast complicated disorder; and thus it gains a more and more consistent and luminous vision of God from the most unpromising materials. Thus conscience is a connecting principle between the creature and his Creator; and the firmest hold of theological truths is gained by habits of personal religion. When men begin all their works with the thought of God, acting for His sake, and to fulfil His will, when they ask His blessing on themselves and their life, pray to Him for the objects they desire, and see Him in the event, whether it be according to their prayers or not, they will find everything that happens tend to confirm them in the truths about Him which live in their imagination, varied and unearthly as those truths may be. Then they are brought into His presence as that of a Living Person, and are able to hold converse with Him, and that with a directness and simplicity, with

6. See *Proverbs*, xxviii,1.

a confidence and intimacy, *mutatis mutandis*,[7] which we use towards an earthly superior; so that it is doubtful whether we realize the company of our fellow-men with greater keenness than these favoured minds are able to contemplate and adore the Unseen, Incomprehensible Creator. . . .

PART II

CHAPTER IX

The Illative Sense

My object in the foregoing pages has been, not to form a theory which may account for those phenomena of the intellect of which they treat, viz. those which characterize inference and assent, but to ascertain what is the matter of fact as regards them, that is, when it is that assent is given to propositions which are inferred, and under what circumstances. I have never had the thought of an attempt which in me would be ambitious and which has failed in the hands of others, — if that attempt may fairly be called unsuccessful, which, though made by the acutest minds, has not succeeded in convincing opponents. Especially have I found myself unequal to antecedent reasonings in the instance of a matter of fact. There are those, who, arguing *à priori*,[1] maintain, that, since experience leads by syllogism only to probabilities, certitude is ever a mistake. There are others, who, while they deny this conclusion, grant the *à priori* principle assumed in the argument, and in consequence are obliged, in order to vindicate the certainty of our knowledge, to have recourse to the hypothesis of intuitions, intellectual forms, and the like, which belong to us by nature, and may be considered to elevate our experience into something more than it is in itself. Earnestly maintaining, as I would, with this latter school of philosophers, the certainty of knowledge, I think it enough to appeal to the common voice of mankind in proof of it. That is to be accounted a normal operation of our nature, which men in general do actually instance. That is a law of our minds, which is exemplified in action on a large scale, whether *à priori* it ought to be a law or no. Our hoping is a proof that hope, as such, is not an extravagance; and our possession of certitude is a proof that it is not a weakness or an absurdity to be certain. How it comes about that we can be certain is not my business to determine; for me it is sufficient that certitude is felt. This is what the schoolmen,[2] I believe, call treating a subject *in facto esse*,[3] in contrast with *in fieri*.[4] Had I attempted the latter, I should have been falling into metaphysics; but my aim is of a practical character, such as that of Butler in his *Analogy*,[5] with this difference, that he treats of probability, doubt, expedience, and duty, whereas in these pages, without excluding, far from it, the question of duty, I would confine myself to the truth of things, and to the mind's certitude of that truth.

Certitude is a mental state: certainty is a quality of propositions. Those propositions I call certain, which are such that I am certain of them. Certitude is not a passive impression made upon the mind from without, by argumentative compulsion, but in all concrete questions (nay, even in abstract, for though the reasoning is abstract, the mind which judges of it is concrete) it is an active recognition of propositions as true, such as it is the duty of each individual himself to exercise at the bidding of reason, and, when reason forbids, to withhold. And reason never bids us be certain except on an absolute proof; and such a proof can never be furnished to us by the logic of words, for

7. 'necessary changes having been made.'

1. *i.e.* by reason alone, without recourse to experience.

2. See page 351, note 24.

3. 'in a state of achievement.'

4. 'in process.'

5. See page 622, note 22.

as certitude is of the mind, so is the act of inference which leads to it. Every one who reasons, is his own centre; and no expedient for attaining a common measure of minds can reverse this truth; — but then the question follows, is there any *criterion* of the accuracy of an inference, such as may be our warrant that certitude is rightly elicited in favour of the proposition inferred, since our warrant cannot, as I have said, be scientific? I have already said that the sole and final judgment on the validity of an inference in concrete matter is committed to the personal action of the ratiocinative faculty, the perfection or virtue of which I have called the Illative Sense, a use of the word 'sense' parallel to our use of it in 'good sense,' 'common sense,' a 'sense of beauty,' &c.; — and I own I do not see any way to go farther than this in answer to the question. However, I can at least explain my meaning more fully; and therefore I will now speak, first of the sanction of the Illative Sense, next of its nature, and then of its range.

1. THE SANCTION OF THE ILLATIVE SENSE

We are in a world of facts, and we use them; for there is nothing else to use. We do not quarrel with them, but we take them as they are, and avail ourselves of what they can do for us. It would be out of place to demand of fire, water, earth, and air their credentials, so to say, for acting upon us, or ministering to us. We call them elements, and turn them to account, and make the most of them. We speculate on them at our leisure. But what we are still less able to doubt about or annul, at our leisure or not, is that which is at once their counterpart and their witness, I mean, ourselves. We are conscious of the objects of external nature, and we reflect and act upon them, and this consciousness, reflection, and action we call our rationality. And as we use the (so called) elements without first criticizing what we have no command over, so is it much more unmeaning in us to criticize or find fault with our own nature, which is nothing else than we ourselves, instead of using it according to the use of which it ordinarily admits. Our being, with its faculties, mind and body, is a fact not admitting of question, all things being of necessity referred to it, not it to other things.

If I may not assume that I exist, and in a particular way, that is, with a particular mental constitution, I have nothing to speculate about, and had better let speculation alone. Such as I am, it is my all; this is my essential stand point, and must be taken for granted; otherwise, thought is but an idle amusement, not worth the trouble. There is no medium between using my faculties, as I have them, and flinging myself upon the external world according to the random impulse of the moment, as spray upon the surface of the waves, and simply forgetting that I am.

I am what I am, or I am nothing. I cannot think, reflect, or judge about my being, without starting from the very point which I aim at concluding. My ideas are all assumptions, and I am ever moving in a circle. I cannot avoid being sufficient for myself, for I cannot make myself anything else, and to change me is to destroy me. If I do not use myself, I have no other self to use. My only business is to ascertain what I am, in order to put it to use. It is enough for the proof of the value and authority of any function which I possess, to be able to pronounce that it is natural. What I have to ascertain is the laws under which I live. My first elementary lesson of duty is that of resignation to the laws of my nature, whatever they are; my first disobedience is to be impatient at what I am, and to indulge an ambitious aspiration after what I cannot be, to cherish a distrust of my powers, and to desire to change laws which are identical with myself.

Truths such as these, which are too obvious to be called irresistible, are illus-

trated by what we see in universal nature. Every being is in a true sense sufficient for itself, so as to be able to fulfil its particular needs. It is a general law that, whatever is found as a function or an attribute of any class of beings, or is natural to it, is in its substance suitable to it, and subserves its existence, and cannot be rightly regarded as a fault or enormity. No being could endure, of which the constituent parts were at war with each other. And more than this; there is that principle of vitality in every being, which is of a sanative and restorative character, and which brings all its parts and functions together into one whole, and is ever repelling and correcting the mischiefs which befall it, whether from within or without, while showing no tendency to cast off its belongings as if foreign to its nature. The brute animals are found severally with limbs and organs, habits, instincts, appetites, surroundings, which play together for the safety and welfare of the whole; and, after all exceptions, may be said each of them to have, after its own kind, a perfection of nature. Man is the highest of the animals, and more indeed than an animal, as having a mind; that is, he has a complex nature different from theirs, with a higher aim and a specific perfection; but still the fact that other beings find their good in the use of their particular nature, is a reason for anticipating that to use duly our own is our interest as well as our necessity.

What is the peculiarity of our nature, in contrast with the inferior animals around us? It is that, though man cannot change what he is born with, he is a being of progress with relation to his perfection and characteristic good. Other beings are complete from their first existence, in that line of excellence which is allotted to them; but man begins with nothing realized (to use the word), and he has to make capital for himself by the exercise of those faculties which are his natural inheritance. Thus he gradually advances to the fulness of his original destiny. Nor is this progress mechanical, nor is it of necessity; it is committed to the personal efforts of each individual of the species; each of us has the prerogative of completing his inchoate and rudimental nature, and of developing his own perfection out of the living elements with which his mind began to be. It is his gift to be the creator of his own sufficiency; and to be emphatically self-made. This is the law of his being, which he cannot escape; and whatever is involved in that law he is bound, or rather he is carried on, to fulfil.

And here I am brought to the bearing of these remarks upon my subject. For this law of progress is carried out by means of the acquisition of knowledge, of which inference and assent are the immediate instruments. Supposing, then, the advancement of our nature, both in ourselves individually and as regards the human family, is, to every one of us in his place, a sacred duty, it follows that that duty is intimately bound up with the right use of these two main instruments of fulfilling it. And as we do not gain the knowledge of the law of progress by any *à priori* view of man, but by looking at it as the interpretation which is provided by himself on a large scale in the ordinary action of his intellectual nature, so too we must appeal to himself, as a fact, and not to any antecedent theory, in order to find what is the law of his mind as regards the two faculties in question. If then such an appeal does bear me out in deciding, as I have done, that the course of inference is ever more or less obscure, while assent is ever distinct and definite, and yet that what is in its nature thus absolute does, in fact follow upon what in outward manifestation is thus complex, indirect, and recondite, what is left to us but to take things as they are, and to resign ourselves to what we find? that is, instead of devising, what cannot be, some sufficient science of reasoning which may compel certitude in concrete conclusions,

to confess that there is no ultimate test of truth besides the testimony born to truth by the mind itself, and that this phenomenon, perplexing as we may find it, is a normal and inevitable characteristic of the mental constitution of a being like man on a stage such as the world. His progress is a living growth, not a mechanism; and its instruments are mental acts, not the formulas and contrivances of language.

We are accustomed in this day to lay great stress upon the harmony of the universe; and we have well learned the maxim so powerfully inculcated by our own English philosopher, that in our inquiries into its laws, we must sternly destroy all idols of the intellect,[6] and subdue nature by co-operating with her. Knowledge is power, for it enables us to use eternal principles which we cannot alter. So also is it in that microcosm, the human mind. Let us follow Bacon more closely than to distort its faculties according to the demands of an ideal optimism, instead of looking out for modes of thought proper to our nature, and faithfully observing them in our intellectual exercises.

Of course I do not stop here. As the structure of the universe speaks to us of Him who made it, so the laws of the mind are the expression, not of mere constituted order, but of His will. I should be bound by them even were they not His laws; but since one of their very functions is to tell me of Him, they throw a reflex light upon themselves, and, for resignation to my destiny, I substitute a cheerful concurrence in an overruling Providence. We may gladly welcome such difficulties as are to be found in our mental constitution, and in the interaction of our faculties, if we are able to feel that He gave them to us, and He can overrule them for us. We may securely take them as they are, and use them as we find them. It is He who teaches us all knowledge; and the way by which we acquire it is His way. He varies that way according to the subject-matter; but whether He has set before us in our particular pursuit the way of observation or of experiment, of speculation or of research, of demonstration or of probability, whether we are inquiring into the system of the universe, or into the elements of matter and of life, or into the history of human society and past times, if we take the way proper to our subject-matter, we have His blessing upon us, and shall find, besides abundant matter for mere opinion, the materials in due measure of proof and assent.

And especially, by this disposition of things, shall we learn, as regards religious and ethical inquiries, how little we can effect, however much we exert ourselves, without that Blessing; for, as if on set purpose, He has made this path of thought rugged and circuitous above other investigations, that the very discipline inflicted on our minds in finding Him, may mould them into due devotion to Him when He is found. 'Verily Thou art a hidden God, the God of Israel, the Saviour,'[7] is the very law of His dealings with us. Certainly we need a clue into the labyrinth which is to lead us to Him; and who among us can hope to seize upon the true starting-points of thought for that enterprise, and upon all of them, who is to understand their right direction, to follow them out to their just limits, and duly to estimate, adjust, and combine the various reasonings in which they issue, so as safely to arrive at what it is worth any labour to secure, without a special illumination from Himself? Such are the dealings of Wisdom with the elect soul. 'She will bring upon him fear, and dread, and trial; and She will torture him with the tribulation of Her discipline, till She try him by Her laws, and trust his soul. Then She will strengthen him, and make Her way straight to him, and give him joy.'[8]

2. THE NATURE OF THE ILLATIVE SENSE

It is the mind that reasons, and that controls its own reasonings, not any technical apparatus of words and propositions. This power of judging and concluding, when in its perfection, I call the Illative Sense, and I shall best illustrate it by referring to parallel faculties, which we commonly recognize without difficulty.

For instance, how does the mind fulfil its function of supreme direction and control, in matters of duty, social intercourse, and taste? In all of these separate actions of the intellect, the individual is supreme, and responsible to himself, nay, under circumstances, may be justified in opposing himself to the judgment of the whole world; though he uses rules to his great advantage, as far as they go, and is in consequence bound to use them. As regards moral duty, the subject is fully considered in the well-known ethical treatises of Aristotle.[9] He calls the faculty which guides the mind in matters of conduct, by the name of *phronesis*, or judgment. This is the directing, controlling, and determining principle in such matters, personal and social. What it is to be virtuous, how we are to gain the just idea and standard of virtue, how we are to approximate in practice to our own standard, what is right and wrong in a particular case, for the answers in fulness and accuracy to these and similar questions, the philosopher refers us to no code of laws, to no moral treatise, because no science of life, applicable to the case of an individual, has been or can be written. Such is Aristotle's doctrine, and it is undoubtedly true. An ethical system may supply laws, general rules, guiding principles, a number of examples, suggestions, landmarks, limitations, cautions, distinctions, solutions of critical or anxious difficulties; but who is to apply them to a particular case? whither can we go, except to the living intellect, our own, or another's? What is written is too vague, too negative for our need. It bids us avoid extremes; but it cannot ascertain for us, according to our personal need, the golden mean. The authoritative oracle, which is to decide our path, is something more searching and manifold than such jejune generalizations as treatises can give, which are most distinct and clear when we least need them. It is seated in the mind of the individual, who is thus his own law, his own teacher, and his own judge in those special cases of duty which are personal to him. It comes of an acquired habit, though it has its first origin in nature itself, and it is formed and matured by practice and experience; and it manifests itself, not in any breadth of view, any philosophical comprehension of the mutual relations of duty towards duty, or any consistency in its teachings, but it is a capacity sufficient for the occasion, deciding what ought to be done here and now, by this given person, under these given circumstances. It decides nothing hypothetical, it does not determine what a man should do ten years hence, or what another should do at this time. It may indeed happen to decide ten years hence as it does now, and to decide a second case now as it now decides a first; still its present act is for the present, not for the distant or the future.

State or public law is inflexible, but this mental rule is not only minute and particular, but has an elasticity, which, in its application to individual cases, is, as I have said, not studious to maintain the appearance of consistency. In old times the mason's rule which was in use at Lesbos was, according to Aristotle, not of wood or iron, but of lead, so as to allow of its ad-

9. Though Aristotle in his Nicomachean Ethics, speaks of *φρόνησις* as the virtue of the *δοξαστικόν* generally, and as being concerned generally with contingent matter (vi,4), or what I have called the concrete, and of its function being, as regards that matter, *ἀληθεύειν τῷ καταφαναι ἢ ἀποφάναι* (*ibid.* 3), he does not treat of it in that work in its general relation to truth and the affirmation of truth, but only as it bears upon *τὰ πρακτά*. [Newman's note.]

justment to the uneven surface of the stones brought together for the work. By such the philosopher illustrates the nature of equity in contrast with law, and such is that *phronesis*, from which the science of morals forms its rules, and receives its complement.

In this respect of course the law of truth differs from the law of duty, that duties change, but truths never; but, though truth is ever one and the same, and the assent of certitude is immutable, still the reasonings which carry us on to truth and certitude are many and distinct, and vary with the inquirer; and it is not with assent, but with the controlling principle in inferences that I am comparing *phronesis*. It is with this drift that I observe that the rule of conduct for one man is not always the rule for another, though the rule is always one and the same in the abstract, and in its principle and scope. To learn his own duty in his own case, each individual must have recourse to his own rule; and if his rule is not sufficiently developed in his intellect for his need, then he goes to some other living, present authority, to supply it for him, not to the dead letter of a treatise or a code. A living, present authority, himself or another, is his immediate guide in matters of a personal, social, or political character. In buying and selling, in contracts, in his treatment of others, in giving and receiving, in thinking, speaking, doing, and working, in toil, in danger, in his recreations and pleasures, every one of his acts, to be praiseworthy, must be in accordance with this practical sense. Thus it is, and not by science, that he perfects the virtues of justice, self-command, magnanimity, generosity, gentleness, and all others. *Phronesis* is the regulating principle of every one of them.

These last words lead me to a further remark. I doubt whether it is correct, strictly speaking, to consider this *phronesis* as a general faculty, directing and perfecting all the virtues at once. So understood, it is little better than an abstract term, including under it a circle of analogous faculties severally proper to the separate virtues. Properly speaking, there are as many kinds of *phronesis* as there are virtues: for the judgment, good sense, or tact which is conspicuous in a man's conduct in one subject-matter, is not necessarily traceable in another. As in the parallel cases of memory and reasoning, he may be great in one aspect of his character, and little-minded in another. He may be exemplary in his family, yet commit a fraud on the revenue; he may be just and cruel, brave and sensual, imprudent and patient. And if this be true of the moral virtues, it holds good still more fully when we compare what is called his private character with his public. A good man may make a bad king; profligates have been great statesmen, or magnanimous political leaders.

So, too, I may go on to speak of the various callings and professions which give scope to the exercise of great talents, for these talents also are matured, not by mere rule, but by personal skill and sagacity. They are as diverse as pleading and cross-examining, conducting a debate in Parliament, swaying a public meeting, and commanding an army; and here, too, I observe that, though the directing principle in each case is called by the same name, — sagacity, skill, tact, or prudence, — still there is no one ruling faculty leading to eminence in all these various lines of action in common, but men will excel in one of them, without any talent for the rest.

The parallel may be continued in the case of the Fine Arts, in which, though true and scientific rules may be given, no one would therefore deny that Phidias or Rafael had a far more subtle standard of taste and a more versatile power of embodying it in his works, than any which he could communicate to others in even a series of treatises. And here again genius is indissolubly united to one definite sub-

ject-matter; a poet is not therefore a painter, or an architect a musical composer.

And so, again, as regards the useful arts and personal accomplishments, we use the same word 'skill,' but proficiency in engineering or in ship-building, or again in engraving, or again in singing, in playing instruments, in acting, or in gymnastic exercises, is as simply one with its particular subject-matter, as the human soul with its particular body, and is, in its own department, a sort of instinct or inspiration, not an obedience to external rules of criticism or of science.

It is natural, then, to ask the question, why ratiocination should be an exception to a general law which attaches to the intellectual exercises of the mind; why it is held to be commensurate with logical science; and why logic is made an instrumental art sufficient for determining every sort of truth, while no one would dream of making any one formula, however generalized, a working rule at once for poetry, the art of medicine, and political warfare?

This is what I have to remark concerning the Illative Sense, and in explanation of its nature and claims; and on the whole, I have spoken of it in four respects, — as viewed in itself, in its subject-matter, in the process it uses, and in its function and scope.

First, viewed in its exercise, it is one and the same in all concrete matters, though employed in them in different measures. We do not reason in one way in chemistry or law, in another in morals or religion; but in reasoning on any subject whatever, which is concrete, we proceed, as far indeed as we can, by the logic of language, but we are obliged to supplement it by the more subtle and elastic logic of thought; for forms by themselves prove nothing.

Secondly, it is in fact attached to definite subject-matters, so that a given individual may possess it in one department of thought, for instance, history, and not in another, for instance, philosophy.

Thirdly, in coming to its conclusion, it proceeds always in the same way, by a method of reasoning, which, as I have observed above, is the elementary principle of that mathematical calculus of modern times, which has so wonderfully extended the limits of abstract science.[10]

Fourthly, in no class of concrete reasonings, whether in experimental science, historical research, or theology, is there any ultimate test of truth and error in our inferences besides the trustworthiness of the Illative Sense that gives them its sanction; just as there is no sufficient test of poetical excellence, heroic action, or gentlemanlike conduct, other than the particular mental sense, be it genius, taste, sense of propriety, or the moral sense, to which those subject-matters are severally committed. Our duty in each of these is to strengthen and perfect the special faculty which is its living rule, and in every case as it comes to do our best. And such also is our duty and our necessity, as regards the Illative Sense.

3. THE RANGE OF THE ILLATIVE SENSE

Great as are the services of language in enabling us to extend the compass of our inferences, to test their validity, and to communicate them to others, still the mind itself is more versatile and vigorous than any of its works, of which language is one, and it is only under its penetrating and subtle action that the margin disappears, which I have described as intervening between verbal argumentation and conclusions in the concrete. It determines what science cannot determine, the limit of converging probabilities and the rea-

10. Allusion to Newton's *Principia*, which Newman cited in Chapter viii, section 2, 'Informal Inference': 'I consider, then, that the principle of concrete reasoning is parallel to the method of proof which is the foundation of modern mathematical science, as contained in the celebrated lemma with which Newton opens his "Principia."'

sons sufficient for a proof. It is the ratiocinative mind itself, and no trick of art, however simple in its form and sure in operation, by which we are able to determine, and thereupon to be certain, that a moving body left to itself will never stop, and that no man can live without eating.

Nor, again, is it by any diagram that we are able to scrutinize, sort, and combine the many premisses which must be first run together before we answer duly a given question. It is to the living mind that we must look for the means of using correctly principles of whatever kind, facts or doctrines, experiences or testimonies, true or probable, and of discerning what conclusion from these is necessary, suitable, or expedient, when they are taken for granted; and this, either by means of a natural gift, or from mental formation and practice and a long familiarity with those various starting-points. Thus, when Laud [11] said that he did not see his way to come to terms with the Holy See, 'till Rome was other than she was,' no Catholic would admit the sentiment: but any Catholic may understand that this is just the judgment consistent with Laud's actual condition of thought and cast of opinions, his ecclesiastical position, and the existing state of England.

Nor, lastly, is an action of the mind itself less necessary in relation to those first elements of thought which in all reasoning are assumptions, the principles, tastes, and opinions, very often of a personal character, which are half the battle in the inference with which the reasoning is to terminate. It is the mind itself that detects them in their obscure recesses, illustrates them, establishes them, eliminates them, resolves them into simpler ideas, as the case may be. The mind contemplates them without the use of words, by a process which cannot be analyzed. Thus it was that Bacon separated the physical system of the world from the theological; thus that Butler connected together the moral system with the religious. Logical formulas could never have sustained the reasonings involved in such investigations.

Thus the Illative Sense, that is, the reasoning faculty, as exercised by gifted, or by educated or otherwise well-prepared minds, has its function in the beginning, middle, and end of all verbal discussion and inquiry, and in every step of the process. It is a rule to itself, and appeals to no judgment beyond its own; and attends upon the whole course of thought from antecedents to consequents, with a minute diligence and unwearied presence, which is impossible to a cumbrous apparatus of verbal reasoning, though, in communicating with others, words are the only instrument we possess, and a serviceable, though imperfect instrument. . . .

Of the two, I would rather have to maintain that we ought to begin with believing everything that is offered to our acceptance, than that it is our duty to doubt of everything. The former, indeed, seems the true way of learning. In that case, we soon discover and discard what is contradictory to itself; and error having always some portion of truth in it, and the truth having a reality which error has not, we may expect, that when there is an honest purpose and fair talents, we shall somehow make our way forward, the error falling off from the mind, and the truth developing and occupying it. Thus it is that the Catholic religion is reached, as we see, by inquirers from all points of the compass, as if it mattered not where a man began, so that he had an eye and a heart for the truth.

An argument has been often put forward by unbelievers, I think by Paine, to this effect, that 'a revelation, which is to be received as true, ought to be written on

11. William Laud (1573–1645), Archbishop of Canterbury during the turbulent times of the Puritan Revolution.

the sun.'[12] This appeals to the common-sense of the many with great force, and implies the assumption of a principle which Butler, indeed, would not grant, and would consider unphilosophical, and yet I think something may be said in its favour. Whether abstractedly defensible or not, Catholic populations would not be averse, *mutatis mutandis*,[13] to admitting it. Till these last centuries, the Visible Church was, at least to her children, the light of the world, as conspicuous as the sun in the heavens; and the Creed was written on her forehead, and proclaimed through her voice, by a teaching as precise as it was emphatical; in accordance with the text, 'Who is she that looketh forth at the dawn, fair as the moon, bright as the sun, terrible as an army set in array?'[14] It was not, strictly speaking, a miracle, doubtless; but in its effect, nay, in its circumstances, it was little less. Of course I would not allow that the Church fails in this manifestation of the truth now, any more than in former times, though the clouds have come over the sun; for what she has lost in her appeal to the imagination, she has gained in philosophical cogency, by the evidence of her persistent vitality. So far is clear, that if Paine's aphorism has a *primâ facie* force against Christianity, it owes this advantage to the miserable deeds of the fifteenth and sixteenth centuries.[15]

Another conflict of first principles of assumptions, which have often been implicit on either side, has been carried through in our day, and relates to the end and scope of civil society, that is, whether government and legislation ought to be of a religious character, or not; whether the state has a conscience; whether Christianity is the law of the land; whether the magistrate, in punishing offenders, exercises a retributive office or a corrective; or whether the whole structure of society is raised upon the basis of secular expediency. The relation of philosophy and the sciences to theology comes into the question. The old time-honoured theory has, during the last forty years, been vigorously contending with the new; and the new is in the ascendant.

There is another great conflict of first principles, and that among Christians, which has occupied a large space in our domestic history, during the last thirty or forty years, and that is the controversy about the Rule of Faith. I notice it as affording an instance of an assumption so deeply sunk into the popular mind, that it is a work of great difficulty to obtain from its maintainers an acknowledgment that it is an assumption. That Scripture is the Rule of Faith is in fact an assumption so congenial to the state of mind and course of thought usual among Protestants, that it seems to them rather a truism than a truth. If they are in controversy with Catholics on any point of faith, they at once ask, 'Where do you find it in Scripture?' and if Catholics reply, as they must do, that it is not necessarily in Scripture in order to be true, nothing can persuade them that such an answer is not an evasion, and a triumph to themselves. Yet it is by no means self-evident that all religious truth is to be found in a number of works, however sacred, which were written at different times, and did not always form one book; and in fact it is a doctrine very hard to prove. So much so, that years ago, when I was considering it from a Protestant point of view, and wished to defend it to the best of my power, I was unable to give any better account of it than the following, which I here quote from its appositeness to my present subject.

'It matters not,' I said, speaking of the first Protestants, 'whether or not they only happened to come right on what, in a

13. 'necessary changes having been made.'

14. See *Song of Solomon*, vi,10.

15. *i.e.* of the Reformation.

logical point of view, are faulty premisses. They had no time for theories of any kind; and to require theories at their hand argues an ignorance of human nature, and of the ways in which truth is struck out in the course of life. Common sense, chance, moral perception, genius, the great discoverers of principles do not reason. They have no arguments, no grounds, they see the truth, but they do not know how they see it; and if at any time they attempt to prove it, it is as much a matter of experiment with them, as if they had to find a road to a distant mountain, which they see with the eye; and they get entangled, embarrassed, and perchance overthrown in the superfluous endeavour. It is the second-rate men, though most useful in their place, who prove, reconcile, finish, and explain. Probably, the popular feeling of the sixteenth century saw the Bible to be the Word of God, so as nothing else is His Word, by the power of a strong sense, by a sort of moral instinct, or by a happy augury.' [16]

That is, I considered the assumption an act of the Illative Sense; — I should now add, the Illative Sense, acting on mistaken elements of thought.

After the aspects in which a question is to be viewed, and the principles on which it is to be considered, come the arguments by which it is decided; among these are antecedent reasons, which are especially in point here, because they are in great measure made by ourselves and belong to our personal character, and to them I shall confine myself.

Antecedent reasoning, when negative, is safe. Thus no one would say that, because Alexander's rash heroism is one of the leading characteristics of his history, therefore we are justified, except in writing a romance, in asserting that at a particular time and place, he distinguished himself by a certain exploit about which history is altogether silent; but, on the other hand, his notorious bravery would be almost decisive against any charge against him of having on a particular occasion acted as a coward.

In like manner, good character goes far in destroying the force of even plausible charges. There is indeed a degree of evidence in support of an allegation, against which reputation is no defence: but it must be singularly strong to overcome an established antecedent probability which stands opposed to it. Thus historical personages or great authors, men of high and pure character, have had imputations cast upon them, easy to make, difficult or impossible to meet, which are indignantly trodden under foot by all just and sensible men, as being as anti-social as they are inhuman. I need not add what a cruel and despicable part a husband or a son would play, who really listened to a charge against his wife or his father. Yet all this being admitted, a great number of cases remain which are perplexing, and on which we cannot adjust the claims of conflicting and heterogeneous arguments except by the keen and subtle operation of the Illative Sense.

Butler's argument in his *Analogy* is such a presumption used negatively. Objection being brought against certain characteristics of Christianity, he meets it by the presumption in their favour derived from their parallels as discoverable in the order of nature, arguing that they do not tell against the Divine origin of Christianity, unless they tell against the Divine origin of the natural system also. But he could not adduce it as a positive and direct proof of the Divine origin of the Christian doctrines that they had their parallels in nature, or at the utmost as more than a recommendation of them to the religious inquirer.

Unbelievers use the antecedent argument from the order of nature against our belief in miracles. Here, if they only mean that the fact of that system of laws, by which physical nature is governed, makes

16. 'Prophetical Office of the Church,' pp.347, 348, ed.1837. [Newman's note.]

it antecedently improbable that an exception should occur in it, there is no objection to the argument; but if, as is not uncommon, they mean that the fact of an established order is absolutely fatal to the very notion of an exception, they are using a presumption as if it were a proof. They are saying, — What has happened 999 times one way cannot possibly happen on the 1000th time another way, *because* what has happened 999 times one way is likely to happen in the same way on the 1000th. But unlikely things do happen sometimes. If, however, they mean that the existing order of nature constitutes a physical necessity, and that a law is an unalterable fact, this is to assume the very point in debate, and is much more than asserting its antecedent probability.

Facts cannot be proved by presumptions, yet it is remarkable that in cases where nothing stronger than presumption was even professed, scientific men have sometimes acted as if they thought this kind of argument, taken by itself, decisive of a fact which was in debate. Thus in the controversy about the Plurality of worlds, it has been considered, on purely antecedent grounds, as far as I see, to be so necessary that the Creator should have filled with living beings the luminaries which we see in the sky, and the other cosmical bodies which we imagine there, that it almost amounts to a blasphemy to doubt it.

Theological conclusions, it is true, have often been made on antecedent reasonings; but then it must be recollected that theological reasoning professes to be sustained by a more than human power, and to be guaranteed by a more than human authority. It may be true, also, that conversions to Christianity have often been made on antecedent reasons; yet, even admitting the fact, which is not quite clear, a number of antecedent probabilities, confirming each other, may make it a duty in the judgment of a prudent man, not only to act as if a statement were true, but actually to accept and believe it. This is not unfrequently instanced in our dealings with others, when we feel it right, in spite of our misgivings, to oblige ourselves to believe their honesty. And in all these delicate questions there is constant call for the exercise of the Illative Sense.

John Stuart Mill
1806–1873

ON LIBERTY

CHAPTER I
Introductory

THE subject of this Essay is not the so-called Liberty of the Will, so unfortunately opposed to the misnamed doctrine of Philosophical Necessity; but Civil, or Social Liberty: the nature and limits of the power which can be legitimately exercised by society over the individual. A question seldom stated, and hardly ever discussed, in general terms, but which profoundly influences the practical controversies of the age by its latent presence, and is likely soon to make itself recognized as the vital question of the future. It is so far from being new, that, in a certain sense, it has divided mankind, almost from the remotest ages; but in the stage of progress into which the more civilized portions of the species have now entered, it presents itself under new conditions, and requires a different and more fundamental treatment.

The struggle between Liberty and Authority is the most conspicuous feature in the portions of history with which we are earliest familiar, particularly in that of

Greece, Rome, and England. But in old times this contest was between subjects, or some classes of subjects, and the Government. By liberty, was meant protection against the tyranny of the political rulers. The rulers were conceived (except in some of the popular governments of Greece) as in a necessarily antagonistic position to the people whom they ruled. They consisted of a governing One, or a governing tribe or caste, who derived their authority from inheritance or conquest, who, at all events, did not hold it at the pleasure of the governed, and whose supremacy men did not venture, perhaps did not desire, to contest, whatever precautions might be taken against its oppressive exercise. Their power was regarded as necessary, but also as highly dangerous; as a weapon which they would attempt to use against their subjects, no less than against external enemies. To prevent the weaker members of the community from being preyed upon by innumerable vultures, it was needful that there should be an animal of prey stronger than the rest, commissioned to keep them down. But as the king of the vultures would be no less bent upon preying on the flock than any of the minor harpies, it was indispensable to be in a perpetual attitude of defence against his beak and claws. The aim, therefore, of patriots was to set limits to the power which the ruler should be suffered to exercise over the community; and this limitation was what they meant by liberty. It was attempted in two ways. First, by obtaining a recognition of certain immunities, called political liberties or rights, which it was to be regarded as a breach of duty in the ruler to infringe, and which, if he did infringe, specific resistance, or general rebellion, was held to be justifiable. A second, and generally a later expedient, was the establishment of constitutional checks, by which the consent of the community, or of a body of some sort, supposed to represent its interests, was made a necessary condition to some of the more important acts of the governing power. To the first of these modes of limitation, the ruling power, in most European countries, was compelled, more or less, to submit. It was not so with the second; and, to attain this, or when already in some degree possessed, to attain it more completely, became everywhere the principal object of the lovers of liberty. And so long as mankind were content to combat one enemy by another, and to be ruled by a master, on condition of being guaranteed more or less efficaciously against his tyranny, they did not carry their aspirations beyond this point.

A time, however, came, in the progress of human affairs, when men ceased to think it a necessity of nature that their governors should be an independent power, opposed in interest to themselves. It appeared to them much better that the various magistrates of the State should be their tenants or delegates, revocable at their pleasure. In that way alone, it seemed, could they have complete security that the powers of government would never be abused to their disadvantage. By degrees this new demand for elective and temporary rulers became the prominent object of the exertions of the popular party, wherever any such party existed; and superseded, to a considerable extent, the previous efforts to limit the power of rulers. As the struggle proceeded for making the ruling power emanate from the periodical choice of the ruled, some persons began to think that too much importance had been attached to the limitation of the power itself. *That* (it might seem) was a resource against rulers whose interests were habitually opposed to those of the people. What was now wanted was, that the rulers should be identified with the people; that their interest and will should be the interest and will of the nation. The nation did not need to be protected against its own will. There was no fear of its tyrannizing over itself. Let the rulers be effectually responsible to it, promptly remov-

able by it, and it could afford to trust them with power of which it could itself dictate the use to be made. Their power was but the nation's own power, concentrated, and in a form convenient for exercise. This mode of thought, or rather perhaps of feeling, was common among the last generation of European liberalism, in the Continental section of which it still apparently predominates. Those who admit any limit to what a government may do, except in the case of such governments as they think ought not to exist, stand out as brilliant exceptions among the political thinkers of the Continent. A similar tone of sentiment might by this time have been prevalent in our own country, if the circumstances which for a time encouraged it, had continued unaltered.

But, in political and philosophical theories, as well as in persons, success discloses faults and infirmities which failure might have concealed from observation. The notion, that the people have no need to limit their power over themselves, might seem axiomatic, when popular government was a thing only dreamed about, or read of as having existed at some distant period of the past. Neither was that notion necessarily disturbed by such temporary aberrations as those of the French Revolution, the worst of which were the work of an usurping few, and which, in any case, belonged, not to the permanent working of popular institutions, but to a sudden and convulsive outbreak against monarchical and aristocratic despotism. In time, however, a democratic republic came to occupy a large portion of the earth's surface, and made itself felt as one of the most powerful members of the community of nations; and elective and responsible government became subject to the observations and criticisms which wait upon a great existing fact. It was now perceived that such phrases as 'self-government,' and 'the power of the people over themselves,' do not express the true state of the case. The 'people' who exercise the power are not always the same people with those over whom it is exercised; and the 'self-government' spoken of is not the government of each by himself, but of each by all the rest. The will of the people, moreover, practically means the will of the most numerous or the most active *part* of the people; the majority, or those who succeed in making themselves accepted as the majority; the people, consequently, *may* desire to oppress a part of their number; and precautions are as much needed against this as against any other abuse of power. The limitation, therefore, of the power of government over individuals loses none of its importance when the holders of power are regularly accountable to the community, that is, to the strongest party therein. This view of things, recommending itself equally to the intelligence of thinkers and to the inclination of those important classes in European society to whose real or supposed interests democracy is adverse, has had no difficulty in establishing itself; and in political speculations 'the tyranny of the majority' is now generally included among the evils against which society requires to be on its guard.

Like other tyrannies, the tyranny of the majority was at first, and is still vulgarly, held in dread, chiefly as operating through the acts of the public authorities. But reflecting persons perceived that when society is itself the tyrant — society collectively, over the separate individuals who compose it — its means of tyrannizing are not restricted to the acts which it may do by the hands of its political functionaries. Society can and does execute its own mandates: and if it issues wrong mandates instead of right, or any mandates at all in things with which it ought not to meddle, it practises a social tyranny more formidable than many kinds of political oppression, since, though not usually upheld by such extreme penalties, it leaves fewer means of escape, penetrating much more deeply into the details of life, and enslaving the soul itself. Protection, therefore,

against the tyranny of the magistrate is not enough: there needs protection also against the tyranny of the prevailing opinion and feeling; against the tendency of society to impose, by other means than civil penalties, its own ideas and practices as rules of conduct on those who dissent from them; to fetter the development, and, if possible, prevent the formation, of any individuality not in harmony with its ways, and compel all characters to fashion themselves upon the model of its own. There is a limit to the legitimate interference of collective opinion with individual independence: and to find that limit, and maintain it against encroachment, is as indispensable to a good condition of human affairs, as protection against political despotism.

But though this proposition is not likely to be contested in general terms, the practical question, where to place the limit — how to make the fitting adjustment between individual independence and social control — is a subject on which nearly everything remains to be done. All that makes existence valuable to any one, depends on the enforcement of restraints upon the actions of other people. Some rules of conduct, therefore, must be imposed, by law in the first place, and by opinion on many things which are not fit subjects for the operation of law. What these rules should be, is the principal question in human affairs; but if we except a few of the most obvious cases, it is one of those which least progress has been made in resolving. No two ages, and scarcely any two countries, have decided it alike; and the decision of one age or country is a wonder to another. Yet the people of any given age and country no more suspect any difficulty in it, than if it were a subject on which mankind had always been agreed. The rules which obtain among themselves appear to them self-evident and self-justifying. This all but universal illusion is one of the examples of the magical influence of custom, which is not only, as the proverb says, a second nature, but is continually mistaken for the first. The effect of custom, in preventing any misgiving respecting the rules of conduct which mankind impose on one another, is all the more complete because the subject is one on which it is not generally considered necessary that reasons should be given, either by one person to others, or by each to himself. People are accustomed to believe, and have been encouraged in the belief by some who aspire to the character of philosophers, that their feelings, on subjects of this nature, are better than reasons, and render reasons unnecessary. The practical principle which guides them to their opinions on the regulation of human conduct, is the feeling in each person's mind that everybody should be required to act as he, and those with whom he sympathizes, would like them to act. No one, indeed, acknowledges to himself that his standard of judgement is his own liking; but an opinion on a point of conduct, not supported by reasons, can only count as one person's preference; and if the reasons, when given, are a mere appeal to a similar preference felt by other people, it is still only many people's liking instead of one. To an ordinary man, however, his own preference, thus supported, is not only a perfectly satisfactory reason, but the only one he generally has for any of his notions of morality, taste, or propriety, which are not expressly written in his religious creed; and his chief guide in the interpretation even of that. Men's opinions, accordingly, on what is laudable or blameable, are affected by all the multifarious causes which influence their wishes in regard to the conduct of others, and which are as numerous as those which determine their wishes on any other subject. Sometimes their reason — at other times their prejudices or superstitions: often their social affections, not seldom their antisocial ones, their envy or jealousy, their arrogance or contemptuousness: but most commonly, their desires

or fears for themselves — their legitimate or illegitimate self-interest. Wherever there is an ascendant class, a large portion of the morality of the country emanates from its class interests, and its feelings of class superiority. The morality between Spartans and Helots,[1] between planters and negroes, between princes and subjects, between nobles and roturiers, between men and women, has been for the most part the creation of these class interests and feelings: and the sentiments thus generated, react in turn upon the moral feelings of the members of the ascendant class, in their relations among themselves. Where, on the other hand, a class, formerly ascendant, has lost its ascendancy, or where its ascendancy is unpopular, the prevailing moral sentiments frequently bear the impress of an impatient dislike of superiority. Another grand determining principle of the rules of conduct, both in act and forbearance, which have been enforced by law or opinion, has been the servility of mankind towards the supposed preferences or aversions of their temporal masters, or of their gods. This servility, though essentially selfish, is not hypocrisy; it gives rise to perfectly genuine sentiments of abhorrence; it made men burn magicians and heretics. Among so many baser influences, the general and obvious interests of society have of course had a share, and a large one, in the direction of the moral sentiments: less, however, as a matter of reason, and on their own account, than as a consequence of the sympathies and antipathies which grew out of them: and sympathies and antipathies which had little or nothing to do with the interests of society, have made themselves felt in the establishment of moralities with quite as great force.

The likings and dislikings of society, or of some powerful portion of it, are thus the main thing which has practically determined the rules laid down for general observance, under the penalties of law or opinion. And in general, those who have been in advance of society in thought and feeling, have left this condition of things unassailed in principle, however they may have come into conflict with it in some of its details. They have occupied themselves rather in inquiring what things society ought to like or dislike, than in questioning whether its likings or dislikings should be a law to individuals. They preferred endeavouring to alter the feelings of mankind on the particular points on which they were themselves heretical, rather than make common cause in defence of freedom, with heretics generally. The only case in which the higher ground has been taken on principle and maintained with consistency, by any but an individual here and there, is that of religious belief: a case instructive in many ways, and not least so as forming a most striking instance of the fallibility of what is called the moral sense: for the *odium theologicum*,[2] in a sincere bigot, is one of the most unequivocal cases of moral feeling. Those who first broke the yoke of what called itself the Universal Church, were in general as little willing to permit difference of religious opinion as that church itself. But when the heat of the conflict was over, without giving a complete victory to any party, and each church or sect was reduced to limit its hopes to retaining possession of the ground it already occupied; minorities, seeing that they had no chance of becoming majorities, were under the necessity of pleading to those whom they could not convert, for permission to differ. It is accordingly on this battle-field, almost solely, that the rights of the individual against society have been asserted on broad grounds of principle, and the claim of society to exercise authority over dissentients, openly controverted. The great writers to whom the world owes what re-

1. The Helots were serfs, or slaves, attached to the landed estates in ancient Sparta; they could not be sold, and could be freed only by the state.

2. The enmity peculiar to contending theologians.

ligious liberty it possesses, have mostly asserted freedom of conscience as an indefeasible right, and denied absolutely that a human being is accountable to others for his religious belief. Yet so natural to mankind is intolerance in whatever they really care about, that religious freedom has hardly anywhere been practically realized, except where religious indifference, which dislikes to have its peace disturbed by theological quarrels, has added its weight to the scale. In the minds of almost all religious persons, even in the most tolerant countries, the duty of toleration is admitted with tacit reserves. One person will bear with dissent in matters of church government, but not of dogma; another can tolerate everybody, short of a Papist or a Unitarian; [3] another, every one who believes in revealed religion; a few extend their charity a little further, but stop at the belief in a God and in a future state. Wherever the sentiment of the majority is still genuine and intense, it is found to have abated little of its claim to be obeyed.

In England, from the peculiar circumstances of our political history, though the yoke of opinion is perhaps heavier, that of law is lighter, than in most other countries of Europe; and there is considerable jealousy of direct interference, by the legislative or the executive power, with private conduct; not so much from any just regard for the independence of the individual, as from the still subsisting habit of looking on the government as representing an opposite interest to the public. The majority have not yet learnt to feel the power of the government their power, or its opinions their opinions. When they do so, individual liberty will probably be as much exposed to invasion from the government, as it already is from public opinion. But, as yet, there is a considerable amount of feeling ready to be called forth against any attempt of the law to control individuals in things in which they have not hitherto been accustomed to be controlled by it; and this with very little discrimination as to whether the matter is, or is not, within the legitimate sphere of legal control; insomuch that the feeling, highly salutary on the whole, is perhaps quite as often misplaced as well grounded in the particular instances of its application. There is, in fact, no recognized principle by which the propriety or impropriety of government interference is customarily tested. People decide according to their personal preferences. Some, whenever they see any good to be done, or evil to be remedied, would willingly instigate the government to undertake the business; while others prefer to bear almost any amount of social evil, rather than add one to the departments of human interests amenable to governmental control. And men range themselves on one or the other side in any particular case, according to this general direction of their sentiments; or according to the degree of interest which they feel in the particular thing which it is proposed that the government should do, or according to the belief they entertain that the government would, or would not, do it in the manner they prefer; but very rarely on account of any opinion to which they consistently adhere, as to what things are fit to be done by a government. And it seems to me that in consequence of this absence of rule or principle, one side is at present as often wrong as the other; the interference of government is, with about equal frequency, improperly invoked and improperly condemned.

The object of this Essay is to assert one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end

3. *Unitarian*: a member of a religious body that affirms the single personality of the Godhead, as opposed to believers in the Trinity.

for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant. He cannot rightfully be compelled to do or forbear because it will be better for him to do so, because it will make him happier, because, in the opinions of others, to do so would be wise, or even right. These are good reasons for remonstrating with him, or reasoning with him, or persuading him, or entreating him, but not for compelling him, or visiting him with any evil in case he do otherwise. To justify that, the conduct from which it is desired to deter him, must be calculated to produce evil to some one else. The only part of the conduct of any one, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his independence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign.

It is, perhaps, hardly necessary to say that this doctrine is meant to apply only to human beings in the maturity of their faculties. We are not speaking of children, or of young persons below the age which the law may fix as that of manhood or womanhood. Those who are still in a state to require being taken care of by others, must be protected against their own actions as well as against external injury. For the same reason, we may leave out of consideration those backward states of society in which the race itself may be considered as in its nonage. The early difficulties in the way of spontaneous progress are so great, that there is seldom any choice of means for overcoming them; and a ruler full of the spirit of improvement is warranted in the use of any expedients that will attain an end, perhaps otherwise unattainable. Despotism is a legitimate mode of government in dealing with barbarians, provided the end be their improvement, and the means justified by actually effecting that end. Liberty, as a principle, has no application to any state of things anterior to the time when mankind have become capable of being improved by free and equal discussion. Until then, there is nothing for them but implicit obedience to an Akbar [4] or a Charlemagne,[5] if they are so fortunate as to find one. But as soon as mankind have attained the capacity of being guided to their own improvement by conviction or persuasion (a period long since reached in all nations with whom we need here concern ourselves), compulsion, either in the direct form or in that of pains and penalties for non-compliance, is no longer admissible as a means to their own good, and justifiable only for the security of others.

It is proper to state that I forgo any advantage which could be derived to my argument from the idea of abstract right, as a thing independent of utility. I regard utility as the ultimate appeal on all ethical questions; but it must be utility in the largest sense, grounded on the permanent interests of man as a progressive being. Those interests, I contend, authorize the subjection of individual spontaneity to external control, only in respect to those actions of each, which concern the interest of other people. If any one does an act hurtful to others, there is a prima facie case for punishing him, by law, or, where legal penalties are not safely applicable, by general disapprobation. There are also many positive acts for the benefit of others, which he may rightfully be compelled to perform; such as, to give evidence in a court of justice; to bear his fair share in the common defence, or in any other joint work necessary to the interest of the so-

4. Akbar Khan, the great Mogul emperor of Hindustan, who reigned from 1556 to 1605.

5. Charlemagne (742–814), king of the Franks (768), emperor of the West (800).

ciety of which he enjoys the protection; and to perform certain acts of individual beneficence, such as saving a fellow creature's life, or interposing to protect the defenceless against ill-usage, things which whenever it is obviously a man's duty to do, he may rightfully be made responsible to society for not doing. A person may cause evil to others not only by his actions but by his inaction, and in either case he is justly accountable to them for the injury. The latter case, it is true, requires a much more cautious exercise of compulsion than the former. To make any one answerable for doing evil to others, is the rule; to make him answerable for not preventing evil, is, comparatively speaking, the exception. Yet there are many cases clear enough and grave enough to justify that exception. In all things which regard the external relations of the individual, he is *de jure* [6] amenable to those whose interests are concerned, and if need be, to society as their protector. There are often good reasons for not holding him to the responsibility; but these reasons must arise from the special expediencies of the case: either because it is a kind of case in which he is on the whole likely to act better, when left to his own discretion, than when controlled in any way in which society have it in their power to control him; or because the attempt to exercise control would produce other evils, greater than those which it would prevent. When such reasons as these preclude the enforcement of responsibility, the conscience of the agent himself should step into the vacant judgement-seat, and protect those interests of others which have no external protection; judging himself all the more rigidly, because the case does not admit of his being made accountable to the judgement of his fellow creatures.

But there is a sphere of action in which society, as distinguished from the individual, has, if any, only an indirect interest; comprehending all that portion of a person's life and conduct which affects only himself, or if it also affects others, only with their free, voluntary, and undeceived consent and participation. When I say only himself, I mean directly, and in the first instance: for whatever affects himself, may affect others through himself; and the objection which may be grounded on this contingency will receive consideration in the sequel. This, then, is the appropriate region of human liberty. It comprises, first, the inward domain of consciousness; demanding liberty of conscience, in the most comprehensive sense; liberty of thought and feeling; absolute freedom of opinion and sentiment on all subjects, practical or speculative, scientific, moral, or theological. The liberty of expressing and publishing opinions may seem to fall under a different principle, since it belongs to that part of the conduct of an individual which concerns other people; but, being almost of as much importance as the liberty of thought itself, and resting in great part on the same reasons, is practically inseparable from it. Secondly, the principle requires liberty of tastes and pursuits; of framing the plan of our life to suit our own character; of doing as we like, subject to such consequences as may follow: without impediment from our fellow creatures, so long as what we do does not harm them, even though they should think our conduct foolish, perverse, or wrong. Thirdly, from this liberty of each individual, follows the liberty, within the same limits, of combination among individuals; freedom to unite, for any purpose not involving harm to others: the persons combining being supposed to be of full age, and not forced or deceived.

No society in which these liberties are not, on the whole, respected, is free, whatever may be its form of government; and none is completely free in which they do not exist absolute and unqualified. The only freedom which deserves the name, is that of pursuing our own good in our own

6. 'by (lawful) right.'

way, so long as we do not attempt to deprive others of theirs, or impede their efforts to obtain it. Each is the proper guardian of his own health, whether bodily, or mental and spiritual. Mankind are greater gainers by suffering each other to live as seems good to themselves, than by compelling each to live as seems good to the rest.

Though this doctrine is anything but new, and, to some persons, may have the air of a truism, there is no doctrine which stands more directly opposed to the general tendency of existing opinion and practice. Society has expended fully as much effort in the attempt (according to its lights) to compel people to conform to its notions of personal, as of social excellence. The ancient commonwealths thought themselves entitled to practise, and the ancient philosophers countenanced, the regulation of every part of private conduct by public authority, on the ground that the State had a deep interest in the whole bodily and mental discipline of every one of its citizens; a mode of thinking which may have been admissible in small republics surrounded by powerful enemies, in constant peril of being subverted by foreign attack or internal commotion, and to which even a short interval of relaxed energy and self-command might so easily be fatal, that they could not afford to wait for the salutary permanent effects of freedom. In the modern world, the greater size of political communities, and, above all, the separation between spiritual and temporal authority (which placed the direction of men's consciences in other hands than those which controlled their worldly affairs), prevented so great an interference by law in the details of private life; but the engines of moral repression have been wielded more strenuously against divergence from the reigning opinion in self-regarding, than even in social matters; religion, the most powerful of the elements which have entered into the formation of moral feeling, having almost always been governed either by the ambition of a hierarchy, seeking control over every department of human conduct, or by the spirit of Puritanism. And some of those modern reformers who have placed themselves in strongest opposition to the religions of the past, have been no way behind either churches or sects in their assertion of the right of spiritual domination: M. Comte,[7] in particular, whose social system, as unfolded in his *Système de Politique Positive*, aims at establishing (though by moral more than by legal appliances) a despotism of society over the individual, surpassing anything contemplated in the political ideal of the most rigid disciplinarian among the ancient philosophers.

Apart from the peculiar tenets of individual thinkers, there is also in the world at large an increasing inclination to stretch unduly the powers of society over the individual, both by the force of opinion and even by that of legislation: and as the tendency of all the changes taking place in the world is to strengthen society, and diminish the power of the individual, this encroachment is not one of the evils which tend spontaneously to disappear, but, on the contrary, to grow more and more formidable. The disposition of mankind, whether as rulers or as fellow citizens, to impose their own opinions and inclinations as a rule of conduct on others, is so energetically supported by some of the best and by some of the worst feelings incident to human nature, that it is hardly ever kept under restraint by anything but want of power; and as the power is not declining, but growing, unless a strong barrier of moral conviction can be raised against the mischief, we must expect, at

7. Auguste Comte (1798–1857), was the chief exponent of the positivist philosophy, which excludes metaphysics and religion, and substitutes the religion of humanity and sociological ethics. His *Système de politique positive* (1851–54) attempts to frame a positivist religion, on the pattern of Roman Catholicism, with sacraments, prayers, etc.

the present circumstances of the world, to see it increase.

It will be convenient for the argument, if, instead of at once entering upon the general thesis, we confine ourselves in the first instance to a single branch of it, on which the principle here stated is, if not fully, yet to a certain point, recognized by the current opinions. This one branch is the Liberty of Thought: from which it is impossible to separate the cognate liberty of speaking and of writing. Although these liberties, to some considerable amount, form part of the political morality of all countries which profess religious toleration and free institutions, the grounds, both philosophical and practical, on which they rest, are perhaps not so familiar to the general mind, nor so thoroughly appreciated by many even of the leaders of opinion, as might have been expected. Those grounds, when rightly understood, are of much wider application than to only one division of the subject, and a thorough consideration of this part of the question will be found the best introduction to the remainder. Those to whom nothing which I am about to say will be new, may therefore, I hope, excuse me, if on a subject which for now three centuries has been so often discussed, I venture on one discussion more.

Chapter II

Of the Liberty of Thought and Discussion

The time, it is to be hoped, is gone by, when any defence would be necessary of the 'liberty of the press' as one of the securities against corrupt or tyrannical government. No argument, we may suppose, can now be needed, against permitting a legislature or an executive, not identified in interest with the people, to prescribe opinions to them, and determine what doctrines or what arguments they shall be allowed to hear. This aspect of the question, besides, has been so often and so triumphantly enforced by preceding writers, that it needs not be specially insisted on in this place. Though the law of England, on the subject of the press, is as servile to this day as it was in the time of the Tudors,[1] there is little danger of its being actually put in force against political discussion, except during some temporary panic, when fear of insurrection drives ministers and judges from their propriety; [2] and, speaking generally, it is not, in constitutional countries, to be appre-

1. *i.e.* from 1485 to 1603, during the reigns of Henry VII, Henry VIII, Edward VI, Mary, and Elizabeth

2. These words had scarcely been written, when as if to give them an emphatic contradiction, occurred the Government Press Prosecutions of 1858. That ill judged interference with the liberty of public discussion has not, however, induced me to alter a single word in the text, nor has it at all weakened my conviction that, moments of panic excepted, the era of pains and penalties for political discussion has, in our own country, passed away. For, in the first place, the prosecutions were not persisted in; and, in the second, they were never, properly speaking, political prosecutions. The offence charged was not that of criticizing institutions, or the acts or persons of rulers, but of circulating what was deemed an immoral doctrine, the lawfulness of Tyrannicide.

   If the arguments of the present chapter are of any validity, there ought to exist the fullest liberty of professing and discussing, as a matter of ethical conviction, any doctrine, however immoral it may be considered. It would, therefore, be irrelevant and out of place to examine here, whether the doctrine of Tyrannicide deserves that title. I shall content myself with saying that the subject has been at all times one of the open questions of morals; that the act of a private citizen in striking down a criminal, who, by raising himself above the law, has placed himself beyond the reach of legal punishment or control, has been accounted by whole nations, and by some of the best and wisest of men, not a crime, but an act of exalted virtue; and that, right or wrong, it is not of the nature of assassination, but of civil war. As such, I hold that the instigation to it, in a specific case, may be a proper subject of punishment, but only if an overt act has followed, and at least a probable connexion can be established between the act and the instigation. Even then, it is not a foreign government, but the very government assailed, which alone, in the exer-

hended, that the government, whether completely responsible to the people or not, will often attempt to control the expression of opinion, except when in doing so it makes itself the organ of the general intolerance of the public. Let us suppose, therefore, that the government is entirely at one with the people, and never thinks of exerting any power of coercion unless in agreement with what it conceives to be their voice. But I deny the right of the people to exercise such coercion, either by themselves or by their government. The power itself is illegitimate. The best government has no more title to it than the worst. It is as noxious, or more noxious, when exerted in accordance with public opinion, than when in opposition to it. If all mankind minus one, were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind. Were an opinion a personal possession of no value except to the owner; if to be obstructed in the enjoyment of it were simply a private injury, it would make some difference whether the injury was inflicted only on a few persons or on many. But the peculiar evil of silencing the expression of an opinion is, that it is robbing the human race; posterity as well as the existing generation; those who dissent from the opinion, still more than those who hold it. If the opinion is right, they are deprived of the opportunity of exchanging error for truth: if wrong, they lose, what is almost as great a benefit, the clearer perception and livelier impression of truth, produced by its collision with error.

It is necessary to consider separately these two hypotheses, each of which has a distinct branch of the argument corresponding to it. We can never be sure that the opinion we are endeavouring to stifle is a false opinion; and if we were sure, stifling it would be an evil still.

First: the opinion which it is attempted to suppress by authority may possibly be true. Those who desire to suppress it, of course deny its truth; but they are not infallible. They have no authority to decide the question for all mankind, and exclude every other person from the means of judging. To refuse a hearing to an opinion, because they are sure that it is false, is to assume that *their* certainty is the same thing as *absolute* certainty. All silencing of discussion is an assumption of infallibility. Its condemnation may be allowed to rest on this common argument, not the worse for being common.

Unfortunately for the good sense of mankind, the fact of their fallibility is far from carrying the weight in their practical judgement, which is always allowed to it in theory; for while every one well knows himself to be fallible, few think it necessary to take any precautions against their own fallibility, or admit the supposition that any opinion, of which they feel very certain, may be one of the examples of the error to which they acknowledge themselves to be liable. Absolute princes, or others who are accustomed to unlimited deference, usually feel this complete confidence in their own opinions on nearly all subjects. People more happily situated, who sometimes hear their opinions disputed, and are not wholly unused to be set right when they are wrong, place the same unbounded reliance only on such of their opinions as are shared by all who surround them, or to whom they habitually defer: for in proportion to a man's want of confidence in his own solitary judgement, does he usually repose, with implicit trust, on the infallibility of 'the world' in general. And the world, to each individual, means the part of it with which he comes in contact: his party, his sect, his church, his class of society: the man may be called, by comparison, almost liberal and large-

cise of self-defence, can legitimately punish attacks directed against its own existence. [Mill's note.]

minded to whom it means anything so comprehensive as his own country or his own age. Nor is his faith in this collective authority at all shaken by his being aware that other ages, countries, sects, churches, classes, and parties have thought, and even now think, the exact reverse. He devolves upon his own world the responsibility of being in the right against the dissentient worlds of other people; and it never troubles him that mere accident has decided which of these numerous worlds is the object of his reliance, and that the same causes which make him a Churchman in London, would have made him a Buddhist or a Confucian in Pekin. Yet it is as evident in itself, as any amount of argument can make it, that ages are no more infallible than individuals; every age having held many opinions which subsequent ages have deemed not only false but absurd; and it is as certain that many opinions, now general, will be rejected by future ages, as it is that many, once general, are rejected by the present.

The objection likely to be made to this argument would probably take some such form as the following. There is no greater assumption of infallibility in forbidding the propagation of error, than in any other thing which is done by public authority on its own judgement and responsibility. Judgement is given to men that they may use it. Because it may be used erroneously, are men to be told that they ought not to use it at all? To prohibit what they think pernicious, is not claiming exemption from error, but fulfilling the duty incumbent on them, although fallible, of acting on their conscientious conviction. If we were never to act on our opinions, because those opinions may be wrong, we should leave all our interests uncared for, and all our duties unperformed. An objection which applies to all conduct, can be no valid objection to any conduct in particular. It is the duty of governments, and of individuals, to form the truest opinions they can; to form them carefully, and never impose them upon others unless they are quite sure of being right. But when they are sure (such reasoners may say), it is not conscientiousness but cowardice to shrink from acting on their opinions, and allow doctrines which they honestly think dangerous to the welfare of mankind, either in this life or in another, to be scattered abroad without restraint, because other people, in less enlightened times, have persecuted opinions now believed to be true. Let us take care, it may be said, not to make the same mistake: but governments and nations have made mistakes in other things, which are not denied to be fit subjects for the exercise of authority: they have laid on bad taxes, made unjust wars. Ought we therefore to lay on no taxes, and, under whatever provocation, make no wars? Men, and governments, must act to the best of their ability. There is no such thing as absolute certainty, but there is assurance sufficient for the purposes of human life. We may, and must, assume our opinion to be true for the guidance of our own conduct: and it is assuming no more when we forbid bad men to pervert society by the propagation of opinions which we regard as false and pernicious.

I answer, that it is assuming very much more. There is the greatest difference between presuming an opinion to be true, because, with every opportunity for contesting it, it has not been refuted, and assuming its truth for the purpose of not permitting its refutation. Complete liberty of contradicting and disproving our opinion, is the very condition which justifies us in assuming its truth for purposes of action; and on no other terms can a being with human faculties have any rational assurance of being right.

When we consider either the history of opinion, or the ordinary conduct of human life, to what is it to be ascribed that the one and the other are no worse than they are? Not certainly to the inherent force of the human understanding; for, on any

matter not self-evident, there are ninety-nine persons totally incapable of judging of it, for one who is capable; and the capacity of the hundredth person is only comparative; for the majority of the eminent men of every past generation held many opinions now known to be erroneous, and did or approved numerous things which no one will now justify. Why is it, then, that there is on the whole a preponderance among mankind of rational opinions and rational conduct? If there really is this preponderance — which there must be unless human affairs are, and have always been, in an almost desperate state — it is owing to a quality of the human mind, the source of everything respectable in man either as an intellectual or as a moral being, namely, that his errors are corrigible. He is capable of rectifying his mistakes, by discussion and experience. Not by experience alone. There must be discussion, to show how experience is to be interpreted. Wrong opinions and practices gradually yield to fact and argument: but facts and arguments, to produce any effect on the mind, must be brought before it. Very few facts are able to tell their own story, without comments to bring out their meaning. The whole strength and value, then, of human judgement, depending on the one property, that it can be set right when it is wrong, reliance can be placed on it only when the means of setting it right are kept constantly at hand. In the case of any person whose judgement is really deserving of confidence, how has it become so? Because he has kept his mind open to criticism of his opinions and conduct. Because it has been his practice to listen to all that could be said against him; to profit by as much of it as was just, and expound to himself, and upon occasion to others, the fallacy of what was fallacious. Because he has felt, that the only way in which a human being can make some approach to knowing the whole of a subject, is by hearing what can be said about it by persons of every variety of opinion, and studying all modes in which it can be looked at by every character of mind. No wise man ever acquired his wisdom in any mode but this; nor is it in the nature of human intellect to become wise in any other manner. The steady habit of correcting and completing his own opinion by collating it with those of others, so far from causing doubt and hesitation in carrying it into practice, is the only stable foundation for a just reliance on it: for, being cognisant of all that can, at least obviously, be said against him, and having taken up his position against all gainsayers — knowing that he has sought for objections and difficulties, instead of avoiding them, and has shut out no light which can be thrown upon the subject from any quarter — he has a right to think his judgement better than that of any person, or any multitude, who have not gone through a similar process.

It is not too much to require that what the wisest of mankind, those who are best entitled to trust their own judgement, find necessary to warrant their relying on it, should be submitted to by that miscellaneous collection of a few wise and many foolish individuals, called the public. The most intolerant of churches, the Roman Catholic Church, even at the canonization of a saint, admits, and listens patiently to, a 'devil's advocate.'[3] The holiest of men, it appears, cannot be admitted to posthumous honours, until all that the devil could say against him is known and weighed. If even the Newtonian philosophy[4] were not permitted to be questioned, mankind could not feel as complete assurance of its truth as they now do. The be-

3. Latin: *advocatus diaboli*; known as the 'protector of the faith' (*promotor fidei*), chosen by the Congregation of Rites to point out any defects in the character or evidence upon which a candidate for canonization has been selected.

4. The doctrine of the universe as expounded in the *Principia* of Sir Isaac Newton (1642–1727), cited here as the least questionable, because highly mathematical, system of concepts.

liefs which we have most warrant for, have no safeguard to rest on, but a standing invitation to the whole world to prove them unfounded. If the challenge is not accepted, or is accepted and the attempt fails, we are far enough from certainty still; but we have done the best that the existing state of human reason admits of; we have neglected nothing that could give the truth a chance of reaching us: if the lists are kept open, we may hope that if there be a better truth, it will be found when the human mind is capable of receiving it; and in the meantime we may rely on having attained such approach to truth, as is possible in our own day. This is the amount of certainty attainable by a fallible being, and this the sole way of attaining it.

Strange it is, that men should admit the validity of the arguments for free discussion, but object to their being 'pushed to an extreme'; not seeing that unless the reasons are good for an extreme case, they are not good for any case. Strange that they should imagine that they are not assuming infallibility, when they acknowledge that there should be free discussion on all subjects which can possibly be *doubtful*, but think that some particular principle or doctrine should be forbidden to be questioned because it is so *certain*, that is, because *they are certain* that it is certain. To call any proposition certain, while there is any one who would deny its certainty if permitted, but who is not permitted, is to assume that we ourselves, and those who agree with us, are the judges of certainty, and judges without hearing the other side.

In the present age — which has been described as 'destitute of faith, but terrified at scepticism' — in which people feel sure, not so much that their opinions are true, as that they should not know what to do without them — the claims of an opinion to be protected from public attack are rested not so much on its truth, as on its importance to society. There are, it is alleged, certain beliefs, so useful, not to say indispensable to well-being, that it is as much the duty of governments to uphold those beliefs, as to protect any other of the interests of society. In a case of such necessity, and so directly in the line of their duty, something less than infallibility may, it is maintained, warrant, and even bind, governments, to act on their own opinion, confirmed by the general opinion of mankind. It is also often argued, and still oftener thought, that none but bad men would desire to weaken these salutary beliefs; and there can be nothing wrong, it is thought, in restraining bad men, and prohibiting what only such men would wish to practise. This mode of thinking makes the justification of restraints on discussion not a question of the truth of doctrines, but of their usefulness; and flatters itself by that means to escape the responsibility of claiming to be an infallible judge of opinions. But those who thus satisfy themselves, do not perceive that the assumption of infallibility is merely shifted from one point to another. The usefulness of an opinion is itself matter of opinion: as disputable, as open to discussion, and requiring discussion as much, as the opinion itself. There is the same need of an infallible judge of opinions to decide an opinion to be noxious, as to decide it to be false, unless the opinion condemned has full opportunity of defending itself. And it will not do to say that the heretic may be allowed to maintain the utility or harmlessness of his opinion, though forbidden to maintain its truth. The truth of an opinion is part of its utility If we would know whether or not it is desirable that a proposition should be believed, is it possible to exclude the consideration of whether or not it is true? In the opinion, not of bad men, but of the best men, no belief which is contrary to truth can be really useful: and can you prevent such men from urging that plea, when they are charged with

culpability for denying some doctrine which they are told is useful, but which they believe to be false? Those who are on the side of received opinions, never fail to take all possible advantage of this plea; you do not find *them* handling the question of utility as if it could be completely abstracted from that of truth: on the contrary, it is, above all, because their doctrine is the 'truth,' that the knowledge or the belief of it is held to be so indispensable. There can be no fair discussion of the question of usefulness, when an argument so vital may be employed on one side, but not on the other. And in point of fact, when law or public feeling do not permit the truth of an opinion to be disputed, they are just as little tolerant of a denial of its usefulness. The utmost they allow is an extenuation of its absolute necessity, or of the positive guilt of rejecting it. . . .

To pass from this to the only other instance of judicial iniquity,[5] the mention of which, after the condemnation of Socrates, would not be an anti-climax: the event which took place on Calvary rather more than eighteen hundred years ago. The man who left on the memory of those who witnessed his life and conversation, such an impression of his moral grandeur, that eighteen subsequent centuries have done homage to him as the Almighty in person, was ignominiously put to death, as what? As a blasphemer. Men did not merely mistake their benefactor; they mistook him for the exact contrary of what he was, and treated him as that prodigy of impiety, which they themselves are now held to be, for their treatment of him. The feelings with which mankind now regard these lamentable transactions, especially the later of the two, render them extremely unjust in their judgement of the unhappy actors. These were, to all appearance, not bad men — not worse than men commonly are, but rather the contrary; men who possessed in a full, or somewhat more than a full measure, the religious, moral, and patriotic feelings of their time and people: the very kind of men who, in all times, our own included, have every chance of passing through life blameless and respected. The high-priest who rent his garments [6] when the words were pronounced, which, according to all the ideas of his country, constituted the blackest guilt, was in all probability quite as sincere in his horror and indignation, as the generality of respectable and pious men now are in the religious and moral sentiments they profess; and most of those who now shudder at his conduct, if they had lived in his time, and been born Jews, would have acted precisely as he did. Orthodox Christians who are tempted to think that those who stoned to death the first martyrs must have been worse men than they themselves are, ought to remember that one of those persecutors was Saint Paul.

Let us add one more example, the most striking of all, if the impressiveness of an error is measured by the wisdom and virtue of him who falls into it. If ever any one, possessed of power, had grounds for thinking himself the best and most enlightened among his contemporaries, it was the Emperor Marcus Aurelius.[7] Absolute monarch of the whole civilized world, he preserved through life not only the most unblemished justice, but what was less to be expected from his Stoical breeding, the tenderest heart. The few failings which are attributed to him, were all on

5. The other, and previous, example of judicial iniquity, which Mill discusses in the passages omitted here, was that of the putting to death of Socrates, 'the head and prototype of all subsequent teachers of virtue,' on the accusation of believing in no gods, and of contributing to the immorality of Athenian youth. (See Socrates' *Apology* in the *Dialogues* of Plato.)

6. See *Mark*, xiv,63.

7. Marcus Aurelius Antoninus (A.D. 121–80), Roman emperor (A.D. 161–80), was a religious philosopher, and author of twelve books of *Meditations* in Greek, expressing the Stoic philosophy.

the side of indulgence: while his writings, the highest ethical product of the ancient mind, differ scarcely perceptibly, if they differ at all, from the most characteristic teachings of Christ. This man, a better Christian in all but the dogmatic sense of the word, than almost any of the ostensibly Christian sovereigns who have since reigned, persecuted Christianity. Placed at the summit of all the previous attainments of humanity, with an open, unfettered intellect, and a character which led him of himself to embody in his moral writings the Christian ideal, he yet failed to see that Christianity was to be a good and not an evil to the world, with his duties to which he was so deeply penetrated. Existing society he knew to be in a deplorable state. But such as it was, he saw, or thought he saw, that it was held together, and prevented from being worse, by belief and reverence of the received divinities. As a ruler of mankind, he deemed it his duty not to suffer society to fall in pieces; and saw not how, if its existing ties were removed, any others could be formed which could again knit it together. The new religion openly aimed at dissolving these ties: unless, therefore, it was his duty to adopt that religion, it seemed to be his duty to put it down. Inasmuch then as the theology of Christianity did not appear to him true or of divine origin; inasmuch as this strange history of a crucified God was not credible to him, and a system which purported to rest entirely upon a foundation to him so wholly unbelievable, could not be foreseen by him to be that renovating agency which, after all abatements, it has in fact proved to be; the gentlest and most amiable of philosophers and rulers, under a solemn sense of duty, authorized the persecution of Christianity. To my mind this is one of the most tragical facts in all history. It is a bitter thought, how different a thing the Christianity of the world might have been, if the Christian faith had been adopted as the religion of the empire under the auspices of Marcus Aurelius instead of those of Constantine.[8] But it would be equally unjust to him and false to truth, to deny, that no one plea which can be urged for punishing anti-Christian teaching, was wanting to Marcus Aurelius for punishing, as he did, the propagation of Christianity. No Christian more firmly believes that Atheism is false, and tends to the dissolution of society, than Marcus Aurelius believed the same things of Christianity; he who, of all men then living, might have been thought the most capable of appreciating it. Unless any one who approves of punishment for the promulgation of opinions, flatters himself that he is a wiser and better man than Marcus Aurelius — more deeply versed in the wisdom of his time, more elevated in his intellect above it — more earnest in his search for truth, or more single-minded in his devotion to it when found; — let him abstain from that assumption of the joint infallibility of him self and the multitude, which the great Antoninus made with so unfortunate a result. . . .[9]

Let us now pass to the second division of the argument, and dismissing the supposition that any of the received opinions may be false, let us assume them to be true, and examine into the worth of the manner in which they are likely to be held, when their truth is not freely and openly canvassed. However unwillingly a person who has a strong opinion may admit the possibility that his opinion may be false, he ought to be moved by the consideration that however true it may be, if it is not

8. The Roman emperor Constantine (A.D. 272–337) made Christianity the official religion of the empire in 330. Mill's note of coldness toward the name of Constantine is owing to that emperor's belief that society could and should be remolded by the fiat of despotic authority, with the will of the emperor as the sole fountain of law. Constantine's power and precedent established a tradition which, both in Church and state, was to prevail for centuries.

9. In the omitted passages, Mill seeks to dispose of the argument that 'persecution is an ordeal through which truth ought to pass.'

fully, frequently, and fearlessly discussed, it will be held as a dead dogma, not a living truth.

There is a class of persons (happily not quite so numerous as formerly) who think it enough if a person assents undoubtingly to what they think true, though he has no knowledge whatever of the grounds of the opinion, and could not make a tenable defence of it against the most superficial objections. Such persons, if they can once get their creed taught from authority, naturally think that no good, and some harm, comes of its being allowed to be questioned. Where their influence prevails, they make it nearly impossible for the received opinion to be rejected wisely and considerately, though it may still be rejected rashly and ignorantly; for to shut out discussion entirely is seldom possible, and when it once gets in, beliefs not grounded on conviction are apt to give way before the slightest semblance of an argument. Waiving, however, this possibility — assuming that the true opinion abides in the mind, but abides as a prejudice, a belief independent of, and proof against, argument — this is not the way in which truth ought to be held by a rational being. This is not knowing the truth. Truth, thus held, is but one superstition the more, accidentally clinging to the words which enunciate a truth.

If the intellect and judgement of mankind ought to be cultivated, a thing which Protestants at least do not deny, on what can these faculties be more appropriately exercised by any one, than on the things which concern him so much that it is considered necessary for him to hold opinions on them? If the cultivation of the understanding consists in one thing more than in another, it is surely in learning the grounds of one's own opinions. Whatever people believe, on subjects on which it is of the first importance to believe rightly, they ought to be able to defend against at least the common objections. But, some one may say, 'Let them be *taught* the grounds of their opinions. It does not follow that opinions must be merely parroted because they are never heard controverted. Persons who learn geometry do not simply commit the theorems to memory, but understand and learn likewise the demonstrations; and it would be absurd to say that they remain ignorant of the grounds of geometrical truths, because they never hear any one deny, and attempt to disprove them.' Undoubtedly: and such teaching suffices on a subject like mathematics, where there is nothing at all to be said on the wrong side of the question. The peculiarity of the evidence of mathematical truths is, that all the argument is on one side. There are no objections, and no answers to objections. But on every subject on which difference of opinion is possible, the truth depends on a balance to be struck between two sets of conflicting reasons. Even in natural philosophy, there is always some other explanation possible of the same facts; some geocentric theory instead of heliocentric, some phlogiston instead of oxygen; and it has to be shown why that other theory cannot be the true one: and until this is shown, and until we know how it is shown, we do not understand the grounds of our opinion. But when we turn to subjects infinitely more complicated, to morals, religion, politics, social relations, and the business of life, three-fourths of the arguments for every disputed opinion consist in dispelling the appearances which favour some opinion different from it. The greatest orator, save one, of antiquity, has left it on record that he always studied his adversary's case with as great, if not with still greater, intensity than even his own. What Cicero practised as the means of forensic success, requires to be imitated by all who study any subject in order to arrive at the truth. He who knows only his own side of the case, knows little of that. His reasons may be good, and no one may have been able to refute them. But if he is equally unable to refute the reasons on the opposite side; if he does not so much as know what they are, he

has no ground for preferring either opinion. The rational position for him would be suspension of judgement, and unless he contents himself with that, he is either led by authority, or adopts, like the generality of the world, the side to which he feels most inclination. Nor is it enough that he should hear the arguments of adversaries from his own teachers, presented as they state them, and accompanied by what they offer as refutations. That is not the way to do justice to the arguments, or bring them into real contact with his own mind. He must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. He must know them in their most plausible and persuasive form; he must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else he will never really possess himself of the portion of truth which meets and removes that difficulty. Ninety-nine in a hundred of what are called educated men are in this condition; even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the mental position of those who think differently from them, and considered what such persons may have to say; and consequently they do not, in any proper sense of the word, know the doctrine which they themselves profess. They do not know those parts of it which explain and justify the remainder; the considerations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred. All that part of the truth which turns the scale, and decides the judgement of a completely informed mind, they are strangers to; nor is it ever really known, but to those who have attended equally and impartially to both sides, and endeavoured to see the reasons of both in the strongest light. So essential is this discipline to a real understanding of moral and human subjects, that if opponents of all important truths do not exist, it is indispensable to imagine them, and supply them with the strongest arguments which the most skilful devil's advocate can conjure up.

To abate the force of these considerations, an enemy of free discussion may be supposed to say, that there is no necessity for mankind in general to know and understand all that can be said against or for their opinions by philosophers and theologians. That it is not needful for common men to be able to expose all the misstatements or fallacies of an ingenious opponent. That it is enough if there is always somebody capable of answering them, so that nothing likely to mislead uninstructed persons remains unrefuted. That simple minds, having been taught the obvious grounds of the truths inculcated on them, may trust to authority for the rest, and being aware that they have neither knowledge nor talent to resolve every difficulty which can be raised, may repose in the assurance that all those which have been raised have been or can be answered, by those who are specially trained to the task.

Conceding to this view of the subject the utmost that can be claimed for it by those most easily satisfied with the amount of understanding of truth which ought to accompany the belief of it; even so, the argument for free discussion is no way weakened. For even this doctrine acknowledges that mankind ought to have a rational assurance that all objections have been satisfactorily answered; and how are they to be answered if that which requires to be answered is not spoken? or how can the answer be known to be satisfactory, if the objectors have no opportunity of showing that it is unsatisfactory? If not the public, at least the philosophers and theologians who are to resolve the difficulties, must make themselves familiar with those difficulties in their most puzzling form; and

this cannot be accomplished unless they are freely stated, and placed in the most advantageous light which they admit of. The Catholic Church has its own way of dealing with this embarrassing problem. It makes a broad separation between those who can be permitted to receive its doctrines on conviction, and those who must accept them on trust. Neither, indeed, are allowed any choice as to what they will accept; but the clergy, such at least as can be fully confided in, may admissibly and meritoriously make themselves acquainted with the arguments of opponents, in order to answer them, and may, therefore, read heretical books; the laity, not unless by special permission, hard to be obtained. This discipline recognizes a knowledge of the enemy's case as beneficial to the teachers, but finds means, consistent with this, of denying it to the rest of the world: thus giving to the *élite* more mental culture, though not more mental freedom, than it allows to the mass. By this device it succeeds in obtaining the kind of mental superiority which its purposes require; for though culture without freedom never made a large and liberal mind, it can make a clever *nisi prius*[10] advocate of a cause. But in countries professing Protestantism, this resource is denied; since Protestants hold, at least in theory, that the responsibility for the choice of a religion must be borne by each for himself, and cannot be thrown off upon teachers. Besides, in the present state of the world, it is practically impossible that writings which are read by the instructed can be kept from the uninstructed. If the teachers of mankind are to be cognizant of all that they ought to know, everything must be free to be written and published without restraint.

If, however, the mischievous operation of the absence of free discussion, when the received opinions are true, were confined to leaving men ignorant of the grounds of those opinions, it might be thought that this, if an intellectual, is no moral evil, and does not affect the worth of the opinions, regarded in their influence on the character. The fact, however, is, that not only the grounds of the opinion are forgotten in the absence of discussion, but too often the meaning of the opinion itself. The words which convey it, cease to suggest ideas, or suggest only a small portion of those they were originally employed to communicate. Instead of a vivid conception and a living belief, there remain only a few phrases retained by rote; or, if any part, the shell and husk only of the meaning is retained, the finer essence being lost. The great chapter in human history which this fact occupies and fills, cannot be too earnestly studied and meditated on.

It is illustrated in the experience of almost all ethical doctrines and religious creeds. They are all full of meaning and vitality to those who originate them, and to the direct disciples of the originators. Their meaning continues to be felt in undiminished strength, and is perhaps brought out into even fuller consciousness, so long as the struggle lasts to give the doctrine or creed an ascendancy over other creeds. At last it either prevails, and becomes the general opinion, or its progress stops; it keeps possession of the ground it has gained, but ceases to spread further. When either of these results has become apparent, controversy on the subject flags, and gradually dies away. The doctrine has taken its place, if not as a received opinion, as one of the admitted sects or divisions of opinion: those who hold it have generally inherited, not adopted it; and conversion from one of these doctrines to another, being now an exceptional fact, occupies little place in the thoughts of their professors. Instead of being, as at first, constantly on the alert either to defend themselves against the world, or to bring the world over to them, they have subsided into acquiescence, and neither listen, when they can help it, to arguments against their

10. Literally, 'unless before'; a legal expression applied to certain causes, writs, actions, trials, etc.

creed, nor trouble dissentients (if there be such) with arguments in its favour. From this time may usually be dated the decline in the living power of the doctrine. We often hear the teachers of all creeds lamenting the difficulty of keeping up in the minds of believers a lively apprehension of the truth which they nominally recognize, so that it may penetrate the feelings, and acquire a real mastery over the conduct. No such difficulty is complained of while the creed is still fighting for its existence: even the weaker combatants then know and feel what they are fighting for, and the difference between it and other doctrines; and in that period of every creed's existence, not a few persons may be found, who have realized its fundamental principles in all the forms of thought, have weighed and considered them in all their important bearings, and have experienced the full effect on the character, which belief in that creed ought to produce in a mind thoroughly imbued with it. But when it has come to be an hereditary creed, and to be received passively, not actively — when the mind is no longer compelled, in the same degree as at first, to exercise its vital powers on the questions which its belief presents to it, there is a progressive tendency to forget all of the belief except the formularies, or to give it a dull and torpid assent, as if accepting it on trust dispensed with the necessity of realizing it in consciousness, or testing it by personal experience; until it almost ceases to connect itself at all with the inner life of the human being. Then are seen the cases, so frequent in this age of the world as almost to form the majority, in which the creed remains as it were outside the mind, encrusting and petrifying it against all other influences addressed to the higher parts of our nature; manifesting its power by not suffering any fresh and living conviction to get in, but itself doing nothing for the mind or heart, except standing sentinel over them to keep them vacant.

To what an extent doctrines intrinsically fitted to make the deepest impression upon the mind may remain in it as dead beliefs, without being ever realized in the imagination, the feelings, or the understanding, is exemplified by the manner in which the majority of believers hold the doctrines of Christianity. By Christianity I here mean what is accounted such by all churches and sects — the maxims and precepts contained in the New Testament. These are considered sacred, and accepted as laws, by all professing Christians. Yet it is scarcely too much to say that not one Christian in a thousand guides or tests his individual conduct by reference to those laws. The standard to which he does refer it, is the custom of his nation, his class, or his religious profession. He has thus, on the one hand, a collection of ethical maxims, which he believes to have been vouchsafed to him by infallible wisdom as rules for his government; and on the other, a set of every day judgements and practices, which go a certain length with some of those maxims, not so great a length with others, stand in direct opposition to some, and are, on the whole, a compromise between the Christian creed and the interests and suggestions of worldly life. To the first of these standards he gives his homage; to the other his real allegiance. All Christians believe that the blessed are the poor and humble, and those who are ill-used by the world; that it is easier for a camel to pass through the eye of a needle than for a rich man to enter the kingdom of heaven; that they should judge not, lest they be judged; that they should swear not at all; that they should love their neighbour as themselves; that if one take their cloak, they should give him their coat also; that they should take no thought for the morrow; that if they would be perfect, they should sell all that they have and give it to the poor. They are not insincere when they say that they believe these things. They do believe them, as people believe what they have always heard lauded and never discussed. But in the sense of that

living belief which regulates conduct, they believe these doctrines just up to the point to which it is usual to act upon them. The doctrines in their integrity are serviceable to pelt adversaries with; and it is understood that they are to be put forward (when possible) as the reasons for whatever people do that they think laudable. But any one who reminded them that the maxims require an infinity of things which they never even think of doing, would gain nothing but to be classed among those very unpopular characters who affect to be better than other people. The doctrines have no hold on ordinary believers — are not a power in their minds. They have an habitual respect for the sound of them, but no feeling which spreads from the words to the things signified, and forces the mind to take *them* in, and make them conform to the formula. Whenever conduct is concerned, they look round for Mr. A and B to direct them how far to go in obeying Christ. . . .

It still remains to speak of one of the principal causes which make diversity of opinion advantageous, and will continue to do so until mankind shall have entered a stage of intellectual advancement which at present seems at an incalculable distance. We have hitherto considered only two possibilities: that the received opinion may be false, and some other opinion, consequently, true; or that, the received opinion being true, a conflict with the opposite error is essential to a clear apprehension and deep feeling of its truth. But there is a commoner case than either of these; when the conflicting doctrines, instead of being one true and the other false, share the truth between them; and the nonconforming opinion is needed to supply the remainder of the truth, of which the received doctrine embodies only a part. Popular opinions, on subjects not palpable to sense, are often true, but seldom or never the whole truth. They are a part of the truth; sometimes a greater, sometimes a smaller part, but exaggerated, distorted, and disjoined from the truths by which they ought to be accompanied and limited. Heretical opinions, on the other hand, are generally some of these suppressed and neglected truths, bursting the bonds which kept them down, and either seeking reconciliation with the truth contained in the common opinion, or fronting it as enemies, and setting themselves up, with similar exclusiveness, as the whole truth. The latter case is hitherto the most frequent, as, in the human mind, one-sidedness has always been the rule, and many-sidedness the exception. Hence, even in revolutions of opinion, one part of the truth usually sets while another rises. Even progress, which ought to superadd, for the most part only substitutes, one partial and incomplete truth for another; improvement consisting chiefly in this, that the new fragment of truth is more wanted, more adapted to the needs of the time, than that which it displaces. Such being the partial character of prevailing opinions, even when resting on a true foundation, every opinion which embodies somewhat of the portion of truth which the common opinion omits, ought to be considered precious, with whatever amount of error and confusion that truth may be blended. No sober judge of human affairs will feel bound to be indignant because those who force on our notice truths which we should otherwise have overlooked, overlook some of those which we see. Rather, he will think that so long as popular truth is one-sided, it is more desirable than otherwise that unpopular truth should have one-sided asserters too; such being usually the most energetic, and the most likely to compel reluctant attention to the fragment of wisdom which they proclaim as if it were the whole.

Thus, in the eighteenth century, when nearly all the instructed, and all those of the uninstructed who were led by them, were lost in admiration of what is called civilization, and of the marvels of modern science, literature, and philosophy, and while greatly overrating the amount of un-

likeness between the men of modern and those of ancient times, indulged the belief that the whole of the difference was in their own favour; with what a salutary shock did the paradoxes of Rousseau [11] explode like bombshells in the midst, dislocating the compact mass of one-sided opinion, and forcing its elements to recombine in a better form and with additional ingredients. Not that the current opinions were on the whole farther from the truth than Rousseau's were; on the contrary, they were nearer to it; they contained more of positive truth, and very much less of error. Nevertheless there lay in Rousseau's doctrine, and has floated down the stream of opinion along with it, a considerable amount of exactly those truths which the popular opinion wanted; and these are the deposit which was left behind when the flood subsided. The superior worth of simplicity of life, the enervating and demoralizing effect of the trammels and hypocrisies of artificial society, are ideas which have never been entirely absent from cultivated minds since Rousseau wrote; and they will in time produce their due effect, though at present needing to be asserted as much as ever, and to be asserted by deeds, for words, on this subject, have nearly exhausted their power.

In politics, again, it is almost a commonplace, that a party of order or stability, and a party of progress or reform, are both necessary elements of a healthy state of political life; until the one or the other shall have so enlarged its mental grasp as to be a party equally of order and of progress, knowing and distinguishing what is fit to be preserved from what ought to be swept away. Each of these modes of thinking derives its utility from the deficiencies of the other; but it is in a great measure the opposition of the other that keeps each within the limits of reason and sanity. Unless opinions favourable to democracy and to aristocracy, to property and to equality, to co-operation and to competition, to luxury and to abstinence, to sociality and individuality, to liberty and discipline, and all the other standing antagonisms of practical life, are expressed with equal freedom, and enforced and defended with equal talent and energy, there is no chance of both elements obtaining their due; one scale is sure to go up, and the other down. Truth, in the great practical concerns of life, is so much a question of the reconciling and combining of opposites, that very few have minds sufficiently capacious and impartial to make the adjustment with an approach to correctness, and it has to be made by the rough process of a struggle between combatants fighting under hostile banners. On any of the great open questions just enumerated, if either of the two opinions has a better claim than the other, not merely to be tolerated, but to be encouraged and countenanced, it is the one which happens at the particular time and place to be in a minority. That is the opinion which, for the time being, represents the neglected interests, the side of human well-being which is in danger of obtaining less than its share. I am aware that there is not, in this country, any intolerance of differences of opinion on most of these topics. They are adduced to show, by admitted and multiplied examples, the universality of the fact, that only through diversity of opinion is there, in the existing state of human intellect, a chance of fair play to all sides of the truth. When there are persons to be found, who form an exception to the apparent unanimity of the world on any subject, even if the world is in the right, it is always probable that dissentients have something worth hearing to say for themselves, and that truth would lose something by their silence.

It may be objected, 'But *some* received principles, especially on the highest and

11. Jean Jacques Rousseau (1712–78), whose writings, *La nouvelle Héloïse*, *Du contrat social*, and *Émile*, in their doctrines of the return to nature, the contractual nature of the state, and the need of new and more natural educational methods, prepared the way for the Revolution.

most vital subjects, are more than half-truths. The Christian morality, for instance, is the whole truth on that subject, and if any one teaches a morality which varies from it, he is wholly in error.' As this is of all cases the most important in practice, none can be fitter to test the general maxim. But before pronouncing what Christian morality is or is not, it would be desirable to decide what is meant by Christian morality. If it means the morality of the New Testament, I wonder that any one who derives his knowledge of this from the book itself, can suppose that it was announced, or intended, as a complete doctrine of morals. The Gospel always refers to a pre-existing morality, and confines its precepts to the particulars in which that morality was to be corrected, or superseded by a wider and higher; expressing itself, moreover, in terms most general, often impossible to be interpreted literally, and possessing rather the impressiveness of poetry or eloquence than the precision of legislation. To extract from it a body of ethical doctrine, has never been possible without eking it out from the Old Testament, that is, from a system elaborate indeed, but in many respects barbarous, and intended only for a barbarous people. St. Paul, a declared enemy to this Judaical mode of interpreting the doctrine and filling up the scheme of his Master, equally assumes a pre-existing morality, namely that of the Greeks and Romans; and his advice to Christians is in a great measure a system of accommodation to that; even to the extent of giving an apparent sanction to slavery. What is called Christian, but should rather be termed theological, morality, was not the work of Christ or the Apostles, but is of much later origin, having been gradually built up by the Catholic church of the first five centuries, and though not implicitly adopted by moderns and Protestants, has been much less modified by them than might have been expected. For the most part, indeed, they have contented themselves with cutting off the additions which had been made to it in the middle ages, each sect supplying the place by fresh additions, adapted to its own character and tendencies. That mankind owe a great debt to this morality, and to its early teachers, I should be the last person to deny; but I do not scruple to say of it, that it is, in many important points, incomplete and one-sided, and that unless ideas and feelings, not sanctioned by it, had contributed to the formation of European life and character, human affairs would have been in a worse condition than they now are. Christian morality (so called) has all the characters of a reaction; it is, in great part, a protest against Paganism. Its ideal is negative rather than positive;[12] passive rather than active; Innocence rather than Nobleness; Abstinence from Evil, rather than energetic Pursuit of Good: in its precepts (as has been well said) 'thou shalt not' predominates unduly over 'thou shalt.' In its horror of sensuality, it made an idol of ascetism, which has been gradually compromised away into one of legality. It holds out the hope of heaven and the threat of hell, as the appointed and appropriate motives to a virtuous life: in this falling far below the best of the ancients, and doing what lies in it to give to human morality an essentially selfish character, by disconnecting each man's feelings of duty from the interests of his fellow-creatures, except so far as a self-interested inducement is offered to him for consulting them. It is essentially a doctrine of passive obedience; it inculcates submission to all authorities found established; who indeed are not to be actively obeyed when they command what religion forbids, but who are not to be resisted, far less rebelled against, for any amount of wrong to ourselves. And while, in the morality of the best Pagan nations, duty to the State holds even a disproportionate place, infringing

12. Mill's discussion of Christian morality should be compared with Matthew Arnold's rejoinder in his essay on 'Marcus Aurelius' in the present collection.

on the just liberty of the individual; in purely Christian ethics, that grand department of duty is scarcely noticed or acknowledged. It is in the Koran, not the New Testament, that we read the maxim — 'A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins against God and against the State.' What little recognition the idea of obligation to the public obtains in modern morality, is derived from Greek and Roman sources, not from Christian; as, even in the morality of private life, whatever exists of magnanimity, high-mindedness, personal dignity, even the sense of honour, is derived from the purely human, not the religious part of our education, and never could have grown out of a standard of ethics in which the only worth, professedly recognized, is that of obedience.

I am as far as any one from pretending that these defects are necessarily inherent in the Christian ethics, in every manner in which it can be conceived, or that the many requisites of a complete moral doctrine which it does not contain, do not admit of being reconciled with it. Far less would I insinuate this of the doctrines and precepts of Christ himself. I believe that the sayings of Christ are all, that I can see any evidence of their having been intended to be; that they are irreconcilable with nothing which a comprehensive morality requires; that everything which is excellent in ethics may be brought within them, with no greater violence to their language than has been done to it by all who have attempted to deduce from them any practical system of conduct whatever. But it is quite consistent with this, to believe that they contain, and were meant to contain, only a part of the truth; that many essential elements of the highest morality are among the things which are not provided for, nor intended to be provided for, in the recorded deliverances of the Founder of Christianity, and which have been entirely thrown aside in the system of ethics erected on the basis of those deliverances by the Christian Church. And this being so, I think it a great error to persist in attempting to find in the Christian doctrine that complete rule for our guidance, which its author intended it to sanction and enforce, but only partially to provide. I believe, too, that this narrow theory is becoming a grave practical evil, detracting greatly from the value of the moral training and instruction, which so many well-meaning persons are now at length exerting themselves to promote. I much fear that by attempting to form the mind and feelings on an exclusively religious type, and discarding those secular standards (as for want of a better name they may be called) which heretofore co-existed with and supplemented the Christian ethics, receiving some of its spirit, and infusing into it some of theirs, there will result, and is even now resulting, a low, abject, servile type of character, which, submit itself as it may to what it deems the Supreme Will, is incapable of rising to or sympathizing in the conception of Supreme Goodness. I believe that other ethics than any which can be evolved from exclusively Christian sources, must exist side by side with Christian ethics to produce the moral regeneration of mankind; and that the Christian system is no exception to the rule, that in an imperfect state of the human mind, the interests of truth require a diversity of opinions. It is not necessary that in ceasing to ignore the moral truths not contained in Christianity, men should ignore any of those which it does contain. Such prejudice, or oversight, when it occurs, is altogether an evil; but it is one from which we cannot hope to be always exempt, and must be regarded as the price paid for an inestimable good. The exclusive pretension made by a part of the truth to be the whole, must and ought to be protested against; and if a reactionary impulse should make the protestors unjust in their turn, this one-sidedness, like the other, may be lamented, but must be tolerated. If Christians would teach infidels

to be just to Christianity, they should themselves be just to infidelity. It can do truth no service to blink the fact, known to all who have the most ordinary acquaintance with literary history, that a large portion of the noblest and most valuable moral teaching has been the work, not only of men who did not know, but of men who knew and rejected, the Christian faith.

I do not pretend that the most unlimited use of the freedom of enunciating all possible opinions would put an end to the evils of religious or philosophical sectarianism. Every truth which men of narrow capacity are in earnest about, is sure to be asserted, inculcated, and in many ways even acted on, as if no other truth existed in the world, or at all events none that could limit or qualify the first. I acknowledge that the tendency of all opinions to become sectarian is not cured by the freest discussion, but is often heightened and exacerbated thereby; the truth which ought to have been, but was not, seen, being rejected all the more violently because proclaimed by persons regarded as opponents. But it is not on the impassioned partisan, it is on the calmer and more disinterested bystander, that this collision of opinions works its salutary effect. Not the violent conflict between parts of the truth, but the quiet suppression of half of it, is the formidable evil: there is always hope when people are forced to listen to both sides; it is when they attend only to one that errors harden into prejudices, and truth itself ceases to have the effect of truth, by being exaggerated into falsehood. And since there are few mental attributes more rare than that judicial faculty which can sit in intelligent judgement between two sides of a question, of which only one is represented by an advocate before it, truth has no chance but in proportion as every side of it, every opinion which embodies any fraction of the truth, not only finds advocates, but is so advocated as to be listened to.

We have now recognized the necessity to the mental well-being of mankind (on which all their other well-being depends) of freedom of opinion, and freedom of the expression of opinion, on four distinct grounds; which we will now briefly recapitulate.

First, if any opinion is compelled to silence, that opinion may, for aught we can certainly know, be true. To deny this is to assume our own infallibility.

Secondly, though the silenced opinion be an error, it may, and very commonly does, contain a portion of truth; and since the general or prevailing opinion on any subject is rarely or never the whole truth, it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied.

Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in the manner of a prejudice, with little comprehension or feeling of its rational grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience.

Before quitting the subject of freedom of opinion, it is fit to take some notice of those who say, that the free expression of all opinions should be permitted, on condition that the manner be temperate, and do not pass the bounds of fair discussion. Much might be said on the impossibility of fixing where these supposed bounds are to be placed; for if the test be offence to those whose opinion is attacked, I think experience testifies that this offence is given whenever the attack is telling and powerful, and that every opponent who

pushes them hard, and whom they find it difficult to answer, appears to them, if he shows any strong feeling on the subject, an intemperate opponent. But this, though an important consideration in a practical point of view, merges in a more fundamental objection. Undoubtedly the manner of asserting an opinion, even though it be a true one, may be very objectionable, and may justly incur severe censure. But the principal offences of the kind are such as it is mostly impossible, unless by accidental self-betrayal, to bring home to conviction. The gravest of them is, to argue sophistically, to suppress facts or arguments, to misstate the elements of the case, or misrepresent the opposite opinion. But all this, even to the most aggravated degree, is so continually done in perfect good faith, by persons who are not considered, and in many other respects may not deserve to be considered, ignorant or incompetent, that it is rarely possible on adequate grounds conscientiously to stamp the misrepresentation as morally culpable; and still less could law presume to interfere with this kind of controversial misconduct. With regard to what is commonly meant by intemperate discussion, namely invective, sarcasm, personality, and the like, the denunciation of these weapons would deserve more sympathy if it were ever proposed to interdict them equally to both sides; but it is only desired to restrain the employment of them against the prevailing opinion: against the unprevailing they may not only be used without general disapproval, but will be likely to obtain for him who uses them the praise of honest zeal and righteous indignation. Yet whatever mischief arises from their use, is greatest when they are employed against the comparatively defenceless; and whatever unfair advantage can be derived by any opinion from this mode of asserting it, accrues almost exclusively to received opinions. The worst offence of this kind which can be committed by a polemic, is to stigmatize those who hold the contrary opinion as bad and immoral men. To calumny of this sort, those who hold any unpopular opinion are peculiarly exposed, because they are in general few and uninfluential, and nobody but themselves feels much interested in seeing justice done them; but this weapon is, from the nature of the case, denied to those who attack a prevailing opinion: they can neither use it with safety to themselves, nor, if they could, would it do anything but recoil on their own cause. In general, opinions contrary to those commonly received can only obtain a hearing by studied moderation of language, and the most cautious avoidance of unnecessary offence, from which they hardly ever deviate even in a slight degree without losing ground: while unmeasured vituperation employed on the side of the prevailing opinion, really does deter people from professing contrary opinions, and from listening to those who profess them. For the interest, therefore, of truth and justice, it is far more important to restrain this employment of vituperative language than the other; and, for example, if it were necessary to choose, there would be much more need to discourage offensive attacks on infidelity, than on religion. It is, however, obvious that law and authority have no business with restraining either, while opinion ought, in every instance, to determine its verdict by the circumstances of the individual case; condemning every one, on whichever side of the argument he places himself, in whose mode of advocacy either want of candour, or malignity, bigotry, or intolerance of feeling manifest themselves; but not inferring these vices from the side which a person takes, though it be the contrary side of the question to our own: and giving merited honour to every one, whatever opinion he may hold, who has calmness to see and honesty to state what his opponents and their opinions really are, exaggerating nothing to their discredit, keeping nothing back which tells.

or can be supposed to tell, in their favour. This is the real morality of public discussion: and if often violated, I am happy to think that there are many controversialists who to a great extent observe it, and a still greater number who conscientiously strive towards it.

Chapter V

Applications

The principles asserted in these pages must be more generally admitted as the basis for discussion of details, before a consistent application of them to all the various departments of government and morals can be attempted with any prospect of advantage. The few observations I propose to make on questions of detail, are designed to illustrate the principles, rather than to follow them out to their consequences. I offer, not so much applications, as specimens of application: which may serve to bring into greater clearness the meaning and limits of the two maxims which together form the entire doctrine of this Essay, and to assist the judgement in holding the balance between them, in the cases where it appears doubtful which of them is applicable to the case.

The maxims are, first, that the individual is not accountable to society for his actions, in so far as these concern the interests of no person but himself. Advice, instruction, persuasion, and avoidance by other people if thought necessary by them for their own good, are the only measures by which society can justifiably express its dislike or disapprobation of his conduct. Secondly, that for such actions as are prejudicial to the interests of others, the individual is accountable, and may be subjected either to social or to legal punishment, if society is of opinion that the one or the other is requisite for its protection.

In the first place, it must by no means be supposed, because damage, or probability of damage, to the interests of others, can alone justify the interference of society, that therefore it always does justify such interference. In many cases, an individual, in pursuing a legitimate object, necessarily and therefore legitimately causes pain or loss to others, or intercepts a good which they had a reasonable hope of obtaining. Such oppositions of interest between individuals often arise from bad social institutions, but are unavoidable while those institutions last; and some would be unavoidable under any institutions. Whoever succeeds in an overcrowded profession, or in a competitive examination; whoever is preferred to another in any contest for an object which both desire, reaps benefit from the loss of others, from their wasted exertion and their disappointment. But it is, by common admission, better for the general interest of mankind, that persons should pursue their objects undeterred by this sort of consequences. In other words, society admits no right, either legal or moral, in the disappointed competitors, to immunity from this kind of suffering; and feels called on to interfere, only when means of success have been employed which it is contrary to the general interest to permit — namely, fraud or treachery, and force.

Again, trade is a social act. Whoever undertakes to sell any description of goods to the public, does what affects the interest of other persons, and of society in general; and thus his conduct, in principle, comes within the jurisdiction of society: accordingly, it was once held to be the duty of governments, in all cases which were considered of importance, to fix prices, and regulate the processes of manufacture. But it is now recognized, though not till after a long struggle, that both the cheapness and the good quality of commodities are most effectually provided for by leaving the producers and sellers perfectly free, under the sole check of equal freedom to the buyers for supplying themselves elsewhere. This is the so-called doctrine of

Free Trade, which rests on grounds different from, though equally solid with, the principle of individual liberty asserted in this Essay. Restrictions on trade, or on production for purposes of trade, are indeed restraints; and all restraint, *quâ* restraint, is an evil: but the restraints in question affect only that part of conduct which society is competent to restrain, and are wrong solely because they do not really produce the results which it is desired to produce by them. As the principle of individual liberty is not involved in the doctrine of Free Trade, so neither is it in most of the questions which arise respecting the limits of that doctrine; as for example, what amount of public control is admissible for the prevention of fraud by adulteration; how far sanitary precautions, or arrangements to protect workpeople employed in dangerous occupations, should be enforced on employers. Such questions involve considerations of liberty, only in so far as leaving people to themselves is always better, *caeteris paribus*,[1] than controlling them: but that they may be legitimately controlled for these ends, is in principle undeniable. On the other hand, there are questions relating to interference with trade, which are essentially questions of liberty; such as the Maine Law,[2] already touched upon; the prohibition of the importation of opium into China; the restriction of the sale of poisons; all cases, in short, where the object of the interference is to make it impossible or difficult to obtain a particular commodity. These interferences are objectionable, not as infringements on the liberty of the producer or seller, but on that of the buyer.

One of these examples, that of the sale of poisons, opens a new question; the proper limits of what may be called the functions of police; how far liberty may legitimately be invaded for the prevention of crime, or of accident. It is one of the undisputed functions of government to take precautions against crime before it has been committed, as well as to detect and punish it afterwards. The preventive function of government, however, is far more liable to be abused, to the prejudice of liberty, than the punitory function; for there is hardly any part of the legitimate freedom of action of a human being which would not admit of being represented, and fairly too, as increasing the facilities for some form or other of delinquency. Nevertheless, if a public authority, or even a private person, sees any one evidently preparing to commit a crime, they are not bound to look on inactive until the crime is committed, but may interfere to prevent it. If poisons were never bought or used for any purpose except the commission of murder, it would be right to prohibit their manufacture and sale. They may, however, be wanted not only for innocent but for useful purposes, and restrictions cannot be imposed in the one case without operating in the other. Again, it is a proper office of public authority to guard against accidents. If either a public officer or any one else saw a person attempting to cross a bridge which had been ascertained to be unsafe, and there were no time to warn him of his danger, they might seize him and turn him back, without any real infringement of his liberty; for liberty consists in doing what one desires, and he does not desire to fall into the river. Nevertheless, when there is not a certainty, but only a danger of mischief, no one but the person himself can judge of the sufficiency of the motive which may prompt him to incur the risk: in this case, therefore (unless he is a child, or delirious, or in some state of excitement or absorption incompatible with the full use of the reflecting faculty), he ought, I conceive, to be only warned of the danger; not forcibly prevented from exposing himself to it. Similar considerations, applied

1. 'other things being equal.'
2. Prohibiting the manufacture or sale of intoxicating beverages; enacted in the state of Maine in 1851, and permanently enacted in 1858.

to such a question as the sale of poisons, may enable us to decide which among the possible modes of regulation are or are not contrary to principle. Such a precaution, for example, as that of labelling the drug with some word expressive of its dangerous character, may be enforced without violation of liberty: the buyer cannot wish not to know that the thing he possesses has poisonous qualities. But to require in all cases the certificate of a medical practitioner, would make it sometimes impossible, always expensive, to obtain the article for legitimate uses. The only mode apparent to me, in which difficulties may be thrown in the way of crime committed through this means, without any infringement, worth taking into account, upon the liberty of those who desire the poisonous substance for other purposes, consists in providing what, in the apt language of Bentham, is called 'preappointed evidence.' This provision is familiar to every one in the case of contracts. It is usual and right that the law, when a contract is entered into, should require as the condition of its enforcing performance, that certain formalities should be observed, such as signatures, attestation of witnesses, and the like, in order that in case of subsequent dispute, there may be evidence to prove that the contract was really entered into, and that there was nothing in the circumstances to render it legally invalid: the effect being, to throw great obstacles in the way of fictitious contracts, or contracts made in circumstances which, if known, would destroy their validity. Precautions of a similar nature might be enforced in the sale of articles adapted to be instruments of crime. The seller, for example, might be required to enter in a register the exact time of the transaction, the name and address of the buyer, the precise quality and quantity sold; to ask the purpose for which it was wanted, and record the answer he received. When there was no medical prescription, the presence of some third person might be required, to bring home the fact to the purchaser, in case there should afterwards be reason to believe that the article had been applied to criminal purposes. Such regulations would in general be no material impediment to obtaining the article, but a very considerable one to making an improper use of it without detection.

The right inherent in society, to ward off crimes against itself by antecedent precautions, suggests the obvious limitations to the maxim, that purely self-regarding misconduct cannot properly be meddled with in the way of prevention or punishment. Drunkenness, for example, in ordinary cases, is not a fit subject for legislative interference; but I should deem it perfectly legitimate that a person, who had once been convicted of any act of violence to others under the influence of drink, should be placed under a special legal restriction, personal to himself; that if he were afterwards found drunk, he should be liable to a penalty, and that if when in that state he committed another offence, the punishment to which he would be liable for that other offence should be increased in severity. The making himself drunk, in a person whom drunkenness excites to do harm to others, is a crime against others. So, again, idleness, except in a person receiving support from the public, or except when it constitutes a breach of contract, cannot without tyranny be made a subject of legal punishment; but if, either from idleness or from any other avoidable cause, a man fails to perform his legal duties to others, as for instance to support his children, it is no tyranny to force him to fulfil that obligation, by compulsory labour, if no other means are available.

Again, there are many acts which, being directly injurious only to the agents themselves, ought not to be legally interdicted, but which, if done publicly, are a violation of good manners, and coming thus within the category of offences

against others, may rightfully be prohibited. Of this kind are offences against decency; on which it is unnecessary to dwell, the rather as they are only connected indirectly with our subject, the objection to publicity being equally strong in the case of many actions not in themselves condemnable, nor supposed to be so.

There is another question to which an answer must be found, consistent with the principles which have been laid down. In cases of personal conduct supposed to be blameable, but which respect for liberty precludes society from preventing or punishing, because the evil directly resulting falls wholly on the agent; what the agent is free to do, ought other persons to be equally free to counsel or instigate? This question is not free from difficulty. The case of a person who solicits another to do an act, is not strictly a case of self-regarding conduct. To give advice or offer inducements to any one, is a social act, and may, therefore, like actions in general which affect others, be supposed amenable to social control. But a little reflection corrects the first impression, by showing that if the case is not strictly within the definition of individual liberty, yet the reasons on which the principle of individual liberty is grounded, are applicable to it. If people must be allowed, in whatever concerns only themselves, to act as seems best to themselves at their own peril, they must equally be free to consult with one another about what is fit to be so done; to exchange opinions, and give and receive suggestions. Whatever it is permitted to do, it must be permitted to advise to do. The question is doubtful, only when the instigator derives a personal benefit from his advice; when he makes it his occupation, for subsistence or pecuniary gain, to promote what society and the State consider to be an evil. Then, indeed, a new element of complication is introduced; namely, the existence of classes of persons with an interest opposed to what is considered as the public weal, and whose mode of living is grounded on the counteraction of it. Ought this to be interfered with, or not? Fornication, for example, must be tolerated, and so must gambling; but should a person be free to be a pimp, or to keep a gambling-house? The case is one of those which lie on the exact boundary line between two principles, and it is not at once apparent to which of the two it properly belongs. There are arguments on both sides. On the side of toleration it may be said, that the fact of following anything as an occupation, and living or profiting by the practice of it, cannot make that criminal which would otherwise be admissible; that the act should either be consistently permitted or consistently prohibited; that if the principles which we have hitherto defended are true, society has no business, *as* society, to decide anything to be wrong which concerns only the individual; that it cannot go beyond dissuasion, and that one person should be as free to persuade, as another to dissuade. In opposition to this it may be contended, that although the public, or the State, are not warranted in authoritatively deciding, for purposes of repression or punishment, that such or such conduct affecting only the interests of the individual is good or bad, they are fully justified in assuming, if they regard it as bad, that its being so or not is at least a disputable question: That, this being supposed, they cannot be acting wrongly in endeavouring to exclude the influence of solicitations which are not disinterested, of instigators who cannot possibly be impartial — who have a direct personal interest on one side, and that side the one which the State believes to be wrong, and who confessedly promote it for personal objects only. There can surely, it may be urged, be nothing lost, no sacrifice of good, by so ordering matters that persons shall make their election, either wisely or foolishly, on their own prompting, as free as possible from the arts of

persons who stimulate their inclinations for interested purposes of their own. Thus (it may be said) though the statutes respecting unlawful games are utterly indefensible — though all persons should be free to gamble in their own or each other's houses, or in any place of meeting established by their own subscriptions, and open only to the members and their visitors — yet public gambling-houses should not be permitted. It is true that the prohibition is never effectual, and that, whatever amount of tyrannical power may be given to the police, gambling-houses can always be maintained under other pretences; but they may be compelled to conduct their operations with a certain degree of secrecy and mystery, so that nobody knows anything about them but those who seek them; and more than this, society ought not to aim at. There is considerable force in these arguments. I will not venture to decide whether they are sufficient to justify the moral anomaly of punishing the accessary, when the principal is (and must be) allowed to go free; of fining or imprisoning the procurer, but not the fornicator, the gambling-house keeper, but not the gambler. Still less ought the common operations of buying and selling to be interfered with on analogous grounds. Almost every article which is bought and sold may be used in excess, and the sellers have a pecuniary interest in encouraging that excess; but no argument can be founded on this, in favour, for instance, of the Maine Law; because the class of dealers in strong drinks, though interested in their abuse, are indispensably required for the sake of their legitimate use. The interest, however, of these dealers in promoting intemperance is a real evil, and justifies the State in imposing restrictions and requiring guarantees which, but for that justification, would be infringements of legitimate liberty.

A further question is, whether the State, while it permits, should nevertheless indirectly discourage conduct which it deems contrary to the best interests of the agent; whether, for example, it should take measures to render the means of drunkenness more costly, or add to the difficulty of procuring them by limiting the number of the places of sale. On this as on most other practical questions, many distinctions require to be made. To tax stimulants for the sole purpose of making them more difficult to be obtained, is a measure differing only in degree from their entire prohibition; and would be justifiable only if that were justifiable. Every increase of cost is a prohibition, to those whose means do not come up to the augmented price; and to those who do, it is a penalty laid on them for gratifying a particular taste. Their choice of pleasures, and their mode of expending their income, after satisfying their legal and moral obligations to the State and to individuals, are their own concern, and must rest with their own judgement. These considerations may seem at first sight to condemn the selection of stimulants as special subjects of taxation for purposes of revenue. But it must be remembered that taxation for fiscal purposes is absolutely inevitable; that in most countries it is necessary that a considerable part of that taxation should be indirect; that the State, therefore, cannot help imposing penalties, which to some persons may be prohibitory, on the use of some articles of consumption. It is hence the duty of the State to consider, in the imposition of taxes, what commodities the consumers can best spare; and *a fortiori*,[3] to select in preference those of which it deems the use, beyond a very moderate quantity, to be positively injurious. Taxation, therefore, of stimulants, up to the point which produces the largest amount of revenue (supposing that the State needs all the revenue which it yields) is not only admissible, but to be approved of.

The question of making the sale of these

3. 'with the greater force,' — said of a conclusion which, as compared with another, is even more certain or necessary.

commodities a more or less exclusive privilege, must be answered differently, according to the purposes to which the restriction is intended to be subservient. All places of public resort require the restraint of a police, and places of this kind peculiarly, because offences against society are especially apt to originate there. It is, therefore, fit to confine the power of selling these commodities (at least for consumption on the spot) to persons of known or vouched-for respectability of conduct; to make such regulations respecting hours of opening and closing as may be requisite for public surveillance, and to withdraw the licence if breaches of the peace repeatedly take place through the connivance or incapacity of the keeper of the house, or if it becomes a rendezvous for concocting and preparing offences against the law. Any further restriction I do not conceive to be, in principle, justifiable. The limitation in number, for instance, of beer and spirit houses, for the express purpose of rendering them more difficult of access, and diminishing the occasions of temptation, not only exposes all to an inconvenience because there are some by whom the facility would be abused, but is suited only to a state of society in which the labouring classes are avowedly treated as children or savages, and placed under an education of restraint, to fit them for future admission to the privileges of freedom. This is not the principle on which the labouring classes are professedly governed in any free country; and no person who sets due value on freedom will give his adhesion to their being so governed, unless after all efforts have been exhausted to educate them for freedom and govern them as freemen, and it has been definitively proved that they can only be governed as children. The bare statement of the alternative shows the absurdity of supposing that such efforts have been made in any case which needs be considered here. It is only because the institutions of this country are a mass of inconsistencies, that things find admittance into our practice which belong to the system of despotic, or what is called paternal, government, while the general freedom of our institutions precludes the exercise of the amount of control necessary to render the restraint of any real efficacy as a moral education.

It was pointed out in an early part of this Essay, that the liberty of the individual, in things wherein the individual is alone concerned, implies a corresponding liberty in any number of individuals to regulate by mutual agreement such things as regard them jointly, and regard no persons but themselves. This question presents no difficulty, so long as the will of all the persons implicated remains unaltered; but since that will may change, it is often necessary, even in things in which they alone are concerned, that they should enter into engagements with one another; and when they do, it is fit, as a general rule, that those engagements should be kept. Yet, in the laws, probably, of every country, this general rule has some exceptions. Not only persons are not held to engagements which violate the rights of third parties, but it is sometimes considered a sufficient reason for releasing them from an engagement, that it is injurious to themselves. In this and most other civilized countries, for example, an engagement by which a person should sell himself, or allow himself to be sold, as a slave, would be null and void; neither enforced by law nor by opinion. The ground for thus limiting his power of voluntarily disposing of his own lot in life, is apparent, and is very clearly seen in this extreme case. The reason for not interfering, unless for the sake of others, with a person's voluntary acts, is consideration for his liberty. His voluntary choice is evidence that what he so chooses is desirable, or at the least endurable, to him, and his good is on the whole best provided for by allowing him to take his own means of pursuing it. But by selling him-

self for a slave, he abdicates his liberty; he forgoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justification of allowing him to dispose of himself. He is no longer free; but is thenceforth in a position which has no longer the presumption in its favour, that would be afforded by his voluntarily remaining in it. The principle of freedom cannot require that he should be free not to be free. It is not freedom, to be allowed to alienate his freedom. These reasons, the force of which is so conspicuous in this peculiar case, are evidently of far wider application; yet a limit is everywhere set to them by the necessities of life, which continually require, not indeed that we should resign our freedom, but that we should consent to this and the other limitation of it. The principle, however, which demands uncontrolled freedom of action in all that concerns only the agents themselves, requires that those who have become bound to one another, in things which concern no third party, should be able to release one another from the engagement: and even without such voluntary release, there are perhaps no contracts or engagements, except those that relate to money or money's worth, of which one can venture to say that there ought to be no liberty whatever of retractation. Baron Wilhelm von Humboldt, in the excellent essay from which I have already quoted,[4] states it as his conviction, that engagements which involve personal relations or services, should never be legally binding beyond a limited duration of time; and that the most important of these engagements, marriage, having the peculiarity that its objects are frustrated unless the feelings of both the parties are in harmony with it, should require nothing more than the declared will of either party to dissolve it. This subject is too important, and too complicated, to be discussed in a parenthesis, and I touch on it only so far as is necessary for purposes of illustration. If the conciseness and generality of Baron Humboldt's dissertation had not obliged him in this instance to content himself with enunciating his conclusion without discussing the premisses, he would doubtless have recognized that the question cannot be decided on grounds so simple as those to which he confines himself. When a person, either by express promise or by conduct, has encouraged another to rely upon his continuing to act in a certain way — to build expectations and calculations, and stake any part of his plan of life upon that supposition — a new series of moral obligations arises on his part towards that person, which may possibly be overruled, but cannot be ignored. And again, if the relation between two contracting parties has been followed by consequences to others; if it has placed third parties in any peculiar position, or, as in the case of marriage, has even called third parties into existence, obligations arise on the part of both the contracting parties towards those third persons, the fulfilment of which, or at all events the mode of fulfilment, must be greatly affected by the continuance or disruption of

4. An allusion to a passage from Chapter iii, 'Of Individual Liberty, as One of the Elements of Well-Being':

'Few persons, out of Germany, even comprehend the meaning of the doctrine which Wilhelm von Humboldt, so eminent both as a savant and as a politician, made the text of a treatise — that "the end of man, or that which is prescribed by the eternal or immutable dictates of reason, and not suggested by vague and transient desires, is the highest and most harmonious development of his powers to a complete and consistent whole"; that, therefore, the object "towards which every human being must ceaselessly direct his efforts, and on which especially those who design to influence their fellow men must ever keep their eyes, is the individuality of power and development"; that for this there are two requisites, "freedom, and variety of situations"; and that from the union of these arise "individual vigour and manifold diversity," which combine themselves in "originality."' (*The Sphere and Duties of Government*, from the German of Baron Wilhelm von Humboldt, pp.11–13.) [Mill's note.]

the relation between the original parties to the contract. It does not follow, nor can I admit, that these obligations extend to requiring the fulfilment of the contract at all costs to the happiness of the reluctant party; but they are a necessary element in the question; and even if, as Von Humboldt maintains, they ought to make no difference in the *legal* freedom of the parties to release themselves from the engagement (and I also hold that they ought not to make *much* difference), they necessarily make a great difference in the *moral* freedom. A person is bound to take all these circumstances into account, before resolving on a step which may affect such important interests of others; and if he does not allow proper weight to those interests, he is morally responsible for the wrong. I have made these obvious remarks for the better illustration of the general principle of liberty, and not because they are at all needed on the particular question, which, on the contrary, is usually discussed as if the interest of children was everything, and that of grown persons nothing.

I have already observed that, owing to the absence of any recognized general principles, liberty is often granted where it should be withheld, as well as withheld where it should be granted; and one of the cases in which, in the modern European world, the sentiment of liberty is the strongest, is a case where, in my view, it is altogether misplaced. A person should be free to do as he likes in his own concerns; but he ought not to be free to do as he likes in acting for another, under the pretext that the affairs of the other are his own affairs. The State, while it respects the liberty of each in what specially regards himself, is bound to maintain a vigilant control over his exercise of any power which it allows him to possess over others. This obligation is almost entirely disregarded in the case of the family relations, a case, in its direct influence on human happiness, more important than all others taken together. The almost despotic power of husbands over wives needs not be enlarged upon here, because nothing more is needed for the complete removal of the evil, than that wives should have the same rights, and should receive the protection of law in the same manner, as all other persons; and because, on this subject, the defenders of established injustice do not avail themselves of the plea of liberty, but stand forth openly as the champions of power. It is in the case of children, that misapplied notions of liberty are a real obstacle to the fulfilment by the State of its duties. One would almost think that a man's children were supposed to be literally, and not metaphorically, a part of himself, so jealous is opinion of the smallest interference of law with his absolute and exclusive control over them; more jealous than of almost any interference with his own freedom of action: so much less do the generality of mankind value liberty than power. Consider, for example, the case of education. Is it not almost a self-evident axiom, that the State should require and compel the education, up to a certain standard, of every human being who is born its citizen? Yet who is there that is not afraid to recognize and assert this truth? Hardly any one indeed will deny that it is one of the most sacred duties of the parents (or, as law and usage now stand, the father), after summoning a human being into the world, to give to that being an education fitting him to perform his part well in life towards others and towards himself. But while this is unanimously declared to be the father's duty, scarcely anybody, in this country, will bear to hear of obliging him to perform it. Instead of his being required to make any exertion or sacrifice for securing education to the child, it is left to his choice to accept it or not when it is provided gratis! It still remains unrecognized, that to bring a child into existence without a fair prospect of being able, not only to provide food for its body, but instruction and training for its mind, is a moral

crime, both against the unfortunate offspring and against society; and that if the parent does not fulfil this obligation, the State ought to see it fulfilled, at the charge, as far as possible, of the parent.

Were the duty of enforcing universal education once admitted, there would be an end to the difficulties about what the State should teach, and how it should teach, which now convert the subject into a mere battle-field for sects and parties, causing the time and labour which should have been spent in educating, to be wasted in quarrelling about education. If the government would make up its mind to *require* for every child a good education, it might save itself the trouble of *providing* one. It might leave to parents to obtain the education where and how they pleased, and content itself with helping to pay the school fees of the poorer classes of children, and defraying the entire school expenses of those who have no one else to pay for them. The objections which are urged with reason against State education, do not apply to the enforcement of education by the State, but to the State's taking upon itself to direct that education: which is a totally different thing. That the whole or any large part of the education of the people should be in State hands, I go as far as any one in deprecating. All that has been said of the importance of individuality of character, and diversity in opinions and modes of conduct, involves, as of the same unspeakable importance, diversity of education. A general State education is a mere contrivance for moulding people to be exactly like one another: and as the mould in which it casts them is that which pleases the predominant power in the government, whether this be a monarch, a priesthood, an aristocracy, or the majority of the existing generation in proportion as it is efficient and successful, it establishes a despotism over the mind, leading by natural tendency to one over the body. An education established and controlled by the State should only exist, if it exist at all, as one among many competing experiments, carried on for the purpose of example and stimulus, to keep the others up to a certain standard of excellence. Unless, indeed, when society in general is in so backward a state that it could not or would not provide for itself any proper institutions of education, unless the government undertook the task: then, indeed, the government may, as the less of two great evils, take upon itself the business of schools and universities, as it may that of joint-stock companies, when private enterprise, in a shape fitted for undertaking great works of industry, does not exist in the country. But in general, if the country contains a sufficient number of persons qualified to provide education under government auspices, the same persons would be able and willing to give an equally good education on the voluntary principle, under the assurance of remuneration afforded by a law rendering education compulsory, combined with State aid to those unable to defray the expense.

The instrument for enforcing the law could be no other than public examinations, extending to all children, and beginning at an early age. An age might be fixed at which every child must be examined, to ascertain if he (or she) is able to read. If a child proves unable, the father, unless he has some sufficient ground of excuse, might be subjected to a moderate fine, to be worked out, if necessary, by his labour, and the child might be put to school at his expense. Once in every year the examination should be renewed, with a gradually extending range of subjects, so as to make the universal acquisition, and what is more, retention, of a certain minimum of general knowledge, virtually compulsory. Beyond that minimum, there should be voluntary examinations on all subjects, at which all who come up to a certain standard of proficiency might claim a certificate. To prevent the State from exercising, through

these arrangements, an improper influence over opinion, the knowledge required for passing an examination (beyond the merely instrumental parts of knowledge, such as languages and their use) should, even in the higher classes of examinations, be confined to facts and positive science exclusively. The examinations on religion, politics, or other disputed topics, should not turn on the truth or falsehood of opinions, but on the matter of fact that such and such an opinion is held, on such grounds, by such authors, or schools, or churches. Under this system, the rising generation would be no worse off in regard to all disputed truths, than they are at present; they would be brought up either churchmen or dissenters as they now are, the State merely taking care that they should be instructed churchmen, or instructed dissenters. There would be nothing to hinder them from being taught religion, if their parents chose, at the same schools where they were taught other things. All attempts by the State to bias the conclusions of its citizens on disputed subjects, are evil; but it may very properly offer to ascertain and certify that a person possesses the knowledge, requisite to make his conclusions, on any given subject, worth attending to. A student of philosophy would be the better for being able to stand an examination both in Locke and in Kant,[5] whichever of the two he takes up with, or even if with neither: and there is no reasonable objection to examining an atheist in the evidences of Christianity, provided he is not required to profess a belief in them. The examinations, however, in the higher branches of knowledge should, I conceive, be entirely voluntary. It would be giving too dangerous a power to governments, were they allowed to exclude any one from professions, even from the profession of teacher, for alleged deficiency of qualifications: and I think, with Wilhelm von Humboldt, that degrees, or other public certificates of scientific or professional acquirements, should be given to all who present themselves for examination, and stand the test; but that such certificates should confer no advantage over competitors, other than the weight which may be attached to their testimony by public opinion.

It is not in the matter of education only, that misplaced notions of liberty prevent moral obligations on the part of parents from being recognized, and legal obligations from being imposed, where there are the strongest grounds for the former always, and in many cases for the latter also. The fact itself, of causing the existence of a human being, is one of the most responsible actions in the range of human life. To undertake this responsibility — to bestow a life which may be either a curse or a blessing — unless the being on whom it is to be bestowed will have at least the ordinary chances of a desirable existence, is a crime against that being. And in a country either overpeopled, or threatened with being so, to produce children, beyond a very small number, with the effect of reducing the reward of labour by their competition, is a serious offence against all who live by the remuneration of their labour. The laws which, in many countries on the Continent, forbid marriage unless the parties can show that they have the means of supporting a family, do not exceed the legitimate powers of the State: and whether such laws be expedient or not (a question mainly dependent on local circumstances and feelings), they are not objectionable as violations of liberty. Such laws are interferences of the State to prohibit a mischievous act — an act injurious to others, which ought to be a subject of

John Locke (1632–1704), English empirical thinker; Immanuel Kant (1724–1804), German philosopher. Mill apparently has in mind the antithesis between Locke's objective and mechanical approach to the problem of mind, and Kant's comparatively subjective and dynamic approach in the *Critique of Pure Reason* (1781).

reprobation, and social stigma, even when it is not deemed expedient to superadd legal punishment. Yet the current ideas of liberty, which bend so easily to real infringements of the freedom of the individual in things which concern only himself, would repel the attempt to put any restraint upon his inclinations when the consequence of their indulgence is a life or lives of wretchedness and depravity to the offspring, with manifold evils to those sufficiently within reach to be in any way affected by their actions. When we compare the strange respect of mankind for liberty, with their strange want of respect for it, we might imagine that a man had an indispensable right to do harm to others, and no right at all to please himself without giving pain to any one.

I have reserved for the last place a large class of questions respecting the limits of government interference, which, though closely connected with the subject of this Essay, do not, in strictness, belong to it. These are cases in which the reasons against interference do not turn upon the principle of liberty: the question is not about restraining the actions of individuals, but about helping them: it is asked whether the government should do, or cause to be done, something for their benefit, instead of leaving it to be done by themselves, individually, or in voluntary combination.

The objections to government interference, when it is not such as to involve infringement of liberty, may be of three kinds.

The first is, when the thing to be done is likely to be better done by individuals than by the government. Speaking generally, there is no one so fit to conduct any business, or to determine how or by whom it shall be conducted, as those who are personally interested in it. This principle condemns the interferences, once so common, of the legislature, or the officers of government, with the ordinary processes of industry. But this part of the subject has been sufficiently enlarged upon by political economists, and is not particularly related to the principles of this Essay.

The second objection is more nearly allied to our subject. In many cases, though individuals may not do the particular thing so well, on the average, as the officers of government, it is nevertheless desirable that it should be done by them, rather than by the government, as a means to their own mental education — a mode of strengthening their active faculties, exercising their judgement, and giving them a familiar knowledge of the subjects with which they are thus left to deal. This is a principal, though not the sole, recommendation of jury trial (in cases not political); of free and popular local and municipal institutions; of the conduct of industrial and philanthropic enterprises by voluntary associations. These are not questions of liberty, and are connected with that subject only by remote tendencies; but they are questions of development. It belongs to a different occasion from the present to dwell on these things as parts of national education; as being, in truth, the peculiar training of a citizen, the practical part of the political education of a free people, taking them out of the narrow circle of personal and family selfishness, and accustoming them to the comprehension of joint interests, the management of joint concerns — habituating them to act from public or semi-public motives, and guide their conduct by aims which unite instead of isolating them from one another. Without these habits and powers, a free constitution can neither be worked nor preserved; as is exemplified by the too-often transitory nature of political freedom in countries where it does not rest upon a sufficient basis of local liberties. The management of purely local business by the localities, and of the great enterprises of industry by the union of those who voluntarily supply the pecuni-

ary means, is further recommended by all the advantages which have been set forth in this Essay as belonging to individuality of development, and diversity of modes of action. Government operations tend to be everywhere alike. With individuals and voluntary associations, on the contrary, there are varied experiments, and endless diversity of experience. What the State can usefully do, is to make itself a central depository, and active circulator and diffuser, of the experience resulting from many trials. Its business is to enable each experimentalist to benefit by the experiments of others; instead of tolerating no experiments but its own.

The third, and most cogent reason for restricting the interference of government, is the great evil of adding unnecessarily to its power. Every function superadded to those already exercised by the government, causes its influence over hopes and fears to be more widely diffused, and converts, more and more, the active and ambitious part of the public into hangers-on of the government, or of some party which aims at becoming the government. If the roads, the railways, the banks, the insurance offices, the great joint-stock companies, the universities, and the public charities, were all of them branches of the government; if, in addition, the municipal corporations and local boards, with all that now devolves on them, became departments of the central administration: if the employés of all these different enterprises were appointed and paid by the government, and looked to the government for every rise in life; not all the freedom of the press and popular constitution of the legislature would make this or any other country free otherwise than in name. And the evil would be greater, the more efficiently and scientifically the administrative machinery was constructed — the more skilful the arrangements for obtaining the best qualified hands and heads with which to work it. In England it has of late been proposed that all the members of the civil service of government should be selected by competitive examination, to obtain for those employments the most intelligent and instructed persons procurable; and much has been said and written for and against this proposal. One of the arguments most insisted on by its opponents, is that the occupation of a permanent official servant of the State does not hold out sufficient prospects of emolument and importance to attract the highest talents, which will always be able to find a more inviting career in the professions, or in the service of companies and other public bodies. One would not have been surprised if this argument had been used by the friends of the proposition, as an answer to its principal difficulty. Coming from the opponents it is strange enough. What is urged as an objection is the safety valve of the proposed system. If indeed all the high talent of the country *could* be drawn into the service of the government, a proposal tending to bring about that result might well inspire uneasiness. If every part of the business of society which required organized concert, or large and comprehensive views, were in the hands of the government, and if government offices were universally filled by the ablest men, all the enlarged culture and practised intelligence in the country, except the purely speculative, would be concentrated in a numerous bureaucracy, to whom alone the rest of the community would look for all things: the multitude for direction and dictation in all they had to do; the able and aspiring for personal advancement. To be admitted into the ranks of this bureaucracy, and when admitted, to rise therein, would be the sole objects of ambition. Under this régime, not only is the outside public ill-qualified, for want of practical experience, to criticize or check the mode of operation of the bureaucracy, but even if the accidents of despotic or the natural working of popular institutions occasionally raise to the summit a ruler or rulers of reforming inclinations, no re-

form can be effected which is contrary to the interest of the bureaucracy. Such is the melancholy condition of the Russian empire, as shown in the accounts of those who have had sufficient opportunity of observation. The Czar himself is powerless against the bureaucratic body; he can send any one of them to Siberia, but he cannot govern without them, or against their will. On every decree of his they have a tacit veto, by merely refraining from carrying it into effect. In countries of more advanced civilization and of a more insurrectionary spirit, the public, accustomed to expect everything to be done for them by the State, or at least to do nothing for themselves without asking from the State not only leave to do it, but even how it is to be done, naturally hold the State responsible for all evil which befalls them, and when the evil exceeds their amount of patience, they rise against the government and make what is called a revolution; whereupon somebody else, with or without legitimate authority from the nation, vaults into the seat, issues his orders to the bureaucracy, and everything goes on much as it did before; the bureaucracy being unchanged, and nobody else being capable of taking their place.

A very different spectacle is exhibited among a people accustomed to transact their own business. In France, a large part of the people having been engaged in military service, many of whom have held at least the rank of non-commissioned officers, there are in every popular insurrection several persons competent to take the lead, and improvise some tolerable plan of action. What the French are in military affairs, the Americans are in every kind of civil business; let them be left without a government, every body of Americans is able to improvise one, and to carry on that or any other public business with a sufficient amount of intelligence, order, and decision. This is what every free people ought to be: and a people capable of this is certain to be free; it will never let itself be enslaved by any man or body of men because these are able to seize and pull the reins of the central administration. No bureaucracy can hope to make such a people as this do or undergo anything that they do not like. But where everything is done through the bureaucracy, nothing to which the bureaucracy is really adverse can be done at all. The constitution of such countries is an organization of the experience and practical ability of the nation, into a disciplined body for the purpose of governing the rest; and the more perfect that organization is in itself, the more successful in drawing to itself and educating for itself the persons of greatest capacity from all ranks of the community, the more complete is the bondage of all, the members of the bureaucracy included. For the governors are as much the slaves of their organization and discipline, as the governed are of the governors. A Chinese mandarin is as much the tool and creature of a despotism as the humblest cultivator. An individual Jesuit is to the utmost degree of abasement the slave of his order, though the order itself exists for the collective power and importance of its members.

It is not, also, to be forgotten, that the absorption of all the principal ability of the country into the governing body is fatal, sooner or later, to the mental activity and progressiveness of the body itself. Banded together as they are — working a system which, like all systems, necessarily proceeds in a great measure by fixed rules — the official body are under the constant temptation of sinking into indolent routine, or, if they now and then desert that mill-horse round, of rushing into some half-examined crudity which has struck the fancy of some leading member of the corps: and the sole check to these closely allied, though seemingly opposite, tendencies, the only stimulus which can keep the ability of the body itself up to a high standard, is liability to the watchful criticism of equal ability outside the body.

It is indispensable, therefore, that the means should exist, independently of the government, of forming such ability, and furnishing it with the opportunities and experience necessary for a correct judgement of great practical affairs. If we would possess permanently a skilful and efficient body of functionaries — above all, a body able to originate and willing to adopt improvements; if we would not have our bureaucracy degenerate into a pedantocracy, this body must not engross all the occupations which form and cultivate the faculties required for the government of mankind.

To determine the point at which evils, so formidable to human freedom and advancement, begin, or rather at which they begin to predominate over the benefits attending the collective application of the force of society, under its recognized chiefs, for the removal of the obstacles which stand in the way of its well-being; to secure as much of the advantages of centralized power and intelligence, as can be had without turning into governmental channels too great a proportion of the general activity — is one of the most difficult and complicated questions in the art of government. It is, in a great measure, a question of detail, in which many and various considerations must be kept in view, and no absolute rule can be laid down. But I believe that the practical principle in which safety resides, the ideal to be kept in view, the standard by which to test all arrangements intended for overcoming the difficulty, may be conveyed in these words: the greatest dissemination of power consistent with efficiency; but the greatest possible centralization of information, and diffusion of it from the centre. Thus, in municipal administration, there would be, as in the New England States, a very minute division among separate officers, chosen by the localities, of all business which is not better left to the persons directly interested: but besides this, there would be, in each department of local affairs, a central superintendence, forming a branch of the general government. The organ of this superintendence would concentrate, as in a focus, the variety of information and experience derived from the conduct of that branch of public business in all the localities, from everything analogous which is done in foreign countries, and from the general principles of political science. This central organ should have a right to know all that is done, and its special duty should be that of making the knowledge acquired in one place available for others. Emancipated from the petty prejudices and narrow views of a locality by its elevated position and comprehensive sphere of observation, its advice would naturally carry much authority; but its actual power, as a permanent institution, should, I conceive, be limited to compelling the local officers to obey the laws laid down for their guidance. In all things not provided for by general rules, those officers should be left to their own judgement, under responsibility to their constituents. For the violation of rules, they should be responsible to law, and the rules themselves should be laid down by the legislature; the central administrative authority only watching over their execution, and if they were not properly carried into effect, appealing, according to the nature of the case, to the tribunals to enforce the law, or to the constituencies to dismiss the functionaries who had not executed it according to its spirit. Such, in its general conception, is the central superintendence which the Poor Law Board is intended to exercise over the administrators of the Poor Rate throughout the country. Whatever powers the Board exercises beyond this limit, were right and necessary in that peculiar case, for the cure of rooted habits of maladministration in matters deeply affecting not the localities merely, but the whole community; since no locality has a moral right to make itself by mismanage-

ment a nest of pauperism, necessarily overflowing into other localities, and impairing the moral and physical condition of the whole labouring community. The powers of administrative coercion and subordinate legislation possessed by the Poor Law Board (but which, owing to the state of opinion on the subject, are very scantily exercised by them), though perfectly justifiable in a case of first-rate national interest, would be wholly out of place in the superintendence of interests purely local. But a central organ of information and instruction for all the localities, would be equally valuable in all departments of administration. A government cannot have too much of the kind of activity which does not impede, but aids and stimulates, individual exertion and development. The mischief begins when, instead of calling forth the activity and powers of individuals and bodies, it substitutes its own activity for theirs; when, instead of informing, advising, and, upon occasion, denouncing, it makes them work in fetters, or bids them stand aside and does their work instead of them. The worth of a State, in the long run, is the worth of the individuals composing it; and a State which postpones the interests of *their* mental expansion and elevation, to a little more of administrative skill, or of that semblance of it which practice gives, in the details of business; a State which dwarfs its men, in order that they may be more docile instruments in its hands even for beneficial purposes — will find that with small men no great thing can really be accomplished; and that the perfection of machinery to which it has sacrificed everything, will in the end avail it nothing, for want of the vital power which, in order that the machine might work more smoothly, it has preferred to banish.

AUTOBIOGRAPHY

Chapter V

A Crisis in My Mental History. One Stage Onward

For some years after this time[1] I wrote very little, and nothing regularly, for publication: and great were the advantages which I derived from the intermission. It was of no common importance to me, at this period, to be able to digest and mature my thoughts for my own mind only, without any immediate call for giving them out in print. Had I gone on writing, it would have much disturbed the important transformation in my opinions and character, which took place during those years. The origin of this transformation, or at least the process by which I was prepared for it, can only be explained by turning some distance back.

1. After 1828, when Mill ceased to write for the *Westminster Review*.

From the winter of 1821, when I first read Bentham,[2] and especially from the commencement of the Westminster Review, I had what might truly be called an object in life; to be a reformer of the world. My conception of my own happiness was entirely identified with this object. The personal sympathies I wished for were those of fellow labourers in this enterprise. I endeavoured to pick up as many flowers as I could by the way; but as a serious and permanent personal satisfaction to rest upon, my whole reliance was placed on this; and I was accustomed to felicitate myself on the certainty of a happy life which I enjoyed, through placing my happiness in something durable and distant, in which some progress might

2. Jeremy Bentham (1748–1832), champion of English Utilitarianism, established the *Westminster Review* in 1823, to spread the principles of philosophic radicalism.

be always making, while it could never be exhausted by complete attainment. This did very well for several years, during which the general improvement going on in the world and the idea of myself as engaged with others in struggling to promote it, seemed enough to fill up an interesting and animated existence. But the time came when I awakened from this as from a dream. It was in the autumn of 1826. I was in a dull state of nerves, such as everybody is occasionally liable to; unsusceptible to enjoyment or pleasurable excitement; one of those moods when what is pleasure at other times, becomes insipid or indifferent; the state, I should think, in which converts to Methodism usually are, when smitten by their first 'conviction of sin.' In this frame of mind it occurred to me to put the question directly to myself: 'Suppose that all your objects in life were realized; that all the changes in institutions and opinions which you are looking forward to, could be completely effected at this very instant: would this be a great joy and happiness to you?' And an irrepressible self-consciousness distinctly answered, 'No!' At this my heart sank within me: the whole foundation on which my life was constructed fell down. All my happiness was to have been found in the continual pursuit of this end. The end had ceased to charm, and how could there ever again be any interest in the means? I seemed to have nothing left to live for.

At first I hoped that the cloud would pass away of itself; but it did not. A night's sleep, the sovereign remedy for the smaller vexations of life, had no effect on it. I awoke to a renewed consciousness of the woful fact. I carried it with me into all companies, into all occupations. Hardly anything had power to cause me even a few minutes' oblivion of it. For some months the cloud seemed to grow thicker and thicker. The lines in Coleridge's 'Dejection' — I was not then acquainted with them — exactly describe my case:

A grief without a pang, void, dark and drear,
A drowsy, stifled, unimpassioned grief,
Which finds no natural outlet or relief
In word, or sigh, or tear.[3]

In vain I sought relief from my favourite books; those memorials of past nobleness and greatness from which I had always hitherto drawn strength and animation. I read them now without feeling, or with the accustomed feeling *minus* all its charm; and I became persuaded, that my love of mankind, and of excellence for its own sake, had worn itself out. I sought no comfort by speaking to others of what I felt. If I had loved any one sufficiently to make confiding my griefs a necessity, I should not have been in the condition I was. I felt, too, that mine was not an interesting, or in any way respectable distress. There was nothing in it to attract sympathy. Advice, if I had known where to seek it, would have been most precious. The words of Macbeth to the physician often occurred to my thoughts.[4] But there was no one on whom I could build the faintest hope of such assistance. My father, to whom it would have been natural to me to have recourse in any practical difficulties, was the last person to whom, in such a case as this, I looked for help. Everything convinced me that he had no knowledge of any such mental state as I was suffering from, and that even if he could be made to understand it, he was not the physician who could heal it. My education, which was wholly his work, had been conducted without any regard to the possibility of its ending in this result; and I saw no use in giving him the pain of thinking that his plans had failed, when the failure was probably irremediable, and, at all events, beyond the power of *his* remedies. Of other friends, I had at that time none to whom I had any hope of making my condition intelligible. It was

4. See *Macbeth*, V,iii,40–45.

however abundantly intelligible to myself; and the more I dwelt upon it, the more hopeless it appeared.

My course of study had led me to believe, that all mental and moral feelings and qualities, whether of a good or of a bad kind, were the results of association;[5] that we love one thing, and hate another, take pleasure in one sort of action or contemplation, and pain in another sort, through the clinging of pleasurable or painful ideas to those things, from the effect of education or of experience. As a corollary from this, I had always heard it maintained by my father, and was myself convinced, that the object of education should be to form the strongest possible associations of the salutary class; associations of pleasure with all things beneficial to the great whole, and of pain with all things hurtful to it. This doctrine appeared inexpugnable; but it now seemed to me, on retrospect, that my teachers had occupied themselves but superficially with the means of forming and keeping up these salutary associations. They seemed to have trusted altogether to the old familiar instruments, praise and blame, reward and punishment. Now, I did not doubt that by these means, begun early, and applied unremittingly, intense associations of pain and pleasure, especially of pain, might be created, and might produce desires and aversions capable of lasting undiminished to the end of life. But there must always be something artificial and casual in associations thus produced. The pains and pleasures thus forcibly associated with things, are not connected with them by any natural tie; and it is therefore, I thought, essential to the durability of these associations, that they should have become so intense and inveterate as to be practically indissoluble, before the habitual exercise of the power of analysis had commenced. For I now saw, or thought I saw, what I had always before received with incredulity — that the habit of analysis has a tendency to wear away the feelings: as indeed it has, when no other mental habit is cultivated, and the analysing spirit remains without its natural complements and correctives. The very excellence of analysis (I argued) is that it tends to weaken and undermine whatever is the result of prejudice; that it enables us mentally to separate ideas which have only casually clung together: and no associations whatever could ultimately resist this dissolving force, were it not that we owe to analysis our clearest knowledge of the permanent sequences in nature; the real connexions between Things, not dependent on our will and feelings; natural laws, by virtue of which, in many cases, one thing is inseparable from another in fact; which laws, in proportion as they are clearly perceived and imaginatively realized, cause our ideas of things which are always joined together in Nature, to cohere more and more closely in our thoughts. Analytic habits may thus even strengthen the associations between causes and effects, means and ends, but tend altogether to weaken those which are, to speak familiarly, a *mere* matter of feeling. They are therefore (I thought) favourable to prudence and clear-sightedness, but a perpetual worm at the root both of the passions and of the virtues; and, above all, fearfully undermine all desires, and all pleasures, which are the effects of association, that is, according to the theory I held, all except the purely physical and organic; of the entire insuf-

5. Allusion to the doctrine of the Association of Ideas, first developed with considerable fullness by David Hume, later by David Hartley and James Mill. According to these writers, all mental experiences consist fundamentally of certain ultimate elements of consciousness which are variously combined into complex wholes under the laws of association, so that the appearance in consciousness of one idea or state of mind is inevitably followed or accompanied by the appearance of those associated with it. It was J.S.Mill himself who was chiefly responsible for the application of this principle in philosophy, involving a mechanistic and deterministic psychology.

ficiency of which to make life desirable, no one had a stronger conviction than I had. These were the laws of human nature, by which, as it seemed to me, I had been brought to my present state. All those to whom I looked up, were of opinion that the pleasure of sympathy with human beings, and the feelings which made the good of others, and especially of mankind on a large scale, the object of existence, were the greatest and surest sources of happiness. Of the truth of this I was convinced, but to know that a feeling would make me happy if I had it, did not give me the feeling. My education, I thought, had failed to create these feelings in sufficient strength to resist the dissolving influence of analysis, while the whole course of my intellectual cultivation had made precocious and premature analysis the inveterate habit of my mind. I was thus, as I said to myself, left stranded at the commencement of my voyage, with a well-equipped ship and a rudder, but no sail; without any real desire for the ends which I had been so carefully fitted out to work for: no delight in virtue, or the general good, but also just as little in anything else. The fountains of vanity and ambition seemed to have dried up within me, as completely as those of benevolence. I had had (as I reflected) some gratification of vanity at too early an age: I had obtained some distinction, and felt myself of some importance, before the desire of distinction and of importance had grown into a passion: and little as it was which I had attained, yet having been attained too early, like all pleasures enjoyed too soon, it had made me *blasé* and indifferent to the pursuit. Thus neither selfish nor unselfish pleasures were pleasures to me. And there seemed no power in nature sufficient to begin the formation of my character anew, and create in a mind now irretrievably analytic, fresh associations of pleasure with any of the objects of human desire.

These were the thoughts which mingled with the dry heavy dejection of the melancholy winter of 1826–7. During this time I was not incapable of my usual occupations. I went on with them mechanically, by the mere force of habit. I had been so drilled in a certain sort of mental exercise, that I could still carry it on when all the spirit had gone out of it. I even composed and spoke several speeches at the debating society, how, or with what degree of success, I know not. Of four years continual speaking at that society, this is the only year of which I remember next to nothing. Two lines of Coleridge, in whom alone of all writers I have found a true description of what I felt, were often in my thoughts, not at this time (for I had never read them), but in a later period of the same mental malady:

> Work without hope draws nectar in a sieve,
> And hope without an object cannot live.[6]

In all probability my case was by no means so peculiar as I fancied it, and I doubt not that many others have passed through a similar state; but the idiosyncrasies of my education had given to the general phenomenon a special character, which made it seem the natural effect of causes that it was hardly possible for time to remove. I frequently asked myself, if I could, or if I was bound to go on living, when life must be passed in this manner. I generally answered to myself, that I did not think I could possibly bear it beyond a year. When, however, not more than half that duration of time had elapsed, a small ray of light broke in upon my gloom. I was reading, accidentally, Marmontel's 'Memoires,'[7] and came to the passage which relates his father's death, the distressed position of the family, and the sudden inspiration by which he, then a mere

boy, felt and made them feel that he would be everything to them — would supply the place of all that they had lost. A vivid conception of the scene and its feelings came over me, and I was moved to tears. From this moment my burden grew lighter. The oppression of the thought that all feeling was dead within me, was gone. I was no longer hopeless: I was not a stock or a stone. I had still, it seemed, some of the material out of which all worth of character, and all capacity for happiness, are made. Relieved from my ever present sense of irremediable wretchedness, I gradually found that the ordinary incidents of life could again give me some pleasure; that I could again find enjoyment, not intense, but sufficient for cheerfulness, in sunshine and sky, in books, in conversation, in public affairs; and that there was, once more, excitement, though of a moderate kind, in exerting myself for my opinions, and for the public good. Thus the cloud gradually drew off, and I again enjoyed life: and though I had several relapses, some of which lasted many months, I never again was as miserable as I had been

The experiences of this period had two very marked effects on my opinions and character. In the first place, they led me to adopt a theory of life, very unlike that on which I had before acted, and having much in common with what at that time I certainly had never heard of, the anti-self-consciousness theory of Carlyle.[8] I never, indeed, wavered in the conviction that happiness is the test of all rules of conduct, and the end of life. But I now thought that this end was only to be attained by not making it the direct end. Those only are happy (I thought) who have their minds fixed on some object other than their own happiness; on the happiness of others, on the improvement of mankind, even on some art or pursuit, followed not as a means, but as itself an ideal end. Aiming thus at something else, they find happiness by the way. The enjoyments of life (such was now my theory) are sufficient to make it a pleasant thing, when they are taken *en passant*, without being made a principal object. Once make them so, and they are immediately felt to be insufficient. They will not bear a scrutinizing examination. Ask yourself whether you are happy, and you cease to be so. The only chance is to treat, not happiness, but some end external to it, as the purpose of life. Let your self-consciousness, your scrutiny, your self-interrogation, exhaust themselves on that; and if otherwise fortunately circumstanced you will inhale happiness with the air you breathe, without dwelling on it or thinking about it, without either forestalling it in imagination, or putting it to flight by fatal questioning. This theory now became the basis of my philosophy of life. And I still hold to it as the best theory for all those who have but a moderate degree of sensibility and of capacity for enjoyment, that is, for the great majority of mankind.[9]

The other important change which my opinions at this time underwent, was that I, for the first time, gave its proper place, among the prime necessities of human well-being, to the internal culture of the individual. I ceased to attach almost exclusive importance to the ordering of outward circumstances, and the training of the human being for speculation and for action.

I had now learnt by experience that the passive susceptibilities needed to be cultivated as well as the active capacities, and required to be nourished and enriched as well as guided. I did not, for an instant, lose sight of, or undervalue, that part of the truth which I had seen before; I never turned recreant to intellectual culture, or ceased to consider the power and practice

8. Expressed most fully in Carlyle's essay, 'Characteristics.'

9. This paragraph shows Mill arriving at the position expressed in *Sartor Resartus*, 'The Everlasting Yea.'

of analysis as an essential condition both of individual and of social improvement. But I thought that it had consequences which required to be corrected, by joining other kinds of cultivation with it. The maintenance of a due balance among the faculties, now seemed to me of primary importance. The cultivation of the feelings became one of the cardinal points in my ethical and philosophical creed. And my thoughts and inclinations turned in an increasing degree towards whatever seemed capable of being instrumental to that object.

I now began to find meaning in the things which I had read or heard about the importance of poetry and art as instruments of human culture. But it was some time longer before I began to know this by personal experience. The only one of the imaginative arts in which I had from childhood taken great pleasure, was music; the best effect of which (and in this it surpasses perhaps every other art) consists in exciting enthusiasm; in winding up to a high pitch those feelings of an elevated kind which are already in the character, but to which this excitement gives a glow and a fervour, which, though transitory at its utmost height, is precious for sustaining them at other times. This effect of music I had often experienced; but like all my pleasurable susceptibilities it was suspended during the gloomy period. I had sought relief again and again from this quarter, but found none. After the tide had turned, and I was in process of recovery, I had been helped forward by music, but in a much less elevated manner. I at this time first became acquainted with Weber's Oberon,[10] and the extreme pleasure which I drew from its delicious melodies did me good, by showing me a source of pleasure to which I was as susceptible as ever. The good, however, was much impaired by the thought, that the pleasure of music (as is quite true of such pleasure as this was, that of mere tune) fades with familiarity, and requires either to be revived by intermittence, or fed by continual novelty. And it is very characteristic both of my then state, and of the general tone of my mind at this period of my life, that I was seriously tormented by the thought of the exhaustibility of musical combinations. The octave consists only of five tones and two semitones, which can be put together in only a limited number of ways, of which but a small proportion are beautiful: most of these, it seemed to me, must have been already discovered, and there could not be room for a long succession of Mozarts and Webers, to strike out, as these had done, entirely new and surpassingly rich veins of musical beauty. This source of anxiety may, perhaps, be thought to resemble that of the philosophers of Laputa,[11] who feared lest the sun should be burnt out. It was, however, connected with the best feature in my character, and the only good point to be found in my very unromantic and in no way honourable distress. For though my dejection, honestly looked at, could not be called other than egotistical, produced by the ruin, as I thought, of my fabric of happiness, yet the destiny of mankind in general was ever in my thoughts, and could not be separated from my own. I felt that the flaw in my life, must be a flaw in life itself; that the question was, whether, if the reformers of society and government could succeed in their objects, and every person in the community were free and in a state of physical comfort, the pleasures of life, being no longer kept up by struggle and privation, would cease to be pleasures. And I felt that unless I could see my way to some better hope than this for human hap-

10. An English opera, written for Covent Garden Theatre, upon a libretto adapted by Planché from Wieland's *Oberon*, by Carl Maria Friedrich Ernest von Weber (1786–1826), German composer. The opera was first produced on April 12, 1826, with great popular success.

11. See Swift, *Gulliver's Travels*, third part, which is directed against philosophers, men of science, etc.

piness in general, my dejection must continue; but that if I could see such an outlet, I should then look on the world with pleasure; content as far as I was myself concerned, with any fair share of the general lot.

This state of my thoughts and feelings made the fact of my reading Wordsworth for the first time (in the autumn of 1828), an important event in my life. I took up the collection of his poems from curiosity, with no expectation of mental relief from it, though I had before resorted to poetry with that hope. In the worst period of my depression, I had read through the whole of Byron (then new to me), to try whether a poet, whose peculiar department was supposed to be that of the intenser feelings, could rouse any feeling in me. As might be expected, I got no good from this reading, but the reverse. The poet's state of mind was too like my own. His was the lament of a man who had worn out all pleasures, and who seemed to think that life, to all who possess the good things of it, must necessarily be the vapid, uninteresting thing which I found it. His Harold and Manfred had the same burden on them which I had; and I was not in a frame of mind to desire any comfort from the vehement sensual passion of his Giaours, or the sullenness of his Laras. But while Byron was exactly what did not suit my condition, Wordsworth was exactly what did. I had looked into the Excursion two or three years before, and found little in it; and I should probably have found as little, had I read it at this time. But the miscellaneous poems, in the two-volume edition of 1815[12] (to which little of value was added in the latter part of the author's life), proved to be the precise thing for my mental wants at that particular juncture.

In the first place, these poems addressed themselves powerfully to one of the strongest of my pleasurable susceptibilities, the love of rural objects and natural scenery; to which I had been indebted not only for much of the pleasure of my life, but quite recently for relief from one of my longest relapses into depression. In this power of rural beauty over me, there was a foundation laid for taking pleasure in Wordsworth's poetry; the more so, as his scenery lies mostly among mountains, which, owing to my early Pyrenean excursion,[13] were my ideal of natural beauty. But Wordsworth would never have had any great effect on me, if he had merely placed before me beautiful pictures of natural scenery. Scott does this still better than Wordsworth, and a very second-rate landscape does it more effectually than any poet. What made Wordsworth's poems a medicine for my state of mind, was that they expressed, not mere outward beauty, but states of feeling, and of thought coloured by feeling, under the excitement of beauty. They seemed to be the very culture of the feelings, which I was in quest of. In them I seemed to draw from a source of inward joy, of sympathetic and imaginative pleasure, which could be shared in by all human beings; which had no connexion with struggle or imperfection, but would be made richer by every improvement in the physical or social condition of mankind. From them I seemed to learn what would be the perennial sources of happiness, when all the greater evils of life shall have been removed. And I felt myself at once better and happier as I came under their influence. There have certainly been, even in our own age, greater poets than Wordsworth; but poetry of deeper and loftier feeling could not have done for me at that time what his did. I needed

12. This was the first collected edition of Wordsworth, and contained his best poetry.

13. Mill had had a year's residence in France (May 1820 to July 1821), in the family of Sir Samuel Bentham, brother of Jeremy Bentham; he accompanied the Benthams in an excursion to the Pyrenees, his 'first introduction to the highest order of mountain scenery' which 'made the deepest impression' upon him. (See Mill's *Autobiography*, Chapter ii.)

to be made to feel that there was real, permanent happiness in tranquil contemplation. Wordsworth taught me this, not only without turning away from, but with a greatly increased interest in the common feelings and common destiny of human beings. And the delight which these poems gave me, proved that with culture of this sort, there was nothing to dread from the most confirmed habit of analysis. At the conclusion of the Poems came the famous Ode, falsely called Platonic,[14] 'Intimations of Immortality': in which, along with more than his usual sweetness of melody and rhythm, and along with the two passages of grand imagery but bad philosophy so often quoted, I found that he too had had similar experience to mine; that he also had felt that the first freshness of youthful enjoyment of life was not lasting; but that he had sought for compensation, and found it, in the way in which he was now teaching me to find it. The result was that I gradually, but completely, emerged from my habitual depression, and was never again subject to it. I long continued to value Wordsworth less according to his intrinsic merits, than by the measure of what he had done for me. Compared with the greatest poets, he may be said to be the poet of unpoetical natures, possessed of quiet and contemplative tastes. But unpoetical natures are precisely those which require poetic cultivation. This cultivation Wordsworth is much more fitted to give, than poets who are intrinsically far more poets than he.

It so fell out that the merits of Wordsworth were the occasion of my first public declaration of my new way of thinking, and separation from those of my habitual companions who had not undergone a similar change. The person with whom at that time I was most in the habit of comparing notes on such subjects was Roebuck,[15] and I induced him to read Wordsworth, in whom he also at first seemed to find much to admire: but I, like most Wordsworthians, threw myself into strong antagonism to Byron, both as a poet and as to his influence on the character. Roebuck, all whose instincts were those of action and struggle, had, on the contrary, a strong relish and great admiration of Byron, whose writings he regarded as the poetry of human life, while Wordsworth's, according to him, was that of flowers and butterflies. We agreed to have the fight out at our Debating Society,[16] where we accordingly discussed for two evenings the comparative merits of Byron and Wordsworth, propounding and illustrating by long recitations our respective theories of poetry: Sterling[17] also, in a brilliant speech, putting forward his particular theory. This was the first debate on any weighty subject in which Roebuck and I had been on opposite sides. The schism between us widened from this time more and more, though we continued for some years longer to be companions. In the beginning, our chief divergence related to the cultivation of the feelings. Roebuck was in many respects very different from the vulgar notion of a Benthamite or Utilitarian. He was a lover of poetry and of most of the fine arts. He took great pleasure in music, in dramatic performances, especially in painting, and himself drew and designed landscapes with great facility and beauty. But he never could be made to see that these things have any value as aids in the formation of character. Personally, instead of being, as Benthamites are supposed to be, void of feeling, he had very quick and

strong sensibilities. But, like most Englishmen who have feelings, he found his feelings stand very much in his way. He was much more susceptible to the painful sympathies than to the pleasurable, and looking for his happiness elsewhere, he wished that his feelings should be deadened rather than quickened. And, in truth, the English character, and English social circumstances, make it so seldom possible to derive happiness from the exercise of the sympathies, that it is not wonderful if they count for little in an Englishman's scheme of life. In most other countries the paramount importance of the sympathies as a constituent of individual happiness is an axiom, taken for granted rather than needing any formal statement; but most English thinkers almost seem to regard them as necessary evils, required for keeping men's actions benevolent and compassionate. Roebuck was, or appeared to be, this kind of Englishman. He saw little good in any cultivation of the feelings, and none at all in cultivating them through the imagination, which he thought was only cultivating illusions. It was in vain I urged on him that the imaginative emotion which an idea, when vividly conceived, excites in us, is not an illusion but a fact, as real as any of the other qualities of objects; and far from implying anything erroneous and delusive in our mental apprehension of the object, is quite consistent with the most accurate knowledge and most perfect practical recognition of all its physical and intellectual laws and relations. The intensest feeling of the beauty of a cloud lighted by the setting sun, is no hindrance to my knowing that the cloud is vapour of water, subject to all the laws of vapours in a state of suspension; and I am just as likely to allow for, and act on, these physical laws whenever there is occasion to do so, as if I had been incapable of perceiving any distinction between beauty and ugliness.

While my intimacy with Roebuck diminished, I fell more and more into friendly intercourse with our Coleridgian adversaries in the Society, Frederick Maurice[18] and John Sterling, both subsequently so well known, the former by his writings, the latter through the biographies by Hare and Carlyle. Of these two friends, Maurice was the thinker, Sterling the orator, and impassioned expositor of thoughts which, at this period, were almost entirely formed for him by Maurice.

With Maurice I had for some time been acquainted through Eyton Tooke,[19] who had known him at Cambridge, and although my discussions with him were almost always disputes, I had carried away from them much that helped to build up my new fabric of thought, in the same way as I was deriving much from Coleridge, and from the writings of Goethe and other German authors which I read during these years. I have so deep a respect for Maurice's character and purposes, as well as for his great mental gifts, that it is with some unwillingness I say anything which may seem to place him on a less high eminence than I would gladly be able to accord to him. But I have always thought that there was more intellectual power wasted in Maurice than in any other of my contemporaries. Few of them certainly have had so much to waste. Great powers of generalization, rare ingenuity and subtlety, and a wide perception of important and unobvious truths, served him not for putting something better into the place of the worthless heap of received opinions on the great subjects of thought, but for proving to his own mind that the Church of England had known

18. Frederick Denison Maurice (1805–72), divine and theologian, Christian Socialist. See note 20.

19. One of the members of Mill's Utilitarian Society described in Chapter iii of the *Autobiography*. Tooke was the son of the economist Thomas Tooke (1774–1858), 'a young man of singular worth both moral and intellectual, lost to the world by an early death.'

everything from the first, and that all the truths on the ground of which the Church and orthodoxy have been attacked (many of which he saw as clearly as any one) are not only consistent with the Thirty-nine Articles, but are better understood and expressed in those Articles than by any one who rejects them. I have never been able to find any other explanation of this, than by attributing it to that timidity of conscience, combined with original sensitiveness of temperament, which has so often driven highly gifted men into Romanism from the need of a firmer support than they can find in the independent conclusions of their own judgment. Any more vulgar kind of timidity no one who knew Maurice would ever think of imputing to him, even if he had not given public proof of his freedom from it, by his ultimate collision with some of the opinions commonly regarded as orthodox, and by his noble origination of the Christian Socialist movement.[20] The nearest parallel to him, in a moral point of view, is Coleridge, to whom, in merely intellectual power, apart from poetical genius, I think him decidedly superior. At this time, however, he might be described as a disciple of Coleridge, and Sterling as a disciple of Coleridge and of him.[21] The modifications which were taking place in my old opinions gave me some points of contact with them; and both Maurice and Sterling were of considerable use to my development. With Sterling I soon became very intimate, and was more attached to him than I have ever been to any other man. He was indeed one of the most loveable of men. His frank, cordial, affectionate, and expansive character; a love of truth alike conspicuous in the highest things and the humblest; a generous and ardent nature which threw itself with impetuosity into the opinions it adopted, but was as eager to do justice to the doctrines and the men it was opposed to, as to make war on what it thought their errors; and an equal devotion to the two cardinal points of Liberty and Duty, formed a combination of qualities as attractive to me, as to all others who knew him as well as I did. With his open mind and heart, he found no difficulty in joining hands with me across the gulf which as yet divided our opinions. He told me how he and others had looked upon me (from hearsay information), as a 'made' or manufactured man, having had a certain impress of opinion stamped on me which I could only reproduce; and what a change took place in his feelings when he found, in the discussion on Wordsworth and Byron, that Wordsworth, and all which that name implies, 'belonged' to me as much as to him and his friends. The failure of his health soon scattered all his plans of life, and compelled him to live at a distance from London, so that after the first year or two of our acquaintance, we only saw each other at distant intervals. But (as he said himself in one of his letters to Carlyle) when we did meet it was like brothers. Though he was never, in the full sense of the word, a profound thinker, his openness of mind, and the moral courage in which he greatly surpassed Maurice, made him outgrow the dominion which Maurice and Coleridge had once exercised over his intellect; though he retained to the last a great but discriminating admiration of both, and towards Maurice a warm affection. Except in that short and transitory phasis of his life, during which he made the mistake of becoming a clergyman, his mind was ever progressive: and the advance he

20. The Christian Socialist movement came into prominence in the early 1850's under the guidance of Maurice and Charles Kingsley. The movement aimed to combine the teachings of Christ with the teachings of Socialism in their applications to life. A part of the movement was the inauguration by Maurice of the Working Men's College in London.

21. A vivid picture of Coleridge at this time, when he had attracted to him such promising young men as Maurice and Sterling, is given in Carlyle's *Life of Sterling*, Part I, Chapter viii.

always seemed to have made when I saw him after an interval, made me apply to him what Goethe said of Schiller, 'er hatte eine furchtliche Fortschreitung.'[22] He and I started from intellectual points almost as wide apart as the poles, but the distance between us was always diminishing: if I made steps towards some of his opinions, he, during his short life, was constantly approximating more and more to several of mine: and if he had lived, and had health and vigour to prosecute his ever assiduous self-culture, there is no knowing how much further this spontaneous assimilation might have proceeded.

After 1829 I withdrew from attendance on the Debating Society. I had had enough of speech-making, and was glad to carry on my private studies and meditations without any immediate call for outward assertion of their results. I found the fabric of my old and taught opinions giving way in many fresh places, and I never allowed it to fall to pieces, but was incessantly occupied in weaving it anew. I never, in the course of my transition, was content to remain, for ever so short a time, confused and unsettled. When I had taken in any new idea, I could not rest till I had adjusted its relation to my old opinions, and ascertained exactly how far its effect ought to extend in modifying or superseding them.

The conflicts which I had so often had to sustain in defending the theory of government laid down in Bentham's and my father's writings, and the acquaintance I had obtained with other schools of political thinking, made me aware of many things which that doctrine, professing to be a theory of government in general, ought to have made room for and did not. But these things, as yet, remained with me rather as corrections to be made in applying the theory to practice, than as defects in the theory. I felt that politics could not be a science of specific experience; and that the accusations against the Benthamic theory of *being* a theory, of proceeding *à priori*[23] by way of general reasoning, instead of Baconian experiment, showed complete ignorance of Bacon's principles, and of the necessary conditions of experimental investigation. At this juncture appeared in the Edinburgh Review, Macaulay's famous attack on my father's Essay on Government.[24] This gave me much to think about. I saw that Macaulay's conception of the logic of politics was erroneous; that he stood up for the empirical mode of treating political phenomena, against the philosophical; that even in physical science his notions of philosophizing might have recognised Kepler, but would have excluded Newton and Laplace. But I could not help feeling, that though the tone was unbecoming (an error for which the writer, at a later period, made the most ample and honourable amends), there was truth in several of his strictures on my father's treatment of the subject; that my father's premises were really too narrow, and included but a small number of the general truths, on which, in politics, the important consequences depend. Identity of interest between the governing body and the community at large, is not, in any practical sense which can be attached to it, the only thing on which good government depends; neither can this identity of interest be secured by the mere conditions of election. I was not at all satisfied with the mode in which my father met the criticisms of Macaulay. He did not, as I thought he ought to have done, justify himself by saying, 'I was not writing a scientific treatise on politics, I was writing an argument for parliamentary reform.' He treated Macaulay's argument as sim-

22. 'he had a terrible development [progress].'

23. *à priori*: reasoning from definitions or principles regarded as self-evident, designating that which can be known by such reasoning rather than through experience, or experiment. The opposite of Bacon's (inductive) method. See Macaulay's essay on Bacon.

24. See the *Edinburgh Review*, March 1829.

ply irrational; an attack upon the reasoning faculty; an example of the saying of Hobbes,[25] that when reason is against a man, a man will be against reason. This made me think that there was really something more fundamentally erroneous in my father's conception of philosophical method, as applicable to politics, than I had hitherto supposed there was. But I did not at first see clearly what the error might be. At last it flashed upon me all at once in the course of other studies. In the early part of 1830 I had begun to put on paper the ideas on Logic (chiefly on the distinctions among Terms, and the import of Propositions) which had been suggested and in part worked out in the morning conversations already spoken of. Having secured these thoughts from being lost, I pushed on into the other parts of the subject, to try whether I could do anything further towards clearing up the theory of logic generally. I grappled at once with the problem of Induction, postponing that of Reasoning, on the ground that it is necessary to obtain premises before we can reason from them. Now, Induction is mainly a process for finding the causes of effects: and in attempting to fathom the mode of tracing causes and effects in physical science, I soon saw that in the more perfect of the sciences, we ascend, by generalization from particulars, to the tendencies of causes considered singly, and then reason downward from those separate tendencies, to the effect of the same causes when combined. I then asked myself, what is the ultimate analysis of this deductive process; the common theory of the syllogism evidently throwing no light upon it. My practice (learnt from Hobbes and my father) being to study abstract principles by means of the best concrete instances I could find, the Composition of Forces, in dynamics, occurred to me as the most complete example of the logical process I was investigating. On examining, accordingly, what the mind does when it applies the principle of the Composition of Forces, I found that it performs a simple act of addition. It adds the separate effect of the one force to the separate effect of the other, and puts down the sum of these separate effects as the joint effect. But is this a legitimate process? In dynamics, and in all the mathematical branches of physics, it is; but in some other cases, as in chemistry, it is not; and I then recollected that something not unlike this was pointed out as one of the distinctions between chemical and mechanical phenomena, in the introduction to that favourite of my boyhood, Thomson's System of Chemistry.[26] This distinction at once made my mind clear as to what was perplexing me in respect to the philosophy of politics. I now saw, that a science is either deductive or experimental, according as, in the province it deals with, the effects of causes when conjoined, are or are not the sums of the effects which the same causes produce when separate. It followed that politics must be a deductive science. It thus appeared, that both Macaulay and my father were wrong; the one in assimilating the method of philosophizing in politics to the purely experimental method of chemistry; while the other, though right in adopting a deductive method, had made a wrong selection of one, having taken as the type of deduction, not the appropriate process, that of the deductive branches of natural philosophy, but the inappropriate one of pure geometry, which, not being a science of causation at all, does not require or admit of any summing-up of effects. A foundation was thus laid in my thoughts for the principal chapters of what I afterwards published on the Logic of the Moral Sciences; and my new position in

25. Thomas Hobbes (1588–1679), English philosopher, who resembled Bacon in the practical or utilitarian importance which he attached to knowledge.

26. Thomas Thomson (1773–1852), English chemist, published his *System of Chemistry* in 1802.

respect to my old political creed, now became perfectly definite.

If I am asked, what system of political philosophy I substituted for that which, as a philosophy, I had abandoned, I answer, No system: only a conviction that the true system was something much more complex and many-sided than I had previously had any idea of, and that its office was to supply, not a set of model institutions, but principles from which the institutions suitable to any given circumstances might be deduced. The influences of European, that is to say, Continental, thought, and especially those of the reaction of the nineteenth century against the eighteenth, were now streaming in upon me. They came from various quarters: from the writings of Coleridge, which I had begun to read with interest even before the change in my opinions; from the Coleridgians with whom I was in personal intercourse; from what I had read of Goethe; from Carlyle's early articles in the Edinburgh and Foreign Reviews,[27] though for a long time I saw nothing in these (as my father saw nothing in them to the last) but insane rhapsody. From these sources, and from the acquaintance I kept up with the French literature of the time, I derived, among other ideas which the general turning upside down of the opinions of European thinkers had brought uppermost, these in particular: That the human mind has a certain order of possible progress, in which some things must precede others, an order which governments and public instructors can modify to some, but not to an unlimited extent: that all questions of political institutions are relative, not absolute, and that different stages of human progress not only *will* have, but *ought* to have, different institutions: that government is always either in the hands, or passing into the hands, of whatever is the strongest power in society, and that what this power is, does not depend on institutions, but institutions on it: that any general theory or philosophy of politics supposes a previous theory of human progress, and that this is the same thing with a philosophy of history. These opinions, true in the main, were held in an exaggerated and violent manner by the thinkers with whom I was now most accustomed to compare notes, and who, as usual with a reaction, ignored that half of the truth which the thinkers of the eighteenth century saw. But though, at one period of my progress, I for some time undervalued that great century, I never joined in the reaction against it, but kept as firm hold of one side of the truth as I took of the other. The fight between the nineteenth century and the eighteenth always reminded me of the battle about the shield, one side of which was white and the other black. I marvelled at the blind rage with which the combatants rushed against one another. I applied to them, and to Coleridge himself, many of Coleridge's sayings about half truths; and Goethe's device, 'many-sidedness,'[28] was one which I would most willingly, at this period, have taken for mine.

The writers by whom, more than by any others, a new mode of political thinking was brought home to me, were those of the St. Simonian school[29] in France. In 1829 and 1830 I became acquainted with some of their writings. They were then only in the earlier stages of their speculations. They had not yet dressed out their

27. *e.g.* the essays on 'Richter,' 'The State of German Literature,' 'Burns,' 'Signs of the Times,' in the *Edinburgh Review* between June 1827 and June 1829; and the essays on 'Werner,' 'Goethe's *Helena*,' 'Goethe,' 'Voltaire,' 'Novalis,' and 'Jean Paul Richter Again,' in the *Foreign Review* between January 1828 and January 1830.

28. Probably an allusion to Goethe's doctrine of *Bildung*, or self-development, as set forth in various passages in *Wilhelm Meister*.

29. The followers of Claude Henri Saint-Simon (1760–1825), the true founder of the positivist philosophy and of French Socialism. Both Mill and Carlyle were attracted for a time to their school of thought. See *Sartor Resartus*, chapters on 'The Phoenix' and 'Farewell.'

philosophy as a religion, nor had they organized their scheme of Socialism. They were just beginning to question the principle of hereditary property. I was by no means prepared to go with them even this length; but I was greatly struck with the connected view which they for the first time presented to me, of the natural order of human progress; and especially with their division of all history into organic periods and critical periods.[30] During the organic periods (they said) mankind accept with firm conviction some positive creed, claiming jurisdiction over all their actions, and containing more or less of truth and adaptation to the needs of humanity. Under its influence they make all the progress compatible with the creed, and finally outgrow it; when a period follows of criticism and negation, in which mankind lose their old convictions without acquiring any new ones, of a general or authoritative character, except the conviction that the old are false. The period of Greek and Roman polytheism, so long as really believed in by instructed Greeks and Romans, was an organic period, succeeded by the critical or sceptical period of the Greek philosophers. Another organic period came in with Christianity. The corresponding critical period began with the Reformation, has lasted ever since, still lasts, and cannot altogether cease until a new organic period has been inaugurated by the triumph of a yet more advanced creed. These ideas, I knew, were not peculiar to the St. Simonians; on the contrary, they were the general property of Europe, or at least of Germany and France, but they had never, to my knowledge, been so completely systematized as by these writers, nor the distinguishing characteristics of a critical period so powerfully set forth; for I was not then acquainted with Fichte's Lectures on 'The Characteristics of the Present Age.'[31] In Carlyle, indeed, I found bitter denunciations of an 'age of unbelief,' and of the present age as such, which I, like most people at that time, supposed to be passionate protests in favour of the old modes of belief. But all that was true in these denunciations, I thought that I found more calmly and philosophically stated by the St. Simonians. Among their publications, too, there was one which seemed to me far superior to the rest; in which the general idea was matured into something much more definite and instructive. This was an early work of Auguste Comte,[32] who then called himself, and even announced himself in the title-page as, a pupil of Saint Simon. In this tract M. Comte first put forth the doctrine, which he afterwards so copiously illustrated, of the natural succession of three stages in every department of human knowledge: first, the theological, next the metaphysical, and lastly, the positive stage; and contended, that social science must be subject to the same law; that the feudal and Catholic system was the concluding phasis of the theological state of the social science, Protestantism the commencement, and the doctrines of the French Revolution the consummation, of the metaphysical; and that its positive state was yet to come. This doctrine harmonized well with my existing notions, to which it seemed to give a scientific shape. I already regarded the methods of physical science as the proper models for political. But the chief benefit which I derived at this time from the trains of thought suggested by the St. Simonians and by Comte, was, that I obtained a clearer conception than ever before of the peculiari-

30. Carlyle had found this doctrine not only in the Saint-Simonians but also in Goethe and in Fichte.

31. Johann Gottlieb Fichte (1762–1814) published this work in 1804, brilliantly analyzing and arraigning the age of Enlightenment (of Voltaire and skepticism), and pointing toward a future age of the life of reason in its highest aspect as a belief in the divine order of the universe.

32. See, in the present collection, Mill's *On Liberty*, Chapter i, note 7.

ties of an era of transition in opinion, and ceased to mistake the moral and intellectual characteristics of such an era, for the normal attributes of humanity. I looked forward, through the present age of loud disputes but generally weak convictions, to a future which shall unite the best qualities of the critical with the best qualities of the organic periods; unchecked liberty of thought, unbounded freedom of individual action in all modes not hurtful to others; but also, convictions as to what is right and wrong, useful and pernicious, deeply engraven on the feelings by early education and general unanimity of sentiment, and so firmly grounded in reason and in the true exigencies of life, that they shall not, like all former and present creeds, religious, ethical, and political, require to be periodically thrown off and replaced by others.

M. Comte soon left the St. Simonians, and I lost sight of him and his writings for a number of years. But the St. Simonians I continued to cultivate. I was kept *au courant*[33] of their progress by one of their most enthusiastic disciples, M. Gustave d'Eichthal, who about that time passed a considerable interval in England. I was introduced to their chiefs, Bazard and Enfantin, in 1830; and as long as their public teachings and proselytism continued, I read nearly everything they wrote. Their criticisms on the common doctrines of Liberalism seemed to me full of important truth; and it was partly by their writings that my eyes were opened to the very limited and temporary value of the old political economy, which assumes private property and inheritance as indefeasible facts, and freedom of production and exchange as the *dernier mot*[34] of social improvement. The scheme gradually unfolded by the St. Simonians, under which the labour and capital of society would be managed for the general account of the community, every individual being required to take a share of labour, either as thinker, teacher, artist, or producer, all being classed according to their capacity, and remunerated according to their work, appeared to me a far superior description of Socialism to Owen's.[35] Their aim seemed to me desirable and rational, however their means might be inefficacious; and though I neither believed in the practicability, nor in the beneficial operation of their social machinery, I felt that the proclamation of such an ideal of human society could not but tend to give a beneficial direction to the efforts of others to bring society, as at present constituted, nearer to some ideal standard. I honoured them most of all for what they have been most cried down for — the boldness and freedom from prejudice with which they treated the subject of family, the most important of any, and needing more fundamental alterations than remain to be made in any other great social institution, but on which scarcely any reformer has the courage to touch. In proclaiming the perfect equality of men and women, and an entirely new order of things in regard to their relations with one another, the St. Simonians, in common with Owen and Fourier,[36] have entitled themselves to the grateful remembrance of future generations.

In giving an account of this period of my life, I have only specified such of my new impressions as appeared to me, both at the time and since, to be a kind of turning points, marking a definite progress in my mode of thought. But these few se-

33. 'informed.'

34. 'the last word,' or 'the ultimate step.'

35. Robert Owen (1771–1858) rose from being an assistant in a shop at Stamford to organizing of socialist communities, such as that at the New Lanark Mills, and at Harmony, Indiana, etc. His socialistic theories and enterprises won world-wide attention during the first three decades of the 19th century.

36. Charles Fourier (1772–1837), French author, and advocate of a communistic system for the reorganization of society, in which population would be divided into *phalansteries*, or socialistic groups of about 1800 persons living together and sharing all property.

lected points give a very insufficient idea of the quantity of thinking which I carried on respecting a host of subjects during these years of transition. Much of this, it is true, consisted in rediscovering things known to all the world, which I had previously disbelieved, or disregarded. But the rediscovery was to me a discovery, giving me plenary possession of the truths, not as traditional platitudes, but fresh from their source: and it seldom failed to place them in some new light, by which they were reconciled with, and seemed to confirm while they modified, the truths less generally known which lay in my early opinions, and in no essential part of which I at any time wavered. All my new thinking only laid the foundation of these more deeply and strongly, while it often removed misapprehension and confusion of ideas which had perverted their effect. For example, during the later returns of my dejection, the doctrine of what is called Philosophical Necessity weighed on my existence like an incubus. I felt as if I was scientifically proved to be the helpless slave of antecedent circumstances; as if my character and that of all others had been formed for us by agencies beyond our control, and was wholly out of our own power. I often said to myself, what a relief it would be if I could disbelieve the doctrine of the formation of character by circumstances; and remembering the wish of Fox[37] respecting the doctrine of resistance to governments, that it might never be forgotten by kings, nor remembered by subjects, I said that it would be a blessing if the doctrine of necessity could be believed by all *quoad*[38] the characters of others, and disbelieved in regard to their own. I pondered painfully on the subject, till gradually I saw light through it. I perceived, that the word Necessity, as a name for the doctrine of Cause and Effect applied to human action, carried with it a misleading association; and that this association was the operative force in the depressing and paralysing influence which I had experienced: I saw that though our character is formed by circumstances, our own desires can do much to shape those circumstances; and that what is really inspiriting and ennobling in the doctrine of freewill, is the conviction that we have real power over the formation of our own character; that our will, by influencing some of our circumstances, can modify our future habits or capabilities of willing. All this was entirely consistent with the doctrine of circumstances, or rather, was that doctrine itself, properly understood. From that time I drew in my own mind, a clear distinction between the doctrine of circumstances, and Fatalism; discarding altogether the misleading word Necessity. The theory, which I now for the first time rightly apprehended, ceased altogether to be discouraging, and besides the relief to my spirits, I no longer suffered under the burden, so heavy to one who aims at being a reformer in opinions, of thinking one doctrine true, and the contrary doctrine morally beneficial. The train of thought which had extricated me from this dilemma, seemed to me, in after years, fitted to render a similar service to others; and it now forms the chapter on Liberty and Necessity in the concluding Book of my system of Logic.

Again, in politics, though I no longer accepted the doctrine of the Essay on Government as a scientific theory; though I ceased to consider representative democracy as an absolute principle, and regarded it as a question of time, place, and circumstance; though I now looked upon the choice of political institutions as a moral and educational question more than one of material interests, thinking that it ought to be decided mainly by the consideration, what great improvement in life and culture stands next in order for the

38. *quoad*: so far as concerned.

people concerned, as the condition of their further progress, and what institutions are most likely to promote that; nevertheless, this change in the premises of my political philosophy did not alter my practical political creed as to the requirements of my own time and country. I was as much as ever a Radical and Democrat for Europe, and especially for England. I thought the predominance of the aristocratic classes, the noble and the rich, in the English constitution, an evil worth any struggle to get rid of; not on account of taxes, or any such comparatively small inconvenience, but as the great demoralizing agency in the country. Demoralizing, first, because it made the conduct of the Government an example of gross public immorality, through the predominance of private over public interests in the State, and the abuse of the powers of legislation for the advantage of classes. Secondly, and in a still greater degree, because the respect of the multitude always attaching itself principally to that which, in the existing state of society, is the chief passport to power; and under English institutions, riches, hereditary or acquired, being the almost exclusive source of political importance; riches, and the signs of riches, were almost the only things really respected, and the life of the people was mainly devoted to the pursuit of them. I thought, that while the higher and richer classes held the power of government, the instruction and improvement of the mass of the people were contrary to the self-interest of those classes, because tending to render the people more powerful for throwing off the yoke: but if the democracy obtained a large, and perhaps the principal share, in the governing power, it would become the interest of the opulent classes to promote their education, in order to ward off really mischievous errors, and especially those which would lead to unjust violations of property. On these grounds I was not only as ardent as ever for democratic institutions, but earnestly hoped that Owenite, St. Simonian, and all other anti-property doctrines might spread widely among the poorer classes; not that I thought those doctrines true, or desired that they should be acted on, but in order that the higher classes might be made to see that they had more to fear from the poor when uneducated, than when educated.

In this frame of mind the French Revolution of July [39] found me. It roused my utmost enthusiasm, and gave me, as it were, a new existence. I went at once to Paris, was introduced to Lafayette, and laid the groundwork of the intercourse I afterwards kept up with several of the active chiefs of the extreme popular party. After my return I entered warmly, as a writer, into the political discussions of the time; which soon became still more exciting, by the coming in of Lord Grey's Ministry,[40] and the proposing of the Reform Bill.[41] For the next few years I wrote copiously in newspapers. It was about this time that Fonblanque,[42] who had for some time written the political articles in the Examiner, became the proprietor and editor of the paper. It is not forgotten with what verve and talent, as well as fine wit, he carried it on, during the whole period of Lord Grey's Ministry, and what importance it assumed as the principal representative, in the newspaper press, of Radical opinions. The distinguishing character of the paper was given to it entirely by his own articles, which formed at least three-fourths of all the original writing contained in it: but of the remaining fourth I contributed during those years a much larger share than any one else. I wrote nearly all the articles on French

subjects, including a weekly summary of French politics, often extending to considerable length; together with many leading articles on general politics, commercial and financial legislation, and any miscellaneous subjects in which I felt interested, and which were suitable to the paper, including occasional reviews of books. Mere newspaper articles on the occurrences or questions of the moment, gave no opportunity for the development of any general mode of thought; but I attempted, in the beginning of 1831, to embody in a series of articles, headed 'The Spirit of the Age,' some of my new opinions, and especially to point out in the character of the present age, the anomalies and evils characteristic of the transition from a system of opinions which had worn out, to another only in process of being formed. These articles were, I fancy, lumbering in style, and not lively or striking enough to be, at any time, acceptable to newspaper readers; but had they been far more attractive, still, at that particular moment, when great political changes were impending, and engrossing all minds, these discussions were ill-timed, and missed fire altogether. The only effect which I know to have been produced by them, was that Carlyle, then living in a secluded part of Scotland,[43] read them in his solitude, and saying to himself (as he afterwards told me) 'Here is a new Mystic,' inquired on coming to London that autumn respecting their authorship; an inquiry which was the immediate cause of our becoming personally acquainted.

I have already mentioned Carlyle's earlier writings as one of the channels through which I received the influences which enlarged my early narrow creed; but I do not think that those writings, by themselves, would ever have had any effect on my opinions. What truths they contained, though of the very kind which I was already receiving from other quarters, were presented in a form and vesture less suited than any other to give them access to a mind trained as mine had been. They seemed a haze of poetry and German metaphysics, in which almost the only clear thing was a strong animosity to most of the opinions which were the basis of my mode of thought: religious scepticism, utilitarianism, the doctrine of circumstances, and the attaching any importance to democracy, logic, or political economy. Instead of my having been taught anything, in the first instance, by Carlyle, it was only in proportion as I came to see the same truths through media more suited to my mental constitution, that I recognised them in his writings. Then, indeed, the wonderful power with which he put them forth made a deep impression upon me, and I was during a long period one of his most fervent admirers; but the good his writings did me, was not as philosophy to instruct, but as poetry to animate. Even at the time when our acquaintance commenced, I was not sufficiently advanced in my new modes of thought, to appreciate him fully; a proof of which is, that on his showing me the manuscript of Sartor Resartus, his best and greatest work, which he had just then finished, I made little of it; though when it came out about two years afterwards in Fraser's Magazine I read it with enthusiastic admiration and the keenest delight. I did not seek and cultivate Carlyle less on account of the fundamental differences in our philosophy. He soon found out that I was not 'another mystic,' and when for the sake of my own integrity I wrote to him a distinct profession of all those of my opinions which I knew he most disliked, he replied that the chief difference between us was that I 'was as yet consciously nothing of a mystic.' I do not know at what period he gave up the expectation that I was destined to become one; but though both his and my opinions underwent in subsequent

43. At Craigenputtock, where from May 1828 to June 1834 Carlyle wrote many of his essays and *Sartor Resartus*.

years considerable changes, we never approached much nearer to each other's modes of thought than we were in the first years of our acquaintance. I did not, however, deem myself a competent judge of Carlyle. I felt that he was a poet, and that I was not; that he was a man of intuition, which I was not; and that as such, he not only saw many things long before me, which I could only when they were pointed out to me, hobble after and prove, but that it was highly probable he could see many things which were not visible to me even after they were pointed out. I knew that I could not see round him, and could never be certain that I saw over him; and I never presumed to judge him with any definiteness, until he was interpreted to me by one greatly the superior of us both — who was more a poet than he, and more a thinker than I — whose own mind and nature included his, and infinitely more.

Among the persons of intellect whom I had known of old, the one with whom I had now most points of agreement was the elder Austin.[44] I have mentioned that he always set himself in opposition to our early sectarianism; and latterly he had, like myself, come under new influences. Having been appointed Professor of Jurisprudence in the London University (now University College), he had lived for some time at Bonn to study for his Lectures; and the influences of German literature and of the German character and state of society had made a very perceptible change in his views of life. His personal disposition was much softened; he was less militant and polemic; his tastes had begun to turn themselves towards the poetic and contemplative. He attached much less importance than formerly to outward changes; unless accompanied by a better cultivation of the inward nature. He had a strong distaste for the general meanness of English life, the absence of enlarged thoughts and unselfish desires, the low objects on which the faculties of all classes of the English are intent. Even the kind of public interests which Englishmen care for, he held in very little esteem. He thought that there was more practical good government, and (which is true enough) infinitely more care for the education and mental improvement of all ranks of the people, under the Prussian monarchy, than under the English representative government: and he held, with the French *Economistes*, that the real security for good government is 'un peuple éclairé,'[45] which is not always the fruit of popular institutions, and which if it could be had without them, would do their work better than they. Though he approved of the Reform Bill, he predicted, what in fact occurred, that it would not produce the great immediate improvements in government, which many expected from it. The men, he said, who could do these great things, did not exist in the country. There were many points of sympathy between him and me, both in the new opinions he had adopted and in the old ones which he retained. Like me, he never ceased to be an utilitarian, and with all his love of the Germans, and enjoyment of their literature, never became in the smallest degree reconciled to the innate-principle metaphysics. He cultivated more and more a kind of German religion, a religion of poetry and feeling with little, if anything, of positive dogma; while, in politics (and here it was that I most differed with him) he acquired an indifference, bordering on contempt, for the progress of popular institutions: though he rejoiced in that of Socialism, as the most effectual means of compelling the powerful classes to educate the people, and to impress on them the only real means of permanently improving their material condition, a limita-

45. 'an enlightened people.'

tion of their numbers. Neither was he, at this time, fundamentally opposed to Socialism in itself as an ultimate result of improvement. He professed great disrespect for what he called 'the universal principles of human nature of the political economists,' and insisted on the evidence which history and daily experience afford of the 'extraordinary pliability of human nature' (a phrase which I have somewhere borrowed from him); nor did he think it possible to set any positive bounds to the moral capabilities which might unfold themselves in mankind, under an enlightened direction of social and educational influences. Whether he retained all these opinions to the end of life I know not. Certainly the modes of thinking of his later years, and especially of his last publication, were much more Tory in their general character than those which he held at this time.

My father's tone of thought and feeling, I now felt myself at a great distance from: greater, indeed, than a full and calm explanation and reconsideration on both sides, might have shown to exist in reality. But my father was not one with whom calm and full explanations on fundamental points of doctrine could be expected, at least with one whom he might consider as, in some sort, a deserter from his standard. Fortunately we were almost always in strong agreement on the political questions of the day, which engrossed a large part of his interest and of his conversation. On those matters of opinion on which we differed, we talked little. He knew that the habit of thinking for myself, which his mode of education had fostered, sometimes led me to opinions different from his, and he perceived from time to time that I did not always tell him *how* different. I expected no good, but only pain to both of us, from discussing our differences: and I never expressed them but when he gave utterance to some opinion or feeling repugnant to mine, in a manner which would have made it disingenuousness on my part to remain silent.

It remains to speak of what I wrote during these years, which, independently of my contributions to newspapers, was considerable. In 1830 and 1831 I wrote the five Essays since published under the title of 'Essays on some Unsettled Questions of Political Economy,' almost as they now stand, except that in 1833 I partially rewrote the fifth Essay. They were written with no immediate purpose of publication; and when, some years later, I offered them to a publisher, he declined them. They were only printed in 1844, after the success of the 'System of Logic.' I also resumed my speculations on this last subject, and puzzled myself, like others before me, with the great paradox of the discovery of new truths by general reasoning. As to the fact, there could be no doubt. As little could it be doubted, that all reasoning is resolvable into syllogisms, and that in every syllogism the conclusion is actually contained and implied in the premises. How, being so contained and implied, it could be new truth, and how the theorems of geometry, so different in appearance from the definitions and axioms, could be all contained in these, was a difficulty which no one, I thought, had sufficiently felt, and which, at all events, no one had succeeded in clearing up. The explanations offered by Whately[46] and others, though they might give a temporary satisfaction, always, in my mind, left a mist still hanging over the subject. At last, when reading a second or third time the chapters on Reasoning in the second volume of Dugald Stewart,[47] interrogat

46. Richard Whately (1787–1863), while Principal of St. Alban Hall, Oxford, published his *Logic* (1826), which restricted the scope of logic to deduction merely.

47. Dugald Stewart (1753–1828), Scotch philosopher, professor of moral philosophy at Edinburgh, published *Elements of the Philosophy of the Human Mind* (1792–1827) and *Outlines of Moral Philosophy* (1793).

ing myself on every point, and following out, as far as I knew how, every topic of thought which the book suggested, I came upon an idea of his respecting the use of axioms in ratiocination, which I did not remember to have before noticed, but which now, in meditating on it, seemed to me not only true of axioms, but of all general propositions whatever, and to be the key of the whole perplexity. From this germ grew the theory of the Syllogism propounded in the Second Book of the Logic; which I immediately fixed by writing it out. And now, with greatly increased hope of being able to produce a work on Logic, of some originality and value, I proceeded to write the First Book, from the rough and imperfect draft I had already made. What I now wrote became the basis of that part of the subsequent Treatise; except that it did not contain the Theory of Kinds, which was a later addition, suggested by otherwise inextricable difficulties which met me in my first attempt to work out the subject of some of the concluding chapters of the Third Book. At the point which I had now reached I made a halt, which lasted five years. I had come to the end of my tether; I could make nothing satisfactory of Induction, at this time. I continued to read any book which seemed to promise light on the subject, and appropriated, as well as I could, the results; but for a long time I found nothing which seemed to open to me any very important vein of meditation.

In 1832 I wrote several papers for the first series of Tait's Magazine, and one for a quarterly periodical called the Jurist, which had been founded, and for a short time carried on, by a set of friends, all lawyers and law reformers, with several of whom I was acquainted. The paper in question is the one on the rights and duties of the State respecting Corporation and Church Property, now standing first among the collected 'Dissertations and Discussions'; where one of my articles in 'Tait,' 'The Currency Juggle,' also appears. In the whole mass of what I wrote previous to these, there is nothing of sufficient permanent value to justify reprinting. The paper in the Jurist, which I still think a very complete discussion of the rights of the State over Foundations, showed both sides of my opinions, asserting as firmly as I should have done at any time, the doctrine that all endowments are national property, which the government may and ought to control; but not, as I should once have done, condemning endowments in themselves, and proposing that they should be taken to pay off the national debt. On the contrary, I urged strenuously the importance of having a provision for education, not dependent on the mere demand of the market, that is, on the knowledge and discernment of average parents, but calculated to establish and keep up a higher standard of instruction than is likely to be spontaneously demanded by the buyers of the article. All these opinions have been confirmed and strengthened by the whole course of my subsequent reflections.

THREE ESSAYS ON RELIGION

Nature

NATURE, natural, and the group of words derived from them, or allied to them in etymology, have at all times filled a great place in the thoughts and taken a strong hold on the feelings of mankind. That they should have done so is not surprising, when we consider what the words, in their primitive and most obvious signification, represent; but it is unfortunate that a set of terms which play so great a

part in moral and metaphysical speculation, should have acquired many meanings different from the primary one, yet sufficiently allied to it to admit of confusion. The words have thus become entangled in so many foreign associations, mostly of a very powerful and tenacious character, that they have come to excite, and to be the symbols of, feelings which their original meaning will by no means justify; and which have made them one of the most copious sources of false taste, false philosophy, false morality, and even bad law.

The most important application of the Socratic Elenchus,[1] as exhibited and improved by Plato, consists in dissecting large abstractions of this description; fixing down to a precise definition the meaning which as properly used they merely shadow forth, and questioning and testing the common maxims and opinions in which they bear a part. It is to be regretted that among the instructive specimens of this kind of investigation which Plato has left, and to which subsequent times have been so much indebted for whatever intellectual clearness they have attained, he has not enriched posterity with a dialogue περὶ φύσεως.[2] If the idea denoted by the word had been subjected to his searching analysis, and the popular commonplaces in which it figures had been submitted to the ordeal of his powerful dialectics, his successors probably would not have rushed, as they speedily did, into modes of thinking and reasoning of which the fallacious use of that word formed the corner stone; a kind of fallacy from which he was himself singularly free.

According to the Platonic method which is still the best type of such investigations, the first thing to be done with so vague a term is to ascertain precisely what it means. It is also a rule of the same method, that the meaning of an abstraction is best sought for in the concrete — of an universal in the particular. Adopting this course with the word Nature, the first question must be, what is meant by the 'nature' of a particular object? as of fire, of water, or of some individual plant or animal? Evidently the *ensemble* or aggregate of its powers or properties: the modes in which it acts on other things (counting among those things the senses of the observer) and the modes in which other things act upon it; to which, in the case of a sentient being, must be added, its own capacities of feeling, or being conscious. The Nature of the thing means all this; means its entire capacity of exhibiting phenomena. And since the phenomena which a thing exhibits, however much they vary in different circumstances, are always the same in the same circumstances, they admit of being described in general forms of words, which are called the *laws* of the thing's nature. Thus it is a law of the nature of water that under the mean pressure of the atmosphere at the level of the sea, it boils at 212° Fahrenheit.

As the nature of any given thing is the aggregate of its powers and properties, so Nature in the abstract is the aggregate of the powers and properties of all things. Nature means the sum of all phenomena, together with the causes which produce them; including not only all that happens, but all that is capable of happening; the unused capabilities of causes being as much a part of the idea of Nature, as those which take effect. Since all phenomena which have been sufficiently examined are found to take place with regularity, each having certain fixed conditions, positive and negative, on the occurrence of which it invariably happens; mankind have been able to ascertain, either by direct observation or by reasoning processes grounded on it, the conditions of the occurrence of many phenomena; and the progress of science mainly consists in ascertaining those

1. *Elenchus*: a refutation cast in syllogistic form, as in Plato's *Dialogues*, in which Socrates reveals the fallacies of his opponents' reasoning by leading them into a conversation in which logic refutes their arguments.
2. 'On Nature.'

conditions. When discovered they can be expressed in general propositions, which are called laws of the particular phenomenon, and also, more generally, Laws of Nature. Thus, the truth that all material objects tend towards one another with a force directly as their masses and inversely as the square of their distance, is a law of Nature. The proposition that air and food are necessary to animal life, if it be as we have good reason to believe, true without exception, is also a law of nature, though the phenomenon of which it is the law is special, and not, like gravitation, universal.

Nature, then, in this its simplest acceptation, is a collective name for all facts, actual and possible: or (to speak more accurately) a name for the mode, partly known to us and partly unknown, in which all things take place. For the word suggests, not so much the multitudinous detail of the phenomena, as the conception which might be formed of their manner of existence as a mental whole, by a mind possessing a complete knowledge of them: to which conception it is the aim of science to raise itself, by successive steps of generalization from experience.

Such, then, is a correct definition of the word Nature. But this definition corresponds only to one of the senses of that ambiguous term. It is evidently inapplicable to some of the modes in which the word is familiarly employed. For example, it entirely conflicts with the common form of speech by which Nature is opposed to Art, and natural to artificial. For in the sense of the word Nature which has just been defined, and which is the true scientific sense, Art is as much Nature as anything else; and everything which is artificial is natural — Art has no independent powers of its own: Art is but the employment of the powers of Nature for an end. Phenomena produced by human agency, no less than those which as far as we are concerned are spontaneous, depend on the properties of the elementary forces, or of the elementary substances and their compounds. The united powers of the whole human race could not create a new property of matter in general, or of any one of its species. We can only take advantage for our purposes of the properties which we find. A ship floats by the same laws of specific gravity and equilibrium, as a tree uprooted by the wind and thrown into the water. The corn which men raise for food, grows and produces its grain by the same laws of vegetation by which the wild rose and the mountain strawberry bring forth their flowers and fruit. A house stands and holds together by the natural properties, the weight and cohesion of the materials which compose it: a steam engine works by the natural expansive force of steam, exerting a pressure upon one part of a system of arrangements, which pressure, by the mechanical properties of the lever, is transferred from that to another part where it raises the weight or removes the obstacle brought into connexion with it. In these and all other artificial operations the office of man is, as has often been remarked, a very limited one; it consists in moving things into certain places. We move objects, and by doing this, bring some things into contact which were separate, or separate others which were in contact: and by this simple change of place, natural forces previously dormant are called into action, and produce the desired effect. Even the volition which designs, the intelligence which contrives, and the muscular force which executes these movements, are themselves powers of Nature.

It thus appears that we must recognize at least two principal meanings in the word Nature. In one sense, it means all the powers existing in either the outer or the inner world and everything which takes place by means of those powers. In another sense, it means, not everything which happens, but only what takes place without the agency, or without the volun-

tary and intentional agency, of man. This distinction is far from exhausting the ambiguities of the word; but it is the key to most of those on which important consequences depend.

Such, then, being the two principal senses of the word Nature; in which of these is it taken, or is it taken in either, when the word and its derivatives are used to convey ideas of commendation, approval, and even moral obligation?

It has conveyed such ideas in all ages. *Naturam sequi*[3] was the fundamental principle of morals in many of the most admired schools of philosophy. Among the ancients, especially in the declining period of ancient intellect and thought, it was the test to which all ethical doctrines were brought. The Stoics and the Epicureans, however irreconcilable in the rest of their systems, agreed in holding themselves bound to prove that their respective maxims of conduct were the dictates of nature. Under their influence the Roman jurists, when attempting to systematize jurisprudence, placed in the front of their exposition a certain *Jus Naturale*,[4] 'quod natura,' as Justinian declares in the Institutes, 'omnia animalia docuit':[5] and as the modern systematic writers not only on law but on moral philosophy, have generally taken the Roman jurists for their models, treatises on the so-called Law of Nature have abounded; and references to this Law as a supreme rule and ultimate standard have pervaded literature. The writers on International Law have done more than any others to give currency to this style of ethical speculation; inasmuch as having no positive law to write about, and yet being anxious to invest the most approved opinions respecting international morality with as much as they could of the authority of law, they endeavoured to find such an authority in Nature's imaginary code. The Christian theology during the period of its greatest ascendency, opposed some, though not a complete, hindrance to the modes of thought which erected Nature into the criterion of morals, inasmuch as, according to the creed of most denominations of Christians (though assuredly not of Christ) man is by nature wicked. But this very doctrine, by the reaction which it provoked, has made the deistical moralists[6] almost unanimous in proclaiming the divinity of Nature, and setting up its fancied dictates as an authoritative rule of action. A reference to that supposed standard is the predominant ingredient in the vein of thought and feeling which was opened by Rousseau,[7] and which has infiltrated itself most widely into the modern mind, not excepting that portion of it which calls itself Christian. The doctrines of Christianity have in every age been largely accommodated to the philosophy which happened to be prevalent, and the Christianity of our day has borrowed a considerable part of its colour and flavour from sentimental deism. At the present time it cannot be said that Nature, or any other standard, is applied as it was wont to be, to deduce rules of action with juridical precision, and with an attempt to make its application coextensive with all human agency. The people of this generation do not commonly apply princi-

3. 'to follow Nature.'

4. 'Natural Law.'

5. 'because nature has led all living beings.'—Justinian (A.D. 483–565), emperor of Constantinople, is noted for his appointment of a commission of jurists to draw up a complete body of law. The *Institutes* was one of several legislative works published under his supervision.

6. *e.g.* the 3rd Earl of Shaftesbury (1671–1713), John Toland (1670–1722), Anthony Collins (1676–1729), etc. Deism is 'natural religion,' in contrast to 'revealed religion,' and holds that God rules the world by established laws which, when studied in the light of reason, will teach us all we can know of Him. It rejects the divinity of Christ, revelation, and all the supernaturalism of Christianity. See Pope's *Essay on Man*.

7. The 'return to Nature' is most fully discussed and advocated in Rousseau's *La nouvelle Héloïse* and *Émile*.

ples with any such studious exactness, nor own such binding allegiance to any standard, but live in a kind of confusion of many standards; a condition not propitious to the formation of steady moral convictions, but convenient enough to those whose moral opinions sit lightly on them, since it gives them a much wider range of arguments for defending the doctrine of the moment. But though perhaps no one could now be found who like the institutional writers of former times, adopts the so-called Law of Nature as the foundation of ethics, and endeavours consistently to reason from it, the word and its cognates must still be counted among those which carry great weight in moral argumentation. That any mode of thinking, feeling, or acting, is 'according to nature' is usually accepted as a strong argument for its goodness. If it can be said with any plausibility that 'nature enjoins' anything, the propriety of obeying the injunction is by most people considered to be made out: and conversely, the imputation of being contrary to nature, is thought to bar the door against any pretension on the part of the thing so designated, to be tolerated or excused; and the word unnatural has not ceased to be one of the most vituperative epithets in the language. Those who deal in these expressions, may avoid making themselves responsible for any fundamental theorem respecting the standard of moral obligation, but they do not the less imply such a theorem, and one which must be the same in substance with that on which the more logical thinkers of a more laborious age grounded their systematic treatises on Natural Law.

Is it necessary to recognize in these forms of speech, another distinct meaning of the word Nature? Or can they be connected, by any rational bond of union, with either of the two meanings already treated of? At first it may seem that we have no option but to admit another ambiguity in the term. All inquiries are either into what is, or into what ought to be: science and history belonging to the first division, art, morals and politics to the second. But the two senses of the word Nature first pointed out, agree in referring only to what is. In the first meaning, Nature is a collective name for everything which is. In the second, it is a name for everything which is of itself, without voluntary human intervention. But the employment of the word Nature as a term of ethics seems to disclose a third meaning, in which Nature does not stand for what is, but for what ought to be; or for the rule or standard of what ought to be. A little consideration, however, will show that this is not a case of ambiguity; there is not here a third sense of the word. Those who set up Nature as a standard of action do not intend a merely verbal proposition; they do not mean that the standard, whatever it be, should be *called* Nature; they think they are giving some information as to what the standard of action really is. Those who say that we ought to act according to Nature do not mean the mere identical proposition that we ought to do what we ought to do. They think that the word Nature affords some external criterion of what we should do; and if they lay down as a rule for what ought to be, a word which in its proper signification denotes what is, they do so because they have a notion, either clearly or confusedly, that what is, constitutes the rule and standard of what ought to be.

The examination of this notion, is the object of the present Essay. It is proposed to inquire into the truth of the doctrines which make Nature a test of right and wrong, good and evil, or which in any mode or degree attach merit or approval to following, imitating, or obeying Nature. To this inquiry the foregoing discussion respecting the meaning of terms, was an indispensable introduction. Language is as it were the atmosphere of philosophical investigation, which must be made transparent before anything can

be seen through it in the true figure and position. In the present case it is necessary to guard against a further ambiguity, which though abundantly obvious, has sometimes misled even sagacious minds, and of which it is well to take distinct note before proceeding further. No word is more commonly associated with the word Nature, than Law; and this last word has distinctly two meanings, in one of which it denotes some definite portion of what is, in the other, of what ought to be. We speak of the law of gravitation, the three laws of motion, the law of definite proportions in chemical combination, the vital laws of organized beings. All these are portions of what is. We also speak of the criminal law, the civil law, the law of honour, the law of veracity, the law of justice; all of which are portions of what ought to be, or of somebody's suppositions, feelings, or commands respecting what ought to be. The first kind of laws, such as the laws of motion, and of gravitation, are neither more nor less than the observed uniformities in the occurrence of phenomena: partly uniformities of antecedence and sequence, partly of concomitance. These are what, in science, and even in ordinary parlance, are meant by laws of Nature. Laws in the other sense are the laws of the land, the law of nations, or moral laws; among which, as already noticed, is dragged in, by jurists and publicists, something which they think proper to call the Law of Nature. Of the liability of these two meanings of the word to be confounded there can be no better example than the first chapter of Montesquieu;[8] where he remarks, that the material world has its laws, the inferior animals have their laws, and man has his laws; and calls attention to the much greater strictness with which the first two sets of laws are observed, than the last; as if it were an inconsistency, and a paradox, that things always are what they are, but men not always what they ought to be. A similar confusion of ideas pervades the writings of Mr. George Combe,[9] from whence it has overflowed into a large region of popular literature, and we are now continually reading injunctions to obey the physical laws of the universe, as being obligatory in the same sense and manner as the moral. The conception which the ethical use of the word Nature implies, of a close relation if not absolute identity between what is and what ought to be, certainly derives part of its hold on the mind from the custom of designating what is, by the expression 'laws of nature,' while the same word Law is also used, and even more familiarly and emphatically, to express what ought to be.

When it is asserted, or implied, that Nature, or the laws of Nature, should be conformed to, is the Nature which is meant, Nature in the first sense of the term, meaning all which is — the powers and properties of all things? But in this signification, there is no need of a recommendation to act according to nature, since it is what nobody can possibly help doing, and equally whether he acts well or ill. There is no mode of acting which is not conformable to Nature in this sense of the term, and all modes of acting are so in exactly the same degree. Every action is the exertion of some natural power, and its effects of all sorts are so many phenomena of nature, produced by the powers and properties of some of the objects of nature, in exact obedience to some law or laws of nature. When I voluntarily use my organs to take in food, the act, and its consequences, take place according to laws of nature: if instead of food I swallow poison, the case is exactly the same. To bid people conform to the laws of nature when they have no power but what the laws of nature give them — when it is a physical impossibility for them to do the smallest

9. George Combe (1788–1858), phrenologist, author of many works on phrenology, and of an *Essay on the Constitution of Man* (1828).

thing otherwise than through some law of nature, is an absurdity. The thing they need to be told is, what particular law of nature they should make use of in a particular case. When, for example, a person is crossing a river by a narrow bridge to which there is no parapet, he will do well to regulate his proceedings by the laws of equilibrium in moving bodies, instead of conforming only to the law of gravitation, and falling into the river.

Yet, idle as it is to exhort people to do what they cannot avoid doing, and absurd as it is to prescribe as a rule of right conduct what agrees exactly as well with wrong; nevertheless a rational rule of conduct *may* be constructed out of the relation which it ought to bear to the laws of nature in this widest acceptation of the term. Man necessarily obeys the laws of nature, or in other words the properties of things, but he does not necessarily *guide* himself by them. Though all conduct is in conformity to laws of nature, all conduct is not grounded on knowledge of them, and intelligently directed to the attainment of purposes by means of them. Though we cannot emancipate ourselves from the laws of nature as a whole, we can escape from any particular law of nature, if we are able to withdraw ourselves from the circumstances in which it acts. Though we can do nothing except through laws of nature, we can use one law to counteract another. According to Bacon's maxim, we can obey nature in such a manner as to command it. Every alteration of circumstances alters more or less the laws of nature under which we act; and by every choice which we make either of ends or of means, we place ourselves to a greater or less extent under one set of laws of nature instead of another. If, therefore, the useless precept to follow nature were changed into a precept to study nature; to know and take heed of the properties of the things we have to deal with, so far as these properties are capable of forwarding or obstructing any given purpose; we should have arrived at the first principle of all intelligent action, or rather at the definition of intelligent action itself. And a confused notion of this true principle, is, I doubt not, in the minds of many of those who set up the unmeaning doctrine which superficially resembles it. They perceive that the essential difference between wise and foolish conduct consists in attending, or not attending, to the particular laws of nature on which some important result depends. And they think, that a person who attends to a law of nature in order to shape his conduct by it, may be said to obey it, while a person who practically disregards it, and acts as if no such law existed, may be said to disobey it: the circumstance being overlooked, that what is thus called disobedience to a law of nature is obedience to some other or perhaps to the very law itself. For example, a person who goes into a powder magazine either not knowing, or carelessly omitting to think of, the explosive force of gunpowder, is likely to do some act which will cause him to be blown to atoms in obedience to the very law which he has disregarded.

But however much of its authority the 'Naturam sequi' doctrine may owe to its being confounded with the rational precept 'Naturam observare,' its favourers and promoters unquestionably intend much more by it than that precept. To acquire knowledge of the properties of things, and make use of the knowledge for guidance, is a rule of prudence, for the adaptation of means to ends; for giving effect to our wishes and intentions whatever they may be. But the maxim of obedience to Nature, or conformity to Nature, is held up not as a simply prudential but as an ethical maxim; and by those who talk of *jus naturae*, even as a law, fit to be administered by tribunals and enforced by sanctions. Right action, must mean something more and other than merely intelligent action: yet no precept beyond this last, can be connected with the word Na-

ture in the wider and more philosophical of its acceptations. We must try it therefore in the other sense, that in which Nature stands distinguished from Art, and denotes, not the whole course of the phenomena which come under our observation, but only their spontaneous course.

Let us then consider whether we can attach any meaning to the supposed practical maxim of following Nature, in this second sense of the word, in which Nature stands for that which takes place without human intervention. In Nature as thus understood, is the spontaneous course of things when left to themselves, the rule to be followed in endeavouring to adapt things to our use? But it is evident at once that the maxim, taken in this sense, is not merely, as it is in the other sense, superfluous and unmeaning, but palpably absurd and self-contradictory. For while human action cannot help conforming to Nature in the one meaning of the term, the very aim and object of action is to alter and improve Nature in the other meaning. If the natural course of things were perfectly right and satisfactory, to act at all would be a gratuitous meddling, which as it could not make things better, must make them worse. Or if action at all could be justified, it would only be when in direct obedience to instincts, since these might perhaps be accounted part of the spontaneous order of Nature; but to do anything with forethought and purpose, would be a violation of that perfect order. If the artificial is not better than the natural, to what end are all the arts of life? To dig, to plough, to build, to wear clothes, are direct infringements of the injunction to follow nature.

Accordingly it would be said by every one, even of those most under the influence of the feelings which prompt the injunction, that to apply it to such cases as those just spoken of, would be to push it too far. Everybody professes to approve and admire many great triumphs of Art over Nature: the junction by bridges of shores which Nature had made separate, the draining of Nature's marshes, the excavation of her wells, the dragging to light of what she has buried at immense depths in the earth; the turning away of her thunderbolts by lightning rods, of her inundations by embankments, of her ocean by breakwaters. But to commend these and similar feats, is to acknowledge that the ways of Nature are to be conquered, not obeyed: that her powers are often towards man in the position of enemies, from whom he must wrest, by force and ingenuity, what little he can for his own use, and deserves to be applauded when that little is rather more than might be expected from his physical weakness in comparison to those gigantic powers. All praise of Civilization, or Art, or Contrivance, is so much dispraise of Nature; an admission of imperfection, which it is man's business, and merit, to be always endeavouring to correct or mitigate.

The consciousness that whatever man does to improve his condition is in so much a censure and a thwarting of the spontaneous order of Nature, has in all ages caused new and unprecedented attempts at improvement to be generally at first under a shade of religious suspicion; as being in any case uncomplimentary, and very probably offensive to the powerful beings (or, when polytheism gave place to monotheism, to the all-powerful Being) supposed to govern the various phenomena of the universe, and of whose will the course of nature was conceived to be the expression. Any attempt to mould natural phenomena to the convenience of mankind might easily appear an interference with the government of those superior beings: and though life could not have been maintained, much less made pleasant, without perpetual interferences of the kind, each new one was doubtless made with fear and trembling, until experience had shown that it could be ventured on without drawing down the vengeance of the Gods. The sagacity of priests

showed them a way to reconcile the impunity of particular infringements with the maintenance of the general dread of encroaching on the divine administration. This was effected by representing each of the principal human inventions as the gift and favour of some God. The old religions also afforded many resources for consulting the Gods, and obtaining their express permission for what would otherwise have appeared a breach of their prerogative. When oracles had ceased, any religion which recognized a revelation afforded expedients for the same purpose. The Catholic religion had the resource of an infallible Church, authorized to declare what exertions of human spontaneity were permitted or forbidden; and in default of this, the case was always open to argument from the Bible whether any particular practice had expressly or by implication been sanctioned. The notion remained that this liberty to control Nature was conceded to man only by special indulgence, and as far as required by his necessities; and there was always a tendency, though a diminishing one, to regard any attempt to exercise power over nature, beyond a certain degree, and a certain admitted range, as an impious effort to usurp divine power, and dare more than was permitted to man. The lines of Horace in which the familiar arts of shipbuilding and navigation are reprobated as *vetitum nefas*,[10] indicate even in that sceptical age a still unexhausted vein of the old sentiment. The intensity of the corresponding feeling in the middle ages is not a precise parallel, on account of the superstition about dealing with evil spirits with which it was complicated: but the imputation of prying into the secrets of the Almighty long remained a powerful weapon of attack against unpopular inquirers into nature: and the charge of presumptuously attempting to defeat the designs of Providence, still retains enough of its original force to be thrown in as a make-weight along with other objections when there is a desire to find fault with any new exertion of human forethought and contrivance. No one, indeed, asserts it to be the intention of the Creator that the spontaneous order of the creation should not be altered, or even that it should not be altered in any new way. But there still exists a vague notion that though it is very proper to control this or the other natural phenomenon, the general scheme of nature is a model for us to imitate: that with more or less liberty in details, we should on the whole be guided by the spirit and general conception of nature's own ways: that they are God's work, and as such perfect; that man cannot rival their unapproachable excellence, and can best show his skill and piety by attempting, in however imperfect a way, to reproduce their likeness; and that if not the whole, yet some particular parts of the spontaneous order of nature, selected according to the speaker's predilections, are in a peculiar sense, manifestations of the Creator's will; a sort of finger posts pointing out the direction which things in general, and therefore our voluntary actions, are intended to take. Feelings of this sort, though repressed on ordinary occasions by the contrary current of life, are ready to break out whenever custom is silent, and the native promptings of the mind have nothing opposed to them but reason: and appeals are continually made to them by rhetoricians, with the effect, if not of convincing opponents, at least of making those who already hold the opinion which the rhetorician desires to recommend, better satisfied with it. For in the present day it probably seldom happens that any one is persuaded to approve any course of action because it appears to him to bear an analogy to the divine government of the world, though the argument tells on him with great force, and is felt by him to be a great support, in behalf of anything which he is already inclined to approve.

10. 'contrary to what is forbidden.' See Horace, *Odes*, I,iii.

If this notion of imitating the ways of Providence as manifested in Nature, is seldom expressed plainly and downrightly as a maxim of general application, it also is seldom directly contradicted. Those who find it on their path, prefer to turn the obstacle rather than to attack it, being often themselves not free from the feeling, and in any case afraid of incurring the charge of impiety by saying anything which might be held to disparage the works of the Creator's power. They therefore, for the most part, rather endeavour to show, that they have as much right to the religious argument as their opponents, and that if the course they recommend seems to conflict with some part of the ways of Providence, there is some other part with which it agrees better than what is contended for on the other side. In this mode of dealing with the great *à priori* fallacies,[11] the progress of improvement clears away particular errors while the causes of errors are still left standing, and very little weakened by each conflict: yet by a long series of such partial victories precedents are accumulated, to which an appeal may be made against these powerful prepossessions, and which afford a growing hope that the misplaced feeling, after having so often learnt to recede, may some day be compelled to an unconditional surrender. For however offensive the proposition may appear to many religious persons, they should be willing to look in the face the undeniable fact, that the order of nature, in so far as unmodified by man, is such as no being, whose attributes are justice and benevolence, would have made, with the intention that his rational creatures should follow it as an example. If made wholly by such a Being, and not partly by beings of very different qualities, it could only be as a designedly imperfect work, which man, in his limited sphere, is to exercise justice and benevolence in amending. The best persons have always held it to be the essence of religion, that the paramount duty of man upon earth is to amend himself: but all except monkish quietists have annexed to this in their inmost minds (though seldom willing to enunciate the obligation with the same clearness) the additional religious duty of amending the world, and not solely the human part of it but the material; the order of physical nature.

In considering this subject it is necessary to divest ourselves of certain preconceptions which may justly be called natural prejudices, being grounded on feelings which, in themselves natural and inevitable, intrude into matters with which they ought to have no concern. One of these feelings is the astonishment, rising into awe, which is inspired (even independently of all religious sentiment) by any of the greater natural phenomena. A hurricane; a mountain precipice; the desert; the ocean, either agitated or at rest; the solar system, and the great cosmic forces which hold it together; the boundless firmament, and to an educated mind any single star; excite feelings which make all human enterprises and powers appear so insignificant, that to a mind thus occupied it seems insufferable presumption in so puny a creature as man to look critically on things so far above him, or dare to measure himself against the grandeur of the universe. But a little interrogation of our own consciousness will suffice to convince us, that what makes these phenomena so impressive is simply their vastness. The enormous extension in space and time, or the enormous power they exemplify, constitutes their sublimity; a feeling in all cases more allied to terror than to any moral emotion. And though the vast scale of these phenomena may well excite wonder, and sets at defiance all idea of rivalry, the feeling it inspires is of a totally different character from admiration of excellence.

11. *à priori fallacies*: such fallacies as arise from reasoning deductively, from definitions, or assumed principles, rather than from experience or investigation.

Those in whom awe produces admiration may be aesthetically developed, but they are morally uncultivated. It is one of the endowments of the imaginative part of our mental nature that conceptions of greatness and power, vividly realized, produce a feeling which though in its higher degrees closely bordering on pain, we prefer to most of what are accounted pleasures. But we are quite equally capable of experiencing this feeling towards maleficent power; and we never experience it so strongly towards most of the powers of the universe, as when we have most present to our consciousness a vivid sense of their capacity of inflicting evil. Because these natural powers have what we cannot imitate, enormous might, and overawe us by that one attribute, it would be a great error to infer that their other attributes are such as we ought to emulate, or that we should be justified in using our small powers after the example which Nature sets us with her vast forces.

For, how stands the fact? That next to the greatness of these cosmic forces, the quality which most forcibly strikes every one who does not avert his eyes from it, is their perfect and absolute recklessness. They go straight to their end, without regarding what or whom they crush on the road. Optimists, in their attempts to prove that 'whatever is, is right,'[12] are obliged to maintain, not that Nature ever turns one step from her path to avoid trampling us into destruction, but that it would be very unreasonable in us to expect that she should. Pope's 'Shall gravitation cease when you go by?'[13] may be a just rebuke to any one who should be so silly as to expect common human morality from nature. But if the question were between two men, instead of between a man and a natural phenomenon, that triumphant apostrophe would be thought a rare piece of impudence. A man who should persist in hurling stones or firing cannon when another man 'goes by,' and having killed him should urge a similar plea in exculpation, would very deservedly be found guilty of murder.

In sober truth, nearly all the things which men are hanged or imprisoned for doing to one another, are nature's every day performances. Killing, the most criminal act recognized by human laws, Nature does once to every being that lives; and in a large proportion of cases, after protracted tortures such as only the greatest monsters whom we read of ever purposely inflicted on their living fellow-creatures. If, by an arbitrary reservation, we refuse to account anything murder but what abridges a certain term supposed to be allotted to human life, nature also does this to all but a small percentage of lives, and does it in all the modes, violent or insidious, in which the worst human beings take the lives of one another. Nature impales men, breaks them as if on the wheel, casts them to be devoured by wild beasts, burns them to death, crushes them with stones like the first christian martyr, starves them with hunger, freezes them with cold, poisons them by the quick or slow venom of her exhalations, and has hundreds of other hideous deaths in reserve, such as the ingenious cruelty of a Nabis[14] or a Domitian[15] never surpassed. All this, Nature does with the most supercilious disregard both of mercy and of justice, emptying her shafts upon the best and noblest indifferently with the meanest and worst; upon those who are engaged in the highest and worthiest enterprises, and often as the direct consequence of the noblest acts; and it might almost be imagined as a punishment for them. She mows down those on whose existence hangs the well-being of a whole people, perhaps

12. Pope's *Essay on Man*, i,294.

13. More properly: 'Shall gravitation cease, *if* you go by?' Pope's *Essay on Man*, iv,128.

14. Nabis: tyrant of Lacedaemon, noted for his cruelty; assassinated shortly after his defeat in 192 B.C.

15. Domitian: Roman emperor A.D. 81–96, delighted in the misfortunes and sufferings of others, owing partly to his unsuccessful wars.

the prospects of the human race for generations to come, with as little compunction as those whose death is a relief to themselves, or a blessing to those under their noxious influence. Such are Nature's dealings with life. Even when she does not intend to kill, she inflicts the same tortures in apparent wantonness. In the clumsy provision which she has made for that perpetual renewal of animal life, rendered necessary by the prompt termination she puts to it in every individual instance, no human being ever comes into the world but another human being is literally stretched on the rack for hours or days, not unfrequently issuing in death. Next to taking life (equal to it according to a high authority) is taking the means by which we live; and Nature does this too on the largest scale and with the most callous indifference. A single hurricane destroys the hopes of a season; a flight of locusts, or an inundation, desolates a district; a trifling chemical change in an edible root, starves a million of people. The waves of the sea, like banditti seize and appropriate the wealth of the rich and the little all of the poor with the same accompaniments of stripping, wounding, and killing as their human antitypes. Everything in short, which the worst men commit either against life or property is perpetrated on a larger scale by natural agents. Nature has Noyades more fatal than those of Carrier; [16] her explosions of fire damp are as destructive as human artillery; her plague and cholera far surpass the poison cups of the Borgias.[17] Even the love of 'order' which is thought to be a following of the ways of Nature, is in fact a contradiction of them. All which people are accustomed to deprecate as 'disorder' and its consequences, is precisely a counterpart of Nature's ways. Anarchy and the Reign of Terror [18] are overmatched in injustice, ruin, and death, by a hurricane and a pestilence.

But, it is said, all these things are for wise and good ends. On this I must first remark that whether they are so or not, is altogether beside the point. Supposing it true that contrary to appearances these horrors when perpetrated by Nature, promote good ends, still as no one believes that good ends would be promoted by our following the example, the course of Nature cannot be a proper model for us to imitate. Either it is right that we should kill because nature kills; torture because nature tortures; ruin and devastate because nature does the like; or we ought not to consider at all what nature does, but what it is good to do. If there is such a thing as a *reductio ad absurdum*,[19] this surely amounts to one. If it is a sufficient reason for doing one thing, that nature does it, why not another thing? If not all things, why anything? The physical government of the world being full of the things which when done by men are deemed the greatest enormities, it cannot be religious or moral in us to guide our actions by the analogy of the course of nature. This proposition remains true, what-

16. Jean Baptiste Carrier (1756–94), French Revolutionist and Terrorist, was sent in 1793 into Nantes to suppress a revolt; he soon became notorious for his mass-executions, not only by the guillotine but also by putting large numbers of prisoners on board vessels with trap-doors for bottoms, and drowning the victims. — *Noyades* = judicial drownings.

17. Cesare Borgia (1476–1507), son of Pope Alexander VI, notorious for his violence and crimes, yet a man of great military capacity; his sister, Lucrezia Borgia (1480–1519) married Alfonso of Aragon, who was murdered by indirection of Cesare Borgia. Pope Alexander VI (Rodrigo Borgia) unscrupulously promoted the interests of his family. But the tradition of the mysterious and deadly poison, which they used against their enemies, has not been substantiated by historical research.

18. The period in the first French Revolution from March 1793 to July 1794, when the dominant faction ruthlessly executed all persons of both sexes, of all ages and conditions, whom they regarded as obnoxious.

19. In logic, a 'reduction to absurdity' of the opposing argument by showing the absurdity to which the proposition leads when carried to its logical conclusion.

ever occult quality of producing good may reside in those facts of nature which to our perceptions are most noxious, and which no one considers it other than a crime to produce artificially.

But, in reality, no one consistently believes in any such occult quality. The phrases which ascribe perfection to the course of nature can only be considered as the exaggerations of poetic or devotional feeling, not intended to stand the test of a sober examination. No one, either religious or irreligious, believes that the hurtful agencies of nature, considered as a whole, promote good purposes, in any other way than by inciting human rational creatures to rise up and struggle against them. If we believed that those agencies were appointed by a benevolent Providence as the means of accomplishing wise purposes which could not be compassed if they did not exist, then everything done by mankind which tends to chain up these natural agencies or to restrict their mischievous operation, from draining a pestilential marsh down to curing the toothache, or putting up an umbrella, ought to be accounted impious; which assuredly nobody does account them, notwithstanding an undercurrent of sentiment setting in that direction which is occasionally perceptible. On the contrary, the improvements on which the civilized part of mankind most pride themselves, consist in more successfully warding off those natural calamities which if we really believed what most people profess to believe, we should cherish as medicines provided for our earthly state by infinite wisdom. Inasmuch too as each generation greatly surpasses its predecessors in the amount of natural evil which it succeeds in averting, our condition, if the theory were true, ought by this time to have become a terrible manifestation of some tremendous calamity, against which the physical evils we have learnt to overmaster, had previously operated as a preservative. Any one, however, who acted as if he supposed this to be the case, would be more likely, I think, to be confined as a lunatic, than reverenced as a saint.

It is undoubtedly a very common fact that good comes out of evil, and when it does occur, it is far too agreeable not to find people eager to dilate on it. But in the first place, it is quite as often true of human crimes, as of natural calamities. The fire of London, which is believed to have had so salutary an effect on the healthiness of the city, would have produced that effect just as much if it had been really the work of the 'furor papisticus'[20] so long commemorated on the Monument.[21] The deaths of those whom tyrants or persecutors have made martyrs in any noble cause, have done a service to mankind which would not have been obtained if they had died by accident or disease. Yet whatever incidental and unexpected benefits may result from crimes, they are crimes nevertheless. In the second place, if good frequently comes out of evil, the converse fact, evil coming out of good, is equally common. Every event public or private, which, regretted on its occurrence, was declared providential at a later period on account of some unforeseen good consequence, might be matched by some other event, deemed fortunate at the time, but which proved calamitous or fatal to those whom it appeared to benefit. Such conflicts between the beginning and the end, or between the event and the expectation, are not only as frequent, but as often held up to notice, in the painful cases as in the agreeable; but there is not the same inclination to generalize on them; or at all events they are not regarded by the moderns (though they were by the ancients) as similarly an indication of the divine purposes: men satisfy themselves with moralizing on the imperfect nature of our fore-

20. 'papist hatred.'

21. The column erected by Sir Christopher Wren in 1671–77. On its plinth there was formerly an inscription attributing the fire to the Roman Catholics.

sight, the uncertainty of events, and the vanity of human expectations. The simple fact is, human interests are so complicated, and the effects of any incident whatever so multitudinous, that if it touches mankind at all, its influence on them is, in the great majority of cases, both good and bad. If the greater number of personal misfortunes have their good side, hardly any good fortune ever befell any one which did not give either to the same or to some other person, something to regret: and unhappily there are many misfortunes so overwhelming that their favourable side, if it exist, is entirely overshadowed and made insignificant; while the corresponding statement can seldom be made concerning blessings. The effects too of every cause depend so much on the circumstances which accidentally accompany it, that many cases are sure to occur in which even the total result is markedly opposed to the predominant tendency: and thus not only evil has its good and good its evil side, but good often produces an overbalance of evil and evil an overbalance of good. This, however, is by no means the general tendency of either phenomenon. On the contrary, both good and evil naturally tend to fructify, each in its own kind, good producing good, and evil, evil. It is one of Nature's general rules, and part of her habitual injustice, that 'to him that hath shall be given, but from him that hath not, shall be taken even that which he hath.'[22] The ordinary and predominant tendency of good is towards more good. Health, strength, wealth, knowledge, virtue, are not only good in themselves but facilitate and promote the acquisition of good, both of the same and of other kinds. The person who can learn easily, is he who already knows much: it is the strong and not the sickly person who can do everything which most conduces to health; those who find it easy to gain money are not the poor but the rich; while health, strength, knowledge, talents, are all means of acquiring riches, and riches are often an indispensable means of acquiring these. Again, *e converso*,[23] whatever may be said of evil turning into good, the general tendency of evil is towards further evil. Bodily illness renders the body more susceptible of disease; it produces incapacity of exertion, sometimes debility of mind, and often the loss of means of subsistence. All severe pain, either bodily or mental, tends to increase the susceptibilities of pain for ever after. Poverty is the parent of a thousand mental and moral evils. What is still worse, to be injured or oppressed, when habitual, lowers the whole tone of the character. One bad action leads to others, both in the agent himself, in the bystanders, and in the sufferers. All bad qualities are strengthened by habit, and all vices and follies tend to spread. Intellectual defects generate moral, and moral, intellectual; and every intellectual or moral defect generates others, and so on without end.

That much applauded class of authors, the writers on natural theology, have, I venture to think, entirely lost their way, and missed the sole line of argument which could have made their speculations acceptable to any one who can perceive when two propositions contradict one another. They have exhausted the resources of sophistry to make it appear that all the suffering in the world exists to prevent greater — that misery exists, for fear lest there should be misery: a thesis which if ever so well maintained, could only avail to explain and justify the works of limited beings, compelled to labour under conditions independent of their own will; but can have no application to a Creator assumed to be omnipotent, who, if he bends to a supposed necessity, himself makes the necessity which he bends to. If the maker of the world *can* all that he will, he wills misery, and there is no escape from the conclusion. The more consistent of those who have deemed themselves qualified to

22. See *Mark*, iv,25.

23. *i.e.* 'conversely' or 'on the other hand.'

'vindicate the ways of God to man'[24] have endeavoured to avoid the alternative by hardening their hearts, and denying that misery is an evil. The goodness of God, they say, does not consist in willing the happiness of his creatures, but their virtue; and the universe, if not a happy, is a just, universe. But waiving the objections to this scheme of ethics, it does not at all get rid of the difficulty. If the Creator of mankind willed that they should all be virtuous, his designs are as completely baffled as if he had willed that they should all be happy: and the order of nature is constructed with even less regard to the requirements of justice than to those of benevolence. If the law of all creation were justice and the Creator omnipotent, then in whatever amount suffering and happiness might be dispensed to the world, each person's share of them would be exactly proportioned to that person's good or evil deeds; no human being would have a worse lot than another, without worse deserts; accident or favouritism would have no part in such a world, but every human life would be the playing out of a drama constructed like a perfect moral tale. No one is able to blind himself to the fact that the world we live in is totally different from this; insomuch that the necessity of redressing the balance has been deemed one of the strongest arguments for another life after death, which amounts to an admission that the order of things in this life is often an example of injustice, not justice. If it be said that God does not take sufficient account of pleasure and pain to make them the reward or punishment of the good or the wicked, but that virtue is itself the greatest good and vice the greatest evil, then these at least ought to be dispensed to all according to what they have done to deserve them; instead of which, every kind of moral depravity is entailed upon multitudes by the fatality of their birth; through the fault of their parents, of society, or of uncontrollable circumstances, certainly through no fault of their own. Not even on the most distorted and contracted theory of good which ever was framed by religious or philosophical fanaticism, can the government of Nature be made to resemble the work of a being at once good and omnipotent.

The only admissible moral theory of Creation is that the Principle of Good *cannot* at once and altogether subdue the powers of evil, either physical or moral; could not place mankind in a world free from the necessity of an incessant struggle with the maleficent powers, or make them always victorious in that struggle, but could and did make them capable of carrying on the fight with vigour and with progressively increasing success. Of all the religious explanations of the order of nature, this alone is neither contradictory to itself, nor to the facts for which it attempts to account. According to it, man's duty would consist, not in simply taking care of his own interests by obeying irresistible power, but in standing forward a not ineffectual auxiliary to a Being of perfect beneficence; a faith which seems much better adapted for nerving him to exertion than a vague and inconsistent reliance on an Author of Good who is supposed to be also the author of evil. And I venture to assert that such has really been, though often unconsciously, the faith of all who have drawn strength and support of any worthy kind from trust in a superintending Providence. There is no subject on which men's practical belief is more incorrectly indicated by the words they use to express it, than religion. Many have derived a base confidence from imagining themselves to be favourites of an omnipotent but capricious and despotic Deity. But those who have been strengthened in goodness by relying on the sympathizing support of a powerful and good Governor of the world, have, I am satisfied, never really believed that Governor to be, in the strict sense of the term, omnipotent. They have

24. See Pope's *Essay on Man*, i,16.

always saved his goodness at the expense of his power. They have believed, perhaps, that he could, if he willed, remove all the thorns from their individual path, but not without causing greater harm to some one else, or frustrating some purpose of greater importance to the general well-being. They have believed that he could do any one thing, but not any combination of things: that his government, like human government, was a system of adjustments and compromises; that the world is inevitably imperfect, contrary to his intention. And since the exertion of all his power to make it as little imperfect as possible, leaves it no better than it is, they cannot but regard that power, though vastly beyond human estimate, yet as in itself not merely finite, but extremely limited. They are bound, for example, to suppose that the best he could do for his human creatures was to make an immense majority of all who have yet existed, be born (without any fault of their own) Patagonians, or Esquimaux, or something nearly as brutal and degraded, but to give them capacities which by being cultivated for very many centuries in toil and suffering, and after many of the best specimens of the race have sacrificed their lives for the purpose, have at last enabled some chosen portions of the species to grow into something better, capable of being improved in centuries more into something really good, of which hitherto there are only to be found individual instances. It may be possible to believe with Plato that perfect goodness, limited and thwarted in every direction by the intractableness of the material, has done this because it could do no better. But that the same perfectly wise and good Being had absolute power over the material, and made it, by voluntary choice, what it is; to admit this might have been supposed impossible to any one who has the simplest notions of moral good and evil. Nor can any such person, whatever kind of religious phrases he may use, fail to believe, that if Nature and Man are both the works of a Being of perfect goodness, that Being intended Nature as a scheme to be amended, not imitated, by Man.

But even though unable to believe that Nature, as a whole, is a realization of the designs of perfect wisdom and benevolence, men do not willingly renounce the idea that some part of Nature, at least, must be intended as an exemplar, or type; that on some portion or other of the Creator's works, the image of the moral qualities which they are accustomed to ascribe to him, must be impressed; that if not all which is, yet something which is, must not only be a faultless model of what ought to be, but must be intended to be our guide and standard in rectifying the rest. It does not suffice them to believe, that what tends to good is to be imitated and perfected, and what tends to evil is to be corrected: they are anxious for some more definite indication of the Creator's designs; and being persuaded that this must somewhere be met with in his works, undertake the dangerous responsibility of picking and choosing among them in quest of it. A choice which except so far as directed by the general maxim that he intends all the good and none of the evil, must of necessity be perfectly arbitrary; and if it leads to any conclusions other than such as can be deduced from that maxim, must be, exactly in that proportion, pernicious.

It has never been settled by any accredited doctrine, what particular departments of the order of nature shall be reputed to be designed for our moral instruction and guidance; and accordingly each person's individual predilections, or momentary convenience, have decided to what parts of the divine government the practical conclusions that he was desirous of establishing, should be recommended to approval as being analogous. One such recommendation must be as fallacious as another, for it is impossible to decide that certain of the Creator's works are more truly expressions of his character than the

rest; and the only selection which does not lead to immoral results, is the selection of those which most conduce to the general good, in other words, of those which point to an end which if the entire scheme is the expression of a single omnipotent and consistent will, is evidently not the end intended by it.

There is however one particular element in the construction of the world, which to minds on the look-out for special indication of the Creator's will, has appeared, not without plausibility, peculiarly fitted to afford them; viz. the active impulses of human and other animated beings. One can imagine such persons arguing that when the Author of Nature only made circumstances, he may not have meant to indicate the manner in which his rational creatures were to adjust themselves to those circumstances; but that when he implanted positive stimuli in the creatures themselves, stirring them up to a particular kind of action, it is impossible to doubt that he intended that sort of action to be practised by them. This reasoning, followed out consistently, would lead to the conclusion that the Deity intended, and approves, whatever human beings do; since all that they do being the consequence of some of the impulses with which their Creator must have endowed them, all must equally be considered as done in obedience to his will. As this practical conclusion was shrunk from, it was necessary to draw a distinction, and to pronounce that not the whole, but only parts of the active nature of mankind point to a special intention of the Creator in respect to their conduct. These parts it seemed natural to suppose, must be those in which the Creator's hand is manifested rather than the man's own: and hence the frequent antithesis between man as God made him, and man as he has made himself. Since what is done with deliberation seems more the man's own act, and he is held more completely responsible for it than for what he does from sudden impulse, the considerate part of human conduct is apt to be set down as man's share in the business, and the inconsiderate as God's. The result is the vein of sentiment so common in the modern world (though unknown to the philosophic ancients) which exalts instinct at the expense of reason; an aberration rendered still more mischievous by the opinion commonly held in conjunction with it, that every, or almost every, feeling or impulse which acts promptly without waiting to ask questions, is an instinct. Thus almost every variety of unreflecting and uncalculating impulse receives a kind of consecration, except those which, though unreflecting at the moment, owe their origin to previous habits of reflection: these, being evidently not instinctive, do not meet with the favour accorded to the rest; so that all unreflecting impulses are invested with authority over reason, except the only ones which are most probably right. I do not mean, of course, that this mode of judgment is even pretended to be consistently carried out: life could not go on if it were not admitted that impulses must be controlled, and that reason ought to govern our actions. The pretension is not to drive Reason from the helm but rather to bind her by articles to steer only in a particular way. Instinct is not to govern, but reason is to practise some vague and unassignable amount of deference to Instinct. Though the impression in favour of instinct as being a peculiar manifestation of the divine purposes, has not been cast into the form of a consistent general theory, it remains a standing prejudice, capable of being stirred up into hostility to reason in any case in which the dictate of the rational faculty has not acquired the authority of prescription.

I shall not here enter into the difficult psychological question, what are, or are not instincts: the subject would require a volume to itself. Without touching upon any disputed theoretical points, it is possible to judge how little worthy is the in-

stinctive part of human nature to be held up as its chief excellence — as the part in which the hand of infinite goodness and wisdom is peculiarly visible. Allowing everything to be an instinct which anybody has ever asserted to be one, it remains true that nearly every respectable attribute of humanity is the result not of instinct, but of a victory over instinct; and that there is hardly anything valuable in the natural man except capacities — a whole world of possibilities, all of them dependent upon eminently artificial discipline for being realized.

It is only in a highly artificialized condition of human nature that the notion grew up, or, I believe, ever could have grown up, that goodness was natural: because only after a long course of artificial education did good sentiments become so habitual, and so predominant over bad, as to arise unprompted when occasion called for them. In the times when mankind were nearer to their natural state, cultivated observers regarded the natural man as a sort of wild animal, distinguished chiefly by being craftier than the other beasts of the field; and all worth of character was deemed the result of a sort of taming; a phrase often applied by the ancient philosophers to the appropriate discipline of human beings. The truth is that there is hardly a single point of excellence belonging to human character, which is not decidedly repugnant to the untutored feelings of human nature.

If there be a virtue which more than any other we expect to find, and really do find, in an uncivilized state, it is the virtue of courage. Yet this is from first to last a victory achieved over one of the most powerful emotions of human nature. If there is any one feeling or attribute more natural than all others to human beings, it is fear; and no greater proof can be given of the power of artificial discipline than the conquest which it has at all times and places shown itself capable of achieving over so mighty and so universal a sentiment. The widest difference no doubt exists between one human being and another in the facility or difficulty with which they acquire this virtue. There is hardly any department of human excellence in which difference of original temperament goes so far. But it may fairly be questioned if any human being is naturally courageous. Many are naturally pugnacious, or irascible, or enthusiastic, and these passions when strongly excited may render them insensible to fear. But take away the conflicting emotion, and fear reasserts its dominion: consistent courage is always the effect of cultivation. The courage which is occasionally though by no means generally found among tribes of savages, is as much the result of education as that of the Spartans or Romans. In all such tribes there is a most emphatic direction of the public sentiment into every channel of expression through which honour can be paid to courage and cowardice held up to contempt and derision. It will perhaps be said, that as the expression of a sentiment implies the sentiment itself, the training of the young to courage presupposes an originally courageous people. It presupposes only what all good customs presuppose — that there must have been individuals better than the rest, who set the customs going. Some individuals, who like other people had fears to conquer, must have had strength of mind and will to conquer them for themselves. These would obtain the influence belonging to heroes, for that which is at once astonishing and obviously useful never fails to be admired: and partly through this admiration, partly through the fear they themselves excite, they would obtain the power of legislators, and could establish whatever customs they pleased.

Let us next consider a quality which forms the most visible, and one of the most radical of the moral distinctions between human beings and most of the

lower animals; that of which the absence, more than of anything else, renders men bestial; the quality of cleanliness. Can anything be more entirely artificial? Children, and the lower classes of most countries, seem to be actually fond of dirt: the vast majority of the human race are indifferent to it: whole nations of otherwise civilized and cultivated human beings tolerate it in some of its worst forms, and only a very small minority are consistently offended by it. Indeed the universal law of the subject appears to be, that uncleanliness offends only those to whom it is unfamiliar, so that those who have lived in so artificial a state as to be unused to it in any form, are the sole persons whom it disgusts in all forms. Of all virtues this is the most evidently not instinctive, but a triumph over instinct. Assuredly neither cleanliness nor the love of cleanliness is natural to man, but only the capacity of acquiring a love of cleanliness.

Our examples have thus far been taken from the personal, or as they are called by Bentham, the self regarding virtues, because these, if any, might be supposed to be congenial even to the uncultivated mind. Of the social virtues it is almost superfluous to speak; so completely is it the verdict of all experience that selfishness is natural. By this I do not in any wise mean to deny that sympathy is natural also; I believe on the contrary that on that important fact rests the possibility of any cultivation of goodness and nobleness, and the hope of their ultimate entire ascendancy. But sympathetic characters, left uncultivated, and given up to their sympathetic instincts, are as selfish as others. The difference is in the *kind* of selfishness: theirs is not solitary but sympathetic selfishness; *l'egoïsme à deux, à trois*, or *à quatre*;[25] and they may be very amiable and delightful to those with whom they sympathize, and grossly unjust and unfeeling to the rest of the world. Indeed the finer nervous organizations which are most capable of and most require sympathy, have, from their fineness, so much stronger impulses of all sorts, that they often furnish the most striking examples of selfishness, though of a less repulsive kind than that of colder natures. Whether there ever was a person in whom, apart from all teaching of instructors, friends or books, and from all intentional self-modelling according to an ideal, natural benevolence was a more powerful attribute than selfishness in any of its forms, may remain undecided. That such cases are extremely rare, every one must admit, and this is enough for the argument.

But (to speak no further of self-control for the benefit of others) the commonest self-control for one's own benefit — that power of sacrificing a present desire to a distant object or a general purpose which is indispensable for making the actions of the individual accord with his own notions of his individual good; even this is most unnatural to the undisciplined human being: as may be seen by the long apprenticeship which children serve to it; the very imperfect manner in which it is acquired by persons born to power, whose will is seldom resisted, and by all who have been early and much indulged; and the marked absence of the quality in savages, in soldiers and sailors, and in a somewhat less degree in nearly the whole of the poorer classes in this and many other countries. The principal difference, on the point under consideration, between this virtue and others, is that although, like them, it requires a course of teaching, it is more susceptible than most of them of being self-taught. The axiom is trite that self-control is only learnt by experience: and this endowment is only thus much nearer to being natural than the others we have spoken of, inasmuch as personal experience, without external inculcation, has a certain tendency to engender it. Nature does not of herself bestow this, any

[25] *i.e.* 'egoism by two's, by three's, or by four's.'

more than other virtues; but nature often administers the rewards and punishments which cultivate it, and which in other cases have to be created artificially for the express purpose.

Veracity might seem, of all virtues, to have the most plausible claim to being natural, since in the absence of motives to the contrary, speech usually conforms to, or at least does not intentionally deviate from, fact. Accordingly this is the virtue with which writers like Rousseau delight in decorating savage life, and setting it in advantageous contrast with the treachery and trickery of civilization. Unfortunately this is a mere fancy picture, contradicted by all the realities of savage life. Savages are always liars. They have not the faintest notion of truth as a virtue. They have a notion of not betraying to their hurt, as of not hurting in any other way, persons to whom they are bound by some special tie of obligation; their chief, their guest, perhaps, or their friend: these feelings of obligation being the taught morality of the savage state, growing out of its characteristic circumstances. But of any point of honour respecting truth for truth's sake, they have not the remotest idea; no more than the whole East, and the greater part of Europe: and in the few countries which are sufficiently improved to have such a point of honour, it is confined to a small minority, who alone, under any circumstances of real temptation practise it.

From the general use of the expression 'natural justice,' it must be presumed that justice is a virtue generally thought to be directly implanted by nature. I believe, however, that the sentiment of justice is entirely of artificial origin; the idea of natural justice not preceding but following that of conventional justice. The farther we look back into the early modes of thinking of the human race, whether we consider ancient times (including those of the Old Testament) or the portions of mankind who are still in no more advanced a condition than that of ancient times, the more completely do we find men's notions of justice defined and bounded by the express appointment of law. A man's just rights, meant the rights which the law gave him: a just man, was he who never infringed, nor sought to infringe, the legal property or other legal rights of others. The notion of a higher justice, to which laws themselves are amenable, and by which the conscience is bound without a positive prescription of law, is a later extension of the idea, suggested by, and following the analogy of, legal justice, to which it maintains a parallel direction through all the shades and varieties of the sentiment, and from which it borrows nearly the whole of its phraseology. The very words *justus* and *justitia* are derived from *jus*, law. Courts of justice, administration of justice, always mean the tribunals.

If it be said, that there must be the germs of all these virtues in human nature, otherwise mankind would be incapable of acquiring them, I am ready, with a certain amount of explanation, to admit the fact. But the weeds that dispute the ground with these beneficent germs, are themselves not germs but rankly luxuriant growths, and would, in all but some one case in a thousand, entirely stifle and destroy the former, were it not so strongly the interest of mankind to cherish the good germs in one another, that they always do so, in as far as their degree of intelligence (in this as in other respects still very imperfect) allows. It is through such fostering, commenced early, and not counteracted by unfavourable influences, that, in some happily circumstanced specimens of the human race, the most elevated sentiments of which humanity is capable become a second nature, stronger than the first, and not so much subduing the original nature as merging it into itself. Even those gifted organizations which have attained the like excellence by self-culture, owe it essentially to the same cause; for what self-culture would be possible without aid from

the general sentiment of mankind delivered through books, and from the contemplation of exalted characters real or ideal? This artificially created or at least artificially perfected nature of the best and noblest human beings, is the only nature which it is ever commendable to follow. It is almost superfluous to say that even this cannot be erected into a standard of conduct, since it is itself the fruit of a training and culture the choice of which, if rational and not accidental, must have been determined by a standard already chosen.

This brief survey is amply sufficient to prove that the duty of man is the same in respect to his own nature as in respect to the nature of all other things, namely not to follow but to amend it. Some people however who do not attempt to deny that instinct ought to be subordinate to reason, pay deference to nature so far as to maintain that every natural inclination must have some sphere of action granted to it, some opening left for its gratification. All natural wishes, they say, must have been implanted for a purpose: and this argument is carried so far, that we often hear it maintained that every wish, which it is supposed to be natural to entertain, must have a corresponding provision in the order of the universe for its gratification: insomuch (for instance) that the desire of an indefinite prolongation of existence, is believed by many to be in itself a sufficient proof of the reality of a future life.

I conceive that there is a radical absurdity in all these attempts to discover, in detail, what are the designs of Providence, in order when they are discovered to help Providence in bringing them about. Those who argue, from particular indications, that Providence intends this or that, either believe that the Creator can do all that he will or that he cannot. If the first supposition is adopted — if Providence is omnipotent, Providence intends whatever happens, and the fact of its happening proves that Providence intended it. If so, everything which a human being can do, is predestined by Providence and is a fulfilment of its designs. But if as is the more religious theory, Providence intends not all which happens, but only what is good, then indeed man has it in his power, by his voluntary actions, to aid the intentions of Providence; but he can only learn those intentions by considering what tends to promote the general good, and not what man has a natural inclination to; for, limited as, on this showing, the divine power must be, by inscrutable but insurmountable obstacles, who knows that man *could* have been created without desires which never are to be, and even which never ought to be, fulfilled? The inclinations with which man has been endowed, as well as any of the other contrivances which we observe in Nature, may be the expression not of the divine will, but of the fetters which impede its free action; and to take hints from these for the guidance of our own conduct may be falling into a trap laid by the enemy. The assumption that everything which infinite goodness can desire, actually comes to pass in this universe, or at least that we must never say or suppose that it does not, is worthy only of those whose slavish fears make them offer the homage of lies to a Being who, they profess to think, is incapable of being deceived and holds all falsehood in abomination.

With regard to this particular hypothesis, that all natural impulses, all propensities sufficiently universal and sufficiently spontaneous to be capable of passing for instincts, must exist for good ends and ought to be only regulated, not repressed; this is of course true of the majority of them, for the species could not have continued to exist unless most of its inclinations had been directed to things needful or useful for its preservation. But unless the instincts can be reduced to a very small number indeed, it must be allowed that we have also bad instincts which it should be the aim of education not simply

to regulate but to extirpate, or rather (what can be done even to an instinct) to starve them by disuse. Those who are inclined to multiply the number of instincts, usually include among them one which they call destructiveness: an instinct to destroy for destruction's sake. I can conceive no good reason for preserving this, no more than another propensity which if not an instinct is very like one, what has been called the instinct of domination; a delight in exercising despotism, in holding other beings in subjection to our will. The man who takes pleasure in the mere exertion of authority, apart from the purpose for which it is to be employed, is the last person in whose hands one would willingly entrust it. Again, there are persons who are cruel by character, or, as the phrase is, naturally cruel; who have a real pleasure in inflicting, or seeing the infliction of pain. This kind of cruelty is not mere hardheartedness, absence of pity or remorse; it is a positive thing; a particular kind of voluptuous excitement. The East, and Southern Europe, have afforded, and probably still afford, abundant examples of this hateful propensity. I suppose it will be granted that this is not one of the natural inclinations which it would be wrong to suppress. The only question would be whether it is not a duty to suppress the man himself along with it.

But even if it were true that every one of the elementary impulses of human nature has its good side, and may by a sufficient amount of artificial training be made more useful than hurtful; how little would this amount to, when it must in any case be admitted that without such training all of them, even those which are necessary to our preservation, would fill the world with misery, making human life an exaggerated likeness of the odious scene of violence and tyranny which is exhibited by the rest of the animal kingdom, except in so far as tamed and disciplined by man. There, indeed, those who flatter themselves with the notion of reading the purposes of the Creator in his works, ought in consistency to have seen grounds for inferences from which they have shrunk. If there are any marks at all of special design in creation, one of the things most evidently designed is that a large proportion of all animals should pass their existence in tormenting and devouring other animals. They have been lavishly fitted out with the instruments necessary for that purpose; their strongest instincts impel them to it, and many of them seem to have been constructed incapable of supporting themselves by any other food. If a tenth part of the pains which have been expended in finding benevolent adaptations in all nature, had been employed in collecting evidence to blacken the character of the Creator, what scope for comment would not have been found in the entire existence of the lower animals, divided, with scarcely an exception, into devourers and devoured, and a prey to a thousand ills from which they are denied the faculties necessary for protecting themselves! If we are not obliged to believe the animal creation to be the work of a demon, it is because we need not suppose it to have been made by a Being of infinite power. But if imitation of the Creator's will as revealed in nature, were applied as a rule of action in this case, the most atrocious enormities of the worst men would be more than justified by the apparent intention of Providence that throughout all animated nature the strong should prey upon the weak.

The preceding observations are far from having exhausted the almost infinite variety of modes and occasions in which the idea of conformity to nature is introduced as an element into the ethical appreciation of actions and dispositions. The same favourable prejudgment follows the word nature through the numerous acceptations, in which it is employed as a distinctive term for certain parts of the constitution of humanity as contrasted with other parts. We have hithero confined

ourselves to one of these acceptations, in which it stands as a general designation for those parts of our mental and moral constitution which are supposed to be innate, in contradistinction to those which are acquired; as when nature is contrasted with education; or when a savage state, without laws, arts, or knowledge, is called a state of nature; or when the question is asked whether benevolence, or the moral sentiment, is natural or acquired; or whether some persons are poets or orators by nature and others not. But in another and a more lax sense, any manifestations by human beings are often termed natural, when it is merely intended to say that they are not studied or designedly assumed in the particular case; as when a person is said to move or speak with natural grace; or when it is said that a person's natural manner or character is so and so; meaning that it is so when he does not attempt to control or disguise it. In a still looser acceptation, a person is said to be naturally, that which he was until some special cause had acted upon him, or which it is supposed he would be if some such cause were withdrawn. Thus a person is said to be naturally dull, but to have made himself intelligent by study and perseverance; to be naturally cheerful, but soured by misfortune; naturally ambitious, but kept down by want of opportunity. Finally, the word natural, applied to feelings or conduct, often seems to mean no more than that they are such as are ordinarily found in human beings; as when it is said that a person acted, on some particular occasion, as it was natural to do; or that to be affected in a particular way by some sight, or sound, or thought, or incident in life, is perfectly natural.

In all these senses of the term, the quality called natural is very often confessedly a worse quality than the one contrasted with it; but whenever its being so is not too obvious to be questioned, the idea seems to be entertained that by describing it as natural, something has been said amounting to a considerable presumption in its favour. For my part I can perceive only one sense in which nature, or naturalness, in a human being, are really terms of praise; and then the praise is only negative: namely when used to denote the absence of affectation. Affectation may be defined, the effort to appear what one is not, when the motive or the occasion is not such as either to excuse the attempt, or to stamp it with the more odious name of hypocrisy. It must be added that the deception is often attempted to be practised on the deceiver himself as well as on others; he imitates the external signs of qualities which he would like to have, in hopes to persuade himself that he has them. Whether in the form of deception or of self-deception, or of something hovering between the two, affectation is very rightly accounted a reproach, and naturalness, understood as the reverse of affectation, a merit. But a more proper term by which to express this estimable quality would be sincerity; a term which has fallen from its original elevated meaning, and popularly denotes only a subordinate branch of the cardinal virtue it once designated as a whole.

Sometimes also, in cases where the term affectation would be inappropriate, since the conduct or demeanour spoken of is really praiseworthy, people say in disparagement of the person concerned, that such conduct or demeanour is not natural to him; and make uncomplimentary comparisons between him and some other person, to whom it is natural: meaning that what in the one seemed excellent was the effect of temporary excitement, or of a great victory over himself, while in the other it is the result to be expected from the habitual character. This mode of speech is not open to censure, since nature is here simply a term for the person's ordinary disposition, and if he is praised it is not for being natural, but for being naturally good.

Conformity to nature, has no connec-

tion whatever with right and wrong. The idea can never be fitly introduced into ethical discussions at all, except, occasionally and partially, into the question of degrees of culpability. To illustrate this point, let us consider the phrase by which the greatest intensity of condemnatory feeling is conveyed in connection with the idea of nature — the word unnatural. That a thing is unnatural, in any precise meaning which can be attached to the word, is no argument for its being blamable; since the most criminal actions are to a being like man, not more unnatural than most of the virtues. The acquisition of virtue has in all ages been accounted a work of labour and difficulty, while the *descensus Averni*[26] on the contrary is of proverbial facility: and it assuredly requires in most persons a greater conquest over a greater number of natural inclinations to become eminently virtuous than transcendently vicious. But if an action, or an inclination, has been decided on other grounds to be blamable, it may be a circumstance in aggravation that it is unnatural, that is, repugnant to some strong feeling usually found in human beings; since the bad propensity, whatever it be, has afforded evidence of being both strong and deeply rooted, by having overcome that repugnance. This presumption of course fails if the individual never had the repugnance: and the argument, therefore, is not fit to be urged unless the feeling which is violated by the act, is not only justifiable and reasonable, but is one which it is blamable to be without.

The corresponding plea in extenuation of a culpable act because it was natural, or because it was prompted by a natural feeling, never, I think, ought to be admitted. There is hardly a bad action ever perpetrated which is not perfectly natural, and the motives to which are not perfectly natural feelings. In the eye of reason, therefore, this is no excuse, but it is quite 'natural' that it should be so in the eyes of the multitude; because the meaning of the expression is, that they have a fellow feeling with the offender. When they say that something which they cannot help admitting to be blamable, is nevertheless natural, they mean that they can imagine the possibility of their being themselves tempted to commit it. Most people have a considerable amount of indulgence towards all acts of which they feel a possible source within themselves, reserving their rigour for those which, though perhaps really less bad, they cannot in any way understand how it is possible to commit. If an action convinces them (which it often does on very inadequate grounds) that the person who does it must be a being totally unlike themselves, they are seldom particular in examining the precise degree of blame due to it, or even if blame is properly due to it at all. They measure the degree of guilt by the strength of their antipathy; and hence differences of opinion, and even differences of taste, have been objects of as intense moral abhorrence as the most atrocious crimes.

It will be useful to sum up in a few words the leading conclusions of this Essay.

The word Nature has two principal meanings: it either denotes the entire system of things, with the aggregate of all their properties, or it denotes things as they would be, apart from human intervention.

In the first of these senses, the doctrine that man ought to follow nature is unmeaning; since man has no power to do anything else than follow nature; all his actions are done through, and in obedience to, some one or many of nature's physical or mental laws.

In the other sense of the term, the doctrine that man ought to follow nature, or in other words, ought to make the spontaneous course of things the model of his

26. Literally, 'descent into Avernus,' a lake of Campania, filling the crater of an extinct volcano; hence 'descent into Hell.' (See the *Aeneid*, v and vi.)

voluntary actions, is equally irrational and immoral.

Irrational, because all human action whatever, consists in altering, and all useful action in improving, the spontaneous course of nature:

Immoral, because the course of natural phenomena being replete with everything which when committed by human beings is most worthy of abhorrence, any one who endeavoured in his actions to imitate the natural course of things would be universally seen and acknowledged to be the wickedest of men.

The scheme of Nature regarded in its whole extent, cannot have had, for its sole or even principal object, the good of human or other sentient beings. What good it brings to them, is mostly the result of their own exertions. Whatsoever, in nature, gives indication of beneficent design, proves this beneficence to be armed only with limited power; and the duty of man is to co-operate with the beneficent powers, not by imitating but by perpetually striving to amend the course of nature — and bringing that part of it over which we can exercise control, more nearly into conformity with a high standard of justice and goodness.

HISTORY OF ENGLAND FROM THE FALL OF WOLSEY TO THE DEFEAT OF THE SPANISH ARMADA. VOLUME XII

Chapter XXXIV

[The Execution of Mary Queen of Scots]

. . . Briefly, solemnly, and sternly they [Lords Kent [1] and Shrewsbury [2]] delivered their awful message. They informed her [Mary Queen of Scots] that they had received a commission under the great seal to see her executed, and she was told that she must prepare to suffer on the following morning.

She was dreadfully agitated. For a moment she refused to believe them. Then, as the truth forced itself upon her, tossing her head in disdain and struggling to control herself, she called her physician and began to speak to him of money that was owed to her in France. At last it seems that she broke down altogether, and they left her with a fear either that she would destroy herself in the night, or that she would refuse to come to the scaffold, and that it might be necessary to drag her there by violence.

The end had come. She had long professed to expect it, but the clearest expectation is not certainty. The scene for which she had affected to prepare she was to encounter in its dread reality, and all her busy schemes, her dreams of vengeance, her visions of a revolution, with herself ascending out of the convulsion and seating herself on her rival's throne — all were gone. She had played deep, and the dice had gone against her.

Yet in death, if she encountered it bravely, victory was still possible. Could she but sustain to the last the character of a calumniated suppliant accepting heroically for God's sake and her creed's the concluding stroke of a long series of wrongs, she might stir a tempest of in-

1. One of the thirteen barons who had sat, with other officials, in the trial of Mary at Fotheringay, October 14 and 15, 1586.
2. George Talbot, 6th Earl of Shrewsbury (1528?–90) had been chosen by Queen Elizabeth to be the keeper of Mary Queen of Scots, who remained his ward at Tutbury, Chatsworth, Sheffield Castle, and other of his country places from 1569 to 1584.

dignation which, if it could not save herself, might at least overwhelm her enemy. Persisting, as she persisted to the last, in denying all knowledge of Babington,[3] it would be affectation to credit her with a genuine feeling of religion; but the imperfection of her motive exalts the greatness of her fortitude. To an impassioned believer death is comparatively easy.

Her chaplain was lodged in a separate part of the castle. The commissioners, who were as anxious that her execution should wear its real character as she was herself determined to convert it into a martyrdom, refused, perhaps unwisely, to allow him access to her, and offered her again the assistance of an Anglican dean. They gave her an advantage over them which she did not fail to use. She would not let the dean come near her. She sent a note to the chaplain telling him that she had meant to receive the sacrament, but as it might not be she must content herself with a general confession. She bade him watch through the night and pray for her. In the morning when she was brought out she might perhaps see him, and receive his blessing on her knees. She supped cheerfully, giving her last meal with her attendants a character of sacred parting; afterwards she drew aside her apothecary M. Gorion, and asked him if she might depend upon his fidelity. When he satisfied her that she might trust him, she said she had a letter and two diamonds which she wished to send to Mendoza.[4] He undertook to melt some drug and conceal them in it where they would never be looked for, and promised to deliver them faithfully. One of the jewels was for Mendoza himself; the other and the largest was for Philip.[5] It was to be a sign that she was dying for the truth, and was meant also to bespeak his care for her friends and servants. Every one of them so far as she was able, without forgetting a name, she commended to his liberality. Arundel,[6] Paget,[7] Morgan,[8] the Archbishop of Glasgow, Westmoreland,[9] Throgmorton,[10] the Bishop of Ross,[11] her two secretaries, the ladies who had shared the trials of her imprisonment, she remembered them all, and specified the sums which she desired Philip to bestow on them. And as Mary Stuart then and throughout her life never lacked gratitude to those who had been true to her, so then as always she remembered her enemies. There was no cant

3. Anthony Babington (1561–86), a Roman Catholic, had been page to Mary Stuart, had made friends at the court of Elizabeth, had travelled on the continent, and had been induced by a Catholic priest to organize a conspiracy to murder Elizabeth and release Mary (1586); he was caught by Walsingham's spies, and after attempting to save himself by giving information, fled in disguise, but was finally captured, imprisoned in the Tower, and executed with the other conspirators.

4. The Spanish ambassador to London; after intrigues with the Jesuits, and after suspicious connections with Mary Stuart, he was ordered to leave England (1584), and became Minister at Paris, under Henry III.

5. Philip II of Spain (1527–98).

6. The Earl of Arundel (1557–95) had turned Roman Catholic, was suspected of complicity in Throgmorton's plot, was imprisoned, and after a release, was again in prison during the execution of Mary Stuart.

7. Thomas Paget, 3rd Baron Paget (d.1590) had fled to the continent on the discovery of Throgmorton's plot, and died in Brussels.

8. Thomas Morgan (1543–1606?) had helped organize the Babington plot.

9. Charles Neville, 6th Earl of Westmorland (1543–1601) had attempted to release Mary Stuart in 1569.

10. Francis Throgmorton (or Throckmorton) (1554–84), student of the Inner Temple, and a zealous Catholic, had engaged abroad in plots against the English government, and was arrested in England while organizing communications between Mary Queen of Scots and Mendoza and Thomas Morgan in Paris: incriminating documents were found in his house, he confessed under torture to furthering French designs on England, and was executed at Tyburn.

11. John Leslie, Bishop of Ross (1527–96), had been employed in France about the person of Queen Mary, and was her chief adviser on ecclesiastical policy; later ambassador to Queen Elizabeth, he had to leave England (1573) because of his connection with the Ridolfi plot (1571).

about her, no unreal talk of forgiveness of injuries. She bade Gorion tell Philip it was her last prayer that he should persevere, notwithstanding her death, in the invasion of England. It was God's quarrel, she said, and worthy of his greatness; and as soon as he had conquered it, she desired him not to forget how she had been treated by Cecil,[12] and Leicester,[13] and Walsingham; [14] by Lord Huntingdon,[15] who had ill-used her fifteen years before at Tutbury; by Sir Amyas Paulet,[16] and Secretary Wade.[17]

Her last night was a busy one. As she said herself, there was much to be done and the time was short. A few lines to the King of France were dated two hours after midnight. They were to insist for the last time that she was innocent of the conspiracy, that she was dying for religion, and for having asserted her right to the crown; and to beg that out of the sum which he owed her, her servants' wages might be paid and masses provided for her soul. After this she slept for three or four hours, and then rose and with the most elaborate care prepared to encounter the end.

At eight in the morning the provost-marshal knocked at the outer door which communicated with her suite of apartments. It was locked and no one answered, and he went back in some trepidation lest the fears might prove true which had been entertained the preceding evening. On his returning with the sheriff, however, a few minutes later, the door was open, and they were confronted with the tall majestic figure of Mary Stuart standing before them in splendour. The plain gray dress had been exchanged for a robe of black satin; her jacket was of black satin also, looped and slashed and trimmed with velvet. Her false hair was arranged studiously with a coif, and over her head and falling down over her back was a white veil of delicate lawn. A crucifix of gold hung from her neck. In her hand she held a crucifix of ivory, and a number of jewelled paternosters [18] was attached to her girdle. Led by two of Paulet's gentlemen, the sheriff walking before her, she passed to the chamber of presence in which she had been tried, where Shrewsbury, Kent, Paulet, Drury,[19] and others were waiting to receive her. Andrew Melville, Sir Robert's [20] brother, who had been master of her household, was kneeling in tears. 'Melville,' she said, 'you should rather rejoice than weep that the end of my troubles is come. Tell my friends I die a true Catholic. Commend me to my son. Tell him I have done nothing to prejudice his kingdom of Scotland, and so, good Melville, farewell.' She kissed him, and turning asked for her chaplain Du Preau. He was not present. There had been a fear of some religious melodrama which it was thought well to avoid. Her ladies, who

12. William Cecil, Baron Burghley (1520–98), powerful and wily statesman of the day, had organized a secret-police system to detect plots against Queen Elizabeth; he was largely responsible for the execution of Mary Stuart.

13. The Earl of Leicester (1532?–88), one of Elizabeth's favorites, had been proposed by the Queen as a possible husband for Mary Stuart.

14. Sir Francis Walsingham (1530?–90), great Elizabethan statesman, organized his own secret service to discover Spanish and Jesuit plots against England; he secured the conviction and execution of Mary Stuart.

15. Henry Hastings, 3rd Earl of Huntingdon (1535–95) had been associated with Lord Shrewsbury in the custody of Mary Stuart (1569–70).

16. Sir Amyas Paulet (or Poulet) (1536?–88) puritanical keeper of Mary Stuart in 1585; he had custody of her at Tutbury, Chartley, and Fotheringay; he assisted in the inspection of her correspondence and, as a commissioner on her trial, vehemently urged her execution.

17. Sir William Wade (or Waad) (1546–1623) was clerk of the Privy Council; he had seized Mary's papers in 1586.

18. *paternoster*: the Lord's Prayer.

19. Sir Drue Drury (1531?–1617), courtier, joint-warder of Mary Stuart.

20. Robert Melville, 1st Baron Melville (1527–1621), privy councilor, had entreated Queen Elizabeth for Mary Stuart's life.

had attempted to follow her, had been kept back also. She could not afford to leave the account of her death to be reported by enemies and Puritans, and she required assistance for the scene which she meditated. Missing them she asked the reason of their absence, and said she wished them to see her die. Kent said he feared they might scream or faint, or attempt perhaps to dip their handkerchiefs in her blood. She undertook that they should be quiet and obedient. 'The queen,' she said, 'would never deny her so slight a request'; and when Kent still hesitated, she added with tears, 'You know I am cousin to your queen, of the blood of Henry VII, a married Queen of France, and anointed Queen of Scotland.'[21]

It was impossible to refuse. She was allowed to take six of her own people with her, and select them herself. She chose her physician Burgoyne, Andrew Melville, the apothecary Gorion, and her surgeon, with two ladies, Elizabeth Kennedy and Curle's young wife Barbara Mowbray, whose child she had baptized.

Allons donc, she then said — 'Let us go,' and passing out attended by the earls, and leaning on the arm of an officer of the guard, she descended the great staircase to the hall. The news had spread far through the country. Thousands of people were collected outside the walls. About three hundred knights and gentlemen of the county had been admitted to witness the execution. The tables and forms had been removed, and a great wood fire was blazing in the chimney. At the upper end of the hall, above the fireplace, but near it, stood the scaffold, twelve feet square and two feet and a half high. It was covered with black cloth; a low rail ran round it covered with black cloth also, and the sheriff's guard of halberdiers[22] were ranged on the floor below on the four sides to keep off the crowd. On the scaffold was the block, black like the rest; a square black cushion was placed behind it, and behind the cushion a black chair; on the right were two other chairs for the earls. The ax leaned against the rail, and two masked figures stood like mutes on either side at the back. The Queen of Scots as she swept in seemed as if coming to take a part in some solemn pageant. Not a muscle of her face could be seen to quiver; she ascended the scaffold with absolute composure, looked round her smiling, and sat down. Shrewsbury and Kent followed and took their places, the sheriff stood at her left hand, and Beale[23] then mounted a platform and read the warrant aloud.

In all the assembly Mary Stuart appeared the person least interested in the words which were consigning her to death.

'Madam,' said Lord Shrewsbury to her, when the reading was ended, 'you hear what we are commanded to do.'

'You will do your duty,' she answered, and rose as if to kneel and pray.

The Dean of Peterborough, Dr. Fletcher,[24] approached the rail. 'Madam,' he began, with a low obeisance, 'the queen's most excellent majesty;' 'madam, the queen's most excellent majesty' — thrice he commenced his sentence, wanting words to pursue it. When he repeated the words a fourth time, she cut him short.

'Mr. Dean,' she said, 'I am a Catholic, and must die a Catholic. It is useless to attempt to move me, and your prayers will avail me but little.'

'Change your opinion, madam,' he

21. Mary was the great-granddaughter of Henry VII; she became Queen of France on her marriage to Francis II (1558); her grandmother was a sister of Henry VIII, the father of Elizabeth.

halberdiers: guards carrying halberds, or long-handled weapons with pointed steel heads.

23. Robert Beale (1541–1601) had been Walsingham's secretary, and had been engaged in negotiating with Mary between 1581 and 1584.

24. Richard Fletcher (d.1596) became Dean of Peterborough in 1583; he had drawn up an account of Mary's examination at Fotheringay.

cried, his tongue being loosed at last; 'repent of your sins, settle your faith in Christ, by him to be saved.'

'Trouble not yourself further, Mr. Dean,' she answered; 'I am settled in my own faith, for which I mean to shed my blood.'

'I am sorry, madam,' said Shrewsbury, 'to see you so addicted to popery.'

'That image of Christ you hold there,' said Kent, 'will not profit you if he be not engraved in your heart.'

She did not reply, and turning her back on Fletcher, knelt for her own devotions.

He had been evidently instructed to impair the Catholic complexion of the scene, and the Queen of Scots was determined that he should not succeed. When she knelt he commenced an extempore prayer in which the assembly joined. As his voice sounded out in the hall she raised her own, reciting with powerful deep-chested tones the penitential psalms in Latin, introducing English sentences at intervals that the audience might know what she was saying, and praying with especial distinctness for her Holy Father the Pope.

From time to time, with conspicuous vehemence, she struck the crucifix against her bosom, and then, as the dean gave up the struggle, leaving her Latin, she prayed in English wholly, still clear and loud. She prayed for the Church which she had been ready to betray, for her son whom she had disinherited, for the queen whom she had endeavoured to murder. She prayed God to avert his wrath from England, that England which she had sent a last message to Philip to beseech him to invade.[25] She forgave her enemies, whom she had invited Philip not to forget, and then, praying to the saints to intercede for her with Christ, and kissing the crucifix and crossing her own breast, 'Even as thy arms, O Jesus,' she cried, 'were spread upon the cross, so receive me into thy mercy and forgive my sins.'

With these words she rose; the black mutes stepped forward, and in the usual form begged her forgiveness.

'I forgive you,' she said, 'for now I hope you shall end all my troubles.' They offered their help in arranging her dress. 'Truly, my lords,' she said with a smile to the earls, 'I never had such grooms waiting on me before.' Her ladies were allowed to come up upon the scaffold to assist her; for the work to be done was considerable, and had been prepared with no common thought.

She laid her crucifix on her chair. The chief executioner took it as a perquisite, but was ordered instantly to lay it down. The lawn veil was lifted carefully off, not to disturb the hair, and was hung upon the rail. The black robe was next removed. Below it was a petticoat of crimson velvet. The black jacket followed, and under the jacket was a body of crimson satin. One of her ladies handed her a pair of crimson sleeves, with which she hastily covered her arms; and thus she stood on the black scaffold with the black figures all around her, blood-red from head to foot.

Her reasons for adopting so extraordinary a costume must be left to conjecture. It is only certain that it must have been carefully studied, and that the pictorial effect must have been appalling.

The women, whose firmness had hitherto borne the trial, began now to give way, spasmodic sobs bursting from them which they could not check. *Ne criez vous*, she said, *j'ay promis pour vous*.[26] Struggling bravely, they crossed their breasts again and again, she crossing them in turn and bidding them pray for her. Then she knelt on the cushion. Barbara Mowbray bound her eyes with a handkerchief. *Adieu*, she said, smiling for the last time and waving her hand to them, *Adieu, au revoir*. They stepped back from off the

25. Mary had proposed to both the pope and Philip II, of (Catholic) Spain, a conquest of England, and had superintended the details of a projected invasion under the direction of the Duke of Guise.

26. 'Do not weep; I have promised for you.'

scaffold and left her alone. On her knees she repeated the psalm, *In te, Domine, confido*, 'In Thee, O Lord, have I put my trust.' Her shoulders being exposed, two scars became visible, one on either side, and the earls being now a little behind her, Kent pointed to them with his white wand and looked inquiringly at his companion. Shrewsbury whispered that they were the remains of two abscesses from which she had suffered while living with him at Sheffield.

When the psalm was finished she felt for the block, and laying down her head muttered: *In manus, Domine tuas, commendo animam meam.*[27] The hard wood seemed to hurt her, for she placed her hands under her neck. The executioners gently removed them, lest they should deaden the blow, and then one of them holding her slightly, the other raised the ax and struck. The scene had been too trying even for the practised headsman of the Tower. His arm wandered. The blow fell on the knot of the handkerchief, and scarcely broke the skin. She neither spoke nor moved. He struck again, this time effectively. The head hung by a shred of skin, which he divided without withdrawing the ax; and at once a metamorphosis was witnessed, strange as was ever wrought by wand of fabled enchanter. The coif fell off and the false plaits. The laboured illusion vanished. The lady who had knelt before the block was in the maturity of grace and loveliness. The executioner, when he raised the head, as usual, to show it to the crowd, exposed the withered features of a grizzled, wrinkled old woman.

'So perish all enemies of the queen,' said the Dean of Peterborough. A loud Amen rose over the hall. 'Such end,' said the Earl of Kent, rising and standing over the body, 'to the queen's and the Gospel's enemies.'

Orders had been given that everything which she had worn should be immediately destroyed, that no relics should be carried off to work imaginary miracles. Sentinels stood at the doors who allowed no one to pass out without permission; and after the first pause, the earls still keeping their places, the body was stripped. It then appeared that a favourite lapdog had followed its mistress unperceived, and was concealed under her clothes; when discovered it gave a short cry, and seated itself between the head and the neck, from which the blood was still flowing. It was carried away and carefully washed, and then beads, Paternoster, handkerchief -- each particle of dress which the blood had touched, with the cloth on the block and on the scaffold, was burned in the hall fire in the presence of the crowd. The scaffold itself was next removed: a brief account of the execution was drawn up, with which Henry Talbot, Lord Shrewsbury's son, was sent to London, and then everyone was dismissed. Silence settled down on Fotheringay, and the last scene of the life of Mary Stuart, in which tragedy and melodrama were so strangely intermingled, was over. . . .

27. 'Into thy hands, O Lord, I commend my spirit.' (*Cf. Luke*, xxiii,46.)

William Makepeace Thackeray
1811–1863

THE FOUR GEORGES

George the Third

We have to glance over sixty years [1] in as many minutes. To read the mere catalogue of characters who figured during that long period would occupy our allotted time, and we should have all text and no sermon. England has to undergo the revolt of the American colonies; to submit to defeat and separation; to shake under the volcano of the French Revolution; to grapple and fight for the life with her gigantic enemy Napoleon; to gasp and rally after that tremendous struggle. The old society, with its courtly splendours, has to pass away; generations of statesmen to rise and disappear; Pitt to follow Chatham to the tomb; the memory of Rodney and Wolfe to be superseded by Nelson's and Wellington's glory; the old poets who unite us to Queen Anne's time to sink into their graves; Johnson to die, and Scott and Byron to arise; Garrick to delight the world with his dazzling dramatic genius, and Kean to leap on the stage and take possession of the astonished theatre. Steam has to be invented; kings to be beheaded, banished, deposed, restored. Napoleon is to be but an episode, and George III. is to be alive through all these varied changes, to accompany his people through all these revolutions of thought, government, society; to survive out of the old world into ours.

When I first saw England, she was in mourning for the young Princess Charlotte,[2] the hope of the empire. I came from India as a child, and our ship touched at an island on the way home, where my black servant took me a long walk over rocks and hills until we reached a garden, where we saw a man walking. 'That is he,' said the black man: 'that is Bonaparte! He eats three sheep every day, and all the little children he can lay hands on!' There were people in the British dominions besides that poor Calcutta servingman, with an equal horror of the Corsican ogre.

With the same childish attendant, I remember peeping through the colonnade at Carlton House, and seeing the abode of the great Prince Regent.[3] I can see yet the guards pacing before the gates of the place. The place! What place? The palace exists no more than the palace of Nebuchadnezzar. It is but a name now. Where be the sentries who used to salute as the Royal chariots drove in and out? The chariots, with the kings inside, have driven to the realms of Pluto; the tall Guards have marched into darkness, and the echoes of their drums are rolling in Hades. Where the palace once stood, a hundred little children are paddling up and down the steps to Saint James's Park. A score of grave gentlemen are taking their tea at the 'Athenæum Club'; as many grisly warriors are garrisoning the 'United Service Club,' opposite. Pall Mall [4] is the great social Exchange of London now — the mart of news, of politics, of scandal, of rumour — the English Forum, so to speak, where men discuss the last despatch from the Crimea, the last speech of Lord Derby, the next move of

1. The reign of George III, 1760–1820.
2. Daughter of the Prince of Wales (afterward George IV). She lived 1796–1817. The island referred to in the next sentence is St. Helena.
3. The Prince of Wales, later George IV, was made Regent in 1811, after George III was declared mentally deranged.
4. Street in London.

Lord John.[5] And, now and then, to a few antiquarians whose thoughts are with the past rather than with the present, it is a memorial of old times and old people, and Pall Mall is our Palmyra.[6] Look! About this spot Tom of Ten Thousand was killed by Königsmarck's gang. In that great red house Gainsborough lived, and Culloden Cumberland, George III.'s uncle. Yonder is Sarah Marlborough's palace, just as it stood when that termagant occupied it.[7] At 25, Walter Scott used to live; at the house, now No. 79, and occupied by the society for the Propagation of the Gospel in Foreign Parts, resided Mistress Eleanor Gwynn, comedian.[8] How often has Queen Caroline's chair issued from under yonder arch! All the men of the Georges have passed up and down the street. It has seen Walpole's chariot and Chatham's sedan; and Fox, Gibbon, Sheridan, on their way to Brooks's; and stately William Pitt stalking on the arm of Dundas; and Hanger and Tom Sheridan reeling out of Raggett's; and Byron limping into Wattier's; and Swift striding out of Bury Street; and Mr. Addison and Dick Steele, both perhaps a little the better for liquor; and the Prince of Wales and the Duke of York clattering over the pavement; and Johnson counting the posts along the streets, after dawdling before Dodsley's window; and Horry Walpole hobbling into his carriage, with a gimcrack just bought at Christie's; and George Selwyn sauntering into White's.[9]

In the published letters to George Selwyn we get a mass of correspondence by no means so brilliant and witty as Walpole's, or so bitter and bright as Hervey's,[10] but as interesting, and even more descriptive of the time, because the letters are the work of many hands. You hear more voices speaking, as it were, and more natural than Horace's dandified treble, and Sporus's[11] malignant whisper. As one reads the Selwyn letters — as one looks at Reynolds's[12] noble pictures illustrative of those magnificent times and voluptuous people — one almost hears the voice of the dead past; the laughter and the chorus; the toast called over the brimming cups; the shout at the race-course or the gaming-table; the merry joke frankly spoken to the laughing fine lady. How

5. The Crimea, peninsula in south European Russia, site of war between England and Russia in 1856. The fourteenth Earl of Derby (1799–1869) and Lord John Russell (1792–1878) were prominent statesmen.

6. Ruined city in Palestine, destroyed by the Emperor Aurelian, A.D. 273; it had been much investigated by archeologists.

7. Thomas Gainsborough (1727–88), painter; William Augustus, Duke of Cumberland (1721–65), military commander, third son of George II; Sarah Churchill, Duchess of Marlborough (1660–1744).

8. 1856. [Thackeray's note.] Eleanor Gwyn (1650–87) actress and mistress of Charles II. Caroline, queen of George II, lived 1683–1737. The four Georges reigned 1714–1830.

9. Robert Walpole (1676–1745), Earl of Orford, statesman; William Pitt (1708–78), first Earl of Chatham, statesman; Charles James Fox (1749–1806), statesman; Edward Gibbon (1737–94), historian; Richard Brinsley Sheridan (1751–1816), dramatist and parliamentary orator; William Pitt (1759–1806), statesman, second son of the first Earl of Chatham; Henry Dundas (1742–1811), first Viscount Melville, statesman; George Hanger (1751?–1824), fourth Baron Coleraine, eccentric; Thomas Sheridan (1719–88), actor, author, lecturer on elocution; Robert Dodsley (1703–64), poet, dramatist, bookseller; Horace Walpole (1717–97), fourth Earl of Orford, author; George Augustus Selwyn (1719–91), wit, politician. Brooks's, Raggett's, Wattier's, and White's were fashionable 'clubs,' for gambling. Christie's was a famous auction-shop for art objects.

10. *Cf. George Selwyn and His Contemporaries*, ed. John H. Jesse, 4 vols., first publ. 1843. The letters of Horace Walpole, ed. J.Wright, had appeared in 6 vols., 1840; Walpole's *Memoirs of the Reign of King George the Third*, ed. Le Marchant, 4 vols., 1845. John, Baron Hervey (1696–1743), writer and politician, lord privy seal in 1740; his *Memoirs of the Reign of George the Second . . .*, ed. J.W. Croker, appeared in 2 vols., 1848.

11. 'Horace' refers to Horace Walpole; 'Sporus' to Lord Hervey — *cf.* Pope's 'Epistle to Dr. Arbuthnot,' ll.305ff.

12. Sir Joshua Reynolds (1723–92).

fine those ladies were, those ladies who heard and spoke such coarse jokes; how grand those gentlemen!

I fancy that peculiar product of the past, the fine gentleman, has almost vanished off the face of the earth, and is disappearing like the beaver or the Red Indian. We can't have fine gentlemen any more, because we can't have the society in which they lived. The people will not obey: the parasites will not be as obsequious as formerly: children do not go down on their knees to beg their parents' blessing: chaplains do not say grace and retire before the pudding: servants do not say 'your honour' and 'your worship' at every moment: tradesmen do not stand hat in hand as the gentleman passes: authors do not wait for hours in gentlemen's anterooms with a fulsome dedication, for which they hope to get five guineas from his Lordship. In the days when there were fine gentlemen, Mr. Secretary Pitt's under-secretaries did not dare to sit down before him; but Mr. Pitt, in his turn, went down on his gouty knees to George II.; and when George III. spoke a few kind words to him, Lord Chatham burst into tears of reverential joy and gratitude: so awful was the idea of the monarch, and so great the distinctions of rank. Fancy Lord John Russell or Lord Palmerston on their knees whilst the Sovereign was reading a despatch, or beginning to cry because Prince Albert said something civil![13]

At the accession of George III., the patricians were yet at the height of their good fortune. Society recognised their superiority, which they themselves pretty calmly took for granted. They inherited not only titles and estates, and seats in the House of Peers, but seats in the House of Commons. There were a multitude of Government places, and not merely these, but bribes of actual £500 notes, which members of the House took not much shame in receiving. Fox went into Parliament at twenty: Pitt when just of age: his father when not much older. It was the good time for patricians. Small blame to them if they took and enjoyed, and overenjoyed, the prizes of politics, the pleasures of social life.

In these letters to Selwyn, we are made acquainted with a whole society of these defunct fine gentlemen: and can watch with a curious interest a life which the novel-writers of that time, I think, have scarce touched upon. To Smollett, to Fielding even, a lord was a lord: a gorgeous being with a blue ribbon, a coroneted chair, and an immense star on his bosom, to whom commoners paid reverence. Richardson,[14] a man of humbler birth than either of the above two, owned that he was ignorant regarding the manners of the aristocracy, and besought Mrs. Donnellan, a lady who had lived in the great world, to examine a volume of Sir Charles Grandison, and point out any errors which she might see in this particular. Mrs. Donnellan found so many faults, that Richardson changed colour; shut up the book; and muttered that it were best to throw it in the fire. Here, in Selwyn, we have the real original men and women of fashion of the early time of George III. We can follow them to the new club at Almack's:[15] we can travel over Europe with them: we can accompany them not only to the public places, but to their country-houses and private society. Here is a whole company of them; wits and prodigals; some persevering in their bad ways; some repentant, but relapsing; beautiful ladies, parasites, humble chaplains, led captains. Those fair creatures whom we love in Reynolds's portraits, and who still

13. Henry John Temple (1784–1865), third Viscount Palmerston, statesman. Albert (1819–61), Prince-Consort of England, husband of Queen Victoria.

14. Samuel Richardson (1689–1761) was the son of a London carpenter in hardwood. His 6-vol. novel, *Sir Charles Grandison*, appeared in 1753.

15. Almack's Club, opened in 1764, primarily for gambling for high stakes. Dancing and card-playing took place, as well as roulette, etc.

look out on us from his canvases with their sweet calm faces and gracious smiles — those fine gentlemen who did us the honour to govern us; who inherited their boroughs; took their ease in their patent places; and slipped Lord North's [16] bribes so elegantly under their ruffles — we make acquaintance with a hundred of these fine folks, hear their talk and laughter, read of their loves, quarrels, intrigues, debts, duels, divorces; can fancy them alive if we read the book long enough. We can attend at Duke Hamilton's wedding, and behold him marry his bride with the curtain-ring: we can peep into her poor sister's death-bed: we can see Charles Fox cursing over the cards, or March [17] bawling out the odds at Newmarket: we can imagine Burgoyne tripping off from St. James's Street to conquer the Americans, and slinking back into the club somewhat crestfallen after his beating; [18] we can see the young King dressing himself for the drawing-room and asking ten thousand questions regarding all the gentlemen: we can have high life or low, the struggle at the Opera to behold the Violetta or the Zamperini — the Macaronis and fine ladies in their chairs trooping to the masquerade or Madame Cornelys's — the crowd at Drury Lane to look at the body of Miss Ray, whom Parson Hackman has just pistolled — or we can peep into Newgate, where poor Mr. Rice the forger is waiting his fate and his supper.[19] 'You need not be particular about the sauce for his fowl,' says one turnkey to another: 'for you know he is to be hanged in the morning.' 'Yes,' replies the second janitor, 'but the chaplain sups with him, and he is a terrible fellow for melted butter.'

Selwyn has a chaplain and parasite, one Doctor Warner, than whom Plautus, or Ben Jonson, or Hogarth, never painted a better character.[20] In letter after letter he adds fresh strokes to the portrait of himself, and completes a portrait not a little curious to look at now that the man has passed away; all the foul pleasures and gambols in which he revelled, played out; all the rouged faces into which he leered, worms and skulls; all the fine gentlemen whose shoe-buckles he kissed, laid in their coffins. This worthy clergyman takes care to tell us that he does not believe in his religion, though, thank Heaven, he is not so great a rogue as a lawyer. He goes on Mr. Selwyn's errands, any errands, and is proud, he says, to be that gentleman's proveditor. He waits upon the Duke of Queensberry — old Q. — and exchanges pretty stories with that aristocrat.[21] He comes home 'after a hard day's christening,' as he says, and writes to his patron before sitting down to whist and partridges for supper. He revels in the thoughts of ox-cheek and burgundy — he

16. Frederick North (1732–92), second Earl of Guilford, financier and statesman.

17. Lord March was later the Duke of Queensberry — see note 21, below. Horse racing was famous at Newmarket. For Duke Hamilton's strange marriage to Elizabeth Gunning, famous Irish beauty, and for the last illness of her celebrated sister Maria, Lady Coventry, see *George Selwyn . . .*, ed. Jesse, I,162–75.

18. John Burgoyne (1722–92), well known as a man of pleasure in London, and a lively dramatist, became lieutenant-general and was defeated by the Americans under Gen. Gates, at Saratoga, New York.

19. Violetta and the Zamparini were popular dancers, and the latter, an opera star, became mistress of the Earl of March; fashionably dressed gay young men were called Macaronis; taxicabs of that day were sedan-chairs, carried by porters; a Mrs. Cornely held fashionable assemblies in Soho Square; Hackman, supposedly in a fit of jealousy, shot the beautiful Miss Ray, mistress of the Earl of Sandwich; Newgate was the great prison. *Cf. George Selwyn . . .*, ed. Jesse, I,360, *et passim*.

20. Dr. John Warner (1736–1800), clergyman, of whom an account is given in *George Selwyn . . .*, ed. Jesse, III,306–07. William Hogarth (1697–1764), English caricaturist and engraver.

21. William Douglas (1724–1810), third Earl of March and fourth Duke of Queensberry. Without regard for public opinion, he indulged himself in all forms of pleasure, as the Selwyn letters bear testimony.

is a boisterous, uproarious parasite, licks his master's shoes with explosions of laughter and cunning smack and gusto, and likes the taste of that blacking as much as the best claret in old Q.'s cellar. He has Rabelais and Horace [22] at his greasy fingers' ends. He is inexpressibly mean, curiously jolly: kindly and good-natured in secret — a tender-hearted knave, not a venomous lickspittle. Jesse says,[23] that at his chapel in Long Acre, 'he attained a considerable popularity by the pleasing, manly, and eloquent style of his delivery.' Was infidelity endemic, and corruption in the air? Around a young King, himself of the most exemplary life and undoubted piety, lived a Court society as dissolute as our country ever knew. George II.'s bad morals bore their fruit in George III.'s early years; as I believe that a knowledge of that good man's example, his moderation, his frugal simplicity, and God-fearing life, tended infinitely to improve the morals of the country and purify the whole nation.

After Warner, the most interesting of Selwyn's correspondents is the Earl of Carlisle, grandfather of the amiable nobleman at present [24] Viceroy in Ireland. The grandfather, too, was Irish Viceroy, having previously been treasurer of the King's household; and, in 1778, the principal Commissioner for treating, consulting, and agreeing upon the means of quieting the divisions subsisting in His Majesty's colonies, plantations, and possessions in North America. You may read his Lordship's manifestoes in the *Royal New York Gazette*. He returned to England, having by no means quieted the colonies; and speedily afterwards the *Royal New York Gazette* somehow ceased to be published.

This good, clever, kind, highly-bred Lord Carlisle was one of the English fine gentlemen who was well-nigh ruined by the awful debauchery and extravagance which prevailed in the great English society of those days. Its dissoluteness was awful: it had swarmed over Europe after the Peace; [25] it had danced, and raced, and gambled in all the Courts. It had made its bow at Versailles; it had run its horses on the plain of Sablons, near Paris, and created the Anglomania there: it had exported vast quantities of pictures and marbles from Rome and Florence: it had ruined itself by building great galleries and palaces for the reception of the statues and pictures: it had brought over singing-women and dancing-women from all the operas of Europe, on whom my Lords lavished their thousands, whilst they left their honest wives and honest children languishing in the lonely deserted splendours of the castle and park at home.

Besides the great London society of those days, there was another unacknowledged world, extravagant beyond measure, tearing about in the pursuit of pleasure; dancing, gambling, drinking, singing; meeting the real society in the public places (at Ranelaghs, Vauxhalls, and Ridottos,[26] about which our old novelists talk so constantly), and outvying the real leaders of fashion in luxury, and splendour, and beauty. For instance, when the

22. The works of Rabelais (1490?–1553) and Horace (65–8 B.C.) have much of vulgarity, immorality, and satire.

23. See reference in note 20, above.

24. 1856. [Thackeray's note.] The grandfather was Frederick Howard (1748–1825), fifth Earl of Carlisle.

25. In 1748 the Treaty of Aix-la-Chapelle, ending the War of the Austrian Succession, opened a period of travel and patronage of the fine arts.

26. Ranelagh, Vauxhall, and Ridotto were large public gardens, with buildings for restaurants, and places of entertainment. *Cf.* Smollett's novel *Humphry Clinker*, etc. In 1742 Walpole described the opening of Ranelagh Gardens, at Chelsea: '. . . the Prince, Princess, Duke, much nobility, and much mob besides, were there. There is a vast amphitheatre, finely gilt, painted, and illuminated, into which everybody that loves eating, drinking, staring, or crowding, is admitted for twelve pence. . . . Twice a week there are to be ridottos, at guinea tickets, for which you are to have a supper and music. . . .' (see *George Selwyn* . . . , ed. Jesse, IV,169).

famous Miss Gunning[27] visited Paris as Lady Coventry, where she expected that her beauty would meet with the applause which had followed her and her sister through England, it appears she was put to flight by an English lady still more lovely in the eyes of the Parisians. A certain Mrs. Pitt took a box at the opera opposite the Countess; and was so much handsomer than her Ladyship, that the parterre[28] cried out that this was the real English angel, whereupon Lady Coventry quitted Paris in a huff. The poor thing died presently of consumption, accelerated, it was said, by the red and white paint with which she plastered those luckless charms of hers. (We must represent to ourselves all fashionable female Europe, at that time, as plastered with white, and raddled with red.) She left two daughters behind her, whom George Selwyn loved (he was curiously fond of little children), and who are described very drolly and pathetically in these letters, in their little nursery, where passionate little Lady Fanny, if she had not good cards, flung hers into Lady Mary's face; and where they sat conspiring how they should receive a mother-in-law whom their papa presently brought home. They got on very well with their mother-in-law, who was very kind to them; and they grew up, and they were married, and they were both divorced afterwards — poor little souls! Poor painted mother, poor society, ghastly in its pleasures, its loves, its revelries!

As for my Lord Commissioner,[29] we can afford to speak about him; because, though he was a wild and weak Commissioner at one time, though he hurt his estate, though he gambled and lost ten thousand pounds at a sitting — 'five times more,' says the unlucky gentleman, 'than I ever lost before'; though he swore he never would touch a card again; and yet, strange to say, went back to the table and lost still more; yet he repented of his errors, sobered down, and became a worthy peer and a good country gentleman, and returned to the good wife and the good children whom he had always loved with the best part of his heart. He had married at one-and-twenty. He found himself, in the midst of a dissolute society, at the head of a great fortune. Forced into luxury, and obliged to be a great lord and a great idler, he yielded to some temptations, and paid for them a bitter penalty of manly remorse; from some others he fled wisely, and ended by conquering them nobly. But he always had the good wife and children in his mind, and they saved him. 'I am very glad you did not come to me the morning I left London,' he writes to G. Selwyn, as he is embarking for America. 'I can only say, I never knew till that moment of parting, what grief was.' There is no parting now, where they are. The faithful wife, the kind generous gentleman, have left a noble race behind them: an inheritor of his name and titles, who is beloved as widely as he is known; a man most kind, accomplished, gentle, friendly, and pure; and female descendants occupying high stations and embellishing great names; some renowned for beauty, and all for spotless lives, and pious matronly virtues.

Another of Selwyn's correspondents is the Earl of March, afterwards Duke of Queensberry, whose life lasted into this century; and who certainly as earl or duke, young man or greybeard, was not an ornament to any possible society. The legends about old Q. are awful. In Selwyn, in Wraxall,[30] and contemporary chronicles, the observer of human nature may follow him, drinking, gambling, intriguing to the end of his career; when the wrinkled, palsied, toothless old Don Juan died, as wicked and unrepentant as he had been

27. For Maria Gunning, see note 17, above.

28. *Parterre*: the audience on the ground, or main floor of the theater.

29. The Earl of Carlisle. For the quotations see *George Selwyn . . .*, ed. Jesse, III,136,276.

30. Sir N. William Wraxall, *Historical Memoirs of My Own Time*, first published in 1815.

at the hottest season of youth and passion. There is a house in Piccadilly, where they used to show a certain low window at which old Q. sat to his very last days, ogling through his senile glasses the women as they passed by.

There must have been a great deal of good about this lazy sleepy George Selwyn, which, no doubt, is set to his present credit. 'Your friendship,' writes Carlisle to him,[31] 'is so different from anything I have ever met with or seen in the world, that when I recollect the extraordinary proofs of your kindness, it seems to me like a dream.' 'I have lost my oldest friend and acquaintance, G. Selwyn,' writes Walpole to Miss Berry: 'I really loved him, not only for his infinite wit, but for a thousand good qualities.'[32] I am glad, for my part, that such a lover of cakes and ale[33] should have had a thousand good qualities — that he should have been friendly, generous, warm-hearted, trustworthy. 'I rise at six,' writes Carlisle to him,[34] from Spa (a great resort of fashionable people in our ancestors' days), 'play at cricket till dinner, and dance in the evening, till I can scarcely crawl to bed at eleven. There is a life for you! You get up at nine; play with Raton your dog till twelve, in your dressing-gown; then creep down to "White's"; are five hours at table;[35] sleep till supper-time; and then make two wretches carry you in a sedan-chair, with three pints of claret in you, three miles for a shilling.' Occasionally, instead of sleeping at 'White's,' George went down and snoozed in the House of Commons by the side of Lord North. He represented Gloucester for many years, and had a borough of his own, Ludgershall, for which, when he was too lazy to contest Gloucester, he sat himself. 'I have given directions for the election of Ludgershall to be of Lord Melbourne and myself,' he writes to the Premier,[36] whose friend he was, and who was himself as sleepy, as witty, and as good-natured as George.

If, in looking at the lives of princes, courtiers, men of rank and fashion, we must perforce depict them as idle, profligate, and criminal, we must make allowances for the rich men's failings, and recollect that we, too, were very likely indolent and voluptuous, had we no motive for work, a mortal's natural taste for pleasure and the daily temptation of a large income. What could a great peer, with a great castle and park, and a great fortune, do but be splendid and idle? In these letters of Lord Carlisle's from which I have been quoting, there is many a just complaint made by the kind-hearted young nobleman of the state which he is obliged to keep; the magnificence in which he must live; the idleness to which his position as a peer of England bound him. Better for him had he been a lawyer at his desk, or a clerk in his office; — a thousand times better chance for happiness, education, employment, security from temptation. A few years since the profession of arms was the only one which our nobles could follow. The Church, the Bar, medicine, literature, the arts, commerce, were below them. It is to the middle class we must look for the safety of England: the working educated men, away from Lord North's bribery in the senate; the good clergy not corrupted into parasites by hopes of preferment; the tradesmen rising into manly opulence; the painters pursuing their gentle calling; the men of letters in their quiet studies: these are the men whom we love and like to read of in the last age. How small the grandees and the men of pleasure look beside them! how contemptible the stories of the George III. Court squabbles are beside the recorded talk of dear old John-

35. At the gaming table.
36. See *George Selwyn* . . . , ed. Jesse, IV,363. The Premier was Lord North.

son![37] What is the grandest entertainment at Windsor, compared to a night at the club over its modest cups, with Percy and Langton, and Goldsmith and poor Bozzy at the table![38] I declare I think, of all the polite men of that age, Joshua Reynolds was the finest gentleman. And they were good, as well as witty and wise, those dear old friends of the past. Their minds were not debauched by excess, or effeminate with luxury. They toiled their noble day's labour: they rested, and took their kindly pleasure: they cheered their holiday meetings with generous wit and hearty interchange of thought: they were no prudes, but no blush need follow their conversation: they were merry, but no riot came out of their cups. Ah! I would have liked a night at the 'Turk's Head,' even though bad news had arrived from the colonies, and Doctor Johnson was growling against the rebels; to have sat with him and Goldy; and to have heard Burke, the finest talker in the world; and to have had Garrick flashing in with a story from his theatre! — I like, I say, to think of that society; and not merely how pleasant and how wise, but how *good* they were. I think it was on going home one night from the club that Edmund Burke — his noble soul full of great thoughts, be sure, for they never left him; his heart full of gentleness — was accosted by a poor wandering woman, to whom he spoke words of kindness; and moved by the tears of this Magdalen,[39] perhaps having caused them by the good words he spoke to her, he took her home to the house of his wife and children, and never left her until he had found the means of restoring her to honesty and labour. O you fine gentlemen! you Marches, and Selwyns, and Chesterfields,[40] how small you look by the side of these great men! Good-natured Carlisle plays at cricket all day, and dances in the evening 'till he can scarcely crawl,' gaily contrasting his superior virtue with George Selwyn's, 'carried to bed by two wretches at midnight with three pints of claret in him.' Do you remember the verses — the sacred verses — which Johnson wrote on the death of his humble friend Levett?[41]

'Well tried through many a varying year,
See Levett to the grave descend;
Officious, innocent, sincere,
Of every friendless name the friend.

In misery's darkest cavern known,
His useful care was ever nigh,
Where hopeless anguish poured the groan,
And lonely want retired to die.

No summons mocked by chill delay,
No petty gain disdained by pride,
The modest wants of every day
The toil of every day supplied.

His virtues walked their narrow round,
Nor made a pause, nor left a void;
And sure the Eternal Master found
His single talent well employed.'

Whose name looks the brightest now, that of Queensberry the wealthy duke, or Selwyn the wit, or Levett the poor physician?

I hold old Johnson (and shall we not pardon James Boswell some errors for embalming him for us?) to be the great supporter of the British monarchy and Church during the last age — better than whole benches of bishops, better than Pitts, Norths, and the great Burke himself.

37. Boswell recorded a vast amount of conversation in his *Life of Dr. Samuel Johnson*, 1791, here referred to.

38. A royal palace has long stood at Windsor, across the Thames from Eton College for boys. Windsor Castle and Hampton Court, at Kew, were favorite residences of George III.

39. 'Penitent prostitute.' Mary Magdalene, traditionally the repentant sinner forgiven by Christ (see *Luke*, vii,37).

40. Philip Dormer Stanhope (1694–1773), fourth Earl of Chesterfield, noted for fashionableness and not too strict morality. *Cf.* his *Letters to His Natural Son*, 1774.

41. Robert Levett, humble physician among the poor in London, had Johnson's high admiration, and for many years lived in one of Johnson's rooms. See Boswell, *Life of Johnson*, Oxf. Stand. Ed., I,162; II,436–37.

Johnson had the ear of the nation: his immense authority reconciled it to loyalty, and shamed it out of irreligion. When George III. talked with him, and the people heard the great author's good opinion of the Sovereign,[42] whole generations rallied to the King. Johnson was revered as a sort of oracle; and the oracle declared for Church and King. What a humanity the old man had! He was a kindly partaker of all honest pleasures: a fierce foe to all sin, but a gentle enemy to all sinners. 'What, boys, are you for a frolic?' he cries, when Topham Beauclerc comes and wakes him up at midnight: 'I'm with you.' And away he goes, tumbles on his homely old clothes, and trundles through Covent Garden with the young fellows.[43] When he used to frequent Garrick's theatre, and had 'the liberty of the scenes,' he says, 'All the actresses knew me, and dropped me a curtsey as they passed to the stage.' That would make a pretty picture: it is a pretty picture, in my mind, of youth, folly, gaiety, tenderly surveyed by wisdom's merciful pure eyes.[44]

George III. and his Queen lived in a very unpretending but elegant-looking house, on the site of the hideous pile under which his granddaughter[45] at present reposes. The King's mother inhabited Carlton House, which contemporary prints represent with a perfect paradise of a garden, with trim lawns, green arcades, and vistas of classic statues. She admired these in company with my Lord Bute, who had a fine classic taste, and sometimes counsel took and sometimes tea[46] in the pleasant green arbours along with that polite nobleman. Bute was hated with a rage of which there have been few examples in English history. He was the butt for everybody's abuse; for Wilkes's devilish mischief; for Churchill's slashing satire; for the hooting of the mob that roasted the boot, his emblem, in a thousand bonfires; that hated him because he was a favourite and a Scotchman, calling him 'Mortimer,' 'Lothario,' I know not what names, and accusing his Royal mistress of all sorts of crimes — the grave, lean, demure elderly woman, who, I dare say, was quite as good as her neighbours.[47] Chatham lent the aid of his great malice to influence the popular sentiment against her. He assailed, in the House of Lords, 'the secret influence, more mighty than the throne itself, which betrayed and clogged every administration.' The most furious pamphlets echoed the cry. 'Impeach the King's mother,' was scribbled over every wall at the Court end of the town, Walpole tells us. What had she done? What had Frederick, Prince of Wales, George's father, done, that he was so loathed by George II. and never mentioned by George III.? Let us not seek for stones to batter that forgotten grave, but acquiesce in the contemporary epitaph over him: —

'Here lies Fred,
Who was alive, and is dead.
Had it been his father,
I had much rather.
Had it been his brother,
Still better than another.
Had it been his sister,
No one would have missed her.
Had it been the whole generation,
Still better for the nation.
But since 'tis only Fred,
Who was alive, and is dead,
There's no more to be said.'

42. See Boswell, *op.cit.*, I,362.
43. See *ibid.*, I,166.
44. See *ibid.*, I,134; II,338.
45. Queen Victoria.
46. *Cf.* Alexander Pope, *The Rape of the Lock*, III, 8. John Stuart (1713–92), third Earl of Bute, statesman.
47. John Wilkes (1727–97), politician and satirical writer; Charles Churchill (1731–64), poet and satirist. In Rowe's drama, *The Fair Penitent*, 1703, Lothario is a gay and unscrupulous rake; Roger Mortimer (1287?–1330), Earl of March, paramour of Isabella, Queen of England, was twice convicted of treason and pardoned by the king, and conspired with the queen against the king, who was murdered.

The widow with eight children round her prudently reconciled herself with the King, and won the old man's confidence and good-will. A shrewd, hard, domineering, narrow-minded woman, she educated her children according to her lights, and spoke of the eldest as a dull good boy: [48] she kept him very close: she held the tightest rein over him: she had curious prejudices and bigotries. His uncle, the burly Cumberland, taking down a sabre once, and drawing it to amuse the child — the boy started back and turned pale. The Prince felt a generous shock: 'What must they have told him about me?' he asked.

His mother's bigotry and hatred he inherited with the courageous obstinacy of his own race; [49] but he was a firm believer where his fathers had been freethinkers, and a true and fond supporter of the Church, of which he was the titular defender. Like other dull men, the King was all his life suspicious of superior people. He did not like Fox; he did not like Reynolds; he did not like Nelson, Chatham, Burke; he was testy at the idea of all innovations, and suspicious of all innovators. He loved mediocrities; Benjamin West was his favourite painter; Beattie was his poet.[50] The King lamented, not without pathos, in his after life, that his education had been neglected. He was a dull lad brought up by narrow-minded people. The cleverest tutors in the world could have done little probably to expand that small intellect, though they might have improved his taste, and taught his perceptions some generosity.

But he admired as well as he could. There is little doubt that a letter, written by the little Princess Charlotte of Mecklenburg-Strelitz, — a letter containing the most feeble commonplaces about the horrors of war, and the most trivial remarks on the blessings of peace — struck the young monarch greatly, and decided him upon selecting the young princess as the sharer of his throne. I pass over the stories of his juvenile loves — of Hannah Lightfoot, the Quakeress, to whom they say he was actually married (though I don't know who has ever seen the register) — of lovely black-haired Sarah Lennox, about whose beauty Walpole has written in raptures,[51] and who used to lie in wait for the young Prince, and make hay at him on the lawn of Holland House. He sighed and he longed, but he rode away from her. Her picture still hangs in Holland House, a magnificent masterpiece of Reynolds, a canvas worthy of Titian. She looks from the castle window, holding a bird in her hand, at black-eyed young Charles Fox, her nephew. The Royal bird flew away from lovely Sarah. She had to figure as bridesmaid at her little Mecklenburg rival's wedding, and died in our own time a quiet old lady, who had become the mother of the heroic Napiers.[52]

They say the little Princess who had written the fine letter about the horrors of war — a beautiful letter without a single blot, for which she was to be rewarded, like the heroine of the old spelling-book story — was at play one day with some of her young companions in the gardens of Strelitz, and that the young ladies' conversation was, strange to say, about husbands. 'Who will take such a poor little princess as me?' Charlotte said to her friend, Ida von Bulow, and at that very moment the postman's horn sounded, and Ida said, 'Princess! there is the sweetheart.' As she said, so it actually turned out. The

48. He became George III.

49. George I was a member of the royal house of Hanover, in northern Germany, and of the purest Teutonic race.

50. Benjamin West (1738–1820); James Beattie (1735–1803), author of *The Minstrel* (1771–74), etc.

51. Sarah Lennox (1745–1826), daughter of the Duke of Richmond, great-granddaughter of Charles II; she married Col. George Napier. Walpole is quoted in *George Selwyn . . .*, ed. Jesse, II,173.

52. Sir Charles James Napier (1782–1853), Sir George Thomas Napier (1784–1855), and Sir William F. P. Napier (1785–1860) all became generals in the British Army.

postman brought letters from the splendid young King of all England, who said, 'Princess! because you have written such a beautiful letter, which does credit to your head and heart, come and be Queen of Great Britain, France, and Ireland, and the true wife of your most obedient servant, George!' So she jumped for joy; and went upstairs and packed all her little trunks; and set off straightway for her kingdom in a beautiful yacht, with a harpsichord on board for her to play upon, and around her a beautiful fleet, all covered with flags and streamers: and the distinguished Madame Auerbach complimented her with an ode, a translation of which may be read in the *Gentleman's Magazine* to the present day: —

'Her gallant navy through the main
Now cleaves its liquid way.
There to their queen a chosen train
Of nymphs due reverence pay.

Europa, when conveyed by Jove
To Crete's distinguished shore,
Greater attention scarce could prove,
Or be respected more.'

They met, and they were married, and for years they led the happiest simplest lives sure ever led by married couple. It is said the King winced when he first saw his homely little bride; but, however that may be, he was a true and faithful husband to her, as she was a faithful and loving wife. They had the simplest pleasures — the very mildest and simplest — little country dances, to which a dozen couples were invited, and where the honest King would stand up and dance for three hours at a time to one tune; after which delicious excitement they would go to bed without any supper (the Court people grumbling sadly at that absence of supper), and get up quite early the next morning, and perhaps the next night have another dance; or the Queen would play on the spinet — she played pretty well, Haydn [53] said — or the King would read to her a paper out of the *Spectator*, or perhaps one of Ogden's sermons.[54] O Arcadia! what a life it must have been! There used to be Sunday drawing-rooms [55] at Court; but the young King stopped these, as he stopped all that godless gambling whereof we have made mention. Not that George was averse to any innocent pleasures, or pleasures which he thought innocent. He was a patron of the arts, after his fashion; kind and gracious to the artists whom he favoured, and respectful to their calling. He wanted once to establish an Order of Minerva for literary and scientific characters; the knights were to take rank after the Knights of the Bath, and to sport a straw-coloured ribbon and a star of sixteen points. But there was such a row among the *literati* as to the persons who should be appointed, that the plan was given up, and Minerva and her star never came down amongst us.

He objected to painting St. Paul's,[56] as Popish practice; accordingly, the most clumsy heathen sculptures decorate that edifice at present. It is fortunate that the paintings, too, were spared, for painting and drawing were woefully unsound at the close of the last century; and it is far better for our eyes to contemplate whitewash (when we turn them away from the clergyman) than to look at Opie's pitchy canvases, or Fuseli's livid monsters.[57]

53. Joseph Haydn (1732–1809), Austrian musician and composer. *Spinet*: a small early forerunner of the piano.
54. Samuel Ogden, D.D. (1716–78), published various sermons, 1758–77; 2 vols. of *Sermons* appeared posthumously, in 1780, and went through five editions by 1814. The *Spectator* (1711–12) with its essays by Addison, Steele, and others, was popular throughout the century. Arcadia, originally the name for a secluded, peaceful section of ancient Greece, is used for any happy state of existence.
55. Receptions.
56. To decorating the interior of St. Paul's Cathedral, in London, with paintings.
57. John Opie (1761–1807), English historical painter; John Henry Fuseli (1742?–1825), Swiss painter in England.

And yet there is one day in the year — a day when old George loved with all his heart to attend it — when I think St. Paul's presents the noblest sight in the whole world: when five thousand charity children with cheeks like nosegays, and sweet fresh voices, sing the hymn which makes every heart thrill with praise and happiness. I have seen a hundred grand sights in the world — coronations, Parisian splendours, Crystal Palace openings,[58] Pope's chapels with their processions of long-tailed cardinals and quavering choirs of fat soprani — but think in all Christendom there is no such sight as Charity Children's Day. *Non Angli, sed angeli.*[59] As one looks at that beautiful multitude of innocents: as the first note strikes: indeed one may almost fancy that cherubs are singing.

Of Church music the King was always very fond, showing skill in it both as a critic and as a performer. Many stories, mirthful and affecting, are told of his behaviour at the concerts which he ordered. When he was blind and ill he chose the music for the Ancient Concerts once, and the music and words which he selected were from 'Samson Agonistes,'[60] and all had reference to his blindness, his captivity, and his affliction. He would beat time with his music-roll as they sang the anthem in the Chapel Royal. If the page below was talkative or inattentive, down would come the music-roll on young scapegrace's powdered head. The theatre was always his delight. His bishops and clergy used to attend it, thinking it no shame to appear where that good man was seen. He is said not to have cared for Shakespeare or tragedy much; farces and pantomimes were his joy: and especially when clown swallowed a carrot or a string of sausages, he would laugh so outrageously that the lovely Princess by his side would have to say, 'My gracious monarch, do compose yourself.' But he continued to laugh, and at the very smallest farces, as long as his poor wits were left him.

There is something to me exceedingly touching in that simple early life of the King's. As long as his mother lived — a dozen years after his marriage with the little spinet-player — he was a great shy awkward boy under the tutelage of that hard parent. She must have been a clever, domineering, cruel woman. She kept her household lonely and in gloom, mistrusting almost all people who came about her children. Seeing the young Duke of Gloucester silent and unhappy once, she sharply asked him the cause of his silence. 'I am thinking,' said the poor child. 'Thinking, sir! and of what?' 'I am thinking if ever I have a son I will not make him so unhappy as you make me.' The other sons were all wild, except George. Dutifully every evening George and Charlotte paid their visit to the King's mother at Carlton House. She had a throat-complaint, of which she died; but to the last persisted in driving about the streets to show she was alive. The night before her death the resolute woman talked with her son and daughter-in-law as usual, went to bed, and was found dead there in the morning. 'George, be a king!' were the words which she was for ever croaking in the ears of her son: and a king the simple, stubborn, affectionate, bigoted man tried to be.

He did his best; he worked according to his lights; what virtue he knew, he tried to practise; what knowledge he could master, he strove to acquire. He was for ever drawing maps, for example, and learned geography with no small care and industry. He knew all about the family histories and genealogies of his gentry, and

58. The Crystal Palace was built in Hyde Park, London, of glass and iron, with wood floors, for the great world's fair of 1851.

59. 'Not Angles, but angels.' Pope Gregory the Great is said to have spoken this as he saw the British captives for sale at Rome, about A.D. 600.

60. Oratorio by Handel, German composer (1685–1759).

pretty histories he must have known. He knew the whole *Army List*; and all the facings, and the exact number of the buttons, and all the tags and laces, and the cut of all the cocked-hats, pigtails, and gaiters in his army. He knew the *personnel* of the Universities; what doctors were inclined to Socinianism,[61] and who were sound Churchmen; he knew the etiquettes of his own and his grandfather's Courts to a nicety, and the smallest particulars regarding the routine of ministers, secretaries, embassies, audiences; the humblest page in the anteroom, or the meanest helper in the stables or kitchen. These parts of the Royal business he was capable of learning, and he learned. But, as one thinks of an office, almost divine, performed by any mortal man — of any single being pretending to control the thoughts, to direct the faith, to order the implicit obedience of brother millions, to compel them into war at his offence or quarrel; to command, 'in this way you shall trade, in this way you shall think; these neighbours shall be your allies whom you shall help, these others your enemies whom you shall slay at my orders; in this way you shall worship God;' — who can wonder that, when such a man as George took such an office on himself, punishment and humiliation should fall upon people and chief?

Yet there is something grand about his courage. The battle of the King with his aristocracy remains yet to be told by the historian who shall view the reign of George more justly than the trumpery panegyrists who wrote immediately after his decease. It was he, with the people to back him, who made the war with America; it was he and the people who refused justice to the Roman Catholics; and on both questions he beat the patricians. He bribed: he bullied: he darkly dissembled on occasion: he exercised a slippery perseverance, and a vindictive resolution, which one almost admires as one thinks his character over. His courage was never to be beat. It trampled North under foot: it bent the stiff neck of the younger Pitt: even his illness never conquered that indomitable spirit. As soon as his brain was clear, it resumed the scheme, only laid aside when his reason left him: as soon as his hands were out of the strait-waistcoat,[62] they took up the pen and the plan which had engaged him up to the moment of his malady. I believe it is by persons believing themselves in the right that nine-tenths of the tyranny of this world has been perpetrated. Arguing on that convenient premiss, the Dey of Algiers would cut off twenty heads of a morning; Father Dominic would burn a score of Jews in the presence of the Most Catholic King, and the Archbishops of Toledo and Salamanca sing Amen. Protestants were roasted, Jesuits hung and quartered at Smithfield, and witches burned at Salem, and all by worthy people, who believed they had the best authority for their actions.[63]

And so, with respect to old George, even Americans, whom he hated and who conquered him, may give him credit for having quite honest reasons for oppressing them. Appended to Lord Brougham's biographical sketch of Lord North[64] are some autograph notes of the King, which let us most curiously into the state of his mind. 'The times certainly require,' says he, 'the concurrence of all who wish to prevent anarchy. I have no wish but the prosperity of my own dominions, therefore I must look upon all who would not heartily assist me as bad men, as well as bad subjects.' That is the way he reasoned. 'I wish nothing but good, therefore every

man who does not agree with me is a traitor and a scoundrel.' Remember that he believed himself anointed by a Divine commission; remember that he was a man of slow parts and imperfect education; that the same awful will of Heaven which placed a crown upon his head, which made him tender to his family, pure in his life, courageous and honest, made him dull of comprehension, obstinate of will, and at many times deprived him of reason. He was the father of his people; his rebellious children must be flogged into obedience. He was the defender of the Protestant faith; he would rather lay that stout head upon the block than that Catholics should have a share in the government of England. And you do not suppose that there are not honest bigots enough in all countries to back kings in this kind of statesmanship? Without doubt the American war was popular in England. In 1775 the address in favour of coercing the colonies was carried by 304 to 105 in the Commons, by 104 to 29 in the House of Lords. Popular? — so was the Revocation of the Edict of Nantes popular in France: so was the Massacre of Saint Bartholomew: so was the Inquisition exceedingly popular in Spain.[65]

Wars and revolutions are, however, the politician's province. The great events of this long reign, the statesmen and orators who illustrated it, I do not pretend to make the subjects of an hour's light talk. Let us return to our humbler duty of Court gossip. Yonder sits our little Queen, surrounded by many stout sons and fair daughters whom she bore to her faithful George. The history of the daughters, as little Miss Burney[66] has painted them to us, is delightful. They were handsome — she calls them beautiful; they were most kind, loving, and ladylike; they were gracious to every person, high and low, who served them. They had many little accomplishments of their own. This one drew: that one played the piano: they all worked most prodigiously, and fitted up whole suites of rooms — pretty smiling Penelopes — with their busy little needles. As we picture to ourselves the society of eighty years ago, we must imagine hundreds of thousands of groups of women in great high caps, tight bodies and full skirts, needling away, whilst one of the number, or perhaps a favoured gentleman in a pigtail, reads out a novel to the company. Peep into the cottage at Olney, for example, and see there Mrs. Unwin and Lady Hesketh, those high-bred ladies, those sweet pious women, and William Cowper, that delicate wit, that trembling pietist, that refined gentleman, absolutely reading out 'Jonathan Wild' to the ladies![67] What a change in our manners, in our amusements, since then!

King George's household was a model of an English gentleman's household. It was early; it was kindly; it was charitable; it was frugal; it was orderly; it must have been stupid to a degree which I shudder now to contemplate. No wonder all the Princes ran away from the lap of that dreary domestic virtue. It always rose, rode, dined at stated intervals. Day after day was the same. At the same hour at night the King kissed his daughters' jolly cheeks; the Princesses kissed their mother's hand; and Madame Thielke brought the

65. The Edict of Nantes (1598), revoked in 1685, had granted religious toleration to the French Protestants, or Huguenots; a great massacre of these had occurred on St. Bartholomew's Day, August 24, in 1572. *Inquisition*: the ecclesiastical authority dealing with detection and punishment of heresy against Roman Catholicism; it was especially ferocious in Spain, beginning with the year 1478.

66. Frances Burney (1752–1840), later Madame D'Arblay, was a maid of honor to the Queen, and an intimate in the royal household, 1786–91. Thackeray draws from her published *Diary and Letters*.

67. William Cowper (1731–1800), poet and hymn-writer. He lived at Olney, in Buckinghamshire. Mrs. Unwin was his close friend and companion, Lady Hesketh his cousin. Henry Fielding's picaresque story of the highwayman Jonathan Wild appeared in 1743.

Royal night-cap. At the same hour the equerries and women in waiting had their little dinner, and cackled over their tea. The King had his backgammon or his evening concert; the equerries yawned themselves to death in the anteroom; or the King and his family walked on Windsor slopes, the King holding his darling little Princess Amelia by the hand; and the people crowded round quite good-naturedly; and the Eton boys thrust their chubby cheeks under the crowd's elbows; and the concert over, the King never failed to take his enormous cocked-hat off, and salute his band, and say, 'Thank you, gentlemen.'

A quieter household, a more prosaic life than this of Kew or Windsor, cannot be imagined. Rain or shine, the King rode every day for hours; poked his red face into hundreds of cottages round about, and showed that shovel hat and Windsor uniform to farmers, to pig-boys, to old women making apple-dumplings; to all sorts of people, gentle and simple, about whom countless stories are told. Nothing can be more undignified than these stories. When Haroun Alraschid visits a subject incog., the latter is sure to be very much the better for the caliph's magnificence.[68] Old George showed no such Royal splendour. He used to give a guinea sometimes: sometimes feel in his pockets and find he had no money: often ask a man a hundred questions: about the number of his family, about his oats and beans, about the rent he paid for his house, and ride on. On one occasion he played the part of King Alfred, and turned a piece of meat with a string at a cottager's house. When the old woman came home, she found a paper with an enclosure of money, and a note written by the Royal pencil: 'Five guineas to buy a jack.'[69] It was not splendid, but it was kind and worthy of Farmer George. One day, when the King and Queen were walking together, they met a little boy — they were always fond of children, the good folk — and patted the little white head. 'Whose little boy are you?' asks the Windsor uniform. 'I am the King's beefeater's little boy,' replied the child. On which the King said, 'Then kneel down, and kiss the Queen's hand.' But the innocent offspring of the beefeater declined this treat. 'No,' said he, 'I won't kneel, for if I do, I shall spoil my new breeches.' The thrifty King ought to have hugged him and knighted him on the spot. George's admirers wrote pages and pages of such stories about him. One morning, before anybody else was up, the King walked about Gloucester town; pushed over Molly the housemaid with her pail, who was scrubbing the doorsteps; ran upstairs and woke all the equerries in their bedrooms; and then trotted down to the bridge, where, by this time, a dozen of louts were assembled. 'What! is this Gloucester New Bridge?' asked our gracious monarch; and the people answered him, 'Yes, your Majesty.' 'Why, then, my boys,' said he, 'let us have a huzzay!' After giving them which intellectual gratification, he went home to breakfast. Our fathers read these simple tales with fond pleasure; laughed at these very small jokes; liked the old man who poked his nose into every cottage; who lived on plain wholesome roast and boiled; who despised your French kickshaws;[70] who was a true hearty old English gentleman. You may have seen Gilray's famous print of him — in the old wig, in the stout old hideous Windsor uniform — as the King of Brobdingnag, peering at a little Gulliver, whom he holds up in his hand, whilst in the other he has an opera-glass, through which he surveys the pigmy?[71] Our fathers chose to set up George as the type

68. Caliph of Bagdad in the Arabian Nights stories. *Incog.*: without one's identity being known.

69. *Jack*: a mechanical contrivance for holding and turning meat to be roasted before a fire.

70. Fancy dishes.

of a great king; and the little Gulliver was the great Napoleon. We prided ourselves on our prejudices; we blustered and bragged with absurd vainglory; we dealt to our enemy a monstrous injustice of contempt and scorn; we fought him with all weapons, mean as well as heroic. There was no lie we would not believe; no charge of crime which our furious prejudice would not credit. I thought at one time of making a collection of the lies which the French had written against us, and we had published against them during the war: it would be a strange memorial of popular falsehood.

Their Majesties were very sociable potentates: and the Court Chronicler tells of numerous visits which they paid to their subjects, gentle and simple: with whom they dined; at whose great country-houses they stopped; or at whose poorer lodgings they affably partook of tea and bread-and-butter. Some of the great folk spent enormous sums in entertaining their sovereigns. As marks of special favour, the King and Queen sometimes stood as sponsors for the children of the nobility. We find Lady Salisbury was so honoured in the year 1786; and in the year 1802, Lady Chesterfield. The *Court News* relates how her Ladyship received their Majesties on a state bed 'dressed with white satin and a profusion of lace: the counterpane of white satin embroidered with gold, and the bed of crimson satin lined with white.' The child was first brought by the nurse to the Marchioness of Bath, who presided as chief nurse. Then the Marchioness handed baby to the Queen. Then the Queen handed the little darling to the Bishop of Norwich, the officiating clergyman; and, the cermony over, a cup of caudle [72] was presented by the Earl to His Majesty on one knee, on a large gold waiter, placed on a crimson velvet cushion. Misfortunes would occur in these interesting genuflectory ceremonies of Royal worship. Bubb Doddington, Lord Melcombe,[73] a very fat, puffy man, in a most gorgeous Court-suit, had to kneel, Cumberland says, and was so fat and so tight that he could not get up again. 'Kneel, sir, kneel!' cried my Lord-in-waiting to a country mayor who had to read an address, but who went on with his compliment standing. 'Kneel, sir, kneel!' cries my Lord, in dreadful alarm. 'I can't!' says the Mayor, turning round; 'don't you see I have got a wooden leg?' In the capital 'Burney Diary and Letters,' the home and Court life of good old King George and good old Queen Charlotte are presented at portentous length. The King rose every morning at six: and had two hours to himself. He thought it effeminate to have a carpet in his bedroom. Shortly before eight, the Queen and the Royal family were always ready for him, and they proceeded to the King's chapel in the castle. There were no fires in the passages: the chapel was scarcely alight; princesses, governesses, equerries grumbled and caught cold: but cold or hot, it was their duty to go: and, wet or dry, light or dark, the stout old George was always in his place to say amen to the chaplain.

The Queen's character is represented in 'Burney' at full length. She was a sensible, most decorous woman; a very grand lady on State occasions, simple enough in ordinary life; well read as times went, and giving shrewd opinions about books; stingy, but not unjust; not generally unkind to her dependants, but invincible in her notions of etiquette, and quite angry if her people suffered ill-health in her service. She gave Miss Burney a shabby pittance, and led the poor young woman a life which well-nigh killed her. She never thought but that she was doing Burney the greatest favour, in taking her from freedom, fame, and competence, and killing her off with languor in that dreary Court. It was not dreary to her. Had she

72. A kind of warm drink, for sick persons.

73. George Bubb Doddington, Lord Melcombe (1691–1762), politician of no great consequence, patron of various literary men.

been servant instead of mistress, her spirit would never have broken down: she never would have put a pin out of place, or been a moment from her duty. *She* was not weak, and she could not pardon those who were. She was perfectly correct in life, and she hated poor sinners with a rancour such as virtue sometimes has. She must have had awful private trials of her own: not merely with her children, but with her husband, in those long days about which nobody will ever know anything now; when he was not quite insane; when his incessant tongue was babbling folly, rage, persecution; and she had to smile and be respectful and attentive under this intolerable ennui. The Queen bore all her duties stoutly, as she expected others to bear them. At a State christening, the lady who held the infant was tired and looked unwell, and the Princess of Wales asked permission for her to sit down. 'Let her stand,' said the Queen, flicking the snuff off her sleeve. *She* would have stood, the resolute old woman, if she had had to hold the child till his beard was grown. 'I am seventy years of age,' the Queen said, facing a mob of ruffians who stopped her sedan: 'I have been fifty years Queen of England, and I never was insulted before.' Fearless, rigid, unforgiving little Queen! I don't wonder that her sons revolted from her.

Of all the figures in that large family group which surrounds George and his Queen, the prettiest, I think, is the father's darling, the Princess Amelia, pathetic for her beauty, her sweetness, her early death, and for the extreme passionate tenderness with which her father loved her. This was his favourite amongst all the children: of his sons, he loved the Duke of York best. Burney tells a sad story of the poor old man at Weymouth, and how eager he was to have this darling son with him. The King's house was not big enough to hold the Prince; and his father had a portable house erected close to his own, and at huge pains, so that his dear Frederick should be near him. He clung on his arm all the time of his visit: talked to no one else; had talked of no one else for some time before. The Prince, so long expected, stayed but a single night. He had business in London the next day, he said. The dulness of the old King's Court stupefied York and the other big sons of George III. They scared equerries and ladies, frightened the modest little circle, with their coarse spirits and loud talk. Of little comfort, indeed, were the King's sons to the King.

But the pretty Amelia was his darling; and the little maiden, prattling and smiling in the fond arms of that old father, is a sweet image to look on. There is a family picture in 'Burney,' which a man must be very hard-hearted not to like. She describes an after-dinner walk of the Royal family at Windsor.[74]

'It was really a mighty pretty procession,' she says. 'The little Princess, just turned of three years old, in a robe-coat covered with fine muslin, a dressed close cap, white gloves, and fan, walked on alone and first, highly delighted with the parade, and turning from side to side to see everybody as she passed; for all the terracers stand up against the walls, to make a clear passage for the Royal family the moment they come in sight. Then followed the King and Queen, no less delighted with the joy of their little darling. The Princess Royal leaning on Lady Elizabeth Waldegrave, the Princess Augusta holding by the Duchess of Ancaster, the Princess Elizabeth led by Lady Charlotte Bertie, followed.'

'Office here takes place of rank,' says Burney, — to explain how it was that Lady Elizabeth Waldegrave, as lady of the bedchamber, walked before a duchess.

'General Bude, and the Duke of Montague, and Major Price as equerry, brought up the rear of the procession.'

74. *Diary and Letters of Madame D'Arblay*, ed. Charlotte Barrett, 1893, II,114–15.

One sees it: the band playing its old music, the sun shining on the happy loyal crowd, and lighting the ancient battlements, the rich elms, and purple landscape, and bright greensward; the Royal standard drooping from the great tower yonder; as old George passes, followed by his race, preceded by the charming infant, who caresses the crowd with her innocent smiles.

'On sight of Mrs. Delany, the King instantly stopped to speak to her; the Queen, of course, and the little Princess, and all the rest, stood still. They talked a good while with the sweet old lady, during which time the King once or twice addressed himself to me. I caught the Queen's eye, and saw in it a little surprise, but by no means any displeasure, to see me of the party. The little Princess went up to Mrs. Delany, of whom she is very fond, and behaved like a little angel to her. She then, with a look of inquiry and recollection, came behind Mrs. Delany to look at me. "I am afraid," said I, in a whisper, and stooping down, "your Royal Highness does not remember me?" Her answer was an arch little smile, and a nearer approach, with her lips pouted out to kiss me.'

The Princess wrote verses herself, and there are some pretty plaintive lines attributed to her, which are more touching than better poetry: —

'Unthinking, idle, wild, and young,
I laughed, and danced, and talked, and sung:
And, proud of health, of freedom vain,
Dreamed not of sorrow, care, or pain;
Concluding, in those hours of glee,
That all the world was made for me.

But when the hour of trial came,
When sickness shook this trembling frame,
When folly's gay pursuits were o'er,
And I could sing and dance no more,
It then occurred, how sad 'twould be,
Were this world only made for me.'

The poor soul quitted it — and ere yet she was dead the agonised father was in such a state, that the officers round about him were obliged to set watchers over him, and from November 1810 George III. ceased to reign. All the world knows the story of his malady: all history presents no sadder figure than that of the old man, blind and deprived of reason, wandering through the rooms of his palace, addressing imaginary parliaments, reviewing fancied troops, holding ghostly Courts. I have seen his picture as it was taken at this time, hanging in the apartment of his daughter, the Landgravine of Hesse Hombourg — amidst books and Windsor furniture, and a hundred fond reminiscences of her English home. The poor old father is represented in a purple gown, his snowy beard falling over his breast — the star of his famous Order still idly shining on it. He was not only sightless: he became utterly deaf. All light, all reason, all sound of human voices, all the pleasures of this world of God, were taken from him. Some slight lucid moments he had; in one of which the Queen, desiring to see him, entered the room, and found him singing a hymn, and accompanying himself at the harpsichord. When he had finished he knelt down and prayed aloud for her, and then for his family, and then for the nation, concluding with a prayer for himself, that it might please God to avert his heavy calamity from him, but if not, to give him resignation to submit. He then burst into tears, and his reason again fled.

What preacher need moralise on this story; what words save the simplest are requisite to tell it? It is too terrible for tears. The thought of such a misery smites me down in submission before the Ruler of kings and men, the Monarch Supreme over empires and republics, the inscrutable Dispenser of life, death, happiness, victory. 'O brothers,' I said to those who heard me first in America — 'O brothers! speaking the same dear mother-tongue —

O comrades! enemies no more, let us take a mournful hand together as we stand by this Royal corpse, and call a truce to battle! Low he lies, to whom the proudest used to kneel once, and who was cast lower than the poorest: dead, whom millions prayed for in vain. Driven off his throne; buffeted by rude hands; with his children in revolt; the darling of his old age killed before him untimely; our Lear hangs over her breathless lips and cries, "Cordelia, Cordelia, stay a little!"

"Vex not his ghost — oh! let him pass — he hates him
That would upon the rack of this tough world
Stretch him out longer!" [75]

Hush! Strife and Quarrel, over the solemn grave! Sound, trumpets, a mournful march! Fall, dark curtain, upon his pageant, his pride, his grief, his awful tragedy!'

75. *King Lear*, V,iii,314–16.

ROUNDABOUT PAPERS

Thorns in the Cushion

In the first of these Essays the *Cornhill Magazine* was likened to a ship sailing forth on her voyage, and the captain uttered a very sincere prayer for her prosperity.[1] The dangers of storm and rock, the vast outlay upon ship and cargo, and the certain risk of the venture, gave the chief officer a feeling of no small anxiety; for who could say from what quarter danger might arise, and how his owner's property might be imperilled? After a six months' voyage, we with very thankful hearts could acknowledge our good fortune: and, taking up the apologue in the Roundabout manner, we compose a triumphal procession in honour of the magazine, and imagined the Imperator thereof riding in a sublime car to return thanks in the Temple of Victory. Cornhill is accustomed to grandeur and greatness, and has witnessed, every ninth of November,[2] for I don't know how many centuries, a prodigious annual pageant, chariot, progress, and flourish of trumpetry; and being so very near the Mansion House, I am sure the reader will understand how the idea of pageant and procession came naturally to my mind. The imagination easily supplied a gold coach, eight cream-coloured horses of your true Pegasus breed, huzzaying multitudes, running footmen, and clanking knights in armour, a chaplain and a sword-bearer with a muff on his head, scowling out of the coach window, and a Lord Mayor all crimson, fur, gold-chain, and white ribbons solemnly occupying the place of state. A playful fancy could have carried the matter farther, could have depicted the feast in the Egyptian Hall, the Ministers, Chief Justices, and right reverend prelates taking their seats round about his Lordship, the turtle and other delicious viands, and Mr. Toole behind the central throne, bawling out to the assembled guests and dignitaries: 'My Lord So-and-so, my Lord What-d'ye-call-'im, my Lord Etcætera, the Lord Mayor pledges you all in a loving cup.' Then the noble proceedings come to an end; Lord Simper proposes the ladies; the company rises from table, and adjourns to coffee and muffins. The carriages of the nobility and guests roll back to the West. The Egyptian Hall, so bright just now, appears in a twilight glimmer, in which waiters are seen ransacking the dessert, and rescuing the spoons. His Lordship and the Lady Mayoress go into their private apartments. The robes are doffed, the collar and white ribbons are removed. The Mayor becomes a man, and is pretty surely

1. In the Roundabout Paper 'On a Lazy Idle Boy.'

2. Lord Mayor's Day in London; elected September 29, the Lord Mayor is sworn into office on November 8, and presented next day to the Lord Chief Justice.

in a fluster about the speeches which he has just uttered; remembering too well now, wretched creature, the principal points which he didn't make when he rose to speak. He goes to bed to headache, to care, to repentance, and, I dare say, to a dose of something which his body-physician has prescribed for him. And there are ever so many men in the City who fancy that man happy!

Now, suppose that all through that 9th of November his Lordship has had a racking rheumatism, or a toothache, let us say, during all dinner-time — through which he has been obliged to grin and mumble his poor old speeches. Is he enviable? Would you like to change with his Lordship? Suppose that bumper which his golden footman brings him, instead i'fackins of ypocras or canary, contains some abomination of senna?[3] Away! Remove the golden goblet, insidious cup-bearer! You now begin to perceive the gloomy moral which I am about to draw.

Last month we sang the song of glorification, and rode in the chariot of triumph. It was all very well. It was right to huzza, and be thankful, and cry, Bravo, our side! and besides, you know, there was the enjoyment of thinking how pleased Brown, and Jones, and Robinson (our dear friends) would be at this announcement of success. But now that the performance is over, my good sir, just step into my private room, and see that it is not all pleasure — this winning of successes. Cast your eye over those newspapers, over those letters. See what the critics say of your harmless jokes, neat little trim sentences, and pet waggeries! Why, you are no better than an idiot; you are drivelling; your powers have left you; this always overrated writer is rapidly sinking to ——, &c.

This is not pleasant; but neither is this the point. It may be the critic is right, and the author wrong. It may be that the archbishop's sermon is not so fine as some of those discourses twenty years ago which used to delight the faithful in Granada. Or it may be (pleasing thought!) that the critic is a dullard, and does not understand what he is writing about. Everybody who has been to an exhibition has heard visitors discoursing about the pictures before their faces. One says, 'This is very well'; another says, 'This is stuff and rubbish'; another cries, 'Bravo! this is a masterpiece': and each has a right to his opinion. For example, one of the pictures I admired most at the Royal Academy is by a gentleman on whom I never, to my knowledge, set eyes. This picture is No. 346, 'Moses,' by Mr. S. Solomon. I thought it had a great intention, I thought it finely drawn and composed. It nobly represented, to my mind, the dark children of the Egyptian bondage, and suggested the touching story.[4] My newspaper says: 'Two ludicrously ugly women, looking at a dingy baby, do not form a pleasing object'; and so good-bye, Mr. Solomon. Are not most of our babies served so in life? and doesn't Mrs. Robinson consider Mr. Brown's cherub an ugly squalling little brat? So cheer up, Mr. S. S. It may be the critic who discoursed on your baby is a bad judge of babies. When Pharaoh's kind daughter found the child, and cherished and loved it, and took it home, and found a nurse for it, too, I dare say, there were grim, brickdust-coloured chamberlains, or some of the tough, old, meagre, yellow princesses at Court, who never had children themselves, who cried out, 'Faugh! the horrid little squalling wretch!' and knew he would never come to good; and said, 'Didn't I tell you so?' when he assaulted the Egyptian.

Never mind then, Mr. S. Solomon, I say, because a critic pooh-poohs your work of art — your Moses — your child — your foundling. Why, did not a wiseacre in *Blackwood's Magazine* lately fall foul of

3. 'Instead indeed of fine wine, contains some abominable extract of senna leaves, a cathartic.'

4. See *Exodus*, ii, for the story of the infant Moses and Pharaoh's daughter.

'Tom Jones'? O hypercritic! So, to be sure, did good old Mr. Richardson,[5] who could write novels himself; but you, and I, and Mr. Gibbon, my dear sir, agree in giving our respect, and wonder, and admiration to the brave old master.

In these last words I am supposing the respected reader to be endowed with a sense of humour, which he may or may not possess; indeed, don't we know many an honest man who can no more comprehend a joke than he can turn a tune? But I take for granted, my dear sir, that you are brimming over with fun — you mayn't make jokes, but you could if you would — you know you could: and in your quiet way you enjoy them extremely. Now many people neither make them, nor understand them when made, nor like them when understood, and are suspicious, testy, and angry with jokers. Have you ever watched an elderly male or female — an elderly 'party,' so to speak, who begins to find out that some young wag of the company is 'chaffing' him? Have you ever tried the sarcastic or Socratic method with a child? Little simple he or she, in the innocence of the simple heart, plays some silly freak, or makes some absurd remark, which you turn to ridicule. The little creature dimly perceives that you are making fun of him, writhes, blushes, grows uneasy, bursts into tears, — upon my word it is not fair to try the weapon of ridicule upon that innocent young victim. The awful objurgatory practice he is accustomed to. Point out his fault, and lay bare the dire consequences thereof: expose it roundly, and give him a proper, solemn, moral whipping — but do not attempt to *castigare ridendo*.[6] Do not laugh at him writhing, and cause all the other boys in the school to laugh. Remember your own young days at school, my friend — the tingling cheeks, burning ears, bursting heart, and passion of desperate tears, with which you looked up, after having performed some blunder, whilst the Doctor held you to public scorn before the class, and cracked his great clumsy jokes upon you — helpless, and a prisoner! Better the block itself, and the lictors, with their fasces of birch-twigs,[7] than the maddening torture of those jokes!

Now, with respect to jokes — and the present company of course excepted — many people, perhaps most people, are as infants. They have little sense of humour. They don't like jokes. Raillery in writing annoys and offends them. The coarseness apart, I think I have met very very few women who liked the banter of Swift and Fielding. Their simple tender natures revolt at laughter. Is the satyr always a wicked brute at heart, and are they rightly shocked at his grin, his leer, his horns, hoofs, and ears? *Fi donc, le vilain monstre*,[8] with his shrieks, and his capering crooked legs! Let him go and get a pair of well-wadded black silk stockings, and pull them over those horrid shanks; put a large gown and bands over beard and hide; and pour a dozen of lavender-water into his lawn handkerchief, and cry, and never make a joke again. It shall all be highly-distilled poesy, and perfumed sentiment, and gushing eloquence; and the foot *shan't* peep out, and a plague take it. Cover it up with the surplice. Out with your cambric,[9] dear ladies, and let us all whimper together.

Now, then, hand on heart, we declare

5. The character Tom Jones was a foundling. Henry Fielding's novel is attacked by the writer of 'Novels of Jane Austen' — see *Blackwood's*, LXXXVI (July 1859), 101. For Richardson's attack, see *The Correspondence of Samuel Richardson*, with pref. by Anna L. Barbauld, 1804,V,275.

6. 'punish by ridiculing.'

7. Boys to be punished in school bent over a block and were whipped with a bundle of birch-twigs. The lictor, in ancient Rome, was the official who carried the fasces (a bundle of rods) as a symbol of law and law enforcement.

8. 'For shame! the nasty monster!' The satyr is half man, half goat.

9. Handkerchief, made of cambric, a fine, white linen fabric.

that it is not the fire of adverse critics which afflicts or frightens the editorial bosom. They may be right; they may be rogues who have a personal spite; they may be dullards who kick and bray as their nature is to do, and prefer thistles to pineapples; they may be conscientious, acute, deeply learned, delightful judges, who see your joke in a moment, and the profound wisdom lying underneath. Wise or dull, laudatory or otherwise, we put their opinions aside. If they applaud, we are pleased: if they shake their quick pens, and fly off with a hiss, we resign their favours and put on all the fortitude we can muster. I would rather have the lowest man's good word than his bad one, to be sure; but as for coaxing a compliment, or wheedling him into good-humour, or stopping his angry mouth with a good dinner, or accepting his contributions for a certain Magazine, for fear of his barking or snapping elsewhere — *allons donc!*[10] These shall not be our acts. Bow-wow, Cerberus! Here shall be no sop for thee, unless — unless Cerberus is an uncommonly good dog, when we shall bear no malice because he flew at us from our neighbour's gate.

What, then, is the main grief you spoke of as annoying you — the toothache in the Lord Mayor's jaw, the thorn in the cushion of the editorial chair? It is there. Ah! it stings me now as I write. It comes with almost every morning's post. At night I come home, and take my letters up to bed (not daring to open them), and in the morning I find one, two, three thorns on my pillow. Three I extracted yesterday; two I found this morning. They don't sting quite so sharply as they did; but a skin is a skin, and they bite, after all, most wickedly. It is all very fine to advertise on the Magazine, 'Contributions are only to be sent to Messrs. Smith, Elder, & Co., and not to the Editor's private residence.' My dear sir, how little you know man or woman-kind, if you fancy they will take that sort of warning! How am I to know (though, to be sure, I begin to know now), as I take the letters off the tray, which of those envelopes contains a real *bonâ fide* letter and which a thorn? One of the best invitations this year I mistook for a thorn-letter, and kept it without opening. This is what I call a thorn-letter: —

'CAMBERWELL: *June* 4.

'SIR, — May I hope, may I entreat, that you will favour me by perusing the enclosed lines, and that they may be found worthy of insertion in the *Cornhill Magazine*? We have known better days, sir. I have a sick and widowed mother to maintain, and little brothers and sisters who look to me. I do my utmost as a governess to support them. I toil at night when they are at rest, and my own hand and brain are alike tired. If I could add but *a little* to our means by my pen, many of my poor invalid's wants might be supplied, and I could procure for her comforts to which she is now a stranger. Heaven knows it is not for want of *will* or for want of *energy* on my part, that she is now in ill-health, and our little household almost without bread. Do — do cast a kind glance over my poem, and if you can help us, the widow, the orphans will bless you! I remain, sir, in anxious expectancy,

'Your faithful servant,

'S.S.S.'

And enclosed is a little poem or two, and an envelope with its penny stamp — Heaven help us! — and the writer's name and address.

Now you see what I mean by a thorn. Here is the case put with true female logic. 'I am poor; I am good; I am ill; I work hard; I have a sick mother and hungry brothers and sisters dependent on me. You can help us if you will.' And then I look at the paper, with the thousandth

10. 'Let's go!' Cerberus, in classical mythology, is the watchdog at the gate of Hades; when a person died, a cake was put in his hand, to be given as a sop to Cerberus, so that the soul might enter Hades unmolested.

part of a faint hope that it may be suitable, and I find it won't do: and I knew it wouldn't do: and why is this poor lady to appeal to my pity and bring her poor little ones kneeling to my bedside, and calling for bread which I can give them if I choose? No day passes but that argument *ad misericordiam* [11] is used. Day and night that sad voice is crying out for help. Thrice it appealed to me yesterday. Twice this morning it cried to me; and I have no doubt when I go to get my hat, I shall find it with its piteous face and its pale family about it, waiting for me in the hall. One of the immense advantages which women have over our sex is, that they actually like to read these letters. Like letters? Oh mercy on us! Before I was an editor I did not like the postman much; — but now!

A very common way with these petitioners is to begin with a fine flummery about the merits and eminent genius of the person whom they are addressing. But this artifice, I state publicly, is of no avail. When I see *that* kind of herb, I know the snake within it, and fling it away before it has time to sting. Away, reptile, to the waste-paper basket, and thence to the flames!

But of these disappointed people, some take their disappointment and meekly bear it. Some hate and hold you their enemy because you could not be their friend. Some, furious and envious, say: 'Who is this man who refuses what I offer? and how dares he, the conceited coxcomb, to deny my merit?'

Sometimes my letters contain not mere thorns, but bludgeons. Here are two choice slips from that noble Irish oak which has more than once supplied alpeens for this meek and unoffending skull: —

'THEATRE ROYAL, DONNYBROOK.

'SIR, — I have just finished reading the first portion of your Tale, "Lovel the Widower," and am much surprised at the unwarrantable strictures you pass therein on the *corps de ballet*.

'I have been for more than ten years connected with the theatrical profession, and I beg to assure you that the majority of the *corps de ballet* are virtuous well-conducted girls, and, consequently, that snug cottages are not taken for them in the Regent's Park.

'I also have to inform you that theatrical managers are in the habit of speaking good English, possibly better English than authors.

'You either know nothing of the subject in question, or you assert a wilful falsehood.

'I am happy to say that the characters of the *corps de ballet*, as also those of actors and actresses, are superior to the snarlings of dyspeptic libellers, or the spiteful attacks and *brutum fulmen* [12] of ephemeral authors.

'I am, sir, your obedient servant,

'A.B.C.

'The Editor of the *Cornhill Magazine*.'

'THEATRE ROYAL, DONNYBROOK.

'SIR, — I have just read, in the *Cornhill Magazine* for January, the first portion of a Tale written by you, and entitled "Lovel the Widower."

'In the production in question you employ all your malicious spite (and you have great capabilities that way) in trying to degrade the character of the *corps de ballet*. When you imply that the majority of ballet-girls have villas taken for them in the Regent's Park, *I say you tell a deliberate falsehood*.

'Having been brought up to the stage from infancy, and, though now an actress, having been seven years principal dancer at the opera, I am competent to speak on the subject. I am only surprised that so vile a libeller as yourself should be allowed to preside at the Dramatic Fund dinner on the 22nd instant. I think it would be much better if you were to reform your

11. 'appealing to pity.'

12. 'brutal thunder.'

own life, instead of telling lies of those who are immeasurably your superiors.

'Yours in supreme disgust,

'A.D.'

The signatures of the respected writers are altered, and for the site of their Theatre Royal an adjacent place is named, which (as I may have been falsely informed) used to be famous for quarrels, thumps, and broken heads. But, I say, is this an easy chair to sit on, when you are liable to have a pair of such shillelaghs flung at it? And, prithee, what was all the quarrel about? In the little history of 'Lovel the Widower' I described, and brought to condign punishment, a certain wretch of a ballet-dancer, who lived splendidly for a while on ill-gotten gains, had an accident, and lost her beauty, and died poor, deserted, ugly, and every way odious. In the same page, other little ballet-dancers are described, wearing homely clothing, doing their duty, and carrying their humble savings to the family at home. But nothing will content my dear correspondents but to have me declare that the majority of ballet-dancers have villas in the Regent's Park, and to convict me of 'deliberate falsehood.' Suppose, for instance, I had chosen to introduce a red-haired washerwoman into a story? I might get an expostulatory letter saying, 'Sir, in stating that the majority of washerwomen are red-haired, you are a liar! and you had best not speak of ladies who are immeasurably your superiors.' Or suppose I had ventured to describe an illiterate haberdasher? One of the craft might write to me, 'Sir, in describing haberdashers as illiterate, you utter a wilful falsehood. Haberdashers use much better English than authors.' It is a mistake, to be sure. I have never said what my correspondents say I say. There is the text under their noses, but what if they choose to read it their own way? 'Hurroo, lads! Here's for a fight. There's a bald head peeping out of the hut. There's a bald head! It must be Tim Malone's.' And whack! come down both the bludgeons at once.

Ah me! we wound where we never intended to strike; we create anger where we never meant harm; and these thoughts are the thorns in our Cushion. Out of mere malignity, I suppose, there is no man who would like to make enemies. But here, in this editorial business, you can't do otherwise: and a queer, sad, strange, bitter thought it is, that must cross the mind of many a public man: 'Do what I will, be innocent or spiteful, be generous or cruel, there are A and B, and C and D, who will hate me to the end of the chapter — to the chapter's end — to the Finis of the page — when hate, and envy, and fortune, and disappointment shall be over.'

On Being Found Out

At the close (let us say) of Queen Anne's reign, when I was a boy at a private and preparatory school for young gentlemen, I remember the wiseacre of a master ordering us all, one night, to march into a little garden at the back of the house, and thence to proceed one by one into a tool- or hen-house (I was but a tender little thing just put into short clothes, and can't exactly say whether the house was for tools or hens), and in that house to put our hands into a sack which stood on a bench, a candle burning beside it. I put my hand into the sack. My hand came out quite black. I went and joined the other boys in the schoolroom; and all their hands were black too.

By reason of my tender age (and there are some critics who, I hope, will be satisfied by my acknowledging that I am a hundred and fifty-six next birthday) I could not understand what was the meaning of this night excursion — this candle, this tool-house, this bag of soot. I think we little boys were taken out of our sleep to be brought to the ordeal. We came, then, and showed our little hands to the master; washed them or not — most prob-

ably, I should say, not — and so went bewildered back to bed.

Something had been stolen in the school that day; and Mr. Wiseacre having read in a book of an ingenious method of finding out a thief by making him put his hand into a sack (which, if guilty, the rogue would shirk from doing), all we boys were subjected to the trial. Goodness knows what the lost object was, or who stole it. We all had black hands to show to the master. And the thief, whoever he was, was not Found Out that time.

I wonder if the rascal is alive — an elderly scoundrel he must be by this time; and a hoary old hypocrite, to whom an old schoolfellow presents his kindest regards — parenthetically remarking what a dreadful place that private school was: cold, chilblains, bad dinners, not enough victuals, and caning awful! — Are you alive still, I say, you nameless villain, who escaped discovery on that day of crime? I hope you have escaped often since, old sinner. Ah, what a lucky thing it is, for you and me, my man, that we are *not* found out in all our peccadilloes; and that our backs can slip away from the master and the cane!

Just consider what life would be, if every rogue was found out, and flogged *coram populo*![1] What a butchery, what an indecency, what an endless swishing of the rod! Don't cry out about my misanthropy. My good friend Mealymouth, I will trouble you to tell me, do you go to church? When there, do you say, or do you not, that you are a miserable sinner? and saying so, do you believe or disbelieve it? If you are a M.S., don't you deserve correction, and aren't you grateful if you are to be let off? I say, again, what a blessed thing it is that we are not all found out!

Just picture to yourself everybody who does wrong being found out, and punished accordingly. Fancy all the boys in all the school being whipped; and then the assistants, and then the head master (Doctor Badford let us call him). Fancy the provost-marshal being tied up, having previously superintended the correction of the whole army. After the young gentlemen have had their turn for the faulty exercises, fancy Doctor Lincolnsinn being taken up for certain faults in *his* Essay and Review. After the clergyman has cried his peccavi,[2] suppose we hoist up a Bishop, and give him a couple of dozen! (I see my Lord Bishop of Double-Gloucester sitting in a very uneasy posture on his right reverend bench.) After we have cast off the Bishop, what are we to say to the Minister who appointed him? My Lord Cinqwarden, it is painful to have to use personal correction to a boy of your age; but really . . . *Siste tandem, carnifex!*[3] The butchery is too horrible. The hand drops powerless, appalled at the quantity of birch which it must cut and brandish. I am glad we are not all found out, I say again; and protest, my dear brethren, against our having our deserts.[4]

To fancy all men found out and punished is bad enough; but imagine all women found out in the distinguished social circle in which you and I have the honour to move. Is it not a mercy that so many of these fair criminals remain unpunished and undiscovered? There is Mrs. Longbow, who is for ever practising, and who shoots poisoned arrows, too; when you meet her you don't call her liar, and charge her with the wickedness she has done, and is doing. There is Mrs. Painter, who passes for a most respectable woman, and a model in society. There is no use in saying what you really know regarding her and her goings on. There is Diana Hunter — what a little haughty prude it is; and yet *we* know stories about her which are not altogether edifying. I say it is best, for the sake of the good, that

1. 'publicly.'

2. *Peccavi*: I have sinned.

3. 'Stop now, O executioner!'

4. *Cf. Hamlet*, II,ii,554–56: '. . . use every man after his desert, and who should scape whipping?'

the bad should not all be found out. You don't want your children to know the history of that lady in the next box, who is so handsome, and whom they admire so. Ah me! what would life be if we were all found out, and punished for all our faults? Jack Ketch [5] would be in permanence; and then who would hang Jack Ketch?

They talk of murderers being pretty certainly found out.[6] Psha! I have heard an authority awfully competent vow and declare that scores and hundreds of murders are committed, and nobody is the wiser. That terrible man mentioned one or two ways of committing murder, which he maintained were quite common, and were scarcely ever found out. A man, for instance, comes home to his wife, and . . . but I pause — I know that this Magazine has a very large circulation. Hundreds and hundreds of thousands — why not say a million of people at once? — well, say a million read it. And amongst these countless readers, I might be teaching some monster how to make away with his wife without being found out, some fiend of a woman how to destroy her dear husband. I will *not* then tell this easy and simple way of murder, as communicated to me by a most respectable party in the confidence of private intercourse. Suppose some gentle reader were to try this most simple and easy receipt — it seems to me almost infallible — and come to grief in consequence, and be found out and hanged? Should I ever pardon myself for having been the means of doing injury to a single one of our esteemed subscribers? The prescription whereof I speak — that is to say whereof I *don't* speak — shall be buried in this bosom. No, I am a humane man. I am not one of your Bluebeards to go and say to my wife, 'My dear! I am going away for a few days to Brighton. Here are all the keys of the house. You may open every door and closet, except the one at the end of the oak-room opposite the fireplace, with the little bronze Shakspeare on the mantelpiece (or what not).' I don't say this to a woman — unless, to be sure, I want to get rid of her — because, after such a caution, I know she'll peep into the closet. I say nothing about the closet at all. I keep the key in my pocket, and a being whom I love, but who, as I know, has many weaknesses, out of harm's way. You toss up your head, dear angel, drub on the ground with your lovely little feet, on the table with your sweet rosy fingers, and cry, 'Oh, sneerer! You don't know the depth of woman's feeling, the lofty scorn of all deceit, the entire absence of mean curiosity in the sex, or never, never would you libel us so!' Ah, Delia! dear dear Delia! It is because I fancy I *do* know something about you (not all, mind — no, no; no man knows that) — Ah, my bride, my ringdove, my rose, my poppet — choose, in fact, whatever name you like — bulbul of my grove, fountain of my desert, sunshine of my darkling life, and joy of my dungeoned existence, it is because I *do* know a little about you that I conclude to say nothing of that private closet, and keep my key in my pocket. You take away that closet-key then, and the house-key. You lock Delia in. You keep her out of harm's way and gadding, and so she never *can* be found out.

And yet by little strange accidents and coincidences how we are being found out every day. You remember that old story of the Abbé Kakatoes, who told the company at supper one night how the first confession he ever received was — from a murderer let us say. Presently enters to supper the Marquis de Croquemitaine. 'Palsambleu, abbé!' says the brilliant Marquis, taking a pinch of snuff, 'are you here? Gentlemen and ladies! I was the Abbé's first penitent, and I made him a

5. A hangman, notorious in England, whose name has become a synonym for hangman.

6. For instance, see Chaucer's *Nun's Priest's Tale*, l.232: 'Murder will out, that see we day by day.'

confession which I promise you astonished him.'

To be sure how queerly things are found out! Here is an instance. Only the other day I was writing in these Roundabout Papers about a certain man, whom I facetiously called Baggs, and who had abused me to my friends, who of course told me. Shortly after that paper was published another friend — Sacks let us call him — scowls fiercely at me as I am sitting in perfect good-humour at the club, and passes on without speaking. A cut. A quarrel. Sacks thinks it is about him that I was writing: whereas, upon my honour and conscience, I never had him once in my mind, and was pointing my moral from quite another man. But don't you see, by this wrath of the guilty-conscienced Sacks, that he had been abusing me too? He has owned himself guilty, never having been accused. He has winced when nobody thought of hitting him. I did but put the cap out, and madly butting and chafing, behold my friend rushes to put his head into it! Never mind, Sacks, you are found out; but I bear you no malice, my man.

And yet to be found out, I know from my own experience, must be painful and odious, and cruelly mortifying to the inward vanity. Suppose I am a poltroon, let us say. With fierce moustache, loud talk, plentiful oaths, and an immense stick, I keep up nevertheless a character for courage. I swear fearfully at cabmen and women; brandish my bludgeon, and perhaps knock down a little man or two with it: brag of the images which I break at the shooting-gallery, and pass amongst my friends for a whiskery fire-eater, afraid of neither man nor dragon. Ah me! Suppose some brisk little chap steps up and gives me a caning in St. James's Street, with all the heads of my friends looking out of all the club windows. My reputation is gone. I frighten no man more. My nose is pulled by whipper-snappers, who jump up on a chair to reach it. I am found out. And in the days of my triumphs, when people were yet afraid of me, and were taken in by my swagger, I always knew that I was a lily-liver, and expected that I should be found out some day.

That certainty of being found out must haunt and depress many a bold braggadocio spirit. Let us say it is a clergyman, who can pump copious floods of tears out of his own eyes and those of his audience. He thinks to himself, 'I am but a poor swindling chattering rogue. My bills are unpaid. I have jilted several women whom I have promised to marry. I don't know whether I believe what I preach, and I know I have stolen the very sermon over which I have been snivelling. Have they found me out?' says he, as his head drops down on the cushion.

Then your writer, poet, historian, novelist, or what not? The *Beacon* says that 'Jones's work is one of the first order.' The *Lamp* declares that 'Jones's tragedy surpasses every work since the days of Him of Avon.' The *Comet* asserts that 'J.'s "Life of Goody Two-shoes" is a κτῆμα ἐς ἀεὶ,[7] a noble and enduring monument to the fame of that admirable Englishwoman,' and so forth. But then Jones knows that he has lent the critic of the *Beacon* five pounds; that his publisher has a half-share in the *Lamp*; and that the *Comet* comes repeatedly to dine with him. It is all very well. Jones is immortal until he is found out; and then down comes the extinguisher, and the immortal is dead and buried. The idea (*dies iræ!*)[8] of discovery must haunt many a man, and make him uneasy, as the trumpets are puffing in his triumph. Brown, who has a higher place than he deserves, cowers before Smith, who has found him out. What is a chorus of critics shouting 'Bravo'? — a public clapping hands and flinging garlands? Brown knows that Smith has found him out. Puff, trumpets! Wave, banners! Huzza, boys, for the immortal

7. 'possession for always.'
8. 'O Day of Wrath, O Judgment Day!'

Brown! 'This is all very well,' B. thinks (bowing the while, smiling, laying his hand to his heart); 'but there stands Smith at the window: *he* has measured me; and some day the others will find me out too.' It is a very curious sensation to sit by a man who has found you out, and who you know has found you out; or, *vice versâ*, to sit with a man whom *you* have found out. His talent? Bah! His virtue? We know a little story or two about his virtue, and he knows we know it. We are thinking over friend Robinson's antecedents, as we grin, bow, and talk; and we are both humbugs together. Robinson a good fellow, is he? You know how he behaved to Hicks? A good-natured man, is he? Pray do you remember that little story of Mrs. Robinson's black eye? How men have to work, to talk, to smile, to go to bed, and try to sleep, with this dread of being found out on their consciences! Bardolph, who has robbed a church, and Nym, who has taken a purse, go to their usual haunts, and smoke their pipes with their companions. Mr. Detective Bull's-eye appears, and says, 'Oh, Bardolph, I want you about that there pyx business!'[9] Mr. Bardolph knocks the ashes out of his pipe, puts out his hands to the little steel cuffs, and walks away quite meekly. He is found out. He must go. 'Good-bye, Doll Tear-sheet! Good-bye, Mrs. Quickly, ma'am! The other gentlemen and ladies *de la société* look on and exchange mute adieux with the departing friends. And an assured time will come when the other gentlemen and ladies will be found out too.

What a wonderful and beautiful provision of nature it has been that, for the most part, our womankind are not endowed with the faculty of finding us out! *They* don't doubt, and probe, and weigh, and take your measure. Lay down this paper, my benevolent friend and reader, go into your drawing-room now, and utter a joke ever so old, and I wager sixpence the ladies there will all begin to laugh. Go to Brown's house, and tell Mrs. Brown and the young ladies what you think of him, and see what a welcome you will get! In like manner, let him come to your house, and tell *your* good lady his candid opinion of you, and fancy how she will receive him! Would you have your wife and children know you exactly for what you are, and esteem you precisely at your worth? If so, my friend, you will live in a dreary house, and you will have but a chilly fireside. Do you suppose the people round it don't see your homely face as under a glamour, and, as it were, with a halo of love round it? You don't fancy you *are*, as you seem to them? No such thing, my man. Put away that monstrous conceit, and be thankful that *they* have not found you out.

9. *Pyx*: receptacle in which the consecrated bread is kept, in the Roman Catholic service. Thackeray is burlesquing the Bardolph robbery episode of *Henry V*, III,vi,40–120.

MODERN PAINTERS — VOLUME I

PART II. OF TRUTH

SECTION III

OF TRUTH OF SKIES

CHAPTER I

Of the Open Sky

1. IT is a strange thing how little in general people know about the sky. It is the part of creation in which nature has done more for the sake of pleasing man, more for the sole and evident purpose of talking to him and teaching him, than in any other of her works, and it is just the part in which we least attend to her. There are not many of her other works in which some more material or essential purpose than the mere pleasing of man is not answered by every part of their organization; but every essential purpose of the sky might, so far as we know, be answered, if once in three days, or thereabouts, a great, ugly, black rain-cloud were brought up over the blue, and everything well watered, and so all left blue again till next time, with perhaps a film of morning and evening mist for dew. And instead of this, there is not a moment of any day of our lives, when nature is not producing scene after scene, picture after picture, glory after glory, and working still upon such exquisite and constant principles of the most perfect beauty, that it is quite certain it is all done for us, and intended for our perpetual pleasure. And every man, wherever placed, however far from other sources of interest or of beauty, has this doing for him constantly. The noblest scenes of the earth can be seen and known but by few; it is not intended that man should live always in the midst of them; he injures them by his presence, he ceases to feel them if he be always with them: but the sky is for all; bright as it is, it is not

> 'Too bright or good
> For human nature's daily food;'[1]

it is fitted in all its functions for the perpetual comfort and exalting of the heart, for soothing it and purifying it from its dross and dust. Sometimes gentle, sometimes capricious, sometimes awful, never the same for two moments together; almost human in its passions, almost spiritual in its tenderness, almost divine in its infinity, its appeal to what is immortal in us is as distinct, as its ministry of chastisement or of blessing to what is mortal is essential. And yet we never attend to it, we never make it a subject of thought, but as it has to do with our animal sensations: we look upon all by which it speaks to us more clearly than to brutes, upon all which bears witness to the intention of the Supreme that we are to receive more from the covering vault than the light and the dew which we share with the weed and the worm, only as a succession of meaningless and monotonous accident, too common and too vain to be worthy of a moment of watchfulness, or a glance of admiration. If in our moments of utter idleness and insipidity, we turn to the sky as a last resource, which of its phenomena do we speak of? One says it has been wet; and another, it has been windy; and another, it has been warm. Who, among the whole chattering crowd, can tell me of the forms and the precipices of the chain of tall white mountains that girded the ho-

1. Wordsworth, 'She Was a Phantom of Delight,' 17–18.

rizon at noon yesterday? Who saw the narrow sunbeam that came out of the south and smote upon their summits until they melted and mouldered away in a dust of blue rain? Who saw the dance of the dead clouds when the sunlight left them last night, and the west wind blew them before it like withered leaves? All has passed, unregretted as unseen; or if the apathy be ever shaken off, even for an instant, it is only by what is gross, or what is extraordinary; and yet it is not in the broad and fierce manifestations of the elemental energies, not in the clash of the hail, nor the drift of the whirlwind, that the highest characters of the sublime are developed. God is not in the earthquake, nor in the fire, but in the still, small voice. They are but the blunt and the low faculties of our nature, which can only be addressed through lampblack and lightning. It is in quiet and subdued passages of unobtrusive majesty, the deep, and the calm, and the perpetual; that which must be sought ere it is seen, and loved ere it is understood; things which the angels work out for us daily, and yet vary eternally: which are never wanting, and never repeated; which are to be found always, yet each found but once; it is through these that the lesson of devotion is chiefly taught, and the blessing of beauty given. These are what the artist of highest aim must study; it is these, by the combination of which his ideal is to be created; these, of which so little notice is ordinarily taken by common observers, that I fully believe, little as people in general are concerned with art, more of their ideas of sky are derived from pictures than from reality; and that if we could examine the conception formed in the minds of most educated persons when we talk of clouds, it would frequently be found composed of fragments of blue and white reminiscences of the old masters. . . .

Chapter IV

Of the Region of the Rain-Cloud

31. . . . Stand upon the peak of some isolated mountain at daybreak, when the night mists first rise from off the plains, and watch their white and lake-like fields, as they float in level bays and winding gulfs about the islanded summits of the lower hills, untouched yet by more than dawn, colder and more quiet than a windless sea under the moon of midnight; watch when the first sunbeam is sent upon the silver channels, how the foam of their undulating surface parts and passes away, and down under their depths the glittering city and green pasture lie like Atlantis, between the white paths of winding rivers; the flakes of light falling every moment faster and broader among the starry spires, as the wreathed surges break and vanish above them, and the confused crests and ridges of the dark hills shorten their grey shadows upon the plain. Has Claude given this? Wait a little longer, and you shall see those scattered mists rallying in the ravines, and floating up towards you, along the winding valleys, till they couch in quiet masses, iridescent with the morning light,[1] upon the broad breasts of the higher hills, whose leagues of massy undulation will melt back and back into that robe of material light, until they fade away, lost in its lustre, to appear again above, in the serene heaven, like a wild, bright, impossible dream, foundationless and inaccessible, their very bases vanishing in the unsubstantial and mocking blue of the deep lake below.[2]

1 I have often seen the white, thin, morning cloud, edged with the seven colours of the prism. I am not aware of the cause of this phenomenon, for it takes place not when we stand with our backs to the sun, but in clouds near the sun itself, irregularly and over indefinite spaces, sometimes taking place in the body of the cloud. The colours are distinct and vivid, but have a kind of metallic lustre upon them. [Ruskin's note.]

2. Lake Lucerne. [Ruskin's note.]

Has Claude given this? Wait yet a little longer, and you shall see those mists gather themselves into white towers, and stand like fortresses along the promontories, massy and motionless, only piled with every instant higher and higher into the sky,[3] and casting longer shadows athwart the rocks; and out of the pale blue of the horizon you will see forming and advancing a troop of narrow, dark, pointed vapours,[4] which will cover the sky, inch by inch, with their grey network, and take the light off the landscape with an eclipse which will stop the singing of the birds and the motion of the leaves, together; and then you will see horizontal bars of black shadow forming under them, and lurid wreaths create themselves, you know not how, along the shoulders of the hills; you never see them form, but when you look back to a place which was clear an instant ago, there is a cloud on it, hanging by the precipices, as a hawk pauses over his prey.[5] Has Claude given this? And then you will hear the sudden rush of the awakened wind, and you will see those watch-towers of vapour swept away from their foundations, and waving curtains of opaque rain let down to the valleys, swinging from the burdened clouds in black bending fringes,[6] or pacing in pale columns along the lake level, grazing its surface into foam as they go. And then, as the sun sinks, you shall see the storm drift for an instant from off the hills, leaving their broad sides smoking, and loaded yet with snow-white, torn, steam-like rags of capricious vapour, now gone, now gathered again;[7] while the smouldering sun, seeming not far away, but burning like a red-hot ball beside you, and as if you could reach it, plunges through the rushing wind and rolling cloud with headlong fall, as if it meant to rise no more, dyeing all the air about it with blood.[8] Has Claude given this? And then you shall hear the fainting tempest die in the hollow of the night, and you shall see a green halo kindling on the summit of the eastern hills,[9] brighter — brighter yet, till the large white circle of the slow moon is lifted up among the barred clouds,[10] step by step, line by line; star after star she quenches with her kindling light, setting in their stead an army of pale, penetrable, fleecy wreaths in the heaven, to give light upon the earth, which move together, hand in hand, company by company, troop by troop, so measured in their unity of motion, that the whole heaven seems to roll with them, and the earth to reel under them. Ask Claude, or his brethren, for that. And then wait yet for one hour, until the east again becomes purple,[11] and the heaving mountains, rolling against it in darkness, like waves of a wild sea, are drowned one by one in the glory of its burning: watch the white glaciers blaze in their winding paths about the mountains, like mighty serpents with scales of fire: watch the columnar peaks of solitary snow, kindling downwards, chasm by chasm, each in itself a new morning; their long avalanches cast down in keen streams brighter than the lightning, sending each his tribute of driven snow, like altar-smoke, up to the heaven; the rose-light of their silent domes flushing that heaven about them and above them, piercing with purer light through its purple lines of lifted cloud, casting a new glory on every wreath as it passes by, until the whole heaven, one scarlet canopy, is interwoven with a roof of waving flame, and tossing, vault beyond vault, as with the drifted wings of

many companies of angels: and then, when you can look no more for gladness, and when you are bowed down with fear and love of the Maker and Doer of this, tell me who has best delivered this His message unto men!

SECTION V

OF TRUTH OF WATER

CHAPTER II

Of Water, as Painted by the Moderns

2. . . . HUNDREDS of men might be named, whose works are highly instructive in the management of calm water. Stand for half an hour beside the Fall of Schaffhausen, on the north side where the rapids are long, and watch how the vault of water first bends, unbroken, in pure polished velocity, over the arching rocks at the brow of the cataract, covering them with a dome of crystal twenty feet thick, so swift that its motion is unseen except when a foam globe from above darts over it like a falling star; and how the trees are lighted above it under all their leaves, at the instant that it breaks into foam; and how all the hollows of that foam burn with green fire like so much shattering chrysoprase; and how, ever and anon, startling you with its white flash, a jet of spray leaps hissing out of the fall, like a rocket, bursting in the wind and driven away in dust, filling the air with light; and how, through the curdling wreaths of the restless crashing abyss below, the blue of the water, paled by the foam in its body, shows purer than the sky through white rain-cloud; while the shuddering iris stoops in tremulous stillness over all, fading and flushing alternately through the choking spray and shattered sunshine, hiding itself at last among the thick golden leaves which toss to and fro in sympathy with the wild water; their dripping masses lifted at intervals, like sheaves of loaded corn, by some stronger gush from the cataract, and bowed again upon the mossy rocks as its roar dies away; the dew gushing from their thick branches through drooping clusters of emerald herbage, and sparkling in white threads along the dark rocks of the shore, feeding the lichens which chase and chequer them with purple and silver. I believe, when you have stood by this for half an hour, you will have discovered that there is something more in nature than has been given by Ruysdael.[1] . . .

CHAPTER III

Of Water, as Painted by Turner

. . . FEW people, comparatively, have ever seen the effect on the sea of a powerful gale continued without intermission for three or four days and nights; and to those who have not, I believe it must be unimaginable, not from the mere force or size of surge, but from the complete annihilation of the limit between sea and air. The water from its prolonged agitation is beaten, not into mere creaming foam, but into masses of accumulated yeast,[1] which hang in ropes and wreaths

1. Jacob Ruysdael (1628?–81), Dutch painter.

1. The 'yesty waves' of Shakspeare have made the likeness familiar, and probably most readers take the expression as merely equivalent to 'foamy'; but Shakspeare knew better. Sea-foam does not, under ordinary circumstances, last a moment after it is formed, but disappears, as above described, in a mere white film. But the foam of a prolonged tempest is altogether different; it is 'whipped' foam, thick, permanent, and, in a foul or discoloured sea, very ugly, especially in the way it hangs about the tops of the waves, and gathers into clotted concretions before the driving wind. The sea looks truly working or fermenting. The following passage from Fenimore Cooper is an interesting confirmation of the rest of the above description, which may be depended upon as entirely free from exaggeration: — 'For the first time I now witnessed a tempest at sea. Gales, and pretty hard ones, I had often seen, but the force of the wind on this occasion, as much exceeded that in ordinary gales of wind, as the force of these had exceeded that of a whole-sail breeze. The seas seemed crushed; the pressure of the swooping atmosphere, as

from wave to wave, and, where one curls over to break, form a festoon like a drapery from its edge; these are taken up by the wind, not in dissipating dust, but bodily, in writhing, hanging, coiling masses, which make the air white and thick as with snow, only the flakes are a foot or two long each: the surges themselves are full of foam in their very bodies, underneath, making them white all through, as the water is under a great cataract; and their masses, being thus half water and half air, are torn to pieces by the wind whenever they rise, and carried away in roaring smoke, which chokes and strangles like actual water. Add to this, that when the air has been exhausted of its moisture by long rain, the spray of the sea is caught by it as described above (Section III. Chapter IV.13), and covers its surface not merely with the smoke of finely divided water, but with boiling mist; imagine also the low rain-clouds brought down to the very level of the sea, as I have often seen them, whirling and flying in rags and fragments from wave to wave; and finally, conceive the surges themselves in their utmost pitch of power, velocity, vastness, and madness, lifting themselves in precipices and peaks, furrowed with their whirl of ascent, through all this chaos; and you will understand that there is indeed no distinction left between the sea and air; that no object, nor horizon, nor any land-mark or natural evidence of position is left; that the heaven is all spray, and the ocean all cloud, and that you can see no farther in any direction than you could see through a cataract. Suppose the effect of the first sunbeam sent from above to show this annihilation to itself, and you have the sea picture of the Academy, 1842, the Snowstorm, one of the very grandest statements of sea-motion, mist, and light, that has ever been put on canvas, even by Turner. Of course it was not understood; his finest works never are: but there was some apology for the public's not comprehending this, for few people have had the opportunity of seeing the sea at such a time, and when they have, cannot face it. To hold by a mast or a rock, and watch it, is a prolonged endurance of drowning which few people have courage to go through. To those who have, it is one of the noblest lessons of nature.

39. But, I think, the noblest sea that Turner has ever painted, and, if so, the noblest certainly ever painted by man, is that of the Slave Ship, the chief Academy picture of the Exhibition of 1840. It is a sunset on the Atlantic, after prolonged storm; but the storm is partially lulled, and the torn and streaming rain-clouds are moving in scarlet lines to lose themselves in the hollow of the night. The whole surface of sea included in the picture is divided into two ridges of enormous swell, not high, nor local, but a low broad heaving of the whole ocean, like the lifting of its bosom by deep-drawn breath after the torture of the storm. Between these two ridges the fire of the sunset falls along the trough of the sea, dyeing it with an awful but glorious light, the intense and lurid splendour which burns like gold, and bathes like blood. Along this fiery path and valley, the tossing waves by which the swell of the sea is restlessly divided, lift themselves in dark, indefinite, fantastic forms, each casting a faint and ghastly shadow behind it along the illumined foam. They do not rise every-

the currents of the air went howling over the surface of the ocean, fairly preventing them from rising; or where a mound of water did appear, it was scooped up and borne off in spray, as the axe dubs inequalities from the log. When the day returned, a species of lurid sombre light was diffused over the watery waste, though nothing was visible but the ocean and the ship. Even the sea-birds seemed to have taken refuge in the caverns of the adjacent coast, none reappearing with the dawn. The air was full of spray, and it was with difficulty that the eye could penetrate as far into the humid atmosphere as half a mile.' — *Miles Wallingford*. Half a mile is an over-estimate on coast sea. [Ruskin's note.]

where, but three or four together in wild groups, fitfully and furiously, as the under strength of the swell compels or permits them; leaving between them treacherous spaces of level and whirling water, now lighted with green and lamp-like fire, now flashing back the gold of the declining sun, now fearfully dyed from above with the undistinguishable images of the burning clouds, which fall upon them in flakes of crimson and scarlet, and give to the reckless waves the added motion of their own fiery flying. Purple and blue, the lurid shadows of the hollow breakers are cast upon the mist of night, which gathers cold and low, advancing like the shadow of death upon the guilty [2] ship as it labours amidst the lightning of the sea, its thin masts written upon the sky in lines of blood, girded with condemnation in that fearful hue which signs the sky with horror, and mixes its flaming flood with the sunlight, and, cast far along the desolate heave of the sepulchral waves, incarnadines the multitudinous sea.

40. I believe, if I were reduced to rest Turner's immortality upon any single work, I should choose this. Its daring conception, ideal in the highest sense of the word, is based on the purest truth, and wrought out with the concentrated knowledge of a life; its colour is absolutely perfect, not one false or morbid hue in any part or line, and so modulated that every square inch of canvas is a perfect composition; its drawing as accurate as fearless; the ship buoyant, bending, and full of motion; its tones as true as they are wonderful; [3] and the whole picture dedicated to the most sublime of subjects and impressions (completing thus the perfect system of all truth, which we have shown to be formed by Turner's works) — the power, majesty, and deathfulness of the open, deep, illimitable sea.

2. She is a slaver, throwing her slaves overboard. The near sea is encumbered with corpses. [Ruskin's note.]

3. There is a piece of tone of the same kind, equal in one part, but not so united with the rest of the picture, in the storm scene illustrative of the Antiquary, — a sunset light on polished sea. I ought to have particularly mentioned the sea in the Lowestoft, as a piece of the cutting motion of shallow water under storm, altogether in grey, which should be especially contrasted, as a piece of colour, with the greys of Vandevelde. And the sea in the Great Yarmouth should have been noticed for its expression of water under a fresh gale, seen in enormous extent from a great elevation. There is almost every form of sea in it: rolling waves dashing on the pier; successive breakers rolling to the shore; a vast horizon of multitudinous waves; and winding canals of calm water along the sands, bringing fragments of bright sky down into their yellow waste. There is hardly one of the views of the Southern Coast which does not give some new condition or circumstance of sea. [Ruskin's note.]

MODERN PAINTERS — VOLUME III

PART IV. OF MANY THINGS

CHAPTER I

Of the Received Opinions Touching the 'Grand Style'

1. IN taking up the clue of an inquiry, now intermitted for nearly ten years, it may be well to do as a traveller would, who had to recommence an interrupted journey in a guideless country; and, ascending, as it were, some little hill beside our road, note how far we have already advanced, and what pleasantest ways we may choose for farther progress.

I endeavoured, in the beginning of the first volume, to divide the sources of pleasure open to us in Art into certain groups, which might conveniently be studied in succession. After some preliminary discussion, it was concluded (Part I. Sec.II. Chap.III.6,) that these groups were, in the main, three; consisting, first, of the pleasures taken in perceiving simple resem-

blance to Nature (Ideas of Truth); secondly, of the pleasures taken in the beauty of the things chosen to be painted (Ideas of Beauty); and, lastly, of pleasures taken in the meanings and relations of these things (Ideas of Relation).

The first volume, treating of the Ideas of Truth, was chiefly occupied with an inquiry into the various success with which different artists had represented the facts of Nature, — an inquiry necessarily conducted very imperfectly, owing to the want of pictorial illustration.

The second volume merely opened the inquiry into the nature of ideas of Beauty and Relation, by analysing (as far as I was able to do so) the two faculties of the human mind which mainly seized such ideas; namely, the contemplative and imaginative faculties.

It remains for us to examine the various success of artists, especially of the great landscape-painter [1] whose works have been throughout our principal subject, in addressing these faculties of the human mind, and to consider who among them has conveyed the noblest ideas of beauty, and touched the deepest sources of thought.

2. I do not intend, however, now to pursue the inquiry in a method so laboriously systematic; for the subject may, it seems to me, be more usefully treated by pursuing the different questions which arise out of it just as they occur to us, without too great scrupulousness in marking connections, or insisting on sequences. Much time is wasted by human beings, in general, on establishment of systems; and it often takes more labour to master the intricacies of an artificial connection, than to remember the separate facts which are so carefully connected. I suspect that system-makers, in general, are not of much more use, each in his own domain, than, in that of Pomona, the old women who tie cherries upon sticks, for the more convenient portableness of the same. To cultivate well, and choose well, your cherries, is of some importance; but if they can be had in their own wild way of clustering about their crabbed stalk, it is a better connection for them than any other; and, if they cannot, then, so that they be not bruised, it makes to a boy of a practical disposition not much difference whether he gets them by handfuls, or in beaded symmetry on the exalting stick. I purpose, therefore, henceforward to trouble myself little with sticks or twine, but to arrange my chapters with a view to convenient reference, rather than to any careful division of subjects, and to follow out, in any by-ways that may open, on right hand or left, whatever question it seems useful at any moment to settle.

3. And, in the outset, I find myself met by one which I ought to have touched upon before — one of especial interest in the present state of the Arts. I have said that the art is greatest which includes the greatest ideas; but I have not endeavoured to define the nature of this greatness in the ideas themselves. We speak of great truths, of great beauties, great thoughts. What is it which makes one truth greater than another, one thought greater than another? This question is, I repeat, of peculiar importance at the present time; for, during a period now of some hundred and fifty years, all writers on Art who have pretended to eminence, have insisted much on a supposed distinction between what they call the Great and the Low Schools; using the terms 'High Art,' 'Great or Ideal Style,' and other such, as descriptive of a certain noble manner of painting, which it was desirable that all students of Art should be early led to reverence and adopt; and characterising as 'vulgar,' or 'low,' or 'realist,' another manner of painting and conceiving, which

1. Joseph Mallord (or Mallard) William Turner (1775–1851), landscape painter and watercolorist, whose reputation, already very great, was immensely enhanced by Ruskin's *Modern Painters*.

it was equally necessary that all students should be taught to avoid.

But lately this established teaching, never very intelligible, has been gravely called in question. The advocates and self-supposed practisers of 'High Art' are beginning to be looked upon with doubt, and their peculiar phraseology to be treated with even a certain degree of ridicule. And other forms of Art are partly developed among us, which do not pretend to be high, but rather to be strong, healthy, and humble. This matter of 'highness' in Art, therefore, deserves our most careful consideration. Has it been, or is it, a true highness, a true princeliness, or only a show of it, consisting in courtly manners and robes of state? Is it rocky height or cloudy height, adamant or vapour, on which the sun of praise so long has risen and set? It will be well at once to consider this.

4. And first, let us get, as quickly as may be, at the exact meaning with which the advocates of 'High Art' use that somewhat obscure and figurative term.

I do not know that the principles in question are anywhere more distinctly expressed than in two papers in the *Idler*,[2] written by Sir Joshua Reynolds, of course under the immediate sanction of Johnson; and which may thus be considered as the utterance of the views then held upon the subject by the artists of chief skill, and critics of most sense, arranged in a form so brief and clear, as to admit of their being brought before the public for a morning's entertainment. I cannot, therefore, it seems to me, do better than quote these two letters, or at least the important parts of them, examining the exact meaning of each passage as it occurs. There are, in all, in the *Idler* three letters on painting, Nos. 76, 79, and 82; of these, the first is directed only against the impertinences of pretended connoisseurs, and is as notable for its faithfulness, as for its wit, in the description of the several modes of criticism in an artificial and ignorant state of society: it is only, therefore, in the two last papers that we find the expression of the doctrines which it is our business to examine.

No. 79 (Saturday, Oct. 20th, 1759) begins, after a short preamble, with the following passage: —

'Amongst the Painters, and the writers on Painting, there is one maxim universally admitted and continually inculcated. *Imitate nature* is the invariable rule; but I know none who have explained in what manner this rule is to be understood; the consequence of which is, that everyone takes it in the most obvious sense — that objects are represented naturally, when they have such relief that they seem real. It may appear strange, perhaps, to hear this sense of the rule disputed; but it must be considered, that, if the excellency of a Painter consisted only in this kind of imitation, Painting must lose its rank, and be no longer considered as a liberal art, and sister to Poetry: this imitation being merely mechanical, in which the slowest intellect is always sure to succeed best; for the Painter of genius cannot stoop to drudgery, in which the understanding has no part; and what pretence has the Art to claim kindred with Poetry but by its power over the imagination? To this power the Painter of genius directs him; in this sense he studies Nature, and often arrives at his end, even by being unnatural in the confined sense of the word.

'The grand style of Painting requires this minute attention to be carefully avoided, and must be kept as separate from it as the style of Poetry from that of History. (Poetical ornaments destroy that air of truth and plainness which ought to

2. *The Idler*, a series of papers, contributed by Dr. Johnson, Reynolds, and others, to the *Universal Chronicle* between 1758 and 1760. — Sir Joshua Reynolds (1723–92) was the greatest of English portrait-painters, and the first president of the Royal Academy of Arts, before which body he delivered a memorable series of *Discourses* between 1769 and 1790, on the principles of art.

characterise History; but the very being of Poetry consists in departing from this plain narrative, and adopting every ornament that will warm the imagination.[3]) To desire to see the excellences of each style united — to mingle the Dutch with the Italian school, is to join contrarieties, which cannot subsist together, and which destroy the efficacy of each other.'

5. We find, first, from this interesting passage, that the writer considers the Dutch and Italian masters as severally representative of the low and high schools; next, that he considers the Dutch painters as excelling in a mechanical imitation, 'in which the slowest intellect is always sure to succeed best;' and, thirdly, that he considers the Italian painters as excelling in a style which corresponds to that of imaginative poetry in literature, and which has an exclusive right to be called the grand style.

I wish that it were in my power entirely to concur with the writer, and to enforce this opinion thus distinctly stated. I have never been a zealous partisan of the Dutch School,[4] and should rejoice in claiming Reynolds's authority for the assertion, that their manner was one 'in which the slowest intellect is always sure to succeed best.' But before his authority can be so claimed, we must observe exactly the meaning of the assertion itself, and separate it from the company of some others not perhaps so admissible. First, I say, we must observe Reynolds's exact meaning, for (though the assertion may at first appear singular) a man who uses accurate language is always more liable to misinterpretation than one who is careless in his expressions. We may assume that the latter means very nearly what we at first suppose him to mean, for words which have been uttered without thought may be received without examination. But when a writer or speaker may be fairly supposed to have considered his expressions carefully, and, after having revolved a number of terms in his mind, to have chosen the one which *exactly* means the thing he intends to say, we may be assured that what costs him time to select, will require from us time to understand; and that we shall do him wrong, unless we pause to reflect how the word which he has actually employed differs from other words which it seems he *might* have employed. It thus constantly happens that persons themselves unaccustomed to think clearly, or speak correctly, misunderstand a logical and careful writer, and are actually in more danger of being misled by language which is measured and precise, than by that which is loose and inaccurate.

6. Now, in the instance before us, a person not accustomed to good writing might very rashly conclude that when Reynolds spoke of the Dutch School as one 'in which the slowest intellect was sure to succeed best,' he meant to say that every successful Dutch painter was a fool. We have no right to take his assertion in that sense. He says, the *slowest* intellect. We have no right to assume that he meant the *weakest*. For it is true, that in order to succeed in the Dutch style, a man has need of qualities of mind eminently deliberate and sustained. He must be possessed of patience rather than of power; and must feel no weariness in contemplating the expression of a single thought for several months together. As opposed to the changeful en-

3. I have put this sentence in a parenthesis, because it is inconsistent with the rest of the statement, and with the general teaching of the paper; since that which 'attends only to the invariable' cannot certainly adopt 'every ornament that will warm the imagination.' [Ruskin's note.]

4 Allusion to such painters as Ruysdael, Van Goyen, the Van de Veldes, Hobbema, Aelbert Cuyp, Terborch, Jan Steen, Pieter de Hooch, Vermeer, Frans Hals, and to some extent, Rembrandt, who, flourishing in the 16th and 17th centuries, developed a remarkable fidelity to realistic detail, giving an exact rendering of things hitherto regarded as devoid of interest, of such subjects as *The Card Players*, *The Merrymakers*, *The Drinkers*, etc.

ergies of the imagination, these mental characters may be properly spoken of as under the general term — slowness of intellect. But it by no means follows that they are necessarily those of weak or foolish men.

We observe however, farther, that the imitation which Reynolds supposes to be characteristic of the Dutch School is that which gives to objects such relief that they seem real, and that he then speaks of this art of realistic imitation as corresponding to history in literature.

7. Reynolds, therefore, seems to class these dull works of the Dutch School under a general head, to which they are not commonly referred — that of *Historical* painting; while he speaks of the works of the Italian School [5] not as historical, but as *poetical* painting. His next sentence will farther manifest his meaning.

'The Italian attends only to the invariable, the great and general ideas which are fixed and inherent in universal Nature; the Dutch, on the contrary, to literal truth, and a minute exactness in the detail, as I may say, of Nature modified by accident. The attention to these petty peculiarities is the very cause of this naturalness so much admired in the Dutch pictures, which, if we suppose it to be a beauty, is certainly of a lower order, which ought to give place to a beauty of a superior kind, since one cannot be obtained but by departing from the other.

'If my opinion were asked concerning the works of Michael Angelo, whether they would receive any advantage from possessing this mechanical merit, I should not scruple to say, they would not only receive no advantage, but would lose, in a great measure, the effect which they now have on every mind susceptible of great and noble ideas. His works may be said to be all genius and soul; and why should they be loaded with heavy matter, which can only counteract his purpose by retarding the progress of the imagination?'

Examining carefully this and the preceding passage, we find the author's unmistakable meaning to be, that Dutch painting is *history*; attending to literal truth and 'minute exactness in the details of nature modified by accident.' That Italian painting is *poetry*, attending only to the invariable; and that works which attend only to the invariable are full of genius and soul; but that literal truth and exact detail are 'heavy matter which retards the progress of the imagination.'

8. This being then indisputably what Reynolds means to tell us, let us think a little whether he is in all respects right. And first, as he compares his two kinds of painting to history and poetry, let us see how poetry and history themselves differ, in their use of *variable* and *invariable* details. I am writing at a window which commands a view of the head of the Lake of Geneva; and as I look up from my paper, to consider this point, I see, beyond it, a blue breadth of softly moving water, and the outline of the mountains above Chillon, bathed in morning mist. The first verses which naturally come into my mind are —

'A thousand feet in depth below
The massy waters meet and flow;
So far the fathom line was sent
From Chillon's snow-white battlement.' [6]

Let us see in what manner this poetical statement is distinguished from a historical one.

It is distinguished from a truly historical statement, first, in being simply false. The water under the Castle of Chillon is not a thousand feet deep, nor anything like it.[7] Herein, certainly, these lines fulfil

5. A broad term, used rather vaguely here. Of the great Italian painters, Ruskin admired most Giotto, Tintoretto, Titian, Fra Angelico, Michelangelo. But his judgment is at times erratic and arbitrary. See *Modern Painters*, I,II.

6. From Byron's *The Prisoner of Chillon*, 162–65. (Not accurately quoted.)

7. 'MM. Mallet et Pictet, se trouvant sur le lac auprès du château de Chillon, le 6 Août, 1774,

Reynolds's first requirement in poetry, 'that it should be inattentive to literal truth and minute exactness in detail.' In order, however, to make our comparison more closely in other points, let us assume that what is stated is indeed a fact, and that it was to be recorded, first historically, and then poetically.

Historically stating it, then, we should say: 'The lake was sounded from the walls of the Castle of Chillon, and found to be a thousand feet deep.'

Now, if Reynolds be right in his idea of the difference between history and poetry, we shall find that Byron leaves out of this statement certain *un*necessary details, and retains only the invariable, — that is to say, the points which the Lake of Geneva and Castle of Chillon have in common with all other lakes and castles.

Let us hear, therefore.

'A thousand feet in depth below.'

'Below?' Here is, at all events, a word added (instead of anything being taken away); invariable, certainly in the case of lakes, but not absolutely necessary.

'The massy waters meet and flow.'

'Massy'! why massy? Because deep water is heavy. The word is a good word, but it is assuredly an added detail, and expresses a character, not which the Lake of Geneva has in common with all other lakes, but which it has in distinction from those which are narrow, or shallow.

9. 'Meet and flow.' Why meet and flow? Partly to make up a rhyme; partly to tell us that the waters are forceful as well as massy, and changeful as well as deep. Observe, a farther addition of details, and of details more or less peculiar to the spot, or, according to Reynolds's definition, of 'heavy matter, retarding the progress of the imagination.'

'So far the fathom line was sent.'

Why fathom line? All lines for sounding are not fathom lines. If the lake was ever sounded from Chillon, it was probably sounded in mètres, not fathoms. This is an addition of another particular detail, in which the only compliance with Reynolds's requirement is, that there is some chance of its being an inaccurate one.

'From Chillon's snow-white battlement.'

Why snow-white? Because castle battlements are not usually snow-white. This is another added detail, and a detail quite peculiar to Chillon, and therefore exactly the most striking word in the whole passage.

'Battlement'! Why battlement? Because all walls have not battlements, and the addition of the term marks the castle to be not merely a prison, but a fortress.

This is a curious result. Instead of finding, as we expected, the poetry distinguished from the history by the omission of details, we find it consist entirely in the *addition* of details; and instead of being characterised by regard only of the invariable, we find its whole power to consist in the clear expression of what is singular and particular!

10. The reader may pursue the investigation for himself in other instances. He will find in every case that a poetical is distinguished from a merely historical statement, not by being more vague, but more specific; and it might, therefore, at first appear that our author's comparison should be simply reversed, and that the Dutch School should be called poetical, and the Italian historical. But the term poetical does not appear very applicable to the generality of Dutch painting; and a little reflection will show us, that if the Italians represent only the invariable, they cannot be properly compared even to his-

plongèrent à la profondeur de 312 pieds un thermomètre,' etc. — SAUSSURE, *Voyages dans les Alpes*, chap. ii, §33. It appears from the next paragraph, that the thermometer was 'au fond du lac.' [Ruskin's note. Transl: — 'Messieurs Mallet and Pictet, happening to be on the lake near the castle of Chillon on 6 August, 1774, sank a thermometer to the depth of 312 feet.']

torians. For that which is incapable of change has no history, and records which state only the invariable need not be written, and could not be read.

11. It is evident, therefore, that our author has entangled himself in some grave fallacy, by introducing this idea of invariableness as forming a distinction between poetical and historical art. What the fallacy is, we shall discover as we proceed; but as an invading army should not leave an untaken fortress in its rear, we must not go on with our inquiry into the views of Reynolds until we have settled satisfactorily the question already suggested to us, in what the essence of poetical treatment really consists. For though, as we have seen, it certainly involves the addition of specific details, it cannot be simply that addition which turns the history into poetry. For it is perfectly possible to add any number of details to a historical statement, and to make it more prosaic with every added word. As, for instance, 'The lake was sounded out of a flat-bottomed boat, near the crab-tree at the corner of the kitchen-garden, and was found to be a thousand feet nine inches deep, with a muddy bottom.' It thus appears that it is not the multiplication of details which constitutes poetry; nor their subtraction which constitutes history, but that there must be something either in the nature of the details themselves, or the method of using them, which invests them with poetical power or historical propriety.

12. It seems to me, and may seem to the reader, strange that we should need to ask the question, 'What is poetry?' Here is a word we have been using all our lives, and, I suppose, with a very distinct idea attached to it; and when I am now called upon to give a definition of this idea, I find myself at a pause. What is more singular, I do not at present recollect hearing the question often asked, though surely it is a very natural one; and I never recollect hearing it answered, or even attempted to be answered. In general, people shelter themselves under metaphors, and while we hear poetry described as an utterance of the soul, an effusion of Divinity, or voice of nature, or in other terms equally elevated and obscure, we never attain anything like a definite explanation of the character which actually distinguishes it from prose.

13. I come, after some embarrassment, to the conclusion, that poetry 'is the suggestion, by the imagination, of noble grounds for the noble emotions.' I mean, by the noble emotions, those four principal sacred passions — Love, Veneration, Admiration, and Joy (this latter especially, if unselfish); and their opposites — Hatred, Indignation (or Scorn), Horror, and Grief, — this last, when unselfish, becoming Compassion. These passions in their various combinations constitute what is called 'poetical feeling,' when they are felt on noble grounds, that is, on great and true grounds. Indignation, for instance, is a poetical feeling, if excited by serious injury; but it is not a poetical feeling if entertained on being cheated out of a small sum of money. It is very possible the manner of the cheat may have been such as to justify considerable indignation; but the feeling is nevertheless not poetical unless the grounds of it be large as well as just. In like manner, energetic admiration may be excited in certain minds by a display of fireworks, or a street of handsome shops; but the feeling is not poetical, because the grounds of it are false, and therefore ignoble. There is in reality nothing to deserve admiration either in the firing of packets of gunpowder, or in the display of the stocks of warehouses. But admiration excited by the budding of a flower is a poetical feeling, because it is impossible that this manifestation of spiritual power and vital beauty can ever be enough admired.

14. Farther, it is necessary to the existence of poetry that the grounds of these feelings should be *furnished by the imagination*. Poetical feeling, that is to say, mere

noble emotion, is not poetry. It is happily inherent in all human nature deserving the name, and is found often to be purest in the least sophisticated. But the power of assembling, by *the help of the imagination*, such images as will excite these feelings, is the power of the poet or literally of the 'Maker.'[8]

Now this power of exciting the emotions depends of course on the richness of the imagination, and on its choice of those images which, in combination, will be most effective, or, for the particular work to be done, most fit. And it is altogether impossible for a writer not endowed with invention to conceive what tools a true poet will make use of, or in what way he will apply them, or what unexpected results he will bring out by them; so that it is vain to say that the details of poetry ought to possess, or ever do possess, any *definite* character. Generally speaking, poetry runs into finer and more delicate details than prose; but the details are not poetical because they are more delicate, but because they are employed so as to bring out an affecting result. For instance, no one but a true poet would have thought of exciting our pity for a bereaved father by describing his way of locking the door of his house:

'Perhaps to himself at that moment he said,
"The key I must take, for my Ellen is dead."
But of this in my ears not a word did he speak;
And he went to the chase with a tear on his cheek.'[9]

In like manner, in painting, it is altogether impossible to say beforehand what details a great painter may make poetical by his use of them to excite noble emotions: and we shall, therefore, find presently that a painting is to be classed in the great or inferior schools, not according to the kind of details which it represents, but according to the uses for which it employs them.

15. It is only farther to be noticed, that infinite confusion has been introduced

8. Take, for instance, the beautiful stanza in the 'Affliction of Margaret' (by Wordsworth):

'I look for ghosts, but none will force
Their way to me. 'Tis falsely said
That ever there was intercourse
Between the living and the dead;
For, surely, then, I should have sight
Of him I wait for, day and night,
With love and longing infinite.'

This we call Poetry, because it is invented or *made* by the writer, entering into the mind of a supposed person. Next, take an instance of the actual feeling truly experienced and simply expressed by a real person.

'Nothing surprised me more than a woman of Argentière, whose cottage I went into to ask for milk, as I came down from the glacier of Argentière, in the month of March, 1764. An epidemic dysentery had prevailed in the village, and, a few months before, had taken away from her, her father, her husband, and her brothers, so that she was left alone, with three children in the cradle. Her face had something noble in it, and its expression bore the seal of a calm and profound sorrow. After having given me milk, she asked me whence I came, and what I came there to do, so early in the year. When she knew that I was of Geneva, she said to me, "she could not believe that all Protestants were lost souls; that there were many honest people among us, and that God was too good and too great to condemn all without distinction." Then, after a moment of reflection, she added, in shaking her head, "But that which is very strange is that of so many who have gone away, none have ever returned. I," she added, with an expression of grief, "who have so mourned my husband and my brothers, who have never ceased to think of them, who every night conjure them with beseechings to tell me where they are, and in what state they are! Ah, surely, if they lived anywhere, they would not leave me thus! But, perhaps," she added, "I am not worthy of this kindness, perhaps the pure and innocent spirits of these children," and she looked at the cradle, "may have their presence, and the joy which is denied to me."' — SAUSSURE, *Voyages dans les Alpes*, chap. xxiv.

This we do not call Poetry, merely because it is not invented, but the true utterance of a real person. [Ruskin's note.]

9. From Wordsworth's 'The Childless Father,' final stanza.

into this subject by the careless and illogical custom of opposing painting to poetry, instead of regarding poetry as consisting in a noble use, whether of colours or words. Painting is properly to be opposed to *speaking* or *writing*, but not to *poetry*. Both painting and speaking are methods of expression. Poetry is the employment of either for the noblest purposes.

16. This question being thus far determined, we may proceed with our paper in the *Idler*.

'It is very difficult to determine the exact degree of enthusiasm that the arts of Painting and Poetry may admit. There may, perhaps, be too great indulgence as well as too great a restraint of imagination; if the one produces incoherent monsters, the other produces what is full as bad, lifeless insipidity. An intimate knowledge of the passions, and good sense, but not common sense, must at last determine its limits. It has been thought, and I believe with reason, that Michael Angelo sometimes transgressed those limits; and, I think, I have seen figures of him of which it was very difficult to determine whether they were in the highest degree sublime or extremely ridiculous. Such faults may be said to be the ebullitions of genius; but at least he had this merit, that he never was insipid; and whatever passion his works may excite, they will always escape contempt.

'What I have had under consideration is the sublimest style, particularly that of Michael Angelo, the Homer of painting. Other kinds may admit of this naturalness, which of the lowest kind is the chief merit; but in painting, as in poetry, the highest style has the least of common nature.'

From this passage we gather three important indications of the supposed nature of the Great Style. That it is the work of men in a state of enthusiasm. That it is like the writing of Homer; and that it has as little as possible of 'common nature' in it.

17. First, it is produced by men in a state of enthusiasm. That is, by men who feel *strongly* and *nobly*; for we do not call a strong feeling of envy, jealousy, or ambition, 'enthusiasm.' That is, therefore, by men who feel poetically. This much we may admit, I think, with perfect safety. Great art is produced by men who feel acutely and nobly; and it is in some sort an expression of this personal feeling. We can easily conceive that there may be a sufficiently marked distinction between such art, and that which is produced by men who do not feel at all, but who reproduce, though ever so accurately, yet coldly, like human mirrors, the scenes which pass before their eyes.

18. Secondly, Great Art is like the writing of Homer, and this chiefly because it has little of 'common nature' in it. We are not clearly informed what is meant by common nature in this passage. Homer seems to describe a great deal of what is common: — cookery, for instance, very carefully in all its processes. I suppose the passage in the *Iliad* which, on the whole, has excited most admiration, is that which describes a wife's sorrow at parting from her husband,[10] and a child's fright at its father's helmet;[11] and I hope, at least, the former feeling may be considered 'common nature.' But the true greatness of Homer's style is, doubtless, held by our author to consist in his imaginations of things not only uncommon but impossible (such as spirits in brazen armour, or monsters with heads of men and bodies of beasts), and in his occasional delineations of the human character and form in their utmost, or heroic, strength and beauty. We gather then on the whole that a painter in the Great Style must be enthusiastic, or full of emotion, and must paint the human form in its utmost strength and beauty, and perhaps certain impossible forms besides, liable by persons not in an equally enthusiastic state

10. See the *Iliad*, i.463ff.; ii,425ff.
11. *Ibid.*, vi,468ff.

of mind to be looked upon as in some degree absurd. This I presume to be Reynolds's meaning, and to be all that he intends us to gather from his comparison of the Great Style with the writings of Homer. But if that comparison be a just one in all respects, surely two other corollaries ought to be drawn from it, namely, — first, that these Heroic or Impossible images are to be mingled with others very unheroic and very possible; and, secondly, that in the representation of the Heroic or Impossible forms, the greatest care must be taken in *finishing the details*, so that a painter must not be satisfied with painting well the countenance and the body of his hero, but ought to spend the greatest part of his time (as Homer the greatest number of verses) in elaborating the sculptured pattern on his shield.[12]

19. Let us, however, proceed with our paper.

'One may very safely recommend a little more enthusiasm to the modern Painters; too much is certainly not the vice of the present age. The Italians seem to have been continually declining in this respect, from the time of Michael Angelo to that of Carlo Maratti,[13] and from thence to the very bathos of insipidity to which they are now sunk, so that there is no need of remarking, that where I mentioned the Italian painters in opposition to the Dutch, I mean not the moderns, but the heads of the old Roman and Bolognian Schools; nor did I mean to include, in my idea of an Italian painter, the Venetian school,[14] *which may be said to be the Dutch part of the Italian genius*. I have only to add a word of advice to the Painters, — that, however excellent they may be in painting naturally, they would not flatter themselves very much upon it; and to the Connoisseurs, that when they see a cat or a fiddle painted so finely, that, as the phrase is, it looks as if you could take it up, they would not for that reason immediately compare the Painter to Raffaelle and Michael Angelo.'

In this passage there are four points chiefly to be remarked. The first, that in the year 1759 the Italian painters were in our author's opinion, sunk in the very bathos of insipidity. The second, that the Venetian painters, *i.e.* Titian, Tintoret, and Veronese, are, in our author's opinion, to be classed with the Dutch; that is to say, are painters in a style 'in which the slowest intellect is always sure to succeed best.' Thirdly, that painting naturally is not a difficult thing, nor one on which a painter should pride himself. And, finally, that connoisseurs, seeing a cat or a fiddle successfully painted, ought not therefore immediately to compare the painter to Raphael or Michael Angelo.

Yet Raphael painted fiddles very carefully in the foreground of his St. Cecilia, — so carefully, that they quite look as if they might be taken up. So carefully, that I never yet looked at the picture without wishing that somebody *would* take them up, and out of the way. And I am under a very strong persuasion that Raphael did not think painting 'naturally' an easy thing. It will be well to examine into this point a little; and for the present, with the reader's permission, we will pass over the first two statements in this passage (touching the character of Italian art in 1759, and of Venetian art in general), and immediately examine some of the evidence existing as to the real dignity of 'natural' painting — that is to say, of painting carried to the point at which it reaches a deceptive appearance of reality.

12. For Homer's famous description of the shield of Achilles, see the *Iliad*, xviii.480ff.

13. That is, from 1564, when Michelangelo died, to the age of Carlo Maratta (or Maratti) (1625–1713), prolific producer of easel pictures, graceful but lacking in vigor.

14. The great painters of the Venetian School were Giorgione, Titian, Tintoretto, and Veronese. Owing to their rejection of the didactic, Ruskin gives them only a qualified admiration, and at times criticizes them with severity.

Chapter III

Of the Real Nature of Greatness of Style

1. I DOUBT not that the reader was ill-satisfied with the conclusion arrived at in the last chapter.[1] That 'great art' is art which represents what is beautiful and good, may not seem a very profound discovery; and the main question may be thought to have been all the time lost sight of, namely, 'What is beautiful, and what is good?' No; those are not the main, at least not the first questions; on the contrary, our subject becomes at once opened and simplified as soon as we have left those the *only* questions. For observe, our present task, according to our old plan, is merely to investigate the relative degrees of the *beautiful* in the art of different masters; and it is an encouragement to be convinced, first of all, that what is lovely will also be great, and what is pleasing, noble. Nor is the conclusion so much a matter of course as it at first appears, for, surprising as the statement may seem, all the confusion into which Reynolds has plunged both himself and his readers, in the essay we have been examining,[2] results primarily from a doubt in his own mind *as to the existence of beauty at all*. In the next paper I alluded to, No. 82 (which needs not, however, to be examined at so great length), he calmly attributes the whole influence of beauty to custom, saying, that 'he has no doubt, if we were more used to deformity than to beauty, deformity would then lose the idea now annexed to it, and take that of beauty; as if the whole world shall agree that Yes and No should change their meanings. Yes would then deny, and No would affirm!'

2. The world does, indeed, succeed — oftener than is, perhaps, altogether well for the world — in making Yes mean No, and No mean Yes. But the world has never succeeded, nor ever will, in making itself delight in black clouds more than in blue sky, or love the dark earth better than the rose that grows from it. Happily for mankind, beauty and ugliness are as positive in their nature as physical pain and pleasure, as light and darkness, or as life and death; and, though they may be denied or misunderstood in many fantastic ways, the most subtle reasoner will at last find that colour and sweetness are still attractive to him, and that no logic will enable him to think the rainbow sombre, or the violet scentless. But the theory that beauty was merely a result of custom was very common in Johnson's time. Goldsmith has, I think, expressed it with more force and wit than any other writer, in various passages of the *Citizen of the World*. And it was indeed, a curious retribution of the folly of the world of art, which for some three centuries had given itself recklessly to the pursuit of beauty, that at last it should be led to deny the very existence of what it had so morbidly and passionately sought. It was as if a child should leave its home to pursue the rainbow, and then, breathless and hopeless, declare that it did not exist. Nor is the lesson less useful which may be gained in observing the adoption of such a theory by Reynolds himself. It shows how completely an artist may be unconscious of the principles of his own work, and how he may be led by instinct to *do* all that is right, while he is misled by false logic to *say* all that is wrong. For nearly every word that Reynolds wrote was contrary to his own practice; he seems to have been born to teach all error by his precept, and all excellence by his example; he enforced with his lips generalization and idealism,

1. Entitled 'Of Realization.' The conclusion was that 'true criticism of art never can consist in the mere application of rules; it can be just only when it is founded on quick sympathy with the innumerable instincts and changeful efforts of human nature, chastened and guided by unchanging love of all things that God has created to be beautiful, and pronounced to be good.'

2. See Chapter I, 'Of the Received Opinions Touching the "Grand Style,"' note 2.

while with his pencil he was tracing the patterns of the dresses of the belles of his day; he exhorted his pupils to attend only to the invariable, while he himself was occupied in distinguishing every variation of womanly temper; and he denied the existence of the beautiful, at the same instant that he arrested it as it passed, and perpetuated it for ever.

3. But we must not quit the subject here. However inconsistently or dimly expressed, there is, indeed, some truth in that commonly accepted distinction between high and low art. That a thing should be beautiful is not enough; there is, as we said in the outset, a higher and lower range of beauty, and some ground for separating into various and unequal ranks painters who have, nevertheless, each in his several way, represented something that was beautiful or good.

Nor, if we would, can we get rid of this conviction. We have at all times some instinctive sense that the function of one painter is greater than that of another, even supposing each equally successful in his own way; and we feel that, if it were possible to conquer prejudice, and do away with the iniquities of personal feeling, and the insufficiencies of limited knowledge, we should all agree in this estimate, and be able to place each painter in his right rank, measuring them by a true scale of nobleness. We feel that the men in the higher classes of the scale would be, in the full sense of the word, Great, — men whom one would give much to see the faces of but for an instant; and that those in the lower classes of the scale (though none were admitted but who had true merit of some kind) would be very small men, not greatly exciting either reverence or curiosity. And with this fixed instinct in our minds, we permit our teachers daily to exhort their pupils to the cultivation of 'great art' — neither they nor we having any very clear notion as to what the greatness consists in: but sometimes inclining to think it must depend on the space of the canvas, and that art on a scale of 6 feet by 10 is something spiritually separated from that on a scale of 3 feet by 5; — sometimes holding it to consist in painting the nude body, rather than the body decently clothed; — sometimes being convinced that it is connected with the study of past history, and that the art is only great which represents what the painter never saw, and about which he knows nothing; — and sometimes being firmly persuaded that it consists in generally finding fault with, and endeavouring to mend, whatsoever the Divine Wisdom has made. All which various errors, having yet some motes and atoms of truth in the make of each of them, deserve some attentive analysis, for they come under that general law, — that 'the corruption of the best is the worst.' There are not *worse* errors going than these four; and yet the truth they contain, and the instinct which urges many to preach them, are at the root of all healthy growth in art. We ruin one young painter after another by telling him to follow great art, without knowing, ourselves, what greatness is; and yet the feeling that it verily *is* something, and that there are depths and breadths, shallows and narrows, in the matter, is all that we have to look to, if we would ever make our art serviceable to ourselves or others. To follow art for the sake of being a great man, and therefore to cast about continually for some means of achieving position or attracting admiration, is the surest way of ending in total extinction. And yet it is only by honest reverence for art itself, and by great self-respect in the practice of it, that it can be rescued from dilettantism, raised to approved honourableness, and brought to the proper work it has to accomplish in the service of man.

4. Let us therefore look into the facts of the thing, not with any metaphysical, or otherwise vain and troublesome effort at acuteness, but in a plain way; for the facts themselves are plain enough, and may be

plainly stated, only the difficulty is that out of these facts, right and left, the different forms of misapprehension branch into grievous complexity, and branch so far and wide, that if once we try to follow them, they will lead us quite from our mark into other separate, though not less interesting discussions. The best way will be, therefore, I think, to sketch out at once in this chapter, the different characters which really constitute 'greatness' of style, and to indicate the principal directions of the outbranching misapprehensions of them; then, in the succeeding chapters, to take up in succession those which need more talk about them, and follow out at leisure whatever inquiries they may suggest.

5. I. CHOICE OF NOBLE SUBJECT.— Greatness of style consists, then: first, in the habitual choice of subjects of thought which involve wide interests and profound passions, as opposed to those which involve narrow interests and slight passions. The style is greater or less in exact proportion to the nobleness of the interests and passions involved in the subject. The habitual choice of sacred subjects, such as the Nativity, Transfiguration, Crucifixion (if the choice be sincere), implies that the painter has a natural disposition to dwell on the highest thoughts of which humanity is capable; it constitutes him so far forth a painter of the highest order, as, for instance, Leonardo,[3] in his painting of the Last Supper: he who delights in representing the acts or meditations of great men, as, for instance, Raphael painting the School of Athens, is, so far forth, a painter of the second order: he who represents the passions and events of ordinary life, of the third. And in this ordinary life, he who represents deep thoughts and sorrows, as, for instance, Hunt,[4] in his Claudio and Isabella, and such other works, is of the highest rank in his sphere: and he who represents the slight malignities and passions of the drawing-room, as, for instance, Leslie,[5] of the second rank; he who represents the sports of boys, or simplicities of clowns, as Webster[6] or Teniers,[7] of the third rank; and he who represents brutalities and vices (for delight in them, and not for rebuke of them), of no rank at all, or rather of a negative rank, holding a certain order in the abyss.

6. The reader will, I hope, understand how much importance is to be attached to the sentence in the first parenthesis, 'if the choice be sincere'; for choice of subject is, of course, only available as a criterion of the rank of the painter, when it is made from the heart. Indeed, in the lower orders of painting, the choice is always made from such heart as the painter has; for his selection of the brawls of peasants or sports of children can, of course, proceed only from the fact that he has more sympathy with such brawls or pastimes than with nobler subjects. But the choice of the higher kind of subjects is often insincere; and may, therefore, afford no real criterion of the painter's rank. The greater number of men who have lately painted religious or heroic subjects have done so in mere ambition, because they had been taught that it was a good thing to be a 'high-art' painter; and the fact is that, in nine cases out of ten, the so-called historical or 'high-art' painter is a person infinitely inferior to the painter of flowers or still life. He is, in modern times, nearly always a man who has great vanity with-

3. Leonardo da Vinci (1452–1519), Italian painter, sculptor, architect, and engineer.

4. Holman Hunt (1827–1910), one of the English Pre-Raphaelite painters, much admired by Ruskin.

5. Charles Robert Leslie (1794–1859), born of American parents, and educated at the University of Pennsylvania, studied in London art schools, and became professor of painting at the Royal Academy (1848–52); he excelled in depicting fashionable life, with quiet humor.

6. Thomas Webster (1800–86) exhibited his work between 1823 and 1879; he was a member of the Royal Academy, and specialized in scenes of school and village life.

7. See *Crown of Wild Olive*, Lecture II, note 2.

out pictorial capacity, and differs from the landscape or fruit painter merely in misunderstanding and overestimating his own powers. He mistakes his vanity for inspiration, his ambition for greatness of soul, and takes pleasure in what he calls 'the ideal,' merely because he has neither humility nor capacity enough to comprehend the real.

7. But also observe, it is not enough even that the choice be sincere. It must also be wise. It happens very often that a man of weak intellect, sincerely desiring to do what is good and useful, will devote himself to high art subjects because he thinks them the only ones on which time and toil can be usefully spent, or, sometimes, because they are really the only ones he has pleasure in contemplating. But not having intellect enough to enter into the minds of truly great men, or to imagine great events as they really happened, he cannot become a great painter; he degrades the subjects he intended to honour, and his work is more utterly thrown away, and his rank as an artist in reality lower, than if he had devoted himself to the imitation of the simplest objects of natural history. The works of Overbeck[8] are a most notable instance of this form of error.

8. It must also be remembered, that in nearly all the great periods of art the choice of subject has not been left to the painter. His employer, — abbot, baron, or monarch, — determined for him whether he should earn his bread by making cloisters bright with choirs of saints, painting coats of arms on leaves of romances, or decorating presence-chambers with complimentary mythology; and his own personal feelings are ascertainable only by watching, in the themes assigned to him, what are the points in which he seems to take most pleasure. Thus, in the prolonged ranges of varied subjects with which Benozzo Gozzoli decorated the cloisters of Pisa, it is easy to see that love of simple domestic incident, sweet landscape, and glittering ornament, prevails slightly over the solemn elements of religious feeling, which, nevertheless, the spirit of the age instilled into him in such measure as to form a very lovely and noble mind, though still one of the second order. In the work of Orcagna, an intense solemnity and energy in the sublimest groups of his figures, fading away as he touches inferior subjects, indicates that his home was among the archangels, and his rank among the first of the sons of men: while Correggio,[9] in the sidelong grace, artificial smiles, and purple languors of his saints, indicates the inferior instinct which would have guided his choice in quite other directions, had it not been for the fashion of the age, and the need of the day.

9. It will follow, of course, from the above considerations, that the choice which characterizes the school of high art is seen as much in the treatment of a subject as in its selection, and that the expression of the thoughts of the persons represented will always be the first thing considered by the painter who worthily enters that highest school. For the artist who sincerely chooses the noblest subject will also choose chiefly to represent what makes that subject noble, namely, the various heroism or other noble emotions of the persons represented. If, instead of this, the artist seeks only to make his picture agreeable by the composition of its masses and colours, or by any other merely pictorial merit, as fine drawing of limbs, it is evident, not only that any other subject

8. Johann Friedrich Overbeck (1789–1869), German painter, leader of the German 'Pre-Raphaelite' movement in art, which attempted grandeur and nobility of conception in the painting of 'sacred subjects,' with rather dry and severe handling of line and color.

9. Benozzo Gozzoli (1420–97). — Orcagna (c. 1308–c.1368), painter sculptor, architect, and worker in mosaic. — Correggio (Antonio Allegri) (1494–1534), one of the vivid and audacious inventors in expression, and a master of foreshortening. Not all critics would agree with Ruskin's judgment of Correggio.

would have answered his purpose as well, but that he is unfit to approach the subject he has chosen, because he cannot enter into its deepest meaning, and therefore cannot in reality have chosen it for that meaning. Nevertheless, while the expression is always to be the first thing considered, all other merits must be added to the utmost of the painter's power: for until he can both colour and draw beautifully he has no business to consider himself a painter at all, far less to attempt the noblest subjects of painting; and, when he has once possessed himself of these powers, he will naturally and fitly employ them to deepen and perfect the impression made by the sentiment of his subject.

The perfect unison of expression, as the painter's main purpose, with the full and natural exertion of his pictorial power in the details of the work, is found only in the old Pre-Raphaelite periods, and in the modern Pre-Raphaelite school.[10] In the works of Giotto, Angelico, Orcagna, John Bellini, and one or two more, these two conditions of high art are entirely fulfilled, so far as the knowledge of those days enable them to be fulfilled; and in the modern Pre-Raphaelite school they are fulfilled nearly to the uttermost. Hunt's Light of the World is, I believe, the most perfect instance of expressional purpose with technical power, which the world has yet produced.

10. Now in the Post-Raphaelite period of ancient art, and in the spurious high art of modern times, two broad forms of error divide the schools: the one consisting in (A) the superseding of expression by technical excellence, and the other in (B) the superseding of technical excellence by expression.

(A). Superseding expression by technical excellence. — This takes place most frankly, and therefore most innocently, in the work of the Venetians.[11] They very nearly ignore expression altogether, directing their aim exclusively to the rendering of external truths of colour and form. Paul Veronese will make the Magdalene wash the feet of Christ with a countenance as absolutely unmoved as that of any ordinary servant bringing a ewer to her master, and will introduce the supper at Emmaus[12] as a background to the portraits of two children playing with a dog. Of the wrongness or rightness of such a proceeding we shall reason in another place; at present we have to note it merely as displacing the Venetian work from the highest or expressional rank of art. But the error is generally made in a more subtle and dangerous way. The artist deceives himself into the idea that he is doing all he can to elevate his subject by treating it under rules of art, introducing into it accurate science, and collecting for it the beauties of (so-called) ideal form; whereas he may, in reality, be all the while sacrificing his subject to his own vanity or pleasure, and losing truth, nobleness, and impressiveness for the sake of delightful lines or creditable pedantries.

11. (B). Superseding technical excellence by expression. — This is usually done under the influence of another kind of vanity. The artist desires that men should think he has an elevated soul, affects to despise the ordinary excellence of art, contemplates with separated egotism the course of his own imaginations or sensations, and refuses to look at the real facts round about him, in order that he

10. The 'old' Pre-Raphaelite 'school' was of course that school of Italian painters before Raphael (1483–1520); the modern Pre-Raphaelites, a group of young artists and men of letters, sought to resist the existing conventions in art and literature by turning to the primitivism and pious copying of nature which they thought was characteristic of early Italian art; they came to public notice shortly after 1848. Ruskin became one of their stanchest champions, and accepted their work with great enthusiasm, though not always critically, as may be seen in his extravagant praise of Hunt's Light of the World.

11. See Ruskin's chapter on 'The "Grand Style,"' note 14.

12. See *Luke*, xxiv,12.

may adore at leisure the shadow of himself. He lives in an element of what he calls tender emotions and lofty aspirations; which are, in fact, nothing more than very ordinary weaknesses or instincts, contemplated through a mist of pride. A large range of modern German art comes under this head.

A more interesting and respectable form of this error is fallen into by some truly earnest men, who, finding their powers not adequate to the attainment of great artistical excellence, but adequate to rendering, up to a certain point, the expression of the human countenance, devote themselves to that object alone, abandoning effort in other directions, and executing the accessories of their pictures feebly or carelessly. With these are associated another group of philosophical painters, who suppose the artistical merits of other parts *adverse* to the expression, as drawing the spectator's attention away from it, and who paint in grey colour, and imperfect light and shade, by way of enforcing the purity of their conceptions. Both these classes of conscientious but narrow-minded artists labour under the same grievous mistake of imagining that wilful fallacy can ever be either pardonable or helpful. They forget that colour, if used at all, must be either true or false, and that what *they* call chastity, dignity, and reserve, is, to the eye of any person accustomed to nature, pure, bold, and impertinent falsehood. It does not, in the eyes of any soundly minded man, exalt the expression of a female face that the cheeks should be painted of the colour of clay, nor does it in the least enhance his reverence for a saint to find the scenery around him deprived, by his presence, of sunshine. It is an important consolation, however, to reflect that no artist ever fell into any of these last three errors (under head B.) who had really the capacity of becoming a great painter. No man ever despised colour who could produce it; and the error of these sentimentalists and philosophers is not so much in the choice of their manner of painting, as in supposing themselves capable of painting at all. Some of them might have made efficient sculptors, but the greater number had their mission in some other sphere than that of art, and would have found, in works of practical charity, better employment for their gentleness and sentimentalism, than in denying to human beauty its colour, and to natural scenery its light; in depriving heaven of its blue, and earth of its bloom, valour of its glow, and modesty of its blush.

12. II. Love of Beauty. — The second characteristic of the great school of art is, that it introduces in the conception of its subject as much beauty as is possible, consistently with truth.[13]

13. As here, for the first time, I am obliged to use the terms Truth and Beauty in a kind of opposition, I must therefore stop for a moment to state clearly the relation of these two qualities of art; and to protest against the vulgar and foolish habit of confusing truth and beauty with each other. People with shallow powers of thought, desiring to flatter themselves with the sensation of having attained profundity, are continually doing the most serious mischief by introducing confusion into plain matters, and then valuing themselves on being confounded. Nothing is more common than to hear people who desire to be thought philosophical, declare that 'beauty is truth,' and 'truth is beauty.' I would most earnestly beg every sensible person who hears such an assertion made to nip the germinating philosopher in his ambiguous bud; and beg him, if he really believes his own assertion, never thenceforward to use two words for the same thing. The fact is, truth and beauty are entirely distinct, though often related, things. One is a property of statements, the other of objects. The statement that 'two and two make four' is true, but it is neither beautiful nor ugly, for it is invisible; a rose is lovely, but it is neither true nor false, for it is silent. That which shows nothing cannot be fair, and that which asserts nothing cannot be false. Even the ordinary use of the words false and true as applied to artificial and real things, is inaccurate. An artificial rose is not a 'false' rose, it is not a rose at all. The falseness is in the person who states, or induces the belief, that it *is* a rose.

For instance, in any subject consisting of a number of figures, it will make as many of those figures beautiful as the faithful representation of humanity will admit. It will not deny the facts of ugliness or decrepitude, or relative inferiority and superiority of feature as necessarily manifested in a crowd, but it will, so far as it is in its power, seek for and dwell upon the fairest forms, and in all things insist on the beauty that is in them, not on the ugliness. In this respect, schools of art become higher in exact proportion to the degree in which they apprehend and love the beautiful. Thus, Angelico, intensely loving all spiritual beauty, will be of the highest rank; and Paul Veronese and Correggio, intensely loving physical and corporeal beauty, of the second rank; and Albert Dürer,[14] Rubens, and in general the Northern artists, apparently insensible to beauty, and caring only for truth, whether shapely or not, of the third rank; and Teniers and Salvator, Caravaggio, and other such worshippers of the depraved, of no rank, or, as we said before, of a certain order in the abyss.

13. The corruptions of the schools of high art, so far as this particular quality is concerned, consists in the sacrifice of truth to beauty. Great art dwells on all that is beautiful; but false art omits or changes all that is ugly. Great art accepts Nature as she is, but directs the eyes and thoughts to what is most perfect in her; false art saves itself the trouble of direction by removing or altering whatever it thinks objectionable. The evil results of which proceeding are twofold.

14. First. That beauty deprived of its proper foils and adjuncts ceases to be enjoyed as beauty, just as light deprived of all shadow ceases to be enjoyed as light. A white canvass cannot produce an effect of sunshine; the painter must darken it in some places before he can make it look luminous in others; nor can an uninterrupted succession of beauty produce the true effect of beauty; it must be foiled by inferiority before its own power can be developed. Nature has for the most part mingled her inferior and nobler elements as she mingles sunshine with shade, giving due use and influence to both, and the painter who chooses to remove the shadow, perishes in the burning desert he has created. The truly high and beautiful art of Angelico is continually refreshed

Now, therefore, in things concerning art, the words true and false are only to be rightly used while the picture is considered as a statement of facts. The painter asserts that this which he has painted is the form of a dog, a man, or a tree. If it be *not* the form of a dog, a man, or a tree, the painter's statement is false; and therefore we justly speak of a false line, or false colour; not that any line or colour can in themselves be false, but they become so when they convey a statement that they resemble something which they do *not* resemble. But the beauty of the lines or colours is wholly independent of any such statement. They may be beautiful lines, though quite inaccurate, and ugly lines, though quite faithful. A picture may be frightfully ugly, which represents with fidelity some base circumstance of daily life; and a painted window may be exquisitely beautiful, which represents men with eagles' faces, and dogs with blue heads and crimson tails (though, by the way, this is not in the strict sense *false* art, as we shall see hereafter, inasmuch as it means no assertion that men ever *had* eagles' faces). If this were not so, it would be impossible to sacrifice truth to beauty; for to attain the one would always be to attain the other. But, unfortunately, this sacrifice is exceedingly possible, and it is chiefly this which characterises the false schools of high art, so far as high art consists in the pursuit of beauty. For although truth and beauty are independent of each other, it does not follow that we are at liberty to pursue whichever we please. They are indeed separable, but it is wrong to separate them: they are to be sought together in the order of their worthiness; that is to say, truth first, and beauty afterwards. High art differs from low art in possessing an excess of beauty in addition to its truth, not in possessing an excess of beauty inconsistent with truth. [Ruskin's note.]

14. Albrecht Dürer (1471–1528), great German painter. — Ruskin's judgments of Dürer, Rubens, and other 'Northern artists,' are of course marked by his puritan asceticism.

and strengthened by his frank portraiture of the most ordinary features of his brother monks, and of the recorded peculiarities of ungainly sanctity; but the modern German and Raphaelesque schools lose all honour and nobleness in barber-like admiration of handsome faces, and have, in fact, no real faith except in straight noses and curled hair. Paul Veronese opposes the dwarf to the soldier, and the negress to the queen; Shakspeare places Caliban beside Miranda, and Autolycus beside Perdita; but the vulgar idealist withdraws his beauty to the safety of the saloon,[15] and his innocence to the seclusion of the cloister; he pretends that he does this in delicacy of choice and purity of sentiment, while in truth he has neither courage to front the monster, nor wit enough to furnish the knave.

15. It is only by the habit of representing faithfully all things, that we can truly learn what is beautiful, and what is not. The ugliest objects contain some element of beauty; and in all, it is an element peculiar to themselves, which cannot be separated from their ugliness, but must either be enjoyed together with it, or not at all. The more a painter accepts nature as he finds it, the more unexpected beauty he discovers in what he at first despised; but once let him arrogate the right of rejection, and he will gradually contract his circle of enjoyment, until what he supposed to be nobleness of selection ends in narrowness of perception. Dwelling perpetually upon one class of ideas, his art becomes at once monstrous and morbid; until at last he cannot faithfully represent even what he chooses to retain; his discrimination contracts into darkness, and his fastidiousness fades into fatuity.

High art, therefore, consists neither in altering, nor in improving nature; but in seeking throughout nature for 'whatsoever things are lovely, and whatsoever things are pure';[16] in loving these, in displaying to the utmost of the painter's power such loveliness as is in them, and directing the thoughts of others to them by winning art, or gentle emphasis. Of the degree in which this can be done, and in which it may be permitted to gather together, without falsifying, the finest forms or thoughts, so as to create a sort of perfect vision, we shall have to speak hereafter: at present, it is enough to remember that art (*cæteris paribus*)[17] is great in exact proportion to the love of beauty shown by the painter, provided that love of beauty forfeit no atom of truth.

16. III. SINCERITY. — The next[18] characteristic of great art is that it includes the largest possible quantity of Truth in the most perfect possible harmony. If it were possible for art to give all the truths of nature, it ought to do it. But this is not possible. Choice must always be made of some facts which *can* be represented, from among others which must be passed by in silence, or even, in some respects, misrepresented. The inferior artist chooses unimportant and scattered truths; the great artist chooses the most necessary first, and afterwards the most consistent with these, so as to obtain the greatest possible and most harmonious *sum*. For instance, Rembrandt always chooses to represent the exact force with which the light on the most illumined part of an object is opposed to its obscurer portions. In order to obtain this, in most cases, not very important truth, he sacrifices the light and colour of five sixths of his picture; and the expression of every character of objects which depends on tenderness of shape or tint. But he obtains his single truth, and what picturesque and forcible expression is dependent upon it, with magnificent skill and subtlety. Veronese,

15. *saloon*: in its original sense, a spacious apartment for the reception of guests or for works of art.

16. *Philippians*, iv,8.

17. 'other things being equal.'

18. I name them in order of *in*creasing, not decreasing, importance. [Ruskin's note.]

on the contrary, chooses to represent the great relations of visible things to each other, to the heaven above, and to the earth beneath them. He holds it more important to show how a figure stands relieved from delicate air, or marble wall; how as a red, or purple, or white figure, it separates itself, in clear discernibility, from things not red, nor purple, nor white; how infinite daylight shines round it; how innumerable veils of faint shadow invest it; how its blackness and darkness are, in the excess of their nature, just as limited and local as its intensity of light: all this, I say, he feels to be more important than showing merely the exact *measure* of the spark of sunshine that gleams on a dagger-hilt, or glows on a jewel. All this, moreover, he feels to be harmonious, — capable of being joined in one great system of spacious truth. And with inevitable watchfulness, inestimable subtlety, he unites all this in tenderest balance, noting in each hair's-breadth of colour, not merely what its rightness or wrongness is in itself, but what its relation is to every other on his canvas; restraining, for truth's sake, his exhaustless energy; reining back, for truth's sake, his fiery strength; veiling, before truth, the vanity of brightness; penetrating, for truth, the discouragement of gloom; ruling his restless invention with a rod of iron; pardoning no error, no thoughtlessness, no forgetfulness; and subduing all his powers, impulses, and imaginations, to the arbitrement of a merciless justice, and the obedience of an incorruptible verity.

I give this instance with respect to colour and shade; but, in the whole field of art, the difference between the great and inferior artists is of the same kind, and may be determined at once by the question, which of them conveys the largest sum of truth?

17. It follows from this principle, that in general all *great* drawing is *distinct* drawing; for truths which are rendered indistinctly might, for the most part, as well not be rendered at all. There are, indeed, certain facts of mystery, and facts of indistinctness, in all objects, which must have their proper place in the general harmony, and the reader will presently find me, when we come to that part of our investigation, telling him that all good drawing must in some sort be *in*distinct. We may, however, understand this apparent contradiction, by reflecting that the highest knowledge always involves a more advanced perception of the fields of the unknown; and, therefore, it may most truly be said, that to know anything well involves a profound sensation of ignorance, while yet it is equally true that good and noble knowledge is distinguished from vain and useless knowledge chiefly by its clearness and distinctness, and by the vigorous consciousness of what is known and what is not.

So in art. The best drawing involves a wonderful perception and expression of indistinctness; and yet all noble drawing is separated from the ignoble by its distinctness, by its fine expression and firm assertion of *Something*; whereas the bad drawing, without either firmness or fineness, expresses and asserts *Nothing*. The first thing, therefore, to be looked for as a sign of noble art, is a clear consciousness of what is drawn and what is not; the bold statement, and frank confession — '*This* I know,' '*that* I know not'; and, generally speaking, all haste, slurring, obscurity, indecision, are signs of low art, and all calmness, distinctness, luminousness, and positiveness, of high art.

18. It follows, secondly, from this principle, that as the great painter is always attending to the sum and harmony of his truths rather than to one or the other of any group, a quality of Grasp is visible in his work, like the power of a great reasoner over his subject, or a great poet over his conception, manifesting itself very often in missing out certain details or less truths (which, though good in themselves, he finds are in the way of others), and in

a sweeping manner of getting the beginnings and ends of things shown at once, and the squares and depths rather than the surfaces: hence, on the whole, a habit of looking at large masses rather than small ones; and even a physical largeness of handling, and love of working, if possible, on a large scale; and various other qualities, more or less imperfectly expressed by such technical terms as breadth, massing, unity, boldness, &c., all of which are, indeed, great qualities when they mean breadth of truth, weight of truth, unity of truth, and courageous assertion of truth; but which have all their correlative errors and mockeries, almost universally mistaken for them, — the breadth which has no contents, the weight which has no value, the unity which plots deception, and the boldness which faces out fallacy.

19. And it is to be noted especially respecting largeness of scale, that though for the most part it is characteristic of the more powerful masters, they having both more invention wherewith to fill space (as Ghirlandajo[19] wished that he might paint all the walls of Florence), and, often, an impetuosity of mind which makes them like free play for hand and arm (besides that they usually desire to paint everything in the foreground of their picture of the natural size), yet, as this largeness of scale involves the placing of the picture at a considerable distance from the eye, and this distance involves the loss of many delicate details, and especially of the subtle lines of expression in features, it follows that the masters of refined detail and human expression are apt to prefer a small scale to work upon; so that the chief masterpieces of expression which the world possesses are small pictures by Angelico, in which the figures are rarely more than six or seven inches high; in the best works of Raphael and Leonardo the figures are almost always less than life; and the best works of Turner do not exceed the size of 18 inches by 12.

20. As its greatness depends on the sum of truth, and this sum of truth can always be increased by delicacy of handling, it follows that all great art must have this delicacy to the utmost possible degree. This rule is infallible and inflexible. All coarse work is the sign of low art. Only, it is to be remembered, that coarseness must be estimated by the distance from the eye; it being necessary to consult this distance, when great, by laying on touches which appear coarse when seen near; but which, so far from being coarse, are, in reality, more delicate in a master's work than the finest close handling, for they involve a calculation of result, and are laid on with a subtlety of sense precisely correspondent to that with which a good archer draws his bow; the spectator seeing in the action nothing but the strain of the strong arm, while there is, in reality, in the finger and eye, an ineffably delicate estimate of distance, and touch on the arrow plume. And, indeed, this delicacy is generally quite perceptible to those who know what the truth is, for strokes by Tintoret or Paul Veronese, which were done in an instant, and look to an ignorant spectator merely like a violent dash of loaded colour (and are, as such, imitated by blundering artists), are, in fact, modulated by the brush and finger to that degree of delicacy that no single grain of the colour could be taken from the touch without injury; and little golden particles of it, not the size of a gnat's head, have important share and function in the balances of light in a picture perhaps fifty feet long. Nearly *every* other rule applicable to art has some exception but this. This has absolutely none. All great art is delicate art, and all coarse art is bad art. Nay, even to a certain extent, all *bold* art is bad art; for boldness is not the proper word to apply to the courage and swiftness of a great master, based on knowledge, and coupled with fear and love.

19. Domenico Ghirlandajo (1449–94), Florentine painter, one of the greatest masters of fresco compositions.

There is as much difference between the boldness of the true and the false masters, as there is between the courage of a pure woman and the shamelessness of a lost one.

21. IV. INVENTION. — The last characteristic of great art is that it must be inventive, that is, be produced by the imagination. In this respect, it must precisely fulfil the definition already given of poetry; and not only present grounds for noble emotion, but furnish these grounds by *imaginative power*. Hence there is at once a great bar fixed between the two schools of Lower and Higher Art. The lower merely copies what is set before it, whether in portrait, landscape, or still-life; the higher either entirely imagines its subject, or arranges the materials presented to it, so as to manifest the imaginative power in all the three phases which have been already explained in the second volume.

And this was the truth which was confusedly present in Reynolds's mind when he spoke, as above quoted, of the difference between Historical and Poetical painting. *Every relation of the plain facts which the painter saw* is proper *historical* painting.[20] If those facts are unimportant (as that he saw a gambler quarrel with another gambler, or a sot enjoying himself with another sot), then the history is trivial; if the facts are important (as that he saw such and such a great man look thus, or act thus, at such a time), then the history is noble: in each case perfect truth of narrative being supposed, otherwise the whole thing is worthless, being neither history nor poetry, but plain falsehood. And farther, as greater or less elegance and precision are manifested in the relation or painting of the incidents, the merit of the work varies; so that, what with difference of subject, and what with difference of treatment, historical painting falls or rises in changeful eminence, from Dutch trivialities [21] to a Velasquez [22] portrait, just as historical talking or writing varies in eminence, from an old woman's story-telling up to Herodotus. Besides which, certain operations of the imagination come into play inevitably, here and there, so as to touch the history with some light of poetry, that is, with some light shot forth of the narrator's mind, or brought out by the way he has put the accidents together: and wherever the imagination has thus had anything to do with the matter at all (and it must be somewhat cold work where it has not), then, the confines of the lower and higher schools touching each other, the work is coloured by both; but there is no reason why, therefore, we should in the least confuse the historical and poetical characters, any more than that we should confuse blue with crimson, because they may overlap each other, and produce purple.

22. Now, historical or simply narrative art is very precious in its proper place and way, but it is never *great* art until the poetical or imaginative power touches it; and in proportion to the stronger manifestation of this power, it becomes greater and greater, while the highest art is purely imaginative, all its materials being wrought into their form by invention; and it differs, therefore, from the simple historical painting, exactly as Wordsworth's stanza, above quoted, differs from Saussure's plain narrative of the parallel fact; and the imaginative painter differs from the historical painter in the manner that Wordsworth differs from Saussure.[23]

23. Farther, imaginative art always *includes* historical art; so that, strictly speaking, according to the analogy above used, we meet with the pure blue, and with the crimson ruling the blue and changing it

20. Compare my Edinburgh Lectures, lecture iv. p.218, et seq. (2d edition). [Ruskin's note.]

21. See Ruskin's chapter on 'The "Grand Style,"' note 4.

22. Velasquez (1599–1660), greatest of Spanish painters.

23. See Ruskin's chapter on 'The "Grand Style,"' notes 8 and 9.

into kingly purple, but not with the pure crimson: for all imagination must deal with the knowledge it has before accumulated; it never produces anything but by combination or contemplation. Creation, in the full sense, is impossible to it. And the mode in which the historical faculties are included by it is often quite simple, and easily seen. Thus, in Hunt's great poetical picture of the Light of the World, the whole thought and arrangement of the picture being imaginative, the several details of it are wrought out with simple portraiture; the ivy, the jewels, the creeping plants, and the moonlight being calmly studied or remembered from the things themselves. But of all these special ways in which the invention works with plain facts, we shall have to treat farther afterwards.

24. And now, finally, since this poetical power includes the historical, if we glance back to the other qualities required in great art, and put all together, we find that the sum of them is simply the sum of all the powers of man. For as (1) the choice of the high subject involves all conditions of right moral choice, and as (2) the love of beauty involves all conditions of right admiration, and as (3) the grasp of truth involves all strength of sense, evenness of judgment, and honesty of purpose, and as (4) the poetical power involves all swiftness of invention, and accuracy of historical memory, the sum of all these powers is the sum of the human soul. Hence we see why the word 'Great' is used of this art. It is literally great. It compasses and calls forth the entire human spirit, whereas any other kind of art, being more or less small or narrow, compasses and calls forth only *part* of the human spirit. Hence the idea of its magnitude is a literal and just one, the art being simply less or greater in proportion to the number of faculties it exercises and addresses.[24] And this is the ultimate meaning of the definition I gave of it long ago, as containing the 'greatest number of the greatest ideas.'

25. Such, then, being the characters required in order to constitute high art, if the reader will think over them a little, and over the various ways in which they may be falsely assumed, he will easily perceive how spacious and dangerous a field of discussion they open to the ambitious critic, and of error to the ambitious artist; he will see how difficult it must be, either to distinguish what is truly great art from the mockeries of it, or to rank the real artists in anything like a progressive system of greater and less. For it will have been observed that the various qualities which form greatness are partly inconsistent with each other (as some virtues are, docility and firmness for instance), and partly independent of each other; and the fact is, that artists differ not more by mere capacity, than by the component *elements* of their capacity, each possessing in very different proportions the several attributes of greatness; so that, classed by one kind of merit, as, for instance, purity of expression, Angelico will stand highest; classed by another, sincerity of manner, Veronese will stand highest; classed by another, love of beauty, Leonardo will stand highest; and so on: hence arise continual disputes and misunderstandings among those who think that high art must always be one and the same, and that great artists ought to unite all great attributes in an equal degree.

26. In one of the exquisitely finished tales of Marmontel, a company of critics are received at dinner by the hero of the story, an old gentleman, somewhat vain of his *acquired* taste, and his niece, by whose incorrigible *natural* taste he is seriously disturbed and tormented. During the entertainment, 'On parcourut tous les genres de littérature, et pour donner plus d'essor à l'érudition et à la critique, on mit sur le tapis cette question toute neuve, sçavoir, lequel méritoit la préférence de

24. Compare Stones of Venice, vol.iii. chap.iv. §7, and §21. [Ruskin's note.]

Corneille ou de Racine. L'on disoit même là-dessus les plus belles choses du monde, lorsque la petite nièce, qui n'avoit pas dit un mot, s'avisa de demander naïvement lequel des deux fruits, de l'orange ou de la pêche, avoit le goût le plus exquis et méritoit le plus d'éloges. Son oncle rougit de sa simplicité, et les convives baissèrent tous les yeux sans daigner répondre à cette bêtise. Ma nièce, dit Fintac, à votre âge, il faut sçavoir écouter, et se taire.' [25]

I cannot close this chapter with shorter or better advice to the reader, than merely, whenever he hears discussions about the relative merits of great masters, to remember the young lady's question. It is, indeed, true that there *is* a relative merit, that a peach is nobler than a hawthorn berry, and still more a hawthorn berry than a bead of the nightshade; but in each rank of fruits, as in each rank of masters, one is endowed with one virtue, and another with another; their glory is their dissimilarity, and they who propose to themselves in the training of an artist that he should unite the colouring of Tintoret, the finish of Albert Durer, and the tenderness of Correggio, are no wiser than a horticulturist would be, who made it the object of his labour to produce a fruit which should unite in itself the lusciousness of the grape, the crispness of the nut, and the fragrance of the pine.

27. And from these considerations one most important practical corollary is to be deduced, with the good help of Mademoiselle Agathe's simile, namely, that the greatness or smallness of a man is, in the most conclusive sense, determined for him at his birth, as strictly as it is determined for a fruit whether it is to be a currant or an apricot. Education, favourable circumstances, resolution, and industry can do much; in a certain sense they do *everything*; that is to say, they determine whether the poor apricot shall fall in the form of a green bead, blighted by the east wind, and be trodden under foot, or whether it shall expand into tender pride, and sweet brightness of golden velvet. But apricot out of currant, — great man out of small, — did never yet art or effort make; and, in a general way, men have their excellence nearly fixed for them when they are born; a little cramped and frost-bitten on one side, a little sun-burnt and fortune-spotted on the other, they reach, between good and evil chances, such size and taste as generally belong to the men of their calibre, and, the small in their serviceable bunches, the great in their golden isolation, have, these no cause for regret, nor those for disdain.

28. Therefore it is, that every system of teaching is false which holds forth 'great art' as in any wise to be taught to students, or even to be aimed at by them. Great art is precisely that which never was, nor will be taught, it is preeminently and finally the expression of the spirits of great men; so that the only wholesome teaching is that which simply endeavours to fix those characters of nobleness in the pupil's mind, of which it seems easily susceptible; and without holding out to him, as a possible or even probable result, that he should ever paint like Titian, or carve like Michael Angelo, enforces upon him the manifest possibility, and assured duty, of endeavouring to draw in a manner at least honest and intelligible; and cultivates in him those general charities of heart, sincerities of thought, and graces of habit

25. See Jean François Marmontel (1723–99), *Contes moraux*, 'Le Connaisseur' (*Moral Tales*, 'The Connoisseur'): 'They ran through all kinds of literature; and in order to give more scope to erudition and criticism, they brought on the carpet this entirely new question, *viz.* "Which merited the preference, Corneille or Racine?" They said also on the subject the finest things in the world, when the little niece, who had not spoken a word, took it into her head to ask simply which of the two fruits, the orange or the peach, had the most exquisite taste, and merited the most commendation? Her uncle blushed at her simplicity, and the guests all looked down without deigning to reply to this idle foolery. "Niece," said Fintac, "at your age one should hear and hold one's tongue."'

which are likely to lead him, throughout life, to prefer openness to affectation, realities to shadows, and beauty to corruption.

Chapter XII

Of the Pathetic Fallacy

1. German dulness, and English affectation, have of late much multiplied among us the use of two of the most objectionable words that were ever coined by the troublesomeness of metaphysicians, — namely, 'Objective' and 'Subjective.'[1]

No words can be more exquisitely, and in all points, useless; and I merely speak of them that I may, at once and for ever, get them out of my way, and out of my reader's. But to get that done, they must be explained.

The word 'Blue,' say certain philosophers, means the sensation of colour which the human eye receives in looking at the open sky, or at a bell gentian.

Now, say they farther, as this sensation can only be felt when the eye is turned to the object, and as, therefore, no such sensation is produced by the object when nobody looks at it, therefore the thing, when it is not looked at, is not blue; and thus (say they) there are many qualities of things which depend as much on something else as on themselves. To be sweet, a thing must have a taster; it is only sweet while it is being tasted, and if the tongue had not the capacity of taste, then the sugar would not have the quality of sweetness.

And then they agree that the qualities of things which thus depend upon our perception of them, and upon our human nature as affected by them, shall be called Subjective; and the qualities of things which they always have, irrespective of any other nature, as roundness or squareness, shall be called Objective.

From these ingenious views the step is very easy to a farther opinion, that it does not much matter what things are in themselves, but only what they are to us; and that the only real truth of them is their appearance to, or effect upon, us. From which position, with a hearty desire for mystification, and much egotism, selfishness, shallowness, and impertinence, a philosopher may easily go so far as to believe, and say, that everything in the world depends upon his seeing or thinking of it, and that nothing, therefore, exists, but what he sees or thinks of.

2. Now, to get rid of all these ambiguities and troublesome words at once, be it observed that the word 'Blue' does *not* mean the *sensation* caused by a gentian on the human eye; but it means the *power* of producing that sensation: and this power is always there, in the thing, whether we are there to experience it or not, and would remain there though there were not left a man on the face of the earth. Precisely in the same way gunpowder has a power of exploding. It will not explode if you put no match to it. But it has always the power of so exploding, and is therefore called an explosive compound, which it very positively and assuredly is, whatever philosophy may say to the contrary.

In like manner, a gentian does not produce the sensation of blueness if you don't look at it. But it has always the power of doing so; its particles being everlastingly so arranged by its Maker. And, therefore, the gentian and the sky are always verily blue, whatever philosophy may say to the contrary; and if you do not see them blue when you look at them, it is not their fault but yours.[2]

1. Terms used frequently in the transcendental and idealistic philosophies of Fichte, Schelling, Hegel, and of Kant, the father of their general metaphysical outlook. Ruskin's master, Carlyle, was partly responsible for the wide use of the terms in 19th-century England. See Carlyle's essays on Novalis, on 'The State of German Literature,' etc.

2. It is quite true, that in all qualities involving sensation, there may be a doubt whether different people receive the same sensation from the

3. Hence I would say to these philosophers: If, instead of using the sonorous phrase, 'It is objectively so,' you will use the plain old phrase, 'It *is* so'; and if instead of the sonorous phrase, 'It is subjectively so,' you will say, in plain old English, 'It does so,' or 'It seems so to me,' you will, on the whole, be more intelligible to your fellow-creatures; and besides, if you find that a thing which generally 'does so' to other people (as a gentian looks blue to most men), does *not* so to you, on any particular occasion, you will not fall into the impertinence of saying, that the thing is not so, or did not so, but you will say simply (what you will be all the better for speedily finding out), that something is the matter with you. If you find that you cannot explode the gunpowder, you will not declare that all gunpowder is subjective, and all explosion imaginary, but you will simply suspect and declare yourself to be an ill-made match. Which, on the whole, though there may be a distant chance of a mistake about it, is, nevertheless, the wisest conclusion you can come to until further experiment.[3]

4. Now, therefore, putting these tiresome and absurd words quite out of our way, we may go on at our ease to examine the point in question, — namely, the difference between the ordinary, proper, and true appearances of things to us; and the extraordinary, or false appearances, when we are under the influence of emotion, or contemplative fancy;[4] false appearances, I say, as being entirely unconnected with any real power or character in the object, and only imputed to it by us.

For instance —

'The spendthrift crocus, bursting through the mould
Naked and shivering, with his cup of gold.'[5]

This is very beautiful, and yet very untrue. The crocus is not a spendthrift, but a hardy plant; its yellow is not gold, but saffron. How is it that we enjoy so much the having it put into our heads that it is anything else than a plain crocus?

It is an important question. For, throughout our past reasonings about art, we have always found that nothing could be good or useful, or ultimately pleasurable, which was untrue. But here is something pleasurable in written poetry, which

same thing (compare Part II.sect.i.Ch v.§ 6); but, though this makes such facts not distinctly explicable, it does not alter the facts themselves I derive a certain sensation, which I call sweetness, from sugar. That is a fact. Another person feels a sensation, which *he* also calls sweetness, from sugar. That is also a fact. The sugar's power to produce these two sensations, which we suppose to be, and which are, in all probability, very nearly the same in both of us, and, on the whole, in the human race, is its sweetness. [Ruskin's note.]

3. In fact (for I may as well, for once, meet our German friends in their own style), all that has been objected to us on this subject seems subject to this great objection; that the subjection of all things (subject to no exceptions) to senses which are, in us, both subject and object, and objects of perpetual contempt, cannot but make it our ultimate object to subject *ourselves* to the senses, and to remove whatever objections existed to such subjection. So that, finally, that which is the subject of examination or object of attention, uniting thus in itself the characters of subness and obness (so that, that which has no obness in it should be called sub-subjective, or a sub-subject, and that which has no subness in it should be called upper or ober-objective, or an ob object); and we also, who suppose ourselves the objects of every arrangement, and are certainly the subjects of every sensual impression, thus uniting in ourselves, in an obverse or adverse manner, the characters of obness and subness, must both become metaphysically dejected or rejected, nothing remaining in *us* objective, but subjectivity, and the very objectivity of the object being lost in the abyss of this subjectivity of the Human.

There is, however, some meaning in the above sentence, if the reader cares to make it out; but in a pure German sentence of the highest style there is often none whatever. See Appendix II. 'German Philosophy.' [Ruskin's note.]

4. Contemplative, in the sense explained in Part III. Sec. ii. Chap. iv. [Ruskin's note.]

5. Holmes (Oliver Wendell), quoted by Miss Mitford in her *Recollections of a Literary Life*. [Ruskin's note.]

is nevertheless *un*true. And what is more, if we think over our favourite poetry, we shall find it full of this kind of fallacy, and that we like it all the more for being so.

5. It will appear also, on consideration of the matter, that this fallacy is of two principal kinds. Either, as in this case of the crocus, it is the fallacy of wilful fancy, which involves no real expectation that it will be believed; or else it is a fallacy caused by an excited state of the feelings, making us, for the time, more or less irrational. Of the cheating of the fancy we shall have to speak presently; but, in this chapter, I want to examine the nature of the other error, that which the mind admits when affected strongly by emotion. Thus, for instance, in *Alton Locke*, —

'They rowed her in across the rolling foam —
The cruel, crawling foam.'[6]

The foam is not cruel, neither does it crawl. The state of mind which attributes to it these characters of a living creature is one in which the reason is unhinged by grief. All violent feelings have the same effect. They produce in us a falseness in all our impressions of external things, which I would generally characterize as the 'pathetic fallacy.'

6. Now we are in the habit of considering this fallacy as eminently a character of poetical description, and the temper of mind in which we allow it, as one eminently poetical, because passionate. But, I believe, if we look well into the matter, that we shall find the greatest poets do not often admit this kind of falseness, — that it is only the second order of poets who much delight in it.[7]

Thus, when Dante describes the spirits falling from the bank of Acheron 'as dead leaves flutter from a bough,'[8] he gives the most perfect image possible of their utter lightness, feebleness, passiveness, and scattering agony of despair, without, however, for an instant losing his own clear perception that *these* are souls, and *those* are leaves: he makes no confusion of one with the other. But when Coleridge speaks of

'The one red leaf, the last of its clan,
That dances as often as dance it can,'[9]

he has a morbid, that is to say, a so far false, idea about the leaf: he fancies a life in it, and will, which there are not; confuses its powerlessness with choice, its fading death with merriment, and the

6. See Chapter xxvi of Charles Kingsley's *Alton Locke*.

7. I admit two orders of poets, but no third; and by these two orders I mean the Creative (Shakspeare, Homer, Dante), and Reflective or Perceptive (Wordsworth, Keats, Tennyson). But both of these must be *first*-rate in their range, though their range is different; and with poetry second-rate in *quality* no one ought to be allowed to trouble mankind. There is quite enough of the best, — much more than we can ever read or enjoy in the length of a life; and it is a literal wrong or sin in any person to encumber us with inferior work. I have no patience with apologies made by young pseudo-poets, 'that they believe there is *some* good in what they have written: that they hope to do better in time,' etc. *Some* good! If there is not *all* good, there is no good. If they ever hope to do better, why do they trouble us now? Let them rather courageously burn all they have done, and wait for the better days. There are few men, ordinarily educated, who in moments of strong feeling could not strike out a poetical thought, and afterwards polish it so as to be presentable. But men of sense know better than so to waste their time; and those who sincerely love poetry, know the touch of the master's hand on the chords too well to fumble among them after him. Nay, more than this, all inferior poetry is an injury to the good, inasmuch as it takes away the freshness of rhymes, blunders upon and gives a wretched commonalty to good thoughts; and, in general, adds to the weight of human weariness in a most woful and culpable manner. There are few thoughts likely to come across ordinary men, which have not already been expressed by greater men in the best possible way; and it is a wiser, more generous, more noble thing to remember and point out the perfect words, than to invent poorer ones, wherewith to encumber temporarily the world. [Ruskin's note.]

8. See Dante, *Inferno*, iii,112.

9. *Christabel*, i,49–50.

wind that shakes it with music. Here, however, there is some beauty, even in the morbid passage; but take an instance in Homer and Pope. Without the knowledge of Ulysses, Elpenor, his youngest follower, has fallen from an upper chamber in the Circean palace, and has been left dead, unmissed by his leader or companions, in the haste of their departure. They cross the sea to the Cimmerian land; and Ulysses summons the shades from Tartarus. The first which appears is that of the lost Elpenor. Ulysses, amazed, and in exactly the spirit of bitter and terrified lightness which is seen in Hamlet,[10] addresses the spirit with the simple, startled words: —

'Elpenor! How camest thou under the shadowy darkness? Hast thou come faster on foot than I in my black ship?'[11]

Which Pope renders thus: —

'O, say, what angry power Elpenor led
To glide in shades, and wander with the dead?
How could thy soul, by realms and seas disjoined,
Outfly the nimble sail, and leave the lagging wind?'

I sincerely hope the reader finds no pleasure here, either in the nimbleness of the sail, or the laziness of the wind! And yet how is it that these conceits are so painful now, when they have been pleasant to us in the other instances?

7. For a very simple reason. They are not a *pathetic* fallacy at all, for they are put into the mouth of the wrong passion — a passion which never could possibly have spoken them — agonized curiosity. Ulysses wants to know the facts of the matter; and the very last thing his mind could do at the moment would be to pause, or suggest in anywise what was *not* a fact. The delay in the first three lines, and conceit in the last, jar upon us instantly, like the most frightful discord in music. No poet of true imaginative power could possibly have written the passage.[12]

Therefore, we see that the spirit of truth must guide us in some sort, even in our enjoyment of fallacy. Coleridge's fallacy has no discord in it, but Pope's has set our teeth on edge. Without farther questioning, I will endeavour to state the main bearings of this matter.

8. The temperament which admits the pathetic fallacy, is, as I said above, that of a mind and body in some sort too weak to deal fully with what is before them or upon them; borne away, or over-clouded, or over-dazzled by emotion; and it is a more or less noble state, according to the force of the emotion which has induced it. For it is no credit to a man that he is not morbid or inaccurate in his perceptions, when he has no strength of feeling to warp them; and it is in general a sign of higher capacity and stand in the ranks of being, that the emotions should be strong enough to vanquish, partly, the intellect, and make it believe what they choose. But it is still a grander condition when the intellect also rises, till it is strong enough to assert its rule against, or together with, the utmost efforts of the passions; and the whole man stands in an iron glow, white hot, perhaps, but still

10. 'Well said, old mole! can'st work i' the ground so fast?' [Ruskin's note. — See *Hamlet*, I,v,161.]

11. *Odyssey*, xi,57–58.

12. It is worth while comparing the way a similar question is put by the exquisite sincerity of Keats: —

'He wept, and his bright tears
Went trickling down the golden bow he held.
Thus, with half-shut, suffused eyes, he stood;
While from beneath some cumbrous boughs hard by,
With solemn step an awful goddess came,
And there was purport in her looks for him,
Which he with eager guess began to read:
Perplexed, the while, melodiously he said,
"*How camest thou over the unfooted sea?*"'

[Ruskin's note. — See *Hyperion*, iii,42–50. — Throughout the present chapter, as in most of Ruskin's works, the quotations are evidently given from memory, with minor changes in wording and in punctuation.]

strong, and in no wise evaporating; even if he melts, losing none of his weight.

So, then, we have the three ranks: the man who perceives rightly, because he does not feel, and to whom the primrose is very accurately the primrose, because he does not love it. Then, secondly, the man who perceives wrongly, because he feels, and to whom the primrose is anything else than a primrose: a star, or a sun, or a fairy's shield, or a forsaken maiden. And then, lastly, there is the man who perceives rightly in spite of his feelings, and to whom the primrose is for ever nothing else than itself — a little flower, apprehended in the very plain and leafy fact of it, whatever and how many soever the associations and passions may be, that crowd around it. And, in general, these three classes may be rated in comparative order, as the men who are not poets at all, and the poets of the second order, and the poets of the first; only however great a man may be, there are always some subjects which *ought* to throw him off his balance; some, by which his poor human capacity of thought should be conquered, and brought into the inaccurate and vague state of perception, so that the language of the highest inspiration becomes broken, obscure, and wild in metaphor, resembling that of the weaker man, over-borne by weaker things.

9. And thus, in full, there are four classes: the men who feel nothing, and therefore see truly; the men who feel strongly, think weakly, and see untruly (second order of poets); the men who feel strongly, think strongly, and see truly (first order of poets); and the men who, strong as human creatures can be, are yet submitted to influences stronger than they, and see in a sort untruly, because what they see is inconceivably above them. This last is the usual condition of prophetic inspiration.

10. I separate these classes, in order that their character may be clearly understood; but of course they are united each to the other by imperceptible transitions, and the same mind, according to the influences to which it is subjected, passes at different times into the various states. Still, the difference between the great and less man is, on the whole, chiefly in this point of *alterability*. That is to say, the one knows too much, and perceives and feels too much of the past and future, and of all things beside and around that which immediately affects him, to be in anywise shaken by it. His mind is made up; his thoughts have an accustomed current; his ways are steadfast; it is not this or that new sight which will at once unbalance him. He is tender to impression at the surface, like a rock with deep moss upon it; but there is too much mass of him to be moved. The smaller man, with the same degree of sensibility, is at once carried off his feet; he wants to do something he did not want to do before; he views all the universe in a new light through his tears; he is gay or enthusiastic, melancholy or passionate, as things come and go to him. Therefore the high creative poet might even be thought, to a great extent, impassive (as shallow people think Dante stern), receiving indeed all feelings to the full, but having a great centre of reflection and knowledge in which he stands serene, and watches the feeling, as it were, from afar off.

Dante, in his most intense moods, has entire command of himself, and can look around calmly, at all moments, for the image or the word that will best tell what he sees to the upper or lower world. But Keats and Tennyson, and the poets of the second order, are generally themselves subdued by the feelings under which they write, or, at least, write as choosing to be so; and therefore admit certain expressions and modes of thought which are in some sort diseased or false.

11. Now so long as we see that the *feeling* is true, we pardon, or are even pleased by, the confessed fallacy of sight which it induces: we are pleased, for instance, with

those lines of Kingsley's, above quoted, not because they fallaciously describe foam, but because they faithfully describe sorrow. But the moment the mind of the speaker becomes cold, that moment every such expression becomes untrue, as being for ever untrue in the external facts. And there is no greater baseness in literature than the habit of using these metaphorical expressions in cold blood. An inspired writer, in full impetuosity of passion, may speak wisely and truly of 'raging waves of the sea, foaming out their own shame'; but it is only the basest writer who cannot speak of the sea without talking of 'raging waves,' 'remorseless floods,' 'ravenous billows,' etc.; and it is one of the signs of the highest power in a writer to check all such habits of thought, and to keep his eyes fixed firmly on the *pure fact*, out of which if any feeling comes to him or his reader, he knows it must be a true one.

To keep to the waves, I forget who it is who represents a man in despair desiring that his body may be cast into the sea,

> '*Whose changing mound, and foam that passed away,*
> Might mock the eyes that questioned where I lay.'

Observe, there is not here a single false, or even overcharged, expression. 'Mound' of the sea wave is perfectly simple and true; 'changing' is as familiar as may be; 'foam that passed away,' strictly literal; and the whole line descriptive of the reality with a degree of accuracy which I know not any other verse, in the range of poetry, that altogether equals. For most people have not a distinct idea of the clumsiness and massiveness of a large wave. The word 'wave' is used too generally of ripples and breakers, and bendings in light drapery or grass: it does not by itself convey a perfect image. But the word 'mound' is heavy, large, dark, definite; there is no mistaking the kind of wave meant, nor missing the sight of it. Then the term 'changing' has a peculiar force also. Most people think of waves as rising and falling. But if they look at the sea carefully, they will perceive that the waves do not rise and fall. They change. Change both place and form, but they do not fall; one wave goes on, and on, and still on; now lower, now higher, now tossing its mane like a horse, now building itself together like a wall, now shaking, now steady, but still the same wave, till at last it seems struck by something, and changes, one knows not how, — becomes another wave.

The close of the line insists on this image, and paints it still more perfectly, — 'foam that passed away.' Not merely melting, disappearing, but passing on, out of sight, on the career of the wave. Then, having put the absolute ocean fact so far as he may before our eyes, the poet leaves us to feel about it as we may, and to trace for ourselves the opposite fact, — the image of the green mounds that do not change, and the white and written stones that do not pass away; and thence to follow out also the associated images of the calm life with the quiet grave, and the despairing life with the fading foam: —

> 'Let no man move his bones.'[13]
> 'As for Samaria, her king is cut off like the foam upon the water.'[14]

But nothing of this is actually told or pointed out, and the expressions, as they stand, are perfectly severe and accurate, utterly uninfluenced by the firmly governed emotion of the writer. Even the word 'mock' is hardly an exception, as it may stand merely for 'deceive' or 'defeat,' without implying any impersonation of the waves.

12. It may be well, perhaps, to give one or two more instances to show the peculiar dignity possessed by all passages which thus limit their expression to the pure fact, and leave the hearer to gather what he can from it. Here is a notable one from

13. *II Kings*, xxiii,18.
14. *Hosea*, x,7.

the *Iliad*. Helen, looking from the Scæan gate of Troy over the Grecian host, and telling Priam the names of its captains, says at last: —

'I see all the other dark-eyed Greeks; but two I cannot see, — Castor and Pollux, — whom one mother bore with me. Have they not followed from fair Lacedæmon, or have they indeed come in their sea-wandering ships, but now will not enter into the battle of men, fearing the shame and the scorn that is in Me?'

Then Homer: —

'So she spoke. But them, already, the life-giving earth possessed, there in Lacedæmon, in the dear fatherland.'[15]

Note, here, the high poetical truth carried to the extreme. The poet has to speak of the earth in sadness, but he will not let that sadness affect or change his thoughts of it. No; though Castor and Pollux be dead, yet the earth is our mother still, fruitful, life-giving. These are the facts of the thing. I see nothing else than these. Make what you will of them.

13. Take another very notable instance from Casimir de la Vigne's[16] terrible ballad, 'La Toilette de Constance.' I must quote a few lines out of it here and there, to enable the reader who has not the book by him, to understand its close.

'Vite, Anna, vite; au miroir!
Plus vite, Anna. L'heure s'avance,
Et je vais au bal ce soir
Chez l'ambassadeur de France.

Y pensez-vous? ils sont fanés, ces nœuds;
Ils sont d'hier; mon Dieu, comme tout passe!
Que du réseau qui retient mes cheveux
Les glands d'azur retombent avec grâce.

Plus haut! Plus bas! Vous ne comprenez rien!
Que sur mon front ce saphir étincelle:
Vous me piquez, maladroite. Ah, c'est bien,
Bien, — chère Anna! Je t'aime, je suis belle.

Vite, j'en crois mon miroir,
Et mon cœur bat d'espérance.
Vite, Anna, je vais ce soir
Chez l'ambassadeur de France.

Celui qu'en vain je voudrais oublier . . .
(Anna, ma robe) il y sera, j'espère.
(Ah, fi! profane, est-ce là mon collier?
Quoi! ces grains d'or bénits par le Saint-Père!)
Il y sera; Dieu, s'il pressait ma main,
En y pensant, à peine je respire;
Père Anselmo doit m'entendre demain,
Comment ferai-je, Anna, pour tout lui dire? . . . .

Vite! un coup d'œil au miroir,
Le dernier. —— J'ai l'assurance
Qu'on va m'adorer ce soir
Chez l'ambassadeur de France.

Près du foyer, Constance s'admirait.
Dieu! sur sa robe il vole une étincelle!
Au feu! Courez! Quand l'espoir l'enivrait,
Tout perdre ainsi! Quoi! Mourir, — et si belle!
L'horrible feu ronge avec volupté
Ses bras, son sein, et l'entoure, et s'élève,
Et sans pitié dévore sa beauté,
Ses dix-huit ans, hélas, et son doux rêve!

Adieu, bal, plaisir, amour!
On se disait, Pauvre Constance!
Et l'on dansait, jusqu'au jour,
Chez l'ambassadeur de France.'[17]

15. See the *Iliad*, iii.166ff.; 271–84.

16. Casimir de la Vigne (1793–1843), French poet and dramatist, member of the Academy, widely popular in the early years of the century.

17. 'Quick, Anna, quick; to the mirror —
Quicker, Anna. It's getting late,
And I go to the dance this evening
At the French Ambassador's.

'Don't you think these ribbon-bows are faded?

Yes, that is the fact of it. Right or wrong, the poet does not say. What you may think about it, he does not know. He has nothing to do with that. There lie the ashes of the dead girl in her chamber. There they danced, till the morning, at the Ambassador's of France. Make what you will of it.

They are yesterday's; my goodness, how rapidly everything goes! —
How gracefully the blue tassels hang down
From the net which holds my hair —
Higher! No, lower! You don't understand.
This sapphire should flash from my brow;
You are pricking me, awkward one. Ah, that's good,
Good — dear Anna! I love you; I'm beautiful.

'Quick, I believe it of my mirror,
And my heart beats with hope.
Quick, Anna: I go this evening
To the French Ambassador's.

'The one I vainly would forget —
(Anna, my gown) — I hope he'll be there.
(Oh, pshaw! heathen, is this my necklace?
What, these golden beads which the Holy Father blessed?)
He'll be there; heavens, should he squeeze my hand!
Why, I can hardly breathe at the thought of it;
Father Anselmo will have to know to-morrow,
But how, Anna, can I tell him everything?

'Quick, — a glance in the mirror,
My last. — I am sure
That they will adore me this evening
At the French Ambassador's.

'Near the fire-place Constance was admiring herself,
When — O my God! A spark flies out on her dress.
Fire! Run! — Just as she was intoxicated with hope,
Thus to lose everything! What! to die? — and so lovely!
The horrible fire gnaws with voluptuousness
Her arms, her breast, and surrounds her, and climbs upward,
And without pity consumes her beauty,
Her eighteen years, alas, and her sweet dream!

'Farewell, dance, pleasure, love!
They said, Poor Constance! —
And they danced on till daybreak
At the French Ambassador's.'

If the reader will look through the ballad, of which I have quoted only about the third part, he will find that there is not, from beginning to end of it, a single poetical (so called) expression, except in one stanza. The girl speaks as simple prose as may be; there is not a word she would not have actually used as she was dressing. The poet stands by, impassive as a statue, recording her words just as they come. At last the doom seizes her, and in the very presence of death, for an instant, his own emotions conquer him. He records no longer the facts only, but the facts as they seem to him. The fire gnaws with *voluptuousness — without pity*. It is soon past. The fate is fixed for ever; and he retires into his pale and crystalline atmosphere of truth. He closes all with the calm veracity,

'They said, "Poor Constance!"'

14. Now in this there is the exact type of the consummate poetical temperament. For, be it clearly and constantly remembered, that the greatness of a poet depends upon the two faculties, acuteness of feeling, and command of it. A poet is great, first in proportion to the strength of his passion, and then, that strength being granted, in proportion to his government of it; there being, however, always a point beyond which it would be inhuman and monstrous if he pushed this government, and, therefore, a point of which all feverish and wild fancy becomes just and true. Thus the destruction of the kingdom of Assyria cannot be contemplated firmly by a prophet of Israel. The fact is too great, too wonderful. It overthrows him, dashes him into a confused element of dreams. All the world is, to his stunned thought, full of strange voices. 'Yea, the fir-trees rejoice at thee, and the cedars of Lebanon, saying, "Since thou art gone down to the grave, no feller is come up against us."'[18] So, still more, the thought of the presence of Deity cannot be borne

18. *Isaiah*, xiv,8.

without this great astonishment. 'The mountains and the hills shall break forth before you into singing, and all the trees of the field shall clap their hands.'[19]

15. But by how much this feeling is noble when it is justified by the strength of its cause, by so much it is ignoble when there is not cause enough for it; and beyond all other ignobleness is the mere affectation of it, in hardness of heart. Simply bad writing may almost always, as above noticed, be known by its adoption of these fanciful metaphorical expressions as a sort of current coin; yet there is even a worse, at least a more harmful condition of writing than this, in which such expressions are not ignorantly and feelinglessly caught up, but, by some master, skilful in handling, yet insincere, deliberately wrought out with chill and studied fancy; as if we should try to make an old lava-stream look red hot again, by covering it with dead leaves, or white-hot, with hoar-frost.

When Young is lost in veneration, as he dwells on the character of a truly good and holy man, he permits himself for a moment to be overborne by the feeling so far as to exclaim —

'Where shall I find him? angels, tell me where.
You know him; he is near you; point him out.
Shall I see glories beaming from his brow,
Or trace his footsteps by the rising flowers?'[20]

This emotion has a worthy cause, and is thus true and right. But now hear the cold-hearted Pope say to a shepherd girl —

'Where'er you walk, cool gales shall fan the glade;
Trees, where you sit, shall crowd into a shade;
Your praise the birds shall chant in every grove,
And winds shall waft it to the powers above.
But would you sing, and rival Orpheus' strain,
The wondering forests soon should dance again;
The moving mountains hear the powerful call,
And headlong streams hang, listening, in their fall.'[21]

This is not, nor could it for a moment be mistaken for, the language of passion. It is simple falsehood, uttered by hypocrisy; definite absurdity, rooted in affectation, and coldly asserted in the teeth of nature and fact. Passion will indeed go far in deceiving itself; but it must be a strong passion, not the simple wish of a lover to tempt his mistress to sing. Compare a very closely parallel passage in Wordsworth, in which the lover has lost his mistress:

'Three years had Barbara in her grave been laid,
When thus his moan he made: —
"Oh, move, thou cottage from behind yon oak,
Or let the ancient tree uprooted lie,
That in some other way yon smoke
May mount into the sky.
If still behind yon pine-tree's ragged bough,
Headlong, the waterfall must come,
Oh, let it, then, be dumb —
Be anything, sweet stream, but that which thou art now."'[22]

Here is a cottage to be moved, if not a mountain, and a water-fall to be silent, if it is not to hang listening: but with what different relation to the mind that contemplates them! Here, in the extremity of its agony, the soul cries out wildly for relief, which at the same moment it partly knows to be impossible, but partly be-

19. *Isaiah*, lv,12.
20. *Night Thoughts*, ii.
21. *Pastorals*, Summer, 73–74,79–84.
22. '"Tis Said That Some Have Died for Love,' 11–16,33–36.

lieves possible, in a vague impression that a miracle *might* be wrought to give relief even to a less sore distress, — that nature is kind, and God is kind, and that grief is strong; it knows not well what *is* possible to such grief. To silence a stream, to move a cottage wall, — one might think it could do as much as that!

16. I believe these instances are enough to illustrate the main point I insist upon respecting the pathetic fallacy, — that so far as it *is* a fallacy, it is always the sign of a morbid state of mind, and comparatively of a weak one. Even in the most inspired prophet it is a sign of the incapacity of his human sight or thought to bear what has been revealed to it. In ordinary poetry, if it is found in the thoughts of the poet himself, it is at once a sign of his belonging to the inferior school; if in the thoughts of the characters imagined by him, it is right or wrong according to the genuineness of the emotion from which it springs; always, however, implying necessarily *some* degree of weakness in the character.

Take two most exquisite instances from master hands. The Jessy of Shenstone, and the Ellen of Wordsworth, have both been betrayed and deserted. Jessy, in the course of her most touching complaint, says:

'If through the garden's flowery tribes I stray,
Where bloom the jasmines that could once allure,
"Hope not to find delight in us," they say,
"For we are spotless, Jessy; we are pure."'[23]

Compare with this some of the words of Ellen:

'"Ah, why," said Ellen, sighing to herself,
"Why do not words, and kiss, and solemn pledge;
And nature, that is kind in woman's breast,
And reason, that in man is wise and good,
And fear of Him Who is a righteous Judge, —
Why do not these prevail for human life,
To keep two hearts together, that began
Their springtime with one love, and that have need
Of mutual pity and forgiveness, sweet
To grant, or be received; while that poor bird —
O, come and hear him! Thou who hast to me
Been faithless, hear him; — though a lowly creature,
One of God's simple children, that yet know not
The Universal Parent, *how* he sings!
As if he wished the firmament of heaven
Should listen, and give back to him the voice
Of his triumphant constancy and love;
The proclamation that he makes, how far
His darkness doth transcend our fickle light."'[24]

The perfection of both these passages, as far as regards truth and tenderness of imagination in the two poets, is quite insuperable. But, of the two characters imagined, Jessy is weaker than Ellen, exactly in so far as something appears to her to be in nature which is not. The flowers do not really reproach her. God meant them to comfort her, not to taunt her; they would do so if she saw them rightly.

Ellen, on the other hand, is quite above the slightest erring emotion. There is not the barest film of fallacy in all her thoughts. She reasons as calmly as if she did not feel. And, although the singing of the bird suggests to her the idea of its desiring to be heard in heaven, she does not for an instant admit any veracity in the thought. 'As if,' she says, — 'I know he means nothing of the kind; but it does verily seem as if.' The reader will find, by

23. Shenstone, *Elegies*, xxvi, stanza 16.

24. Wordsworth, *The Excursion*, vi,869–87.

examining the rest of the poem, that Ellen's character is throughout consistent in this clear though passionate strength.[25]

It then being, I hope, now made clear to the reader in all respects that the pathetic fallacy is powerful only so far as it is pathetic, feeble so far as it is fallacious, and, therefore, that the dominion of Truth is entire, over this, as over every other natural and just state of the human mind, we may go on to the subject for the dealing with which this prefatory inquiry became necessary; and why necessary, we shall see forthwith.

Chapter XIII

Of Classical Landscape

1. My reason for asking the reader to give so much of his time to the examination of the pathetic fallacy was, that, whether in literature or in art, he will find it eminently characteristic of the modern mind; and in the landscape, whether of literature or art, he will also find the modern painter endeavouring to express something which he, as a living creature, imagines in the lifeless object, while the classical and mediæval painters were content with expressing the unimaginary and actual qualities of the object itself. It will be observed that, according to the principle stated long ago, I use the words 'painter' and 'poet' quite indifferently, including in our inquiry the landscape of literature, as well as that of painting; and this the more because the spirit of classical landscape has hardly been expressed in any other way than by words.

2. Taking, therefore, this wide field, it is surely a very notable circumstance, to begin with, that this pathetic fallacy is eminently characteristic of modern painting. For instance, Keats, describing a wave, breaking out at sea, says of it —

'Down whose green back the short-lived foam, all hoar,
Bursts gradual, with a wayward indolence.'[1]

That is quite perfect, as an example of the modern manner. The idea of the peculiar action with which foam rolls down a long, large wave could not have been given by any other words so well as by this 'wayward indolence.' But Homer would never have written, never thought of, such words. He could not by any possibility have lost sight of the great fact that the wave, from the beginning to the end of it, do what it might, was still nothing else than salt water; and that salt water could not be either wayward or indolent. He will call the waves 'over-roofed,' 'full-charged,' 'monstrous,' 'compact-black,' 'dark-clear,' 'violet-coloured,' 'wine-coloured,' and so on. But every one of these epithets is descriptive of pure physical nature. 'Over-roofed' is the term he invariably uses of anything — rock, house, or wave — that nods over at the brow; the other terms need no explanation; they are as accurate and intense in truth as words can be, but they never show the slightest feeling of anything animated in the ocean. Black or clear, monstrous or violet-coloured, cold salt water it is always, and nothing but that.

3. 'Well, but the modern writer, by his admission of the tinge of fallacy, has given

25. I cannot quit this subject without giving two more instances, both exquisite, of the pathetic fallacy, which I have just come upon, in Maud:

'For a great speculation had fail'd;
And ever he mutter'd and madden'd, and ever wann'd with despair;
And out he walk'd, when the wind like a broken worldling wail'd,
And the *flying gold of the ruin'd woodlands drove thro' the air.*'

'There has fallen a splendid tear
From the passion-flower at the gate.
The red rose cries, "She is near, she is near!"
And the white rose weeps, "She is late."
The larkspur listens, "I hear, I hear!"
And the lily whispers, "I wait."'

[Ruskin's note. — See Tennyson's *Maud*, I, i, stanza 3; xxii, stanza 10.]

1. *Endymion*, ii,349–50.

an idea of something in the action of the wave which Homer could not, and surely, therefore, has made a step in advance? Also there appears to be a degree of sympathy and feeling in the one writer, which there is not in the other; and as it has been received for a first principle that writers are great in proportion to the intensity of their feelings, and Homer seems to have no feelings about the sea but that it is black and deep, surely in this respect also the modern writer is the greater?'

Stay a moment. Homer *had* some feeling about the sea; a faith in the animation of it much stronger than Keats's. But all this sense of something living in it, he separates in his mind into a great abstract image of a Sea Power. He never says the waves rage, or the waves are idle. But he says there is somewhat in, and greater than, the waves, which rages, and is idle, and *that* he calls a god.

4. I do not think we ever enough endeavour to enter into what a Greek's real notion of a god was. We are so accustomed to the modern mockeries of the classical religion, so accustomed to hear and see the Greek gods introduced as living personages, or invoked for help, by men who believe neither in them nor in any other gods, that we seem to have infected the Greek ages themselves with the breath, and dimmed them with the shade, of our hypocrisy; and are apt to think that Homer, as we know that Pope, was merely an ingenious fabulist; nay, more than this, that all the nations of past time were ingenious fabulists also, to whom the universe was a lyrical drama, and by whom whatsoever was said about it was merely a witty allegory, or a graceful lie, of which the entire upshot and consummation was a pretty statue in the middle of the court, or at the end of the garden.

This, at least, is one of our forms of opinion about Greek faith; not, indeed, possible altogether to any man of honesty or ordinary powers of thought; but still so venomously inherent in the modern philosophy that all the pure lightning of Carlyle cannot as yet quite burn it out of any of us.[2] And then, side by side with this mere infidel folly, stands the bitter shortsightedness of Puritanism, holding the classical god to be either simply an idol, — a block of stone ignorantly, though sincerely, worshipped, — or else an actual diabolic or betraying power, usurping the place of God.

5. Both these Puritanical estimates of Greek deity are of course to some extent true. The corruption of classical worship is barren idolatry; and that corruption was deepened, and variously directed to their own purposes, by the evil angels. But this was neither the whole, nor the principal part, of Pagan worship. Pallas[3] was not, in the pure Greek mind, merely a powerful piece of ivory in a temple at Athens; neither was the choice of Leonidas[4] between the alternatives granted him by the oracle, of personal death, or ruin to his country, altogether a work of the Devil's prompting.

6. What, then, was actually the Greek god? In what way were these two ideas of human form, and divine power, credibly associated in the ancient heart, so as to become a subject of true faith, irrespective equally of fable, allegory, superstitious trust in stone, and demoniacal influence?

It seems to me that the Greek had exactly the same instinctive feeling about the elements that we have ourselves; that to Homer, as much as to Casimir de la Vigne,[5] fire seemed ravenous and pitiless; to Homer, as much as to Keats, the sea-wave appeared wayward or idle, or whatever else it may be to the poetical passion. But then the Greek reasoned upon this sensation, saying to himself: 'I can light the fire, and put it out; I can dry this water

2. For Carlyle on paganism, see the lecture of 'The Hero as Divinity.'
3. *i.e.* Pallas Athena, goddess of wisdom.
4. Leonidas led the Spartans at the battle of Thermopylae. See Herodotus, vii.
5. See 'Of the Pathetic Fallacy,' note 16.

up, or drink it. It cannot be the fire or the water that rages, or that is wayward. But it must be something *in* this fire and *in* the water, which I cannot destroy by extinguishing the one, or evaporating the other, any more than I destroy myself by cutting off my finger; *I* was *in* my finger, — something of me at least was; I had a power over it, and felt pain in it, though I am still as much myself when it is gone. So there may be a power in the water which is not water, but to which the water is as a body; — which can strike with it, move in it, suffer in it, yet not be destroyed with it. This something, this great Water Spirit, I must not confuse with the waves, which are only its body. *They* may flow hither and thither, increase or diminish. *That* must be invisible — imperishable — a god. So of fire also; those rays which I can stop, and in the midst of which I cast a shadow, cannot be divine, nor greater than I. They cannot feel, but there may be something in them that feels, — a glorious intelligence, as much nobler and more swift than mine, as these rays, which are its body, are nobler and swifter than my flesh; — the spirit of all light, and truth, and melody, and revolving hours.'

7. It was easy to conceive, farther, that such spirits should be able to assume at will a human form, in order to hold intercourse with men, or to perform any act for which their proper body, whether of fire, earth, or air, was unfitted. And it would have been to place them beneath, instead of above, humanity, if, assuming the form of man, they could not also have tasted his pleasures. Hence the easy step to the more or less material ideas of deities, which are apt at first to shock us, but which are indeed only dishonourable so far as they represent the gods as false and unholy. It is not the materialism, but the vice, which degrades the conception; for the materialism itself is never positive or complete. There is always some sense of exaltation in the spiritual and immortal body; and of a power proceeding from the visible form through all the infinity of the element ruled by the particular god. The precise nature of the idea is well seen in the passage of the *Iliad* which describes the river Scamander defending the Trojans against Achilles. In order to remonstrate with the hero, the god assumes a human form, which nevertheless is in some way or other instantly recognized by Achilles as that of the river-god: it is addressed at once as a river, not as a man; and its voice is the voice of a river, 'out of the deep whirlpools.'[6] Achilles refuses to obey its commands; and from the human form it returns instantly into its natural or divine one, and endeavours to overwhelm him with waves. Vulcan defends Achilles, and sends fire against the river, which suffers in its water-body, till it is able to bear no more. At last even the 'nerve of the river,' or 'strength of the river' (note the expression), feels the fire, and this 'strength of the river' addresses Vulcan in supplications for respite. There is in this precisely the idea of a vital part of the river-body, which acted and felt, to which, if the fire reached, it was death, just as would be the case if it touched a vital part of the human body. Throughout the passage the manner of conception is perfectly clear and consistent; and if, in other places, the exact connection between the ruling spirit and the thing ruled is not so manifest, it is only because it is almost impossible for the human mind to dwell long upon such subjects without falling into inconsistencies, and gradually slackening its effort to grasp the entire truth;

6. Compare *Lay of the Last Minstrel*, canto i. stanza 15, and canto v. stanza 2. In the first instance, the river-spirit is accurately the Homeric god, only Homer would have believed in it, — Scott did not; at least not altogether. [Ruskin's note. — The Homeric allusions throughout the present selection are frequently so general, and usually so self-explanatory, that for a further examination of their significance, the reader may readily turn to any good translation of the *Iliad* or the *Odyssey*, and note the 'Argument' at the head of each Book.]

until the more spiritual part of it slips from its hold, and only the human form of the god is left, to be conceived and described as subject to all the errors of humanity. But I do not believe that the idea ever weakens itself down to mere allegory. When Pallas is said to attack and strike down Mars, it does not mean merely that Wisdom at that moment prevailed against Wrath. It means that there are, indeed, two great spirits, one entrusted to guide the human soul to wisdom and chastity, the other to kindle wrath and prompt to battle. It means that these two spirits, on the spot where, and at the moment when, a great contest was to be decided between all that they each governed in man, then and there assumed human form, and human weapons, and did verily and materially strike at each other, until the Spirit of Wrath was crushed. And when Diana is said to hunt with her nymphs in the woods, it does not mean merely, as Words worth puts it,[7] that the poet or shepherd saw the moon and stars glancing between the branches of the trees, and wished to say so figuratively. It means that there is a living spirit, to which the light of the moon is a body; which takes delight in glancing between the clouds and following the wild beasts as they wander through the night; and that this spirit sometimes assumes a perfect human form, and in this form, with real arrows, pursues and slays the wild beasts, which with its mere arrows of moonlight it could not slay; retaining, nevertheless, all the while, its power and being in the moonlight, and in all else that it rules.

8. There is not the smallest inconsistency or unspirituality in this conception. If there were, it would attach equally to the appearance of the angels to Jacob, Abraham, Joshua, or Manoah.[8] In all those instances the highest authority which governs our own faith requires us to conceive divine power clothed with a human form (a form so real that it is recognized for superhuman only by its 'doing wondrously'), and retaining, nevertheless, sovereignty and omnipresence in all the world. This is precisely, as I understand it, the heathen idea of a God; and it is impossible to comprehend any single part of the Greek mind until we grasp this faithfully, not endeavouring to explain it away in any wise, but accepting, with frank decision and definition, the tangible existence of its deities; — blue-eyed — white-fleshed — human-hearted, — capable at their choice of meeting man absolutely in his own nature — feasting with him — talking with him — fighting with him, eye to eye, or breast to breast, as Mars with Diomed; or else, dealing with him in a more retired spirituality, as Apollo sending the plague upon the Greeks, when his quiver rattles at his shoulders as he moves, and yet the darts sent forth of it strike not as arrows, but as plague; or, finally, retiring completely into the material universe which they properly inhabit, and dealing with man through that, as Scamander with Achilles, through his waves.

9. Nor is there anything whatever in the various actions recorded of the gods, however apparently ignoble, to indicate weakness of belief in them. Very frequently things which appear to us ignoble are merely the simplicities of a pure and truthful age. When Juno beats Diana about the ears with her own quiver, for instance, we start at first, as if Homer could not have believed that they were both real goddesses. But what should Juno have done? Killed Diana with a look? Nay, she neither wished to do so, nor could she have done so, by the very faith of Diana's goddess-ship. Diana is as immortal as herself. Frowned Diana into submission? But Diana has come expressly to try conclusions with her, and will by no means be frowned into submission. Wounded her with a celestial lance? That sounds more

7. See Wordsworth, *The Excursion*, iv,861–71.
8. See *Genesis*, xxxii,24ff.; *Genesis*, xviii,1–9; *Joshua*, v,13ff.; *Judges*, xiii,8ff., respectively.

poetical, but it is in reality partly more savage, and partly more absurd, than Homer. More savage, for it makes Juno more cruel, therefore less divine; and more absurd, for it only seems elevated in tone, because we use the word 'celestial,' which means nothing. What sort of a thing is a 'celestial' lance? Not a wooden one. Of what then? Of moonbeams, or clouds, or mist. Well, therefore, Diana's arrows were of mist too; and her quiver, and herself, and Juno, with her lance, and all, vanish into mist. Why not have said at once, if that is all you mean, that two mists met, and one drove the other back? That would have been rational and intelligible, but not to talk of celestial lances. Homer had no such misty fancy; he believed the two goddesses were there in true bodies, with true weapons, on the true earth; and still I ask, what should Juno have done? Not beaten Diana? No; for it is un-lady like. Un-English-lady like, yes; but by no means un-Greek-lady-like, nor even un-natural-lady-like. If a modern lady does *not* beat her servant or her rival about the ears, it is oftener because she is too weak, or too proud, than because she is of purer mind than Homer's Juno. She will not strike them; but she will overwork the one or slander the other without pity; and Homer would not have thought that one whit more goddess-like than striking them with her open hand.

10. If, however, the reader likes to suppose that while the two goddesses in personal presence thus fought with arrow and quiver, there was also a broader and vaster contest supposed by Homer between the elements they ruled; and that the goddess of the heavens, as she struck the goddess of the moon on the flushing cheek, was at the same instant exercising omnipresent power in the heavens themselves, and gathering clouds, with which, filled with the moon's own arrows or beams, she was encumbering and concealing the moon; he is welcome to this outcarrying of the idea, provided that he does not pretend to make it an interpretation instead of a mere extension, nor think to explain away my real, running, beautiful, beaten Diana, into a moon behind clouds.[9]

11. It is only farther to be noted, that the Greek conception of God-head, as it was much more real than we usually suppose, so it was much more bold and familiar than to a modern mind would be possible. I shall have something more to observe, in a little while, of the danger of our modern habit of endeavouring to raise ourselves to something like comprehension of the truth of divinity, instead of simply believing the words in which the Deity reveals Himself to us. The Greek erred rather on the other side, making hardly any effort to conceive divine mind as above the human; and no more shrinking from frank intercourse with a divine being, or dreading its immediate presence, than that of the simplest of mortals. Thus Atrides, enraged at his sword's breaking in his hand upon the helmet of Paris, after he had expressly invoked the assistance of Jupiter, exclaims aloud, as he would to a king who had betrayed him, 'Jove, Father, there is not another god more evil-minded than thou!' and Helen, provoked at Paris's defeat, and oppressed with pouting shame both for him and for herself, when Venus appears at her side, and would lead her back to the delivered Paris, impatiently tells the goddess to 'go and take care of Paris herself.'

12. The modern mind is naturally, but vulgarly and unjustly, shocked by this kind of familiarity. Rightly understood, it is not so much a sign of misunderstanding of the divine nature as of good understanding of the human. The Greek lived, in all things, a healthy, and, in a certain degree, a perfect life. He had no morbid

9. Compare the exquisite lines of Longfellow on the sunset in *The Golden Legend*:—

'The day is done, and slowly from the scene
The stooping sun upgathers his spent shafts,
And puts them back into his golden quiver.'

[Ruskin's note.—See *The Golden Legend*, 417–19.]

or sickly feeling of any kind. He was accustomed to face death without the slightest shrinking, to undergo all kinds of bodily hardship without complaint, and to do what he supposed right and honourable, in most cases, as a matter of course. Confident of his own immortality, and of the power of abstract justice, he expected to be dealt with in the next world as was right, and left the matter much in his god's hands; but being thus immortal, and finding in his own soul something which it seemed quite as difficult to master, as to rule the elements, he did not feel that it was an appalling superiority in those gods to have bodies of water, or fire, instead of flesh, and to have various work to do among the clouds and waves, out of his human way; or sometimes, even, in a sort of service to himself. Was not the nourishment of herbs and flowers a kind of ministering to his wants; were not the gods in some sort his husbandmen, and spirit-servants? Their mere strength or omnipresence did not seem to him a distinction absolutely terrific. It might be the nature of one being to be in two places at once, and of another to be only in one; but that did not seem of itself to infer any absolute lordliness of one nature above the other, any more than an insect must be a nobler creature than a man, because it can see on four sides of its head, and the man only in front. They could kill him or torture him, it was true; but even that not unjustly, or not for ever. There was a fate, and a Divine Justice, greater than they; so that if they did wrong, and he right, he might fight it out with them, and have the better of them at last. In a general way, they were wiser, stronger, and better than he; and to ask counsel of them, to obey them, to sacrifice to them, to thank them for all good, this was well: but to be utterly downcast before them, or not to tell them his mind in plain Greek if they seemed to him to be conducting themselves in an ungodly manner, — this would not be well.

13. Such being their general idea of the gods, we can now easily understand the habitual tone of their feelings towards what was beautiful in nature. With us, observe, the idea of the Divinity is apt to get separated from the life of nature; and imagining our God upon a cloudy throne, far above the earth, and not in the flowers or waters, we approach those visible things with a theory that they are dead; governed by physical laws, and so forth. But coming to them, we find the theory fail; that they are not dead; that, say what we choose about them, the instinctive sense of their being alive is too strong for us; and in scorn of all physical law, the wilful fountain sings, and the kindly flowers rejoice. And then, puzzled, and yet happy; pleased, and yet ashamed of being so; accepting sympathy from nature, which we do not believe it gives, and giving sympathy to nature, which we do not believe it receives, — mixing, besides, all manner of purposeful play and conceit with these involuntary fellowships, — we fall necessarily into the curious web of hesitating sentiment, pathetic fallacy, and wandering fancy, which form a great part of our modern view of nature. But the Greek never removed his god out of nature at all; never attempted for a moment to contradict his instinctive sense that God was everywhere. 'The tree *is* glad,' said he, 'I know it is; I can cut it down; no matter, there was a nymph in it. The water *does* sing,' said he; 'I can dry it up; but no matter, there was a naiad in it.' But in thus clearly defining his belief, observe, he threw it entirely into a human form, and gave his faith to nothing but the image of his own humanity. What sympathy and fellowship he had, were always for the spirit *in* the stream, not for the stream; always for the dryad *in* the wood, not for the wood. Content with this human sympathy, he approached the actual waves and woody fibres with no sympathy at all. The spirit that ruled them, he received as a plain fact. Them, also, ruled and material,

he received as plain facts; they, without their spirit, were dead enough. A rose was good for scent, and a stream for sound and coolness; for the rest, one was no more than leaves, the other no more than water; he could not make anything else of them; and the divine power, which was involved in their existence, having been all distilled away by him into an independent Flora or Thetis,[10] the poor leaves or waves were left, in mere cold corporealness, to make the most of their being discernibly red and soft, clear and wet, and unacknowledged in any other power whatsoever.

14. Then, observe farther, the Greeks lived in the midst of the most beautiful nature, and were as familiar with blue sea, clear air, and sweet outlines of mountain, as we are with brick walls, black smoke, and level fields. This perfect familiarity rendered all such scenes of natural beauty unexciting, if not indifferent to them, by lulling and overwearying the imagination as far as it was concerned with such things; but there was another kind of beauty which they found it required effort to obtain, and which, when thoroughly obtained, seemed more glorious than any of this wild loveliness — the beauty of the human countenance and form. This, they perceived, could only be reached by continual exercise of virtue; and it was in Heaven's sight, and theirs, all the more beautiful because it needed this self-denial to obtain it. So they set themselves to reach this, and having gained it, gave it their principal thoughts, and set it off with beautiful dress as best they might. But making this their object, they were obliged to pass their lives in simple exercise and disciplined employments. Living wholesomely, giving themselves no fever fits, either by fasting or over-eating, constantly in the open air, and full of animal spirit and physical power, they became incapable of every morbid condition of mental emotion. Unhappy love, disappointed ambition, spiritual despondency, or any other disturbing sensation, had little power over the well-braced nerves, and healthy flow of the blood; and what bitterness might yet fasten on them was soon boxed or raced out of a boy, and spun or woven out of a girl, or danced out of both. They had indeed their sorrows, true and deep, but still, more like children's sorrows than ours, whether bursting into open cry of pain, or hid with shuddering under the veil, still passing over the soul as clouds do over heaven, not sullying it, not mingling with it; — darkening it perhaps long or utterly, but still not becoming one with it, and for the most part passing away in dashing rain of tears, and leaving the man unchanged: in nowise affecting, as our sorrow does, the whole tone of his thought and imagination thenceforward.

How far our melancholy may be deeper and wider than theirs in its roots and view, and therefore nobler, we shall consider presently; but at all events, they had the advantage of us in being entirely free from all those dim and feverish sensations which result from an unhealthy state of the body. I believe that a large amount of the dreamy and sentimental sadness, tendency to reverie, and general patheticalness of modern life results merely from derangement of stomach; holding to the Greek life the same relation that the feverish night of an adult does to a child's sleep.

15. Farther, the human beauty, which, whether in its bodily being or in imagined divinity, had become, for the reasons we have seen, the principal object of culture and sympathy to these Greeks, was, in its perfection, eminently orderly, symmetrical, and tender. Hence, contemplating it constantly in this state, they could not but feel a proportionate fear of all that was disorderly, unbalanced, and rugged. Having trained their stoutest soldiers into a strength so delicate and lovely, that their white flesh, with their blood upon it,

10. *Flora*: in Roman religion, goddess of flowers. — *Thetis*: a sea nymph, mother of Achilles.

should look like ivory stained with purple;[11] and having always around them, in the motion and majesty of this beauty, enough for the full employment of their imagination, they shrank with dread or hatred from all the ruggedness of lower nature, — from the wrinkled forest bark, the jagged hill-crest, and irregular, inorganic storm of sky; looking to these for the most part as adverse powers, and taking pleasure only in such portions of the lower world as were at once conducive to the rest and health of the human frame, and in harmony with the laws of its gentler beauty.

16. Thus, as far as I recollect, without a single exception, every Homeric landscape, intended to be beautiful, is composed of a fountain, a meadow, and a shady grove. This ideal is very interestingly marked, as intended for a perfect one, in the fifth book of the *Odyssey*; when Mercury himself stops for a moment, though on a message, to look at a landscape 'which even an immortal might be gladdened to behold.' This landscape consists of a cave covered with a running vine, all blooming into grapes, and surrounded by a grove of alder, poplar, and sweet-smelling cypress. Four fountains of white (foaming) water, springing *in succession* (mark the orderliness), and close to one another, flow away in different directions, through a meadow full of violets and parsley (parsley, to mark its moisture, being elsewhere called 'marsh-nourished,' and associated with the lotus[12]); the air is perfumed not only by these violets and by the sweet cypress, but by Calypso's[13] fire of finely chopped cedar-wood, which sends a smoke, as of incense, through the island; Calypso herself is singing; and finally, upon the trees are resting, or roosting, owls, hawks, and 'long-tongued seacrows.' Whether these last are considered as a part of the ideal landscape, as marine singing-birds, I know not; but the approval of Mercury appears to be elicited chiefly by the fountains and violet meadow.

17. Now the notable things in this description are, first, the evident subservience of the whole landscape to human comfort, to the foot, the taste, or the smell; and, secondly, that throughout the passage there is not a single figurative word expressive of the things being in any wise other than plain grass, fruit, or flower. I have used the term 'spring' of the fountains, because, without doubt, Homer means that they sprang forth brightly, having their source at the foot of the rocks (as copious fountains nearly always have); but Homer does not say 'spring,' he says simply flow, and uses only one word for 'growing softly,' or 'richly,' of the tall trees, the vine, and the violets. There is, however, some expression of sympathy with the sea-birds; he speaks of them in precisely the same terms, as in other places of naval nations, saying they 'have care of the works of the sea.'

18. If we glance through the references to pleasant landscape which occur in other parts of the *Odyssey*, we shall always be struck by this quiet subjection of their every feature to human service, and by the excessive similarity in the scenes. Perhaps the spot intended, after this, to be most perfect, may be the garden of Alcinous,[14] where the principal ideas are, still more definitely, order, symmetry, and fruitfulness; the beds being duly ranged between rows of vines, which, as well as the pear, apple, and fig-trees, bear fruit continually, some grapes being yet sour, while others are getting black; there are plenty of '*orderly* square beds of herbs,' chiefly leeks, and two fountains, one running through the garden, and one under the pavement of the palace to a reservoir for the citizens.

11. *Iliad*, iv.141. [Ruskin's note.]

12. *Ibid.*, ii.776. [Ruskin's note.]

13. The sea nymph who kept Odysseus seven years a prisoner on her island, Ogygia.

14. King of Phaeacia, father of Nausicaa, who hospitably entertained Odysseus when cast upon his coast, on his return from Troy.

Ulysses, pausing to contemplate this scene, is described nearly in the same terms as Mercury pausing to contemplate the wilder meadow; and it is interesting to observe, that, in spite of all Homer's love of symmetry, the god's admiration is excited by the free fountains, wild violets, and wandering vine; but the mortal's, by the vines in rows, the leeks in beds, and the fountains in pipes.

Ulysses has, however, one touching reason for loving vines in rows. His father had given him fifty rows for himself, when he was a boy, with corn between them (just as it now grows in Italy). Proving his identity afterwards to his father, whom he finds at work in his garden, 'with thick gloves on, to keep his hands from the thorns,' he reminds him of these fifty rows of vines, and of the 'thirteen pear-trees and ten apple-trees' which he had given him; and Laertes faints upon his neck.

19. If Ulysses had not been so much of a gardener, it might have been received as a sign of considerable feeling for landscape beauty, that, intending to pay the very highest possible compliment to the Princess Nausicaa, (and having indeed, the moment before, gravely asked her whether she was a goddess or not), he says that he feels, at seeing her, exactly as he did when he saw the young palm-tree growing at Apollo's shrine at Delos. But I think the taste for trim hedges and upright trunks has its usual influence over him here also, and that he merely means to tell the princess that she is delightfully tall and straight.

20. The princess is, however, pleased by his address, and tells him to wait outside the town, till she can speak to her father about him. The spot to which she directs him is another ideal piece of landscape, composed of a 'beautiful grove of aspen poplars, a fountain, and a meadow,' near the road-side: in fact, as nearly as possible such a scene as meets the eye of the traveller every instant on the much-despised lines of road through lowland France; for instance, on the railway between Arras and Amiens; — scenes, to my mind, quite exquisite in the various grouping and grace of their innumerable poplar avenues, casting sweet, tremulous shadows over their level meadows and labyrinthine streams. We know that the princess means aspen poplars, because soon afterwards we find her fifty maid-servants at the palace, all spinning, and in perpetual motion, compared to the 'leaves of the tall poplar'; and it is with exquisite feeling that it is made afterwards [15] the chief tree in the groves of Proserpine; [16] its light and quivering leafage having exactly the melancholy expression of fragility, faintness, and inconstancy which the ancients attributed to the disembodied spirit.[17] The likeness to the poplars by the streams of Amiens is more marked still in the *Iliad*, where the young Simois, struck by Ajax, falls to the earth 'like an aspen that has grown in an irrigated meadow, smooth-trunked, the soft shoots springing from its top, which some coach-making man has cut down with his keen iron, that he may fit a wheel of it to a fair chariot, and it lies parching by the side of the stream.' It is sufficiently notable that Homer, living in mountainous and rocky countries, dwells thus delightedly on all the *flat* bits; and so I think invariably the inhabitants of mountain countries do, but the inhabitants of the plains do not, in any similar way, dwell delightedly on mountains. The Dutch painters [18] are perfectly contented with their flat fields and pollards: Rubens, though he had seen the Alps, usually composes his landscapes of a hayfield or two, plenty of pollards and willows, a distant

18. *e.g.* Jan van Eyck (c.1390–1441) and his school.

spire, a Dutch house with a moat about it, a windmill, and a ditch. The Flemish sacred painters are the only ones who introduce mountains in the distance, as we shall see presently; but rather in a formal way than with any appearance of enjoyment. So Shakespeare never speaks of mountains with the slightest joy, but only of lowland flowers, flat fields, and Warwickshire streams. And if we talk to the mountaineer, he will usually characterise his own country to us as a 'pays affreux,'[19] or in some equivalent, perhaps even more violent, German term: but the lowland peasant does not think his country frightful; he either will have no ideas beyond it, or about it; or will think it a very perfect country, and be apt to regard any deviation from its general principle of flatness with extreme disfavour; as the Lincolnshire farmer in *Alton Locke*: 'I'll shaw 'ee some'at like a field o' beans, I wool — none o' this here darned ups and downs o' hills, to shake a body's victuals out of his inwards — all so vlat as a barn's vloor, for vorty mile on end — there's the country to live in!'[20]

I do not say whether this be altogether right (though certainly not wholly wrong), but it seems to me that there must be in the simple freshness and fruitfulness of level land, in its pale upright trees, and gentle lapse of silent streams, enough for the satisfaction of the human mind in general; and I so far agree with Homer, that, if I had to educate an artist to the full perception of the meaning of the word 'gracefulness' in landscape, I should send him neither to Italy nor to Greece, but simply to those poplar groves between Arras and Amiens.

21. But to return more definitely to our Homeric landscape. When it is perfect, we have, as in the above instances, the foliage and meadows together; when imperfect, it is always either the foliage or the meadow; preeminently the meadow, or arable field. Thus, meadows of asphodel are prepared for the happier dead; and even Orion, a hunter among the mountains in his lifetime, pursues the ghosts of beasts in these asphodel meadows after death.[21] So the sirens sing in a meadow; and throughout the *Odyssey* there is a general tendency to the depreciation of poor Ithaca, because it is rocky, and only fit for goats, and has 'no meadows'; for which reason Telemachus refuses Atrides's present of horses, congratulating the Spartan king at the same time on ruling over a plain which has 'plenty of lotus in it, and rushes,' with corn and barley. Note this constant dwelling on the marsh plants, or at least, those which grow in flat and well-irrigated land, or beside streams: when Scamander, for instance, is restrained by Vulcan, Homer says, very sorrowfully, that 'all his lotus, and reeds, and rushes were burnt'; and thus Ulysses, after being shipwrecked and nearly drowned, and beaten about the sea for many days and nights, on raft and mast, at last getting ashore at the mouth of a large river, casts himself down first upon its *rushes*, and then, in thankfulness, kisses the 'corn-giving land,' as most opposed, in his heart, to the fruitless and devouring sea.[22]

22. In this same passage, also, we find some peculiar expressions of the delight which the Greeks had in trees; for, when Ulysses first comes in sight of land, which gladdens him 'as the reviving of a father from his sickness gladdens his children,' it is not merely the sight of the land itself which gives him such pleasure, but of the 'land and *wood*.' Homer never throws away any words, at least in such a place as this; and what in another poet would have been merely the filling up of the deficient line with an otherwise useless word, is in him the expression of the general

19. 'frightful country.'

20. See Kingsley's *Alton Locke*, Chapter xii. (Not quoted literally.)

21. *Odyssey*, xi.572;xxiv.13. The couch of Ceres, with Homer's usual faithfulness, is made of a *ploughed* field, v.127. [Ruskin's note.]

22. *Odyssey*, v.398,463. [Ruskin's note.]

Greek sense, that land of any kind was in nowise grateful or acceptable till there was *wood* upon it (or corn; but the corn, in the flats, could not be seen so far as the black masses of forest on the hill sides), and that, as in being rushy and corn-giving, the low land, so in being woody, the high land was most grateful to the mind of the man who for days and nights had been wearied on the engulphing sea. And this general idea of wood and corn, as the types of the fatness of the whole earth, is beautifully marked in another place of the *Odyssey*,[23] where the sailors in a desert island, having no flour of corn to offer as a meat offering with their sacrifices, take the leaves of the trees, and scatter them over the burnt offering instead.

23. But still, every expression of the pleasure which Ulysses has in this landing and resting, contains uninterruptedly the reference to the utility and sensible pleasantness of all things, not to their beauty. After his first grateful kiss given to the corn-growing land, he considers immediately how he is to pass the night; for some minutes hesitating whether it will be best to expose himself to the misty chill from the river, or run the risk of wild beasts in the wood. He decides for the wood, and finds in it a bower formed by a sweet and a wild olive tree, interlacing their branches, or — perhaps more accurately translating Homer's intensely graphic expression — 'changing their branches with each other' (it is very curious how often, in an entanglement of wood, one supposes the branches to belong to the wrong trees) and forming a roof penetrated by neither rain, sun, nor wind. Under this bower Ulysses collects the '*vain* (or *frustrate*) outpouring of the dead leaves' — another exquisite expression, used elsewhere of useless grief or shedding of tears; — and, having got enough together, makes his bed of them, and goes to sleep, having covered himself up with them, 'as embers are covered up with ashes.'

23. *Odyssey*, xii.357. [Ruskin's note.]

Nothing can possibly be more intensely possessive of the *facts* than this whole passage; the sense of utter deadness and emptiness, and frustrate fall in the leaves; of dormant life in the human body, — the fire, and heroism, and strength of it, lulled under the dead brown heap, as embers under ashes, and the knitting of interchanged and close strength of living boughs above. But there is not the smallest apparent sense of there being *beauty* elsewhere than in the human being. The wreathed wood is admired simply as being a perfect roof for it; the fallen leaves only as being a perfect bed for it; and there is literally no more excitement of emotion in Homer, as he describes them, nor does he expect us to be more excited or touched by hearing about them, than if he had been telling us how the chambermaid at the Bull aired the four-poster, and put on two extra blankets.

24. Now, exactly this same contemplation of subservience to human use makes the Greek take some pleasure in *rocks*, when they assume one particular form, but one only — that of a *cave*. They are evidently quite frightful things to him under any other condition, and most of all if they are rough and jagged; but if smooth, looking 'sculptured,' like the sides of a ship, and forming a cave or shelter for him, he begins to think them endurable. Hence, associating the ideas of rich and sheltering wood, sea, becalmed and made useful as a port by projecting promontories of rock, and smoothed caves or grottoes in the rocks themselves, we get the pleasantest idea which the Greek could form of a landscape, next to a marsh with poplars in it; not, indeed, if possible, ever to be without these last: thus, in commending the Cyclops'[24] country as one possessed of every perfection, Homer first says: 'They have soft *marshy* meadows

24. One of the race of giants, in Greek mythology, who had one eye in the middle of the forehead; according to Homer, they were shepherds.

near the sea, and good, rich, crumbling, ploughing-land, giving fine deep crops, and vines always giving fruit'; then, 'a port so quiet, that they have no need of cables in it; and at the head of the port, a beautiful clear spring just *under a cave* and *aspen poplars all round it*.'[25]

25. This, it will be seen, is very nearly Homer's usual 'ideal'; but, going into the middle of the island, Ulysses comes on a rougher and less agreeable bit, though still fulfilling certain required conditions of endurableness; a 'cave shaded with laurels,' which, having no poplars about it, is, however, meant to be somewhat frightful, and only fit to be inhabited by a Cyclops. So in the country of the Læstrygons,[26] Homer, preparing his reader gradually for something very disagreeable, represents the rocks as bare and 'exposed to the sun'; only with some smooth and slippery roads over them, by which the trucks bring down wood from the higher hills. Any one familiar with Swiss slopes of hills must remember how often he has descended, sometimes faster than was altogether intentional, by these same slippery woodman's truck roads.

And thus, in general, whenever the landscape is intended to be lovely, it verges towards the ploughed land and poplars; or, at worst, to *woody* rocks; but, if intended to be painful, the rocks are bare and 'sharp.' This last epithet, constantly used by Homer for mountains, does not altogether correspond, in Greek, to the English term, nor is it intended merely to characterize the sharp mountain summits; for it never would be applied simply to the edge or point of a sword, but signifies rather 'harsh,' 'bitter,' or 'painful,' being applied habitually to fate, death, and in *Od.* xi. 333, to a halter; and, as expressive of general objectionableness and unpleasantness, to all high, dangerous, or peaked mountains, as the Maleian promontory (a much-dreaded one), the crest of Parnassus, the Tereian mountain, and a grim or untoward, though, by keeping off the force of the sea, protective, rock at the mouth of the Jardanus; as well as habitually to inaccessible or impregnable fortresses built on heights.

26. In all this I cannot too strongly mark the utter absence of any trace of the feeling for what we call the picturesque, and the constant dwelling of the writer's mind on what was available, pleasant, or useful; his ideas respecting all landscape being not uncharacteristically summed, finally, by Pallas herself; when, meeting Ulysses, who after his long wandering does not recognize his own country, and meaning to describe it as politely and soothingly as possible, she says:[27]—'This Ithaca of ours is, indeed, a rough country enough, and not good for driving in; but, still, things might be worse: it has plenty of corn, and good wine, and *always rain*, and soft nourishing dew, and it has good feeding for goats and oxen, and all manner of wood, and springs fit to drink at all the year round.'

We shall see presently how the blundering, pseudo-picturesque, pseudo-classical minds of Claude[28] and the Renaissance landscape-painters, wholly missing Homer's practical common sense, and equally incapable of feeling the quiet natural grace and sweetness of his asphodel meadows, tender aspen poplars, or running vines,—fastened on his *ports* and *caves*, as the only available features of his scenery; and appointed the type of 'classical landscape' thenceforward to consist in a bay of insipid sea, and a rock with a hole through it.[29]

27. It may indeed be thought that I am assuring too hastily that this was the general view of the Greeks respecting landscape, because it was Homer's. But I believe the true mind of a nation, at any period, is always best ascertainable by examining that of its greatest men; and that simpler and truer results will be attainable for us by simply comparing Homer, Dante, and Walter Scott, than by attempting (what my limits must have rendered absurdly inadequate, and in which, also, both my time and knowledge must have failed me) an analysis of the landscape in the range of contemporary literature. All that I can do is to state the general impression which has been made upon me by my desultory reading, and to mark accurately the grounds for this impression in the works of the greatest men. Now it is quite true that in others of the Greeks, especially in Æschylus and Aristophanes, there is infinitely more of modern feeling, of pathetic fallacy, love of picturesque or beautiful form, and other such elements, than there is in Homer; but then these appear to me just the parts of them which were not Greek, the elements of their minds by which (as one division of the human race always must be with subsequent ones) they are connected with the mediævals and moderns. And without doubt, in his influence over future mankind, Homer is eminently the Greek of Greeks: if I were to associate any one with him it would be Herodotus, and I believe all I have said of the Homeric landscape will be found equally true of the Herodotean, as assuredly it will be of the Platonic; — the contempt, which Plato sometimes expresses by the mouth of Socrates, for the country in general, except so far as it is shady, and has cicadas and running streams to make pleasant noises in it, being almost ludicrous. But Homer is the great type, and the more notable one because of his influence on Vergil, and, through him, on Dante, and all the after ages: and, in like manner, if we can get the abstract of mediæval landscape out of Dante, it will serve us as well as if we had read all the songs of the troubadours, and help us to the farther changes in derivative temper, down to all modern time.

28. I think, therefore, the reader may safely accept the conclusions about Greek landscape which I have got for him out of Homer; and in these he will certainly perceive something very different from the usual imaginations we form of Greek feelings. We think of the Greeks as poetical, ideal, imaginative, in a way that a modern poet or novelist is; supposing that their thoughts about their mythology and world were as visionary and artificial as ours are: but I think the passages I have quoted show that it was not so, although it may be difficult for us to apprehend the strange minglings in them of the elements of faith, which, in our days, have been blended with other parts of human nature in a totally different guise. Perhaps the Greek mind may be best imagined by taking, as its groundwork, that of a good, conscientious, but illiterate, Scotch Presbyterian Border farmer of a century or two back, having perfect faith in the bodily appearances of Satan and his imps; and in all kelpies, brownies, and fairies. Substitute for the indignant terrors in this man's mind, a general persuasion of the *Divinity*, more or less beneficent, yet faultful, of all these beings; that is to say, take away his belief in the demoniacal malignity of the fallen spiritual world, and lower, in the same degree, his conceptions of the angelical, retaining for him the same firm faith in both; keep his ideas about flowers and beautiful scenery much as they are, — his delight in regular ploughed land and meadows, and a neat garden (only with rows of goosberry bushes instead of vines), being, in all probability, about accurately representative of the feelings of Ulysses; then, let the military spirit that is in him, glowing against the Border forager, or the

tion a strange power and freshness, in his *Glaucus and Scylla*. [Ruskin's note.]

foe of old Flodden and Chevy-Chase,[30] be made more principal, with a higher sense of nobleness in soldiership, not as a careless excitement, but a knightly duty; and increased by high cultivation of every personal quality, not of mere shaggy strength, but graceful strength, aided by a softer climate, and educated in all proper harmony of sight and sound; finally, instead of an informed Christian, suppose him to have only the patriarchal Jewish knowledge of the Deity, and even this obscured by tradition, but still thoroughly solemn and faithful, requiring his continual service as a priest of burnt sacrifice and meat offering; and I think we shall get a pretty close approximation to the vital being of a true old Greek; some slight difference still existing in a feeling which the Scotch farmer would have of a pleasantness in blue hills and running streams, wholly wanting in the Greek mind; and perhaps also some difference of views on the subjects of truth and honesty. But the main points, the easy, athletic, strongly logical and argumentative, yet fanciful and credulous, characters of mind, would be very similar in both; and the most serious change in the substance of the stuff among the modifications above suggested as necessary to turn the Scot into the Greek, is that effect of softer climate and surrounding luxury, inducing the practice of various forms of polished art, — the more polished, because the practical and realistic tendency of the Hellenic mind (if my interpretation of it be right) would quite prevent it from taking pleasure in any irregularities of form, or imitations of the weeds and wildnesses of that mountain nature with which it thought itself born to contend. In its utmost refinement of work, it sought eminently for orderliness; carried the principle of the leeks in squares, and fountains in pipes, perfectly out in its streets and temples; formalized whatever decoration it put into its minor architectural mouldings, and reserved its whole heart and power to represent the action of living men, or gods, though not unconscious, meanwhile, of

'The simple, the sincere delight;
The habitual scene of hill and dale;
The rural herds, the vernal gale;
The tangled vetches' purple bloom;
The fragrance of the bean's perfume, —
Theirs, theirs alone, who cultivate the soil,
And drink the cup of thirst, and eat the bread of toil.'[31]

Chapter XIV

Of Mediæval Landscape: — First, the Fields

1. In our examination of the spirit of classical landscape, we were obliged to confine ourselves to what is left to us in written description. Some interesting results might indeed have been obtained by examining the Egyptian and Ninevite landscape sculpture, but in nowise conclusive enough to be worth the pains of the inquiry; for the landscape of sculpture is necessarily confined in range, and usually inexpressive of the complete feelings of the workman, being introduced rather to explain the place and circumstances of events, than for its own sake. In the Middle Ages, however, the case is widely different. We have written landscape, sculptured landscape, and painted landscape, all bearing united testimony to the tone of the national mind in almost every remarkable locality of Europe.

2. That testimony, taken in its breadth, is very curiously conclusive. It marks the

30. The battle of Flodden Field (September 9, 1513) resulted in the defeat of James IV of Scotland by the Earl of Surrey on behalf of Henry VIII. — *Chevy-Chase*: allusion to the battle of Otterbourne in 1388, in which the Scotch, after an unsuccessful attack on the Castle of Otterbourne, were surprised by Henry Hotspur, Lord Percy, and James, Earl of Douglas, was killed. These events were the subject of the famous ballad of Chevy-Chase.

31. Shenstone, *Rural Elegance*, 201ff.

mediæval mind as agreeing altogether with the ancients, in holding that flat land, brooks, and groves of aspens, compose the pleasant places of the earth, and that rocks and mountains are, for inhabitation, altogether to be reprobated and detested; but as disagreeing with the classical mind totally in this other most important respect, that the pleasant flat land is never a ploughed field, nor a rich lotus meadow good for pasture, but *garden* ground covered with flowers, and divided by fragrant hedges, with a castle in the middle of it. The aspens are delighted in, not because they are good for 'coach-making men' to make cart-wheels of, but because they are shady and graceful; and the fruit-trees, covered with delicious fruit, especially apple and orange, occupy still more important positions in the scenery. Singing-birds — not 'sea-crows,' but nightingales [1] — perch on every bough; and the ideal occupation of mankind is not to cultivate either the garden or the meadow, but to gather roses and eat oranges in the one, and ride out hawking over the other.

Finally, mountain scenery, though considered as disagreeable for general inhabitation, is always introduced as being proper to meditate in, or to encourage communion with higher beings; and in the ideal landscape of daily life, mountains are considered agreeable things enough, so that they be far enough away.

3. In this great change there are three vital points to be noticed.

The first, the disdain of agricultural pursuits by the nobility; a fatal change, and one gradually bringing about the ruin of that nobility. It is expressed in the mediæval landscape by the eminently pleasurable and horticultural character of everything; by the fences, hedges, castle walls, and masses of useless, but lovely flowers, especially roses. The knights and ladies are represented always as singing, or making love, in these pleasant places. The idea of setting an old knight, like Laertes [2] (whatever his state of fallen fortune), 'with thick gloves on to keep his hands from the thorns,' to prune a row of vines, would have been regarded as the most monstrous violation of the decencies of life; and a senator, once detected in the home employments of Cincinnatus,[3] could, I suppose, thenceforward hardly have appeared in society.

4. The second vital point is the evidence of a more sentimental enjoyment of external nature. A Greek, wishing really to enjoy himself, shut himself into a beautiful atrium,[4] with an excellent dinner, and a society of philosophical or musical friends. But a mediæval knight went into his pleasance,[5] to gather roses and hear the birds sing; or rode out hunting or hawking. His evening feast, though riotous enough sometimes, was not the height of his day's enjoyment; and if the attractions of the world are to be shown typically to him, as opposed to the horrors of death, they are never represented by a full feast in a chamber, but by a delicate dessert in an orange grove, with musicians under the trees; or a ride on a May morning, hawk on fist.

This change is evidently a healthy, and a very interesting one.

5. The third vital point is the marked sense that this hawking and apple-eating are not altogether right; that there is something else to be done in the world than that; and that the mountains, as opposed to the pleasant garden-ground, are places

1. The peculiar dislike felt by the mediævals for the *sea*, is so interesting a subject of inquiry, that I have reserved it for separate discussion in another work, in present preparation, 'Harbours of England.' [Ruskin's note.]

2. The father of Ulysses.

3. L. Quintus Cincinnatus, hero of the Roman republic, was called from his plough to the dictatorship during a war with the Aequians (458 B.C.). After saving his countrymen, he returned to his farm.

4. The principal room in a Roman house, probably with a central opening in the roof, through which the rain fell into a tank, sunk in the floor.

5. The pleasure ground attached to a mansion or castle, with shady walks, fountains, flower gardens, etc.

where that other something may best be learned; — which is evidently a piece of infinite and new respect for the mountains, and another healthy change in the tone of the human heart.

Let us glance at the signs and various results of these changes, one by one.

6. The two first named, evil and good as they are, are very closely connected. The more poetical delight in external nature proceeds just from the fact that it is no longer looked upon with the eye of the farmer; and in proportion as the herbs and flowers cease to be regarded as useful, they are felt to be charming. Leeks are not now the most important objects in the garden, but lilies and roses; the herbage which a Greek would have looked at only with a view to the number of horses it would feed, is regarded by the mediæval knight as a green carpet for fair feet to dance upon, and the beauty of its softness and colour is proportionally felt by him; while the brook, which the Greek rejoiced to dismiss into a reservoir under the palace threshold, would be, by the mediæval, distributed into pleasant pools, or forced into fountains; and regarded alternately as a mirror for fair faces, and a witchery to ensnare the sunbeams and the rainbow.

7. And this change of feeling involves two others, very important. When the flowers and grass were regarded as means of life, and therefore (as the thoughtful labourer of the soil must always regard them) with the reverence due to those gifts of God which were most necessary to his existence; although their own beauty was less felt, their proceeding from the Divine hand was more seriously acknowledged, and the herb yielding seed, and fruit-tree yielding fruit, though in themselves less admired, were yet solemnly connected in the heart with the reverence of Ceres, Pomona, or Pan.[6] But when the sense of these necessary beauties was more or less lost, among the upper classes, by the delegation of the art of husbandry to the hands of the peasant, the flower and fruit, whose bloom or richness thus became a mere source of pleasure, were regarded with less solemn sense of the Divine gift in them; and were converted rather into toys than treasures, chance gifts for gaiety, rather than promised rewards of labour; so that while the Greek could hardly have trodden the formal furrow, or plucked the clusters from the trellised vine, without reverent thoughts of the deities of field and leaf, who gave the seed to fructify, and the bloom to darken, the mediæval knight plucked the violet to wreathe in his lady's hair, or strewed the idle rose on the turf at her feet, with little sense of anything in the nature that gave them, but a frail, accidental, involuntary exuberance; while also the Jewish sacrificial system being now done away, as well as the Pagan mythology, and, with it, the whole conception of meat offering or first-fruits offering, the chiefest seriousness of all the thoughts connected with the gifts of nature faded from the minds of the classes of men concerned with art and literature; while the peasant, reduced to serf level, was incapable of imaginative thought, owing to his want of general cultivation. But on the other hand, exactly in proportion as the idea of definite spiritual presence in material nature was lost, the mysterious sense of *unaccountable* life in the things themselves would be increased, and the mind would instantly be laid open to all those currents of fallacious, but pensive and pathetic sympathy, which we have seen to be characteristic of modern times.

8. Farther: a singular difference would necessarily result from the far greater loneliness of baronial life, deprived as it was of all interest in agricultural pursuits. The palace of a Greek leader in early times might have gardens, fields, and farms around it, but was sure to be near some

6. *Ceres*: Roman goddess of growing vegetation. — *Pomona*: old Italian goddess of the fruit of trees. — *Pan*: Greek god of flocks, pastures, and forests; and patron of shepherds, hunters, etc.

busy city or sea-port: in later times, the city itself became the principal dwelling-place, and the country was visited only to see how the farm went on, or traversed in a line of march. Far other was the life of the mediæval baron, nested on his solitary jut of crag; entering into cities only occasionally for some grave political or warrior's purpose, and, for the most part, passing the years of his life in lion-like isolation; the village inhabited by his retainers straggling indeed about the slopes of the rocks at his feet, but his own dwelling standing gloomily apart, between them and the uncompanionable clouds, commanding, from sunset to sunrise, the flowing flame of some calm unvoyaged river, and the endless undulation of the untraversable hills. How different must the thoughts about nature have been, of the noble who lived among the bright marble porticos of the Greek groups of temple or palace, — in the midst of a plain covered with corn and olives, and by the shore of a sparkling and freighted sea, — from those of the master of some mountain promontory in the green recesses of Northern Europe, watching night by night, from amongst his heaps of storm-broken stone, rounded into towers, the lightning of the lonely sea flash round the sands of Harlech, or the mists changing their shapes for ever, among the changeless pines, that fringe the crests of Jura.

9. Nor was it without similar effect on the minds of men that their journeyings and pilgrimages became more frequent than those of the Greek, the extent of ground traversed in the course of them larger, and the mode of travel more companionless. To the Greek, a voyage to Egypt, or the Hellespont, was the subject of lasting fame and fable, and the forests of the Danube and the rocks of Sicily closed for him the gates of the intelligible world. What parts of that narrow world he crossed were crossed with fleets or armies; the camp always populous on the plain, and the ships drawn in cautious symmetry around the shore. But to the mediæval knight, from Scottish moor to Syrian sand, the world was one great exercise ground, or field of adventure; the staunch pacing of his charger penetrated the pathlessness of outmost forest, and sustained the sultriness of the most secret desert. Frequently alone, — or, if accompanied, for the most part only by retainers of lower rank, incapable of entering into complete sympathy with any of his thoughts, — he must have been compelled often to enter into dim companionship with the silent nature around him, and must assuredly sometimes have talked to the wayside flowers of his love, and to the fading clouds of his ambition.

10. But, on the other hand, the idea of retirement from the world for the sake of self-mortification, of combat with demons, or communion with angels, and with their King, — authoritatively commended as it was to all men by the continual practice of Christ Himself, — gave to all mountain solitude at once a sanctity and a terror, in the mediæval mind, which were altogether different from anything that it had possessed in the un-Christian periods. On the one side, there was an idea of sanctity attached to rocky wilderness, because it had always been among hills that the Deity had manifested Himself most intimately to men, and to the hills that His saints had nearly always retired for meditation, for especial communion with Him, and to prepare for death. Men acquainted with the history of Moses, alone at Horeb, or with Israel at Sinai, — of Elijah by the brook Cherith, and in the Horeb cave; of the deaths of Moses and Aaron on Hor and Nebo; of the preparation of Jephthah's daughter for her death among the Judea mountains; of the continual retirement of Christ Himself to the mountains for prayer, His temptation in the desert of the Dead Sea, His sermon on the hills of Capernaum, His transfiguration on the crest of Tabor, and His evening and morning walks over Olivet for the four or five

days preceding His crucifixion,[7] — were not likely to look with irreverent or unloving eyes upon the blue hills that girded their golden horizon, or drew down upon them the mysterious clouds out of the height of the darker heaven. But with this impression of their greater sanctity was involved also that of a peculiar terror. In all this, — their haunting by the memories of prophets, the presences of angels, and the everlasting thoughts and words of the Redeemer, — the mountain ranges seemed separated from the active world, and only to be fitly approached by hearts which were condemnatory of it. Just in so much as it appeared necessary for the noblest men to retire to the hill-recesses before their missions could be accomplished, or their spirits perfected, in so far did the daily world seem by comparison to be pronounced profane and dangerous; and to those who loved that world and its work, the mountains were thus voiceful with perpetual rebuke, and necessarily contemplated with a kind of pain and fear, such as a man engrossed by vanity feels at being by some accident forced to hear a startling sermon, or to assist at a funeral service. Every association of this kind was deepened by the practice and the precept of the time; and thousands of hearts, which might otherwise have felt that there was loveliness in the wild landscape, shrank from it in dread, because they knew that the monk retired to it for penance, and the hermit for contemplation. The horror which the Greek had felt for hills only when they were uninhabitable and barren, attached itself now to many of the sweetest spots of earth; the feeling was conquered by political interests, but never by admiration; military ambition seized the frontier rock, or maintained itself in the unassailable pass; but it was only for their punishment, or in their despair, that men consented to tread the crocused slopes of the Chartreuse, or the soft glades and dewy pastures of Vallombrosa.

11. In all these modifications of temper and principle there appears much which tends to a passionate, affectionate, or awe-struck observance of the features of natural scenery, closely resembling, in all but this superstitious dread of mountains, our feelings at the present day. But *one* character which the mediævals had in common with the ancients, and that exactly the most eminent character in both, opposed itself steadily to all the feelings we have hitherto been examining, — the admiration, namely, and constant watchfulness, of human beauty. Exercised in nearly the same manner as the Greeks, from their youth upwards, their countenances were cast even in a higher mould; for, although somewhat less regular in feature, and affected by minglings of Northern bluntness and stolidity of general expression, together with greater thinness of lip and shaggy formlessness of brow, these less sculpturesque features were, nevertheless, touched with a seriousness and refinement proceeding first from the modes of thought inculcated by the Christian religion, and secondly from their more romantic and various life. Hence a degree of personal beauty, both male and female, was attained in the Middle Ages, with which classical periods could show nothing for a moment comparable; and this beauty was set forth by the most perfect splendour, united with grace, in dress, which the human race have hitherto invented. The strength of their art-genius was directed in great part to this object; and their best workmen and most brilliant fanciers were employed in wreathing the mail or embroidering the robe. The exquisite arts of enamelling and chasing metal enabled them to make the armour as radiant and delicate as the plumage of a tropical bird; and the most vari-

7. See, respectively, *Exodus*, iii,1ff.; *Deuteronomy*, xxxiii,2; *1 Kings*, xvii,1ff.,xix,9ff.; *Numbers*, xx,23ff.; *Deuteronomy*, xxxiv,1ff.; *Judges*, xi, 38; *Matthew*, xiv,23; *Luke*, iv,1ff.; *Matthew*, viii,5–14; *John*, vi,15ff.; *Matthew*, xvii,2; *Mark*, ix,2; *John*, xi,44; *Matthew*, xxi,1–9.

ous and vivid imaginations were displayed in the alternations of colour, and fiery freaks of form, on shield and crest. . . .

12. Now, the effect of this superb presence of human beauty on men in general was, exactly as it had been in Greek times, first, to turn their thoughts and glances in great part away from all other beauty but that, and to make the grass of the field take to them always more or less the aspect of a carpet to dance upon, a lawn to tilt upon, or a serviceable crop of hay; and, secondly, in what attention they paid to this lower nature, to make them dwell exclusively on what was graceful, symmetrical, and bright in colour. All that was rugged, rough, dark, wild, unterminated, they rejected at once, as the domain of 'salvage men' and monstrous giants: all that they admired was tender, bright, balanced, enclosed, symmetrical — only symmetrical in the noble and free sense: for what we moderns call 'symmetry,' or 'balance,' differs as much from mediæval symmetry as the poise of a grocer's scales, or the balance of an Egyptian mummy with its hands tied to its sides, does from the balance of a knight on his horse, striking with the battle-axe, at the gallop; the mummy's balance looking wonderfully perfect, and yet sure to be one-sided if you weigh the dust of it, — the knight's balance swaying and changing like the wind, and yet as true and accurate as the laws of life.

13. And this love of symmetry was still farther enhanced by the peculiar duties required of art at the time; for, in order to fit a flower or leaf for inlaying in armour, or showing clearly in glass, it was absolutely necessary to take away its complexity, and reduce it to the condition of a disciplined and orderly pattern; and this the more, because, for all military purposes, the device, whatever it was, had to be distinctly intelligible at extreme distance. That it should be a good imitation of nature, when seen near, was of no moment; but it was of highest moment that when first the knight's banner flashed in the sun at the turn of the mountain road, or rose, torn and bloody, through the drift of the battle dust, it should still be discernible what the bearing was.

'At length, the freshening western blast
Aside the shroud of battle cast;
And first the ridge of mingled spears
Above the brightening cloud appears;
And in the smoke the pennons flew,
As in the storm the white sea-mew;
Then marked they, dashing broad and far
The broken billows of the war.
Wide raged the battle on the plain;
Spears shook, and falchions flashed amain;
Fell England's arrow-flight like rain;
Crests rose, and stooped, and rose again,
Wild and disorderly.
Amidst the scene of tumult, high,
They saw Lord Marmion's falcon fly,
And stainless Tunstall's banner white,
And Edmund Howard's lion bright.'[8]

It was needed, not merely that they should see it was a falcon, but Lord Marmion's falcon; not only a lion, but the Howard's lion. Hence, to the one imperative end of *intelligibility*, every minor resemblance to nature was sacrificed, and above all, the *curved*, which are chiefly the confusing lines; so that the straight, elongated back, doubly elongated tail, projected and separate claws, and other rectilinear unnaturalnesses of form, became the means by which the leopard was, in midst of the mist and storm of battle, distinguished from the dog, or the lion from the wolf; the most admirable fierceness and vitality being, in spite of these necessary changes (so often shallowly sneered at by the modern workman), obtained by the old designer.

Farther, it was necessary to the brilliant harmony of colour, and clear setting forth of everything, that all confusing shadows,

8. Scott, *Marmion*, VI,xxvii,1–8,12–20.

all dim and doubtful lines should be rejected: hence at once an utter denial of natural appearances by the great body of workmen; and a calm rest in a practice of representation which would make either boar or lion blue, scarlet, or golden, according to the device of the knight, or the need of such and such a colour in that place of the pattern; and which wholly denied that any substance ever cast a shadow, or was affected by any kind of obscurity.

14. All this was in its way, and for its end, absolutely right, admirable, and delightful; and those who despise it, laugh at it, or derive no pleasure from it, are utterly ignorant of the highest principles of art, and are mere tyros and beginners in the practice of colour. But, admirable though it might be, one necessary result of it was a farther withdrawal of the observation of men from the refined and subtle beauty of nature; so that the workman who first was led to think *lightly* of natural beauty, as being subservient to human, was next led to think *inaccurately* of natural beauty, because he had continually to alter and simplify it for his practical purposes.

15. Now, assembling all these different sources of the peculiar mediæval feeling towards nature in one view, we have:

1st. Love of the garden instead of love of the farm, leading to a sentimental contemplation of nature, instead of a practical and agricultural one.

2d. Loss of sense of actual Divine presence, leading to fancies of fallacious animation, in herbs, flowers, clouds, &c.

3d. Perpetual, and more or less undisturbed, companionship with wild nature.

4th. Apprehension of demoniacal and angelic presence among mountains, leading to a reverent dread of them.

5th. Principalness of delight in human beauty, leading to comparative contempt of natural objects.

6th. Consequent love of order, light, intelligibility, and symmetry, leading to dislike of the wildness, darkness, and mystery of nature.

7th. Inaccuracy of observance of nature, induced by the habitual practice of change on its forms.

From these mingled elements, we should necessarily expect to find resulting, as the characteristic of mediæval landscape art, compared with Greek, a far higher sentiment about it, and affection for it, more or less subdued by still greater respect for the loveliness of man, and therefore subordinated entirely to human interests; mingled with curious traces of terror, piety, or superstition, and cramped by various formalisms, — some wise and necessary, some feeble, and some exhibiting needless ignorance and inaccuracy.

Under these lights, let us examine the facts.

16. The landscape of the Middle Ages is represented in a central manner by the illuminations of the MSS. of Romances, executed about the middle of the fifteenth century. On one side of these stands the earlier landscape work, more or less treated as simple decoration; on the other, the later landscape work, becoming more or less affected with modern ideas and modes of imitation.

These central fifteenth century landscapes are almost invariably composed of a grove or two of tall trees, a winding river, and a castle, or a garden: the peculiar feature of both these last being *trimness*; the artist always dwelling especially on the fences; wreathing the espaliers indeed prettily with sweetbriar, and putting pots of orange-trees on the tops of the walls, but taking great care that there shall be no loose bricks in the one, nor broken stakes in the other, — the trouble and ceaseless warfare of the times having rendered security one of the first elements of

pleasantness, and making it impossible for any artist to conceive Paradise but as surrounded by a moat, or to distinguish the road to it better than by its narrow wicket gate, and watchful porter.

17. One of these landscapes is thus described by Macaulay: — 'We have an exact square, enclosed by the rivers Pison, Gihon, Hiddekel, and Euphrates, each with a convenient bridge in the centre; rectangular beds of flowers; a long canal neatly bricked and railed in; the tree of knowledge, clipped like one of the limes behind the Tuileries, standing in the centre of the grand alley; the snake turned round it, the man on the right hand, the woman on the left, and the beasts drawn up in an exact circle round them.'[9]

All this is perfectly true; and seems in the description very curiously foolish. The only curious folly, however, in the matter is the exquisite *naïveté* of the historian, in supposing that the quaint landscape indicates in the understanding of the painter so marvellous an inferiority to his own; whereas, it is altogether his own wit that is at fault, in not comprehending that nations, whose youth had been decimated among the sands and serpents of Syria, knew probably nearly as much about Eastern scenery as youths trained in the schools of the modern Royal Academy; and that this curious symmetry was entirely symbolic, only more or less modified by the various instincts which I have traced above. Mr. Macaulay is evidently quite unaware that the serpent with the human head, and body twisted round the tree, was the universally accepted symbol of the evil angel from the dawn of art up to Michael Angelo; that the greatest sacred artists invariably place the man on the one side of the tree, the woman on the other, in order to denote the enthroned and balanced dominion about to fall by temptation; that the beasts are ranged (when they *are* so, though this is much more seldom the case,) in a circle round them, expressly to mark that they were then not wild, but obedient, intelligent, and orderly beasts; and that the four rivers are trenched and enclosed on the four sides, to mark that the waters which now wander in waste, and destroy in fury, had then for their principal office to 'water the garden' of God. The description is, however, sufficiently apposite and interesting, as bearing upon what I have noted respecting the eminent *fence*-loving spirit of the mediævals.

18. Together with this peculiar formality, we find an infinite delight in drawing pleasant flowers, always articulating and outlining them completely; the sky is always blue, having only a few delicate white clouds in it, and in the distance are blue mountains, very far away, if the landscape is to be simply delightful; but brought near, and divided into quaint overhanging rocks, if it is intended to be meditative, or a place of saintly seclusion. But the whole of it always, — flowers, castles, brooks, clouds, and rocks, — subordinate to the human figures in the foreground, and painted for no other end than that of explaining their adventures and occupations.

19. Before the idea of landscape had been thus far developed, the representations of it had been purely typical; the objects which had to be shown in order to explain the scene of the event, being firmly outlined, usually on a pure golden or chequered colour background, not on sky. The change from the golden background, (characteristic of the finest thirteenth century work) and the coloured chequer (which in like manner belongs to the finest fourteenth) to the blue sky, gradated to the horizon, takes place early in the fifteenth century, and is the *crisis* of change in the spirit of mediæval art. Strictly speaking, we might divide the art of

9. See Macaulay's essay on 'Moore's Life of Lord Byron.' Macaulay is comparing the 'correctness of the last century' (the 18th) to 'those pictures of the garden of Eden which we see in old Bibles.' See *Genesis*, ii,8ff.

Christian times into two great masses — Symbolic and Imitative; — the symbolic, reaching from the earliest periods down to the close of the fourteenth century, and the imitative from that close, to the present time; and, then, the most important circumstance indicative of the culminating point, or turn of tide, would be this of the change from chequered background to sky background. . . .

20. The moment the sky is introduced (and it is curious how perfectly it is done *at once*, many manuscripts presenting, in alternate pages, chequered backgrounds, and deep blue skies exquisitely gradated to the horizon) — the moment, I say, the sky is introduced, the spirit of art becomes for evermore changed, and thenceforward it gradually proposes imitation more and more as an end, until it reaches the Turnerian landscape. This broad division into two schools would therefore be the most true and accurate we could employ, but not the most convenient. For the great mediæval art lies in a cluster about the culminating point, including symbolism on one side, and imitation on the other, and extending like a radiant cloud upon the mountain peak of ages, partly down both sides of it, from the year 1200 to 1500; the brightest part of the cloud leaning a little backwards, and poising itself between 1250 and 1350. And therefore the most convenient arrangement is into Romanesque and barbaric art, up to 1200, — mediæval art, 1200 to 1500, — and modern art, from 1500 downwards. But it is only in the earlier or symbolic mediæval art, reaching up to the close of the fourteenth century, that the peculiar modification of natural forms for decorative purposes is seen in its perfection, with all its beauty, and all its necessary shortcomings; the minds of men being accurately balanced between that honour for the superior human form which they shared with the Greek ages, and the sentimental love of nature which was peculiar to their own. The expression of the two feelings will be found to vary according to the material and place of the art; in painting, the conventional forms are more adopted, in order to obtain definition, and brilliancy of colour, while in sculpture the life of nature is often rendered with a love and faithfulness which put modern art to shame. . . .

Chapter XVI

Of Modern Landscape

1. We turn our eyes, therefore, as boldly and as quickly as may be, from these serene fields and skies of mediæval art, to the most characteristic examples of modern landscape. And, I believe, the first thing that will strike us, or that ought to strike us, is their *cloudiness*.

Out of perfect light and motionless air, we find ourselves on a sudden brought under sombre skies, and into drifting wind; and, with fickle sunbeams flashing in our face, or utterly drenched with sweep of rain, we are reduced to track the changes of the shadows on the grass, or watch the rents of twilight through angry cloud. And we find that whereas all the pleasure of the mediæval was in *stability*, *definiteness*, and *luminousness*, we are expected to rejoice in darkness, and triumph in mutability; to lay the foundation of happiness in things which momentarily change or fade; and to expect the utmost satisfaction and instruction from what it is impossible to arrest, and difficult to comprehend.

2. We find, however, together with this general delight in breeze and darkness, much attention to the real form of clouds, and careful drawing of effects of mist; so that the appearance of objects, as seen through it, becomes a subject of science with us; and the faithful representation of that appearance is made of primal importance, under the name of aërial perspective. The aspects of sunset and sunrise, with all their attendant phenomena of cloud and mist, are watchfully delineated;

and in ordinary daylight landscape, the sky is considered of so much importance, that a principal mass of foliage, or a whole foreground, is unhesitatingly thrown into shade merely to bring out the form of a white cloud. So that, if a general and characteristic name were needed for modern landscape art, none better could be invented than 'the service of clouds.'

3. And this name would, unfortunately, be characteristic of our art in more ways than one. In the last chapter, I said that all the Greeks spoke kindly about the clouds, except Aristophanes;[1] and he, I am sorry to say (since his report is so unfavourable) is the only Greek who had studied them attentively. He tells us, first, that they are 'great goddesses to idle men'; then, that they are 'mistresses of disputings, and logic, and monstrosities, and noisy chattering'; declares that whoso believes in their divinity must first disbelieve in Jupiter and place supreme power in the hands of an unknown god 'Whirlwind'; and, finally, he displays their influence over the mind of one of their disciples, in his sudden desire 'to speak ingeniously concerning smoke.'

There is, I fear, an infinite truth in this Aristophanic judgment applied to our modern cloud-worship. Assuredly, much of the love of mystery in our romances, our poetry, our art, and, above all, in our metaphysics, must come under that definition so long ago given by the great Greek, 'speaking ingeniously concerning smoke.' And much of the instinct, which, partially developed in painting, may be now seen throughout every mode of exertion of mind, — the easily encouraged doubt, easily excited curiosity, habitual agitation, and delight in the changing and the marvellous, as opposed to the old quiet serenity of social custom and religious faith, — is again deeply defined in those few words, the 'dethroning of Jupiter,' the 'coronation of the whirlwind.'

4. Nor of whirlwind merely, but also of darkness or ignorance respecting all stable facts. That darkening of the foreground to bring out the white cloud, is, in one aspect of it, a type of the subjection of all plain and positive fact, to what is uncertain and unintelligible. And as we examine farther into the matter, we shall be struck by another great difference between the old and modern landscape, namely, that in the old no one ever thought of drawing anything but as well *as he could*. That might not be *well*, as we have seen in the case of rocks; but it was as well as he *could*, and always distinctly. Leaf, or stone, or animal, or man, it was equally drawn with care and clearness, and its essential characters shown. If it was an oak tree, the acorns were drawn; if a flint pebble, its veins were drawn; if an arm of the sea, its fish were drawn; if a group of figures, their faces and dresses were drawn — to the very last subtlety of expression and end of thread that could be got into the space, far off or near. But now our ingenuity is all 'concerning smoke.' Nothing is truly drawn but that; all else is vague, slight, imperfect; got with as little pains as possible. You examine your closest foreground, and find no leaves; your largest oak, and find no acorns; your human figure, and find a spot of red paint instead of a face; and in all this, again and again, the Aristophanic words come true, and the clouds seem to be 'great goddesses to idle men.'

5. The next thing that will strike us, after this love of clouds, is the love of liberty. Whereas the mediæval was always shutting himself into castles, and behind fosses, and drawing brickwork neatly, and beds of flowers primly, our painters delight in getting to the open fields and moors; abhor all hedges and moats; never paint anything but free-growing trees, and rivers gliding 'at their own sweet will';

1. In § 21, not included in the present collection. — Aristophanes (c.444–c.380), the great Athenian comic poet, was the author of the comedy, *Clouds*, which is a satirical criticism of contemporary philosophic inquiry.

eschew formality down to the smallest detail; break and displace the brickwork which the mediæval would have carefully cemented; leave unpruned the thickets he would have delicately trimmed; and, carrying the love of liberty even to license, and the love of wildness even to ruin, take pleasure at last in every aspect of age and desolation which emancipates the objects of nature from the government of men; — on the castle wall displacing its tapestry with ivy, and spreading, through the garden, the bramble for the rose.

6. Connected with this love of liberty we find a singular manifestation of love of mountains, and see our painters traversing the wildest places of the globe in order to obtain subjects with craggy foregrounds and purple distances. Some few of them remain content with pollards and flat land; but these are always men of third-rate order; and the leading masters, while they do not reject the beauty of the low grounds, reserve their highest powers to paint Alpine peaks or Italian promontories. And it is eminently noticeable, also, that this pleasure in the mountains is never mingled with fear, or tempered by a spirit of meditation, as with the mediæval; but it is always free and fearless, brightly exhilarating, and wholly unreflective: so that the painter feels that his mountain foreground may be more consistently animated by a sportsman than a hermit; and our modern society in general goes to the mountains, not to fast, but to feast, and leaves their glaciers covered with chicken-bones and egg-shells.

7. Connected with this want of any sense of solemnity in mountain scenery, is a general profanity of temper in regarding all the rest of nature; that is to say, a total absence of faith in the presence of any deity therein. Whereas the mediæval never painted a cloud, but with the purpose of placing an angel in it; and a Greek never entered a wood without expecting to meet a god in it; *we* should think the appearance of an angel in the cloud wholly unnatural, and should be seriously surprised by meeting a god anywhere. Our chief ideas about the wood are connected with poaching. We have no belief that the clouds contain more than so many inches of rain or hail, and from our ponds and ditches expect nothing more divine than ducks and watercresses.

8. Finally: connected with this profanity of temper is a strong tendency to deny the sacred element of colour, and make our boast in blackness. For though occasionally glaring, or violent, modern colour is on the whole eminently sombre, tending continually to grey or brown, and by many of our best painters consistently falsified, with a confessed pride in what they call chaste or subdued tints; so that, whereas a mediæval paints his sky bright blue, and his foreground bright green, gilds the towers of his castles, and clothes his figures with purple and white, we paint our sky grey, our foreground black, and our foliage brown, and think that enough is sacrificed to the sun in admitting the dangerous brightness of a scarlet cloak or a blue jacket.

9. These, I believe, are the principal points which would strike us instantly, if we were to be brought suddenly into an exhibition of modern landscapes out of a room filled with mediæval work. It is evident that there are both evil and good in this change; but how much evil, or how much good, we can only estimate by considering, as in the former divisions of our inquiry, what are the real roots of the habits of mind which have caused them.

And first, it is evident that the title 'Dark Ages,' given to the mediæval centuries, is, respecting art, wholly inapplicable. They were, on the contrary, the bright ages; ours are the dark ones. I do not mean metaphysically, but literally. They were the ages of gold; ours are the ages of umber.

This is partly mere mistake in us; we

build brown brick walls, and wear brown coats, because we have been blunderingly taught to do so, and go on doing so mechanically. There is, however, also some cause for the change in our own tempers. On the whole, these are much *sadder* ages than the early ones; not sadder in a noble and deep way, but in a dim, wearied way, — the way of ennui, and jaded intellect, and uncomfortableness of soul and body. The Middle Ages had their wars and agonies, but also intense delights. Their gold was dashed with blood; but ours is sprinkled with dust. Their life was inwoven with white and purple; ours is one seamless stuff of brown. Not that we are without apparent festivity, but festivity more or less forced, mistaken, embittered, incomplete — not of the heart. How wonderfully, since Shakspere's time, have we lost the power of laughing at bad jests! The very finish of our wit belies our gaiety.

10. The profoundest reason of this darkness of heart is, I believe, our want of faith. There never yet was a generation of men (savage or civilized) who, taken as a body, so wofully fulfilled the words, 'having no hope, and without God in the world,'[2] as the present civilized European race. A Red Indian or Otaheitan[3] savage has more sense of a Divine existence round him, or government over him, than the plurality of refined Londoners and Parisians; and those among us who may in some sense be said to believe, are divided almost without exception into two broad classes, Romanist and Puritan; who, but for the interference of the unbelieving portions of society, would, either of them, reduce the other sect as speedily as possible to ashes; the Romanist having always done so whenever he could, from the beginning of their separation, and the Puritan at this time holding himself in complacent expectation of the destruction of Rome by volcanic fire. Such division as this between persons nominally of one religion, that is to say, believing in the same God, and the same Revelation, cannot but become a stumbling-block of the gravest kind to all thoughtful and far-sighted men, — a stumbling-block which they can only surmount under the most favourable circumstances of early education. Hence, nearly all our powerful men in this age of the world are unbelievers; the best of them in doubt and misery; the worst in reckless defiance; the plurality, in plodding hesitation, doing, as well as they can, what practical work lies ready to their hands. Most of our scientific men are in this last class; our popular authors either set themselves definitely against all religious form, pleading for simple truth and benevolence (Thackeray, Dickens), or give themselves up to bitter and fruitless statement of facts, (De Balzac), or surface-painting, (Scott), or careless blasphemy, sad or smiling, (Byron, Beranger[4]). Our earnest poets, and deepest thinkers, are doubtful and indignant, (Tennyson, Carlyle); one or two, anchored, indeed, but anxious, or weeping, (Wordsworth, Mrs. Browning); and of these two, the first is not so sure of his anchor, but that now and then it drags with him, even to make him cry out, —

'Great God, I had rather be
A Pagan suckled in some creed outworn;
So might I, standing on this pleasant lea,
Have glimpses that would make me less forlorn.'[5]

In politics, religion is now a name; in art, a hypocrisy, or affectation. Over German religious pictures the inscription, 'See how Pious I am,' can be read at a glance by any clear-sighted person. Over

2. *Ephesians*, ii,12.

3. *Otaheitan*: older form for 'Tahitian.'

4. Pierre Jean de Beranger (1780–1857), French poet, whose gay and trivial songs of Parisian bourgeois life gained much popularity owing to their natural and unconventional form.

5. Wordsworth, 'The World is too Much with Us,' 9–12. (Not quoted literally.)

French and English religious pictures, the inscription, 'See how Impious I am,' is equally legible. All sincere and modest art is, among us, profane.[6]

11. This faithlessness operates among us according to our tempers, producing either sadness or levity, and being the ultimate root alike of our discontents and of our wantonnesses. It is marvellous how full of contradiction it makes us: we are first dull, and seek for wild and lonely places because we have no heart for the garden; presently we recover our spirits, and build an assembly room among the mountains, because we have no reverence for the desert. I do not know if there be game on Sinai, but I am always expecting to hear of some one's shooting over it.

12. There is, however, another, and a more innocent root of our delight in wild scenery.

All the Renaissance principles of art tended, as I have before often explained, to the setting Beauty above Truth, and seeking for it always at the expense of truth. And the proper punishment of such pursuit — the punishment which all the laws of the universe rendered inevitable — was, that those who thus pursued beauty should wholly lose sight of beauty. All the thinkers of the age, as we saw previously, declared that it did not exist. The age seconded their efforts, and banished beauty, so far as human effort could succeed in doing so, from the face of the earth, and the form of man. To powder the hair, to patch the cheek, to hoop the body, to buckle the foot, were all part and parcel of the same system which reduced streets to brick walls, and pictures to brown stains. One desert of Ugliness was extended before the eyes of mankind; and their pursuit of the beautiful, so recklessly continued, received unexpected consummation in high-heeled shoes and periwigs, — Gower Street, and Gaspar Poussin.[7]

13. Reaction from this state was inevitable, if any true life was left in the races of mankind; and, accordingly, though still forced, by rule and fashion, to the producing and wearing all that is ugly, men steal out, half-ashamed of themselves for doing so, to the fields and mountains; and, finding among these the colour, and liberty, and variety, and power, which are for ever grateful to them, delight in these to an extent never before known; rejoice in all the wildest shattering of the mountain side, as an opposition to Gower Street; gaze in a rapt manner at sunsets and sunrises, to see there the blue, and gold, and purple, which glow for them no longer on knight's armour or temple porch; and gather with care out of the fields, into their blotted herbaria, the flowers which the five orders of architecture[8] have banished from their doors and casements.

14. The absence of care for personal beauty, which is another great characteristic of the age, adds to this feeling in a twofold way: first, by turning all reverent thoughts away from human nature; and making us think of men as ridiculous or ugly creatures, getting through the world as well as they can, and spoiling it in doing so; not ruling it in a kingly way and crowning all its loveliness. In the Middle Ages hardly anything but vice could be

6. Pre-Raphaelitism, of course, excepted, which is a new phase of art, in no wise considered in this chapter. Blake was sincere, but full of wild creeds, and somewhat diseased in brain. [Ruskin's note.]

7. Gower Street, a street in London, symbolized for Ruskin modern ugliness. — Gaspar Poussin (1613–75), French landscape painter, notably of the Roman Campagna; he came under the influence of Claude Lorrain, and achieved considerable grace and romantic beauty in his work. Ruskin's linking of Gaspar's name with Gower Street is Ruskin's satirical suggestion of how low he ranks the painter, possibly because of Claude's influence, which Ruskin never tired of bewailing. (Throughout Ruskin's discussion, Gaspar Poussin is not to be confused with his brother-in-law, Nicolas Poussin [1594–1665], a much greater painter.)

8. Allusion to the five orders of classical architecture, rising above each other in relative height, lightness, and decoration — the Tuscan, Doric, Ionic, Corinthian, and the Composite.

caricatured, because virtue was always visibly and personally noble: now virtue itself is apt to inhabit such poor human bodies, that no aspect of it is invulnerable to jest; and for all fairness we have to seek to the flowers, for all sublimity, to the hills.

The same want of care operates, in another way, by lowering the standard of health, increasing the susceptibility to nervous or sentimental impressions, and thus adding to the other powers of nature over us whatever charm may be felt in her fostering the melancholy fancies of brooding idleness.

15. It is not, however, only to existing inanimate nature that our want of beauty in person and dress has driven us. The imagination of it, as it was seen in our ancestors, haunts us continually; and while we yield to the present fashions, or act in accordance with the dullest modern principles of economy and utility, we look fondly back to the manners of the ages of chivalry, and delight in painting, to the fancy, the fashions we pretend to despise, and the splendours we think it wise to abandon. The furniture and personages of our romance are sought, when the writer desires to please most easily, in the centuries which we profess to have surpassed in everything; the art which takes us into the present times is considered as both daring and degraded; and while the weakest words please us, and are regarded as poetry, which recall the manners of our forefathers, or of strangers, it is only as familiar and vulgar that we accept the description of our own.

In this we are wholly different from all the races that preceded us. All other nations have regarded their ancestors with reverence as saints or heroes; but have nevertheless thought their own deeds and ways of life the fitting subjects for their arts of painting or of verse. We, on the contrary, regard our ancestors as foolish and wicked, but yet find our chief artistic pleasures in descriptions of their ways of life.

The Greeks and mediævals honoured, but did not imitate, their forefathers; we imitate, but do not honour.

16. With this romantic love of beauty, forced to seek in history, and in external nature, the satisfaction it cannot find in ordinary life, we mingle a more rational passion, the due and just result of newly awakened powers of attention. Whatever may first lead us to the scrutiny of natural objects, that scrutiny never fails of its reward. Unquestionably they are intended to be regarded by us with both reverence and delight; and every hour we give to them renders their beauty more apparent, and their interest more engrossing. Natural science — which can hardly be considered to have existed before modern times — rendering our knowledge fruitful in accumulation, and exquisite in accuracy, has acted for good or evil, according to the temper of the mind which received it; and though it has hardened the faithlessness of the dull and proud, has shown new grounds for reverence to hearts which were thoughtful and humble. The neglect of the art of war, while it has somewhat weakened and deformed the body,[9] has given us leisure and opportunity for studies to which, before, time and space were equally wanting; lives which once were early wasted on the battle field are now passed usefully in the study; nations which exhausted themselves in annual warfare now dispute with each other the discovery of new planets; and the serene philosopher dissects the plants, and analyzes the dust, of lands which were of old only traversed by the knight in hasty march, or by the borderer in heedless rapine.

17. The elements of progress and de-

9. Of course this is meant only of the modern citizen or country-gentleman, as compared with a citizen of Sparta or old Florence. I leave it to others to say whether the 'neglect of the *art* of war' may or may not, in a yet more fatal sense, be predicated of the English nation. War, *without* art, we seem, with God's help, able still to wage nobly. [Ruskin's note.]

cline being thus strangely mingled in the modern mind, we might beforehand anticipate that one of the notable characters of our art would be its inconsistency; that efforts would be made in every direction, and arrested by every conceivable cause and manner of failure; that in all we did, it would become next to impossible to distinguish accurately the grounds for praise or for regret; that all previous canons of practice and methods of thought would be gradually overthrown, and criticism continually defied by successes which no one had expected, and sentiments which no one could define.

18. Accordingly, while, in our inquiries into Greek and mediæval art, I was able to describe, in general terms, what all men did or felt, I find now many characters in many men; some, it seems to me, founded on the inferior and evanescent principles of modernism, on its recklessness, impatience, or faithlessness; others founded on its science, its new affection for nature, its love of openness and liberty. And among all these characters, good or evil, I see that some, remaining to us from old or transitional periods, do not properly belong to us, and will soon fade away, and others, though not yet distinctly developed, are yet properly our own, and likely to grow forward into greater strength.

For instance: our reprobation of bright colour is, I think, for the most part, mere affectation, and must soon be done away with. Vulgarity, dulness, or impiety, will indeed always express themselves through art in brown and grey, as in Rembrandt, Caravaggio, and Salvator; but we are not wholly vulgar, dull, or impious; nor, as moderns, are we necessarily obliged to continue so in anywise. Our greatest men, whether sad or gay, still delight, like the great men of all ages, in brilliant hues. The colouring of Scott and Byron is full and pure; that of Keats and Tennyson rich even to excess. Our practical failures in colouring are merely the necessary consequences of our prolonged want of practice during the periods of Renaissance affectation and ignorance; and the only durable difference between old and modern colouring, is the acceptance of certain hues, by the modern, which please him by expressing that melancholy peculiar to his more reflective or sentimental character, and the greater variety of them necessary to express his greater science.

19. Again: if we ever become wise enough to dress consistently and gracefully, to make health a principal object in education, and to render our streets beautiful with art, the external charm of past history will in great measure disappear. There is no essential reason, because we live after the fatal seventeenth century,[10] that we should never again be able to confess interest in sculpture, or see brightness in embroidery; nor, because now we choose to make the night deadly with our pleasures, and the day with our labours, prolonging the dance till dawn, and the toil to twilight, that we should never again learn how rightly to employ the sacred trusts of strength, beauty, and time. Whatever external charm attaches itself to the past, would then be seen in proper subordination to the brightness of present life; and the elements of romance would exist, in the earlier ages, only in the attraction which must generally belong to whatever is unfamiliar; in the reverence which a noble nation always pays to its ancestors; and in the enchanted light which races, like individuals, must perceive in looking back to the days of their childhood.

20. Again: the peculiar levity with which natural scenery is regarded by a large number of modern minds cannot be considered as entirely characteristic of the age, inasmuch as it never can belong to its greatest intellects. Men of any high mental power must be serious, whether in ancient or modern days: a certain degree of reverence for fair scenery is found in all

10. Allusion to the triumph and subsequent influence of Puritanism.

our great writers without exception, — even the one who has made us laugh oftenest, taking us to the valley of Chamouni, and to the sea beach, there to give peace after suffering, and change revenge into pity.[11] It is only the dull, the uneducated, or the worldly, whom it is painful to meet on the hill sides; and levity, as a ruling character, cannot be ascribed to the whole nation, but only to its holiday-making apprentices, and its House of Commons.

21. We need not, therefore, expect to find any single poet or painter representing the entire group of powers, weaknesses, and inconsistent instincts which govern or confuse our modern life. But we may expect that in the man who seems to be given by Providence as the type of the age (as Homer and Dante were given, as the types of classical and mediæval mind), we shall find whatever is fruitful and substantial to be completely present, together with those of our weaknesses, which are indeed nationally characteristic, and compatible with general greatness of mind; just as the weak love of fences, and dislike of mountains, were found compatible with Dante's greatness in other respects.

22. Farther: as the admiration of mankind is found, in our times, to have in great part passed from men to mountains, and from human emotion to natural phenomena, we may anticipate that the great strength of art will also be warped in this direction; with this notable result for us, that whereas the greatest painters or painter of classical and mediæval periods, being wholly devoted to the representation of humanity, furnished us with but little to examine in landscape, the greatest painters or painter of modern times will in all probability be devoted to landscape principally; and farther, because in representing human emotion words surpass painting, but in representing natural scenery painting surpasses words, we may anticipate also that the painter and poet (for convenience' sake I here use the words in opposition) will somewhat change their relations of rank in illustrating the mind of the age; that the painter will become of more importance, the poet of less; and that the relations between the men who are the types and first-fruits of the age in word and work, — namely, Scott and Turner, — will be, in many curious respects, different from those between Homer and Phidias, or Dante and Giotto.

It is this relation which we have now to examine.

23. And, first, I think it probable that many readers may be surprised at my calling Scott the great representative of the mind of the age in literature.[12] Those who can perceive the intense penetrative depth of Wordsworth, and the exquisite finish and melodious power of Tennyson, may be offended at my placing in higher rank that poetry of careless glance, and reckless rhyme, in which Scott poured out the fancies of his youth; and those who are familiar with the subtle analysis of the French novelists, or who have in anywise submitted themselves to the influence of German philosophy, may be equally indignant at my ascribing a principality to Scott among the literary men of Europe, in an age which has produced De Balzac and Goethe.

So also in painting, those who are acquainted with the sentimental efforts

11. See David Copperfield, chap.lv. and lviii. [Ruskin's note.]

12. For Ruskin's statement of his indebtedness to Scott, see the 10th letter in *Fors Clavigera* ('From my own masters, then, Scott and Homer, I learned the Toryism which my best after-thought has only served to confirm'), also letters 31 and 67. Throughout the remainder of the present chapter, it is evident that Ruskin's curious exaltation of Scott as a poet of nature is owing to Ruskin's admiration of Scott's ethical, social, and political ideals. (Much of the latter half of the chapter, containing frequent quotations from Scott's poetry, is largely repetitious of points already made, and several paragraphs have therefore been omitted.)

made at present by the German religious and historical schools, and with the disciplined power and learning of the French, will think it beyond all explanation absurd to call a painter of light water-colour landscapes, eighteen inches by twelve, the first representative of the arts of the age. I can only crave the reader's patience, and his due consideration of the following reasons for my doing so, together with those advanced in the farther course of the work.

24. I believe the first test of a truly great man is his humility. I do not mean, by humility, doubt of his own power, or hesitation in speaking his opinions; but a right understanding of the relation between what *he* can do and say, and the rest of the world's sayings and doings. All great men not only know their business, but usually know that they know it; and are not only right in their main opinions, but they usually know that they are right in them; only, they do not think much of themselves on that account. Arnolfo [13] knows he can build a good dome at Florence; Albert Durer writes calmly to one who had found fault with his work, 'It cannot be better done'; Sir Isaac Newton knows that he has worked out a problem or two that would have puzzled anybody else; — only they do not expect their fellow-men therefore to fall down and worship them; they have a curious undersense of powerlessness, feeling that the greatness is not *in* them, but *through* them; that they could not do or be anything else than God made them. And they see something divine and God-made in every other man they meet, and are endlessly, foolishly, incredibly merciful.

25. Now, I find among the men of the present age, as far as I know them, this character in Scott and Turner preeminently; I am not sure if it is not in them alone. I do not find Scott talking about the dignity of literature, nor Turner about the dignity of painting. They do their work, feeling that they cannot well help it; the story must be told, and the effect put down; and if people like it, well and good; and, if not, the world will not be much the worse.

I believe a very different impression of their estimate of themselves and their doings will be received by any one who reads the conversations of Wordsworth or Goethe. The *slightest* manifestation of jealousy or self-complacency is enough to mark a second-rate character of the intellect; and I fear that, especially in Goethe, such manifestations are neither few nor slight.

26. Connected with this general humility, is the total absence of affectation in these men, — that is to say, of any assumption of manner or behaviour in their work, in order to attract attention. Not but that they are mannerists both. Scott's verse is strongly mannered, and Turner's oil painting; but the manner of it necessitated by the feelings of the men, entirely natural to both, never exaggerated for the sake of show. I hardly know any other literary or pictorial work of the day which is not in some degree affected. I am afraid Words worth was often affected in his simplicity, and De Balzac in his finish. Many fine French writers are affected in their reserve, and full of stage tricks in placing of sentences. It is lucky if in German writers we ever find so much as a sentence without affectation. I know no painters without it, except one or two Pre-Raphaelites (chiefly Holman Hunt), and some simple water-colour painters, as William Hunt, William Turner of Oxford, and the late George Robson; [14] but these last have no invention, and therefore by our fourth canon, Chap. III. sec. 21., are excluded from the first rank of artists; and of the

13. Arnolfo di Lapo (1232–1300), Florentine architect and sculptor.

14. William Turner ('Turner of Oxford') (1789–1862) taught art at Oxford, and excelled in painting English scenery. — George Fennell Robson (1788–1833), water-color painter, president of the Oil and Water-color Society (1819–20).

Pre-Raphaelites there is here no question, as they in no wise represent the modern school.

27. Again: another very important, though not infallible, test of greatness is, as we have often said, the appearance of Ease with which the thing is done. It may be that, as with Dante and Leonardo, the finish given to the work effaces the evidence of ease; but where the ease is manifest, as in Scott, Turner, and Tintoret; and the thing done is very noble, it is a strong reason for placing the men above those who confessedly work with great pains. Scott writing his chapter or two before breakfast — not retouching, Turner finishing a whole drawing in a forenoon before he goes out to shoot (providing always the chapter and drawing be good), are instantly to be set above men who confessedly have spent the day over the work, and think the hours well spent if it has been a little mended between sunrise and sunset. Indeed, it is no use for men to think to appear great by working fast, dashing, and scrawling; the thing they do must be good and great, cost what time it may; but if it *be* so, and they have honestly and unaffectedly done it with *no effort*, it is probably a greater and better thing than the result of the hardest efforts of others.

28. Then, as touching the kind of work done by these two men, the more I think of it I find this conclusion more impressed upon me, — that the greatest thing a human soul ever does in this world is to *see* something, and tell what it *saw* in a plain way. Hundreds of people can talk for one who can think, but thousands can think for one who can see. To see clearly is poetry, prophecy, and religion, — all in one.

Therefore, finding the world of Literature more or less divided into Thinkers and Seers, I believe we shall find also that the Seers are wholly the greater race of the two. A true Thinker, who has practical purpose in his thinking, and is sincere, as Plato, or Carlyle, or Helps,[15] becomes in some sort a seer, and must be always of infinite use in his generation; but an affected Thinker, who supposes his thinking of any other importance than as it tends to work, is about the vainest kind of person that can be found in the occupied classes. Nay, I believe that metaphysicians and philosophers are, on the whole, the greatest troubles the world has got to deal with; and that while a tyrant or bad man is of some use in teaching people submission or indignation, and a thoroughly idle man is only harmful in setting an idle example, and communicating to other lazy people his own lazy misunderstandings, busy metaphysicians are always entangling *good* and *active* people, and weaving cobwebs among the finest wheels of the world's business; and are as much as possible, by all prudent persons, to be brushed out of their way, like spiders, and the meshed weed that has got into the Cambridgeshire canals, and other such impediments to barges and business. And if we thus clear the metaphysical element out of modern literature, we shall find its bulk amazingly diminished, and the claims of the remaining writers, or of those whom we have thinned by this abstraction of their straw stuffing, much more easily adjusted.[16]

29. Again: the mass of sentimental literature, concerned with the analysis and description of emotion, headed by the po-

15. Sir Arthur Helps (1813–75), popular writer, Clerk of the Privy Council, widely known for his *Friends in Council* (1847–59), dialogues on ethical and aesthetic questions; hardly the 'seer' which Ruskin's puritan didacticism interpreted him as being.

16. Observe, I do not speak thus of metaphysics because I have no pleasure in them. When I speak contemptuously of philology, it may be answered me, that I am a bad scholar; but I cannot be so answered touching metaphysics, for every one conversant with such subjects may see that I have strong inclination that way, which would, indeed, have led me far astray long ago, if I had not learned also some use of my hands, eyes, and feet. [Ruskin's note.]

etry of Byron, is altogether of lower rank than the literature which merely describes what it saw. The true Seer always feels as intensely as any one else; but he does not much describe his feelings. He tells you whom he met, and what they said; leaves you to make out, from that, what they feel, and what he feels, but goes into little detail. And, generally speaking, pathetic writing and careful explanation of passion are quite easy, compared with this plain recording of what people said or did, or with the right invention of what they are likely to say and do; for this reason, that to invent a story, or admirably and thoroughly tell any part of a story, it is necessary to grasp the entire mind of every personage concerned in it, and know precisely how they would be affected by what happens; which to do requires a colossal intellect; but to describe a separate emotion delicately, it is only needed that one should feel it oneself; and thousands of people are capable of feeling this or that noble emotion, for one who is able to enter into all the feelings of somebody sitting on the other side of the table. Even, therefore, when this sentimental literature is first rate, as in passages of Byron, Tennyson, and Keats, it ought not to be ranked so high as the Creative; and though perfection, even in narrow fields, is perhaps as rare as in the wider, and it may be as long before we have another In Memoriam as another Guy Mannering, I unhesitatingly receive as a greater manifestation of power the right invention of a few sentences spoken by Pleydell and Mannering across their supper-table, than the most tender and passionate melodies of the self-examining verse.

30. Having, therefore, cast metaphysical writers out of our way, and sentimental writers into the second rank, I do not think Scott's supremacy among those who remain will any more be doubtful; nor would it, perhaps, have been doubtful before, had it not been encumbered by innumerable faults and weaknesses. But it is preeminently in these faults and weaknesses that Scott is representative of the mind of his age: and because he is the greatest man born amongst us, and intended for the enduring type of us, all our principal faults must be laid on his shoulders, and he must bear down the dark marks to the latest ages; while the smaller men, who have some special work to do, perhaps not so much belonging to this age as leading out of it to the next, are often kept providentially quit of the encumbrances which they had not strength to sustain, and are much smoother and pleasanter to look at, in their way; only that is a smaller way.

31. Thus, the most startling fault of the age being its faithlessness, it is necessary that its greatest man should be faithless. Nothing is more notable or sorrowful in Scott's mind than its incapacity of steady belief in anything. He cannot even resolve hardily to believe in a ghost, or a water-spirit; always explains them away in an apologetic manner, not believing, all the while, even in his own explanation. He never can clearly ascertain whether there is anything behind the arras but rats; never draws sword, and thrusts at it for life or death; but goes on looking at it timidly, and saying, 'it must be the wind.' He is educated a Presbyterian, and remains one, because it is the most sensible thing he can do if he is to live in Edinburgh; but he thinks Romanism more picturesque, and profaneness more gentlemanly: does not see that anything affects human life but love, courage, and destiny; which are, indeed, not matters of faith at all, but of sight. Any gods but those are very misty in outline to him; and when the love is laid ghastly in poor Charlotte's coffin; [17] and the courage is no more of use, — the pen having fallen from between the fingers; and destiny is sealing

17. Scott's wife, Charlotte, died in 1826.

the scroll, — the God-light is dim in the tears that fall on it.

He is in all this the epitome of his epoch.

32. Again: as another notable weakness of the age is its habit of looking back, in a romantic and passionate idleness, to the past ages, not understanding them all the while, nor really desiring to understand them, so Scott gives up nearly the half of his intellectual power to a fond, yet purposeless, dreaming over the past, and spends half his literary labours in endeavours to revive it, not in reality, but on the stage of fiction; endeavours which were the best of the kind that modernism made, but still successful only so far as Scott put, under the old armour, the everlasting human nature which he knew; and totally unsuccessful, so far as concerned the painting of the armour itself, which he knew *not*. The excellence of Scott's work is precisely in proportion to the degree in which it is sketched from present nature. His familiar life is inimitable; his quiet scenes of introductory conversation, as the beginning of Rob Roy and Red-gauntlet, and all his living Scotch characters, mean or noble, from Andrew Fairservice to Jeanie Deans, are simply right, and can never be bettered. But his romance and antiquarianism, his knighthood and monkery, are all false, and he knows them to be false; does not care to make them earnest; enjoys them for their strangeness, but laughs at his own antiquarianism, all through his own third novel, — with exquisite modesty indeed, but with total misunderstanding of the function of an Antiquary. He does not see how anything is to be got out of the past but confusion, old iron on drawingroom chairs, and serious inconvenience to Dr. Heavysterne.[18]

33. Again: more than any age that had preceded it, ours had been ignorant of the meaning of the word 'Art.' It had not a single fixed principle, and what unfixed principles it worked upon were all wrong. It was necessary that Scott should know nothing of art. He neither cared for painting nor sculpture, and was totally incapable of forming a judgment about them. He had some confused love of Gothic architecture, because it was dark, picturesque, old, and like nature; but could not tell the worst from the best, and built for himself perhaps the most incongruous and ugly pile[19] that gentlemanly modernism ever designed; marking, in the most curious and subtle way, that mingling of reverence with irreverence which is so striking in the age: he reverences Melrose, yet casts one of its piscinas,[20] puts a modern steel grate into it, and makes it his fireplace. Like all pure moderns, he supposes the Gothic barbarous, notwithstanding his love of it; admires, in an equally ignorant way, totally opposite styles; is delighted with the new town of Edinburgh; mistakes its dulness for purity of taste, and actually compares it, in its deathful formality of street, as contrasted with the rudeness of the old town, to Britomart[21] taking off her armour.

34. Again: as in reverence and irreverence, so in levity and melancholy, we saw that the spirit of the age was strangely interwoven. Therefore, also, it is necessary that Scott should be light, careless, unearnest, and yet eminently sorrowful. Throughout all his work there is no evidence of any purpose but to while away the hour. His life had no other object than the pleasure of the instant, and the establishing of a family name. All his thoughts were, in their outcome and end, less than nothing, and vanity. And yet, of all poetry that I know, none is so sorrowful as Scott's. Other great masters are pathetic in a resolute and predetermined way,

18. Dr. Heavysterne is the learned professor from Utrecht in Scott's *The Antiquary*.

19. Abbotsford, Scott's 'medieval' residence on the Tweed River.

20. *piscina*: the basin used in liturgical ablutions, and in the washing of altar linens.

when they choose; but, in their own minds, are evidently stern, or hopeful, or serene; never really melancholy. Even Byron is rather sulky and desperate than melancholy; Keats is sad because he is sickly; Shelley because he is impious; but Scott is inherently and consistently sad. . . .

Life begins to pass from him very early; and while Homer sings cheerfully in his blindness, and Dante retains his courage, and rejoices in hope of Paradise, through all his exile, Scott, yet hardly past his youth, lies pensive in the sweet sunshine and among the harvest of his native hills.

'Blackford, on whose uncultured breast,
Among the broom, and thorn, and whin,
A truant boy, I sought the nest,
Or listed as I lay at rest,
While rose on breezes thin
The murmur of the city crowd,
And, from his steeple jangling loud,
St. Giles's mingling din!
Now, from the summit to the plain,
Waves all the hill with yellow grain;
And on the landscape as I look,
Nought do I see unchanged remain,
Save the rude cliffs and chiming brook;
To me they make a heavy moan
Of early friendships past and gone.' [22]

35. Such, then, being the weaknesses which it was necessary that Scott should share with his age, in order that he might sufficiently represent it, and such the grounds for supposing him, in spite of all these weaknesses, the greatest literary man whom that age produced, let us glance at the principal points in which his view of landscape differs from that of the mediævals.

I shall not endeavour now, as I did with Homer and Dante, to give a complete analysis of all the feelings which appear to be traceable in Scott's allusions to landscape scenery, — for this would require a volume, — but only to indicate the main points of differing character between his temper and Dante's. Then we will examine in detail, not the landscape of literature, but that of painting, which must, of course, be equally, or even in a higher degree, characteristic of the age.

36. And, first, observe Scott's habit of looking at nature neither as dead, or merely material, in the way that Homer regards it, nor as altered by his own feelings, in the way that Keats and Tennyson regard it, but as having an animation and pathos of *its own*, wholly irrespective of human presence or passion, — an animation which Scott loves and sympathizes with, as he would with a fellow creature, forgetting himself altogether, and subduing his own humanity before what seems to him the power of the landscape.

'Yon lonely thorn, — would he could tell
The changes of his parent dell,
Since he, so grey and stubborn now,
Waved in each breeze a sapling bough!
Would he could tell, how deep the shade
A thousand mingled branches made,
How broad the shadows of the oak,
How clung the rowan to the rock,
And through the foliage showed his head,
With narrow leaves and berries red!'

Scott does not dwell on the grey stubbornness of the thorn, because he himself is at that moment disposed to be dull, or stubborn; neither on the cheerful peeping forth of the rowan, because he himself is at that moment cheerful or curious: but he perceives them both with the kind of interest that he would take in an old man, or a climbing boy; forgetting himself, in sympathy with either age or youth.

'And from the grassy slope he sees
The Greta flow to meet the Tees,
Where issuing from her darksome bed,
She caught the morning's eastern red,
And through the softening vale below
Rolled her bright waves in rosy glow,

22. *Marmion*, IV,xxiv.

23. *Ibid.*, Int. to Canto II,8–17.

All blushing to her bridal bed,
Like some shy maid, in convent bred;
While linnet, lark, and blackbird gay
Sing forth her nuptial roundelay.' [24]

Is Scott, or are the persons of his story, gay at this moment? Far from it. Neither Scott nor Risingham is happy, but the Greta is; and all Scott's sympathy is ready for the Greta, on the instant.

37. Observe, therefore, this is not *pathetic* fallacy; for there is no passion in *Scott* which alters nature. It is not the lover's passion, making him think the lark spurs are listening for his lady's foot; [25] it is not the miser's passion making him think that dead leaves are falling coins; but it is an inherent and continual habit of thought, which Scott shares with the moderns in general, being, in fact, nothing else than the instinctive sense which men must have of the Divine presence, not formed into distinct belief. In the Greek it created, as we saw, the faithfully believed gods of the elements; in Dante and the mediævals, it formed the faithfully believed angelic presence: in the modern, it creates no perfect form, does not apprehend distinctly any Divine being or operation; but only a dim, slightly credited animation in the natural object, accompanied with great interest and affection for it.

This feeling is quite universal with us, only varying in depth according to the greatness of the heart that holds it; and in Scott, being more than usually intense, and accompanied with infinite affection and quickness of sympathy, it enables him to conquer all tendencies to the pathetic fallacy, and, instead of making Nature anywise subordinate to himself, he makes himself subordinate to *her* — follows her lead simply — does not venture to bring his own cares and thoughts into her pure and quiet presence — paints her in her simple and universal truth, adding no result of momentary passion or fancy, and appears, therefore, at first shallower than other poets, being in reality wider and healthier. 'What am I?' he says continually, 'that I should trouble this sincere nature with my thoughts. I happen to be feverish and depressed, and I could see a great many sad and strange things in those waves and flowers; but I have no business to see such things. Gay Greta! sweet harebells! *you* are not sad nor strange to most people: you are but bright water and blue blossoms; you shall not be anything else to me, except that I cannot help thinking you are a little alive, — no one can help thinking that.' And thus, as Nature is bright, serene, or gloomy, Scott takes her temper, and paints her as she is; nothing of himself being ever intruded, except that far-away Æolian tone, of which he is unconscious; and sometimes a stray syllable or two, like that about Blackford Hill, distinctly stating personal feeling, but all the more modestly for that distinctness, and for the clear consciousness that it is not the chiming brook, nor the cornfields, that are sad, but only the boy that rests by them; so returning on the instant to reflect, in all honesty, the image of Nature as she is meant by all men to be received; nor that in fine words, but in the first that come; nor with comment of far-fetched thoughts, but with easy thoughts, such as all sensible men ought to have in such places, only spoken sweetly; and evidently also with an undercurrent of more profound reflection, which here and there murmurs for a moment, and which I think, if we choose, we may continually pierce down to, and drink deeply from, but which Scott leaves us to seek, or shun, at our pleasure.

38. And in consequence of this unselfishness and humility, Scott's enjoyment of nature is incomparably greater than that of any other poet I know. All the rest carry their cares to her, and begin maundering in her ears about their own affairs. Tennyson goes out on a furzy common, and sees it is calm autumn sunshine, but

24. *Rokeby*, II,xvi,11–20.
25. See Tennyson's *Maud*, I,xxii,10.

it gives him no pleasure. He only remembers that it is

'Dead calm in that noble breast
Which heaves but with the heaving deep.' [26]

He sees a thundercloud in the evening, and *would* have 'doted and pored' on it, but cannot, for fear it should bring the ship bad weather. Keats drinks the beauty of nature violently; but has no more real sympathy with her than he has with a bottle of claret. His palate is fine; but he 'bursts joy's grape against it,' [27] gets nothing but misery, and a bitter taste of dregs, out of his desperate draught.

Byron and Shelley are nearly the same, only with less truth of perception, and even more troublesome selfishness. Wordsworth is more like Scott, and understands how to be happy, but yet cannot altogether rid himself of the sense that he is a philosopher, and ought always to be saying something wise. He has also a vague notion that Nature would not be able to get on well without Wordsworth; and finds a considerable part of his pleasure in looking at himself as well as at her. But with Scott the love is entirely humble and unselfish. 'I, Scott, am nothing, and less than nothing; but these crags, and heaths, and clouds, how great they are, how lovely, how for ever to be beloved, only for their own silent, thoughtless sake!' . . .

We began our investigation, it will be remembered, in order to determine whether landscape-painting was worth studying or not. We have now reviewed the three principal phases of temper in the civilized human race, and we find that landscape has been mostly disregarded by great men, or cast into a second place, until now; and that now it seems dear to us, partly in consequence of our faults, and partly owing to accidental circumstances, soon, in all likelihood to pass away: and there seems great room for question still, whether our love of it is a permanent and healthy feeling, or only a healthy crisis in a generally diseased state of mind. If the former, society will for ever hereafter be affected by its results; and Turner, the first great landscape-painter, must take a place in the history of nations corresponding in art accurately to that of Bacon in philosophy; — Bacon having first opened the study of the laws of material nature, when, formerly, men had thought only of the laws of human mind; and Turner having first opened the study of the aspect of material nature, when, before, men had thought only of the aspect of the human form. Whether, therefore, the love of landscape be trivial and transient, or important and permanent, it now becomes necessary to consider. We have, I think, data enough before us for the solution of the question, and we will enter upon it, accordingly, in the following chapter.

Chapter XVII

The Moral of Landscape

1. Supposing then the preceding conclusions correct, respecting the grounds and component *elements* of the pleasure which the moderns take in landscape, we have here to consider what are the probable or usual *effects* of this pleasure. Is it a safe or a seductive one? May we wisely boast of it, and unhesitatingly indulge it? or is it rather a sentiment to be despised when it is slight, and condemned when it is intense; a feeling which disinclines us to labour, and confuses us in thought; a joy only to the inactive and the visionary, incompatible with the duties of life, and the accuracies of reflection?

2. It seems to me that, as matters stand at present, there is considerable ground for the latter opinion. We saw, in the preceding chapter, that our love of nature had been partly forced upon us by mistakes in our social economy, and led to no distinct

26. Tennyson's *In Memoriam*, 11, final stanza, 3–4.

27. *Cf.* Keats, *Ode on Melancholy*, 28.

issues of action or thought. And when we look to Scott — the man who feels it most deeply — for some explanation of its effect upon him, we find a curious tone of apology (as if for an involuntary folly) running through his confessions of such sentiment, and a still more curious inability to define, beyond a certain point, the character of this emotion. He has lost the company of his friends among the hills, and turns to these last for comfort. He says, 'there is a pleasure in the pain' consisting in such thoughts

'As oft awake
By lone St. Mary's silent lake;'

but, when we look for some definition of these thoughts, all that we are told is, that they compose

'A mingled sentiment
Of resignation and content';[1]

a sentiment which, I suppose, many people can attain to on the loss of their friends, without the help of lakes or mountains; while Wordsworth definitely and positively affirms that *thought* has nothing whatever to do with the matter, and that though, in his youth, the cataract and wood 'haunted him like a passion,'[2] it was without the help of any 'remoter charm, by thought supplied.'

3. There is not, however, any question, but that both Scott and Wordsworth are here mistaken in their analysis of their feelings. Their delight, so far from being without thought, is more than half made up of thought, but of thought in so curiously languid and neutralized a condition that they cannot trace it. The thoughts are beaten to a powder so small that they know not what they are; they know only that in such a state they are not good for much, and disdain to call them thoughts. But the way in which thought, even thus broken, acts in producing the delight will be understood by glancing back to §§ 9 and 10 of the tenth chapter,[3] in which we observed the power of the imagination in exalting any visible object, by gathering round it, in farther vision, all the facts properly connected with it; this being, as it were, a spiritual or second sight, multiplying the power of enjoyment according to the fulness of the vision. For, indeed, although in all lovely nature there is, first, an excellent degree of simple beauty, addressed to the eye alone, yet often what impresses us most will form but a very small portion of that visible beauty. That beauty may, for instance, be composed of lovely flowers and glittering streams, and blue sky, and white clouds; and yet the thing that impresses us most, and which we should be sorriest to lose, may be a thin grey film on the extreme horizon, not so large, in the space of the scene it occupies, as a piece of gossamer on a near at hand bush, nor in any wise prettier to the eye than the gossamer; but, because the gossamer is known by us for a little bit of spider's work, and the other grey film is known to mean a mountain ten thousand feet high, inhabited by a race of noble mountaineers, we are solemnly impressed by the aspect of it; and yet, all the while, the thoughts and knowledge which cause us to receive this impression are so obscure that we are not conscious of them; we think we are only enjoying the visible scene; and the very men whose minds are fullest of such thoughts absolutely deny, as we have just heard, that they owe their pleasure to anything but the eye, or that the pleasure consists in anything else than 'Tranquillity.'

4. And observe, farther, that this comparative Dimness and Untraceableness of the thoughts which are the sources of our admiration, is not a *fault* in the thoughts, at such a time. It is, on the contrary, a necessary condition of their subordination to the pleasure of Sight. If the thoughts

1. Marmion, Introduction to canto II. [Ruskin's note.]
2. See Wordsworth's *Lines Composed a Few Miles above Tintern Abbey*, 76–77.
3. Entitled 'Of the Use of Pictures.'

were more distinct we should not *see* so well; and beginning definitely to think, we must comparatively cease to see. In the instance just supposed, as long as we look at the film of mountain or Alp, with only an obscure consciousness of its being the source of mighty rivers, that consciousness adds to our sense of its sublimity; and if we have ever seen the Rhine or the Rhone near their mouths, our knowledge, so long as it is only obscurely suggested, adds to our admiration of the Alp; but once let the idea define itself, — once let us begin to consider seriously *what* rivers flow from that mountain, to trace their course, and to recall determinately our memories of their distant aspects, — and we cease to behold the Alp; or, if we still behold it, it is only as a point in a map which we are painfully designing, or as a subordinate object which we strive to thrust aside, in order to make room for our remembrances of Avignon or Rotterdam.

Again: so long as our idea of the multitudes who inhabit the ravines at its foot remains indistinct, that idea comes to the aid of all the other associations which increase our delight. But let it once arrest us, and entice us to follow out some clear course of thought respecting the causes of the prosperity or misfortune of the Alpine villagers, and the snowy peak again ceases to be visible, or holds its place only as a white spot upon the retina, while we pursue our meditations upon the religion or the political economy of the mountaineers.

5. It is thus evident that a curiously balanced condition of the powers of mind is necessary to induce full admiration of any natural scene. Let those powers be themselves inert, and the mind vacant of knowledge, and destitute of sensibility; and the external object becomes little more to us than it is to birds or insects; we fall into the temper of the clown. On the other hand, let the reasoning powers be shrewd in excess, the knowledge vast, or sensibility intense, and it will go hard but that the visible object will suggest so much that it shall be soon itself forgotten, or become, at the utmost, merely a kind of key note to the course of purposeful thought. Newton, probably, did not perceive whether the apple which suggested his meditations on gravity was withered or rosy; nor could Howard[4] be affected by the picturesqueness of the architecture which held the sufferers it was his occupation to relieve.

6. This wandering away in thought from the thing seen to the business of life, is not, however, peculiar to men of the highest reasoning powers, or most active benevolence. It takes place more or less in nearly all persons of average mental endowment. They see and love what is beautiful, but forget their admiration of it in following some train of thought which it suggested, and which is of more personal interest to them. Suppose that three or four persons come in sight of a group of pine-trees, not having seen pines for some time. One, perhaps an engineer, is struck by the manner in which their roots hold the ground, and sets himself to examine their fibres, in a few minutes retaining little more consciousness of the beauty of the trees than if he were a rope-maker untwisting the strands of a cable: to another, the sight of the trees calls up some happy association, and presently he forgets them, and pursues the memories they summoned: a third is struck by certain groupings of their colours, useful to him as an artist, which he proceeds immediately to note mechanically for future use, with as little feeling as a cook setting down the constituents of a newly discovered dish: and a fourth impressed by the wild coiling of boughs and roots, will begin to change them in his fancy into dragons and monsters, and lose his grasp of the scene in fantastic metamorphosis: while, in the mind of the man who has most the power of contemplating the thing itself, all these

4. John Howard (1726?–90), celebrated prison reformer.

perceptions and trains of idea are partially present, not distinctly, but in a mingled and perfect harmony. He will not see the colours of the tree so well as the artist, nor its fibres so well as the engineer; he will not altogether share the emotion of the sentimentalist, nor the trance of the idealist; but fancy, and feeling, and perception, and imagination, will all obscurely meet and balance themselves in him, and he will see the pine-trees somewhat in this manner:

'Worthier still of note
Are those fraternal Four of Borrowdale,
Joined in one solemn and capacious grove:
Huge trunks! and each particular trunk a growth
Of intertwisted fibres serpentine
Up-coiling, and inveterately convolved;
Nor uninformed with Phantasy, and looks
That threaten the profane; a pillared shade,
Upon whose grassless floor of red-brown hue,
By sheddings from the pining umbrage tinged
Perennially, — beneath whose sable roof
Of boughs, as if for festal purpose, decked
With unrejoicing berries, ghostly Shapes
May meet at noontide; Fear and trembling Hope,
Silence and Foresight; Death the Skeleton,
And Time the Shadow; there to celebrate,
As in a natural temple scattered o'er
With altars undisturbed of mossy stone,
United worship.' [5]

7. The power, therefore, of thus fully *perceiving* any natural object depends on our being able to group and fasten all our fancies about it as a centre, making a garland of thoughts for it, in which each separate thought is subdued and shortened of its own strength, in order to fit it for harmony with others; the intensity of our enjoyment of the object depending, first, on its own beauty, and then on the richness of the garland. And men who have this habit of clustering and harmonizing their thoughts are a little too apt to look scornfully upon the harder workers who tear the bouquet to pieces to examine the stems. This was the chief narrowness of Wordsworth's mind; he could not understand that to break a rock with a hammer in search of crystal may sometimes be an act not disgraceful to human nature, and that to dissect a flower may sometimes be as proper as to dream over it: whereas all experience goes to teach us, that among men of average intellect the most useful members of society are the dissectors, not the dreamers. It is not that they love nature or beauty less, but that they love result, effect, and progress more; and when we glance broadly along the starry crowd of benefactors to the human race, and guides of human thought, we shall find that this dreaming love of natural beauty — or at least its expression — has been more or less checked by them all, and subordinated either to hard work or watching of *human* nature. Thus in all the classical and mediæval periods, it was, as we have seen, subordinate to agriculture, war, and religion; and in the modern period, in which it has become far more powerful, observe in what persons it is chiefly manifested.

(1.) It is subordinate in	(2.) It is intense in
Bacon.	Mrs. Radclyffe.

8. I have purposely omitted the names of Wordsworth, Tennyson, and Scott, in the second list, because, glancing at the two columns as they now stand, we may, I think, draw some useful conclusions

5. Wordsworth, *Yew-Trees*, 13–31.

from the high honourableness and dignity of the names on one side, and the comparative slightness of those on the other, — conclusions which may help us to a better understanding of Scott and Tennyson themselves. Glancing, I say, down those columns in their present form, we shall at once perceive that the intense love of nature is, in modern times, characteristic of persons not of the first order of intellect, but of brilliant imagination, quick sympathy, and undefined religious principle, suffering also usually under strong and ill-governed passions: while in the same individual it will be found to vary at different periods, being, for the most part, strongest in youth, and associated with force of emotion, and with indefinite and feeble powers of thought; also, throughout life, perhaps developing itself most at times when the mind is slightly unhinged by love, grief, or some other of the passions.

9. But, on the other hand, while these feelings of delight in natural objects cannot be construed into signs of the highest mental powers, or purest moral principles, we see that they are assuredly indicative of minds above the usual standard of power, and endowed with sensibilities of great preciousness to humanity; so that those who find themselves entirely destitute of them, must make this want a subject of humiliation, not of pride. The apathy which cannot perceive beauty is very different from the stern energy which disdains it; and the coldness of heart which receives no emotion from external nature, is not to be confounded with the wisdom of purpose which represses emotion in action. In the case of most men, it is neither acuteness of the reason, nor breadth of humanity, which shields them from the impressions of natural scenery, but rather low anxieties, vain discontents, and mean pleasures; and for one who is blinded to the works of God by profound abstraction or lofty purpose, tens of thousands have their eyes sealed by vulgar selfishness, and their intelligence crushed by impious care.

Observe, then: we have, among mankind in general, the three orders of being; — the lowest, sordid and selfish, which neither sees nor feels; the second, noble and sympathetic, but which sees and feels without concluding or acting; the third and highest, which loses sight in resolution, and feeling in work.[6]

6. The investigation of this subject becomes, therefore, difficult beyond all other parts of our inquiry, since precisely the same sentiments may arise in different minds from totally opposite causes; and the extreme of frivolity may sometimes for a moment desire the same things as the extreme of moral power and dignity. In the following extract from 'Marriage,' the sentiment expressed by Lady Juliana (the ineffably foolish and frivolous heroine of the story) is as nearly as possible what Dante would have felt, under the same circumstances:

'The air was soft and genial; not a cloud stained the bright azure of the heavens; and the sun shone out in all his splendour, shedding life and beauty even over the desolate heath-clad hills of Glenfern. But, after they had journeyed a few miles, suddenly emerging from the valley, a scene of matchless beauty burst at once upon the eye. Before them lay the dark blue waters of Lochmarlie, reflecting, as in a mirror, every surrounding object, and bearing on its placid, transparent bosom a fleet of herring-boats, the drapery of whose black, suspended nets contrasted, with picturesque effect, the white sails of the larger vessels, which were vainly spread to catch a breeze. All around, rocks, meadows, woods, and hills mingled in wild and lovely irregularity.

'Not a breath was stirring, not a sound was heard, save the rushing of a waterfall, the tinkling of some silver rivulet, or the calm rippling of the tranquil lake; now and then, at intervals, the fisherman's Gaelic ditty, chanted as he lay stretched on the sand in some sunny nook; or the shrill, distant sound of childish glee. How delicious to the feeling heart to behold so fair a scene of unsophisticated nature, and to listen to her voice alone, breathing the accents of innocence and joy! But none of the party who now gazed on it had minds capable of being touched with the emotions it was calculated to inspire.

'Henry, indeed, was rapturous in his expressions of admiration; but he concluded his panegyrics by wondering his brother did not keep a cutter, and resolving to pass a night on board

Thus, even in Scott and Wordsworth themselves, the love of nature is more or less associated with their weaknesses. Scott shows it most in the cruder compositions of his youth, his perfect powers of mind being displayed only in dialogues with which description has nothing whatever to do. Wordsworth's distinctive work was a war with pomp and pretence, and a display of the majesty of simple feelings and humble hearts, together with high reflective truth in his analysis of the courses of politics and ways of men; without these, his love of nature would have been comparatively worthless.

10. 'If this be so, it is not well to encourage the observance of landscape, any more than other ways of dreamily and ineffectually spending time?'

Stay a moment. We have hitherto observed this love of natural beauty only as it distinguishes one man from another, not as it acts for good or evil on those minds to which it necessarily belongs. It may, on the whole, distinguish weaker men from stronger men, and yet in those weaker men may be of some notable use. It may distinguish Byron from St. Bernard, and Shelley from Sir Isaac Newton, and yet may, perhaps, be the best thing that Byron and Shelley possess — a saving element in them; just as a rush may be distinguished from an oak by its bending, and yet the bending may be the saving element in the rush, and an admirable gift in its place and way. So that, although St. Bernard journeys all day by the Lake of Geneva, and asks at evening 'where it is,' and Byron learns by it 'to love earth only for its earthly sake,'[7] it does not follow that Byron, hating men, was the worse for loving the earth, nor that St. Bernard, loving men, was the better or wiser for being blind to it. And this will become still more manifest if we examine somewhat farther into the nature of this instinct, as characteristic especially of youth.

11. We saw above that Wordsworth described the feeling as independent of thought, and, in the particular place then quoted, he *therefore* speaks of it depreciatingly. But in other places he does not speak of it depreciatingly, but seems to think the absence of thought involves a certain nobleness; as in the passage already quoted, vol.ii. p.264:

> 'In such high hour
> Of visitation from the living God
> *Thought* was not.'[8]

And he refers to the intense delight which he himself felt, and which he supposes other men feel, in nature, during their thoughtless youth, as an intimation of their immortality, and a joy which indicates their having come fresh from the hand of God.

Now, if Wordsworth be right in supposing this feeling to be in some degree common to all men, and most vivid in youth, we may question if it can be *entirely* explained as I have now tried to explain it. For if it entirely depended on multitudes of ideas, clustering about a beautiful object, it might seem that the youth could not feel it so strongly as the man, because the man knows more, and must have more ideas to make the garland of. Still less can we suppose the pleasure to be of that melancholy and languid kind, which Scott defines as 'Resignation' and 'Content'; boys being not distinguished for either of those characters, but for eager effort, and delightsome discontent. If Wordsworth is at all right in this

one of the herring-boats, that he might eat the fish in perfection.

'Lady Juliana thought it might be very pretty, if, instead of those frightful rocks and shabby cottages, there could be villas, and gardens, and lawns, and conservatories, and summer-houses, and statues.

'Miss Bella observed, if it was hers, she would cut down the woods, and level the hills, and have races.' [Ruskin's note. — See *Marriage* (1818) by Susan E. Ferrier (1782–1854).]

7. Childe Harold, canto III. st.71. [Ruskin's note.]

8. *The Excursion*, i,211–13.

matter, therefore, there must surely be some other element in the feeling not yet detected.

12. Now, in a question of this subtle kind, relating to a period of life when self-examination is rare, and expression imperfect, it becomes exceedingly difficult to trace, with any certainty, the movements of the minds of others, nor always easy to remember those of our own. I cannot, from observation, form any decided opinion as to the extent in which this strange delight in nature influences the hearts of young persons in general; and, in stating what has passed in my own mind, I do not mean to draw any positive conclusion as to the nature of the feeling in other children; but the inquiry is clearly one in which personal experience is the only safe ground to go upon, though a narrow one; and I will make no excuse for talking about myself with reference to this subject, because, though there is much egotism in the world, it is often the last thing a man thinks of doing, — and, though there is much work to be done in the world, it is often the best thing a man can do, — to tell the exact truth about the movements of his own mind; and there is this farther reason, that whatever other faculties I may or may not possess, this gift of taking pleasure in landscape I assuredly possess in a greater degree than most men; it having been the ruling passion of my life, and the reason for the choice of its field of labour.

13. The first thing which I remember, as an event in life, was being taken by my nurse to the brow of Friar's Crag on Derwentwater; the intense joy, mingled with awe, that I had in looking through the hollows in the mossy roots, over the crag, into the dark lake, has associated itself more or less with all twining roots of trees ever since. Two other things I remember, as, in a sort, beginnings of life; — crossing Shapfells (being let out of the chaise to run up the hills), and going through Glenfarg, near Kinross, in a winter's morning, when the rocks were hung with icicles; these being culminating points in an early life of more travelling than is usually indulged to a child. In such journeyings, whenever they brought me near hills, and in all mountain ground and scenery, I had a pleasure, as early as I can remember, and continuing till I was eighteen or twenty, infinitely greater than any which has been since possible to me in anything; comparable for intensity only to the joy of a lover in being near a noble and kind mistress, but no more explicable or definable than that feeling of love itself. Only thus much I can remember, respecting it, which is important to our present subject.

14. First: it was never independent of associated thought. Almost as soon as I could see or hear, I had got reading enough to give me associations with all kinds of scenery; and mountains, in particular, were always partly confused with those of my favourite book, Scott's Monastery; so that Glenfarg and all other glens were more or less enchanted to me, filled with forms of hesitating creed about Christie of the Clint Hill, and the monk Eustace; and with a general presence of White Lady [9] everywhere. I also generally knew, or was told by my father and mother, such simple facts of history as were necessary to give more definite and justifiable association to other scenes which chiefly interested me, such as the ruins of Lochleven and Kenilworth; and thus my pleasure in mountains or ruins was never, even in earliest childhood, free from a certain awe and melancholy, and general sense of the meaning of death, though, in its principal influence, entirely exhilarating and gladdening.

15. Secondly: it was partly dependent on contrast with a very simple and unamused mode of general life: I was born

9. *White Lady*: the tutelary spirit protecting the fortunes of the noble family, the Avenels, in *The Monastery*. — Christie of the Clint Hill and the monk Eustace are characters in the same novel.

in London, and accustomed, for two or three years, to no other prospect than that of the brick walls over the way; had no brothers nor sisters, nor companions; and though I could always make myself happy in a quiet way, the beauty of the mountains had an additional charm of change and adventure which a country-bred child would not have felt.

16. Thirdly: there was no definite religious feeling mingled with it. I partly believed in ghosts and fairies; but supposed that angels belonged entirely to the Mosaic dispensation, and cannot remember any single thought or feeling connected with them. I believed that God was in heaven, and could hear me and see me; but this gave me neither pleasure nor pain, and I seldom thought of it at all. I never thought of nature as God's work, but as a separate fact or existence.

17. Fourthly: it was entirely unaccompanied by powers of reflection or invention. Every fancy that I had about nature was put into my head by some book; and I never reflected about anything till I grew older; and then, the more I reflected, the less nature was precious to me: I could then make myself happy, by thinking, in the dark, or in the dullest scenery; and the beautiful scenery became less essential to my pleasure.

18. Fifthly: it was, according to its strength, inconsistent with every evil feeling, with spite, anger, covetousness, discontent, and every other hateful passion; but would associate itself deeply with every just and noble sorrow, joy, or affection. It had not, however, always the power to repress what was inconsistent with it; and, though only after stout contention, might at last be crushed by what it had partly repressed. And as it only acted by setting one impulse against another, though it had much power in moulding the character, it had hardly any in strengthening it; it formed temperament, but never instilled principle; it kept me generally good-humoured and kindly, but could not teach me perseverance or self-denial: what firmness or principle I had was quite independent of it; and it came itself nearly as often in the form of a temptation as of a safeguard, leading me to ramble over hills when I should have been learning lessons, and lose days in reveries which I might have spent in doing kindnesses.

19. Lastly: although there was no definite religious sentiment mingled with it, there was a continual perception of Sanctity in the whole of nature, from the slightest thing to the vastest; — an instinctive awe, mixed with delight; an indefinable thrill, such as we sometimes imagine to indicate the presence of a disembodied spirit. I could only feel this perfectly when I was alone; and then it would often make me shiver from head to foot with the joy and fear of it, when after being some time away from hills, I first got to the shore of a mountain river, where the brown water circled among the pebbles, or when I saw the first swell of distant land against the sunset, or the first low broken wall, covered with mountain moss. I cannot in the least *describe* the feeling; but I do not think this is my fault, nor that of the English language, for, I am afraid, no feeling *is* describable. If we had to explain even the sense of bodily hunger to a person who had never felt it, we should be hard put to it for words; and this joy in nature seemed to me to come of a sort of heart-hunger, satisfied with the presence of a Great and Holy Spirit. These feelings remained in their full intensity till I was eighteen or twenty, and then, as the reflective and practical power increased, and the 'cares of this world' gained upon me, faded gradually away, in the manner described by Wordsworth in his Intimations of Immortality.

20. I cannot, of course, tell how far I am justified in supposing that these sensations may be reasoned upon as common to children in general. In the same degree they are not of course common, otherwise chil-

dren would be, most of them, very different from what they are in their choice of pleasures. But, as far as such feelings exist, I apprehend they are more or less similar in their nature and influence; only producing different characters according to the elements with which they are mingled. Thus, a very religious child may give up many pleasures to which its instincts lead it, for the sake of irksome duties; and an inventive child would mingle its love of nature with watchfulness of human sayings and doings: but I believe the feelings I have endeavoured to describe are the pure landscape-instinct; and the likelihoods of good or evil resulting from them may be reasoned upon as generally indicating the usefulness or danger of the modern love and study of landscape.

21. And, first, observe that the charm of romantic association (§ 14) can be felt only by the modern European child. It rises eminently out of the contrast of the beautiful past with the frightful and monotonous present; and it depends for its force on the existence of ruins and traditions, on the remains of architecture, the traces of battle fields, and the precursorship of eventful history. The instinct to which it appeals can hardly be felt in America, and every day that either beautifies our present architecture and dress, or overthrows a stone of mediæval monument, contributes to weaken it in Europe. Of its influence on the mind of Turner and Prout,[10] and the permanent results which, through them, it is likely to effect, I shall have to speak presently.

22. Again: the influence of surprise in producing the delight, is to be noted as a suspicious or evanescent element in it. Observe, my pleasure was chiefly (§ 19) when I *first* got into beautiful scenery, out of London. The enormous influence of novelty — the way in which it quickens observation, sharpens sensation, and exalts sentiment — is not half enough taken note of by us, and is to me a very sorrowful matter. I think that what Wordsworth speaks of as a glory in the child, because it has come fresh from God's hands, is in reality nothing more than the freshness of all things to its newly opened sight. I find that by keeping long away from hills, I can in great part still restore the old childish feeling about them; and the more I live and work among them, the more it vanishes.

23. This evil is evidently common to all minds; Wordsworth himself mourning over it in the same poem:

> 'Custom hangs upon us, with a weight
> Heavy as frost, and deep almost as life.'[11]

And if we grow impatient under it, and seek to recover the mental energy by more quickly repeated and brighter novelty, it is all over with our enjoyment. There is no cure for this evil, any more than for the weariness of the imagination already described, but in patience and rest: if we try to obtain perpetual change, change itself will become monotonous; and then we are reduced to that old despair, 'If water chokes, what will you drink after it?' And the two points of practical wisdom in this matter are, first, to be content with as little novelty as possible at a time; and, secondly, to preserve, as much as possible in the world, the sources of novelty.

24. I say, first, to be content with as little change as possible. If the attention is awake, and the feelings in proper train, a turn of a country road, with a cottage beside it, which we have not seen before, is as much as we need for refreshment; if we hurry past it, and take two cottages at a time, it is already too much: hence, to any person who has all his senses about him, a quiet walk along not more than ten or twelve miles of road a day, is the most amusing of all travelling; and all travelling becomes dull in exact proportion to its

10. Samuel Prout (1783–1852), water-color painter, made famous by his series of paintings of continental streets (begun in 1818).

11. See Wordsworth's ode on *Intimations of Immortality*, viii,20–21.

rapidity. Going by railroad I do not consider as travelling at all; it is merely 'being sent' to a place, and very little different from becoming a parcel: the next step to it would of course be telegraphic transport, of which, however, I suppose it has been truly said by Octave Feuillet,

'*Il y aurait des gens assey bêtes* pour trouver ça amusant.'[12]

If we walk more than ten or twelve miles, it breaks up the day too much; leaving no time for stopping at the stream sides or shady banks, or for any work at the end of the day; besides that the last few miles are apt to be done in a hurry, and may then be considered as lost ground. But if, advancing thus slowly, after some days we approach any more interesting scenery, every yard of the changeful ground becomes precious and piquant; and the continual increase of hope, and of surrounding beauty, affords one of the most exquisite enjoyments possible to the healthy mind; besides that real knowledge is acquired of whatever it is the object of travelling to learn, and a certain sublimity given to all places, so attained, by the true sense of the spaces of earth that separate them. A man who really loves travelling would as soon consent to pack a day of such happiness into an hour of railroad, as one who loved eating would agree, if it were possible, to concentrate his dinner into a pill.

25. And, secondly, I say that it is wisdom to preserve as much as possible the innocent *sources* of novelty; — not definite inferiorities of one place to another, if such can be done away; but differences of manners and customs, of language and architecture. The greatest effort ought especially to be made by all wise and far-sighted persons, in the present crisis of civilization, to enforce the distinction between wholesome reform, and heartless abandonment of ancestral custom; between kindly fellowship of nation with nation, and ape-like adoption, by one, of the habits of another. It is ludicrously woful to see the luxurious inhabitants of London and Paris rushing over the Continent (as they say, to *see* it), and transposing every place, as far as lies in their power, instantly into a likeness of Regent Street and the Rue de la Paix, which they need not certainly have come so far to see. Of this evil I shall have more to say hereafter; meantime I return to our main subject.

26. The next character we have to note in the landscape-instinct (and on this much stress is to be laid), is its total inconsistency with all evil passion; its absolute contrariety (whether in the contest it were crushed or not) to all care, hatred, envy, anxiety, and moroseness. A feeling of this kind is assuredly not one to be lightly repressed, or treated with contempt.

But how, if it be so, the reader asks, can it be characteristic of passionate and unprincipled men, like Byron, Shelley, and such others, and not characteristic of the noblest and most highly principled men?

First, because it is itself a passion, and therefore likely to be characteristic of passionate men. Secondly, because it is (§ 18) wholly a separate thing from moral principle, and may or may not be joined to strength of will, or rectitude of purpose;[18]

12. Scènes et Proverbes. La Crise; (Scène en calèche, hors Paris). [Ruskin's note. ('There would be people stupid enough to find that amusing.')]

13 Compare the characters of Fleur de Marie and Rigolette, in the Mystères de Paris. I know no other instance in which the two tempers are so exquisitely delineated and opposed. Read carefully the beautiful pastoral, in the eighth chapter of the first Part, where Fleur de Marie is first taken into the fields under Montmartre, and compare it with the sixth of the second Part, its accurately traced companion sketch, noting carefully Rigolette's 'Non, *je déteste la campagne*.' She does not, however, dislike flowers or birds: 'Cette caisse de bois, que Rigolette appellait le jardin de ses oiseaux, était remplie de terre recouverte de mousse, pendant l'hiver. Elle travaillait auprès de la fenêtre ouverte, à-demi-voilée par un verdoyant rideau de pois de senteur roses, de capucines oranges, de volubilis bleus et blancs.' [Ruskin's note.]

only, this much is always observable in the men whom it characterizes, that, whatever their faults or failings, they always understand and love noble qualities of character; they can conceive (if not certain phases of piety), at all events, self-devotion of the highest kind; they delight in all that is good, gracious, and noble; and, though warped often to take delight also in what is dark or degraded, that delight is mixed with bitter self-reproach; or else is wanton, careless, or affected, while their delight in noble things is constant and sincere. . . .

31. And having arrived at this conclusion by a review of facts, which I hope it will be admitted, whether accurate or not, has at least been candid, these farther considerations may confirm our belief in its truth. Observe: the whole force of education, until very lately, has been directed in every possible way to the destruction of the love of nature. The only knowledge which has been considered essential among us is that of words, and, next after it, of the abstract sciences; while every liking shown by children for simple natural history has been either violently checked, (if it took an inconvenient form for the housemaids,) or else scrupulously limited to hours of play: so that it has really been impossible for any child earnestly to study the works of God but against its conscience; and the love of nature has become inherently the characteristic of truants and idlers. While also the art of drawing, which is of more real importance to the human race than that of writing (because people can hardly draw anything without being of some use both to themselves and others, and can hardly write anything without wasting their own time and that of others), — this art of drawing, I say, which on plain and stern system should be taught to every child, just as writing is, — has been so neglected and abused, that there is not one man in a thousand, even of its professed teachers, who knows its first principles: and thus it needs much ill-fortune or obstinacy — much neglect on the part of his teachers, or rebellion on his own — before a boy can get leave to use his eyes or his fingers; so that those who *can* use them are for the most part neglected or rebellious lads — runaways and bad scholars — passionate, erratic, self-willed, and restive against all forms of education; while your well-behaved and amiable scholars are disciplined into blindness and palsy of half their faculties. Wherein there is at once a notable ground for what difference we have observed between the lovers of nature and its despisers; between the somewhat immoral and unrespectable watchfulness of the one, and the moral and respectable blindness of the other.

32. One more argument remains, and that, I believe, an unanswerable one. As, by the accident of education, the love of nature has been, among us, associated with *wilfulness*, so, by the accident of time, it has been associated with *faithlessness*. I traced, above, the peculiar mode in which this faithlessness was indicated; but I never intended to imply, therefore, that it was an invariable concomitant of the love. Because it happens that, by various concurrent operations of evil, we have been led, according to those words of the Greek poet already quoted, 'to dethrone the gods, and crown the whirlwind,' it is no reason that we should forget there was once a time when 'the Lord answered Job *out of* the whirlwind.'[14] And if we now take final and full view of the matter, we shall find that the love of nature, wherever it has existed, has been a faithful and sacred element of human feeling; that is to say, supposing all circumstances otherwise the same with respect to two individuals, the one who loves nature most will be *always* found to have more *faith in God* than the other. It is intensely difficult, owing to the confusing and counter influences which always mingle in the data of the problem, to make this abstraction fairly; but so far

14. *Job*, xxxviii,1.

as we can do it, so far I boldly assert, the result is constantly the same: the nature-worship will be found to bring with it such a sense of the presence and power of a Great Spirit as no mere reasoning can either induce or controvert; and where that nature-worship is innocently pursued, — i.e. with due respect to other claims on time, feeling, and exertion, and associated with the higher principles of religion, — it becomes the channel of certain sacred truths, which by no other means can be conveyed.

33. This is not a statement which any investigation is needed to prove. It comes to us at once from the highest of all authority. The greater number of the words which are recorded in Scripture, as directly spoken to men by the lips of the Deity, are either simple revelations of His law, or special threatenings, commands, and promises relating to special events. But two passages of God's speaking, one in the Old and one in the New Testament, possess, it seems to me, a different character from any of the rest, having been uttered, the one to effect the last necessary change in the mind of a man whose piety was in other respects perfect; and the other, as the first statement to all men of the principles of Christianity by Christ Himself — I mean the 38th to 41st chapters of the book of Job, and the Sermon on the Mount. Now the first of these passages is, from beginning to end, nothing else than a direction of the mind which was to be perfected to humble observance of the works of God in nature. And the other consists only in the inculcation of *three* things: 1st, right conduct; 2nd, looking for eternal life; 3rd, trusting God, through watchfulness of His dealings with His creation: and the entire contents of the book of Job, and of the Sermon on the Mount, will be found resolvable simply into these three requirements from all men, — that they should act rightly, hope for heaven, and watch God's wonders and work in the earth; the right conduct being always summed up under the three heads of *justice*, *mercy*, and *truth*, and no mention of any doctrinal point whatsoever occurring in either piece of divine teaching.

34. As far as I can judge of the ways of men, it seems to me that the simplest and most necessary truths are always the last believed; and I suppose that well-meaning people in general would rather regulate their conduct and creed by almost any other portion of Scripture whatsoever, than by that Sermon on the Mount which contains the things that Christ thought it first necessary for all men to understand. Nevertheless, I believe the time will soon come for the full force of these two passages of Scripture to be accepted. Instead of supposing the love of nature necessarily connected with the faithlessness of the age, I believe it is connected properly with the benevolence and liberty of the age; that it is precisely the most healthy element which distinctively belongs to us; and that out of it, cultivated no longer in levity or ignorance, but in earnestness and as a duty, results will spring of an importance at present inconceivable; and lights arise, which, for the first time in man's history, will reveal to him the true nature of his life, the true field for his energies, and the true relations between him and his Maker.

35. I will not endeavour here to trace the various modes in which these results are likely to be effected, for this would involve an essay on education, on the uses of natural history, and the probable future destiny of nations. Somewhat on these subjects I have spoken in other places; and I hope to find time, and proper place, to say more. But one or two observations may be made merely to suggest the directions in which the reader may follow out the subject for himself.

The great mechanical impulses of the age, of which most of us are so proud, are a mere passing fever, half-speculative, half-childish. People will discover at last that royal roads to anything can no more

be laid in iron than they can in dust; that there are, in fact, no royal roads to anywhere worth going to; that if there were, it would that instant cease to be worth going to, — I mean, so far as the things to be obtained are in any way estimable in terms of *price*. For there are two classes of precious things in the world: those that God gives us for nothing — sun, air, and life (both mortal life and immortal); and the secondarily precious things which He gives us for a price: these secondarily precious things, worldly wine and milk, can only be bought for definite money; they never can be cheapened. No cheating nor bargaining will ever get a single thing out of nature's 'establishment' at half-price. Do we want to be strong? — we must work. To be hungry? — we must starve. To be happy? — we must be kind. To be wise? — we must look and think. No changing of place at a hundred miles an hour, nor making of stuffs a thousand yards a minute, will make us one whit stronger, happier, or wiser. There was always more in the world than men could see, walked they ever so slowly; they will see it no better for going fast. And they will at last, and soon too, find out that their grand inventions for conquering (as they think) space and time, do, in reality, conquer nothing; for space and time are, in their own essence, unconquerable, and besides did not want any sort of conquering; they wanted *using*. A fool always wants to shorten space and time: a wise man wants to lengthen both. A fool wants to kill space and kill time: a wise man, first to gain them, then to animate them. Your railroad, when you come to understand it, is only a device for making the world smaller: and as for being able to talk from place to place, that is, indeed, well and convenient; but suppose you have, originally, nothing to say.[15] We shall be obliged at last to confess, what we should long ago have known, that the really precious things are thought and sight, not pace. It does a bullet no good to go fast; and a man, if he be truly a man, no harm to go slow; for his glory is not at all in going, but in being.

36. 'Well; but railroads and telegraphs are so useful for communicating knowledge to savage nations.' Yes, if you have any to give them. If you know nothing *but* railroads, and can communicate nothing but aqueous vapour and gunpowder, — what then? But if you have any other thing than those to give, then the railroad is of use only because it communicates that other thing; and the question is — what that other thing may be. Is it religion? I believe if we had really wanted to communicate that, we could have done it in less than 1800 years, without steam. Most of the good religious communication that I remember, has been done on foot; and it cannot be easily done faster than at foot pace. Is it science? But what science — of motion, meat, and medicine? Well; when you have moved your savage, and dressed your savage, fed him with white bread, and shown him how to set a limb, — what next? Follow out that question. Suppose every obstacle overcome; give your savage every advantage of civilization to the full; suppose that you have put the Red Indian in tight shoes; taught the Chinese how to make Wedgwood's ware, and to paint it with colours that will rub off; and persuaded all Hindoo women that it is more pious to torment their husbands into graves than to burn themselves at the burial, — what next? Gradually, thinking on from point to point, we shall come to perceive that all true happiness and nobleness are near us, and yet neglected by us; and that till we have learned how to be happy and noble we have not much to tell, even to Red Indians. The delights of horse-racing and hunting, of assemblies in the night instead of the day, of costly and wearisome music,

15. 'The light-outspeeding telegraph
Bears nothing on its beam.' EMERSON.
[Ruskin's note. — See Emerson's *World-Soul*, 15–16.]

of costly and burdensome dress, of chagrined contention for place or power, or wealth, or the eyes of the multitude; and all the endless occupation without purpose, and idleness without rest, of our vulgar world, are not, it seems to me, enjoyments we need be ambitious to communicate. And all real and wholesome enjoyments possible to man have been just as possible to him, since first he was made of the earth, as they are now; and they are possible to him chiefly in peace. To watch the corn grow, and the blossoms set; to draw hard breath over ploughshare or spade; to read, to think, to love, to hope, to pray, — these are the things that make men happy; they have always had the power of doing these, they never *will* have power to do more. The world's prosperity or adversity depends upon our knowing and teaching these few things: but upon iron, or glass, or electricity, or steam, in no wise.

37. And I am Utopian and enthusiastic enough to believe, that the time will come when the world will discover this. It has now made its experiments in every possible direction but the right one; and it seems that it must, at last, try the right one, in a mathematical necessity. It has tried fighting, and preaching, and fasting, buying and selling, pomp and parsimony, pride and humiliation, — every possible manner of existence in which it could conjecture there was any happiness or dignity; and all the while, as it bought, sold, and fought, and fasted, and wearied itself with policies, and ambitions, and self-denials, God had placed its real happiness in the keeping of the little mosses of the wayside, and of the clouds of the firmament. Now and then a weary king, or a tormented slave, found out where the true kingdoms of the world were, and possessed himself, in a furrow or two of garden ground, of a truly infinite dominion. But the world would not believe their report, and went on trampling down the mosses, and forgetting the clouds, and seeking happiness in its own way, until, at last, blundering and late, came natural science; and in natural science not only the observation of things, but the finding out of new uses for them. Of course the world, having a choice left to it, went wrong as usual, and thought that these mere material uses were to be the sources of its happiness. It got the clouds packed into iron cylinders, and made them carry its wise self at their own cloud pace. It got weavable fibres out of the mosses, and made clothes for itself, cheap and fine, — here was happiness at last. To go as fast as the clouds, and manufacture everything out of anything, — here was paradise, indeed!

38. And now, when, in a little while, it is unparadised again, if there were any other mistake that the world could make, it would of course make it. But I see not that there is any other; and, standing fairly at its wits' end, having found that going fast, when it is used to it, is no more paradisiacal than going slow; and that all the prints and cottons in Manchester cannot make it comfortable in its mind, I do verily believe it will come, finally, to understand that God paints the clouds and shapes the moss-fibres, that men may be happy in seeing Him at His work, and that in resting quietly beside Him, and watching His working, and — according to the power He has communicated to ourselves, and the guidance He grants, — in carrying out His purposes of peace and charity among all His creatures, are the only real happinesses that ever were, or will be, possible to mankind.

39. How far art is capable of helping us in such happiness we hardly yet know; but I hope to be able, in the subsequent parts of this work, to give some data for arriving at a conclusion in the matter. Enough has been advanced to relieve the reader from any lurking suspicion of unworthiness in our subject, and to induce him to take interest in the mind and work of the great painter who has headed the

landscape school among us. What farther considerations may, within any reasonable limits, be put before him, respecting the effect of natural scenery on the human heart, I will introduce in their proper places either as we examine, under Turner's guidance, the different classes of scenery, or at the close of the whole work; and therefore I have only one point more to notice here, namely, the exact relation between landscape-painting and natural science, properly so called.

40. For it may be thought that I have rashly assumed that the Scriptural authorities above quoted apply to that partly superficial view of nature which is taken by the landscape-painter, instead of to the accurate view taken by the man of science. So far from there being rashness in such an assumption, the whole language, both of the book of Job and the Sermon on the Mount, gives precisely the view of nature which is taken by the uninvestigating affection of a humble, but powerful mind. There is no dissection of muscles or counting of elements, but the boldest and broadest glance at the apparent facts, and the most magnificent metaphor in expressing them. 'His eyes are like the eyelids of the morning. In his neck remaineth strength, and sorrow is turned into joy before him.'[16] And in the often repeated, never obeyed, command, 'Consider the lilies of the field,'[17] observe there is precisely the delicate attribution of life which we have seen to be the characteristic of the modern view of landscape, — 'They toil not.' There is no science, or hint of science; no counting of petals, nor display of provisions for sustenance: nothing but the expression of sympathy, at once the most childish, and the most profound, — 'They toil not.'

41. And we see in this, therefore, that the instinct which leads us thus to attribute life to the lowest forms of organic nature, does not necessarily spring from faithlessness, nor the deducing a moral out of them from an irregular and languid conscientiousness. In this, as in almost all things connected with moral discipline, the same results may follow from contrary causes; and as there are a good and evil contentment, a good and evil discontent, a good and evil care, fear, ambition, and so on, there are also good and evil forms of this sympathy with nature, and disposition to moralize over it.[18] In general, active men, of strong sense and stern principle, do not care to see anything in a leaf, but vegetable tissue, and are so well convinced of useful moral truth, that it does not strike them as a new or notable thing when they find it in any way symbolized by material nature; hence there is a strong presumption, when first we perceive a tendency in any one to regard trees as living, and enunciate moral aphorisms over every pebble they stumble against, that such tendency proceeds from a morbid temperament, like Shelley's, or an inconsistent one, like Jaques's. But when the active life is nobly fulfilled, and the mind is then raised beyond it into clear and calm beholding of the world around us, the same tendency again manifests itself in the most sacred way: the simplest forms of nature are strangely animated by the sense of the Divine presence; the trees and flowers seem all, in a sort, children of God; and we ourselves, their fellows, made out of the same dust, and greater than they only in having a greater portion of the Divine power exerted on our frame, and all the common uses and palpably visible forms of things, become subordinate in our minds to their inner glory, — to the mysterious voices in which they talk to us

16. *Job*, xli,18,22.

17. *Matthew*, vi,28; *Luke*, xii,27.

18. Compare what is said before in various places of good and bad finish, good and bad mystery, &c. If a man were disposed to system-making, he could easily throw together a counter-system to Aristotle's, showing that in all things there were two extremes which exactly resembled each other, but of which one was bad, the other good; and a mean, resembling neither, but better than the one, and worse than the other. [Ruskin's note.]

about God, and the changeful and typical aspects by which they witness to us of holy truth, and fill us with obedient, joyful, and thankful emotion.

42. It is in raising us from the first state of inactive reverie to the second of useful thought, that scientific pursuits are to be chiefly praised. But in restraining us at this second stage, and checking the impulses towards higher contemplation, they are to be feared or blamed. They may in certain minds be consistent with such contemplation; but only by an effort: in their nature they are always adverse to it, having a tendency to chill and subdue the feelings, and to resolve all things into atoms and numbers. For most men, an ignorant enjoyment is better than an informed one; it is better to conceive the sky as a blue dome than a dark cavity, and the cloud as a golden throne than a sleety mist. I much question whether any one who knows optics, however religious he may be, can feel in equal degree the pleasure or reverence which an unlettered peasant may feel at the sight of a rainbow. And it is mercifully thus ordained, since the law of life, for a finite being, with respect to the works of an infinite one, must be always an infinite ignorance. We cannot fathom the mystery of a single flower, nor is it intended that we should; but that the pursuit of science should constantly be stayed by the love of beauty, and accuracy of knowledge by tenderness of emotion.

43. Nor is it even just to speak of the love of beauty as in all respects unscientific; for there is a science of the aspects of things as well as of their nature; and it is as much a fact to be noted in their constitution, that they produce such and such an effect upon the eye or heart (as, for instance, that minor scales of sound cause melancholy), as that they are made up of certain atoms or vibrations of matter.

It is as the master of this science of *Aspects*, that I said, some time ago, Turner must eventually be named always with Bacon, the master of the science of *Essence*. As the first poet who has, in all their range, understood the grounds of noble emotion which exist in landscape, his future influence will be of a still more subtle and important character. The rest of this work will therefore be dedicated to the explanation of the principles on which he composed, and of the aspects of nature which he was the first to discern.

MODERN PAINTERS — VOLUME V

PART IX. OF IDEAS OF RELATION: — OF INVENTION SPIRITUAL

Chapter VII

Of Vulgarity

1. Two great errors, colouring, or rather discolouring, severally, the minds of the higher and lower classes, have sown wide dissension, and wider misfortune, through the society of modern days. These errors are in our modes of interpreting the word 'gentleman.'

Its primal, literal, and perpetual meaning is 'a man of pure race'; well bred, in the sense that a horse or dog is well bred.

The so-called higher classes, being generally of purer race than the lower, have retained the true idea, and the convictions associated with it; but are afraid to speak it out, and equivocate about it in public; this equivocation mainly proceeding from their desire to connect another meaning with it, and a false one; — that of 'a man living in idleness on other people's labour'; — with which idea the term has nothing whatever to do.

The lower classes, denying vigorously, and with reason, the notion that a gentleman means an idler, and rightly feeling that the more any one works, the more of a gentleman he becomes, and is likely to

become, — have nevertheless got little of the good they otherwise might, from the truth, because, with it, they wanted to hold a falsehood, — namely, that race was of no consequence. It being precisely of as much consequence in man as it is in any other animal.

2. The nation cannot truly prosper till both these errors are finally got quit of. Gentlemen have to learn that it is no part of their duty or privilege to live on other people's toil. They have to learn that there is no degradation in the hardest manual, or the humblest servile, labour, when it is honest. But that there *is* degradation, and that deep, in extravagance, in bribery, in indolence, in pride, in taking places they are not fit for, or in coining places for which there is no need. It does not disgrace a gentleman to become an errand boy, or a day labourer; but it disgraces him much to become a knave, or a thief. And knavery is not the less knavery because it involves large interests, nor theft the less theft because it is countenanced by usage, or accompanied by failure in undertaken duty. It is an incomparably less guilty form of robbery to cut a purse out of a man's pocket, than to take it out of his hand on the understanding that you are to steer his ship up channel, when you do not know the soundings.

3. On the other hand, the lower orders, and all orders, have to learn that every vicious habit and chronic disease communicates itself by descent; and that by purity of birth the entire system of the human body and soul may be gradually elevated, or, by recklessness of birth, degraded; until there shall be as much difference between the well-bred and ill-bred human creature (whatever pains be taken with their education) as between a wolf-hound and the vilest mongrel cur. And the knowledge of this great fact ought to regulate the education of our youth, and the entire conduct of the nation.[1]

4. Gentlemanliness, however, in ordinary parlance, must be taken to signify those qualities which are usually the evidence of high breeding, and which, so far as they can be acquired, it should be every man's effort to acquire; or, if he has them by nature, to preserve and exalt. Vulgarity, on the other hand, will signify qualities usually characteristic of ill-breeding, which, according to his power, it becomes every person's duty to subdue. We have briefly to note what these are.

5. A gentleman's first characteristic is that fineness of structure in the body, which renders it capable of the most delicate sensation; and of structure in the mind which renders it capable of the most delicate sympathies — one may say, simply, 'fineness of nature.' This is, of course, compatible with heroic bodily strength and mental firmness; in fact, heroic strength is not conceivable without such delicacy. Elephantine strength may drive

1. We ought always in pure English to use the term 'good breeding' literally; and to say 'good nurture' for what we usually mean by good breeding. Given the race and make of the animal, you may turn it to good or bad account: you may spoil your good dog or colt, and make him as vicious as you choose, or break his back at once by ill-usage; and you may, on the other hand, make something serviceable and respectable out of your poor cur or colt if you educate them carefully; but ill-bred they will both of them be to their lives' end: and the best you will ever be able to say of them is, that they are useful, and decently behaved, ill-bred creatures. An error, which is associated with the truth, and which makes it always look weak and disputable, is the confusion of race with name and the supposition that the blood of a family must still be good, if its genealogy be unbroken and its name not lost, though sire and son have been indulging age after age in habits involving perpetual degeneracy of race. Of course it is equally an error to suppose that, because a man's name is common, his blood must be base: since his family may have been ennobling it by pureness of moral habit for many generations, and yet may not have got any title, or other sign of nobleness, attached to their names. Nevertheless, the probability is always in favour of the race which has had acknowledged supremacy, and in which every motive leads to the endeavour to preserve their true nobility. [Ruskin's note.]

its way through a forest and feel no touch of the boughs; but the white skin of Homer's Atrides[2] would have felt a bent roseleaf, yet subdue its feeling in glow of battle, and behave itself like iron. I do not mean to call an elephant a vulgar animal; but if you think about him carefully, you will find that his non-vulgarity consists in such gentleness as is possible to elephantine nature; not in his insensitive hide, nor in his clumsy foot; but in the way he will lift his foot if a child lies in his way; and in his sensitive trunk, and still more sensitive mind, and capability of pique on points of honour.

6. And, though rightness of moral conduct is ultimately the great purifier of race, the sign of nobleness is not in this rightness of moral conduct, but in sensitiveness. When the make of the creature is fine, its temptations are strong, as well as its perceptions; it is liable to all kinds of impressions from without in their most violent form; liable therefore to be abused and hurt by all kinds of rough things which would do a coarser creature little harm, and thus to fall into frightful wrong if its fate will have it so. Thus David, coming of gentlest as well as royalest race, of Ruth as well as of Judah,[3] is sensitiveness through all flesh and spirit; not that his compassion will restrain him from murder when his terror urges him to it; nay, he is driven to the murder all the more by his sensitiveness to the shame which otherwise threatens him. But when his own story is told him under a disguise, though only a lamb is now concerned, his passion about it leaves him no time for thought. 'The man shall die' — note the reason — 'because he had no pity.'[4] He is so eager and indignant that it never occurs to him as strange that Nathan hides the name. This is true gentleman. A vulgar man would assuredly have been cautious, and asked 'who it was?'

7. Hence it will follow that one of the probable signs of high-breeding in men generally, will be their kindness and mercifulness; these always indicating more or less fineness of make in the mind; and miserliness and cruelty the contrary; hence that of Isaiah: 'The vile person shall no more be called liberal, nor the churl said to be bountiful.'[5] But a thousand things may prevent this kindness from displaying or continuing itself; the mind of the man may be warped so as to bear mainly on his own interests, and then all his sensibilities will take the form of pride, or fastidiousness, or revengefulness: and other wicked, but not ungentlemanly tempers; or, farther, they may run into utter sensuality and covetousness, if he is bent on pleasure, accompanied with quite infinite cruelty when the pride is wounded or the passions thwarted; — until your gentleman becomes Ezzelin,[6] and your lady, the deadly Lucrece;[7] yet still gentleman and lady, quite incapable of making anything else of themselves, being so born.

8. A truer sign of breeding than mere kindness is therefore sympathy; — a vulgar man may often be kind in a hard way, on principle, and because he thinks he ought to be; whereas, a highly-bred man, even when cruel, will be cruel in a softer way, understanding and feeling what he inflicts, and pitying his victim. Only we must carefully remember that the quantity of sympathy a gentleman feels can never be judged of by its outward expression, for

2. The Atridae were the sons of Atreus, namely Agamemnon and Menelaus. (See the *Iliad*, the *Odyssey*, etc.)

3. See *Ruth*, iv,18ff. — David was the son of Jesse, who was of the tribe of Judah, and a grandson of Ruth.

4. *II Samuel*, xii,5–6.

5. *Isaiah*, xxxii,5.

6. Probably Ezzelin IV (d.1259), named 'the Ferocious'; Podesta of Venice, excommunicated for leading a rebellious faction against the Pope; one of the Ezzelin family involved in the Guelf and Ghibelline feud of medieval Italy.

7. Lucrezia Borgia (1480–1519), notorious (not altogether justly) as one of the great conspirators of the Borgia family.

another of his chief characteristics is apparent reserve. I say 'apparent' reserve; for the sympathy is real, but the reserve not: a perfect gentleman is never reserved, but sweetly and entirely open, so far as it is good for others, or possible, that he should be. In a great many respects it is impossible that he should be open except to men of his own kind. To them, he can open himself, by a word, or syllable, or a glance; but to men not of his kind he cannot open himself, though he tried it through an eternity of clear grammatical speech. By the very acuteness of his sympathy he knows how much of himself he can give to anybody; and he gives that much frankly; — would always be glad to give more if he could, but is obliged, nevertheless, in his general intercourse with the world, to be a somewhat silent person; silence is to most people, he finds, less reserve than speech. Whatever he said, a vulgar man would misinterpret: no words that he could use would bear the same sense to the vulgar man that they do to him; if he used any, the vulgar man would go away saying, 'He had said so and so, and meant so and so' (something assuredly he never meant); but he keeps silence, and the vulgar man goes away saying, 'He didn't know what to make of him.' Which is precisely the fact, and the only fact which he is anywise able to announce to the vulgar man concerning himself.

9. There is yet another quite as efficient cause of the apparent reserve of a gentleman. His sensibility being constant and intelligent, it will be seldom that a feeling touches him, however acutely, but it has touched him in the same way often before, and in some sort is touching him always. It is not that he feels little, but that he feels habitually; a vulgar man having some heart at the bottom of him, if you can by talk or by sight fairly force the pathos of anything down to his heart, will be excited about it and demonstrative; the sensation of pity being strange to him, and wonderful. But your gentleman has walked in pity all day long; the tears have never been out of his eyes; you thought the eyes were bright only; but they were wet. You tell him a sorrowful story, and his countenance does not change; the eyes can but be wet still; he does not speak neither, there being, in fact, nothing to be said, only something to be done; some vulgar person, beside you both, goes away saying, 'How hard he is!' Next day he hears that the hard person has put good end to the sorrow he said nothing about; — and then he changes his wonder, and exclaims, 'How reserved he is!'

10. Self-command is often thought a characteristic of high-breeding: and to a certain extent it is so, at least it is one of the means of forming and strengthening character; but it is rather a way of imitating a gentleman than a characteristic of him; a true gentleman has no need of self command; he simply feels rightly on all occasions; and desiring to express only so much of his feeling as it is right to express, does not need to command himself. Hence perfect ease is indeed characteristic of him: but perfect ease is inconsistent with self-restraint. Nevertheless gentlemen, so far as they fail of their own ideal, need to command themselves, and do so; while, on the contrary, to feel unwisely, and to be unable to restrain the expression of the unwise feeling, is vulgarity, and yet even then, the vulgarity, at its root, is not in the mistimed expression, but in the unseemly feeling; and when we find fault with a vulgar person for 'exposing himself,' it is not his openness, but clumsiness; and yet more the want of sensibility to his own failure, which we blame; so that still the vulgarity resolves itself into want of sensibility. Also, it is to be noted that great powers of self-restraint may be attained by very vulgar persons, when it suits their purposes.

11. Closely, but strangely, connected with this openness is that form of truthfulness which is opposed to cunning, yet not

opposed to falsity absolute. And herein is a distinction of great importance.

Cunning signifies especially a habit or gift of overreaching, accompanied with enjoyment and a sense of superiority. It is associated with small and dull conceit, and with an absolute want of sympathy or affection. Its essential connection with vulgarity may be at once exemplified by the expression of the butcher's dog in Landseer's 'Low Life.' Cruikshank's 'Noah Claypole,' in the illustrations to Oliver Twist, in the interview with the Jew, is, however, still more characteristic. It is the intensest rendering of vulgarity absolute and utter with which I am acquainted.[8]

The truthfulness which is opposed to cunning ought, perhaps, rather to be called the desire of truthfulness; it consists more in unwillingness to deceive than in not deceiving, — an unwillingness implying sympathy with and respect for the person deceived; and a fond observance of truth up to the possible point, as in a good soldier's mode of retaining his honour through a *ruse-de-guerre*.[9] A cunning person seeks for opportunities to deceive; a gentleman shuns them. A cunning person triumphs in deceiving; a gentleman is humiliated by his success, or at least by so much of the success as is dependent merely on the falsehood, and not on his intellectual superiority.

12. The absolute disdain of all lying belongs rather to Christian chivalry than to mere high breeding; as connected merely with this latter, and with general refinement and courage, the exact relations of truthfulness may be best studied in the well-trained Greek mind. The Greeks believed that mercy and truth were co-relative virtues — cruelty and falsehood, co-relative vices. But they did not call necessary severity, cruelty; nor necessary deception, falsehood. It was needful sometimes to slay men, and sometimes to deceive them. When this had to be done, it should be done well and thoroughly; so that to direct a spear well to its mark, or a lie well to its end, was equally the accomplishment of a perfect gentleman. Hence, in the pretty diamond-cut-diamond scene between Pallas and Ulysses, when she receives him on the coast of Ithaca, the goddess laughs delightedly at her hero's good lying, and gives him her hand upon it; — showing herself then in her woman's form, as just a little more than his match. 'Subtle would he be, and stealthy, who should go beyond thee in deceit, even were he a god, thou many-witted! What! here in thine own land, too, wilt thou not cease from cheating? Knowest thou not me, Pallas Athena, maid of Jove, who am with thee in all thy labours, and gave thee favour with the Phæacians, and keep thee, and have come now to weave cunning with thee?'[10] But how completely this kind of cunning was looked upon as a part of a man's power, and not as a diminution of faithfulness, is perhaps best shown by the single line of praise in which the high qualities of his servant are summed up by Chremulus in the Plutus — 'Of all my house servants, I hold you to be the faithfullest, and the greatest cheat (or thief).'[11]

13. Thus, the primal difference between honourable and base lying in the Greek mind lay in honourable purpose. A man who used his strength wantonly to hurt others was a monster; so, also, a man who used his cunning wantonly to hurt others. Strength and cunning were to be used only in self-defence, or to save the

8 Among the reckless losses of the right service of intellectual power with which this century must be charged, very few are, to my mind, more to be regretted than that which is involved in its having turned to no higher purpose than the illustration of the career of Jack Sheppard, and of the Irish Rebellion, the great, grave (I use the words deliberately and with large meaning), and singular genius of Cruikshank. [Ruskin's note.]

9. 'stratagem of war.'

10. *Odyssey*, xiii,226ff.

11. Aristophanes, *Plutus*, 26–27.

weak, and then were alike admirable. This was their first idea. Then the second, and perhaps the more essential, difference between noble and ignoble lying in the Greek mind, was that the honourable lie — or, if we may use the strange, yet just, expression, the true lie — knew and confessed itself for such — was ready to take the full responsibility of what it did. As the sword answered for its blow, so the lie for its snare. But what the Greeks hated with all their heart was the false lie; — the lie that did not know itself, feared to confess itself, which slunk to its aim under a cloak of truth, and sought to do liars' work, and yet not take liars' pay, excusing itself to the conscience by quibble and quirk. Hence the great expression of Jesuit principle by Euripides, 'The tongue has sworn, but not the heart,'[12] was a subject of execration throughout Greece, and the satirists exhausted their arrows on it — no audience was ever tired hearing (τὸ Εὐριπιδειον ἐκεῖνο) 'that Euripidean thing' brought to shame.

14. And this is especially to be insisted on in the early education of young people. It should be pointed out to them with continual earnestness that the essence of lying is in deception, not in words: a lie may be told by silence, by equivocation, by the accent on a syllable, by a glance of the eye attaching a peculiar significance to a sentence; and all these kinds of lies are worse and baser by many degrees than a lie plainly worded; so that no form of blinded conscience is so far sunk as that which comforts itself for having deceived, because the deception was by gesture or silence, instead of utterance; and, finally, according to Tennyson's deep and trenchant line, 'A lie which is half a truth is ever the worst of lies.'[13]

15. Although, however, ungenerous cunning is usually so distinct an outward manifestation of vulgarity, that I name it separately from insensibility, it is in truth only an effect of insensibility, producing want of affection to others, and blindness to the beauty of truth. The degree in which political subtlety in men such as Richelieu, Machiavel, or Metternich,[14] will efface the gentleman, depends on the selfishness of political purpose to which the cunning is directed, and on the base delight taken in its use. The command, 'Be ye wise as serpents, harmless as doves,'[15] is the ultimate expression of this principle, misunderstood usually because the word 'wise,' is referred to the intellectual power instead of the subtlety of the serpent. The serpent has very little intellectual power, but according to that which it has, it is yet, as of old, the subtlest of the beasts of the field.

16. Another great sign of vulgarity is also, when traced to its root, another phase of insensibility, namely, the undue regard to appearances and manners, as in the households of vulgar persons, of all stations, and the assumption of behaviour, language, or dress unsuited to them, by persons in inferior stations of life. I say 'undue' regard to appearances, because in the undueness consists, of course, the vulgarity. It is due and wise in some sort to care for appearances, in another sort undue and unwise. Wherein lies the difference?

At first one is apt to answer quickly: the vulgarity is simply in pretending to be what you are not. But that answer will not stand. A queen may dress like a waiting-maid,— perhaps succeed, if she

12. See Euripides, *Hippolytus*, 612. The line was actually spoken in a flash of indignation at being caught in a trap; Hippolytus keeps his oath at the cost of his life.

13. Tennyson, *The Grandmother*, viii,2. (Not quoted literally.)

14. A.J. du Plessis, Duke de Richelieu (1585–1642), French cardinal and statesman; Niccolo di Bernardo Machiavelli (1469–1527), Florentine statesman, author of *The Prince*. — K.W.N.Lothar, Prince von Metternich (1773–1859), Austrian statesman. All of these statesmen acted upon the principle that deception and perfidy were unavoidable in realistic and effective statesmanship.

15. *Matthew*, x,16.

chooses, in passing for one; but she will not, therefore, be vulgar; nay, a waiting-maid may dress like a queen, and pretend to be one, and yet need not be vulgar, unless there is inherent vulgarity in her. In Scribe's very absurd but very amusing *Reine d'un jour*,[16] a milliner's girl sustains the part of a queen for a day. She several times amazes and disgusts her courtiers by her straightforwardness; and once or twice very nearly betrays herself to her maids of honour by an unqueenly knowledge of sewing; but she is not in the least vulgar, for she is sensitive, simple, and generous, and a queen could be no more.

17. Is the vulgarity, then, only in trying to play a part you cannot play, so as to be continually detected? No; a bad amateur actor may be continually detected in his part, but yet continually detected to be a gentleman: a vulgar regard to appearances has nothing in it necessarily of hypocrisy. You shall know a man not to be a gentleman by the perfect and neat pronunciation of his words: but he does not pretend to pronounce accurately; he *does* pronounce accurately, and the vulgarity is in the real (not assumed) scrupulousness.

18. It will be found on farther thought, that a vulgar regard for appearances is, primarily, a selfish one, resulting, not out of a wish to give pleasure (as a wife's wish to make herself beautiful for her husband), but out of an endeavour to mortify others, or attract for pride's sake; — the common 'keeping up appearances' of society, being a mere selfish struggle of the vain with the vain. But the deepest stain of the vulgarity depends on this being done, not selfishly only, but stupidly, without understanding the impression which is really produced, nor the relations of importance between oneself and others, so as to suppose that their attention is fixed upon us, when we are in reality ciphers in their eyes — all which comes of insensibility. Hence pride simple is not vulgar (the looking down on others because of their true inferiority to us), nor vanity simple (the desire of praise), but conceit simple (the attribution to ourselves of qualities we have not), is always so. In cases of overstudied pronunciation, &c., there is insensibility, first, in the person's thinking more of himself than of what he is saying; and, secondly, in his not having musical fineness of ear enough to feel that his talking is uneasy and strained.

19. Finally, vulgarity is indicated by coarseness of language or manners, only so far as this coarseness has been contracted under circumstances not necessarily producing it. The illiterateness of a Spanish or Calabrian peasant is not vulgar, because they had never an opportunity of acquiring letters; but the illiterateness of an English school-boy is. So again, provincial dialect is not vulgar; but cockney dialect, the corruption, by blunted sense, of a finer language continually heard, is so in a deep degree; and again, of this corrupted dialect, that is the worst which consists, not in the direct or expressive alteration of the form of a word, but in an unmusical destruction of it by dead utterance and bad or swollen formation of lip. There is no vulgarity in —

> 'Blythe, blythe, blythe was she,
> Blythe was she, but and ben,
> And weel she liked a Hawick gill,
> And leugh to see a tappit hen;'[17]

but much in Mrs. Gamp's inarticulate 'bottle on the chumley-piece, and let me put my lips to it when I am so disposed.'[18]

20. So also of personal defects, those only are vulgar which imply insensibility or dissipation.

16. Augustin Eugène Scribe (1791–1861), French dramatist, for fifty years the exponent of the ideas of the middle classes. — *Reine d'un jour*: Queen for a day.

17. *Cf.* Burns' *Blythe, Blythe and Merry Was She.*

18. *Mrs. Gamp*: the nurse and midwife in Dickens' *Martin Chuzzlewit.*

There is no vulgarity in the emaciation of Don Quixote, the deformity of the Black Dwarf, or the corpulence of Falstaff; but much in the same personal characters, as they are seen in Uriah Heep, Quilp, and Chadband.[19]

21. One of the most curious minor questions in this matter is respecting the vulgarity of excessive neatness, complicating itself with inquiries into the distinction between base neatness, and the perfectness of good execution in the fine arts. It will be found on final thought that precision and exquisiteness of arrangement are always noble; but become vulgar only when they arise from an equality (insensibility) of temperament, which is incapable of fine passion, and is set ignobly, and with a dullard mechanism, on accuracy in vile things. In the finest Greek coins, the letters of the inscriptions are purposely coarse and rude, while the relievi are wrought with inestimable care. But in an English coin, the letters are the best done, and the whole is unredeemably vulgar. In a picture of Titian's, an inserted inscription will be complete in the lettering, as all the rest is; because it costs Titian very little more trouble to draw rightly than wrongly, and in him, therefore, impatience with the letters would be vulgar, as in the Greek sculptor of the coin, patience would have been. For the engraving of a letter accurately[20] is difficult work, and his time must have been unworthily thrown away.

22. All the different impressions connected with negligence or foulness depend in like manner, on the degree of insensibility implied. Disorder in a drawing-room is vulgar, in an antiquary's study, not; the black battle-stain on a soldier's

19. Allusion to characters in Cervantes' *Don Quixote*, Scott's *The Black Dwarf*, Shakespeare's *Henry IV* and *Merry Wives of Windsor*, Dickens' *David Copperfield*, *The Old Curiosity Shop*, and *Bleak House*, respectively.

20. There is this farther reason also: 'Letters are always ugly things' — (Seven Lamps, chap.iv. s.9). Titian often wanted a certain quantity of ugliness to oppose his beauty with, as a certain quantity of black to oppose his colour. He could regulate the size and quantity of inscription as he liked; and, therefore, made it as neat — that is, as effectively ugly — as possible. But the Greek sculptor could not regulate either size or quantity of inscription. Legible it must be, to common eyes, and contain an assigned group of words. He had more ugliness than he wanted, or could endure. There was nothing for it but to make the letters themselves rugged and picturesque; to give them — that is, a certain quantity of organic variety.

I do not wonder at people sometimes thinking I contradict myself when they come suddenly on any of the scattered passages, in which I am forced to insist on the opposite practical applications of subtle principles of this kind. It may amuse the reader, and be finally serviceable to him in showing him how necessary it is to the right handling of any subject, that these contrary statements should be made, if I assemble here the principal ones I remember having brought forward, bearing on this difficult point of precision in execution.

It would be well if you first glance over the chapter on Finish in the third volume; and if, coming to the fourth paragraph, about gentlemen's carriages, you have time to turn to Sydney Smith's Memoirs and read his account of the construction of the 'Immortal,' it will furnish you with an interesting illustration.

The general conclusion reached in that chapter being that finish, for the sake of added truth, or utility, or beauty, is noble: but finish, for the sake of workmanship, neatness, or polish, ignoble, — turn to the fourth chapter of the Seven Lamps, where you will find the Campanile of Giotto given as the model and mirror of perfect architecture, just on account of its exquisite completion. Also, in the next chapter, I expressly limit the delightfulness of rough and imperfect work to developing and unformed schools (pp.142–3, 1st edition): then turn to the 156th page of the Stones of Venice, Vol.II., and you will find this directly contrary statement: —

'No good work whatever can be perfect, and the demand for perfection is always a sign of the misunderstanding of the end of art.' . . . 'The first cause of the fall of the arts in Europe was a relentless requirement of perfection' (p.157). By reading the intermediate text, you will be put in possession of many good reasons for this opinion: and, comparing it with that just cited about the Campanile of Giotto, will be brought, I hope, into

face is not vulgar, but the dirty face of a housemaid is.

And lastly, courage, so far as it is a sign of race, is peculiarly the mark of a gentleman or a lady: but it becomes vulgar if rude or insensitive, while timidity is not vulgar, if it be a characteristic of race or fineness of make. A fawn is not vulgar in being timid, nor a crocodile 'gentle' because courageous.

23. Without following the inquiry into farther detail,[21] we may conclude that vulgarity consists in a deadness of the heart and body, resulting from prolonged, and especially from inherited conditions of 'degeneracy,' or literally 'unracing';—gentlemanliness, being another word for an intense humanity. And vulgarity shows itself primarily in dulness of heart, not in rage or cruelty, but in inability to feel or conceive noble character or emotion. This is its essential, pure, and most fatal form. Dulness of bodily sense and general stupidity, with such forms of crime as

a wholesome state of not knowing what to think.

Then turn to p 153, where the great law of finish is again maintained as strongly as ever: 'Perfect finish (finish — that is to say, up to the point possible) is always desirable from the greatest masters, and is always given by them' §19.

And, lastly, if you look to § 19 of the chapter on the Early Renaissance, you will find the profoundest respect paid to completion, and, at the close of that chapter, § 38, the principle is resumed very strongly 'As *ideals of executive perfection*, these palaces are most notable among the architecture of Europe, and the Rio façade of the Ducal palace, as an example of finished masonry in a vast building, is one of the finest things, not only in Venice, but in the world.'

Now, all these passages are perfectly true; and, as in much more serious matters, the essential thing for the reader is to receive their truth however little he may be able to see their consistency. If truths of apparently contrary character are candidly and rightly received, they will fit themselves together in the mind without any trouble. But no truth maliciously received will nourish you, or fit with others. The clue of connection may in this case, however, be given in a word. Absolute finish is always right; finish, inconsistent with prudence and passion, wrong. The imperative demand for finish is ruinous, because it refuses better things than finish. The stopping short of the finish, which is honourably possible to human energy, is destructive on the other side, and not in less degree. Err, of the two, on the side of completion. [Ruskin's note.]

21. In general illustration of the subject, the following extract from my private diary possesses some interest. It refers to two portraits which happened to be placed opposite to each other in the arrangement of a gallery; one, modern, of a (foreign) general on horseback at a review; the other, by Vandyck, also an equestrian portrait, of an ancestor of his family, whom I shall here simply call the 'knight':

'I have seldom seen so noble a Vandyck, chiefly because it is painted with less flightiness and flimsiness than usual, with a grand quietness and reserve — almost like Titian. The other is, on the contrary, as vulgar and base a picture as I have ever seen, and it becomes a matter of extreme interest to trace the cause of the difference.

'In the first place, everything the general and his horse wear is evidently just made. It has not only been cleaned that morning, but has been sent home from the tailor's in a hurry last night. Horse bridle, saddle housings, blue coat, stars and lace thereupon, cocked hat, and sword hilt — all look as if they had just been taken from a shopboard in Pall Mall; the irresistible sense of the coat having been brushed to perfection is the first sentiment which the picture summons. The horse has also been rubbed down all the morning, and shines from head to tail.

'The knight rides in a suit of rusty armour. It has evidently been polished also carefully, and gleams brightly here and there; but all the polishing in the world will never take the battle-dints and battle darkness out of it. His horse is gray, not lustrous, but a dark, lurid gray. Its mane is deep and soft; part of it shaken in front over its forehead — the rest, in enormous masses of waving gold, six feet long, falls streaming on its neck, and rises in currents of softest light, rippled by the wind, over the rider's armour. The saddle cloth is of a dim red, fading into leathern brown, gleaming with sparkles of obscure gold. When, after looking a little while at the soft mane of the Vandyck horse, we turn back to the general's, we are shocked by the evident coarseness of its hair, which hangs, indeed, in long locks over the bridle, but is stiff, crude, sharp pointed, coarsely coloured

peculiarly issue from stupidity, are its material manifestation.

24. Two years ago, when I was first beginning to work out the subject, and chatting with one of my keenest-minded friends (Mr. Brett, the painter of the Val d'Aosta in the Exhibition of 1859), I casually asked him, 'What is vulgarity?' merely to see what he would say, not supposing it possible to get a sudden answer.

(a kind of buff); no fine drawing of nostril or neck can give any look of nobleness to the animal which carries such hair: it looks like a hobby-horse with tow glued to it, which riotous children have half pulled or scratched out. The next point of difference is the isolation of Vandyck's figure, compared with the modern painter's endeavour to ennoble his by subduing others. The knight seems to be just going out of his castle gates: his horse rears as he passes their pillars; there is nothing behind, but the sky. But the general is reviewing a regiment; the ensign lowers its colours to him; he takes off his hat in return. All which reviewing and bowing is in its very nature ignoble, wholly unfit to be painted: a gentleman might as well be painted leaving his card on somebody. And, in the next place, the modern painter has thought to enhance his officer by putting the regiment some distance back, and in the shade, so that the men look only about five feet high, being besides very ill painted to keep them in better subordination. One does not know whether most to despise the feebleness of the painter who must have recourse to such an artifice, or his vulgarity in being satisfied with it. I ought, by the way, before leaving the point of dress, to have noted that the vulgarity of the painter is considerably assisted by the vulgarity of the costume itself. Not only is it base in being new, but base in that it cannot last to be old. If one wanted a lesson on the ugliness of modern costume, it could not be more sharply received than by turning from one to the other horseman. The knight wears steel plate armour, chased here and there with gold; the delicate, rich, pointed lace collar falling on the embossed breastplate; his dark hair flowing over his shoulders; a crimson silk scarf fastened round his waist, and floating behind him; buff boots, deep folded at the instep, set in silver stirrup. The general wears his hair cropped short; blue coat, padded and buttoned; blue trowsers and red stripe; black shiny boots; common saddler's stirrups; cocked hat in hand, suggestive of absurd completion, when assumed.

'Another thing noticeable as giving nobleness to the Vandyck is its femininenes: the rich, light silken scarf, the flowing hair, the delicate, sharp, though sunburnt features, and the lace collar, do not in the least diminish the manliness, but *add* femininenes. One sees that the knight is indeed a soldier, but not a soldier only; that he is accomplished in all ways, and tender in all thoughts: while the general is represented as nothing but a soldier — and it is very doubtful if he is even that — one is sure, at a glance, that if he can do anything but put his hat off and on, and give words of command, the anything must, at all events, have something to do with the barracks; that there is no grace, no music, nor softness, nor learnedness, in the man's soul; that he is made up of forms and accoutrements.

'Lastly, the modern picture is as bad painting as it is wretched conceiving; and one is struck, in looking from it to Vandyck's, peculiarly by the fact that good work is always *enjoyed* work. There is not a touch of Vandyck's pencil but he seems to have revelled in — not grossly, but delicately — tasting the colour in every touch as an epicure would wine. While the other goes on daub, daub, daub, like a bricklayer spreading mortar — nay, with far less lightness of hand or lightness of spirit than a good bricklayer's — covering his canvas heavily and conceitedly at once, caring only but to catch the public eye with his coarse, presumptuous, ponderous, illiterate work.'

Thus far my diary. In case it should be discovered by any one where these pictures are, it should be noted that the vulgarity of the modern one is wholly the painter's fault. It implies none in the general (except bad taste in pictures). The same painter would have made an equally vulgar portrait of Bayard. And as for taste in pictures, the general's was not singular. I used to spend much time before the Vandyck; and among all the tourist visitors to the gallery, who were numerous, I never saw one look at it twice, but all paused in respectful admiration before the padded surtout. The reader will find, farther, many interesting and most valuable notes on the subject of nobleness and vulgarity in Emerson's Essays, and every phase of nobleness illustrated in Sir Kenelm Digby's 'Broad Stone of Honour.' The best help I have ever had — so far as help depended on the sympathy or praise of others in work which, year after year, it was necessary to pursue through the abuse of the brutal and the base — was given me, when this author, from whom I had first learned to

He thought for about a minute, then answered quietly, 'It is merely one of the forms of Death.' I did not see the meaning of the reply at the time; but on testing it, found that it met every phase of the difficulties connected with the inquiry, and summed the true conclusion. Yet, in order to be complete, it ought to be made a distinctive as well as conclusive definition; showing *what* form of death vulgarity is; for death itself is not vulgar, but only death mingled with life. I cannot, however, construct a short-worded definition which will include all the minor conditions of bodily degeneracy; but the term 'deathful selfishness' will embrace all the most fatal and essential forms of mental vulgarity.

love nobleness, introduced frequent reference to my own writings in his 'Children's Bower.' [Ruskin's note. — *The Broad Stone of Honour* (1826–27) by Kenelm Henry Digby (1800–80) was a study of chivalry, considered historically, in its relation to Christianity, knighthood, woman, etc.]

THE SEVEN LAMPS OF ARCHITECTURE

Chapter VI

The Lamp of Memory

1. Among the hours of his life to which the writer looks back with peculiar gratitude, as having been marked by more than ordinary fulness of joy or clearness of teaching, is one passed, now some years ago, near time of sunset, among the broken masses of pine forest which skirt the course of the Ain, above the village of Champagnole, in the Jura.[1] It is a spot which has all the solemnity, with none of the savageness, of the Alps; where there is a sense of a great power beginning to be manifested in the earth, and of a deep and majestic concord in the rise of the long low lines of piny hills; the first utterance of those mighty mountain symphonies, soon to be more loudly lifted and wildly broken along the battlements of the Alps. But their strength is as yet restrained; and the far-reaching ridges of pastoral mountain succeed each other, like the long and sighing swell which moves over quiet waters from some far off stormy sea. And there is a deep tenderness pervading that vast monotony. The destructive forces and the stern expression of the central ranges are alike withdrawn. No frost-ploughed, dust-encumbered paths of ancient glacier fret the soft Jura pastures; no splintered heaps of ruin break the fair ranks of her forest; no pale, defiled, or furious rivers send their rude and changeful ways among her rocks. Patiently, eddy by eddy, the clear green streams wind along their well-known beds; and under the dark quietness of the undisturbed pines, there spring up, year by year, such company of joyful flowers as I know not the like of among all the blessings of the earth. It was spring time, too; and all were coming forth in clusters crowded for very love; there was room enough for all, but they crushed their leaves into all manner of strange shapes only to be nearer each other. There was the wood anemone, star after star, closing every now and then into nebulæ; and there was the oxalis, troop by troop, like virginal processions of the Mois de Marie, the dark vertical clefts in the limestone choked up with them as with heavy snow, and touched with ivy on the edges — ivy as light and lovely as the vine; and, ever and anon, a blue gush of violets, and cowslip bells in sunny places; and in the more open ground, the vetch, and comfrey, and mezereon, and the small sapphire buds of the Polygala Alpina, and the wild strawberry, just a blossom or two, all showered amidst

1. The system of mountain ranges between the Rhine and the Rhone, forming the frontier between France and Switzerland. The Ain is one of three rivers which flow down the western slopes.

the golden softness of deep, warm, amber-coloured moss. I came out presently on the edge of the ravine: the solemn murmur of its waters rose suddenly from beneath, mixed with the singing of the thrushes among the pine boughs; and, on the opposite side of the valley, walled all along as it was by grey cliffs of limestone, there was a hawk sailing slowly off their brow, touching them nearly with his wings, and with the shadows of the pines flickering upon his plumage from above; but with the fall of a hundred fathoms under his breast, and the curling pools of the green river gliding and glittering dizzily beneath him, their foam globes moving with him as he flew. It would be difficult to conceive a scene less dependent upon any other interest than that of its own secluded and serious beauty; but the writer well remembers the sudden blankness and chill which were cast upon it when he endeavoured, in order more strictly to arrive at the sources of its impressiveness, to imagine it, for a moment, a scene in some aboriginal forest of the New Continent. The flowers in an instant lost their light, the river its music, the hills became oppressively desolate; a heaviness in the boughs of the darkened forest showed how much of their former power had been dependent upon a life which was not theirs, how much of the glory of the imperishable, or continually renewed, creation is reflected from things more precious in their memories than it, in its renewing. Those ever springing flowers and ever flowing streams had been dyed by the deep colours of human endurance, valour, and virtue; and the crests of the sable hills that rose against the evening sky received a deeper worship, because their far shadows fell eastward over the iron walls of Joux,[2] and the four-square keep of Granson.[3]

2. It is as the centralization and protectress of this sacred influence, that Architecture is to be regarded by us with the most serious thought. We may live without her, and worship without her, but we cannot remember without her. How cold is all history, how lifeless all imagery, compared to that which the living nation writes, and the uncorrupted marble bears! — how many pages of doubtful record might we not often spare, for a few stones left one upon another! The ambition of the old Babel builders was well directed for this world: there are but two strong conquerors of the forgetfulness of men, Poetry and Architecture; and the latter in some sort includes the former, and is mightier in its reality: it is well to have, not only what men have thought and felt, but what their hands have handled, and their strength wrought, and their eyes beheld, all the days of their life. The age of Homer[4] is surrounded with darkness, his very personality with doubt. Not so that of Pericles:[5] and the day is coming when we shall confess, that we have learned more of Greece out of the crumbled fragments of her sculpture than even from her sweet singers or soldier historians. And if indeed there be any profit in our knowledge of the past, or any joy in the thought of being remembered hereafter, which can give strength to present exertion, or patience to present endurance, there are two duties respecting national architecture whose importance it is impossible to overrate: the first, to render the architecture of the day, historical; and, the second, to preserve, as the most precious of inheritances, that of past ages.

3. It is in the first of these two directions that Memory may truly be said to be the Sixth Lamp of Architecture; for it is in becoming memorial or monumental that a true perfection is attained by civil and domestic buildings; and this partly

as they are, with such a view, built in a more stable manner, and partly as their decorations are consequently animated by a metaphorical or historical meaning.

As regards domestic buildings, there must always be a certain limitation to views of this kind in the power, as well as in the hearts, of men; still I cannot but think it an evil sign of a people when their houses are built to last for one generation only. There is a sanctity in a good man's house which cannot be renewed in every tenement that rises on its ruins: and I believe that good men would generally feel this; and that having spent their lives happily and honourably, they would be grieved, at the close of them, to think that the place of their earthly abode, which had seen, and seemed almost to sympathize in, all their honour, their gladness, or their suffering, — that this, with all the record it bare of them, and of all material things that they had loved and ruled over, and set the stamp of themselves upon — was to be swept away, as soon as there was room made for them in the grave; that no respect was to be shown to it, no affection felt for it, no good to be drawn from it by their children; that though there was a monument in the church, there was no warm monument in the hearth and house to them; that all that they ever treasured was despised, and the places that had sheltered and comforted them were dragged down to the dust. I say that a good man would fear this; and that, far more, a good son, a noble descendant, would fear doing it to his father's house. I say that if men lived like men indeed, their houses would be temples — temples which we should hardly dare to injure, and in which it would make us holy to be permitted to live; and there must be a strange dissolution of natural affection, a strange unthankfulness for all that homes have given and parents taught, a strange consciousness that we have been unfaithful to our fathers' honour, or that our own lives are not such as would make our dwellings sacred to our children, when each man would fain build to himself, and build for the little revolution of his own life only. And I look upon those pitiful concretions of lime and clay which spring up, in mildewed forwardness, out of the kneaded fields about our capital — upon those thin, tottering, foundationless shells of splintered wood and imitated stone — upon those gloomy rows of formalized minuteness, alike without difference and without fellowship, as solitary as similar — not merely with the careless disgust of an offended eye, not merely with sorrow for a desecrated landscape, but with a painful foreboding that the roots of our national greatness must be deeply cankered when they are thus loosely struck in their native ground; that those comfortless and unhonoured dwellings are the signs of a great and spreading spirit of popular discontent; that they mark the time when every man's aim is to be in some more elevated sphere than his natural one, and every man's past life is his habitual scorn; when men build in the hope of leaving the places they have built, and live in the hope of forgetting the years that they have lived; when the comfort, the peace, the religion of home have ceased to be felt; and the crowded tenements of a struggling and restless population differ only from the tents of the Arab or the Gypsy by their less healthy openness to the air of heaven, and less happy choice of their spot of earth; by their sacrifice of liberty without the gain of rest, and of stability without the luxury of change.

4. This is no slight, no consequenceless evil; it is ominous, infectious, and fecund of other fault and misfortune. When men do not love their hearths, nor reverence their thresholds, it is a sign that they have dishonoured both, and that they have never acknowledged the true universality of that Christian worship which was indeed to supersede the idolatry, but not the piety, of the pagan. Our God is a

household God, as well as a heavenly one; He has an altar in every man's dwelling; let men look to it when they rend it lightly and pour out its ashes. It is not a question of mere ocular delight, it is no question of intellectual pride, or of cultivated and critical fancy, how, and with what aspect of durability and of completeness, the domestic buildings of a nation shall be raised. It is one of those moral duties, not with more impunity to be neglected because the perception of them depends on a finely toned and balanced conscientiousness, to build our dwellings with care, and patience, and fondness, and diligent completion, and with a view to their duration at least for such a period as, in the ordinary course of national revolutions, might be supposed likely to extend to the entire alteration of the direction of local interests. This at the least; but it would be better if, in every possible instance, men built their own houses on a scale commensurate rather with their condition at the commencement, than their attainments at the termination, of their worldly career; and built them to stand as long as human work at its strongest can be hoped to stand; recording to their children what they had been, and from what, if so it had been permitted them, they had risen. And when houses are thus built, we may have that true domestic architecture, the beginning of all other, which does not disdain to treat with respect and thoughtfulness the small habitation as well as the large, and which invests with the dignity of contented manhood the narrowness of worldly circumstance.

5. I look to this spirit of honourable, proud, peaceful self-possession, this abiding wisdom of contented life, as probably one of the chief sources of great intellectual power in all ages, and beyond dispute as the very primal source of the great architecture of old Italy and France. To this day, the interest of their fairest cities depends, not on the isolated richness of palaces, but on the cherished and exquisite decoration of even the smallest tenements of their proud periods. The most elaborate piece of architecture in Venice is a small house at the head of the Grand Canal, consisting of a ground floor with two stories above, three windows in the first, and two in the second. Many of the most exquisite buildings are on the narrower canals, and of no larger dimensions. One of the most interesting pieces of fifteenth century architecture in north Italy, is a small house in a back street, behind the market-place of Vicenza;[6] it bears date 1481, and the motto, *Il. n'est. rose. sans. épine.*;[7] it has also only a ground floor and two stories, with three windows in each, separated by rich flower-work, and with balconies, supported, the central one by an eagle with open wings, the lateral ones by winged griffins standing on cornucopiæ. The idea that a house must be large in order to be well built, is altogether of modern growth, and is parallel with the idea, that no picture can be historical, except of a size admitting figures larger than life.

6. I would have, then, our ordinary dwelling-houses built to last, and built to be lovely; as rich and full of pleasantness as may be, within and without; with what degree of likeness to each other in style and manner, I will say presently, under another head; but, at all events, with such differences as might suit and express each man's character and occupation, and partly his history. This right over the house, I conceive, belongs to its first builder, and is to be respected by his children; and it would be well that blank stones should be left in places, to be inscribed with a summary of his life and of its experience, raising thus the habitation into a kind of monument, and developing, into more systematic instructiveness, that good custom which was of old universal, and which still remains among

6. A small town about thirty-five miles northwest of Padua.

7. 'There is no rose without its thorn.'

some of the Swiss and Germans, of acknowledging the grace of God's permission to build and possess a quiet resting-place, in such sweet words as may well close our speaking of these things. I have taken them from the front of a cottage lately built among the green pastures which descend from the village of Grindelwald[8] to the lower glacier: —

Mit herzlichem Vertrauen
Hat Johannes Mooter und Maria Rubi
Dieses Haus bauen lassen.
Der liebe Gott woll uns bewahren
Vor allem Unglück und Gefahren
Und es in Segen lassen stehn
Auf der Reise durch diese Jammerzeit
Nach dem himmlischen Paradiese,
Wo alle Frommen wohnen,
Da wird Gott sie belohnen
Mit der Friedenskrone
Zu alle Ewigkeit.[9]

7. In public buildings the historical purpose should be still more definite. It is one of the advantages of Gothic architecture, — I use the word Gothic in the most extended sense as broadly opposed to classical, — that it admits of a richness of record altogether unlimited. Its minute and multitudinous sculptural decorations afford means of expressing, either symbolically or literally, all that need be known of national feeling or achievement. More decoration will, indeed, be usually required than can take so elevated a character; and much, even in the most thoughtful periods, has been left to the freedom of fancy, or suffered to consist of mere repetitions of some national bearing or symbol. It is, however, generally unwise, even in mere surface ornament, to surrender the power and privilege of variety which the spirit of Gothic architecture admits; much more in important features — capitals of columns or bosses, and string-courses, as of course in all confessed bas-reliefs. Better the rudest work that tells a story or records a fact, than the richest without meaning. There should not be a single ornament put upon great civic buildings, without some intellectual intention. Actual representation of history has in modern times been checked by a difficulty, mean indeed, but steadfast; that of unmanageable costume: nevertheless, by a sufficiently bold imaginative treatment, and frank use of symbols, all such obstacles may be vanquished; not perhaps in the degree necessary to produce sculpture in itself satisfactory, but at all events so as to enable it to become a grand and expressive element of architectural composition. Take, for example, the management of the capitals of the ducal palace at Venice. History, as such, was indeed entrusted to the painters of its interior, but every capital of its arcades was filled with meaning. The large one, the corner stone of the whole, next the entrance, was devoted to the symbolization of Abstract Justice; above it is a sculpture of the Judgment of Solomon,[10] remarkable for a beautiful subjection in its treatment to its decorative purpose. The figures, if the subject had been entirely composed of them, would have awkwardly interrupted the line of the angle, and diminished its apparent strength; and therefore in the midst of them, entirely without relation to them, and indeed actually between the executioner and interceding mother, there rises the ribbed trunk of a massy tree, which supports and continues the shaft of the angle, and whose leaves above overshadow and enrich the whole. The capital below bears among its leafage a

8. In the Bernese Oberland, Switzerland.

9. 'With heart-felt trust
Have John Mooter and Mary Rubi
Had this house built.
The dear God will preserve us
Against all misfortune and peril
And permit it to stand as a blessing
On our journey through this life of sorrow
To the heavenly paradise,
Where dwell all the saints;
There God will reward them
With the crown of peace
To all eternity.'

10. See *I Kings*, iii,16–28.

throned figure of Justice, Trajan doing justice to the widow,[11] Aristotle 'che die legge,'[12] and one or two other subjects now unintelligible from decay. The capitals next in order represent the virtues and vices in succession, as preservative or destructive of national peace and power, concluding with Faith, with the inscription 'Fides optima in Deo est.'[13] A figure is seen on the opposite side of the capital, worshipping the sun. After these, one or two capitals are fancifully decorated with birds, and then come a series representing, first the various fruits, then the national costumes, and then the animals of the various countries subject to Venetian rule.

8. Now, not to speak of any more important public building, let us imagine our own India House adorned in this way, but historical or symbolical sculpture: massively built in the first place; then chased with bas-reliefs of our Indian battles, and fretted with carvings of Oriental foliage, or inlaid with Oriental stones; and the more important members of its decoration composed of groups of Indian life and landscape, and prominently expressing the phantasms of Hindoo worship in their subjection to the Cross. Would not one such work be better than a thousand histories? If, however, we have not the invention necessary for such efforts, or if, which is probably one of the most noble excuses we can offer for our deficiency in such matters, we have less pleasure in talking about ourselves, even in marble, than the Continental nations, at least we have no excuse for any want of care in the points which insure the building's endurance. And as this question is one of great interest in its relations to the choice of various modes of decoration, it will be necessary to enter into it at some length.

9. The benevolent regards and purposes of men in masses seldom can be supposed to extend beyond their own generation. They may look to posterity as an audience, may hope for its attention, and labour for its praise: they may trust to its recognition of unacknowledged merit, and demand its justice for contemporary wrong. But all this is mere selfishness, and does not involve the slightest regard to, or consideration of, the interest of those by whose numbers we would fain swell the circle of our flatterers, and by whose authority we would gladly support our presently disputed claims. The idea of self-denial for the sake of posterity, of practising present economy for the sake of debtors yet unborn, of planting forests that our descendants may live under their shade, or of raising cities for future nations to inhabit, never, I suppose, efficiently takes place among publicly recognized motives of exertion. Yet these are not the less our duties; nor is our part fitly sustained upon the earth, unless the range of our intended and deliberate usefulness include, not only the companions, but the successors of our pilgrimage. God has lent us the earth for our life; it is a great entail. It belongs as much to those who are to come after us, and whose names are already written in the book of creation, as to us; and we have no right, by anything that we do or neglect, to involve them in unnecessary penalties, or deprive them of benefits which it was in our power to bequeath. And this the more, because it is one of the appointed conditions of the labour of men that, in proportion to the time between the seed-sowing and the harvest, is the fulness of the fruit; and that generally, therefore, the farther off we place our aim, and the less we desire to be ourselves the witnesses of what we have laboured for, the more wide and rich will be the measure of our success. Men cannot benefit those that are with them as they can benefit those who come after them: and of all the pulpits from which human voice is ever sent forth, there is none from which it reaches so far as from the grave.

11. Trajan (A.D. 53–117), Roman emperor.
12. 'who pronounces law.'
13. 'Our best faith is in God.'

10. Nor is there, indeed, any present loss, in such respect, for futurity. Every human action gains in honour, in grace, in all true magnificence, by its regard to things that are to come. It is the far sight, the quiet and confident patience, that, above all other attributes, separate man from man, and near him to his Maker; and there is no action nor art, whose majesty we may not measure by this test. Therefore, when we build, let us think that we build for ever. Let it not be for present delight, nor for present use alone; let it be such work as our descendants will thank us for, and let us think, as we lay stone on stone, that a time is to come when those stones will be held sacred because our hands have touched them, and that men will say as they look upon the labour and wrought substance of them, 'See! this our fathers did for us.' For, indeed, the greatest glory of a building is not in its stones, nor in its gold. Its glory is in its Age, and in that deep sense of voicefulness, of stern watching, of mysterious sympathy, nay, even of approval or condemnation, which we feel in walls that have long been washed by the passing waves of humanity. It is in their lasting witness against men, in their quiet contrast with the transitional character of all things, in the strength which, through the lapse of seasons and times, and the decline and birth of dynasties, and the changing of the face of the earth, and of the limits of the sea, maintains its sculptured shapeliness for a time insuperable, connects forgotten and following ages with each other, and half constitutes the identity, as it concentrates the sympathy, of nations: it is in that golden stain of time, that we are to look for the real light, and colour, and preciousness of architecture; and it is not until a building has assumed this character, till it has been entrusted with the fame, and hallowed by the deeds of men, till its walls have been witnesses of suffering, and its pillars rise out of the shadows of death, that its existence, more lasting as it is than that of the natural objects of the world around it, can be gifted with even so much as these possess, of language and of life.

11. For that period, then, we must build; not, indeed, refusing to ourselves the delight of present completion, nor hesitating to follow such portions of character as may depend upon delicacy of execution to the highest perfection of which they are capable, even although we may know that in the course of years such details must perish; but taking care that for work of this kind we sacrifice no enduring quality, and that the building shall not depend for its impressiveness upon anything that is perishable. This would, indeed, be the law of good composition under any circumstances, the arrangement of the larger masses being always a matter of greater importance than the treatment of the smaller; but in architecture there is much in that very treatment which is skilful or otherwise in proportion to its just regard to the probable effects of time: and (which is still more to be considered) there is a beauty in those effects themselves, which nothing else can replace, and which it is our wisdom to consult and to desire. For though, hitherto, we have been speaking of the sentiment of age only, there is an actual beauty in the marks of it, such and so great as to have become not unfrequently the subject of especial choice among certain schools of art, and to have impressed upon those schools the character usually and loosely expressed by the term 'picturesque.' It is of some importance to our present purpose to determine the true meaning of this expression, as it is now generally used; for there is a principle to be developed from that use which, while it has occultly been the ground of much that is true and just in our judgment of art, has never been so far understood as to become definitely serviceable. Probably no word in the language, (exclusive of theological expressions) has been the subject of so frequent or so pro-

longed dispute; yet none remain more vague in their acceptance, and it seems to me to be a matter of no small interest to investigate the essence of that idea which all feel, and (to appearance) with respect to similar things, and yet which every attempt to define has, as I believe, ended either in mere enumeration of the effects and objects to which the term has been attached, or else in attempts at abstraction more palpably nugatory than any which have disgraced metaphysical investigation on other subjects. A recent critic on Art, for instance, has gravely advanced the theory that the essence of the picturesque consists in the expression of 'universal decay.' It would be curious to see the result of an attempt to illustrate this idea of the picturesque, in a painting of dead flowers and decayed fruit; and equally curious to trace the steps of any reasoning which, on such a theory, should account for the picturesqueness of an ass colt as opposed to a horse foal. But there is much excuse for even the most utter failure in reasonings of this kind, since the subject is, indeed, one of the most obscure of all that may legitimately be submitted to human reason; and the idea is itself so varied in the minds of different men, according to their subjects of study, that no definition can be expected to embrace more than a certain number of its infinitely multiplied forms.

12. That peculiar character, however, which separates the picturesque from the characters of subject belonging to the higher walks of art (and this is all that it is necessary for our present purpose to define), may be shortly and decisively expressed. Picturesqueness, in this sense, is *Parasitical Sublimity*. Of course all sublimity, as well as all beauty, is, in the simple etymological sense, picturesque, that is to say, fit to become the subject of a picture; and all sublimity is, even in the peculiar sense which I am endeavouring to develop, picturesque, as opposed to beauty; that is to say, there is more picturesqueness in the subject of Michael Angelo than of Perugino,[14] in proportion to the prevalence of the sublime element over the beautiful. But that character, of which the extreme pursuit is generally admitted to be degrading to art, is *parasitical* sublimity; *i.e.*, a sublimity dependent on the accidents, or on the least essential characters, of the objects to which it belongs; and the picturesque is *developed distinctively exactly in proportion to the distance from the centre of thought of those points of character in which the sublimity is found*. Two ideas, therefore, are essential to picturesqueness, — the first, that of sublimity (for pure beauty is not picturesque at all, and becomes so only as the sublime element mixes with it), and the second, the subordinate or parasitical position of that sublimity. Of course, therefore, whatever characters of line or shade or expression are productive of sublimity, will become productive of picturesqueness; what these characters are I shall endeavour hereafter to show at length; but, among those which are generally acknowledged, I may name angular and broken lines, vigorous oppositions of light and shadow, and grave, deep, or boldly contrasted colour; and all these are in a still higher degree effective, when, by resemblance or association, they remind us of objects on which a true and essential sublimity exists, as of rocks or mountains, or stormy clouds or waves. Now if these characters, or any others of a higher and more abstract sublimity, be found in the very heart and substance of what we contemplate, as the sublimity of Michael Angelo depends on the expression of mental character in his figures far more than even on the noble lines of their arrangement, the art which represents such characters cannot be properly called picturesque: but, if they be found in the accidental or external qualities,

14. c.1450–1524; the greatest, after Raphael, of the Umbrian school of Italian painters; his paintings are full of the ideal and the mystical, graceful and delicate in line and color.

the distinctive picturesque will be the result.

13. Thus, in the treatment of the features of the human face by Francia [15] or Angelico,[16] the shadows are employed only to make the contours of the features thoroughly felt; and to those features themselves the mind of the observer is exclusively directed (that is to say, to the essential characters of the thing represented). All power and all sublimity rest on these; the shadows are used only for the sake of the features. On the contrary, by Rembrandt, Salvator, or Caravaggio,[17] the features are used *for the sake of the shadows*; and the attention is directed, and the power of the painter addressed, to characters of accidental light and shade across or around those features. In the case of Rembrandt there is often an essential sublimity in invention and expression besides, and always a high degree of it in the light and shade itself; but it is, for the most part, parasitical or engrafted sublimity as regards the subject of the painting, and, just so far, picturesque.

14. Again, in the management of the sculptures of the Parthenon, shadow is frequently employed as a dark field on which the forms are drawn. This is visibly the case in the metopes,[18] and must have been nearly as much so in the pediment. But the use of that shadow is entirely to show the confines of the figures; and it is to *their lines*, and not to the shapes of the shadows behind them, that the art and the eye are addressed. The figures themselves are conceived, as much as possible, in full light, aided by bright reflections; they are drawn exactly as, on vases, white figures on a dark ground; and the sculptors have dispensed with, or even struggled to avoid, all shadows which were not absolutely necessary to the explaining of the form. On the contrary, in Gothic sculpture, the shadow becomes itself a subject of thought. It is considered as a dark colour, to be arranged in certain agreeable masses; the figures are very frequently made even subordinate to the placing of its divisions: and their costume is enriched at the expense of the forms underneath, in order to increase the complexity and variety of the points of shade. There are thus, both in sculpture and painting, two, in some sort, opposite schools, of which the one follows for its subject the essential forms of things, and the other the accidental lights and shades upon them. There are various degrees of their contrariety: middle steps, as in the works of Correggio,[19] and all degrees of nobility and of degradation in the several manners: but the one is always recognized as the pure and the other as the picturesque school. Portions of picturesque treatment will be found in Greek work, and of pure and unpicturesque in Gothic; and in both there are countless instances, as pre-eminently in the works of Michael Angelo, in which shadows become valuable as media of expression, and therefore take rank among essential characteristics. Into these multitudinous distinctions and exceptions I cannot now enter, desiring only to prove the broad applicability of the general definition.

15. Again, the distinction will be found

15. c 1450 1517; a Bolognese painter and goldsmith, whose work is graceful and beautifully finished.

16. Fra Angelico (1387 1455), the saintly Florentine painter-friar, a great colorist, and master of design and of sublimity.

17 Rembrandt Harmens van Rijn (1606–69), greatest of Dutch painters; Salvator Rosa (1615–73), Italian painter of romantic landscapes and battle-pieces; and Michelangelo Amerighi Caravaggio (1569 1609), Italian painter, were all interested in potent contrasts of light and shadow. Rembrandt handled the method with genius; Caravaggio adopted and applied the style sometimes with harsh vigor.

18. *metopes*: the spaces between the triglyphs (or rectangular tablets) on the Doric friezes, often adorned with carved work.

19. 1494–1534; Italian painter, and head of the school of painting at Parma; a vivid and impulsive inventor of expression and pose, and a daring adept at foreshortening.

to exist, not only between forms and shades as subjects of choice, but between essential and inessential forms. One of the chief distinctions between the dramatic and picturesque schools of sculpture is found in the treatment of the hair. By the artists of the time of Pericles it was considered as an excrescence, indicated by few and rude lines, and subordinated, in every particular, to the principality of the features and person. How completely this was an artistical, not a national idea, it is unnecessary to prove. We need but remember the employment of the Lacedæmonians, reported by the Persian spy on the evening before the battle of Thermopylæ,[20] or glance at any Homeric description of ideal form, to see how purely *sculpturesque* was the law which reduced the markings of the hair, lest, under the necessary disadvantages of material, they should interfere with the distinctness of the personal forms. On the contrary, in later sculpture, the hair receives almost the principal care of the workman; and, while the features and limbs are clumsily and bluntly executed, the hair is curled and twisted, cut into bold and shadowy projections, and arranged in masses elaborately ornamental: there is true sublimity in the lines and the chiaroscuro of these masses, but it is as regards the creature represented, parasitical and therefore picturesque. In the same sense we may understand the application of the term to modern animal painting, distinguished as it has been by peculiar attention to the colours, lustre, and texture of skin; nor is it in art alone that the definition will hold. In animals themselves, when their sublimity depends upon their muscular forms or motions, or necessary and principal attributes, as perhaps more than all others in the horse, we do not call them picturesque, but consider them as peculiarly fit to be associated with pure historical subject. Exactly in proportion as their character of sublimity passes into excrescences; — into mane and beard as in the lion, into horns as in the stag, into shaggy hide as in the instance above given of the ass colt, into variegation as in the zebra, or into plumage, — they become picturesque, and are so in art exactly in proportion to the prominence of these excrescential characters. It may be often most expedient that they should be prominent; often there is in them the highest degree of majesty, as in those of the leopard and boar; and in the hands of men like Tintoret and Rubens,[21] such attributes become means of deepening the very highest and most ideal impressions. But the picturesque direction of their thoughts is always distinctly recognizable, as clinging to the surface, to the less essential character, and as developing out of this a sublimity different from that of the creature itself; a sublimity which is, in a sort, common to all the objects of creation, and the same in its constituent elements, whether it be sought in the clefts and folds of shaggy hair, or in the chasms and rents of rocks, or in the hanging of thickets or hill sides, or in the alternations of gayety and gloom in the variegation of the shell, the plume, or the cloud.

16. Now, to return to our immediate subject, it so happens that, in architecture, the superinduced and accidental beauty is most commonly inconsistent with the preservation of original character, and the picturesque is therefore sought in ruin, and supposed to consist in decay. Whereas, even when so sought, it consists in the mere sublimity of the rents, or fractures, or stains, or vegetation, which assimilate the architecture with the work of Nature, and bestow upon it those circumstances

20. The spy, much to his amazement, found the Lacedaemonians (the Spartans) engaged in gymnastic exercises (or games) and in combing their hair. (See Herodotus, vii,208.)

21. Jacopo Robusti Tintoretto (1518–94), one of the greatest painters of the Venetian school. — Peter Paul Rubens (1577–1640), great Flemish painter. Both painters are noted for their power, love of color, and skill in detail.

of colour and form which are universally beloved by the eye of man. So far as this is done, to the extinction of the true characters of the architecture, it is picturesque, and the artist who looks to the stem of the ivy instead of the shaft of the pillar, is carrying out in more daring freedom the debased sculptor's choice of the hair instead of the countenance. But so far as it can be rendered consistent with the inherent character, the picturesque or extraneous sublimity of architecture has just this of nobler function in it than that of any other object whatsoever, that it is an exponent of age, of that in which, as has been said, the greatest glory of the building consists; and, therefore, the external signs of this glory, having power and purpose greater than any belonging to their mere sensible beauty, may be considered as taking rank among pure and essential characters; so essential to my mind, that I think a building cannot be considered as in its prime until four or five centuries have passed over it; and that the entire choice and arrangement of its details should have reference to their appearance after that period, so that none should be admitted which would suffer material injury either by the weather-staining, or the mechanical degradation which the lapse of such a period would necessitate.

17. It is not my purpose to enter into any of the questions which the application of this principle involves. They are of too great interest and complexity to be even touched upon within my present limits, but this is broadly to be noticed, that those styles of architecture which are picturesque in the sense above explained with respect to sculpture, that is to say, whose decoration depends on the arrangement of points of shade rather than on purity of outline, do not suffer, but commonly gain in richness of effect when their details are partly worn away; hence such styles, pre-eminently that of French Gothic, should always be adopted when the materials to be employed are liable to degradation, as brick, sandstone, or soft limestone; and styles in any degree dependent on purity of line, as the Italian Gothic, must be practised altogether in hard and undecomposing materials, granite, serpentine, or crystalline marbles. There can be no doubt that the nature of the accessible materials influenced the formation of both styles; and it should still more authoritatively determine our choice of either.

18. It does not belong to my present plan to consider at length the second head of duty of which I have above spoken; the preservation of the architecture we possess: but a few words may be forgiven, as especially necessary in modern times. Neither by the public, nor by those who have the care of public monuments, is the true meaning of the word *restoration* understood. It means the most total destruction which a building can suffer: a destruction out of which no remnants can be gathered: a destruction accompanied with false description of the thing destroyed. Do not let us deceive ourselves in this important matter; it is *impossible*, as impossible as to raise the dead, to restore anything that has ever been great or beautiful in architecture. That which I have above insisted upon as the life of the whole, that spirit which is given only by the hand and eye of the workman, never can be recalled. Another spirit may be given by another time, and it is then a new building; but the spirit of the dead workman cannot be summoned up, and commanded to direct other hands, and other thoughts. And as for direct and simple copying, it is palpably impossible. What copying can there be of surfaces that have been worn half an inch down? The whole finish of the work was in the half inch that is gone; if you attempt to restore that finish, you do it conjecturally; if you copy what is left, granting fidelity to be possible, (and what care, or watchfulness, or cost can secure it,) how is the

new work better than the old? There was yet in the old *some* life, some mysterious suggestion of what it had been, and of what it had lost; some sweetness in the gentle lines which rain and sun had wrought. There can be none in the brute hardness of the new carving. Look at the animals which I have given in Plate XIV.,[22] as an instance of living work, and suppose the markings of the scales and hair once worn away, or the wrinkles of the brows, and who shall ever restore them? The first step to restoration, (I have seen it, and that again and again — seen it on the Baptistery of Pisa, seen it on the Casa d'Oro at Venice, seen it on the Cathedral of Lisieux,) is to dash the old work to pieces; the second is usually to put up the cheapest and basest imitation which can escape detection, but in all cases, however careful, and however laboured, an imitation still, a cold model of such parts as *can* be modelled, with conjectural supplements; and my experience has as yet furnished me with only one instance, that of the Palais de Justice at Rouen, in which even this, the utmost degree of fidelity which is possible, has been attained, or even attempted.

19. Do not let us talk then of restoration. The thing is a Lie from beginning to end. You may make a model of a building as you may of a corpse, and your model may have the shell of the old walls within it as your cast might have the skeleton, with what advantage I neither see nor care: but the old building is destroyed, and that more totally and mercilessly than if it had sunk into a heap of dust, or melted into a mass of clay: more has been gleaned out of desolated Nineveh than ever will be out of re-built Milan. But, it is said, there may come a necessity for restoration! Granted. Look the necessity full in the face, and understand it on its own terms. It is a necessity for destruction. Accept it as such, pull the building down, throw its stones into neglected corners, make ballast of them, or mortar, if you will; but do it honestly, and do not set up a Lie in their place. And look that necessity in the face before it comes, and you may prevent it. The principle of modern times, (a principle which, I believe, at least in France, to be *systematically acted on by the masons*, in order to find themselves work, as the abbey of St. Ouen was pulled down by the magistrates of the town by way of giving work to some vagrants,) is to neglect buildings first, and restore them afterward. Take proper care of your monuments, and you will not need to restore them. A few sheets of lead put in time upon a roof, a few dead leaves and sticks swept in time out of a watercourse, will save both roof and walls from ruin. Watch an old building with an anxious care; guard it as best you may, and at *any* cost, from every influence of dilapidation. Count its stones as you would jewels of a crown; set watches about it as if at the gates of a besieged city; bind it together with iron where it loosens; stay it with timber where it declines; do not care about the unsightliness of the aid: better a crutch than a lost limb; and do this tenderly, and reverently, and continually, and many a generation will still be born and pass away beneath its shadow. Its evil day must come at last; but let it come declaredly and openly, and let no dishonouring and false substitute deprive it of the funeral offices of memory.

20. Of more wanton or ignorant ravage it is vain to speak; my words will not reach those who commit them, and yet, be it heard or not, I must not leave the truth unstated, that it is again no question of expediency or feeling whether we shall preserve the buildings of past times or not. *We have no right whatever to touch them.* They are not ours. They belong partly to those who built them, and partly to all the generations of mankind who are to follow us. The dead have still their right in them: that which they la

22. The original text contained illustrative plates impossible to reproduce here.

boured for, the praise of achievement or the expression of religious feeling, or whatsoever else it might be which in those buildings they intended to be permanent, we have no right to obliterate. What we have ourselves built, we are at liberty to throw down; but what other men gave their strength and wealth and life to accomplish, their right over does not pass away with their death; still less is the right to the use of what they have left vested in us only. It belongs to all their successors. It may hereafter be a subject of sorrow, or a cause of injury, to millions, that we have consulted our present convenience by casting down such buildings as we choose to dispense with. That sorrow, that loss, we have no right to inflict. Did the cathedral of Avranches[23] belong to the mob who destroyed it, any more than it did to us, who walk in sorrow to and fro over its foundation? Neither does any building whatever belong to those mobs who do violence to it. For a mob it is, and must be always; it matters not whether enraged, or in deliberate folly; whether countless, or sitting in committees; the people who destroy anything causelessly are a mob, and Architecture is always destroyed causelessly. A fair building is necessarily worth the ground it stands upon, and will be so until Central Africa and America shall have become as populous as Middlesex: nor is any cause whatever valid as a ground for its destruction. If ever valid, certainly not now, when the place both of the past and future is too much usurped in our minds by the restless and discontented present. The very quietness of nature is gradually withdrawn from us; thousands who once in their necessarily prolonged travel were subjected to an influence, from the silent sky and slumbering fields, more effectual than known or confessed, now bear with them even there the ceaseless fever of their life; and along the iron veins that traverse the frame of our country, beat and flow the fiery pulses of its exertion, hotter and faster every hour. All vitality is concentrated through those throbbing arteries into the central cities; the country is passed over like a green sea by narrow bridges, and we are thrown back in continually closer crowds upon the city gates. The only influence which can in any wise *there* take the place of that of the woods and fields, is the power of ancient Architecture. Do not part with it for the sake of the formal square, or of the fenced and planted walk, nor of the goodly street nor opened quay. The pride of a city is not in these. Leave them to the crowd; but remember that there will surely be some within the circuit of the disquieted walls who would ask for some other spots than these wherein to walk; for some other forms to meet their sight familiarly: like him who sat so often where the sun struck from the west, to watch the lines of the dome of Florence drawn on the deep sky,[24] or like those, his Hosts, who could bear daily to behold, from their palace chambers, the places where their fathers lay at rest, at the meeting of the dark streets of Verona.

23. The cathedral of Avranches, the finest in Normandy, was destroyed at the time of the first French Revolution.

24. The allusion is to Dante.

THE STONES OF VENICE — VOLUME II

FIRST, OR BYZANTINE PERIOD

CHAPTER IV

St. Mark's

10. AND now I wish that the reader, before I bring him into St. Mark's Place, would imagine himself for a little time in a quiet English cathedral town, and walk with me to the west front of its cathedral. Let us go together up the more retired street, at the end of which we can see the pinnacles of one of the towers, and then through the low grey gateway, with its battlemented top and small latticed window in the centre, into the inner private-looking road or close, where nothing goes in but the carts of the tradesmen who supply the bishop and the chapter, and where there are little shaven grass-plots, fenced in by neat rails, before old-fashioned groups of somewhat diminutive and excessively trim houses, with little oriel and bay windows jutting out here and there, and deep wooden cornices and eaves painted cream colour and white, and small porches to their doors in the shape of cockle-shells, or little, crooked, thick, indescribable wooden gables warped a little on one side; and so forward till we come to larger houses, also old-fashioned, but of red brick, and with garden behind them, and fruit walls, which show here and there, among the nectarines, the vestiges of an old cloister arch or shaft, and looking in front on the cathedral square itself, laid out in rigid divisions of smooth grass and gravel walk, yet not uncheerful, especially on the sunny side, where the canon's children are walking with their nurserymaids. And so, taking care not to tread on the grass, we will go along the straight walk to the west front, and there stand for a time, looking up at its deep-pointed porches and the dark places between their pillars where there were statues once, and where the fragments, here and there, of a stately figure are still left, which has in it the likeness of a king, perhaps indeed a king on earth, perhaps a saintly king long ago in heaven; and so higher and higher up to the great moulder-ing wall of rugged sculpture and confused arcades, shattered, and grey, and grisly with heads of dragons and mock-ing fiends, worn by the rain and swirling winds into yet unseemlier shape, and coloured on their stony scales by the deep russet-orange lichen, melancholy gold; and so, higher still, to the bleak towers, so far above that the eye loses itself among the bosses of their traceries, though they are rude and strong, and only sees like a drift of eddying black points, now clos-ing, now scattering, and now settling sud-denly into invisible places among the bosses and flowers, the crowd of restless birds that fill the whole square with that strange clangour of theirs, so harsh and yet so soothing, like the cries of birds on a solitary coast between the cliffs and sea.

11. Think for a little while of that scene, and the meaning of all its small formalisms, mixed with its serene sublim-ity. Estimate its secluded, continuous, drowsy felicities, and its evidence of the sense and steady performance of such kind of duties as can be regulated by the cathedral clock; and weigh the influence of those dark towers on all who have passed through the lonely square at their feet for centuries, and on all who have seen them rising far away over the wooded plain, or catching on their square masses the last rays of the sunset, when the city at their feet was indicated only by the mist at the bend of the river. And then let us quickly recollect that we are in Venice, and land at the extremity of the Calle Lunga San Moisè, which may be considered as there answering to the se-

cluded street that led us to our English cathedral gateway.

12. We find ourselves in a paved alley, some seven feet wide where it is widest, full of people, and resonant with cries of itinerant salesmen, — a shriek in their beginning, and dying away into a kind of brazen ringing, all the worse for its confinement between the high houses of the passage along which we have to make our way. Overhead an inextricable confusion of rugged shutters, and iron balconies and chimney flues pushed out on brackets to save room, and arched windows with projecting sills of Istrian stone, and gleams of green leaves here and there where a fig tree branch escapes over a lower wall from some inner cortile, leading the eye up to the narrow stream of blue sky high over all. On each side, a row of shops, as densely set as may be, occupying, in fact, intervals between the square stone shafts, about eight feet high, which carry the first floors: intervals of which one is narrow and serves as a door; the other is, in the more respectable shops, wainscotted to the height of the counter and glazed above, but in those of the poorer tradesmen left open to the ground, and the wares laid on benches and tables in the open air, the light in all cases entering at the front only, and fading away in a few feet from the threshold into a gloom which the eye from without cannot penetrate, but which is generally broken by a ray or two from a feeble lamp at the back of the shop, suspended before a print of the Virgin. The less pious shopkeeper sometimes leaves his lamp unlighted, and is contented with a penny print; the more religious one has his print coloured and set in a little shrine with a gilded or figured fringe, with perhaps a faded flower or two on each side, and his lamp burning brilliantly. Here at the fruiterer's, where the dark-green water-melons are heaped upon the counter like cannon balls, the Madonna has a tabernacle of fresh laurel leaves; but the pewterer next door has let his lamp out, and there is nothing to be seen in his shop but the dull gleam of the studded patterns on the copper pans, hanging from his roof in the darkness. Next comes a 'Vendita Frittole e Liquori,' where the Virgin, enthroned in a very humble manner beside a tallow candle on a back shelf, presides over certain ambrosial morsels of a nature too ambiguous to be defined or enumerated. But a few steps farther on, at the regular wine-shop of the calle, where we are offered 'Vino Nostrani a Soldi 28-32,' the Madonna is in great glory, enthroned above ten or a dozen large red casks of three-year-old vintage, and flanked by goodly ranks of bottles of Maraschino, and two crimson lamps; and for the evening, when the gondoliers will come to drink out, under her auspices, the money they have gained during the day, she will have a whole chandelier.

13. A yard or two farther, we pass the hostelry of the Black Eagle, and glancing as we pass through the square door of marble, deeply moulded, in the outer wall, we see the shadows of its pergola of vines resting on an ancient well, with a pointed shield carved on its side; and so presently emerge on the bridge and Campo San Moisè, whence to the entrance into St. Mark's Place, called the Bocca di Piazza (mouth of the square), the Venetian character is nearly destroyed, first by the frightful façade of San Moisè, which we will pause at another time to examine, and then by the modernizing of the shops as they near the piazza, and the mingling with the lower Venetion populace of lounging groups of English and Austrians. We will push fast through them into the shadow of the pillars at the end of the 'Bocca di Piazza,' and then we forget them all; for between those pillars there opens a great light, and, in the midst of it, as we advance slowly, the vast tower of St. Mark seems to lift itself visibly forth from the level field of chequered stones; and, on each side, the countless arches prolong themselves into ranged symmetry,

as if the rugged and irregular houses that pressed together above us in the dark alley had been struck back into sudden obedience and lovely order, and all their rude casements and broken walls had been transformed into arches charged with goodly sculpture, and fluted shafts of delicate stone.

14. And well may they fall back, for beyond those troops of ordered arches there rises a vision out of the earth, and all the great square seems to have opened from it in a kind of awe, that we may see it far away; — a multitude of pillars and white domes, clustered into a long low pyramid of coloured light; a treasure-heap, it seems, partly of gold, and partly of opal and mother-of-pearl, hollowed beneath into five great vaulted porches, ceiled with fair mosaic, and beset with sculpture of alabaster, clear as amber and delicate as ivory, — sculpture fantastic and involved, of palm leaves and lilies, and grapes and pomegranates, and birds clinging and fluttering among the branches, all twined together into an endless network of buds and plumes; and in the midst of it, the solemn forms of angels, sceptred, and robed to the feet, and leaning to each other across the gates, their figures indistinct among the gleaming of the golden ground through the leaves beside them, interrupted and dim, like the morning light as it faded back among the branches of Eden, when first its gates were angel-guarded long ago. And round the walls of the porches there are set pillars of variegated stones, jasper and porphyry, and deep-green serpentine spotted with flakes of snow, and marbles, that half refuse and half yield to the sunshine, Cleopatra-like, 'their bluest veins to kiss'[1] — the shadow, as it steals back from them, revealing line after line of azure undulation, as a receding tide leaves the waved sand; their capitals rich with interwoven tracery, rooted knots of herbage, and drifting leaves of acanthus and vine, and mystical signs, all beginning and ending in the Cross; and above them, in the broad archivolts, a continuous chain of language and of life — angels, and the signs of heaven, and the labours of men, each in its appointed season upon the earth; and above these, another range of glittering pinnacles, mixed with white arches edged with scarlet flowers, — a confusion of delight, amidst which the breasts of the Greek horses are seen blazing in their breadth of golden strength, and the St. Mark's lion, lifted on a blue field covered with stars, until at last, as if in ecstasy, the crests of the arches break into a marble foam, and toss themselves far into the blue sky in flashes and wreaths of sculptured spray, as if the breakers on the Lido shore had been frost-bound before they fell, and the sea-nymphs had inlaid them with coral and amethyst.

Between that grim cathedral of England and this, what an interval! There is a type of it in the very birds that haunt them; for, instead of the restless crowd, hoarse-voiced and sable-winged, drifting on the bleak upper air, the St. Mark's porches are full of doves, that nestle among the marble foliage, and mingle the soft iridescence of their living plumes, changing at every motion, with the tints, hardly less lovely, that have stood unchanged for seven hundred years. . . .

SECOND, OR GOTHIC, PERIOD

Chapter VI

The Nature of Gothic

1. If the reader will look back to the division of our subject which was made in the first chapter of the first volume, he will find that we are now about to enter upon the examination of that school of Venetian architecture which forms an intermediate step between the Byzantine and Gothic forms; but which I find may be conveniently considered in its connection with the latter style. In order that we

1. *Antony and Cleopatra*, II,v,29.

may discern the tendency of each step of this change, it will be wise in the outset to endeavour to form some general idea of its final result. We know already what the Byzantine architecture is from which the transition was made, but we ought to know something of the Gothic architecture into which it led. I shall endeavour therefore to give the reader in this chapter an idea, at once broad and definite, of the true nature of *Gothic* architecture, properly so called; not of that of Venice only, but of universal Gothic: for it will be one of the most interesting parts of our subsequent inquiry, to find out how far Venetian architecture reached the universal or perfect type of Gothic, and how far it either fell short of it, or assumed foreign and independent forms.

2. The principal difficulty in doing this arises from the fact that every building of the Gothic period differs in some important respect from every other; and many include features which, if they occurred in other buildings, would not be considered Gothic at all; so that all we have to reason upon is merely, if I may be allowed so to express it, a greater or less degree of *Gothicness* in each building we examine. And it is this Gothicness, — the character which, according as it is found more or less in a building, makes it more or less Gothic, — of which I want to define the nature; and I feel the same kind of difficulty in doing so which would be encountered by any one who undertook to explain, for instance, the nature of Redness, without any actually red thing to point to, but only orange and purple things. Suppose he had only a piece of heather and a dead oak-leaf to do it with. He might say, the colour which is mixed with the yellow in this oak-leaf, and with the blue in this heather, would be red, if you had it separate; but it would be difficult, nevertheless, to make the abstraction perfectly intelligible: and it is so in a far greater degree to make the abstraction of the Gothic character intelligible, because that character itself is made up of many mingled ideas, and can consist only in their union. That is to say, pointed arches do not constitute Gothic, nor vaulted roofs, nor flying buttresses, nor grotesque sculptures; but all or some of these things, and many other things with them, when they come together so as to have life.

3. Observe also, that, in the definition proposed, I shall only endeavour to analyse the idea which I suppose already to exist in the reader's mind. We all have some notion, most of us a very determined one, of the meaning of the term Gothic; but I know that many persons have this idea in their minds without being able to define it: that is to say, understanding generally that Westminster Abbey is Gothic, and St. Paul's is not, that Strasburg Cathedral is Gothic, and St. Peter's is not, they have, nevertheless, no clear notion of what it is that they recognise in the one or miss in the other, such as would enable them to say how far the work at Westminster or Strasburg is good and pure of its kind; still less to say of any nondescript building, like St. James's Palace or Windsor Castle, how much right Gothic element there is in it, and how much wanting. And I believe this inquiry to be a pleasant and profitable one; and that there will be found something more than usually interesting in tracing out this grey, shadowy, many-pinnacled image of the Gothic spirit within us; and discerning what fellowship there is between it and our Northern hearts. And if, at any point of the inquiry, I should interfere with any of the reader's previously formed conceptions, and use the term Gothic in any sense which he would not willingly attach to it, I do not ask him to accept, but only to examine and understand, my interpretation, as necessary to the intelligibility of what follows in the rest of the work.

4. We have, then, the Gothic character submitted to our analysis, just as the rough mineral is submitted to that of the chem-

ist, entangled with many other foreign substances, itself perhaps in no place pure, or ever to be obtained or seen in purity for more than an instant; but nevertheless a thing of definite and separate nature, however inextricable or confused in appearance. Now observe: the chemist defines his mineral by two separate kinds of character; one external, its crystalline form, hardness, lustre, &c.; the other internal, the proportions and nature of its constituent atoms. Exactly in the same manner, we shall find that Gothic architecture has external forms, and internal elements. Its elements are certain mental tendencies of the builders, legibly expressed in it; as fancifulness, love of variety, love of richness, and such others. Its external forms are pointed arches, vaulted roofs, &c. And unless both the elements and the forms are there, we have no right to call the style Gothic. It is not enough that it has the Form, if it have not also the power and life. It is not enough that it has the Power, if it have not the form. We must therefore inquire into each of these characters successively; and determine first, what is the Mental Expression, and secondly, what the Material Form, of Gothic architecture, properly so called.

1st. Mental Power or Expression. What characters, we have to discover, did the Gothic builders love, or instinctively express in their work, as distinguished from all other builders?

5. Let us go back for a moment to our chemistry, and note that, in defining a mineral by its constituent parts, it is not one nor another of them, that can make up the mineral, but the union of all: for instance, it is neither in charcoal, nor in oxygen, nor in lime, that there is the making of chalk, but in the combination of all three in certain measures; they are all found in very different things from chalk, and there is nothing like chalk either in charcoal or in oxygen, but they are nevertheless necessary to its existence.

So in the various mental characters which make up the soul of Gothic. It is not one nor another that produces it; but their union in certain measures. Each one of them is found in many other architectures besides Gothic; but Gothic cannot exist where they are not found, or, at least, where their place is not in some way supplied. Only there is this great difference between the composition of the mineral, and of the architectural style, that if we withdraw one of its elements from the stone, its form is utterly changed, and its existence as such and such a mineral is destroyed; but if we withdraw one of its mental elements from the Gothic style, it is only a little less Gothic than it was before, and the union of two or three of its elements is enough already to bestow a certain Gothicness of character, which gains in intensity as we add the others, and loses as we again withdraw them.

6. I believe, then, that the characteristic or moral elements of Gothic are the following, placed in the order of their importance:

1. Savageness.
2. Changefulness
3. Naturalism.
4. Grotesqueness.
5. Rigidity.
6. Redundance.

These characters are here expressed as belonging to the building; as belonging to the builder, they would be expressed thus: — 1. Savageness, or Rudeness. 2. Love of Change. 3. Love of Nature. 4. Disturbed Imagination. 5. Obstinacy. 6. Generosity. And I repeat, that the withdrawal of any one, or any two, will not at once destroy the Gothic character of a building, but the removal of a majority of them will. I shall proceed to examine them in their order.

7. 1. Savageness. I am not sure when the word 'Gothic' was first generically applied to the architecture of the North: but I presume that, whatever the date of its original usage, it was intended to imply reproach, and express the barbaric character of the nations among whom that architecture arose. It never implied that

they were literally of Gothic lineage, far less that their architecture had been originally invented by the Goths themselves; but it did imply that they and their buildings together exhibited a degree of sternness and rudeness, which, in contradistinction to the character of Southern and Eastern nations, appeared like a perpetual reflection of the contrast between the Goth and the Roman in their first encounter. And when that fallen Roman, in the utmost impotence of his luxury, and insolence of his guilt, became the model for the imitation of civilised Europe, at the close of the so-called Dark ages,[1] the word Gothic became a term of unmitigated contempt, not unmixed with aversion. From that contempt, by the exertion of the antiquaries and architects of this century, Gothic architecture has been sufficiently vindicated; and perhaps some among us, in our admiration of the magnificent science of its structure, and sacredness of its expression, might desire that the term of ancient reproach should be withdrawn, and some other, of more apparent honourableness, adopted in its place. There is no chance, as there is no need, of such a substitution. As far as the epithet was used scornfully, it was used falsely; but there is no reproach in the word, rightly understood; on the contrary, there is a profound truth, which the instinct of mankind almost unconsciously recognises. It is true, greatly and deeply true, that the architecture of the North is rude and wild; but it is not true, that, for this reason, we are to condemn it, or despise. Far otherwise: I believe it is in this very character that it deserves our profoundest reverence.

8. The charts of the world which have been drawn up by modern science have thrown into a narrow space the expression of a vast amount of knowledge, but I have never yet seen any one pictorial enough to enable the spectator to imagine the kind of contrast in physical character which exists between Northern and Southern countries. We know the differences in detail, but we have not that broad glance and grasp which would enable us to feel them in their fulness. We know that gentians grow on the Alps, and olives on the Apennines; but we do not enough conceive for ourselves that variegated mosaic of the world's surface which a bird sees in its migration, that difference between the district of the gentian and of the olive which the stork and the swallow see far off, as they lean upon the sirocco wind. Let us, for a moment, try to raise ourselves even above the level of their flight, and imagine the Mediterranean lying beneath us like an irregular lake, and all its ancient promontories sleeping in the sun: here and there an angry spot of thunder, a grey stain of storm, moving upon the burning field; and here and there a fixed wreath of white volcano smoke, surrounded by its circle of ashes; but for the most part a great peacefulness of light, Syria and Greece, Italy and Spain, laid like pieces of a golden pavement into the sea-blue, chased, as we stoop nearer to them, with bossy beaten work of mountain chains, and glowing softly with terraced gardens, and flowers heavy with frankincense, mixed among masses of laurel, and orange, and plumy palm, that abate with their grey-green shadows the burning of the marble rocks, and of the ledges of porphyry sloping under lucent sand. Then let us pass farther towards the north, until we see the orient colours change gradually into a vast belt of rainy green, where the pastures of Switzerland, and poplar valleys of France, and dark forests of the Danube and Carpathians stretch from the mouths of the Loire to those of the Volga, seen through clefts in grey swirls of raincloud and flaky veils of the mist of the brooks, spreading low along the pasture lands: and then, farther north still, to see

1. The expression 'Dark Ages,' as loosely used to refer to the medieval period in European history, is no longer in good repute. It may, however, be used to refer to the earlier part of the Middle Ages, *i.e.* the 5th to the 11th centuries.

the earth heave into mighty masses of leaden rock and heathy moor, bordering with a broad waste of gloomy purple that belt of field and wood, and splintering into irregular and grisly islands amidst the northern seas, beaten by storm, and chilled by ice-drift, and tormented by furious pulses of contending tide, until the roots of the last forests fail from among the hill ravines, and the hunger of the north wind bites their peaks into barrenness; and, at last, the wall of ice, durable like iron, sets, deathlike, its white teeth against us out of the polar twilight. And, having once traversed in thought this gradation of the zoned iris of the earth in all its material vastness, let us go down nearer to it, and watch the parallel change in the belt of animal life: the multitudes of swift and brilliant creatures that glance in the air and sea, or tread the sands of the southern zone; striped zebras and spotted leopards, glistening serpents, and birds arrayed in purple and scarlet. Let us contrast their delicacy and brilliancy of colour, and swiftness of motion, with the frost-cramped strength, and shaggy covering, and dusky plumage of the northern tribes; contrast the Arabian horse with the Shetland, the tiger and leopard with the wolf and bear, the antelope with the elk, the bird of paradise with the osprey: and then, submissively acknowledging the great laws by which the earth and all that it bears are ruled throughout their being, let us not condemn, but rejoice in the expression by man of his own rest in the statutes of the lands that gave him birth. Let us watch him with reverence as he sets side by side the burning gems, and smooths with soft sculpture the jasper pillars, that are to reflect a ceaseless sunshine, and rise into a cloudless sky: but not with less reverence let us stand by him, when, with rough strength and hurried stroke, he smites an uncouth animation out of the rocks which he has torn from among the moss of the moorland, and heaves into the darkened air the pile of iron buttress and rugged wall, instinct with work of an imagination as wild and wayward as the northern sea; creations of ungainly shape and rigid limb, but full of wolfish life; fierce as the winds that beat, and changeful as the clouds that shade them.

There is, I repeat, no degradation, no reproach in this, but all dignity and honourableness: and we should err grievously in refusing either to recognise as an essential character of the existing architecture of the North, or to admit as a desirable character in that which it yet may be, this wildness of thought, and roughness of work; this look of mountain brotherhood between the cathedral and the Alp; this magnificence of sturdy power, put forth only the more energetically because the fine finger-touch was chilled away by the frosty wind, and the eye dimmed by the moor-mist, or blinded by the hail; this outspeaking of the strong spirit of men who may not gather redundant fruitage from the earth, nor bask in dreamy benignity of sunshine, but must break the rock for bread, and cleave the forest for fire, and show, even in what they did for their delight, some of the hard habits of the arm and heart that grew on them as they swung the axe or pressed the plough.

9. If, however, the savageness of Gothic architecture, merely as an expression of its origin among Northern nations, may be considered, in some sort, a noble character, it possesses a higher nobility still, when considered as an index, not of climate, but of religious principle.

In the 13th and 14th paragraphs of Chapter XXI. of the first volume of this work, it was noticed that the systems of architectural ornament, properly so called, might be divided into three: — 1. Servile ornament, in which the execution or power of the inferior workman is entirely subjected to the intellect of the higher; — 2. Constitutional ornament, in which the executive inferior power is, to a certain point, emancipated and independent, having a will of its own, yet confessing its inferi-

ority and rendering obedience to higher powers; — and 3. Revolutionary ornament, in which no executive inferiority is admitted at all. I must here explain the nature of these divisions at somewhat greater length.

Of Servile ornament, the principal schools are the Greek, Ninevite, and Egyptian; but their servility is of different kinds. The Greek master-workman was far advanced in knowledge and power above the Assyrian or Egyptian. Neither he nor those for whom he worked could endure the appearance of imperfection in anything; and, therefore, what ornament he appointed to be done by those beneath him was composed of mere geometrical forms, — balls, ridges, and perfectly symmetrical foliage, — which could be executed with absolute precision by line and rule, and were as perfect in their way, when completed, as his own figure sculpture. The Assyrian and Egyptian, on the contrary, less cognisant of accurate form in anything, were content to allow their figure sculpture to be executed by inferior workmen, but lowered the method of its treatment to a standard which every workman could reach, and then trained him by discipline so rigid, that there was no chance of his falling beneath the standard appointed. The Greek gave to the lower workman no subject which he could not perfectly execute. The Assyrian gave him subjects which he could only execute imperfectly, but fixed a legal standard for his imperfection. The workman was, in both systems, a slave.[2]

10. But in the mediæval, or especially Christian, system of ornament, this slavery is done away with altogether; Christianity having recognised, in small things as well as great, the individual value of every soul. But it not only recognises its value; it confesses its imperfection, in only bestowing dignity upon the acknowledgment of unworthiness. That admission of lost power and fallen nature, which the Greek or Ninevite felt to be intensely painful, and, as far as might be, altogether refused, the Christian makes daily and hourly, contemplating the fact of it without fear, as tending, in the end, to God's greater glory. Therefore, to every spirit which Christianity summons to her service, her exhortation is: Do what you can, and confess frankly what you are unable to do; neither let your effort be shortened for fear of failure, nor your confession silenced for fear of shame. And it is, perhaps, the principal admirableness of the Gothic schools of architecture, that they thus receive the results of the labour of inferior minds; and out of fragments full of imperfection, and betraying that imperfection in every touch, indulgently raise up a stately and unaccusable whole.

11. But the modern English mind has this much in common with that of the Greek, that it intensely desires, in all things, the utmost completion or perfection compatible with their nature. This is a noble character in the abstract, but becomes ignoble when it causes us to forget the relative dignities of that nature itself, and to prefer the perfectness of the lower nature to the imperfection of the higher; not considering that as, judged by such a rule, all the brute animals would be preferable to man, because more perfect in their functions and kind, and yet are always held inferior to him, so also in the works of man, those which are more perfect in their kind are always inferior to those which are, in their nature, liable to

2. The third kind of ornament, the Renaissance, is that in which the inferior detail becomes principal, the executor of every minor portion being required to exhibit skill and possess knowledge as great as that which is possessed by the master of the design; and in the endeavour to endow him with this skill and knowledge, his own original power is overwhelmed, and the whole building becomes a wearisome exhibition of well-educated imbecility. We must fully inquire into the nature of this form of error, when we arrive at the examination of the Renaissance schools. [Ruskin's note.]

more faults and shortcomings. For the finer the nature, the more flaws it will show through the clearness of it; and it is a law of this universe, that the best things shall be seldomest seen in their best form. The wild grass grows well and strongly, one year with another; but the wheat is, according to the greater nobleness of its nature, liable to the bitterer blight. And therefore, while in all things that we see, or do, we are to desire perfection, and strive for it, we are nevertheless not to set the meaner thing, in its narrow accomplishment, above the nobler thing, in its mighty progress; not to esteem smooth minuteness above shattered majesty; not to prefer mean victory to honourable defeat; not to lower the level of our aim, that we may the more surely enjoy the complacency of success. But, above all, in our dealings with the souls of other men, we are to take care how we check, by severe requirement or narrow caution, efforts which might otherwise lead to a noble issue; and, still more, how we withhold our admiration from great excellencies, because they are mingled with rough faults. Now, in the make and nature of every man, however rude or simple, whom we employ in manual labour, there are some powers for better things: some tardy imagination, torpid capacity of emotion, tottering steps of thought, there are, even at the worst; and in most cases it is all our own fault that they *are* tardy or torpid. But they cannot be strengthened, unless we are content to take them in their feebleness, and unless we prize and honour them in their imperfection above the best and most perfect manual skill. And this is what we have to do with all our labourers; to look for the *thoughtful* part of them, and get that out of them, whatever we lose for it, whatever faults and errors we are obliged to take with it. For the best that is in them cannot manifest itself, but in company with much error. Understand this clearly: You can teach a man to draw a straight line, and to cut one; to strike a curved line, and to carve it; and to copy and carve any number of given lines or forms, with admirable speed and perfect precision; and you find his work perfect of its kind: but if you ask him to think about any of those forms, to consider if he cannot find any better in his own head, he stops; his execution becomes hesitating; he thinks, and ten to one he thinks wrong; ten to one he makes a mistake in the first touch he gives to his work as a thinking being. But you have made a man of him for all that. He was only a machine before, an animated tool.

12. And observe, you are put to stern choice in this matter. You must either make a tool of the creature, or a man of him. You cannot make both. Men were not intended to work with the accuracy of tools, to be precise and perfect in all their actions. If you will have that precision out of them, and make their fingers measure degrees like cog-wheels, and their arms strike curves like compasses, you must unhumanise them. All the energy of their spirits must be given to make cogs and compasses of themselves. All their attention and strength must go to the accomplishment of the mean act. The eye of the soul must be bent upon the finger-point, and the soul's force must fill all the invisible nerves that guide it, ten hours a day, that it may not err from its steely precision, and so soul and sight be worn away, and the whole human being be lost at last — a heap of sawdust, so far as its intellectual work in this world is concerned: saved only by its Heart, which cannot go into the form of cogs and compasses, but expands, after the ten hours are over, into fireside humanity. On the other hand, if you will make a man of the working creature, you cannot make a tool. Let him but begin to imagine, to think, to try to do anything worth doing; and the engine turned precision is lost at once. Out come all his roughness, all his dulness, all his incapability; shame upon shame, failure upon failure, pause after pause: but out

comes the whole majesty of him also; and we know the height of it only, when we see the clouds settling upon him. And, whether the clouds be bright or dark, there will be transfiguration behind and within them.

13. And now, reader, look round this English room of yours, about which you have been proud so often, because the work of it was so good and strong, and the ornaments of it so finished. Examine again all those accurate mouldings, and perfect polishings, and unerring adjustments of the seasoned wood and tempered steel. Many a time you have exulted over them, and thought how great England was, because her slightest work was done so thoroughly. Alas! if read rightly, these perfectnesses are signs of a slavery in our England a thousand times more bitter and more degrading than that of the scourged African, or helot[3] Greek. Men may be beaten, chained, tormented, yoked like cattle, slaughtered like summer flies, and yet remain in one sense, and the best sense, free. But to smother their souls within them, to blight and hew into rotting pollards the suckling branches of their human intelligence, to make the flesh and skin which, after the worm's work on it, is to see God, into leathern thongs to yoke machinery with, — this it is to be slave-masters indeed: and there might be more freedom in England, though her feudal lords' lightest words were worth men's lives, and though the blood of the vexed husbandman dropped in the furrows of her fields, than there is while the animation of her multitudes is sent like fuel to feed the factory smoke, and the strength of them is given daily to be wasted into the fineness of a web, or racked into the exactness of a line.

14. And, on the other hand, go forth again to gaze upon the old cathedral front, where you have smiled so often at the fantastic ignorance of the old sculptors: examine once more those ugly goblins, and formless monsters, and stern statues, anatomiless and rigid; but do not mock at them, for they are signs of the life and liberty of every workman who struck the stone; a freedom of thought, and rank in scale of being, such as no laws, no charters, no charities can secure; but which it must be the first aim of all Europe at this day to regain for her children.

15. Let me not be thought to speak wildly or extravagantly. It is verily this degradation of the operative into a machine, which, more than any other evil of the times, is leading the mass of the nations everywhere into vain, incoherent, destructive struggling for a freedom of which they cannot explain the nature to themselves. Their universal outcry against wealth, and against nobility, is not forced from them either by the pressure of famine, or the sting of mortified pride. These do much, and have done much in all ages; but the foundations of society were never yet shaken as they are at this day. It is not that men are ill fed, but that they have no pleasure in the work by which they make their bread, and therefore look to wealth as the only means of pleasure. It is not that men are pained by the scorn of the upper classes, but they cannot endure their own; for they feel that the kind of labour to which they are condemned is verily a degrading one, and makes them less than men. Never had the upper classes so much sympathy with the lower, or charity for them, as they have at this day, and yet never were they so much hated by them: for, of old, the separation between the noble and the poor was merely a wall built by law; now it is a veritable difference in level of standing, a precipice between upper and lower grounds in the field of humanity, and there is pestilential air at the bottom of it. I know not if a day is ever to come when the nature of right freedom will be understood, and when men will see that to obey another man, to labour for him, yield reverence to him or to his

3. *helot*: one of the lowest class (or slaves) in ancient Sparta.

place, is not slavery. It is often the best kind of liberty, — liberty from care. The man who says to one, Go, and he goeth, and to another, Come, and he cometh,[4] has, in most cases, more sense of restraint and difficulty than the man who obeys him. The movements of the one are hindered by the burden on his shoulder; of the other, by the bridle on his lips: there is no way by which the burden may be lightened; but we need not suffer from the bridle if we do not champ at it. To yield reverence to another, to hold ourselves and our lives at his disposal, is not slavery; often, it is the noblest state in which a man can live in this world. There is, indeed, a reverence which is servile, that is to say irrational or selfish: but there is also noble reverence, that is to say, reasonable and loving; and a man is never so noble as when he is reverent in this kind; nay, even if the feeling pass the bounds of mere reason, so that it be loving, a man is raised by it. Which had, in reality, most of the serf nature in him, — the Irish peasant who was lying in wait yesterday for his landlord, with his musket muzzle thrust through the ragged hedge; or that old mountain servant, who, 200 years ago, at Inverkeithing, gave up his own life and the lives of his seven sons for his chief? [5] — as each fell, calling forth his brother to the death, 'Another for Hector!' And therefore, in all ages and all countries, reverence has been paid and sacrifice made by men to each other, not only without complaint, but rejoicingly; and famine, and peril, and sword, and all evil, and all shame, have been borne willingly in the causes of masters and kings; for all these gifts of the heart ennobled the men who gave, not less than the men who received them, and nature prompted, and God rewarded the sacrifice. But to feel their souls withering within them, unthanked, to find their whole being sunk into an unrecognised abyss, to be counted off into a heap of mechanism, numbered with its wheels, and weighed with its hammer strokes; — this nature bade not, — this God blesses not, — this humanity for no long time is able to endure.

16. We have much studied and much perfected, of late, the great civilised invention of the division of labour; only we give it a false name. It is not, truly speaking, the labour that is divided; but the men: — Divided into mere segments of men — broken into small fragments and crumbs of life; so that all the little piece of intelligence that is left in a man is not enough to make a pin, or a nail, but exhausts itself in making the point of a pin, or the head of a nail.[6] Now it is a good and desirable thing, truly, to make many pins in a day; but if we could only see with what crystal sand their points were polished, — sand of human soul, much to be magnified before it can be discerned for what it is, — we should think there might be some loss in it also. And the great cry that rises from all our manufacturing cities, louder than their furnace blast, is all in very deed for this, — that we manufacture everything there except men; we blanch cotton, and strengthen steel, and refine sugar, and shape pottery; but to brighten, to strengthen, to refine, or to form a single living spirit, never enters into our estimate of advantages. And all the evil to which that cry is urging our

4. *Cf. Matthew*, viii,9.

5. Vide Preface to 'Fair Maid of Perth.' [Ruskin's note.]

6. Compare this statement with a well known passage in *Lectures on Art*, Lect.iii, 'The Relation of Art to Morals': 'Finally, you must remember that great obscurity has been brought upon the truth in this matter [of mastery over self and materials] by the want of integrity and simplicity in our modern life I mean integrity in the Latin sense, wholeness Everything is broken up, and mingled in confusion, both in our habits and thoughts; besides being in great part imitative: so that you not only cannot tell what a man is, but sometimes you cannot tell whether he *is*, at all! — whether you have indeed to do with a spirit or only with an echo.'

myriads can be met only in one way: not by teaching nor preaching, for to teach them is but to show them their misery, and to preach to them, if we do nothing more than preach, is to mock at it. It can be met only by a right understanding, on the part of all classes, of what kinds of labour are good for men, raising them, and making them happy; by a determined sacrifice of such convenience, or beauty, or cheapness as is to be got only by the degradation of the workman; and by equally determined demand for the products and results of healthy and ennobling labour.

17. And how, it will be asked, are these products to be recognised, and this demand to be regulated? Easily: by the observance of three broad and simple rules:

1. Never encourage the manufacture of any article not absolutely necessary, in the production of which *Invention* has no share.

2. Never demand an exact finish for its own sake, but only for some practical or noble end.

3. Never encourage imitation or copying of any kind, except for the sake of preserving record of great works.

The second of these principles is the only one which directly rises out of the consideration of our immediate subject; but I shall briefly explain the meaning and extent of the first also, reserving the enforcement of the third for another place.

1. Never encourage the manufacture of anything not necessary, in the production of which invention has no share.

For instance. Glass beads are utterly unnecessary, and there is no design or thought employed in their manufacture. They are formed by first drawing out the glass into rods; these rods are chopped up into fragments of the size of beads by the human hand, and the fragments are then rounded in the furnace. The men who chop up the rods sit at their work all day, their hands vibrating with a perpetual and exquisitely timed palsy, and the beads dropping beneath their vibration like hail. Neither they, nor the men who draw out the rods or fuse the fragments, have the smallest occasion for the use of any single human faculty; and every young lady, therefore, who buys glass beads is engaged in the slave-trade, and in a much more cruel one than that which we have so long been endeavouring to put down.

But glass cups and vessels may become the subjects of exquisite invention; and if in buying these we pay for the invention, that is to say for the beautiful form, or colour, or engraving, and not for mere finish of execution, we are doing good to humanity.

18. So, again, the cutting of precious stones, in all ordinary cases, requires little exertion of any mental faculty; some tact and judgment in avoiding flaws, and so on, but nothing to bring out the whole mind. Every person who wears cut jewels merely for the sake of their value is, therefore, a slave-driver.

But the working of the goldsmith, and the various designing of grouped jewellery and enamel-work, may become the subject of the most noble human intelligence. Therefore, money spent in the purchase of well-designed plate, of precious engraved vases, cameos, or enamels, does good to humanity; and, in work of this kind, jewels may be employed to heighten its splendour; and their cutting is then a price paid for the attainment of a noble end, and thus perfectly allowable.

19. I shall perhaps press this law farther elsewhere, but our immediate concern is chiefly with the second, namely, never to demand an exact finish, when it does not lead to a noble end. For observe, I have only dwelt upon the rudeness of Gothic, or any other kind of imperfectness, as admirable, where it was impossible to get design or thought without it. If you are to have the thought of a rough and untaught man, you must have it in a rough and untaught way; but from an educated man, who can without effort express his thoughts in an educated way, take the

graceful expression, and be thankful. Only *get* the thought, and do not silence the peasant because he cannot speak good grammar, or until you have taught him his grammar. Grammar and refinement are good things, both, only be sure of the better thing first. And thus in art, delicate finish is desirable from the greatest masters, and is always given by them. In some places Michael Angelo, Leonardo, Phidias, Perugino, Turner, all finished with the most exquisite care; and the finish they give always leads to the fuller accomplishment of their noble purposes. But lower men than these cannot finish, for it requires consummate knowledge to finish consummately, and then we must take their thoughts as they are able to give them. So the rule is simple: Always look for invention first, and after that, for such execution as will help the invention, and as the inventor is capable of without painful effort, and *no more*. Above all, demand no refinement of execution where there is no thought, for that is slaves' work, unredeemed. Rather choose rough work than smooth work, so only that the practical purpose be answered, and never imagine there is reason to be proud of anything that may be accomplished by patience and sand-paper.

20. I shall only give one example, which however will show the reader what I mean, from the manufacture already alluded to, that of glass. Our modern glass is exquisitely clear in its substance, true in its form, accurate in its cutting. We are proud of this. We ought to be ashamed of it. The old Venice glass was muddy, inaccurate in all its forms, and clumsily cut, if at all. And the old Venetian was justly proud of it. For there is this difference between the English and Venetian workman, that the former thinks only of accurately matching his patterns, and getting his curves perfectly true and his edges perfectly sharp, and becomes a mere machine for rounding curves and sharpening edges, while the old Venetian cared not a whit whether his edges were sharp or not, but he invented a new design for every glass that he made, and never moulded a handle or a lip without a new fancy in it. And therefore, though some Venetian glass is ugly and clumsy enough, when made by clumsy and uninventive workmen, other Venetian glass is so lovely in its forms that no price is too great for it; and we never see the same form in it twice. Now you cannot have the finish and the varied form too. If the workman is thinking about his edges, he cannot be thinking of his design; if of his design, he cannot think of his edges. Choose whether you will pay for the lovely form or the perfect finish, and choose at the same moment whether you will make the worker a man or a grindstone.

21. Nay, but the reader interrupts me, —'If the workman can design beautifully, I would not have him kept at the furnace. Let him be taken away and made a gentleman, and have a studio, and design his glass there, and I will have it blown and cut for him by common workmen, and so I will have my design and my finish too.'

All ideas of this kind are founded upon two mistaken suppositions: the first, that one man's thoughts can be, or ought to be, executed by another man's hands; the second, that manual labour is a degradation, when it is governed by intellect.

On a large scale, and in work determinable by line and rule, it is indeed both possible and necessary that the thoughts of one man should be carried out by the labour of others; in this sense I have already defined the best architecture to be the expression of the mind of manhood by the hands of childhood. But on a smaller scale, and in a design which cannot be mathematically defined, one man's thoughts can never be expressed by another: and the difference between the spirit of touch of the man who is inventing, and of the man who is obeying directions, is often all the difference between

a great and a common work of art. How wide the separation is between original and second-hand execution, I shall endeavour to show elsewhere; it is not so much to our purpose here as to mark the other and more fatal error of despising manual labour when governed by intellect; for it is no less fatal an error to despise it when thus regulated by intellect, than to value it for its own sake. We are always in these days endeavouring to separate the two; we want one man to be always thinking, and another to be always working, and we call one a gentleman, and the other an operative; whereas the workman ought often to be thinking, and the thinker often to be working, and both should be gentlemen, in the best sense. As it is, we make both ungentle, the one envying, the other despising, his brother; and the mass of society is made up of morbid thinkers, and miserable workers. Now it is only by labour that thought can be made healthy, and only by thought that labour can be made happy, and the two cannot be separated with impunity. It would be well if all of us were good handicraftsmen in some kind, and the dishonour of manual labour done away with altogether; so that though there should still be a trenchant distinction of race between nobles and commoners, there should not, among the latter, be a trenchant distinction of employment, as between idle and working men, or between men of liberal and illiberal professions. All professions should be liberal, and there should be less pride felt in peculiarity of employment, and more in excellence of achievement. And yet more, in each several profession, no master should be too proud to do its hardest work. The painter should grind his own colours; the architect work in the mason's yard with his men; the master-manufacturer be himself a more skilful operative than any man in his mills; and the distinction between one man and another be only in experience and skill, and the authority and wealth which these must naturally and justly obtain.

22. I should be led far from the matter in hand, if I were to pursue this interesting subject. Enough, I trust, has been said to show the reader that the rudeness or imperfection which at first rendered the term 'Gothic' one of reproach is indeed, when rightly understood, one of the most noble characters of Christian architecture, and not only a noble but an *essential* one. It seems a fantastic paradox, but it is nevertheless a most important truth, that no architecture can be truly noble which is *not* imperfect. And this is easily demonstrable. For since the architect, whom we will suppose capable of doing all in perfection, cannot execute the whole with his own hands, he must either make slaves of his workmen in the old Greek, and present English fashion, and level his work to a slave's capacities, which is to degrade it; or else he must take his workmen as he finds them, and let them show their weaknesses together with their strength, which will involve the Gothic imperfection, but render the whole work as noble as the intellect of the age can make it.

23. But the principle may be stated more broadly still. I have confined the illustration of it to architecture, but I must not leave it as if true of architecture only. Hitherto I have used the words imperfect and perfect merely to distinguish between work grossly unskilful, and work executed with average precision and science; and I have been pleading that any degree of unskilfulness should be admitted, so only that the labourer's mind had room for expression. But, accurately speaking, no good work whatever can be perfect, and *the demand for perfection is always a sign of a misunderstanding of the ends of art.*

24. This for two reasons, both based on everlasting laws. The first, that no great man ever stops working till he has reached his point of failure; that is to say, his mind

is always far in advance of his powers of execution, and the latter will now and then give way in trying to follow it; besides that he will always give to the inferior portions of his work only such inferior attention as they require; and according to his greatness he becomes so accustomed to the feeling of dissatisfaction with the best he can do, that in moments of lassitude or anger with himself he will not care though the beholder be dissatisfied also. I believe there has only been one man who would not acknowledge this necessity, and strove always to reach perfection, Leonardo; the end of his vain effort being merely that he would take ten years to a picture, and leave it unfinished. And therefore, if we are to have great men working at all, or less men doing their best, the work will be imperfect, however beautiful. Of human work none but what is bad can be perfect, in its own bad way.[7]

25. The second reason is, that imperfection is in some sort essential to all that we know of life. It is the sign of life in a mortal body, that is to say, of a state of progress and change. Nothing that lives is, or can be, rigidly perfect; part of it is decaying, part nascent. The foxglove blossom, — a third part bud, a third part past, a third part in full bloom, — is a type of the life of this world. And in all things that live there are certain irregularities and deficiencies which are not only signs of life, but sources of beauty. No human face is exactly the same in its lines on each side, no leaf perfect in its lobes, no branch in its symmetry. All admit irregularity as they imply change; and to banish imperfection is to destroy expression, to check exertion, to paralyse vitality. All things are literally better, lovelier, and more beloved for the imperfections which have been divinely appointed, that the law of human life may be Effort, and the law of human judgment, Mercy.

Accept this then for a universal law, that neither architecture nor any other noble work of man can be good unless it be imperfect; and let us be prepared for the otherwise strange fact, which we shall discern clearly as we approach the period of the Renaissance, that the first cause of the fall of the arts of Europe was a relentless requirement of perfection, incapable alike either of being silenced by veneration for greatness, or softened into forgiveness of simplicity.

Thus far then of the Rudeness or Savageness, which is the first mental element of Gothic architecture. It is an element in many other healthy architectures also, as in Byzantine and Romanesque; but true Gothic cannot exist without it.

26. The second mental element above named was CHANGEFULNESS, or Variety.

I have already enforced the allowing independent operation to the inferior workman, simply as a duty *to him*, and as ennobling the architecture by rendering it more Christian. We have now to consider what reward we obtain for the performance of this duty, namely, the perpetual variety of every feature of the building.

Wherever the workman is utterly enslaved, the parts of the building must of course be absolutely like each other; for the perfection of his execution can only be reached by exercising him in doing one thing, and giving him nothing else to do. The degree in which the workman is degraded may be thus known at a glance, by observing whether the several parts of the building are similar or not; and if, as in Greek work, all the capitals are alike, and all the mouldings unvaried, then the degradation is complete; if, as in Egyptian or Ninevite work, though the manner of executing certain figures is always the same, the order of design is perpetually varied, the degradation is less to

7. The Elgin marbles are supposed by many persons to be 'perfect.' In the most important portions they indeed approach perfection, but only there. The draperies are unfinished, the hair and wool of the animals are unfinished, and the entire bas-reliefs of the frieze are roughly cut. [Ruskin's note.]

tal; if, as in Gothic work, there is perpetual change both in design and execution, the workman must have been altogether set free.

27. How much the beholder gains from the liberty of the labourer may perhaps be questioned in England, where one of the strongest instincts in nearly every mind is that Love of Order which makes us desire that our house windows should pair like our carriage horses, and allows us to yield our faith unhesitatingly to architectural theories which fix a form for everything, and forbid variation from it. I would not impeach love of order: it is one of the most useful elements of the English mind; it helps us in our commerce and in all purely practical matters; and it is in many cases one of the foundation stones of morality. Only do not let us suppose that love of order is love of art. It is true that order, in its highest sense, is one of the necessities of art, just as time is a necessity of music; but love of order has no more to do with our right enjoyment of architecture or painting, than love of punctuality with the appreciation of an opera. Experience, I fear, teaches us that accurate and methodical habits in daily life are seldom characteristic of those who either quickly perceive, or richly possess, the creative powers of art; there is, however, nothing inconsistent between the two instincts, and nothing to hinder us from retaining our business habits, and yet fully allowing and enjoying the noblest gifts of Invention. We already do so, in every other branch of art except architecture, and we only do *not* so there because we have been taught that it would be wrong. Our architects gravely inform us that, as there are four rules of arithmetic, there are five orders of architecture; we, in our simplicity, think that this sounds consistent, and believe them. They inform us also that there is one proper form for Corinthian capitals, another for Doric, and another for Ionic. We, considering that there is also a proper form for the letters A, B, and C, think that this also sounds consistent, and accept the proposition. Understanding, therefore, that one form of the said capitals is proper, and no other, and having a conscientious horror of all impropriety, we allow the architect to provide us with the said capitals, of the proper form, in such and such a quantity, and in all other points to take care that the legal forms are observed; which having done, we rest in forced confidence that we are well housed.

28. But our higher instincts are not deceived. We take no pleasure in the building provided for us, resembling that which we take in a new book or a new picture. We may be proud of its size, complacent in its correctness, and happy in its convenience. We may take the same pleasure in its symmetry and workmanship as in a well-ordered room, or a skilful piece of manufacture. And this we suppose to be all the pleasure that architecture was ever intended to give us. The idea of reading a building as we would read Milton or Dante, and getting the same kind of delight out of the stones as out of the stanzas, never enters our minds for a moment. And for good reason; — There is indeed rhythm in the verses, quite as strict as the symmetries or rhythm of the architecture, and a thousand times more beautiful, but there is something else than rhythm. The verses were neither made to order, nor to match, as the capitals were; and we have therefore a kind of pleasure in them other than a sense of propriety. But it requires a strong effort of common sense to shake ourselves quit of all that we have been taught for the last two centuries, and wake to the perception of a truth just as simple and certain as it is new: that great art, whether expressing itself in words, colours, or stones, does *not* say the same thing over and over again; that the merit of architectural, as of every other art, consists in its saying new and different things; that to repeat itself is no more a characteristic of genius in marble than it is of gen-

ius in print; and that we may, without offending any laws of good taste, require of an architect, as we do of a novelist, that he should be not only correct, but entertaining.

Yet all this is true, and self-evident; only hidden from us, as many other self-evident things are, by false teaching. Nothing is a great work of art, for the production of which either rules or models can be given. Exactly so far as architecture works on known rules, and from given models, it is not an art, but a manufacture; and it is, of the two procedures, rather less rational (because more easy) to copy capitals or mouldings from Phidias, and call ourselves architects, than to copy heads and hands from Titian, and call ourselves painters.

29. Let us then understand at once, that change or variety is as much a necessity to the human heart and brain in buildings as in books; that there is no merit, though there is some occasional use, in monotony; and that we must no more expect to derive either pleasure or profit from an architecture whose ornaments are of one pattern, and whose pillars are of one proportion, than we should out of a universe in which the clouds were all of one shape, and the trees all of one size.

30. And this we confess in deeds, though not in words. All the pleasure which the people of the nineteenth century take in art, is in pictures, sculpture, minor objects of virtù, or mediæval architecture, which we enjoy under the term picturesque: no pleasure is taken anywhere in modern buildings, and we find all men of true feeling delighting to escape out of modern cities into natural scenery: hence, as I shall hereafter show, that peculiar love of landscape which is characteristic of the age. It would be well, if, in all other matters, we were as ready to put up with what we dislike, for the sake of compliance with established law, as we are in architecture.

31. How so debased a law ever came to be established, we shall see when we come to describe the Renaissance schools: here we have only to note, as the second most essential element of the Gothic spirit, that it broke through that law wherever it found it in existence; it not only dared, but delighted in, the infringement of every servile principle; and invented a series of forms of which the merit was, not merely that they were new, but that they were *capable of perpetual novelty*. The pointed arch was not merely a bold variation from the round, but it admitted of millions of variations in itself; for the proportions of a pointed arch are changeable to infinity, while a circular arch is always the same. The grouped shaft was not merely a bold variation from the single one, but it admitted of millions of variations in its grouping, and in the proportions resultant from its grouping. The introduction of tracery was not only a startling change in the treatment of window lights, but admitted endless changes in the interlacement of the tracery bars themselves. So that, while in all living Christian architecture the love of variety exists, the Gothic schools exhibited that love in culminating energy; and their influence, wherever it extended itself, may be sooner and farther traced by this character than by any other; the tendency to the adoption of Gothic types being always first shown by greater irregularity and richer variation in the forms of the architecture it is about to supersede, long before the appearance of the pointed arch or of any other recognisable *outward* sign of the Gothic mind.

32. We must, however, herein note carefully what distinction there is between a healthy and a diseased love of change: for as it was in healthy love of change that the Gothic architecture rose, it was partly in consequence of diseased love of change that it was destroyed. In order to understand this clearly, it will be necessary to consider the different ways in which change and monotony are presented to us

in nature; both having their use, like darkness and light, and the one incapable of being enjoyed without the other: change being most delightful after some prolongation of monotony, as light appears most brilliant after the eyes have been for some time closed.

33. I believe that the true relations of monotony and change may be most simply understood by observing them in music. We may therein notice, first, that there is a sublimity and majesty in monotony which there is not in rapid or frequent variation. This is true throughout all nature. The greater part of the sublimity of the sea depends on its monotony; so also that of desolate moor and mountain scenery; and especially the sublimity of motion, as in the quiet, unchanged fall and rise of an engine beam. So also there is sublimity in darkness which there is not in light.

34. Again, monotony after a certain time, or beyond a certain degree, becomes either uninteresting or intolerable, and the musician is obliged to break it in one or two ways: either while the air or passage is perpetually repeated, its notes are variously enriched and harmonised; or else, after a certain number of repeated passages, an entirely new passage is introduced, which is more or less delightful according to the length of the previous monotony. Nature, of course, uses both these kinds of variation perpetually. The sea-waves, resembling each other in general mass, but none like its brother in minor divisions and curves, are a monotony of the first kind; the great plain, broken by an emergent rock or clump of trees, is a monotony of the second.

35. Farther: in order to the enjoyment of the change in either case, a certain degree of patience is required from the hearer or observer. In the first case, he must be satisfied to endure with patience the recurrence of the great masses of sound or form, and to seek for entertainment in a careful watchfulness of the minor details. In the second case, he must bear patiently the infliction of the monotony for some moments, in order to feel the full refreshment of the change. This is true even of the shortest musical passage in which the element of monotony is employed. In cases of more majestic monotony, the patience required is so considerable that it becomes a kind of pain, — a price paid for the future pleasure.

36. Again: the talent of the composer is not in the monotony, but in the changes: he may show feeling and taste by his use of monotony in certain places or degrees; that is to say, by his *various* employment of it; but it is always in the new arrangement or invention that his intellect is shown, and not in the monotony which relieves it.

Lastly: if the pleasure of change be too often repeated, it ceases to be delightful, for then change itself becomes monotonous, and we are driven to seek delight in extreme and fantastic degrees of it. This is the diseased love of change of which we have above spoken.

37. From these facts we may gather generally that monotony is, and ought to be, in itself painful to us, just as darkness is; that an architecture which is altogether monotonous is a dark or dead architecture; and, of those who love it, it may be truly said, 'they love darkness rather than light.'[8] But monotony in certain measure, used in order to give value to change, and, above all, that *transparent* monotony which, like the shadows of a great painter, suffers all manner of dimly suggested form to be seen through the body of it, is an essential in architectural as in all other composition; and the endurance of monotony has about the same place in a healthy mind that the endurance of darkness has: that is to say, as a strong intellect will have pleasure in the solemnities of storm and twilight, and in the broken and mysterious lights that gleam among them, rather than in mere brilliancy and

8. *John*, iii,19.

glare, while a frivolous mind will dread the shadow and the storm; and as a great man will be ready to endure much darkness of fortune in order to reach greater eminence of power or felicity, while an inferior man will not pay the price; exactly in like manner a great mind will accept, or even delight in, monotony which would be wearisome to an inferior intellect, because it has more patience and power of expectation, and is ready to pay the full price for the great future pleasure of change. But in all cases it is not that the noble nature loves monotony, any more than it loves darkness or pain. But it can bear with it, and receives a high pleasure in the endurance or patience, a pleasure necessary to the well-being of this world; while those who will not submit to the temporary sameness, but rush from one change to another, gradually dull the edge of change itself, and bring a shadow and weariness over the whole world from which there is no more escape.

38. From these general uses of variety in the economy of the world, we may at once understand its use and abuse in architecture. The variety of the Gothic schools is the more healthy and beautiful, because in many cases it is entirely unstudied, and results, not from the mere love of change, but from practical necessities. For in one point of view Gothic is not only the best, but the *only rational* architecture, as being that which can fit itself most easily to all services, vulgar or noble. Undefined in its slope of roof, height of shaft, breadth of arch, or disposition of ground plan, it can shrink into a turret, expand into a hall, coil into a staircase, or spring into a spire, with undegraded grace and unexhausted energy; and whenever it finds occasion for change in its form or purpose, it submits to it without the slightest sense of loss either to its unity or majesty, — subtle and flexible like a fiery serpent, but ever attentive to the voice of the charmer. And it is one of the chief virtues of the Gothic builders, that they never suffered ideas of outside symmetries and consistencies to interfere with the real use and value of what they did. If they wanted a window, they opened one; a room, they added one; a buttress, they built one; utterly regardless of any established conventionalities of external appearance, knowing (as indeed it always happened) that such daring interruptions of the formal plan would rather give additional interest to its symmetry than injure it. So that, in the best times of Gothic, a useless window would rather have been opened in an unexpected place for the sake of the surprise, than a useful one forbidden for the sake of symmetry. Every successive architect, employed upon a great work, built the pieces he added in his own way, utterly regardless of the style adopted by his predecessors; and if two towers were raised in nominal correspondence at the sides of a cathedral front, one was nearly sure to be different from the other, and in each the style at the top to be different from the style at the bottom.

39. These marked variations were, however, only permitted as part of the great system of perpetual change which ran through every member of Gothic design, and rendered it as endless a field for the beholder's inquiry, as for the builder's imagination: change, which in the best schools is subtle and delicate, and rendered more delightful by intermingling of a noble monotony; in the more barbaric schools is somewhat fantastic and redundant; but, in all, a necessary and constant condition of the life of the school. Sometimes the variety is in one feature, sometimes in another; it may be in the capitals or crockets, in the niches or the traceries, or in all together, but in some one or other of the features it will be found always. If the mouldings are constant, the surface sculpture will change; if the capitals are of a fixed design, the traceries will change; if the traceries are monotonous, the capitals will change; and

if even, as in some fine schools, the early English for example, there is the slightest approximation to an unvarying type of mouldings, capitals, and floral decoration, the variety is found in the disposition of the masses, and in the figure sculpture.

40. I must now refer for a moment, before we quit the consideration of this, the second mental element of Gothic, to the opening of the third chapter of the 'Seven Lamps of Architecture,' in which the distinction was drawn (§ 2) between man gathering and man governing; between his acceptance of the sources of delight from nature, and his development of authoritative or imaginative power in their arrangement: for the two mental elements, not only of Gothic, but of all good architecture, which we have just been examining, belong to it, and are admirable in it, chiefly as it is, more than any other subject of art, the work of man, and the expression of the average power of man. A picture or poem is often little more than a feeble utterance of man's admiration of something out of himself; but architecture approaches more to a creation of his own, born of his necessities, and expressive of his nature. It is also, in some sort, the work of the whole race, while the picture or statue is the work of one only, in most cases more highly gifted than his fellows. And therefore we may expect that the first two elements of good architecture should be expressive of some great truths commonly belonging to the whole race, and necessary to be understood or felt by them in all their work that they do under the sun. And observe what they are: the confession of Imperfection, and the confession of Desire of Change. The building of the bird and the bee needs not express anything like this. It is perfect and unchanging. But just because we are something better than birds or bees, our building must confess that we have not reached the perfection we can imagine, and cannot rest in the condition we have attained. If we pretend to have reached either perfection or satisfaction, we have degraded ourselves and our work. God's work only may express that; but ours may never have that sentence written upon it, — 'And behold, it was very good.'[9] And, observe again, it is not merely as it renders the edifice a book of various knowledge, or a mine of precious thought, that variety is essential to its nobleness. The vital principle is not the love of *Knowledge*, but the love of *Change*. It is that strange *disquietude* of the Gothic spirit that is its greatness; that restlessness of the dreaming mind, that wanders hither and thither among the niches, and flickers feverishly around the pinnacles, and frets and fades in labyrinthine knots and shadows along wall and roof, and yet is not satisfied, nor shall be satisfied. The Greek could stay in his triglyph furrow, and be at peace; but the work of the Gothic heart is fretwork still, and it can neither rest in, nor from, its labour, but must pass on, sleeplessly, until its love of change shall be pacified for ever in the change that must come alike on them that wake and them that sleep.

41. The third constituent element of the Gothic mind was stated to be NATURALISM; that is to say, the love of natural objects for their own sake, and the effort to represent them frankly, unconstrained by artistical laws.

This characteristic of the style partly follows in necessary connection with those named above. For, so soon as the workman is left free to represent what subjects he chooses, he must look to the nature that is round him for material, and will endeavour to represent it as he sees it, with more or less accuracy according to the skill he possesses, and with much play of fancy, but with small respect for law. There is, however, a marked distinction between the imaginations of the Western and Eastern races, even when both are left free; the Western, or Gothic, delighting most in the representation of facts, and the Eastern (Arabian, Persian, and Chi-

9. *Genesis*, i,31.

nese) in the harmony of colours and forms. Each of these intellectual dispositions has its particular forms of error and abuse, which, though I have often before stated, I must here again briefly explain; and this the rather, because the word Naturalism is, in one of its senses, justly used as a term of reproach, and the questions respecting the real relations of art and nature are so many and so confused throughout all the schools of Europe at this day, that I cannot clearly enunciate any single truth without appearing to admit, in fellowship with it, some kind of error, unless the reader will bear with me in entering into such an analysis of the subject as will serve us for general guidance.

42. We are to remember, in the first place, that the arrangement of colours and lines is an art analogous to the composition [10] of music, and entirely independent of the representation of facts. Good colouring does not necessarily convey the image of anything but itself. It consists in certain proportions and arrangements of rays of light, but not in likenesses to anything. A few touches of certain greys and purples laid by a master's hand on white paper, will be good colouring; as more touches are added beside them, we may find out that they were intended to represent a dove's neck, and we may praise, as the drawing advances, the perfect imitation of the dove's neck. But the good colouring does not consist in that imitation, but in the abstract qualities and relations of the grey and purple.

In like manner, as soon as a great sculptor begins to shape his work out of the block, we shall see that its lines are nobly arranged, and of noble character. We may not have the slightest idea for what the forms are intended, whether they are of man or beast, of vegetation or drapery. Their likeness to anything does not affect their nobleness. They are magnificent forms, and that is all we need care to know of them, in order to say whether the workman is a good or bad sculptor.

43. Now the noblest art is an exact unison of the abstract value, with the imitative power, of forms and colours. It is the noblest composition, used to express the noblest facts. But the human mind cannot in general unite the two perfections: it either pursues the fact to the neglect of the composition, or pursues the composition to the neglect of the fact.

44. And it is intended by the Deity that it *should* do this; the best art is not always wanted. Facts are often wanted without art, as in a geological diagram; and art often without facts, as in a Turkey carpet. And most men have been made capable of giving either one or the other, but not both; only one or two, the very highest, can give both.

Observe then. Men are universally divided, as respects their artistical qualifications, into three great classes; a right, a left, and a centre. On the right side are the men of facts, on the left the men of design,[11] in the centre the men of both.

The three classes of course pass into each other by imperceptible gradations.

10. I am always afraid to use this word 'Composition'; it is so utterly misused in the general parlance respecting art. Nothing is more common than to hear divisions of art into 'form, composition, and colour,' or 'light and shade and composition,' or 'sentiment and composition,' or it matters not what else and composition; the speakers in each case attaching a perfectly different meaning to the word, generally an indistinct one, and always a wrong one. Composition is, in plain English, 'putting together,' and it means the putting together of lines, of forms, of colours, of shades, or of ideas. Painters compose in colour, compose in thought, compose in form, and compose in effect; the word being of use merely in order to express a scientific, disciplined, and inventive arrangement of any of these, instead of a merely natural or accidental one. [Ruskin's note.]

11. Design is used in this place as expressive of the power to arrange lines and colours nobly. By facts, I mean facts perceived by the eye and mind, not facts accumulated by knowledge. . . [Ruskin's note.]

The men of facts are hardly ever altogether without powers of design; the men of design are always in some measure cognisant of facts; and as each class possesses more or less of the powers of the opposite one, it approaches to the character of the central class. Few men, even in that central rank, are so exactly throned on the summit of the crest that they cannot be perceived to incline in the least one way or the other, embracing both horizons with their glance. Now each of these classes has, as I above said, a healthy function in the world, and correlative diseases or unhealthy functions; and, when the work of either of them is seen in its morbid condition, we are apt to find fault with the class of workmen, instead of finding fault only with the particular abuse which has perverted their action. . . .

What, then, are the diseased operations to which the three classes of workmen are liable?

46. Primarily, two; affecting the two inferior classes:

1st, When either of those two classes Despises the other;

2nd, When either of the two classes Envies the other; producing, therefore, four forms of dangerous error.

First, when the men of facts despise design. This is the error of the common Dutch painters, of merely imitative painters of still life, flowers, &c., and other men who, having either the gift of accurate imitation or strong sympathies with nature, suppose that all is done when the imitation is perfected or sympathy expressed. A large body of English landscapists come into this class, including most clever sketches from nature, who fancy that to get a sky of true tone, and a gleam of sunshine or sweep of shower faithfully expressed, is all that can be required of art. These men are generally themselves answerable for much of their deadness of feeling to the higher qualities of composition. They probably have not originally the high gifts of design, but they lose such powers as they originally possessed by despising, and refusing to study, the results of great power of design in others. Their knowledge, as far as it goes, being accurate, they are usually presumptuous and self-conceited, and gradually become incapable of admiring anything but what is like their own works. They see nothing in the works of great designers but the faults, and do harm almost incalculable in the European society of the present day by sneering at the compositions of the greatest men of the earlier ages,[12] because they do not absolutely tally with their own ideas of 'Nature.'

47. The second form of error is when the men of design despise facts. All noble design must deal with facts to a certain extent, for there is no food for it but in nature. The best colourist invents best by taking hints from natural colours; from birds, skies, or groups of figures. And if, in the delight of inventing fantastic colour and form, the truths of nature are wilfully neglected, the intellect becomes comparatively decrepit, and that state of art results which we find among the Chinese. The Greek designers delighted in the facts of the human form, and became great in consequence; but the facts of lower nature were disregarded by them, and their inferior ornament became, therefore, dead and valueless.

48. The third form of error is when the men of facts envy design: that is to say, when, having only imitative powers, they refuse to employ those powers upon the visible world around them; but, having been taught that composition is the end of art, strive to obtain the inventive powers which nature has denied them, study nothing but the works of reputed designers, and perish in a fungous growth of plagiarism and laws of art.

12. 'Earlier,' that is to say, pre-Raphaelite ages. Men of this stamp will praise Claude, and such other comparatively debased artists; but they cannot taste the work of the thirteenth century. [Ruskin's note.]

Here was the great error of the beginning of this century; it is the error of the meanest kind of men that employ themselves in painting, and it is the most fatal of all, rendering those who fall into it utterly useless, incapable of helping the world with either truth or fancy, while, in all probability, they deceive it by base resemblances of both, until it hardly recognises truth or fancy when they really exist.

49. The fourth form of error is when the men of design envy facts; that is to say, when the temptation of closely imitating nature leads them to forget their own proper ornamental function, and when they lose the power of the composition for the sake of graphic truth; as, for instance, in the hawthorn moulding so often spoken of round the porch of Bourges Cathedral, which, though very lovely, might perhaps, as we saw above, have been better, if the old builder, in his excessive desire to make it look like hawthorn, had not painted it green.

50. It is, however, carefully to be noted, that the two morbid conditions to which the men of facts are liable are much more dangerous and harmful than those to which the men of design are liable. The morbid state of men of design injures themselves only; that of the men of facts injures the whole world. The Chinese porcelain-painter is, indeed, not so great a man as he might be, but he does not want to break everything that is not porcelain: but the modern English fact-hunter, despising design, wants to destroy everything that does not agree with his own notions of truth, and becomes the most dangerous and despicable of iconoclasts, excited by egotism instead of religion. Again: the Bourges sculptor, painting his hawthorns green, did indeed somewhat hurt the effect of his own beautiful design, but did not prevent any one from loving hawthorn: but Sir George Beaumont,[13] trying to make Constable[14] paint grass brown *instead* of green, was setting himself between Constable and nature, blinding the painter, and blaspheming the work of God. . . .

68. There is, however, one direction in which the Naturalism of the Gothic workmen is peculiarly manifested; and this direction is even more characteristic of the school than the Naturalism itself; I mean their peculiar fondness for the forms of Vegetation. In rendering the various circumstances of daily life, Egyptian and Ninevite sculpture is as frank and as diffuse as the Gothic. From the highest pomps of state or triumphs of battle, to the most trivial domestic arts and amusements, all is taken advantage of to fill the field of granite with the perpetual interest of a crowded drama; and the early Lombardic and Romanesque sculpture is equally copious in its description of the familiar circumstances of war and the chase. But in all the scenes portrayed by the workmen of these nations, vegetation occurs only as an explanatory accessary: the reed is introduced to mark the course of the river, or the tree to mark the covert of the wild beast, or the ambush of the enemy, but there is no especial interest in the forms of the vegetation strong enough to induce them to make it a subject of separate and accurate study. Again, among the nations who followed the arts of design exclusively, the forms of foliage introduced were meagre and general, and their real intricacy and life were neither admired nor expressed. But to the Gothic workman the living foliage became a subject of intense affection, and he struggled to render all its characters with as much accuracy as was compatible with the laws

13. Sir George Howland Beaumont (1753–1827), art patron and landscape painter of mediocre talents; acquainted with Dr. Johnson, Reynolds, Scott, Wordsworth, Byron, and Coleridge.

14. John Constable (1776–1837), landscape painter, producing between 1803 and 1837, with little contemporary recognition in England, a series of remarkable paintings of the quiet English countryside.

of his design and the nature of his material, not unfrequently tempted in his enthusiasm to transgress the one and disguise the other.

69. There is a peculiar significance in this, indicative both of higher civilisation and gentler temperament, than had before been manifested in architecture. Rudeness, and the love of change, which we have insisted upon as the first elements of Gothic, are also elements common to all healthy schools. But here is a softer element mingled with them, peculiar to the Gothic itself. The rudeness or ignorance which would have been painfully exposed in the treatment of the human form, are still not so great as to prevent the successful rendering of the wayside herbage; and the love of change, which becomes morbid and feverish in following the haste of the hunter, and the rage of the combatant, is at once soothed and satisfied as it watches the wandering of the tendril, and the budding of the flower. Nor is this all: the new direction of mental interest marks an infinite change in the means and the habits of life. The nations whose chief support was in the chase, whose chief interest was in the battle, whose chief pleasure was in the banquet, would take small care respecting the shapes of leaves and flowers; and notice little in the forms of the forest trees which sheltered them, except the signs indicative of the wood which would make the toughest lance, the closest roof, or the clearest fire. The affectionate observation of the grace and outward character of vegetation is the sure sign of a more tranquil and gentle existence, sustained by the gifts, and gladdened by the splendour, of the earth. In that careful distinction of species, and richness of delicate and undisturbed organisation, which characterise the Gothic design, there is the history of rural and thoughtful life, influenced by habitual tenderness, and devoted to subtle inquiry; and every discriminating and delicate touch of the chisel, as it rounds the petal or guides the branch, is a prophecy of the development of the entire body of the natural sciences, beginning with that of medicine, of the recovery of literature, and the establishment of the most necessary principles of domestic wisdom and national peace.

70. I have before alluded to the strange and vain supposition, that the original conception of Gothic architecture had been derived from vegetation, — from the symmetry of avenues, and the interlacing of branches. It is a supposition which never could have existed for a moment in the mind of any person acquainted with early Gothic; but, however idle as a theory, it is most valuable as a testimony to the character of the perfected style. It is precisely because the reverse of this theory is the fact, because the Gothic did not arise out of, but develope itself into, a resemblance to vegetation, that this resemblance is so instructive as an indication of the temper of the builders. It was no chance suggestion of the form of an arch from the bending of a bough, but a gradual and continual discovery of a beauty in natural forms which could be more and more perfectly transferred into those of stone, that influenced at once the heart of the people, and the form of the edifice. The Gothic architecture arose in massy and mountainous strength, axe-hewn, and iron-bound, block heaved upon block by the monk's enthusiasm and the soldier's force; and cramped and stanchioned into such weight of grisly wall, as might bury the anchoret in darkness, and beat back the utmost storm of battle, suffering but by the same narrow crosslet the passing of the sunbeam, or of the arrow. Gradually, as that monkish enthusiasm became more thoughtful, and as the sound of war became more and more intermittent beyond the gates of the convent or the keep, the stony pillar grew slender and the vaulted roof grew light, till they had wreathed themselves into the semblance of the summer woods at their fairest, and of the dead field-flowers, long

trodden down in blood, sweet monumental statues were set to bloom for ever, beneath the porch of the temple, or the canopy of the tomb.

71. Nor is it only as a sign of greater gentleness or refinement of mind, but as a proof of the best possible direction of this refinement, that the tendency of the Gothic to the expression of vegetative life is to be admired. That sentence of Genesis, 'I have given thee every green herb for meat,'[15] like all the rest of the book, has a profound symbolical as well as a literal meaning. It is not merely the nourishment of the body, but the food of the soul, that is intended. The green herb is, of all nature, that which is most essential to the healthy spiritual life of man. Most of us do not need fine scenery; the precipice and the mountain peak are not intended to be seen by all men, — perhaps their power is greatest over those who are unaccustomed to them. But trees, and fields, and flowers were made for all, and are necessary for all. God has connected the labour which is essential to the bodily sustenance, with the pleasures which are healthiest for the heart; and while He made the ground stubborn, He made its herbage fragrant, and its blossoms fair. The proudest architecture that man can build has no higher honour than to bear the image and recall the memory of that grass of the field which is, at once, the type and the support of his existence; the goodly building is then most glorious when it is sculptured into the likeness of the leaves of Paradise; and the great Gothic spirit, as we showed it to be noble in its disquietude, is also noble in its hold of nature; it is, indeed, like the dove of Noah, in that she found no rest upon the face of the waters, — but like her in this also, 'Lo, IN HER MOUTH WAS AN OLIVE BRANCH, PLUCKED OFF.'[16]

72. The fourth essential element of the Gothic mind was above stated to be the sense of the GROTESQUE; but I shall defer the endeavour to define this most curious and subtle character until we have occasion to examine one of the divisions of the Renaissance schools, which was morbidly influenced by it (Vol.III Chap.III.). It is the less necessary to insist upon it here, because every reader familiar with Gothic architecture must understand what I mean, and will, I believe, have no hesitation in admitting that the tendency to delight in fantastic and ludicrous, as well as in sublime, images, is a universal instinct of the Gothic imagination.

73. The fifth element above named was RIGIDITY; and this character I must endeavour carefully to define, for neither the word I have used, nor any other that I can think of, will express it accurately. For I mean, not merely stable, but *active* rigidity; the peculiar energy which gives tension to movement, and stiffness to resistance, which makes the fiercest lightning forked rather than curved, and the stoutest oak-branch angular rather than bending, and is as much seen in the quivering of the lance as in the glittering of the icicle.

74. I have before had occasion (Vol.I Chap.XIII. § VII.) to note some manifestations of this energy or fixedness; but it must be still more attentively considered here, as it shows itself throughout the whole structure and decoration of Gothic work. Egyptian and Greek buildings stand, for the most part, by their own weight and mass, one stone passively incumbent on another: but in the Gothic vaults and traceries there is a stiffness analogous to that of the bones of a limb, or fibres of a tree; an elastic tension and communication of force from part to part, and also a studious expression of this throughout every visible line of the building. And, in like manner, the Greek and Egyptian ornament is either mere surface engraving, as if the face of the wall had been stamped with a seal, or its lines are flow-

15. *Genesis*, i,30.
16. *Ibid.*, viii,11. (Properly: 'an olive *leaf* plucked off.')

ing, lithe, and luxuriant; in either case, there is no expression of energy in the framework of the ornament itself. But the Gothic ornament stands out in prickly independence, and frosty fortitude, jutting into crockets, and freezing into pinnacles; here starting up into a monster, there germinating into a blossom; anon knitting itself into a branch, alternately thorny, bossy, and bristly, or writhed into every form of nervous entanglement; but, even when most graceful, never for an instant languid, always quickset; erring, if at all, ever on the side of brusquerie. . . .

78. Last, because the least essential, of the constituent elements of this noble school, was placed that of REDUNDANCE, —the uncalculating bestowal of the wealth of its labour. There is, indeed, much Gothic, and that of the best period, in which this element is hardly traceable, and which depends for its effect almost exclusively on loveliness of simple design and grace of uninvolved proportion: still, in the most characteristic buildings, a certain portion of their effect depends upon accumulation of ornament; and many of those which have most influence on the minds of men, have attained it by means of this attribute alone. And although, by careful study of the school, it is possible to arrive at a condition of taste which shall be better contented by a few perfect lines than by a whole façade covered with fretwork, the building which only satisfies such a taste is not to be considered the best. For the very first requirement of Gothic architecture being, as we saw above, that it shall both admit the aid, and appeal to the admiration, of the rudest as well as the most refined minds, the richness of the work is, paradoxical as the statement may appear, a part of its humility. No architecture is so haughty as that which is simple; which refuses to address the eye, except in a few clear and forceful lines; which implies, in offering so little to our regards, that all it has offered is perfect; and disdains, either by the complexity of the attractiveness of its features, to embarrass our investigation, or betray us into delight. That humility, which is the very life of the Gothic school, is shown not only in the imperfection, but in the accumulation, of ornament. The inferior rank of the workman is often shown as much in the richness, as the roughness, of his work; and if the co-operation of every hand, and the sympathy of every heart, are to be received, we must be content to allow the redundance which disguises the failure of the feeble, and wins the regard of the inattentive. There are, however, far nobler interests mingling, in the Gothic heart, with the rude love of decorative accumulation: a magnificent enthusiasm, which feels as if it never could do enough to reach the fulness of its ideal; and unselfishness of sacrifice, which would rather cast fruitless labour before the altar than stand idle in the market; and, finally, a profound sympathy with the fulness and wealth of the material universe, rising out of that Naturalism whose operation we have already endeavoured to define. The sculptor who sought for his models among the forest leaves, could not but quickly and deeply feel that complexity need not involve the loss of grace, nor richness that of repose; and every hour which he spent in the study of the minute and various work of Nature, made him feel more forcibly the barrenness of what was best in that of man: nor is it to be wondered at, that, seeing her perfect and exquisite creations poured forth in a profusion which conception could not grasp nor calculation sum, he should think that it ill became him to be niggardly of his own rude craftsmanship; and where he saw throughout the universe a faultless beauty lavished on measureless spaces of broidered field and blooming mountain, to grudge his poor and imperfect labour to the few stones that he had raised one upon another, for habitation or memorial. The years of his life passed away before his task was accomplished; but generation

succeeded generation with unwearied enthusiasm, and the cathedral front was at last lost in the tapestry of its traceries, like a rock among the thickets and herbage of spring. . . .

106. We have now, I believe, obtained a sufficiently accurate knowledge both of the spirit and form of Gothic architecture; but it may, perhaps, be useful to the general reader, if, in conclusion, I set down a few plain and practical rules for determining, in every instance, whether a given building be good Gothic or not, and, if not Gothic, whether its architecture is of a kind which will probably reward the pains of careful examination.

107. First. Look if the roof rises in a steep gable, high above the walls. If it does not do this, there is something wrong; the building is not quite pure Gothic, or has been altered.

108. Secondly. Look if the principal windows and doors have pointed arches with gables over them. If not pointed arches, the building is not Gothic; if they have not any gables over them, it is either not pure, or not first-rate.

If, however, it has the steep roof, the pointed arch, and gable all united, it is nearly certain to be a Gothic building of a very fine time.

109. Thirdly. Look if the arches are cusped, or apertures foliated. If the building has met the first two conditions, it is sure to be foliated somewhere; but, if not everywhere, the parts which are unfoliated are imperfect, unless they are large bearing arches, or small and sharp arches in groups, forming a kind of foliation by their own multiplicity, and relieved by sculpture and rich mouldings. The upper windows, for instance, in the east end of Westminster Abbey are imperfect for want of foliation. If there be no foliation anywhere, the building is assuredly imperfect Gothic.

110. Fourthly. If the building meets all the first three conditions, look if its arches in general, whether of windows and doors, or of minor ornamentation, are carried on *true shafts with bases and capitals*. If they are, then the building is assuredly of the finest Gothic style. It may still, perhaps, be an imitation, a feeble copy, or a bad example, of a noble style; but the manner of it, having met all these four conditions, is assuredly first-rate.

If its apertures have not shafts and capitals, look if they are plain openings in the walls, studiously simple, and unmoulded at the sides. . . . If so, the building may still be of the finest Gothic, adapted to some domestic or military service. But if the sides of the window be moulded, and yet there are no capitals at the spring of the arch, it is assuredly of an inferior school.

This is all that is necessary to determine whether the building be of a fine Gothic style. The next tests to be applied are in order to discover whether it be good architecture or not: for it may be very impure Gothic, and yet very noble architecture; or it may be very pure Gothic, and yet, if a copy, or originally raised by an ungifted builder, very bad architecture.

If it belong to any of the great schools of colour, its criticism becomes as complicated, and needs as much care, as that of a piece of music, and no general rules for it can be given; but if not —

111. First. See if it looks as if it had been built by strong men; if it has the sort of roughness, and largeness, and nonchalance, mixed in places with the exquisite tenderness which seems always to be the sign-manual of the broad vision, and massy power of men who can see *past* the work they are doing, and betray here and there something like disdain for it. If the building has this character, it is much already in its favour; it will go hard but it proves a noble one. If it has not this, but is altogether accurate, minute, and scrupulous in its workmanship, it must belong to either the very best or the very worst of schools: the very best, in which exquisite design is wrought out with untiring and

conscientious care, as in the Giottesque Gothic;[17] or the very worst, in which mechanism has taken the place of design. It is more likely, in general, that it should belong to the worst than the best: so that, on the whole, very accurate workmanship is to be esteemed a bad sign; and if there is nothing remarkable about the building but its precision, it may be passed at once with contempt.

112. Secondly. Observe if it be irregular, its different parts fitting themselves to different purposes, no one caring what becomes of them, so that they do their work. If one part always answers accurately to another part, it is sure to be a bad building; and the greater and more conspicuous the irregularities, the greater the chances are that it is a good one. . . .

113. Thirdly. Observe if all the traceries, capitals, and other ornaments are of perpetually varied design. If not, the work is assuredly bad.

114. Lastly. *Read* the sculpture. Preparatory to reading it, you will have to discover whether it is legible (and, if legible, it is nearly certain to be worth reading). On a good building, the sculpture is *always* so set, and on such a scale, that at the ordinary distance from which the edifice is seen, the sculpture shall be thoroughly intelligible and interesting. In order to accomplish this, the uppermost statues will be ten or twelve feet high, and the upper ornamentation will be colossal, increasing in fineness as it descends, till on the foundation it will often be wrought as if for a precious cabinet in a king's chamber; but the spectator will not notice that the upper sculptures are colossal. He will merely feel that he can see them plainly, and make them all out at his ease.

And having ascertained this, let him set himself to read them. Thenceforward the criticism of the building is to be conducted precisely on the same principles as that of a book; and it must depend on the knowledge, feeling, and not a little on the industry and perseverance of the reader, whether, even in the case of the best works, he either perceive them to be great, or feel them to be entertaining.

17 As in the hands of Giotto (1267?–1337), great Italian painter, and designer of the exquisite Campanile in Florence.

UNTO THIS LAST

Essay I

The Roots of Honour

1. Among the delusions which at different periods have possessed themselves of the minds of large masses of the human race, perhaps the most curious — certainly the least creditable — is the modern *soi-disant*[1] science of political economy, based on the idea that an advantageous code of social action may be determined irrespectively of the influence of social affection.

Of course, as in the instances of alchemy, astrology, witchcraft, and other such popular creeds, political economy has a plausible idea at the root of it. 'The social affections,' says the economist, 'are accidental and disturbing elements in human nature; but avarice and the desire of progress are constant elements. Let us eliminate the inconstants, and, considering the human being merely as a covetous machine, examine by what laws of labour, purchase, and sale, the greatest accumulative result in wealth is obtainable. Those laws once determined, it will be for each individual afterwards to introduce as much of the disturbing affectionate element as he chooses, and to determine for himself the result on the new conditions supposed.'

2. This would be a perfectly logical and successful method of analysis, if the acci-

1. 'self-styled'; 'pretended.'

dentals afterwards to be introduced were of the same nature as the powers first examined. Supposing a body in motion to be influenced by constant and inconstant forces, it is usually the simplest way of examining its course to trace it first under the persistent conditions, and afterwards introduce the causes of variation. But the disturbing elements in the social problem are not of the same nature as the constant ones: they alter the essence of the creature under examination the moment they are added; they operate, not mathematically, but chemically, introducing conditions which render all our previous knowledge unavailable. We made learned experiments upon pure nitrogen, and have convinced ourselves that it is a very manageable gas: but, behold! the thing which we have practically to deal with is its chloride; and this, the moment we touch it on our established principles, sends us and our apparatus through the ceiling.

3. Observe, I neither impugn nor doubt the conclusion of the science, if its terms are accepted. I am simply uninterested in them, as I should be in those of a science of gymnastics which assumed that men had no skeletons. It might be shown, on that supposition, that it would be advantageous to roll the students up into pellets, flatten them into cakes, or stretch them into cables; and that when these results were effected, the re-insertion of the skeleton would be attended with various inconveniences to their constitution. The reasoning might be admirable, the conclusions true, and the science deficient only in applicability. Modern political economy stands on a precisely similar basis. Assuming, not that the human being has no skeleton, but that it is all skeleton, it founds an ossifiant theory of progress on this negation of a soul; and having shown the utmost that may be made of bones, and constructed a number of interesting geometrical figures with death's-head and humeri,[2] successfully proves the inconvenience of the reappearance of a soul among these corpuscular structures. I do not deny the truth of this theory: I simply deny its applicability to the present phase of the world.

4. The inapplicability has been curiously manifested during the embarrassment caused by the late strikes of our workmen. Here occurs one of the simplest cases, in a pertinent and positive form, of the first vital problem which political economy has to deal with (the relation between employer and employed); and, at a severe crisis, when lives in multitudes and wealth in masses are at stake, the political economists are helpless — practically mute: no demonstrable solution of the difficulty can be given by them, such as may convince or calm the opposing parties. Obstinately the masters take one view of the matter; and no political science can set them at one.

5. It would be strange if it could, it being not by 'science' of any kind that men were ever intended to be set at one. Disputant after disputant vainly strives to show that the interests of the masters are, or are not, antagonistic to those of the men: none of the pleaders ever seeming to remember that it does not absolutely or always follow that the persons must be antagonistic because their interests are. If there is only a crust of bread in the house, and mother and children are starving, their interests are not the same. If the mother eats it, the children want it: if the children eat it, the mother must go hungry to her work. Yet it does not necessarily follow that there will be 'antagonism' between them, that they will fight for the crust, and that the mother, being strongest, will get it, and eat it. Neither, in any other case, whatever the relations of the persons may be, can it be assumed for certain that, because their interests are diverse, they must necessarily regard each other with hostility, and use violence or cunning to obtain the advantage.

2. 'crossed-bones.'

6. Even if this were so, and it were as just as it is convenient to consider men as actuated by no other moral influences than those which affect rats or swine, the logical conditions of the question are still indeterminable. It can never be shown generally either that the interests of master and labourer are alike, or that they are opposed: for, according to circumstances, they may be either. It is, indeed, always the interest of both that the work should be rightly done, and a just price obtained for it; but, in the division of profits, the gain of one may or may not be the loss of the other. It is not the master's interest to pay wages so low as to leave the men sickly and depressed, nor the workman's interest to be paid high wages if the smallness of the master's profits hinders him from enlarging his business, or conducting it in a safe and liberal way. A stoker ought not to desire high pay if the company is too poor to keep the engine-wheels in repair.

7. And the varieties of circumstance which influence these reciprocal interests are so endless, that all endeavour to deduce rules of action from balance of expediency is in vain. And it is meant to be in vain. For no human actions ever were intended by the Maker of men to be guided by balances of expediency, but by balances of justice. He has therefore rendered all endeavours to determine expediency futile for evermore. No man ever knew, or can know, what will be the ultimate result to himself, or to others, of any given line of conduct. But every man may know, and most of us do know, what is a just and unjust act. And all of us may know also, that the consequences of justice will be ultimately the best possible, both to others and ourselves, though we can neither say what *is* best, nor how it is likely to come to pass.

I have said balances of justice, meaning, in the term justice, to include affection, — such affection as one man *owes* to another. All right relations between master and operative, and all their best interests, ultimately depend on these.

8. We shall find the best and simplest illustration of the relations of master and operative in the position of domestic servants.

We will suppose that the master of a household desires only to get as much work out of his servants as he can, at the rate of wages he gives. He never allows them to be idle; feeds them as poorly and lodges them as ill as they will endure, and in all things pushes his requirements to the exact point beyond which he cannot go without forcing the servant to leave him. In doing this, there is no violation on his part of what is commonly called 'justice.' He agrees with the domestic for his whole time and service, and takes them; — the limits of hardship in treatment being fixed by the practice of other masters in his neighbourhood; that is to say, by the current rate of wages for domestic labour. If the servant can get a better place, he is free to take one, and the master can only tell what is the real market value of his labour, by requiring as much as he will give.

This is the politico-economical view of the case, according to the doctors of that science; who assert that by this procedure the greatest average of work will be obtained from the servant, and therefore the greatest benefit to the community, and through the community, by reversion, to the servant himself.

That, however, is not so. It would be so if the servant were an engine of which the motive power was steam, magnetism, gravitation, or any other agent of calculable force. But he being, on the contrary, an engine whose motive power is a Soul, the force of this very peculiar agent, as an unknown quantity, enters into all the political economist's equations, without his knowledge, and falsifies every one of their results. The largest quantity of work will not be done by this curious engine for pay, or under pressure, or by help of

any kind of fuel which may be applied by the chaldron. It will be done only when the motive force, that is to say, the will or spirit of the creature, is brought to its greatest strength by its own proper fuel: namely, by the affections.

9. It may indeed happen, and does happen often, that if the master is a man of sense and energy, a large quantity of material work may be done under mechanical pressure, enforced by strong will and guided by wise method: also it may happen, and does happen often, that if the master is indolent and weak (however good-natured), a very small quantity of work, and that bad, may be produced by the servant's undirected strength, and contemptuous gratitude. But the universal law of the matter is that, assuming any given quantity of energy and sense in master and servant, the greatest material result obtainable by them will be, not through antagonism to each other, but through affection for each other; and that if the master, instead of endeavouring to get as much work as possible from the servant, seeks rather to render his appointed and necessary work beneficial to him, and to forward his interests in all just and wholesome ways, the real amount of work ultimately done, or of good rendered, by the person so cared for, will indeed be the greatest possible.

Observe, I say, 'of good rendered,' for a servant's work is not necessarily or always the best thing he can give his master. But good of all kinds, whether in material service, in protective watchfulness of his master's interest and credit, or in joyful readiness to seize unexpected and irregular occasions of help.

Nor is this one whit less generally true because indulgence will be frequently abused, and kindness met with ingratitude. For the servant who, gently treated, is ungrateful, treated ungently, will be revengeful; and the man who is dishonest to a liberal master, will be injurious to an unjust one.

10. In any case, and with any person, this unselfish treatment will produce the most effective return. Observe, I am here considering the affections wholly as a motive power; not at all as things in themselves desirable or noble, or in any other way abstractedly good. I look at them simply as an anomalous force, rendering every one of the ordinary political economist's calculations nugatory; while, even if he desired to introduce this new element into his estimates, he has no power of dealing with it; for the affections only become a true motive power when they ignore every other motive and condition of political economy. Treat the servant kindly, with the idea of turning his gratitude to account, and you will get, as you deserve, no gratitude, nor any value for your kindness; but treat him kindly without any economical purpose, and all economical purposes will be answered; in this, as in all other matters, whosoever will save his life shall lose it, and whoso loses it shall find it.[3]

3. The difference between the two modes of treatment, and between their effective material results, may be seen very accurately by a comparison of the relations of Esther and Charlie in *Bleak House*, with those of Miss Brass and the Marchioness in *Master Humphrey's Clock*.

The essential value and truth of Dickens's writings have been unwisely lost sight of by many thoughtful persons merely because he presents his truth with some colour of caricature. Unwisely, because Dickens's caricature, though often gross, is never mistaken. Allowing for his manner of telling them, the things he tells us are always true. I wish that he could think it right to limit his brilliant exaggeration to works written only for public amusement; and when he takes up a subject of high national importance, such as that which he handled in *Hard Times*, that he would use severer and more accurate analysis. The usefulness of that work (to my mind, in several respects, the greatest he has written) is with many persons seriously diminished because Mr. Bounderby is a dramatic monster, instead of a characteristic example of a worldly master; and Stephen Blackpool a dramatic perfection, instead of a characteristic example of an honest workman. But let us not lose the use of Dickens's wit and insight, because he chooses to

11. The next clearest and simplest example of relation between master and operative is that which exists between the commander of a regiment and his men.

Supposing the officer only desires to apply the rules of discipline so as, with least trouble to himself, to make the regiment most effective, he will not be able, by any rules, or administration of rules, on this selfish principle, to develop the full strength of his subordinates. If a man of sense and firmness, he may, as in the former instance, produce a better result than would be obtained by the irregular kindness of a weak officer; but let the sense and firmness be the same in both cases, and assuredly the officer who has the most direct personal relations with his men, the most care for their interests, and the most value for their lives, will develop their effective strength, through their affection for his own person, and trust in his character, to a degree wholly unattainable by other means. The law applies still more stringently as the numbers concerned are larger: a charge may often be successful, though the men dislike their officers; a battle has rarely been won, unless they loved their general.

12. Passing from these simple examples to the more complicated relations existing between a manufacturer and his workmen, we are met first by certain curious difficulties, resulting, apparently, from a harder and colder state of moral elements. It is easy to imagine an enthusiastic affection existing among soldiers for the colonel. Not so easy to imagine an enthusiastic affection among cotton-spinners for the proprietor of the mill. A body of men associated for the purposes of robbery (as a Highland clan in ancient times) shall be animated by perfect affection, and every member of it be ready to lay down his life for the life of his chief. But a band of men associated for purposes of legal production and accumulation is usually animated, it appears, by no such emotions, and none of them are in anywise willing to give his life for the life of his chief. Not only are we met by this apparent anomaly, in moral matters, but by others connected with it, in administration of system. For a servant or a soldier is engaged at a definite rate of wages, for a definite period; but a workman at a rate of wages variable according to the demand for labour, and with the risk of being at any time thrown out of his situation by chances of trade. Now, as, under these contingencies, no action of the affections can take place, but only an explosive action of *dis*affections, two points offer themselves for consideration in the matter.

The first — How far the rate of wages may be so regulated as not to vary with the demand for labour.

The second — How far it is possible that bodies of workmen may be engaged and maintained at such fixed rate of wages (whatever the state of trade may be), without enlarging or diminishing their number, so as to give them permanent interest in the establishment with which they are connected, like that of the domestic servants in an old family, or an *esprit de corps*, like that of the soldiers in a crack regiment.

13. The first question is, I say, how far it may be possible to fix the rate of wages, irrespectively of the demand for labour.

Perhaps one of the most curious facts in the history of human error is the denial by the common political economist of the possibility of thus regulating wages; while, for all the important, and much of the

speak in a circle of stage fire. He is entirely right in his main drift and purpose in every book he has written; and all of them, but especially *Hard Times*, should be studied with close and earnest care by persons interested in social questions. They will find much that is partial, and, because partial, apparently unjust; but if they examine all the evidence on the other side, which Dickens seems to overlook, it will appear, after all their trouble, that his view was the finally right one, grossly and sharply told. [Ruskin's note. *Cf. Matthew*, xvi,25.]

unimportant, labour on the earth, wages are already regulated.

We do not sell our prime-ministership by Dutch auction;[4] nor, on the decease of a bishop, whatever may be the general advantages of simony, do we (yet) offer his diocese to the clergyman who will take the episcopacy at the lowest contract. We (with exquisite sagacity of political economy!) do indeed sell commissions; but not openly, generalships: sick, we do not inquire for a physician who takes less than a guinea; litigious, we never think of reducing six-and-eightpence to four-and-sixpence; caught in a shower, we do not canvass the cabmen, to find one who values his driving at less than sixpence a mile.

It is true that in all these cases there is, and in every conceivable case there must be, ultimate reference to the presumed difficulty of the work, or number of candidates for the office. If it were thought that the labour necessary to make a good physician would be gone through by a sufficient number of students with the prospect of only half-guinea fees, public consent would soon withdraw the unnecessary half-guinea. In this ultimate sense, the price of labour is indeed always regulated by the demand for it; but so far as the practical and immediate administration of the matter is regarded, the best labour always has been, and is, as *all* labour ought to be, paid by an invariable standard.

14. 'What!' the reader, perhaps, answers amazedly: 'pay good and bad work men alike?'

Certainly. The difference between one prelate's sermons and his successor's, — or between one physician's opinion and another's — is far greater, as respects the qualities of mind involved, and far more important in result to you personally, than the difference between good and bad laying of bricks (though that is greater than most people suppose). Yet you pay with equal fee, contentedly, the good and bad workmen upon your soul, and the good and bad workmen upon your body; much more may you pay, contentedly, with equal fees, the good and bad workmen upon your house.

'Nay, but I choose my physician and (?) my clergyman, thus indicating my sense of the quality of their work.' By all means, also, choose your bricklayer; that is the proper reward of the good workman, to be 'chosen.' The natural and right system respecting all labour is, that it should be paid at a fixed rate, but the good workman employed, and the bad workman unemployed. The false, unnatural, and destructive system is when the bad workman is allowed to offer his work at half-price, and either take the place of the good, or force him by his competition to work for an inadequate sum.

15. This equality of wages, then, being the first object towards which we have to discover the directest available road, the second is, as above stated, that of maintaining constant numbers of workmen in employment, whatever may be the accidental demand for the article they produce.

I believe the sudden and extensive inequalities of demand, which necessarily arise in the mercantile operations of an active nation, constitute the only essential difficulty which has to be overcome in a just organization of labour.

The subject opens into too many branches to admit of being investigated in a paper of this kind; but the following general facts bearing on it may be noted.

The wages which enable any workman to live are necessarily higher, if his work is liable to intermission, than if it is assured and continuous; and however severe the struggle for work may become, the general law will always hold, that men must get more daily pay if, on the average, they can only calculate on work three

4. An auction in which property is offered at a price beyond its value, and finally sold after the price has been gradually lowered.

days a week than they would require if they were sure of work six days a week. Supposing that a man cannot live on less than a shilling a day, his seven shillings he must get, either for three days' violent work, or six days' deliberate work. The tendency of all modern mercantile operations is to throw both wages and trade into the form of a lottery, and to make the workman's pay depend on intermittent exertion, and the principal's profit on dexterously used chance.

16. In what partial degree, I repeat, this may be necessary, in consequence of the activities of modern trade, I do not here investigate; contenting myself with the fact, that in its fatalest aspects it is assuredly unnecessary, and results merely from love of gambling on the part of the masters, and from ignorance and sensuality in the men. The masters cannot bear to let any opportunity of gain escape them, and frantically rush at every gap and breach in the walls of Fortune, raging to be rich, and affronting, with impatient covetousness, every risk of ruin, while the men prefer three days of violent labour, and three days of drunkenness, to six days of moderate work and wise rest. There is no way in which a principal, who really desires to help his workmen, may do it more effectually than by checking these disorderly habits both in himself and them; keeping his own business operations on a scale which will enable him to pursue them securely, not yielding to temptations of precarious gain; and, at the same time, leading his workmen into regular habits of labour and life, either by inducing them rather to take low wages, in the form of a fixed salary, than high wages, subject to the chance of their being thrown out of work; or if this be impossible, by discouraging the system of violent exertion for nominally high day wages, and leading the men to take lower pay for more regular labour.

In effecting any radical changes of this kind, doubtless there would be great inconvenience and loss incurred by all the originators of the movement. That which can be done with perfect convenience and without loss, is not always the thing that most needs to be done, or which we are most imperatively required to do.

17. I have already alluded to the difference hitherto existing between regiments of men associated for purposes of violence, and for purposes of manufacture; in that the former appear capable of self-sacrifice — the latter, not: which singular fact is the real reason of the general lowness of estimate in which the profession of commerce is held, as compared with that of arms. Philosophically, it does not, at first sight, appear reasonable (many writers have endeavoured to prove it unreasonable) that a peaceable and rational person, whose trade is buying and selling, should be held in less honour than an unpeaceable and often irrational person, whose trade is slaying. Nevertheless, the consent of mankind has always, in spite of the philosophers, given precedence to the soldier.

And this is right.

For the soldier's trade, verily and essentially, is not slaying, but being slain. This, without well knowing its own meaning, the world honours it for. A bravo's trade is slaying; but the world has never respected bravos more than merchants: the reason it honours the soldier is, because he holds his life at the service of the State. Reckless he may be — fond of pleasure or of adventure — all kinds of bye-motives and mean impulses may have determined the choice of his profession, and may affect (to all appearance exclusively) his daily conduct in it; but our estimate of him is based on this ultimate fact — of which we are well assured — that, put him in a fortress breach, with all the pleasures of the world behind him, and only death and his duty in front of him, he will keep his face to the front: and he knows that this choice may be put to him at any moment — and has before-

hand taken his part — virtually takes such part continually — does, in reality, die daily.

18. Not less is the respect we pay to the lawyer and physician, founded ultimately on their self-sacrifice. Whatever the learning or acuteness of a great lawyer, our chief respect for him depends on our belief that, set in a judge's seat, he will strive to judge justly, come of it what may. Could we suppose that he would take bribes, and use his acuteness and legal knowledge to give plausibility to iniquitous decisions, no degree of intellect would win for him our respect. Nothing will win it, short of our tacit conviction, that in all important acts of his life justice is first with him; his own interest, second.

In the case of a physician, the ground of the honour we render him is clearer still. Whatever his science, we should shrink from him in horror if we found him regard his patients merely as subjects to experiment upon; much more, if we found that, receiving bribes from persons interested in their deaths, he was using his best skill to give poison in the mask of medicine.

Finally, the principle holds with utmost clearness as it respects clergymen. No goodness of disposition will excuse want of science in a physician or of shrewdness in an advocate; but a clergyman, even though his power of intellect be small, is respected on the presumed ground of his unselfishness and serviceableness.

19. Now, there can be no question but that the tact, foresight, decision, and other mental powers, required for the successful management of a large mercantile concern, if not such as could be compared with those of a great lawyer, general, or divine, would at least match the general conditions of mind required in the subordinate officers of a ship, or of a regiment, or in the curate of a country parish. If, therefore, all the efficient members of the so-called liberal professions are still, somehow, in public estimate of honour, preferred before the head of a commercial firm, the reasons must lie deeper than in the measurement of their several powers of mind.

And the essential reason for such preference will be found to lie in the fact that the merchant is presumed to act always selfishly. His work may be very necessary to the community; but the motive of it is understood to be wholly personal. The merchant's first object in all his dealings must be (the public believe) to get as much for himself, and leave as little to his neighbour (or customer) as possible. Enforcing this upon him, by political statute, as the necessary principle of his action; recommending it to him on all occasions, and themselves reciprocally adopting it, proclaiming vociferously, for law of the universe, that a buyer's function is to cheapen, and a seller's to cheat, — the public, nevertheless, involuntarily condemn the man of commerce for his compliance with their own statement, and stamp him forever as belonging to an inferior grade of human personality.

20. This they will find, eventually, they must give up doing. They must not cease to condemn selfishness; but they will have to discover a kind of commerce which is not exclusively selfish. Or, rather, they will have to discover that there never was, or can be, any other kind of commerce; that this which they have called commerce was not commerce at all, but cozening; and that a true merchant differs as much from a merchant according to laws of modern political economy, as the hero of the *Excursion* from Autolycus.[5] They will find that commerce is an occupation which gentlemen will every day see more need to engage in, rather than in the businesses of talking to men, or slaying them; that, in true commerce,

5. The hero of Wordsworth's *The Excursion* (1814) is the Wanderer, a philosophical peddler. — Autolycus, in *The Winter's Tale*, also a peddler, is in addition a rogue.

as in true preaching, or true fighting, it is necessary to admit the idea of occasional voluntary loss; — that sixpences have to be lost, as well as lives, under a sense of duty; that the market may have its martyrdoms as well as the pulpit; and trade its heroisms, as well as war.

May have — in the final issue, must have — and only has not had yet, because men of heroic temper have always been misguided in their youth into other fields; not recognizing what is in our days, perhaps, the most important of all fields; so that, while many a zealous person loses his life in trying to teach the form of a gospel, very few will lose a hundred pounds in showing the practice of one.

21. The fact is, that people never have had clearly explained to them the true functions of a merchant with respect to other people. I should like the reader to be very clear about this.

Five great intellectual professions, relating to daily necessities of life, have hitherto existed — three exist necessarily, in every civilized nation: —

The Soldier's profession is to *defend* it.

The Pastor's, to *teach* it.

The Physician's, to *keep it in health*.

The Lawyer's, to *enforce justice* in it.

The Merchant's, to *provide* for it.

And the duty of all these men is, on due occasion, to *die* for it.

'On due occasion,' namely: —

The Soldier, rather than leave his post in battle.

The Physician, rather than leave his post in plague.

The Pastor, rather than teach Falsehood.

The Lawyer, rather than countenance Injustice.

The Merchant — What is *his* 'due occasion' of death?

22. It is the main question for the merchant, as for all of us. For, truly, the man who does not know when to die, does not know how to live.

Observe, the merchant's function (or manufacturer's, for in the broad sense in which it is here used the word must be understood to include both) is to provide for the nation. It is no more his function to get profit for himself out of that provision than it is a clergyman's function to get his stipend. The stipend is a due and necessary adjunct, but not the object, of his life, if he be a true clergyman, any more than his fee (or honorarium) is the object of life to a true physician. Neither is his fee the object of life to a true merchant. All three, if true men, have a work to be done irrespective of fee — to be done even at any cost, or for quite the contrary of fee; the pastor's function being to teach, the physician's to heal, and the merchant's, as I have said, to provide. That is to say, he has to understand to their very root the qualities of the thing he deals in, and the means of obtaining or producing it; and he has to apply all his sagacity and energy to the producing or obtaining it in perfect state, and distributing it at the cheapest possible price where it is most needed.

And because the production or obtaining of any commodity involves necessarily the agency of many lives and hands, the merchant becomes in the course of his business the master and governor of large masses of men in a more direct, though less confessed way, than a military officer or pastor; so that on him falls, in great part, the responsibility for the kind of life they lead; and it becomes his duty, not only to be always considering how to produce what he sells, in the purest and cheapest forms, but how to make the various employments involved in the production, or transference of it, most beneficial to the men employed.

23. And as into these two functions, requiring for their right exercise the highest intelligence, as well as patience, kindness, and tact, the merchant is bound to put all his energy, so for their just discharge he is bound, as soldier or physician is bound, to give up, if need be, his life, in such way as it may be demanded of

him. Two main points he has in his providing function to maintain: first, his engagements (faithfulness to engagements being the real root of all possibilities, in commerce); and, secondly, the perfectness and purity of the thing provided; so that, rather than fail in any engagement, or consent to any deterioration, adulteration, or unjust and exorbitant price of that which he provides, he is bound to meet fearlessly any form of distress, poverty, or labour, which may, through maintenance of these points, come upon him.

24. Again: in his office as governor of the men employed by him, the merchant or manufacturer is invested with a distinctly paternal authority and responsibility. In most cases, a youth entering a commercial establishment is withdrawn altogether from home influence; his master must become his father, else he has, for practical and constant help, no father at hand: in all cases the master's authority, together with the general tone and atmosphere of his business, and the character of the men with whom the youth is compelled in the course of it to associate, have more immediate and pressing weight than the home influence, and will usually neutralize it either for good or evil; so that the only means which the master has of doing justice to the men employed by him is to ask himself sternly whether he is dealing with such subordinate as he would with his own son, if compelled by circumstances to take such a position.

Supposing the captain of a frigate saw it right, or were by any chance obliged, to place his own son in the position of a common sailor; as he would then treat his son, he is bound always to treat every one of the men under him. So, also, supposing the master of a manufactory saw it right, or were by any chance obliged, to place his own son in the position of an ordinary workman; as he would then treat his son, he is bound always to treat every one of his men. This is the only effective, true, or practical RULE which can be given on this point of political economy.

And as the captain of a ship is bound to be the last man to leave his ship in case of wreck, and to share his last crust with the sailors in case of famine, so the manufacturer, in any commercial crisis or distress, is bound to take the suffering of it with his men, and even to take more of it for himself than he allows his men to feel: as a father would in a famine, shipwreck, or battle, sacrifice himself for his son.

25. All which sounds very strange: the only real strangeness in the matter being, nevertheless, that it should so sound. For all this is true, and that not partially nor theoretically, but everlastingly and practically: all other doctrine than this respecting matters political being false in premises, absurd in deduction, and impossible in practice, consistently with any progressive state of national life; all the life which we now possess as a nation showing itself in the resolute denial and scorn, by a few strong minds and faithful hearts, of the economic principles taught to our multitudes, which principles, so far as accepted, lead straight to national destruction. Respecting the modes and forms of destruction to which they lead, and, on the other hand, respecting the farther practical working of true polity, I hope to reason farther in a following paper.

MUNERA PULVERIS

Chapter I

Maintenance of Life: Wealth, Money and Riches

As domestic economy regulates the acts and habits of a household, political economy regulates those of a society or state, with reference to the means of its maintenance.

Political economy is neither an art nor a science,[1] but a system of conduct and legislature, founded on the sciences, directing the arts, and impossible, except under certain conditions of moral culture.[2]

By the 'maintenance' of a state is to be understood the support of its population in healthy and happy life; and the increase of their numbers, so far as that increase is consistent with their happiness. It is not the object of political economy to increase the numbers of a nation at the cost of common health or comfort; nor to increase indefinitely the comfort of individuals, by sacrifice of surrounding lives, or possibilities of life.

The assumption which lies at the root of nearly all erroneous reasoning on political economy, — namely, that its object is to accumulate money or exchangeable property, — may be shown in few words to be without foundation. For no economist would admit national economy to be legitimate which proposed to itself only the building of a pyramid of gold. He would declare the gold to be wasted, were it to remain in the monumental form, and would say it ought to be employed. But to what end? Either it must be used only to gain more gold, and build a larger pyramid, or to some purpose other than the gaining of gold. And this other purpose, however at first apprehended, will be found to resolve itself finally into the service of man — that is to say, the extension, defence, or comfort of his life. The golden pyramid may perhaps be prov-

1 The science which in modern days has been called Political Economy is in reality nothing more than the investigation of the phenomena of commercial operations. It has no connexion with political economy, as understood and treated of by the great thinkers of past ages, and as long as it is allowed to pass under the same name, every word written by those thinkers — and chiefly the words of Plato, Xenophon, Cicero, and Bacon — must be either misunderstood or misapplied. The reader must not, therefore, be surprised at the care and insistence with which I have retained the literal and earliest sense of all important terms used in these papers; for a word is usually well made at the time it is first wanted, its youngest meaning has in it the full strength of its youth: subsequent senses are commonly warped or weakened, and as a misused word always is liable to involve an obscured thought, and all careful thinkers, either on this or any other subject, are sure to have used their words accurately, the first condition, in order to be able to avail ourselves of their sayings at all, is a firm definition of terms. [Ruskin's note.]

2 In *Unto This Last* (Essay IV, §65) Ruskin had indicated what he thought were the relationships between political economy and morality: 'While the manly character and material value only form wealth by their conjunction, they have nevertheless a mutually destructive operation on each other. For the manly character is apt to ignore, or even cast away, the material value. . . And on the other hand, the material value is apt to undermine the manly character. . . I may, however, anticipate future conclusions, so far as to state that in a community regulated only by laws of demand and supply, but protected from open violence, the persons who become rich are, generally speaking, industrious, resolute, proud, covetous, prompt, methodical, sensible, unimaginative, insensitive, and ignorant. The persons who remain poor are the entirely foolish, the entirely wise, the idle, the reckless, the humble, the thoughtful, the dull, the imaginative, the sensitive, the well-informed, the improvident, the irregularly and impulsively wicked, the clumsy knave, the open thief, and the entirely merciful, just, and godly person.' Later, in the same Essay, Ruskin sums up his doctrine in the well-known words: 'There is no Wealth but Life' (§77).

idently built, perhaps improvidently; but, at all events, the wisdom or folly of the accumulation can only be determined by our having first clearly stated the aim of all economy, namely, the extension of life.

If the accumulation of money, or of exchangeable property, were a certain means of extending existence, it would be useless, in discussing economical questions, to fix our attention upon the more distant object — life — instead of the immediate one — money. But it is not so. Money may sometimes be accumulated at the cost of life, or by limitations of it; that is to say, either by hastening the deaths of men, or preventing their births. It is therefore necessary to keep clearly in view the ultimate object of economy; and to determine the expediency of minor operations with reference to that ulterior end.

It has been just stated that the object of political economy is the continuance not only of life, but of healthy and happy life. But all true happiness is both a consequence and cause of life: it is a sign of its vigour, and means of its continuance. All true suffering is in like manner a consequence and cause of death. I shall therefore, in future, use the word 'Life' singly: but let it be understood to include in its signification the happiness and power of the entire human nature, body and soul.

That human nature, as its Creator made it, and maintains it wherever His laws are observed, is entirely harmonious. No physical error can be more profound, no moral error more dangerous, than that involved in the monkish doctrine of the opposition of body to soul. No soul can be perfect in an imperfect body; no body perfect without perfect soul. Every right action and true thought sets the seal of its beauty on person and face; every wrong action and foul thought its seal of distortion; and the various aspects of humanity might be read as plainly as a printed history, were it not that the impressions are so complex that it must always in some cases — and, in the present state of our knowledge, in all cases — be impossible to decipher them completely. Nevertheless, the face of a consistently just, and of a consistently unjust person, may always be rightly discerned at a glance; and if the qualities are continued by descent through a generation or two, there arises a complete distinction of race. Both moral and physical qualities are communicated by descent, far more than they can be developed by education (though both may be destroyed for want of education), and there is as yet no ascertained limit to the nobleness of person and mind which the human creature may attain, by persevering observance of the laws of God respecting its birth and training.

We must therefore yet farther define the aim of political economy to be 'The multiplication of human life at the highest standard.' It might at first seem questionable whether we should endeavour to maintain a small number of persons of the highest type of beauty and intelligence, or a larger number of an inferior class. But I shall be able to show in the sequel, that the way to maintain the largest number is first to aim at the highest standard. Determine the noblest type of man, and aim simply at maintaining the largest possible number of persons of that class, and it will be found that the largest possible number of every healthy subordinate class must necessarily be produced also.

The perfect type of manhood, as just stated, involves the perfections (whatever we may hereafter determine these to be) of his body, affections, and intelligence. The material things, therefore, which it is the object of political economy to produce, and use (or accumulate for use), are things which serve either to sustain and comfort the body, or exercise rightly the affections and form the intelligence.[3]

3. It may be observed, in anticipation of some of our future results, that while some conditions of the affections are aimed at by the economists as final, others are necessary to him as his own instruments: as he obtains them in greater or less degree his own farther work becomes more

Whatever truly serves either of these purposes is 'useful' to man, wholesome, healthful, helpful, or holy. By seeking such things, man prolongs and increases his life upon the earth.

On the other hand, whatever does not serve either of these purposes, — much more whatever counteracts them, — is in like manner useless to man, unwholesome, unhelpful, or unholy; and by seeking such things man shortens and diminishes his life upon the earth. And neither with respect to things useful or useless can man's estimate of them alter their nature. Certain substances being good for his food, and others noxious to him, what he thinks or wishes respecting them can neither change their nature, nor prevent their power. If he eats corn, he will live; if nightshade, he will die. If he produce or make good and beautiful things, they will 're-create' him; (note the solemnity and weight of the word); if bad and ugly things, they will 'corrupt' or break in pieces — that is, in the exact degree of their power, kill him. For every hour of

or less possible. Such, for instance, are the fortifying virtues, which the wisest men of all time have, with more or less of distinctness, arranged under the general heads of Prudence, or Discretion (the spirit which discerns and adopts rightly); Justice (the spirit which rules and divides rightly); Fortitude (the spirit which persists and endures rightly); and Temperance (the spirit which stops and refuses rightly); or in shorter terms still, the virtues which teach how to consist, assist, persist, and desist. These outermost virtues are not only the means of protecting and prolonging life itself, but they are the chief guards or sources of the material means of life, and are the visible governing powers and princes of economy. Thus (reserving detailed statements for the sequel) precisely according to the number of just men in a nation, is their power of avoiding either intestine or foreign war. All disputes may be peaceably settled, if a sufficient number of persons have been trained to submit to the principles of justice. The necessity for war is in direct ratio to the number of unjust persons who are incapable of determining a quarrel but by violence. Whether the injustice take the form of the desire of dominion, or of refusal to submit to it, or of lust of territory, or lust of money, or of mere irregular passion and wanton will, the result is economically the same — loss of the quantity of power and life consumed in repressing the injustice, as well as of that requiring to be repressed, added to the material and moral destruction caused by the fact of war. The early civil wars of England, and the existing war in America, are curious examples — these under monarchical, this under republican institutions — of the results of the want of education of large masses of nations in principles of justice. This latter war, especially, may perhaps at last serve for some visible, or if that be impossible (for the Greeks told us that Plutus was blind, as Dante that he was speechless), some feelable proof that true political economy is an ethical, and by no means

a commercial business. The Americans imagined themselves to know somewhat of money-making; bowed low before their Dollar, expecting Divine help from it, more than potent — even omnipotent. Yet all the while this apparently tangible, was indeed an imaginary Deity, — and had they shown the substance of him to any true economist, or even true mineralogist, they would have been told, long years ago, — 'Alas, gentlemen, this that you are gaining is not gold — not a particle of it. It is yellow, and glittering, and like enough to be the real metal, — but see — it is *brittle* catgold, "iron firestone." Out of this, heap it as high as you will, you will get so much steel and brimstone — nothing else, and in a year or two, when (had you known but a little of right economy) you might have had quiet rooftrees over your heads, and a fair account at your banker's, you shall instead have to sleep a-field, under red tapestries, costliest, yet comfortless; and at your banker's find deficit at compound interest.' But the mere dread or distrust resulting from the want of the inner virtues of Faith and Charity among nations, is often no less costly than war itself. The fear which France and England have of each other costs each nation about fifteen millions sterling annually, besides various paralyses of commerce; that sum being spent in the manufacture of means of destruction instead of means of production. There is no more reason in the nature of things that France and England should be hostile to each other than that England and Scotland should be, or Lancashire and Yorkshire; and the reciprocal terrors of the opposite sides of the English Channel are neither more necessary, more economical, nor more virtuous than the old riding and reiving on opposite flanks of the Cheviots, or than England's own weaving for herself of crowns of thorn from the stems of her Red and White Roses. [Ruskin's note.]

labour, however enthusiastic or well intended, which he spends for that which is not bread, so much possibility of life is lost to him. His fancies, likings, beliefs, however brilliant, eager, or obstinate, are of no avail if they are set on a false object. Of all that he has laboured for, the eternal law of heaven and earth measures out to him for reward, to the utmost atom, that part which he ought to have laboured for, and withdraws from him (or enforces on him, it may be) inexorably that part which he ought not to have laboured for. The dust and chaff are all, to the last speck, winnowed away, and on his summer threshing-floor stands his heap of corn; little or much, not according to his labour, but to his discretion. No 'commercial arrangements,' no painting of surfaces nor alloying of substances, will avail him a pennyweight. Nature asks him calmly and inevitably, What have you found, or formed — the right thing or the wrong? By the right thing you shall live; by the wrong you shall die.

To thoughtless persons it seems otherwise. The world looks to them as if they could cozen[4] it out of some ways and means of life. But they cannot cozen IT: they can only cozen their neighbours. The world is not to be cheated of a grain; not so much as a breath of its air can be drawn surreptitiously. For every piece of wise work done, so much life is granted; for every piece of foolish work, nothing; for every piece of wicked work, so much death. This is as sure as the courses of day and night. But when the means of life are once produced, men, by their various struggles and industries of accumulation or exchange, may variously gather, waste, restrain, or distribute them; necessitating, in proportion to the waste or restraint, accurately so much more death. The rate and range of additional death is measured by the rate and range of waste, and is inevitable; — the only question (determined mostly by fraud in peace, and force in war) is, Who is to die, and how?

Such being the everlasting law of human existence, the essential work of the political economist is to determine what are in reality useful or life giving things, and by what degrees and kinds of labour they are attainable and distributable. This investigation divides itself under three great heads; — the studies, namely, of the phenomena, first, of WEALTH; secondly, of MONEY; and thirdly, of RICHES.

These terms are often used as synonymous, but they signify entirely different things. 'Wealth' consists of things in themselves valuable; 'Money,' of documentary claims to the possession of such things; and 'Riches' is a relative term, expressing the magnitude of the possessions of one person or society as compared with those of other persons or societies.

The study of Wealth is a province of natural science: — it deals with the essential properties of things.

The study of Money is a province of commercial science: — it deals with the conditions of engagement and exchange

The study of Riches is a province of moral science: — it deals with the due relations of men to each other in regard of material possessions; and with the just laws of their association for purposes of labour.

I shall in this paper shortly sketch out the range of subjects which will come before us as we follow these three branches of inquiry.

SECTION I

WEALTH

Wealth, it has been said, consists of things essentially valuable. We now, therefore, need a definition of 'value.'

Value signifies the strength or 'availing' of anything towards the sustaining of life, and is always twofold; that is to say, primarily, INTRINSIC, and secondarily, EFFECTUAL.

4. *cozen*: to cheat or defraud.

The reader must, by anticipation, be warned against confusing value with cost, or with price. Value is the life-giving power of anything; cost, the quantity of labour required to produce it; price, the quantity of labour which its possessor will take in exchange for it. Cost and price are commercial conditions, to be studied under the head of money.

Intrinsic value is the absolute power of anything to support life. A sheaf of wheat of given quality and weight has in it a measurable power of sustaining the substance of the body; a cubic foot of pure air, a fixed power of sustaining its warmth; and a cluster of flowers of given beauty a fixed power of enlivening or animating the senses and heart.

It does not in the least affect the intrinsic value of the wheat, the air, or the flowers, that men refuse or despise them. Used or not, their own power is in them, and that particular power is in nothing else.

But, in order that this value of theirs may become effectual, a certain state is necessary in the recipient of it. The digesting, breathing, and perceiving functions must be perfect in the human creature before the food, air, or flowers can become of their full value to it. The production of effectual value, therefore, always involves two needs: first, the production of a thing essentially useful; then the production of the capacity to use it. Where the intrinsic value and acceptant capacity come together there is Effectual value, or wealth; where there is either no intrinsic value, or no acceptant capacity, there is no effectual value; that is to say, no wealth. A horse is no wealth to us if we cannot ride, nor a picture if we cannot see, nor can any noble thing be wealth, except to a noble person. As the aptness of the user increases, the effectual value of the thing used increases; and in its entirety can coexist only with perfect skill of use, or harmony of nature. The effectual value of a given quantity of any commodity existing in the world at any moment is therefore a mathematical function of the capacity existing in the human race to enjoy it. Let its intrinsic value be represented by x, and the recipient faculty by y; its effectual value is $x\ y$, in which the sum varies as either coefficient varies, is increased by either's increase,[5] and cancelled by either's absence.

Valuable material things may be conveniently referred to five heads:

1. Land, with its associated air, water, and organisms.
2. Houses, furniture, and instruments.
3. Stored or prepared food and medicine, and articles of bodily luxury, including clothing.
4. Books.
5. Works of art.

We shall enter into separate inquiry as to the conditions of value under each of these heads. The following sketch of the entire subject may be useful for future reference.

1. Land. Its value is twofold.

A. As producing food and mechanical power.

B. As an object of sight and thought, producing intellectual power.

A. Its value, as a means of producing food and mechanical power, varies with its form (as mountain or plain), with its substance (in soil or mineral contents), and with its climate. All these conditions of intrinsic value, in order to give effectual value, must be known and complied with by the men who have to deal with it; but at any given time and place, the intrinsic value is fixed: such and such a piece of land, with its associated lakes and seas, rightly treated in surface and substance, can produce precisely so much food and power, and no more.

5. With this somewhat strange and ungeometrical limitation, however, which, here expressed for the moment in the briefest terms, we must afterwards trace in detail, — the $x\ y$ may be indefinitely increased by the increase of y only; but not by the increase of x, unless y increase also in a fixed proportion. [Ruskin's note.]

Its surface treatment (agriculture) and substance treatment (practical geology and chemistry) are the first roots of economical science. By surface treatment, however, I mean more than agriculture as commonly understood; I mean land and sea culture; — dominion over both the fixed and the flowing fields; — perfect acquaintance with the laws of climate, and of vegetable and animal growth in the given tracts of earth or ocean, and of their relations to those of other districts; such relations regulating especially the production of those articles of food which, being in each particular spot producible in the highest perfection, will bring the best price in commercial exchanges.

B. The second element of value in land is its beauty, united with such conditions of space and form as are necessary for exercise, or pleasant to the eye, associated with vital organism.

Land of the highest value in these respects is that lying in temperate climates, and boldly varied in form; removed from unhealthy or dangerous influences (as of miasm or volcano); and capable of sustaining a rich fauna and flora. Such land, carefully tended by the hand of man, so far as to remove from it unsightliness and evidences of decay; guarded from violence, and inhabited, under man's affectionate protection, by every kind of living creature that can occupy it in peace, forms the most precious 'property' that human beings can possess.

The determination of the degree in which these two elements of value can be united in land, or in which either element must, or should, in particular cases, be sacrificed to the other, forms the most important branch of economical inquiry respecting preferences of things.

2. Buildings, furniture, and instruments.

The value of buildings consists, A. In permanent strength, with convenience of form, of size, and of position; so as to render employment peaceful, social intercourse easy, temperature and air healthy. The advisable or possible magnitude of cities and mode of their distribution in squares, streets, courts, &c.; the relative value of sites of land, and the modes of structure which are healthiest and most permanent, have to be studied under this head.

B. The value of buildings consists secondarily in historical association and architectural beauty, of which we have to examine the influence on manners and life.

The value of instruments consists, A. In their power of shortening labour, or otherwise accomplishing (as ships) what human strength unaided could not. The kinds of work which are severally best accomplished by hand or by machine; — the effect of machinery in gathering and multiplying population, and its influence on the minds and bodies of such population; together with the conceivable uses of machinery on a colossal scale in accomplishing mighty and useful works, hitherto unthought of, such as the deepening of large river channels; — changing the surface of mountainous districts; — irrigating tracts of desert in the torrid zone; — breaking up, and thus rendering capable of quicker fusion edges of ice in the northern and southern Arctic seas, &c., so rendering parts of the earth habitable which hitherto have not been so, are to be studied under this head.

B. The value of instruments is, secondarily, in their aid to abstract sciences. The degree in which the multiplication of such instruments should be encouraged, so as to make them, if large, easy of access to numbers (as costly telescopes), or so cheap as that they might, in a serviceable form, become a common part of the furniture of households, is to be considered under this head.

3. Food, medicine, and articles of luxury. Under this head we shall have to examine the possible methods of obtaining pure and nourishing food in such security

and equality of supply as to avoid both waste and famine: then the economy of medicine and just range of sanitary law: finally the economy of luxury, partly an æsthetic and partly an ethical question.

4. Books. The value of these consists,

A. In their power of preserving and communicating the knowledge of facts.

B. In their power of exciting vital or noble emotion and intellectual action. They have also their corresponding negative powers of disguising and effacing the memory of facts, and killing the noble emotions, or exciting base ones. Under these two heads we have to consider the economical and educational value, positive and negative, of literature; — the means of producing and educating good authors, and the means and advisability of rendering good books generally accessible, and directing the reader's choice to them.

5. Works of art. The value of these is of the same nature as that of books, but the laws of their production and possible modes of distribution are very different, and require separate examination.

SECTION II

MONEY

Under this head, we shall have to examine the laws of currency and exchange; of which I will note here the first principles.

Money has been inaccurately spoken of as merely a means of circulation. It is, on the contrary, an expression of right. It is not wealth, but a documentary claim to wealth, being the sign[6] of the relative quantities of it, or of the labour producing it, to which, at a given time, persons or societies are entitled.

If all the money in the world, notes and gold, were destroyed in an instant, it would leave the world neither richer nor poorer than it was. But it would leave the individual inhabitants of it in different relations.

6. Always, and necessarily, an imperfect sign; but capable of approximate accuracy if rightly ordered. [Ruskin's note.]

Money is, therefore, correspondent in its nature to the title-deed of an estate. Though the deed be burned, the estate still exists, but the right to it has become disputable.

The worth of money remains unchanged, as long as the proportion of the quantity of existing money to the quantity of existing wealth or available labour which it professes to represent, remains unchanged.

If the wealth increases, but not the money, the worth of the money increases; if the money increases, but not the wealth, the worth of the money diminishes.

Money, therefore, cannot be arbitrarily multiplied, any more than title-deeds can. So long as the existing wealth or available labour is not fully represented by the currency, the currency may be increased without diminution of the assigned worth of its pieces. But when the existing wealth or available labour is once fully represented, every piece of money thrown into circulation diminishes the worth of every other existing piece, in the proportion it bears to the number of them, provided the new piece be received with equal credit; if not, the depreciation of worth takes place exclusively in the new piece, according to the inferiority of its credit.

When, however, new money, composed of some substance of supposed intrinsic value (as of gold), is brought into the market, or when new notes are issued which are supposed to be deserving of credit, the desire to obtain the money will, under certain circumstances, stimulate industry: an additional quantity of wealth is immediately produced, and if this be in proportion to the new claims advanced, the value of the existing currency is undepreciated. If the stimulus given be so great as to produce more goods than are proportioned to the additional coinage, the worth of the existing currency will be raised.

Arbitrary control and issues of currency affect the production of wealth, by

acting on the hopes and fears of men, and are, under certain circumstances, wise. But the issue of additional currency to meet the exigencies of immediate expense, is merely one of the disguised forms of borrowing or taxing. It is, however, in the present low state of economical knowledge, often possible for Governments to venture on an issue of currency, when they could not venture on an additional loan or tax, because the real operation of such issue is not understood by the people, and the pressure of it is irregularly distributed, and with an unperceived gradation.

Finally. The use of substances of intrinsic value as the materials of a currency, is a barbarism; — a remnant of the conditions of barter, which alone can render commerce possible among savage nations. It is, however, still necessary, partly as a mechanical check on arbitrary issues; partly as a means of exchanges with foreign nations. In proportion to the extension of civilisation, and increase of trustworthiness in Governments, it will cease. So long as it exists, the phenomena of the cost and price of the articles used for currency, are mingled with those of currency itself, in an almost inextricable manner; and the worth of money in the market is affected by multitudinous accidental circumstances, which have been traced, with more or less success by writers on commercial operations: but with these variations the true political economist has no more to do than an engineer fortifying a harbour of refuge against Atlantic tide, has to concern himself with the cries or quarrels of children who dig pools with their fingers for its ebbing currents among the sand.

SECTION III
RICHES

According to the various industry, capacity, good fortune, and desires of men, they obtain greater or smaller share of, and claim upon, the wealth of the world.

The inequalities between these shares, always in some degree just and necessary, may be either restrained by law (or circumstance) within certain limits; or may increase indefinitely.

Where no moral or legal restraint is put upon the exercise of the will and intellect of the stronger, shrewder, or more covetous men, these differences become ultimately enormous. But as soon as they become so distinct in their extremes as that, on one side, there shall be manifest redundance of possession, and on the other manifest pressure of need, — the terms 'riches' and 'poverty' are used to express the opposite states; being contrary only in the manner of the terms 'warmth' and 'cold'; which neither of them imply an actual degree, but only a relation to other degrees, of temperature.

Respecting riches, the economist has to inquire, first, into the advisable modes of their collection; secondly, into the advisable modes of their administration.

Respecting the collection of national riches, he has to inquire, first, whether he is justified in calling the nation rich, if the quantity of money it possesses relatively to that possessed by other nations be large, irrespectively of the manner of its distribution. Or does the mode of distribution in any wise affect the nature of the riches? Thus, if the king alone be rich — suppose Crœsus [7] or Mausolus [8] — are the Lydians and Carians therefore a rich nation? Or if one or two slave-masters be rich, and the nation be otherwise composed of slaves, is it to be called a rich nation? For if not, and the ideas of a certain mode of distribution or operation in the riches, and of a certain degree of freedom in the people, enter into our idea of riches as attributed to a people, we shall

7. A king of Lydia in the 6th century B.C., having vast wealth.
8. King of Caria in the 4th century B.C.; his tomb was one of the Seven Wonders of the World.

have to define the degree of fluency or circulative character which is essential to their vitality; and the degree of independence of action required in their possessors. Questions which look as if they would take time in answering. And farther. Since there are two modes in which the inequality, which is indeed the condition and constituent of riches, may be established — namely, by increase of possession on the one side, and by decrease of it on the other — we have to inquire, with respect to any given state of riches, precisely in what manner the correlative poverty was produced: that is to say, whether by being surpassed only, or being depressed also; and if by being depressed, what are the advantages, or the contrary, conceivable in the depression. For instance, it being one of the commonest advantages of being rich to entertain a number of servants, we have to inquire, on the one side, what economical process produced the riches of the master; and on the other, what economical process produced the poverty of the persons who serve him; and what advantages each (on his own side) derives from the result.

These being the main questions touching the collection of riches, the next, or last, part of the inquiry is into their administration.

They have in the main three great economical powers which require separate examination: namely, the powers of selection, direction, and provision.

A. Their power of SELECTION relates to things of which the supply is limited (as the supply of best things is always). When it becomes matter of question to whom such things are to belong, the richest person has necessarily the first choice, unless some arbitrary mode of distribution be otherwise determined upon. The business of the economist is to show how this choice may be a wise one.

B. Their power of DIRECTION arises out of the necessary relation of rich men to poor, which ultimately, in one way or another, involves the direction of, or authority over, the labour of the poor; and this nearly as much over their mental as their bodily labour. The business of the economist is to show how this direction may be a Just one.

C. Their power of PROVISION or 'preparatory sight' (for pro-accumulation is by no means necessarily provision) is dependent upon their redundance, which may of course by active persons be made available in preparation for future work or future profit; in which function riches have generally received the name of capital; that is to say, of head-, or source-material. The business of the economist is to show how this provision may be a Distant one.

The examination of these three functions of riches will embrace every final problem of political economy; — and, above, or before all, this curious and vital problem, — whether, since the wholesome action of riches in these three functions will depend (it appears) on the Wisdom, Justice, and Far-sightedness of the holders; and it is by no means to be assumed that persons primarily rich, must therefore be just and wise, — it may not be ultimately possible so, or somewhat so, to arrange matters, as that persons primarily just and wise, should therefore be rich?

Such being the general plan of the inquiry before us, I shall not limit myself to any consecutive following of it, having hardly any good hope of being able to complete so laborious a work as it must prove to me; but from time to time, as I have leisure, shall endeavour to carry forward this part or that, as may be immediately possible; indicating always with accuracy the place which the particular essay will or should take in the completed system.

SESAME AND LILIES [1]

LECTURE I

Sesame

OF KINGS' TREASURIES

'You shall each have a cake of sesame, — and ten pound.'

LUCIAN: *The Fisherman.*

1. MY first duty this evening is to ask your pardon for the ambiguity of title under which the subject of this lecture has been announced: for indeed I am not going to talk of kings, known as regnant, nor of treasuries, understood to contain wealth; but of quite another order of royalty, and another material of riches, than those usually acknowledged. I had even intended to ask your attention for a little while on trust, and (as sometimes one contrives, in taking a friend to see a favourite piece of scenery) to hide what I wanted most to show, with such imperfect cunning as I might, until we unexpectedly reached the best point of view by winding paths. But — and as also I have heard it said, by men practised in public address, that hearers are never so much fatigued as by the endeavour to follow a speaker who gives them no clue to his purpose — I will take the slight mask off at once, and tell you plainly that I want to speak to you about the treasures hidden in books; and about the way we find them, and the way we lose them. A grave subject, you will say; and a wide one! Yes; so wide that I shall make no effort to touch the compass of it. I will try only to bring before you a few simple thoughts about reading, which press themselves upon me every day more deeply, as I watch the course of the public mind with respect to our daily enlarging means of education; and the answeringly wider spreading on the levels, of the irrigation of literature.

2. It happens that I have practically some connection with schools for different classes of youth; and I receive many letters from parents respecting the education of their children. In the mass of these letters I am always struck by the precedence which the idea of a 'position in life' takes above all other thoughts in the parents' — more especially in the mothers' — minds. 'The education befitting such and such a *station in life*' — this is the phrase, this the object, always. They never seek, as far as I can make out, an education good in itself; even the conception of abstract rightness in training rarely seems reached by the writers. But, an education 'which shall keep a good coat on my son's back; — which shall enable him to ring with confidence the visitors' bell at doubled-belled doors; which shall result ultimately in establishment of a doubled-belled door to his own house; — in a word, which shall lead to advancement in life; — *this* we pray for on bent knees — and this is *all* we pray for.' It never seems to occur to the parents that there may be an education which, in itself, *is* advancement in Life; — that any other than that may perhaps be advancement in Death; and that this essential education might be more easily got, or given, than they fancy, if they set about it in the right way; while it is for no price, and by no favour, to be got, if they set about it in the wrong.

3. Indeed, among the ideas most prevalent and effective in the mind of this busiest of countries, I suppose the first — at least that which is confessed with the greatest frankness, and put forward as the fittest stimulus to youthful exertion — is this of 'Advancement in life.' May I ask you to consider with me what this idea

1. The sesame is an East Indian hairy herb, with small flat seeds. In the story of Ali Baba and the Forty Thieves (*Arabian Nights*), the thieves obtain access to a cave, which contains their treasure, by pronouncing the magic words, 'Open, Sesame!'

practically includes, and what it should include?

Practically, then, at present, 'advancement in life' means, becoming conspicuous in life; — obtaining a position which shall be acknowledged by others to be respectable or honourable. We do not understand by this advancement, in general, the mere making of money, but the being known to have made it; not the accomplishment of any great aim, but the being seen to have accomplished it. In a word, we mean the gratification of our thirst for applause. That thirst, if the last infirmity of noble minds,[2] is also the first infirmity of weak ones; and, on the whole, the strongest impulsive influence of average humanity: the greatest efforts of the race have always been traceable to the love of praise, as its greatest catastrophes to the love of pleasure.

4. I am not about to attack or defend this impulse. I want you only to feel how it lies at the root of effort; especially of all modern effort. It is the gratification of vanity which is, with us, the stimulus of toil, and balm of repose; so closely does it touch the very springs of life that the wounding of our vanity is always spoken of (and truly) as in its measure *mortal*; we call it 'mortification,' using the same expression which we should apply to a gangrenous and incurable bodily hurt. And although few of us may be physicians enough to recognise the various effect of this passion upon health and energy, I believe most honest men know, and would at once acknowledge, its leading power with them as a motive. The seaman does not commonly desire to be made captain only because he knows he can manage the ship better than any other sailor on board. He wants to be made captain that he may be *called* captain. The clergyman does not usually want to be made a bishop only because he believes that no other hand can, as firmly as his, direct the diocese through its difficulties. He wants to be made bishop primarily that he may be called 'My Lord.' And a prince does not usually desire to enlarge, or a subject to gain, a kingdom, because he believes that no one else can as well serve the State, upon its throne; but, briefly, because he wishes to be addressed as 'Your Majesty,' by as many lips as may be brought to such utterance.

5. This, then, being the main idea of 'advancement in life,' the force of it applies, for all of us, according to our station, particularly to that secondary result of such advancement which we call 'getting into good society.' We want to get into good society, not that we may have it, but that we may be seen in it; and our notion of its goodness depends primarily on its conspicuousness.

Will you pardon me if I pause for a moment to put what I fear you may think an impertinent question? I never can go on with an address unless I feel, or know, that my audience are either with me or against me: I do not much care which, in beginning; but I must know where they are; and I would fain find out, at this instant, whether you think I am putting the motives of popular action too low. I am resolved, to-night, to state them low enough to be admitted as probable; for whenever, in my writings on Political Economy, I assume that a little honesty, or generosity — or what used to be called 'virtue' — may be calculated upon as a human motive of action, people always answer me, saying, 'You must not calculate on that: that is not in human nature: you must not assume anything to be common to men but acquisitiveness and jealousy; no other feeling ever has influence on them, except accidentally, and in matters out of the way of business.' I begin, accordingly, to-night low in the scale of motives; but I must know if you think me right in doing so. Therefore, let me ask those who admit the love of praise to be usually the strongest motive in men's minds in seeking advancement, and the

2. *Cf.* Milton, *Lycidas*, 71.

honest desire of doing any kind of duty to be an entirely secondary one, to hold up their hands. (*About a dozen hands held up — the audience, partly, not being sure the lecturer is serious, and, partly, shy of expressing opinion.*) I am quite serious — I really do want to know what you think; however, I can judge by putting the reverse question. Will those who think that duty is generally the first, and love of praise the second, motive, hold up their hands? (*One hand reported to have been held up, behind the lecturer.*) Very good; I see you are with me, and that you think I have not begun too near the ground. Now, without teasing you by putting farther question, I venture to assume that you will admit duty as at least a secondary or tertiary motive. You think that the desire of doing something useful, or obtaining some real good, is indeed an existent collateral idea, though a secondary one, in most men's desire of advancement. You will grant that moderately honest men desire place and office, at least in some measure, for the sake of beneficent power; and would wish to associate rather with sensible and well-informed persons than with fools and ignorant persons, whether they are seen in the company of the sensible ones or not. And finally, without being troubled by repetition of any common truisms about the preciousness of friends, and the influence of companions, you will admit, doubtless, that according to the sincerity of our desire that our friends may be true, and our companions wise, — and in proportion to the earnestness and discretion with which we choose both, — will be the general chances of our happiness and usefulness.

6. But, granting that we had both the will and the sense to choose our friends well, how few of us have the power! or, at least, how limited, for most, is the sphere of choice! Nearly all our associations are determined by chance, or necessity; and restricted within a narrow circle. We cannot know whom we would; and those whom we know, we cannot have at our side when we most need them All the higher circles of human intelligence are, to those beneath, only momentarily and partially open. We may, by good fortune, obtain a glimpse of a great poet, and hear the sound of his voice; or put a question to a man of science, and be answered good-humouredly. We may intrude ten minutes' talk on a cabinet minister, answered probably with words worse than silence, being deceptive; or snatch, once or twice in our lives, the privilege of throwing a bouquet in the path of a princess, or arresting the kind glance of a queen. And yet these momentary chances we covet; and spend our years, and passions, and powers in pursuit of little more than these; while, meantime, there is a society continually open to us, of people who will talk to us as long as we like, whatever our rank or occupation; — talk to us in the best words they can choose, and of the things nearest their hearts. And this society, because it is so numerous and so gentle, and can be kept waiting round us all day long, — kings and statesmen lingering patiently, not to grant audience, but to gain it! — in those plainly furnished and narrow ante-rooms, our bookcase shelves, — we make no account of that company, — perhaps never listen to a word they would say, all day long!

7. You may tell me, perhaps, or think within yourselves, that the apathy with which we regard this company of the noble, who are praying us to listen to them; and the passion with which we pursue the company, probably of the ignoble, who despise us, or who have nothing to teach us, are grounded in this, — that we can see the faces of the living men, and it is themselves, and not their sayings, with which we desire to become familiar. But it is not so. Suppose you never were to see their faces; — suppose you could be put behind a screen in the statesman's cabinet, or the prince's chamber, would you not be glad to listen to

their words, though you were forbidden to advance beyond the screen? And when the screen is only a little less, folded in two instead of four, and you can be hidden behind the cover of the two boards that bind a book, and listen all day long, not to the casual talk, but to the studied, determined, chosen addresses of the wisest of men; — this station of audience, and honourable privy council, you despise!

8. But perhaps you will say that it is because the living people talk of things that are passing, and are of immediate interest to you, that you desire to hear them. Nay; that cannot be so, for the living people will themselves tell you about passing matters, much better in their writings than in their careless talk. Yet I admit that this motive does influence you, so far as you prefer those rapid and ephemeral writings to slow and enduring writings, — books, properly so called. For all books are divisible into two classes, the books of the hour, and the books of all time. Mark this distinction — it is not one of quality only. It is not merely the bad book that does not last, and the good one that does. It is a distinction of species. There are good books for the hour, and good ones for all time; bad books for the hour, and bad ones for all time. I must define the two kinds before I go farther.

9. The good book of the hour, then, — I do not speak of the bad ones, — is simply the useful or pleasant talk of some person whom you cannot otherwise converse with, printed for you. Very useful often, telling you what you need to know; very pleasant often, as a sensible friend's present talk would be. These bright accounts of travels; good-humoured and witty discussions of question; lively or pathetic story-telling in the form of novel; firm fact-telling, by the real agents concerned in the events of passing history; — all these books of the hour, multiplying among us as education becomes more general, are a peculiar possession of the present age: we ought to be entirely thankful for them, and entirely ashamed of ourselves if we make no good use of them. But we make the worst possible use if we allow them to usurp the place of true books: for, strictly speaking, they are not books at all, but merely letters or newspapers in good print. Our friend's letter may be delightful, or necessary, to-day: whether worth keeping or not, is to be considered. The newspaper may be entirely proper at breakfast time, but assuredly it is not reading for all day. So, though bound up in a volume, the long letter which gives you so pleasant an account of the inns, and roads, and weather last year at such a place, or which tells you that amusing story, or gives you the real circumstances of such and such events, however valuable for occasional reference, may not be, in the real sense of the word, a 'book' at all, nor, in the real sense, to be 'read.' A book is essentially not a talking thing, but a written thing; and written, not with the view of mere communication, but of permanence. The book of talk is printed only because its author cannot speak to thousands of people at once; if he could, he would — the volume is mere *multiplication* of his voice. You cannot talk to your friend in India; if you could, you would; you write instead: that is mere *conveyance* of voice. But a book is written, not to multiply the voice merely, not to carry it merely, but to perpetuate it. The author has something to say which he perceives to be true and useful, or helpfully beautiful. So far as he knows, no one has yet said it; so far as he knows, no one else can say it. He is bound to say it, clearly and melodiously if he may; clearly at all events. In the sum of his life he finds this to be the thing, or group of things, manifest to him; — this, the piece of true knowledge, or sight, which his share of sunshine and earth has permitted him to seize. He would fain set it down forever; engrave it on rock, if he could; saying, 'This is the best of me; for the rest, I ate, and drank, and slept, loved, and hated,

like another; my life was as the vapour, and is not; but this I saw and knew: this, if anything of mine, is worth your memory.' That is his 'writing'; it is, in his small human way, and with whatever degree of true inspiration is in him, his inscription, or scripture. That is a 'Book.'

10. Perhaps you think no books were ever so written?

But, again, I ask you, do you at all believe in honesty, or at all in kindness, or do you think there is never any honesty or benevolence in wise people? None of us, I hope, are so unhappy as to think that. Well, whatever bit of a wise man's work is honestly and benevolently done, that bit is his book or his piece of art.[3] It is mixed always with evil fragments — ill-done, redundant, affected work. But if you read rightly, you will easily discover the true bits, and those *are* the book.

11. Now books of this kind have been written in all ages by their greatest men: — by great leaders, great statesmen, and great thinkers. These are all at your choice; and Life is short. You have heard as much before; — yet have you measured and mapped out this short life and its possibilities? Do you know, if you read this, that you cannot read that — that what you lose to-day you cannot gain to-morrow? Will you go and gossip with your housemaid, or your stable-boy, when you may talk with queens and kings; or flatter yourselves that it is with any worthy consciousness of your own claims to respect, that you jostle with the hungry and common crowd for *entrée* here, and audience there, when all the while this eternal court is open to you, with its society, wide as the world, multitudinous as its days, the chosen, and the mighty, of every place and time? Into that you may enter always; in that you may take fellowship and rank according to your wish; from that, once entered into it, you can never be outcast but by your own fault; by your aristocracy of companionship there, your own inherent aristocracy will be assuredly tested, and the motives with which you strive to take high place in the society of the living, measured, as to all the truth and sincerity that are in them, by the place you desire to take in this company of the Dead.

12. 'The place you desire,' and the place you *fit yourself for*, I must also say; because, observe, this court of the past differs from all living aristocracy in this: — it is open to labour and to merit, but to nothing else. No wealth will bribe, no name overawe, no artifice deceive, the guardian of those Elysian gates. In the deep sense, no vile or vulgar person ever enters there. At the portières of that silent Faubourg St. Germain,[4] there is but brief question: — 'Do you deserve to enter? Pass. Do you ask to be the companion of nobles? Make yourself noble, and you shall be. Do you long for the conversation of the wise? Learn to understand it, and you shall hear it. But on other terms? — no. If you will not rise to us, we cannot stoop to you. The living lord may assume courtesy, the living philosopher explain his thought to you with considerate pain; but here we neither feign nor interpret: you must rise to the level of our thoughts if you would be gladdened by them, and share our feelings, if you would recognise our presence.'

13. This, then, is what you have to do, and I admit that it is much. You must, in a word, love these people, if you are to be among them. No ambition is of any use. They scorn your ambition. You must love them, and show your love in these two following ways:

(1) — First, by a true desire to be taught by them, and to enter into their thoughts. To enter into theirs, observe; not to find your own expressed by them. If the person who wrote the book is not wiser than you, you need not read it; if he be, he will think differently from you in many respects.

3. Note this sentence carefully, and compare the *Queen of the Air*, §106. [Ruskin's note.]

4. An aristocratic section of Paris.

(2) Very ready we are to say of a book, 'How good this is — that's exactly what I think!' But the right feeling is, 'How strange that is! I never thought of that before, and yet I see it is true; or if I do not now, I hope I shall, some day.' But whether thus submissively or not, at least be sure that you go to the author to get at *his* meaning, not to find yours. Judge it afterwards, if you think yourself qualified to do so; but ascertain it first. And be sure also, if the author is worth anything, that you will not get at his meaning all at once; — nay, that at his whole meaning you will not for a long time arrive in any wise. Not that he does not say what he means, and in strong words too; but he cannot say it all; and what is more strange, *will* not, but in a hidden way and in parables, in order that he may be sure you want it. I cannot quite see the reason of this, nor analyse that cruel reticence in the breasts of wise men which makes them always hide their deeper thought. They do not give it to you by way of help, but of reward; and will make themselves sure that you deserve it before they allow you to reach it. But it is the same with the physical type of wisdom, gold. There seems, to you and me, no reason why the electric forces of the earth should not carry whatever there is of gold within it at once to the mountain tops, so that kings and people might know that all the gold they could get was there; and without any trouble of digging, or anxiety, or chance, or waste of time, cut it away, and coin as much as they needed. But Nature does not manage it so. She puts it in little fissures in the earth, nobody knows where: you may dig long and find none; you must dig painfully to find any.

14. And it is just the same with men's best wisdom. When you come to a good book, you must ask yourself, 'Am I inclined to work as an Australian miner would? Are my pickaxes and shovels in good order, and am I in good trim myself, my sleeves well up to the elbow, and my breath good, and my temper?' And, keeping the figure a little longer, even at cost of tiresomeness, for it is a thoroughly useful one, the metal you are in search of being the author's mind or meaning, his words are as the rock which you have to crush and smelt in order to get at it. And your pickaxes are your own care, wit, and learning; your smelting furnace is your own thoughtful soul. Do not hope to get at any good author's meaning without those tools and that fire; often you will need sharpest, finest chiselling, and patientest fusing, before you can gather one grain of the metal.

15. And therefore, first of all, I tell you earnestly and authoritatively (I *know* I am right in this), you must get into the habit of looking intensely at words, and assuring yourself of their meaning, syllable by syllable — nay letter by letter. For though it is only by reason of the opposition of letters in the function of signs, to sounds in the function of signs, that the study of books is called 'literature,' and that a man versed in it is called, by the consent of nations, a man of letters instead of a man of books, or of words, you may yet connect with that accidental nomenclature this real fact: — that you might read all the books in the British Museum (if you could live long enough) and remain an utterly 'illiterate,' uneducated person; but that if you read ten pages of a good book, letter by letter, — that is to say, with real accuracy, — you are for evermore in some measure an educated person. The entire difference between education and non-education (as regards the merely intellectual part of it), consists in this accuracy. A well-educated gentleman may not know many languages, — may not be able to speak any but his own, — may have read very few books. But whatever language he knows, he knows precisely; whatever word he pronounces, he pronounces rightly; above all, he is learned in the *peerage* of words; knows the words of true descent and an-

cient blood, at a glance, from words of modern canaille; remembers all their ancestry, their intermarriages, distant relationships, and the extent to which they were admitted, and offices they held, among the national noblesse of words at any time, and in any country. But an uneducated person may know, by memory, many languages, and talk them all, and yet truly know not a word of any, — not a word even of his own. An ordinarily clever and sensible seaman will be able to make his way ashore at most ports; yet he has only to speak a sentence of any language to be known for an illiterate person: so also the accent, or turn of expression of a single sentence, will at once mark a scholar. And this is so strongly felt, so conclusively admitted, by educated persons, that a false accent or a mistaken syllable is enough, in the parliament of any civilised nation, to assign to a man a certain degree of inferior standing for ever.

16. And this is right; but it is a pity that the accuracy insisted on is not greater, and required to a serious purpose. It is right that a false Latin quantity should excite a smile in the House of Commons; but it is wrong that a false English *meaning* should *not* excite a frown there. Let the accent of words be watched; and closely: let their meaning be watched more closely still, and fewer will do the work. A few words well chosen and distinguished, will do work that a thousand cannot, when every one is acting, equivocally, in the function of another. Yes; and words, if they are not watched, will do deadly work sometimes. There are masked words droning and skulking about us in Europe just now, — (there never were so many, owing to the spread of a shallow, blotching, blundering, infectious 'information,' or rather deformation, everywhere, and to the teaching of catechisms and phrases at schools instead of human meanings) — there are masked words abroad, I say, which nobody understands, but which everybody uses, and most people will also fight for, live for, or even die for, fancying they mean this or that, or the other, of things dear to them: for such words wear chameleon cloaks — 'ground-lion'[5] cloaks, of the colour of the ground of any man's fancy: on that ground they lie in wait, and rend him with a spring from it. There never were creatures of prey so mischievous, never diplomatists so cunning, never poisoners so deadly, as these masked words; they are the unjust stewards of all men's ideas: whatever fancy or favourite instinct a man most cherishes, he gives to his favourite masked word to take care of for him; the word at last comes to have an infinite power over him, — you cannot get at him but by its ministry.
