17. And in languages so mongrel in breed as the English, there is a fatal power of equivocation put into men's hands, almost whether they will or no, in being able to use Greek or Latin words for an idea when they want it to be awful; and Saxon or otherwise common words when they want it to be vulgar. What a singular and salutary effect, for instance, would be produced on the minds of people who are in the habit of taking the Form of the 'Word' they live by, for the Power of which that Word tells them, if we always either retained, or refused, the Greek form 'biblos,' or 'biblion,' as the right expression for 'book' — instead of employing it only in the one instance in which we wish to give dignity to the idea, and translating it into English everywhere else. How wholesome it would be for many simple persons, if, in such places (for instance) as Acts xix. 19, we retained the Greek expression, instead of translating it, and they had to read — 'Many of them also which used curious arts, brought their bibles together, and burnt them before all men; and they counted the price of them, and found it fifty thousand pieces of silver!' Or if, on the other hand,

5. 'ground-lion' is a literal translation of 'chameleon' from the Greek.

we translated where we retain it, and always spoke of 'The Holy Book,' instead of 'Holy Bible,' it might come into more heads than it does at present, that the Word of God, by which the heavens were, of old, and by which they are now kept in store,[6] cannot be made a present of to anybody in morocco binding; nor sown on any wayside by help either of steam plough or steam press; but is nevertheless being offered to us daily, and by us with contumely refused; and sown in us daily, and by us, as instantly as may be, choked.

18. So, again, consider what effect has been produced on the English vulgar mind by the use of the sonorous Latin form 'damno,' in translating the Greek κατακρίνω, when people charitably wish to make it forcible; and the substitution of the temperate 'condemn' for it, when they choose to keep it gentle; and what notable sermons have been preached by illiterate clergymen on — 'He that believeth not shall be damned'; though they would shrink with horror from translating Heb. xi. 7, 'The saving of his house, by which he damned the world'; or John viii. 10–11, 'Woman, hath no man damned thee? She saith, No man, Lord. Jesus answered her, Neither do I damn thee: go and sin no more.' And divisions in the mind of Europe, which have cost seas of blood and in the defence of which the noblest souls of men have been cast away in frantic desolation, countless as forest leaves — though, in the heart of them, founded on deeper causes — have nevertheless been rendered practically possible, namely, by the European adoption of the Greek word for a public meeting, 'ecclesia,' to give peculiar respectability to such meetings, when held for religious purposes; and other collateral equivocations, such as the vulgar English one of using the word 'priest' as a contraction for 'presbyter.'

19. Now, in order to deal with words rightly, this is the habit you must form. Nearly every word in your language has been first a word of some other language — of Saxon, German, French, Latin, or Greek (not to speak of eastern and primitive dialects). And many words have been all these — that is to say, have been Greek first, Latin next, French or German next, and English last: undergoing a certain change of sense and use on the lips of each nation; but retaining a deep vital meaning, which all good scholars feel in employing them, even at this day. If you do not know the Greek alphabet, learn it; young or old — girl or boy — whoever you may be, if you think of reading seriously (which, of course, implies that you have some leisure at command), learn your Greek alphabet; then get good dictionaries of all these languages, and whenever you are in doubt about a word, hunt it down patiently. Read Max Müller's[7] lectures thoroughly, to begin with; and, after that, never let a word escape you that looks suspicious. It is severe work; but you will find it, even at first, interesting, and at last endlessly amusing. And the general gain to your character, in power and precision, will be quite incalculable.

Mind, this does not imply knowing, or trying to know, Greek or Latin, or French. It takes a whole life to learn any language perfectly. But you can easily ascertain the meanings through which the English word has passed; and those which in a good writer's work it must still bear.

20. And now, merely for example's sake, I will, with your permission, read a few lines of a true book with you, carefully; and see what will come out of them. I will take a book perfectly known to you all. No English words are more familiar to us, yet few perhaps have been read with less sincerity. I will take these few following lines of *Lycidas*: —

6. 2 Peter, iii.5–7. [Ruskin's note.]

7. Max Müller (1823–1900), Anglo-German Orientalist and comparative philologist, published a *Manual of Comparative Philology* in 1838, and in 1861 and 1863 delivered at the Royal Institution two courses of lectures on the *Science of Language*.

'Last came, and last did go,
The pilot of the Galilean lake;
Two massy keys he bore of metals twain,
(The golden opes, the iron shuts amain),
He shook his mitred locks, and stern bespake,
"How well could I have spar'd for thee, young swain,
Enow of such as for their bellies' sake
Creep, and intrude, and climb into the fold!
Of other care they little reckoning make,
Than how to scramble at the shearers' feast,
And shove away the worthy bidden guest;
Blind mouths! that scarce themselves know how to hold
A sheep-hook, or have learn'd aught else, the least
That to the faithful herdsman's art belongs!
What recks it them? What need they? They are sped;
And when they list, their lean and flashy songs
Grate on their scrannel pipes of wretched straw;
The hungry sheep look up, and are not fed,
But, swoln with wind, and the rank mist they draw,
Rot inwardly, and foul contagion spread;
Besides what the grim wolf with privy paw
Daily devours apace, and nothing said."'

Let us think over this passage, and examine its words.

First, is it not singular to find Milton assigning to St. Peter, not only his full episcopal function, but the very types of it which Protestants usually refuse most passionately? His 'mitred' locks! Milton was no Bishop-lover; how comes St. Peter to be 'mitred'? 'Two massy keys he bore.' Is this, then, the power of the keys claimed by the Bishops of Rome? and is it acknowledged here by Milton only in a poetical licence, for the sake of its picturesqueness, that he may get the gleam of the golden keys to help his effect?

Do not think it. Great men do not play stage tricks with doctrines of life and death: only little men do that. Milton means what he says; and means it with his might too — is going to put the whole strength of his spirit presently into the saying of it. For though not a lover of false bishops, he *was* a lover of true ones; and the Lake-pilot is here, in his thoughts, the type and head of true episcopal power. For Milton reads that text, 'I will give unto thee the keys of the kingdom of Heaven'[8] quite honestly. Puritan though he be, he would not blot it out of the book because there have been bad bishops; nay, in order to understand *him*, we must understand that verse first; it will not do to eye it askance, or whisper it under our breath, as if it were a weapon of an adverse sect. It is a solemn, universal assertion, deeply to be kept in mind by all sects. But perhaps we shall be better able to reason on it if we go on a little farther, and come back to it. For clearly this marked insistence on the power of the true episcopate is to make us feel more weightily what is to be charged against the false claimants of episcopate; or generally, against false claimants of power and rank in the body of the clergy; they who, 'for their bellies' sake, creep, and intrude, and climb into the fold.'

21. Never think Milton uses those three words to fill up his verse, as a loose writer would. He needs all the three; — specially those three, and no more than those — 'creep,' and 'intrude,' and 'climb'; no other words would or could serve the turn, and no more could be added. For they exhaustively comprehend the three classes, correspondent to the three characters, of men who dishonestly seek ecclesiastical power. First, those who '*creep*' into the fold; who do not care for office, nor name, but for secret influence, and do all things

8. See *Matthew*, xvi,19.

occultly and cunningly, consenting to any servility of office or conduct, so only that they may intimately discern, and unawares direct, the minds of men. Then those who 'intrude' (thrust, that is) themselves into the fold, who by natural insolence of heart, and stout eloquence of tongue, and fearlessly perseverant self-assertion, obtain hearing and authority with the common crowd. Lastly, those who 'climb,' who by labour and learning, both stout and sound, but selfishly exerted in the cause of their own ambition, gain high dignities and authorities, and become 'lords over the heritage,' though not 'ensamples to the flock.'

22. Now go on: —

'Of other care they little reckoning make,
Than how to scramble at the shearers' feast.
Blind mouths — '

I pause again, for this is a strange expression; a broken metaphor, one might think, careless and unscholarly.

Not so: its very audacity and pithiness are intended to make us look close at the phrase and remember it. Those two monosyllables express the precisely accurate contraries of right character, in the two great offices of the Church — those of bishop and pastor.

A 'Bishop' means a 'person who sees.'

A 'Pastor' means a 'person who feeds.'

The most unbishoply character a man can have is therefore to be Blind.

The most unpastoral is, instead of feeding, to want to be fed, — to be a Mouth.

Take the two reverses together, and you have 'blind mouths.' We may advisably follow out this idea a little. Nearly all the evils in the Church have arisen from bishops desiring *power* more than *light*. They want authority, not outlook. Whereas their real office is not to rule; though it may be vigorously to exhort and rebuke: it is the king's office to rule; the bishop's office is to *oversee* the flock; to number it, sheep by sheep; to be ready always to give full account of it. Now it is clear he cannot give account of the souls, if he has not so much as numbered the bodies, of his flock. The first thing, therefore, that a bishop has to do is at least to put himself in a position in which, at any moment, he can obtain the history, from childhood, of every living soul in his diocese, and of its present state. Down in that back street, Bill and Nancy, knocking each other's teeth out! — Does the bishop know all about it? Has he his eye upon them? Has he *had* his eye upon them? Can he circumstantially explain to us how Bill got into the habit of beating Nancy about the head? If he cannot, he is no bishop, though he had a mitre as high as Salisbury steeple; he is no bishop, — he has sought to be at the helm instead of the masthead; he has no sight of things. 'Nay,' you say, 'it is not his duty to look after Bill in the back street.' What! the fat sheep that have full fleeces — you think it is only those he should look after, while (go back to your Milton) 'the hungry sheep look up, and are not fed, besides what the grim wolf, with privy paw' (bishops knowing nothing about it), 'daily devours apace, and nothing said'?

'But that's not our idea of a bishop.'[9] Perhaps not; but it was St. Paul's; and it was Milton's. They may be right, or we may be; but we must not think we are reading either one or the other by putting our meaning into their words.

23. I go on.

'But, swoln with wind, and the rank mist they draw.'

This is to meet the vulgar answer that 'if the poor are not looked after in their bodies, they are in their souls; they have spiritual food.'

And Milton says, 'They have no such thing as spiritual food; they are only swollen with wind.' At first you may think

9. Compare the 13th Letter in *Time and Tide*. [Ruskin's note.]

that is a coarse type, and an obscure one. But again, it is a quite literally accurate one. Take up your Latin and Greek dictionaries, and find out the meaning of 'Spirit.' It is only a contraction of the Latin word 'breath,' and an indistinct translation of the Greek word for 'wind.' The same word is used in writing, 'The wind bloweth where it listeth'; and in writing, 'So is every one that is born of the Spirit';[10] born of the *breath*, that is; for it means the breath of God, in soul and body. We have the true sense of it in our words 'inspiration' and 'expire.' Now, there are two kinds of breath with which the flock may be filled; God's breath, and man's. The breath of God is health, and life, and peace to them, as the air of heaven is to the flocks on the hills; but man's breath — the word which *he* calls spiritual, — is disease and contagion to them, as the fog of the fen. They rot inwardly with it; they are puffed up by it, as a dead body by the vapours of its own decomposition. This is literally true of all false religious teaching; the first and last, and fatalest sign of it, is that 'puffing up.' Your converted children, who teach their parents; your converted convicts, who teach honest men; your converted dunces, who, having lived in cretinous stupefaction half their lives, suddenly awaking to the fact of there being a God, fancy themselves therefore His peculiar people and messengers, your sectarians of every species, small and great, Catholic or Protestant, or high church or low, in so far as they think themselves exclusively in the right and others wrong; and pre-eminently, in every sect, those who hold that men can be saved by thinking rightly instead of doing rightly, by word instead of act, and wish instead of work: — these are the true fog children — clouds, these, without water; bodies, these, of putrescent vapour and skin, without blood or flesh: blown bag-pipes for the fiends to pipe with — corrupt, and corrupting, — 'Swollen with wind, and the rank mist they draw.'

24. Lastly, let us return to the lines respecting the power of the keys, for now we can understand them. Note the difference between Milton and Dante in their interpretation of this power: for once, the latter is weaker in thought; he supposes *both* the keys to be of the gate of heaven; one is of gold, the other of silver: they are given by St. Peter to the sentinel angel; and it is not easy to determine the meaning either of the substances of the three steps of the gate, or of the two keys. But Milton makes one, of gold, the key of heaven; the other, of iron, the key of the prison in which the wicked teachers are to be bound who 'have taken away the key of knowledge, yet entered not in themselves.'

We have seen that the duties of bishop and pastor are to see and feed; and, of all who do so it is said, 'He that watereth, shall be watered also himself.'[11] But the reverse is truth also. He that watereth not, shall be *withered* himself, and he that seeth not, shall himself be shut out of sight, — shut into the perpetual prison-house. And that prison opens here, as well as hereafter: he who is to be bound in heaven must first be bound on earth. That command to the strong angels, of which the rock-apostle is the image, 'Take him, and bind him hand and foot, and cast him out,'[12] issues, in its measure, against the teacher, for every help withheld, and for every truth refused, and for every falsehood enforced; so that he is more strictly fettered the more he fetters, and farther outcast, as he more and more misleads, till at last the bars of the iron cage close upon him, and as 'the golden opes, the iron shuts amain.'

25. We have got something out of the lines, I think, and much more is yet to be found in them; but we have done enough by way of example of the kind

10. *John*, iii,8.

11. *Proverbs*, xi,25.

12. *Matthew*, xxii,13.

of word-by-word examination of your author which is rightly called 'reading'; watching every accent and expression, and putting ourselves always in the author's place, annihilating our own personality, and seeking to enter into his, so as to be able assuredly to say, 'Thus Milton thought,' not 'Thus *I* thought, in misreading Milton.' And by this process you will gradually come to attach less weight to your own 'Thus I thought' at other times. You will begin to perceive that what *you* thought was a matter of no serious importance; — that your thoughts on any subject are not perhaps the clearest and wisest that could be arrived at thereupon: — in fact, that unless you are a very singular person, you cannot be said to have any 'thoughts' at all; that you have no materials for them, in any serious matters; [13] — no right to 'think,' but only to try to learn more of the facts. Nay, most probably all your life (unless, as I said, you are a singular person) you will have no legitimate right to an 'opinion' on any business, except that instantly under your hand. What must of necessity be done, you can always find out, beyond question, how to do. Have you a house to keep in order, a commodity to sell, a field to plough, a ditch to cleanse? There need be no two opinions about these proceedings; it is at your peril if you have not much more than an 'opinion' on the way to manage such matters. And also, outside of your own business, there are one or two subjects on which you are bound to have but one opinion. That roguery and lying are objectionable, and are instantly to be flogged out of the way whenever discovered; — that covetousness and love of quarrelling are dangerous dispositions even in children, and deadly dispositions in men and nations; — that in the end, the God of heaven and earth loves active, modest, and kind people, and hates idle, proud, greedy, and cruel ones; — on these general facts you are bound to have but one, and that a very strong, opinion. For the rest, respecting religions, governments, sciences, arts, you will find that, on the whole, you can know NOTHING, — judge nothing; that the best you can do, even though you may be a well-educated person, is to be silent, and strive to be wiser every day, and to understand a little more of the thoughts of others, which so soon as you try to do honestly, you will discover that the thoughts even of the wisest are very little more than pertinent questions. To put the difficulty into a clear shape, and exhibit to you the grounds for *in*decision, that is all they can generally do for you! — and well for them and for us, if indeed they are able 'to mix the music with our thoughts, and sadden us with heavenly doubts.' This writer, from whom I have been reading to you, is not among the first or wisest: he sees shrewdly as far as he sees, and therefore it is easy to find out his full meaning; but with the greater men, you cannot fathom their meaning; they do not even wholly measure it themselves, — it is so wide. Suppose I had asked you, for instance, to seek for Shakespeare's opinion, instead of Milton's, on this matter of Church authority? — or for Dante's? Have any of you, at this instant, the least idea what either thought about it? Have you ever balanced the scene with the bishops in *Richard III.* against the character of Cranmer? [14] the description of St. Francis and St. Dominic against that of him who made Vergil wonder to gaze upon him, — 'disteso, tanto vilmente, nell' eterno esilio': or of him

13. Modern 'Education' for the most part signifies giving people the faculty of thinking wrong on every conceivable subject of importance to them. [Ruskin's note.]

14. See *Richard III*, III, vii. — Thomas Cranmer (1489–1556), Archbishop of Canterbury, supported Henry VIII in the King's demand for a divorce from Catherine of Aragon and in his claim to be the supreme head of the Church of England. With this, Ruskin parallels the repellent allegiance of the two bishops to Richard, Duke of Gloucester, in the latter's criminal seizure of royal power.

whom Dante stood beside, 'come 'l frate che confessa lo perfido assassin?'[15] Shakespeare and Alighieri knew men better than most of us, I presume! They were both in the midst of the main struggle between the temporal and spiritual powers. They had an opinion, we may guess. But where is it? Bring it into court! Put Shakespeare's or Dante's creed into articles, and send *it* up for trial by the Ecclesiastical Courts!

26. You will not be able, I tell you again, for many and many a day, to come at the real purposes and teaching of these great men; but a very little honest study of them will enable you to perceive that what you took for your own 'judgment' was mere chance prejudice, and drifted, helpless, entangled weed of castaway thought; nay, you will see that most men's minds are indeed little better than rough heath wilderness, neglected and stubborn, partly barren, partly overgrown with pestilent brakes, and venomous, wind-sown herbage of evil surmise; that the first thing you have to do for them, and yourself, is eagerly and scornfully to set fire to *this*; burn all the jungle into wholesome ash-heaps, and then plough and sow. All the true literary work before you, for life, must begin with obedience to that order, 'Break up your fallow ground, and *sow not among thorns*.'[16]

27. (II.[17]) — Having then faithfully listened to the great teachers, that you may enter into their Thoughts, you have yet this higher advance to make; — you have to enter into their Hearts. As you go to them first for clear sight, so you must stay with them, that you may share at last their just and mighty Passion. Passion, or 'sensation.' I am not afraid of the word; still less of the thing. You have heard many outcries against sensation lately; but, I can tell you, it is not less sensation we want, but more. The ennobling difference between one man and another, — between one animal and another, — is precisely in this, that one feels more than another. If we were sponges, perhaps sensation might not be easily got for us; if we were earthworms, liable at every instant to be cut in two by the spade, perhaps too much sensation might not be good for us. But, being human creatures, it *is* good for us; nay, we are only human in so far as we are sensitive, and our honour is precisely in proportion to our passion.

28. You know I said of that great and pure society of the Dead, that it would allow 'no vain or vulgar person to enter there.' What do you think I meant by a 'vulgar' person? What do you yourselves mean by 'vulgarity'? You will find it a fruitful subject of thought; but, briefly, the essence of all vulgarity lies in want of sensation. Simple and innocent vulgarity is merely an untrained and undeveloped bluntness of body and mind; but in true inbred vulgarity, there is a dreadful callousness, which, in extremity, becomes capable of every sort of bestial habit and crime, without fear, without pleasure, without horror, and without pity. It is in the blunt hand and the dead heart, in the diseased habit, in the hardened conscience, that men become vulgar; they are for ever vulgar, precisely in proportion as they are incapable of sympathy, — of quick understanding, — of all that, in deep insistence on the common, but most accurate term, may be called the 'tact' or 'touch-faculty,' of body and soul: that tact which the Mimosa has in trees, which the pure woman has above all creatures; fineness and fullness of sensation beyond reason; — the guide and sanctifier of reason itself. Reason can but determine what is true: — it is the God-given passion of humanity which alone can recognise what God has made good.

29. We come then to the great con-

15. *Inf.* xxiii.125,126; xix.49,50. [Ruskin's note. Transl.: 'stretched on the cross so vilely in that place of eternal exile'; 'like the friar who is hearing the confession of a treacherous murderer.']

16. *Jeremiah*, iv,3.

17. Compare ¶13 above. [Ruskin's note.]

course of the Dead, not merely to know from them what is True, but chiefly to feel with them what is just. Now, to feel with them, we must be like them; and none of us can become that without pains. As the true knowledge is disciplined and tested knowledge, — not the first thought that comes, so the true passion is disciplined and tested passion, — not the first passion that comes. The first that come are the vain, the false, the treacherous; if you yield to them they will lead you wildly and far in vain pursuit, in hollow enthusiasm, till you have no true purpose and no true passion left. Not that any feeling possible to humanity is in itself wrong, but only wrong when undisciplined. Its nobility is in its force and justice; it is wrong when it is weak, and felt for paltry cause. There is a mean wonder, as of a child who sees a juggler tossing golden balls; and this is base, if you will. But do you think that the wonder is ignoble, or the sensation less, with which every human soul is called to watch the golden balls of heaven tossed through the night by the Hand that made them? There is a mean curiosity, as of a child opening a forbidden door, or a servant prying into her master's business; — and a noble curiosity, questioning, in the front of danger, the source of the great river beyond the sand, — the place of the great continents beyond the sea; — a nobler curiosity still, which questions of the source of the River of Life, and of the space of the Continent of Heaven, — things which 'the angels desire to look into.'[18] So the anxiety is ignoble, with which you linger over the course and catastrophe of an idle tale; but do you think the anxiety is less, or greater, with which you watch, or *ought* to watch, the dealings of fate and destiny with the life of an agonised nation? Alas! it is the narrowness, selfishness, minuteness, of your sensation that you have to deplore in England at this day; — sensation which spends itself in bouquets and speeches; in revellings and junketings; in sham fights and gay puppet shows, while you can look on and see noble nations murdered, man by man, without an effort or a tear.[19]

30. I said 'minuteness' and 'selfishness' of sensation, but it would have been enough to have said 'injustice' or 'unrighteousness' of sensation. For as in nothing is a gentleman better to be discerned from a vulgar person, so in nothing is a gentle nation (such nations have been) better to be discerned from a mob, than in this, — that their feelings are constant and just, results of due contemplation, and of equal thought. You can talk a mob into anything; its feelings may be — usually are — on the whole, generous and right; but it has no foundation for them, no hold of them; you may tease or tickle it into any, at your pleasure; it thinks by infection, for the most part, catching an opinion like a cold, and there is nothing so little that it will not roar itself wild about, when the fit is on; — nothing so great but it will forget in an hour, when the fit is past. But a gentleman's or a gentle nation's, passions are just, measured, and continuous. A great nation, for instance, does not spend its entire national wits for a couple of months in weighing evidence of a single ruffian's having done a single murder;[20] and for a couple of years see its own children murder each other by their thousands or tens of thousands a day, considering only what the effect is likely to be on the price of cotton,[21] and caring no wise to determine which side of battle is in the wrong. Neither does a great nation send its poor little boys to jail for stealing six walnuts;

18. *I Peter*, i,12.

19. Allusion to the oppression of Poland by Prussia in 1864.

20. During October and November 1864, the newspapers were filled with the trial of one Muller who had murdered a Mr. Briggs.

21. Allusion to the American Civil War (1861–65), which, because the North blockaded the Southern ports, was depriving Lancashire of its raw cotton, and was thus raising the price of cotton.

and allow its bankrupts to steal their hundreds of thousands with a bow, and its bankers, rich with poor men's savings, to close their doors 'under circumstances over which they have no control,' with a 'by your leave'; and large landed estates to be bought by men who have made their money by going with armed steamers up and down the China Seas, selling opium at the cannon's mouth,[22] and altering, for the benefit of the foreign nation, the common highwayman's demand of 'your money *or* your life,' into that of 'your money *and* your life.' Neither does a great nation allow the lives of its innocent poor to be parched out of them by fog fever, and rotted out of them by dunghill plague, for the sake of sixpence a life extra per week to its landlords;[23] and then debate, with drivelling tears, and diabolical sympathies, whether it ought not piously to save, and nursingly cherish, the lives of its murderers. Also, a great nation having made up its mind that hanging is quite the wholesomest process for its homicides in general, can yet with mercy distinguish between the degrees of guilt in homicides; and does not yelp like a pack of frost-pinched wolf-cubs on the blood-track of an unhappy crazed boy, or grey-haired clodpate Othello, 'perplexed i' the extreme,'[24] at the very moment that it is sending a Minister of the Crown to make polite speeches to a man who is bayoneting young girls in their father's sight, and killing noble youths in cool blood, faster than a country butcher kills lambs in spring.[25] And, lastly, a great nation does not mock Heaven and its Powers, by pretending belief in a revelation which asserts the love of money to be the root of *all* evil, and declaring, at the same time, that it is actuated, and intends to be actuated, in all chief national deeds and measures, by no other love.

31. My friends, I do not know why any of us should talk about reading. We want some sharper discipline than that of reading; but, at all events, be assured, we cannot read. No reading is possible for a people with its mind in this state. No sentence of any great writer is intelligible to them. It is simply and sternly impossible for the English public, at this moment, to understand any thoughtful writing, — so incapable of thought has it become in its insanity of avarice. Happily, our disease is, as yet, little worse than this incapacity of thought; it is not corruption of the inner nature; we ring true still, when anything strikes home to us; and though the idea that everything should 'pay' has infected our every purpose so deeply, that even when we would play the good Samaritan, we never take out our twopence and give them to the host, without saying, 'When I come again, thou shalt give me fourpence,' there is a capacity of noble passion left in our hearts' core. We show it in our work, — in our war, — even in those unjust domestic affections which make us furious at a small private wrong, while we are polite to a boundless public one: we are still industrious to the last hour of the day, though we add the gambler's fury to the labourer's patience; we are still brave to the death, though incapable of discerning true cause for battle; and are still true in affection to our own flesh, to the death, as the sea-monsters are, and the rock-eagles. And there is hope for a nation while this can be still said of it. As long as it holds its life in its hand, ready to give it for its honour (though a foolish honour), for its love (though a selfish love), and for its business (though a base business), there is hope for it. But

22. Allusion to the 'opium wars' (1840–50), between Great Britain and China, due to the attempt of the latter to stop importation of opium.

23. See note at end of lecture. I have put it in large type, because the course of matters since it was written has made it perhaps better worth attention. [Ruskin's note.]

24. See *Othello*, V,ii,345.

25. Allusion to the appointment of a new British ambassador to Russia in September 1864. The Russian regime in Poland was at this time extremely oppressive.

hope only; for this instinctive, reckless virtue cannot last. No nation can last, which has made a mob of itself, however generous at heart. It must discipline its passions, and direct them, or they will discipline *it*, one day, with scorpion whips. Above all, a nation cannot last as a money-making mob: it cannot with impunity, — it cannot with existence, — go on despising literature, despising science, despising art, despising nature, despising compassion, and concentrating its soul on Pence. Do you think these are harsh or wild words? Have patience with me but a little longer. I will prove their truth to you, clause by clause.

32. (I.) I say first we have despised literature. What do we, as a nation, care about books? How much do you think we spend altogether on our libraries, public or private, as compared with what we spend on our horses? If a man spends lavishly on his library, you call him mad — a bibliomaniac. But you never call any one a horsemaniac, though men ruin themselves every day by their horses, and you do not hear of people ruining themselves by their books. Or, to go lower still, how much do you think the contents of the book-shelves of the United Kingdom, public and private, would fetch, as compared with the contents of its wine-cellars? What position would its expenditure on literature take, as compared with its expenditure on luxurious eating? We talk of food for the mind, as of food for the body; now a good book contains such food inexhaustibly; it is a provision for life, and for the best part of us; yet how long most people would look at the best book before they would give the price of a large turbot for it? though there have been men who have pinched their stomachs and bared their backs to buy a book, whose libraries were cheaper to them, I think, in the end, than most men's dinners are. We are few of us put to such trial, and more the pity; for, indeed, a precious thing is all the more precious to us if it has been won by work or economy; and if public libraries were half as costly as public dinners, or books cost the tenth part of what bracelets do, even foolish men and women might sometimes suspect there was good in reading, as well as in munching and sparkling: whereas the very cheapness of literature is making even wise people forget that if a book is worth reading, it is worth buying. No book is worth anything which is not worth *much*; nor is it serviceable, until it has been read, and re-read, and loved, and loved again; and marked, so that you can refer to the passages you want in it, as a soldier can seize the weapon he needs in an armoury, or a housewife bring the spice she needs from her store. Bread of flour is good: but there is bread, sweet as honey, if we would eat it, in a good book; and the family must be poor indeed which, once in their lives, cannot, for such multipliable barley-loaves, pay their baker's bill. We call ourselves a rich nation, and we are filthy and foolish enough to thumb each other's books out of circulating libraries!

33. (II.) I say we have despised science. 'What!' you exclaim, 'are we not foremost in all discovery,[26] and is not the whole world giddy by reason, or unreason, of our inventions?' Yes; but do you suppose that is national work? That work is all done *in spite of* the nation: by private people's zeal and money. We are glad enough, indeed, to make our profit of science; we snap up anything in the way of a scientific bone that has meat on it, eagerly enough; but if the scientific man comes for a bone or a crust to *us*, that is another story. What have we publicly done for science? We are obliged to know what o'clock it is, for the safety of our ships, and therefore we pay for an observatory; and we allow ourselves, in the

26. Since this was written, the answer has become definitely — No; we have surrendered the field of Arctic discovery to the Continental nations, as being ourselves too poor to pay for ships. [Ruskin's note.]

person of our Parliament, to be annually tormented into doing something, in a slovenly way, for the British Museum; sullenly apprehending that to be a place for keeping stuffed birds in, to amuse our children. If anybody will pay for their own telescope, and resolve another nebula, we cackle over the discernment as if it were our own; if one in ten thousand of our hunting squires suddenly perceives that the earth was indeed made to be something else than a portion for foxes, and burrows in it himself, and tells us where the gold is, and where the coals, we understand that there is some use in that; and very properly knight him: but is the accident of his having found out how to employ himself usefully any credit to *us*? (The negation of such discovery among his brother squires may perhaps be some *dis*credit to us, if we would consider of it.) But if you doubt these generalities, here is one fact for us all to meditate upon, illustrative of our love of science. Two years ago there was a collection of the fossils of Solenhofen to be sold in Bavaria; the best in existence, containing many specimens unique for perfectness, and one unique as an example of a species (a whole kingdom of unknown living creatures being announced by that fossil). This collection, of which the mere market worth, among private buyers, would probably have been some thousand or twelve hundred pounds, was offered to the English nation for seven hundred: but we would not give seven hundred, and the whole series would have been in the Munich Museum at this moment, if Professor Owen [27] had not, with loss of his own time, and patient tormenting of the British public in person of its representatives, got leave to give four hundred pounds at once, and himself become answerable for the other three! which the said public will doubtless pay him eventually, but sulkily, and caring nothing about the matter all the while; only always ready to cackle if any credit comes of it. Consider, I beg of you, arithmetically, what this fact means. Your annual expenditure for public purposes (a third of it for military apparatus), is at least 50 millions. Now £700 is to £50,000,000 roughly, as seven pence to two thousand pounds. Suppose then, a gentleman of unknown income, but whose wealth was to be conjectured from the fact that he spent two thousand a year on his park-walls and footmen only, professes himself fond of science; and that one of his servants comes eagerly to tell him that an unique collection of fossils, giving clue to a new era of creation, is to be had for the sum of seven pence sterling; and that the gentleman, who is fond of science, and spends two thousand a year on his park, answers, after keeping his servant waiting several months, 'Well! I'll give you fourpence for them, if you will be answerable for the extra threepence yourself, till next year!'

34. (III.) I say you have despised Art! 'What!' you again answer, 'have we not Art exhibitions, miles long? and do we not pay thousands of pounds for single pictures? and have we not Art schools and institutions, more than ever nation had before?' Yes, truly, but all that is for the sake of the shop. You would fain sell canvas as well as coals, and crockery as well as iron; you would take every other nation's bread out of its mouth if you could; [28] not being able to do that, your ideal of life is to stand in the thorough-

27. I state this fact without Professor Owen's permission: which of course he could not with propriety have granted, had I asked it; but I consider it so important that the public should be aware of the fact, that I do what seems to me right, though rude. [Ruskin's note. — Sir Richard Owen (1804–92): naturalist, biologist, etc., whose chief works included *Lectures on Comparative Anatomy and Physiology of Invertebrates* (1843).]

28. That was our real idea of 'Free Trade' — 'All the trade to myself.' You find now that by 'competition' other people can manage to sell something as well as you — and now we call for Protection again. Wretches! [Ruskin's note.]

fares of the world, like Ludgate apprentices, screaming to every passer-by, 'What d'ye lack?' You know nothing of your own faculties or circumstances; you fancy that, among your damp, flat fat fields of clay, you can have as quick art-fancy as the Frenchman among his bronzed vines, or the Italian under his volcanic cliffs; — that Art may be learned as book-keeping is, and when learned, will give you more books to keep. You care for pictures, absolutely, no more than you do for the bills pasted on your dead walls. There is always room on the walls for the bills to be read, — never for the pictures to be seen. You do not know what pictures you have (by repute) in the country, nor whether they are false or true, nor whether they are taken care of or not; in foreign countries, you calmly see the noblest existing pictures in the world rotting in abandoned wreck — (in Venice you saw the Austrian guns deliberately pointed at the palaces containing them),[29] and if you heard that all the fine pictures in Europe were made into sand-bags tomorrow on the Austrian forts, it would not trouble you so much as the chance of a brace or two of game less in your own bags, in a day's shooting. That is your national love of Art.

35. (IV.) You have despised Nature; that is to say, all the deep and sacred sensations of natural scenery. The French revolutionists made stables of the cathedrals of France; you have made racecourses of the cathedrals of the earth. Your *one* conception of pleasure is to drive in railroad carriages round their aisles, and eat off their altars.[30] You have put a railroad bridge over the fall of Schaffhausen. You have tunneled the cliffs of Lucerne by Tell's chapel; you have destroyed the Clarens shore of the Lake of Geneva; there is not a quiet valley in England that you have not filled with bellowing fire; there is no particle left of English land which you have not trampled coal ashes into[31] — nor any foreign city in which the spread of your presence is not marked among its fair old streets and happy gardens by a consuming white leprosy of new hotels and perfumers' shops: the Alps themselves, which your own poets used to love so reverently, you look upon as soaped poles in a bear-garden, which you set yourselves to climb and slide down again, with 'shrieks of delight.' When you are past shrieking, having no human articulate voice to say you are glad with, you fill the quietude of their valleys with gunpowder blasts, and rush home, red with cutaneous eruption of conceit, and voluble with convulsive hiccough of self-satisfaction. I think nearly the two sorrowfullest spectacles I have ever seen in humanity, taking the deep inner significance of them, are the English mobs in the valley of Chamouni, amusing themselves with firing rusty howitzers; and the Swiss vintagers of Zurich expressing their Christian thanks for the gift of the vine, by assembling in knots in the 'towers of the vineyards,' and slowly loading and firing horse-pistols from morning till evening. It is pitiful to have dim conceptions of beauty; more pitiful, it seems to me, to have conceptions like these, of mirth.

36. Lastly. You despise compassion. There is no need of words of mine for proof of this. I will merely print one of the newspaper paragraphs which I am in the habit of cutting out and throwing into my store-drawer; here is one from a *Daily*

29. Allusion to the 'Italian Wars,' which began in 1848, and in which Venetia and other northern provinces sought independence from Austrian power.

30. I meant that the beautiful places of the world — Switzerland, Italy, South Germany, and so on — are, indeed, the truest cathedrals — places to be reverent in, and to worship in; and that we only care to drive through them; and to eat and drink at their most sacred places. [Ruskin's note.]

31. I was singularly struck, some years ago, by finding all the river shore at Richmond, in Yorkshire, black in its earth, from the mere drift of soot-laden air from places many miles away. [Ruskin's note.]

Telegraph of an early date this year (1867);[32] (date which, though by me carelessly left unmarked, is easily discoverable; for on the back of the slip, there is the announcement that 'yesterday the seventh of the special services of this year was performed by the Bishop of Ripon in St. Paul's'); it relates only one of such facts as happen now daily; this, by chance, having taken a form in which it came before the coroner. I will print the paragraph in red. Be sure, the facts themselves are written in that colour in a book which we shall all of us, literate or illiterate, have to read our page of, some day.

'An inquiry was held on Friday by Mr. Richards, deputy coroner, at the White Horse Tavern, Christ Church, Spitalfields, respecting the death of Michael Collins, aged 58 years. Mary Collins, a miserable-looking woman, said that she lived with the deceased and his son in a room at 2, Cobb's Court, Christ Church. Deceased was a "translator" of boots. Witness went out and bought old boots; deceased and his son made them into good ones, and then witness sold them for what she could get at the shops, which was very little indeed. Deceased and his son used to work night and day to try and get a little bread and tea, and pay for the room (2s. a week), so as to keep the home together. On Friday-night-week deceased got up from his bench and began to shiver. He threw down the boots, saying, "Somebody else must finish them when I am gone, for I can do no more." There was no fire, and he said, "I would be better if I was warm." Witness therefore took two pairs of translated boots[33] to sell at the shop, but she could only get 14d. for the two pairs, for the people at the shop said, "We must have our profit." Witness got 14 lb. of coal and a little tea and bread. Her son sat up the whole night to make the "translations," to get money, but deceased died on Saturday morning. The family never had enough to eat. — Coroner: "It seems to me deplorable that you did not go into the workhouse." Witness: "We wanted the comforts of our little home." A juror asked what the comforts were, for he only saw a little straw in the corner of the room, the windows of which were broken. The witness began to cry, and said that they had a quilt and other little things. The deceased said he never would go into the workhouse. In summer, when the season was good, they sometimes made as much as 10s. profit in the week. They then always saved towards the next week, which was generally a bad one. In winter they made not half so much. For three years they had been getting from bad to worse. — Cornelius Collins said that he had assisted his father since 1847. They used to work so far into the night that both nearly lost their eyesight. Witness now had a film over his eyes. Five years ago deceased applied to the parish for aid. The relieving officer gave him a 4 lb. loaf, and told him if he came again he should "get the stones."[34]

32. The original lecture referred to the *Morning Post*, February 13, 1865.

33. One of the things which we must very resolutely enforce, for the good of all classes, in our future arrangements, must be that they wear no 'translated' articles of dress. [Ruskin's note.]

34. This abbreviation of the penalty of useless labour is curiously coincident in verbal form with a certain passage which some of us may remember. It may, perhaps, be well to preserve beside this paragraph another cutting out of my store-drawer, from the *Morning Post*, of about a parallel date, Friday, March 10th, 1865: — 'The *salons* of Mme. C——, who did the honours with clever imitative grace and elegance, were crowded with princes, dukes, marquises, and counts — in fact, with the same *male* company as one meets at the parties of the Princess Metternich and Madame Drouyn de Lhuys. Some English peers and members of Parliament were present, and appeared to enjoy the animated and dazzlingly improper scene. On the second floor the supper tables were loaded with every delicacy of the season. That your readers may form some idea of the dainty fare of the Parisian demi-monde, I copy the menu of the supper, which was served to all the guests (about 200) seated at four o'clock. Choice

That disgusted deceased, and he would have nothing to do with them since. They got worse and worse until last Friday week, when they had not even a halfpenny to buy a candle. Deceased then lay down on the straw, and said he could not live till morning. — A juror: "You are dying of starvation yourself, and you ought to go into the house until the summer." Witness: "If we went in we should die. When we come out in the summer we should be like people dropped from the sky. No one would know us, and we would not have even a room. I could work now if I had food, for my sight would get better." Dr. G. P. Walker said deceased died from syncope, from exhaustion from want of food. The deceased had had no bedclothes. For four months he had had nothing but bread to eat. There was not a particle of fat in the body. There was no disease, but, if there had been medical attendance, he might have survived the syncope or fainting. The Coroner having remarked upon the painful nature of the case, the jury returned the following verdict: "That deceased died from exhaustion from want of food and the common necessaries of life; also through want of medical aid."'

37. 'Why would witness not go into the workhouse?' you ask. Well, the poor seem to have a prejudice against the workhouse which the rich have not; for, of course, every one who takes a pension from Government goes into the workhouse on a grand scale;[35] only the workhouses for the rich do not involve the idea of work, and should be called playhouses. But the poor like to die independently, it appears; perhaps if we made the play-houses for them pretty and pleasant enough, or gave them their pensions at home, and allowed them a little introductory peculation with the public money, their minds might be reconciled to the conditions. Meantime, here are the facts: we make our relief either so insulting to them, or so painful, that they rather die than take it at our hands; or, for third alternative, we leave them so untaught and foolish that they starve like brute creatures, wild and dumb, not knowing what to do, or what to ask. I say, you despise compassion; if you did not, such a newspaper paragraph would be as impossible in a Christian country as a deliberate assassination permitted in its public streets.[36] 'Christian' did I say? Alas! if

Yquem, Johannisberg, Laffitte, Tokay, and champagne of the finest vintages were served most lavishly throughout the morning. After supper dancing was resumed with increased animation, and the ball terminated with a *chaîne diabolique* and a *cancan d'enfer* at seven in the morning. (Morning-service — "Ere the fresh lawns appeared under the opening eyelids of the Morn. — ") Here is the menu: — "Consommé de volaille à la Bagration; 16 hors-d'œuvres variés. Bouchées à la Talleyrand. Saumons froids, sauce Ravigote. Filets de bœuf en Bellevue, timbales milanaises chaudfroid de gibier. Dindes truffées. Pâtés de foies gras, buissons d'écrevisses, salades vénétiennes, gelées blanches aux fruits, gâteaux mancini, parisiens et parisiennes. Fromages glacés. Ananas. Dessert."' [Ruskin's note.]

35. Please observe this statement, and think of it, and consider how it happens that a poor old woman will be ashamed to take a shilling a week from the country — but no one is ashamed to take a pension of a thousand a year. [Ruskin's note.]

36. I am heartily glad to see such a paper as the *Pall Mall Gazette* established; for the power of the press in the hands of highly educated men, in independent position, and of honest purpose, may indeed become all that it has been hitherto vainly vaunted to be. Its editor will therefore, I doubt not, pardon me, in that, by very reason of my respect for the journal, I do not let pass unnoticed an article in its third number, page 5, which was wrong in every word of it, with the intense wrongness which only an honest man can achieve who has taken a false turn of thought in the outset, and is following it, regardless of consequences. It contained at the end this notable passage: —

'The bread of affliction, and the water of affliction — aye, and the bedsteads and blankets of affliction, are the very utmost that the law ought to give to *outcasts merely as outcasts*.' I merely put beside this expression of the gentlemanly mind of England in 1865, a part of the message which Isaiah was ordered

we were but wholesomely *un*-Christian, it would be impossible: it is our imaginary Christianity that helps us to commit these crimes, for we revel and luxuriate in our faith, for the lewd sensation of it; dressing *it* up, like everything else, in fiction. The dramatic Christianity of the organ and aisle, of dawn-service and twilight-revival — the Christianity which we do not fear to mix the mockery of, pictorially, with our play about the devil, in our Satanellas,[37] — Roberts,[38] — Fausts; chanting hymns through traceried windows for background effect, and artistically modulating the 'Dio'[39] through variation on variation of mimicked prayer: (while we

to 'lift up his voice like a trumpet' in declaring to the gentlemen of his day: 'Ye fast for strife, and to smite with the fist of wickedness. Is not this the fast that I have chosen, to deal thy bread to the hungry, and that thou bring the poor *that are cast out* (margin "afflicted") to *thy* house?' The falsehood on which the writer had mentally founded himself, as previously stated by him, was this: 'To confound the functions of the dispensers of the poor-rates with those of the dispensers of a charitable institution is a great and pernicious error.' This sentence is so accurately and exquisitely wrong, that its substance must be thus reversed in our minds before we can deal with any existing problem of national distress. 'To understand that the dispensers of the poor-rates are the almoners of the nation, and should distribute its alms with a gentleness and freedom of hand as much greater and franker than that possible to individual charity, as the collective national wisdom and power may be supposed greater than those of any single person, is the foundation of all law respecting pauperism.' (Since this was written the *Pall Mall Gazette* has become a mere party paper — like the rest: but it writes well, and does more good than mischief on the whole.) [Ruskin's note.]

37. *Satanella: or the Power of Love*, an opera by Balfe, produced in London, 1858.

38. *Cf. The Life of Robert the Devil*, the 15th-century verse-tale of the 6th Duke of Normandy, father of William the Conqueror; notorious for his violence and cruelty, in consequence of which he was represented as having been devoted body and soul to Satan by his mother, who, childless, had prayed to the Devil for a son.

39. 'God.'

distribute tracts, next day, for the benefit of uncultivated swearers, upon what we suppose to be the signification of the Third Commandment; —) this gas-lighted, and gas-inspired Christianity, we are triumphant in, and draw back the hem of our robes from the touch of the heretics who dispute it. But to do a piece of common Christian righteousness in a plain English word or deed; to make Christian law any rule of life, and found one National act or hope thereon, — we know too well what our faith comes to for that! You might sooner get lightning out of incense smoke than true action or passion out of your modern English religion. You had better get rid of the smoke, and the organ pipes, both: leave them, and the Gothic windows, and the painted glass, to the property man; give up your carburetted hydrogen ghost in one healthy expiration, and look after Lazarus at the doorstep.[40] For there is a true Church wherever one hand meets another helpfully, and that is the only holy or Mother Church which ever was, or ever shall be.

38. All these pleasures, then, and all these virtues, I repeat, you nationally despise. You have, indeed, men among you who do not; by whose work, by whose strength, by whose life, by whose death, you live, and never thank them. Your wealth, your amusement, your pride, would all be alike impossible, but for those whom you scorn or forget. The policeman, who is walking up and down the black lane all night to watch the guilt you have created there; and may have his brains beaten out, and be maimed for life, at any moment, and never be thanked; the sailor wrestling with the sea's rage; the quiet student poring over his book or his vial; the common worker, without praise, and nearly without bread, fulfilling his task as your horses drag your carts, hopeless, and spurned of all: these are the men by whom England lives; but they are not the nation; they are only the

40. See *Luke*, vi,20ff.

body and nervous force of it, acting still from old habit in a convulsive perseverance, while the mind is gone. Our National wish and purpose are only to be amused; our National religion is the performance of church ceremonies, and preaching of soporific truths (or untruths) to keep the mob quietly at work, while we amuse ourselves; and the necessity for this amusement is fastening on us as a feverous disease of parched throat and wandering eyes — senseless, dissolute, merciless. How literally that word *Dis-Ease*, the Negation and impossibility of Ease, expresses the entire moral state of our English Industry and its Amusements!

39. When men are rightly occupied, their amusement grows out of their work, as the colour-petals out of a fruitful flower; — when they are faithfully helpful and compassionate, all their emotions become steady, deep, perpetual, and vivifying to the soul as the natural pulse of the body. But now, having no true business, we pour our whole masculine energy into the false business of money-making; and having no true emotion, we must have false emotions dressed up for us to play with, not innocently, as children with dolls, but guiltily and darkly, as the idolatrous Jews with their pictures on cavern walls, which men had to dig to detect. The justice we do not execute, we mimic in the novel and on the stage; for the beauty we destroy in nature, we substitute the metamorphosis of the pantomime, and (the human nature of us imperatively requiring awe and sorrow of *some* kind) for the noble grief we should have borne with our fellows, and the pure tears we should have wept with them, we gloat over the pathos of the police court, and gather the night-dew of the grave.

40. It is difficult to estimate the true significance of these things; the facts are frightful enough; — the measure of national fault involved in them is, perhaps, not as great as it would at first seem. We permit, or cause, thousands of deaths daily, but we mean no harm; we set fire to houses, and ravage peasants' fields; yet we should be sorry to find we had injured anybody. We are still kind at heart; still capable of virtue, but only as children are. Chalmers,[41] at the end of his long life, having had much power with the public, being plagued in some serious matter by a reference to 'public opinion,' uttered the impatient exclamation, 'The public is just a great baby!' And the reason that I have allowed all these graver subjects of thought to mix themselves up with an inquiry into methods of reading, is that, the more I see of our national faults and miseries, the more they resolve themselves into conditions of childish illiterateness, and want of education in the most ordinary habits of thought. It is, I repeat, not vice, not selfishness, not dullness of brain, which we have to lament; but an unreachable schoolboy's recklessness, only differing from the true schoolboy's in its incapacity of being helped, because it acknowledges no master.

41. There is a curious type of us given in one of the lovely, neglected works of the last of our great painters. It is a drawing of Kirkby Lonsdale churchyard, and of its brook, and valley, and hills, and folded morning sky beyond. And unmindful alike of these, and of the dead who have left these for other valleys and for other skies, a group of schoolboys have piled their little books upon a grave, to strike them off with stones. So, also, we play with the words of the dead that would teach us, and strike them far from us with our bitter, reckless will; little thinking that those leaves which the wind scatters had been piled, not only upon a gravestone, but upon the seal of an enchanted vault — nay, the gate of a great city of sleeping kings, who would awake for us, and walk with us, if we knew but how to call them by their names. How often, even if we lift the marble entrance

41. Thomas Chalmers (1780–1847), Scotch theologian and popular preacher.

gate, do we but wander among those old kings in their repose, and finger the robes they lie in, and stir the crowns on their foreheads; and still they are silent to us, and seem but a dusty imagery, because we know not the incantation of the heart that would wake them; — which, if they once heard, they would start up to meet us in their power of long ago, narrowly to look upon us, and consider us; and, as the fallen kings of Hades meet the newly fallen, saying, 'Art thou also become weak as we — art thou also become one of us?'[42] so would these kings, with their undimmed, unshaken diadems, meet us, saying, 'Art thou also become pure and mighty of heart as we — art thou also become one of us?'

42. Mighty of heart, mighty of mind — 'magnanimous' — to be this, is, indeed, to be great in life; to become this increasingly, is, indeed, to 'advance in life,' — in life itself — not in the trappings of it. My friends, do you remember that old Scythian custom, when the head of a house died? How he was dressed in his finest dress, and set in his chariot, and carried about to his friends' houses; and each of them placed him at his table's head, and all feasted in his presence? Suppose it were offered to you, in plain words, as it *is* offered to you in dire facts, that you should gain this Scythian honour, gradually, while you yet thought yourself alive. Suppose the offer were this: You shall die slowly; your blood shall daily grow cold, your flesh petrify, your heart beat at last only as a rusted group of iron valves. Your life shall fade from you, and sink through the earth into the ice of Caina[43]; but, day by day, your body shall be dressed more gaily, and set in higher chariots, and have more orders on its breast — crowns on its head, if you will. Men shall bow before it, stare and shout round it, crowd after it up and down the streets; build palaces for it, feast with it at their tables' heads all the night long; your soul shall stay enough within it to know what they do, and feel the weight of the golden dress on its shoulders, and the furrow of the crown-edge on the skull; — no more. Would you take the offer, verbally made by the death-angel? Would the meanest among us take it, think you? Yet practically and verily we grasp at it, every one of us, in a measure; many of us grasp at it in its fullness of horror. Every man accepts it, who desires to advance in life without knowing what life is; who means only that he is to get more horses, and more footmen, and more fortune, and more public honour, and — *not* more personal soul. He only is advancing in life, whose heart is getting softer, whose blood warmer, whose brain quicker, whose spirit is entering into Living[44] peace. And the men who have this life in them are the true lords or kings of the earth — they, and they only. All other kingships, so far as they are true, are only the practical issue and expression of theirs; if less than this, they are either dramatic royalties, — costly shows, set off, indeed, with real jewels instead of tinsel, — but still only the toys of nations; or else, they are no royalties at all, but tyrannies, or the mere active and practical issue of national folly; for which reason I have said of them elsewhere, 'Visible governments are the toys of some nations, the diseases of others, the harness of some, the burdens of more.'

43. But I have no words for the wonder with which I hear Kinghood still spoken of, even among thoughtful men, as if governed nations were a personal property, and might be bought and sold, or otherwise acquired, as sheep, of whose flesh their king was to feed, and whose fleece he was to gather; as if Achilles' indignant epithet of base kings, 'people-

42. *Cf. Isaiah*, xiv,10.

43. The lowest part of Hell, where Dante in his *Inferno* placed the most evil sinners. See *Inferno*, xxxii.

44. 'τὸ δὲ φρόνημα τοῦ πνεύματος ζωὴ καὶ εἰρήνη.' [Ruskin's note. — 'To be spiritually minded is life and peace.']

eating,' were the constant and proper title of all monarchs; and enlargement of a king's dominion meant the same thing as the increase of a private man's estate! Kings who think so, however powerful, can no more be the true kings of the nation than gadflies are the kings of a horse; they suck it, and may drive it wild, but do not guide it. They, and their courts, and their armies are, if one could see clearly, only a large species of marsh mosquito, with bayonet proboscis and melodious, band-mastered trumpeting in the summer air; the twilight being, perhaps, sometimes fairer, but hardly more wholesome, for its glittering mists of midge companies. The true kings, meanwhile, rule quietly, if at all, and hate ruling; too many of them make 'il gran rifiúto';[45] and if they do not, the mob, as soon as they are likely to become useful to it, is pretty sure to make *its* 'gran rifiúto' of *them*.

44. Yet the visible king may also be a true one, some day, if ever day comes when he will estimate his dominion by the *force* of it, — not the geographical boundaries. It matters very little whether Trent cuts you a cantel out here, or Rhine rounds you a castle less there. But it does matter to you, king of men, whether you can verily say to this man, 'Go,' and he goeth; and to another, 'Come,' and he cometh.[46] Whether you can turn your people, as you can Trent — and where it is that you bid them come, and where go. It matters to you, king of men, whether your people hate you, and die by you, or love you, and live by you. You may measure your dominion by multitudes better than by miles; and count degrees of love-latitude, not from, but to, a wonderfully warm and infinite equator.

45. Measure! — nay, you cannot measure. Who shall measure the difference between the power of those who 'do and teach,' and who are greatest in the kingdoms of earth, as of heaven — and the power of those who undo, and consume — whose power, at the fullest, is only the power of the moth and the rust? Strange! to think how the Moth-kings lay up treasures for the moth; and the Rust-kings, who are to their peoples' strength as rust to armour, lay up treasures for the rust; and the Robber-kings, treasures for the robber; but how few kings have ever laid up treasures that needed no guarding — treasures of which, the more thieves there were, the better! Broidered robe, only to be rent; helm and sword, only to be dimmed; jewel and gold, only to be scattered; — there have been three kinds of kings who have gathered these. Suppose there ever should arise a Fourth order of kings, who had read, in some obscure writing of long ago, that there was a Fourth kind of treasure, which the jewel and gold could not equal, neither should it be valued with pure gold. A web made fair in the weaving, by Athena's shuttle; an armour, forged in divine fire by Vulcanian force; a gold to be mined in the very sun's red heart, where he sets over the Delphian cliffs; — deep-pictured tissue; — impenetrable armour; — potable gold! — the three great Angels of Conduct, Toil, and Thought, still calling to us, and waiting at the posts of our doors, to lead us, with their winged power, and guide us, with their unerring eyes, by the path which no fowl knoweth, and which the vulture's eye has not seen! Suppose kings should ever arise, who heard and believed this word, and at last gathered and brought forth treasures of — Wisdom — for their people?

46. Think what an amazing business *that* would be! How inconceivable, in the state of our present national wisdom! That we should bring up our peasants to a book exercise instead of a bayonet exercise! — organise, drill, maintain with pay, and good generalship, armies of thinkers, instead of armies of stabbers! — find national amusement in reading-rooms as well as rifle-grounds; give prizes for a fair shot at a fact, as well as for a leaden splash on a

45 'the great refusal.'

46. *Cf. Matthew*, viii,9.

target. What an absurd idea it seems, put fairly in words, that the wealth of the capitalists of civilised nations should ever come to support literature instead of war!

47. Have yet patience with me, while I read you a single sentence out of the only book, properly to be called a book, that I have yet written myself, the one that will stand (if anything stand) surest and longest of all work of mine.[47]

'It is one very awful form of the operation of wealth in Europe that it is entirely capitalists' wealth which supports unjust wars. Just wars do not need so much money to support them; for most of the men who wage such, wage them gratis; but for an unjust war, men's bodies and souls have both to be bought; and the best tools of war for them besides, which make such war costly to the maximum; not to speak of the cost of base fear, and angry suspicion, between nations which have not grace nor honesty enough in all their multitudes to buy an hour's peace of mind with; as, at present, France and England, purchasing of each other ten millions' sterling worth of consternation, annually (a remarkably light crop, half thorns and half aspen leaves, sown, reaped, and granaried by the "science" of the modern political economist, teaching covetousness instead of truth). And, all unjust war being supportable, if not by pillage of the enemy, only by loans from capitalists, these loans are repaid by subsequent taxation of the people, who appear to have no will in the matter, the capitalists' will being the primary root of the war; but its real root is the covetousness of the whole nation, rendering it incapable of faith, frankness, or justice, and bringing about, therefore, in due time, his own separate loss and punishment to each person.'

48. France and England literally, observe, buy *panic* of each other; they pay, each of them, for ten thousand-thousand-pounds'-worth of terror, a year. Now suppose, instead of buying these ten millions' worth of panic annually, they made up their minds to be at peace with each other, and buy ten millions' worth of knowledge annually; and that each nation spent its ten thousand thousand pounds a year in founding royal libraries, royal art galleries, royal museums, royal gardens, and places of rest. Might it not be better somewhat for both French and English?

49. It will be long, yet, before that comes to pass. Nevertheless, I hope it will not be long before royal or national libraries will be founded in every considerable city, with a royal series of books in them: the same series in every one of them, chosen books, the best in every kind, prepared for that national series in the most perfect way possible; their text printed all on leaves of equal size, broad of margin, and divided into pleasant volumes, light in the hand, beautiful, and strong, and thorough as examples of binders' work: and that these great libraries will be accessible to all clean and orderly persons at all times of the day and evening; strict law being enforced for this cleanliness and quietness.

50. I could shape for you other plans, for art-galleries, and for natural history galleries, and for many precious — many, it seems to me, needful — things; but this book plan is the easiest and needfullest, and would prove a considerable tonic to what we call our British constitution, which has fallen dropsical of late, and has an evil thirst, and evil hunger, and wants healthier feeding. You have got its corn laws repealed for it; [48] try if you cannot get corn laws established for it, dealing in a better bread; — bread made of that old enchanted Arabian grain, the Sesame, which opens doors; — doors, not of robbers', but of Kings', Treasuries.

47. Allusion to *Unto This Last*. Ruskin quotes a footnote to the second paragraph of section 76.

48. The Corn (grain) laws were repealed in 1846, permitting a greater importation of grain, and thus a lower price for bread.

Note to § 30. — Respecting the increase of rent by the deaths of the poor, for evidence of which, see the preface to the Medical Officer's report to the Privy Council, just published, there are suggestions in its preface which will make some stir among us, I fancy, respecting which let me note these points following: —

There are two theories on the subject of land now abroad, and in contention; both false.

The first is that, by Heavenly law, there have always existed, and must continue to exist, a certain number of hereditarily sacred persons to whom the earth, air, and water of the world belong, as personal property; of which earth, air, and water, these persons may, at their pleasure, permit, or forbid, the rest of the human race to eat, to breathe, or to drink. This theory is not for many years longer tenable. The adverse theory is that a division of the land of the world among the mob of the world would immediately elevate the said mob into sacred personages; that houses would then build themselves, and corn grow of itself; and that everybody would be able to live, without doing any work for his living. This theory would also be found highly untenable in practice.

It will, however, require some rough experiments, and rougher catastrophes, before the generality of persons will be convinced that no law concerning anything — least of all concerning land, for either holding or dividing it, or renting it high, or renting it low — would be of the smallest ultimate use to the people, so long as the general contest for life, and for the means of life, remains one of mere brutal competition. That contest, in an unprincipled nation, will take one deadly form or another, whatever laws you make against it. For instance, it would be an entirely wholesome law for England, if it could be carried, that maximum limits should be assigned to incomes according to classes; and that every nobleman's income should be paid to him as a fixed salary or pension by the nation; and not squeezed by him in variable sums, at discretion, out of the tenants of his land. But if you could get such a law passed tomorrow, and if, which would be farther necessary, you could fix the value of the assigned incomes by making a given weight of pure bread legal tender for a given sum, a twelvemonth would not pass before another currency would have been tacitly established, and the power of accumulated wealth would have re-asserted itself in some other article, or some other imaginary sign. There is only one cure for public distress — and that is public education, directed to make men thoughtful, merciful, and just. There are, indeed, many laws conceivable which would gradually better and strengthen the national temper; but, for the most part, they are such as the national temper must be much bettered before it would bear. A nation in its youth may be helped by laws, as a weak child by backboards, but when it is old, it cannot that way straighten its crooked spine.

And besides; the problem of land, at its worst, is a bye one; distribute the earth as you will, the principal question remains inexorable, — Who is to dig it? Which of us, in brief word, is to do the hard and dirty work for the rest, and for what pay? Who is to do the pleasant and clean work, and for what pay? Who is to do no work, and for what pay? And there are curious moral and religious questions connected with these. How far is it lawful to suck a portion of the soul out of a great many persons, in order to put the abstracted psychical quantities together and make one very beautiful or ideal soul? If we had to deal with mere blood, instead of spirit, (and the thing might literally be done — as it has been done with infants before now) — so that it were possible, by taking a certain quantity of blood from the arms of a given number of the mob, and putting it all into one person, to make a more azure-blooded gentleman of him, the thing would of course be managed; but

secretly, I should conceive. But now, because it is brain and soul that we abstract, not visible blood, it can be done quite openly, and we live, we gentlemen, on delicatest prey, after the manner of weasels; that is to say, we keep a certain number of clowns digging and ditching, and generally stupefied, in order that we, being fed gratis, may have all the thinking and feeling to ourselves. Yet there is a great deal to be said for this. A highly-bred and trained English, French, Austrian, or Italian gentleman (much more a lady) is a great production, — a better production than most statues; being beautifully coloured as well as shaped, and plus all the brains; a glorious thing to look at, a wonderful thing to talk to; and you cannot have it, any more than a pyramid or a church, but by sacrifice of much contributed life. And it is, perhaps, better to build a beautiful human creature than a beautiful dome or steeple — and more delightful to look up reverently to a creature far above us, than to a wall; only the beautiful human creature will have some duties to do in return — duties of living belfry and rampart — of which presently.

Lecture III

The Mystery of Life and Its Arts

96. When I accepted the privilege of addressing you today, I was not aware of a restriction with respect to the topics of discussion which may be brought before this Society [1] — a restriction which, though entirely wise and right under the circumstances contemplated in its introduction, would necessarily have disabled me, thinking as I think, from preparing any lecture for you on the subject of art in a form which might be permanently useful. Pardon me, therefore, in so far as I must transgress such limitation; for indeed my infringement will be of the letter — not of the spirit — of your commands. In whatever I may say touching the religion which has been the foundation of art, or the policy which has contributed to its power, if I offend one, I shall offend all; for I shall take no note of any separations in creeds, or antagonisms in parties: neither do I fear that ultimately I shall offend any, by proving — or at least stating as capable of positive proof — the connection of all that is best in the crafts and arts of man, with the simplicity of his faith, and the sincerity of his patriotism.

97. But I speak to you under another disadvantage, by which I am checked in frankness of utterance, not here only, but everywhere: namely, that I am never fully aware how far my audiences are disposed to give me credit for real knowledge of my subject, or how far they grant me attention only because I have been sometimes thought an ingenious or pleasant essayist upon it. For I have had what, in many respects, I boldly call the misfortune, to set my words sometimes prettily together; not without a foolish vanity in the poor knack that I had of doing so: until I was heavily punished for this pride, by finding that many people thought of the words only, and cared nothing for their meaning. Happily, therefore, the power of using such pleasant language — if indeed it ever were mine — is passing away from me; and whatever I am now able to say at all, I find myself forced to say with great plainness. For my thoughts have changed also, as my words have; and whereas in earlier life, what little influence I obtained was due perhaps chiefly to the enthusiasm with which I was able to dwell on the beauty of the physical clouds, and of their colours in the sky; so all the influence I now desire to retain must be due to the earnestness with which I am endeavouring to trace the form and beauty of another kind of cloud than those; the bright cloud of which it is written — 'What is

1. That no reference should be made to religious questions. [Ruskin's note. — This lecture was delivered in the theater of the Royal College of Science, Dublin, May 13, 1868.]

your life? It is even as a vapour that appeareth for a little time, and then vanisheth away.'[2]

98. I suppose few people reach the middle or latter period of their age, without having, at some moment of change or disappointment, felt the truth of those bitter words; and been startled by the fading of the sunshine from the cloud of their life into the sudden agony of the knowledge that the fabric of it was as fragile as a dream, and the endurance of it as transient as the dew. But it is not always that, even at such times of melancholy surprise, we can enter into any true perception that this human life shares in the nature of it, not only the evanescence, but the mystery of the cloud; that its avenues are wreathed in darkness, and its forms and courses no less fantastic, than spectral and obscure; so that not only in the vanity which we cannot grasp, but in the shadow which we cannot pierce, it is true of this cloudy life of ours, that 'man walketh in a vain shadow, and disquieteth himself in vain.'[3]

99. And least of all, whatever may have been the eagerness of our passions, or the height of our pride, are we able to understand in its depth the third and most solemn character in which our life is like those clouds of heaven; that to it belongs not only their transcience, not only their mystery, but also their power; that in the cloud of the human soul there is a fire stronger than the lightning, and a grace more precious than the rain; and that though of the good and evil it shall one day be said alike, that the place that knew them knows them no more, there is an infinite separation between those whose brief presence had there been a blessing, like the mist of Eden that went up from the earth to water the garden, and those whose place knew them only as a drifting and changeful shade, of whom the heavenly sentence is, that they are 'wells without water; clouds that are carried with a tempest, to whom the mist of darkness is reserved for ever.'[4]

100. To those among us, however, who have lived long enough to form some just estimate of the rate of the changes which are, hour by hour in accelerating catastrophe, manifesting themselves in the laws, the arts, and the creeds of men, it seems to me, that now at least, if never at any former time, the thoughts of the true nature of our life, and of its powers and responsibilities, should present themselves with absolute sadness and sternness. And although I know that this feeling is much deepened in my own mind by disappointment, which, by chance, has attended the greater number of my cherished purposes, I do not for that reason distrust the feeling itself, though I am on my guard against an exaggerated degree of it: nay, I rather believe that in periods of new effort and violent change, disappointment is a wholesome medicine; and that in the secret of it, as in the twilight so beloved by Titian, we may see the colours of things with deeper truth than in the most dazzling sunshine. And because these truths about the works of men, which I want to bring today before you, are most of them sad ones, though at the same time helpful; and because also I believe that your kind Irish hearts will answer more gladly to the truthful expression of a personal feeling, than to the exposition of an abstract principle, I will permit myself so much unreserved speaking of my own causes of regret, as may enable you to make just allowance for what, according to your sympathies, you will call either the bitterness, or the insight, of a mind which has surrendered its best hopes, and been foiled in its favourite aims.

101. I spent the ten strongest years of my life (from twenty to thirty), in endeavouring to show the excellence of the work of the man whom I believed, and rightly believed, to be the greatest painter of the

2. *James*, iv,14.

3. *Psalms*, xxxix,6. (Properly: 'in a vain *shew*.')

4. *II Peter*, ii,17.

schools of England since Reynolds.[5] I had then perfect faith in the power of every great truth of beauty to prevail ultimately, and take its right place in usefulness and honour; and I strove to bring the painter's work into this due place, while the painter was yet alive. But he knew, better than I, the uselessness of talking about what people could not see for themselves. He always discouraged me scornfully, even when he thanked me — and he died before even the superficial effect of my work was visible. I went on, however, thinking I could at least be of use to the public, if not to him, in proving his power. My books got talked about a little. The prices of modern pictures, generally, rose, and I was beginning to take some pleasure in a sense of gradual victory, when, fortunately or unfortunately, an opportunity of perfect trial undeceived me at once, and for ever. The Trustees of the National Gallery commissioned me to arrange the Turner drawings there, and permitted me to prepare three hundred examples of his studies from nature, for exhibition at Kensington. At Kensington they were, and are, placed for exhibition; but they are not exhibited, for the room in which they hang is always empty.

102. Well — this showed me at once, that those ten years of my life had been, in their chief purpose, lost. For that, I did not so much care; I had, at least, learned my own business thoroughly, and should be able, as I fondly supposed, after such a lesson, now to use my knowledge, with better effect. But what I did care for was the — to me frightful — discovery, that the most splendid genius in the arts might be permitted by Providence to labour and perish uselessly; that in the very fineness of it there might be something rendering it invisible to ordinary eyes; but that, with this strange excellence, faults might be mingled which would be as deadly as its virtues were vain; that the glory of it was perishable, as well as invisible, and the gift and grace of it might be to us as snow in summer and as rain in harvest.

103. That was the first mystery of life to me. But, while my best energy was given to the study of painting, I had put collateral effort, more prudent if less enthusiastic, into that of architecture; and in this I could not complain of meeting with no sympathy. Among several personal reasons which caused me to desire that I might give this, my closing lecture on the subject of art here, in Ireland, one of the chief was, that in reading it, I should stand near the beautiful building, — the engineer's school of your college, — which was the first realisation I had the joy to see, of the principles I had, until then, been endeavouring to teach! but which, alas, is now, to me, no more than the richly canopied monument of one of the most earnest souls that ever gave itself to the arts, and one of my truest and most loving friends, Benjamin Woodward.[6] Nor was it here in Ireland only that I received the help of Irish sympathy and genius. When to another friend, Sir Thomas Deane,[7] with Mr. Woodward, was entrusted the building of the museum at Oxford, the best details of the work were executed by sculptors who had been born and trained here; and the first window of the façade of the building, in which was inaugurated the study of natural science in England, in true fellowship with literature, was carved from my design by an Irish sculptor.

104. You may perhaps think that no man ought to speak of disappointment, to whom, even in one branch of labour, so much success was granted. Had Mr. Woodward now been beside me, I had not

5. *i.e.*, of course, J.M.W.Turner.

6. Benjamin Woodward (1815–61), architect, built the Oxford Museum under Ruskin's supervision, 1855–58; and was intimate with the Pre-Raphaelites.

7. Sir Thomas Deane (1792–1871), builder and architect in Cork, designer of many public buildings in Cork, assisted with the designing of the Oxford Museum.

so spoken; but his gentle and passionate spirit was cut off from the fulfilment of its purposes, and the work we did together is now become vain. It may not be so in future; but the architecture we endeavoured to introduce is inconsistent alike with the reckless luxury, the deforming mechanism, and the squalid misery of modern cities; among the formative fashions of the day, aided, especially in England, by ecclesiastical sentiment, it indeed obtained notoriety; and sometimes behind an engine furnace, or a railroad bank, you may detect the pathetic discord of its momentary grace, and, with toil, decipher its floral carvings choked with soot. I felt answerable to the schools I loved, only for their injury. I perceived that this new portion of my strength had also been spent in vain; and from amidst streets of iron, and palaces of crystal,[8] shrank back at last to the carving of the mountain and colour of the flower.

105. And still I could tell of failure, and failure repeated, as years went on; but I have trespassed enough on your patience to show you, in part, the causes of my discouragement. Now let me more deliberately tell you its results. You know there is a tendency in the minds of many men, when they are heavily disappointed in the main purposes of their life, to feel, and perhaps in warning, perhaps in mockery, to declare, that life itself is a vanity. Because it has disappointed them, they think its nature is of disappointment always, or at best, of pleasure that can be grasped by imagination only; that the cloud of it has no strength nor fire within; but is a painted cloud only, to be delighted in, yet despised. You know how beautifully Pope has expressed this particular phase of thought: —

'Meanwhile opinion gilds, with varying rays,
These painted clouds that beautify our days;
Each want of happiness by hope supplied,
And each vacuity of sense, by pride.
Hope builds as fast as Knowledge can destroy;
In Folly's cup, still laughs the bubble joy.
One pleasure past, another still we gain,
And not a vanity is given in vain.'[9]

But the effect of failure upon my own mind has been just the reverse of this. The more that my life disappointed me, the more solemn and wonderful it became to me. It seemed, contrarily to Pope's saying, that the vanity of it *was* indeed given in vain; but that there was something behind the veil of it, which was not vanity. It became to me not a painted cloud, but a terrible and impenetrable one: not a mirage, which vanished as I drew near, but a pillar of darkness, to which I was forbidden to draw near. For I saw that both my own failure, and such success in petty things as in its poor triumph seemed to me worse than failure, came from the want of sufficiently earnest effort to understand the whole law and meaning of existence, and to bring it to noble and due end; as, on the other hand, I saw more and more clearly that all enduring success in the arts, or in any other occupation, had come from the ruling of lower purposes, not by a conviction of their nothingness, but by a solemn faith in the advancing power of human nature, or in the promise, however dimly apprehended, that the mortal part of it would one day be swallowed up in immortality; and that, indeed, the arts themselves never had reached any vital strength or honour, but in the effort to proclaim this immortality, and in the service either of great and just religion, or of some unselfish patriotism, and law of such national life as must be the foundation of religion.

8. Allusion to the Crystal Palace, erected for the Great (international) Exhibition, prompted by Prince Albert, and held in 1851, in Hyde Park. The Palace was built principally of glass and steel. It was afterwards removed to Sydenham, a suburb of London, where it was destroyed by fire in 1936.

9. Pope's *Essay on Man*, ii,283–90. (Not quoted literally.)

106. Nothing that I have ever said is more true or necessary — nothing has been more misunderstood or misapplied — than my strong assertion that the arts can never be right themselves, unless their motive is right. It is misunderstood this way: weak painters, who have never learned their business, and cannot lay a true line, continually come to me, crying out — 'Look at this picture of mine; it *must* be good, I had such a lovely motive. I have put my whole heart into it, and taken years to think over its treatment.' Well, the only answer for these people is — if one had the cruelty to make it — 'Sir, you cannot think over *any*thing in any number of years, — you haven't the head to do it; and though you had fine motives, strong enough to make you burn yourself in a slow fire, if only first you could paint a picture, you can't paint one, nor half an inch of one; you haven't the hand to do it.'

But, far more decisively we have to say to the men who *do* know their business, or may know it if they choose — 'Sir, you have this gift, and a mighty one; see that you serve your nation faithfully with it. It is a greater trust than ships and armies: you might cast *them* away, if you were their captain, with less treason to your people than in casting your own glorious power away, and serving the devil with it instead of men. Ships and armies you may replace if they are lost, but a great intellect, once abused, is a curse to the earth for ever.'

107. This, then, I meant by saying that the arts must have noble motive. This also I said respecting them, that they never had prospered, nor could prosper, but when they had such true purpose, and were devoted to the proclamation of divine truth or law. And yet I saw also that they had always failed in this proclamation — that poetry, and sculpture, and painting, though only great when they strove to teach us something about the gods, never had taught us anything trustworthy about the gods, but had always betrayed their trust in the crisis of it, and, with their powers at the full reach, became ministers to pride and to lust. And I felt also, with increasing amazement, the unconquerable apathy in ourselves and hearers, no less than in these the teachers; and that while the wisdom and rightness of every act and art of life could only be consistent with a right understanding of the ends of life, we were all plunged as in a languid dream — our hearts fat, and our eyes heavy, and our ears closed, lest the inspiration of hand or voice should reach us — lest we should see with our eyes, and understand with our hearts, and be healed.

108. This intense apathy in all of us is the first great mystery of life; it stands in the way of every perception, every virtue There is no making ourselves feel enough astonishment at it. That the occupations or pastimes of life should have no motive, is understandable; but — That life itself should have no motive — that we neither care to find out what it may lead to, nor to guard against its being for ever taken away from us — here is a mystery indeed. For just suppose I were able to call at this moment to any one in this audience by name, and to tell him positively that I knew a large estate had been lately left to him on some curious conditions; but that though I knew it was large, I did not know how large, nor even where it was — whether in the East Indies or the West, or in England, or at the Antipodes. I only knew it was a vast estate, and that there was a chance of his losing it altogether if he did not soon find out on what terms it had been left to him. Suppose I were able to say this positively to any single man in this audience, and he knew that I did not speak without warrant, do you think that he would rest content with that vague knowledge, if it were anywise possible to obtain more? Would he not give every energy to find some trace of the facts, and never rest till he had ascertained where this place was, and what it

was like? And suppose he were a young man, and all he could discover by his best endeavour was that the estate was never to be his at all, unless he persevered, during certain years of probation, in an orderly and industrious life; but that, according to the rightness of his conduct, the portion of the estate assigned to him would be greater or less, so that it literally depended on his behaviour from day to day whether he got ten thousand a year, or thirty thousand a year, or nothing whatever—would you not think it strange if the youth never troubled himself to satisfy the conditions in any way, nor ever to know what was required of him, but lived exactly as he chose, and never inquired whether his chances of the estate were increasing or passing away? Well, you know that this is actually and literally so with the greater number of the educated persons now living in Christian countries. Nearly every man and woman in any company such as this, outwardly professes to believe—and a large number unquestionably think they believe—much more than this; not only that a quite unlimited estate is in prospect for them if they please the Holder of it, but that the infinite contrary of such a possession—an estate of perpetual misery—is in store for them if they displease this great Land-Holder, this great Heaven-Holder. And yet there is not one in a thousand of these human souls that cares to think, for ten minutes of the day, where this estate is or how beautiful it is, or what kind of life they are to lead in it, or what kind of life they must lead to obtain it.

109. You fancy that you care to know this: so little do you care that, probably, at this moment many of you are displeased with me for talking of the matter! You came to hear about the Art of this world, not about the Life of the next, and you are provoked with me for talking of what you can hear any Sunday in church. But do not be afraid. I will tell you something before you go about pictures, and carvings, and pottery, and what else you would like better to hear of than the other world. Nay, perhaps you say, 'We want you to talk of pictures and pottery, because we are sure that you know something of them, and you know nothing of the other world.' Well—I don't. That is quite true. But the very strangeness and mystery of which I urge you to take notice, is in this—that I do not;—nor you either. Can you answer a single bold question unflinchingly about that other world?—Are you sure there is a heaven? Sure there is a hell? Sure that men are dropping before your faces through the pavements of these streets into eternal life, or sure that they are not? Sure that at your own death you are going to be delivered from all sorrow, to be endowed with all virtue, to be gifted with all felicity, and raised into perpetual companionship with a King, compared to whom the kings of the earth are as grasshoppers, and the nations as the dust of His feet? Are you sure of this? or, if not sure, do any of us so much as care to make it sure? and, if not, how can anything that we do be right—how can anything we think be wise? what honour can there be in the arts that amuse us, or what profit in the possessions that please?

Is not this a mystery of life?

110. But farther, you may, perhaps, think it a beneficent ordinance for the generality of men that they do not, with earnestness or anxiety, dwell on such questions of the future because the business of the day could not be done if this kind of thought were taken by all of us for the morrow. Be it so: but at least we might anticipate that the greatest and wisest of us, who were evidently the appointed teachers of the rest, would set themselves apart to seek out whatever could be surely known of the future destinies of their race; and to teach this in no rhetorical or ambiguous manner, but in the plainest and most severely earnest words.

Now, the highest representatives of men who have thus endeavoured, during the

Christian era, to search out these deep things, and relate them, are Dante and Milton. There are none who for earnestness of thought, for mastery of word, can be classed with these. I am not at present, mind you, speaking of persons set apart in any priestly or pastoral office, to deliver creeds to us, or doctrines; but of men who try to discover and set forth, as far as by human intellect is possible, the facts of the other world. Divines may perhaps teach us how to arrive there, but only these two poets have in any powerful manner striven to discover, or in any definite words professed to tell, what we shall see and become there; or how those upper and nether worlds are, and have been, inhabited.

111. And what have they told us? Milton's account of the most important event in his whole system of the universe, the fall of the angels, is evidently unbelievable to himself; and the more so, that it is wholly founded on, and in a great part spoiled and degraded from, Hesiod's[10] account of the decisive war of the younger gods with the Titans. The rest of his poem is a picturesque drama, in which every artifice of invention is visibly and consciously employed; not a single fact being, for an instant, conceived as tenable by any living faith. Dante's conception is far more intense, and, by himself, for the time, not to be escaped from; it is indeed a vision, but a vision only, and that one of the wildest that ever entranced a soul — a dream in which every grotesque type or phantasy of heathen tradition is renewed, and adorned; and the destinies of the Christian Church, under their most sacred symbols, become literally subordinate to the praise, and are only to be understood by the aid, of one dear Florentine maiden.[11]

112. I tell you truly that, as I strive more with this strange lethargy and trance in myself, and awake to the meaning and power of life, it seems daily more amazing to me that men such as these should dare to play with the most precious truths (or the most deadly untruths), by which the whole human race listening to them could be informed, or deceived; — all the world their audiences forever, with pleased ear, and passionate heart; — and yet, to this submissive infinitude of souls, and evermore succeeding and succeeding multitude, hungry for bread of life, they do but play upon sweetly modulated pipes; with pompous nomenclature adorn the councils of hell; touch a troubadour's guitar to the courses of the sun; and fill the openings of eternity, before which prophets have veiled their faces, and which angels desire to look into, with idle puppets of their scholastic imagination, and melancholy lights of frantic faith in their lost mortal love.

Is not this a mystery of life?

113. But more. We have to remember that these two great teachers were both of them warped in their temper, and thwarted in their search for truth. They were men of intellectual war, unable, through darkness of controversy, or stress of personal grief, to discern where their own ambition modified their utterances of the moral law; or their own agony mingled with their anger at its violation. But greater men than these have been — innocent-hearted — too great for contest. Men, like Homer and Shakespeare, of so unrecognised personality, that it disappears in future ages, and becomes ghostly, like the tradition of a lost heathen god. Men, therefore, to whose unoffended, uncondemning sight, the whole of human nature reveals itself in a pathetic weakness, with which they will not strive; or in mournful and transitory strength, which they dare not praise. And all Pagan and Christian Civilisation thus becomes subject to them. It does not matter how little, or how much, any of us have read, either

10. Hesiod (8th century B.C.), Greek poet, who wrote a *Theogony*, containing a mythical account of the origin of the world and the birth of the gods.

11. Beatrice; possibly Bice Portinari, who married Simone de Bardi. (See Dante's *Vita Nuova*.)

of Homer or Shakespeare; everything round us, in substance, or in thought, has been moulded by them. All Greek gentlemen were educated under Homer. All Roman gentlemen, by Greek literature. All Italian, and French, and English gentlemen, by Roman literature, and by its principles. Of the scope of Shakespeare, I will say only, that the intellectual measure of every man since born, in the domains of creative thought, may be assigned to him, according to the degree in which he has been taught by Shakespeare. Well, what do these two men, centres of mortal intelligence, deliver to us of conviction respecting what it most behooves that intelligence to grasp? What is their hope — their crown of rejoicing? what manner of exhortation have they for us, or of rebuke? what lies next their own hearts, and dictates their undying words? Have they any peace to promise to our unrest — any redemption to our misery?

114. Take Homer first, and think if there is any sadder image of human fate than the great Homeric story. The main features in the character of Achilles are its intense desire of justice, and its tenderness of affection. And in that bitter song of the Iliad, this man, though aided continually by the wisest of the gods, and burning with the desire of justice in his heart, becomes yet, through ill-governed passion, the most unjust of men: and, full of the deepest tenderness in his heart, becomes yet, through ill-governed passion, the most cruel of men. Intense alike in love and in friendship, he loses, first his mistress, and then his friend; for the sake of the one, he surrenders to death the armies of his own land; for the sake of the other, he surrenders all. Will a man lay down his life for his friend? Yea — even for his *dead* friend, this Achilles, though goddess-born, and goddess-taught, gives up his kingdom, his country, and his life — casts alike the innocent and guilty, with himself, into one gulf of slaughter, and dies at last by the hand of the basest of his adversaries.

Is not this a mystery of life?

115. But what, then, is the message to us of our own poet, and searcher of hearts, after fifteen hundred years of Christian faith have been numbered over the graves of men? Are his words more cheerful than the Heathen's — is his hope more near — his trust more sure — his reading of fate more happy? Ah, no! He differs from the Heathen poet chiefly in this — that he recognises, for deliverance, no gods nigh at hand; and that, by petty chance — by momentary folly — by broken message — by fool's tyranny — or traitor's snare, the strongest and most righteous are brought to their ruin, and perish without word of hope. He indeed, as part of his rendering of character, ascribes the power and modesty of habitual devotion to the gentle and the just. The death-bed of Katharine is bright with visions of angels; and the great soldier-king, standing by his few dead, acknowledges the presence of the Hand that can save alike by many or by few. But observe that from those who with deepest spirit, meditate, and with deepest passion, mourn, there are no such words as these; nor in their hearts are any such consolations. Instead of the perpetual sense of the helpful presence of the Deity, which, through all heathen tradition, is the source of heroic strength, in battle, in exile, and in the valley of the shadow of death, we find only in the great Christian poet, the consciousness of a moral law, through which 'the gods are just, and of our pleasant vices make instruments to scourge us';[12] and of the resolved arbitration of the destinies, that conclude into precision of doom what we feebly and blindly began; and force us, when our indiscretion serves us, and our deepest plots do pall, to the confession, that 'there's a divinity that shapes our ends, rough hew them how we will.'[13]

12. *King Lear*, V,iii,172–73.
13. *Hamlet*, V,ii,11–12.

Is not this a mystery of life?

116. Be it so, then. About this human life that is to be, or that is, the wise religious men tell us nothing that we can trust; and the wise contemplative men, nothing that can give us peace. But there is yet a third class, to whom we may turn — the wise practical men. We have sat at the feet of the poets who sang of heaven, and they have told us their dreams. We have listened to the poets who sang of earth, and they have chanted to us dirges and words of despair. But there is one class of men more: — men, not capable of vision, nor sensitive to sorrow, but firm of purpose — practised in business; learned in all that can be (by handling,) known. Men, whose hearts and hopes are wholly in this present world, from whom, therefore, we may surely learn, at least, how, at present, conveniently to live in it. What will *they* say to us, or show us by example? These kings — these councillors — these statesmen and builders of kingdoms — these capitalists and men of business, who weigh the earth, and the dust of it, in a balance.[14] They know the world, surely; and what is the mystery of life to us, is none to them. They can surely show us how to live, while we live, and to gather out of the present world what is best.

117. I think I can best tell you their answer, by telling you a dream I had once. For though I am no poet, I have dreams sometimes: — I dreamed I was at a child's May-day party, in which every means of entertainment had been provided for them, by a wise and kind host. It was in a stately house, with beautiful gardens attached to it; and the children had been set free in the rooms and gardens, with no care whatever but how to pass their afternoon rejoicingly. They did not, indeed, know much about what was to happen next day; and some of them, I thought, were a little frightened, because there was a chance of their being sent to a new school where there were examinations; but they kept the thoughts of that out of their heads as well as they could, and resolved to enjoy themselves. The house, I said, was in a beautiful garden, and in the garden were all kinds of flowers; sweet, grassy banks for rest; and smooth lawns for play; and pleasant streams and woods; and rocky places for climbing. And the children were happy for a little while, but presently they separated themselves into parties; and then each party declared it would have a piece of the garden for its own, and that none of the others should have anything to do with that piece. Next, they quarrelled violently which pieces they would have; and at last the boys took up the thing, as boys should do, 'practically,' and fought in the flower-beds till there was hardly a flower left standing; then they trampled down each other's bits of the garden out of spite; and the girls cried till they could cry no more; and so they all lay down at last breathless in the ruin, and waited for the time when they were to be taken home in the evening.[15]

118. Meanwhile, the children in the house had been making themselves happy also in their manner. For them, there had been provided every kind of indoor pleasure: there was music for them to dance to; and the library was open, with all manner of amusing books; and there was a museum full of the most curious shells, and animals, and birds; and there was a workshop, with lathes and carpenter's tools, for the ingenious boys; and there were pretty fantastic dresses, for the girls to dress in; and there were microscopes, and kaleidoscopes; and whatever toys a child could fancy; and a table, in the dining-room, loaded with everything nice to eat.

But, in the midst of all this, it struck

14. *Isaiah*, xl,12.

15. I have sometimes been asked what this means. I intended it to set forth the wisdom of men in war contending for kingdoms, and what follows to set forth their wisdom in peace, contending for wealth. [Ruskin's note.]

two or three of the more 'practical' children, that they would like some of the brass-headed nails that studded the chairs; and so they set to work to pull them out. Presently, the others, who were reading, or looking at shells, took a fancy to do the like; and, in a little while, all the children, nearly, were spraining their fingers, in pulling out brass-headed nails. With all that they could pull out, they were not satisfied; and then, everybody wanted some of somebody else's. And at last, the really practical and sensible ones declared, that nothing was of any real consequence, that afternoon, except to get plenty of brass-headed nails; and that the books, and the cakes, and the microscopes were of no use at all in themselves, but only, if they could be exchanged for nail-heads. And at last they began to fight for nail-heads, as the others fought for the bits of garden. Only here and there, a despised one shrank away into a corner, and tried to get a little quiet with a book, in the midst of the noise; but all the practical ones thought of nothing else but counting nail heads all the afternoon — even though they knew they would not be allowed to carry so much as one brass knob away with them. But no — it was — 'who has most nails? I have a hundred, and you have fifty; or, I have a thousand, and you have two. I must have as many as you before I leave the house, or I cannot possibly go home in peace.' At last, they made so much noise that I awoke, and thought to myself, 'What a false dream that is, of *children*!' The child is the father of the man;[16] and wiser. Children never do such foolish things. Only men do.

119. But there is yet one last class of persons to be interrogated. The wise religious men we have asked in vain; the wise contemplative men, in vain; the wise worldly men, in vain. But there is another group yet. In the midst of this vanity of empty religion — of tragic contemplation — of wrathful and wretched ambition, and dispute for dust, there is yet one great group of persons, by whom all these disputers live — the persons who have determined, or have had it by a beneficent Providence determined for them, that they will do something useful; that whatever may be prepared for them hereafter, or happen to them here, they will, at least, deserve the food that God gives them by winning it honourably: and that, however fallen from the purity, or far from the peace, of Eden, they will carry out the duty of human dominion, though they have lost its felicity; and dress and keep the wilderness, though they no more can dress or keep the garden.[17]

These, — hewers of wood, and drawers of water,[18] — these, bent under burdens, or torn of scourges — these, that dig and weave — that plant and build; workers in wood, and in marble, and in iron — by whom all food, clothing, habitation, furniture, and means of delight are produced, for themselves, and for all men besides; men, whose deeds are good, though their words may be few; men, whose lives are serviceable, be they never so short, and worthy of honour, be they never so humble; — from these, surely, at least, we may receive some clear message of teaching; and pierce, for an instant, into the mystery of life, and of its arts.

120. Yes; from these, at last, we do receive a lesson. But I grieve to say, or rather — for that is the deeper truth of the matter — I rejoice to say — this message of theirs can only be received by joining them — not by thinking about them.

You sent for me to talk to you of art; and I have obeyed you in coming. But the main thing I have to tell you is, — that art must not be talked about. The fact that there is talk about it at all, signifies that it is ill done, or cannot be done. No true painter ever speaks, or ever has spoken, much of his art. The greatest

16. See Wordsworth's *My Heart Leaps Up When I Behold.*

17. *Genesis*, ii,15.

18. *Joshua*, ix,21.

speak nothing. Even Reynolds is no exception, for he wrote of all that he could not himself do, and was utterly silent respecting all that he himself did.

The moment a man can really do his work he becomes speechless about it. All words become idle to him — all theories.

121. Does a bird need to theorise about building its nest, or boast of it when built? All good work is essentially done that way — without hesitation, without difficulty, without boasting; and in the doers of the best, there is an inner and involuntary power which approximates literally to the instinct of an animal — nay, I am certain that in the most perfect human artists, reason does *not* supersede instinct, but is added to an instinct as much more divine than that of the lower animals as the human body is more beautiful than theirs; that a great singer sings not with less instinct than the nightingale, but with more — only more various, applicable, and governable; that a great architect does not build with less instinct than the beaver or the bee, but with more — with an innate cunning of proportion that embraces all beauty, and a divine ingenuity of skill that improvises all construction. But be that as it may — be the instinct less or more than that of inferior animals — like or unlike theirs, still the human art is dependent on that first, and then upon an amount of practice, of science, — and of imagination disciplined by thought, which the true possessor of it knows to be incommunicable, and the true critic of it, inexplicable, except through long process of laborious years. That journey of life's conquest, in which hills over hills, and Alps on Alps arose, and sank, — do you think you can make another trace it painlessly by talking? Why, you cannot even carry us up an Alp, by talking. You can guide us up it, step by step, no otherwise — even so, best silently. You girls, who have been among the hills, know how the bad guide chatters and gesticulates, and it is 'Put your foot here'; and 'Mind how you balance yourself there'; but the good guide walks on quietly, without a word, only with his eyes on you when need is, and his arm like an iron bar, if need be.

122. In that slow way, also, art can be taught — if you have faith in your guide, and will let his arm be to you as an iron bar when need is. But in what teacher of art have you such faith? Certainly not in me; for, as I told you at first, I know well enough it is only because you think I can talk, not because you think I know my business, that you let me speak to you at all. If I were to tell you anything that seemed to you strange you would not believe it, and yet it would only be in telling you strange things that I could be of use to you. I could be of great use to you — infinite use — with brief saying, if you would believe it; but you would not, just because the thing that would be of real use would displease you. You are all wild, for instance, with admiration of Gustave Doré.[19] Well, suppose I were to tell you, in the strongest terms I could use, that Gustave Doré's art was bad — bad, not in weakness, — not in failure, — but bad with dreadful power — the power of the Furies and the Harpies mingled, enraging, and polluting; that so long as you looked at it, no perception of pure or beautiful art was possible for you. Suppose I were to tell you that! What would be the use? Would you look at Gustave Doré less? Rather, more, I fancy. On the other hand, I could soon put you into good humour with me, if I chose. I know well enough what you like, and how to praise it to your better liking. I could talk to you about moonlight, and twilight, and spring flowers, and autumn leaves, and the Madonnas of Raphael — how motherly! and the Sibyls of Michael Angelo — how majestic! and the Saints of Angelico — how pious! and the Cherubs of Correggio — how delicious! Old as I am, I could play you a tune on the harp yet,

19. See *Time and Tide*, Letter XVI, in the present collection, note 6.

that you would dance to. But neither you nor I should be a bit the better or wiser; or, if we were, our increased wisdom could be of no practical effect. For, indeed, the arts, as regards teachableness, differ from the sciences also in this, that their power is founded not merely on facts which can be communicated, but on dispositions which require to be created. Art is neither to be achieved by effort of thinking, nor explained by accuracy of speaking. It is the instinctive and necessary result of power, which can only be developed through the mind of successive generations, and which finally burst into life under social conditions as slow of growth as the faculties they regulate. Whole æras of mighty history are summed, and the passions of dead myriads are concentrated, in the existence of a noble art: and if that noble art were among us, we should feel it and rejoice; not caring in the least to hear lectures on it; and since it is not among us, be assured we have to go back to the root of it, or, at least, to the place where the stock of it is yet alive, and the branches began to die.

123. And now, may I have your pardon for pointing out, partly with reference to matters which are at this time of greater moment than the arts — that if we undertook such recession to the vital germ of national arts that have decayed, we should find a more singular arrest of their power in Ireland than in any other European country? For in the eighth century Ireland possessed a school of art in her manuscripts and sculpture, which, in many of its qualities — apparently in all essential qualities of decorative invention — was quite without rival; seeming as if it might have advanced to the highest triumphs in architecture and in painting. But there was one fatal flaw in its nature, by which it was stayed, and stayed with a conspicuousness of pause to which there is no parallel: so that, long ago, in tracing the progress of European schools from infancy to strength, I chose for the students of Kensington, in a lecture since published, two characteristic examples of early art, of equal skill; but in the one case, skill which was progressive — in the other, skill which was at pause. In the one case, it was work receptive of correction — hungry for correction; and in the other, work which inherently rejected correction. I chose for them a corrigible Eve, and an incorrigible Angel, and I grieve to say that the incorrigible Angel was also an Irish Angel![20]

124. And the fatal difference lay wholly in this. In both pieces of art there was an equal falling short of the needs of fact; but the Lombardic Eve knew she was in the wrong, and the Irish Angel thought himself all right. The eager Lombardic sculptor, though firmly insisting on his childish idea, yet showed in the irregular broken touches of the features, and the imperfect struggle for softer lines in the form, a perception of beauty and law that he could not render; there was the strain of effort, under conscious imperfection, in every line. But the Irish missal-painter had drawn his angel with no sense of failure, in happy complacency, and put red dots into the palm of each hand, and rounded the eyes into perfect circles, and, I regret to say, left the mouth out altogether, with perfect satisfaction to himself.

125. May I without offence ask you to consider whether this mode of arrest in ancient Irish art may not be indicative of points of character which even yet, in some measure, arrest your national power? I have seen much of Irish character, and have watched it closely, for I have also much loved it. And I think the form of failure to which it is most liable is this, — that being generous-hearted, and wholly intending always to do right, it does not attend to the external laws of right, but thinks it must necessarily do right because it means to do so, and therefore does wrong without finding it out; and then, when the consequences of its

20. See *'The Two Paths,'* §§28 *et seq.* [Ruskin's note.]

wrong come upon it, or upon others connected with it, it cannot conceive that the wrong is in any wise of its causing or of its doing, but flies into wrath, and a strange agony of desire for justice, as feeling itself wholly innocent, which leads it farther astray, until there is nothing that it is not capable of doing with a good conscience.

126. But mind, I do not mean to say that, in past or present relations between Ireland and England, you have been wrong, and we right. Far from that, I believe that in all great questions of principle, and in all details of administration of law, you have been usually right, and we wrong; sometimes in misunderstanding you, sometimes in resolute iniquity to you. Nevertheless, in all disputes between states, though the stronger is nearly always mainly in the wrong, the weaker is often so in a minor degree; and I think we sometimes admit the possibility of our being in error, and you never do.

127. And now, returning to the broader question, what these arts and labours of life have to teach us of its mystery, this is the first of their lessons — that the more beautiful the art, the more it is essentially the work of people who *feel themselves wrong*; — who are striving for the fulfilment of a law, and the grasp of a loveliness, which they have not yet attained, which they feel even farther and farther from attaining the more they strive for it. And yet, in still deeper sense, it is the work of people who know also that they are right. The very sense of inevitable error from their purpose marks the perfectness of that purpose, and the continued sense of failure arises from the continued opening of the eyes more clearly to all the sacredest laws of truth.

128. This is one lesson. The second is a very plain, and greatly precious one: namely — that whenever the arts and labours of life are fulfilled in this spirit of striving against misrule, and doing whatever we have to do, honourably and perfectly, they invariably bring happiness, as much as seems possible to the nature of man. In all other paths by which that happiness is pursued there is disappointment, or destruction: for ambition and for passion there is no rest — no fruition; the fairest pleasures of youth perish in a darkness greater than their past light: and the loftiest and purest love too often does but inflame the cloud of life with endless fire of pain. But, ascending from lowest to highest, through every scale of human industry, that industry worthily followed, gives peace. Ask the labourer in the field, at the forge, or in the mine; ask the patient, delicate-fingered artisan, or the strong-armed, fiery-hearted worker in bronze, and in marble, and with the colours of light; and none of these, who are true workmen, will ever tell you, that they have found the law of heaven an unkind one — that in the sweat of their face they should eat bread,[21] till they return to the ground; nor that they ever found it an unrewarded obedience, if, indeed, it was rendered faithfully to the command — 'Whatsoever thy hand findeth to do — do it with thy might.'[22]

129. These are the two great and constant lessons which our labourers teach us of the mystery of life. But there is another, and a sadder one, which they cannot teach us, which we must read on their tombstones.

'Do it with thy might.' There have been myriads upon myriads of human creatures who have obeyed this law — who have put every breath and nerve of their being into its toil — who have devoted every hour, and exhausted every faculty — who have bequeathed their unaccomplished thoughts at death — who, being dead, have yet spoken,[23] by majesty of memory, and strength of example. And, at last, what has all this 'Might' of humanity accomplished, in six thousand

21. *Genesis*, iii,19.
22. *Ecclesiastes*, ix, 10. (*Cf.* the final sentences in Book II, Chapter ix, of *Sartor Resartus*.)
23. *Hebrews*, xi,4.

years of labour and sorrow? What has it *done?* Take the three chief occupations and arts of men, one by one, and count their achievements. Begin with the first — the lord of them all — Agriculture. Six thousand years have passed since we were set to till the ground, from which we were taken. How much of it is tilled? How much of that which is, wisely or well? In the very centre and chief garden of Europe — where the two forms of parent Christianity have had their fortresses — where the noble Catholics of the Forest Cantons, and the noble Protestants of the Vaudois valleys, have maintained, for dateless ages, their faiths and liberties — there the unchecked Alpine rivers yet run wild in devastation; and the marshes, which a few hundred men could redeem with a year's labour, still blast their helpless inhabitants into fevered idiotism. That is so, in the centre of Europe! While, on the near coast of Africa, once the Garden of the Hesperides,[24] an Arab woman, but a few sunsets since, ate her child, for famine. And, with all the treasures of the East at our feet, we, in our own dominion, could not find a few grains of rice, for a people that asked of us no more; but stood by, and saw five hundred thousand of them perish of hunger.[25]

130. Then, after agriculture, the art of kings, take the next head of human arts — Weaving; the art of queens, honoured of all noble Heathen women, in the person of their virgin goddess[26] — honoured of all Hebrew women, by the word of their wisest king — 'She layeth her hands to the spindle, and her hands hold the distaff; she stretcheth out her hand to the poor. She is not afraid of the snow for her household, for all her household are clothed with scarlet. She maketh herself covering of tapestry; her clothing is silk and purple. She maketh fine linen, and selleth it, and delivereth girdles to the merchant.'[27] What have we done in all these thousands of years with this bright art of Greek maid and Christian matron? Six thousand years of weaving, and have we learned to weave? Might not every naked wall have been purple with tapestry, and every feeble breast fenced with sweet colours from the cold? What have we done? Our fingers are too few, it seems, to twist together some poor covering for our bodies. We set our streams to work for us, and choke the air with fire, to turn our spinning-wheels — and, — *are we yet clothed?* Are not the streets of the capitals of Europe foul with sale of cast clouts and rotten rags?[28] Is not the beauty of your sweet children left in wretchedness of disgrace, while, with better honour, nature clothes the brood of the bird in its nest, and the suckling of the wolf in her den? And does not every winter's snow robe what you have not robed, and shroud what you have not shrouded; and every winter's wind bear up to heaven its wasted souls, to witness against you hereafter, by the voice of their Christ, — 'I was naked, and ye clothed me not'?[29]

131. Lastly — take the Art of Building — the strongest — proudest — most orderly — most enduring of the arts of man; that of which the produce is in the surest manner accumulative, and need not perish, or be replaced; but if once well done, will stand more strongly than the unbalanced rocks — more prevalently than the crumbling hills. The art which is associated with all civic pride and sacred principle; with which men record their power — satisfy their enthusiasm — make sure their defence — define and make dear their habitation. And in six thousand years

24. The *later* location of the garden, in which the daughters of Atlas and Hesperus, assisted by the dragon Ladon, guarded the golden apples.

26. Athena, who was the goddess not only of wisdom but also of the useful and elegant arts, such as weaving.

27. *Proverbs*, xxxi,19–22,24. (Not quoted literally.)

28. *Jeremiah*, xxxviii,11.

29. *Matthew*, xxv,43.

of building, what have we done? Of the greater part of all that skill and strength, *no* vestige is left, but fallen stones, that encumber the fields and impede the streams. But, from this waste of disorder, and of time, and of rage, what *is* left to us? Constructive and progressive creatures that we are, with ruling brains, and forming hands, capable of fellowship, and thirsting for fame, can we not contend, in comfort, with the insects of the forest, or, in achievement, with the worm of the sea? The white surf rages in vain against the ramparts built by poor atoms of scarcely nascent life; but only ridges of formless ruin mark the places where once dwelt our noblest multitudes. The ant and the moth have cells for each of their young, but our little ones lie in festering heaps, in homes that consume them like graves; and night by night, from the corners of our streets, rises up the cry of the homeless — 'I was a stranger, and ye took me not in.' [30]

132. Must it be always thus? Is our life for ever to be without profit — without possession? Shall the strength of its generations be as barren as death; or cast away their labour, as the wild fig-tree casts her untimely figs? [31] Is it all a dream then — the desire of the eyes and the pride of life — or, if it be, might we not live in nobler dream than this? The poets and prophets, the wise men, and the scribes, though they have told us nothing about a life to come, have told us much about the life that is now. They have had — they also, — their dreams, and we have laughed at them. They have dreamed of mercy, and of justice; they have dreamed of peace and good-will; they have dreamed of labour undisappointed, and of rest undisturbed; they have dreamed of fulness in harvest, and overflowing in store; they have dreamed of wisdom in council, and of providence in law; of gladness of parents, and strength of children, and glory of gray hairs. And at these visions of theirs we have mocked, and held them for idle and vain, unreal and unaccomplishable. What have we accomplished with our realities? Is this what has come of our worldly wisdom, tried against their folly? this, our mightiest possible, against their impotent ideal? or, have we only wandered among the spectra of a baser felicity, and chased phantoms of the tombs, instead of visions of the Almighty; and walked after the imaginations of our evil hearts,[32] instead of after the counsels of Eternity, until our lives — not in the likeness of the cloud of heaven, but of the smoke of hell — have become 'as a vapour, that appeareth for a little time, and then vanisheth away'? [33]

133. *Does* it vanish then? Are you sure of that? — sure, that the nothingness of the grave will be a rest from this troubled nothingness; and that the coiling shadow, which disquiets itself in vain, cannot change into the smoke of the torment that ascends for ever? [34] Will any answer that they *are* sure of it, and that there is no fear, nor hope, nor desire, nor labour, whither they go? [35] Be it so: will you not, then, make as sure of the Life that now is, as you are of the Death that is to come? Your hearts are wholly in this world — will you not give them to it wisely, as well as perfectly? And see, first of all, that you *have* hearts, and sound hearts, too, to give. Because you have no heaven to look for, is that any reason that you should remain ignorant of this wonderful and infinite earth, which is firmly and instantly given you in possession? Although your days are numbered, and the following darkness sure, is it necessary that you should share the degradation of the brute, because you are condemned to its mortality; or live the life of the moth, and of the worm, because you are to companion them in the dust? Not so; we may have but a few thousands

of days to spend, perhaps hundreds only — perhaps tens; nay, the longest of our time and best, looked back on, will be but as a moment, as the twinkling of an eye; still we are men, not insects; we are living spirits, not passing clouds. 'He maketh the winds His messengers; the momentary fire, His minister';[36] and shall we do less than *these*? Let us do the work of men while we bear the form of them; and, as we snatch our narrow portion of time out of Eternity, snatch also our narrow inheritance of passion out of Immortality — even though our lives *be* as a vapour, that appeareth for a little time, and then vanisheth away.

134. But there are some of you who believe not this — who think this cloud of life has no such close — that it is to float, revealed and illumined, upon the floor of heaven, in the day when He cometh with clouds, and every eye shall see Him.[37] Some day, you believe, within these five, or ten, or twenty years, for every one of us the judgment will be set, and the books opened.[38] If that be true, far more than that must be true. Is there but one day of judgment? Why, for us every day is a day of judgment — every day is a Dies Iræ,[39] and writes its irrevocable verdict in the flame of its West. Think you that judgment waits till the doors of the grave are opened? It waits at the doors of your houses — it waits at the corners of your streets; we are in the midst of judgment — the insects that we crush are our judges — the moments we fret away are our judges — the elements that feed us, judge, as they minister — and the pleasures that deceive us, judge, as they indulge. Let us, for our lives, do the work of Men while we bear the form of them, if indeed those lives are *Not* as a vapour, and do *Not* vanish away.

135. 'The work of men' — and what is that? Well, we may any of us know very quickly, on the condition of being wholly ready to do it. But many of us are for the most part thinking, not of what we are to do, but of what we are to get; and the best of us are sunk into the sin of Ananias,[40] and it is a mortal one — we want to keep back part of the price; and we continually talk of taking up our cross, as if the only harm in a cross was the *weight* of it — as if it was only a thing to be carried, instead of to be — crucified upon. 'They that are His have crucified the flesh, with the affections and lusts.'[41] Does that mean, think you, that in time of national distress, of religious trial, of crisis for every interest and hope of humanity — none of us will cease jesting, none cease idling, none put themselves to any wholesome work, none take so much as a tag of lace off their footmen's coats, to save the world? Or does it rather mean, that they are ready to leave houses, lands, and kindreds — yes, and life, if need be? Life! — some of us are ready enough to throw that away, joyless as we have made it. But '*station* in Life' — how many of us are ready to quit *that*? Is it not always the great objection, where there is question of finding something useful to do — 'We cannot leave our stations in Life'?

Those of us who really cannot — that is to say, who can only maintain themselves by continuing in some business or salaried office, have already something to do; and all that they have to see to is, that they do it honestly and with all their might. But with most people who use that apology, 'remaining in the station of life to which Providence has called them' means keeping all the carriages, and all the footmen and large houses they can possibly pay for; and, once for all, I say that if ever Providence *did* put them into stations of that sort — which is not at all a matter of certainty — Providence is just

41. *Cf. Galatians*, v,24.

now very distinctly calling them out again. Levi's station in life was the receipt of custom; and Peter's, the shore of Galilee; and Paul's, the ante-chambers of the High Priest,[42] — which 'station in life' each had to leave, with brief notice.

And, whatever our station in life may be, at this crisis, those of us who mean to fulfil our duty ought first to live on as little as we can; and, secondly, to do all the wholesome work for it we can, and to spend all we can spare in doing all the sure good we can.

And sure good is, first in feeding people, then in dressing people, then in lodging people, and lastly in rightly pleasing people, with arts, or sciences, or any other subject of thought.

136. I say first in feeding; and, once for all, do not let yourselves be deceived by any of the common talk of 'indiscriminate charity.' The order to us is not to feed the deserving hungry, nor the industrious hungry, nor the amiable and well-intentioned hungry, but simply to feed the hungry.[43] It is quite true, infallibly true, that if any man will not work, neither should he eat [44] — think of that, and every time you sit down to your dinner, ladies and gentlemen, say solemnly, before you ask a blessing, 'How much work have I done today for my dinner?' But the proper way to enforce that order on those below you, as well as on yourselves, is not to leave vagabonds and honest people to starve together, but very distinctly to discern and seize your vagabond; and shut your vagabond up out of honest people's way, and very sternly then see that, until he has worked, he does *not* eat. But the first thing is to be sure you have the food to give; and, therefore, to enforce the organisation of vast activities in agriculture and in commerce, for the production of the wholesomest food, and proper storing and distribution of it, so that no famine shall any more be possible among civilised beings. There is plenty of work in this business alone, and at once, for any number of people who like to engage in it.

137. Secondly, dressing people — that is to say, urging every one within reach of your influence to be always neat and clean, and giving them means of being so. In so far as they absolutely refuse, you must give up the effort with respect to them, only taking care that no children within your sphere of influence shall any more be brought up with such habits; and that every person who is willing to dress with propriety shall have encouragement to do so. And the first absolutely necessary step towards this is the gradual adoption of a consistent dress for different ranks of persons, so that their rank shall be known by their dress; and the restriction of the changes of fashion within certain limits. All which appears for the present quite impossible; but it is only so far even difficult as it is difficult to conquer our vanity, frivolity, and desire to appear what we are not. And it is not, nor ever shall be, creed of mine, that these mean and shallow vices are unconquerable by Christian women.

138. And then, thirdly, lodging people, which you may think should have been put first, but I put it third, because we must feed and clothe people where we find them, and lodge them afterward. And providing lodgment for them means a great deal of vigorous legislation, and cutting down of vested interests that stand in the way, and after that, or before that, so far as we can get it, thorough sanitary and remedial action in the houses that we have; and then the building of more, strongly, beautifully, and in groups of limited extent, kept in proportion to their streams, and walled round, so that there may be no festering and wretched suburb anywhere, but clean and busy street within, and the open country without,

43. See *Isaiah*, lviii,7.

44. *Cf. II Thessalonians*, iii,10.

with a belt of beautiful garden and orchard round the walls, so that from any part of the city perfectly fresh air and grass, and sight of far horizon, might be reachable in a few minutes' walk. This the final aim; but in immediate action every minor and possible good to be instantly done, when, and as, we can; roofs mended that have holes in them — fences patched that have gaps in them — walls buttressed that totter — and floors propped that shake; cleanliness and order enforced with our own hands and eyes, till we are breathless, every day. And all the fine arts will healthily follow. I myself have washed a flight of stone stairs all down, with bucket and broom, in a Savoy inn, where they hadn't washed their stairs since they first went up them; and I never made a better sketch than that afternoon.

139. These, then, are the three first needs of civilised life; and the law for every Christian man and woman is, that they shall be in direct service toward one of these three needs, as far as is consistent with their own special occupation, and if they have no special business, then wholly in one of these services. And out of such exertion in plain duty all other good will come; for in this direct contention with material evil, you will find out the real nature of all evil; you will discern by the various kinds of resistance, what is really the fault and main antagonism to good; also you will find the most unexpected helps and profound lessons given, and truths will come thus down to us which the speculation of all our lives would never have raised us up to. You will find nearly every educational problem solved, as soon as you truly want to do something; everybody will become of use in their own fittest way, and will learn what is best for them to know in that use. Competitive examination will then, and not till then, be wholesome, because it will be daily, and calm, and in practice; and on these familiar arts, and minute, but certain and serviceable knowledges, will be surely edified and sustained the greater arts and splendid theoretical sciences.

140. But much more than this. On such holy and simple practice will be founded, indeed, at last, an infallible religion. The greatest of all the mysteries of life, and the most terrible, is the corruption of even the sincerest religion, which is not daily founded on rational, effective, humble, and helpful action. Helpful action, observe! for there is just one law, which, obeyed, keeps all religions pure — forgotten, makes them all false. Whenever in any religious faith, dark or bright, we allow our minds to dwell upon the points in which we differ from other people, we are wrong, and in the devil's power. That is the essence of the Pharisee's thanksgiving — 'Lord, I thank Thee that I am not as other men are.'[45] At every moment of our lives we should be trying to find out, not in what we differ from other people, but in what we agree with them; and the moment we find we can agree as to anything that should be done, kind or good (and who but fools couldn't?) then do it; push at it together: you can't quarrel in a side-by-side push; but the moment that even the best men stop pushing, and begin talking, they mistake their pugnacity for piety, and it's all over. I will not speak of the crimes which in past times have been committed in the name of Christ, nor of the follies which are at this hour held to be consistent with obedience to Him; but I *will* speak of the morbid corruption and waste of vital power in religious sentiment, by which the pure strength of that which should be the guiding soul of every nation, the splendour of its youthful manhood, and spotless light of its maidenhood, is averted or cast away. You may see continually girls who have never been taught to do a single useful thing thoroughly; who cannot sew, who cannot cook, who cannot cast an account, nor prepare a medicine, whose whole life has been passed either in play or in pride; you

45. *Luke*, xviii,11.

will find girls like these, when they are earnest-hearted, cast all their innate passion of religious spirit, which was meant by God to support them through the irksomeness of daily toil, into grievous and vain meditation over the meaning of the great Book, of which no syllable was ever yet to be understood but through a deed; all the instinctive wisdom and mercy of their womanhood made vain, and the glory of their pure consciences warped into fruitless agony concerning questions which the laws of common serviceable life would have either solved for them in an instant, or kept out of their way. Give such a girl any true work that will make her active in the dawn, and weary at night, with the consciousness that her fellow-creatures have indeed been the better for her day, and the powerless sorrow of her enthusiasm will transform itself into a majesty of radiant and beneficent peace.

So with our youths. We once taught them to make Latin verses, and called them educated; now we teach them to leap and to row, to hit a ball with a bat, and call them educated. Can they plough, can they sow, can they plant at the right time, or build with a steady hand? Is it the effort of their lives to be chaste, knightly, faithful, holy in thought, lovely in word and deed? Indeed it is, with some, nay, with many, and the strength of England is in them, and the hope; but we have to turn their courage from the toil of war to the toil of mercy; and their intellect from dispute of words to discernment of things; and their knighthood from the errantry of adventure to the state and fidelity of a kingly power. And then, indeed, shall abide, for them and for us, an incorruptible felicity, and an infallible religion; shall abide for us Faith, no more to be assailed by temptation, no more to be defended by wrath and by fear; — shall abide with us Hope, no more to be quenched by the years that overwhelm, or made ashamed by the shadows that betray: — shall abide for us, and with us, the greatest of these: the abiding will, the abiding name of our Father. For the greatest of these is Charity [46]

THE CROWN OF WILD OLIVE

Lecture II

Traffic

52. My good Yorkshire friends, you asked me down here among your hills that I might talk to you about this Exchange you are going to build; but, earnestly and seriously asking you to pardon me, I am going to do nothing of the kind. I cannot talk, or at least can say very little, about this same Exchange. I must talk of quite other things, though not willingly; — I could not deserve your pardon, if, when you invited me to speak on one subject, I *wilfully* spoke on another. But I cannot speak, to purpose, of anything about which I do not care; and most simply and sorrowfully I have to tell you, in the outset, that I do *not* care about this Exchange of yours.

If, however, when you sent me your invitation, I had answered, 'I won't come, I don't care about the Exchange of Bradford,' you would have been justly offended with me, not knowing the reason of so blunt a carelessness. So I have come down, hoping that you will patiently let me tell you why, on this, and many other such occasions, I now remain silent, when formerly I should have caught at the opportunity of speaking to a gracious audience.

53. In a word, then, I do not care about this Exchange — because *you* don't; and because you know perfectly well I cannot make you. Look at the essential conditions of the case, which you, as business

men, know perfectly well, though perhaps you think I forget them. You are going to spend £30,000, which to you, collectively, is nothing; the buying a new coat is, as to the cost of it, a much more important matter of consideration to me, than building a new Exchange is to you. But you think you may as well have the right thing for your money. You know there are a great many odd styles of architecture about; you don't want to do anything ridiculous; you hear of me, among others, as a respectable architectural man-milliner; and you send for me, that I may tell you the leading fashion; and what is, in our shops, for the moment, the newest and sweetest thing in pinnacles.

54. Now, pardon me for telling you frankly, you cannot have good architecture merely by asking people's advice on occasion. All good architecture is the expression of national life and character, and it is produced by a prevalent and eager national taste, or desire for beauty. And I want you to think a little of the deep significance of this word 'taste'; for no statement of mine has been more earnestly or oftener controverted than that good taste is essentially a moral quality. 'No,' say many of my antagonists, 'taste is one thing, morality is another. Tell us what is pretty: we shall be glad to know that; but we need no sermons — even were you able to preach them, which may be doubted.'

Permit me, therefore, to fortify this old dogma of mine somewhat. Taste is not only a part and an index of morality; — it is the ONLY morality. The first, and last, and closest trial question to any living creature is, 'What do you like?' Tell me what you like, and I'll tell you what you are. Go out into the street, and ask the first man or woman you meet, what their 'taste' is; and if they answer candidly, you know them, body and soul. 'You, my friend in the rags, with the unsteady gait, what do *you* like?' 'A pipe and a quartern of gin.' I know you. 'You, good woman, with the quick step and tidy bonnet, what do you like?' 'A swept hearth, and a clean tea-table; and my husband opposite me, and a baby at my breast.' Good, I know you also. 'You, little girl with the golden hair and the soft eyes, what do you like?' 'My canary, and a run among the wood hyacinths.' 'You, little boy with the dirty hands, and the low forehead, what do you like?' 'A shy at the sparrows, and a game at pitch farthing.' Good; we know them all now. What more need we ask?

55. 'Nay,' perhaps you answer; 'we need rather to ask what these people and children do, than what they like. If they *do* right, it is no matter that they like what is wrong; and if they *do* wrong, it is no matter that they like what is right. Doing is the great thing; and it does not matter that the man likes drinking, so that he does not drink; nor that the little girl likes to be kind to her canary, if she will not learn her lessons; nor that the little boy likes throwing stones at the sparrows, if he goes to the Sunday school.' Indeed, for a short time, and in a provisional sense, this is true. For if, resolutely, people do what is right, in time to come they like doing it. But they only are in a right moral state when they *have* come to like doing it; and as long as they don't like it, they are still in a vicious state. The man is not in health of body who is always thinking of the bottle in the cupboard, though he bravely bears his thirst; but the man who heartily enjoys water in the morning, and wine in the evening, each in its proper quantity and time. And the entire object of true education is to make people not merely *do* the right things, but *enjoy* the right things: — not merely industrious, but to love industry — not merely learned, but to love knowledge — not merely pure, but to love purity — not merely just, but to hunger and thirst after justice.[1]

56. But you may answer or think, 'Is the liking for outside ornaments, — for pictures, or statues, or furniture, or archi-

1. *Cf. Matthew*, v,6.

tecture, a moral quality? ' Yes, most surely, if a rightly set liking. Taste for *any* pictures or statues is not a moral quality, but taste for good ones is. Only here again we have to define the word ' good.' I don't mean by ' good,' clever — or learned — or difficult in the doing. Take a picture by Teniers,[2] of sots quarrelling over their dice; it is an entirely clever picture; so clever that nothing in its kind has ever been done equal to it; but it is also an entirely base and evil picture. It is an expression of delight in the prolonged contemplation of a vile thing, and delight in that is an ' unmannered,' or ' immoral ' quality. It is ' bad taste ' in the profoundest sense — it is the taste of the devils. On the other hand, a picture of Titian's, or a Greek statue, or a Greek coin, or a Turner landscape, expresses delight in the perpetual contemplation of a good and perfect thing. That is an entirely moral quality — it is the taste of the angels. And all delight in fine art, and all love of it, resolve themselves into simple love of that which deserves love. That deserving is the quality which we call ' loveliness ' — (we ought to have an opposite word, hateliness, to be said of the things which deserve to be hated); and it is not an indifferent nor optional thing whether we love this or that; but it is just the vital function of all our being. What we *like* determines what we *are,* and is the sign of what we are; and to teach taste is inevitably to form character.

57. As I was thinking over this, in walking up Fleet Street the other day, my eye caught the title of a book standing open in a bookseller's window. It was — ' On the necessity of the diffusion of taste among all classes.' ' Ah,' I thought to myself, ' my classifying friend, when you have diffused your taste, where will your classes be? The man who likes what you like, belongs to the same class with you, I think. Inevitably so. You may put him to other work if you choose; but, by the condition you have brought him into, he will dislike the work as much as you would yourself. You get hold of a scavenger or a costermonger, who enjoyed the Newgate Calendar[3] for literature, and " Pop goes the Weasel " for music. You think you can make him like Dante and Beethoven? I wish you joy of your lessons; but if you do, you have made a gentleman of him: — he won't like to go back to his costermongering.'

58. And so completely and unexceptionally is this so, that, if I had time tonight, I could show you that a nation cannot be affected by any vice, or weakness, without expressing it, legibly, and for ever, either in bad art, or by want of art; and that there is no national virtue, small or great, which is not manifestly expressed in all the art which circumstances enable the people possessing that virtue to produce. Take, for instance, your great English virtue of enduring and patient courage. You have at present in England only one art of any consequence — that is, iron-working. You know thoroughly well how to cast and hammer iron. Now, do you think, in those masses of lava which you build volcanic cones to melt, and which you forge at the mouths of the Infernos you have created; do you think, on those iron plates, your courage and endurance are not written for ever, — not merely with an iron pen, but on iron parchment? And take also your great English vice — European vice — vice of all the world — vice of all other worlds that roll or shine in heaven, bearing with them yet the atmosphere of hell — the vice of jealousy, which brings competition into your commerce, treachery into your councils, and dishonour into your wars — that vice which has rendered for you, and for your next neighbouring nation, the daily oc-

2. David Teniers, the elder (1582–1649) and David Teniers, the younger (1610–90) were great realistic painters of the Dutch school.

3. The account, formerly published in London, of prisoners in Newgate prison, with details of their crimes.

cupations of existence no longer possible, but with the mail upon your breasts and the sword loose in its sheath: so that at last, you have realised for all the multitudes of the two great peoples who lead the so-called civilisation of the earth, — you have realised for them all, I say, in person and in policy, what was once true only of the rough Border riders of your Cheviot hills —

> They carved at the meal
> With gloves of steel,
> And they drank the red wine through the helmet barr'd; [4] —

do you think that this national shame and dastardliness of heart are not written as legibly on every rivet of your iron armour as the strength of the right hands that forged it?

59. Friends, I know not whether this thing be the more ludicrous or the more melancholy. It is quite unspeakably both. Suppose, instead of being now sent for by you, I had been sent for by some private gentleman, living in a suburban house, with his garden separated only by a fruit wall from his next door neighbour's; and he had called me to consult with him on the furnishing of his drawing-room. I begin looking about me, and find the walls rather bare: I think such and such a paper might be desirable — perhaps a little fresco here and there on the ceiling — a damask curtain or so at the windows. 'Ah,' says my employer, 'damask curtains, indeed! That's all very fine, but you know I can't afford that kind of thing just now!' 'Yet the world credits you with a splendid income!' 'Ah, yes,' says my friend, 'but do you know, at present I am obliged to spend it nearly all in steel-traps?' 'Steel-traps! for whom?' 'Why, for that fellow on the other side the wall, you know: we're very good friends, capital friends; but we are obliged to keep our traps set on both sides of the wall; we could not possibly keep on friendly terms without them, and our spring guns. The worst of it is, we are both clever fellows enough; and there's never a day passes that we don't find out a new trap, or a new gun-barrel, or something; we spend about fifteen millions a year each in our traps, take it altogether; and I don't see how we're to do with less.' A highly comic state of life for two private gentlemen! but for two nations, it seems to me, not wholly comic. Bedlam would be comic, perhaps, if there were only one madman in it; and your Christmas pantomime is comic, when there is only one clown in it; but when the whole world turns clown, and paints itself red with its own heart's blood instead of vermilion, it is something else than comic, I think.

60. Mind, I know a great deal of this is play, and willingly allow for that. You don't know what to do with yourselves for a sensation: fox-hunting and cricketing will not carry you through the whole of this unendurably long mortal life: you liked popguns when you were schoolboys, and rifles and Armstrongs [5] are only the same things better made: but then the worst of it is, that what was play to you when boys, was not play to the sparrows; and what is play to you now, is not play to the small birds of State neither; and for the black eagles,[6] you are somewhat shy of taking shots at them, if I mistake not.

61. I must get back to the matter in hand, however. Believe me, without farther instance, I could show you, in all time, that every nation's vice, or virtue, was written in its art: the soldiership of early Greece; the sensuality of late Italy; the visionary religion of Tuscany; the splendid human energy of Venice. I have no time to do this tonight (I have done it elsewhere before now); but I proceed to apply the principle to ourselves in a more searching manner.

I notice that among all the new build-

4. Scott, *Lay of the Last Minstrel*, i,31ff.

5. Big guns, so called from the name of the manufacturers, Armstrong, in England.

6. Symbols of the Austrian arms.

ings which cover your once wild hills, churches and schools are mixed in due, that is to say, in large proportion, with your mills and mansions; and I notice also that the churches and schools are almost always Gothic, and the mansions and mills are never Gothic. May I ask the meaning of this? for, remember, it is peculiarly a modern phenomenon. When Gothic was invented, houses were Gothic as well as churches; and when the Italian style superseded the Gothic, churches were Italian as well as houses. If there is a Gothic spire to the Cathedral of Antwerp, there is a Gothic belfry to the Hôtel de Ville at Brussels; if Inigo Jones [7] builds an Italian Whitehall, Sir Christopher Wren [8] builds an Italian St. Paul's. But now you live under one school of architecture, and worship under another. What do you mean by doing this? Am I to understand that you are thinking of changing your architecture back to Gothic; and that you treat your churches experimentally, because it does not matter what mistakes you make in a church? Or am I to understand that you consider Gothic a pre-eminently sacred and beautiful mode of building, which you think, like the fine frankincense, should be mixed for the tabernacle only, and reserved for your religious services? For if this be the feeling, though it may seem at first as if it were graceful and reverent, at the root of the matter, it signifies neither more nor less than that you have separated your religion from your life.

62. For consider what a wide significance this fact has: and remember that it is not you only, but all the people of England, who are behaving thus, just now.

You have all got into the habit of calling the church 'the house of God.' I have seen, over the doors of many churches, the legend actually carved, '*This* is the house of God and this is the gate of heaven.' [9] Now, note where that legend comes from, and of what place it was first spoken. A boy leaves his father's house to go on a long journey on foot, to visit his uncle: he has to cross a wild hill-desert; just as if one of your own boys had to cross the wolds to visit an uncle at Carlisle. The second or third day your boy finds himself somewhere between Hawes and Brough, in the midst of the moors, at sunset. It is stony ground, and boggy; he cannot go one foot farther that night. Down he lies, to sleep, on Wharnside, where best he may, gathering a few of the stones together to put under his head; — so wild the place is, he cannot get anything but stones. And there, lying under the broad night, he has a dream; and he sees a ladder set up on the earth, and the top of it reaches to heaven, and the angels of God are seen ascending and descending upon it. And when he wakes out of his sleep, he says, 'How dreadful is this place; surely this is none other than the house of God, and this is the gate of heaven.' [10] This PLACE, observe; not this church; not this city; not this stone, even, which he puts up for a memorial — the piece of flint on which his head was lain. But this *place*; this windy slope of Wharnside; this moorland hollow, torrent-bitten, snow-blighted; this *any* place where God lets down the ladder. And how are you to know where that will be? or how are you to determine where it may be, but by being ready for it always? Do you know where the lightning is to fall next? You *do* know that, partly; you can guide the lightning; but you cannot guide the going forth of the Spirit, which is as that lightning when it shines from the east to the west.

63. But the perpetual and insolent warping of that strong verse to serve a merely

7. Inigo Jones (1573–1652), distinguished architect who introduced the classic style into England. He designed the banqueting house at Whitehall, 1619–22, as part of a projected new palace.

8. Sir Christopher Wren (1632–1723) rebuilt St. Paul's cathedral and most of the parish churches of London after the great fire of 1666.

9. *Cf. Genesis*, xxviii.17.

10. *Ibid.*, 10ff.

ecclesiastical purpose, is only one of the thousand instances in which we sink back into gross Judaism. We call our churches 'temples.' Now, you know perfectly well they are *not* temples. They have never had, never can have, anything whatever to do with temples. They are 'synagogues'— 'gathering places'— where you gather yourselves together as an assembly; and by not calling them so, you again miss the force of another mighty text — 'Thou, when thou prayest, shalt not be as the hypocrites are: for they love to pray standing in the *churches*' [we should translate it], 'that they may be seen of men. But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father,' — which is, not in chancel nor in aisle, but 'in secret.'[11]

64. Now, you feel, as I say this to you — I know you feel — as if I were trying to take away the honour of your churches. Not so; I am trying to prove to you the honour of your houses and your hills: not that the Church is not sacred — but that the whole Earth is. I would have you feel what careless, what constant, what infectious sin there is in all modes of thought, whereby, in calling your churches only 'holy,' you call your hearths and homes 'profane'; and have separated yourselves from the heathen by casting all your household gods to the ground, instead of recognising, in the places of their many and feeble Lares,[12] the presence of your One and Mighty Lord and Lar.

65. 'But what has all this to do with our Exchange?' you ask me, impatiently. My dear friends, it has just everything to do with it; on these inner and great questions depend all the outer and little ones; and if you have asked me down here to speak to you, because you had before been interested in anything I have written, you must know that all I have yet said about architecture was to show this. The book I called *The Seven Lamps* was to show that certain right states of temper and moral feeling were the magic powers by which all good architecture, without exception, had been produced. *The Stones of Venice* had, from beginning to end, no other aim than to show that the Gothic architecture of Venice had risen out of, and indicated in all its features, a state of pure national faith, and of domestic virtue; and that its Renaissance architecture had arisen out of, and in all its features indicated, a state of concealed national infidelity, and of domestic corruption. And now, you ask me what style is best to build in, and how can I answer, knowing the meaning of the two styles, but by another question — do you mean to build as Christians or as Infidels? And still more — do you mean to build as honest Christians or as honest Infidels? as thoroughly and confessedly either one or the other? You don't like to be asked such rude questions. I cannot help it; they are of much more importance than this Exchange business; and if they can be at once answered, the Exchange business settles itself in a moment. But before I press them farther, I must ask leave to explain one point clearly.

66. In all my past work, my endeavour has been to show that good architecture is essentially religious — the production of a faithful and virtuous, not of an infidel and corrupted people. But in the course of doing this, I have had also to show that good architecture is not *ecclesiastical*. People are so apt to look upon religion as the business of the clergy, not their own, that the moment they hear of anything depending on 'religion,' they think it must also have depended on the priesthood; and I have had to take what place was to be occupied between these two errors, and fight both, often with seeming contradiction. Good architecture is the work of good and believing men; therefore, you say, at least some people say, 'Good architecture must essentially have been the work of the clergy, not of the laity.' No — a thousand times no; good architec-

11. *Cf. Matthew*, vi,6.

12 Roman household gods.

ture [13] has always been the work of the commonalty, *not* of the clergy. 'What,' you say, 'those glorious cathedrals — the pride of Europe — did their builders not form Gothic architecture?' No; they corrupted Gothic architecture. Gothic was formed in the baron's castle, and the burgher's street. It was formed by the thoughts, and hands, and powers of labouring citizens and warrior kings. By the monk it was used as an instrument for the aid of his superstition; when that superstition became a beautiful madness, and the best hearts of Europe vainly dreamed and pined in the cloister, and vainly raged and perished in the crusade, — through that fury of perverted faith and wasted war, the Gothic rose also to its loveliest, most fantastic, and, finally, most foolish dreams; and in those dreams was lost.

67. I hope, now, that there is no risk of your misunderstanding me when I come to the gist of what I want to say tonight; — when I repeat, that every great national architecture has been the result and exponent of a great national religion. You can't have bits of it here, bits there — you must have it everywhere or nowhere. It is not the monopoly of a clerical company — it is not the exponent of a theological dogma — it is not the hieroglyphic writing of an initiated priesthood; it is the manly language of a people inspired by resolute and common purpose, and rendering resolute and common fidelity to the legible laws of an undoubted God.

68. Now there have as yet been three distinct schools of European architecture. I say, European, because Asiatic and African architectures belong so entirely to other races and climates, that there is no question of them here; only, in passing, I will simply assure you that whatever is good or great in Egypt, and Syria, and India, is just as good or great for the same reasons as the buildings on our side of the Bosphorus. We Europeans, then, have had three great religions: the Greek, which was the worship of the God of Wisdom and Power; the Mediæval, which was the worship of the God of Judgment and Consolation; the Renaissance, which was the worship of the God of Pride and Beauty: these three we have had — they are past, — and now, at last, we English have got a fourth religion, and a God of our own, about which I want to ask you. But I must explain these three old ones first.

69. I repeat, first, the Greeks essentially worshipped the God of Wisdom; so that whatever contended against their religion, — to the Jews a stumbling-block, — was, to the Greeks — *Foolishness*.[14]

The first Greek idea of deity was that expressed in the word, of which we keep the remnant in our words '*Di*-urnal' and '*Di*-vine' — the god of *Day*, Jupiter the revealer. Athena is his daughter, but especially daughter of the Intellect, springing armed from the head. We are only with the help of recent investigation beginning to penetrate the depth of meaning couched under the Athenaic symbols: but I may note rapidly, that her ægis, the mantle with the serpent fringes, in which she often, in the best statues, is represented as folding up her left hand, for better guard; and the Gorgon,[15] on her shield, are both representative mainly of the chilling horror and sadness (turning men to stone, as it were) of the outmost and superficial spheres of knowledge — that knowledge which separates, in bitterness, hardness, and sorrow, the heart of the full-grown man from the heart of the child. For out of imperfect knowledge spring terror, dissension, danger, and disdain; but from perfect knowledge, given by the full-revealed Athena, strength and peace, in sign of which she is crowned with

13. And all other arts, for the most part; even of incredulous and secularly-minded commonalties. [1873.] [Ruskin's note.]

14. *Cf. 1 Corinthians*, i,23.

15. In Greek mythology, one of the three snaky haired sisters, whose terrible aspect turned the beholder to stone.

the olive spray, and bears the resistless spear.

This, then, was the Greek conception of purest Deity; and every habit of life, and every form of his art developed themselves from the seeking this bright, serene, resistless wisdom; and setting himself, as a man, to do things evermore rightly and strongly;[16] not with any ardent affection or ultimate hope; but with a resolute and continent energy of will, as knowing that for failure there was no consolation, and for sin there was no remission. And the Greek architecture rose unerring, bright, clearly defined, and self contained.

70. Next followed in Europe the great Christian faith, which was essentially the religion of Comfort. Its great doctrine is the remission of sins; for which cause, it happens, too often, in certain phases of Christianity, that sin and sickness themselves are partly glorified, as if, the more you had to be healed of, the more divine was the healing. The practical result of this doctrine, in art, is a continual contemplation of sin and disease, and of imaginary states of purification from them; thus we have an architecture conceived in a mingled sentiment of melancholy and aspiration, partly severe, partly luxuriant, which will bend itself to every one of our needs, and every one of our fancies, and be strong or weak with us, as we are strong or weak ourselves. It is, of all architecture, the basest, when base people build it — of all, the noblest, when built by the noble.

16. It is an error to suppose that the Greek worship, or seeking, was chiefly of Beauty. It was essentially of rightness and strength, founded on Forethought; the principal character of Greek art is not beauty, but design: and the Dorian Apollo-worship and Athenian Virgin-worship are both expressions of adoration of divine wisdom and purity. Next to these great deities, rank, in power over the national mind, Dionysus and Ceres, the givers of human strength and life; then, for heroic example, Hercules. There is no Venus-worship among the Greeks in the great times: and the Muses are essentially teachers of Truth, and of its harmonies. (Compare *Aratra Pentelici*, §200.) [Ruskin's note.]

71. And now note that both these religions — Greek and Mediæval — perished by falsehood in their own main purpose. The Greek religion of Wisdom perished in a false philosophy — 'Oppositions of science, falsely so called.' The Mediæval religion of Consolation perished in false comfort; in remission of sins given lyingly. It was the selling of absolution that ended the Mediæval faith; and I can tell you more, it is the selling of absolution which, to the end of time, will mark false Christianity. Pure Christianity gives her remission of sins only by *ending* them; but false Christianity gets her remission of sins by *compounding for* them. And there are many ways of compounding for them. We English have beautiful little quiet ways of buying absolution, whether in low Church or high, far more cunning than any of Tetzel's trading.[17]

72. Then, thirdly, there followed the religion of Pleasure, in which all Europe gave itself to luxury, ending in death. First, *bals masqués*[18] in every saloon, and then guillotines in every square. And all these three worships issue in vast temple building. Your Greek worshipped Wisdom, and built you the Parthenon[19] — the Virgin's temple. The Mediæval worshipped Consolation, and built you Virgin temples also — but to our Lady of Salvation. Then the Revivalist[20] worshipped beauty, of a sort, and built you Versailles and the Vatican. Now, lastly, will you tell me what *we* worship, and what *we* build?

73. You know we are speaking always of the real, active, continual, national worship; that by which men act, while they live; not that which they talk of, when

17. Johann Tetzel (c.1460–1519), preacher and salesman of papal indulgences, who aroused Luther's wrath and helped precipitate the Reformation.

18. 'masked balls.'

19. The celebrated Doric temple of Athena, on the Acropolis, a rock-hill of Athens; it was built in the 5th century B.C.

20. *i.e.* the revivalist of classic architecture.

they die. Now, we have, indeed, a nominal religion, to which we pay tithes of property and sevenths of time; but we have also a practical and earnest religion, to which we devote nine-tenths of our property and six-sevenths of our time. And we dispute a great deal about the nominal religion: but we are all unanimous about this practical one; of which I think you will admit that the ruling goddess may be best generally described as the 'Goddess of Getting-on,' or 'Britannia of the Market.' The Athenians had an 'Athena Agoraia,'[21] or Athena of the Market; but she was a subordinate type of their goddess, while our Britannia Agoraia is the principal type of ours. And all your great architectural works are, of course, built to her. It is long since you built a great cathedral; and how you would laugh at me if I proposed building a cathedral on the top of one of these hills of yours, to make it an Acropolis! But your railroad mounds, vaster than the walls of Babylon; your railroad stations, vaster than the temple of Ephesus,[22] and innumerable; your chimneys, how much more mighty and costly than cathedral spires! your harbour-piers; your warehouses; your exchanges! — all these are built to your great Goddess of 'Getting-on'; and she has formed, and will continue to form, your architecture, as long as you worship her; and it is quite vain to ask me to tell you how to build to *her*; you know far better than I.

74. There might, indeed, on some theories, be a conceivably good architecture for Exchanges — that is to say, if there were any heroism in the fact or deed of exchange which might be typically carved on the outside of your building. For, you know, all beautiful architecture must be adorned with sculpture or painting; and for sculpture or painting, you must have a subject. And hitherto it has been a received opinion among the nations of the world that the only right subjects for either, were *heroisms* of some sort. Even on his pots and his flagons, the Greek put a Hercules slaying lions, or an Apollo slaying serpents, or Bacchus slaying melancholy giants, and earthborn despondencies. On his temples, the Greek put contests of great warriors in founding states, or of gods with evil spirits. On his houses and temples alike, the Christian put carvings of angels conquering devils; or of hero-martyrs exchanging this world for another; subject inappropriate, I think, to our direction of exchange here. And the Master of Christians not only left His followers without any orders as to the sculpture of affairs of exchange on the outside of buildings, but gave some strong evidence of His dislike of affairs of exchange within them.[23] And yet there might surely be a heroism in such affairs; and all commerce become a kind of selling of doves, not impious. The wonder has always been great to me, that heroism has never been supposed to be in any wise consistent with the practice of supplying people with food, or clothes; but rather with that of quartering one's self upon them for food, and stripping them of their clothes. Spoiling of armour is an heroic deed in all ages; but the selling of clothes, old or new, has never taken any colour of magnanimity. Yet one does not see why feeding the hungry and clothing the naked should ever become base businesses, even when engaged in on a large scale. If one could contrive to attach the notion of conquest to them anyhow! so that, supposing there were anywhere an obstinate race, who refused to be comforted, one might take some pride in giving them compulsory comfort! and, as it were, '*occupying* a country' with one's gifts, instead of one's armies? If one could only

21. *Athena*: goddess of wisdom. *Agora*: marketplace.

22. At Ephesus, founded in Asia Minor in the 12th century B.C., there was a great temple sacred to Diana, the powerful nature-goddess.

23. Allusion to Christ driving the money-changers from the temple. See *Matthew*, xxi,12ff.

consider it as much a victory to get a barren field sown, as to get an eared field stripped; and contend who should build villages, instead of who should 'carry' them! Are not all forms of heroism conceivable in doing these serviceable deeds? You doubt who is strongest? It might be ascertained by push of spade, as well as push of sword. Who is wisest? There are witty things to be thought of in planning other business than campaigns. Who is bravest? There are always the elements to fight with, stronger than men; and nearly as merciless.

75. The only absolutely and unapproachably heroic element in the soldier's work seems to be — that he is paid little for it — and regularly: while you traffickers, and exchangers, and others occupied in presumably benevolent business, like to be paid much for it — and by chance. I never can make out how it is that a *knight*-errant does not expect to be paid for his trouble, but a *pedlar* errant always does; — that people are willing to take hard knocks for nothing, but never to sell ribands cheap: that they are ready to go on fervent crusades, to recover the tomb of a buried God, but never on any travels to fulfil the orders of a living one; — that they will go anywhere barefoot to preach their faith, but must be well bribed to practise it, and are perfectly ready to give the Gospel gratis, but never the loaves and fishes.

76. If you chose to take the matter up on any such soldierly principle; to do your commerce, and your feeding of nations, for fixed salaries; and to be as particular about giving people the best food, and the best cloth, as soldiers are about giving them the best gunpowder, I could carve something for you on your exchange worth looking at. But I can only at present suggest decorating its frieze with pendant purses; and making its pillars broad at the base, for the sticking of bills. And in the innermost chambers of it there might be a statue of Britannia of the Market, who may have, perhaps advisably, a partridge for her crest, typical at once of her courage in fighting for noble ideas, and of her interest in game; and round its neck, the inscription in golden letters, 'Perdix fovit quæ non peperit.'[24] Then, for her spear, she might have a weaver's beam; and on her shield, instead of St. George's Cross,[25] the Milanese boar, semi-fleeced, with the town of Gennesaret proper, in the field;[26] and the legend, 'In the best market,' and her corslet, of leather, folded over her heart in the shape of a purse, with thirty slits in it, for a piece of money to go in at, on each day of the month. And I doubt not but that people would come to see your exchange, and its goddess, with applause.

77. Nevertheless, I want to point out to you certain strange characters in this goddess of yours. She differs from the great Greek and Mediæval deities essentially in two things — first, as to the continuance of her presumed power; secondly, as to the extent of it.

First, as to the Continuance.

The Greek Goddess of Wisdom gave continual increase of wisdom, as the Christian Spirit of Comfort (or Comforter) continual increase of comfort. There was no question, with these, of any limit or cessation of function. But with your Agora Goddess, that is just the most important question. Getting on — but where to? Gathering together — but how much? Do you mean to gather always — never to spend? If so, I wish you joy of your goddess, for I am just as well off as you, without the trouble of worshipping her at all. But if you do not spend, somebody else will — somebody else must.

24. See *Jeremiah*, xvii,11: 'As the partridge sitteth on eggs and hatcheth them not; so he that getteth riches, and not by right, shall leave them in the midst of his days, and at his end shall be a fool.'

25 St. George is the legendary saint of England

26. *Cf. Matthew*, viii,28ff. (The words *boar*, *semi-fleeced*, *proper*, and *field* are technical terms in heraldry. — The allusions are not entirely consistent.)

And it is because of this (among many other such errors) that I have fearlessly declared your so-called science of Political Economy to be no science; because, namely, it has omitted the study of exactly the most important branch of the business — the study of *spending*. For spend you must, and as much as you make, ultimately. You gather corn: — will you bury England under a heap of grain; or will you, when you have gathered, finally eat? You gather gold: — will you make your house-roofs of it, or pave your streets with it? That is still one way of spending it. But if you keep it, that you may get more, I'll give you more; I'll give you all the gold you want — all you can imagine — if you can tell me what you'll do with it. You shall have thousands of gold pieces; — thousands of thousands — millions — mountains, of gold: where will you keep them? Will you put an Olympus of silver upon a golden Pelion — make Ossa like a wart? [27] Do you think the rain and dew would then come down to you, in the streams from such mountains, more blessedly than they will down the mountains which God has made for you, of moss and whinstone? But it is not gold that you want to gather! What is it? greenbacks? No; not those neither. What is it then — is it ciphers after a capital I? Cannot you practise writing ciphers, and write as many as you want! Write ciphers for an hour every morning, in a big book, and say every evening, I am worth all those naughts more than I was yesterday. Won't that do? Well, what in the name of Plutus [28] is it you want? Not gold, not greenbacks, not ciphers after a capital I? You will have to answer, after all, 'No; we want, somehow or other, money's *worth*.' Well, what is that? Let your Goddess of Getting-on discover it, and let her learn to stay therein.

78. Second. But there is yet another question to be asked respecting this Goddess of Getting-on. The first was of the continuance of her power; the second is of its extent.

Pallas [29] and the Madonna were supposed to be all the world's Pallas, and all the world's Madonna. They could teach all men, and they could comfort all men. But, look strictly into the nature of the power of your Goddess of Getting-on: and you will find she is the Goddess — not of everybody's getting on — but only of somebody's getting on. This is a vital, or rather deathful, distinction. Examine it in your own ideal of the state of national life which this Goddess is to evoke and maintain. I asked you what it was, when I was last here; [30] — you have never told me. Now, shall I try to tell you?

79. Your ideal of human life then is, I think, that it should be passed in a pleasant undulating world, with iron and coal everywhere underneath it. On each pleasant bank of this world is to be a beautiful mansion, with two wings; and stables, and coach houses; a moderately-sized park; a large garden and hot-houses; and pleasant carriage drives through the shrubberies. In this mansion are to live the favoured votaries of the Goddess; the English gentleman, with his gracious wife, and his beautiful family; always able to have the boudoir and the jewels for the wife, and the beautiful ball dresses for the daughters, and hunters for the sons, and a shooting in the Highlands for himself. At the bottom of the bank, is to be the mill; not less than a quarter of a mile long, with one steam engine at each end, and two in the middle, and a chimney three hundred feet high. In this mill are to be in constant employment from eight hundred to a thousand workers, who never drink, never strike, always go to

27. *Olympus*: a mountain in Greece, the supposed home of the gods. — In Greek mythology, the giants, in attacking the gods, piled the mountains Pelion and Ossa one upon the other in their attempt to scale heaven. — See *Hamlet*, V,i,305.

28. The god of riches.

29. Pallas Athena, or Minerva, goddess of wisdom.

30. *The Two Paths*, §89. [Ruskin's note]

church on Sunday, and always express themselves in respectful language.

80. Is not that, broadly, and in the main features, the kind of thing you propose to yourselves? It is very pretty indeed, seen from above; not at all so pretty, seen from below. For, observe, while to one family this deity is indeed the Goddess of Getting-on, to a thousand families she is the Goddess of *not* Getting-on. 'Nay,' you say, 'they have all their chance.' Yes, so has every one in a lottery, but there must always be the same number of blanks. 'Ah! but in a lottery it is not skill and intelligence which take the lead, but blind chance.' What then! do you think the old practice, that 'they should take who have the power, and they should keep who can,' is less iniquitous, when the power has become power of brains instead of fist? and that, though we may not take advantage of a child's or a woman's weakness, we may of a man's foolishness? 'Nay, but finally, work must be done, and some one must be at the top, some one at the bottom.' Granted, my friends. Work must always be, and captains of work must always be; and if you in the least remember the tone of any of my writings, you must know that they are thought unfit for this age, because they are always insisting on need of government, and speaking with scorn of liberty. But I beg you to observe that there is a wide difference between being captains or governors of work, and taking the profits of it. It does not follow, because you are general of an army, that you are to take all the treasure, or land, it wins (if it fight for treasure or land); neither, because you are king of a nation, that you are to consume all the profits of the nation's work. Real kings, on the contrary, are known invariably by their doing quite the reverse of this — by their taking the least possible quantity of the nation's work for themselves. There is no test of real kinghood so infallible as that. Does the crowned creature live simply, bravely, unostentatiously? probably he *is* a King. Does he cover his body with jewels, and his table with delicates? in all probability he is *not* a King. It is possible he may be, as Solomon was;[31] but that is when the nation shares his splendour with him. Solomon made gold, not only to be in his own palace as stones, but to be in Jerusalem as stones. But, even so, for the most part, these splendid kinghoods expire in ruin, and only the true kinghoods live, which are of royal labourers governing loyal labourers; who, both leading rough lives, establish the true dynasties. Conclusively you will find that because you are king of a nation, it does not follow that you are to gather for yourself all the wealth of that nation; neither, because you are king of a small part of the nation, and lord over the means of its maintenance — over field, or mill, or mine, — are you to take all the produce of that piece of the foundation of national existence for yourself.

81. You will tell me I need not preach against these things, for I cannot mend them. No, good friends, I cannot; but you can, and you will; or something else can and will. Even good things have no abiding power — and shall these evil things persist in victorious evil? All history shows, on the contrary, that to be the exact thing they never can do. Change *must* come; but it is ours to determine whether change of growth, or change of death. Shall the Parthenon be in ruins on its rock, and Bolton priory[32] in its meadow, but these mills of yours be the consummation of the buildings of the earth, and their wheels be as the wheels of eternity? Think you that 'men may come, and men may go,' but — mills — go on for ever?[33] Not so; out of these, better or worse shall come; and it is for you to choose which.

82. I know that none of this wrong is done with deliberate purpose. I know, on the contrary, that you wish your work-

31. *Cf. I Kings*, x,14ff.
32. A beautiful old abbey in Yorkshire.
33. See Tennyson's *The Brook*.

men well; that you do much for them, and that you desire to do more for them, if you saw your way to such benevolence safely. I know that even all this wrong and misery are brought about by a warped sense of duty, each of you striving to do his best; but, unhappily, not knowing for whom this best should be done. And all our hearts have been betrayed by the plausible impiety of the modern economist, telling us that, 'To do the best for ourselves, is finally to do the best for others.' Friends, our great Master said not so; and most absolutely we shall find this world is not made so. Indeed, to do the best for others, is finally to do the best for ourselves; but it will not do to have our eyes fixed on that issue. The Pagans had got beyond that. Hear what a Pagan says of this matter; hear what were, perhaps, the last written words of Plato, — if not the last actually written (for this we cannot know), yet assuredly in fact and power his parting words — in which, endeavouring to give full crowning and harmonious close to all his thoughts, and to speak the sum of them by imagined sentence of the Great Spirit, his strength and his heart fail him, and the words cease, broken off for ever.

83. They are at the close of the dialogue called *Critias*, in which he describes, partly from real tradition, partly in ideal dream, the early state of Athens; and the genesis, and order, and religion, of the fabled isle of Atlantis; in which genesis he conceives the same first perfection and final degeneracy of man, which in our own Scriptural tradition is expressed by saying that the Sons of God inter-married with the daughters of men, for he supposes the earliest race to have been indeed the children of God; and to have corrupted themselves, until 'their spot was not the spot of his children.' And this, he says, was the end; that indeed 'through many generations, so long as the God's nature in them yet was full, they were submissive to the sacred laws, and carried themselves lovingly to all that had kindred with them in divineness; for their uttermost spirit was faithful and true, and in every wise great; so that, in *all meekness of wisdom, they dealt with each other*, and took all the chances of life; and despising all things except virtue, they cared little what happened day by day, and *bore lightly the burden* of gold and of possessions; for they saw that, if *only their common love and virtue increased, all these things would be increased together with them*; but to set their esteem and ardent pursuit upon material possession would be to lose that first, and their virtue and affection together with it. And by such reasoning, and what of the divine nature remained in them, they gained all this greatness of which we have already told; but when the God's part of them faded and became extinct, being mixed again and again, and effaced by the prevalent mortality; and the human nature at last exceeded, they then became unable to endure the courses of fortune; and fell into shapelessness of life, and baseness in the sight of him who could see, having lost everything that was fairest of their honour; while to the blind hearts which could not discern the true life, tending to happiness, it seemed that they were then chiefly noble and happy, being filled with all iniquity of inordinate possession and power. Whereupon, the God of Gods, whose Kinghood is in laws, beholding a once just nation thus cast into misery, and desiring to lay such punishment upon them as might make them repent into restraining, gathered together all the gods into his dwelling place, which from heaven's centre overlooks whatever has part in creation; and having assembled them, he said' —

84. The rest is silence.[84] Last words of the chief wisdom of the heathen, spoken of this idol of riches; this idol of yours: this golden image, high by measureless cubits, set up where your green fields of England are furnace-burnt into the like

34. *Cf. Hamlet*, V,ii,372.

ness of the plain of Dura:[35] this idol, forbidden to us, first of all idols, by our own Master and faith; forbidden to us also by every human lip that has ever, in any age or people, been accounted of as able to speak according to the purposes of God. Continue to make that forbidden deity your principal one, and soon no more art, no more science, no more pleasure will be possible. Catastrophe will come; or, worse than catastrophe, slow mouldering and withering into Hades. But if you can fix some conception of a true human state of life to be striven for — life, good for all men, as for yourselves; if you can determine some honest and simple order of existence; following those trodden ways of wisdom, which are pleasantness, and seeking her quiet and withdrawn paths, which are peace; — then, and so sanctifying wealth into 'commonwealth,' all your art, your literature, your daily labours, your domestic affection, and citizen's duty, will join and increase into one magnificent harmony. You will know then how to build, well enough; you will build with stone well, but with flesh better; temples not made with hands, but riveted of hearts; and that kind of marble, crimson-veined, is indeed eternal.

35. In the province of Babylon, where Nebuchadnezzar set up 'an image of gold.' See *Daniel*, iii,1.

TIME AND TIDE

By WEARE *and* TYNE

LETTER I

The Two Kinds of Co-operation — in Its Highest Sense It Is not yet Thought of

DENMARK HILL, *February* 4, 1867. My dear Friend, — You have now everything I have yet published on political economy; but there are several points in these books of mine which I intended to add notes to, and it seems little likely I shall get that soon done So I think the best way of making up for the want of these is to write you a few simple letters, which you can read to other people, or send to be printed, if you like, in any of your journals where you think they may be useful.

I especially want you, for one thing, to understand the sense in which the word 'co-operation' is used in my books.[1] You will find I am always pleading for it; and yet I don't at all mean the co-operation of partnership (as opposed to the system of wages) which is now so gradually extending itself among our great firms. I am glad to see it doing so, yet not altogether glad; for none of you who are engaged in the immediate struggle between the system of co-operation and the system of mastership know how much the dispute involves; and none of us know the results to which it may finally lead. For the alternative is not, in reality, only between two modes of conducting business — it is between two different states of society. It is not the question whether an amount of wages, no greater in the end than that at present received by the men, may be paid to them in a way which shall give them share in the risks, and interest in the prosperity of the business. The question is, really, whether the profits which are at present taken, as his own right, by the person whose capital, or energy, or ingenuity, has made him head of the firm, are not in some proportion to be divided among the subordinates of it.

I do not wish, for the moment, to enter into any inquiry as to the just claims of capital, or as to the proportions in which

1. In *Modern Painters*, Part VIII, Chapter i, 'The Law of Help,' §6, Ruskin had written 'Government and co-operation are in all things and eternally the laws of life. Anarchy and competition, eternally, and in all things, the laws of death.' (Quoted in *Unto This Last*, Essay iii, §54.)

profits ought to be, or are in actually existing firms, divided. I merely take the one assured and essential condition, that a somewhat larger income will be in co-operative firms secured to the subordinates, by the diminution of the income of the chief. And the general tendency of such a system is to increase the facilities of advancement among the subordinates; to stimulate their ambition; to enable them to lay by, if they are provident, more ample and more early provision for declining years; and to form in the end a vast class of persons wholly different from the existing operative — members of society, possessing each a moderate competence; able to procure, therefore, not indeed many of the luxuries, but all the comforts of life; and to devote some leisure to the attainments of liberal education, and to the other objects of free life. On the other hand, by the exact sum which is divided among them, more than their present wages, the fortune of the man who, under the present system, takes all the profits of the business, will be diminished; and the acquirement of large private fortune by regular means, and all the conditions of life belonging to such fortune, will be rendered impossible in the mercantile community.

Now, the magnitude of the social change hereby involved, and the consequent differences in the moral relations between individuals, have not as yet been thought of, — much less estimated, — by any of your writers on commercial subjects; and it is because I do not yet feel able to grapple with them that I have left untouched, in the books I send you, the question of co-operative labour. When I use the word 'co-operation,' it is not meant to refer to these new constitutions of firms at all. I use the word in a far wider sense, as opposed, not to masterhood, but to *competition*. I do not mean for instance, by co-operation, that all the master bakers in a town are to give a share of their profits to the men who go out with the bread; but that the masters are not to try to undersell each other, nor seek each to get the other's business, but are all to form one society, selling to the public under a common law of severe penalty for unjust dealing, and at an established price. I do not mean that all bankers' clerks should be partners in the bank; but I do mean that all bankers should be members of a great national body, answerable as a society for all deposits; and that the private business of speculating with other people's money should take another name than that of 'banking.' And, for final instance, I mean by 'co-operation' not only fellowships between trading *firms*, but between trading *nations*; so that it shall no more be thought (as it is now, with ludicrous and vain selfishness) an advantage for one nation to undersell another, and take its occupation away from it; but that the primal and eternal law of vital commerce shall be of all men understood — namely, that every nation is fitted by its character, and the nature of its territories, for some particular employments or manufactures; and that it is the true interest of every other nation to encourage it in such specialty, and by no means to interfere with, but in all ways forward and protect its efforts, ceasing all rivalship with it, so soon as it is strong enough to occupy its proper place. You see, therefore, that the idea of co-operation, in the sense in which I employ it, has hardly yet entered into the minds of political inquirers; and I will not pursue it at present; but return to that system which is beginning to obtain credence and practice among us. This, however, must be in a following letter.

Letter II

Co-operation, as Hitherto Understood, Is Perhaps not Expedient

February 4, 1867.

Limiting the inquiry, then, for the present, as proposed in the close of my last

letter, to the form of co-operation which is now upon its trial in practice, I would beg of you to observe that the points at issue, in the comparison of this system with that of mastership, are by no means hitherto frankly stated; still less can they as yet be fairly brought to test. For all mastership is not alike in principle; there are just and unjust masterships; and while, on the one hand, there can be no question but that co-operation is better than unjust and tyrannous mastership, there is very great room for doubt whether it be better than a just and benignant mastership.

At present you — every one of you — speak, and act, as if there were only one alternative; namely, between a system in which profits shall be divided in due proportion among all; and the present one, in which the workman is paid the least wages he will take, under the pressure of competition in the labour-market. But an intermediate method is conceivable; a method which appears to me more prudent, and in its ultimate results more just, than the co-operative one. An arrangement may be supposed, and I have good hope also may one day be effected, by which every subordinate shall be paid sufficient and regular wages, according to his rank; by which due provision shall be made out of the profits of the business for sick and superannuated workers; and by which the master, *being held responsible, as a minor king or governor, for the conduct as well as the comfort of all those under his rule*, shall, on that condition, be permitted to retain to his own use the surplus profits of the business which the fact of his being its master may be assumed to prove that he has organised by superior intellect and energy. And I think this principle of regular wage-paying, whether it be in the abstract more just, or not, is at all events the more prudent; for this reason mainly, that in spite of all the cant which is continually talked by cruel, foolish, or designing persons about 'the duty of remaining content in the position in which Providence has placed you,' there is a root of the very deepest and holiest truth in the saying, which gives to it such power as it still retains, even uttered by unkind and unwise lips, and received into doubtful and embittered hearts.

If, indeed, no effort be made to discover, in the course of their early training, for what services the youths of a nation are individually qualified; nor any care taken to place those who have unquestionably proved their fitness for certain functions, in the offices they could best fulfil, — then, to call the confused wreck of social order and life brought about by malicious collision and competition, an arrangement of Providence, is quite one of the most insolent and wicked ways in which it is possible to take the name of God in vain. But if, at the proper time, some earnest effort be made to place youths, according to their capacities, in the occupations for which they are fitted, I think the system of organisation will be finally found the best, which gives the least encouragement to thoughts of any great future advance in social life.

The healthy sense of progress, which is necessary to the strength and happiness of men, does not consist in the anxiety of a struggle to attain higher place, or rank, but in gradually perfecting the manner, and accomplishing the ends, of the life which we have chosen, or which circumstances have determined for us. Thus, I think the object of a workman's ambition should not be to become a master; but to attain daily more subtle and exemplary skill in his own craft, to save from his wages enough to enrich and complete his home gradually with more delicate and substantial comforts; and to lay by such store as shall be sufficient for the happy maintenance of his old age (rendering him independent of the help provided for the sick and indigent by the arrangement pre-supposed), and sufficient also for the starting of his children in a rank of life

equal to his own. If his wages are not enough to enable him to do this, they are unjustly low; if they are once raised to this adequate standard, I do not think that by the possible increase of his gains under contingencies of trade, or by divisions of profits with his master, he should be enticed into feverish hope of an entire change of condition; and as an almost necessary consequence, pass his days in an anxious discontent with immediate circumstances, and a comfortless scorn of his daily life, for which no subsequent success could indemnify him. And I am the more confident in this belief, because, even supposing a gradual rise in social rank possible for all well-conducted persons, my experience does not lead me to think the elevation itself, when attained, would be conducive to their happiness.

The grounds of this opinion I will give you in a future letter; in the present one, I must pass to a more important point, namely, that if this stability of condition be indeed desirable for those in whom existing circumstances might seem to justify discontent, much more must it be good and desirable for those who already possess everything which can be conceived necessary to happiness. It is the merest insolence of selfishness to preach contentment to a labourer who gets thirty shillings a week, while we suppose an active and plotting covetousness to be meritorious in a man who has three thousand a year. In this, as in all other points of mental discipline, it is the duty of the upper classes to set an example to the lower; and to recommend and justify the restraint of the ambition of their inferiors, chiefly by severe and timely limitation of their own. And, without at present inquiring into the greater or less convenience of the possible methods of accomplishing such an object (every detail in suggestions of this kind necessarily furnishing separate matter of dispute), I will merely state my long-fixed conviction, that one of the most important conditions of a healthful system of social economy would be the restraint of the properties and incomes of the upper classes within certain fixed limits. The temptation to use every energy in the accumulation of wealth being thus removed, another, and a higher ideal of the duties of advanced life would be necessarily created in the national mind; by withdrawal of those who had attained the prescribed limits of wealth from commercial competition, earlier worldly success, and earlier marriage, with all its beneficent moral results, would become possible to the young; while the older men of active intellect, whose sagacity is now lost or warped in the furtherance of their own meanest interests, would be induced unselfishly to occupy themselves in the superintendence of public institutions, or furtherance of public advantage.

And out of this class it would be found natural and prudent always to choose the members of the legislative body of the Commons; and to attach to the order also some peculiar honours, in the possession of which such complacency would be felt as would more than replace the unworthy satisfaction of being supposed richer than others, which to many men is the principal charm of their wealth. And although no law of this purport would ever be imposed on themselves by the actual upper classes, there is no hindrance to its being gradually brought into force from beneath, without any violent or impatient proceedings; and this I will endeavour to show you in my next letter.

Letter III

Of True Legislation — That Every Man May Be a Law to Himself

February 17, 1867.

No, I have not been much worse in health; but I was asked by a friend to look over some work in which you will all be deeply interested one day, so that I could not write again till now. I was the more sorry, because there were several things I wished

to note in your last letter; one especially leads me directly to what I in any case was desirous of urging upon you. You say, 'In Vol.VI. of *Frederick the Great* I find a great deal that I feel quite certain, if our Queen or Government could make law, thousands of our English workmen would hail with a shout of joy and gladness.' I do not remember to what you especially allude, but whatever the rules you speak of may be, unless there be anything in them contrary to the rights of present English property, why should you care whether the Government makes them law or not? Can you not, you thousands of English workmen, simply make them a law to yourselves, by practising them?

It is now some five or six years since I first had occasion to speak to the members of the London Working Men's College[1] on the subject of Reform, and the substance of what I said to them was this: 'You are all agape, my friends, for this mighty privilege of having your opinions represented in Parliament. The concession might be desirable, — at all events courteous, — if only it were quite certain you had got any opinions to represent. But have you? Are you agreed on any single thing you systematically want? Less work and more wages, of course; but how much lessening of work do you suppose is possible? Do you think the time will ever come for everybody to have *no* work and *all* wages? Or have you yet taken the trouble so much as to think out the nature of the true connection between wages and work, and to determine, even approximately, the real quantity of the one, that can, according to the laws of God and nature, be given for the other; for, rely on it, make what laws you like, that quantity only can you at last get?

'Do you know how many mouths can be fed on an acre of land, or how fast those mouths multiply; and have you considered what is to be done finally with unfeedable mouths? "Send them to be fed elsewhere," do you say? Have you, then, formed any opinion as to the time at which emigration should begin, or the countries to which it should preferably take place, or the kind of population which should be left at home? Have you planned the permanent state which you would wish England to hold, emigrating over her edges, like a full well, constantly? How full would you have her be of people first; and of what sort of people? Do you want her to be nothing but a large workshop and forge, so that the name of "Englishman" shall be synonymous with "ironmonger," all over the world; or would you like to keep some of your lords and landed gentry still, and a few green fields and trees?

'You know well enough that there is not one of these questions, I do not say which you can answer, but which you have ever *thought* of answering; and yet you want to have voices in Parliament! Your voices are not worth a rat's squeak, either in Parliament or out of it, till you have some ideas to utter with them; and when you have the thoughts, you will not want to utter them, for you will see that your way to the fulfilling of them does not lie through speech. You think such matters need debating about? By all means debate about them; but debate among yourselves, and with such honest helpers of your thoughts as you can find; if that way you cannot get at the truth, do you suppose you could get at it sooner in the House of Commons, where the only aim of many of the members would be to refute every word uttered in your favour; and where the settlement of any question whatever depends merely on the perturbations of the balance of conflicting interests?'

That was, in main particulars, what I then said to the men of the Working Men's College; and in this recurrent agitation about Reform, that is what I would steadfastly say again. Do you think it is

1. Ruskin had lectured frequently at the Working Men's College since the autumn of 1854.

only under the lacquered splendours of Westminster, — you working men of England, — that your affairs can be rationally talked over? You have perfect liberty and power to talk over, and establish for yourselves, whatever laws you please; so long as you do not interfere with other people's liberties or properties. Elect a parliament of your own. Choose the best men among you, the best at least you can find, by whatever system of election you think likeliest to secure such desirable result. Invite trustworthy persons of other classes to join your council; appoint time and place for its stated sittings, and let this parliament, chosen after your own hearts, deliberate on the possible modes of the regulation of industry, and advisablest schemes for helpful discipline of life; and so lay before you the best laws they can devise, which such of you as were wise might submit to, and teach their children to obey. And if any of the laws thus determined appeared to be inconsistent with the present circumstances or customs of trade, do not make a noise about them, nor try to enforce them suddenly on others, nor embroider them on flags, nor call meetings in parks about them, in spite of railings and police; but keep them in your thoughts and sight, as objects of patient purpose, and future achievement by peaceful strength.

For you need not think that even if you obtained a majority of representatives in the existing parliament, you could immediately compel any system of business, broadly contrary to that now established by custom. If you could pass laws tomorrow, wholly favourable to yourselves, as you might think, because unfavourable to your masters, and to the upper classes of society, — the only result would be that the riches of the country would at once leave it, and you would perish in riot and famine. Be assured that no great change for the better can ever be easily accomplished, nor quickly; nor by impulsive, ill-regulated effort, nor by bad men; nor even by good men, without much suffering. The suffering must, indeed, come, one way or another, in all greatly critical periods; the only question, for us, is whether we will reach our ends (if we ever reach them) through a chain of involuntary miseries, many of them useless, and all ignoble; or whether we will know the worst at once, and deal with it by the wisely sharp methods of God-sped courage.

This, I repeat to you, it is wholly in your own power to do, but it is in your power on one condition only, that of stead fast truth to yourselves, and to all men. If there is not, in the sum of it, honesty enough among you to teach you to frame, and strengthen you to obey, *just* laws of trade, there is no hope left for you. No political constitution can ennoble knaves: no privileges can assist them, no posses sions enrich them. Their gains are occult curses; comfortless loss their truest bless ing; failure and pain Nature's only mercy to them. Look to it, therefore, first, that you get some wholesome honesty for the foundation of all things. Without the resolution in your hearts to do good work, so long as your right hands have motion in them; and to do it whether the issue be that you die or live, no life worthy the name will ever be possible to you, while, in once forming the resolution that your work is to be well done, life is really won, here and for ever. And to make your children capable of such resolution, is the be ginning of all true education, of which I have more to say in a future letter.

Letter VIII

The Four Possible Theories Respecting the Authority of the Bible

March 7, 1867.

I HAVE your yesterday's letter, but must not allow myself to be diverted from the business in hand for this once, for it is the most important of which I have to write to you.

You must have seen long ago that the

essential difference between the political economy I am trying to teach, and the popular science, is, that mine is based on *presumably attainable honesty* in men, and conceivable respect in them for the interest of others, while the popular science founds itself wholly on their supposed constant regard for their own, and on their honesty only so far as thereby likely to be secured.

It becomes, therefore, for me, and for all who believe anything I say, a great primal question on what this presumably attainable honesty is to be based.

'Is it to be based on religion?' you may ask. 'Are we to be honest for fear of losing heaven if we are dishonest, or (to put it as generously as we may) for fear of displeasing God? Or, are we to be honest on speculation, because honesty is the best policy; and to invest in virtue as in an undepreciable stock?'

And my answer is — not in any hesitating or diffident way (and you know, my friend, that whatever people may say of me, I often do speak diffidently; though, when I am diffident of things, I like to avoid speaking of them, if it may be; but here I say with no shadow of doubt) — your honesty is *not* to be based either on religion or policy. Both your religion and policy must be based on *it*. Your honesty must be based, as the sun is, in vacant heaven; poised, as the lights in the firmament, which have rule over the day and over the night. If you ask why you are to be honest — you are, in the question itself, dishonoured. 'Because you are a man,' is the only answer; and therefore I said in a former letter that to make your children *capable of honesty* is the beginning of education. Make them men first, and religious men afterwards, and all will be sound; but a knave's religion is always the rottenest thing about him.

It is not, therefore, because I am endeavouring to lay down a foundation of religious concrete, on which to build piers of policy, that you so often find me quoting Bible texts in defence of this or that principle or assertion. But the fact that such references are an offence, as I know them to be, to many of the readers of these political essays, is one among many others, which I would desire you to reflect upon (whether you are yourself one of the offended or not) as expressive of the singular position which the mind of the British public has at present taken with respect to its worshipped Book. The positions, honestly tenable, before I use any more of its texts, I must try to define for you.

All the theories possible to theological disputants respecting the Bible are resolvable into four, and four only.

1. The first is that of the comparatively illiterate modern religious world, namely, that every word of the book known to them as 'The Bible' was dictated by the Supreme Being, and is in every syllable of it His 'Word.'

This theory is of course tenable, though honestly, yet by no ordinarily well-educated person.

2. The second theory is, that although admitting verbal error, the substance of the whole collection of books called the Bible is absolutely true, and furnished to man by Divine inspiration of the speakers and writers of it; and that every one who honestly and prayerfully seeks for such truth in it as is necessary for salvation, will infallibly find it there.

This theory is that held by most of our good and upright clergymen, and the better class of the professedly religious laity.

3. The third theory is that the group of books which we call the Bible were neither written nor collected under any Divine guidance, securing them from substantial error; and that they contain, like all other human writings, false statements mixed with true, and erring thoughts mixed with just thoughts; but that they nevertheless relate, on the whole, faithfully, the dealings of the one God with the first races of man, and His dealings with them in aftertime through Christ;

that they record true miracles, and bear true witness to the resurrection of the dead, and the life of the world to come.

This is a theory held by many of the active leaders of modern thought in England.

4. The fourth, and last possible theory is that the mass of religious Scripture contains merely the best efforts which we hitherto know to have been made by any of the races of men towards the discovery of some relations with the spiritual world; that they are only trustworthy as expressions of the enthusiastic visions or beliefs of earnest men oppressed by the world's darkness and have no more authoritative claim on our faith than the religious speculations and histories of the Egyptians, Greeks, Persians, and Indians; but are, in common with all these, to be reverently studied, as containing the best wisdom which human intellect, earnestly seeking for help from God, has hitherto been able to gather between birth and death.

This has been, for the last half century, the theory of the leading scholars and thinkers of Europe.

There is yet indeed one farther condition of incredulity attainable, and sorrowfully attained, by many men of powerful intellect — the incredulity, namely, of inspiration in any sense, or of help given by any Divine power to the thoughts of men. But this form of infidelity merely indicates a natural incapacity for receiving certain emotions; though many honest and good men belong to this insentient class.

The educated men, therefore, who may be seriously appealed to, in these days, on questions of moral responsibility, as modified by Scripture, are broadly divisible into *three classes, severally holding the three last theories above stated.*

Now, whatever power a passage from the statedly authoritative portions of the Bible may have over the mind of a person holding the fourth theory, it will have a proportionately greater over that of persons holding the third, or the second. I, therefore, always imagine myself speaking to the fourth class of theorists. If I can persuade or influence *them*, I am logically sure of the others. I say 'logically,' for in the actual fact, strange as it may seem, no persons are so little likely to submit to a passage of Scripture not to their liking, as those who are most positive on the subject of its general inspiration.

Addressing, then, this fourth class of thinkers, I would say to them, when asking them to enter on any subject of importance to national morals, or conduct, 'This book, which has been the accepted guide of the moral intelligence of Europe for some 1500 years, enforces certain simple laws of human conduct which you know have also been agreed upon in every main point by all the religious and by all the greatest profane writers, of every age and country. This book primarily forbids pride, lasciviousness, and covetousness; and you know that all great thinkers, in every nation of mankind, have similarly forbade these mortal vices. This book enjoins truth, temperance, charity, and equity; and you know that every great Egyptian, Greek, and Indian, enjoins these also. You know besides, that through all the mysteries of human fate and history, this one great law of fate is written on the walls of cities, or in their dust; — written in letters of light, and letters of blood, — that where truth, temperance, and equity have been preserved, all strength, and peace, and joy have been preserved also, — that where lying, lasciviousness, and covetousness have been practised, there has followed an infallible, and for centuries, irrecoverable, ruin. And you know, lastly, that the observance of this common *law of righteousness, commending itself to all the pure instincts of men, and fruitful in their temporal good, is by the religious writers of every nation, and chiefly* in this venerated Scripture of ours, connected with some distinct hope of better life, and righteousness, to come.

'Let it not then offend you if, deducing principles of action first from the laws and facts of nature, I nevertheless fortify them also by appliance of the precepts, or suggestive and probable teachings of this Book, of which the authority is over many around you, more distinctly than over you, and which, confessing to be divine, *they*, at least, can only disobey at their moral peril.'

On these grounds, and in this temper, I am in the habit of appealing to passages of Scripture in my writings on political economy; and in this temper I will ask you to consider with me some conclusions which appear to me derivable from that text about Miriam, which haunted me through the jugglery;[1] and from certain others.

Letter XII

The Necessity of Imperative Law to the Prosperity of States

March 19, 1867.

I have your most interesting letter,[1] which I keep for reference, when I come to the consideration of its subject in its proper place, under the head of abuse of Food. I do not wonder that your life should be rendered unhappy by the scenes of drunkenness which you are so often compelled to witness; nor that this so gigantic and infectious evil should seem to you the root of the greater part of the misery of our lower orders. I do not wonder that Sir Walter Trevelyan[2] has given his best energy to its repression; nor even that another friend, George Cruikshank,[3] has warped the entire current of his thoughts and life, at once to my admiration and my sorrow, from their natural field of work, that he might spend them, in struggle, for the poor lowest people whom he knows so well, with this fiend who grasps his victims by the throat first, and then by the heart. I wholly sympathise with you in indignation at the methods of temptation employed, and at the use of the fortunes made, by the vendors of death; and whatever immediately applicable legal means there might be of restricting the causes of drunkenness, I should without hesitation desire to bring into operation. But all such appliance I consider temporary and provisionary; nor, while there is record of the miracle at Cana[4] (not to speak of the sacrament), can I conceive it possible, without (logically) the denial of the entire truth of the New Testament, to reprobate the use of wine as a stimulus to the powers of life. Supposing we did deny the words and deeds of the Founder of Christianity, the authority of the wisest heathens, especially that of Plato in the *Laws*, is wholly against abstinence from wine; and much as I can believe, and as I have been endeavouring to make you believe also, of the subtlety of the Devil, I do not suppose the vine to have been one of his inventions. Of this, however, more in another place. By the way, was it not curious that in the *Manchester Examiner*, in which that letter of mine on the abuse of dancing appeared, there chanced to be in the next column a paragraph giving an account of a girl stabbing her betrayer in a ball-room; and another paragraph de-

1. Allusion to Letter VII, in which Ruskin had quoted *Exodus*, xv,20: 'And Miriam the prophetess, the sister of Aaron, took a timbrel in her hand: and all the women went out after her with timbrels and with dances.' Letters V, *VI, and VII deal, to a large extent, with the 'Corruption of Modern Pleasure,' with reference to pantomime, jugglery, and the 'fantastic ghastliness of caricature'* in Doré's illustrations for Balzac's *Contes drolatiques*.

1. On drunkenness as the cause of crime.

2. Sir Walter Calverley Trevelyan (1797–1879), naturalist, author of scientific articles.

3. George Cruikshank (1792–1878), artist and caricaturist, illustrator for Dickens, Thackeray, Lowell; published *The Bottle* (1847) and *The Drunkard's Children* (1848) in support of the cause of total abstinence; and his magnum opus, a cartoon entitled *The Worship of Bacchus: or, the Drinking Customs of Society* (1862). In certain respects, Cruikshank was the Hogarth of Victorian England.

4. *i.e.* Christ's changing water into wine. See *John*, ii,1ff.

scribing a Parisian character, which gives exactly the extreme type I wanted, for example of the abuse of food? [5]

I return, however, now to the examination of possible means for the enforcement of justice, in temper and in act, as the first of political requirements. And as, in stating my conviction of the necessity of certain stringent laws on this matter, I shall be in direct opposition to Mr. Stuart Mill; and more or less in opposition to other professors of modern political economy, as well as to many honest and active promoters of the privileges of working men (as if privilege only were wanted, and never restraint!), I will give you, as briefly as I can, the grounds on which I am prepared to justify such opposition.

When the crew of a wrecked ship escape in an open boat, and the boat is crowded, the provisions scanty, and the prospect of making land distant, laws are instantly established and enforced which no one thinks of disobeying. An entire equality of claim to the provisions is acknowledged without dispute; and an equal liability to necessary labour. No man who can row is allowed to refuse his oar; no man, however much money he may have saved in his pocket, is allowed so much as half a biscuit beyond his proper ration. Any riotous person who endangered the safety of the rest would be bound, and laid in the bottom of the boat, without the smallest compunction for such violation of the principles of individual liberty; and on the other hand, any child, or woman, or aged person, who was helpless, and exposed to greater danger and suffering by their weakness, would receive more than ordinary care and indulgence, not unaccompanied with unanimous self-sacrifice, on the part of the labouring crew.

There is never any question, under circumstances like these, of what is right and wrong, worthy and unworthy, wise or foolish. If there *be* any question, there is little hope for boat or crew. The right man is put at the helm; every available hand is set to the oars; the sick are tended, and the vicious restrained, at once, and decisively; or if not, the end is near.

Now, the circumstances of every associated group of human society, contending bravely for national honours, and felicity of life, differ only from those thus supposed, in the greater, instead of less, necessity for the establishment of restraining law. There is no point of difference in the difficulties to be met, nor in the rights reciprocally to be exercised. Vice and indolence are not less, but more, injurious in a nation than in a boat's company; the modes in which they affect the interests of worthy persons being far more complex, and more easily concealed. The right of restraint, vested in those who labour, over those who would impede their labour, is as absolute in the large as in the small society; the equal claim to share in whatever is necessary to the common life (or commonwealth) is as indefeasible; the claim of the sick and helpless to be cared for by the strong with earnest self-sacrifice, is as pitiful and as imperative; the necessity that the governing authority should be in the hands of a true and trained pilot is as clear, and as constant. In none of these conditions is there any difference between a nation and a boat's company. The only difference is in this, that the impossibility of discerning the effects of individual error and crime, or of counteracting them by individual effort, in the affairs of a great nation, renders it tenfold more necessary than in a small society that direction by law should be sternly established. Assume that your boat's crew is disorderly and licentious, and will, by agreement, submit to no order;—the most troublesome of them will yet be easily discerned; and the chance is that the best man among them knocks him

5. When this letter appeared in the volume called *Time and Tide*, Ruskin added, as an Appendix, two paragraphs from the *Manchester Examiner* of March 16, 1867.

down. Common instinct of self-preservation will make the rioters put a good sailor at the helm, and impulsive pity and occasional help will be, by heart and hand, here and there given to visible distress. Not so in the ship of the realm. The most troublesome persons in *it* are usually the least recognized for such, and the most active in its management: the best men mind their own business patiently, and are never thought of; the good helmsman never touches the tiller but in the last extremity; and the worst forms of misery are hidden, not only from every eye, but from every thought. On the deck, the aspect is of Cleopatra's galley — under hatches, there is a slave-hospital; while, finally (and this is the most fatal difference of all), even the few persons who care to interfere energetically, with purpose of doing good, can, in a large society, discern so little of the real state of evil to be dealt with, and judge so little of the best means of dealing with it, that half of their best efforts will be misdirected, and some may even do more harm than good. Whereas it is the sorrowful law of this universe that evil, even unconscious and unintended, never fails of *its* effect; and in a state where the evil and the good, under conditions of individual 'liberty,' are allowed to contend together, not only every *stroke* on the Devil's side tells — but every *slip* (the mistakes of wicked men being as mischievous as their successes); while on the side of right, there will be much direct and fatal defeat, and, even of its measure of victory, half will be fruitless.

It is true, of course, that in the end of ends, nothing but the right conquers: the prevalent thorns of wrong, at last, crackle away in indiscriminate flame: and of the good seed sown, one grain in a thousand, at last, verily comes up — and somebody lives by it; but most of our great teachers, not excepting Carlyle and Emerson themselves, are a little too encouraging in their proclamation of this comfort, not, to my mind, very sufficient, when, for the present our fields are full of nothing but nettles and thistles, instead of wheat; and none of them seem to me yet to have enough insisted on the inevitable power and infectiousness of all evil, and the easy and utter extinguishableness of good. Medicine often fails of its effect — but poison never: and while, in summing the observation of past life, not unwatchfully spent, I can truly say that I have a thousand times seen patience disappointed of her hope, and wisdom of her aim, I have never yet seen folly fruitless of mischief, nor vice conclude but in calamity.

There is, however, one important condition in national economy, in which the analogy of that of a ship's company is incomplete: namely, that while labour at oar or sail is necessarily united, and can attain no independent good, or personal profit, the labour properly undertaken by the several members of a political community is necessarily, and justly, within certain limits, independent; and obtains for them independent advantage, of which, if you will glance at the last paragraph of the first essay in *Munera Pulveris*,[6] you will see I should be the last person to propose depriving them. This great difference in final condition involves necessarily much complexity in the system and application

6. The following is the paragraph referred to: — 'The first necessity of all economical government is to secure the unquestioned and unquestionable working of the great law of property — that a man who works for a thing shall be allowed to get it, keep it, and consume it, in peace: and that he who does not eat his cake to-day shall be seen, without grudging, to have his cake to-morrow. This, I say, is the first point to be secured by social law; without this, no political advance, nay, no political existence, is in any sort possible. Whatever evil, luxury, iniquity, may seem to result from it, this is nevertheless the first of all equities: and to the enforcement of this, by law and by police-truncheon, the nation must always primarily set its mind — that the cupboard-door may have a firm lock to it, and no man's dinner be carried off by the mob, on its way home from the baker's.'

of general laws; but it in no wise abrogates, — on the contrary, it renders yet more imperative, — the necessity for the firm ordinance of such laws, which, marking the due limits of independent agency, may enable it to exist in full energy, not only without becoming injurious, but so as more variously and perfectly to promote the entire interests of the common wealth.

I will address myself therefore in my next letter to the statement of some of these necessary laws.

Letter XV

The Nature of Theft by Unjust Profits — Crime Can Finally Be Arrested only by Education

29th March.

The first methods of polite robbery, by dishonest manufacture, and by debt, of which we have been hitherto speaking, are easily enough to be dealt with and ended, when once men have a mind to end them. But the third method of polite robbery, by dishonest *acquisition*, has many branches, and is involved among honest arts of acquisition, so that it is difficult to repress the one without restraining the other.

Observe, first, large fortunes cannot honestly be made by the work of any *one* man's hands or head. If his work benefits multitudes, and involves position of high trust, it may be (I do not say that it *is*) expedient to reward him with great wealth or estate; but fortune of this kind is freely given in gratitude for benefit, not as repayment for labour. Also, men of peculiar genius in any art, if the public can enjoy the product of their genius, may set it at almost any price they choose; but this, I will show you when I come to speak of art, is unlawful on their part, and ruinous to their own powers. Genius must not be sold; the sale of it involves, in a transcendental, but perfectly true sense, the guilt both of simony and prostitution. Your labour only may be sold; your soul must not.

Now, by fair pay for fair labour, according to the rank of it, a man can obtain means of comfortable, or if he needs it, refined life. But he cannot obtain large fortune. Such fortunes as are now the prizes of commerce can be made only in one of three ways: —

1. By obtaining command over the labour of multitudes of other men, and taxing it for our own profit.

2. By treasure trove, — as of mines, useful vegetable products, and the like, — in circumstances putting them under our own exclusive control.

3. By speculation (commercial gambling).

The two first of these means of obtaining riches are, in some forms and within certain limits, lawful, and advantageous to the State. The third is entirely detrimental to it; for in all cases of profit derived from speculation, at best, what one man gains another loses; and the net result to the State is zero (pecuniarily), with the loss of the time and ingenuity spent in the transaction; besides the disadvantage involved in the discouragement of the losing party, and the corrupted moral natures of both. This is the result of speculation at its best. At its worst, not only B. loses what A. gains (having taken his fair risk of such loss for his fair chance of gain), but C. and D., who never had any chance at all, are drawn in by B.'s fall, and the final result is that A. sets up his carriage on the collected sum which was once the means of living to a dozen families.

Nor is this all. For while real commerce is founded on real necessities or uses, and limited by these, speculation, of which the object is merely gain, seeks to excite imaginary necessities and popular desires, in order to gather its temporary profit from the supply of them. So that not only the persons who lend their money to it will be finally robbed, but the work done with their money will be for the most part use-

less, and thus the entire body of the public injured as well as the persons concerned in the transaction. Take, for instance, the architectural decorations of railways throughout the kingdom, — representing many millions of money for which no farthing of dividend can ever be forthcoming. The public will not be induced to pay the smallest fraction of higher fare to Rochester or Dover because the ironwork of the bridge which carries them over the Thames is covered with floral cockades, and the piers of it edged with ornamental cornices. All that work is simply put there by the builders that they may put the percentage upon it into their own pockets; and, the rest of the money being thrown into that floral form, there is an end of it, as far as the shareholders are concerned. Millions upon millions have thus been spent, within the last twenty years, on ornamental arrangements of zig-zag bricks, black and blue tiles, cast-iron foliage, and the like; of which millions, as I said, not a penny can ever return into the shareholders' pockets, nor contribute to public speed or safety on the line. It is all sunk for ever in ornamental architecture, and (trust me for this!) *all that architecture is bad*. As such, it had incomparably better not have been built. Its only result will be to corrupt what capacity of taste or right pleasure in such work we have yet left to us! And consider a little, what other kind of result than that might have been attained if all those millions had been spent usefully: say, in buying land for the people, or building good houses for them, or (if it had been imperatively required to be spent decoratively) in laying out gardens and parks for them, — or buying noble works of art for their permanent possession, — or, best of all, establishing frequent public schools and libraries? Count what those lost millions would have so accomplished for you! But you left the affair to 'supply and demand,' and the British public had not brains enough to 'demand' land, or lodging, or books. It 'demanded' cast-iron cockades and zig-zag cornices, and is 'supplied' with them, to its beatitude for ever more.

Now, the theft we first speak of, by falsity of workmanship or material, is, indeed, so far worse than those thefts by dishonest acquisition, that there is no possible excuse for it on the ground of self-deception; while many speculative thefts are committed by persons who really mean to do no harm, but think the system on the whole a fair one, and do the best they can in it for themselves. But in the real fact of the crime, when consciously committed, in the numbers reached by its injury, in the degree of suffering it causes to those whom it ruins, in the baseness of its calculated betrayal of implicit trust, in the yet more perfect vileness of the obtaining such trust by misrepresentation, only that it *may* be betrayed, and in the impossibility that the crime should be at all committed, except by persons of good position and large knowledge of the world, — what manner of theft is so wholly unpardonable, so inhuman, so contrary to every law and instinct which binds or animates society?

And then consider farther, how many of the carriages that glitter in our streets are driven, and how many of the stately houses that gleam among our English fields are inhabited, by this kind of thief!

I happened to be reading this morning (29th March) some portions of the Lent services, and I came to a pause over the familiar words, 'And with Him they crucified two thieves.' Have you ever considered (I speak to you now as a professing Christian), why, in the accomplishment of the 'numbering among transgressors,' the transgressors chosen should have been especially thieves — not murderers, nor, as far as we know, sinners by any gross violence? Do you observe how the sin of theft is again and again indicated as the chiefly antagonistic one to the law of Christ? 'This he said, not that he cared for the poor, but because he was a thief, and had

the bag' (of Judas). And again, though Barabbas was a leader of sedition, and a murderer besides, — (that the popular election might be in all respects perfect) — yet St. John, in curt and conclusive account of him, fastens again on the theft. 'Then cried they all again saying, Not this man, but Barabbas. Now Barabbas was a robber.'[1] I believe myself the reason to be that theft is indeed, in its subtle forms, the most complete and excuseless of human crimes. Sins of violence usually have passion to excuse them: they may be the madness of moments; or they may be apparently the only means of extrication from calamity. In other cases, they are the diseased habits of lower and brutified natures. But theft involving deliberative intellect, and absence of passion, is the purest type of wilful iniquity, in persons capable of doing right. Which being so, it seems to be fast becoming the practice of modern society to crucify its Christ indeed, as willingly as ever, in the persons of His poor; but by no means now to crucify its thieves beside Him! It elevates its thieves after another fashion; sets them upon an hill, that their light may shine before men, and that all may see their good works, and glorify their Father, in — the Opposite of Heaven.

I think your trade parliament will have to put an end to this kind of business somehow! But it cannot be done by laws merely, where the interests and circumstances are so extended and complex. Nay, even as regards lower and more defined crimes, the assigned punishment is not to be thought of as a preventive means; but only as the seal of opinion set by society on the fact. Crime cannot be hindered by punishment; it will always find some shape and outlet, unpunishable or unclosed. Crime can only be truly hindered by letting no man grow up a criminal — by taking away the *will* to commit sin; not by mere punishment of its commission. Crime, small and great, can only be truly stayed by education, — not the education of the intellect only, which is, on some men, wasted, and for others mischievous; but education of the heart, which is alike good and necessary for all. So, on this matter, I will try to say one or two things of which the silence has kept my own heart heavy this many a day, in my next letter.

1. See *John*, xii,6;xviii;xix.

Letter XVI

Of Public Education Irrespective of Class-Distinction — It Consists Essentially in Giving Habits of Mercy, and Habits of Truth

March 30, 1867.

Thank you for sending me the pamphlet containing the account of the meeting of clergy and workmen, and of the reasonings which there took place. I cannot promise you that I shall read much of them, for the question to my mind most requiring discussion and explanation is not, why workmen don't go to church, but — why other people do. However, this I know, that if, among our many spiritual teachers, there are indeed any who heartily and literally believe that the wisdom they have to teach, 'is more precious than rubies, and all the things thou canst desire are not to be compared unto her,'[1] and if, so believing, they will further dare to affront their congregations by the assertion; and plainly tell them they are not to hunt for rubies or gold any more, at their peril, till they have gained that which cannot be gotten for gold, nor silver weighed for the price thereof, — such believers, so preaching, and refusing to preach otherwise till they are in that attended to, will never want congregations, both of working men, and every other kind of men.

Did you ever hear of anything else so ill-named as the phantom called the 'Philosopher's' Stone? A talisman that shall turn base metal into precious metal, nature acknowledges not; nor would any

1. *Proverbs*, iii,15.

but fools seek after it. But a talisman to turn base souls into noble souls, nature has given us! and that is a 'Philosopher's' Stone indeed, but it is a stone which the builders refuse.

If there were two valleys in California or Australia, with two different kinds of gravel in the bottom of them; and in the one stream bed you could dig up, occasionally and by good fortune, nuggets of gold: and in the other stream bed, certainly and without hazard, you could dig up little caskets, containing talismans which gave length of days and peace; and alabaster vases of precious balms, which were better than the Arabian Dervish's ointment, and made not only the eyes to see, but the mind to know, whatever it would — I wonder in which of the stream beds there would be most diggers?

'Time is money' — so say your practised merchants and economists. None of them, however, I fancy, as they draw towards death, find that the reverse is true and that 'money is time'? Perhaps it might be better for them in the end if they did not turn so much of their time into money, as no re-transformation is possible! There are other things, however, which in the same sense are money, or can be changed into it, as well as time. Health is money, wit is money, knowledge is money, and all your health, and wit, and knowledge may be changed for gold; and the happy goal so reached, of a sick, insane, and blind, auriferous old age; but the gold cannot be changed in its turn back into health and wit.

'Time is money,' the words tingle in my ears so that I can't go on writing. Is it nothing better, then? If we could thoroughly understand that time was — *itself*, — would it not be more to the purpose? A thing of which loss or gain was absolute loss, and perfect gain. And that it was expedient also to buy health and knowledge with money, if so purchaseable; but not to buy money with *them*?

And purchaseable they are, at the beginning of life, though not at its close. Purchaseable, always, for others, if not for ourselves. You can buy, and cheaply, life, endless life, according to your Christian's creed — (there's a bargain for you!) but — long years of knowledge, and peace, and power, and happiness of love — these assuredly, and irrespectively of any creed or question, — for all those desolate and haggard children about your streets.

'That is not political economy, however.' Pardon me; the all-comfortable saying, 'What he layeth out, it shall be paid him again,'[2] is quite literally true in matters of education; no money-seed can be sown with so sure and large return at harvest-time as that; only of this money-seed, more than of flesh-seed, it is utterly true, 'That which thou sowest is not quickened, except it *die*.'[3] You must forget your money, and every other material interest, and educate for education's sake only! or the very good you try to bestow will become venomous, and that and your money will be lost together.

And this has been the real cause of failure in our efforts for education hitherto — whether from above or below. There is no honest desire for the thing itself. The cry for it among the lower orders is because they think that, when once they have got it, they must become upper orders. There is a strange notion in the mob's mind, now-a-days (including all our popular economists and educators, as we most justly may, under that brief term 'mob'), that *everybody* can be uppermost; or at least, that a state of general scramble, in which everybody in his turn should come to the top, is a proper Utopian constitution; and that, once give every lad a good education, and he cannot but come to ride in his carriage (the methods of supply of coachmen and footmen not being contemplated). And very sternly I say to you — and say from sure

2. *Proverbs*, xix,17: '. . . and that which he hath given will he pay him again.'
3. *1 Corinthians*, xv,36.

knowledge — that a man had better not know how to read or write, than receive education on such terms.

The first condition under which it can be given usefully is, that it should be clearly understood to be no means of getting on in the world, but a means of staying pleasantly in your place there. And the first elements of State education should be calculated equally for the advantage of every order of person composing the State. From the lowest to the highest class, every child born in this island should be required by law to receive these general elements of human discipline and to be baptised — not with a drop of water on its forehead — but in the cloud and sea of heavenly wisdom and of earthly power.

And the elements of this general State education should be briefly these:

First. — The body must be made as beautiful and perfect in its youth as it can be, wholly irrespective of ulterior purpose. If you mean afterwards to set the creature to business which will degrade its body and shorten its life, first, I should say, simply, — you had better let such business alone; — but if you must have it done, somehow, yet let the living creature whom you mean to kill, get the full strength of its body first, and taste the joy, and bear the beauty of youth. After that, poison it, if you will. Economically, the arrangement is a wiser one, for it will take longer in the killing than if you began with it younger; and you will get an excess of work out of it which will more than pay for its training.

Therefore, first teach — as I said in the preface to *Unto this Last* — 'The Laws of Health, and exercises enjoined by them'; and to this end your schools must be in fresh country, and amidst fresh air, and have great extents of land attached to them in permanent estate. Riding, running, all the honest personal exercises of offence and defence, and music, should be the primal heads of this bodily education.

Next to these bodily accomplishments, the two great mental graces should be taught, Reverence and Compassion: not that these are in a literal sense to be 'taught,' for they are innate in every well-born human creature, but they have to be developed, exactly as the strength of the body must be, by deliberate and constant exercise. I never understood why Goethe (in the plan of education in *Wilhelm Meister*)[4] says that reverence is not innate, but must be taught from without; it seems to me so fixedly a function of the human spirit, that if men can get nothing else to reverence they will worship a fool, or a stone, or a vegetable.[5] But to teach reverence rightly is to attach it to the right persons and things; first, by setting over your youth masters whom they cannot but love and respect; next, by gathering for them, out of past history, whatever has been most worthy, in human deeds and human passion; and leading them continually to dwell upon such instances, making this the principal element of emotional excitement to them; and, lastly, by letting them justly feel, as far as may be, the smallness of their own powers and knowledge, as compared with the attainments of others.

Compassion, on the other hand, is to be taught chiefly by making it a point of honour, collaterally with courage, and in the same rank (as indeed the complement and evidence of courage), so that, in the code of unwritten school law, it shall be held as shameful to have done a cruel thing as a cowardly one. All infliction of pain on weaker creatures is to be stigmatised as unmanly crime; and every possible opportunity taken to exercise the youths

4. In Goethe's *Wilhelm Meister* (Carlyle's transl., Centenary Ed.), II,Chapter x, reverence is said to be developed in children out of the inborn primitive instinct of fear. *Cf. Sartor Resartus*, Book II, end of Chapter ii.

5. By steady preaching against it, one may quench reverence, and bring insolence to its height; but the instinct cannot be wholly uprooted. [Ruskin's note.]

in offices of some practical help, and to acquaint them with the realities of the distress which, in the joyfulness of entering into life, it is so difficult for those who have not seen home suffering, to conceive.

Reverence, then, and compassion, we are to teach primarily, and with these, as the bond and guardian of them, truth of spirit and word, of thought and sight. Truth, earnest and passionate, sought for like a treasure, and kept like a crown.

This teaching of truth as a habit will be the chief work the master has to do; and it will enter into all parts of education. First, you must accustom the children to close accuracy of statement: this both as a principle of honour, and as an accomplishment of language, making them try always who shall speak truest, both as regards the fact he has to relate or express (not concealing or exaggerating), and as regards the precision of the words he expresses it in, thus making truth (which, indeed, it is) the test of perfect language, and giving the intensity of a moral purpose to the study and art of words: then carrying this accuracy into all habits of thought and observation also, so as always to *think* of things as they truly are, and to *see* them as they truly are, as far as in us rests. And it *does* rest much in our power, for all false thoughts and seeings come mainly of our thinking of what we have no business with, and looking for things we want to see, instead of things that ought to be seen.

'Do not talk but of what you know; do not think but of what you have materials to think justly upon; and do not look for things only that you like, when there are others to be seen'—this is the lesson to be taught to our youth, and inbred in them; and that mainly by our own example and continence. Never teach a child anything of which you are not yourself sure; and, above all, if you feel anxious to force anything into its mind in tender years, that the virtue of youth and early association may fasten it there, be sure it is no lie which you thus sanctify. There is always more to be taught of absolute, incontrovertible knowledge, open to its capacity, than any child can learn; there is no need to teach it anything doubtful. Better that it should be ignorant of a thousand truths, than have consecrated in its heart a single lie.

And for this, as well as for many other reasons, the principal subjects of education, after history, ought to be natural science and mathematics; but with respect to these studies, your schools will require to be divided into three groups; one for children who will probably have to live in cities, one for those who will live in the country, and one for those who will live at sea; the schools for these last, of course, being always placed on the coast. And for children whose life is to be in cities, the subjects of study should be, as far as their disposition will allow of it, mathematics and the arts; for children who are to live in the country, natural history of birds, insects, and plants, together with agriculture taught practically; and for children who are to be seamen, physical geography, astronomy, and the natural history of sea fish and sea birds.

This, then, being the general course and material of education for all children, observe farther that in the preface to *Unto this Last* I said that every child, besides passing through this course, was at school to learn 'the calling by which it was to live.' And it may perhaps appear to you that after, or even in the early stages of education such as this above described, there are many callings which, however much called to them, the children might not willingly determine to learn or live by. 'Probably,' you may say, 'after they have learned to ride, and fence, and sing, and know birds and flowers, it will be little to their liking to make themselves into tailors, carpenters, shoemakers, blacksmiths, and the like.' And I cannot but agree with you as to the exceeding probability of some such reluctance on their part, which

will be a very awkward state of things indeed (since we can by no means get on without tailoring and shoemaking), and one to be meditated upon very seriously in next letter.

P.S. — Thank you for sending me your friend's letter about Gustave Doré; [6] he is wrong, however, in thinking there is any good in those illustrations of *Elaine*. I had intended to speak of them afterwards, for it is to my mind quite as significant — almost as awful — a sign of what is going on in the midst of us, that our great English poet should have suffered his work to be thus contaminated, as that the lower Evangelicals, never notable for sense in the arts, should have got their Bibles dishonoured. Those *Elaine* illustrations are just as impure as anything else that Doré has done; but they are also vapid, and without any one merit whatever in point of art. The illustrations to the *Contes Drolatiques* are full of power and invention; but those to *Elaine* are merely and simply stupid; theatrical *bêtises*,[7] with the taint of the charnel-house on them besides.

Letter XXI

Of the Dignity of the Four Fine Arts; and of the Proper System of Retail Trade

April 15, 1867.

I RETURN now to the part of the subject at which I was interrupted — the inquiry as to the proper means of finding persons willing to maintain themselves and others by degrading occupations.

That, on the whole, simply manual occupations *are* degrading, I suppose I may assume you to admit; at all events, the fact is so, and I suppose few general readers will have any doubt of it.[1]

Granting this, it follows as a direct consequence that it is the duty of all persons in higher stations of life, by every means in their power, to diminish their demand for work of such kind, *and to live with as little aid from the lower trades* as they can possibly contrive.

I suppose you see that this conclusion is not a little at variance with received notions on political economy? It is popularly supposed that it benefits a nation to invent a want. But the fact is, that the true benefit is in extinguishing a want — in living with as few wants as possible.

I cannot tell you the contempt I feel for the common writers on political economy, in their stupefied missing of this first principle of all human economy — individual or political — to live, namely, with as few wants as possible, and to waste nothing of what is given you to supply them.

This ought to be the first lesson of every rich man's political code. 'Sir,' his tutor should early say to him, 'you are so placed in society — it may be for your misfortune, it *must* be for your trial — that you are likely to be maintained all your life by the labour of other men. You will have to make shoes for nobody, but some one will have to make a great many for you. You will have to dig ground for nobody, but some one will have to dig through every summer's hot day for you.

6. Paul Gustave Doré (1832–83), French artist, of an extraordinary facility as a draughtsman. Between 1855 and 1873, he illustrated masterpieces by Balzac, Dante, Cervantes, Milton, La Fontaine, and Rabelais. His illustrations, including those of the Bible, had a great popular success throughout the latter half of the 19th century, especially in England and America.

7. 'stupidities.'

1. Many of my working readers have disputed this statement eagerly, feeling the good effect of work in themselves; but observe, I only say, *simply* or *totally* manual work; and that, alone, *is* degrading, though often in measure refreshing, wholesome, and necessary. So it is highly necessary and wholesome to eat sometimes; but degrading to eat all day, as to labour with the hands all day. But it is not degrading to think all day — if you can. A highly bred court lady, rightly interested in politics and literature, is a much finer type of the human creature than a servant of all work, however clever and honest. [Ruskin's note.]

You will build houses and make clothes for no one, but many a rough hand must knead clay, and many an elbow be crooked to the stitch, to keep that body of yours warm and fine. Now remember, whatever you and your work may be worth, the less your keep costs the better. It does not cost money only. It costs degradation. You do not merely employ these people. You also tread upon them. It cannot be helped; — you have your place, and they have theirs; but see that you tread as lightly as possible, and on as few as possible. What food, and clothes, and lodging, you honestly need, for your health and peace, you may righteously take. See that you take the plainest you can serve yourself with — that you waste or wear nothing vainly; — and that you employ no man in furnishing you with any useless luxury.' That is the first lesson of Christian — or human — economy; and depend upon it, my friend, it is a sound one, and has every voice and vote of the spirits of Heaven and earth to back it, whatever views the Manchester men,[2] or any other manner of men, may take respecting 'demand and supply.' Demand what you deserve, and you shall be supplied with it, for your good. Demand what you do *not* deserve, and you shall be supplied with something which you have not demanded, and which Nature perceives that you deserve, quite to the contrary of your good. That is the law of your existence, and if you do not make it the law of your resolved acts — so much, precisely, the worse for you and all connected with you.

Yet observe, though it is out of its proper place said here, this law forbids no luxury which men are not degraded in providing. You may have Paul Veronese to paint your ceiling, if you like, or Benvenuto Cellini[3] to make cups for you. But you must not employ a hundred divers to find beads to stitch over your sleeve. (Did you see the account of the sales of the Esterhazy jewels the other day?)

And the degree in which you recognise the difference between these two kinds of services, is precisely what makes the difference between your being a civilised person or a barbarian. If you keep slaves to furnish forth your dress — to glut your stomach — sustain your indolence — or deck your pride, you are a barbarian. If you keep servants, properly cared for, to furnish you with what you verily want, and no more than that — you are a 'civil' person — a person capable of the qualities of citizenship. (Just look to the note on Liebig's[4] idea that civilisation means the consumption of coal, in the *Crown of Wild Olive*,[5] and please observe the sentence at the end of it, which signifies a good deal of what I have to expand here, — 'Civilisation is the making of civil persons.')

Now, farther, observe that in a truly civilised and disciplined state, no man would be allowed to meddle with any material who did not know how to make the best of it. In other words, the arts of working in wood, clay, stone, and metal, would all be *fine* arts (working in iron for machinery becoming an entirely distinct business). There would be no joiner's work, no smith's, no pottery nor stonecutting, so debased in character as to be entirely unconnected with the finer branches of the same art; and to at least one of these finer branches (generally in metal-work) every painter and sculptor would be necessarily apprenticed during some years of his education. There would be room, in these four trades alone, for nearly every grade of practical intelligence and productive imagination.

2. Allusion to the 'Manchester school' of politicians and adherents of political economy, led by Cobden and Bright, supporters of free trade and the doctrine of *laissez-faire*. They met at Manchester, and were first so called in 1848 by Disraeli.

3. 1500–71; Florentine goldsmith and sculptor.

4. Baron Justus von Liebig (1803–73), German chemist, professor of chemistry at Giessen.

5. See §123, and footnote.

But it should not be artists alone who are exercised early in these crafts. It would be part of my scheme of physical education that every youth in the state — from the King's son downwards, — should learn to do something finely and thoroughly with his hand, so as to let him know what *touch* meant; and what stout craftsmanship meant; and to inform him of many things besides, which no man can learn but by some severely accurate discipline in doing. Let him once learn to take a straight shaving off a plank, or draw a fine curve without faltering, or lay a brick level in its mortar; and he has learned a multitude of other matters which no lips of man could ever teach him. He might choose his craft, but whatever it was, he should learn it to some sufficient degree of true dexterity: and the result would be, in after life, that among the middle classes a good deal of their house furniture would be made, and a good deal of rough work, more or less clumsily, but not ineffectively, got through, by the master himself and his sons, with much furtherance of their general health and peace of mind, and increase of innocent domestic pride and pleasure, and to the extinction of a great deal of vulgar upholstery and other mean handicraft.

Farther. A great deal of the vulgarity, and nearly all the vice, of retail commerce, involving the degradation of persons occupied in it, depends simply on the fact that their minds are always occupied by the vital (or rather mortal) question of profits. I should at once put an end to this source of baseness by making all retail dealers merely salaried officers in the employ of the trade guilds; the stewards, that is to say, of the saleable properties of those guilds, and purveyors of such and such articles to a given number of families. A perfectly well-educated person might without the least degradation hold such an office as this, however poorly paid; and it would be precisely the fact of his being well educated which would enable him to fulfil his duties to the public without the stimulus of direct profit. Of course the current objection to such a system would be that no man, for a regularly paid salary, would take pains to please his customers; and the answer to that objection is, that if you can train a man to so much unselfishness as to offer himself fearlessly to the chance of being shot, in the course of his daily duty, you can most assuredly, if you make it also a point of honour with him, train him to the amount of self denial involved in looking you out with care such a piece of cheese or bacon as you have asked for.

You see that I have already much diminished the number of employments involving degradation; and raised the character of many of those that are left. There remain to be considered the necessarily painful or mechanical works of mining, forging, and the like: the unclean, noisome, or paltry manufactures — the various kinds of transport — (by merchant shipping, etc.) — and the conditions of menial service.

It will facilitate the examination of these if we put them for the moment aside, and pass to the other division of our dilemma, the question, namely, what kind of lives our gentlemen and ladies are to live, for whom all this hard work is to be done.

FORS CLAVIGERA [1]

LETTER V

The White-Thorn Blossom

For lo, the winter is past,
The rain is over and gone,
The flowers appear on the earth,
The time of the singing of birds is come,

Arise, oh my fair one, my dove,
And come.' [*Song of Solomon*, ii, 11–12, 13.]

DENMARK HILL, 1st May, 1871.

MY FRIENDS — It has been asked of me, very justly, why I have hitherto written to you of things you were little likely to care for, in words which it was difficult for you to understand.

I have no fear but that you will one day understand all my poor words, — the saddest of them, perhaps, too well. But I have great fear that you may never come to understand these written above, which are part of a king's love-song, in one sweet May, of many long since gone.

I fear that for you the wild winter's rain may never pass, — the flowers never appear on the earth; — that for you no bird may ever sing; — for you no perfect Love arise, and fulfil your life in peace.

'And why not for us, as for others?' will you answer me so, and take my fear for you as an insult?

Nay, it is no insult; — nor am I happier than you. For me, the birds do not sing, nor ever will. But they would, for you, if you cared to have it so. When I told you that you would never understand that love song, I meant only that you would not desire to understand it.

Are you again indignant with me? Do you think, though you should labour, and grieve, and be trodden down in dishonour all your days, at least you can keep that one joy of Love, and that one honour of Home? Had you, indeed, kept that, you had kept all. But no men yet, in the history of the race, have lost it so piteously.

1. In the second letter of *Fors Clavigera*, Ruskin explains the meaning of this title in detail: '"Fors" is the best part of three good English words, Force, Fortitude, and Fortune. I wish you to know the meaning of these three words accurately.

'"Force" (in humanity) means power of doing good work. A fool, or a corpse, can do any quantity of mischief: but only a wise and strong man, or, with what true vital force there is in him, a weak one, can do good.

'"Fortitude" means the power of bearing necessary pain, or trial of patience, whether by time or temptation.

'"Fortune" means the necessary fate of a man: the ordinance of his life which cannot be changed. To "make your fortune" is to rule that appointed fate to the best ends of which it is capable.

'Fors is a feminine word: and Clavigera is, therefore, the feminine of "Claviger."

'Clava means a club. Clavis a key. Clavus, a nail, or a rudder.

'Gero means "I carry." It is the root of our word "gesture" (the way you carry yourself): and, in a curious bye-way, of "jest."

'Clavigera may mean, therefore, either Club-bearer, Key-bearer, or Nail bearer.

'Each of these three possible meanings of Clavigera corresponds to one of the three meanings of Fors.

'Fors, the Club-bearer, means the strength of Hercules, or of Deed.

'Fors, the Key-bearer, means the strength of Ulysses, or of Patience.

'Fors, the Nail-bearer, means the strength of Lycurgus, or of Law.

'. . . At present, note only of the three powers: 1. That the strength of Hercules is for deed, not misdeed; and that his club . . . was for subduing monsters and cruel persons, and was of olive-wood. 2. That the Second Fors Clavigera is portress at a gate which she cannot open till you have waited long; and that her robe is of the colour of ashes, or dry earth. 3. That the third Fors Clavigera, the power of Lycurgus, is Royal as well as Legal; and that the notablest crown yet existing in Europe of any that have been worn of Christian Kings, was — people say — made of a Nail.' Reference here is to the Iron Crown of Lombardy, the fillet of iron said to have been hammered from one of the Nails used at the Crucifixion.

In many a country, and many an age, women have been compelled to labour for their husbands' wealth, or bread; but never until now were they so homeless as to say, like the poor Samaritan, 'I have no husband.'[2] Women of every country and people have sustained without complaint the labour of fellowship: for the women of the latter days in England it has been reserved to claim the privilege of isolation.

This, then, is the end of your universal education and civilisation, and contempt of the ignorance of the Middle Ages, and of their chivalry. Not only do you declare yourselves too indolent to labour for daughters and wives, and too poor to support them; but you have made the neglected and distracted creatures hold it for an honour to be independent of you, and shriek for some hold of the mattock for themselves. Believe it or not, as you may, there has not been so low a level of thought reached by any race, since they grew to be male and female out of starfish, or chickweed, or whatever else they have been made from, by natural selection, — according to modern science.

That modern science also, Economic and of other kinds, has reached its climax at last. For it seems to be the appointed function of the nineteenth century to exhibit in all things the elect pattern of perfect Folly, for a warning to the farthest future. Thus the statement of principle which I quoted to you in my last letter, from the circular of the Emigration Society, that it is over-production which is the cause of distress, is accurately the most Foolish thing, not only hitherto ever said by men, but which it is possible for men ever to say, respecting their own business. It is a kind of opposite pole (or negative acme of mortal stupidity) to Newton's discovery of gravitation as an acme of mortal wisdom: — as no wise being on earth will ever be able to make such another wise discovery, so no foolish being on earth will ever be capable of saying such another foolish thing, through all the ages.

And the same crisis has been exactly reached by our natural science and by our art. It has several times chanced to me, since I began these papers, to have the exact thing shown or brought to me that I wanted for illustration, just in time[3] — and it happened that on the very day on which I published my last letter, I had to go to the Kensington Museum; and there I saw the most perfectly and roundly ill-done thing which, as yet, in my whole life, I ever saw produced by art. It had a tablet in front of it, bearing this inscription: —

'Statue in black and white marble, a Newfoundland Dog standing on a Serpent, which rests on a marble cushion, the pedestal ornamented with pietra dura fruits in relief. — *English. Present Century*. No. I.'

It was so very right for me, the Kensington people having been good enough to number it 'I.,' the thing itself being almost incredible in its one-ness; and, indeed, such a punctual accent over the iota of Miscreation, — so absolutely and exquisitely miscreant, that I am not myself capable of conceiving a Number two, or three, or any rivalship or association with it whatsoever. The extremity of its unvirtue consisted, observe, mainly in the quantity of instruction which was abused in it. It showed that the persons who produced it had seen everything, and practised everything; and misunderstood everything they saw, and misapplied everything they did. They had seen Roman work, and

2. *John*, iv,17.

3. Here is another curious instance: I have but a minute ago finished correcting these sheets, and take up the *Times* of this morning, April 21st, and find in it the suggestion by the Chancellor of the Exchequer for the removal of exemption from taxation of Agricultural horses and carts, in the very nick of time to connect it, as a proposal for economic practice, with the statement of economic principle respecting Production, quoted on this page. [Ruskin's note.]

Florentine work, and Byzantine work, and Gothic work; and misunderstanding of everything had passed through them as the mud does through earth-worms, and here at last was their worm-cast of a Production.

But the second chance that came to me that day, was more significant still. From the Kensington Museum I went to an afternoon tea, at a house where I was sure to meet some nice people. And among the first I met was an old friend who had been hearing some lectures on botany at the Kensington Museum, and been delighted by them. She is the kind of person who gets good out of everything, and she was quite right in being delighted; besides that, as I found by her account of them, the lectures were really interesting, and pleasantly given. She had expected botany to be dull, and had not found it so, and 'had learned so much.' On hearing this, I proceeded naturally to inquire what; for my idea of her was that before she went to the lectures at all, she had known more botany than she was likely to learn by them. So she told me that she had learned first of all that 'there were seven sorts of leaves.' Now I have always a great suspicion of the number Seven: because when I wrote the *Seven Lamps of Architecture*, it required all the ingenuity I was master of to prevent them from becoming Eight, or even Nine, on my hands. So I thought to myself that it would be very charming if there were only seven sorts of leaves; but that, perhaps, if one looked the woods and forests of the world carefully through, it was just possible that one might discover as many as eight sorts; and then where would my friend's new knowledge of Botany be? So I said, 'That was very pretty; but what more?' Then my friend told me that she had no idea, before, that petals were leaves. On which, I thought to myself that it would not have been any great harm to her if she had remained under her old impression that petals were petals. But I said, 'That was very pretty, too: and what more?' So then my friend told me that the lecturer said, 'the object of his lectures would be entirely accomplished if he could convince his hearers that there was no such thing as a flower.' Now, in that sentence you have the most perfect and admirable summary given you of the general temper and purposes of modern science. It gives lectures on Botany, of which the object is to show that there is no such thing as a flower; on Humanity, to show that there is no such thing as a Man; and on Theology, to show there is no such thing as a God. No such thing as a Man, but only a Mechanism; no such thing as a God, but only a series of forces. The two faiths are essentially one: if you feel yourself to be only a machine, constructed to be a Regulator of minor machinery, you will put your statue of such science on your Holborn Viaduct, and necessarily recognize only major machinery as regulating *you*.

I must explain the real meaning to you, however, of that saying of the Botanical lecturer, for it has a wide bearing. Some fifty years ago, the poet Goethe discovered that all the parts of plants had a kind of common nature, and would change into each other. Now this was a true discovery, and a notable one; and you will find that, in fact, all plants are composed of essentially two parts — the leaf and root — one loving the light, the other darkness; one liking to be clean, the other to be dirty; one liking to grow for the most part up, the other for the most part down; and each having faculties and purposes of its own. But the pure one which loves the light has, above all things, the purpose of being married to another leaf, and having child-leaves, and children's children of leaves, to make the earth fair forever. And when the leaves marry, they put on wedding-robes, and are more glorious than Solomon in all his glory, and they have feasts of honey, and we call them 'Flowers.'

In a certain sense, therefore, you see the

lecturer was quite right. There are no such things as Flowers — there are only — gladdened Leaves. Nay, farther than this, there may be a dignity in the less happy, but unwithering leaf, which is, in some sort, better than the brief lily of its bloom; — which the great poets always knew, — well; — Chaucer, before Goethe; and the writer of the first Psalm, before Chaucer. The Botanical lecturer was, in a deeper sense than he knew, right.

But in the deepest sense of all, the Botanical lecturer was, to the extremity of wrongness, wrong; for leaf, and root, and fruit, exist, all of them, only — that there may be flowers. He disregarded the life and passion of the creature, which were its essence. Had he looked for these, he would have recognised that in the thought of Nature herself, there is, in a plant, nothing else but its flowers.

Now in exactly the sense that modern Science declares there is no such thing as a Flower, it has declared there is no such thing as a Man, but only a transitional form of Ascidians[4] and apes. It may, or may not be true — it is not of the smallest consequence whether it be or not. The real fact is, that, rightly seen with human eyes, there is nothing else but man; that all animals and beings beside him are only made that they may change into him; that the world truly exists only in the presence of Man, acts only in the passion of Man. The essence of Light is in his eyes, — the centre of Force in his soul, — the pertinence of action in his deeds.

And all true science — which my Savoyard guide rightly scorned me when he thought I had not, — all true science is 'savoir vivre.'[5] But all your modern science is the contrary of that. It is 'savoir mourir.'[6]

And of its very discoveries, such as they are, it cannot make use.

That telegraphic signalling was a discovery; and conceivably, some day, may be a useful one. And there was some excuse for your being a little proud when, about last sixth of April (Cœur-de-Lion's death-day, and Albert Dürer's), you knotted a copper wire all the way to Bombay, and flashed a message along it, and back.

But what was the message, and what the answer? Is India the better for what you said to her? Are you the better for what she replied?

If not, you have only wasted an all-round-the-world's length of copper wire, — which is, indeed, about the sum of your doing. If you had had, perchance, two words of common-sense to say, though you had taken wearisome time and trouble to send them; — though you had written them slowly in gold, and sealed them with a hundred seals, and sent a squadron of ships of the line to carry the scroll, and the squadron had fought its way round the Cape of Good Hope, through a year of storms, with loss of all its ships but one, — the two words of common-sense would have been worth the carriage, and more. But you have not anything like so much as that to say, either to India, or to any other place.

You think it a great triumph to make the sun draw brown landscapes for you.

4. In zoology, any of an order (Ascidiacea) of simple or compound tunicates; often called 'sea squirts.'

5. 'knowing how to live.' See the 4th letter of *Fors*: 'One of the pleasantest friends I ever had in my life was a Savoyard guide [Joseph Marie Couttet], who could only read with difficulty, and write scarcely intelligibly, and by great effort. He knew no language but his own — no science, except as much practical agriculture as served him to till his fields. But he was, without exception, one of the happiest persons, and, on the whole, one of the best, I have ever known: and after lunch, when he had had his half bottle of Savoy wine, he would generally . . . give me a little lecture on philosophy; and after I had fatigued and provoked him with less cheerful views of the world than his own, he would fall back to my servant behind me, and console himself with a shrug of the shoulders, and a whispered, "Le pauvre enfant, il ne sait pas vivre!" ("The poor child, he doesn't know how to live!")'

6. 'knowing how to die.'

That was also a discovery, and some day may be useful. But the sun had drawn landscapes before for you, not in brown, but in green, and blue, and all imaginable colours, here in England. Not one of you ever looked at them then; not one of you cares for the loss of them now, when you have shut the sun out with smoke, so that he can draw nothing more, except brown blots through a hole in a box. There was a rocky valley between Buxton and Bakewell, once upon a time, divine as the Vale of Tempe; you might have seen the Gods there morning and evening — Apollo and all the sweet Muses of the light — walking in fair procession on the lawns of it, and to and fro among the pinnacles of its crags. You cared neither for Gods nor grass, but for cash (which you did not know the way to get); you thought you could get it by what the *Times* calls 'Railroad Enterprise.' You Enterprised a Railroad through the valley — you blasted its rocks away, heaped thousands of tons of shale into its lovely stream. The valley is gone, and the Gods with it; and now, every fool in Buxton can be at Bakewell in half an-hour, and every fool in Bakewell at Buxton; which you think a lucrative process of exchange — you Fools Everywhere.

To talk at a distance, when you have nothing to say, though you were ever so near; to go fast from this place to that, with nothing to do either at one or the other: these are powers certainly. Much more, power of increased Production, if you, indeed, had got it, would be something to boast of. But are you so entirely sure that you *have* got it — that the mortal disease of plenty, and afflictive affluence of good things, are all you have to dread?

Observe. A man and a woman, with their children, properly trained, are able easily to cultivate as much ground as will feed them; to build as much wall and roof as will lodge them, and to spin and weave as much cloth as will clothe them. They can all be perfectly happy and healthy in doing this. Supposing that they invent machinery which will build, plough, thresh, cook, and weave, and that they have none of these things any more to do, but may read, or play croquet, or cricket, all day long, I believe myself that they will neither be so good nor so happy as without the machines. But I waive my belief in this matter for the time. I will assume that they become more refined and moral persons, and that idleness is in future to be the mother of all good. But observe, I repeat, the power of your machine is only in enabling them to be idle. It will not enable them to live better than they did before, nor to live in greater numbers. Get your heads quite clear on this matter. Out of so much ground, only so much living is to be got, with or without machinery. You may set a million of steam-ploughs to work on an acre, if you like — out of that acre only a given number of grains of corn will grow, scratch or scorch it as you will. So that the question is not at all whether, by having more machines, more of you can live. No machines will increase the possibilities of life. They only increase the possibilities of idleness. Suppose, for instance, you could get the oxen in your plough driven by a goblin, who would ask for no pay, not even a cream bowl,— (you have nearly managed to get it driven by an iron goblin, as it is); — Well, your furrow will take no more seeds than if you had held the stilts yourself. But, instead of holding them, you sit, I presume, on a bank beside the field, under an eglantine; — watch the goblin at his work, and read poetry. Meantime, your wife in the house has also got a goblin to weave and wash for her. And she is lying on the sofa, reading poetry.

Now, as I said, I don't believe you would be happier so, but I am willing to believe it; only, since you are already such brave mechanists, show me at least one or two places where you *are* happier. Let me see one small example of approach to this seraphic condition. *I* can show *you*

examples, millions of them, of happy people, made happy by their own industry. Farm after farm I can show you, in Bavaria, Switzerland, the Tyrol, and such other places, where men and women are perfectly happy and good, without any iron servants. Show me, therefore, some English family, with its fiery familiar, happier than these. Or bring me — for I am not inconvincible by any kind of evidence, — bring me the testimony of an English family, with its fiery familiar, felicity. Or if you cannot do so much as that, can you convince even themselves of it? They *are* perhaps happy, if only they knew how happy they were; Virgil thought so, long ago, of simple rustics; [7] but you hear at present your steam-propelled rustics are crying out that they are anything else than happy, and that they regard their boasted progress 'in the light of a monstrous Sham.' I must tell you one little thing, however, which greatly perplexes my imagination of the relieved ploughman sitting under his rose bower, reading poetry. I have told it you before, indeed, but I forget where. There was really a great festivity, and expression of satisfaction in the new order of things, down in Cumberland, a little while ago; some first of May, I think it was, a country festival, such as the old heathens, who had no iron servants, used to keep with piping and dancing. So I thought, from the liberated country people — their work all done for them by goblins — we should have some extraordinary piping and dancing. But there was no dancing at all, and they could not even provide their own piping. They had their goblin to pipe for them. They walked in procession after their steam-plough, and their steam-plough whistled to them occasionally in the most melodious manner it could. Which seemed to me, indeed, a return to more than Arcadian simplicity; for in old Arcadia, ploughboys truly whistled as they went, for want of thought; whereas, here was verily a large company walking without thought, but not having any more even the capacity of doing their own whistling.

But next, as to the inside of the house. Before you got your power-looms, a woman could always make herself a chemise and petticoat of bright and pretty appearance. I have seen a Bavarian peasant-woman at church in Munich, looking a much grander creature, and more beautifully dressed, than any of the crossed and embroidered angels in Hess's high-art frescoes (which happened to be just above her, so that I could look from one to the other). Well, here you are, in England, served by household demons, with five hundred fingers, at least, weaving, for one that used to weave in the day of Minerva.[8] You ought to be able to show me five hundred dresses for one that used to be; tidiness ought to have become five hundred-fold tidier; tapestry should be increased into cinque-cento-fold iridescence of tapestry. Not only your peasant-girl ought to be lying on the sofa reading poetry, but she ought to have in her wardrobe five hundred petticoats instead of one. Is that, indeed, your issue? or are you only on a curiously crooked way to it?

It is just possible, indeed, that you may not have been allowed to get the use of the goblin's work — that other people may have got the use of it, and you none; because, perhaps, you have not been able to evoke goblins wholly for your own personal service: but have been borrowing goblins from the capitalist, and paying interest, in the 'position of William,' on ghostly self-going planes; but suppose you had laid by capital enough, yourselves, to hire all the demons in the world, — nay, — all that are inside of it; are you quite sure you know what you might best set them to work at? and what 'useful things' you should command them to make for you? I told you, last month, that no economist going (whether by steam or

7. See Carlyle's 'Characteristics,' note 2.

8. Goddess of wisdom, and of weaving.

ghost) knew what are useful things and what are not. Very few of you know, yourselves, except by bitter experience of the want of them. And no demons, either of iron or spirit, can ever make them.

There are three Material things, not only useful, but essential to Life. No one 'knows how to live' till he has got them.

These are, Pure Air, Water, and Earth.

There are three Immaterial things, not only useful, but essential to Life. No one knows how to live till he has got them.

These are, Admiration, Hope, and Love.[9]

Admiration — the power of discerning and taking delight in what is beautiful in visible Form, and lovely in human Character; and, necessarily, striving to produce what is beautiful in form, and to become what is lovely in character.

Hope — the recognition, by true Foresight, of better things to be reached hereafter, whether by ourselves or others; necessarily issuing in the straightforward and undisappointable effort to advance, according to our proper power, the gaining of them.

Love, both of family and neighbour, faithful and satisfied.

These are the six chiefly useful things to be got by Political Economy, when it *has* become a science. I will briefly tell you what modern Political Economy — the great 'savoir mourir' — is doing with them.

The first three, I said, are Pure Air, Water, and Earth.

Heaven gives you the main elements of these. You can destroy them at your pleasure, or increase, almost without limit, the available quantities of them.

You can vitiate the air by your manner of life, and of death, to any extent. You might easily vitiate it so as to bring such a pestilence on the globe as would end all of you. You, or your fellows, German and French, are at present busy in vitiating it to the best of your power in every direction; chiefly at this moment with corpses, and animal and vegetable ruin in war: changing men, horses, and garden-stuff into noxious gas. But everywhere, and all day long, you are vitiating it with foul chemical exhalations; and the horrible nests, which you call towns, are little more than laboratories for the distillation into heaven of venomous smokes and smells, mixed with effluvia from decaying animal matter, and infectious miasmata from purulent disease.

On the other hand, your power of purifying the air, by dealing properly and swiftly with all substances in corruption; by absolutely forbidding noxious manufactures; and by planting in all soils the trees which cleanse and invigorate earth and atmosphere, — is literally infinite. You might make every breath of air you draw, food.

Secondly, your power over the rain and river-waters of the earth is infinite. You can bring rain where you will, by planting wisely and tending carefully; — drought where you will, by ravage of woods and neglect of the soil. You might have the rivers of England as pure as the crystal of the rock; beautiful in falls, in lakes, in living pools; so full of fish that you might take them out with your hands instead of nets. Or you may do always as you have done now, turn every river of England into a common sewer, so that you cannot so much as baptise an English baby but with filth, unless you hold its face out in the rain; and even *that* falls dirty.

Then for the third, Earth, — meant to be nourishing for you, and blossoming. You have learned, about it, that there is no such thing as a flower; and as far as your scientific hands and scientific brains, inventive of explosive and deathful, instead of blossoming and life-giving, Dust, can contrive, you have turned the Mother-Earth, Demeter,[10] into the Avenger-Earth,

9. See Wordsworth, *The Excursion*, iv,763: 'We live by Admiration, Hope, and Love.'

10. Read this, for instance, concerning the Gar-

Tisiphone — with the voice of your brother's blood crying out of it, in one wild harmony round all its murderous sphere.

This is what you have done for the Three Material Useful Things.

Then for the Three Immaterial Useful Things. For Admiration, you have learned contempt and conceit. There is no lovely thing ever yet done by man that you care for, or can understand, but you are persuaded you are able to do much finer things yourselves. You gather, and exhibit together, as it equally instructive, what is infinitely bad, with what is infinitely good. You do not know which is which; you instinctively prefer the Bad, and do more of it. You instinctively hate the Good, and destroy it.[11]

dens of Paris: one sentence in the letter is omitted; I will give it in full elsewhere, with its necessary comments: —

'To the Editor of the "Times"

'*5th April*, 1871.

'Sir, — As the paragraph you quoted on Monday from the *Field* gives no idea of the destruction in the gardens round Paris, if you can spare me a very little space I will endeavour to supplement it.

'The public gardens in the interior of Paris, including the planting on the greater number of the Boulevards, are in a condition perfectly surprising when one considers the sufferings even well-to-do persons had to endure for want of fuel during the siege. Some of them, like the little oases in the centre of the Louvre, even look as pretty as ever. After a similar ordeal, it is probable we should not have a stick left in London, and the presence of the very handsome planes on the Boulevards, and large trees in the various squares and gardens, after the winter of 1870–71, is most creditable to the population But when one goes beyond the Champs Élysées and toward the Bois, down the once beautiful Avenue de l'Impératrice, a sad scene of desolation presents itself. A year ago it was the finest avenue garden in existence; now a considerable part of the surface where troops were camped is about as filthy and as cheerless as Leicester Square or a sparsely furnished rubbish yard.

'The view into the once richly-wooded Bois from the huge and ugly banks of earth which now cross the noble roads leading into it is desolate indeed, the stumps of the trees cut down over a large extent of its surface reminding one of the dreary scenes observable in many parts of Canada and the United States, where the stumps of the burnt or cut-down pines are allowed to rot away for years. The zone of the ruins round the vast belt of fortifications I need not speak of, nor of the other zone of destruction round each of the forts, as here houses and gardens and all have disappeared But the destruction in the wide zone occupied by French and Prussian outposts is beyond description. I got to Paris the morning after the shooting of Generals Clément Thomas and Lecomte, and in consequence did not see so much of it as I otherwise might have done; but round the villages of Sceaux, Bourg-la-Reine, L'Hay, Vitry, and Villejuif, I saw an amount of havoc which the subscriptions to the French Horticultural Relief Fund will go but a very small way to repair Notwithstanding all his revolutions and wars, the Frenchman usually found time to cultivate a few fruit trees, and the neighbourhood of the villages above mentioned was only a few of many covered by nurseries of young trees When I last visited Vitry, in the autumn of 1868, the fields and hill-sides around were everywhere covered with trees; now the view across them is only interrupted by stumps about a foot high. When at Vitry on the 28th of March, I found the once fine nursery of M. Honoré Dufresne deserted, and many acres once covered with large stock and specimens cleared to the ground And so it was in numerous other cases It may give some notion of the effect of the war on the gardens and nurseries around Paris, when I state that, according to returns made up just before my visit to Vitry and Villejuif, it was found that around these two villages alone 2,400,400 fruit and other trees were destroyed As to the private gardens, I cannot give a better idea of them than by describing the materials composing the protecting bank of a battery near Sceaux. It was made up of mattresses, sofas, and almost every other large article of furniture, with the earth stowed between There were, in addition, nearly forty orange and oleander tubs gathered from the little gardens in the neighbourhood visible in various parts of this ugly bank. One nurseryman at Sceaux, M. Ketelecr, lost 1500 vols. of books, which were not taken to Germany, but simply mutilated and thrown out of the doors to rot. . . . Multiply these few instances by the number of districts occupied by the belligerents during the war, and some idea of the effects of glory on gardening in France may be obtained.

'W. Robinson.' [Ruskin's note.]

11. Last night (I am writing this on the 18th of April) I got a letter from Venice, bringing me

Then, secondly, for Hope. You have not so much spirit of it in you as to begin any plan which will not pay until ten years; nor so much intelligence of it in you (either politicians or workmen) as to be able to form one clear idea of what you would like your country to become.

Then, thirdly, for Love. You were ordered by the Founder of your religion to love your neighbour as yourselves.

You have founded an entire Science of Political Economy, on what you have stated to be the constant instinct of man — the desire to defraud his neighbour.

And you have driven your women mad, so that they ask no more for Love, nor for fellowship with you; but stand against you, and ask for 'justice.'

Are there any of you who are tired of all this? Any of you, Landlords or Tenants? Employers or Workmen?

Are there any landlords, — any masters, — who would like better to be served by men than by iron devils?

Any tenants, any workmen, who can be true to their leaders and to each other? who can vow to work and to live faithfully, for the sake of the joy of their homes?

Will any such give the tenth of what they have, and of what they earn, — not to emigrate with, but to stay in England with; and do what is in their hands and hearts to make her a happy England?

I am not rich (as people now estimate riches), and great part of what I have is already engaged in maintaining art-workmen, or for other objects more or less of public utility. The tenth of whatever is left to me, estimated as accurately as I can (you shall see the accounts), I will make over to you in perpetuity, with the best security that English law can give, on Christmas Day of this year, with engagement to add the tithe of whatever I earn afterward. Who else will help, with little or much? the object of such fund being, to begin, and gradually — no matter how slowly — to increase, the buying and securing of land in England, which shall not be built upon, but cultivated by Englishmen, with their own hands, and such help of force as they can find in wind and wave.

I do not care with how many, or how few, this thing is begun, nor on what inconsiderable scale, — if it be but in two or three poor men's gardens. So much, at least, I can buy, myself, and give them. If no help come, I have done and said what I could, and there will be an end. If any help come to me, it is to be on the following conditions: — We will try to make some small piece of English ground, beautiful, peaceful, and fruitful. We will have no steam-engines upon it, and no railroads; we will have no untended or unthought-of creatures on it; none wretched, but the sick; none idle but the dead. We will have no liberty upon it; but instant obedience to known law, and appointed persons; no equality upon it, but recognition of every betterness that we can find, and reprobation of every worseness. When we want to go anywhere, we will go there quietly and safely, not at forty miles an hour in the risk of our lives; when we want to carry anything anywhere, we will carry it either on the backs of beasts, or on our own, or in carts, or boats; we will have plenty of flowers and vegetables in our gardens, plenty of corn and grass in our fields, — and few bricks. We will have some music and poetry; the children shall learn to dance to it and sing it; — perhaps some of the old people, in time, may also.

the, I believe, too well-grounded, report that the Venetians have requested permission from the government of Italy to pull down their Ducal Palace, and 'rebuild' it. Put up a horrible model of it, in its place, that is to say, for which their architects may charge a commission. Meantime, all their canals are choked with human dung, which they are too poor to cart away, but throw out at their windows.

And all the great thirteenth-century cathedrals in France have been destroyed, within my own memory, only that architects might charge commissions for putting up false models of them in their place. [Ruskin's note.]

We will have some art, moreover; we will at least try if, like the Greeks, we can't make some pots. The Greeks used to paint pictures of gods on their pots; we, probably, cannot do as much, but we may put some pictures of insects on them, and reptiles; — butterflies, and frogs, if nothing better. There was an excellent old potter in France who used to put frogs and vipers into his dishes, to the admiration of mankind; we can surely put something nicer than that. Little by little, some higher art and imagination may manifest themselves among us; and feeble rays of science may dawn for us. Botany, though too dull to dispute the existence of flowers; and history, though too simple to question the nativity of men; — nay — even perhaps an uncalculating and uncovetous wisdom, as of rude Magi, presenting, at such nativity, gifts of gold and frankincense.[12]

Faithfully yours,

JOHN RUSKIN.

LETTER LVIII

The Catholic Prayer

'Deus, a quo sancta desideria, recta consilia, et justa sunt opera, da servis tuis illam quam mundus dare non potest pacem, ut et corda nostra mandatis tuis, et, hostium sublata formidine, tempora, sint tuâ protectione tranquilla.'

'God, from whom are all holy desires, right counsels, and just works, give to Thy servants that peace which the world cannot, that both our hearts, in Thy commandments, and our times, the fear of enemies being taken away, may be calm under Thy guard.'

THE adulteration of this great Catholic prayer in our English church-service (as needless as it was senseless, since the pure form of it contains nothing but absolutely Christian prayer, and is as fit for the most stammering Protestant lips as for Dante's), destroyed all the definite meaning of it, and left merely the vague expression of desire for peace, on quite unregarded terms. For of the millions of people who utter the prayer at least weekly, there is not one in a thousand who is ever taught, or can for themselves find out, either what a holy desire means, or a right counsel means, or a just work means, — or what the world is, or what the peace is which it cannot give. And half-an-hour after they have insulted God by praying to Him in this deadest of all dead languages, not understanded of the people, they leave the church, themselves pacified in their perennial determination to put no check on their natural covetousness; to act on their own opinions, be they right or wrong; to do whatever they can make money by, be it just or unjust; and to thrust themselves, with the utmost of their soul and strength, to the highest, by them attainable, pinnacle of the most bedrummed and betrumpeted booth in the Fair of the World.

The prayer, in its pure text, is essentially, indeed, a monastic one; but it is written for the great Monastery of the Servants of God, whom the world hates. It cannot be uttered with honesty but by these; nor can it ever be answered but with the peace bequeathed to these, 'not as the world giveth.'[1]

Of which peace, the nature is not to be without war, but undisturbed in the midst of war; and not without enemies, but without fear of them. It is a peace without pain, because desiring only what is holy; without anxiety, because it thinks only what is right; without disappointment, because a just work is always successful; without sorrow, because 'great peace have they which love Thy Law, and nothing shall offend them';[2] and without terror, because the God of all battles is its Guard.

So far as any living souls in the England of this day can use, understandingly,

12. *Cf. Matthew*, ii,11.

1. *Cf. John*, xiv,27.
2. *Cf. Psalms*, cxix,165.

the words of this collect, they are already, consciously or not, companions of all good labourers in the vineyard of God. For those who use it reverently, yet have never set themselves to find out what the commandments of God are, nor how lovable they are, nor how far, instead of those commandments, the laws of the world are the only code they care for, nor how far they still think their own thoughts and speak their own words, it is assuredly time to search out these things. And I believe that, after having searched them out, no sincerely good and religious person would find, whatever his own particular form of belief might be, anything which he could reasonably refuse, or which he ought in anywise to fear to profess before all men, in the following statement of creed and resolution, which must be written with their own hand, and signed, with the solemnity of a vow, by every person received into the St. George's Company.

I. I trust in the Living God, Father Almighty, Maker of heaven and earth, and of all things and creatures visible and invisible.

I trust in the kindness of His law, and the goodness of His work.

And I will strive to love Him, and keep His law, and see His work, while I live.

II. I trust in the nobleness of human nature, in the majesty of its faculties, the fulness of its mercy, and the joy of its love.

And I will strive to love my neighbour as myself, and, even when I cannot, will act as if I did.

III. I will labour, with such strength and opportunity as God gives me, for my own daily bread; and all that my hand finds to do, I will do with my might.

IV. I will not deceive, or cause to be deceived, any human being for my gain or pleasure; nor hurt, or cause to be hurt, any human being for my gain or pleasure; nor rob, or cause to be robbed, any human being for my gain or pleasure.

V. I will not kill nor hurt any living creature needlessly, nor destroy any beautiful thing, but will strive to save and comfort all gentle life, and guard and perfect all natural beauty, upon the earth.

VI. I will strive to raise my own body and soul daily into higher powers of duty and happiness; not in rivalship or contention with others, but for the help, delight, and honour of others, and for the joy and peace of my own life.

VII. I will obey all the laws of my country faithfully; and the orders of its monarch, and of all persons appointed to be in authority under its monarch, so far as such laws or commands are consistent with what I suppose to be the law of God; and when they are not, or seem in anywise to need change, I will oppose them loyally and deliberately, not with malicious, concealed, or disorderly violence.

VIII. And with the same faithfulness, and under the limits of the same obedience, which I render to the laws of my country, and the commands of its rulers, I will obey the laws of the Society called of St. George, into which I am this day received; and the orders of its masters, and of all persons appointed to be in authority under its masters, so long as I remain a Companion, called of St. George.

Letter LXVII

Companionship

As I am now often asked, in private letters, the constitution of St. George's Com-

pany,[1] and cannot, hitherto, refer, in answer, to any clear summary of it, I will try to write such a summary in this number of *Fors*, that it may henceforward be sent to inquirers as alone sufficiently explanatory.

The St. George's Company is a society established to carry out certain charitable objects, toward which it invites, and thankfully will receive, help from any persons caring to give it, either in money, labour, or any kind of gift. But the Company itself consists of persons who agree in certain general principles of action, and objects of pursuit, and who can, therefore, act together in effective and constant unison.

These objects of pursuit are, in brief terms, the health, wealth, and long life of the British nation: the Company having thus devoted itself, in the conviction that the British nation is at present unhealthy, poor, and likely to perish, as a power, from the face of the earth. They accordingly propose to themselves the general medicining, enriching, and preserving in political strength, of the population of these islands; they themselves numbering at present, in their ranks, about thirty persons — none of them rich, several of them sick, and the leader of them, at all events, not likely to live long.

Whether the nation be healthy, or in unwholesome degradation of body and mind; wealthy, or in continual and shameful distress; strong, or in rapid decline of political power and authority, — the reader will find debated throughout the various contents of the preceding five volumes of *Fors*. But there is one public fact, which cannot be debated — that the nation is in debt. And the St. George's Company do practically make it their *first*, though not their principal, object, to bring *that* state of things to an end; and to establish, instead of a National Debt, a National Store. (See the last line of the fifth page of the first letter of the series, published 1st January, 1871, and the eleventh, and twenty-seventh, letters, throughout.)

That very few readers of *this* page have any notion, at this moment, what a National Debt is, or can conceive what a National Store should be, is one of many evil consequences of the lies which, under the title of 'Political Economy,' have been taught by the ill-educated, and mostly dishonest, commercial men who at present govern the press of the country.

I have again and again stated the truth in both these matters, but must try once more to do it, emphatically and intelligibly.

A 'civilised nation' in modern Europe consists, in broad terms, of (A) a mass of half-taught, discontented, and mostly penniless populace, calling itself the people; of (B) a thing which it calls a government, meaning an apparatus for collecting and spending money; and (C) a small number of capitalists, many of them rogues, and most of them stupid persons, who have no idea of any object of human existence other than money making, gambling, or champagne bibbing. A certain quantity of literary men, saying anything they can get paid to say, — of clergymen, saying anything they have been taught to say, — of natural philosophers, saying anything that comes into their heads, — and of nobility, saying nothing at all, combine in disguising the action, and perfecting the disorganisation, of the mass; but with respect to practical business, the civilised nation consists broadly of mob, money-collecting machine and capitalist.

Now when the civilised mob wants to spend money for any profitless or mischievous purposes, — fireworks, illuminations, battles, driving about from place to place, or what not, — being itself penniless, it sets its money collecting machine to borrow the sum needful for these amusements from the civilised capitalist.

The civilised capitalist lends the money, on condition that, through the money-collecting machine, he may tax the civilised

1. St. George is the patron saint of England.

mob thenceforward for ever. The civilised mob spends the money forthwith, in gunpowder, infernal machines, masquerade dresses, new boulevards, or anything else it has set its idiotic mind on for the moment; and appoints its money-collecting machine to collect a daily tax from its children, and children's children, to be paid to the capitalists from whom it had received the accommodation, thenceforward for ever.

That is the nature of a National Debt.

In order to understand that of a National Store, my readers must first consider what any store whatever, serviceable to human beings, consists of. A store properly means a collection of useful things. Literally, it signifies only a quantity, — or much of *any*thing. But the heap of broken bottles which, I hear, is accumulating under the principal cliff of Snowdon, through the contributions of tourists from the summit, is not properly to be called a store; though a bin full of old wine is. Neither is a heap of cannon-balls a store; though a heap of potatoes is. Neither is a cellar full of gunpowder a store; though a cellar full of coals is. A store is, for squirrels, of nuts; for bees, of honey; for men, of food, clothes, fuel, or pretty things, such as toys or jewels, — and, for educated persons, of books and pictures.

And the possession of such a store by the nation would signify, that there were no taxes to pay; that everybody had clothes enough, and some stuff laid by for next year; that everybody had food enough, and plenty of salted pork, pickled walnuts, potted shrimps, or other conserves, in the cupboard; that everybody had jewels enough, and some of the biggest laid by, in treasuries and museums; and, of persons caring for such things, that everybody had as many books and pictures as they could read or look at; with quantities of the highest quality besides, in easily accessible public libraries and galleries.

Now the wretches who have, at present, the teaching of the people in their hands, through the public press, tell them that it is not 'practical' to attempt to bring about this state of things; — and that their government, or money-collecting machine, must not buy wine, potatoes, jewels, or pictures for them; but *must* buy iron plates two feet thick, gunpowder, and red tape. And this popular instruction is given, you will find, in the end, by persons who know that they could not get a percentage themselves (without the public's coming to know it) on buying potatoes or pictures; but *can* get it, and a large one, on manufacturing iron, on committing wholesale murder, or on tying up papers with red tape.

Now the St. George's Company propose to themselves, — and, if the God they believe in, lives, will assuredly succeed in their proposition, — to put an end to this rascally and inhuman state of things, and bring about an honest and human state of them, instead. And they have already actually begun the accumulation of a National Store of good and useful things; by the collection and administration of which, they are not themselves to derive any gain whatsoever, but the Nation only.

We are, therefore, at present, as I said at first, a company established for a charitable purpose; the object of charity being the entire body of the British nation, now paying taxes to cheating capitalists. But we hope to include, finally, in our ranks a large number of the people themselves, and to make quite a different sort of people of them, carrying out our company's laws, to the abolition of many existing interests, and in abrogation of many existing arrangements.

And the laws which we hope thus to see accepted are none of them new; but have been already recommended by all wise men, and practised by all truly prosperous states; nor is there anything whatever new in the modes of administration proposed; — and especially be it noted, there is nothing of the present leader's

fancies, in any part or character of the scheme — which is merely the application, to our nationally diseased thoughts and practises, of the direct precepts of the true sages of past time, who are every one of them in harmony concerning all that is necessary for men to do, feel, and know.

And we hope to establish these laws, not by violence, but by obeying them ourselves, to the extent of which existing circumstances admit; and so gradually showing the advantage of them, and making them acceptable to others. Not that, for the enforcement of some of them (the abolition of all manufactures that make the air unwholesome, for instance), we shall hesitate to use the strong hand, when once our hands are strong. But we shall not begin by street riots to throw down our neighbour's chimneys, or break his machinery; — though what we shall *end* in doing — God knows, not I, — but I have my own thoughts concerning it; not at present needing exposition.

The Companions, for the most part, will remain exactly in the condition of life they held before entering the Society; but they will direct all their powers, and some part of their revenues, in that condition, to the advance of its interests. We hold it short-sighted and ruinous policy to form separate institutions, or attempt the sudden establishment of new systems of labour. Every one of us must use the advantages he now possesses, whatever they may be, and contend with the difficulties arising out of his present position, gradually modifying it, as he can, into conformity with the laws which the Society desires may be ultimately observed by all its members.

The first of our conditions of Companionship is Honesty. We are a company of honest persons, vowing to have no fellowship with dishonest ones. Persons who do not know the meaning of the word 'Honesty,' or who would in anywise, for selfish convenience, tolerate any manner of cheating or lying, either in others or themselves, we class indiscriminately with the self-conscious rogues, for whom we have more respect; and our separation from all such is to be quite manifest and unmistakable. We do not go into monasteries, — we seek no freedom of conscience in foreign lands, — we profess no severities of asceticism at home. We simply refuse to have any dealings with rogues, whether at home or abroad.

I repeat, for this must be strictly understood, we are a company of honest persons; and will add to ourselves none but persons of that quality. We, for our own part, entirely decline to live by passing bad half-crowns, by selling bad goods, or by lying as to their relative quality. And we hold only such communication with persons guilty of such practices, as we should with any other manner of thieves or liars.

It will follow that anything gravely said by a Companion of St. George may be, without investigation, believed; and anything sold by one, without scrutiny, bought for what it is said to be, — of which recovery of old principles of human speech and commerce, no words can set forth the infinitude of beneficial consequences, when it is once brought about among a discernible and every day increasing body of persons.

The second condition of Companionship is the resolution, so far as we have ability, to earn our own living with our own hands; and not to allow, much less compel, other people to work for us: this duty being of double force, — first, as necessary to our own health and honour; but much more, as striking home at the ghastly universal crime of modern society, — stealing the labourer's bread from him (making him work, that is to say, for ours, as well as his own), and then abusing and despising him for the degradation of character which his perpetual toil involves; deliberately, in many cases, refusing to encourage him in economy, that we may have him at our mercy to grind in the mill; always selling as much gin and beer

to him as we can persuade him to swill, at the rate of twentypence for twopence worth (see Letter 27), to fill our own pockets; and teaching him pious catechisms, that we may keep him our quiet slave.

We cannot, at present, all obey this great law concerning labour, however willing we may be; for we may not, in the condition of life in which we have been brought up, have been taught any manual labour by which we now could make a living. I myself, the present Master of the Society, cannot obey this, its second main law; but then I am only a makeshift Master, taking the place till somebody more fit for it be found. Sir Walter Scott's life, in the full strength of it at Ashestiel, and early at Abbotsford with his literary work done by ten, or at latest twelve in the morning; and the rest of the day spent in useful work with Tom Purdie in his woods,[2] is a model of wise moral management of mind and body, for men of true literary power; but I had neither the country training of body, nor have the natural strength of brain, which can reach this ideal in anywise. Sir Walter wrote as a stream flows; but I do all my brainwork like a wrung sponge, and am tired out, and good for nothing, after it. Sir Walter was in the open air, farm-bred, and playing with lambs, while I was a poor little Cockney wretch, playing, in a dark London nursery, with a bunch of keys. I do the best I can, and know what ought to be: and that is all the Company really need of me. I would fain, at this moment, both for pleasure and duty's sake, be cutting the dead stems out of my wood, or learning to build a dry stone wall under my good mason, Mr. Usher, than writing these institutes of St. George; but the institutes are needed, and must be written by me, since there is nobody else to write them.

Anyone, therefore, may be a Companion of St. George who sincerely does what they can, to make themselves useful, and earn their daily bread by their own labour: and some forms of intellectual or artistic labour, inconsistent (as a musician's) with other manual labour, are accepted by the Society as useful; provided they be truly undertaken for the good and help of all; and that the intellectual labourer ask no more pay than any other workman. A scholar can generally live on less food than a ploughman, and there is no conceivable reason why he should have more. And if he be a false-hearted scholar, or a bad painter or fiddler, there is infinite reason why he should have less. My readers may have been surprised at the instant and eager assertion, as of a leading principle, in the first of these letters (January '71), that people cannot live by art. But I spoke swiftly, because the attempt so to live is among the worst possible ways they can take of injurious begging. There are a few, a very few persons born in each generation, whose words are worth hearing, whose art is worth seeing. These born few will preach, or sing, or paint, in spite of you; they will starve like grasshoppers, rather than stop singing; and even if you don't choose to listen, it is charitable to throw them some crumbs to keep them alive. But the people who take to writing or painting as a means of livelihood, because they think it genteel, are just by so much more contemptible than common beggars, in that they are noisy and offensive beggars. I am quite willing to pay for keeping our poor vagabonds in the workhouse; but not to pay them for grinding organs outside my door, defacing the streets with bills and caricatures, tempting young girls to read rubbishy novels, or deceiving the whole nation to its ruin, in a thousand leagues square of dirtily printed falsehood, every morning at breakfast. Whatever in literature, art, or religion, is done for money, is poisonous itself; and doubly deadly, in preventing the hearing or seeing of the noble literature and art

2. See J.G.Lockhart, *Life of Sir Walter Scott*, Chapter iv.

which have been done for love and truth. If people cannot make their bread by honest labour, let them at least make no noise about the streets; but hold their tongues, and hold out their idle hands humbly; and they shall be fed kindly.

Then the third condition of Companionship is, that, after we have done as much manual work as will earn our food, we all of us discipline ourselves, our children, and anyone else willing to be taught, in all the branches of honourable knowledge and graceful art attainable by us. Having honestly obtained our meat and drink, and having sufficiently eaten and drunken, we proceed, during the rest of the day, to seek after things better than meat and drink; and to provide for the nobler necessities of what, in ancient days, Englishmen used to call their souls.

To this end, we shall, as we increase in numbers, establish such churches and schools as may best guide religious feeling, and diffuse the love of sound learning and prudent art. And when I set myself first to the work of forming the Society, I was induced to do so chiefly by the consciousness that the balanced unison of artistic sensibility with scientific faculty, which enabled me at once to love Giotto, and learn from Galileo, gave me singular advantages for a work of this kind. More particularly, the course of study through which, after being trained in the severest schools of Protestant divinity, I became acquainted with the mythology of Greece, and legends of Rome, in their most vivid power over the believing minds of both nations, permits me now to accept with freedom and respect the concurrence of a wider range of persons holding different views on religious subjects, than any other scholar I know, at the present day, in England, would feel himself secure in the hope of reconciling to a common duty, and in uncontested elements of faith.

The scheme, and elementary means, of this common education, I am now occupied in arranging and choosing as I best may. In especial, I have set myself to write three grammars — of geology, botany, and zoology, — which will contain nothing but indisputable facts in those three branches of proper human learning; and which, if I live a little longer, will embrace as many facts as any ordinary schoolboy or schoolgirl need be taught. In these three grammars (*Deucalion, Proserpina, and Love's Meinie*)[3] I shall accept every aid that sensible and earnest men of science can spare me, towards the task of popular education: and I hope to keep thankful records of the names of the persons who are making true discoveries in any of these sciences, and of the dates of such discovery, which shall be unassailably trustworthy as far as they extend. I hope also to be able to choose, and in some degree provide, a body of popular literature of entirely serviceable quality. Of some of the most precious books needed, I am preparing, with the help of my friends, new editions, for a common possession in all our school libraries.

If I have powers fitted for this task (and I should not have attempted it but in conviction that I have), they are owing mainly to this one condition of my life, that, from my youth up, I have been seeking the fame, and honouring the work, of others; — never my own. I first was driven into literature that I might defend the fame of Turner; since that day I have been explaining the power, or proclaiming the praise, of Tintoret, — of Luini, — of Carpaccio, — of Botticelli, — of Carlyle; — never thinking for an instant of myself: and sacrificing what little faculty, and large pleasure, I had in painting, either from nature or noble art, that, if possible, I might bring others to see what I rejoiced in, and understand what I had deciphered. There has been no heroism in this, nor virtue; — but only, as far as I am myself concerned, quaint order-

3. Published, respectively, in parts, in 1875–83, 1875–86, and 1873–81, then in one-volume editions.

ing of Fate; but the result is, that I *have* at last obtained an instinct of impartial and reverent judgment, which sternly fits me for this final work, to which, if to any thing, I was appointed.

And for the right doing of it, and for all future work of the same kind, requiring to be done for the Society by other persons, it is absolutely needful that the person charged with it should be implicitly trusted, and accurately obeyed by the Companions, in all matters necessary to the working of the Society. He cannot lose his time in contention or persuasion; he must act undisturbedly, or his mind will not suffice for its toil; and with concurrence of all the Society's power, or half their power will be wasted, and the whole perverted, by hesitation, and opposition. His authority over them must correspond precisely, in the war against the poverty and vice of the State, to that of a Roman Dictator, in his war against its external enemies.

Of a Roman '*Dictator*,' I say, observe; not a Roman '*Emperor*.' It is not the command of private will, but the dictation of necessary law, which the Society obeys: — only, the obedience must be absolute, and without question; faithful to the uttermost, — that is to say, trusting to the uttermost. The practice of faith and obedience to some of our fellow-creatures is the alphabet by which we learn the higher obedience to heaven; and it is not only needful to the prosperity of all noble united action, but essential to the happiness of all noble living spirits.

I have not, in my past letters, much noticed this condition of the Society's work; because its explanation will involve that of our religious creed to the full; and its enforcement must be in the very teeth of the mad-dog's creed of modernism, 'I will not be dictated to,' which contains the essence of all diabolical error. For, in sum, the moral scale is raised exactly according to the degree and motive of obedience. To be disobedient through temptation, is human sin, but to be disobedient for the sake of disobedience, fiendish sin. To be obedient for the sake of success in conduct, is human virtue; but to be obedient for the sake of obedience, angelic virtue.

The constitution of the Society is to be, therefore, that of an aristocracy electing an absolute chief (as the Senate of Rome their Dictator, or the Senate of Venice their Doge), who is to be entirely responsible for the conduct of the Society's affairs; to appoint its principal officers, and to grant or refuse admission to candidates for Companionship. But he is liable to deposition at any moment, by a vote of the majority of the Companions; and is to have no control over the property of the Society, but through the Trustees in whom that property is vested.

And now, for farther explanation of the details of our constitution and design, I must refer the reader to the *Fors* for March of this year; and, if he desires to pursue his inquiry, to the 8th, 9th, 11th, 17th, and 19th Letters of the previous series. These state clearly what we propose to do, and how: but for defence of our principles, the entire series of Letters must be studied; and that with quiet attention, for not a word of them has been written but with purpose. Some parts of the plan are confessedly unexplained, and others obscurely hinted at; nor do I choose to say how much of this indistinctness has been intentional. But I am well assured that if any patient and candid person cares to understand the book, and master its contents, he may do so with less pains than would be required for the reading of any ordinary philosophical treatise on equally important subjects.

Only readers should be clearly aware of one peculiarity in the manner of my writing in *Fors*, which might otherwise much mislead them: — namely, that if they will enclose in brackets with their pen, passages of evident irony, all the rest of the book is written with absolute seri-

ousness and literalness of meaning. The violence, or grotesque aspect, of a statement may seem as if I were mocking; but this comes mainly of my endeavour to bring the absolute truth out into pure crystalline structure, unmodified by disguise of custom, or obscurity of language; for the result of that process is continually to reduce the facts into a form so contrary, if theoretical, to our ordinary impressions, and so contrary, if moral, to our ordinary practice, that the straightforward statement of them looks like a jest. But every such apparent jest will be found, if you think of it, a pure, very dreadful, and utterly imperious veracity.

With this understanding, the following series of aphorisms contain the gist of the book, and may serve to facilitate the arrangement of its incidental matter.

(1) Any form of government will work, provided the governors are real, and the people obey them; and none will work, if the governors are unreal, or the people disobedient. If you mean to have logs for kings, no quantity of liberty in choice of the wood will be of any profit to you: — nor will the wisest or best governor be able to serve you, if you mean to discuss his orders instead of obeying them. Read carefully on this matter Letter 13, §§ 7, 8.

(2) The first duty of government is to see that the people have food, fuel, and clothes. The second, that they have means of moral and intellectual education.

(3) Food, fuel, and clothes can only be got out of the ground, or sea, by muscular labour; and no man has any business to have any, unless he has done, if able, the muscular work necessary to produce his portion, or to render (as the labour of a surgeon or a physician renders) equivalent benefit to life. It indeed saves both toil and time that one man should dig, another bake, and another tan; but the digger, baker, and tanner are alike bound to do their equal day's duty; and the business of the government is to see that they have done it, before it gives any one of them their dinner.

(4) While the daily teaching of God's truth, doing of His justice, and heroic bearing of His sword, are to be required of every human soul according to its ability, the mercenary professions of preaching, law-giving, and fighting must be entirely abolished.

(5) Scholars, painters, and musicians may be advisedly kept, on due pittance, to instruct or amuse the labourer after, or at, his work; provided the duty be severely restricted to those who have high special gifts of voice, touch, and imagination,[4] and that the possessors of these melodious lips, light-fingered hands, and lively brains, do resolutely undergo the normal discipline necessary to insure their skill; the people whom they are to please, understanding, always, that they cannot employ these tricksy artists without working double-tides themselves, to provide them with beef and ale.

(6) The duty of the government, as regards the distribution of its work, is to attend first to the wants of the most necessitous; therefore, to take particular charge of the back streets of every town; leaving the fine ones, more or less, according to their finery, to take care of themselves. And it is the duty of magistrates, and other persons in authority, but especially of all bishops, to know thoroughly the numbers, means of subsistence, and modes of life of the poorest persons in the community, and to be sure that *they* at least are virtuous and comfortable; for if poor persons be not virtuous, after all the wholesome discipline of poverty, what must be the state of the rich, under their perilous trials and temptations? — but, on the other hand, if the poor are made comfortable and good, the rich have a fair chance

4. Such limitation being secured by the severity of the required education in the public schools of art, and thought; and by the high standard of examination fixed before granting licence of exhibition, in the public theatres, or picture galleries. [Ruskin's note.]

of entering the kingdom of heaven also, if they choose to live honourably and decently.

(7) Since all are to be made to labour for their living, and it is not possible to labour without materials and tools, these must be provided by the government, for all persons, in the necessary quantities. If bricks are to be made, clay and straw must be provided; if sheep are to be kept, grass; if coats are to be made, cloth; if oakum to be picked, oakum. All these raw materials, with the tools for working them, must be provided by the government, at first, free of cost to the labourer, the value of them being returned to them as the first fruits of his toil; and no pawnbrokers or usurers may be allowed to live by lending sea to fishermen, air to fowlers, land to farmers, crooks to shepherds, or bellows to smiths.

(8) When the lands and seas belonging to any nation are all properly divided, cultivated, and fished, its population cannot be increased, except by importing food in exchange for useless articles, — that is to say, by living as the toy-manufacturers of some independent nation, which can both feed itself, and afford to buy toys besides. But no nation can long exist in this servile state. It must either emigrate, and form colonies to assist in cultivating the land which feeds it, or become entirely slavish and debased. The moment any nation begins to import food,[5] its political power and moral worth are ended.

(9) All the food, clothing, and fuel required by men, can be produced by the labour of their own arms on the earth and sea; all food is appointed to be so produced, and *must* be so produced, at their peril. If instead of taking the quantity of exercise made necessary to their bodies by God, in the work appointed by God, they take it in hunting or shooting, they become ignorant, irreligious, and finally insane, and seek to live by fighting as well as by hunting; whence the type of Nimrod, in the circle of the Hell-towers, which I desire you to study in Dante.[6] If they do not take exercise at all, they become sensual, and insane in worse ways. *And it is physically impossible that true religious knowledge, or pure morality, should exist among any classes of a nation who do not work with their hands for their bread.* Read Letter 11 carefully.

(10) The use of machinery[7] in agriculture throws a certain number of persons out of wholesome employment, who must thenceforward either do nothing, or mischief. The use of machinery in art destroys the national intellect; and, finally, renders all luxury impossible. All machinery needful in ordinary life to supplement human or animal labour may be moved by wind or water: while steam, or any modes of *heat-power*, may only be employed justifiably under extreme or special conditions of need; as for speed on main lines of communication, and for raising water from great depths, or other such work beyond human strength.

(11) No true luxury, wealth, or religion is possible to dirty persons; nor is it decent or human to attempt to compass any temporal prosperity whatever by the sacrifice of cleanliness. The speedy abolition of all abolishable filth is the first process of

5. It may always import such food as its climate cannot produce, in exchange for such food as it can: it may buy oranges with corn, or pepper with cheese. But not with articles that do not support life. Separate cities may honourably produce salable art; Limoges its enamel, Sheffield its whittle; but a *nation* must not live on enamel or whittles. [Ruskin's note.]

6. See Dante, *Inferno*, xxxi; and *Genesis*, x,9 (Nimrod 'was a mighty hunter before the Lord,' and was the supposed builder of the tower of Babel).

7. Foolish people are continually quibbling and stupefying themselves about the word 'machine.' Briefly, any instrument is a machine so far as its action is, in any particular, or moment, beyond the control of a human hand. A violin, a pencil, and a plough, are tools, not machines. A grinding organ, or a windmill, is a machine, not a tool: often the two are combined; thus a lathe is a machine, and the workman's chisel, used at it, a tool. [Ruskin's note.]

education;[8] the principles of which I state in the second group of aphorisms following.

(12) All education must be moral first; intellectual secondarily. Intellectual, before — (much more without) — moral education, is, in completeness, impossible; and in incompleteness, a calamity.

(13) Moral education begins in making the creature to be educated, clean, and obedient. This must be done thoroughly, and at any cost, and with any kind of compulsion rendered necessary by the nature of the animal, be it dog, child or man.

(14) Moral education consists next in making the creature practically serviceable to other creatures, according to the nature and extent of its own capacities; taking care that these be healthily developed in such service. It may be a question how long, and to what extent, boys and girls of fine race may be allowed to run in the paddock before they are broken; but assuredly the sooner they are put to such work as they are able for, the better. Moral education is summed when the creature has been made to do its work with delight, and thoroughly; but this cannot be until some degree of intellectual education has been given also.

(15) Intellectual education consists in giving the creature the faculties of admiration, hope, and love.

These are to be taught by the study of beautiful Nature; the sight and history of noble persons; and the setting forth of noble objects of action.

(16) Since all noble persons hitherto existent in the world have trusted in the government of it by a supreme Spirit, and in that trust, or faith, have performed all their great actions, the history of these persons will finally mean the history of their faith; and the sum of intellectual education will be the separation of what is inhuman, in such faiths, and therefore perishing, from what is human, and, for human creatures, eternally true.

These sixteen aphorisms contain, as plainly as I can speak it, the substance of what I have hitherto taught, and am now purposed to enforce practice of, as far as I am able. It is no business of mine to think about possibilities; — any day, any moment, may raise up someone to take the carrying forward of the plan out of my hands, or to furnish me with larger means of prosecuting it; meantime, neither fastening nor slackening, I shall go on doing what I can, with the people, few or many, who are ready to help me.

Such help (to conclude with what simplest practical direction I can) may be given me by any persons interested in my plans, mainly by sending me money; secondly, by acting out as much as they agree with of the directions for private life given in *Fors*; and thirdly, by promulgating and recommending such principles. If they wish to do more than this, and to become actual members of the Company, they must write to me, giving a short and clear account of their past lives, and present circumstances. I then examine them on such points as seem to me necessary; and if I accept them, I inscribe their names in the roll, at Corpus Christi College, with two of our masters for witnesses. This roll of the Company is written, hitherto, on the blank leaves of an eleventh-century MS. of the Gospels, always kept in my rooms; and would enable the Trustees, in case of my death, at once to consult the Companions respecting the disposition of the Society's property. As to the legal tenure of that property, I have taken counsel with my lawyer-friends till I am tired; and, as will be seen by the statement in the second page of the Correspondence, I purpose henceforward to leave all such legal arrangements to the discretion of the Companions themselves.

8. The ghastly squalor of the once lovely fields of Dulwich, trampled into mud, and strewn with rags and paper by the filthy London population, bred in cigar smoke, which is attracted by the Crystal Palace, would alone neutralize all possible gentlemanly education in the district. [Ruskin's note.]

Matthew Arnold
1822–1888

POEMS

[*Preface to the First Edition*, 1853]

In two small volumes of Poems, published anonymously, one in 1849, the other in 1852,[1] many of the Poems which compose the present volume have already appeared. The rest are now published for the first time.

I have, in the present collection, omitted the poem from which the volume published in 1852 took its title. I have done so, not because the subject of it was a Sicilian Greek born between two and three thousand years ago,[2] although many persons would think this a sufficient reason. Neither have I done so because I had, in my own opinion, failed in the delineation which I intended to effect. I intended to delineate the feelings of one of the last of the Greek religious philosophers, one of the family of Orpheus and Musæus,[3] having survived his fellows, living on into a time when the habits of Greek thought and feeling had begun fast to change, character to dwindle, the influence of the Sophists[4] to prevail. Into the feelings of a man so situated there are entered much that we are accustomed to consider as exclusively modern, how much, the fragments of Empedocles himself which remain to us are sufficient at least to indicate. What those who are familiar only with the great monuments of early Greek genius suppose to be its exclusive characteristics, have disappeared; the calm, the cheerfulness, the disinterested objectivity have disappeared; the dialogue of the mind with itself has commenced; modern problems have presented themselves; we hear already the doubts, we witness the discouragement, of Hamlet and of Faust.

The representation of such a man's feelings must be interesting, if consistently drawn. We all naturally take pleasure, says Aristotle,[5] in any imitation or representation whatever: this is the basis of our love of poetry: and we take pleasure in them, he adds, because all knowledge is naturally agreeable to us; not to the philosopher only, but to mankind at large. Every representation therefore which is consistently drawn may be supposed to be interesting, inasmuch as it gratifies this natural interest in knowledge of all kinds. What is *not* interesting, is that which does not add to our knowledge of any kind; that which is vaguely conceived and loosely drawn; a representation which is general, indeterminate, and faint, instead of being particular, precise, and firm.

Any accurate representation may therefore be expected to be interesting; but, if the representation be a poetical one, more than this is demanded. It is demanded, not only that it shall interest, but also that it shall inspirit and rejoice the reader: that it shall convey a charm, and infuse delight. For the Muses, as Hesiod[6] says, were born that they might be 'a forgetfulness of evils, and a truce from cares': and it is not enough that the poet should add to the knowledge of men, it is required of him also that he should add to their happiness.

1. *The Strayed Reveller, and Other Poems* (1849) and *Empedocles on Etna, and Other Poems* (1852).
2. Empedocles (c 500–430? B.C.), Sicilian Greek philosopher.
3. Orpheus, the son of Apollo, was thought of as a soul-stirring poet and musician, as also was his son, Musaeus.
4. The Sophists in ancient Greece were teachers of rhetoric, philosophy, and conduct, and became masters of adroit and specious reasoning.
5. *Poetics*, IV, 2–5.
6. *Theognis*, 52–56.

'All art,' says Schiller,[7] 'is dedicated to Joy, and there is no higher and no more serious problem, than how to make men happy. The right art is that alone, which creates the highest enjoyment.'

A poetical work, therefore, is not yet justified when it has been shown to be an accurate, and therefore interesting representation; it has to be shown also that it is a representation from which men can derive enjoyment. In presence of the most tragic circumstances represented in a work of art, the feeling of enjoyment, as is well known, may still subsist: the representation of the most utter calamity, of the liveliest anguish, is not sufficient to destroy it: the more tragic the situation, the deeper becomes the enjoyment; and the situation is more tragic in proportion as it becomes more terrible.

What then are the situations, from the representation of which, though accurate, no poetical enjoyment can be derived? They are those in which the suffering finds no vent in action; in which a continuous state of mental distress is prolonged, unrelieved by incident, hope, or resistance; in which there is everything to be endured, nothing to be done. In such situations there is inevitably something morbid, in the description of them something monotonous. When they occur in actual life, they are painful, not tragic; the representation of them in poetry is painful also.

To this class of situations, poetically faulty as it appears to me, that of Empedocles, as I have endeavoured to represent him, belongs; and I have therefore excluded the poem from the present collection.

And why, it may be asked, have I entered into this explanation respecting a matter so unimportant as the admission or exclusion of the poem in question? I have done so, because I was anxious to avow that the sole reason for its exclusion was that which has been stated above; and that it has not been excluded in deference to the opinion which many critics of the present day appear to entertain against subjects chosen from distant times and countries: against the choice, in short, of any subjects but modern ones.

'The poet,' it is said,[8] and by an intelligent critic, 'the poet who would really fix the public attention must leave the exhausted past, and draw his subjects from matters of present import, and *therefore* both of interest and novelty.'

Now this view I believe to be completely false. It is worth examining, inasmuch as it is a fair sample of a class of critical dicta everywhere current at the present day, having a philosophical form and air, but no real basis in fact; and which are calculated to vitiate the judgement of readers of poetry, while they exert, so far as they are adopted, a misleading influence on the practice of those who make it.

What are the eternal objects of poetry, among all nations and at all times? They are actions; human actions; possessing an inherent interest in themselves, and which are to be communicated in an interesting manner by the art of the poet. Vainly will the latter imagine that he has everything in his own power; that he can make an intrinsically inferior action equally delightful with a more excellent one by his treatment of it: he may indeed compel us to admire his skill, but his work will possess, within itself, an incurable defect.

The poet, then, has in the first place to select an excellent action; and what actions are the most excellent? Those, certainly, which most powerfully appeal to the great primary human affections: to those elementary feelings which subsist permanently in the race, and which are independent of time. These feelings are

7. See Schiller's preface to *Die Braut von Messina*, on the use of the chorus in tragedy, in *Schriften* (Stuttgart, 1872), XIV,4.

8. In the *Spectator* of April 2, 1853. The words quoted were not used with reference to poems of mine. [Arnold's note.] The italics for *therefore* are Arnold's.

permanent and the same; that which interests them is permanent and the same also. The modernness or antiquity of an action, therefore, has nothing to do with its fitness for poetical representation; this depends upon its inherent qualities. To the elementary part of our nature, to our passions, that which is great and passionate is eternally interesting; and interesting solely in proportion to its greatness and to its passion. A great human action of a thousand years ago is more interesting to it than a smaller human action of today, even though upon the representation of this last the most consummate skill may have been expended, and though it has the advantage of appealing by its modern language, familiar manners, and contemporary allusions, to all our transient feelings and interests. These, however, have no right to demand of a poetical work that it shall satisfy them; their claims are to be directed elsewhere. Poetical works belong to the domain of our permanent passions: let them interest these, and the voice of all subordinate claims upon them is at once silenced.

Achilles, Prometheus, Clytemnestra, Dido[9] — what modern poem presents personages as interesting, even to us moderns, as these personages of an 'exhausted past'? We have the domestic epic dealing with the details of modern life, which pass daily under our eyes; we have poems representing modern personages in contact with the problems of modern life, moral, intellectual, and social; these works have been produced by poets the most distinguished of their nation and time; yet I fearlessly assert that *Hermann and Dorothea*, *Childe Harold*, *Jocelyn*, the *Excursion*,[10] leave the reader cold in comparison with the effect produced upon him by the latter books of the *Iliad*, by the *Oresteia*, or by the episode of Dido. And why is this? Simply because in the three last-named cases the action is greater, the personages nobler, the situations more intense: and this is the true basis of the interest in a poetical work, and this alone.

It may be urged, however, that past actions may be interesting in themselves, but that they are not to be adopted by the modern poet, because it is impossible for him to have them clearly present to his own mind, and he cannot therefore feel them deeply, nor represent them forcibly. But this is not necessarily the case. The externals of a past action, indeed, he cannot know with the precision of a contemporary; but his business is with its essentials. The outward man of Œdipus[11] or of Macbeth, the houses in which they lived, the ceremonies of their courts, he cannot accurately figure to himself; but neither do they essentially concern him. His business is with their inward man; with their feelings and behaviour in certain tragic situations, which engage their passions as men; these have in them nothing local and casual; they are as accessible to the modern poet as to a contemporary.

The date of an action, then, signifies nothing: the action itself, its selection and construction, this is what is all-important. This the Greeks understood far more clearly than we do. The radical difference between their poetical theory and ours consists, as it appears to me, in this: that, with them, the poetical character of the action in itself, and the conduct of it, was the first consideration; with us, attention is fixed mainly on the value of the separate thoughts and images which occur in the treatment of an action. They regarded the whole; we regard the parts. With them, the action predominated over the expression of it; with us, the expression predomi-

9. Achilles, Greek warrior, hero of Homer's *Iliad*; Prometheus, 'Forethought,' in Greek mythology one of the immortal Titans and a friend of man; Clytemnestra, wife of Agamemnon (for these, see Aeschylus's *Oresteia*); Dido, tragic queen of Carthage (see Virgil's *Aeneid*).

10. Long narrative poems by Goethe, Byron, Lamartine, and Wordsworth.

11. Oedipus, in Greek mythology, king of Thebes; see the drama *Oedipus Tyrannus* and *Oedipus Coloneus* by Sophocles (496?–406 B.C.).

nates over the action. Not that they failed in expression, or were inattentive to it; on the contrary, they are the highest models of expression, the unapproached masters of the *grand style*:[12] but their expression is so excellent because it is so admirably kept in its right degree of prominence; because it is so simple and so well subordinated; because it draws its force directly from the pregnancy of the matter which it conveys. For what reason was the Greek tragic poet confined to so limited a range of subjects? Because there are so few actions which united in themselves, in the highest degree, the conditions of excellence; and it was not thought that on any but an excellent subject could an excellent poem be constructed. A few actions, therefore, eminently adapted for tragedy, maintained almost exclusive possession of the Greek tragic stage. Their significance appeared inexhaustible; they were as permanent problems, perpetually offered to the genius of every fresh poet. This too is the reason of what appears to us moderns a certain baldness of expression in Greek tragedy; of the triviality with which we often reproach the remarks of the chorus, where it takes part in the dialogue: that the action itself, the situation of Orestes, or Merope, or Alcmæon,[13] was to stand the central point of interest, unforgotten, absorbing, principal; that no accessories were for a moment to distract the spectator's attention from this, that the tone of the parts was to be perpetually kept down, in order not to impair the grandiose effect of the whole. The terrible old mythic story on which the drama was founded stood, before he entered the theatre, traced in its bare outlines upon the spectator's mind; it stood in his memory, as a group of statuary, faintly seen, at the end of a long and dark vista: then came the poet, embodying outlines, developing situations, not a word wasted, not a sentiment capriciously thrown in: stroke upon stroke, the drama proceeded: the light deepened upon the group; more and more it revealed itself to the rivetted gaze of the spectator: until at last, when the final words were spoken, it stood before him in broad sunlight, a model of immortal beauty.

This was what a Greek critic demanded; this was what a Greek poet endeavoured to effect. It signified nothing to what time an action belonged. We do not find that the *Persæ* occupied a particularly high rank among the dramas of Æschylus because it represented a matter of contemporary interest:[14] this was not what a cultivated Athenian required. He required that the permanent elements of his nature should be moved; and dramas of which the action, though taken from a long-distant mythic time, yet was calculated to accomplish this in a higher degree than that of the *Persæ*, stood higher in his estimation accordingly. The Greeks felt, no doubt, with their exquisite sagacity of taste, that an action of present times was too near them, too much mixed up with what was accidental and passing, to form a sufficiently grand, detached, and self-subsistent object for a tragic poem. Such objects belonged to the domain of the comic poet, and of the lighter kinds of poetry. For the more serious kinds, for *pragmatic* poetry, to use an excellent expression of Polybius,[15] they were more

12. For a discussion by Arnold on 'the grand style,' see the selection reprinted from his *On Translating Homer Last Words*.

13. Orestes, son of Agamemnon, who avenged his father's murder by killing his mother Clytemnestra, appeared in plays by the Greek poet-dramatists Aeschylus, Sophocles, and Euripides. Merope, Greek queen who aided Aepytus, avenged the murder of her husband, appeared in plays by Euripides, Voltaire, and others, including, in 1858, Arnold himself. Alcmaeon, the subject of several lost tragedies, was, in Greek mythology, the avenger of his heroic father by slaying his faithless mother; then, like Orestes, he went mad.

14. The *Persae*, or *Persians*, was produced in 472 B.C.; it dealt with the war of the Greeks against the invading Persians.

15. Greek historian (205–123 B.C.). As here used, 'pragmatic' means treating the facts of history as cause and effect.

difficult and severe in the range of subjects which they permitted. Their theory and practice alike, the admirable treatise of Aristotle, and the unrivalled works of their poets, exclaim with a thousand tongues — 'All depends upon the subject; choose a fitting action, penetrate yourself with the feeling of its situations; this done, everything else will follow.'

But for all kinds of poetry alike there was one point on which they were rigidly exacting; the adaptability of the subject to the kind of poetry selected, and the careful construction of the poem.

How different a way of thinking from this is ours! We can hardly at the present day understand what Menander [16] meant, when he told a man who inquired as to the progress of his comedy that he had finished it, not having yet written a single line, because he had constructed the action of it in his mind. A modern critic would have assured him that the merit of his piece depended on the brilliant things which arose under his pen as he went along. We have poems which seem to exist merely for the sake of single lines and passages; not for the sake of producing any total impression. We have critics who seem to direct their attention merely to detached expressions, to the language about the action, not to the action itself. I verily think that the majority of them do not in their hearts believe that there is such a thing as a total-impression to be derived from a poem at all, or to be demanded from a poet; they think the term a commonplace of metaphysical criticism. They will permit the poet to select any action he pleases, and to suffer that action to go as it will, provided he gratifies them with occasional bursts of fine writing, and with a shower of isolated thoughts and images. That is, they permit him to leave their poetical sense ungratified, provided that he gratifies their rhetorical sense and their curiosity. Of his neglecting to gratify these, there is little danger; he needs rather to be warned against the danger of attempting to gratify these alone; he needs rather to be perpetually reminded to prefer his action to everything else; so to treat this, as to permit its inherent excellences to develop themselves, without interruption from the intrusion of his personal peculiarities: most fortunate when he most entirely succeeds in effacing himself, and in enabling a noble action to subsist as it did in nature.

But the modern critic not only permits a false practice: he absolutely prescribes false aims. 'A true allegory of the state of one's own mind in a representative history,' the poet is told, 'is perhaps the highest thing that one can attempt in the way of poetry.' And accordingly he attempts it. An allegory of the state of one's own mind, the highest problem of an art which imitates actions! No, assuredly, it is not, it never can be so: no great poetical work has ever been produced with such an aim. *Faust* itself, in which something of the kind is attempted, wonderful passages as it contains, and in spite of the unsurpassed beauty of the scenes which relate to Margaret, *Faust* itself, judged as a whole, and judged strictly as a poetical work, is defective: its illustrious author, the greatest poet of modern times, the greatest critic of all times, would have been the first to acknowledge it; he only defended his work, indeed, by asserting it to be 'something incommensurable.' [17]

The confusion of the present times is great, the multitude of voices counselling different things bewildering, the number of existing works capable of attracting a young writer's attention and of becoming his models, immense: what he wants is a hand to guide him through the confusion, a voice to prescribe to him the aim which he should keep in view, and to explain to him that the value of the literary works which offer themselves to his attention is relative to their power of helping him for-

16. Greek poet-dramatist (342–292 B.C.).

17. Eckermann, *Gespräche mit Goethe*, Jan. 3, 1830. See also Notes.

ward on his road towards this aim. Such a guide the English writer at the present day will nowhere find. Failing this, all that can be looked for, all indeed that can be desired, is, that his attention should be fixed on excellent models; that he may reproduce, at any rate, something of their excellence, by penetrating himself with their works and by catching their spirit, if he cannot be taught to produce what is excellent independently.

Foremost among these models for the English writer stands Shakespeare: a name the greatest perhaps of all poetical names; a name never to be mentioned without reverence. I will venture, however, to express a doubt whether the influence of his works, excellent and fruitful for the readers of poetry, for the great majority, has been an unmixed advantage to the writers of it. Shakespeare indeed chose excellent subjects — the world could afford no better than *Macbeth*, or *Romeo and Juliet*, or *Othello*: he had no theory respecting the necessity of choosing subjects of present import, or the paramount interest attaching to allegories of the state of one's own mind; like all great poets, he knew well what constituted a poetical action; like them, wherever he found such an action, he took it; like them, too, he found his best in past times. But to these general characteristics of all great poets he added a special one of his own; a gift, namely, of happy, abundant, and ingenious expression, eminent and unrivalled; so eminent as irresistibly to strike the attention first in him and even to throw into comparative shade his other excellences as a poet. Here has been the mischief. These other excellences were his fundamental excellences *as a poet*; what distinguishes the artist from the mere amateur, says Goethe,[18] is *Architectonicè* in the highest sense; that power of execution which creates, forms, and constitutes: not the profoundness of single thoughts, not the richness of imagery, not the abundance of illustration. But these attractive accessories of a poetical work being more easily seized than the spirit of the whole, and these accessories being possessed by Shakespeare in an unequalled degree, a young writer having recourse to Shakespeare as his model runs great risk of being vanquished and absorbed by them, and, in consequence, of reproducing, according to the measure of his power, these, and these alone. Of this prepondering quality of Shakespeare's genius, accordingly, almost the whole of modern English poetry has, it appears to me, felt the influence. To the exclusive attention on the part of his imitators to this, it is in a great degree owing that of the majority of modern poetical works the details alone are valuable, the composition worthless. In reading them one is perpetually reminded of that terrible sentence on a modern French poet, — *il dit tout ce qu'il veut, mais malheureusement il n'a rien à dire.*[19]

Let me give an instance of what I mean. I will take it from the works of the very chief among those who seem to have been formed in the school of Shakespeare; of one whose exquisite genius and pathetic death render him forever interesting. I will take the poem of *Isabella, or the Pot of Basil*, by Keats. I choose this rather than the *Endymion*, because the latter work (which a modern critic has classed with the *Faery Queen*!), although undoubtedly there blows through it the breath of genius, is yet as a whole so utterly incoherent, as not strictly to merit the name of a poem at all. The poem of *Isabella*, then, is a perfect treasure-house of graceful and felicitous words and images: almost in every stanza there occurs one of those vivid and picturesque turns of expression, by which the object is made to flash upon the eye of the mind, and which thrill the reader with

19. 'he says all that he wishes to, but unfortunately he has nothing to say.' Théophile Gautier (1811–72).

a sudden delight. This one short poem contains, perhaps, a greater number of happy single expressions which one could quote than all the extant tragedies of Sophocles. But the action, the story? The action in itself is an excellent one; but so feebly is it conceived by the poet, so loosely constructed, that the effect produced by it, in and for itself, is absolutely null. Let the reader, after he has finished the poem of Keats, turn to the same story in the *Decameron*:[20] he will then feel how pregnant and interesting the same action has become in the hands of a great artist, who above all things delineates his object; who subordinates expression to that which it is designed to express.

I have said that the imitators of Shakespeare, fixing their attention on his wonderful gift of expression, have directed their imitation to this, neglecting his other excellences. These excellences, the fundamental excellences of poetical art, Shakespeare no doubt possessed them — possessed many of them in a splendid degree; but it may perhaps be doubted whether even he himself did not sometimes give scope to his faculty of expression to the prejudice of a higher poetical duty. For we must never forget that Shakespeare is the great poet he is from his skill in discerning and firmly conceiving an excellent action, from his power of intensely feeling a situation, of intimately associating himself with a character; not from his gift of expression, which rather even leads him astray, degenerating sometimes into a fondness for curiosity of expression, into an irritability of fancy, which seems to make it impossible for him to say a thing plainly, even when the press of the action demands the very directest language, or its level character the very simplest. Mr. Hallam,[21] than whom it is impossible to find a saner and more judicious critic, has had the courage (for at the present day it needs courage) to remark, how extremely and faultily difficult Shakespeare's language often is. It is so: you may find main scenes in some of his greatest tragedies, *King Lear*, for instance, where the language is so artificial, so curiously tortured, and so difficult, that every speech has to be read two or three times before its meaning can be comprehended. This over-curiousness of expression is indeed but the excessive employment of a wonderful gift — of the power of saying a thing in a happier way than any other man; nevertheless, it is carried so far that one understands what M. Guizot[22] meant when he said that Shakespeare appears in his language to have tried all styles except that of simplicity. He has not the severe and scrupulous self-restraint of the ancients, partly, no doubt, because he had a far less cultivated and exacting audience. He has indeed a far wider range than they had, a far richer fertility of thought; in this respect he rises above them. In his strong conception of his subject, in the genuine way in which he is penetrated with it, he resembles them, and is unlike the moderns. But in the accurate limitation of it, the conscientious rejection of superfluities, the simple and rigorous development of it from the first line of his work to the last, he falls below them, and comes nearer to the moderns. In his chief works, besides what he has of his own, he has the elementary soundness of the ancients; he has their important action and their large and broad manner; but he has not their purity of method. He is therefore a less safe model; for what he has of his own is personal, and inseparable from his own rich nature; it may be imitated and exaggerated, it cannot be learned or applied as an art. He is above all suggestive; more valu-

able, therefore, to young writers as men than as artists. But clearness of arrangement, rigour of development, simplicity of style — these may to a certain extent be learned: and these may, I am convinced, be learned best from the ancients, who, although infinitely less suggestive than Shakespeare, are thus, to the artist, more instructive.

What then, it will be asked, are the ancients to be our sole models? the ancients with their comparatively narrow range of experience, and their widely different circumstances? Not, certainly, that which is narrow in the ancients, nor that in which we can no longer sympathize. An action like the action of the *Antigone* of Sophocles, which turns upon the conflict between the heroine's duty to her brother's corpse and that to the laws of her country, is no longer one in which it is possible that we should feel a deep interest. I am speaking too, it will be remembered, not of the best sources of intellectual stimulus for the general reader, but of the best models of instruction for the individual writer. This last may certainly learn of the ancients, better than anywhere else, three things which it is vitally important for him to know: — the all-importance of the choice of a subject; the necessity of accurate construction; and the subordinate character of expression. He will learn from them how unspeakably superior is the effect of the one moral impression left by a great action treated as a whole, to the effect produced by the most striking single thought or by the happiest image. As he penetrates into the spirit of the great classical works, as he becomes gradually aware of their intense significance, their noble simplicity, and their calm pathos, he will be convinced that it is this effect, unity and profoundness of moral impression, at which the ancient poets aimed; that it is this which constitutes the grandeur of their works, and which makes them immortal. He will desire to direct his own efforts towards producing the same effect. Above all, he will deliver himself from the jargon of modern criticism, and escape the danger of producing poetical works conceived in the spirit of the passing time, and which partake of its transitoriness.

The present age makes great claims upon us: we owe it service, it will not be satisfied without our admiration. I know not how it is, but their commerce with the ancients appears to me to produce, in those who constantly practise it, a steadying and composing effect upon their judgment, not of literary works only, but of men and events in general. They are like persons who have had a very weighty and impressive experience: they are more truly than others under the empire of facts, and more independent of the language current among those with whom they live. They wish neither to applaud nor to revile their age: they wish to know what it is, what it can give them, and whether this is what they want. What they want, they know very well: they want to educe and cultivate what is best and noblest in themselves: they know, too, that this is no easy task — χαλεπὸν, as Pittacus said, χαλεπὸν ἐσθλὸν ἔμμεναι[23] — and they ask themselves sincerely whether their age and its literature can assist them in the attempt. If they are endeavouring to practise any art, they remember the plain and simple proceedings of the old artists, who attained their grand results by penetrating themselves with some noble and significant action, not by inflating themselves with a belief in the pre-eminent importance and greatness of their own times. They do not talk of their mission, nor of interpreting their age, nor of the coming poet; all this, they know, is the mere delirium of vanity; their business is not to praise their age, but to afford to the men who live in it the highest pleasure which

23. 'it is hard to be excellent.' This was a favorite saying of Pittacus (c 650–569 B.C.), ruler of Mytilene in Lesbos, and one of the Seven Sages of Greece.

they are capable of feeling. If asked to afford this by means of subjects drawn from the age itself, they ask what special fitness the present age has for supplying them. They are told that it is an era of progress, an age commissioned to carry out the great ideas of industrial development and social amelioration. They reply that with all this they can do nothing; that the elements they need for the exercise of their art are great actions, calculated powerfully and delightfully to affect what is permanent in the human soul; that so far as the present age can supply such actions, they will gladly make use of them; but that an age wanting in moral grandeur can with difficulty supply such, and an age of spiritual discomfort with difficulty be powerfully and delightfully affected by them.

A host of voices will indignantly rejoin that the present age is interior to the past neither in moral grandeur nor in spiritual health. He who possesses the discipline I speak of will content himself with remembering the judgments passed upon the present age, in this respect, by the men of strongest head and widest culture whom it has produced; by Goethe and by Niebuhr.[24] It will be sufficient for him that he knows the opinions held by these two great men respecting the present age and its literature; and that he feels assured in his own mind that their aims and demands upon life were such as he would wish, at any rate, his own to be; and their judgment as to what is impeding and disabling such as he may safely follow. He will not, however, maintain a hostile attitude towards the false pretensions of his age; he will content himself with not being overwhelmed by them. He will esteem himself fortunate if he can succeed in banishing from his mind all feelings of contradiction, and irritation, and impatience; in order to delight himself with the contemplation of some noble action of a heroic time, and to enable others, through his representation of it, to delight in it also.

I am far indeed from making any claim, for myself, that I possess this discipline; or for the following poems, that they breathe its spirit. But I say, that in the sincere endeavour to learn and practise, amid the bewildering confusion of our times, what is sound and true in poetical art, I seemed to myself to find the only sure guidance, the only solid footing, among the ancients. They, at any rate, knew what they wanted in art, and we do not. It is this uncertainty which is disheartening, and not hostile criticism. How often have I felt this when reading words of disparagement or of cavil: that it is the uncertainty as to what is really to be aimed at which makes our difficulty, not the dissatisfaction of the critic, who himself suffers from the same uncertainty. *Non me tua fervida terrent Dicta; . . . Dii me terrent, et Jupiter hostis.*[25]

Two kinds of *dilettanti*, says Goethe,[26] there are in poetry: he who neglects the indispensable mechanical part, and thinks he has done enough if he shows spirituality and feeling; and he who seeks to arrive at poetry merely by mechanism, in which he can acquire an artisan's readiness, and is without soul and matter. And he adds, that the first does most harm to art, and the last to himself. If we must be *dilettanti*: if it is impossible for us, under the circumstances amidst which we live, to think clearly, to feel nobly, and to delineate firmly: if we cannot attain to the mastery of the great artists — let us, at least, have so much respect for our art as to prefer it to ourselves. Let us not bewilder our successors: let us transmit to them the practice of poetry, with its boundaries and wholesome regulative

laws, under which excellent works may again, perhaps, at some future time, be produced, not yet fallen into oblivion through our neglect, not yet condemned and cancelled by the influence of their eternal enemy, caprice.

ON TRANSLATING HOMER: LAST WORDS

[*The Grand Style*]

. . . NOTHING has raised more questioning among my critics than these words, *noble, the grand style*.[1] People complain that I do not define these words sufficiently, that I do not tell them enough about them. 'The grand style, but what *is* the grand style?' they cry; some with an inclination to believe in it, but puzzled; others mockingly and with incredulity. Alas! the grand style is the last matter in the world for verbal definition to deal with adequately. One may say of it as is said of faith: 'One must feel it in order to know what it is.' But, as of faith, so too one may say of nobleness, of the grand style: 'Woe to those who know it not!' Yet this expression, though indefinable, has a charm; one is the better for considering it; *bonum est, nos hic esse*;[2] nay, one loves to try to explain it, though one knows that one must speak imperfectly. For those, then, who ask the question, What is the grand style? with sincerity, I will try to make some answer, inadequate as it must be. For those who ask it mockingly I have no answer, except to repeat to them, with compassionate sorrow, the Gospel words: *Moriemini in peccatis vestris*, Ye shall die in your sins.[3]

But let me, at any rate, have the pleasure of again giving, before I begin to try and define the grand style, a specimen of what it *is*.

> Standing on earth, not wrapt above the pole,
> More safe I sing with mortal voice, unchanged
> To hoarse or mute, though fall'n on evil days,
> On evil days though fall'n, and evil tongues. . . .[4]

There is the grand style in perfection; and anyone who has a sense for it, will feel it a thousand times better from repeating those lines than from hearing anything I can say about it.

Let us try, however, what *can* be said, controlling what we say by examples. I think it will be found that the grand style arises in poetry, *when a noble nature, poetically gifted, treats with simplicity or with severity a serious subject*. I think this definition will be found to cover all instances of the grand style in poetry which present themselves. I think it will be found to exclude all poetry which is not in the grand style. And I think it contains no terms which are obscure, which themselves need defining. Even those who do not understand what is meant by calling poetry noble, will understand, I imagine, what is meant by speaking of a noble nature in a man. But the noble or powerful nature — the *bedeutendes Individuum*[5] of Goethe — is not enough. For instance, Mr. Newman[6] has zeal for

1. For Arnold's earlier use of these words, see his *On Translating Homer* (1861), especially the end of each of the three lectures, but also *passim*.
2. 'it is good for us to be here.' *Cf. Matthew*, xvii, 4. Arnold wrote that when he quoted from the Bible and was 'not earnestly serious,' he always used the Vulgate Latin. See his *Letters*, I,191.
3. See *John*, viii,24.
4. Milton, *Paradise Lost*, vii,23–26.
5. *Bedeutendes*, in the sense, as here, of 'full of meaning,' or 'full of significance,' was a favorite word with Goethe. He made this sense of it familiar; *cf.* the discussion of 'bedeutend' in Paul Fischer, *Goethe-Wortschatz* (1929).
6. Francis William Newman. See Notes.

learning, zeal for thinking, zeal for liberty, and all these things are noble, they ennoble a man; but he has not the poetical gift: there must be the poetical gift, the 'divine faculty,' also. And, besides all this, the subject must be a serious one (for it is only by a kind of licence that we can speak of the grand style in comedy); and it must be treated *with simplicity or severity*. Here is the great difficulty: the poets of the world have been many; there has been wanting neither abundance of poetical gift nor abundance of noble natures; but a poetical gift so happy, in a noble nature so circumstanced and trained, that the result is a continuous style, perfect in simplicity or perfect in severity, has been extremely rare. One poet [7] has had the gifts of nature and faculty in unequalled fulness, without the circumstances and training which make this sustained perfection of style possible. Of other poets, some have caught this perfect strain now and then, in short pieces or single lines, but have not been able to maintain it through considerable works; others have composed all their productions in a style which, by comparison with the best, one must call secondary.

The best model of the grand style simple is Homer; perhaps the best model of the grand style severe is Milton. But Dante is remarkable for affording admirable examples of both styles; he has the grand style which arises from simplicity, and he has the grand style which arises from severity; and from him I will illustrate them both. In a former lecture [8] I pointed out what that severity of poetical style is, which comes from saying a thing with a kind of intense compression, or in an illusive, brief, almost haughty way, as if the poet's mind were charged with so many and such grave matters, that he would not deign to treat any one of them explicitly. Of this severity the last line of the following stanza of the *Purgatory* is a good example. Dante has been telling Forese that Virgil had guided him through Hell, and he goes on:

> Indi m' han tratto su gli suoi conforti,
> Salendo e rigirando la Montagna
> *Che drizza voi che il mondo fece torti.*[9]

'Thence hath his comforting aid led me up, climbing and circling the Mountain, *which straightens you whom the world made crooked*.' These last words, 'la Montagna *che drizza voi che il mondo fece torti*,' 'the Mountain *which straightens you whom the world made crooked*,' for the Mountain of Purgatory, I call an excellent specimen of the grand style in severity, where the poet's mind is too full charged to suffer him to speak more explicitly. But the very next stanza is a beautiful specimen of the grand style in simplicity, where a noble nature and a poetical gift unite to utter a thing with the most limpid plainness and clearness:

> Tanto dice di farmi sua compagna
> Ch' io sarò là dove fia Beatrice;
> Quivi convien che senza lui rimagna.

'So long,' Dante continues, 'so long he (Virgil) saith he will bear me company, until I shall be there where Beatrice is; there it behoves that without him I remain.' But the noble simplicity of that in the Italian no words of mine can render.

Both these styles, the simple and the severe, are truly grand; the severe seems, perhaps, the grandest, so long as we attend most to the great personality, to the noble nature, in the poet its author; the simple seems the grandest when we attend most to the exquisite faculty, to the poetical gift. But the simple is no doubt to be preferred. It is the more *magical*: in the other there is something intellectual, something which gives scope for a play

7. Shakespeare. Arnold says of him, 'His workmanship is often far from being pure and flawless.' See *Works* (1904), X,186. Also see *ibid.*, X,255.

8. Lecture I of *On Translating Homer* (1861)

9. The two quotations from *La Divina Commedia* are from 'Purgatorio,' xxiii,124–29.

of thought which may exist where the poetical gift is either wanting or present in only inferior degree: the severe is much more imitable, and this a little spoils its charm. A kind of semblance of this style keeps Young going, one may say, through all the nine parts of that most indifferent production, the *Night Thoughts*.[10] But the grand style in simplicity is inimitable:

αἰὼν ἀσφαλὴς
οὐκ ἔγεντ' οὔτ' Αἰακίδᾳ παρὰ Πηλεῖ,
οὔτε παρ' ἀντιθέῳ Κάδμῳ· λέγονται μὰν
βροτῶν
ὄλβον ὑπέρτατον οἱ σχεῖν, οἵ τε καὶ χρυ-
σαμπύκων

10 Edward Young's *The Complaint, or, Night Thoughts on Life, Death, and Immortality* appeared in 1742.

μελπομενᾶν ἐν ὄρει Μοισᾶν, καὶ ἐν ἑπτα-
πύλοις
Θήβαις . . .[11]

There is a limpidness in that, a want of salient points to seize and transfer, which makes imitation impossible, except by a genius akin to the genius which produced it.

11. 'A secure time fell to the lot neither of Peleus the son of Aeacus, nor of the godlike Cadmus; howbeit these are said to have had, of all mortals, the supreme of happiness, who heard the golden-snooded Muses sing, one of them on the mountain (Pelion), the other in seven-gated Thebes.' [Arnold's note.] The quotation is from Pindar, *Pythian Odes*, iii, 86–91.

ESSAYS IN CRITICISM, FIRST SERIES

I

The Function of Criticism at the Present Time

MANY objections have been made to a proposition which, in some remarks of mine on translating Homer,[1] I ventured to put forth; a proposition about criticism, and its importance at the present day. I said: 'Of the literature of France and Germany, as of the intellect of Europe in general, the main effort, for now many years, has been a critical effort; the endeavour, in all branches of knowledge, theology, philosophy, history, art, science, to see the object as in itself it really is.' I added, that owing to the operation in English literature of certain causes, 'almost the last thing for which one would come to English literature is just that very thing which now Europe most desires,—criticism'; and that the power and value of English literature was thereby impaired. More than one rejoinder declared that the importance I here assigned to criticism was excessive, and asserted the inherent superiority of the creative effort of the human spirit over its critical effort. And the other day, having been led by a Mr. Shairp's[2] excellent notice of Wordsworth[3] to turn again to his biography, I found, in the words of this great man, whom I, for one, must always listen to

1. See the last paragraph of Lecture II of Arnold's *On Translating Homer* (pp.63–64 of 1st ed., 1861).

2. John Campbell Shairp (1819–85), Scottish critic and man of letters, professor of poetry at Oxford, 1877–84; author of *On the Poetic Interpretation of Nature* (1877), *Aspects of Poetry* (1881) etc. The essay alluded to is 'Wordsworth: The Man and the Poet,' in the *North British Review*, XLI (Aug. 1864), 1–54.

3. I cannot help thinking that a practice, common in England during the last century, and still followed in France, of printing a notice of this kind,—a notice by a competent critic,—to serve as an introduction to an eminent author's works, might be revived among us with advantage. To introduce all succeeding editions of Wordsworth, Mr. Shairp's notice might, it seems to me, excellently serve: it is written from the point of view of an admirer, nay, of a disciple, and that is right; but then the disciple must be also, as in this case he is, a critic, a man of letters, not, as too often happens, some relation or friend with no qualification for his task except affection for his author. [Arnold's note.]

with the profoundest respect, a sentence passed on the critic's business, which seems to justify every possible disparagement of it. Wordsworth says in one of his letters: [4] —

'The writers in these publications' (the Reviews), 'while they prosecute their inglorious employment, cannot be supposed to be in a state of mind very favourable for being affected by the finer influences of a thing so pure as genuine poetry.'

And a trustworthy reporter of his conversation quotes a more elaborate judgment to the same effect: [5] —

'Wordsworth holds the critical power very low, infinitely lower than the inventive; and he said today that if the quantity of time consumed in writing critiques on the works of others were given to original composition, of whatever kind it might be, it would be much better employed; it would make a man find out sooner his own level, and it would do infinitely less mischief. A false or malicious criticism may do much injury to the minds of others; a stupid invention, either in prose or verse, is quite harmless.'

It is almost too much to expect of poor human nature, that a man capable of producing some effect in one line of literature, should, for the greater good of society, voluntarily doom himself to impotence and obscurity in another. Still less is this to be expected from men addicted to the composition of the 'false or malicious criticism' of which Wordsworth speaks. However, everybody would admit that a false or malicious criticism had better never have been written. Everybody, too, would be willing to admit, as a general proposition, that the critical faculty is lower than the inventive. But is it true that criticism is really, in itself, a baneful and injurious employment; is it true that all time given to writing critiques on the works of others would be much better employed if it were given to original composition, of whatever kind this may be? Is it true that Johnson had better have gone on producing more *Irenes* instead of writing his *Lives of the Poets*; [6] nay, is it certain that Wordsworth himself was better employed in making his Ecclesiastical Sonnets [7] than when he made his celebrated Preface [8] so full of criticism, and criticism of the works of others? Wordsworth was himself a great critic, and it is to be sincerely regretted that he has not left us more criticism; Goethe was one of the greatest of critics, and we may sincerely congratulate ourselves that he has left us so much criticism. Without wasting time over the exaggeration which Wordsworth's judgment on criticism clearly contains, or over an attempt to trace the causes, — not difficult, I think, to be traced, — which may have led Wordsworth to this exaggeration, a critic may with advantage seize an occasion for trying his own conscience, and for asking himself of what real service, at any given moment, the practice of criticism either is or may be made to his own mind and spirit, and to the minds and spirits of others.

The critical power is of lower rank than the creative. True; but in assenting to this proposition, one or two things are to be kept in mind. It is undeniable that the exercise of a creative power, that a free creative activity, is the highest function of man; it is proved to be so by man's finding

4. A letter to Bernard Barton (1784–1849), the Quaker poet, who had written some verses in praise of Wordsworth's *The Excursion*, despite the strictures of its reviewers. See Christopher Wordsworth, *Memoirs of William Wordsworth* (1851), II,53.

5. The reporter was Lady Richardson; her statement was printed in Knight's *Life of Wordsworth* (see the ed. of Edinburgh, 1889, III, 438).

6. Dr. Samuel Johnson (1709–84) had his unsuccessful play *Irene* produced in 1749. His great *Lives of the Poets* appeared 1779–81.

7. A series of sonnets, published 1821–22, on the history of the Church in England.

8. The preface to the 2nd ed. (1800) of *Lyrical Ballads*; it was expanded for the 3rd ed. (1802).

in it his true happiness. But it is undeniable, also, that men may have the sense of exercising this free creative activity in other ways than in producing great works of literature or art; if it were not so, all but a very few men would be shut out from the true happiness of all men. They may have it in well-doing, they may have it in learning, they may have it even in criticising. This is one thing to be kept in mind. Another is, that the exercise of the creative power in the production of great works of literature or art, however high this exercise of it may rank, is not at all epochs and under all conditions possible; and that therefore labour may be vainly spent in attempting it, which might with more fruit be used in preparing for it, in rendering it possible. This creative power works with elements, with materials; what if it has not those materials, those elements, ready for its use? In that case it must surely wait till they are ready. Now, in literature, — I will limit myself to literature, for it is about literature that the question arises, — the elements with which the creative power works are ideas; the best ideas on every matter which literature touches, current at the time. At any rate we may lay it down as certain that in modern literature no manifestation of the creative power not working with these can be very important or fruitful. And I say *current* at the time, not merely accessible at the time; for creative literary genius does not principally show itself in discovering new ideas, that is rather the business of the philosopher. The grand work of literary genius is a work of synthesis and exposition, not of analysis and discovery; its gift lies in the faculty of being happily inspired by a certain intellectual and spiritual atmosphere, by a certain order of ideas, when it finds itself in them; of dealing divinely with these ideas, presenting them in the most effective and attractive combinations, — making beautiful works with them, in short. But it must have the atmosphere, it must find itself amidst the order of ideas, in order to work freely; and these it is not so easy to command. This is why great creative epochs in literature are so rare, this is why there is so much that is unsatisfactory in the productions of many men of real genius; because, for the creation of a master-work of literature two powers must concur, the power of the man and the power of the moment, and the man is not enough without the moment; the creative power has, for its happy exercise, appointed elements, and those elements are not in its own control.

Nay, they are more within the control of the critical power. It is the business of the critical power, as I said in the words already quoted, 'in all branches of knowledge, theology, philosophy, history, art, science, to see the object as in itself it really is.' Thus it tends, at last, to make an intellectual situation of which the creative power can profitably avail itself. It tends to establish an order of ideas, if not absolutely true, yet true by comparison with that which it displaces; to make the best ideas prevail. Presently these new ideas reach society, the touch of truth is the touch of life, and there is a stir and growth everywhere; out of this stir and growth come the creative epochs of literature.

Or, to narrow our range, and quit these considerations of the general march of genius and of society, — considerations which are apt to become too abstract and impalpable, — every one can see that a poet, for instance, ought to know life and the world before dealing with them in poetry; and life and the world being in modern times very complex things, the creation of a modern poet, to be worth much, implies a great critical effort behind it; else it must be a comparatively poor, barren, and short-lived affair. This is why Byron's poetry had so little endurance in it, and Goethe's so much; both Byron and Goethe had a great productive power, but Goethe's was nourished by a great critical effort providing the true materials for it,

and Byron's was not; Goethe knew life and the world, the poet's necessary subjects, much more comprehensively and thoroughly than Byron. He knew a great deal more of them, and he knew them much more as they really are.

It has long seemed to me that the burst of creative activity in our literature, through the first quarter of this century, had about it in fact something premature; and that from this cause its productions are doomed, most of them, in spite of the sanguine hopes which accompanied and do still accompany them, to prove hardly more lasting than the productions of far less splendid epochs. And this prematureness comes from its having proceeded without having its proper data, without sufficient materials to work with. In other words, the English poetry of the first quarter of this century, with plenty of energy, plenty of creative force, did not know enough. This makes Byron so empty of matter, Shelley so incoherent, Wordsworth even, profound as he is, yet so wanting in completeness and variety. Wordsworth cared little for books, and disparaged Goethe. I admire Wordsworth, as he is, so much that I cannot wish him different; and it is vain, no doubt, to imagine such a man different from what he is, to suppose that he *could* have been different. But surely the one thing wanting to make Wordsworth an even greater poet than he is, — his thought richer, and his influence of wider application, — was that he should have read more books, among them, no doubt, those of that Goethe whom he disparaged without reading him.

But to speak of books and reading may easily lead to a misunderstanding here. It was not really books and reading that lacked to our poetry at this epoch: Shelley had plenty of reading, Coleridge had immense reading. Pindar and Sophocles,[9] — as we all say so glibly, and often with so little discernment of the real import of what we are saying, — had not many books; Shakspeare was no deep reader. True; but in the Greece of Pindar and Sophocles, in the England of Shakspeare, the poet lived in a current of ideas in the highest degree animating and nourishing to the creative power; society was, in the fullest measure, permeated by fresh thought, intelligent and alive. And this state of things is the true basis for the creative power's exercise, in this it finds its data, its materials, truly ready for its hand; all the books and reading in the world are only valuable as they are helps to this. Even when this does not actually exist, books and reading may enable a man to construct a kind of semblance of it in his own mind, a world of knowledge and intelligence in which he may live and work. This is by no means an equivalent to the artist for the nationally diffused life and thought of the epochs of Sophocles or Shakspeare; but, besides that it may be a means of preparation for such epochs, it does really constitute, if many share in it, a quickening and sustaining atmosphere of great value. Such an atmosphere the many-sided learning and the long and widely combined critical effort of Germany formed for Goethe, when he lived and worked. There was no national glow of life and thought there as in the Athens of Pericles[10] or the England of Elizabeth. That was the poet's weakness. But there was a sort of equivalent for it in the complete culture and unfettered thinking of a large body of Germans. That was his strength. In the England of the first quarter of this century there was neither a national glow of life and thought, such as we had in the age of Elizabeth, nor yet a culture and a force of learning and criticism such as were to be found in Germany. Therefore the creative power of poetry wanted, for success in the highest sense, materials and a basis; a thorough

9. Pindar (522–448? B.C.); Sophocles (496?–406 B.C.).

10. Pericles (495?–429 B.C.), great Greek statesman.

interpretation of the world was necessarily denied to it.

At first sight it seems strange that out of the immense stir of the French Revolution and its age should not have come a crop of works of genius equal to that which came out of the stir of the great productive time of Greece, or out of that of the Renascence, with its powerful episode the Reformation. But the truth is that the stir of the French Revolution took a character which essentially distinguished it from such movements as these. These were, in the main, disinterestedly intellectual and spiritual movements; movements in which the human spirit looked for its satisfaction in itself and in the increased play of its own activity. The French Revolution took a political, practical character. The movement, which went on in France under the old *régime*, from 1700 to 1789, was far more really akin than that of the Revolution itself to the movement of the Renascence: the France of Voltaire and Rousseau told far more powerfully upon the mind of Europe than the France of the Revolution. Goethe reproached this last expressly with having 'thrown quiet culture back.' Nay, and the true key to how much in our Byron, even in our Wordsworth, is this[1] — that they had their source in a great movement of feeling, not in a great movement of mind. The French Revolution, however, — that object of so much blind love and so much blind hatred, — found undoubtedly its motive-power in the intelligence of men, and not in their practical sense; this is what distinguishes it from the English Revolution of Charles the First's time. This is what makes it a more spiritual event than our Revolution, an event of much more powerful and world-wide interest, though practically less successful; it appeals to an order of ideas which are universal, certain, permanent. 1789 asked of a thing, Is it rational? 1642 asked of a thing, Is it legal? or, when it went furthest, Is it according to conscience? This is the English fashion, a fashion to be treated, within its own sphere, with the highest respect; for its success, within its own sphere, has been prodigious. But what is law in one place is not law in another; what is law here today is not law even here tomorrow; and as for conscience, what is binding on one man's conscience is not binding on another's. The old woman[11] who threw her stool at the head of the surpliced minister in St. Giles's Church at Edinburgh obeyed an impulse to which millions of the human race may be permitted to remain strangers. But the prescriptions of reason are absolute, unchanging, of universal validity: *to count by tens is the easiest way of counting* — that is a proposition of which every one, from here to the Antipodes, feels the force; at least I should say so if we did not live in a country where it is not impossible that any morning we may find a letter in the *Times* declaring that a decimal coinage is an absurdity. That a whole nation should have been penetrated with an enthusiasm for pure reason, and with an ardent zeal for making its prescriptions triumph, is a very remarkable thing, when we consider how little of mind, or anything so worthy and quickening as mind, comes into the motives which alone, in general, impel great masses of men. In spite of the extravagant direction given to this enthusiasm, in spite of the crimes and follies in which it lost itself, the French Revolution derives from the force, truth, and universality of the ideas which it took for its law, and from the passion with which it could inspire a multitude for these ideas, a unique and still living power; it is, — it will probably long remain, — the greatest, the most animating event in history. And as no sincere pas-

11. Jenny, or Janet Geddes was the old woman who, according to tradition, commenced the riot (July 23, 1637) of throwing the folding stools of the audience in St. Giles's Church, protesting against the new service prescribed by Charles I for Scotland. *Cf.* John H. Burton, *History of Scotland*, ed. 1905, VI,150.

sion for the things of the mind, even though it turn out in many respects an unfortunate passion, is ever quite thrown away and quite barren of good, France has reaped from hers one fruit — the natural and legitimate fruit though not precisely the grand fruit she expected: she is the country in Europe where *the people* is most alive.

But the mania for giving an immediate political and practical application to all these fine ideas of the reason was fatal. Here an Englishman is in his element: on this theme we can all go on for hours. And all we are in the habit of saying on it has undoubtedly a great deal of truth. Ideas cannot be too much prized in and for themselves, cannot be too much lived with; but to transport them abruptly into the world of politics and practice, violently to revolutionise this world to their bidding, — that is quite another thing. There is the world of ideas and there is the world of practice; the French are often for suppressing the one and the English the other; but neither is to be suppressed. A member of the House of Commons said to me the other day: 'That a thing is an anomaly, I consider to be no objection to it whatever.' I venture to think he was wrong; that a thing is an anomaly *is* an objection to it, but absolutely and in the sphere of ideas: it is not necessarily, under such and such circumstances, or at such and such a moment, an objection to it in the sphere of politics and practice. Joubert has said beautifully: 'C'est la force et le droit qui règlent toutes choses dans le monde; la force en attendant le droit.'[12] (Force and right are the governors of this world; force till right is ready.) *Force till right is ready*; and till right is ready, force, the existing order of things, is justified, is the legitimate ruler. But right is something moral, and implies inward recognition, free assent of the will; we are not ready for right, — *right*, so far as we are concerned, *is not ready*, — until we have attained this sense of seeing it and willing it. The way in which for us it may change and transform force, the existing order of things, and become, in its turn, the legitimate ruler of the world, should depend on the way in which, when our time comes, we see it and will it. Therefore for other people enamoured of their own newly discerned right, to attempt to impose it upon us as ours, and violently to substitute their right for our force, is an act of tyranny, and to be resisted. It sets at nought the second great half of our maxim, *force till right is ready*. This was the grand error of the French Revolution; and its movement of ideas, by quitting the intellectual sphere and rushing furiously into the political sphere, ran, indeed, a prodigious and memorable course, but produced no such intellectual fruit as the movement of ideas of the Renascence, and created, in opposition to itself, what I may call an *epoch of concentration*. The great force of that epoch of concentration was England; and the great voice of that epoch of concentration was Burke. It is the fashion to treat Burke's writings on the French Revolution as superannuated and conquered by the event; as the eloquent but unphilosophical tirades of bigotry and prejudice. I will not deny that they are often disfigured by the violence and passion of the moment, and that in some directions Burke's view was bounded, and his observation therefore at fault. But on the whole, and for those who can make the needful corrections, what distinguishes these writings is their profound, permanent, fruitful, philosophical truth. They contain the true philosophy of an epoch of concentration, dissipate the heavy atmosphere which its own nature is apt to engender round it, and make its resistance rational instead of mechanical.

But Burke is so great because, almost alone in England, he brings thought to bear upon politics, he saturates politics

12. Joseph Joubert (1754–1824), French essayist. See *Pensées de J. Joubert*, ed 1911, p.178 — the 2nd aphorism under Titre XV.

with thought. It is his accident that his ideas were at the service of an epoch of concentration, not of an epoch of expansion; it is his characteristic that he so lived by ideas, and had such a source of them welling up within him, that he could float even an epoch of concentration and English Tory politics with them. It does not hurt him that Dr. Price [13] and the Liberals were enraged with him; it does not even hurt him that George the Third and the Tories were enchanted with him. His greatness is that he lived in a world which neither English Liberalism nor English Toryism is apt to enter; — the world of ideas, not the world of catchwords and party habits. So far is it from being really true of him that he 'to party gave up what was meant for mankind,' [14] that at the very end of his fierce struggle with the French Revolution, after all his invectives against its false pretensions, hollowness, and madness, with his sincere convictions of its mischievousness, he can close a memorandum on the best means of combating it, some of the last pages he ever wrote, — the *Thoughts on French Affairs*, in December 1791, — with these striking words: —

'The evil is stated, in my opinion, as it exists. The remedy must be where power, wisdom, and information, I hope, are more united with good intentions than they can be with me. I have done with this subject, I believe, for ever. It has given me many anxious moments for the last two years. *If a great change is to be made in human affairs, the minds of men will be fitted to it; the general opinions and feelings will draw that way. Every fear, every hope will forward it; and then they who persist in opposing this mighty current in human affairs, will appear rather to resist the decrees of Providence itself, than the mere designs of men. They will not be resolute and firm, but perverse and obstinate.*' [15]

That return of Burke upon himself has always seemed to me one of the finest things in English literature, or indeed in any literature. That is what I call living by ideas: when one side of a question has long had your earnest support, when all your feelings are engaged, when you hear all round you no language but one, when your party talks this language like a steam engine and can imagine no other, — still to be able to think, still to be irresistibly carried, if so it be, by the current of thought to the opposite side of the question, and, like Balaam,[16] to be unable to speak anything *but what the Lord has put in your mouth*. I know nothing more striking, and I must add that I know nothing more un-English.

For the Englishman in general is like my friend the Member of Parliament, and believes, point-blank, that for a thing to be an anomaly is absolutely no objection to it whatever. He is like the Lord Auckland [17] of Burke's day, who, in a memorandum on the French Revolution, talks of certain 'miscreants, assuming the name of philosophers, who have presumed themselves capable of establishing a new system of society.' The Englishman has been called a political animal, and he values what is political and practical so much that ideas easily become objects of dislike in his eyes, and thinkers, 'miscreants,' because ideas and thinkers have rashly meddled with politics and practice. This would be all very well if the dislike and neglect confined themselves to ideas transported out of their own sphere, and meddling rashly with practice; but they

are inevitably extended to ideas as such, and to the whole life of intelligence; practice is everything, a free play of the mind is nothing. The notion of the free play of the mind upon all subjects being a pleasure in itself, being an object of desire, being an essential provider of elements without which a nation's spirit, whatever compensations it may have for them, must, in the long run, die of inanition, hardly enters into an Englishman's thoughts. It is noticeable that the word *curiosity*, which in other languages is used in a good sense, to mean, as a high and fine quality of man's nature, just this disinterested love of a free play of the mind on all subjects, for its own sake, — it is noticeable, I say, that this word has in our language no sense of the kind, no sense but a rather bad and disparaging one.[18] But criticism, real criticism, is essentially the exercise of this very quality. It obeys an instinct prompting it to try to know the best that is known and thought in the world, irrespectively of practice, politics, and everything of the kind; and to value knowledge and thought as they approach this best, without the intrusion of any other considerations whatever. This is an instinct for which there is, I think, little original sympathy in the practical English nature, and what there was of it has undergone a long benumbing period of blight and suppression in the epoch of concentration which followed the French Revolution.

But epochs of concentration cannot well endure for ever; epochs of expansion, in the due course of things, follow them. Such an epoch of expansion seems to be opening in this country. In the first place all danger of a hostile forcible pressure of foreign ideas upon our practice has long disappeared; like the traveller in the fable, therefore, we begin to wear our cloak a little more loosely.[19] Then, with a long peace, the ideas of Europe steal gradually and amicably in, and mingle, though in infinitesimally small quantities at a time, with our own notions. Then, too, in spite of all that is said about the absorbing and brutalising influence of our passionate material progress, it seems to me indisputable that this progress is likely, though not certain, to lead in the end to an apparition of intellectual life; and that man, after he has made himself perfectly comfortable and has now to determine what to do with himself next, may begin to remember that he has a mind, and that the mind may be made the source of great pleasure. I grant it is mainly the privilege of faith, at present, to discern this end to our railways, our business, and our fortune-making; but we shall see if, here as elsewhere, faith is not in the end the true prophet. Our ease, our travelling, and our unbounded liberty to hold just as hard and securely as we please to the practice to which our notions have given birth, all tend to beget an inclination to deal a little more freely with these notions themselves, to canvass them a little, to penetrate a little into their real nature. Flutterings of curiosity, in the foreign sense of the word, appear amongst us, and it is in these that criticism must look to find its account. Criticism first; a time of true creative activity, perhaps, — which, as I have said, must inevitably be preceded amongst us by a time of criticism, — hereafter, when criticism has done its work.

It is of the last importance that English criticism should clearly discern what rule for its course, in order to avail itself of the field now opening to it, and to produce fruit for the future, it ought to take. The rule may be summed up in one word, — *disinterestedness*. And how is criticism to show disinterestedness? By keeping aloof from what is called 'the practical view of things'; by resolutely following

19. See Aesop's fable of the wind and the sun. In a contest of strength, the winner was to be the one who first made the traveller remove his cloak. The sun was the winner.

the law of its own nature, which is to be a free play of the mind on all subjects which it touches. By steadily refusing to lend itself to any of those ulterior, political, practical considerations about ideas, which plenty of people will be sure to attach to them, which perhaps ought often to be attached to them, which in this country at any rate are certain to be attached to them quite sufficiently, but which criticism has really nothing to do with. Its business is, as I have said, simply to know the best that is known and thought in the world, and by in its turn making this known, to create a current of true and fresh ideas. Its business is to do this with inflexible honesty, with due ability; but its business is to do no more, and to leave alone all questions of practical consequences and applications, questions which will never fail to have due prominence given to them. Else criticism, besides being really false to its own nature, merely continues in the old rut which it has hitherto followed in this country, and will certainly miss the chance now given to it. For what is at present the bane of criticism in this country? It is that practical considerations cling to it and stifle it. It subserves interests not its own. Our organs of criticism are organs of men and parties having practical ends to serve, and with them those practical ends are the first thing and the play of mind the second; so much play of mind as is compatible with the prosecution of those practical ends is all that is wanted. An organ like the *Revue des Deux Mondes*, having for its main function to understand and utter the best that is known and thought in the world, existing, it may be said, as just an organ for a free play of the mind, we have not. But we have the *Edinburgh Review*, existing as an organ of the old Whigs, and for as much play of mind as may suit its being that; we have the *Quarterly Review*, existing as an organ of the Tories, and for as much play of mind as may suit its being that; we have the *British Quarterly Review*, existing as an organ of the political Dissenters, and for as much play of mind as may suit its being that; we have the *Times*, existing as an organ of the common, satisfied, well-to do Englishman, and for as much play of mind as may suit its being that. And so on through all the various fractions, political and religious, of our society; every fraction has, as such, its organ of criticism, but the notion of combining all fractions in the common pleasure of a free disinterested play of mind meets with no favour. Directly this play of mind wants to have more scope, and to forget the pressure of practical considerations a little, it is checked, it is made to feel the chain. We saw this the other day in the extinction, so much to be regretted, of the *Home and Foreign Review*.[20] Perhaps in no organ of criticism in this country was there so much knowledge, so much play of mind; but these could not save it. The *Dublin Review* subordinates play of mind to the practical business of English and Irish Catholicism, and lives. It must needs be that men should act in sects and parties, that each of these sects and parties should have its organ, and should make this organ subserve the interests of its action; but it would be well, too, that there should be a criticism, not the minister of these interests, not their enemy, but absolutely and entirely independent of them. No other criticism will ever attain any real authority or make any real way towards its end, — the creating a current of true and fresh ideas.

It is because criticism has so little kept in the pure intellectual sphere, has so little detached itself from practice, has been so directly polemical and controversial, that it has so ill accomplished, in this country, its best spiritual work; which is to keep man from a self-satisfaction which is retarding and vulgarising, to lead him towards perfection, by making his mind dwell upon what is excellent in itself, and

20. Published in London, 1862–64.

the absolute beauty and fitness of things. A polemical practical criticism makes men blind even to the ideal imperfection of their practice, makes them willingly assert its ideal perfection, in order the better to secure it against attack; and clearly this is narrowing and baneful for them. If they were reassured on the practical side, speculative considerations of ideal perfection they might be brought to entertain, and their spiritual horizon would thus gradually widen. Sir Charles Adderley [21] says to the Warwickshire farmers: —

'Talk of the improvement of breed! Why, the race we ourselves represent, the men and women, the old Anglo-Saxon race, are the best breed in the whole world. . . . The absence of a too enervating climate, too unclouded skies, and a too luxurious nature, has produced so vigorous a race of people, and has rendered us so superior to all the world.'

Mr. Roebuck [22] says to the Sheffield cutlers: —

'I look around me and ask what is the state of England? Is not property safe? Is not every man able to say what he likes? Can you not walk from one end of England to the other in perfect security? I ask you whether, the world over or in past history, there is anything like it? Nothing. I pray that our unrivalled happiness may last.'

Now obviously there is a peril for poor human nature in words and thoughts of such exuberant self-satisfaction, until we find ourselves safe in the streets of the Celestial City.

'Das wenige verschwindet leicht dem Blicke
Der vorwärts sieht, wie viel noch übrig bleibt — '

says Goethe; 'the little that is done seems nothing when we look forward and see how much we have yet to do.' [23] Clearly this is a better line of reflection for weak humanity, so long as it remains on this earthly field of labour and trial.

But neither Sir Charles Adderley nor Mr. Roebuck is by nature inaccessible to considerations of this sort. They only lose sight of them owing to the controversial life we all lead, and the practical form which all speculation takes with us. They have in view opponents whose aim is not ideal, but practical; and in their zeal to uphold their own practice against these innovators, they go so far as even to attribute to this practice an ideal perfection. Somebody has been wanting to introduce a six-pound franchise,[24] or to abolish church-rates,[25] or to collect agricultural statistics by force, or to diminish local self-government. How natural, in reply to such proposals, very likely improper or ill-timed, to go a little beyond the mark and to say stoutly, 'Such a race of people as we stand, so superior to all the world! The old Anglo-Saxon race, the best breed in the whole world! I pray that our unrivalled happiness may last! I ask you whether, the world over or in past history, there is anything like it?' And so long as criticism answers this dithyramb by insisting that the old Anglo-Saxon race would be still more superior to all others if it had no church-rates, or that our unrivalled happiness would last yet longer with a six-pound franchise, so long will the strain, 'The best breed in the whole world!' swell louder and louder, everything ideal and refining will be lost out of sight, and both the assailed and their crit

ics will remain in a sphere, to say the truth, perfectly unvital, a sphere in which spiritual progression is impossible. But let criticism leave church-rates and the franchise alone, and in the most candid spirit, without a single lurking thought of practical innovation, confront with our dithyramb this paragraph on which I stumbled in a newspaper immediately after reading Mr. Roebuck: —

'A shocking child murder has just been committed at Nottingham. A girl named Wragg left the workhouse there on Saturday morning with her young illegitimate child. The child was soon afterwards found dead on Mapperly Hills, having been strangled. Wragg is in custody.'

Nothing but that; but, in juxtaposition with the absolute eulogies of Sir Charles Adderley and Mr. Roebuck, how eloquent, how suggestive are those few lines! 'Our old Anglo-Saxon breed, the best in the whole world!' — how much that is harsh and ill-favoured there is in this best! *Wragg!* If we are to talk of ideal perfection, of 'the best in the whole world,' has any one reflected what a touch of grossness in our race, what an original shortcoming in the more delicate spiritual perceptions, is shown by the natural growth amongst us of such hideous names, — Higginbottom, Stiggins, Bugg! In Ionia and Attica they were luckier in this respect than 'the best race in the world'; by the Ilissus [26] there was no Wragg, poor thing! And 'our unrivalled happiness'; — what an element of grimness, bareness, and hideousness mixes with it and blurs it; the workhouse, the dismal Mapperly Hills, — how dismal those who have seen them will remember; — the gloom, the smoke, the cold, the strangled illegitimate child! 'I ask you whether, the world over or in past history, there is anything like it?' Perhaps not, one is inclined to answer; but at any rate, in that case, the world is very much to be pitied. And the final touch, — short, bleak and inhuman: *Wragg is in custody.* The sex lost in the confusion of our unrivalled happiness; or (shall I say?) the superfluous Christian name lopped off by the straightforward vigour of our old Anglo-Saxon breed! There is profit for the spirit in such contrasts as this; criticism serves the cause of perfection by establishing them. By eluding sterile conflict, by refusing to remain in the sphere where alone narrow and relative conceptions have any worth and validity, criticism may diminish its momentary importance, but only in this way has it a chance of gaining admittance for those wider and more perfect conceptions to which all its duty is really owed. Mr. Roebuck will have a poor opinion of an adversary who replies to his defiant songs of triumph only by murmuring under his breath, *Wragg is in custody*; but in no other way will these songs of triumph be induced gradually to moderate themselves, to get rid of what in them is excessive and offensive, and to fall into a softer and truer key.

It will be said that it is a very subtle and indirect action which I am thus prescribing for criticism, and that, by embracing in this manner the Indian virtue of detachment [27] and abandoning the sphere of practical life, it condemns itself to a slow and obscure work. Slow and obscure it may be, but it is the only proper work of criticism. The mass of mankind will never have any ardent zeal for seeing things as they are; very inadequate ideas will always satisfy them. On these inadequate ideas reposes, and must repose, the general practice of the world. That is as much as saying that whoever sets himself to see things as they are will find himself one of a very small circle; but it is only by this small circle resolutely doing its

26. Ionia and Attica: names of districts in ancient Greece. Ilissus is the name of a classically famous river near Athens.

27. In India, Buddhism teaches that lasting happiness comes only through renunciation of the world and freedom from all worldly desire and activity.

own work that adequate ideas will ever get current at all. The rush and roar of practical life will always have a dizzying and attracting effect upon the most collected spectator, and tend to draw him into its vortex; most of all will this be the case where that life is so powerful as it is in England. But it is only by remaining collected, and refusing to lend himself to the point of view of the practical man, that the critic can do the practical man any service; and it is only by the greatest sincerity in pursuing his own course, and by at last convincing even the practical man of his sincerity, that he can escape misunderstandings which perpetually threaten him.

For the practical man is not apt for fine distinctions, and yet in these distinctions truth and the highest culture greatly find their account. But it is not easy to lead a practical man, — unless you reassure him as to your practical intentions, you have no chance of leading him, — to see that a thing which he has always been used to look at from one side only, which he greatly values, and which, looked at from that side, quite deserves, perhaps, all the prizing and admiring which he bestows upon it, — that this thing, looked at from another side, may appear much less beneficent and beautiful, and yet retain all its claims to our practical allegiance. Where shall we find language innocent enough, how shall we make the spotless purity of our intentions evident enough, to enable us to say to the political Englishman that the British Constitution itself, which, seen from the practical side, looks such a magnificent organ of progress and virtue, seen from the speculative side, — with its compromises, its love of facts, its horror of theory, its studied avoidance of clear thoughts, — that, seen from this side, our august Constitution sometimes looks, — forgive me, shade of Lord Somers![28] — a colossal machine for the manufacture of Philistines?[29] How is Cobbett[30] to say this and not be misunderstood, blackened as he is with the smoke of a lifelong conflict in the field of political practice? how is Mr. Carlyle to say it and not be misunderstood, after his furious raid into this field with his *Latter-day Pamphlets*? how is Mr. Ruskin,[31] after his pugnacious political economy? I say, the critic must keep out of the region of immediate practice in the political, social, humanitarian sphere if he wants to make a beginning for that more free speculative treatment of things, which may perhaps one day make its benefits felt even in this sphere, but in a natural and thence irresistible manner.

Do what he will, however, the critic will still remain exposed to frequent misunderstandings, and nowhere so much as in this country. For here people are particularly indisposed even to comprehend that without this free disinterested treatment of things, truth and the highest culture are out of the question. So immersed are they in practical life, so accustomed to take all their notions from this life and its processes, that they are apt to think that truth and culture themselves can be reached by the processes of this life, and that it is an impertinent singularity to think of reaching them in any other. 'We

28. John Somers, Baron Somers (1651–1716), great lawyer and statesman, champion of the English Constitution; presided over the drafting of the Declaration of Rights after the abdication of James II; lord chancellor, 1697.

29. Arnold uses 'Philistine' to mean a middle-class person lacking in and indifferent (or resistant) to liberal culture and refinement. See his definition reprinted in the Notes on the selection from his *On the Study of Celtic Literature*. See also his analysis in the essay 'Barbarians, Philistines, Populace.' For an excellent brief treatment of the background, and earlier uses of the word in England (by Carlyle and others), see Lewis E. Gates's ed. of *Selections from the Prose Writings of Matthew Arnold* (New York, 1898), pp. 318–19. See also Notes.

30. William Cobbett (1762–1835), politician and writer, violently democratic; wrote on many subjects; wrote many virulent political pamphlets and articles.

31. In *Unto This Last* (1862).

are all *terræ filii*,'[32] cries their eloquent advocate; 'all Philistines together. Away with the notion of proceeding by any other course than the course dear to the Philistines; let us have a social movement, let us organise and combine a party to pursue truth and new thought, let us call it *the liberal party*, and let us all stick to each other, and back each other up. Let us have no nonsense about independent criticism, and intellectual delicacy, and the few and the many. Don't let us trouble ourselves about foreign thought; we shall invent the whole thing for ourselves as we go along. If one of us speaks well, applaud him; if one of us speaks ill, applaud him too; we are all in the same movement, we are all liberals, we are all in pursuit of truth.' In this way the pursuit of truth becomes really a social, practical, pleasurable affair, almost requiring a chairman, a secretary, and advertisements; with the excitement of an occasional scandal, with a little resistance to give the happy sense of difficulty overcome; but, in general, plenty of bustle and very little thought. To act is so easy, as Goethe says; to think is so hard![33] It is true that the critic has many temptations to go with the stream, to make one of the party movement,[34] one of these *terræ filii*; it seems ungracious to refuse to be a *terræ filius* when so many excellent people are; but the critic's duty is to refuse, or, if resistance is vain, at least to cry with Obermann: *Périssons en résistant*.[35]

How serious a matter it is to try and resist, I had ample opportunity of experiencing when I ventured some time ago to criticise the celebrated first volume of Bishop Colenso.[36] The echoes of the storm which was then raised I still, from time to time, hear grumbling round me. That storm arose out of a misunderstanding almost inevitable. It is a result of no little culture to attain to a clear perception that science and religion are two wholly different things. The multitude will for ever confuse them; but happily that is of no great real importance, for while the multitude imagines itself to live by its false science, it does really live by its true religion. Dr. Colenso, however, in his first volume did all he could to strengthen the confusion,[37] and to make it dangerous. He did this with the best intentions, I freely admit, and with the most candid

32. 'sons of the earth.'

33. See Carlyle's transl. of Goethe's *Wilhelm Meister's Apprenticeship*, Bk.VII,Ch.ix, 'Indenture.'

34. See Notes.

35. 'Let us die resisting!' See Senancour's *Obermann*, Letter XC (in ed.1912, II,231). This book, first published in 1804, a collection of letters from Switzerland treating mainly of nature and of the human soul, influenced Arnold greatly. See his essay on Obermann, and the note to 'Stanzas in Memory of the Author of "Obermann"' in Arnold's *Works* (1903), I,324–25.

36. So sincere is my dislike to all personal attack and controversy, that I abstain from reprinting, at this distance of time from the occasion which called them forth, the essays in which I criticised Dr. Colenso's book. I feel bound, however, after all that has passed, to make here a final declaration, of my sincere impenitence for having published them. Nay, I cannot forbear repeating yet once more, for his benefit and that of his readers, this sentence from my original remarks upon him: *There is truth of science and truth of religion; truth of science does not become truth of religion till it is made religious.* And I will add: Let us have all the science there is from the men of science, from the men of religion let us have religion. [Arnold's note.]

37. John William Colenso (1814–83), Bishop of Natal, published in 1862 the first volume of his *The Pentateuch and Book of Joshua Critically Examined*, attacking belief in the literal inspiration of the Bible and in the reliability of the Mosaic story as historical fact. Arnold attacked Colenso's book in 'The Bishop and the Philosopher,' an essay in *Macmillan's Magazine*, VII (Jan. 1863). He thought the book not spiritually helpful for the uninstructed, and for cultivated people too cheap in scholarship and methods. The philosopher Spinoza's methods were indicated as better. He cites one of Colenso's cheap 'arithmetical demonstrations': '"*If three priests have to eat 264 pigeons a day, how many must each priest eat?*" That disposes of Leviticus.' *Cf.* Colenso, *op.cit.*, ed. New York, 1863, I,192.

ignorance that this was the natural effect of what he was doing; but, says Joubert, 'Ignorance, which in matters of morals extenuates the crime, is itself, in intellectual matters, a crime of the first order.'[38] I criticised Bishop Colenso's speculative confusion. Immediately there was a cry raised: 'What is this? here is a liberal attacking a liberal. Do not you belong to the movement? are you not a friend of truth? Is not Bishop Colenso in pursuit of truth? then speak with proper respect of his book. Dr. Stanley[39] is another friend of truth, and you speak with proper respect of his book; why make these invidious differences? both books are excellent, admirable, liberal; Bishop Colenso's perhaps the most so, because it is the boldest, and will have the best practical consequences for the liberal cause. Do you want to encourage to the attack of a brother liberal his, and your, and our implacable enemies, the *Church and State Review* or the *Record*, – the High Church rhinoceros and the Evangelical hyaena? Be silent, therefore; or rather speak, speak as loud as ever you can! and go into ecstasies over the eighty and odd pigeons.'

But criticism cannot follow this coarse and indiscriminate method. It is unfortunately possible for a man in pursuit of truth to write a book which reposes upon a false conception. Even the practical consequences of a book are to genuine criticism no recommendation of it, if the book is, in the highest sense, blundering. I see that a lady[40] who herself, too, is in pursuit of truth, and who writes with great ability, but a little too much, perhaps, under the influence of the practical spirit of the English liberal movement, classes Bishop Colenso's book and M. Renan's[41] together, in her survey of the religious state of Europe, as facts of the same order, works, both of them, of 'great importance'; 'great ability, power, and skill'; Bishop Colenso's, perhaps, the most powerful; at least, Miss Cobbe gives special expression to her gratitude that to Bishop Colenso 'has been given the strength to grasp, and the courage to teach, truths of such deep import.' In the same way, more than one popular writer has compared him to Luther. Now it is just this kind of false estimate which the critical spirit is, it seems to me, bound to resist. It is really the strongest possible proof of the low ebb at which, in England, the critical spirit is, that while the critical hit in the religious literature of Germany is Dr. Strauss's book,[42] in that of France M. Renan's book, the book of Bishop Colenso is the critical hit in the religious literature of England. Bishop Colenso's book reposes on a total misconception of the essential elements of the religious problem, as that problem is now presented for solution. To criticism, therefore, which seeks to have the best that is known and thought on this prob-

38. See *Pensées de J. Joubert* ed. 1911, p.311 (Titre XXIII,54). Arnold's note on this sentence reads: 'It has been said that I make it "a crime against literary criticism and the higher culture to attempt to inform the ignorant." Need I point out that the ignorant are not informed by being confirmed in a confusion?'

39. Arthur Penrhyn Stanley (1815–81), Dean of Westminster. In Arnold's essay on Colenso, cited above, he refers favorably to Stanley's *Sinai and Palestine* (1856). Stanley, as 'a friend of truth,' admits that the Bible cannot be called literally inspired, but he asserts that in the study of the Bible the chief purpose is 'an increased acquaintance' with it, 'and increased appreciation of its instruction.' *Cf.* his *Sinai and Palestine*, ed. New York, 1863, pp. xxiv,xxv.

40. Frances Power Cobbe (1822–1904), philanthropist and religious writer. The quotation is from her *Broken Lights* (1864), p.134.

41. Ernest Renan (1823–92), French philosopher, Oriental scholar, and writer. His well-known *Histoire des origines du Christianisme* had as its prefatory volume the work here referred to, the *Vie de Jésus* (1863). He went to the Holy Land, as indicated below. The *Vie de Jésus* was begun in Syria.

42. David Friedrich Strauss (1808–74), German rationalistic theologian and author. His life of Christ, *Das Leben Jesu* (1835) appeared in a popular edition in 1864. It had been translated into English by George Eliot in 1846.

lem, it is, however well meant, of no importance whatever. M. Renan's book attempts a new synthesis of the elements furnished to us by the Four Gospels. It attempts, in my opinion, a synthesis, perhaps premature, perhaps impossible, certainly not successful. Up to the present time, at any rate, we must acquiesce in Fleury's sentence on such recastings of the Gospel story: *Quiconque s'imagine la pouvoir mieux écrire, ne l'entend pas.*[43] M. Renan had himself passed by anticipation a like sentence on his own work, when he said: 'If a new presentation of the character of Jesus were offered to me, I would not have it; its very clearness would be, in my opinion, the best proof of its insufficiency.' His friends may with perfect justice rejoin that at the sight of the Holy Land, and of the actual scene of the Gospel-story, all the current of M. Renan's thoughts may have naturally changed, and a new casting of that story irresistibly suggested itself to him; and that this is just a case for applying Cicero's maxim: Change of mind is not inconsistency — *nemo doctus unquam mutationem consilii inconstantiam dixit esse.*[44] Nevertheless, for criticism, M. Renan's first thought must still be the truer one, as long as his new casting so fails more fully to commend itself, more fully (to use Coleridge's happy phrase about the Bible)[45] to *find* us. Still M. Renan's attempt is, for criticism, of the most real interest and importance, since, with all its difficulty, a fresh synthesis of the New Testament *data* — not a making war on them, in Voltaire's fashion, not a leaving them out of mind, in the world's fashion, but the putting a new construction upon them, the taking them from under the old, traditional, conventional point of view and placing them under a new one, — is the very essence of the religious problem, as now presented; and only by efforts in this direction can it receive a solution.

Again, in the same spirit in which she judges Bishop Colenso, Miss Cobbe, like so many earnest liberals of our practical race, both here and in America, herself sets vigorously about a positive reconstruction of religion, about making a religion of the future out of hand, or at least setting about making it. We must not rest, she and they are always thinking and saying, in negative criticism, we must be creative and constructive; hence we have such works as her recent *Religious Duty*, and works still more considerable, perhaps, by others, which will be in every one's mind. These works often have much ability; they often spring out of sincere convictions, and a sincere wish to do good; and they sometimes, perhaps, do good. Their fault is (if I may be permitted to say so) one which they have in common with the British College of Health, in the New Road. Every one knows the British College of Health; it is that building with the lion and the statue of the Goddess Hygeia[46] before it; at least I am sure about the lion, though I am not absolutely certain about the Goddess Hygeia. This building does credit, perhaps, to the resources of Dr. Morrison[47] and his disciples; but it falls a good deal short of one's idea of what a British College of Health ought to be. In England, where we hate public interference

43. 'Whoever thinks that he can write it better, does not understand it.' See Claude Fleury, *Discours sur l'histoire ecclésiastique* (premier discours servant de préface), new ed., Paris, 1763, p.24.

44. 'no learned person has ever said that change of mind is inconsistency.' See Cicero, *Letters to Atticus*, XVI,vii.

45. See Coleridge's *Confessions of an Inquiring Spirit*, Letter 2: 'In my last letter I said that in the Bible there is more that *finds* me than I have experienced in all other books put together.' *Cf.* his *Literary Remains*, ed. H.N. Coleridge (ed. New York, 1868), p.582.

46. The Greek goddess of health.

47. James Morison (1770-1840), merchant, cured himself of ill health; advertised and sold Morison's Pills as a universal cure-all. (*Cf.* Carlyle, *Past and Present*, Bk.I,Ch.iv, 'Morrison's Pill.') He called himself 'the Hygeist,' and his place of business the British College of Health.

and love individual enterprise, we have a whole crop of places like the British College of Health; the grand name without the grand thing. Unluckily, creditable to individual enterprise as they are, they tend to impair our taste by making us forget what more grandiose, noble, or beautiful character properly belongs to a public institution. The same may be said of the religions of the future of Miss Cobbe and others. Creditable, like the British College of Health, to the resources of their authors, they yet tend to make us forget what more grandiose, noble, or beautiful character properly belongs to religious constructions. The historic religions, with all their faults, have had this; it certainly belongs to the religious sentiment, when it truly flowers, to have this; and we impoverish our spirit if we allow a religion of the future without it. What then is the duty of criticism here? To take the practical point of view, to applaud the liberal movement and all its works, — its New Road religions of the future into the bargain, — for their general utility's sake? By no means; but to be perpetually dissatisfied with these works, while they perpetually fall short of a high and perfect ideal.

For criticism, these are elementary laws; but they never can be popular, and in this country they have been very little followed, and one meets with immense obstacles in following them. That is a reason for asserting them again and again. Criticism must maintain its independence of the practical spirit and its aims. Even with well-meant efforts of the practical spirit it must express dissatisfaction, if in the sphere of the ideal they seem impoverishing and limiting. It must not hurry on to the goal because of its practical importance. It must be patient, and know how to wait; and flexible, and know how to attach itself to things and how to withdraw from them. It must be apt to study and praise elements that for the fulness of spiritual perfection are wanted, even though they belong to a power which in the practical sphere may be maleficent. It must be apt to discern the spiritual shortcomings or illusions of powers that in the practical sphere may be beneficent. And this without any notion of favouring or injuring, in the practical sphere, one power or the other; without any notion of playing off, in this sphere, one power against the other. When one looks, for instance, at the English Divorce Court, — an institution which perhaps has its practical conveniences, but which in the ideal sphere is so hideous; an institution which neither makes divorce impossible nor makes it decent, which allows a man to get rid of his wife, or a wife of her husband, but makes them drag one another first, for the public edification, through a mire of unutterable infamy, — when one looks at this charming institution, I say, with its crowded trials, its newspaper reports, and its money compensations, this institution in which the gross unregenerate British Philistine has indeed stamped an image of himself, — one may be permitted to find the marriage theory of Catholicism refreshing and elevating. Or when Protestantism, in virtue of its supposed rational and intellectual origin, gives the law to criticism too magisterially, criticism may and must remind it that its pretensions, in this respect, are illusive and do it harm; that the Reformation was a moral rather than an intellectual event; that Luther's theory of grace [48] no more exactly reflects the mind of the spirit than Bossuet's philosophy of history [49] reflects it; and that there is no more antecedent probability of the Bishop of Durham's [50] stock of ideas being agreeable

48. Luther held that the Holy Sacraments brought divine grace to the recipient only when he had faith.

49. Jacques Bénigne Bossuet (1627–1704), French Roman Catholic bishop and author, theorized that universal history showed that events had been directed by God for the benefit of Christianity, and especially of the Roman Catholic church.

50. The Bishop of Durham was, in 1865, Charles Thomas Baring (1807–79).

to perfect reason than of Pope Pius the Ninth's.[51] But criticism will not on that account forget the achievements of Protestantism in the practical and moral sphere; nor that, even in the intellectual sphere, Protestantism, though in a blind and stumbling manner, carried forward the Renascence, while Catholicism threw itself violently across its path.

I lately heard a man of thought and energy contrasting the want of ardour and movement which he now found amongst young men in this country with what he remembered in his own youth, twenty years ago. 'What reformers we were then!' he exclaimed; 'What a zeal we had! how we canvassed every institution in Church and State, and were prepared to remodel them all on first principles!' He was inclined to regret, as a spiritual flagging, the lull which he saw. I am disposed rather to regard it as a pause in which the turn to a new mode of spiritual progress is being accomplished. Everything was long seen, by the young and ardent amongst us, in inseparable connection with politics and practical life. We have pretty well exhausted the benefits of seeing things in this connection, we have got all that can be got by so seeing them. Let us try a more disinterested mode of seeing them; let us betake ourselves more to the serener life of the mind and spirit. This life, too, may have its excesses and dangers; but they are not for us at present. Let us think of quietly enlarging our stock of true and fresh ideas, and not, as soon as we get an idea or half an idea, be running out with it into the street, and trying to make it rule there. Our ideas will, in the end, shape the world all the better for maturing a little. Perhaps in fifty years' time it will in the English House of Commons be an objection to an institution that it is an anomaly, and my friend the Member of Parliament will shudder in his grave. But let us in the meanwhile rather endeavour that in twenty years' time it may, in English literature, be an objection to a proposition that it is absurd. That will be a change so vast, that the imagination almost fails to grasp it. *Ab integro sæclorum nascitur ordo.*[52]

If I have insisted so much on the course which criticism must take where politics and religion are concerned, it is because, where these burning matters are in question, it is most likely to go astray. I have wished, above all, to insist on the attitude which criticism should adopt towards things in general; on its right tone and temper of mind. But then comes another question as to the subject-matter which literary criticisms should most seek. Here, in general, its course is determined for it by the idea which is the law of its being; the idea of a disinterested endeavour to learn and propagate the best that is known and thought in the world, and thus to establish a current of fresh and true ideas. By the very nature of things, as England is not all the world, much of the best that is known and thought in the world cannot be of English growth, must be foreign; by the nature of things, again, it is just this that we are least likely to know, while English thought is streaming in upon us from all sides, and takes excellent care that we shall not be ignorant of its existence. The English critic of literature, therefore, must dwell much on foreign thought, and with particular heed on any part of it, which, while significant and fruitful in itself, is for any reason specially likely to escape him. Again, judging is often spoken of as the critic's one business, and so in some sense it is; but the judgment which almost insensibly forms itself in a fair and clear mind, along with fresh knowledge, is the valuable one; and thus knowledge, and ever fresh knowledge, must be the critic's great concern for

51. Pope from 1846 to 1878.

52. 'From the renewal of the generations is born order.' *Cf.* Virgil's *Eclogues*,IV,5. This was translated by Shelley in his poem *Hellas* as 'The world's great age begins anew'; Dryden translated: 'The last great Age renews its finish'd course.'

himself. And it is by communicating fresh knowledge, and letting his own judgment pass along with it, — but insensibly, and in the second place, not the first, as a sort of companion and clue, not as an abstract lawgiver, — that the critic will generally do most good to his readers. Sometimes, no doubt, for the sake of establishing an author's place in literature, and his relation to a central standard (and if this is not done, how are we to get at our *best in the world*?) criticism may have to deal with a subject-matter so familiar that fresh knowledge is out of the question, and then it must be all judgment: an enunciation and detailed application of principles. Here the great safeguard is never to let oneself become abstract, always to retain an intimate and lively consciousness of the truth of what one is saying, and, the moment this fails us, to be sure that something is wrong. Still under all circumstances, this mere judgment and application of principles is, in itself, not the most satisfactory work to the critic: like mathematics, it is tautological, and cannot well give us, like fresh learning, the sense of creative activity.

But stop, some one will say; all this talk is of no practical use to us whatever; this criticism of yours is not what we have in our minds when we speak of criticism; when we speak of critics and criticism, we mean critics and criticism of the current English literature of the day; when you offer to tell criticism its function, it is to this criticism that we expect you to address yourself. I am sorry for it, for I am afraid I must disappoint these expectations. I am bound by my own definition of criticism: *a disinterested endeavour to learn and propagate the best that is known and thought in the world*. How much of current English literature comes into this 'best that is known and thought in the world'? Not very much I fear; certainly less, at this moment, than of the current literature of France or Germany. Well, then, am I to alter my definition of criticism, in order to meet the requirements of a number of practising English critics, who, after all, are free in their choice of a business? That would be making criticism lend itself just to one of those alien practical considerations, which, I have said, are so fatal to it. One may say, indeed, to those who have to deal with the mass — so much better disregarded — of current English literature, that they may at all events endeavour, in dealing with this, to try it, so far as they can, by the standard of the best that is known and thought in the world; one may say, that to get anywhere near this standard, every critic should try and possess one great literature, at least, besides his own; and the more unlike his own, the better. But, after all, the criticism I am really concerned with, — the criticism which alone can much help us for the future, the criticism which, throughout Europe, is at the present day meant, when so much stress is laid on the importance of criticism and the critical spirit, — is a criticism which regards Europe as being, for intellectual and spiritual purposes, one great confederation, bound to a joint action and working to a common result; and whose members have, for their proper outfit, a knowledge of Greek, Roman, and Eastern antiquity, and of one another. Special, local, and temporary advantages being put out of account, that modern nation will in the intellectual and spiritual sphere make most progress, which most thoroughly carries out this program. And what is that but saying that we too, all of us, as individuals, the more thoroughly we carry it out, shall make the more progress?

There is so much inviting us! — what are we to take? what will nourish us in growth towards perfection? That is the question which, with the immense field of life and of literature lying before him, the critic has to answer; for himself first, and afterwards for others. In this idea of the critic's business the essays brought together in the following pages have had

their origin; in this idea, widely different as are their subjects, they have, perhaps, their unity.

I conclude with what I said at the beginning: to have the sense of creative activity is the great happiness and the great proof of being alive, and it is not denied to criticism to have it; but then criticism must be sincere, simple, flexible, ardent, ever widening its knowledge. Then it may have, in no contemptible measure, a joyful sense of creative activity; a sense which a man of insight and conscience will prefer to what he might derive from a poor, starved, fragmentary, inadequate creation. And at some epochs no other creation is possible.

Still, in full measure, the sense of creative activity belongs only to genuine creation; in literature we must never forget that. But what true man of letters ever can forget it? It is no such common matter for a gifted nature to come into possession of a current of true and living ideas, and to produce amidst the inspiration of them, that we are likely to underrate it. The epochs of Æschylus and Shakspeare make us feel their pre-eminence. In an epoch like those is, no doubt, the true life of literature; there is the promised land, towards which criticism can only beckon. That promised land it will not be ours to enter, and we shall die in the wilderness: but to have desired to enter it, to have saluted it from afar, is already, perhaps, the best distinction among contemporaries; it will certainly be the best title to esteem with posterity.

II

The Literary Influence of Academies

It is impossible to put down a book like the history of the French Academy, by Pellisson and D'Olivet, which M. Charles Livet has lately re-edited,[1] without being led to reflect upon the absence, in our own country, of any institution like the French Academy,[2] upon the probable causes of this absence, and upon its results. A thousand voices will be ready to tell us that this absence is a signal mark of our national superiority; that it is in great part owing to this absence that the exhilarating words of Lord Macaulay, lately given to the world by his very clever nephew, Mr. Trevelyan,[3] are so profoundly true: 'It may safely be said that the literature now extant in the English language is of far greater value than all the literature which three hundred years ago was extant in all the languages of the world together.' I daresay this is so; only, remembering Spinoza's[4] maxim that the two great banes of humanity are self-conceit and the laziness coming from self-conceit, I think it may do us good, instead of resting in our pre-eminence with perfect security, to look a little more closely why this is so, and whether it is so without any limitations.

But first of all I must give a very few words to the outward history of the French Academy. About the year 1629, seven or eight persons in Paris, fond of literature, formed themselves into a sort of little club to meet at one another's houses and discuss literary matters. Their meetings got talked of, and Cardinal Richelieu,[5] then minister and all-powerful, heard of them. He himself had a noble passion for letters, and for all fine culture;

1. The *Histoire de l'Académie Française*, by Pellisson and d'Olivet, was edited by Ch. Livet, in 1858.

2. It is still in existence, composed, since 1637, of forty members.

3. Sir George Otto Trevelyan (1838–1928), politician, biographer, historian.

4. Benedict (Baruch) Spinoza (1632–77), Dutch philosopher, of Jewish parentage and Portuguese extraction, published his *Tractatus Theologico-Politicus* in 1670; it was translated into English by Robert Willis (1863). For the maxim referred to, *cf.* Spinoza's *Ethics*, III. Prop.liv and xxviii (see *Works*, tr. Elwes, 1903, II,166-67,179–80). Arnold's essay 'A Word More about Spinoza' had appeared in *Macmillan's Magazine*, Dec. 1863.

5. Armand Jean du Plessis, Duc de Richelieu (1585–1642), French cardinal and statesman.

he was interested by what he heard of the nascent society. Himself a man in the grand style, if ever man was, he had the insight to perceive what a potent instrument of the grand style was here to his hand. It was the beginning of a great century for France, the seventeenth; men's minds were working, the French language was forming. Richelieu sent to ask the members of the new society whether they would be willing to become a body with a public character holding regular meetings. Not without a little hesitation, — for apparently they found themselves very well as they were, and these seven or eight gentlemen of a social and literary turn were not perfectly at their ease as to what the great and terrible minister could want with them, — they consented. The favours of a man like Richelieu are not easily refused, whether they are honestly meant or no; but, this favour of Richelieu's was meant quite honestly. The Parliament, however, had its doubts of this. The Parliament had none of Richelieu's enthusiasm about letters and culture; it was jealous of the apparition of a new public body in the State; above all, of a body called into existence by Richelieu. The King's letters patent, establishing and authorising the new society, were granted early in 1635; but, by the old constitution of France, these letters-patent required the verification of the Parliament. It was two years and a half — towards the autumn of 1637 — before the Parliament would give it; and it then gave it only after pressing solicitations, and earnest assurances of the innocent intentions of the young Academy. Jocose people said that this society, with its mission to purify and embellish the language, filled with terror a body of lawyers like the French Parliament, the stronghold of barbarous jargon and of chicane.

This improvement of the language was in truth the declared grand aim for the operations of the Academy. Its statutes of foundation, approved by Richelieu before the royal edict establishing it was issued, say expressly: 'The Academy's principal function shall be to work with all the care and all the diligence possible at giving sure rules to our language, and rendering it pure, eloquent, and capable of treating the arts and sciences.'[6] This zeal for making a nation's great instrument of thought, — its language, — correct and worthy, is undoubtedly a sign full of promise, — a weighty earnest of future power. It is said that Richelieu had it in his mind that French should succeed Latin in its general ascendency, as Latin had succeeded Greek; if it was so, even this wish has to some extent been fulfilled. But, at any rate, the *ethical* influences of style in language, — its close relations, so often pointed out, with character, — are most important. Richelieu, a man of high culture, and, at the same time, of great character, felt them profoundly; and that he should have sought to regularise, strengthen, and perpetuate them by an institution for perfecting language, is alone a striking proof of his governing spirit and of his genius.

This was not all he had in his mind, however. The new Academy, now enlarged to a body of forty members, and meant to contain all the chief literary men of France, was to be a *literary tribunal*. The works of its members were to be brought before it previous to publication, were to be criticised by it, and finally, if it saw fit, to be published with its declared approbation. The works of other writers, not members of the Academy, might also, at the request of these writers themselves, be passed under the Academy's review. Besides this, in essays and discussions the Academy examined and judged works already published, whether by living or dead authors, and literary matters in general. The celebrated opinion on Corneille's *Cid*, delivered in 1637 by the Academy at Richelieu's urgent request, when this poem, which strongly occupied public at-

6. See Sainte-Beuve, 'Histoire de l'Académie Française,' *Causeries du Lundi*, XIV, 206.

tention, had been attacked by M. de Scudéry,[7] shows how fully Richelieu designed his new creation to do duty as a supreme court of literature, and how early it in fact began to exercise this function. One [8] who had known Richelieu declared, after the Cardinal's death, that he had projected a yet greater institution than the Academy, a sort of grand European college of art, science, and literature, a Prytaneum,[9] where the chief authors of all Europe should be gathered together in one central home, there to live in security, leisure, and honour; — that was a dream which will not bear to be pulled about too roughly. But the project of forming a high court of letters for France was no dream; Richelieu in great measure fulfilled it. This is what the Academy, by its idea, really is; this is what it has always tended to become; this is what it has, from time to time, really been; by being, or tending to be this, far more than even by what it has done for the language, it is of such importance in France. To give the law, the tone to literature, and that tone a high one, is its business. 'Richelieu meant it,' says M. Sainte-Beuve, 'to be a *haut jury*,' — a jury the most choice and authoritative that could be found on all important literary matters in question before the public; to be, as it in fact became in the latter half of the eighteenth century, 'a sovereign organ of opinion.'[10] 'The duty of the Academy is,' says M. Renan,[11] '*maintenir la délicatesse de l'esprit français*' — to keep the fine quality of the French spirit unimpaired; it represents a kind of '*maîtrise en fait de bon ton*' — the authority of a recognised master in matters of tone and taste. 'All ages,' says M. Renan again, 'have had their inferior literature; but the great danger of our time is that this inferior literature tends more and more to get the upper place. No one has the same advantage as the Academy for fighting against this mischief;' the Academy, which, as he says elsewhere, has even special facilities for 'creating a form of intellectual culture *which shall impose itself on all around*.' M. Sainte-Beuve and M. Renan are, both of them, very keen-sighted critics; and they show it signally by seizing and putting so prominently forward this character of the French Academy.

Such an effort to set up a recognised authority, imposing on us a high standard in matters of intellect and taste, has many enemies in human nature. We all of us like to go our own way, and not to be forced out of the atmosphere of commonplace habitual to most of us; — '*was uns alle bandigt*,' says Goethe, '*das Gemeine*'.[12] We like to be suffered to lie comfortably in the old straw of our habits, especially of our intellectual habits, even though this straw may not be very clean and fine. But if the effort to limit this freedom of our lower nature finds, as it does and must find, enemies in human nature, it finds also auxiliaries in it. Out of the four great parts, says Cicero,[13] of the *honestum*, or good, which forms the matter on which *officium*, or human duty, finds employment, one is the fixing of a *modus* and an *ordo*, a measure and an order, to fashion and wholesomely constrain our action, in order to lift it above the level it keeps if left to itself, and to bring it nearer to perfection. Man alone of living creatures, he says, goes feeling after '*quid sit* ordo, *quid sit quod* deceat, *in factis dictisque qui* modus' — the discovery of an *order*, a law of *good taste*, a *measure* for his words and

actions. Other creatures submissively follow the law of their nature; man alone has an impulse leading him to set up some other law to control the bent of his nature.

This holds good, of course, as to moral matters, as well as intellectual matters: and it is of moral matters that we are generally thinking when we affirm it. But it holds good as to intellectual matters too. Now, probably, M. Sainte-Beuve had not these words of Cicero in his mind when he made, about the French nation, the assertion I am going to quote; but, for all that, the assertion leans for support, one may say, upon the truth conveyed in those words of Cicero, and wonderfully illustrates and confirms them. 'In France,' says M. Sainte Beuve,[14] 'the first consideration for us is not whether we are amused and pleased by a work of art or mind, nor is it whether we are touched by it. What we seek above all to learn is, whether *we were right* in being amused with it, and in applauding it, and in being moved by it.' Those are very remarkable words, and they are, I believe, in the main quite true. A Frenchman has, to a considerable degree, what one may call a conscience in intellectual matters; he has an active belief that there is a right and a wrong in them, that he is bound to honour and obey the right, that he is disgraced by cleaving to the wrong. All the world has, or professes to have, this conscience in moral matters. The word *conscience* has become almost confined, in popular use, to the moral sphere, because this lively susceptibility of feeling is, in the moral sphere, so far more common than in the intellectual sphere; the livelier, in the moral sphere, this susceptibility is, the greater becomes a man's readiness to admit a high standard of action, an ideal authoritatively correcting his everyday moral habits; here, such willing admission of authority is due to sensitiveness of conscience.[15] And a like deference to a standard higher than one's own habitual standard in intellectual matters, a like respectful recognition of a superior ideal, is caused, in the intellectual sphere, by sensitiveness of intelligence. Those whose intelligence is quickest, openest, most sensitive, are readiest with this deference; those whose intelligence is less delicate and sensitive are less disposed to it. Well, now we are on the road to see why the French have their Academy and we have nothing of the kind.

What are the essential characteristics of the spirit of our nation? Not, certainly, an open and clear mind, not a quick and flexible intelligence. Our greatest admirers would not claim for us that we have these in a pre-eminent degree; they might say that we had more of them than our detractors gave us credit for; but they would not assert them to be our essential characteristics. They would rather allege, as our chief spiritual characteristics, energy and honesty; and, if we are judged favourably and positively, not invidiously and negatively, our chief characteristics are no doubt, these: — energy and honesty, not an open and clear mind, not a quick and flexible intelligence. Openness of mind and flexibility of intelligence were very signal characteristics of the Athenian people in ancient times; everybody will feel that. Openness of mind and flexibility of intelligence are remarkable characteristics of the French people in modern times; at any rate, they strikingly characterise them as compared with us; I think everybody, or almost everybody, will feel that. I will not now ask what more the Athenian or the French spirit has than this, nor what shortcomings either of them may have as a set-off against this; all I want now to point out is that they have this, and that we have it in a much lesser degree. Let me remark, however, that not only in the moral sphere, but also in the intellectual and spiritual sphere, energy and honesty are most important and fruitful qualities; that, for instance, of what

14. Sainte-Beuve, *op.cit.*, p.209.

15. *Cf.* the use of the word 'conscience' in Arnold's essay on Hebraism and Hellenism.

we call genius energy is the most essential part. So, by assigning to a nation energy and honesty as its chief spiritual characteristics, — by refusing to it, as at all eminent characteristics, openness of mind and flexibility of intelligence, — we do not by any means, as some people might at first suppose, relegate its importance and its power of manifesting itself with effect from the intellectual to the moral sphere. We only indicate its probable special line of successful activity in the intellectual sphere, and, it is true, certain imperfections and failings to which, in this sphere, it will always be subject. Genius is mainly an affair of energy, and poetry is mainly an affair of genius; therefore a nation whose spirit is characterised by energy may well be eminent in poetry; — and we have Shakspeare. Again, the highest reach of science is, one may say, an inventive power, a faculty of divination, akin to the highest power exercised in poetry; therefore, a nation whose spirit is characterised by energy may well be eminent in science; — and we have Newton. Shakspeare and Newton: in the intellectual sphere there can be no higher names. And what that energy, which is the life of genius, above everything demands and insists upon, is freedom; entire independence of all authority, prescription, and routine, — the fullest room to expand as it will. Therefore, a nation whose chief spiritual characteristic is energy, will not be very apt to set up, in intellectual matters, a fixed standard, an authority, like an academy. By this it certainly escapes certain real inconveniences and dangers, and it can, at the same time, as we have seen, reach undeniably splendid heights in poetry and science. On the other hand, some of the requisites of intellectual work are specially the affair of quickness of mind and flexibility of intelligence. The form, the method of evolution, the precision, the proportions, the relations of the parts to the whole, in an intellectual work, depend mainly upon them. And these are the elements of an intellectual work which are really most communicable from it, which can most be learned and adopted from it, which have, therefore, the greatest effect upon the intellectual performance of others. Even in poetry, these requisites are very important; and the poetry of a nation, not eminent for the gifts on which they depend, will, more or less, suffer by this shortcoming. In poetry, however, they are, after all, secondary, and energy is the first thing; but in prose they are of first-rate importance. In its prose literature, therefore, and in the routine of intellectual work generally, a nation with no particular gifts for these will not be so successful. These are what, as I have said, can to a certain degree be learned and appropriated, while the free activity of genius cannot. Academies consecrate and maintain them, and, therefore, a nation with an eminent turn for them naturally establishes academies. So far as routine and authority tend to embarrass energy and inventive genius, academies may be said to be obstructive to energy and inventive genius, and, to this extent, to the human spirit's general advance. But then this evil is so much compensated by the propagation, on a large scale, of the mental aptitudes and demands which an open mind and a flexible intelligence naturally engender, genius itself, in the long run, so greatly finds its account in this propaga tion, and bodies like the French Academy have such power for promoting it, that the general advance of the human spirit is perhaps, on the whole, rather furthered than impeded by their existence.

How much greater is our nation in poetry than prose! how much better, in general, do the productions of its spirit show in the qualities of genius than in the qualities of intelligence! One may constantly remark this in the work of individuals; how much more striking, in general, does any Englishman, — of some vigour of mind, but by no means a poet, — seem in his verse than in his prose! His verse partly

suffers from his not being really a poet, partly, no doubt, from the very same defects which impair his prose, and he cannot express himself with thorough success in it. But how much more powerful a personage does he appear in it, by dint of feeling, and of originality and movement of ideas, than when he is writing prose! With a Frenchman of like stamp, it is just the reverse: set him to write poetry, he is limited, artificial, and impotent: set him to write prose, he is free, natural, and effective. The power of French literature is in its prose-writers, the power of English literature is in its poets. Nay, many of the celebrated French poets depend wholly for their fame upon the qualities of intelligence which they exhibit, — qualities which are the distinctive support of prose; many of the celebrated English prose writers depend wholly for their fame upon the qualities of genius and imagination which they exhibit, — qualities which are the distinctive support of poetry. But, as I have said, the qualities of genius are less transferable than the qualities of intelligence; less can be immediately learned and appropriated from their product; they are less direct and stringent intellectual agencies, though they may be more beautiful and divine. Shakspeare and our great Elizabethan group were certainly more gifted writers than Corneille and his group; but what was the sequel to this great literature, this literature of genius, as we may call it, stretching from Marlowe to Milton? What did it lead up to in English literature? To our provincial and second-rate literature of the eighteenth century. What, on the other hand, was the sequel to the literature of the French 'great century,' to this literature of intelligence, as, by comparison with our Elizabethan literature, we may call it; what did it lead up to? To the French literature of the eighteenth century, one of the most powerful and pervasive intellectual agencies that have ever existed, — the greatest European force of the eighteenth century. In science, again, we had Newton, a genius of the very highest order, a type of genius in science, if ever there was one. On the continent, as a sort of counterpart to Newton, there was Leibnitz; [16] a man, it seems to me (though on these matters I speak under correction), of much less creative energy of genius, much less power of divination than Newton, but rather a man of admirable intelligence, a type of intelligence in science, if ever there was one. Well, and what did they each directly lead up to in science? What was the intellectual generation that sprang from each of them? I only repeat what the men of science have themselves pointed out. The man of genius was continued by the English analysts of the eighteenth century, comparatively powerless and obscure followers of the renowned master; the man of intelligence was continued by successors like Bernouilli, Euler, Lagrange, and Laplace,[17] the greatest names in modern mathematics.

What I want the reader to see is, that the question as to the utility of academies to the intellectual life of a nation is not settled when we say, for instance: 'Oh, we have never had an academy, and yet we have, confessedly, a very great literature.' It still remains to be asked: 'What sort of a great literature? a literature great in the special qualities of genius, or great in the special qualities of intelligence?' If in the former, it is by no means sure that either our literature, or the general intellectual life of our nation, has got already, without academies, all that academies can give. Both the one and the other may very well be somewhat wanting in those qualities of intelligence, out of a

16. Gottfried Wilhelm von Leibnitz (1646–1716), German philosopher and mathematician.

17. Daniel Bernouilli (1700–82), Swiss mathematician; Leonhard Euler (1707–83), Swiss mathematician; Joseph Louis, Comte Lagrange (1736–1813), French mathematician; Pierre Simon, Marquis de Laplace (1749–1827), French mathematician and astronomer.

lively sense for which a body like the French Academy, as I have said, springs, and which such a body does a great deal to spread and confirm. Our literature, in spite of the genius manifested in it, may fall short in form, method, precision, proportions, arrangement, — all of them, I have said, things where intelligence proper comes in. It may be comparatively weak in prose, that branch of literature where intelligence proper is, so to speak, all in all. In this branch it may show many grave faults to which the want of a quick flexible intelligence, and of the strict standard which such an intelligence tends to impose, makes it liable; it may be full of haphazard, crudeness, provincialism, eccentricity, violence, blundering. It may be a less stringent and effective intellectual agency, both upon our own nation and upon the world at large, than other literatures which show less genius, perhaps, but more intelligence.

The right conclusion certainly is that we should try, so far as we can, to make up our shortcomings; and that to this end, instead of always fixing our thoughts upon the points in which our literature, and our intellectual life generally, are strong, we should, from time to time, fix them upon those in which they are weak, and so learn to perceive clearly what we have to amend. What is our second great spiritual characteristic, — our honesty, — good for, if it is not good for this? But it will, — I am sure it will, — more and more, as time goes on, be found good for this.

Well, then, an institution like the French Academy, — an institution owing its existence to a national bent towards the things of the mind, towards culture, towards clearness, correctness and propriety in thinking and speaking, and, in its turn, promoting this bent, — sets standards in a number of directions, and creates, in all these directions, a force of educated opinion, checking and rebuking those who fall below these standards, or who set them at nought. Educated opinion exists here as in France; but in France the Academy serves as a sort of centre and rallying-point to it, and gives it a force which it has not got here. Why is all the *journeyman-work*[18] of literature, as I may call it, so much worse done here than it is in France? I do not wish to hurt anyone's feelings; but surely this is so. Think of the difference between our books of reference and those of the French, between our biographical dictionaries (to take a striking instance) and theirs; think of the difference between the translations of the classics turned out for Mr. Bohn's library and those turned out for M. Nisard's collection![19] As a general rule, hardly any one amongst us, who knows French and German well, would use an English book of reference when he could get a French or German one; or would look at an English prose translation of an ancient author when he could get a French or German one. It is not that there do not exist in England, as in France, a number of people perfectly well able to discern what is good, in these things, from what is bad, and preferring what is good; but they are isolated, they form no powerful body of opinion, they are not strong enough to set a standard, up to which even the journeyman-work of literature must be brought, if it is to be vendible. Ignorance and charlatanism in work of this kind are always trying to pass off their wares as excellent, and to cry down criticism as the voice of an insignificant, over fastidious minority; they easily persuade the multitude that this is so when the minority is scattered about as it is here, not so easily when it is banded together as in the French Academy. So,

18. A journeyman is one who has learned a craft and who works for another person, especially one who works by the day (French *jour*).

19. Henry George Bohn (1796–1884), bookseller and publisher. His 'Classical Library' series began in 1848. Désiré Nisard (1806–88), French critic and editor, helped in the publication of translations of Latin classics: *Collections des Auteurs Latins*, 27 vols. (1838–50).

again, with freaks in dealing with language; certainly all such freaks tend to impair the power and beauty of language; and how far more common they are with us than with the French! To take a very familiar instance. Every one has noticed the way in which the *Times* chooses to spell the word 'diocese'; it always spells it 'diocess'[20] deriving it, I suppose, from *Zeus* and *census*. The *Journal des Débats*[21] might just as well write 'diocess' instead of 'diocése,' but imagine the *Journal des Débats* doing so! Imagine an educated Frenchman indulging himself in an orthographical antic of this sort, in face of the grave respect with which the Academy and its dictionary invest the French language! Some people will say these are little things; they are not; they are of bad example. They tend to spread the baneful notion that there is no such thing as a high correct standard in intellectual matters; that every one may as well take his own way; they are at variance with the severe discipline necessary for all real culture; they confirm us in habits of wilfulness and eccentricity, which hurt our minds, and damage our credit with serious people. The late Mr. Donaldson[22] was certainly a man of great ability, and I, who am not an Orientalist, do not pretend to judge his *Jashar*: but let the reader observe the form which a foreign Orientalist's judgment of it naturally takes. M. Renan calls it a *tentative malheureuse*,[23] a failure, in short; this it may be, or it may not be; I am no judge. But he goes on: 'It is astonishing that a recent article' (in a French periodical, he means) 'should have brought forward as the last word of German exegesis a work like this, composed by a doctor of the University of Cambridge, and universally condemned by German critics.' You see what he means to imply: an extravagance of this sort could never have come from Germany, where there is a great force of critical opinion controlling a learned man's vagaries, and keeping him straight; it comes from the native home of intellectual eccentricity of all kinds,[24] — from England — from a doctor of the University of Cambridge: — and I daresay he would not expect much better things from a doctor of the University of Oxford. Again, after speaking of what Germany and France have done for the history of Mahomet: 'America and England,' M. Renan goes on, 'have also occupied themselves with Mahomet.' He mentions Washington Irving's *Life of Mahomet*,[25] which does not, he says, evince much of an historical sense, a *sentiment historique fort élevé*; 'but,' he proceeds, 'this book shows a real progress, when one thinks that in 1829 Mr. Charles Forster published two thick volumes,[26] which enchanted the English *révérends*, to make out that Mahomet was the little horn of the he-goat that figures in the eighth chapter of Daniel, and that the Pope was the great horn. Mr. Forster founded on this ingenious parallel a whole philosophy of history, according to which the Pope represented the Western corruption of Chris-

20. 'Diocese' is derived from Greek διοίκησις, a housekeeping or province, from δα, through + οἰκεῖν, to manage a house. [Arnold's note: 'The *Times* has now (1868) abandoned this spelling and adopted the ordinary one.']

21. A Paris newspaper.

22. John William Donaldson (1811–61), philologist. His *Jashar*, published in 1854, attempted to prove that a book of Jashar constituted 'the religious marrow of the Scriptures.' He was a Cambridge man and a doctor of divinity.

23. 'an unhappy attempt.'

24. A critic declares I am wrong in saying that M. Renan's language implies this. I still think that there is a shade, a *nuance* of expression, in M. Renan's language, which does imply this; but I confess, the only person who can really settle such a question is M. Renan himself. [Arnold's note.]

25. Published in 1850.

26. *Mahometanism Unveiled! an Inquiry. . . .* 2 vols. (1829). Renan refers also to Forster's authorship of the book mentioned below by Arnold: *The One Primeval Language Traced Experimentally through Ancient Inscriptions. . . .* (1851).

tianity, and Mahomet the Eastern; thence the striking resemblances between Mahometanism and Popery.' And in a note M. Renan adds: 'This is the same Mr. Charles Forster who is the author of a mystification about the Sinaitic inscriptions, in which he declares he finds the primitive language.' As much as to say: 'It is an Englishman, be surprised at no extravagance.' If these innuendoes had no ground, and were made in hatred and malice, they would not be worth a moment's attention; but they come from a grave Orientalist, on his own subject, and they point to a real fact; — the absence, in this country, of any force of educated literary and scientific opinion, making aberrations like those of the author of *The One Primeval Language* out of the question. Not only the author of such aberrations, often a very clever man, suffers by the want of check, by the not being kept straight, and spends force in vain on a false road, which, under better discipline, he might have used with profit on a true one; but all his adherents, both 'reverends' and others, suffer too, and the general rate of information and judgment is in this way kept low.

In a production which we have all been reading lately, a production stamped throughout with a literary quality very rare in this country, and of which I shall have a word to say presently — *urbanity*; in this production, the work of a man never to be named by any son of Oxford without sympathy, a man who alone in Oxford of his generation, alone of many generations, conveyed to us in his genius that same charm, that same ineffable sentiment which this exquisite place itself conveys, — I mean Dr. Newman, — an expression is frequently used which is more common in theological than in literary language, but which seems to me fitted to be of general service; the *note* of so and so, the note of catholicity, the note of antiquity, the note of sanctity, and so on. Adopting this expressive word, I say that in the bulk of the intellectual work of a nation which has no centre, no intellectual metropolis like an academy, like M. Sainte-Beuve's 'sovereign organ of opinion,' like M. Renan's 'recognised authority in matters of tone and taste,' — there is observable a *note of provinciality*. Now to get rid of provinciality is a certain stage of culture; a stage the positive result of which we must not make of too much importance, but which is, nevertheless, indispensable; for it brings us on to the platform where alone the best and highest intellectual work can be said fairly to begin. Work done after men have reached this platform is *classical*; and that is the only work which, in the long run, can stand. All the *scoriæ*[27] in the work of men of great genius who have not lived on this platform are due to their not having lived on it. Genius raises them to it by moments, and the portions of their work which are immortal are done at these moments; but more of it would have been immortal if they had not reached this platform at moments only, if they had had the culture which makes men live there.

The less a literature has felt the influence of a supposed centre of correct information, correct judgment, correct taste, the more we shall find in it this note of provinciality. I have shown the note of provinciality as caused by remoteness from a centre of correct information. Of course the note of provinciality from the want of a centre of correct taste is still more visible, and it is also still more common. For here great — even the greatest — powers of mind most fail a man. Great powers of mind will make him inform himself thoroughly, great powers of mind will make him think profoundly, even with ignorance and platitude all round him; but not even great powers of mind will keep his taste and style perfectly sound and sure, if he is left too much to himself, with no 'sovereign organ of opinion' in these matters near him.

27. 'pieces of slag or dross.'

Even men like Jeremy Taylor and Burke suffer here. Take this passage from Taylor's funeral sermon on Lady Carbery: —

'So have I seen a river, deep and smooth, passing with a still foot and a sober face, and paying to the *fiscus*, the great exchequer of the sea, a tribute large and full; and hard by it a little brook, skipping and making a noise upon its unequal and neighbour bottom; and after all its talking and bragged motion, it paid to its common audit no more than the revenues of a little cloud or a contemptible vessel: so have I sometimes compared the issues of her religion to the solemnities and famed outsides of another's piety.' [28]

That passage has been much admired, and, indeed, the genius in it is undeniable. I should say, for my part, that genius, the ruling divinity of poetry, had been too busy in it, and intelligence, the ruling divinity of prose, not busy enough. But can any one, with the best models of style in his head, help feeling the note of provinciality there, the want of simplicity, the want of measure, the want of just the qualities that make prose classical? If he does not feel what I mean, let him place beside the passage of Taylor this passage from the Panegyric of St. Paul, by Taylor's contemporary, Bossuet: —

'Il ira, cet ignorant dans l'art de bien dire, avec cette locution rude, avec cette phrase qui sent l'étranger, il ira en cette Grèce polie, la mère des philosophes et des orateurs; et malgré la résistance du monde, il y établira plus d'Eglises que Platon n'y a gagné de disciples par cette éloquence qu'on a crue divine.' [29]

28. Jeremy Taylor (1613–67), clergyman and author. See his *Works* (ed 1844),II,89.

29. Jacques Bénigne Bossuet (1627–1704), French clergyman and author. See his *Œuvres oratoires*, ed. Lebarq (1891),II,302–03. 'He will go, this man ignorant of the art of fine speech, with his crude discourse, with that phrase smacking of the foreigner, he will go into this cultured Greece, the mother of philosophers and orators; and in spite of the opposition of the world, he will establish more churches than Plato gained disciples by that eloquence which was believed divine.'

There we have prose [illegible] of provinciality [illegible] prose [illegible] the centre.

Or take Burke, our greatest English prose-writer, as I think; take expressions like this: — [30]

'Blindfold themselves, like bulls that shut their eyes when they push, they drive, by the point of their bayonets, their slaves, blindfolded, indeed, no worse than their lords, to take their fictions for currencies, and to swallow down paper pills by thirty-four millions sterling at a dose.'

Or this: —

'They used it' (the royal name) 'as a sort of navel-string, to nourish their unnatural offspring from the bowels of royalty itself. Now that the monster can purvey for its own subsistence, it will only carry the mark about it, as a token of its having torn the womb it came from.'

Or this: —

'Without one natural pang, he' (Rousseau) 'casts away, as a sort of offal and excrement, the spawn of his disgustful amours, and sends his children to the hospital of foundlings.'

Or this: —

'I confess I never liked this continual talk of resistance and revolution, or the practice of making the extreme medicine of the constitution its daily bread. It renders the habit of society dangerously valetudinary; it is taking periodical doses of mercury sublimate, and swallowing down repeated provocatives of cantharides to our love of liberty.'

I say that is extravagant prose; prose too much suffered to indulge its caprices; prose at too great a distance from the centre of good taste; prose, in short, with the note of provinciality. People may reply, it

30. The first and the fourth quotation that follow come from Burke's *Reflections on the Revolution in France*; the second and the third from *A Letter to a Member of the National Assembly*. See his *Works*, 4th ed. (Boston, 1871),IV,551,20,27–28,314.

is rich and imaginative; yes, that is just it, it is *Asiatic* prose, as the ancient critics would have said; prose somewhat barbarously rich and over-loaded. But the true prose is Attic [31] prose.

Well, but Addison's [32] prose is Attic prose. Where, then, it may be asked, is the note of provinciality in Addison? I answer, in the commonplace of his ideas.[33] This is a matter worth remarking. Addison claims to take leading rank as a moralist. To do that, you must have ideas of the first order on your subject — the best ideas, at any rate, attainable in your time — as well as be able to express them in a perfectly sound and sure style. Else you show your distance from the centre of ideas by your matter; you are provincial by your matter, though you may not be provincial by your style. It is comparatively a small matter to express oneself well, if one will be content with not expressing much, with expressing only trite ideas; the problem is to express new and profound ideas in a perfectly sound and classical style. He is the true classic, in every age, who does that. Now Addison has not, on his subject of morals, the force of ideas of the moralists of the first class — the classical moralists; he has not the best ideas attainable in or about his time, and which were, so to speak, in the air then, to be seized by the finest spirits; he is not to be compared for power, searchingness, or delicacy of thought to Pascal or La Bruyère or Vauvenargues; he is rather on a level, in this respect, with a man like Marmontel; [34] therefore, I say, he has the note of provinciality as a moralist; he is provincial by his matter, though not by his style.

To illustrate what I mean by an example. Addison, writing as a moralist on fixedness in religious faith, says: —

'Those who delight in reading books of controversy do very seldom arrive at a fixed and settled habit of faith. The doubt which was laid revives again, and shows itself in new difficulties; and that generally for this reason, — because the mind, which is perpetually tossed in controversies and disputes, is apt to forget the reasons which had once set it at rest, and to be disquieted with any former perplexity when it appears in a new shape, or is started by a different hand.'

It may be said, that is classical English, perfect in lucidity, measure, and propriety. I make no objection; but, in my turn, I say that the idea expressed is perfectly trite and barren, and that it is a note of provinciality in Addison, in a man whom a nation puts forward as one of its great moralists, to have no profounder and more striking idea to produce on this great subject. Compare, on the same subject, these words of a moralist really of the first order, really at the centre by his ideas, — Joubert: — [35]

31. Pertaining to Attica, or Athens — simple, refined, pure, clear, just

32. The quotation in the next paragraph is from Addison's *Spectator*, No.465, but is inexact. *Cf.* Addison's *Works*, ed. R.Hurd (1902), III, 482–83.

33. A critic says this is paradoxical, and urges that many second-rate French academicians have uttered the most commonplace ideas possible; but Addison is not a second-rate man. He is a man of the order, I will not say of Pascal, but at any rate of La Bruyère and Vauvenargues; why does he not equal them? I say because of the medium in which he finds himself, the atmosphere in which he lives and works; an atmosphere which tells unfavourably, or rather *tends* to tell unfavourably (for that is the truer way of putting it) either upon style or else upon ideas; tends to make even a man of great ability either a Mr. Carlyle or else a Lord Macaulay.

It is to be observed, however, that Lord Macaulay's style has in its turn suffered by his failure in ideas, and this cannot be said of Addison's. [Arnold's note.]

34. Blaise Pascal (1623–62), French philosopher and mathematician; Jean de La Bruyère (1645–96), French essayist; Luc de Clapiers de Vauvenargues (1715–47), French philosopher; Jean François Marmontel (1723–99), French critic and man of letters.

35. Joseph Joubert (1754–1824), French essayist. See his *Pensées* (ed. Paris, 1911), p.188: Titre XVI,xvii. 'Knowledge of many opinions

'L'expérience de beaucoup d'opinions donne à l'esprit beaucoup de flexibilité et l'affermit dans celles qu'il croit les meilleures.'

With what a flash of light that touches the subject! how it sets us thinking! what a genuine contribution to moral science it is!

In short, where there is no centre like an academy, if you have genius and powerful ideas, you are apt not to have the best style going; if you have precision of style and not genius, you are apt not to have the best ideas going.

The provincial spirit, again, exaggerates the value of its ideas for want of a high standard at hand by which to try them. Or rather, for want of such a standard, it gives one idea too much prominence at the expense of others; it orders its ideas amiss; it is hurried away by fancies; it likes and dislikes too passionately, too exclusively. Its admiration weeps hysterical tears, and its disapprobation foams at the mouth. So we get the *eruptive* and the *aggressive* manner in literature; the former prevails most in our criticism, the latter in our newspapers. For, not having the lucidity of a large and centrally placed intelligence, the provincial spirit has not its graciousness; it does not persuade, it makes war; it has not urbanity, the tone of the city, of the centre, the tone which always aims at a spiritual and intellectual effect, and not excluding the use of banter, never disjoins banter itself from politeness, from felicity. But the provincial tone is more violent, and seems to aim rather at an effect upon the blood and senses than upon the spirit and intellect; it loves hard-hitting rather than persuading. The newspaper, with its party spirit, its thoroughgoingness, its resolute avoidance of shades and distinctions, its short, highly-charged, heavy-shotted articles, its style so unlike that style *lenis minimèque pertinax* — easy and not too violently insisting, — which the ancients so much admired, is its true literature; the provincial spirit likes in the newspaper just what makes the newspaper such bad food for it, — just what made Goethe say,[36] when he was pressed hard about the immorality of Byron's poems, that, after all, they were not so immoral as the newspapers. The French talk of the *brutalité des journaux anglais*.[37] What strikes them comes from the necessary inherent tendencies of newspaper-writing not being checked in England by any centre of intelligent and urbane spirit, but rather stimulated by coming in contact with a provincial spirit. Even a newspaper like the *Saturday Review*, that old friend of all of us, a newspaper expressly aiming at an immunity from the common newspaper-spirit, aiming at being a sort of organ of reason, — and, by thus aiming, it merits great gratitude and has done great good, — even the *Saturday Review*, replying to some foreign criticism on our precautions against invasion, falls into a strain of this kind: —

'To do this' (to take these precautions) 'seems to us eminently worthy of a great nation, and to talk of it as unworthy of a great nation, seems to us eminently worthy of a great fool.'

There is what the French mean when they talk of the *brutalité des journaux anglais*; there is a style certainly as far removed from urbanity as possible, — a style with what I call the note of provinciality. And the same note may not unfrequently be observed even in the ideas of this newspaper, full as it is of thought and cleverness: certain ideas allowed to become fixed ideas, to prevail too absolutely. I will not speak of the immediate present, but, to go a little while back, it had the critic who so disliked the Emperor of

gives the spirit a great deal of flexibility and strengthens it in those opinions which it (knowledge) believes to be the best.'

36. For Goethe's knowledge and defense of Byron's work, see James Boyd, *Goethe's Knowledge of English Literature* (1932), pp.148–212.

37. 'brutality, or bluntness, of the English newspapers.'

the French; it had the critic who so disliked the subject of my present remarks — academies; it had the critic who was so fond of the German element in our nation, and, indeed, everywhere; who ground his teeth if one said *Charlemagne* instead of *Charles the Great*, and, in short, saw all things in Teutonism, as Malebranche [38] saw all things in God. Certainly any one may fairly find faults in the Emperor Napoleon or in academies, and merit in the German element; but it is a note of the provincial spirit not to hold ideas of this kind a little more easily, to be so devoured by them, to suffer them to become crotchets.

In England there needs a miracle of genius like Shakspeare's to produce balance of mind, and a miracle of intellectual delicacy like Dr. Newman's to produce urbanity of style. How prevalent all round us is the want of balance of mind and urbanity of style! How much, doubtless, it is to be found in ourselves, — in each of us! but, as human nature is constituted, every one can see it clearest in his contemporaries. There, above all, we should consider it, because they and we are exposed to the same influences; and it is in the best of one's contemporaries that it is most worth considering, because one then most feels the harm it does, when one sees what they would be without it. Think of the difference between Mr. Ruskin exercising his genius, and Mr. Ruskin exercising his intelligence; consider the truth and beauty of this: — [39]

'Go out, in the spring-time, among the meadows that slope from the shores of the Swiss lakes to the roots of their lower mountains. There, mingled with the taller gentians and the white narcissus, the grass grows deep and free; and as you follow the winding mountain paths, beneath arching boughs all veiled and dim with blossom, — paths that for ever droop and rise over the green banks and mounds sweeping down in scented undulation, steep to the blue water, studded here and there with new-mown heaps, filling all the air with fainter sweetness, — look up towards the higher hills, where the waves of everlasting green roll silently into their long inlets among the shadows of the pines. . . .'

There is what the genius, the feeling, the temperament in Mr. Ruskin, the original and incommunicable part, has to do with; and how exquisite it is! All the critic could possibly suggest, in the way of objection, would be, perhaps, that Mr. Ruskin is there trying to make prose do more than it can perfectly do; that what he is there attempting he will never, except in poetry, be able to accomplish to his own entire satisfaction: but he accomplishes so much that the critic may well hesitate to suggest even this. Place beside this charming passage another, — a passage about Shakspeare's names, where the intelligence and judgment of Mr. Ruskin, the acquired, trained, communicable part in him, are brought into play, — and see the difference: —

'Of Shakspeare's names I will afterwards speak at more length; they are curiously — often barbarously — mixed out of various traditions and languages. Three of the clearest in meaning have been already noticed. Desdemona — "δυσδαιμονία," *miserable fortune* — is also plain enough. Othello is, I believe, "the careful"; all the calamity of the tragedy arising from the single flaw and error in his magnificently collected strength. Ophelia, "serviceableness," the true, lost wife of Hamlet, is marked as having a Greek name by that of her brother, Laertes; and its signification is once exquisitely alluded to in that brother's last word of her, where her gentle preciousness is opposed to the uselessness of the churlish clergy: — "A *ministering* angel shall my sister be, when

38. Nicolas de Malebranche (1638–1715), French philosopher.

39. For the two quotations, see Ruskin's *Works*, ed. Cook and Wedderburn, V,289; and XVII, 257–58.

thou liest howling." Hamlet is, I believe, connected in some way with "homely," the entire event of the tragedy turning on betrayal of home duty. Hermione (ἕρμα), "pillar-like" (ἡ εἶδος ἔχε χρυσῆς Ἀφροδίτη); Titania (τιτήνη), "the queen"; Benedick and Beatrice, "blessed and blessing"; Valentine and Proteus, "enduring or strong" (*valens*), and "changeful." Iago and Iachimo have evidently the same root — probably the Spanish Iago, Jacob, "the supplanter."'

Now, really, what a piece of extravagance all that is! I will not say that the meaning of Shakspeare's names (I put aside the question as to the correctness of Mr. Ruskin's etymologies) has no effect at all, may be entirely lost sight of: but to give it that degree of prominence is to throw the reins to one's whim, to forget all moderation and proportion, to lose the balance of one's mind altogether. It is to show in one's criticism, to the highest excess, the note of provinciality.

Again, there is Mr. Palgrave,[40] certainly endowed with a very fine critical tact: his *Golden Treasury* abundantly proves it. The plan of arrangement which he devised for that work, the mode in which he followed his plan out, nay, one might even say, merely the juxtaposition, in pursuance of it, of two such pieces as those of Wordsworth and Shelley which form the 285th and 286th in his collection, show a delicacy of feeling in these matters which is quite indisputable and very rare. And his notes are full of remarks which show it too. All the more striking, conjoined with so much justness of perception, are certain freaks and violences in Mr. Palgrave's criticism, mainly imputable, I think, to the critic's isolated position in this country, to his feeling himself too much left to take his own way, too much without any central authority representing high culture and sound judgment, by which he may be, on the one hand, confirmed as against the ignorant, on the other, held in respect when he himself is inclined to take liberties. I mean such things as this note on Milton's line, —

'The great Emathian conqueror bade spare'. . .

'When Thebes was destroyed, Alexander ordered the house of Pindar to be spared. *He was as incapable of appreciating the poet as Louis XIV. of appreciating Racine; but even the narrow and barbarian mind of Alexander could understand the advantage of a showy act of homage to poetry.*' A note like that I call a freak or a violence; if this disparaging view of Alexander and Louis XIV., so unlike the current view, is wrong, — if the current view is, after all, the truer one of them, — the note is a freak. But, even if its disparaging view is right, the note is a violence; for abandoning the true mode of intellectual action — persuasion, the instilment of conviction, — it simply astounds and irritates the hearer by contradicting without a word of proof or preparation, his fixed and familiar notions; and this is mere violence. In either case, the fitness, the measure, the centrality, which is the soul of all good criticism, is lost, and the note of provinciality shows itself.

Thus, in the famous *Handbook*,[41] marks of a fine power of perception are everywhere discernible, but so, too, are marks of the want of sure balance, of the check and support afforded by knowing one speaks before good and severe judges.

40. Francis Turner Palgrave (1824–97), poet, critic, and man of letters. His *The Golden Treasury of the Best Songs and Lyrical Poems in the English Language* (1861) has been many times reprinted. Numbers 285 and 286 are Shelley's brief and gloomy 'A Lament,' beginning 'O World! O Life! O Time!' and Wordsworth's brief and cheery poem beginning 'My heart leaps up when I behold A rainbow in the sky.' Milton's line quoted here is l.10 of the sonnet 'When the Assault Was Intended to the City.'

41. Palgrave's *Handbook to the Fine Art Collection in the International Exhibition of 1862* (London, 1862).

When Mr. Palgrave dislikes a thing, he feels no pressure constraining him either to try his dislike closely or to express it moderately; he does not mince matters, he gives his dislike all its own way; both his judgment and his style would gain if he were under more restraint. 'The style which has filled London with the dead monotony of Gower or Harley Streets, or the pale commonplace of Belgravia, Tyburnia, and Kensington; which has pierced Paris and Madrid with the feeble frivolities of the Rue Rivoli and the Strada de Toledo.' He dislikes the architecture of the Rue Rivoli, and he puts it on a level with the architecture of Belgravia and Gower Street; he lumps them all together in one condemnation, he loses sight of the shade, the distinction, which is everything here; the distinction, namely, that the architecture of the Rue Rivoli expresses show, splendour, pleasure, — unworthy things, perhaps, to express alone and for their own sakes, but it expresses them; whereas the architecture of Gower Street and Belgravia merely expresses the impotence of the architect to express anything. Then, as to style: 'sculpture which stands in a contrast with Woolner[42] hardly more shameful than diverting.' . . . 'passing from Davy or Faraday[43] to the art of the mountebank or the science of the spirit-rapper.' . . . 'it is the old, old story with Marochetti, the frog trying to blow himself out to bull dimensions. He may puff and be puffed, but he will never do it.' We all remember that shower of amenities on poor M. Marochetti.[44] Now, here Mr. Palgrave himself enables us to form a contrast which lets us see just what the presence of an academy does for style; for he quotes a criticism by M. Gustave Planche on this very M. Marochetti. M. Gustave Planche was a critic of the very first order, a man of strong opinions, which he expressed with severity; he, too, condemns M. Marochetti's work, and Mr. Palgrave calls him as a witness to back what he has himself said; certainly Mr. Palgrave's translation will not exaggerate M. Planche's urbanity in dealing with M. Marochetti, but, even in this translation, see the difference in sobriety, in measure, between the critic writing in Paris and the critic writing in London: —

'These conditions are so elementary, that I am at a perfect loss to comprehend how M. Marochetti has neglected them. There are soldiers here like the leaden playthings of the nursery: it is almost impossible to guess whether there is a body beneath the dress. We have here no question of style, not even of grammar; it is nothing beyond mere matter of the alphabet of art. To break these conditions is the same as to be ignorant of spelling.'

That is really more formidable criticism than Mr. Palgrave's, and yet in how perfectly temperate a style! M. Planche's advantage is, that he feels himself to be speaking before competent judges, that there is a force of cultivated opinion for him to appeal to. Therefore, he must not be extravagant, and he need not storm; he must satisfy the reason and taste, — that is his business. Mr. Palgrave, on the other hand, feels himself to be speaking before a promiscuous multitude, with the few good judges so scattered through it as to be powerless; therefore, he has no calm confidence and no self-control; he relies on the strength of his lungs; he knows that big words impose on the mob, and that, even if he is outrageous, most of his audience are apt to be a great deal more so.[45]

Again, the first two volumes of Mr.

42. Thomas Woolner (1825–92), eminent sculptor.

43. Sir Humphry Davy (1778–1829) and Michael Faraday (1791–1867), great scientists.

44. Carlo Marochetti (1801–68), an Italian sculptor who made many statues in England. Gustave Planche (1808–57), French critic.

45. When I wrote this I had before me the first edition of Mr. Palgrave's *Handbook*. I am bound to say that in the second edition much strong language has been expunged, and what remains, softened. [Arnold's note.]

Kinglake's *Invasion of the Crimea*[46] were certainly among the most successful and renowned English books of our time. Their style was one of the most renowned things about them, and yet how conspicuous a fault in Mr. Kinglake's style is this overcharge of which I have been speaking! Mr. James Gordon Bennett,[47] of the *New York Herald*, says, I believe, that the highest achievement of the human intellect is what he calls 'a good editorial.' This is not quite so; but, if it were so, on what a height would these two volumes by Mr. Kinglake stand! I have already spoken of the Attic and the Asiatic styles; besides these, there is the Corinthian[48] style. That is the style for 'a good editorial,' and Mr. Kinglake has really reached perfection in it. It has not the warm glow, blithe movement, and soft pliancy of life, as the Attic style has; it has not the over-heavy richness and encumbered gait of the Asiatic style; it has glitter without warmth, rapidity without ease, effectiveness without charm. Its characteristic is, that it has no *soul*; all it exists for, is to get its ends, to make its points, to damage its adversaries, to be admired, to triumph. A style so bent on effect at the expense of soul, simplicity, and delicacy; a style so little studious of the charm of the great models; so far from classic truth and grace, must surely be said to have the note of provinciality. Yet Mr. Kinglake's talent is a really eminent one, and so in harmony with our intellectual habits and tendencies, that, to the great bulk of English people, the faults of his style seem its merits; all the more needful that criticism should not be dazzled by them.

46. Alexander William Kinglake (1809-91), traveler and historian. The first two volumes of his 8-vol. *Invasion of the Crimea* were published in 1863.

47. James Gordon Bennett (1795–1872), American journalist, founder and editor of the New York *Herald*; his son, of the same name, established a daily edition of the *Herald* in London and in Paris.

48. Pertaining to Corinth, a city of ancient Greece noted for ornateness and profligacy.

We must not compare a man of Mr. Kinglake's literary talent with French writers like M. de Bazancourt.[49] We must compare him with M. Thiers.[50] And what a superiority in style has M. Thiers from being formed in a good school, with severe traditions, wholesome restraining influences! Even in this age of Mr. James Gordon Bennett, his style has nothing Corinthian about it, its lightness and brightness make it almost Attic. It is not quite Attic, however; it has not the infallible sureness of Attic taste. Sometimes his head gets a little hot with the fumes of patriotism, and then he crosses the line, he loses perfect measure, he declaims, he raises a momentary smile. France condemned 'à être l'effroi du monde *dont elle pourrait être l'amour*,'[51] — Cæsar, whose exquisite simplicity M. Thiers so much admires, would not have written like that. There is, if I may be allowed to say so, the slightest possible touch of fatuity in such language, — of that failure in good sense which comes from too warm a self-satisfaction. But compare this language with Mr. Kinglake's Marshal St. Arnaud — 'dismissed from the presence' of Lord Raglan or Lord Stratford, 'cowed and pressed down' under their 'stern reproofs,' or under 'the majesty of the great Elchi's Canning brow and tight, merciless lips!'[52] The failure in good sense and good taste there reaches far beyond what the French mean by *fatuity*; they would

49. César Lecat, Baron de Bazancourt (1810–65), French man of letters, historian.

50. Louis Adolphe Thiers (1797–1877), French historian and statesman, author of *Histoire du Consulat et de l'Empire* (1845–62), etc.

51. 'to be the terror of the world of which she could be the beloved.'

52. Lord Raglan was commander of the British army in the Crimea. Lord Stratford, born Stratford Canning (1786–1880), was a prominent diplomat, called 'the Great Elchi,' who was the capable Ambassador to Turkey in 1854, when St. Arnaud, commander of the French forces in Turkey, entered the conference here referred to. Arnold does not quote exactly. See Kinglake, *The Invasion of the Crimea*. . . . (Leipzig, 1863), III,35.

call it by another word, a word expressing blank defect of intelligence, a word for which we have no exact equivalent in English, — *bête*. It is the difference between a venial, momentary, good-tempered excess, in a man of the world, of an amiable and social weakness, — vanity; and a serious, settled, fierce, narrow, provincial misconception of the whole relative value of one's own things and the things of others. So baneful to the style of even the cleverest man may be the total want of checks.

In all I have said, I do not pretend that the examples given prove my rule as to the influence of academies; they only illustrate it. Examples in plenty might very likely be found to set against them; the truth of the rule depends, no doubt, on whether the balance of all the examples is in its favour or not; but actually to strike this balance is always out of the question. Here, as everywhere else, the rule, the idea, if true, commends itself to the judicious, and then the examples make it clearer still to them. This is the real use of examples, and this alone is the purpose which I have meant mine to serve. There is also another side to the whole question, — as to the limiting and prejudicial operation which academies may have; but this side of the question it rather behoves the French, not us, to study.

The reader will ask for some practical conclusion about the establishment of an Academy in this country, and perhaps I shall hardly give him the one he expects. But nations have their own modes of acting, and these modes are not easily changed; they are even consecrated, when great things have been done in them. When a literature has produced Shakspeare and Milton, when it has even produced Barrow [53] and Burke, it cannot well abandon its traditions; it can hardly begin, at this late time of day, with an institution like the French Academy. I think academies with a limited, special, scientific scope, in the various lines of intellectual work, — academies like that of Berlin,[54] for instance, — we with time may, and probably shall, establish. And no doubt they will do good; no doubt the presence of such influential centres of correct information will tend to raise the standard amongst us for what I have called the *journeyman-work* of literature, and to free us from the scandal of such biographical dictionaries as Chalmers's,[55] or such translations as a recent one of Spinoza, or perhaps, such philological freaks as Mr. Forster's about the one primeval language. But an academy quite like the French Academy, a sovereign organ of the highest literary opinion, a recognised authority in matters of intellectual tone and taste, we shall hardly have, and perhaps we ought not to wish to have it. But then every one amongst us with any turn for literature will do well to remember to what shortcomings and excesses, which such an academy tends to correct, we are liable; and the more liable, of course, for not having it. He will do well constantly to try himself in respect of these, steadily to widen his culture, severely to check in himself the provincial spirit; and he will do this the better the more he keeps in mind that all mere glorification by ourselves of ourselves, or our literature, in the strain of what, at the beginning of these remarks, I quoted from Lord Macaulay, is both vulgar, and, besides being vulgar, retarding.

53. Isaac Barrow (1630-77), Anglican clergyman, classical scholar, mathematician, and writer. His sermons 'now rank among the finest.'

54. The Academy of Sciences (*der Wissenschaften*), founded in Berlin, by Leibnitz, in 1700. Arnold had read Renan's comment on it — *cf. Renan's Essais de Morale. . .* (1859), pp.346-47.

55. Alexander Chalmers (1759–1834), a miscellaneous writer, published *The General Biographical Dictionary* (1812–17).

Marcus Aurelius

MR. MILL[1] says, in his book on Liberty, that 'Christian morality is in great part merely a protest against paganism; its ideal is negative rather than positive, passive rather than active.' He says, that, in certain most important respects, 'it falls far below the best morality of the ancients.' Now, the object of systems of morality is to take possession of human life, to save it from being abandoned to passion or allowed to drift at hazard, to give it happiness by establishing it in the practice of virtue; and this object they seek to attain by prescribing to human life fixed principles of action, fixed rules of conduct. In its uninspired as well as in its inspired moments, in its days of languor and gloom as well as in its days of sunshine and energy, human life has thus always a clue to follow, and may always be making way towards its goal. Christian morality has not failed to supply to human life aids of this sort. It has supplied them far more abundantly than many of its critics imagine. The most exquisite document after those of the New Testament, of all the documents the Christian spirit has ever inspired, — the *Imitation*,[2] — by no means contains the whole of Christian morality; nay, the disparagers of this morality would think themselves sure of triumphing if one agreed to look for it in the *Imitation* only. But even the *Imitation* is full of passages like these: 'Vita sine proposito languida et vaga est'; — 'Omni die renovare debemus propositum nostrum, dicentes: nunc hodie perfecte incipiamus, quia nihil est quod hactenus fecimus'; — 'Secundum propositum nostrum est cursus profectus nostri'; — 'Rare etiam unum vitium perfecte vincimus, et ad *quotidianum* profectum non accendimur'; 'Semper aliquid certi proponendum est'; 'Tibi ipsi violentiam frequenter fac.' (*A life without a purpose is a languid, drifting thing; — Every day we ought to renew our purpose, saying to ourselves: This day let us make a sound beginning, for what we have hitherto done is nought; — Our improvement is in proportion to our purpose; — We hardly ever manage to get completely rid even of one fault, and do not set our hearts on* daily *improvement; — Always place a definite purpose before thee; — Get the habit of mastering thine inclination.*) These are moral precepts, and moral precepts of the best kind. As rules to hold possession of our conduct, and to keep us in the right course through outward troubles and inward perplexity, they are equal to the best ever furnished by the great masters of morals, — Epictetus[3] or Marcus Aurelius.[4]

But moral rules, apprehended as ideas first, and then rigorously followed as laws, are, and must be, for the sage only. The mass of mankind have neither force of intellect enough to apprehend them clearly as ideas, nor force of character enough to follow them strictly as laws. The mass of mankind can be carried along a course full of hardship for the natural man, can be borne over the thousand impediments of the narrow way, only by the tide of a joyful and bounding emotion. It is impossible to rise from reading Epictetus or Marcus Aurelius without a sense of constraint and melancholy, without

1. John Stuart Mill (1806–73), philosopher and political economist, published his book *On Liberty* in 1859. The quotations are from the eighth-last paragraph of Ch. ii, 'Of the Liberty of Thought and Discussion.'
2. The *Imitation of Christ*, written in Latin (*De Imitatione Christi*), is a medieval devotional work attributed to Thomas à Kempis (1380–1471), an Augustinian canon of the Convent of Mount St. Agnes in the diocese of Utrecht, in the Netherlands.
3. Epictetus (60?–120?), Roman philosopher, whose writings greatly influenced Arnold. *Cf.* the famous sonnet 'To a Friend,' where Arnold lists him with Homer and Sophocles.
4. Marcus Aurelius Antoninus (121–180), Roman emperor (161–180) and philosopher.

feeling that the burden laid upon man is well-nigh greater than he can bear. Honour to the sages who have felt this, and yet have borne it! Yet, even for the sage, this sense of labour and sorrow in his march towards the goal constitutes a relative inferiority; the noblest souls of whatever creed, the pagan Empedocles [5] as well as the Christian Paul, have insisted on the necessity of an inspiration, a joyful emotion, to make moral action perfect: an obscure indication of this necessity is the one drop of truth in the ocean of verbiage with which the controversy on justification by faith has flooded the world. But, for the ordinary man, this sense of labour and sorrow constitutes an absolute disqualification: it paralyses him: under the weight of it, he cannot make way towards the goal at all. The paramount virtue of religion is, that it has *lighted up* morality; that it has supplied the emotion and inspiration needful for carrying the sage along the narrow way perfectly, for carrying the ordinary man along it at all. Even the religions with most dross in them have had something of this virtue; but the Christian religion manifests it with unexampled splendour. 'Lead me, Zeus and Destiny!' says the prayer of Epictetus, 'whithersoever I am appointed to go; I will follow without wavering; even though I turn coward and shrink, I shall have to follow all the same.' [6] The fortitude of that is for the strong, for the few; even for them the spiritual atmosphere with which it surrounds them is bleak and gray. But, 'Let thy loving spirit lead me forth into the land of righteousness'; [7] — 'The Lord shall be unto thee an everlasting light, and thy God thy glory'; — 'Unto you that fear my name shall the sun of righteousness arise with healing in his wings,' says the Old Testament; 'Born, not of blood, nor of the will of the flesh, nor of the will of man, but of God'; — 'Except a man be born again, he cannot see the kingdom of God'; — 'Whatsoever is born of God, overcometh the world,' says the New. The ray of sunshine is there, the glow of a divine warmth; — the austerity of the sage melts away under it, the paralysis of the weak is healed; he who is vivified by it renews his strength; 'all things are possible to him'; 'he is a new creature.'

Epictetus says: 'Every matter has two handles, one of which will bear taking hold of, the other not. If thy brother sin against thee, lay not hold of the matter by this, that he sins against thee; for by this handle the matter will not bear taking hold of. But rather lay hold of it by this, that he is thy brother, thy born mate; and thou wilt take hold of it by what will bear handling.' [8] Jesus, being asked whether a man is bound to forgive his brother as often as seven times, answers: 'I say not unto thee, until seven times, but until seventy times seven.' [9] Epictetus here suggests to the reason grounds for forgiveness of injuries which Jesus does not; but it is vain to say that Epictetus is on that account a better moralist than Jesus, if the warmth, the emotion, of Jesus's answer fires his hearer to the practice of forgiveness of injuries, while the thought in Epictetus's leaves him cold. So with Christian morality in general: its distinction is not that it propounds the maxim, 'Thou shalt love God and thy neighbour,' with more development, closer reasoning, truer sincerity, than other moral systems; it is that it propounds this maxim with an inspiration which wonderfully catches the hearer and makes him act upon it. It is because Mr. Mill has attained to the perception of truths of this

5. Empedocles (c. 500–430? B.C.), Sicilian Greek philosopher.
6. *Encheiridion*, liii.
7. For this quotation from the Bible, and the following seven, see *Psalms*, cxliii,10 (inexactly quoted); *Isaiah*, lx,19; *Malachi*, iv,2; *John*, i,13; *John*, iii,5 (inexactly quoted); *I John*, v,4; *Mark*, ix,23; *II Corinthians*, v,17.

nature, that he is, — instead of being, like the school from which he proceeds,[10] doomed to sterility, — a writer of distinguished mark and influence, a writer deserving all attention and respect; it is (I must be pardoned for saying) because he is not sufficiently leavened with them, that he falls just short of being a great writer.

That which gives to the moral writings of the Emperor Marcus Aurelius their peculiar character and charm, is their being suffused and softened by something of this very sentiment whence Christian morality draws its best power. Mr. Long[11] has recently published in a convenient form a translation of these writings, and has thus enabled English readers to judge Marcus Aurelius for themselves; he has rendered his countrymen a real service by so doing. Mr. Long's reputation as a scholar is a sufficient guarantee of the general fidelity and accuracy of his translation; on these matters, besides, I am hardly entitled to speak, and my praise is of no value. But that for which I and the rest of the unlearned may venture to praise Mr. Long is this: that he treats Marcus Aurelius's writings, as he treats all the other remains of Greek and Roman antiquity which he touches, not as a dead and dry matter of learning, but as documents with a side of modern applicability and living interest, and valuable mainly so far as this side in them can be made clear; that as in his notes on Plutarch's[12] Roman Lives he deals with the modern epoch of Cæsar and Cicero, not as food for schoolboys, but as food for men, and men engaged in the current of contemporary life and action, so in his remarks and essays on Marcus Aurelius he treats this truly modern striver and thinker not as a Classical Dictionary hero, but as a present source from which to draw 'example of life, and instruction of manners.' Why may not a son of Dr. Arnold[13] say, what might naturally here be said by any other critic, that in this lively and fruitful way of considering the men and affairs of ancient Greece and Rome, Mr. Long resembles Dr. Arnold?

One or two little complaints, however, I have against Mr. Long, and I will get them off my mind at once. In the first place, why could he not have found gentler and juster terms to describe the translation of his predecessor, Jeremy Collier,[14] — the redoubtable enemy of stage plays, — than these: 'a most coarse and vulgar copy of the original'? As a matter of taste, a translator should deal leniently with his predecessor; but putting that out of the question, Mr. Long's language is a great deal too hard. Most English people who knew Marcus Aurelius before Mr. Long appeared as his introducer, knew him through Jeremy Collier. And the acquaintance of a man like Marcus Aurelius is such an imperishable benefit, that one can never lose a peculiar sense of obligation towards the man who confers it. Apart from this claim upon one's tenderness, however, Jeremy Collier's version deserves respect for its genuine spirit and vigour, the spirit and vigour of the age of Dryden. Jeremy Collier too, like Mr. Long, regarded in Marcus Aurelius the living moralist, and not the dead classic; and his warmth of feeling gave to his style an impetuosity and rhythm which from Mr. Long's style (I do not blame it on that ac-

10. The Utilitarian school of philosophy, founded by Jeremy Bentham (1748–1832).

11. George Long (1800–79), eminent classical scholar. His translation, *Thoughts of Marcus Aurelius*, appeared in 1862.

12. Plutarch (46?–120?), Greek biographer. Long's *Selections* from Plutarch's *Lives of the Noble Grecians and Romans* appeared in 1844.

13. Thomas Arnold (1795–1842), father of Matthew Arnold, clergyman, historian, and headmaster of Rugby School.

14. Jeremy Collier (1650–1726), clergyman and author. His famous *Short View of the Immorality and Profaneness of the English Stage* appeared in 1698, his *The Emperor M. Aurelius Antoninus, His Conversation with Himself*, in 1701.

count) are absent. Let us place the two side by side. The impressive opening of Marcus Aurelius's fifth book, Mr. Long translates thus: —

'In the morning when thou risest unwillingly, let this thought be present: I am rising to the work of a human being. Why then am I dissatisfied if I am going to do the things for which I exist and for which I was brought into the world? Or have I been made for this, to lie in the bed-clothes and keep myself warm? — But this is more pleasant. — Dost thou exist then to take thy pleasure, and not at all for action or exertion? '

Jeremy Collier has: —

'When you find an unwillingness to rise early in the morning, make this short speech to yourself: 'I am getting up now to do the business of a man: and am I out of humour for going about that which I was made for, and for the sake of which I was sent into the world? Was I then designed for nothing but to doze and batten beneath the counterpane? I thought action had been the end of your being.'

In another striking passage,[15] again, Mr. Long has: —

'No longer wander at hazard; for neither wilt thou read thy own memoirs, nor the acts of the ancient Romans and Hellenes,[16] and the selections from books which thou wast reserving for thy old age. Hasten then to the end which thou hast before thee, and, throwing away idle hopes, come to thine own aid, if thou carest at all for thyself, while it is in thy power.'

Here his despised predecessor has: —

'Don't go too far in your books and overgrasp yourself. Alas, you have no time left to peruse your diary, to read over the Greek and Roman history: come, don't flatter and deceive yourself; look to the main chance, to the end and design of reading, and mind life more than notion: I say, if you have a kindness for your person, drive at the practice and help yourself, for that is in your own power.'

It seems to me that here for style and force Jeremy Collier can (to say the least) perfectly stand comparison with Mr. Long. Jeremy Collier's real defect as a translator is not his coarseness and vulgarity, but his imperfect acquaintance with Greek; this is a serious defect, a fatal one; it rendered a translation like Mr. Long's necessary. Jeremy Collier's work will now be forgotten, and Mr. Long stands master of the field; but he may be content, at any rate, to leave his predecessor's grave unharmed, even if he will not throw upon it, in passing, a handful of kindly earth.

Another complaint I have against Mr. Long is, that he is not quite idiomatic and simple enough. It is a little formal, at least, if not pedantic, to say *Ethic* and *Dialectic*, instead of *Ethics* and *Dialectics*, and to say '*Hellenes* and Romans' instead of '*Greeks* and Romans.' And why, too, — the name of Antoninus being preoccupied by Antoninus Pius,[17] — will Mr. Long call his author Marcus *Antoninus* instead of Marcus *Aurelius*? Small as these matters appear, they are important when one has to deal with the general public, and not with a small circle of scholars; and it is the general public that the translator of a short masterpiece on morals, such as is the book of Marcus Aurelius, should have in view; his aim should be to make Marcus Aurelius's work as popular as the *Imitation*, and Marcus Aurelius's name as familiar as Socrates's. In rendering or naming him, therefore, punctilious accuracy of phrase is not so much to be sought as accessibility and currency; everything which may best enable the Emperor and his precepts *volitare per ora virûm*.[18] It is

15. *Meditations of Marcus Aurelius Antoninus*, III,14.

16. Citizens of Hellas, or ancient Greece.

17. Antoninus Pius (86–161), Roman emperor (138–161), uncle and foster-father of Marcus Aurelius.

18. Arnold is quoting, with slight grammatical change, Cicero's quotation from Ennius; it

essential to render him in language perfectly plain and unprofessional, and to call him by the name by which he is best and most distinctly known. The translators of the Bible talk of *pence* and not *denarii*,[19] and the admirers of Voltaire do not celebrate him under the name of Arouet.[20]

But, after these trifling complaints are made, one must end, as one began, in unfeigned gratitude to Mr. Long for his excellent and substantial reproduction in English of an invaluable work. In general the substantiality, soundness, and precision of Mr. Long's rendering are (I will venture, after all, to give my opinion about them) as conspicuous as the living spirit with which he treats antiquity; and these qualities are particularly desirable in the translator of a work like that of Marcus Aurelius, of which the language is often corrupt, almost always hard and obscure. Any one who wants to appreciate Mr. Long's merits as a translator may read, in the original and in Mr. Long's translation, the seventh chapter of the tenth book; he will see how, through all the dubiousness and involved manner of the Greek, Mr. Long has firmly seized upon the clear thought which is certainly at the bottom of that troubled wording, and, in distinctly rendering this thought, has at the same time thrown round its expression a characteristic shade of painfulness and difficulty which just suits it. And Marcus Aurelius's book is one which, when it is rendered so accurately as Mr. Long renders it, even those who know Greek tolerably well may choose to read rather in the translation than in the original. For not only are the contents here incomparably more valuable than the external form, but this form, the Greek of a Roman, is not exactly one of those styles which have a physiognomy, which are an essential part of their author, which stamp an indelible impression of him on the reader's mind. An old Lyons[21] commentator finds, indeed, in Marcus Aurelius's Greek, something characteristic, something specially firm and imperial; but I think an ordinary mortal will hardly find this: he will find crabbed Greek, without any great charm of distinct physiognomy. The Greek of Thucydides and Plato has this charm, and he who reads them in a translation, however accurate, loses it, and loses much in losing it; but the Greek of Marcus Aurelius, like the Greek of the New Testament, and even more than the Greek of the New Testament, is wanting in it. If one could be assured that the English Testament were made perfectly accurate, one might be almost content never to open a Greek Testament again; and, Mr. Long's version of Marcus Aurelius being what it is, an Englishman who reads to live, and does not live to read, may henceforth let the Greek original repose upon its shelf.

The man whose thoughts Mr. Long has thus faithfully reproduced, is perhaps the most beautiful figure in history. He is one of those consoling and hope-inspiring marks, which stand for ever to remind our weak and easily discouraged race how high human goodness and perseverance have once been carried, and may be carried again. The interest of mankind is peculiarly attracted by examples of signal goodness in high places; for that testimony to the worth of goodness is the most striking which is borne by those to whom all the means of pleasure and self-indulgence lay open, by those who had at their command the kingdoms of the world and the glory of them. Marcus Aurelius was the ruler of the grandest of empires; and he was one of the best of men. Besides him, history presents one or two sovereigns eminent for their goodness, such as

means 'to fly through the mouths of men,' or, 'to become familiar.' *Cf.* Cicero, *Tusculanarum Disputationum*, I,xv,34.

19. The denarius was a Roman silver coin.

21. A city in southeast France, founded in ancient times.

Saint Louis [22] or Alfred. But Marcus Aurelius has, for us moderns, this great superiority in interest over Saint Louis or Alfred, that he lived and acted in a state of society modern by its essential characteristics, in an epoch akin to our own, in a brilliant centre of civilisation. Trajan [23] talks of 'our enlightened age' just as glibly as the *Times* talks of it. Marcus Aurelius thus becomes for us a man like ourselves, a man in all things tempted as we are. Saint Louis inhabits an atmosphere of mediæval Catholicism, which the man of the nineteenth century may admire, indeed, may even passionately wish to inhabit, but which, strive as he will, he cannot really inhabit. Alfred belongs to a state of society (I say it with all deference to the *Saturday Review* critic who keeps such jealous watch over the honour of our Saxon ancestors) half barbarous. Neither Alfred nor Saint Louis can be morally and intellectually as near to us as Marcus Aurelius.

The record of the outward life of this admirable man has in it little of striking incident. He was born at Rome on the 26th of April, in the year 121 of the Christian era. He was nephew and son-in-law to his predecessor on the throne, Antoninus Pius. When Antoninus died, he was forty years old, but from the time of his earliest manhood he had assisted in administering public affairs. Then, after his uncle's death in 161, for nineteen years he reigned as emperor. The barbarians were pressing on the Roman frontier, and a great part of Marcus Aurelius's nineteen years of reign was passed in campaigning. His absences from Rome were numerous and long. We hear of him in Asia Minor, Syria, Egypt, Greece; but, above all, in the countries on the Danube, where the war with the barbarians was going on, — in Austria, Moravia, Hungary. In these countries much of his Journal seems to have been written; parts of it are dated from them; and there, a few weeks before his fifty-ninth birthday, he fell sick and died.[24] The record of him on which his fame chiefly rests is the record of his inward life, — his *Journal*, or *Commentaries*, or *Meditations*, or *Thoughts*, for by all these names has the work been called. Perhaps the most interesting of the records of his outward life is that which the first book of this work supplies, where he gives an account of his education, recites the names of those to whom he is indebted for it, and enumerates his obligations to each of them. It is a refreshing and consoling picture, a priceless treasure for those, who, sick of the 'wild and dreamlike trade of blood and guile,' which seems to be nearly the whole of what history has to offer to our view, seek eagerly for that substratum of right thinking and well-doing which in all ages must surely have somewhere existed, for without it the continued life of humanity would have been impossible. 'From my mother I learnt piety and beneficence, and abstinence not only from evil deeds but even from evil thoughts; and further, simplicity in my way of living, far removed from the habits of the rich.' [25] Let us remember that, the next time we are reading the sixth satire of Juvenal.[26] 'From my tutor I learnt' (hear it, ye tutors of princes!) 'endurance of labour, and to want little and to work with my own hands, and not to meddle with other people's affairs, and not to be ready to listen to slander.' [27] The vices and foibles of the Greek sophist or rhetorician — the *Græculus esuriens* [28] — are in everybody's

mind; but he who reads Marcus Aurelius's account of his Greek teachers and masters, will understand how it is that, in spite of the vices and foibles of individual *Græculi*, the education of the human race owes to Greece a debt which can never be overrated. The vague and colourless praise of history leaves on the mind hardly any impression of Antoninus Pius: it is only from the private memoranda of his nephew that we learn what a disciplined, hard working, gentle, wise, virtuous man he was; a man who, perhaps, interests mankind less than his immortal nephew only because he has left in writing no record of his inner life,—*caret quia vate sacro*.[29]

Of the outward life and circumstances of Marcus Aurelius, beyond these notices which he has himself supplied, there are few of much interest and importance. There is the fine anecdote of his speech when he heard of the assassination of the revolted Avidius Cassius, against whom he was marching: *he was sorry*, he said, *to be deprived of the pleasure of pardoning him*.[30] And there are one or two more anecdotes of him which show the same spirit. But the great record for the outward life of a man who has left such a record of his lofty inward aspirations as that which Marcus Aurelius has left, is the clear consenting voice of all his contemporaries,—high and low, friend and enemy, pagan and Christian,—in praise of his sincerity, justice, and goodness. The world's charity does not err on the side of excess, and here was a man occupying the most conspicuous station in the world, and professing the highest possible standard of conduct;—yet the world was obliged to declare that he walked worthily of his profession. Long after his death, his bust was to be seen in the houses of private men through the wide Roman empire. It may be the vulgar part of human nature which busies itself with the semblance and doings of living sovereigns, it is its nobler part which busies itself with those of the dead; these busts of Marcus Aurelius, in the homes of Gaul, Britain, and Italy, bear witness, not to the inmates' frivolous curiosity about princes and palaces, but to their reverential memory of the passage of a great man upon the earth.

Two things, however, before one turns from the outward to the inward life of Marcus Aurelius, force themselves upon one's notice, and demand a word of comment; he persecuted the Christians, and he had for his son the vicious and brutal Commodus.[31] The persecution at Lyons, in which Attalus and Pothinus suffered, the persecution at Smyrna, in which Polycarp suffered, took place in his reign.[32] Of his humanity, of his tolerance, of his horror of cruelty and violence, of his wish to refrain from severe measures against the Christians, of his anxiety to temper the severity of these measures when they appeared to him indispensable, there is no doubt: but, on the one hand, it is certain that the letter, attributed to him, directing that no Christian should be punished for being a Christian, is spurious; it is almost certain that his alleged answer to the authorities of Lyons, in which he directs that Christians persisting in their profession shall be dealt with according to law, is genuine. Mr. Long seems inclined to try and throw doubt over the persecution at Lyons, by pointing out that the letter of the Lyons Christians relating it, alleges it to have been attended by miraculous and

29 'because he lacks an inspired poet' to praise him. See Horace, *Odes*, IV,ix,28.

30. Avidius Cassius, a Roman general, declared himself emperor in Syria in A.D. 175. Grieved at having to proceed against a trusted officer, Aurelius marched against him, but he was slain by his own officers before Aurelius could reach him. See the *Harvard Classics*, ed. 1909, II,310.

31. Commodus (161–192), Roman emperor (180–192).

incredible incidents. 'A man,' he says, 'can only act consistently by accepting all this letter or rejecting it all, and we cannot blame him for either.'[33] But it is contrary to all experience to say that because a fact is related with incorrect additions, and embellishments, therefore it probably never happened at all; or that it is not, in general, easy for an impartial mind to distinguish between the fact and the embellishments. I cannot doubt that the Lyons persecution took place, and that the punishment of Christians for being Christians was sanctioned by Marcus Aurelius. But then I must add that nine modern readers out of ten, when they read this, will, I believe, have a perfectly false notion of what the moral action of Marcus Aurelius, in sanctioning that punishment, really was. They imagine Trajan, or Antoninus Pius, or Marcus Aurelius, fresh from the perusal of the Gospel, fully aware of the spirit and holiness of the Christian saints, ordering their extermination because he loved darkness rather than light. Far from this, the Christianity which these emperors aimed at repressing was, in their conception of it, something philosophically contemptible, politically subversive and morally abominable. As men they sincerely regarded it much as well-conditioned people, with us, regard Mormonism;[34] as rulers, they regarded it much as Liberal statesmen, with us, regard the Jesuits.[35] A kind of Mormonism, constituted as a vast secret society, with obscure aims of political and social subversion, was what Antoninus Pius and Marcus Aurelius believed themselves to be repressing when they punished Christians. The early Christian apologists again and again declare to us under what odious imputations the Christians lay, how general was the belief that these imputations were well-grounded, how sincere was the horror which the belief inspired. The multitude, convinced that the Christians were atheists who ate human flesh and thought incest no crime, displayed against them a fury so passionate as to embarrass and alarm their rulers. The severe expressions of Tacitus, *exitiabilis superstitio — odio humani generis convicti*,[36] show how deeply the prejudices of the multitude imbued the educated class also. One asks oneself with astonishment how a doctrine so benign as that of Jesus Christ can have incurred misrepresentation so monstrous. The inner and moving cause of the misrepresentation lay, no doubt, in this, — that Christianity was a new spirit in the Roman world, destined to act in that world as its dissolvent; and it was inevitable that Christianity in the Roman world, like democracy in the modern world, like every new spirit with a similar mission assigned to it, should at its first appearance occasion an instinctive shrinking and repugnance in the world which it was to dissolve. The outer and palpable causes of the misrepresentation were, for the Roman public at large, the confounding of the Christians with the Jews, that isolated, fierce, and stubborn race, whose stubbornness, fierceness, and isolation, real as they were, the fancy of a civilised Roman yet further exaggerated; the atmosphere of mystery and novelty which surrounded the Christian rites; the very simplicity of Christian theism. For the Roman statesman, the cause of mistake lay in that character of secret assemblages which the meetings of the Christian community wore, under a State-system as jealous of unauthorised associations as is the State-system of modern France.

A Roman of Marcus Aurelius's time and position could not well see the Christians except through the mist of these preju-

dices. Seen through such a mist, the Christians appeared with a thousand faults not their own; but it has not been sufficiently remarked that faults really their own many of them assuredly appeared with besides, faults especially likely to strike such an observer as Marcus Aurelius, and to confirm him in the prejudices of his race, station, and rearing. We look back upon Christianity after it has proved what a future it bore within it, and for us the sole representatives of its early struggles are the pure and devoted spirits through whom it proved this; Marcus Aurelius saw it with its future yet unshown, and with the tares among its professed progeny not less conspicuous than the wheat. Who can doubt that among the professing Christians of the second century, as among the professing Christians of the nineteenth, there was plenty of folly, plenty of rabid nonsense, plenty of gross fanaticism? who will even venture to affirm that, separated in great measure from the intellect and civilisation of the world for one or two centuries, Christianity, wonderful as have been its fruits, had the development perfectly worthy of its inestimable germ? Who will venture to affirm that, by the alliance of Christianity with the virtue and intelligence of men like the Antonines,[37] — of the best product of Greek and Roman civilisation, while Greek and Roman civilisation had yet life and power, — Christianity and the world, as well as the Antonines themselves, would not have been gainers? That alliance was not to be. The Antonines lived and died with an utter misconception of Christianity; Christianity grew up in the Catacombs, not on the Palatine.[38] And Marcus Aurelius incurs no moral reproach by having authorised the punishment of the Christians; he does not thereby become in the least what we mean by a *persecutor*. One may concede that it was impossible for him to see Christianity as it really was; — as impossible as for even the moderate and sensible Fleury[39] to see the Antonines as they really were; — one may concede that the point of view from which Christianity appeared something anti-civil and anti-social, which the State had the faculty to judge and the duty to suppress, was inevitably his. Still, however, it remains true that this sage, who made perfection his aim and reason his law, did Christianity an immense injustice and rested in an idea of State-attributes which was illusive. And this is, in truth, characteristic of Marcus Aurelius, that he is blameless, yet, in a certain sense, unfortunate; in his character, beautiful as it is, there is something melancholy, circumscribed, and ineffectual.

For of his having such a son as Commodus, too, one must say that he is not to be blamed on that account, but that he is unfortunate. Disposition and temperament are inexplicable things; there are natures on which the best education and example are thrown away; excellent fathers may have, without any fault of theirs, incurably vicious sons. It is to be remembered, also, that Commodus was left, at the perilous age of nineteen, master of the world; while his father, at that age, was but beginning a twenty years' apprenticeship to wisdom, labour, and self-command, under the sheltering teachership of his uncle Antoninus. Commodus was a prince apt to be led by favourites; and if the story is true which says that he left, all through his reign, the Christians untroubled, and ascribes this lenity to the influence of his mistress Marcia, it shows that he could be led to good as well as to evil. But for such a nature to be left at a critical age with absolute power, and

37. The two emperors Antoninus Pius and his successor Marcus Aurelius.

38. The Catacombs were caves, with many passages, used for burial, and as places of refuge by early Christians in Rome. The Palatine was that hill in Rome where stood the palaces of the Caesars.

wholly without good counsel and direction, was the more fatal. Still one cannot help wishing that the example of Marcus Aurelius could have availed more with his own only son. One cannot but think that with such virtue as his there should go, too, the ardour which removes mountains, and that the ardour which removes mountains might have even won Commodus. The word *ineffectual* again rises to one's mind; Marcus Aurelius saved his own soul by his righteousness, and he could do no more. Happy they who can do this! but still happier, who can do more!

Yet, when one passes from his outward to his inward life, when one turns over the pages of his *Meditations*, — entries jotted down from day to day, amid the business of the city or the fatigues of the camp, for his own guidance and support, meant for no eye but his own, without the slightest attempt at style, with no care, even, for correct writing, not to be surpassed for naturalness and sincerity, — all disposition to carp and cavil dies away, and one is overpowered by the charm of a character of such purity, delicacy, and virtue. He fails neither in small things nor in great; he keeps watch over himself both that the great springs of action may be right in him, and that the minute details of action may be right also. How admirable in a hard-tasked ruler, and a ruler, too, with a passion for thinking and reading, is such a memorandum as the following: —

'Not frequently nor without necessity to say to any one, or to write in a letter, that I have no leisure; nor continually to excuse the neglect of duties required by our relation to those with whom we live, by alleging urgent occupation.' [40]

And, when that ruler is a Roman emperor, what an 'idea' is this to be written down and meditated by him: —

'The idea of a polity in which there is the same law for all, a polity administered with regard to equal rights and equal freedom of speech, and the idea of a kingly government which respects most of all the freedom of the governed.'

And, for all men who 'drive at practice,' what practical rules may not one accumulate out of these *Meditations*: —

'The greatest part of what we say or do being unnecessary, if a man takes this away, he will have more leisure and less uneasiness. Accordingly, on every occasion a man should ask himself: "Is this one of the unnecessary things?" Now a man should take away not only unnecessary acts, but also unnecessary thoughts, for thus superfluous acts will not follow after.'

And again: —

'We ought to check in the series of our thoughts everything that is without a purpose and useless, but most of all the overcurious feeling and the malignant; and a man should use himself to think of those things only about which if one should suddenly ask, "What hast thou now in thy thoughts?" with perfect openness thou mightest immediately answer, "This or That"; so that from thy words it should be plain that everything in thee is simple and benevolent, and such as befits a social animal, and one that cares not for thoughts about sensual enjoyments, or any rivalry or envy and suspicion, or anything else for which thou wouldst blush if thou shouldst say thou hadst it in thy mind.'

So, with a stringent practicalness worthy of Franklin,[41] he discourses on his favourite text, *Let nothing be done without a purpose*. But it is when he enters the region where Franklin cannot follow him, when he utters his thoughts on the ground-motives of human action, that he is most interesting; that he becomes the unique, the incomparable Marcus Aurelius. Christianity uses language very liable to be misunderstood when it seems to tell men to

40. For this and the next three quotations, see *Meditations*, I,12; I,14; IV,24; III,4.

41. Benjamin Franklin's aphoristic *Poor Richard's Almanac* appeared from 1732 to 1757.

do good, not, certainly, from the vulgar motives of worldly interest, or vanity, or love of human praise, but 'that their Father which seeth in secret may reward them openly.'[42] The motives of reward and punishment have come, from the misconception of language of this kind, to be strangely overpressed by many Christian moralists, to the deterioration and disfigurement of Christianity. Marcus Aurelius says, truly and nobly: —

'One man, when he has done a service to another, is ready to set it down to his account as a favour conferred. Another is not ready to do this, but still in his own mind he thinks of the man as his debtor, and he knows what he has done. A third in a manner does not even know what he has done, *but he is like a vine which has produced grapes, and seeks for nothing more after it has once produced its proper fruit.* As a horse when he has run, a dog when he has caught the game, a bee when it has made its honey, so a man when he has done a good act, does not call out for others to come and see, but he goes on to another act, as a vine goes on to produce again the grapes in season. Must a man, then, be one of these, who in a manner acts thus without observing it? Yes.'[43]

And again: —

'What more dost thou want when thou hast done a man a service? Art thou not content that thou hast done something conformable to thy nature, and dost thou seek to be paid for it, *just as if the eye demanded a recompense for seeing, or the feet for walking?*'

Christianity, in order to match morality of this strain, has to correct its apparent offers of external reward, and to say: *The kingdom of God is within you.*[44]

I have said that it is by its accent of emotion that the morality of Marcus Aurelius acquires a special character, and reminds one of Christian morality. The sentences of Seneca[45] are stimulating to the intellect; the sentences of Epictetus are fortifying to the character; the sentences of Marcus Aurelius find their way to the soul. I have said that religious emotion has the power to *light up* morality: the emotion of Marcus Aurelius does not quite light up his morality, but it suffuses it; it has not power to melt the clouds of effort and austerity quite away, but it shines through them and glorifies them; it is a spirit, not so much of gladness and elation, as of gentleness and sweetness; a delicate and tender sentiment, which is less than joy and more than resignation. He says that in his youth he learned from Maximus, one of his teachers, 'cheerfulness in all circumstances as well as in illness; *and a just admixture in the moral character of sweetness and dignity*';[46] and it is this very admixture of sweetness with his dignity which makes him so beautiful a moralist. It enables him to carry even into his observation of nature, a delicate penetration, a sympathetic tenderness, worthy of Wordsworth; the spirit of such a remark as the following has hardly a parallel, so far as my knowledge goes, in the whole range of Greek and Roman literature: —

'Figs, when they are quite ripe, gape open; and in the ripe olives the very circumstance of their being near to rottenness adds a peculiar beauty to the fruit. And the ears of corn bending down, and the lion's eyebrows, and the foam which flows from the mouth of wild boars, and many other things, — though they are far from being beautiful, in a certain sense, — still, because they come in the course of nature, have a beauty in them, and they please the mind; so that if a man should have a feeling and a deeper insight with respect to the things which are produced in the universe, there is hardly anything

46. *Meditations*, I,15.

which comes in the course of nature which will not seem to him to be in a manner disposed so as to give pleasure.'[47]

But it is when his strain passes to directly moral subjects that his delicacy and sweetness lend to it the greatest charm. Let those who can feel the beauty of spiritual refinement read this, the reflection of an emperor who prized mental superiority highly: —

'Thou sayest, "Men cannot admire the sharpness of thy wits." Be it so; but there are many other things of which thou canst not say, "I am not formed for them by nature." Show those qualities, then, which are altogether in thy power, — sincerity, gravity, endurance of labour, aversion to pleasure, contentment with thy portion and with few things, benevolence, frankness, no love of superfluity, freedom from trifling, magnanimity. Dost thou not see how many qualities thou art at once able to exhibit, as to which there is no excuse of natural incapacity and unfitness, and yet thou still remainest voluntarily below the mark? Or art thou compelled, through being defectively furnished by nature, to murmur, and to be mean, and to flatter, and to find fault with thy poor body, and to try to please men, and to make great display, and to be so restless in thy mind? No, indeed; but thou mightest have been delivered from these things long ago. Only, if in truth thou canst be charged with being rather slow and dull of comprehension, thou must exert thyself about this also, not neglecting nor yet taking pleasure in thy dulness.'

The same sweetness enables him to fix his mind, when he sees the isolation and moral death caused by sin, not on the cheerless thought of the misery of this condition, but on the inspiriting thought that man is blest with the power to escape from it: —

'Suppose that thou hast detached thyself from the natural unity, — for thou wast made by nature a part, but thou hast cut thyself off, — yet here is this beautiful provision, that it is in thy power again to unite thyself. God has allowed this to no other part, — after it has been separated and cut asunder, to come together again. But consider the goodness with which he has privileged man; for he has put it in his power, when he has been separated, to return and to be united and to resume his place.'

It enables him to control even the passion for retreat and solitude, so strong in a soul like his, to which the world could offer no abiding city: —

'Men seek retreat for themselves, houses in the country, seashores, and mountains; and thou, too, art wont to desire such things very much. But this is altogether a mark of the most common sort of men, for it is in thy power whenever thou shalt choose to retire into thyself. For nowhere either with more quiet or more freedom from trouble does a man retire than into his own soul, particularly when he has within him such thoughts that by looking into them he is immediately in perfect tranquillity. Constantly then, give to thyself this retreat, and renew thyself; and let thy principles be brief and fundamental, which as soon as thou shalt recur to them, will be sufficient to cleanse the soul completely, and to send thee back free from all discontent with the things to which thou returnest.'

Against this feeling of discontent and weariness, so natural to the great for whom there seems nothing left to desire or to strive after, but so enfeebling to them, so deteriorating, Marcus Aurelius never ceased to struggle. With resolute thankfulness he kept in remembrance the blessings of his lot; the true blessings of it, not the false: —

'I have to thank Heaven that I was subjected to a ruler and a father (Antoninus Pius) who was able to take away all pride from me, and to bring me to the knowledge that it is possible for a man to

47. For this and the next four quotations, see *Meditations*, III,2; V,5; VIII,34; IV,3; I,17.

live in a palace without either guards, or embroidered dresses, or any show of this kind; but that it is in such a man's power to bring himself very near to the fashion of a private person, without being for this reason either meaner in thought or more remiss in action with respect to the things which must be done for public interest. . . . I have to be thankful that my children have not been stupid nor deformed in body; that I did not make more proficiency in rhetoric, poetry, and the other studies, by which I should perhaps have been completely engrossed, if I had seen that I was making great progress in them; . . . that I knew Apollonius, Rusticus, Maximus; . . . that I received clear and frequent impressions about living according to nature, and what kind of a life that is, so that, so far as depended on Heaven, and its gifts, help, and inspiration, nothing hindered me from forthwith living according to nature, though I still fall short of it through my own fault, and through not observing the admonitions of Heaven, and, I may almost say, its direct instructions; that my body has held out so long in such a kind of life as mine; that though it was my mother's lot to die young, she spent the last years of her life with me; that whenever I wished to help any man in his need, I was never told that I had not the means of doing it; that, when I had an inclination to philosophy, I did not fall into the hands of a sophist.'

And, as he dwelt with gratitude on these helps and blessings vouchsafed to him, his mind (so, at least, it seems to me) would sometimes revert with awe to the perils and temptations of the lonely height where he stood, to the lives of Tiberius, Caligula, Nero, Domitian,[48] in their hideous blackness and ruin; and then he wrote down for himself such a warning entry as this, significant and terrible in its abruptness: —

'A black character, a womanish character, a stubborn character, bestial, childish, animal, stupid, counterfeit, scurrilous, fraudulent, tyrannical!'[49]

Or this: —

'About what am I now employing my soul? On every occasion I must ask myself this question, and enquire, What have I now in this part of me which they call the ruling principle, and whose soul have I now? — that of a child, or of a young man, or of a weak woman, or of a tyrant, or of one of the lower animals in the service of man, or of a wild beast?'

The character he wished to attain he knew well, and beautifully he has marked it, and marked, too, his sense of shortcoming: —

'When thou hast assumed these names, — good, modest, true, rational, equal-minded, magnanimous, — take care that thou dost not change these names; and, if thou shouldst lose them, quickly return to them. If thou maintainest thyself in possession of these names without desiring that others should call thee by them, thou wilt be another being, and wilt enter on another life. For to continue to be such as thou hast hitherto been, and to be torn in pieces and defiled in such a life, is the character of a very stupid man, and one overfond of his life, and like those half-devoured fighters with wild beasts, who though covered with wounds and gore still entreat to be kept to the following day, though they will be exposed in the same state to the same claws and bites. Therefore fix thyself in the possession of these few names: and if thou art able to abide in them, abide as if thou wast removed to the Happy Islands.'

For all his sweetness and serenity, however, man's point of life 'between two infinities' (of that expression Marcus Aurelius is the real owner) was to him anything but a Happy Island, and the per-

48. Four Roman emperors who reigned before Aurelius: Tiberius (A.D. 14–37), Caligula (37–41), Nero (54–68), Domitian (81–96).

formances on it he saw through no veils of illusion. Nothing is in general more gloomy and monotonous than declamations on the hollowness and transitoriness of human life and grandeur: but here, too, the great charm of Marcus Aurelius, his emotion, comes in to relieve the monotony and to break through the gloom; and even on this eternally used topic he is imaginative, fresh, and striking: —

'Consider, for example, the times of Vespasian. Thou wilt see all these things, people marrying, bringing up children, sick, dying, warring, feasting, trafficking, cultivating the ground, flattering, obstinately arrogant, suspecting, plotting, wishing for somebody to die, grumbling about the present, loving, heaping up treasure, desiring to be consuls or kings. Well then that life of these people no longer exists at all. Again, go to the times of Trajan. All is again the same. Their life too is gone. But chiefly thou shouldst think of those whom thou hast thyself known distracting themselves about idle things, neglecting to do what was in accordance with their proper constitution, and to hold firmly to this and to be content with it.'

Again: —

'The things which are much valued in life are empty, and rotten, and trifling; and people are like little dogs, biting one another, and little children quarrelling, crying, and then straightway laughing. But fidelity, and modesty, and justice, and truth, are fled

"Up to Olympus from the wide-spread earth."

What then is there which still detains thee here?'

And once more: —

'Look down from above on the countless herds of men, and their countless solemnities, and the infinitely varied voyagings in storms and calms, and the differences among those who are born, who live together, and die. And consider too the life lived by others in olden time, and the life now lived among barbarous nations, and how many know not even thy name, and how many will soon forget it, and how they who perhaps now are praising thee will very soon blame thee and that neither a posthumous name is of any value, nor reputation, nor anything else.'

He recognised, indeed, that (to use his own words) 'the prime principle in man's constitution is the social'; and he laboured sincerely to make not only his acts towards his fellow-men, but his thoughts also, suitable to this conviction: —

'When thou wishest to delight thyself, think of the virtues of those who live with thee; for instance, the activity of one, and the modesty of another, and the liberality of a third, and some other good quality of a fourth.'

Still, it is hard for a pure and thoughtful man to live in a state of rapture at the spectacle afforded to him by his fellow-creatures; above all it is hard, when such a man is placed as Marcus Aurelius was placed, and has had the meanness and perversity of his fellow-creatures thrust, in no common measure, upon his notice, — has had, time after time, to experience how 'within ten days thou wilt seem a god to those to whom thou art now a beast and an ape.' His true strain of thought as to his relations with his fellow men is rather the following. He has been enumerating the higher consolations which may support a man at the approach of death, and he goes on: —

'But if thou requirest also a vulgar kind of comfort which shall reach thy heart, thou wilt be made best reconciled to death by observing the objects from which thou art going to be removed, and the morals of those with whom thy soul will no longer be mingled. For it is no way right to be offended with men, but it is thy duty to care for them and to bear with them gently; and yet to remember that thy departure will not be from men who have the same principles as thyself. For this is the only thing, if there be any, which

could draw us the contrary way and attach us to life, to be permitted to live with those who have the same principles as ourselves. But now thou seest how great is the distress caused by the difference of those who live together, so that thou mayest say: "Come quick, O death, lest perchance I too should forget myself."'

O faithless and perverse generation! how long shall I be with you? how long shall I suffer you?[50] Sometimes this strain rises even to passion: —

'Short is the little which remains to thee of life. Live as on a mountain. Let men see, let them know, a real man, who lives as he was meant to live. If they cannot endure him, let them kill him. For that is better than to live as men do.'[51]

It is remarkable how little of a merely local and temporary character, how little of those *scoriæ*[52] which a reader has to clear away before he gets to the precious ore, how little that even admits of doubt or question, the morality of Marcus Aurelius exhibits. Perhaps as to one point we must make an exception. Marcus Aurelius is fond of urging as a motive for man's cheerful acquiescence in whatever befalls him, that 'whatever happens to every man *is for the interest of the universal*';[53] that the whole contains nothing *which is not for its advantage*; that everything which happens to a man is to be accepted, 'even if it seems disagreeable, *because it leads to the health of the universe*.' And the whole course of the universe, he adds, has a providential reference to man's welfare: '*all other things have been made for the sake of rational beings.*' Religion has in all ages freely used this language, and it is not religion which will object to Marcus Aurelius's use of it; but science can hardly accept as severely accurate this employment of the terms *interest* and *advantage*. To a sound nature and a clear reason the proposition that things happen 'for the interest of the universal,' as men conceive of interest, may seem to have no meaning at all, and the proposition that 'all things have been made for the sake of rational beings' may seem to be false. Yet even to this language, not irresistibly cogent when it is thus absolutely used, Marcus Aurelius gives a turn which makes it true and useful, when he says: 'The ruling part of man can make a material for itself out of that which opposes it, as fire lays hold of what falls into it, and rises higher by means of this very material'; — when he says: 'What else are all things except exercises for the reason? Persevere then until thou shalt have made all things thine own, as the stomach which is strengthened makes all things its own, as the blazing fire makes flame and brightness out of everything that is thrown into it'; — when he says: 'Thou wilt not cease to be miserable till thy mind is in such a condition, that, what luxury is to those who enjoy pleasure, such shall be to thee, in every matter which presents itself, the doing of the things which are conformable to man's constitution; for a man ought to consider as an enjoyment everything which it is in his power to do according to his own nature, — and it is in his power everywhere.' In this sense it is, indeed, most true that 'all things have been made for the sake of rational beings'; that 'all things work together for good.'

In general, however, the action Marcus Aurelius prescribes is action which every sound nature must recognise as right, and the motives he assigns are motives which every clear reason must recognise as valid. And so he remains the especial friend and comforter of all clear-headed and scrupulous, yet pure-hearted and upward striving men, in those ages most especially that walk by sight, not by faith, but yet have no open vision. He cannot give such souls, perhaps, all they yearn for, but he gives

them much; and what he gives them, they can receive.

Yet no, it is not for what he thus gives them that such souls love him most! it is rather because of the emotion which lends to his voice so touching an accent, it is because he too yearns as they do for something unattained by him. What an affinity for Christianity had this persecutor of the Christians! The effusion of Christianity, its relieving tears, its happy self-sacrifice, were the very element, one feels, for which his soul longed; they were near him, they brushed him, he touched them, he passed them by. One feels, too, that the Marcus Aurelius one reads must still have remained, even had Christianity been fully known to him, in a great measure himself; he would have been no Justin;[54] — but how would Christianity have affected him? in what measure would it have changed him? Granted that he might have found, like the *Alogi*[55] of modern times, in the most beautiful of the Gospels, the Gospel which has leavened Christendom most powerfully, the Gospel of St. John, too much Greek metaphysics, too much *gnosis*;[56] granted that this Gospel might have looked too like what he knew already to be a total surprise to him: what, then, would he have said to the Sermon on the Mount,[57] to the twenty-sixth chapter of St. Matthew? What would have become of his notions of the *exitiabilis superstitio*, of the 'obstinacy of the Christians'? Vain question! yet the greatest charm of Marcus Aurelius is that he makes us ask it. We see him wise, just, self-governed, tender, thankful, blameless; yet, with all this, agitated, stretching out his arms for something beyond, — *tendentemque manus ripæ ulterioris amore*.[58]

54. Justin Martyr (100?–165?), a Church father in Palestine, martyr.

55. The Alogi were an ancient sect of Christians that rejected the Gospel of St John and the Book of Revelation, written by St. John.

56. 'knowledge' of things thought of as belonging to faith, such as was claimed by the heretical Christian sect of the 2nd century called the Gnostics

57. See *Matthew*, v,vi,vii.

58. 'stretching out his hands in longing for the farther shore.' *Cf.* Virgil's *Aeneid*, VI,314, which reads *tendebantque*, etc; Arnold has changed the grammatical form to suit his context.

ON THE STUDY OF CELTIC LITERATURE

[SECTION VI]

If I were asked where English poetry got these three things, its turn for style, its turn for melancholy, and its turn for natural magic, for catching and rendering the charm of nature in a wonderfully near and vivid way, — I should answer, with some doubt, that it got much of its turn for style from a Celtic[1] source; with less doubt, that it got much of its melancholy from a Celtic source; with no doubt at all, that from a Celtic source it got nearly all its natural magic.

Any German with penetration and tact in matters of literary criticism will own that the principal deficiency of German poetry is in style; that for style, in the highest sense, it shows but little feeling. Take the eminent masters of style, the poets who best give the idea of what the peculiar power which lies in style is, — Pindar, Virgil, Dante, Milton. An example of the peculiar effect which these poets produce, you can hardly give from German poetry. Examples enough you can give from German poetry of the effect produced by genius, thought, and feeling expressing themselves in clear language, simple language, passionate language, eloquent language, with harmony and melody; but not of the peculiar effect exercised by eminent power of style. Every

1. Pertaining to the ancient Gauls and Britons, and the modern Bretons, Welsh, Irish, and Gaelic Scotch.

reader of Dante can at once call to mind what the peculiar effect I mean is; I spoke of it in my lectures on translating Homer, and there I took an example of it from Dante, who perhaps manifests it more eminently than any other poet. But from Milton, too, one may take examples of it abundantly; compare this from Milton: —

. . . . . nor sometimes forget
Those other two equal with me in fate,
So were I equall'd with them in renown,
Blind Thamyris and blind Mæonides —[2]

with this from Goethe: —

Es bildet ein Talent sich in der Stille,
Sich ein Character in dem Strom der Welt.[3]

Nothing can be better in its way than the style in which Goethe there presents his thought, but it is the style of prose as much as of poetry; it is lucid, harmonious, earnest, eloquent, but it has not received that peculiar kneading, heightening, and recasting which is observable in the style of the passage from Milton, — a style which seems to have for its cause a certain pressure of emotion, and an ever-surging, yet bridled, excitement in the poet, giving a special intensity to his way of delivering himself. In poetical races and epochs this turn for style is peculiarly observable; and perhaps it is only on condition of having this somewhat heightened and difficult manner, so different from the plain manner of prose, that poetry gets the privilege of being loosed, at its best moments, into that perfectly simple, limpid style, which is the supreme style of all, but the simplicity of which is still not the simplicity of prose. The simplicity of Menander's[4] style is the simplicity of prose, and is the same kind of simplicity as that which Goethe's style, in the passage I have quoted, exhibits; but Menander does not belong to a great poetical moment, he comes too late for it; it is the simple passages in poets like Pindar or Dante which are perfect, being masterpieces of *poetical* simplicity. One may say the same of the simple passages in Shakspeare; they are perfect, their simplicity being a *poetical* simplicity. They are the golden, easeful, crowning moments of a manner which is always pitched in another key from that of prose, a manner changed and heightened; the Elizabethan style, regnant in most of our dramatic poetry to this day, is mainly the continuation of this manner of Shakspeare's. It was a manner much more turbid and strewn with blemishes than the manner of Pindar, Dante, or Milton; often it was detestable; but it owed its existence to Shakspeare's instinctive impulse towards *style* in poetry, to his native sense of the necessity for it; and without the basis of style everywhere, faulty though it may in some places be, we should not have had the beauty of expression, unsurpassable for effectiveness and charm, which is reached in Shakspeare's best passages. The turn for style is perceptible all through English poetry, proving, to my mind, the genuine poetical gift of the race; this turn imparts to our poetry a stamp of high distinction, and sometimes it doubles the force of a poet not by nature of the very highest order, such as Gray, and raises him to a rank beyond what his natural richness and power seem to promise. Goethe, with his fine critical perception, saw clearly enough both the power of style in itself, and the lack of style in the literature of his own country; and perhaps if we regard him solely as a German, not as a European, his great work was that he laboured all his life to impart style into German literature, and firmly to establish it there. Hence the immense importance to him of the world of classical art, and of the productions of Greek or Latin genius, where style so eminently manifests its power. Had he

2. *Paradise Lost*, iii,32–35.

3. *Tasso*, I.ii,66–67. 'A talent, or skill, is developed in seclusion; a character is developed in the midst of the stream of worldly affairs.'

4. Menander (342–292 B.C.), famous Greek dramatic poet of the New Comedy.

found in the German genius and literature an element of style existing by nature and ready to his hand, half his work, one may say, would have been saved him, and he might have done much more in poetry. But as it was, he had to try and create, out of his own powers, a style for German poetry, as well as to provide contents for this style to carry; and thus his labour as a poet was doubled.

It is to be observed that power of style, in the sense in which I am here speaking of style, is something quite different from the power of idiomatic, simple, nervous, racy expression, such as the expression of healthy, robust natures so often is, such as Luther's was in a striking degree. Style, in my sense of the word, is a peculiar recasting and heightening, under a certain condition of spiritual excitement, of what a man has to say, in such a manner as to add dignity and distinction to it; and dignity and distinction are not terms which suit many acts or words of Luther. Deeply touched with the *Gemeinheit*[5] which is the bane of his nation, as he is at the same time a grand example of the honesty which is his nation's excellence, he can seldom even show himself brave, resolute, and truthful, without showing a strong dash of coarseness and commonness all the while; the right definition of Luther, as of our own Bunyan, is that he is a Philistine[6] of genius. So Luther's sincere idiomatic German, — such language as this: 'Hilf lieber Gott, wie manchen Jammer habe ich gesehen, dass der gemeine Mann doch so gar nichts weiss von der christlichen Lehre!'[7] — no more proves a power of style in German literature, than Cobbett's[8] sinewy idiomatic English proves it in English literature. Power of style, properly so called, as manifested in masters of style like Dante or Milton in poetry, Cicero, Bossuet or Bolingbroke[9] in prose, is something quite different, and has, as I have said, for its characteristic effect, this: to add dignity and distinction.

Style, then, the Germans are singularly without, and it is strange that the power of style should show itself so strongly as it does in the Icelandic poetry, if the Scandinavians are such genuine Teutons as is commonly supposed. Fauriel[10] used to talk of the Scandinavian Teutons and the German Teutons, as if they were two divisions of the same people, and the common notion about them, no doubt, is very much this. Since the war in Schleswig-Holstein,[11] however, all one's German friends are exceedingly anxious to insist on the difference of nature between themselves and the Scandinavians; when one expresses surprise that the German sense of nationality should be so deeply affronted by the rule over Germans, not of Latins or Celts, but of brother Teutons or next door to it, a German will give you I know not how long a catalogue of the radical points of unlikeness, in genius and disposition, between himself and a Dane. This emboldens me to remark that there is a fire, a sense of style, a distinction, in Icelandic poetry, which German poetry has not. Icelandic poetry, too, shows a powerful and developed technic; and I wish to throw out, for examination by those who are competent to sift the matter, the suggestion that this power of style and development of technic in the Norse poetry seems to point towards an early Celtic influence or intermixture. It is curi-

10. Claude Charles Fauriel (1772–1844), French critic and historian.
11. War between Germany and Denmark, 1848–62, in Schleswig-Holstein, the district at the base of the Danish peninsula.

ous that Zeuss,[12] in his grammar, quotes a text which gives countenance to this notion; as late as the ninth century, he says, there were Irish Celts in Iceland; and the text he quotes to show this, is as follows: — 'In 870 A.D., when the Norwegians came to Iceland, there were Christians there, who departed, and left behind them Irish books, bells, and other things; from whence it may be inferred that these Christians were Irish.' I speak, and ought to speak, with the utmost diffidence on all these questions of ethnology; but I must say that when I read this text in Zeuss, I caught eagerly at the clue it seemed to offer; for I had been hearing the *Nibelungen*[13] read and commented on in German schools (German schools have the good habit of reading and commenting on German poetry, as we read and comment on Homer and Virgil, but do *not* read and comment on Chaucer and Shakspeare), and it struck me how the fatal humdrum and want of style of the Germans had marred their way of telling this magnificent tradition of the *Nibelungen*, and taken half its grandeur and power out of it; while in the Icelandic poems which deal with this tradition, its grandeur and power are much more fully visible, and everywhere in the poetry of the Edda[14] there is a force of style and a distinction as unlike as possible to the want of both in the German Nibelungen.[15] At the same time the Scandinavians have a realism, as it is called, in their genius, which abundantly proves their relationship with the Germans; any one whom Mr. Dasent's[16] delightful books have made acquainted with the prose tales of the Norsemen, will be struck with the stamp of a Teutonic nature in them; but the Norse poetry seems to have something which from Teutonic sources alone it could not have derived; which the Germans have not, and which the Celts have.

This something is *style*, and the Celts certainly have it in a wonderful measure. Style is the most striking quality of their poetry. Celtic poetry seems to make up to itself for being unable to master the world and give an adequate interpretation of it, by throwing all its force into style, by bending language at any rate to its will, and expressing the ideas it has with unsurpassable intensity, elevation, and effect. It has all through it a sort of intoxication of style, — a *Pindarism*, to use a word formed from the name of the poet, on whom, above all other poets, the power of style seems to have exercised an inspiring and intoxicating effect; and not in its great poets only, in Taliesin, or Llywarch Hen, or Ossian,[17] does the Celtic genius show

12. J.C Zeuss, *Grammatica Celtica* (Lipsiae, 1853), 'Praefatio,' I,12n.

13. The *Nibelungenlied*, the song or *Lay of the Nibelungs*, is the German version of the mythological hero tales told in Icelandic as the saga of the Volsungs.

14. The reference is to the 'poetic' Edda, or Elder Edda, a collection of old Northern poems, made in Iceland toward the end of the 13th century.

15. Lord Strangford's note on this is: — 'The Irish monks whose bells and books were found in Iceland could not have contributed anything to the old Norse spirit, for they had perished before the first Norseman had set foot on the island. The form of the old Norse poetry known to us as Icelandic, from the accident of its preservation in that island alone, is surely Pan-Teutonic from old times: the art and method of its strictly literary cultivation must have been much influenced by the contemporary Old-English national poetry, with which the Norsemen were in constant contact; and its larger, freer, and wilder spirit must have been owing to their freer and wilder life, to say nothing of their roused and warring paganism. They could never have known any Celts save when living in embryo with other Teutons.'

Very likely Lord Strangford is right, but the proposition with which he begins is at variance with what the text quoted by Zeuss alleges. [Arnold's note.]

16. Sir George Webbe Dasent (1817–96), English scholar of Scandinavian literature, who published many translations: *Popular Tales from Norse* (1859), etc.

17. Taliesin and Llywarch Hen were British, or Welsh, bards of the 6th century. Not much is known of them (see the accounts in the Dictionary of National Biography). Taliesin may

this Pindarism, but in all its productions: —

'The grave of March is this, and this the grave of Gwythyr;
Here is the grave of Gwgawn Gleddyfreidd;
But unknown is the grave of Arthur.'

That comes from the Welsh *Memorials of the Graves of the Warriors*,[18] and if we compare it with the familiar memorial inscriptions of an English churchyard (for we English have so much Germanism in us that our productions offer abundant examples of German want of style as well as of its opposite): —

'Afflictions sore long time I bore,
Physicians were in vain,
Till God did please Death should me seize
And ease me of my pain' —

if, I say, we compare the Welsh memorial lines with the English, which in their *Gemeinheit* of style are truly Germanic, we shall get a clear sense of what that Celtic talent for style I have been speaking of is.

Or take this epitaph of an Irish Celt, Angus the Culdee, whose *Feliré*, or festology, I have already mentioned;[19] — a festology in which, at the end of the eighth or beginning of the ninth century, he collected from 'the countless hosts of the illuminated books of Erin' (to use his own words) the festivals of the Irish saints, his poem having a stanza for every day in the year. The epitaph on Angus, who died at Cluain Eidhnech, in Queen's County, runs thus: —

'Angus in the assembly of Heaven,
Here are his tomb and his bed;
It is from hence he went to death,
In the Friday, to holy Heaven.

'It was in Cluain Eidhnech he was rear'd;
It was in Cluain Eidhnech he was buried;
In Cluain Eidhnech, of many crosses,
He first read his psalms.'

That is by no eminent hand; and yet a Greek epitaph could not show a finer perception of what constitutes propriety and felicity of style in compositions of this nature. Take the well-known Welsh prophecy about the fate of the Britons: —

'Their Lord they will praise,
Their speech they will keep,
Their land they will lose,
Except wild Wales.'

To however late an epoch that prophecy belongs, what a feeling for style, at any rate, it manifests! And the same thing may be said of the famous Welsh triads.[20] We may put aside all the vexed questions as to their greater or less antiquity, and still what important witness they bear to the genius for literary style of the people who produced them!

Now we English undoubtedly exhibit very often the want of sense for style of our German kinsmen. The churchyard lines I just now quoted afford an instance of it; but the whole branch of our literature, — and a very popular branch of it is, our hymnology, — to which those lines are to be referred, is one continued instance of it. Our German kinsmen and we are the great people for hymns. The Germans are very proud of their hymns, and we are very

be mythical. Ossian, or Oisin, was a legendary Irish hero of the 3rd century, according to Gaelic literature.

18. From the *Black Book of Caermarthen*. *Cf.* the reproduction by J.G.Evans, 1906, p.67, ll.12–13.

19. In Sect.I of *On the Study of Celtic Literature*. For the epitaph, *cf.* Kuno Meyer, *Selections from Ancient Irish Poetry*, ed. 1928, p.88.

20. A triad was a brief composition (found in ancient Irish as well as Welsh) listing three related things; for example, 'Three treacherous invasions of the Isle of Britain — the *Gwyddyl Coch o'r Iwerddon*, who came into Alban; the men of Llychlyn, and the Saesons.' Triads are discussed and translated in the works by Meyer and Skene cited in notes 19 and 29.

proud of ours; but it is hard to say which of the two, the German hymn-book or ours, has least poetical worth in itself, or does least to prove genuine poetical power in the people producing it. I have not a word to say against Sir Roundell Palmer's choice and arrangement of materials for his *Book of Praise*;[21] I am content to put them on a level (and that is giving them the highest possible rank) with Mr. Palgrave's choice and arrangement of materials for his *Golden Treasury*;[22] but yet no sound critic can doubt that, so far as poetry is concerned, while the *Golden Treasury* is a monument of a nation's strength, the *Book of Praise* is a monument of a nation's weakness. Only the German race, with its want of quick instinctive tact, of delicate, sure perception, could have invented the hymn as the Germans and we have it; and our non-German turn for style, — style, of which the very essence is a certain happy fineness and truth of poetical perception, — could not but desert us when our German nature carried us into a kind of composition which can please only when the perception is somewhat blunt. Scarcely any one of us ever judges our hymns fairly, because works of this kind have two sides, — their side for religion and their side for poetry. Everything which has helped a man in his religious life, everything which associates itself in his mind with the growth of that life, is beautiful and venerable to him; in this way, productions of little or no poetical value, like the German hymns and ours, may come to be regarded as very precious. Their worth in this sense, as means by which we have been edified, I do not for a moment hold cheap; but there is an edification proper to all our stages of development, the highest as well as the lowest, and it is for man to press on towards the highest stages of his development, with the certainty that for those stages, too, means of edification will not be found wanting. Now certainly it is a higher state of development when our fineness of perception is keen than when it is blunt. And if, — whereas the Semitic genius placed its highest spiritual life in the religious sentiment, and made that the basis of its poetry, — the Indo-European genius places its highest spiritual life in the imaginative reason, and makes that the basis of its poetry, we are none the better for wanting the perception to discern a natural law, which is, after all, like every natural law, irresistible; we are none the better for trying to make ourselves Semitic, when Nature has made us Indo-European, and to shift the basis of our poetry. We may mean well; all manner of good may happen to us on the road we go; but we are not on our real right road, the road we must in the end follow.

That is why, when our hymns betray a false tendency by losing a power which accompanies the poetical work of our race on our other more suitable lines, the indication thus given is of great value and instructiveness for us. One of our main gifts for poetry deserts us in our hymns, and so gives us a hint as to the one true basis for the spiritual work of an Indo-European people, which the Germans, who have not this particular gift of ours, do not and cannot get in this way, though they may get it in others. It is worth noticing that the masterpieces of the spiritual work of Indo-Europeans, taking the pure religious sentiment, and not the imaginative reason, for their basis, are works like the *Imitation*, the *Dies Iræ*, the *Stabat Mater*,[23] — works clothing themselves in the

21. Sir Roundell Palmer (1812–95), lord chancellor, and man of letters *The Book of Praise, from the Best English Hymn Writers*, appeared in 1864.

22. See Arnold's essay, 'The Literary Influence of Academies,' note 40.

23. For the *Imitation*, see the essay on Marcus Aurelius, note 2. The *Dies Irae* ('day of wrath') is a famous Latin hymn on the Day of Judgment. The *Stabat Mater* ('the mother was standing') is a 13th-century Latin hymn on the sorrows of Mary, so called from its first two words.

Middle-Age Latin, the genuine native voice of no Indo-European nation. The perfection of their kind, but that kind not perfectly legitimate, they take a language not perfectly legitimate; as if to show, that when mankind's Semitic age is once passed, the age which produced the great incomparable monuments of the pure religious sentiment, the books of Job and Isaiah, the Psalms, — works truly to be called inspired, because the same divine power which worked in those who produced them works no longer, — as if to show us, that, after this primitive age, we Indo-Europeans must feel these works without attempting to remake them; and that our poetry, if it tries to make itself simply the organ of the religious sentiment, leaves the true course, and must conceal this by not speaking a living language. The moment it speaks a living language, and still makes itself the organ of the religious sentiment only, as in the German and English hymns, it betrays weakness; — the weakness of all false tendency.

But if, by attending to the Germanism in us English and to its works, one has come to doubt whether we, too, are not thorough Germans by genius and with the German deadness to style, one has only to repeat to oneself a line of Milton, — a poet intoxicated with the passion for style as much as Taliesin or Pindar, — to see that we have another side to our genius beside the German one. Whence do we get it? The Normans may have brought in among us the Latin sense for rhetoric and style, — for, indeed, this sense goes naturally with a high spirit and a strenuousness like theirs, — but the sense for style which English poetry shows is something finer than we could well have got from a people so positive and so little poetical as the Normans; and it seems to me we may much more plausibly derive it from a root of the poetical Celtic nature in us.

Its chord of penetrating passion and melancholy, again, its *Titanism* as we see it in Byron, — what other European poetry possesses that like the English, and where do we get it from? The Celts, with their vehement reaction against the despotism of fact, with their sensuous nature, their manifold striving, their adverse destiny, their immense calamities, the Celts are the prime authors of this vein of piercing regret and passion, — of this Titanism in poetry. A famous book, Macpherson's *Ossian*,[24] carried in the last century this vein like a flood of lava through Europe. I am not going to criticise Macpherson's *Ossian* here. Make the part of what is forged, modern, tawdry, spurious, in the book, as large as you please; strip Scotland, if you like, of every feather of borrowed plumes which on the strength of Macpherson's *Ossian* she may have stolen from that *vetus et major Scotia*,[25] the true home of the Ossianic poetry, Ireland; I make no objection. But there will still be left in the book a residue with the very soul of the Celtic genius in it, and which has the proud distinction of having brought this soul of the Celtic genius into contact with the genius of the nations of modern Europe, and enriched all our poetry by it. Woody Morven, and echoing Sora, and Selma with its silent halls! — we all owe them a debt of gratitude, and when we are unjust enough to forget it, may the Muse forget us! Choose any one of the better passages in Macpherson's *Ossian* and you can see even at this time

24. James Macpherson (1736–96), Scottish man of letters, published anonymously in 1760 *Fragments of Ancient Poetry Collected in the Highlands of Scotland and Translated from the Gaelic or Erse Language*; in 1762 and 1763 appeared *Fingal* and *Temora*, epic poems that he alleged to have translated from the Gaelic of the poet Ossian. It has been shown that he greatly amplified his original material to make his 'Ossianic forgeries.' There did exist, however, a great legend of Ossian and Fingal in Scotland.

25. 'old and greater Scotland.'

of day what an apparition of newness and power such a strain must have been to the eighteenth century: — [26]

'I have seen the walls of Balclutha, but they were desolate. The fox looked out from the windows, the rank grass of the wall waved round her head. Raise the song of mourning, O bards, over the land of strangers. They have but fallen before us, for one day we must fall. Why dost thou build the hall, son of the winged days? Thou lookest from thy towers today; yet a few years, and the blast of the desert comes; it howls in thy empty court, and whistles round thy half-worn shield. Let the blast of the desert come! we shall be renowned in our day.'

All Europe felt the power of that melancholy; but what I wish to point out is, that no nation of Europe so caught in its poetry the passionate penetrating accent of the Celtic genius, its strain of Titanism, as the English. Goethe, like Napoleon, felt the spell of Ossian very powerfully, and he quotes a long passage from him in his *Werther*.[27] But what is there Celtic, turbulent, and Titanic about the German Werther, that amiable, cultivated, and melancholy young man, having for his sorrow and suicide the perfectly definite motive that Lotte cannot be his? Faust, again, has nothing unaccountable, defiant, and Titanic in him; his knowledge does not bring him the satisfaction he expected from it, and meanwhile he finds himself poor and growing old, and baulked of the palpable enjoyment of life; and here is the motive for Faust's discontent. In the most energetic and impetuous of Goethe's creations, — his *Prometheus*, — it is not Celtic self-will and passion, it is rather the Germanic sense of justice and reason, which revolts against the despotism of Zeus. The German *Sehnsucht* [28] itself is a wistful, soft, tearful longing, rather than a struggling, fierce, passionate one. But the Celtic melancholy is struggling, fierce, passionate; to catch its note, listen to Llywarch Hen in old age, addressing his crutch: — [29]

'O my crutch! is it not autumn, when the fern is red, the water-flag yellow? Have I not hated that which I love?

'O my crutch! is it not winter-time now, when men talk together after that they have drunken? Is not the side of my bed left desolate?

'O my crutch! is it not spring, when the cuckoo passes through the air, when the foam sparkles on the sea? The young maidens no longer love me.

'O my crutch! is it not the first day of May? The furrows, are they not shining; the young corn, is it not springing? Ah! the sight of thy handle makes me wroth.

'O my crutch! stand straight, thou wilt support me the better; it is very long since I was Llywarch.

'Behold old age, which makes sport of me, from the hair of my head to my teeth, to my eyes, which women loved.

'The four things I have all my life most hated fall upon me together, — coughing and old age, sickness and sorrow.

'I am old, I am alone, shapeliness and warmth are gone from me; the couch of

26. The quotation (Arnold has omitted four sentences that occur within the passage) is from 'Carthon: a Poem,' that appeared in Macpherson's 1760 volume. The reference above to Morven, Sora (Macpherson has *Lora*), and Selma, is based on the same poem. *Cf.* Macpherson, *The Poems of Ossian*, ed. Sharp (1896), pp.175–76.

27. Goethe's melancholy *Die Leiden des jungen Werthers* (1774): 'The Sorrows of Young Werther.' In Bk.II, Letter 28 ('Am 12. October') begins with a sentimental passage that starts thus: 'Ossian has superseded Homer in my heart.' Later several passages from Ossian are translated. Goethe's *Prometheus*, written by 1773, is an unfinished 'dramatic fragment.'

28. 'longing.'

29. From *The Red Book of Hergest*, XI. *Cf.* W.F. Skene, *The Four Ancient Books of Wales* (Edinburgh, 1868), II,259ff. For a translation of the poem differing somewhat from the one quoted by Arnold, see *ibid.*, I,327–29.

honour shall be no more mine; I am miserable, I am bent on my crutch.

'How evil was the lot allotted to Llywarch, the night when he was brought forth! sorrows without end, and no deliverance from his burden.'

There is the Titanism of the Celt, his passionate, turbulent, indomitable reaction against the despotism of fact; and of whom does it remind us so much as of Byron? [30]

'The fire which on my bosom preys
Is lone as some volcanic isle;
No torch is kindled at its blaze;
A funeral pile!'

Or, again: —

'Count o'er the joys thine hours have seen,
Count o'er thy days from anguish free,
And know, whatever thou hast been,
'Tis something better not to be.'

One has only to let one's memory begin to fetch passages from Byron striking the same note as that passage from Llywarch Hen, and she will not soon stop. And all Byron's heroes, not so much in collision with outward things, as breaking on some rock of revolt and misery in the depths of their own nature; Manfred, self-consumed, fighting blindly and passionately with I know not what, having nothing of the consistent development and intelligible motive of Faust, — Manfred, Lara, Cain,[31] what are they but Titanic? Where in European poetry are we to find this Celtic passion of revolt so warm-breathing, puissant, and sincere; except perhaps in the creation of a yet greater poet than Byron, but an English poet, too, like Byron, — in the Satan of Milton? [32]

30. The two quotations are from 'On This Day I Complete My Thirty-Sixth Year' (1824) and 'Euthanasia' (1812).

31. Manfred, Lara, and Cain are the heroes of Byron's poems with those names.

32. *Paradise Lost*, i,105–09.

. . . 'What though the field be lost?
All is not lost; the unconquerable will,
And study of revenge, immortal hate,
And courage never to submit or yield,
And what is else not to be overcome.'

There, surely, speaks a genius to whose composition the Celtic fibre was not wholly a stranger!

And as, after noting the Celtic Pindarism or power of style present in our poetry, we noted the German flatness coming in in our hymns, and found here a proof of our compositeness of nature; so, after noting the Celtic Titanism or power of rebellious passion in our poetry, we may also note the Germanic patience and reasonableness in it, and get in this way a second proof how mixed a spirit we have. After Llywarch Hen's: —

'How evil was the lot allotted to Llywarch, the night when he was brought forth' —

after Byron's: —

'Count o'er the joys thine hours have

take this of Southey's, in answer to the question whether he would like to have his youth over again: — [33]

'Do I regret the past?
Would I live o'er again
The morning hours of life?
Nay, William, nay, not so!
Praise be to God who made me what I am,
Other I would not be.'

There we have the other side of our being; the Germanic goodness, docility, and fidelity to nature, in place of the Celtic Titanism.

The Celt's quick feeling for what is

33. From Robert Southey's (1774–1843) 'To a Friend, Enquiring if I Would Live over my Youth Again.' These are ll.1–4,12–13. (Southey wrote 'Him' in place of 'God.')

noble and distinguished gave his poetry style; his indomitable personality gave it pride and passion; his sensibility and nervous exaltation gave it a better gift still, the gift of rendering with wonderful felicity the magical charm of nature. The forest solitude, the bubbling spring, the wild flowers, are everywhere in romance. They have a mysterious life and grace there; they are Nature's own children, and utter her secret in a way which makes them something quite different from the woods, waters, and plants of Greek and Latin poetry. Now of this delicate magic, Celtic romance is so pre-eminent a mistress, that it seems impossible to believe the power did not come into romance from the Celts.[34] Magic is just the word for it, — the magic of nature; not merely the beauty of nature, — that the Greeks and Latins had; not merely an honest smack of the soil, a faithful realism, — that the Germans had; but the intimate life of Nature, her weird power and her fairy charm. As the Saxon names of places, with the pleasant wholesome smack of the soil in them, — Weathersfield, Thaxted, Shalford, — are to the Celtic names of places, with their penetrating, lofty beauty, — Velindra, Tyntagel, Caernarvon, — so is the homely realism of German and Norse nature to the fairy-like loveliness of Celtic nature. Gwydion wants a wife for his pupil: 'Well,' says Math, 'we will seek, I and thou, by charms and illusions, to form a wife for him out of flowers. So they took the blossoms of the oak, and the blossoms of the broom, and the blossoms of the meadow-sweet, and produced from them a maiden, the fairest and most graceful that man ever saw. And they baptized her, and gave her the name of Flower-Aspect.'[35] Celtic romance is full of exquisite touches like that, showing the delicacy of the Celt's feeling in these matters, and how deeply Nature lets him come into her secrets. The quick dropping of blood is called 'faster than the fall of the dewdrop from the blade of reed-grass upon the earth, when the dew of June is at the heaviest.' And thus is Olwen described:[36] 'More yellow was her hair than the flower of the broom, and her skin was whiter than the foam of the wave, and fairer were her hands and her fingers than the blossoms of the wood-anemony amidst the spray of the meadow fountains.' For loveliness it would be hard to beat that; and for magical clearness and nearness take the following: —[37]

'And in the evening Peredur entered a valley, and at the head of the valley he came to a hermit's cell, and the hermit welcomed him gladly, and there he spent the night. And in the morning he arose, and when he went forth, behold, a shower of snow had fallen the night before, and a hawk had killed a wild-fowl in front of the cell. And the noise of the horse scared the hawk away, and a raven alighted upon the bird. And Peredur stood and compared the blackness of the raven, and the whiteness of the snow, and the redness of the blood, to the hair of the lady whom best he loved, which was blacker than the raven, and to her skin, which was whiter than the snow, and to her two cheeks, which were redder than the blood upon the snow appeared to be.'

And this, which is perhaps less striking, is not less beautiful: —[38]

'And early in the day Geraint and Enid

34. Rhyme, — the most striking characteristic of our modern poetry as distinguished from that of the ancients, and a main source, to our poetry, of its magic and charm, of what we call its *romantic element*, — rhyme itself, all the weight of evidence tends to show, comes into our poetry from the Celts. [Arnold's note.] See also Notes.

35. *Cf.* Lady Charlotte Guest's *Mabinogion* (Everyman ed.), 'Math the Son of Mathonwy,' pp.73–74.

36. *Cf. ibid.*, 'Kilwch and Olwen,' p.110.

37. *Cf. ibid.*, 'Peredur the Son of Evrawc,' p.192.

38. *Cf. ibid.*, 'Geraint the Son of Erbin,' pp.245–46. The sentence about the half-flaming tree is quoted from another story: see *ibid.*, 'Peredur the Son of Evrawc,' p.203.

left the wood, and they came to an open country, with meadows on one hand and mowers mowing the meadows. And there was a river before them, and the horses bent down and drank the water. And they went up out of the river by a steep bank, and there they met a slender stripling with a satchel about his neck; and he had a small blue pitcher in his hand, and a bowl on the mouth of the pitcher.'

And here the landscape, up to this point so Greek in its clear beauty, is suddenly magicalised by the romance touch: —

'And they saw a tall tree by the side of the river, one-half of which was in flames from the root to the top, and the other half was green and in full leaf.'

Magic is the word to insist upon, — a magically vivid and near interpretation of nature; since it is this which constitutes the special charm and power of the effect I am calling attention to, and it is for this that the Celt's sensibility gives him a peculiar aptitude. But the matter needs rather fine handling, and it is easy to make mistakes here in our criticism. In the first place, Europe tends constantly to become more and more one community, and we tend to become Europeans instead of merely Englishmen, Frenchmen, Germans, Italians; so whatever aptitude or felicity one people imparts into spiritual work, gets imitated by the others, and thus tends to become the common property of all. Therefore anything so beautiful and attractive as the natural magic I am speaking of, is sure, nowadays, if it appears in the productions of the Celts, or of the English, or of the French, to appear in the productions of the Germans also, or in the productions of the Italians; but there will be a stamp of perfectness and inimitableness about it in the literatures where it is native, which it will not have in the literatures where it is not native. Novalis or Rückert,[39] for instance, have their eye fixed on nature, and have undoubtedly a feeling for natural magic; a rough-and-ready critic easily credits them and the Germans with the Celtic fineness of tact, the Celtic nearness to Nature and her secret; but the question is whether the strokes in the German's picture of nature[40] have ever the indefinable delicacy, charm, and perfection of the Celt's touch in the pieces I just now quoted, or of Shakspeare's touch in his daffodil,[41] Wordsworth's in his cuckoo,[42] Keats's in his Autumn,[43] Obermann's in his mountain birch-tree or his Easter daisy among the Swiss farms.[44] To decide where the gift for natural magic originally lies, whether it is properly Celtic or Germanic, we must decide this question.

In the second place, there are many ways of handling nature, and we are here only concerned with one of them; but a rough-and-ready critic imagines that it is all the same so long as nature is handled at all, and fails to draw the needful distinction between modes of handling her. But these modes are many; I will mention four of them now: there is the conventional way of handling nature, there is the faithful way of handling nature, there is the Greek way of handling nature, there is the magical way of handling nature. In all these three last the eye is on the object, but with a difference; in

39. Novalis is the pen-name of Friedrich Leopold von Hardenberg (1772–1801), German writer called the prophet of Romanticism. Friedrich Ruckert (1788–1866), German writer. See Carlyle's essay on Novalis.

40. Arnold has a footnote here. See Notes.

41. For the references to Shakespeare's daffodils, Wordsworth's cuckoo, and Senancour's birch tree, see the Notes for the selection on the grand style. For the daffodil passage, *cf. The Winter's Tale*, IV.iii.118–20.

42. The allusion is probably to 'The Solitary Reaper' (*cf.* the Notes for the selection on the grand style); Wordsworth wrote also a poem 'To the Cuckoo.'

43. Keats's 'Ode to Autumn,' beginning 'Season of mists and mellow fruitfulness!'

44. For Senancour's *Obermann*, see the essay on the function of criticism, note 35. The birch-tree passage occurs in *Obermann*, Letter XI; that on the Easter-daisy at the end, in Letter XCI. See *Obermann*, ed. 1912, I,58; II,246.

the faithful way of handling nature, the eye is on the object, and that is all you can say; in the Greek, the eye is on the object, but lightness and brightness are added; in the magical, the eye is on the object, but charm and magic are added. In the conventional way of handling nature, the eye is not on the object; what that means we all know, we have only to think of our eighteenth century poetry: —[45]

'As when the moon, refulgent lamp of night' —

to call up any number of instances. Latin poetry supplies plenty of instances too; if we put this from Propertius's *Hylas*: —[46]

. . . 'manus heroum . . .
Mollia composita litora fronde tegit' —

side by side the line of Theocritus by which it was suggested: —[47]

'λειμὼν γάρ σφιν ἔκειτο μέγας, στιβάδεσσιν ὄνειαρ' —

we get at the same moment a good specimen both of the conventional and of the Greek way of handling nature. But from our own poetry we may get specimens of the Greek way of handling nature, as well as of the conventional: for instance, Keats's: —[48]

'What little town, by river or seashore,
Or mountain-built with quiet citadel,
Is emptied of its folk, this pious morn?'

is Greek, as Greek as a thing from Homer or Theocritus; it is composed with the eye on the object, a radiancy and light clearness being added. German poetry abounds in specimens of the faithful way of handling nature; an excellent example is to be found in the stanzas called *Zueignung*,[49] prefixed to Goethe's poems; the morning walk, the mist, the dew, the sun, are as faithful as they can be, they are given with the eye on the object, but there the merit of the work, as a handling of nature, stops; neither Greek radiance nor Celtic magic is added; the power of these is not what gives the poem in question its merit, but a power of quite another kind, a power of moral and spiritual emotion. But the power of Greek radiance Goethe could give to his handling of nature, and nobly too, as any one who will read his *Wanderer*, — the poem in which a wanderer falls in with a peasant woman and her child by their hut, built out of the ruins of a temple near Cuma, — may see. Only the power of natural magic Goethe does not, I think, give; whereas Keats passes at will from the Greek power to that power which is, as I say, Celtic; from his: —

'What little town, by river or seashore' —

to his: —[50]

'White hawthorn and the pastoral eglantine,
Fast-fading violets cover'd up in leaves' —

or his: —

. . . 'magic casements, opening on the foam
Of perilous seas, in fairy lands forlorn' —

in which the very same note is struck as in those extracts which I quoted from Celtic romance, and struck with authentic and unmistakable power.

Shakspeare, in handling nature, touches this Celtic note so exquisitely, that perhaps one is inclined to be always looking for the Celtic note in him, and not to recognise his Greek note when it comes. But

45. The *Iliad*, VIII,687, in the translation by Alexander Pope (1688–1744).
46. Propertius, *Elegies*, I,xx,21–22: '. . . the band of heroes covered the pleasant beach with leaves and branches woven together.'
47. Theocritus, *Idylls*, XIII,34: 'For a great meadow lay before them, rich with rushes for beds.' The present reading gives ἔκειτο, μέγα. This would make μέγα modify ὄνειαρ.
48. From the 'Ode on a Grecian Urn.'
49. 'Dedication.'
50. The two quotations following are from Keats's 'Ode to a Nightingale.'

if one attends well to the difference between the two notes, and bears in mind, to guide one, such things as Virgil's 'moss-grown springs and grass softer than sleep': —[51]

'Muscosi fontes et somno mollior herba' —

as his charming flower-gatherer, who: —[52]

'Pallentes violas et summa papavera carpens
Narcissum et florem jungit bene olentis anethi' —

as his quinces and chestnuts: —[53]

. . . 'cana legam tenera lanugine mala
Castaneasque nuces' . . .

then, I think, we shall be disposed to say that in Shakspeare's: —[54]

'I know a bank where the wild thyme blows,
Where oxlips and the nodding violet grows,
Quite over-canopied with luscious woodbine,
With sweet musk-roses and with eglantine' —

it is mainly a Greek note which is struck. Then, again in his: —[55]

. . . 'look how the floor of heaven
Is thick inlaid with patines of bright gold!'

we are at the very point of transition from the Greek note to the Celtic; there is the Greek clearness and brightness, with the Celtic aërialness and magic coming in. Then we have the sheer, inimitable Celtic note in passages like this: —[56]

'Met we on hill, in dale, forest or mead,
By paved fountain or by rushy brook,
Or in the beached margent of the sea' —

or this, the last I will quote: —[57]

'The moon shines bright. In such a night as this,
When the sweet wind did gently kiss the trees,
And they did make no noise, in such a night
Troilus, methinks, mounted the Trojan walls —

. . . 'in such a night
Did Thisbe fearfully o'ertrip the dew —

. . . 'in such a night
Stood Dido, with a willow in her hand,
Upon the wild sea-banks, and waved her love
To come again to Carthage.'

And those last lines of all are so drenched and intoxicated with the fairy-dew of that natural magic which is our theme, that I cannot do better than end with them.

And now, with the pieces of evidence in our hand, let us go to those who say it is vain to look for Celtic elements in any Englishman, and let us ask them, first, if they seize what we mean by the power of natural magic in Celtic poetry; secondly, if English poetry does not eminently exhibit this power; and, thirdly, where they suppose English poetry got it from?

I perceive that I shall be accused of having rather the air, in what I have said, of denying this and that gift to the Germans, and of establishing our difference from them a little ungraciously and at their expense. The truth is, few people have any real care to analyse closely in their criticism; they merely employ criticism as a means for heaping all praise on what they like, and all blame on what they dislike. Those of us (and they are many) who owe a great debt of gratitude to the Ger-

51. Virgil, *Eclogues*, vii,45.
52. *Ibid.*, ii,47–48: 'Plucking pale violets and the tallest poppies, she pleasingly adds the narcissus and the flower of the fragrant anise.'

man spirit and to German literature, do not like to be told of any powers being lacking there; we are like the young ladies who think the hero of their novel is only half a hero unless he has all perfections united in him. But nature does not work, either in heroes or races, according to the young ladies' notion. We all are what we are, the hero and the great nation are what they are, by our limitations as well as by our powers, by lacking something as well as by possessing something. It is not always gain to possess this or that gift, or loss to lack this or that gift. Our great, our only first-rate body of contemporary poetry is the German; the grand business of modern poetry, — a moral interpretation, from an independent point of view, of man and the world, — it is only German poetry, Goethe's poetry, that has, since the Greeks, made much way with. Campbell's[58] power of style, and the natural magic of Keats and Wordsworth, and Byron's Titanic personality, may be wanting to this poetry; but see what it has accomplished without them! How much more than Campbell with his power of style, and Keats and Wordsworth with their natural magic, and Byron with his Titanic personality! Why, for the immense serious task it had to perform, the steadiness of German poetry, its going near the ground, its patient fidelity to nature, its using great plainness of speech, poetical drawbacks in one point of view, were safeguards and helps in another. The plainness and earnestness of the two lines I have already quoted from Goethe: —

'Es bildet ein Talent sich in der Stille,
Sich ein Character in dem Strom der Welt' —

compared with the play and power of Shakspeare's style or Dante's, suggest at once the difference between Goethe's task and theirs, and the fitness of the faithful laborious German spirit for its own task. Dante's task was to set forth the lesson of the world from the point of view of mediæval Catholicism; the basis of spiritual life was given, Dante had not to make this anew. Shakspeare's task was to set forth the spectacle of the world when man's spirit re-awoke to the possession of the world at the Renaissance. The spectacle of human life, left to bear its own significance and tell its own story, but shown in all its fulness, variety, and power, is at that moment the great matter; but, if we are to press deeper, the basis of spiritual life is still at that time the traditional religion, reformed or unreformed, of Christendom, and Shakspeare has not to supply a new basis. But when Goethe came, Europe had lost her basis of spiritual life; she had to find it again; Goethe's task was, — the inevitable task for the modern poet henceforth is, — as it was for the Greek poet in the days of Pericles, not to preach a sublime sermon on a given text like Dante, not to exhibit all the kingdoms of human life and the glory of them like Shakspeare, but to interpret human life afresh, and to supply a new spiritual basis to it. This is not only a work for style, eloquence, charm, poetry; it is a work for science; and the scientific, serious German spirit, not carried away by this and that intoxication of ear, and eye, and self-will, has peculiar aptitudes for it.

We, on the other hand, do not necessarily gain by the commixture of elements in us; we have seen how the clashing of natures in us hampers and embarrasses our behaviour; we might very likely be more attractive, we might very likely be more successful, if we were all of a piece. Our want of sureness of taste, our eccentricity, come in great measure, no doubt, from our not being all of a piece, from our having no fixed, fatal, spiritual centre of gravity. The Rue de Rivoli is one thing, and Nuremberg is another, and Stonehenge[59] is another; but we have a turn for

58. Thomas Campbell (1777–1844).

59. The Rue de Rivoli is a street in Paris, famous for shops and hotels; Nuremberg is a city of

all three, and lump them all up together. Mr. Tom Taylor's [60] translations from Breton poetry offer a good example of this mixing; he has a genuine feeling for these Celtic matters, and often, as in the *Evil Tribute of Nomenoë*, or in *Lord Nann and the Fairy*, he is, both in movement and expression, true and appropriate; but he has a sort of Teutonism and Latinism in him too, and so he cannot forbear mixing with his Celtic strain such disparates as: —

'Twas mirk, mirk night, and the water bright
Troubled and drumlie flowed' —

which is evidently Lowland-Scotchy; or as: —

'Foregad, but thou'rt an artful hand!'

which is English-stagey; or as: —

'To Gradlon's daughter, bright of blee,
Her lover he whispered tenderly —
Bethink thee, sweet Dahut! the key!'

which is Anacreontic [61] in the manner of Tom Moore.[62] Yes, it is not a sheer advantage to have several strings to one's bow; if we had been all German, we might have had the science of Germany; if we had been all Celtic, we might have been popular and agreeable; if we had been all Latinised, we might have governed Ireland as the French govern Alsace, without getting ourselves detested. But now we have Germanism enough to make us Philistines, and Normanism enough to make us imperious, and Celtism enough to make us self-conscious and awkward; but German fidelity to Nature, and Latin precision and clear reason, and Celtic quick-wittedness and spirituality, we fall short of. Nay, perhaps, if we are doomed to perish (Heaven avert the omen!), we shall perish by our Celtism, by our self will and want of patience with ideas, our inability to see the way the world is going; and yet those very Celts, by our affinity with whom we are perishing, will be hating and upbraiding us all the time.

This is a somewhat unpleasant view to take of the matter; but if it is true, its being unpleasant does not make it any less true, and we are always the better for seeing the truth. What we here see is not the whole truth, however. So long as this mixed constitution of our nature possesses us, we pay it tribute and serve it. So soon as we possess it, it pays us tribute and serves us. So long as we are blindly and ignorantly rolled about by the forces of our nature, their contradiction baffles us and lames us; so soon as we have clearly discerned what they are, and begun to apply to them a law of measure, control, and guidance, they may be made to work for our good and to carry us forward. Then we may have the good of our German part, the good of our Latin part, the good of our Celtic part; and instead of one part clashing with the other, we may bring it in to continue and perfect the other, when the other has given us all the good it can yield, and by being pressed further, could only give us its faulty excess. Then we may use the German faithfulness to Nature to give us science, and to free us from insolence and self-will; we may use the Celtic quickness of perception to give

considerable size and stability, in Germany; Stonehenge is an ancient spot in southern England, near Salisbury, and dominated by immense stones arranged for Druid worship by the prehistoric natives. Arnold uses these places to typify the French or Latin good taste and decisiveness, the German scientific, serious steadiness, and the Celtic 'spirituality.'

60. Tom Taylor (1817–80), man of letters. His *Ballads and Songs of Brittany* appeared in 1865; the two ballads here named in italics are included in the book: for the three quotations, see pp.111,171,33. Brittany is the English name for Bretagne (formerly called Armorica), the northwest province of France across the channel from Plymouth. Its people were of Celtic origin, and were called Bretons.

61. Similar to the light, graceful style of the Greek lyric poet Anacreon (563?–478 B.C.).

62. Thomas Moore (1779–1852), Irish poet, friend of Byron.

us delicacy, and to free us from hardness and Philistinism; we may use the Latin decisiveness to give us strenuous clear method, and to free us from fumbling and idling. Already, in their untrained state, these elements give signs, in our life and literature, of their being present in us, and a kind of prophecy of what they could do for us if they were properly observed, trained, and applied. But this they have not yet been; we ride one force of our nature to death: we will be nothing but Anglo-Saxons in the Old World or in the New; and when our race has built Bold Street, Liverpool, and pronounced it very good, it hurries across the Atlantic, and builds Nashville, and Jacksonville, and Milledgeville, and thinks it is fulfilling the designs of Providence in an incomparable manner. But true Anglo-Saxons, simply and sincerely rooted in the German nature, we are not and cannot be: all we have accomplished by our onesidedness is to blur and confuse the natural basis in ourselves altogether, and to become something eccentric, unattractive, and inharmonious.

A man of exquisite intelligence and charming character, the late Mr. Cobden,[63] used to fancy that a better acquaintance with the United States was the grand panacea for us; and once in a speech he bewailed the inattention of our seats of learning to them, and seemed to think that if our ingenuous youth at Oxford were taught a little less about the Ilissus, and a little more about Chicago, we should all be the better for it. Chicago has its claims upon us, no doubt; but it is evident that from the point of view to which I have been leading, a stimulation of our Anglo-Saxonism, such as is intended by Mr. Cobden's proposal, does not appear the thing most needful for us; seeing our American brothers themselves have rather, like us, to try and moderate the flame of Anglo-Saxonism in their own breasts, than to ask us to clap the bellows to it in ours. So I am inclined to beseech Oxford, instead of expiating her over-addiction to the Ilissus by lectures on Chicago, to give us an expounder for a still more remote-looking object than the Ilissus, — the Celtic languages and literature. And yet why should I call it remote? if, as I have been labouring to show, in the spiritual frame of us English ourselves, a Celtic fibre, little as we may have ever thought of tracing it, lives and works. *Aliens in speech, in religion, in blood!* said Lord Lyndhurst,[64] the philologists have set him right about the speech, the physiologists about the blood; and perhaps, taking religion in the wide but true sense of our whole spiritual activity, those who have followed what I have been saying here will think that the Celt is not so wholly alien to us in religion. But, at any rate, let us consider that of the shrunken and diminished remains of this great primitive race, all, with one insignificant exception, belongs to the English empire; only Brittany is not ours; we have Ireland, the Scotch Highlands, Wales, the Isle of Man, Cornwall. They are a part of ourselves, we are deeply interested in knowing them, they are deeply interested in

63. Richard Cobden (1804–65), liberal politician and writer. An article in the London Times had shown ignorance of American geography. Cobden commented: 'When I was at Athens I sallied out one summer morning to see the far-famed river, the Ilyssus, and after walking for some hundred yards up what appeared to be the bed of a winter torrent, I came up to a number of Athenian laundresses, and I found they had dammed up this far-famed classic river, and that they were using every drop of water for their linen and such sanitary purposes I say, Why should not the young gentlemen who are taught all about the geography of the Ilyssus know something about the geography of the Mississippi, the Ohio, and the Missouri?' See John Morley, *The Life of Richard Cobden*, ed. 1883, p.610.

64. John Singleton Copley, Baron Lyndhurst (1772–1863), lord chancellor. He was charged with having used this phrase in the debates in the House of Lords in 1836, but denied having used it. See Sir Theodore Martin, *Lord Lyndhurst*, ed. 1884, p.346.

being known by us; and yet in the great and rich universities of this great and rich country there is no chair of Celtic, there is no study or teaching of Celtic matters; those who want them must go abroad for them. It is neither right nor reasonable that this should be so. Ireland has had in the last half century a band of Celtic students, — a band with which death, alas! has of late been busy, — from whence Oxford or Cambridge might have taken an admirable professor of Celtic; and with the authority of a university chair, a great Celtic scholar, on a subject little known, and where all would have readily deferred to him, might have by this time doubled our facilities for knowing the Celt, by procuring for this country Celtic documents which were inaccessible here, and preventing the dispersion of others which were accessible. It is not much that the English Government does for science or literature; but if Eugene O'Curry,[65] from a chair of Celtic at Oxford, had appealed to the Government to get him copies or the originals of the Celtic treasures in the Burgundian Library at Brussels, or in the library of St. Isidore's College at Rome, even the English Government could not well have refused him. The invaluable Irish manuscripts in the Stowe Library the late Sir Robert Peel proposed, in 1849, to buy for the British Museum; Lord Macaulay, one of the trustees of the Museum, declared, with the confident shallowness which makes him so admired by public speakers and leading-article writers, and so intolerable to all searchers for truth, that he saw nothing in the whole collection worth purchasing for the Museum, except the correspondence of Lord Melville[66] on the American war. That is to say, this correspondence of Lord Melville's was the only thing in the collection about which Lord Macaulay himself knew or cared. Perhaps an Oxford or Cambridge professor of Celtic might have been allowed to make his voice heard, on a matter of Celtic manuscripts, even against Lord Macaulay. The manuscripts were bought by Lord Ashburnham,[67] who keeps them shut up, and will let no one consult them (at least up to the date when O'Curry published his *Lectures* he did so) 'for fear an actual acquaintance with their contents should decrease their value as matter of curiosity at some future transfer or sale.' Who knows? Perhaps an Oxford professor of Celtic might have touched the flinty heart of Lord Ashburnham.

At this moment, when the narrow Philistinism, which has long had things its own way in England, is showing its natural fruits, and we are beginning to feel ashamed, and uneasy, and alarmed at it; now, when we are becoming aware that we have sacrificed to Philistinism culture, and insight, and dignity, and acceptance, and weight among the nations, and hold on events that deeply concern us, and control of the future, and yet that it cannot even give us the fool's paradise it promised us, but is apt to break down, and to leave us with Mr. Roebuck's and Mr. Lowe's[68] laudations of our matchless happiness, and the largest circulation in the world assured to the *Daily Telegraph*,[69] for our only

65. Eugene O'Curry (1796–1862), Irish scholar. He copied and arranged Irish manuscripts, and was the first professor of Irish history and archaeology in the Catholic University at Dublin. Arnold had paid high tribute to him in Section I of this essay.

66. Henry Dundas, Viscount Melville (1742–1811), statesman, was a vigorous supporter of Lord North's policy toward the American colonies.

67. Bertram, 4th Earl of Ashburnham (1797–1878), collected an extensive library of early and rare books and MSS. His Stowe Collection was purchased by the British Government in July 1883, for £45,000.

68. For Roebuck see the essay on the function of criticism, note 22. Robert Lowe (1811–92), politician, and, in 1880, Viscount Sherbrooke. Here, and elsewhere, Arnold ridicules these two men as narrow-minded Philistine spokesmen for the prosperous *middle* classes. See also 'Sweetness and Light.'

69. The *Daily Telegraph* was the London morning newspaper with the largest circulation

comfort; at such a moment it needs some moderation not to be attacking Philistinism by storm, but to mine it through such gradual means as the slow approaches of culture, and the introduction of chairs of Celtic. But the hard unintelligence, which is just now our bane, cannot be conquered by storm; it must be supplied and reduced by culture, by a growth in the variety, fulness, and sweetness of our spiritual life; and this end can only be reached by studying things that are outside of ourselves, and by studying them disinterestedly. Let us reunite ourselves with our better mind and with the world through science; and let it be one of our angelic revenges on the Philistines, who among their other sins are the guilty authors of Fenianism,[70] to found at Oxford a chair of Celtic, and to send, through the gentle ministration of science, a message of peace to Ireland.

among the middle classes, and Arnold felt that it catered indefensibly to the weak elements in the public: to their Philistinism — their love of demagoguery and high-sounding cant in politics, and of over-ornateness in literary style, and of the material wealth of the present day. See also the Introduction to *Culture and Anarchy*, note 3.

70. The Fenians, founded about 1860, were a secret organization with the purpose of causing the overthrow of English rule in Ireland. The name is taken from Gaelic legends, wherein the Fenians were a band of heroic fighters, led by the great Finn mac Coul, the 'Fingal' of Macpherson.

CULTURE AND ANARCHY

Preface

My foremost design in writing this Preface is to address a word of exhortation to the Society for Promoting Christian Knowledge.[1] In the essay which follows, the reader will often find Bishop Wilson [2] quoted. To me and to the members of the Society for Promoting Christian Knowledge his name and writings are still, no doubt, familiar. But the world is fast going away from old-fashioned people of his sort, and I learnt with consternation lately from a brilliant and distinguished votary of the natural sciences,[3] that he had never so much as heard of Bishop Wilson, and that he imagined me to have invented him. At a moment when the Courts of Law have just taken off the embargo from the recreative religion furnished on Sundays by my gifted acquaintance and others, and when St. Martin's Hall and the Alhambra [4] will soon be beginning again to resound with their pulpit-eloquence, it distresses one to think that the new lights should not only have, in general, a very low opinion of the preachers of the old religion, but that they should have it without knowing the best that these preachers can do. And that they are in this case is owing in part, certainly, to the negligence of the Christian Knowledge Society. In the old times they used to print and spread abroad Bishop Wilson's *Maxims of Piety and Christianity*. The copy of this work which I use is one of their publications, bearing their imprint, and bound in the well-known brown calf which they made familiar to our childhood; but the date of my copy is 1812. I know of no copy be-

1. A charitable organization for subsidizing the printing and sale of moral and religious books and pamphlets.
2. Thomas Wilson (1663–1755), Bishop of Sodor and Man, and religious writer.
3. Probably Professor John Tyndall (1820–93), who was a 'distinguished physicist' and beside whom Arnold sat at a Geological Society dinner on Feb. 21, 1868. *Cf.* Arnold's *Letters*, ed. G.W.E.Russell (1895), I,389.
4. Thomas Henry Huxley (1825–95), distinguished scientist, writer, and lecturer, had been lecturing in St. Martin's Hall in 1854; see his *Science and Education*, pp.vii,38. J. Dover Wilson, in his edition of *Culture and Anarchy*, p.213, says he has been unable to explain, from Huxley's *Life and Letters* or elsewhere, the allusion to an embargo on 'recreative religion.'

sides, and I believe the work is no longer one of those printed and circulated by the Society.[5] Hence the error, flattering, I own, to me personally, yet in itself to be regretted, of the distinguished physicist already mentioned.

But Bishop Wilson's *Maxims* deserve to be circulated as a religious book, not only by comparison with the cart-loads of rubbish circulated at present under this designation, but for their own sake, and even by comparison with the other works of the same author. Over the far better known *Sacra Privata* they have this advantage, that they were prepared by him for his own private use, while the *Sacra Privata* were prepared by him for the use of the public. The *Maxims* were never meant to be printed, and have on that account, like a work of, doubtless, far deeper emotion and power, the *Meditations* of Marcus Aurelius, something peculiarly sincere and first-hand about them. Some of the best things from the *Maxims* have passed into the *Sacra Privata*. Still, in the *Maxims*, we have them as they first arose; and whereas, too, in the *Sacra Privata* the writer speaks very often as one of the clergy, and as addressing the clergy, in the *Maxims* he almost always speaks solely as a man. I am not saying a word against the *Sacra Privata*, for which I have the highest respect; only the *Maxims* seem to me a better and more edifying book still. They should be read, as Joubert says Nicole should be read, with a direct aim at practice.[6] The reader will leave on one side things which, from the change of time and from the changed point of view which the change of time inevitably brings with it, no longer suit him; enough will remain to serve as a sample of the very best, perhaps, which our nation and race can do in the way of religious writing. M. Michelet[7] makes it a reproach to us that, in all the doubt as to the real author of the *Imitation*,[8] no one has ever dreamed of ascribing that work to an Englishman. It is true, the *Imitation* could not well have been written by an Englishman; the religious delicacy and the profound asceticism of that admirable book are hardly in our nature. This would be more of a reproach to us if in poetry, which requires, no less than religion, a true delicacy of spiritual perception, our race had not done great things; and if the *Imitation*, exquisite as it is, did not, as I have elsewhere remarked, belong to a class of works in which the perfect balance of human nature is lost, and which have therefore, as spiritual productions, in their contents something excessive and morbid, in their form something not thoroughly sound. On a lower range than the *Imitation*, and awakening in our nature chords less poetical and delicate, the *Maxims* of Bishop Wilson are, as a religious work, far more solid. To the most sincere ardour and unction, Bishop Wilson unites, in these *Maxims*, that downright honesty and plain good sense which our English race has so powerfully applied to the divine impossibilities of religion; by which it has brought religion so much into practical life, and has done its allotted part in promoting upon earth the kingdom of God.

With ardour and unction religion, as we all know, may still be fanatical; with honesty and good sense, it may still be prosaic; and the fruit of honesty and good sense united with ardour and unction is often only a prosaic religion held fanatically. Bishop Wilson's excellence lies in a balance of the four qualities, and in a fulness and perfection of them, which makes this untoward result impossible. His unction

5. The Christian Knowledge Society has, since 1869, republished the *Maxims* of Bishop Wilson. [Arnold's note.]

6. Pierre Nicole (1625–95), French teacher and moral writer. Joseph Joubert (1754–1824), French religious philosopher and moral writer, on whom Arnold wrote an essay, in which the passage on Nicole is quoted in full; *cf. Essays in Criticism: First Series*, ed. 1921, p.295.

7. Jules Michelet (1798–1874), French historian.

8. *The Imitation of Christ*. See the essay on Marcus Aurelius, note 2.

is so perfect, and in such happy alliance with his good sense, that it becomes tenderness and fervent charity. His good sense is so perfect, and in such happy alliance with his unction, that it becomes moderation and insight. While, therefore, the type of religion exhibited in his *Maxims* is English, it is yet a type of a far higher kind than is in general reached by Bishop Wilson's countrymen; and yet, being English, it is possible and attainable for them. And so I conclude as I began, by saying that a work of this sort is one which the Society for Promoting Christian Knowledge should not suffer to remain out of print and out of currency.

And now to pass to the matters canvassed in the following essay. The whole scope of the essay is to recommend culture as the great help out of our present difficulties; culture being a pursuit of our total perfection by means of getting to know, on all the matters which most concern us, the best which has been thought and said in the world; and through this knowledge, turning a stream of fresh and free thought upon our stock notions and habits, which we now follow staunchly but mechanically, vainly imagining that there is a virtue in following them staunchly which makes up for the mischief of following them mechanically. This, and this alone, is the scope of the following essay. And the culture we recommend is, above all, an inward operation.

But we are often supposed, when we criticise by the help of culture some imperfect doing or other, to have in our eye some well-known rival plan of doing, which we want to serve and recommend. Thus, for instance, because we have freely pointed out the dangers and inconveniences to which our literature is exposed in the absence of any centre of taste and authority like the French Academy,[9] it is constantly said that we want to introduce here in England an institution like the French Academy. We have, indeed, expressly declared that we wanted no such thing; but let us notice how it is just our worship of machinery,[10] and of external doing, which leads to this charge being brought; and how the inwardness of culture makes us seize, for watching and cure, the faults to which our want of an Academy inclines us, and yet prevents us from trusting to an arm of flesh, as the Puritans[11] say, — from blindly flying to this outward machinery of an Academy, in order to help ourselves. For the very same culture and free inward play of thought which shows how the Corinthian style,[12] or the whimsies about the One Primeval Language,[13] are generated and strengthened in the absence of an Academy, shows us, too, how little any Academy, such as we should be likely to get, would cure them. Every one who knows the characteristics of our national life, and the tendencies so fully discussed in the following pages, knows exactly what an English Academy would be like. One can see the happy family in one's mind's eye as distinctly as if it were already constituted. Lord Stanhope, the Dean of St. Paul's, the Bishop of Oxford, Mr. Gladstone, the Dean of Westminster, Mr. Froude, Mr. Henry Reeve,[14] — everything which is in-

10. *Cf.* the use of the word 'machinery' in 'Sweetness and Light.'

11. For the allusion to the arm of flesh, see *II Chronicles*, xxxii,8.

12. Over-ornate. *Cf.* Arnold's essay on the literary influence of academies, note 48.

13. *Cf.* 'The Literary Influence of Academies,' note 26.

14. Philip Henry Stanhope, 5th Earl Stanhope (1805–75), historian, politician, promoter of the amended copyright law and of the National Portrait Gallery and the Historical MSS. Commission. Henry Hart Milman (1791–1868), Dean of St. Paul's Cathedral, man of letters, professor of poetry at Oxford, 1821–31. Samuel Wilberforce (1805–73), Bishop of Oxford and Winchester, orator and man of letters, High Churchman, opponent of Darwin and Huxley. Arthur Penrhyn Stanley (1815–81), Dean of Westminster, man of letters. Henry Reeve (1813–95), man of letters,

fluential, accomplished, and distinguished; and then, some fine morning, a dissatisfaction of the public mind with this brilliant and select coterie, a flight of Corinthian leading articles, and an irruption of Mr. G. A. Sala.[15] Clearly, this is not what will do us good. The very same faults, — the want of sensitiveness of intellectual conscience, the disbelief in right reason, the dislike of authority, — which have hindered our having an Academy and have worked injuriously in our literature, would also hinder us from making our Academy, if we established it, one which would really correct them. And culture, which shows us truly the faults to be corrected, shows us this also just as truly.

Natural, as we have said, the sort of misunderstanding just noticed is; yet our usefulness depends upon our being able to clear it away, and to convince those who mechanically serve some stock notion or operation, and thereby go astray, that it is not culture's work or aim to give the victory to some rival fetish, but simply to turn a free and fresh stream of thought upon the whole matter in question. In a thing of more immediate interest, just now, than any question of an Academy, the like misunderstanding prevails; and until it is dissipated, culture can do no good work in the matter. When we criticise the present operation of disestablishing the Irish Church,[16] not by the power of reason and justice, but by the power of the antipathy of the Protestant Nonconformists, English and Scotch, to establishments, we are called enemies of the Nonconformists, blind partisans of the Anglican Establishment, possessed with the one desire to help the clergy and to harm the Dissenters. More than a few words we must give to showing how erroneous are these charges; because if they were true, we should be actually subverting our own design, and playing false to that culture which it is our very purpose to recommend.

Certainly we are no enemies of the Nonconformists; for, on the contrary, what we aim at is their perfection. But culture, which is the study of perfection, leads us, as we in the following pages have shown, to conceive of true human perfection as a *harmonious* perfection, developing all sides of our humanity; and as a *general* perfection, developing all parts of our society. For if one member suffer, the other members must suffer with it; and the fewer there are that follow the true way of salvation, the harder that way is to find. And while the Nonconformists, the successors and representatives of the Puritans, and like them staunchly walking by the best light they have, make a large part of what is strongest and most serious in this nation, and therefore attract our respect and interest, yet all which, in what follows, is said about Hebraism and Hellenism,[17] has for its main result to show how our Puritans, ancient and modern, have not enough added to their care for walking staunchly by the best light they have, a care that that light be not darkness; how they have developed one side of their humanity at the expense of all others, and have become incomplete and mutilated men in consequence. Thus falling short of harmonious perfection, they fail to follow the true way of salvation.

on the staff of the London *Times*, editor of the *Edinburgh Review*.

15. George Augustus Sala (1828–96), journalist, contributor to many periodicals, from 1857 on the staff of the London *Daily Telegraph*; Arnold ridiculed him repeatedly for his incautious and bombastic style.

16. An act for revoking the Church of England as the one church legally established as the Irish Church, and for revoking the compulsory payment of tithes to the Church of England by the people of Ireland. For Arnold's arguments against this act, see ***Culture and Anarchy***, Sect.I of Ch.vi ('Our Liberal Practitioners').

17. Hebraism emphasizes *action in obedience* to conscience, and Hellenism emphasizes spontaneity of consciousness, *intelligent testing* of ideas. *Cf.* Arnold's essay on them.

Therefore that way is made the harder for others to find, general perfection is put further off out of our reach, and the confusion and perplexity, in which our society now labours, is increased by the Nonconformists rather than diminished by them. So, while we praise and esteem the zeal of the Nonconformists in walking staunchly by the best light they have, and desire to take no whit from it, we seek to add to this what we call sweetness and light, and to develop their full humanity more perfectly. To seek this is certainly not to be the enemy of the Nonconformists.

But now, with these ideas in our head, we come upon the operation for disestablishing the Irish Church by the power of the Nonconformists' antipathy to religious establishments and endowments. And we see Liberal statesmen, for whose purpose this antipathy happens to be convenient, flattering it all they can; saying that though they have no intention of laying hands on an Establishment which is efficient and popular, like the Anglican Establishment here in England, yet it is in the abstract a fine and good thing that religion should be left to the voluntary support of its promoters, and should thus gain in energy and independence; and Mr. Gladstone has no words strong enough to express his admiration of the refusal of State-aid by the Irish Roman Catholics, who have never yet been seriously asked to accept it, but who would a good deal embarrass him if they demanded it. And we see philosophical politicians with a turn for swimming with the stream, and philosophical divines with the same turn, seeking to give a sort of grand stamp of generality and solemnity to this antipathy of the Nonconformists, and to dress it out as a law of human progress in the future. Now, nothing can be pleasanter than swimming with the stream; and we might gladly, if we could, try in our unsystematic way to take part in labours at once so philosophical and so popular. But we have got fixed in our minds that a more full and harmonious development of their humanity is what the Nonconformists most want, that narrowness, onesidedness, and incompleteness is what they most suffer from; in a word, that in what we call *provinciality* [18] they abound, but in what we may call *totality* they fall short.

And they fall short more than the members of Establishments. The great works by which, not only in literature, art, and science generally, but in religion itself, the human spirit has manifested its approaches to totality and to a full, harmonious perfection, and by which it stimulates and helps forward the world's general perfection, come, not from Nonconformists, but from men who either belong to Establishments or have been trained in them. A Nonconformist minister, the Rev. Edward White,[19] who has written a temperate and well-reasoned pamphlet against Church Establishments, says that 'the unendowed and unestablished communities of England exert full as much moral and ennobling influence upon the conduct of statesmen as that Church which is both established and endowed.' That depends upon what one means by moral and ennobling influence. The believer in machinery may think that to get a Government to abolish Church-rates or to legalise marriage with a deceased wife's sister [20] is to exert a moral and ennobling influence upon Government. But a lover of perfection, who looks to inward ripeness for the true springs of conduct, will surely think that as Shakspeare has done more for the inward ripeness of our states-

18. See Arnold's explanation of 'provinciality' in the latter part of his essay on the literary influence of academies.

19. Edward White (1819–98), a prominent London Congregational minister; his biography by F.A.Freer does not mention the pamphlet here alluded to.

20. For Arnold's opposition to the movement here referred to, see Sect.III of his 'Our Liberal Practitioners' (Ch.vi of *Culture and Anarchy*).

men than Dr. Watts,[21] and has, therefore, done more to moralise and ennoble them, so an Establishment which has produced Hooker, Barrow, Butler,[22] has done more to moralise and ennoble English statesmen and their conduct than communities which have produced the Nonconformist divines. The fruitful men of English Puritanism and Nonconformity are men who were trained within the pale of the Establishment, — Milton, Baxter, Wesley.[23] A generation or two outside the Establishment, and Puritanism produces men of national mark no more. With the same doctrine and discipline, men of national mark are produced in Scotland; but in an Establishment. With the same doctrine and discipline, men of national and even European mark are produced in Germany, Switzerland, France; but in Establishments. Only two religious disciplines seem exempted, or comparatively exempted, from the operation of the law which appears to forbid the rearing, outside of national Churches, of men of the highest spiritual significance. These two are the Roman Catholic and the Jewish. And these, both of them, rest on Establishments, which, though not indeed national, are cosmopolitan; and perhaps here, what the individual man does not lose by these conditions of his rearing, the citizen, and the State of which he is a citizen, loses.

What, now, can be the reason of this undeniable provincialism of the English Puritans and Protestant Nonconformists? Men of genius and character are born and reared in this medium as in any other. From the faults of the mass such men will always be comparatively free, and they will always excite our interest; yet in this medium they seem to have a special difficulty in breaking through what bounds them, and in developing their totality. Surely the reason is, that the Nonconformist is not in contact with the main current of national life, like the member of an Establishment. In a matter of such deep and vital concern as religion, this separation from the main current of the national life has peculiar importance. In the following essay we have discussed at length the tendency in us to *Hebraise*, as we call it; that is, to sacrifice all other sides of our being to the religious side. This tendency has its cause in the divine beauty and grandeur of religion, and bears affecting testimony to them. But we have seen that it has dangers for us, we have seen that it leads to a narrow and twisted growth of our religious side itself, and to a failure in perfection. But if we tend to Hebraise even in an Establishment, with the main current of national life flowing round us, and reminding us in all ways of the variety and fulness of human existence, — by a Church which is historical as the State itself is historical, and whose order, ceremonies, and monuments reach, like those of the State, far beyond any fancies and devisings of ours; and by institutions such as the Universities, formed to defend and advance that very culture and many-sided development which it is the danger of He-

21. Isaac Watts (1674–1748), D.D., Nonconformist minister in London, author of famous hymns, many of them still standard and familiar.

22. Richard Hooker (1554?–1600), clergyman and author. His *The Laws of Ecclesiasticall Politie* appeared first in 1594–1662, in several sections, called books. Isaac Barrow (1630–1677), clergyman, mathematician, and classical scholar; his sermons rank high, for substance and for oratorical style. Joseph Butler (1692–1752), Bishop of Durham, philosopher and theological writer; his *Analogy of Religion* appeared in 1736; Arnold treats of him in 'Bishop Butler and the Zeit-Geist' (see *Last Essays on Church and Religion* (1877).

23. Milton (1608–74) studied at Cambridge and did not until about 1643 abandon his intention of taking orders in the Church of England. Richard Baxter (1615–91), Presbyterian clergyman and author, retired from the Church of England only after the Act of Uniformity, in 1662. John Wesley (1703–91), leader of Methodism, was ordained in the Church of England, and never renounced his orders, though from 1729 an evangelist and 'Methodist.'

braising to make us neglect, — how much more must we tend to Hebraise when we lack these preventives. One may say that to be reared a member of a national Church is in itself a lesson of religious moderation, and a help towards culture and harmonious perfection. Instead of battling for his own private forms for expressing the inexpressible and defining the undefinable, a man takes those which have commended themselves most to the religious life of his nation; and while he may be sure that within those forms the religious side of his own nature may find its satisfaction, he has leisure and composure to satisfy other sides of his nature as well.

But with the member of a Nonconforming or self-made religious community, how different! The sectary's *eigene grosse Erfindungen*,[24] as Goethe calls them, — the precious discoveries of himself and his friends for expressing the inexpressible and defining the undefinable in peculiar forms of their own, — cannot but, as he has voluntarily chosen them, and is personally responsible for them, fill his whole mind. He is zealous to do battle for them and affirm them; for in affirming them he affirms himself, and that is what we all like. Other sides of his being are thus neglected, because the religious side, always tending in every serious man to predominance over our other spiritual sides, is in him made quite absorbing and tyrannous by the condition of self-assertion and challenge which he has chosen for himself. And just what is not essential in religion he comes to mistake for essential, and a thousand times the more readily because he has chosen it of himself; and religious activity he fancies to consist in battling for it. All this leaves him little leisure or inclination for culture; to which, besides, he has no great institutions not of his own making, like the Universities connected with the National Church to invite him,[25] but only such institutions, as, like the order and discipline of his religion, he may have invented for himself, and invented under the sway of the narrow and tyrannous notions of religion fostered in him as we have seen. Thus, while a national establishment of religion favours totality, *hole-and-corner* forms of religion (to use an expressive popular word) inevitably favour provincialism.

But the Nonconformists, and many of our Liberal friends along with them, have a plausible plan for getting rid of this provincialism, if, as they can hardly quite deny, it exists. 'Let us all be in the same boat,' they cry; 'open the Universities to everybody, and let there be no establishment of religion at all!' Open the Universities by all means; but, as to the second point about establishment, let us sift the proposal a little. It does seem at first a little like that proposal of the fox, who had lost his own tail, to put all the other foxes in the same case by a general cutting off of tails; and we know that moralists have decided that the right course here was, not to adopt this plausible suggestion, and cut off tails all round, but rather that the other foxes should keep their tails, and that the fox without a tail should get one. And so we might be inclined to urge, that, to cure the evil of the Nonconformists' provincialism, the right way can hardly be to provincialise us all round.

However, perhaps we shall not be provincialised. For Mr. White says that probably, 'when all good men alike are placed in a condition of religious equality, and the whole complicated iniquity of Government Church patronage is swept away, more of moral and ennobling influence

24. The member of a religious sect has made his 'own great discoveries.' *Cf.* the third paragraph of Sect. III of 'Our Liberal Practitioners,' in *Culture and Anarchy*.

25. Only members of the Established Church were admitted to Oxford or Cambridge until the Universities Acts of 1854–1856, and not until after Arnold had written this were Nonconformists enabled to take the M.A. degree or to be elected to fellowships — by the Universities Tests Act of 1871.

than ever will be brought to bear upon the action of statesmen.'

We already have an example of religious equality in our colonies. 'In the colonies,' says *The Times*, 'we see religious communities unfettered by State-control, and the State relieved from one of the most troublesome and irritating responsibilities.' But America is the great example alleged by those who are against establishments for religion. Our topic at this moment is the influence of religious establishments on culture; and it is remarkable that Mr. Bright,[26] who has taken lately to representing himself as, above all, a promoter of reason and of the simple natural truth of things, and his policy as a fostering of the growth of intelligence, — just the aims, as is well known, of culture also, — Mr. Bright, in a speech at Birmingham about education, seized on the very point which seems to concern our topic, when he said: 'I believe the people of the United States have offered to the world more valuable information during the last forty years, than all Europe put together.' So America, without religious establishments, seems to get ahead of us all, even in light and the things of the mind.

On the other hand, another friend of reason and the simple natural truth of things, M. Renan,[27] says of America, in a book he has recently published, what seems to conflict violently with what Mr. Bright says. Mr. Bright avers that not only have the United States thus informed Europe, but they have done it without a great apparatus of higher and scientific instruction, and by dint of all classes in America being 'sufficiently educated to be able to read, and to comprehend, and to think; and that, I maintain, is the foundation of all subsequent progress.' And then comes M. Renan, and says: 'The sound instruction of the people is an effect of the high culture of certain classes. *The countries which, like the United States, have created a considerable popular instruction without any serious higher instruction, will long have to expiate this fault by their intellectual mediocrity, their vulgarity of manners, their superficial spirit, their lack of general intelligence.*'[28]

Now, which of these two friends of light are we to believe? M. Renan seems more to have in view what we ourselves mean by culture; because Mr. Bright always has in his eye what he calls 'a commendable interest' in politics and in political agitations. As he said only the other day at Birmingham: 'At this moment, — in fact, I may say at every moment in the history of a free country, — there is nothing that is so much worth discussing as politics.' And he keeps repeating, with all the powers of his noble oratory, the old story, how to the thoughtfulness and intelligence of the people of great towns we owe all our improvements in the last thirty years, and how these improvements have hitherto consisted in Parliamentary reform, and free trade, and abolition of Church-rates, and so on; and how they are now about to consist in getting rid of minority-members, and in introducing a free breakfast-table, and in abolishing the Irish Church by the power of the Nonconformists' antipathy to establishments, and much more of the same kind. And though our pauperism and ignorance, and all the questions which are called social, seem now to be forcing themselves upon his mind, yet he still goes on with his glorifying of the great towns, and the Liberals, and their operations for the last thirty years. It never seems to occur to him that the present troubled state of our social life has anything to do with the thirty years' blind worship of their nostrums by him-

26. See Notes.

27. The quotation is translated from Renan's *Questions Contemporaines* (Paris, 1868), p.vii.

28. 'Les pays qui, comme les États-Unis, ont creé un enseignement populaire considérable sans instruction supérieure sérieuse, expieront longtemps encore cette faute par leur médiocrité intellectuelle, leur grossièreté de mœurs, leur esprit superficiel, leur manque d'intelligence générale.' [Arnold's note.]

self and our Liberal friends, or that it throws any doubts upon the sufficiency of this worship. But he thinks that what is still amiss is due to the stupidity of the Tories, and will be cured by the thoughtfulness and intelligence of the great towns, and by the Liberals going on gloriously with their political operations as before; or that it will cure itself. So we see what Mr. Bright means by thoughtfulness and intelligence, and in what matter, according to him, we are to grow in them. And, no doubt, in America all classes read their newspaper, and take a commendable interest in politics, more than here or anywhere else in Europe.

But in the following essay we have been led to doubt the sufficiency of all this political operating, pursued mechanically as our race pursues it; and we found that *general intelligence*, as M. Renan calls it, or, as we say, attention to the reason of things, was just what we were without, and that we were without it because we worshipped our machinery so devoutly. Therefore, we conclude that M. Renan, more than Mr. Bright, means by reason and intelligence the same thing as we do. And when M. Renan says that America, that chosen home of newspapers and politics, is without general intelligence, we think it likely, from the circumstances of the case, that this is so; and that in the things of the mind, and in culture and totality, America, instead of surpassing us all, falls short.[29]

And, — to keep to our point of the influence of religious establishments upon culture and a high development of our humanity, — we can surely see reasons why, with all her energy and fine gifts, America does not show more of this development, or more promise of this. In the following essay it will be seen how our society distributes itself into Barbarians, Philistines, and Populace; and America is just ourselves, with the Barbarians quite left out, and the Populace nearly. This leaves the Philistines for the great bulk of the nation; — a livelier sort of Philistine than ours, and with the pressure and false ideal of our Barbarians taken away, but left all the more to himself and to have his full swing. And as we have found that the strongest and most vital part of English Philistinism was the Puritan and Hebraising middle class, and that its Hebraising keeps it from culture and totality, so it is notorious that the people of the United States issues from this class, and reproduces its tendencies, — its narrow conception of man's spiritual range and of his one thing needful. From Maine to Florida, and back again, all America Hebraises. Difficult as it is to speak of a people merely from what one reads, yet that, I think, one may without much fear of contradiction say. I mean, when in the United States any spiritual side in man is wakened to activity, it is generally the religious side, and the religious side in a narrow way. Social reformers go to Moses or St. Paul for their doctrines, and have no notion there is anywhere else to go to; earnest young men at schools and universities, instead of conceiving salvation as a harmonious perfection only to be won by unreservedly cultivating many sides in us, conceive of it in the old Puritan fashion, and fling themselves ardently upon it in the old, false ways of this fashion, which we know so well, and such as Mr. Hammond, the American revivalist, has lately at Mr. Spurgeon's Tabernacle[30] been refreshing our memory with.

Now, if America thus Hebraises more than either England or Germany, will any one deny that the absence of religious es-

30. Charles Haddon Spurgeon (1834–92), an exceedingly popular Nonconformist preacher in London; in 1861 the Metropolitan Tabernacle was built for his congregation, at a cost of £31,000, to seat 6,000, and he preached there till his death.

tablishments has much to do with it? We have seen how establishments tend to give us a sense of a historical life of the human spirit, outside and beyond our own fancies and feelings; how they thus tend to suggest new sides and sympathies in us to cultivate; how, further, by saving us from having to invent and fight for our own forms of religion, they give us leisure and calm to steady our view of religion itself, — the most overpowering of objects, as it is the grandest, — and to enlarge our first crude notions of the one thing needful. But, in a serious people, where every one has to choose and strive for his own order and discipline of religion, the contention about these non-essentials occupies his mind. His first crude notions about the one thing needful do not get purged, and they invade the whole spiritual man in him, and then, making a solitude, they call it heavenly peace.

I remember a Nonconformist manufacturer, in a town of the Midland counties, telling me that when he first came there, some years ago, the place had no Dissenters; but he had opened an Independent chapel in it, and now Church and Dissent were pretty equally divided,[31] with sharp contests between them. I said that this seemed a pity. 'A pity?' cried he; 'not at all! Only think of all the zeal and activity which the collision calls forth!' 'Ah, but, my dear friend,' I answered, 'only think of all the nonsense which you now hold quite firmly, which you would never have held if you had not been contradicting your adversary in it all these years!' The more serious the people, and the more prominent the religious side in it, the greater is the danger of this side, if set to choose out forms for itself and fight for existence, swelling and spreading till it swallows all other spiritual sides up, intercepts and absorbs all nutriment which should have gone to them, and leaves Hebraism rampant in us and Hellenism stamped out.

Culture, and the harmonious perfection of our whole being, and what we call totality, then become quite secondary matters. And even the institutions, which should develop these, take the same narrow and partial view of humanity and its wants as the free religious communities take. Just as the free churches of Mr. Beecher[32] or Brother Noyes,[33] with their provincialism and want of centrality, make mere Hebraisers in religion, and not perfect men, so the university of Mr. Ezra Cornell,[34] a really noble monument of his munificence, yet seems to rest on a misconception of what culture truly is, and to be calculated to produce miners, or engineers, or architects, not sweetness and light.

And, therefore, when Mr. White asks the same kind of question about America that he has asked about England, and wants to know whether, without religious establishments, as much is not done in America for the higher national life as is done for that life here, we answer in the same way as we did before, that as much is not done. Because to enable and stir up people to read their Bible and the newspapers, and to get a practical knowledge of their business, does not serve to the higher spiritual life of a nation so much as culture, truly conceived, serves; and a true conception of culture is, as M. Renan's words show, just what America fails in.

To the many who think that spiritual-

31. That is, the members of the Church of England and of other Protestant churches were about equal in numbers.

32. Henry Ward Beecher (1813–87), famous Congregational minister in New York, strongly anti-slavery; he visited England in 1863.

33. John Humphrey Noyes (1811–86), founder of the 'Perfectionists,' and, with them, of the communistic Oneida Community in New York State. W. Hepworth Dixon in his *New America* (1867), II, Ch.xx, had given an account of the Oneida Community.

34. Ezra Cornell (1807–74) founded Cornell University, in 1868. The charter of this university said that its purpose was teaching 'such branches of learning as are related to agriculture, and the mechanic arts.'

ity, and sweetness, and light, are all moonshine, this will not appear to matter much; but with us, who value them, and who think that we have traced much of our present discomfort to the want of them, it weighs a great deal. So not only do we say that the Nonconformists have got provincialism and lost totality by the want of a religious establishment, but we say that the very example which they bring forward to help their case makes against them; and that when they triumphantly show us America without religious establishments, they only show us a whole nation touched, amidst all its greatness and promise, with that provincialism which it is our aim to extirpate in the English Nonconformists.

But now to evince the disinterestedness which culture teaches us. We have seen the narrowness generated in Puritanism by its hole-and-corner organisation, and we propose to cure it by bringing Puritanism more into contact with the main current of national life. Here we are fully at one with the Dean of Westminster; [35] and, indeed, he and we were trained in the same school to mark the narrowness of Puritanism, and to wish to cure it. But he and others seem disposed simply to give to the present Anglican Establishment a character the most latitudinarian,[36] as it is called, possible; availing themselves for this purpose of the diversity of tendencies and doctrines which does undoubtedly exist already in the Anglican formularies; and then they would say to the Puritans: 'Come all of you into this liberally conceived Anglican Establishment.' But to say this is hardly, perhaps, to take sufficient account of the course of history, or of the strength of men's feelings in what concerns religion, or of the gravity which may have come to attach to points of religious order and discipline merely. When Mr. White talks of 'sweeping away the whole complicated iniquity of Government Church patronage,' he uses language which has been forced upon him by his position, but which is devoid of all real solidity. But when he talks of the religious communities 'which have for three hundred years contended for the power of the congregation in the management of their own affairs,' then he talks history; and his language has behind it, in my opinion, facts which make the latitudinarianism of our Broad Churchmen quite illusory.

Certainly, culture will never make us think it an essential of religion whether we have in our Church discipline 'a popular authority of elders,' as Hooker calls it, or whether we have Episcopal jurisdiction.[37] Certainly, Hooker himself did not think it an essential; for in the dedication of his *Ecclesiastical Polity*, speaking of these questions of church-discipline which gave occasion to his great work, he says they are 'in truth, for the greatest part, such silly things, that very easiness doth make them hard to be disputed of in serious manner.' [38] Hooker's great work against the impugners of the order and discipline of the Church of England was written (and this is too indistinctly seized by many who read it), not because Episcopalianism is essential, but because its impugners maintained that Presbyterianism is essential, and that Episcopalianism is sinful. Neither the one nor the other is either essential or sinful, and much may be said on behalf of both. But what is important to be remarked is, *that both were in the Church of England at the Reformation*, and that Presbyterianism was only extruded gradually. We have mentioned Hooker, and nothing better illustrates

35. Stanley and Arnold were 'trained in the same school,' Rugby, under Dr. Thomas Arnold.

36. Broad, not narrow or strict in belief or opinion.

37. The word 'presbyter' means literally an 'elder'; the Presbyterian Church is the church with government vested in popularly elected elders, who may be ministers or laymen. Government is by bishops in the Episcopal churches (Latin *episcopus*, bishop).

38. See Hooker's *Works*, ed. 1676, p.36.

what has just been asserted than the following incident in Hooker's own career, which every one has read, for it is related in Isaac Walton's[39] *Life of Hooker*, but of which, probably, the significance has been fully grasped by very few of those who have read it.

Hooker was through the influence of Archbishop Whitgift appointed, in 1585, Master of the Temple;[40] but a great effort had first been made to obtain the place for a Mr. Walter Travers, well known in that day, though now it is Hooker's name which alone preserves his. This Travers was then afternoon-lecturer at the Temple. The Master whose death made the vacancy, Alvey, recommended on his deathbed Travers for his successor. The Society was favourable to Travers, and he had the support of the Lord Treasurer Burghley. Although Hooker was appointed to the Mastership, Travers remained afternoon-lecturer, and combated in the afternoons the doctrine which Hooker preached in the mornings. Now, this Travers, originally a Fellow of Trinity College, Cambridge, afterwards afternoon-lecturer at the Temple, recommended for the Mastership by the foregoing Master whose opinions, it is said, agreed with his, favoured by the Society of the Temple and supported by the Prime Minister, — this Travers was not an Episcopally ordained clergyman at all. He was a Presbyterian, a partisan of the Geneva church-discipline,[41] as it was then called, and 'had taken orders,' says Walton, 'by the Presbyters in Antwerp.' In another place Walton speaks of his orders yet more fully: — 'He had disowned,' he says, 'the English Established Church and Episcopacy, and went to Geneva, and afterwards to Antwerp, to be ordained minister, as he was by Villers and Cartwright and others the heads of a congregation there; and so came back again more confirmed for the discipline.' Villers and Cartwright are in like manner examples of Presbyterianism within the Church of England, which was common enough at that time. But perhaps nothing can better give us a lively sense of its presence there than this history of Travers, which is as if Mr. Binney[42] were now afternoon-reader at Lincoln's Inn or the Temple; were to be a candidate, favoured by the Benchers and by the Prime Minister, for the Mastership; and were only kept out of the post by the accident of the Archbishop of Canterbury's influence with the Queen carrying a rival candidate.

Presbyterianism, with its popular principle of the power of the congregation in the management of their own affairs was extruded from the Church of England, and men like Travers can no longer appear in her pulpits. Perhaps if a government like that of Elizabeth, with secular statesmen like the Cecils,[43] and ecclesiasti-

39. Izaak Walton (1593–1683). His life of Hooker appeared in 1665. For the incident related in the following paragraph, *cf. Works of Hooker*, with *Life* by Walton (1890), I, 18–24.

40. The Inner and the Middle Temple, Lincoln's Inn, and Gray's Inn are societies or legal guilds, called Inns of Court, in London, and take their names from the buildings they have occupied since the 14th century. For centuries they were great law schools, and in the 16th and 17th centuries, because of libraries and companionable scholarship, were educational institutions of considerable cultural importance. Today they are little more than lawyers' clubs, but are important in maintaining standards for admission to the bar. The senior and governing members of an Inn of Court are called Benchers.

41. John Calvin, French Protestant reformer at Geneva, Switzerland, was met there in 1554 by John Knox, the great Scottish reformer, and from him Knox took many of the ideas for church organization that were embodied in the Church of Scotland, which was Presbyterian.

42. Thomas Binney (1798–1874), a famous Congregational minister, for whom it was 'a matter of deep, serious, religious conviction that the established church is a great national evil' (*D.N.B.*).

43. William Cecil, Baron Burghley (1520–98), a statesman of renown, the Lord Treasurer Burghley referred to in the paragraph just preceding. His sons Thomas (1542–1623) and

cal statesmen like Whitgift,[44] could have been prolonged, Presbyterianism might, by a wise mixture of concession and firmness, have been absorbed in the Establishment. Lord Bolingbroke,[45] on a matter of this kind a very clear-judging and impartial witness, says, in a work far too little read, his *Remarks on English History*: — 'The measures pursued and the temper observed in Queen Elizabeth's time tended to diminish the religious opposition by a slow, a gentle, and for that very reason an effectual progression. There was even room to hope that when the first fire of the Dissenters' zeal was passed, reasonable terms of union with the Established Church might be accepted by such of them as were not intoxicated with fanaticism. These were friends to order, though they disputed about it. If these friends of Calvin's discipline had been once incorporated with the Established Church, the remaining sectaries would have been of little moment, either for numbers or reputation; and the very means which were proper to gain these friends were likewise the most effectual to hinder the increase of them, and of the other sectaries in the meantime.' The temper and ill judgment of the Stuarts made shipwreck of all policy of this kind. Yet speaking even of the time of the Stuarts, but their early time, Clarendon[46] says that if Bishop Andrewes had succeeded Bancroft at Canterbury,[47] the disaffection of separatists[48] might have been stayed and healed. This, however, was not to be; and Presbyterianism, after exercising for some years the law of the strongest, itself in Charles the Second's reign suffered under this law, and was finally cast out from the Church of England.

Now the points of church-discipline at issue between Presbyterianism and Episcopalianism are, as has been said, not essential. They might probably once have been settled in a sense altogether favourable to Episcopalianism. Hooker may have been right in thinking that there were in his time circumstances which made it essential that they should be settled in this sense, though the points in themselves were not essential. But by the very fact of the settlement not having then been effected, of the breach having gone on and widened, of the Nonconformists not having been amicably incorporated with the Establishment but violently cast out from it, the circumstances are now altogether altered. Isaac Walton, a fervent Churchman, complains that 'the principles of the Nonconformists grew at last to such a height and were vented so daringly, that, beside the loss of life and limbs, the Church and State were both forced to use such other severities as will not admit of an excuse, if it had not been to prevent confusion and the perilous consequences of it.'[49] But those very severities have of themselves made union on an Episcopalian footing impossible. Besides, Presbyterianism, the popular authority of elders, the power of the congregation in the management of their own affairs, has that warrant given to it by Scripture and by

Robert (1563?–1612) also served the nation well, and were raised to earldoms.

44. John Whitgift (1530?–1604), Archbishop of Canterbury.

45. Henry St John, Lord Bolingbroke (1678–1751), statesman, philosopher, and political writer. For the quotation see his *Remarks on the History of England*, ed. of [1780?], pp 217–18.

46. Edward Hyde, 1st Earl of Clarendon (1609–74), statesman and historian. His *History of the Rebellion and Civil Wars in England* appeared first in 1702–04.

47. The Archbishop of Canterbury, as the religious head of the Church of England, has been, since the Act of Supremacy in 1534, when England refused further to recognize the Pope's power, a person of great political power. Lancelot Andrewes (1555–1626), famous divine, Bishop of Winchester. Richard Bancroft (1544–1610), Archbishop of Canterbury, whose writings were chiefly directed against the Puritans.

48. The separatists favored separating, or withdrawing, from the Established Church.

49. See Izaak Walton, 'Life of Hooker,' in his *Lives*, ed. New York, 1832, p.221.

the proceedings of the early Christian Churches, it is so consonant with the spirit of Protestantism which made the Reformation and which has great strength in this country, it is so predominant in the practice of other Reformed Churches, it was so strong in the original Reformed Church of England, that one cannot help doubting whether any settlement which suppressed it could have been really permanent, and whether it would not have kept appearing again and again, and causing dissension.

Well, then, if culture is the disinterested endeavour after man's perfection, will it not make us wish to cure the provincialism of the Nonconformists, not by rendering Churchmen provincial along with them, but by letting their popular church-discipline, formerly present in the national Church and still present in the affections and practice of a good part of the nation, appear in the national Church once more; and thus to bring Nonconformists into contact again, as their greater fathers were, with the main stream of national life? Why should not a Presbyterian Church, based on this considerable and important, though not essential principle, of the congregation's share in the church-management, be established, — with equal rank for its chiefs with the chiefs of Episcopacy, and with admissibility of its ministers, under a revised system of patronage and preferment to benefices, — side by side with the Episcopal Church, as the Calvinist and Lutheran Churches are established side by side in France and Germany? Such a Presbyterian Church would unite the main bodies of Protestants who are now separatists; and separation would cease to be the law of their religious order. And thus, — though this concession on a really considerable point of difference, — that endless splitting into hole-and-corner churches on quite inconsiderable points of difference, which must prevail so long as separatism is the first law of a Nonconformist's religious existence, would be checked. Culture would then find a place among English followers of the popular authority of Elders, as it has long found it among the followers of Episcopal jurisdiction. And this we should gain by merely recognising, regularising, and restoring an element which appeared once in the reformed national Church, and which is considerable and national enough to have a sound claim to appear there still.

So far, then, is culture from making us unjust to the Nonconformists because it forbids us to worship their fetishes, that it even leads us to propose to do more for them than they themselves venture to claim. It leads us, also, to respect what is solid and respectable in their convictions. Not that the forms in which the human spirit tries to express the inexpressible, or the forms by which man tries to worship, have or can have, as has been said, for the follower of perfection, anything necessary or eternal. If the New Testament and the practice of the primitive Christians sanctioned the popular form of church-government a thousand times more expressly than they do, if the Church since Constantine [50] were a thousand times more of a departure from the scheme of primitive Christianity than it can be shown to be, that does not at all make, as is supposed by men in bondage to the letter, the popular form of church-government alone and always sacred and binding, or the work of Constantine a thing to be regretted.

What is alone and always sacred and binding for man is the making progress towards his total perfection; and the machinery by which he does this varies in value according as it helps him to do it. The planters of Christianity had their roots in deep and rich grounds of human life and achievement, both Jewish and also Greek; and had thus a comparatively firm and wide basis amidst all the vehement inspiration of their mighty movement and change. By their strong inspira-

50. Constantine the Great (272–337), Roman emperor (324–37), the first Christian emperor.

tion they carried men off the old basis of life and culture, whether Jewish or Greek, and generations arose who had their roots in neither world, and were in contact therefore with no full and great stream of human life. If it had not been for some such change as that of the fourth century, Christianity might have lost itself in a multitude of hole-and-corner churches like the churches of English Nonconformity after its founders departed; churches without great men, and without furtherance for the higher life of humanity. At a critical moment came Constantine, and placed Christianity, — or let us rather say, placed the human spirit, whose totality was endangered, — in contact with the main current of human life. And his work was justified by its fruits, in men like Augustine and Dante, and indeed in all the great men of Christianity, Catholics or Protestants, ever since.

And one may go beyond this. M. Albert Réville,[51] whose religious writings are always interesting, says that the conception which cultivated and philosophical Jews now entertain of Christianity and its Founder, is probably destined to become the conception which Christians themselves will entertain. Socinians[52] are fond of saying the same thing about the Socinian conception of Christianity. Now, even if this were true, it would still have been better for a man, during the last eighteen hundred years, to have been a Christian and a member of one of the great Christian communions, than to have been a Jew or a Socinian; because the being in contact with the main stream of human life is of more moment for a man's total spiritual growth, and for his bringing to perfection the gifts committed to him, which is his business on earth, than any speculative opinion which he may hold or think he holds. Luther, — whom we have called a Philistine of genius,[53] and who, because he was a Philistine, had a coarseness and lack of spiritual delicacy which have harmed his disciples, but who, because he was a genius, had splendid flashes of spiritual insight, — Luther says admirably in his Commentary on the Book of Daniel: 'A God is simply *that* whereon the human heart rests with trust, faith, hope, *and* love. If the resting is right, then the God too is right; if the resting is wrong, then the God too is illusory.' In other words, the worth of what a man thinks about God and the objects of religion depends on what the man *is*; and what the man *is*, depends upon his having more or less reached the measure of a perfect and total man.

Culture, disinterestedly seeking in its aim at perfection to see things as they really are, shows us how worthy and divine a thing is the religious side in man, though it is not the whole of man. But while recognising the grandeur of the religious side in man, culture yet makes us also eschew an inadequate conception of man's totality. Therefore to the worth and grandeur of the religious side in man, culture is rejoiced and willing to pay any tribute, except the tribute of man's totality. Unless it is proved that contact with the main current of national life is of no value (and we have shown that it is of the greatest value), we cannot safely, even to please the Nonconformists in a matter where we would please them as much as possible, admit their doctrines of disestablishment and separation.

Culture, again, can be disinterested enough to perceive and avow, that for Ireland the ends of human perfection might be best served by establishing, — that is, by bringing into contact with the main current of the national life, — the Roman Catholic and the Presbyterian Churches along with the Anglican Church. It can

perceive and avow that we should really, in this way, be working to make reason and the will of God prevail; because we should be making Roman Catholics better citizens, and both Protestants and Roman Catholics larger-minded and more complete men. Undoubtedly there are great difficulties in such a plan as this; and the plan is not one which looks very likely to be adopted. The Churchman must rise above his ordinary self in order to favour it. And the Nonconformist has worshipped his fetish of separatism so long that he is likely to wish to remain, like Ephraim, 'a wild ass alone by himself.' [54] It is a plan more for a time of creative statesmen, like the time of Elizabeth, than for a time of instrumental statesmen like the present. The centre of power being where it is, our statesmen have every temptation, when they must act, to go along as they do with the ordinary self of those on whose favour they depend, to adopt as their own its desires, and to serve them with fidelity, and even, if possible, with ardour. This is the more easy for them, because there are not wanting, — and there never will be wanting, — thinkers to call the desires of the ordinary self of any great section of the community edicts of the national mind and laws of human progress, and to give them a general, a philosophic, and imposing expression. Therefore a plan such as that which we have indicated does not seem a plan so likely to find favour as a plan for abolishing the Irish Church by the power of the Nonconformists' antipathy to establishments.

But although culture makes us fond stickers to no machinery, not even our own, and therefore we are willing to grant that perfection can be reached without it, — with free churches as with established churches, and with instrumental statesmen as with creative statesmen, — yet perfection can never be reached without seeing things as they really are; and it is to this, therefore, and to no machinery in the world, that we stick. We insist that men should not mistake, as they are prone to mistake, their natural taste for the bathos for a relish for the sublime. And if statesmen, either with their tongue in their cheek or with a fine impulsiveness, tell people that their natural taste for the bathos is a relish for the sublime, there is the more need to tell them the contrary.

It is delusion on this point which is fatal, and against delusion on this point culture works. It is not fatal to our Liberal friends to labour for free trade, extension of the suffrage, and abolition of church-rates, instead of graver social ends; but it is fatal to them to be told by their flatterers, and to believe, with our social condition what it is, that they have performed a great, a heroic work, by occupying themselves exclusively, for the last thirty years, with these Liberal nostrums, and that the right and good course for them now is to go on occupying themselves with the like for the future. It is not fatal to Americans to have no religious establishments and no effective centres of high culture; but it is fatal to them to be told by their flatterers, and to believe, that they are the most intelligent people in the whole world, when of intelligence, in the true and fruitful sense of the word, they even singularly, as we have seen, come short. It is not fatal to the Nonconformists to remain with their separated churches; but it is fatal to them to be told by their flatterers, and to believe, that theirs is the one true way of worshipping God, that provincialism and loss of totality have not come to them from following it, or that provincialism and loss of totality are not evils. It is not fatal to the English nation to abolish the Irish Church by the power of the Nonconformists' antipathy to establishments; but it is fatal to it to be told by its flatterers, and to believe, that it is abolishing it through reason and justice, when it is really abolishing it through this power: or to expect the fruits of reason and jus-

54. See *Hosea*, viii,9.

tice from anything but the spirit of reason and justice themselves.

Now culture, because of its keen sense of what is really fatal, is all the more disposed to be rather indifferent about what is not fatal. And because machinery is the one concern of our actual politics, and an inward working, and not machinery, is what we most want, we keep advising our ardent young Liberal friends to think less of machinery, to stand more aloof from the arena of politics at present, and rather to try and promote, with us, an inward working. They do not listen to us, and they rush into the arena of politics, where their merits, indeed, seem to be little appreciated as yet; and then they complain of the reformed constituencies,[55] and call the new Parliament a Philistine Parliament. As if a nation, nourished and reared as ours has been, could give us, just yet, anything but a Philistine Parliament! — and would a Barbarian Parliament be even so good, or a Populace Parliament? [56] For our part, we rejoice to see our dear old friends, the Hebraising Philistines, gathered in force in the Valley of Jehoshaphat [57] previous to their final conversion, which will certainly come. But, to attain this conversion, we must not try to oust them from their places and to contend for machinery with them, but we must work on them inwardly and cure their spirit. Ousted they will not be, but transformed. Ousted they do not deserve to be, and will not be.

For *the days of Israel are innumerable*; [58] and in its blame of Hebraising too, and in its praise of Hellenising, culture must not fail to keep its flexibility, and to give to its judgments that passing and provisional character which we have seen it impose on its preferences and rejections of machinery. Now, and for us, it is a time to Hellenise, and to praise knowing; for we have Hebraised too much, and have over-valued doing. But the habits and discipline received from Hebraism remain for our race an eternal possession; and, as humanity is constituted, one must never assign to them the second rank to-day, without being prepared to restore to them the first rank to-morrow. Let us conclude by marking this distinctly.

To walk staunchly by the best light one has, to be strict and sincere with oneself, not to be of the number of those who say and do not, to be in earnest, — this is the discipline by which alone man is enabled to rescue his life from thraldom to the passing moment and to his bodily senses, to ennoble it, and to make it eternal. And this discipline has been nowhere so effectively taught as in the school of Hebraism. The intense and convinced energy with which the Hebrew, both of the Old and of the New Testament, threw himself upon his ideal of righteousness, and which inspired the incomparable definition of the great Christian virtue, faith, — *the substance of things hoped for, the evidence of things not seen*, [59] — this energy of devotion to its ideal has belonged to Hebraism alone. As our idea of perfection widens beyond the narrow limits to which the over-rigour of Hebraising has tended to confine it, we shall yet come again to Hebraism for that devout energy in embracing our ideal, which alone can give to man the happiness of doing what he knows. 'If ye know these things, happy are ye if ye do them!' [60] — the last word for infirm humanity will always be that. For this word, reiterated with a power now sublime, now affecting, but always admirable, our race will, as long as the world lasts, return to Hebraism; and the Bible, which preaches this word, will for ever remain, as Goethe called it, not only a national book, but the Book of the Nations. Again and again,

Introduction

IN one of his speeches a short time ago, that fine speaker and famous Liberal, Mr. Bright,[1] took occasion to have a fling at the friends and preachers of culture. 'People who talk about what they call *culture*!' said he, contemptuously; 'by which they mean a smattering of the two dead languages of Greek and Latin.' And he went on to remark, in a strain with which modern speakers and writers have made us very familiar, how poor a thing this culture is, how little good it can do to the world, and how absurd it is for its possessors to set much store by it. And the other day a younger Liberal than Mr. Bright, one of a school whose mission it is to bring into order and system that body of truth with which the earlier Liberals merely fumbled, a member of the University of Oxford, and a very clever writer, Mr. Frederic Harrison,[2] developed, in the systematic and stringent manner of his school, the thesis which Mr. Bright had propounded in only general terms. 'Perhaps the very silliest cant of the day,' said Mr. Frederic Harrison, 'is the cant about culture. Culture is a desirable quality in a critic of new books, and sits well on a possessor of *belles-lettres*; but as applied to politics, it means simply a turn for small fault-finding, love of selfish ease, and indecision in action. The man of culture is in politics one of the poorest mortals alive. For simple pedantry and want of good sense no man is his equal. No assumption is too unreal, no end is too unpractical for him. But the active exercise of politics requires common sense, sympathy, trust, resolution, and enthusiasm, qualities which your man of culture has carefully rooted up, lest they damage the delicacy of his critical olfactories. Perhaps they are the only class of responsible beings in the community who cannot with safety be entrusted with power.'

Now for my part I do not wish to see men of culture asking to be entrusted with power; and, indeed, I have freely said, that in my opinion the speech most proper, at present, for a man of culture to make to a body of his fellow-countrymen who get him into a committee-room, is Socrates's: *Know thyself!* and this is not a speech to be made by men wanting to be entrusted with power. For this very indifference to direct political action I have been taken to task by the *Daily Telegraph*,[3] coupled, by a strange perversity of fate, with just

1. For John Bright, see the Preface to *Culture and Anarchy*, note 26.

2. Frederic Harrison (1831–1923), a barrister and author, a strong supporter of the working class. Arnold quotes from an article 'Our Venetian Constitution' in the *Fortnightly Review*, March 1, 1867, pp.276–77, reprinted as 'Parliament before Reform' in Harrison's *Order and Progress* (1875).

3. See the selection from Arnold's *On the Study of Celtic Literature*, note 69. See also the note on G.A.Sala, of the *Daily Telegraph* staff, in the Preface to *Culture and Anarchy*, note 15. This is Arnold's last sentence of the Preface (not reprinted in this book) to *Essays in Criticism* (1865): 'Yes, the world will soon be the Philistines'! and then, with every voice, not of thunder, silenced, and the whole earth filled and ennobled every morning by the magnificent roaring of the young lions of the *Daily Telegraph*, we shall all yawn in one another's faces with the dismallest, the most unimpeachable gravity.' By 'lions,' here and elsewhere (*cf.* 'Young Leo,' the typical newswriter of the *Daily Telegraph*, in Arnold's *Friendship's Garland* [1871], Letter xii), Arnold means the bombastically ambitious reporters.

that very one of the Hebrew prophets whose style I admire the least, and called 'an elegant Jeremiah.' It is because I say (to use the words which the *Daily Telegraph* puts in my mouth): — 'You mustn't make a fuss because you have no vote, — that is vulgarity; you mustn't hold big meetings to agitate for reform bills and to repeal corn laws, — that is the very height of vulgarity,' — it is for this reason that I am called sometimes an elegant Jeremiah, sometimes a spurious Jeremiah, a Jeremiah about the reality of whose mission the writer in the *Daily Telegraph* has his doubts. It is evident, therefore, that I have so taken my line as not to be exposed to the whole brunt of Mr. Frederic Harrison's censure. Still, I have often spoken in praise of culture, I have striven to make all my works and ways serve the interests of culture. I take culture to be something a great deal more than what Mr. Frederic Harrison and others call it: 'a desirable quality in a critic of new books.' Nay, even though to a certain extent I am disposed to agree with Mr. Frederic Harrison, that men of culture are just the class of responsible beings in this community of ours who cannot properly, at present, be entrusted with power, I am not sure that I do not think this the fault of our community rather than of the men of culture. In short, although, like Mr. Bright and Mr. Frederic Harrison, and the editor of the *Daily Telegraph*, and a large body of valued friends of mine, I am a Liberal, yet I am a Liberal tempered by experience, reflection, and renouncement,[4] and I am, above all, a believer in culture. Therefore I propose now to try and inquire, in the simple unsystematic way which best suits both my taste and my powers, what culture really is, what good it can do, what is our own special need of it; and I shall seek to find some plain grounds on which a faith in culture, — both my own faith in it and the faith of others, — may rest securely.

4. These three nouns are used as a pointed imitation of 'Peace, retrenchment, reform' — the slogan of the Liberal party.

Chapter I

Sweetness and Light

The disparagers of culture make its motive curiosity; sometimes, indeed, they make its motive mere exclusiveness and vanity. The culture which is supposed to plume itself on a smattering of Greek and Latin [1] is a culture which is begotten by nothing so intellectual as curiosity; it is valued either out of sheer vanity and ignorance or else as an engine of social and class distinction, separating its holder, like a badge or title, from other people who have not got it. No serious man would call this *culture*, or attach any value to it, as culture, at all. To find the real ground for the very different estimate which serious people will set upon culture, we must find some motive for culture in the terms of which may lie a real ambiguity; and such a motive the word *curiosity* gives us.

I have before now pointed out [2] that we English do not, like the foreigners, use this word in a good sense as well as in a bad sense. With us the word is always used in a somewhat disapproving sense. A liberal and intelligent eagerness about the things of the mind may be meant by a foreigner when he speaks of curiosity, but with us the word always conveys a certain notion of frivolous and unedifying activity. In the *Quarterly Review*, some little time ago,[3] was an estimate of the celebrated French critic, M. Sainte-Beuve, and a very inadequate estimate it in my judgment was. And its inadequacy consisted chiefly in this: that in our English way it left out of sight the double sense really involved in the word *curiosity*, thinking enough was said to stamp M. Sainte-Beuve with

1. See the opening sentences of the Introduction to *Culture and Anarchy*.
2. In the essay on the function of criticism; *cf.* the passage with note 18.
3. *Quarterly Review* for Jan. 1866, pp.80–108.

blame if it was said that he was impelled in his operations as a critic by curiosity, and omitting either to perceive that M. Sainte-Beuve himself, and many other people with him, would consider that this was praiseworthy and not blameworthy, or to point out why it ought really to be accounted worthy of blame and not of praise. For as there is a curiosity about intellectual matters which is futile, and merely a disease, so there is certainly a curiosity, — a desire after the things of the mind simply for their own sakes and for the pleasure of seeing them as they are, — which is, in an intelligent being, natural and laudable. Nay, and the very desire to see things as they are implies a balance and regulation of mind which is not often attained without fruitful effort, and which is the very opposite of the blind and diseased impulse of mind which is what we mean to blame when we blame curiosity. Montesquieu says:[4] 'The first motive which ought to impel us to study is the desire to augment the excellence of our nature, and to render an intelligent being yet more intelligent.' This is the true ground to assign for the genuine scientific passion, however manifested, and for culture, viewed simply as a fruit of this passion; and it is a worthy ground, even though we let the term *curiosity* stand to describe it.

But there is of culture another view, in which not solely the scientific passion, the sheer desire to see things as they are, natural and proper in an intelligent being, appears as the ground of it. There is a view in which all the love of our neighbour, the impulses towards action, help, and beneficence, the desire for removing human error, clearing human confusion, and diminishing human misery, the noble aspiration to leave the world better and happier than we found it, — motives eminently such as are called social, — come in as part of the grounds of culture, and the main and preeminent part. Culture is then properly described not as having its origin in curiosity, but as having its origin in the love of perfection; it is *a study of perfection*. It moves by the force, not merely or primarily of the scientific passion for pure knowledge, but also of the moral and social passion for doing good. As, in the first view of it, we took for its worthy motto Montesquieu's words: 'To render an intelligent being yet more intelligent!' so, in the second view of it, there is no better motto which it can have than these words of Bishop Wilson:[5] 'To make reason and the will of God prevail!'

Only, whereas the passion for doing good is apt to be overhasty in determining what reason and the will of God say, because its turn is for acting rather than thinking and it wants to be beginning to act; and whereas it is apt to take its own conceptions, which proceed from its own state of development and share in all the imperfections and immaturities of this, for a basis of action; what distinguishes culture is, that it is possessed by the scientific passion as well as by the passion of doing good; that it demands worthy notions of reason and the will of God, and does not readily suffer its own crude conceptions to substitute themselves for them. And knowing that no action or institution can be salutary and stable which is not based on reason and the will of God, it is not so bent on acting and instituting, even with the great aim of diminishing human error and misery ever before its thoughts, but that it can remember that acting and instituting are of little use, unless we know how and what we ought to act and to institute.

This culture is more interesting and more far-reaching than that other, which is founded solely on the scientific passion

4. Charles de Montesquieu (1689–1755), French jurist, philosopher, and writer. *Cf.* his *Œuvres Complètes*, ed. Laboulaye, VII, 78.

5. *Cf.* Thomas Wilson, *Sacra Privata* (*Works*, ed. 1860, V,187): 'In the primitive Church, everything was done with advice, because their great aim was to have reason and the will of God prevail.'

for knowing. But it needs times of faith and ardour, times when the intellectual horizon is opening and widening all round us, to flourish in. And is not the close and bounded intellectual horizon within which we have long lived and moved now lifting up, and are not new lights finding free passage to shine in upon us? For a long time there was no passage for them to make their way in upon us, and then it was of no use to think of adapting the world's action to them. Where was the hope of making reason and the will of God prevail among people who had a routine which they had christened reason and the will of God, in which they were inextricably bound, and beyond which they had no power of looking? But now the iron force of adhesion to the old routine, — social, political, religious, — has wonderfully yielded; the iron force of exclusion of all which is new has wonderfully yielded. The danger now is, not that people should obstinately refuse to allow anything but their old routine to pass for reason and the will of God, but either that they should allow some novelty or other to pass for these too easily, or else that they should underrate the importance of them altogether, and think it enough to follow action for its own sake, without troubling themselves to make reason and the will of God prevail therein. Now, then, is the moment for culture to be of service, culture which believes in making reason and the will of God prevail, believes in perfection, is the study and pursuit of perfection, and is no longer debarred, by a rigid invincible exclusion of whatever is new, from getting acceptance for its ideas, simply because they are new.

The moment this view of culture is seized, the moment it is regarded not solely as the endeavour to see things as they are, to draw towards a knowledge of the universal order which seems to be intended and aimed at in the world, and which it is a man's happiness to go along with or his misery to go counter to, — to learn, in short, the will of God, — the moment, I say, culture is considered not merely as the endeavour to *see* and *learn* this, but as the endeavour, also, to make it *prevail*, the moral, social, and beneficent character of culture becomes manifest. The mere endeavour to see and learn the truth for our own personal satisfaction is indeed a commencement for making it prevail, a preparing the way for this, which always serves this, and is wrongly, therefore, stamped with blame absolutely in itself and not only in its caricature and degeneration. But perhaps it has got stamped with blame, and disparaged with the dubious title of curiosity, because in comparison with this wider endeavour of such great and plain utility it looks selfish, petty, and unprofitable.

And religion, the greatest and most important of the efforts by which the human race has manifested its impulse to perfect itself, — religion, that voice of the deepest human experience, — does not only enjoin and sanction the aim which is the great aim of culture, the aim of setting ourselves to ascertain what perfection is and to make it prevail; but also, in determining generally in what human perfection consists, religion comes to a conclusion identical with that which culture, — culture seeking the determination of this question through *all* the voices of human experience which have been heard upon it, of art, science, poetry, philosophy, history, as well as of religion, in order to give a greater fulness and certainty to its solution, — likewise reaches. Religion says: *The kingdom of God is within you*; [6] and culture, in like manner, places human perfection in an *internal* condition, in the growth and predominance of our humanity proper, as distinguished from our animality. It places it in the ever-increasing efficacy and in the general harmonious expansion of those gifts of thought and feeling, which make the peculiar dignity, wealth, and happiness of human nature.

6. See *Luke*, xvii,21.

As I have said on a former occasion:[7] 'It is in making endless additions to itself, in the endless expansion of its powers, in endless growth in wisdom and beauty, that the spirit of the human race finds its ideal. To reach this ideal, culture is an indispensable aid, and that is the true value of culture.' Not a having and a resting, but a growing and a becoming, is the character of perfection as culture conceives it; and here, too, it coincides with religion.

And because men are all members of one great whole, and the sympathy which is in human nature will not allow one member to be indifferent to the rest or to have a perfect welfare independent of the rest, the expansion of our humanity, to suit the idea of perfection which culture forms, must be a *general* expansion. Perfection, as culture conceives it, is not possible while the individual remains isolated. The individual is required, under pain of being stunted and enfeebled in his own development if he disobeys, to carry others along with him in his march towards perfection, to be continually doing all he can to enlarge and increase the volume of the human stream sweeping thitherward. And here, once more, culture lays on us the same obligation as religion which says, as Bishop Wilson has admirably put it, that 'to promote the kingdom of God is to increase and hasten one's own happiness.'[8]

But, finally, perfection, — as culture from a thorough disinterested study of human nature and human experience learns to conceive it, — is a harmonious expansion of *all* the powers which make the beauty and worth of human nature, and is not consistent with the over-development of any one power at the expense of the rest. Here culture goes beyond religion, as religion is generally conceived by us.

If culture, then, is a study of perfection, and of harmonious perfection, general perfection, and perfection which consists in becoming something rather than in having something, in an inward condition of the mind and spirit, not in an outward set of circumstances, — it is clear that culture, instead of being the frivolous and useless thing which Mr. Bright, and Mr. Frederic Harrison, and many other Liberals are apt to call it, has a very important function to fulfil for mankind. And this function is particularly important in our modern world, of which the whole civilisation is, to a much greater degree than the civilisation of Greece and Rome, mechanical and external, and tends constantly to become more so. But above all in our own country has culture a weighty part to perform, because here that mechanical character, which civilisation tends to take everywhere, is shown in the most eminent degree. Indeed nearly all the characters of perfection, as culture teaches us to fix them, meet in this country with some powerful tendency which thwarts them and sets them at defiance. The idea of perfection as an *inward* condition of the mind and spirit is at variance with the mechanical and material civilisation in esteem with us, and nowhere, as I have said, so much in esteem as with us. The idea of perfection as a *general* expansion of the human family is at variance with our strong individualism, our hatred of all limits to the unrestrained swing of the individual's personality, our maxim of 'every man for himself.' Above all, the idea of perfection as a *harmonious* expansion of human nature is at variance with our want of flexibility, with our inaptitude for seeing more than one side of a thing, with our intense energetic absorption in the particular pursuit we happen to be following. So culture has a rough task to achieve in this country. Its preachers have, and are likely long to have, a hard time of it, and they will much oftener be regarded, for a great while to come, as elegant or

spurious Jeremiahs than as friends and benefactors. That, however, will not prevent their doing in the end good service if they persevere. And, meanwhile, the mode of action they have to pursue, and the sort of habits they must fight against, ought to be made quite clear for every one to see, who may be willing to look at the matter attentively and dispassionately.

Faith in machinery, is, I said, our besetting danger; often in machinery most absurdly disproportioned to the end which this machinery, if it is to do any good at all, is to serve; but always in machinery, as if it had a value in and for itself. What is freedom but machinery? what is population but machinery? what is coal but machinery? what are railroads but machinery? what is wealth but machinery? what are, even, religious organisations but machinery? Now almost every voice in England is accustomed to speak of these things as if they were precious ends in themselves, and therefore had some of the characters of perfection indisputably joined to them. I have before now [9] noticed Mr. Roebuck's stock argument for proving the greatness and happiness of England as she is, and for quite stopping the mouths of all gainsayers. Mr. Roebuck is never weary of reiterating this argument of his, so I do not know why I should be weary of noticing it. 'May not every man in England say what he likes?' — Mr. Roebuck perpetually asks; and that, he thinks, is quite sufficient, and when every man may say what he likes, our aspirations ought to be satisfied. But the aspirations of culture, which is the study of perfection, are not satisfied, unless what men say, when they may say what they like, is worth saying, — has good in it, and more good than bad. In the same way the *Times*, replying to some foreign strictures on the dress, looks, and behaviour of the English abroad, urges that the English ideal is that every one should be free to do and to look just as he likes.[10] But culture indefatigably tries, not to make what each raw person may like the rule by which he fashions himself; but to draw eve. nearer to a sense of what is indeed beautiful, graceful, and becoming, and to get the raw person to like that.

And in the same way with respect to railroads and coal. Every one must have observed the strange language current during the late discussions as to the possible failures of our supplies of coal. Our coal, thousands of people were saying, is the real basis of our national greatness; if our coal runs short, there is an end of the greatness of England. But what *is* greatness? — culture makes us ask. Greatness is a spiritual condition worthy to excite love, interest, and admiration; and the outward proof of possessing greatness is that we excite love, interest, and admiration. If England were swallowed up by the sea tomorrow, which of the two, a hundred years hence, would most excite the love, interest, and admiration of mankind, — would most, therefore, show the evidences of having possessed greatness, — the England of the last twenty years, or the England of Elizabeth, of a time of splendid spiritual effort, but when our coal, and our industrial operations depending on coal, were very little developed? Well, then, what an unsound habit of mind it must be which makes us talk of things like coal or iron as constituting the greatness of England, and how salutary a friend is culture, bent on seeing things as they are, and thus dissipating delusions of this kind and fixing standards of perfection that are real!

Wealth, again, that end to which our prodigious works for material advantage are directed, — the commonest of commonplaces tells us how men are always apt

9. See the selection from *On the Study of Celtic Literature*, note 68. The quotation is from a speech made by Roebuck at Sheffield. *Cf.* also the essay 'Barbarians, Philistines, Populace,' the passage with note 40.

10. This may have provided Arnold with the title of Ch.ii, 'Doing as One Likes,' in *Culture and Anarchy*.

to regard wealth as a precious end in itself; and certainly they have never been so apt thus to regard it as they are in England at the present time. Never did people believe anything more firmly than nine Englishmen out of ten at the present day believe that our greatness and welfare are proved by our being so very rich. Now, the use of culture is that it helps us, by means of its spiritual standard of perfection, to regard wealth as but machinery, and not only to say as a matter of words that we regard wealth as but machinery, but really to perceive and feel that it is so. If it were not for this purging effect wrought upon our minds by culture, the whole world, the future as well as the present, would inevitably belong to the Philistines. The people who believe most that our greatness and welfare are proved by our being very rich, and who most give their lives and thoughts to becoming rich, are just the very people whom we call Philistines. Culture says: 'Consider these people, then, their way of life, their habits, their manners, the very tones of their voice; look at them attentively; observe the literature they read, the things which give them pleasure, the words which come forth out of their mouths, the thoughts which make the furniture of their minds; would any amount of wealth be worth having with the condition that one was to become just like these people by having it?' And thus culture begets a dissatisfaction which is of the highest possible value in stemming the common tide of men's thoughts in a wealthy and industrial community, and which saves the future, as one may hope, from being vulgarised, even if it cannot save the present.

Population, again, and bodily health and vigour, are things which are nowhere treated in such an unintelligent, misleading, exaggerated way as in England. Both are really machinery; yet how many people all around us do we see rest in them and fail to look beyond them! Why, one has heard people, fresh from reading certain articles of the *Times* on the Registrar-General's returns of marriages and births in this country, who would talk of our large English families in quite a solemn strain, as if they had something in itself beautiful, elevating, and meritorious in them; as if the British Philistine would have only to present himself before the Great Judge with his twelve children, in order to be received among the sheep as a matter of right!

But bodily health and vigour, it may be said, are not to be classed with wealth and population as mere machinery; they have a more real and essential value. True; but only as they are more intimately connected with a perfect spiritual condition than wealth or population are. The moment we disjoin them from the idea of a perfect spiritual condition, and pursue them, as we do pursue them, for their own sake and as ends in themselves, our worship of them becomes as mere worship of machinery, as our worship of wealth or population, and as unintelligent and vulgarising a worship as that is. Every one with anything like an adequate idea of human perfection has distinctly marked this subordination to higher and spiritual ends of the cultivation of bodily vigour and activity. 'Bodily exercise profiteth little; but godliness is profitable unto all things,'[11] says the author of the Epistle to Timothy. And the utilitarian Franklin says just as explicitly: — 'Eat and drink such an exact quantity as suits the constitution of thy body, *in reference to the services of the mind*.'[12] But the point of view of culture, keeping the mark of human perfection simply and broadly in view, and not assigning to this perfection, as religion or utilitarianism assigns to it, a special and limited character, this point of view, I say, of culture is best given by these words of

11. *I Timothy*, iv,8.

12. This is the first of Benjamin Franklin's 'Rules of Health and Long Life,' in his *Poor Richard's Almanack*, for Dec. 1742, inexactly quoted. It should read: '. . . as the Constitution of thy Body allows of . . .'

Epictetus: — 'It is a sign of ἀφυΐα,' says he, — that is, of a nature not finely tempered, — 'to give yourselves up to things which relate to the body; to make, for instance, a great fuss about exercise, a great fuss about eating, a great fuss about drinking, a great fuss about walking, a great fuss about riding. All these things ought to be done merely by the way: the formation of the spirit and character must be our real concern.'[13] This is admirable; and, indeed, the Greek word εὐφυΐα, a finely tempered nature, gives exactly the notion of perfection as culture brings us to conceive it: a harmonious perfection, a perfection in which the characters of beauty and intelligence are both present, which unites 'the two noblest of things,' — as Swift, who of one of the two, at any rate, had himself all too little, most happily calls them in his *Battle of the Books*, — 'the two noblest of things, *sweetness and light*.'[14] The εὐφυής is the man who tends towards sweetness and light; the ἀφυής, on the other hand, is our Philistine. The immense spiritual significance of the Greeks is due to their having been inspired with this central and happy idea of the essential character of human perfection; and Mr. Bright's misconception of culture, as a smattering of Greek and Latin,[15] comes itself, after all, from this wonderful significance of the Greeks having affected the very machinery of our education, and is in itself a kind of homage to it.

In thus making sweetness and light to be characters of perfection, culture is of like spirit with poetry, follows one law with poetry. Far more than on our freedom, our population, and our industrialism, many amongst us rely upon our religious organisations to save us. I have called religion a yet more important manifestation of human nature than poetry, because it has worked on a broader scale for perfection, and with greater masses of men. But the idea of beauty and of a human nature perfect on all its sides, which is the dominant idea of poetry, is a true and invaluable idea, though it has not yet had the success that the idea of conquering the obvious faults of our animality, and of a human nature perfect on the moral side, — which is the dominant idea of religion, — has been enabled to have; and it is destined, adding to itself the religious idea of a devout energy, to transform and govern the other.

The best art and poetry of the Greeks, in which religion and poetry are one, in which the idea of beauty and of a human nature perfect on all sides adds to itself a religious and devout energy, and works in the strength of that, is on this account of such surpassing interest and instructiveness for us, though it was, — as, having regard to the human race in general, and, indeed, having regard to the Greeks themselves, we must own, — a premature attempt, an attempt which for success needed the moral and religious fibre in humanity to be more braced and developed than it had yet been. But Greece did not err in having the idea of beauty, harmony, and complete human perfection, so present and paramount. It is impossible to have this idea too present and paramount; only, the moral fibre must be braced too. And we, because we have braced the moral fibre, are not on that account in the right way, if at the same time the idea of beauty, harmony, and complete human perfection, is wanting or misapprehended amongst us; and evidently it *is* wanting or misapprehended at present. And when we rely as we do on our religious organisations, which in themselves do not and cannot give us this idea, and think we have done enough if we make them spread and prevail, then, I say, we fall into our common fault of overvaluing machinery.

Nothing is more common than for peo-

13. Epictetus (60?–120?), Roman philosopher. The sentence here quoted is a rather free translation of Ch.xli of the *Encheiridion*.

14. See Notes.

15. See note 1. above.

ple to confound the inward peace and satisfaction which follows the subduing of the obvious faults of our animality with what I may call absolute inward peace and satisfaction, — the peace and satisfaction which are reached as we draw near to complete spiritual perfection, and not merely to moral perfection, or rather to relative moral perfection. No people in the world have done more and struggled more to attain this relative moral perfection than our English race has. For no people in the world has the command to *resist the devil*,[16] to *overcome the wicked one*,[17] in the nearest and most obvious sense of those words, had such a pressing force and reality. And we have had our reward, not only in the great worldly prosperity which our obedience to this command has brought us, but also, and far more, in great inward peace and satisfaction. But to me few things are more pathetic than to see people, on the strength of the inward peace and satisfaction which their rudimentary efforts towards perfection have brought them, employ, concerning their incomplete perfection and the religious organisations within which they have found it, language which properly applies only to complete perfection, and is a far-off echo of the human soul's prophecy of it. Religion itself, I need hardly say, supplies them in abundance with this grand language. And very freely do they use it; yet it is really the severest possible criticism of such an incomplete perfection as alone we have yet reached through our religious organisations.

The impulse of the English race towards moral development and self-conquest has nowhere so powerfully manifested itself as in Puritanism. Nowhere has Puritanism found so adequate an expression as in the religious organisation of the Independents.[18] The modern Independents have a newspaper, the *Nonconformist*, written with great sincerity and ability. The motto, the standard, the profession of faith which this organ of theirs carries aloft, is: 'The Dissidence of Dissent and the Protestantism of the Protestant religion.'[19] There is sweetness and light, and an ideal of complete harmonious human perfection! One need not go to culture and poetry to find language to judge it. Religion, with its instinct for perfection, supplies language to judge it, language, too, which is in our mouths every day. 'Finally, be of one mind, united in feeling,'[20] says St. Peter. There is an ideal which judges the Puritan ideal: 'The Dissidence of Dissent and the Protestantism of the Protestant religion!' And religious organisations like this are what people believe in, rest in, would give their lives for! Such, I say, is the wonderful virtue of even the beginnings of perfection, of having conquered even the plain faults of our animality, that the religious organisation which has helped us to do it can seem to us something precious, salutary, and to be propagated, even when it wears such a brand of imperfection on its forehead as this. And men have got such a habit of giving to the language of religion a special application, of making it a mere jargon, that for the condemnation which religion itself passes on the shortcomings of their religious organisations they have no ear; they are sure to cheat themselves and to explain this condemnation away. They can only be reached by the criticism which culture, like poetry, speaking a language not to be sophisticated, and resolutely testing these organisations by the ideal of a

20. A partial rephrasing of *I Peter*, iii,8.

human perfection complete on all sides, applies to them.

But men of culture and poetry, it will be said, are again and again failing, and failing conspicuously, in the necessary first stage to a harmonious perfection, in the subduing of the great obvious faults of our animality, which it is the glory of these religious organisations to have helped us to subdue. True, they do often so fail. They have often been without the virtues as well as the faults of the Puritan; it has been one of their dangers that they so felt the Puritan's faults that they too much neglected the practice of his virtues. I will not, however, exculpate them at the Puritan's expense. They have often failed in morality, and morality is indispensable. And they have been punished for their failure, as the Puritan has been rewarded for his performance. They have been punished wherein they erred; but their ideal of beauty, of sweetness and light, and a human nature complete on all its sides, remains the true ideal of perfection still; just as the Puritan's ideal of perfection remains narrow and inadequate, although for what he did well he has been richly rewarded. Notwithstanding the mighty results of the Pilgrim Fathers' voyage, they and their standard of perfection are rightly judged when we figure to ourselves Shakspeare or Virgil, — souls in whom sweetness and light, and all that in human nature is most humane, were eminent, — accompanying them on their voyage, and think what intolerable company Shakspeare and Virgil would have found them! In the same way let us judge the religious organisations which we see all around us. Do not let us deny the good and the happiness which they have accomplished; but do not let us fail to see clearly that their idea of human perfection is narrow and inadequate, and that the Dissidence of Dissent and the Protestantism of the Protestant religion will never bring humanity to its true goal. As I said with regard to wealth: Let us look at the life of those who live in and for it, — so I say with regard to the religious organisations. Look at the life imaged in such a newspaper as the *Nonconformist*, — a life of jealousy of the Establishment,[21] disputes, tea-meetings, openings of chapels, sermons; and then think of it as an ideal of a human life completing itself on all sides, and aspiring with all its organs after sweetness, light, and perfection!

Another newspaper, representing, like the *Nonconformist*, one of the religious organisations of this country, was a short time ago giving an account of the crowd at Epsom[22] on the Derby day, and of all the vice and hideousness which was to be seen in that crowd; and then the writer turned suddenly round upon Professor Huxley,[23] and asked him how he proposed to cure all this vice and hideousness without religion. I confess I felt disposed to ask the asker this question: and how do you propose to cure it with such a religion as yours? How is the ideal of a life so unlovely, so unattractive, so incomplete, so narrow, so far removed from a true and satisfying ideal of human perfection, as is the life of your religious organisation as you yourself reflect it, to conquer and transform all this vice and hideousness? Indeed, the strongest plea for the study of perfection as pursued by culture, the clearest proof of the actual inadequacy of the idea of perfection held by the religious organisations, — expressing, as I have said, the most widespread effort which the human race has yet made after perfection, — is to be found in the state of our life and society with these in possession of it, and having been in possession of it I know not how many hundred years. We are all of us included in some religious organisation or other; we all call ourselves, in the sublime and aspiring language of

21. The Church of England.

22. A town near London, home of the famous Derby horse races, which commenced in 1780.

23. Huxley, the scientist and agnostic, was from 1863 to 1869 Hunterian professor at the Royal College of Surgeons.

religion which I have before noticed, *children of God*.[24] Children of God; — it is an immense pretension! — and how are we to justify it? By the works which we do, and the words which we speak. And the work which we collective children of God do, our grand centre of life, our *city* which we have builded for us to dwell in, is London! London, with its unutterable external hideousness, and with its internal canker of *publicè egestas, privatim opulentia*,[25] — to use the words which Sallust puts into Cato's mouth about Rome, — unequalled in the world! The word, again, which we children of God speak, the voice which most hits our collective thought, the newspaper with the largest circulation in England, nay, with the largest circulation in the whole world, is the *Daily Telegraph*! I say that when our religious organisations, — which I admit to express the most considerable effort after perfection that our race has yet made, — land us in no better result than this, it is high time to examine carefully their idea of perfection, to see whether it does not leave out of account sides and forces of human nature which we might turn to great use; whether it would not be more operative if it were more complete. And I say that the English reliance on our religious organisations and on their ideas of human perfection just as they stand, is like our reliance on freedom, on muscular Christianity, on population, on coal, on wealth, — mere belief in machinery, and unfruitful; and that it is wholesomely counteracted by culture, bent on seeing things as they are, and on drawing the human race onwards to a more complete, a harmonious perfection.

Culture, however, shows its single-minded love of perfection, its desire simply to make reason and the will of God prevail, its freedom from fanaticism, by its attitude towards all this machinery, even while it insists that it *is* machinery. Fanatics, seeing the mischief men do themselves by their blind belief in some machinery or other, — whether it is wealth and industrialism, or whether it is the cultivation of bodily strength and activity, or whether it is a political organisation, — or whether it is a religious organisation, — oppose with might and main the tendency to this or that political and religious organisation, or to games and athletic exercises, or to wealth and industrialism, and try violently to stop it. But the flexibility which sweetness and light give, and which is one of the rewards of culture pursued in good faith, enables a man to see that a tendency may be necessary, and even, as a preparation for something in the future, salutary, and yet that the generations or individuals who obey this tendency are sacrificed to it, that they fall short of the hope of perfection by following it; and that its mischiefs are to be criticised, lest it should take too firm a hold and last after it has served its purpose.

Mr. Gladstone well pointed out, in a speech at Paris,[26] — and others have pointed out the same thing, — how necessary is the present great movement towards wealth and industrialism, in order to lay broad foundations of material well-being for the society of the future. The worst of these justifications is, that they are generally addressed to the very people engaged, body and soul, in the movement in question; at all events, that they are always seized with the greatest avidity by these people, and taken by them as quite justifying their life; and that thus they tend to harden them in their sins. Now, culture admits the necessity of the movement towards fortune-making and exaggerated industrialism, readily allows that the future may derive benefit from it; but insists, at the same time, that the passing

24. See the New Testament, *passim*, especially *Romans*, viii,16; *Galatians*, iii,26.

25. 'Publicly (for the people in general) neediness, privately (for some few people) great wealth.' Adapted from Sallust, *Catiline*, LII, xxii.

26. A speech delivered in Paris on Jan. 31, 1867. See the London *Times*, Feb. 1, 1867, p.10.

generations of industrialists, — forming, for the most part, the stout main body of Philistinism, — are sacrificed to it. In the same way, the result of all the games and sports which occupy the passing generation of boys and young men may be the establishment of a better and sounder physical type for the future to work with. Culture does not set itself against the games and sports; it congratulates the future, and hopes it will make a good use of its improved physical basis; but it points out that our passing generation of boys and young men is, meantime, sacrificed. Puritanism was perhaps necessary to develop the moral fibre of the English race, Nonconformity to break the yoke of ecclesiastical domination over men's minds and to prepare the way for freedom of thought in the distant future; still, culture points out that the harmonious perfection of generations of Puritans and Nonconformists has been, in consequence, sacrificed. Freedom of speech may be necessary for the society of the future, but the young lions of the *Daily Telegraph* in the meanwhile are sacrificed. A voice for every man in his country's government may be necessary for the society of the future, but meanwhile Mr. Beales [27] and Mr. Bradlaugh [28] are sacrificed.

Oxford, the Oxford of the past, has many faults; and she has heavily paid for them in defeat, in isolation, in want of hold upon the modern world. Yet we in Oxford, brought up amidst the beauty and sweetness of that beautiful place, have not failed to seize one truth, — the truth that beauty and sweetness are essential characters of a complete human perfection. When I insist on this, I am all in the faith and tradition of Oxford. I say boldly that this our sentiment for beauty and sweetness, our sentiment against hideousness and rawness, has been at the bottom of our attachment to so many beaten causes, of our opposition to so many triumphant movements. And the sentiment is true, and has never been wholly defeated, and has shown its power even in its defeat. We have not won our political battles, we have not carried our main points, we have not stopped our adversaries' advance, we have not marched victoriously with the modern world; but we have told silently upon the mind of the country, we have prepared currents of feeling which sap our adversaries' position when it seems gained, we have kept up our own communications with the future. Look at the course of the great movement which shook Oxford to its centre some thirty years ago! It was directed, as any one who reads Dr. Newman's *Apology* may see, against what in one word may be called 'Liberalism.' Liberalism prevailed; it was the appointed force to do the work of the hour; it was necessary, it was inevitable that it should prevail. The Oxford movement was broken, it failed; [29] our wrecks are scattered on every shore: —

> Quæ regio in terris nostri non plena laboris? [30]

But what was it, this liberalism, as Dr. Newman saw it, and as it really broke the Oxford movement? It was the great middle-class liberalism, which had for the cardinal points of its belief the Reform Bill of 1832, and local self-government, in politics; in the social sphere, free-trade, unrestricted competition, and the making of large industrial fortunes; in the reli-

27. Edmond Beales (1803–81), political agitator, in 1866 president of the Reform League, and strong advocate for manhood suffrage and suffrage by ballot.

28. Charles Bradlaugh (1833–91), politician and advocate for free speech, freedom of the press, and free thought in religious belief.

29. Many evidences in 1869 showed the failure of the Oxford Movement and the success of liberalism. For instance, Bishop Wilberforce, leader of the High Church party, had twice failed to succeed as Archbishop; and by 1864 Stanley, a latitudinarian, had begun his many years as Dean of Westminster.

30. Virgil's *Aeneid*, I,460: 'What region in the world is not full of [the story of] our toil and trouble?'

gious sphere, the Dissidence of Dissent and the Protestantism of the Protestant religion. I do not say that other and more intelligent forces than this were not opposed to the Oxford movement: but this was the force which really beat it; this was the force which Dr. Newman felt himself fighting with; this was the force which till only the other day seemed to be the paramount force in this country, and to be in possession of the future; this was the force whose achievements fill Mr. Lowe [31] with such inexpressible admiration, and whose rule he was so horror-struck to see threatened. And where is this great force of Philistinism now? It is thrust into the second rank, it is become a power of yesterday, it has lost the future. A new power has suddenly appeared,[32] a power which it is impossible yet to judge fully, but which is certainly a wholly different force from middle-class liberalism; different in its cardinal points of belief, different in its tendencies in every sphere. It loves and admires neither the legislation of middle-class Parliaments, nor the local self-government of middle-class vestries,[33] nor the unrestricted competition of middle-class industrialists, nor the dissidence of middle-class Dissent and the Protestantism of middle-class Protestant religion. I am not now praising this new force, or saying that its own ideals are better; all I say is, that they are wholly different. And who will estimate how much the currents of feeling created by Dr. Newman's movements, the keen desire for beauty and sweetness which it nourished, the deep aversion it manifested to the hardness and vulgarity of middle-class liberalism, the strong light it turned on the hideous and grotesque illusions of middle-class Protestantism, — who will estimate how much all these contributed to swell the tide of secret dissatisfaction which has mined the ground under self-confident liberalism of the last thirty years, and has prepared the way for its sudden collapse and supersession? It is in this manner that the sentiment of Oxford for beauty and sweetness conquers, and in this manner long may it continue to conquer!

In this manner it works to the same end as culture, and there is plenty of work for it yet to do. I have said that the new and more democratic force which is now superseding our old middle-class liberalism cannot yet be rightly judged. It has its main tendencies still to form. We hear promises of its giving us administrative reform, law reform, reform of education, and I know not what; but those promises come rather from its advocates, wishing to make a good plea for it and to justify it for superseding middle-class liberalism, than from clear tendencies which it has itself yet developed. But meanwhile it has plenty of well-intentioned friends against whom culture may with advantage continue to uphold steadily its ideal of human perfection; that this is *an inward spiritual activity, having for its characters increased sweetness, increased light, increased life, increased sympathy*. Mr. Bright, who has a foot in both worlds, the world of middle-class liberalism and the world of democracy, but who brings most of his ideas from the world of middle-class liberalism in which he was bred, always inclines to inculcate that faith in machinery to which, as we have seen, Englishmen are so prone, and which has been the bane of middle-class liberalism. He complains with a sor-

31. See the selection from *On the Study of Celtic Literature*, note 68. Lowe, a member of Gladstone's cabinet, was liberal, but was opposed to the Reform Bill of the Liberal party, that would extend political power into the lower classes.

32. The new power, surpassing the Philistinism of the middle classes, is called in the next paragraph 'the new and more democratic force.' The Reform Act of 1867 had given great new power to the lower classes, 'the world of democracy.'

33. A vestry in the Church of England is a body of church members who administer the worldly, temporal affairs of their parish. The emphasis in Arnold's sentence above is laid upon the word 'middle-class,' and particularly upon 'middle.'

rowful indignation of people who 'appear to have no proper estimate of the value of the franchise'; he leads his disciples to believe, — what the Englishman is always too ready to believe, — that the having a vote, like the having a large family, or a large business, or large muscles, has in itself some edifying and perfecting effect upon human nature. Or else he cries out to the democracy, — 'the men,' as he calls them, 'upon whose shoulders the greatness of England rests,' — he cries out to them: 'See what you have done! I look over this country and see the cities you have built, the railroads you have made, the manufactures you have produced, the cargoes which freight the ships of the greatest mercantile navy the world has ever seen! I see that you have converted by your labours what was once a wilderness, these islands, into a fruitful garden; I know that you have created this wealth, and are a nation whose name is a word of power throughout all the world.'[34] Why, this is just the very style of laudation with which Mr. Roebuck, or Mr. Lowe debauches the minds of the middle classes, and makes such Philistines of them. It is the same fashion of teaching a man to value himself not on what he *is*, not on his progress in sweetness and light, but on the number of the railroads he has constructed, or the bigness of the tabernacle he has built. Only the middle classes are told they have done it all with their energy, self-reliance, and capital, and the democracy are told they have done it all with their hands and sinews. But teaching the democracy to put its trust in achievements of this kind is merely training them to be Philistines to take the place of the Philistines whom they are superseding; and they too, like the middle class, will be encouraged to sit down at the banquet of the future without having on a wedding garment, and nothing excellent can then come from them. Those who know their besetting faults, those who have watched them and listened to them, or those who will read the instructive account recently given of them by one of themselves, the *Journeyman Engineer*,[35] will agree that the idea which culture sets before us of perfection, — an increased spiritual activity, having for its characters increased sweetness, increased light, increased life, increased sympathy, — is an idea which the new democracy needs far more than the idea of the blessedness of the franchise, or the wonderfulness of its own industrial performances.

Other well-meaning friends of this new power are for leading it, not in the old ruts of middle-class Philistinism, but in ways which are naturally alluring to the feet of democracy, though in this country they are novel and untried ways. I may call them the ways of Jacobinism.[36] Violent indignation with the past, abstract systems of renovation applied wholesale, a new doctrine drawn up in black and white for elaborating down to the very smallest details a rational society for the future, — these are the ways of Jacobinism. Mr. Frederic Harrison and other disciples of Comte,[37] — one of them, Mr. Congreve, is an old friend of mine, and I am glad to have an opportunity of publicly ex-

34. From a speech by Bright on Dec. 4, 1866; see *Speeches on Questions of Public Policy by John Bright, M.P.*, ed. James E. T. Rogers (1868), II,229. Arnold does not quote exactly.

35. The pseudonym of Thomas Wright, whose *Some Habits and Customs of the Working Classes* had appeared in 1867.

36. Derived from the name of the most famous of the political clubs of the French Revolution, the *Société des Jacobins*.

37. Auguste Comte (1798–1857), French philosopher, founder of Positivism. This system of thought deals only with positive facts, verifiable phenomena, and rejects inquiry into causes, is concerned only with finding the correlation between verifiable phenomena. It rejects all the supernatural in religion, and sets up the worship of Humanity and of great men. Richard Congreve (1819–99), educated at Rugby and Oxford, founded the Positivist community in London in 1855, laid great stress on the value of religion, translated Comte's *Positive Religion* (1858).

pressing my respect for his talents and character, — are among the friends of democracy who are for leading it in paths of this kind. Mr. Frederic Harrison is very hostile to culture, and from a natural enough motive; for culture is the eternal opponent of the two things which are the signal marks of Jacobinism, — its fierceness, and its addiction to an abstract system. Culture is always assigning to system-makers and systems a smaller share in the bent of human destiny than their friends like. A current in people's minds sets towards new ideas; people are dissatisfied with their old narrow stock of Philistine ideas, Anglo-Saxon ideas, or any other; and some man, some Bentham or Comte, who has the real merit of having early and strongly felt and helped the new current, but who brings plenty of narrowness and mistakes of his own into his feeling and help of it, is credited with being the author of the whole current, the fit person to be entrusted with its regulation and to guide the human race.

The excellent German historian of the mythology of Rome, Preller,[38] relating the introduction at Rome under the Tarquins[39] of the worship of Apollo, the god of light, healing, and reconciliation, will have us observe that it was not so much the Tarquins who brought to Rome the new worship of Apollo, as a current in the mind of the Roman people which set powerfully at that time towards a new worship of this kind, and away from the old run of Latin and Sabine[40] religious ideas. In a similar way, culture directs our attention to the natural current there is in human affairs, and to its continual working, and will not let us rivet our faith upon any one man and his doings. It makes us see not only his good side, but also how much in him was of necessity limited and transient; nay, it even feels a pleasure, a sense of an increased freedom and of an ampler future, in so doing.

I remember, when I was under the influence of a mind to which I feel the greatest obligations, the mind of a man who was the very incarnation of sanity and clear sense, a man the most considerable, it seems to me, whom America has yet produced, — Benjamin Franklin,[41] — I remember the relief with which, after long feeling the sway of Franklin's imperturbable common-sense, I came upon a project of his for a new version of the Book of Job, to replace the old version, the style of which, says Franklin, has become obsolete, and thence less agreeable. 'I give,' he continues, 'a few verses, which may serve as a sample of the kind of version I would recommend.' We all recollect the famous verse in our translation: 'Then Satan answered the Lord and said: "Doth Job fear God for nought?"' Franklin makes this: 'Does your Majesty imagine that Job's good conduct is the effect of mere personal attachment and affection?' I well remember how, when first I read that, I drew a deep breath of relief, and said to myself: 'After all, there is a stretch of humanity beyond Franklin's victorious good sense!' So, after hearing Bentham cried loudly up as the renovator of modern society, and Bentham's mind and ideas proposed as the rulers of our future, I open the *Deontology*. There I read:[42] 'While Xenophon was writing

38. Ludwig Preller (1809–61), German scholar and author. His *Romische Mythologie* appeared in 1858.

39. In Roman legend, the Tarquin family provided the fifth and the seventh king of Rome.

40. 'Latin' here refers to Latium, the district in ancient Italy where Rome was. The Sabine district lay northeast of Latium and had been conquered by Rome in 290 B.C.

41. Franklin (1706–90) clearly was not serious in his trifling bit of ironic humor with the *Book of Job*. It is included among the 'Bagatelles,' and these were 'chiefly written by Dr. Franklin for the amusement of his intimate society in London and Paris.' *Cf.* his *Writings*, ed. A.H.Smyth (1907), I,177–80.

42. *Deontology, or, The Science of Morality* was arranged and edited by John Bowring in 1834, two years after Bentham's death; and one can

his history and Euclid teaching geometry, Socrates and Plato were talking nonsense under pretence of talking wisdom and morality. This morality of theirs consisted in words; this wisdom of theirs was the denial of matters known to every man's experience.' From the moment of reading that, I am delivered from the bondage of Bentham! the fanaticism of his adherents can touch me no longer. I feel the inadequacy of his mind and ideas for supplying the rule of human society, for perfection.

Culture tends always thus to deal with the men of a system, of disciples, of a school: with men like Comte, or the late Mr. Buckle,[43] or Mr. Mill. However much it may find to admire in these personages, or in some of them, it nevertheless remembers the text: 'Be not ye called Rabbi!'[44] and it soon passes on from any Rabbi. But Jacobinism loves a Rabbi: it does not want to pass on from its Rabbi in pursuit of a future and still unreached perfection; it wants its Rabbi and his ideas to stand for perfection, that they may with the more authority recast the world; and for Jacobinism, therefore, culture, — eternally passing onwards and seeking, — is an impertinence and an offence. But culture, just because it resists this tendency of Jacobinism to impose on us a man with limitations and errors of his own along with the true ideas of which he is the organ, really does the world and Jacobinism itself a service.

So, too, Jacobinism, in its fierce hatred of the past and of those whom it makes liable for the sins of the past, cannot away with the inexhaustible indulgence proper to culture, the consideration of circumstances, the severe judgment of actions joined to the merciful judgment of persons. 'The man of culture is in politics,' cries Mr. Frederic Harrison, 'one of the poorest mortals alive!' Mr. Frederic Harrison wants to be doing business, and he complains that the man of culture stops him with a 'turn for small fault-finding, love of selfish ease, and indecision in action.' Of what use is culture, he asks, except for 'a critic of new books or a professor of *belles-lettres*?' Why, it is of use because, in presence of the fierce exasperation which breathes, or rather, I may say, hisses through the whole production in which Mr. Frederic Harrison asks that question, it reminds us that the perfection of human nature is sweetness and light. It is of use because, like religion, — that other effort after perfection, — it testifies, that, where bitter envying and strife are, there is confusion and every evil work.

The pursuit of perfection, then, is the pursuit of sweetness and light. He who works for sweetness and light, works to make reason and the will of God prevail. He who works for machinery, he who works for hatred, works only for confusion. Culture looks beyond machinery, culture hates hatred; culture has one great passion, the passion for sweetness and light. It has one even yet greater! — the passion for making them *prevail*. It is not satisfied till we *all* come to a perfect man; it knows that the sweetness and light of the few must be imperfect until the raw and unkindled masses of humanity are touched with sweetness and light. If I have not shrunk from saying that we must work for sweetness and light, so neither have I shrunk from saying that we must have a broad basis, must have sweetness and light for as many as possible. Again and again I have insisted how

not depend upon it as truly representing Bentham's thoughts. But see his *Works* (Edinburgh, 1843), I,19n. For the quotation, see the *Deontology*, I,39. See also Bentham, *Rationale of Judicial Evidence* (London, 1827), I,120–26, where he discusses 'nonsense ethics.'

43. Henry Thomas Buckle (1821–62), published two vols. (1857, 1861) of his projected 14-vol. *History of Civilization in England*. The work was immensely popular. It attempted to put history on a scientific basis, to trace the laws and relationships determining the development of national life.

44. From *Matthew*, xxiii,8. 'Rabbi' means 'Master,' or, better here, 'Dictator.'

those are the happy moments of humanity, how those are the marking epochs of a people's life, how those are the flowering times for literature and art and all the creative power of genius, when there is a *national* glow of life and thought, when the whole of society is in the fullest measure permeated by thought, sensible to beauty, intelligent and alive. Only it must be *real* thought and *real* beauty; *real* sweetness and *real* light. Plenty of people will try to give the masses, as they call them, an intellectual food prepared and adapted in the way they think proper for the actual condition of the masses. The ordinary popular literature is an example of this way of working on the masses. Plenty of people will try to indoctrinate the masses with the set of ideas and judgments constituting the creed of their own profession or party. Our religious and political organizations give an example of this way of working on the masses. I condemn neither way; but culture works differently. It does not try to teach down to the level of inferior classes; it does not try to win them for this or that sect of its own, with ready-made judgments and watchwords. It seeks to do away with classes; to make the best that has been thought and known in the world current everywhere; to make all men live in an atmosphere of sweetness and light, where they may use ideas, as it uses them itself, freely, — nourished, and not bound by them.

This is the *social idea*; and the men of culture are the true apostles of equality. The great men of culture are those who have had a passion for diffusing, for making prevail, for carrying from one end of society to the other, the best knowledge, the best ideas of their time; who have laboured to divest knowledge of all that was harsh, uncouth, difficult, abstract, professional, exclusive; to humanise it, to make it efficient outside the clique of the cultivated and learned, yet still remaining the *best* knowledge and thought of the time, and a true source, therefore, of sweetness and light. Such a man was Abelard [45] in the Middle Ages, in spite of all his imperfections; and thence the boundless emotion and enthusiasm which Abelard excited. Such were Lessing and Herder [46] in Germany, at the end of the last century; and their services to Germany were in this way inestimably precious. Generations will pass, and literary monuments will accumulate, and works far more perfect than the works of Lessing and Herder will be produced in Germany; and yet the names of these two men will fill a German with a reverence and enthusiasm such as the names of the most gifted masters will hardly awaken. And why? Because they *humanised* knowledge; because they broadened the basis of life and intelligence; because they worked powerfully to diffuse sweetness and light, to make reason and the will of God prevail. With Saint Augustine they said: [47] 'Let us not leave thee alone to make in the secret of thy knowledge, as thou didst before the creation of the firmament, the division of light from darkness; let the children of thy spirit, placed in their firmament, make their light shine upon the earth, mark the division of night and day, and announce the revolution of the times; for the old order is passed, and the new arises; the night is spent, the day is come forth; and thou shalt crown the year with thy blessing, when thou shalt send forth labourers into thy harvest sown by other hands than theirs; when thou shalt send forth new labourers to new seed-times, whereof the harvest shall be not yet.'

45. Pierre Abelard (1079–1142), French scholastic philosopher and logician.

46. Gotthold Ephraim Lessing (1729–81), German critic and dramatist, author of the *Laokoon* (1766), etc. Johann Gottfried von Herder (1744–1803), German critic, poet, philosopher, and scholar, a pioneer of the romantic revival in Germany.

47. *Cf. Confessions of St. Augustine*, XIII,xviii, 22.

Chapter II

Doing as One Likes

I HAVE been trying to show that culture is, or ought to be, the study and pursuit of perfection; and that of perfection as pursued by culture, beauty and intelligence, or, in other words, sweetness and light, are the main characters.[1] But hitherto I have been insisting chiefly on beauty, or sweetness, as a character of perfection. To complete rightly my design, it evidently remains to speak also of intelligence, or light, as a character of perfection.

First, however, I ought perhaps to notice that, both here and on the other side of the Atlantic, all sorts of objections are raised against the 'religion of culture,' as the objectors mockingly call it, which I am supposed to be promulgating. It is said to be a religion proposing parmaceti,[2] or some scented salve or other, as a cure for human miseries; a religion breathing a spirit of cultivated inaction, making its believer refuse to lend a hand at uprooting the definite evils on all sides of us, and filling him with antipathy against the reforms and reformers which try to extirpate them. In general, it is summed up as being not practical, or, — as some critics familiarly put it, — all moonshine. That Alcibiades,[3] the editor of the *Morning Star*,[4] taunts me, as its promulgator, with living out of the world and knowing nothing of life and men. That great austere toiler, the editor of the *Daily Telegraph*,[5] upbraids me, — but kindly, and more in sorrow than in anger, — for trifling with æsthetics and poetical fancies, while he himself, in that arsenal of his in Fleet Street, is bearing the burden and heat of the day. An intelligent American newspaper, the *Nation*, says that it is very easy to sit in one's study and find fault with the course of modern society, but the thing is to propose practical improvements for it. While, finally, Mr. Frederic Harrison, in a very good-tempered and witty satire, which makes me quite understand his having apparently achieved such a conquest of my young Prussian friend, Arminius, at last gets moved to an almost stern moral impatience, to behold, as he says, 'Death, sin, cruelty stalk among us, filling their maws with innocence and youth,' and me, in the midst of the general tribulation, handing out my pouncet-box.[6]

It is impossible that all these remonstrances and reproofs should not affect me, and I shall try my very best, in completing my design and in speaking of light as one of the characters of perfection, and of culture as giving us light, to profit by the objections I have heard and read, and to drive at practice as much as I can, by showing the communications and passages into practical life from the doctrine which I am inculcating.

1. See 'Sweetness and Light.'
2. Parmaceti (a white waxy solid that separates from the oil of the sperm whale, used for making candles and cosmetics) was the remedy 'for an inward bruise,' recommended to Hotspur by a foppish lord. See Shakespeare's *I Henry IV*, I,iii,30–66.
3. Alcibiades (450?–404 B.C.), ward of Pericles and pupil of Socrates, typical of the brilliant, luxurious, cosmopolitan, unprincipled person. Arnold thus ironically indicates that the editor is actually narrow-minded and unattractive, for all of his vaunted knowledge of the world
4. A penny paper, for Nonconformists and political radicals. Arnold (*Letters*, ed. Russell, I,204) said it was a 'true reflexion of the rancour of Protestant Dissent in alliance with all the vulgarity, meddlesomeness, and grossness of the British multitude.'
5. Irony is directed at this editor, too. For the *Daily Telegraph*, see the introduction to *Culture and Anarchy*, note 3.
6. Harrison had published in the *Fortnightly Review*, Nov. 1867 (VIII,603–14), an article satirizing Arnold, entitled 'Culture: A Dialogue.' The speakers were Harrison and Arminius, the Prussian philosopher and critic invented by Arnold for his *Friendship's Garland*. The article opens with two lines from *I Henry IV*, recommending parmaceti. *Cf.* note 2, above. The foppish lord, who did not fight, sniffed daintily at his pouncet-box (perfume-box with a perforated lid), and irritated the active Hotspur by making supercilious and, above all, impractical remarks.

It is said that a man with my theories of sweetness and light is full of antipathy against the rougher or coarser movements going on around him, that he will not lend a hand to the humble operation of uprooting evil by their means, and that therefore the believers in action grow impatient with him. But what if rough and coarse action, ill-calculated action, action with insufficient light, is, and has for a long time been, our bane? What if our urgent want now is, not to act at any price, but rather to lay in a stock of light for our difficulties? In that case, to refuse to lend a hand to the rougher and coarser movements going on round us, to make the primary need, both for oneself and others, to consist in enlightening ourselves and qualifying ourselves to act less at random, is surely the best and in real truth the most practical line our endeavours can take. So that if I can show what my opponents call rough or coarse action, but what I would rather call random and ill-regulated action, — action with insufficient light, action pursued because we like to be doing something and doing it as we please, and do not like the trouble of thinking and the severe constraint of any kind of rule, — if I can show this to be, at the present moment, a practical mischief and dangerous to us, then I have found a practical use for light in correcting this state of things, and have only to exemplify how, in cases which fall under everybody's observation, it may deal with it.

When I began to speak of culture, I insisted on our bondage to machinery, on our proneness to value machinery as an end in itself, without looking beyond it to the end for which alone, in truth, it is valuable. Freedom, I said, was one of those things which we thus worshipped in itself, without enough regarding the ends for which freedom is to be desired. In our common notions and talk about freedom, we eminently show our idolatry of machinery. Our prevalent notion is, — and I quoted a number of instances to prove it, — that it is a most happy and important thing for a man merely to be able to do as he likes. On what he is to do when he is thus free to do as he likes, we do not lay so much stress. Our familiar praise of the British Constitution under which we live, is that it is a system of checks, — a system which stops and paralyses any power in interfering with the free action of individuals. To this effect Mr. Bright, who loves to walk in the old ways of the Constitution, said forcibly in one of his great speeches, what many other people are every day saying less forcibly, that the central idea of English life and politics is *the assertion of personal liberty*. Evidently this is so; but evidently, also, as feudalism, which with its ideas, and habits of subordination was for many centuries silently behind the British Constitution, dies out, and we are left with nothing but our system of checks, and our notion of its being the great right and happiness of an Englishman to do as far as possible what he likes, we are in danger of drifting towards anarchy. We have not the notion, so familiar on the Continent and to antiquity, of *the State*, — the nation in its collective and corporate character, entrusted with stringent powers for the general advantage, and controlling individual wills in the name of an interest wider than that of individuals. We say, what is very true, that this notion is often made instrumental to tyranny; we say that a State is in reality made up of the individuals who compose it, and that every individual is the best judge of his own interests. Our leading class is an aristocracy, and no aristocracy likes the notion of a State-authority greater than itself, with a stringent administrative machinery superseding the decorative inutilities of lord-lieutenancy, deputy-lieutenancy, and the *posse comitatus*,[7] which are all in its own hands. Our middle class, the great representative of

7. 'power of the county,' the group of men summoned by the sheriff to help enforce the law.

trade and Dissent, with its maxims of every man for himself in business, every man for himself in religion, dreads a powerful administration which might somehow interfere with it; and besides, it has its own decorative inutilities of vestrymanship and guardianship, which are to this class what lord-lieutenancy and the county magistracy are to the aristocratic class, and a stringent administration might either take these functions out of its hands, or prevent its exercising them in its own comfortable, independent manner, as at present.

Then as to our working class. This class, pressed constantly by the hard daily compulsion of material wants, is naturally the very centre and stronghold of our national idea, that it is man's ideal right and felicity to do as he likes. I think I have somewhere related how M. Michelet [8] said to me of the people of France, that it was 'a nation of barbarians civilised by the conscription.' He meant that through their military service the idea of public duty and of discipline was brought to the mind of these masses, in other respects so raw and uncultivated. Our masses are quite as raw and uncultivated as the French; and so far from their having the idea of public duty and of discipline, superior to the individual's self-will, brought to their mind by a universal obligation of military service, such as that of the conscription, — so far from their having this, the very idea of a conscription is so at variance with our English notion of the prime right and blessedness of doing as one likes, that I remember the manager of the Clay Cross works in Derbyshire told me during the Crimean war, when our want of soldiers was much felt and some people were talking of a conscription, that sooner than submit to a conscription the population of that district would flee to the mines, and lead a sort of Robin Hood life under ground.

For a long time, as I have said, the strong feudal habits of subordination and deference continued to tell upon the working class. The modern spirit has now almost entirely dissolved those habits, and the anarchical tendency of our worship of freedom in and for itself, of our superstitious faith, as I say, in machinery, is becoming very manifest. More and more, because of this our blind faith in machinery, because of our want of light to enable us to look beyond machinery to the end for which machinery is valuable, this and that man, and this and that body of men, all over the country, are beginning to assert and put in practice an Englishman's right to do what he likes; his right to march where he likes, meet where he likes, enter where he likes, hoot as he likes, threaten as he likes, smash as he likes. All this, I say, tends to anarchy; and though a number of excellent people, and particularly my friends of the Liberal or progressive party, as they call themselves, are kind enough to reassure us by saying that these are trifles, that a few transient outbreaks of rowdyism signify nothing, that our system of liberty is one which itself cures all the evils which it works, that the educated and intelligent classes stand in overwhelming strength and majestic repose, ready, like our military force in riots, to act at a moment's notice, — yet one finds that one's Liberal friends generally say this because they have such faith in themselves and their nostrums, when they shall return, as the public welfare requires, to place and power. But this faith of theirs one cannot exactly share, when one has so long had them and their nostrums at work, and sees that they have not prevented our coming to our present embarrassed condition. And one finds, also, that the outbreaks of rowdyism tend to become less and less of trifles, to become more frequent rather than less frequent; and that meanwhile our educated and intelligent classes remain in their majestic repose, and somehow or other, whatever happens, their overwhelming strength,

8. See the Preface to *Culture and Anarchy*, note 7.

like our military force in riots,[9] never does act.

How, indeed, *should* their overwhelming strength act, when the man who gives an inflammatory lecture, or breaks down the park railings, or invades a Secretary of State's office,[9a] is only following an Englishman's impulse to do as he likes; and our own conscience tells us that we ourselves have always regarded this impulse as something primary and sacred? Mr. Murphy[10] lectures at Birmingham, and showers on the Catholic population of that town 'words,' says the Home Secretary, 'only fit to be addressed to thieves or murderers.' What then? Mr. Murphy has his own reasons of several kinds. He suspects the Roman Catholic Church of designs upon Mrs. Murphy; and he says if mayors and magistrates do not care for their wives and daughters, he does. But, above all, he is doing as he likes; or, in worthier language, asserting his personal liberty. 'I will carry out my lectures if they walk over my body as a dead corpse, and I say to the Mayor of Birmingham that he is my servant while I am in Birmingham, and as my servant he must do his duty and protect me.' Touching and beautiful words, which find a sympathetic chord in every British bosom! The moment it is plainly put before us that a man is asserting his personal liberty, we are half disarmed; because we are believers in freedom, and not in some dream of a right reason to which the assertion of our freedom is to be subordinated. Accordingly, the Secretary of State had to say that although the lecturer's language was 'only fit to be addressed to thieves or murderers,' yet, 'I do not think he is to be deprived, I do not think that anything I have said could justify the inference that he is to be deprived, of the right of protection in a place built by him for the purpose of these lectures; because the language was not language which afforded grounds for a criminal prosecution.' No, nor to be silenced by Mayor, or Home Secretary, or any administrative authority on earth, simply on their notion of what is discreet and reasonable! This is in perfect consonance with our public opinion, and with our national love for the assertion of personal liberty.

In quite another department of affairs, an experienced and distinguished Chancery Judge relates an incident which is just to the same effect as this of Mr. Murphy. A testator bequeathed £300 a year, to be for ever applied as a pension to some person who had been unsuccessful in literature, and whose duty should be to support, and diffuse, by his writings, the testator's own views, as enforced in the testator's publications. The views were not worth a straw, and the bequest was appealed against in the Court of Chancery on the ground of its absurdity; but, being only absurd, it was upheld, and the so-called charity was established. Having, I say, at the bottom of our English hearts a very strong belief in freedom, and a very weak belief in right reason, we are soon silenced when a man pleads the prime right to do as he likes, because this is the prime right for ourselves too; and even if we attempt now and then to mumble something about reason, yet we have ourselves thought so little about this and so much about liberty, that we are in conscience forced, when our brother Philistine with whom we are meddling turns boldly round upon us and asks: *Have you any light?* — to shake our heads ruefully, and to let him go his own way after all.

There are many things to be said on behalf of this exclusive attention of ours to liberty, and of the relaxed habits of government which it has engendered. It is very easy to mistake or to exaggerate the sort of anarchy from which we are in danger through them. We are not in danger from Fenianism,[9a] fierce and turbulent as it may show itself; for against this our conscience is free enough to let us act reso-

9, 9a. See Introduction to this book; and Notes.
10. See Notes.

lutely and put forth our overwhelming strength the moment there is any real need for it. In the first place, it never was any part of our creed that the great right and blessedness of an Irishman, or, indeed, of anybody on earth except an Englishman, is to do as he likes; and we can have no scruple at all about abridging, if necessary, a non-Englishman's assertion of personal liberty. The British Constitution, its checks, and its prime virtues, are for Englishmen. We may extend them to others out of love and kindness; but we find no real divine law written on our hearts constraining us so to extend them. And then the difference between an Irish Fenian and an English rough is so immense, and the case, in dealing with the Fenian, so much more clear! He is so evidently desperate and dangerous, a man of a conquered race, a Papist, with centuries of ill-usage to inflame him against us, with an alien religion established in his country by us at his expense, with no admiration of our institutions, no love of our virtues, no talents for our business, no turn for our comfort! Show him our symbolical Truss Manufactory on the finest site in Europe,[11] and tell him that British industrialism and individualism can bring a man to that, and he remains cold! Evidently, if we deal tenderly with a sentimentalist like this, it is out of pure philanthropy.

But with the Hyde Park rioter how different! He is our own flesh and blood; he is a Protestant; he is framed by nature to do as we do, hate what we hate, love what we love; he is capable of feeling the symbolical force of the Truss Manufactory; the question of questions, for him, is a wages question. That beautiful sentence Sir Daniel Gooch[12] quoted to the Swindon workmen, and which I treasure as Mrs. Gooch's Golden Rule, or the Divine Injunction 'Be ye Perfect'[13] done into British, — the sentence Sir Daniel Gooch's mother repeated to him every morning when he was a boy going to work: — *'Ever remember, my dear Dan, that you should look forward to being some day manager of that concern!'* — this truthful maxim is perfectly fitted to shine forth in the heart of the Hyde Park rough also, and to be his guiding-star through life. He has no visionary schemes of revolution and transformation, though of course he would like his class to rule, as the aristocratic class like their class to rule, and the middle class theirs. But meanwhile our social machine is a little out of order; there are a good many people in our paradisiacal centres of industrialism and individualism taking the bread out of one another's mouths. The rough has not yet quite found his groove and settled down to his work, and so he is just asserting his personal liberty a little, going where he likes, assembling where he likes, bawling as he likes, hustling as he likes. Just as the rest of us, — as the country squires in the aristocratic class, as the political dissenters in the middle class, — he has no idea of a *State*, of the nation in its collective and corporate character controlling, as government, the free swing of this or that one of its members in the name of the higher reason of all of them, his own as well as that of others. He sees the rich, the aristocratic class, in occupation of the executive government, and so if he is stopped from making Hyde Park a beargarden or the streets impassable, he says he is being butchered by the aristocracy.

His apparition is somewhat embarrassing, because too many cooks spoil the broth; because, while the aristocratic and

12. Sir Daniel Gooch (1816–89), railway pioneer and inventor; chairman (1865–87) and reorganizer of the Great Western Railway. The headquarters of that railroad were at Swindon.

13. *Matthew*, v,28. (*Cf.* the note on the title of the Preface to *Culture and Anarchy*.)

middle classes have long been doing as they like with great vigour, he has been too undeveloped and submissive hitherto to join in the game; and now, when he does come, he comes in immense numbers, and is rather raw and rough. But he does not break many laws, or not many at one time; and, as our laws were made for very different circumstances from our present (but always with an eye to Englishmen doing as they like), and as the clear letter of the law must be against our Englishman who does as he likes, and not only the spirit of the law and public policy, and as Government must neither have any discretionary power nor act resolutely on its own interpretation of the law if any one disputes it, it is evident our laws give our playful giant, in doing as he likes, considerable advantage. Besides, even if he can be clearly proved to commit an illegality in doing as he likes, there is always the resource of not putting the law in force, or of abolishing it. So he has his way, and if he has his way he is soon satisfied for the time. However, he falls into the habit of taking it oftener and oftener, and at last begins to create by his operations a confusion of which mischievous people can take advantage, and which, at any rate, by troubling the common course of business throughout the country, tends to cause distress, and so to increase the sort of anarchy and social disintegration which had previously commenced. And thus that profound sense of settled order and security, without which a society like ours cannot live and grow at all, sometimes seems to be beginning to threaten us with taking its departure.

Now, if culture, which simply means trying to perfect oneself, and one's mind as part of oneself, brings us light, and if light shows us that there is nothing so very blessed in merely doing as one likes, that the worship of the mere freedom to do as one likes is worship of machinery, that the really blessed thing is to like what right reason ordains, and to follow her authority, then we have got a practical benefit out of culture. We have got a much wanted principle, a principle of authority, to counteract the tendency to anarchy which seems to be threatening us.

But how to organize this authority, or to what hands to entrust the wielding of it? How to get your *State*, summing up the right reason of the community, and giving effect to it, as circumstances may require, with vigour? And here I think I see my enemies waiting for me with a hungry joy in their eyes. But I shall elude them.

The *State*, the power most representing the right reason of the nation, and most worthy, therefore, of ruling, — of exercising, when circumstances require it, authority over us all, — is for Mr. Carlyle the aristocracy.[14] For Mr. Lowe, it is the middle class with its incomparable Parliament.[15] For the Reform League, it is the working class, the class with 'the brightest powers of sympathy and readiest powers of action.'[16] Now culture, with its disinterested pursuit of perfection, culture, simply trying to see things as they are in order to seize on the best and to make it prevail, is surely well fitted to help us to judge rightly, by all the aids of observing, reading, and thinking, the qualifications and titles to our confidence of these three candidates for authority, and can thus render us a practical service of no mean value.

So when Mr. Carlyle, a man of genius to whom we have all at one time or other been indebted for refreshment and stimulus, says we should give rule to the aristocracy, mainly because of its dignity and politeness, surely culture is useful in reminding us, that in our idea of perfection the characters of beauty and intelligence

14. This refers to Carlyle's article 'Shooting Niagara: and After?' published in *Macmillan's Magazine*, Aug. 1867.

15. See 'Sweetness and Light,' note 31.

16. The quotation is from an article by Frederic Harrison — see the Introduction to *Culture and Anarchy*, note 2.

are both of them present, and sweetness and light, the two noblest of things, are united. Allowing, therefore, with Mr. Carlyle, the aristocratic class to possess sweetness, culture insists on the necessity of light also, and shows us that aristocracies, being by the very nature of things inaccessible to ideas, unapt to see how the world is going, must be somewhat wanting in light, and must therefore be, at a moment when light is our great requisite, inadequate to our needs. Aristocracies, those children of the established fact, are for epochs of concentration.[17] In epochs of expansion, epochs such as that in which we now live, epochs when always the warning voice is again heard: *Now is the judgment of this world*,[18] — in such epochs aristocracies with their natural clinging to the established fact, their want of sense for the flux of things, for the inevitable transitoriness of all human institutions, are bewildered and helpless. Their serenity, their high spirit, their power of haughty resistance, — the great qualities of an aristocracy, and the secret of its distinguished manners and dignity, — these very qualities, in an epoch of expansion, turn against their possessors. Again and again I have said how the refinement of an aristocracy may be precious and educative to a raw nation as a kind of shadow of true refinement; how its serenity and dignified freedom from petty cares may serve as a useful foil to set off the vulgarity and hideousness of that type of life which a hard middle class tends to establish, and to help people to see this vulgarity and hideousness in their true colours. But the true grace and serenity is that of which Greece and Greek art suggest the admirable ideals of perfection, — a serenity which comes from having made order among ideas and harmonised them; whereas the serenity of aristocracies, at least the peculiar serenity of aristocracies of Teutonic origin, appears to come from their never having had any ideas to trouble them. And so, in a time of expansion like the present, a time for ideas, one gets perhaps, in regarding an aristocracy, even more than the idea of serenity, the idea of futility and sterility.

One has often wondered whether upon the whole earth there is anything so unintelligent, so unapt to perceive how the world is really going, as an ordinary young Englishman of our upper class. Ideas he has not, and neither has he that seriousness of our middle class which is, as I have often said, the great strength of this class, and may become its salvation. Why, a man may hear a young Dives[19] of the aristocratic class, when the whim takes him to sing the praises of wealth and material comfort, sing them with a cynicism from which the conscience of the veriest Philistine of our industrial middle class would recoil in affright. And when, with the natural sympathy of aristocracies for firm dealing with the multitude, and his uneasiness at our feeble dealing with it at home, an unvarnished young Englishman of our aristocratic class applauds the absolute rulers on the Continent, he in general manages completely to miss the grounds of reason and intelligence which alone can give any colour of justification, any possibility of existence, to those rulers, and applauds them on grounds which it would make their own hair stand on end to listen to.

And all this time we are in an epoch of expansion; and the essence of an epoch of expansion is a movement of ideas, and the one salvation of an epoch of expansion is a harmony of ideas. The very principle of the authority which we are seeking as a defence against anarchy is right reason, ideas, light. The more, therefore, an aris-

18. *John*, xii,31.

19. A rich young worldling. The word is derived from the parable of 'the rich man and Lazarus,' in *Luke*, xvi,19–31; in the Vulgate version the Latin adjective *dives*, 'rich,' is used substantively.

tocracy calls to its aid its innate forces, — its impenetrability, its high spirit, its power of haughty resistance, — to deal with an epoch of expansion, the graver is the danger, the greater the certainty of explosion, the surer the aristocracy's defeat; for it is trying to do violence to nature instead of working along with it. The best powers shown by the best men of an aristocracy at such an epoch are, it will be observed, non-aristocratical powers, powers of industry, powers of intelligence; and these powers thus exhibited, tend really not to strengthen the aristocracy, but to take their owners out of it, to expose them to the dissolving agencies of thought and change, to make them men of the modern spirit and of the future. If, as sometimes happens, they add to their non-aristocratical qualities of labour and thought, a strong dose of aristocratical qualities also, — of pride, defiance, turn for resistance, — this truly aristocratical side of them, so far from adding any strength to them, really neutralises their force and makes them impracticable and ineffective.

Knowing myself to be indeed sadly to seek, as one of my many critics [20] says, in 'a philosophy with coherent, interdependent, subordinate, and derivative principles,' I continually have recourse to a plain man's expedient of trying to make what few simple notions I have, clearer and more intelligible to myself by means of example and illustration. And having been brought up at Oxford in the bad old times, when we were stuffed with Greek and Aristotle, and thought nothing of preparing ourselves by the study of modern languages, — as after Mr. Lowe's great speech at Edinburgh [21] we shall do, — to fight the battle of life with the waiters in foreign hotels, my head is still full of a lumber of phrases we learnt at Oxford from Aristotle, about virtue being in a mean, and about excess and defect, and so on.[22] Once when I had had the advantage of listening to the Reform debates in the House of Commons, having heard a number of interesting speakers, and among them a well-known lord and a well-known baronet,[23] I remember it struck me, applying Aristotle's machinery of the mean to my ideas about our aristocracy, that the lord was exactly the perfection, or happy mean, or virtue, of aristocracy, and the baronet the excess. And I fancied that by observing these two we might see both the inadequacy of aristocracy to supply the principle of authority needful for our present wants, and the danger of its trying to supply it when it was not really competent for the business. On the one hand, in the brilliant lord, showing plenty of high spirit, but remarkable, far above and beyond his gift of high spirit, for the fine tempering of his high spirit, for ease, serenity, politeness, — the great virtues, as Mr. Carlyle says, of aristocracy, — in this beautiful and virtuous mean, there seemed evidently some insufficiency of light; while, on the other hand, the worthy baronet, in whom the high spirit of aristocracy, its impenetrability, defiant courage, and pride of resistance, were developed even in excess was manifestly capable, if he had his way given him, of causing us great danger, and, indeed, of throwing the whole commonwealth into confusion. Then I reverted to that old fundamental notion of mine about the grand merit of our race being really our

20. Frederic Harrison, in 'Culture: A Dialogue' — see note 6, above.

21. Robert Lowe had been vice-president of the committee of council on education, from 1859 to 1864. Arnold's ironic reference is to a speech by Lowe on primary and classical education, at the Philosophical Institute of Edinburgh, Nov. 1, 1867, urging the study of modern languages in place of Latin and Greek. See the London *Times*, Nov. 2, 1867, p.8.

22. Virtue, or excellence, according to Aristotle consisted of moderation, nothing in excess, the 'golden mean' between too much (excess) and too little (defect). *Lumber*: 'old or refuse stuff' (usually furniture).

honesty. And the very helplessness of our aristocratic or governing class in dealing with our perturbed social condition, their jealousy of entrusting too much power to the State as it now actually exists — that is to themselves — gave me a sort of pride and satisfaction; because I saw they were, as a whole, too honest to try and manage a business for which they did not feel themselves capable.

Surely, now, it is no inconsiderable boon which culture confers upon us, if in embarrassed times like the present it enables us to look at the ins and the outs of things in this way, without hatred and without partiality, and with a disposition to see the good in everybody all round. And I try to follow just the same course with our middle class as with our aristocracy. Mr. Lowe talks to us of this strong middle part of the nation, of the unrivalled deeds of our Liberal middle-class Parliament, of the noble, the heroic work it has performed in the last thirty years; and I begin to ask myself if we shall not, then, find in our middle class the principle of authority we want, and if we had not better take administration as well as legislation away from the weak extreme which now administers for us, and commit both to the strong middle part. I observe, too, that the heroes of middle-class liberalism, such as we have hitherto known it, speak with a kind of prophetic anticipation of the great destiny which awaits them, and as if the future was clearly theirs. The advanced party, the progressive party, the party in alliance with the future, are the names they like to give themselves. 'The principles which will obtain recognition in the future,' says Mr. Miall,[24] a personage of deserved eminence among the political Dissenters, as they are called, who have been the backbone of middle-class liberalism, — 'the principles which will obtain recognition in the future are the principles for which I have long and zealously laboured. I qualified myself for joining in the work of harvest by doing to the best of my ability the duties of seedtime.' These duties, if one is to gather them from the works of the great Liberal party in the last thirty years, are, as I have elsewhere summed them up, the advocacy of free trade, of Parliamentary reform, of abolition of church-rates,[25] of voluntaryism in religion and education, of non-interference of the State between employers and employed, and of marriage with one's deceased wife's sister.

Now I know, when I object that all this is machinery, the great Liberal middle class has by this time grown cunning enough to answer that it always meant more by these things than meets the eye; that it has had that within which passes show, and that we are soon going to see, in a Free Church and all manner of good things, what it was. But I have learned from Bishop Wilson (if Mr. Frederic Harrison will forgive my again quoting that poor old hierophant of a decayed superstition):[26] 'If we would really know our heart let us impartially view our actions'; and I cannot help thinking that if our Liberals had had so much sweetness and light in their inner minds as they allege, more of it must have come out in their sayings and doings.

24. Edward Miall (1809–81), independent minister; editor, politician, founded (1841) and edited the weekly *Nonconformist*, a Congregational paper.

25. In July 1868, an act was passed abolishing the compulsory payment of taxes by Nonconformists for the churches of the Established Church. Voluntaryism, mentioned next, was the principle of having religious and educational institutions voluntary, or maintained by free will and choice instead of by state action and establishment. For the item regarding the deceased wife's sister, *cf.* 'Our Liberal Practitioners,' Sect.III, in *Culture and Anarchy*.

26. Harrison believed in the religion not of Christianity but of Positivism; *cf.* 'Sweetness and Light,' note 37. For the quotation, *cf.* Thomas Wilson, *Sacra Privata*, Suppl.XIV,xiv,3; a similar expression appears on the opening page — *cf.* his *Works*, ed. 1860, V,1,343.

An American friend of the English Liberals says, indeed, that their Dissidence of Dissent has been a mere instrument of the political Dissenters for making reason and the will of God prevail (and no doubt he would say the same of marriage with one's deceased wife's sister); and that the abolition of a State Church is merely the Dissenter's means to this end, just as culture is mine. Another American defender of theirs says just the same of their industrialism and free trade; indeed, this gentleman, taking the bull by the horns, proposes that we should for the future call industrialism culture, and the industrialists the men of culture, and then of course there can be no longer any misapprehension about their true character; and besides the pleasure of being wealthy and comfortable, they will have authentic recognition as vessels of sweetness and light.

All this is undoubtedly specious; but I must remark that the culture of which I talked was an endeavour to come at reason and the will of God by means of reading, observing, and thinking; and that whoever calls anything else culture, may, indeed, call it so if he likes, but then he talks of something quite different from what I talked of. And, again, as culture's way of working for reason and the will of God is by directly trying to know more about them, while the Dissidence of Dissent is evidently in itself no effort of this kind, nor is its Free Church, in fact, a church with worthier conceptions of God and the ordering of the world than the State Church professes, but with mainly the same conceptions of these as the State Church has, only that every man is to comport himself as he likes in professing them, — this being so, I cannot at once accept the Nonconformity any more than the industrialism and the other great works of our Liberal middle class as proof positive that this class is in possession of light, and that here is the true seat of authority for which we are in search; but I must try a little further, and seek for other indications which may enable me to make up my mind.

Why should we not do with the middle class as we have done with the aristocratic class, — find in it some representative men who may stand for the virtuous mean of this class, for the perfection of its present qualities and mode of being, and also for the excess of them. Such men must clearly not be men of genius like Mr. Bright; for, as I have formerly said, so far as a man has genius he tends to take himself out of the category of class altogether,[27] and to become simply a man. Some more ordinary man would be more to the purpose, — would sum up better in himself, without disturbing influences, the general liberal force of the middle class, the force by which it has done its great works of free trade, Parliamentary reform, voluntaryism, and so on, and the spirit in which it has done them. Now it happens that a typical middle-class man, the member for one of our chief industrial cities, has given us a famous sentence which bears directly on the resolution of our present question: whether there is light enough in our middle class to make it the proper seat of the authority we wish to establish. When there was a talk some little while ago about the state of middle-class education, our friend, as the representative of that class, spoke some memorable words: — 'There had been a cry that middle-class education ought to receive more attention. He confessed himself very much surprised by the clamour that was raised. He did not think that class need excite the sympathy either of the legislature or the public.'[28] Now this satisfaction of our middle-class member of

27. *Cf.* 'Sweetness and Light' (the paragraph with note 34): 'Mr. Bright, who has a foot in both worlds.'

28. The first edition names the 'typical middle-class man' here quoted. He was Mr. Bazley (1797–1885), member of Parliament from Manchester, a cotton-mill man, sometime chairman of the Manchester Chamber of Commerce; created Sir Thomas Bazley in 1869.

Parliament with the mental state of the middle class was truly representative, and makes good his claim to stand as the beautiful and virtuous mean of that class. But it is obviously at variance with our definition of culture, or the pursuit of light and perfection, which made light and perfection consist, not in resting and being, but in growing and becoming, in a perpetual advance in beauty and wisdom. So the middle class is by its essence, as one may say, by its incomparable self-satisfaction decisively expressed through its beautiful and virtuous mean, self-excluded from wielding an authority of which light is to be the very soul.

Clear as this is, it will be made clearer still if we take some representative man as the excess of the middle class, and remember that the middle class, in general, is to be conceived as a body swaying between the qualities of its mean and of its excess, and on the whole, of course, as human nature is constituted, inclining rather towards the excess than the mean. Of its excess no better representative can possibly be imagined than a Dissenting minister from Walsall,[29] who came before the public in connection with the proceedings at Birmingham of Mr. Murphy, already mentioned. Speaking in the midst of an irritated population of Catholics, this Walsall gentleman exclaimed: 'I say, then, away with the Mass! It is from the bottomless pit; and in the bottomless pit shall all liars have their part, in the lake that burneth with fire and brimstone.' And again: 'When all the praties[30] were black in Ireland, why didn't the priests say the hocus-pocus over them, and make them all good again?' He shared, too, Mr. Murphy's fears of some invasion of his domestic happiness: 'What I wish to say to you as Protestant husbands is, *Take care of your wives!*' And finally, in the true vein of an Englishman doing as he likes, a vein of which I have at some length pointed out the present dangers, he recommended for imitation the example of some churchwardens at Dublin, among whom, said he, 'there was a Luther and also a Melanchthon,'[31] who had made very short work with some ritualist or other, hauled him down from his pulpit, and kicked him out of church. Now it is manifest, as I said in the case of our aristocratical baronet, that if we let this excess of the sturdy English middle class, this conscientious Protestant Dissenter, so strong, so self-reliant, so fully persuaded in his own mind, have his way, he would be capable, with his want of light, — or, to use the language of the religious world, with his zeal without knowledge, — of stirring up strife which neither he nor any one else could easily compose.

And then comes in, as it did also with the aristocracy, the honesty of our race, and by the voice of another middle-class man, Alderman of the City of London and Colonel of the City of London Militia, proclaims that it has twinges of conscience, and that it will not attempt to cope with our social disorders, and to deal with a business which it feels to be too high for it. Every one remembers how this virtuous Alderman-Colonel, or Colonel-Alderman, led his militia through the London streets; how the bystanders gathered to see him pass; how the London roughs, asserting an Englishman's best and most blissful right of doing what he likes, robbed and beat the bystanders; and how the blameless warrior-magistrate refused to let his troops interfere. 'The crowd,' he touchingly said afterwards, 'was mostly composed of fine healthy strong men, bent on mischief; if he had allowed his soldiers to interfere they might have been overpowered, their rifles taken from them and used against them by the mob; a riot, in

29. The first edition names him: 'the Rev. W. Cattle.' He was a Wesleyan minister who took the chair for Murphy at Birmingham, according to Wilson in his ed. of *Culture and Anarchy*, p.227.

30. Potatoes.

31. Philipp Melanchthon (1497–1560), German Lutheran reformer.

fact, might have ensued, and been attended with bloodshed, compared with which the assaults and loss of property that actually occurred would have been as nothing.' Honest and affecting testimony of the English middle class to its own inadequacy for the authoritative part one's admiration would sometimes incline one to assign to it! 'Who are we,' they say by the voice of their Alderman-Colonel, 'that we should not be overpowered if we attempt to cope with social anarchy, our rifles taken from us and used against us by the mob, and we, perhaps, robbed and beaten ourselves? Or what light have we, beyond a free-born Englishman's impulse to do as he likes, which could justify us in preventing, at the cost of bloodshed, other free-born Englishmen from doing as they like, and robbing and beating us as much as they please?'

This distrust of themselves as an adequate centre of authority does not mark the working class, as was shown by their readiness the other day in Hyde Park to take upon themselves all the functions of government. But this comes from the working class being, as I have often said, still an embryo, of which no one can yet quite foresee the final development; and from its not having the same experience and self-knowledge as the aristocratic and middle classes. Honesty it no doubt has, just like the other classes of Englishmen, but honesty in an inchoate and untrained state; and meanwhile its powers of action, which are, as Mr. Frederic Harrison says, exceedingly ready, easily run away with it. That it cannot at present have a sufficiency of light which comes by culture, — that is, by reading, observing, and thinking, — is clear from the very nature of its condition; and, indeed, we saw that Mr. Frederic Harrison, in seeking to make a free stage for its bright powers of sympathy and ready powers of action, had to begin by throwing overboard culture, and flouting it as only fit for a professor of *belles-lettres*. Still, to make it perfectly manifest that no more in the working class than in the aristocratic and middle classes can one find an adequate centre of authority, — that is, as culture teaches us to conceive our required authority, of light, — let us again follow, with this class, the method we have followed with the aristocratic and middle classes, and try to bring before our minds representative men, who may figure to us its virtue and its excess.

We must not take, of course, men like the chiefs of the Hyde Park demonstration, Colonel Dickson or Mr. Beales; because Colonel Dickson, by his martial profession and dashing exterior, seems to belong properly, like Julius Cæsar and Mirabeau and other great popular leaders, to the aristocratic class, and to be carried into the popular ranks only by his ambition or his genius; while Mr. Beales belongs to our solid middle class, and, perhaps, if he had not been a great popular leader, would have been a Philistine. But Mr. Odger,[32] whose speeches we have all read, and of whom his friends relate, besides, much that is favourable, may very well stand for the beautiful and virtuous mean of our present working class; and I think everybody will admit that in Mr. Odger there is manifestly, with all his good points, some insufficiency of light. The excess of the working class, in its present state of development, is perhaps best shown in Mr. Bradlaugh, the iconoclast,[33] who seems to be almost for baptizing us all in blood and fire into his new social dispensation, and to whose reflections, now that I have once been set going on Bishop Wilson's track, I cannot forbear commending this maxim of the good old man: 'Intemperance in talk makes

32. George Odger (1820–77), a London shoemaker and a good speaker; in 1862 secretary to the London trades council; in 1870 president of the international association of working men.

33. For Bradlaugh, see 'Sweetness and Light,' note 28. He wrote radical propaganda over the pen-name 'Iconoclast.' He preached violence.

a dreadful havoc in the heart.'[34] Mr. Bradlaugh, like our types of excess in the aristocratic and middle classes, is evidently capable, if he had his head given him, of running us all into great dangers and confusion. I conclude, therefore, — what indeed, few of those who do me the honour to read this disquisition are likely to dispute, — that we can as little find in the working class as in the aristocratic or in the middle class our much-wanted source of authority, as culture suggests it to us.

Well, then, what if we tried to rise above the idea of class to the idea of the whole community, *the State*, and to find our centre of light and authority there? Every one of us has the idea of country, as a sentiment; hardly any one of us has the idea of *the State*, as a working power. And why? Because we habitually live in our ordinary selves, which do not carry us beyond the ideas and wishes of the class to which we happen to belong. And we are all afraid of giving to the State too much power, because we only conceive of the State as something equivalent to the class in occupation of the executive government, and are afraid of that class abusing power to its own purposes. If we strengthen the State with the aristocratic class in occupation of the executive government, we imagine we are delivering ourselves up captive to the ideas and wishes of our fierce aristocratical baronet; if with the middle class in occupation of the executive government, to those of our truculent middle-class Dissenting minister; if with the working class, to those of its notorious tribune, Mr. Bradlaugh. And with much justice; owing to the exaggerated notion which we English, as I have said, entertain of the right and blessedness of the mere doing as one likes, of the affirming oneself, and oneself just as it is. People of the aristocratic class want to affirm their ordinary selves, their likings and dislikings; people of the middle class the same, people of the working class the same. By our every day selves, however, we are separate, personal, at war; we are only safe from one another's tyranny when no one has any power; and this safety, in its turn, cannot save us from anarchy. And when, therefore, anarchy presents itself as a danger to us, we know not where to turn.

But by our *best self* we are united, impersonal, at harmony. We are in no peril from giving authority to this, because it is the truest friend we all of us can have; and when anarchy is a danger to us, to this authority we may turn with sure trust. Well, and this is the very self which culture, or the study of perfection, seeks to develop in us; at the expense of our old untransformed self, taking pleasure only in doing what it likes or is used to do, and exposing us to the risk of clashing with every one else who is doing the same! So that our poor culture, which is flouted as so unpractical, leads us to the very ideas capable of meeting the great want of our present embarrassed times! We want an authority, and we find nothing but jealous classes, checks, and a deadlock; culture suggests the idea of *the State*. We find no basis for a firm State-power in our ordinary selves; culture suggests one to us in our *best self*.

It cannot but acutely try a tender conscience to be accused, in a practical country like ours, of keeping aloof from the work and hope of a multitude of earnest-hearted men, and of merely toying with poetry and æsthetics. So it is with no little sense of relief that I find myself thus in the position of one who makes a contribution in aid of the practical necessities of our times. The great thing, it will be observed, is to find our *best* self, and to seek to affirm nothing but that; not, — as we English with our over-value for merely being free and busy have been so accustomed to do, — resting satisfied with a self which comes uppermost long before our best self,

34. Thomas Wilson's *Maxims*, No.971; see his *Works*, ed. 1860, V,478.

and affirming that with blind energy. In short, — to go back yet once more to Bishop Wilson, — of these two excellent rules of Bishop Wilson's for a man's guidance,[35] 'Firstly, never go against the best light you have; secondly, take care that your light be not darkness,' we English have followed with praiseworthy zeal the first rule, but we have not given so much heed to the second. We have gone manfully according to the best light we have; but we have not taken enough care that this should be really the best light possible for us, that it should not be darkness. And, our honesty being very great, conscience has whispered to us that the light we were following, our ordinary self, was, indeed, perhaps, only an inferior self, only darkness; and that it would not do to impose this seriously on all the world.

But our best self inspires faith, and is capable of affording a serious principle of authority. For example. We are on our way to what the late Duke of Wellington, with his strong sagacity, foresaw and admirably described as 'a revolution by due course of law.' This is undoubtedly, — if we are still to live and grow, and this famous nation is not to stagnate and dwindle away on the one hand, or, on the other, to perish miserably in mere anarchy and confusion, — what we are on the way to. Great changes there must be, for a revolution cannot accomplish itself without great changes; yet order there must be, for without order a revolution cannot accomplish itself by due course of law. So whatever brings risk of tumult and disorder, multitudinous processions in the streets of our crowded towns, multitudinous meetings in their public places and parks, — demonstrations perfectly unnecessary in the present course of our affairs, — our best self, or right reason, plainly enjoins us to set our faces against. It enjoins us to encourage and uphold the occupants of the executive power, whoever they may be, in firmly prohibiting them. But it does this clearly and resolutely, and is thus a real principle of authority, because it does it with a free conscience; because in thus provisionally strengthening the executive power, it knows that it is not doing this merely to enable our aristocratical baronet to affirm himself as against our working-men's tribune, or our middle-class Dissenter to affirm himself as against both. It knows that it is establishing *the State*, or organ of our collective best self, of our national right reason. And it has the testimony of conscience that it is stablishing the State on behalf of whatever great changes are needed, just as much as on behalf of order; stablishing it to deal just as stringently, when the time comes, with our baronet's aristocratical prejudices, or with the fanaticism of our middle-class Dissenter, as it deals with Mr. Bradlaugh's street-processions.

35. *Cf.* Thomas Wilson's *Maxims*, No.452; see his *Works*, ed. 1860, V,429–30. See also *Luke*, xi,35.

Chapter III

Barbarians, Philistines, Populace

From a man without a philosophy[1] no one can expect philosophical completeness. Therefore I may observe without shame, that in trying to get a distinct notion of our aristocratic, our middle, and our working class, with a view of testing the claims of each of these classes to become a centre of authority, I have omitted, I find, to complete the old-fashioned analysis which I had the fancy of applying, and have not shown in these classes, as well as the virtuous mean and the excess, the defect also. I do not know that the omission very much matters. Still, as clearness is the one merit which a plain, unsystematic writer, without a philosophy, can hope to have, and as our notion of the three great English classes may perhaps be made clearer if we see their distinctive qualities in the

1. See 'Doing as One Likes,' note 20.

defect, as well as in the excess and in the mean, let us try, before proceeding further, to remedy this omission.

It is manifest, if the perfect and virtuous mean of that fine spirit which is the distinctive quality of aristocracies, is to be found in a high, chivalrous style, and its excess in a fierce turn for resistance, that its defect must lie in a spirit not bold and high enough, and in an excessive and pusillanimous unaptness for resistance. If, again, the perfect and virtuous mean of that force by which our middle class has done its great works, and of that self-reliance with which it contemplates itself and them, is to be seen in the performances and speeches of our commercial member of Parliament,[2] and the excess of that force and of that self-reliance in the performances and speeches of our fanatical Dissenting minister,[3] then it is manifest that their defect must lie in a helpless inaptitude for the great works of the middle class, and in a poor and despicable lack of its self-satisfaction.

To be chosen to exemplify the happy mean of a good quality, or set of good qualities, is evidently a praise to a man; nay, to be chosen to exemplify even their excess, is a kind of praise. Therefore I could have no hesitation in taking actual personages to exemplify, respectively, the mean and the excess of aristocratic and middle-class qualities. But perhaps there might be a want of urbanity in singling out this or that personage as the representative of defect. Therefore I shall leave the defect of aristocracy unillustrated by any representative man. But with oneself one may always, without impropriety, deal quite freely; and, indeed, this sort of plain-dealing with oneself has in it, as all the moralists tell us, something very wholesome. So I will venture to humbly offer myself as an illustration of defect in those forces and qualities which make our middle class what it is. The too well-founded reproaches of my opponents declare how little I have lent a hand to the great works of the middle class; for it is evidently these works, and my slackness at them, which are meant, when I am said to 'refuse to lend a hand to the humble operation of uprooting certain definite evils' (such as church-rates and others), and that therefore 'the believers in action grow impatient' with me.[4] The line, again, of a still unsatisfied seeker which I have followed, the idea of self-transformation, of growing towards some measure of sweetness and light not yet reached, is evidently at clean variance with the perfect self-satisfaction current in my class, the middle class, and may serve to indicate in me, therefore, the extreme defect of this feeling. But these confessions, though salutary, are bitter and unpleasant.

To pass, then, to the working class. The defect of this class would be the falling short in what Mr. Frederic Harrison calls those 'bright powers of sympathy and ready powers of action,'[5] of which we saw in Mr. Odger the virtuous mean, and in Mr. Bradlaugh the excess.[6] The working class is so fast growing and rising at the present time, that instances of this defect cannot well be now very common. Perhaps Canning's 'Needy Knife-Grinder'[7] (who is dead, and therefore cannot be pained at my taking him for an illustration) may serve to give us the notion of defect in the essential quality of

7. George Canning (1770–1827), statesman, wrote for the *Anti-Jacobin* magazine a poem in dialogue, called 'The Friend of Humanity and the Needy Knife-Grinder.' The well-to-do 'humanitarian' tries to stir the poor laborer into a wail and complaint, but the laborer simply does not complain.

a working class; or I might even cite (since, though he is alive in the flesh, he is dead to all heed of criticism) my poor old poaching friend, Zephaniah Diggs,[8] who, between his hare-snaring and his gin-drinking, has got his powers of sympathy quite dulled and his powers of action in any great movement of his class hopelessly impaired. But examples of this defect belong, as I have said, to a bygone age rather than to the present.

The same desire for clearness, which has led me thus to extend a little my first analysis of the three great classes of English society, prompts me also to improve my nomenclature for them a little, with a view to making it thereby more manageable. It is awkward and tiresome to be always saying the aristocratic class, the middle class, the working class. For the middle class, for that great body which, as we know, 'has done all the great things that have been done in all departments,'[9] and which is to be conceived as moving between its two cardinal points of our commercial member of Parliament and our fanatical Protestant Dissenter, — for this class we have a designation which now has become pretty well known, and which we may as well still keep for them, the designation of Philistines. What this term means I have so often explained that I need not repeat it here. For the aristocratic class, conceived mainly as a body moving between the two cardinal points of our chivalrous lord and our defiant baronet, we have as yet got no special designation. Almost all my attention has naturally been concentrated on my own class, the middle class, with which I am in closest sympathy, and which has been, besides, the great power of our day, and has had its praises sung by all speakers and newspapers.

Still the aristocratic class is so important in itself, and the weighty functions which Mr. Carlyle proposes at the present critical time to commit to it, must add so much to its importance, that it seems neglectful, and a strong instance of that want of coherent philosophic method for which Mr. Frederic Harrison blames me, to leave the aristocratic class so much without notice and denomination. It may be thought that the characteristic which I have occasionally mentioned as proper to aristocracies, — their natural inaccessibility, as children of the established fact, to ideas, — points to our extending to this class also the designation of Philistines; the Philistine being, as is well known, the enemy of the children of light or servants of the idea. Nevertheless, there seems to be an inconvenience in thus giving one and the same designation to two very different classes; and besides, if we look into the thing closely, we shall find that the term Philistine conveys a sense which makes it more peculiarly appropriate to our middle class than to our aristocratic. For *Philistine* gives the notion of something particularly stiff-necked and perverse in the resistance to light and its children; and therein it specially suits our middle class, who not only do not pursue sweetness and light, but who even prefer to them that sort of machinery of business, chapels, tea-meetings, and addresses from Mr. Murphy,[10] which makes up the dismal and illiberal life on which I have so often touched. But the aristocratic class has actually, as we have seen, in its well-known politeness, a kind of image or shadow of sweetness; and as for light, if it does not pursue light, it is not that it perversely cherishes some dismal and illiberal existence in preference to light, but it is lured off from following light by those mighty and eternal seducers of our race which weave for this class their most irresistible charms, — by worldly splendour, security, power, and pleasure. These se-

8. A character delineated by Arnold in his *Friendship's Garland*, typifying the crude, unpleasant, lowest-class English country fellow.

9. From the *Daily News*: see the passage with note 33, below.

10. See 'Doing as One Likes,' note 10.

ducers are exterior goods, but in a way they are goods; and he who is hindered by them from caring for light and ideas, is not so much doing what is perverse as what is too natural.

Keeping this in view, I have in my own mind often indulged myself with the fancy of employing, in order to designate our aristocratic class, the name of *The Barbarians*. The Barbarians, to whom we all owe so much, and who reinvigorated and renewed our worn-out Europe, had, as is well known, eminent merits; and in this country, where we are for the most part sprung from the Barbarians, we have never had the prejudice against them which prevails among the races of Latin origin. The Barbarians brought with them that staunch individualism, as the modern phrase is, and that passion for doing as one likes, for the assertion of personal liberty, which appears to Mr. Bright the central idea of English life, and of which we have, at any rate, a very rich supply. The stronghold and natural seat of this passion was in the nobles of whom our aristocratic class are the inheritors; and this class, accordingly, have signally manifested it, and have done much by their example to recommend it to the body of the nation, who already, indeed, had it in their blood. The Barbarians, again, had the passion for field-sports; and they have handed it on to our aristocratic class, who of this passion too, as of the passion for asserting one's personal liberty, are the great natural stronghold. The care of the Barbarians for the body, and for all manly exercises; the vigour, good looks, and fine complexion which they acquired and perpetuated in their families by these means, — all this may be observed still in our aristocratic class. The chivalry of the Barbarians, with its characteristics of high spirit, choice manners, and distinguished bearing, — what is this but the attractive commencement of the politeness of our aristocratic class? In some Barbarian noble, no doubt, one would have admired, if one could have been then alive to see it, the rudiments of our politest peer. Only, all this culture (to call it by that name) of the Barbarians was an exterior culture mainly. It consisted principally in outward gifts and graces, in looks, manners, accomplishments, prowess. The chief inward gifts which had part in it were the most exterior, so to speak, of inward gifts, those which come nearest to outward ones; they were courage, a high spirit, self-confidence. Far within, and unawakened, lay a whole range of powers of thought and feeling, to which these interesting productions of nature had, from the circumstances of their life, no access. Making allowances for the difference of the times, surely we can observe precisely the same thing now in our aristocratic class. In general its culture is exterior chiefly; all the exterior graces and accomplishments, and the more external of the inward virtues, seem to be principally its portion. It now, of course, cannot but be often in contact with those studies by which, from the world of thought and feeling, true culture teaches us to fetch sweetness and light; but its hold upon these very studies appears remarkably external, and unable to exert any deep power upon its spirit. Therefore the one insufficiency which we noted in the perfect mean of this class was an insufficiency of light. And owing to the same causes, does not a subtle criticism lead us to make even on the good looks and politeness of our aristocratic class, and of even the most fascinating half of that class, the feminine half, the one qualifying remark, that in these charming gifts there should perhaps be, for ideal perfection, a shade more *soul*?

I often, therefore, when I want to distinguish clearly the aristocratic class from the Philistines proper, or middle class, name the former, in my own mind, *the Barbarians*. And when I go through the country, and see this and that beautiful and imposing seat of theirs crowning the landscape, 'There,' I say to my-

self, 'is a great fortified post of the Barbarians.'

It is obvious that that part of the working class which, working diligently by the light of Mrs. Gooch's Golden Rule,[11] looks forward to the happy day when it will sit on thrones with commercial members of Parliament and other middle-class potentates, to survey, as Mr. Bright beautifully says, 'the cities it has built, the railroads it has made, the manufactures it has produced, the cargoes which freight the ships of the greatest mercantile navy the world has ever seen,' — it is obvious, I say, that this part of the working class is, or is in a fair way to be, one in spirit with the industrial middle class. It is notorious that our middle-class Liberals have long looked forward to this consummation, when the working class shall join forces with them, aid them heartily to carry forward their great works, go in a body to their tea-meetings, and, in short, enable them to bring about their millennium. That part of the working class, therefore, which does really seem to lend itself to these great aims, may, with propriety, be numbered by us among the Philistines. That part of it, again, which so much occupies the attention of philanthropists at present, — the part which gives all its energies to organising itself, through trades' unions and other means, so as to constitute, first, a great working-class power independent of the middle and aristocratic classes, and then, by dint of numbers, give the law to them and itself reign absolutely, — this lively and promising part must also, according to our definition, go with the Philistines; because it is its class and its class instinct which it seeks to affirm — its ordinary self, not its best self; [12] and it is a machinery, an industrial machinery, and power and pre-eminence and other external goods, which fill its thoughts, and not an inward perfection. It is wholly occupied, according to Plato's subtle expression,[13] with the things of itself and not its real self, with the things of the State and not the real State. But that vast portion, lastly, of the working class which, raw and half developed, has long lain half-hidden amidst its poverty and squalor, and is now issuing from its hiding-place to assert an Englishman's heaven-born privilege of doing as he likes, and is beginning to perplex us by marching where it likes, meeting where it likes, bawling what it likes, breaking what it likes, — to this vast residuum we may with great propriety give the name of *Populace*.

Thus we have got three distinct terms, *Barbarians, Philistines, Populace*, to denote roughly the three great classes into which our society is divided; and though this humble attempt at a scientific nomenclature falls, no doubt, very far short in precision of what might be required from a writer equipped with a complete and coherent philosophy, yet, from a notoriously unsystematic and unpretending writer, it will, I trust, be accepted as sufficient.

But in using this new, and, I hope, convenient division of English society, two things are to be borne in mind. The first is, that since, under all our class divisions, there is a common basis of human nature, therefore, in every one of us, whether we be properly Barbarians, Philistines, or Populace, there exists, sometimes only in germ and potentially, sometimes more or less developed, the same tendencies and passions which have made our fellow-citizens of other classes what they are. This consideration is very important, because it has great influence in begetting that spirit of indulgence which is a necessary part of sweetness, and which, indeed, when our culture is complete, is, as I have said, inexhaustible. Thus, an English Barbarian who examines himself will, in general,

11. See 'Doing as One Likes,' the sentence with note 12.

12. See 'Doing as One Likes,' especially the third-last paragraph.

13. Possibly in *Charmides*. The emphasis in Arnold's sentence lies upon 'things' and 'real.'

find himself to be not so entirely a Barbarian but that he has in him, also, something of the Philistine, and even something of the Populace as well. And the same with Englishmen of the two other classes.

This is an experience which we may all verify every day. For instance, I myself (I again take myself as a sort of *corpus vile* to serve for illustration in a matter where serving for illustration may not by every one be thought agreeable), I myself am properly a Philistine, — Mr. Swinburne [14] would add, the son of a Philistine. And although, through circumstances which will perhaps one day be known if ever the affecting history of my conversion comes to be written, I have, for the most part, broken with the ideas and the tea-meetings of my own class, yet I have not, on that account, been brought much the nearer to the ideas and works of the Barbarians or of the Populace. Nevertheless, I never take a gun or a fishing-rod in my hands without feeling that I have in the ground of my nature the self-same seeds which, fostered by circumstances, do so much to make the Barbarian; and that, with the Barbarian's advantages, I might have rivalled him. Place me in one of his great fortified posts, with these seeds of a love for field-sports sown in my nature, with all the means of developing them, with all pleasures at my command, with most whom I met deferring to me, every one I met smiling on me, and with every appearance of permanence and security before me and behind me, — then I too might have grown, I feel, into a very passable child of the established fact, of commendable spirit and politeness, and, at the same time, a little inaccessible to ideas and light; not, of course, with either the eminent fine spirit of our type of aristocratic perfection, or the eminent turn for resistance of our type of aristocratic excess, but, according to the measure of the common run of mankind, something between the two. And as to the Populace, who, whether he be Barbarian or Philistine, can look at them without sympathy, when he remembers how often, — every time that we snatch up a vehement opinion in ignorance and passion, every time that we long to crush an adversary by sheer violence, every time that we are envious, every time that we are brutal, every time that we adore mere power or success, every time that we add our voice to swell a blind clamour against some unpopular personage, every time that we trample savagely on the fallen, — he has found in his own bosom the eternal spirit of the Populace, and that there needs only a little help from circumstances to make it triumph in him untamably.

The second thing to be borne in mind I have indicated several times already. It is this. All of us, so far as we are Barbarians, Philistines, or Populace, imagine happiness to consist in doing what one's ordinary self likes. What one's ordinary self likes differs according to the class to which one belongs, and has its severer and its lighter side; always, however, remaining machinery, and nothing more. The graver self of the Barbarian likes honours and consideration; his more relaxed self, field-sports and pleasure. The graver self of one kind of Philistine likes fanaticism, business, and money-making; his more relaxed self, comfort and tea-meetings. Of another kind of Philistine, the graver self likes rattening; [15] the relaxed self, deputations, or hearing Mr. Odger speak. The sterner self of the Populace likes bawling, hustling, and smashing; the lighter self, beer. But in each class there are born a certain number of natures with a curiosity about their best self, with a bent for seeing things as they are, for disentangling themselves from machinery, for simply concerning themselves with reason and the

14. See Notes.

15. Sabotage by trades unions; destruction or theft of machinery or tools, in order to coerce an employer. (Literally, 'doing mischief like a rat.')

will of God, and doing their best to make these prevail; — for the pursuit, in a word, of perfection. To certain manifestations of this love for perfection mankind have accustomed themselves to give the name of genius; implying, by this name, something original and heaven-bestowed in the passion. But the passion is to be found far beyond those manifestations of it to which the world usually gives the name of genius, and in which there is, for the most part, a *talent* of some kind or other, a special and striking faculty of execution, informed by the heaven-bestowed ardour, or genius. It is to be found in many manifestations besides these, and may best be called, as we have called it, the love and pursuit of perfection; culture being the true nurse of the pursuing love, and sweetness and light the true character of the pursued perfection. Natures with this bent emerge in all classes, — among the Barbarians, among the Philistines, among the Populace. And this bent always tends to take them out of their class, and to make their distinguishing characteristic not their Barbarianism or their Philistinism, but their *humanity*. They have, in general, a rough time of it in their lives; but they are sown more abundantly than one might think, they appear where and when one leasts expects it, they set up a fire which enfilades,[16] so to speak, the class with which they are ranked; and, in general, by the extrication of their best self as the self to develop, and by the simplicity of the ends fixed by them as paramount, they hinder the unchecked predominance of that class-life which is the affirmation of our ordinary self, and seasonably disconcert mankind in their worship of machinery.

Therefore, when we speak of ourselves as divided into Barbarians, Philistines, and Populace, we must be understood always to imply that within each of these classes there are a certain number of *aliens*, if we may so call them, — persons who are mainly led, not by their class spirit, but by a general *humane* spirit, by the love of human perfection; and that this number is capable of being diminished or augmented. I mean, the number of those who will succeed in developing this happy instinct will be greater or smaller, in proportion both to the force of the original instinct within them, and to the hindrance or encouragement which it meets with from without. In almost all who have it, it is mixed with some infusion of the spirit of an ordinary self, some quantity of class-instinct, and even, as has been shown, of more than one class-instinct at the same time; so that, in general, the extrication of the best self, the predominance of the *humane* instinct, will very much depend upon its meeting, or not, with what is fitted to help and elicit it. At a moment, therefore, when it is agreed that we want a source of authority, and when it seems probable that the right source is our best self, it becomes of vast importance to see whether or not the things around us are, in general, such as to help and elicit our best self, and if they are not, to see why they are not, and the most promising way of mending them.

Now, it is clear that the very absence of any powerful authority amongst us, and the prevalent doctrine of the duty and happiness of doing as one likes, and asserting our personal liberty, must tend to prevent the erection of any very strict standard of excellence, the belief in any very paramount authority of right reason, the recognition of our best self as anything very recondite and hard to come at. It may be, as I have said, a proof of our honesty that we do not attempt to give to our ordinary self, as we have it in action, predominant authority, and to impose its rule upon other people. But it is evident also, that it is not easy, with our style of proceeding, to get beyond the notion of an ordinary self at all, or to get the paramount authority of a commanding best

16. Rakes with gunfire for the length of an entire rank, or file.

self, or right reason, recognised. The learned Martinus Scriblerus[17] well says: —'the taste of the bathos is implanted by nature itself in the soul of man; till, perverted by custom or example, he is taught, or rather compelled, to relish the sublime.' But with us everything seems directed to prevent any such perversion of us by custom or example as might compel us to relish the sublime: by all means we are encouraged to keep our natural taste for the bathos unimpaired.

I have formerly pointed out how in literature the absence of any authoritative centre, like an Academy, tends to do this.[18] Each section of the public has its own literary organ, and the mass of the public is without any suspicion that the value of these organs is relative to their being nearer a certain ideal centre of correct information, taste, and intelligence, or farther away from it. I have said that within certain limits, which any one who is likely to read this will have no difficulty in drawing for himself, my old adversary, the *Saturday Review*,[19] may, on matters of literature and taste, be fairly enough regarded, relatively to the mass of newspapers which treat these matters, as a kind of organ of reason. But I remember once conversing with a company of Nonconformist admirers of some lecturer who had let off a great firework, which the *Saturday Review* said was all noise and false lights, and feeling my way as tenderly as I could about the effect of this unfavourable judgment upon those with whom I was conversing. 'Oh,' said one who was their spokesman, with the most tranquil air of conviction, 'it is true the *Saturday Review* abuses the lecture, but the *British Banner*'[20] (I am not quite sure it was the *British Banner*, but it was some newspaper of that stamp) 'says that the *Saturday Review* is quite wrong.' The speaker had evidently no notion that there was a scale of value for judgments on these topics, and that the judgments of the *Saturday Review* ranked high on this scale, and those of the *British Banner* low; the taste of the bathos implanted by nature in the literary judgments of man had never, in my friend's case, encountered any let or hindrance.

Just the same in religion as in literature. We have most of us little idea of a high standard to choose our guides by, of a great and profound spirit which is an authority while inferior spirits are none. It is enough to give importance to things that this or that person says them decisively, and has a large following of some strong kind when he says them. This habit of ours is very well shown in that able and interesting work of Mr. Hepworth Dixon's, which we were all reading lately, *The Mormons, by One of Themselves*. Here, again, I am not quite sure that my memory serves me as to the exact title,[21] but I mean the well-known book in which Mr. Hepworth Dixon described the Mormons, and other similar religious bodies in America, with so much detail and such warm sympathy. In this work it seems enough for Mr. Dixon that this or that doctrine has its Rabbi, who talks big to him, has a staunch body of disciples, and,

17. 'The Memoirs of Martinus Scriblerus,' published with Alexander Pope's *Works* in 1741, was largely contributed to by John Arbuthnot (1667–1735), friend of Pope and Swift. For the quotation, see the beginning of Ch.ii of Scriblerus on bathos; *cf.* Pope, *Works*, ed. Elwin and Courthope, 1886, X,348.

18. See the essay on the literary influence of academies.

19. The *Saturday Review*, Feb. 1865 (XIX,235–36), presented 'Mr. Arnold and His Countrymen,' an unfavorable review of *Essays in Criti-*

20. A weekly Nonconformist paper, commenced in 1847.

21. It is *New America* (1867), by William Hepworth Dixon (1821–79). The five quotations that follow are taken from (1) I,239; (2) II,155, speaking of three million Spiritualists; (3) II,165, still referring to Spiritualism; (4) II,159, referring to a Spiritualist convention in Providence, R.I., in Pratt's Hall (Arnold misquotes the name); (5) II,89, referring to Shakerism, on which Spiritualism was based.

above all, has plenty of rifles. That there are any further stricter tests to be applied to a doctrine, before it is pronounced important, never seems to occur to him. 'It is easy to say,' he writes of the Mormons, 'that these saints are dupes and fanatics, to laugh at Joe Smith [22] and his church, but what then? *The great facts remain.* Young and his people are at Utah; a church of 200,000 souls; an army of 20,000 rifles.' But if the followers of a doctrine are really dupes, or worse, and its promulgators are really fanatics, or worse, it gives the doctrine no seriousness or authority the more that there should be found 200,000 souls, — 200,000 of the innumerable multitude with a natural taste for the bathos, — to hold it, and 20,000 rifles to defend it. And again, of another religious organisation in America: 'A fair and open field is not to be refused when hosts so mighty throw down wager of battle on behalf of what they hold to be true, however strange their faith may seem.' A fair and open field is not to be refused to any speaker; but this solemn way of heralding him is quite out of place, unless he has, for the best reason and spirit of man, some significance. 'Well, but,' says Mr. Hepworth Dixon, 'a theory which has been accepted by men like Judge Edmonds, Dr. Hare, Elder Frederick, and Professor Bush!' And again: 'Such are, in brief, the bases of what Newman Weeks, Sarah Horton, Deborah Butler, and the associated brethren, proclaimed in Rolt's Hall as the new covenant!' [23] If he was summing up an account of the doctrine of Plato, or of St. Paul, and of its followers, Mr. Hepworth Dixon could not be more earnestly reverential. But the question is, Have personages like Judge Edmonds, and Newman Weeks, and Elderess Polly, and Elderess Antoinette, and the rest of Mr. Hepworth Dixon's heroes and heroines, anything of the weight and significance for the best reason and spirit of man that Plato and St. Paul have? Evidently they, at present, have not; and a very small taste of them and their doctrines ought to have convinced Mr. Hepworth Dixon that they never could have. 'But,' says he, 'the magnetic power which Shakerism [24] is exercising on American thought would of itself compel us,' — and so on. Now, so far as real thought is concerned, — thought which affects the best reason and spirit of man, the scientific or the imaginative thought of the world, the only thought which deserves speaking of in this solemn way, — America has up to the present time been hardly more than a province of England, and even now would not herself claim to be more than abreast of England; and of this only real human thought, English thought itself is not just now, as we must all admit, the most significant factor. Neither, then, can American thought be; and the magnetic power which Shakerism exercises on American thought is about as important, for the best reason and spirit of man, as the magnetic power which Mr. Murphy exercises on Birmingham Protestantism. And as we shall never get rid of our natural taste for the bathos in religion, — never get access to a best self and right reason which may stand as a serious authority, — by treating Mr. Murphy as his own disciples treat him, seriously, and as if he was as much an authority as any one else: so we shall never get rid of it while our able and popular writers treat their Joe Smiths and Deborah Butlers, with their so many thousand souls and so many thousand rifles, in the like exaggerated and misleading manner, and so do their best to confirm us in a bad mental habit to which we are already too prone.

22. Joseph Smith (1805–44), founder of Mormonism; Brigham Young (1801–77), the second president of the Mormon Church.

23. In the preceding two quoted passages the lists are of names relatively insignificant.

24. The Shakers, a religious sect, had a communistic colony in New York State. Shakerism began in Manchester, England, its principal founder being 'Mother Ann' Lee (1736–84), who claimed to be a reincarnation of Christ.

If our habits make it hard for us to come at the idea of a high best self, of a paramount authority, in literature or religion, how much more do they make this hard in the sphere of politics! In other countries the governors, not depending so immediately on the favour of the governed, have everything to urge them, if they know anything of right reason (and it is at least supposed that governors should know more of this than the mass of the governed), to set it authoritatively before the community. But our whole scheme of government being representative, every one of our governors has all possible temptation, instead of setting up before the governed who elect him, and on whose favour he depends, a high standard of right reason, to accommodate himself as much as possible to their natural taste for the bathos; and even if he tries to go counter to it, to proceed in this with so much flattering and coaxing, that they shall not suspect their ignorance and prejudices to be anything very unlike right reason, or their natural taste for the bathos to differ much from a relish for the sublime. Every one is thus in every possible way encouraged to trust in his own heart; but, 'he that trusteth in his own heart,' says the Wise Man, 'is a fool';[25] and at any rate this, which Bishop Wilson says, is undeniably true: 'The number of those who need to be awakened is far greater than that of those who need comfort.'[26]

But in our political system everybody is comforted. Our guides and governors who have to be elected by the influence of the Barbarians, and who depend on their favour, sing the praises of the Barbarians, and say all the smooth things that can be said of them. With Mr. Tennyson,[27] they celebrate 'the great broad-shouldered genial Englishman,' with his 'sense of duty,' his 'reverence for the laws,' and his 'patient force,' who saves us from the 'revolts, republics, revolutions, most no graver than a schoolboy's barring out,' which upset other and less broad-shouldered nations. Our guides who are chosen by the Philistines and who have to look to their favour, tell the Philistines how 'all the world knows that the great middle class of this country supplies the mind, the will, and the power requisite for all the great and good things that have to be done,' and congratulate them on their 'earnest good sense, which penetrates through sophisms, ignores commonplaces, and gives to conventional illusions their true value.'[28] Our guides who look to the favour of the Populace, tell them that 'theirs are the brightest powers of sympathy, and the readiest powers of action.'[29]

Harsh things are said too, no doubt, against all the great classes of the community; but these things so evidently come from a hostile class, and are so manifestly dictated by the passions and prepossessions of a hostile class, and not by right reason, that they make no serious impression on those at whom they are launched, but slide easily off their minds. For instance, when the Reform League orators inveigh against our cruel and bloated aristocracy, these invectives so evidently show the passions and point of view of the Populace, that they do not sink into the minds of those at whom they are addressed, or awaken any thought or self-examination in them. Again, when our aristocratical baronet describes the Philistines and the Populace as influenced with a kind of hideous mania for emasculating the aristocracy,[30] that re-

29. See note 5, above.

30. The speech referred to was delivered by Sir Thomas Bateson (the baronet; *cf.* 'Doing as One Likes,' note 23) on June 4, 1867. See Hansard's *Parliamentary Debates, Third Series* (1866), CLXXXIII, 1856.

proach so clearly comes from the wrath and excited imagination of the Barbarians, that it does not much set the Philistines and the Populace thinking. Or when Mr. Lowe [31] calls the Populace drunken and venal, he so evidently calls them this in an agony of apprehension for his Philistine or middle-class Parliament, which has done so many great and heroic works, and is now threatened with mixture and debasement, that the Populace do not lay his words seriously to heart.

So the voice which makes a permanent impression on each of our classes is the voice of its friends, and this is from the nature of things, as I have said, a comforting voice. The Barbarians remain in the belief that the great broad-shouldered genial Englishman may be well satisfied with himself; the Philistines remain in the belief that the great middle class of this country, with its earnest commonsense penetrating through sophisms and ignoring commonplaces, may be well satisfied with itself; the Populace, that the working man with his bright powers of sympathy and ready powers of action, may be well satisfied with himself. What hope, at this rate, of extinguishing the taste of the bathos implanted by nature itself in the soul of man, or of inculcating the belief that excellence dwells among high and steep rocks, and can only be reached by those who sweat blood to reach her?

But it will be said, perhaps, that candidates for political influence and leadership, who thus caress the self-love of those whose suffrages they desire, know quite well that they are not saying the sheer truth as reason sees it, but that they are using a sort of conventional language, or what we call clap-trap, which is essential to the working of representative institutions. And therefore, I suppose, we ought rather to say with Figaro: *Qui est-ce qu'on trompe ici?* [32] Now, I admit that often, but not always, when our governors say smooth things to the self love of the class whose political support they want, they know very well that they are overstepping, by a long stride, the bounds of truth and soberness; and while they talk, they in a manner, no doubt, put their tongue in their cheek. Not always; because, when a Barbarian appeals to his own class to make him their representative and give him political power, he, when he pleases their self-love by extolling broad-shouldered genial Englishmen with their sense of duty, reverence for the laws, and patient force, pleases his own self-love and extols himself, and is, therefore, himself ensnared by his own smooth words. And so, too, when a Philistine wants to be sent to Parliament by his brother Philistines, and extols the earnest good sense which characterises Manchester and supplies the mind, the will, and the power, as the *Daily News* [33] eloquently says, requisite for all the great and good things that have to be done, he intoxicates and deludes himself as well as his brother Philistines who hear him.

But it is true that a Barbarian often wants the political support of the Philistines; and he unquestionably, when he flatters the self-love of Philistinism, and extols, in the approved fashion, its energy, enterprise, and self-reliance, knows that he is talking clap-trap, and so to say, puts his tongue in his cheek. On all matters where Nonconformity and its catch-words are concerned, this insincerity of Barbarians needing Nonconformist support, and, therefore, flattering the self-love of Nonconformity and repeating its catch-words

31. For Lowe, see 'Sweetness and Light,' note 31. His speech against Gladstone's Reform Bill on March 13, 1866, is alluded to here. See Hansard's *op.cit.*, CLXXXII,147–48. *Cf.* Lowe's letter in the London *Times*, April 5, 1866, p.9.

32. 'Who is being deceived here?' Figaro is the valet-hero of the plays *Le Barbier de Seville* (1775) and *Le Mariage de Figaro* (1784), by Pierre de Beaumarchais.

33. The *Daily News*, founded in 1846 by Dickens, was the organ of moderate Liberalism.

without the least real belief in them, is very noticeable. When the Nonconformists, in a transport of blind zeal, threw out Sir James Graham's useful Education Clauses in 1843,[34] one-half of their Parliamentary advocates, no doubt, who cried aloud against 'trampling on the religious liberty of the Dissenters by taking the money of Dissenters to teach the tenets of the Church of England,' put their tongue in their cheek while they so cried out. And perhaps there is even a sort of motion of Mr. Frederic Harrison's tongue towards his cheek when he talks of 'the shriek of superstition,' and tells the working class that 'theirs are the brightest powers of sympathy and the readiest powers of action.' But the point on which I would insist is, that this involuntary tribute to truth and soberness on the part of certain of our governors and guides never reaches at all the mass of us governed, to serve as a lesson to us, to abate our self-love, and to awaken in us a suspicion that our favourite prejudices may be, to a higher reason, all nonsense. Whatever by-play goes on among the more intelligent of our leaders, we do not see it; and we are left to believe that, not only in our own eyes, but in the eyes of our representative and ruling men, there is nothing more admirable than our ordinary self, whatever our ordinary self happens to be, Barbarian, Philistine, or Populace.

Thus everything in our political life tends to hide from us that there is anything wiser than our ordinary selves, and to prevent our getting the notion of a paramount right reason. Royalty itself, in its idea the expression of the collective nation, and a sort of constituted witness to its best mind, we try to turn into a kind of grand advertising van, meant to give publicity and credit to the inventions, sound or unsound, of the ordinary self of individuals.

I remember, when I was in North Germany,[35] having this very strongly brought to my mind in the matter of schools and their institution. In Prussia, the best schools are Crown patronage schools, as they are called; schools which have been established and endowed (and new ones are to this day being established and endowed) by the Sovereign himself out of his own revenues, to be under the direct control and management of him or of those representing him, and to serve as types of what schools should be. The Sovereign, as his position raises him above many prejudices and littlenesses, and as he can always have at his disposal the best advice, has evident advantages over private founders in well planning and directing a school; while at the same time his great means and his great influence secure, to a well-planned school of his, credit and authority. This is what, in North Germany, the governors do in the matter of education for the governed; and one may say that they thus give the governed a lesson, and draw out in them the idea of a right reason higher than the suggestions of an ordinary man's ordinary self.

But in England how different is the part which in this matter our governors are accustomed to play! The Licensed Victuallers or the Commercial Travellers propose to make a school for their children; and I suppose, in the matter of schools, one may call the Licensed Victuallers or the Commercial Travellers ordinary men, with their natural taste for the bathos still strong; and a Sovereign with the advice of men like Wilhelm von Humboldt or Schleiermacher[36] may, in this matter, be

34. Sir James Graham (1792–1861), then Home Secretary, introduced in the Factory Act of 1843 clauses providing for the education of children employed in factories, including religious instruction according to the principles of the Church of England.

35. In 1865, when Arnold was sent to the continent to report, for the Taunton Commission, on higher education abroad.

36. Wilhelm von Humboldt (1767–1835), German statesman, first Prussian minister of education, founder of Berlin University, and of the theory of official State-culture — the basis

a better judge, and nearer to right reason. And it will be allowed, probably, that right reason would suggest that, to have a sheer school of Licensed Victuallers' children, or a sheer school of Commercial Travellers' children, and to bring them all up, not only at home but at school too, in a kind of odour of licensed victualism or of bagmanism,[37] is not a wise training to give to these children. And in Germany, I have said, the action of the national guides or governors is to suggest and provide a better. But, in England, the action of the national guides or governors is, for a Royal Prince or a great Minister[38] to go down to the opening of the Licensed Victuallers' or of the Commercial Travellers' school, to take the chair, to extol the energy and self-reliance of the Licensed Victuallers or the Commercial Travellers, to be all of their way of thinking, to predict full success to their schools, and never so much as to hint to them that they are probably doing a very foolish thing, and that the right way to go to work with their children's education is quite different. And it is the same in almost every department of affairs. While, on the Continent, the idea prevails that it is the business of the heads and representatives of the nation, by virtue of their superior means, power, and information, to set an example and to provide suggestions of right reason, among us the idea is that the business of the heads and representatives of the nation is to do nothing of the kind, but to applaud the natural taste for the bathos showing itself vigorously in any part of the community, and to encourage its works.

Now I do not say that the political system of foreign countries has not inconveniences which may outweigh the inconveniences of our own political system; nor am I the least proposing to get rid of our own political system and to adopt theirs. But a sound centre of authority being what, in this disquisition, we have been led to seek, and right reason, or our best self, appearing alone to offer such a sound centre of authority, it is necessary to take note of the chief impediments which hinder, in this country, the extrication or recognition of this right reason as a paramount authority, with a view to afterwards trying in what way they can best be removed.

This being borne in mind, I proceed to remark how not only do we get no suggestions of right reason, and no rebukes of our ordinary self, from our governors, but a kind of philosophical theory is widely spread among us to the effect that there is no such thing at all as a best self and a right reason having claim to paramount authority, or, at any rate, no such thing ascertainable and capable of being made use of; and that there is nothing but an infinite number of ideas and works of our ordinary selves, and suggestions of our natural taste for the bathos, pretty nearly equal in value, which are doomed either to an irreconcilable conflict, or else to a perpetual give and take; and that wisdom consists in choosing the give and take rather than the conflict, and in sticking to our choice with patience and good humour.

And, on the other hand, we have another philosophical theory rife among us, to the effect that without the labour of perverting ourselves by custom or example to relish right reason, but by continuing all of us to follow freely our natural taste for the bathos, we shall, by the mercy of Providence, and by a kind of natural

of the modern German educational system. Friedrich Schleiermacher (1768–1834), German philosopher and educationalist, friend and co-worker of von Humboldt.

37. Of licensed foodsellers or of traveling salesmen.

38. In his edition of *Culture and Anarchy*, p.231, J. Dover Wilson points out that 'on June 18th, 1866, the Prince of Wales opened the Warehousemen, Clerks and Drapers School at Russell Hill, Purley, an incident to which Arnold is no doubt referring in his oblique fashion. The Princess Louise opened a new wing in 1878 and the King is still a patron.'

tendency of things, come in due time to relish and follow right reason.

The great promoters of these philosophical theories are our newspapers, which, no less than our Parliamentary representatives, may be said to act the part of guides and governors to us; and these favourite doctrines of theirs I call, — or should call, if the doctrines were not preached by authorities I so much respect, — the first, a peculiarly British form of Atheism, the second, a peculiarly British form of Quietism.[39] The first-named melancholy doctrine is preached in the *Times* with great clearness and force of style; indeed, it is well known, from the example of the poet Lucretius and others, what great masters of style the atheistic doctrine has always counted among its promulgators. 'It is of no use,' says the *Times*, 'for us to attempt to force upon our neighbours our several likings and dislikings. We must take things as they are. Everybody has his own little vision of religious or civil perfection. Under the evident impossibility of satisfying everybody, we agree to take our stand on equal laws and on a system as open and liberal as is possible. The result is that everybody has more liberty of action and of speaking here than anywhere else in the Old World.' We come again here upon Mr. Roebuck's celebrated definition of happiness, on which I have so often commented:[40] 'I look around me and ask what is the state of England? Is not every man able to say what he likes? I ask you whether the world over, or in past history, there is anything like it? Nothing. I pray that our unrivalled happiness may last.' This is the old story of our system of checks and every Englishman doing as he likes, which we have already seen to have been convenient enough so long as there were only the Barbarians and the Philistines to do what they liked, but to be getting inconvenient, and productive of anarchy, now that the Populace wants to do what it likes too.

But for all that, I will not at once dismiss this famous doctrine, but will first quote another passage from the *Times*, applying the doctrine to a matter of which we have just been speaking, — education. 'The difficulty here' (in providing a national system of education), says the *Times*, 'does not reside in any removable arrangements. It is inherent and native in the actual and inveterate state of things in this country. All these powers and personages, all these conflicting influences and varieties of character, exist, and have long existed among us; they are fighting it out, and will long continue to fight it out, without coming to that happy consummation when some one element of the British character is to destroy or to absorb all the rest.' There it is! the various promptings of the natural taste for the bathos in this man and that amongst us are fighting it out; and the day will never come (and, indeed, why should we wish it to come?) when one man's particular sort of taste for the bathos shall tyrannise over another man's; nor when right reason (if that may be called an element of the British character) shall absorb and rule them all. 'The whole system of this country, like the constitution we boast to inherit, and are glad to uphold, is made up of established facts, prescriptive authorities, existing usages, powers that be, persons in possession, and communities or classes that have won dominion for themselves, and will hold it against all comers.' Every force in the world, evidently, except the one reconciling force, right reason! Barbarian here, Philistine there, Mr. Bradlaugh and Populace striking in! — pull devil, pull baker! Really, presented with the mastery of style of our leading journal, the sad picture, as one gazes upon it, assumes the iron and inexorable solemnity of tragic Destiny.

After this, the milder doctrine of our other philosophical teacher, the *Daily*

39. Quietism is defined three paragraphs below this.

40. See the passage in 'Sweetness and Light' with note 9.

News, has, at first, something very attractive and assuaging. The *Daily News* begins, indeed, in appearance, to weave the iron webb of necessity round us like the *Times*. 'The alternative is between a man's doing what he likes and his doing what some one else, probably not one whit wiser than himself, likes.' This points to the tacit compact, mentioned in my last paper,[41] between the Barbarians and the Philistines, and into which it is hoped that the Populace will one day enter; the compact, so creditable to English honesty, that since each class has only the ideas and aims of its ordinary self to give effect to, none of them shall, if it exercise power, treat its ordinary self too seriously, or attempt to impose it on others; but shall let these others, — the fanatical Protestant, for instance, in his Papist-baiting, and the popular tribune in his Hyde Park anarchy-mongering, — have their fling. But then the *Daily News* suddenly lights up the gloom of necessitarianism with bright beams of hope. 'No doubt,' it says, 'the common reason of society ought to check the aberrations of individual eccentricity.' This common reason of society looks very like our best self or right reason, to which we want to give authority, by making the action of the *State*, or nation in its collective character, the expression of it. But of this project of ours, the *Daily News*, with its subtle dialectics, makes havoc. 'Make the State the organ of the common reason?' — it says. 'You make it the organ of something or other, but how can you be certain that reason will be the quality which will be embodied in it?' You cannot be certain of it, undoubtedly, if you never try to bring the thing about; but the question is, the action of the State being the action of the collective nation, and the action of the collective nation carrying naturally great publicity, weight, and force of example with it, whether we should not try to put into the action of the State as much as possible of right reason or our best self, which may, in this manner, come back to us with new force and authority; may have visibility, form, and influence; and help to confirm us, in the many moments when we are tempted to be our ordinary selves merely, in resisting our natural taste of the bathos rather than in giving way to it?

But no! says our teacher: 'It is better there should be an infinite variety of experiments in human action; the common reason of society will in the main check the aberrations of individual eccentricity well enough, if left to its natural operation.' This is what I call the specially British form of Quietism, or a devout, but excessive reliance on an over-ruling Providence. Providence, as the moralists are careful to tell us, generally works in human affairs by human means; so, when we want to make right reason act on individual inclination, our best self on our ordinary self, we seek to give it more power of doing so by giving it public recognition and authority, and embodying it, so far as we can, in the State. It seems too much to ask of Providence, that while we, on our part, leave our congenital taste for the bathos to its natural operation and its infinite variety of experiments, Providence should mysteriously guide it into the true track, and compel it to relish the sublime. At any rate, great men and great institutions have hitherto seemed necessary for producing any considerable effect of this kind. No doubt we have an infinite variety of experiments and an ever-multiplying multitude of explorers. Even in these few chapters I have enumerated many: the *British Banner*, Judge Edmonds, Newman Weeks, Deborah Butler, Elderess Polly, Brother Noyes, Mr. Murphy, the Licensed Victuallers, the Commercial Travellers, and I know not how many more; and the members of the noble army are swelling every day. But what a depth of Quietism, or rather, what an over-bold call on the direct interposition of Providence, to believe that these interesting ex-

41. 'Doing as One Likes.'

plorers will discover the true track, or at any rate, 'will do so in the main well enough' (whatever that may mean) if left to their natural operation, that is, by going on as they are! Philosophers say, indeed, that we learn virtue by performing acts of virtue; but to say that we shall learn virtue by performing any acts to which our natural taste for the bathos carries us, that the fanatical Protestant comes at his best self by Papist-baiting, or Newman Weeks and Deborah Butler at right reason by following their noses, this certainly does appear over-sanguine.

It is true, what we want is to make right reason act on individual reason, the reason of individuals; all our search for authority has that for its end and aim. The *Daily News* says, I observe, that all my argument for authority 'has a non-intellectual root'; and from what I know of my own mind and its poverty I think this so probable, that I should be inclined easily to admit it, if it were not that, in the first place, nothing of this kind, perhaps, should be admitted without examination; and, in the second, a way of accounting for the charge being made, in this particular instance, without good grounds, appears to present itself. What seems to me to account here, perhaps, for the charge, is the want of flexibility of our race, on which I have so often remarked. I mean, it being admitted that the conformity of the individual reason of the fanatical Protestant or the popular rioter with right reason is our true object, and not the mere restraining them, by the strong arm of the State, from Papist-baiting, or railing-breaking, — admitting this, we English have so little flexibility that we cannot readily perceive that the State's restraining them from these indulgences may yet fix clearly in their minds that, to the collective nation, these indulgences appear irrational and unallowable, may make them pause and reflect, and may contribute to bringing, with time, their individual reason into harmony with right reason. But in no country, owing to the want of intellectual flexibility above mentioned, is the leaning which is our natural one, and, therefore, needs no recommending to us, so sedulously recommended, and the leaning which is not our natural one, and, therefore does not need dispraising to us, so sedulously dispraised, as in ours. To rely on the individual being, with us, the natural leaning, we will hear of nothing but the good of relying on the individual; to act through the collective nation on the individual being not our natural leaning, we will hear nothing in recommendation of it. But the wise know that we often need to hear most of that to which we are least inclined, and even to learn to employ, in certain circumstances, that which is capable, if employed amiss, of being a danger to us.

Elsewhere this is certainly better understood than here. In a recent number of the *Westminster Review*,[42] an able writer, but with precisely our national want of flexibility of which I have been speaking, has unearthed, I see, for our present needs, an English translation, published some years ago, of Wilhelm von Humboldt's book, *The Sphere and Duties of Government*.[43] Humboldt's object in this book is to show that the operation of government ought to be severely limited to what directly and immediately relates to the security of person and property. Wilhelm von Humboldt, one of the most beautiful souls that have ever existed, used to say that one's business in life was first to perfect one's self by all the means in one's power, and secondly, to try and create in the world around one an aristocracy, the most numerous that one possibly could, of talents and characters. He saw, of course, that, in the end, everything comes

42. In Jan. 1868, the *Westminster Review* published an anonymous article, 'Dangers of Democracy,' reviewing Carlyle's 'Shooting Niagara: and After?' and von Humboldt's book mentioned below.

43. The English version, tr. by Joseph Coulthard, Jr., appeared in 1854.

to this, — that the individual must act for himself, and must be perfect in himself; and he lived in a country, Germany, where people were disposed to act too little for themselves, and to rely too much on the Government. But even thus, such was his flexibility, so little was he in bondage to a mere abstract maxim, that he saw very well that for his purpose itself, of enabling the individual to stand perfect on his own foundations and to do without the State, the action of the State would for long, long years be necessary. And soon after he wrote his book on *The Sphere and Duties of Government*, Wilhelm von Humboldt became Minister of Education in Prussia; and from his ministry all the great reforms which give the control of Prussian education to the State, — the transference of the management of public schools from their old boards of trustees to the State, the obligatory State-examination for schoolmasters, and the foundation of the great State-University of Berlin, — take their origin. This his English reviewer says not a word of. But, writing for a people whose dangers lie, as we have seen, on the side of their unchecked and unguided individual action, whose dangers none of them lie on the side of an over-reliance on the State, he quotes just so much of Wilhelm von Humboldt's example as can flatter them in their propensities, and do them no good; and just what might make them think, and be of use to them, he leaves on one side. This precisely recalls the manner, it will be observed, in which we have seen that our royal and noble personages proceed with the Licensed Victuallers.

In France the action of the State on individuals is yet more preponderant than in Germany; and the need which friends of human perfection feel for what may enable the individual to stand perfect on his own foundations is all the stronger. But what says one of the staunchest of these friends, M. Renan, on State action; and even State action in that very sphere where in France it is most excessive, the sphere of education? Here are his words: [44] — 'A Liberal believes in liberty, and liberty signifies the non-intervention of the State. *But such an ideal is still a long way off from us, and the very means to remove it to an indefinite distance would be precisely the State's withdrawing its action too soon.*' And this, he adds, is even truer of education than of any other department of public affairs.

We see, then, how indispensable to that human perfection which we seek is, in the opinion of good judges, some public recognition and establishment of our best self, or right reason. We see how our habits and practice oppose themselves to such a recognition, and the many inconveniences which we therefore suffer. But now let us try to go a little deeper, and to find, beneath our actual habits and practice, the very ground and cause out of which they spring.

Chapter IV

Hebraism and Hellenism

This fundamental ground [1] is our preference of doing to thinking. Now this preference is a main element in our nature, and as we study it we find ourselves opening up a number of large questions on every side.

Let me go back for a moment to Bishop Wilson, who says: 'First, never go against the best light you have; secondly, take care that your light be not darkness.' We show, as a nation, laudable energy and persistence in walking according to the best light we have, but are not quite careful enough, perhaps, to see that our light be not darkness. This is only another version of the old story that energy is our strong point and favourable characteristic, rather than intelligence. But we may give to this idea

44. *Cf.* Ernest Renan, *Questions Contemporaines* (1868), p.73.

1. See the final sentence of 'Barbarians, Philistines, Populace.'

a more general form still, in which it will have a yet larger range of application. We may regard this energy driving at practice, this paramount sense of the obligation of duty, self-control, and work, this earnestness in going manfully with the best light we have, as one force. And we may regard the intelligence driving at those ideas which are, after all, the basis of right practice, the ardent sense for all the new and changing combinations of them which man's development brings with it, the indomitable impulse to know and adjust them perfectly, as another force. And these two forces we may regard as in some sense rivals, — rivals not by the necessity of their own nature, but as exhibited in man and his history, — and rivals dividing the empire of the world between them. And to give these forces names from the two races of men who have supplied the most signal and splendid manifestations of them, we may call them respectively the forces of Hebraism and Hellenism. Hebraism and Hellenism, — between these two points of influence moves our world. At one time it feels more powerfully the attraction of one of them, at another time of the other; and it ought to be, though it never is, evenly and happily balanced between them.

The final aim of both Hellenism and Hebraism, as of all great spiritual disciplines, is no doubt the same: man's perfection or salvation. The very language which they both of them use in schooling us to reach this aim is often identical. Even when their language indicates by variation, — sometimes a broad variation, often a but slight and subtle variation, — the different courses of thought which are uppermost in each discipline, even then the unity of the final end and aim is still apparent. To employ the actual words of that discipline with which we ourselves are all of us most familiar, and the words of which, therefore, come most home to us, that final end and aim is 'that we might be partakers of the divine nature.' [2] These are the words of a Hebrew apostle, but of Hellenism and Hebraism alike this is, I say, the aim. When the two are confronted, as they very often are confronted, it is nearly always with what I may call a rhetorical purpose; the speaker's whole design is to exalt and enthrone one of the two, and he uses the other only as a foil and to enable him the better to give effect to his purpose. Obviously, with us, it is usually Hellenism which is thus reduced to minister to the triumph of Hebraism. There is a sermon on Greece and the Greek spirit by a man never to be mentioned without interest and respect, Frederick Robertson,[3] in which this rhetorical use of Greece and the Greek spirit, and the inadequate exhibition of them necessarily consequent upon this, is almost ludicrous, and would be censurable if it were not to be explained by the exigencies of a sermon. On the other hand, Heinrich Heine,[4] and other writers of his sort, give us the spectacle of the tables completely turned, and of Hebraism brought in just as a foil and contrast to Hellenism, and to make the superiority of Hellenism more manifest. In both these cases there is injustice and misrepresentation. The aim and end of both Hebraism and Hellenism is, as I have said, one and the same, and this aim and end is august and admirable.

Still, they pursue this aim by very different courses. The uppermost idea with Hellenism is to see things as they really

2. *Cf. II Peter*, 1,4.

3. Frederick William Robertson (1816–53), clergyman and author. He was a great preacher, acquiring great influence among all church parties throughout England, though belonging exclusively to none. The sermon Arnold refers to is apparently the Advent Lecture of Dec. 6, 1849, 'The Grecian.' 'Four characteristics marked Grecian life and Grecian religion: Restlessness — Worldliness — The Worship of the Beautiful — The Worship of the Human.' Worldliness is said to have three results: disappointment, degradation, disbelief in immortality. See Robertson's *Sermons* (Boston, 1869), I,195–206.

4. For Heine, see the note on the title of this essay. Also, Arnold wrote an essay on him, that appeared in the *Essays in Criticism* (1865).

are; the uppermost idea with Hebraism is conduct and obedience. Nothing can do away with this ineffaceable difference. The Greek quarrel with the body and its desires is, that they hinder right thinking; the Hebrew quarrel with them is, that they hinder right acting. 'He that keepeth the law, happy is he';[5] 'Blessed is the man that feareth the Eternal, that delighteth greatly in his commandments';[6] — that is the Hebrew notion of felicity; and, pursued with passion and tenacity, this notion would not let the Hebrew rest till, as is well known, he had at last got out of the law a network of prescriptions to enwrap his whole life, to govern every moment of it, every impulse, every action. The Greek notion of felicity, on the other hand, is perfectly conveyed in these words of a great French moralist:[7] *'C'est le bonheur des hommes,'* — when? when they abhor that which is evil? — no; when they exercise themselves in the law of the Lord day and night? — no; when they die daily? — no; when they walk about the New Jerusalem[8] with palms in their hands? — no; but when they think aright, when their thought hits: *'quand ils pensent juste.'* At the bottom of both the Greek and the Hebrew notion is the desire, native in man, for reason and the will of God, the feeling after the universal order, — in a word, the love of God. But, while Hebraism seizes upon certain plain, capital intimations of the universal order, and rivets itself, one may say, with unequalled grandeur of earnestness and intensity on the study and observance of them, the bent of Hellenism is to follow, with flexible activity, the whole play of the universal order, to be apprehensive of missing any part of it, of sacrificing one part to another, to slip away from resting in this or that intimation of it, however capital. An unclouded clearness of mind, an unimpeded play of thought, is what this bent drives at. The governing idea of Hellenism is *spontaneity of consciousness*; that of Hebraism, *strictness of conscience*.

Christianity changed nothing in this essential bent of Hebraism to set doing above knowing. Self-conquest, self-devotion, the following not our own individual will, but the will of God, *obedience*, is the fundamental idea of this form, also, of the discipline to which we have attached the general name of Hebraism. Only, as the old law and the network of prescriptions with which it enveloped human life were evidently a motive-power not driving and searching enough to produce the result aimed at, — patient continuance in well-doing, self-conquest, — Christianity substituted for them boundless devotion to that inspiring and affecting pattern of self-conquest offered by Jesus Christ; and by the new motive-power, of which the essence was this, though the love and admiration of Christian churches have for centuries been employed in varying, amplifying, and adoring the plain description of it, Christianity, as St. Paul truly says, 'establishes the law,'[9] and in the strength of the ampler power which she has thus supplied to fulfil it, has accomplished the miracles, which we all see, of her history.

So long as we do not forget that both Hellenism and Hebraism are profound and admirable manifestations of man's life, tendencies, and powers, and that both of them aim at a like final result, we can hardly insist too strongly on the divergence of line and of operation with which they proceed. It is a divergence so great that it most truly, as the prophet Zechariah says, 'has raised up thy sons, O Zion, against thy sons, O Greece!'[10] The difference whether it is by doing or by knowing that we set most store, and the practical consequences which follow from this difference, leave their mark on all the his-

tory of our race and of its development. Language may be abundantly quoted from both Hellenism and Hebraism to make it seem that one follows the same current as the other towards the same goal. They are, truly, borne towards the same goal; but the currents which bear them are infinitely different. It is true, Solomon will praise knowing: 'Understanding is a well-spring of life unto him that hath it.'[11] And in the New Testament, again, Jesus Christ is a 'light,'[12] and 'truth makes us free.'[13] It is true, Aristotle will undervalue knowing: 'In what concerns virtue,' says he, 'three things are necessary — knowledge, deliberate will and perseverance; but, whereas the two last are all-important, the first is a matter of little importance.'[14] It is true that with the same impatience with which St. James enjoins a man to be not a forgetful hearer, but a *doer of the work*,[15] Epictetus[16] exhorts us to *do* what we have demonstrated to ourselves we ought to do; or he taunts us with futility, for being armed at all points to prove that lying is wrong, yet all the time continuing to lie. It is true Plato,[17] in words which are almost the words of the New Testament[18] or the Imitation,[19] calls life a learning to die. But underneath the superficial agreement the fundamental divergence still subsists. The understanding of Solomon is 'the walking in the way of the commandments';[20] this is 'the way of peace,'[21] and it is of this that blessedness comes. In the New Testament, the truth which gives us the peace of God and makes us free, is the love of Christ constraining us to crucify, as he did, and with a like purpose of moral regeneration, the flesh with its affections and lusts, and thus establishing, as we have seen, the law.[22] The moral virtues, on the other hand, are with Aristotle but the porch and access to the intellectual, and with these last is blessedness.[23] That partaking of the divine life, which both Hellenism and Hebraism, as we have said, fix as their crowning aim, Plato expressly denies to the man of practical virtue merely, of self-conquest with any other motive than that of perfect intellectual vision. He reserves it for the lover of pure knowledge, of seeing things as they really are, — the φιλομαθής.[24]

Both Hellenism and Hebraism arise out of the wants of human nature, and address themselves to satisfying those wants. But their methods are so different, they lay stress on such different points, and call into being by their respective disciplines such different activities, that the face which human nature presents when it passes from the hands of one of them to those of the other, is no longer the same. To get rid of one's ignorance, to see things as they are, and by seeing them as they are to see them in their beauty, is the simple and attractive ideal which Hellenism holds out before human nature; and from the simplicity and charm of this ideal, Hellenism, and human life in the hands of Hellenism, is invested with a kind of aërial ease, clearness, and radiancy; they are

full of what we call sweetness and light. Difficulties are kept out of view, and the beauty and rationalness of the ideal have all our thoughts. 'The best man is he who most tries to perfect himself, and the happiest man is he who most feels that he *is* perfecting himself,'[25] — this account of the matter by Socrates, the true Socrates of the *Memorabilia*, has something so simple, spontaneous, and unsophisticated about it, that it seems to fill us with clearness and hope when we hear it. But there is a saying which I have heard attributed to Mr. Carlyle about Socrates, — a very happy saying, whether it is really Mr. Carlyle's or not,[26] — which excellently marks the essential point in which Hebraism differs from Hellenism. 'Socrates,' this saying goes, 'is terribly *at ease in Zion*.'[27] Hebraism, — and here is the source of its wonderful strength, — has always been severely preoccupied with an awful sense of the impossibility of being at ease in Zion; of the difficulties which oppose themselves to man's pursuit or attainment of that perfection of which Socrates talks so hopefully, and, as from this point of view one might almost say, so glibly. It is all very well to talk of getting rid of one's ignorance, of seeing things in their reality, seeing them in their beauty; but how is this to be done when there is something which thwarts and spoils all our efforts?

This something is *sin*; and the space which sin fills in Hebraism, as compared with Hellenism, is indeed prodigious. This obstacle to perfection fills the whole scene, and perfection appears remote and rising away from earth, in the background. Under the name of sin, the difficulties of knowing oneself and conquering oneself which impede man's passage to perfection, become, for Hebraism, a positive, active entity hostile to man, a mysterious power which I heard Dr. Pusey[28] the other day, in one of his impressive sermons, compare to a hideous hunchback seated on our shoulders, and which it is the main business of our lives to hate and oppose. The discipline of the Old Testament may be summed up as a discipline teaching us to abhor and flee from sin; the discipline of the New Testament, as a discipline teaching us to die to it. As Hellenism speaks of thinking clearly, seeing things in their essence and beauty, as a grand and precious feat for man to achieve, so Hebraism speaks of becoming conscious of sin, of wakening to a sense of sin, as a feat of this kind. It is obvious to what wide divergence these differing tendencies, actively followed, must lead. As one passes and repasses from Hellenism to Hebraism, from Plato to St. Paul, one feels inclined to rub one's eyes and ask oneself whether man is indeed a gentle and simple being, showing the traces of a noble and divine nature; or an unhappy chained captive, labouring with groanings that cannot be uttered to free himself from the body of this death.[29]

Apparently it was the Hellenic conception of human nature which was unsound, for the world could not live by it. Absolutely to call it unsound, however, is to fall into the common error of its Hebraising enemies; but it was unsound at that particular moment of man's development, it was premature. The indispensable basis of conduct and self-control, the platform upon which alone the perfection aimed at by Greece can come into bloom, was not to be reached by our race so easily; centuries of probation and discipline were needed to bring us to it. Therefore the bright promise of Hellenism faded, and Hebraism ruled the world. Then was seen that astonishing spectacle, so well

marked by the often-quoted words of the prophet Zechariah, when men of all languages and nations took hold of the skirt of him that was a Jew, saying: — '*We will go with you, for we have heard that God is with you.*'[30] And the Hebraism which thus received and ruled a world all gone out of the way and altogether become unprofitable, was, and could not but be, the later, the more spiritual, the more attractive development of Hebraism. It was Christianity; that is to say, Hebraism aiming at self-conquest and rescue from the thrall of vile affections, not by obedience to the letter of a law, but by conformity to the image of a self-sacrificing example. To a world stricken with moral enervation Christianity offered its spectacle of an inspired self-sacrifice; to men who refused themselves nothing, it showed one who refused himself everything; — '*my Saviour banished joy!*' says George Herbert.[31] When the *alma Venus*,[32] the life-giving and joy-giving power of nature, so fondly cherished by the Pagan world, could not save her followers from self-dissatisfaction and ennui, the severe words of the apostle came bracingly and refreshingly: 'Let no man deceive you with vain words, for because of these things cometh the wrath of God upon the children of disobedience.'[33] Through age after age and generation after generation, our race, or all that part of our race which was most living and progressive, was *baptized into a death*;[34] and endeavoured, by suffering in the flesh, to cease from sin. Of this endeavour, the animating labours and afflictions of early Christianity, the touching asceticism of mediæval Christianity, are the great historical manifestations. Literary monuments of it, each in its own way incomparable, remain in the Epistles of St. Paul, in St. Augustine's Confessions, and in the two original and simplest books of the Imitation.[35]

Of two disciplines laying their main stress, the one, on clear intelligence, the other, on firm obedience; the one, on comprehensively knowing the grounds of one's duty, the other, on diligently practising it; the one, on taking all possible care (to use Bishop Wilson's words again) that the light we have be not darkness, the other, that according to the best light we have we diligently walk, — the priority naturally belongs to that discipline which braces all man's moral powers, and founds for him an indispensable basis of character. And, therefore, it is justly said of the Jewish people, who were charged with setting powerfully forth that side of the divine order to which the words *conscience* and *self-conquest* point, that they were 'entrusted with the oracles of God';[36] as it is justly said of Christianity, which followed Judaism and which set forth this side with a much deeper effectiveness and a much wider influence, that the wisdom of the old Pagan world was foolishness[37] compared to it. No words of devotion and admiration can be too strong to render thanks to these beneficent forces which have so borne forward humanity in its appointed work of coming to the knowledge and possession of itself; above all, in those great moments when their action was the wholesomest and the most necessary.

But the evolution of these forces, separately and in themselves, is not the whole evolution of humanity, — their single history is not the whole history of man; whereas their admirers are always apt to make it stand for the whole history. Hebraism and Hellenism are, neither of them, the *law* of human development, as

30. *Zechariah*, viii.23.

31. The poem, 'The Size,' by George Herbert (1593–1633), begins its 5th stanza:

> 'Thy Saviour sentenc'd joy,
> And in the flesh condemn'd it as unfit;
> At least in lump.'

37. *I Corinthians*, iii,19.

their admirers are prone to make them; they are, each of them, *contributions* to human development, — august contributions, invaluable contributions; and each showing itself to us more august, more invaluable, more preponderant over the other, according to the moment in which we take them, and the relation in which we stand to them. The nations of our modern world, children of that immense and salutary movement [38] which broke up the Pagan world, inevitably stand to Hellenism in a relation which dwarfs it, and to Hebraism in a relation which magnifies it. They are inevitably prone to take Hebraism as the law of human development, and not as simply a contribution to it, however precious. And yet the lesson must perforce be learned, that the human spirit is wider than the most priceless of the forces which bear it onward, and that to the whole development of man Hebraism itself is, like Hellenism, but a contribution.

Perhaps we may help ourselves to see this clearer by an illustration drawn from the treatment of a single great idea which has profoundly engaged the human spirit, and has given it eminent opportunities for showing its nobleness and energy. It surely must be perceived that the idea of immortality, as this idea rises in its generality before the human spirit, is something grander, truer, and more satisfying, than it is in the particular forms by which St. Paul, in the famous fifteenth chapter of the Epistle to the Corinthians, and Plato, in the *Phædo*,[39] endeavour to develop and establish it. Surely we cannot but feel, that the argumentation with which the Hebrew apostle goes about to expound this great idea is, after all, confused and inconclusive; and that the reasoning, drawn from analogies of likeness and equality, which is employed upon it by the Greek philosopher, is over-subtle and sterile. Above and beyond the inadequate solutions which Hebraism and Hellenism here attempt, extends the immense and august problem itself, and the human spirit which gave birth to it. And this single illustration may suggest to us how the same thing happens in other cases also.

But meanwhile, by alternations of Hebraism and Hellenism, of a man's intellectual and moral impulses, of the effort to see things as they really are, and the effort to win peace by self-conquest, the human spirit proceeds; and each of these two forces has its appointed hours of culmination and seasons of rule. As the great movement of Christianity was a triumph of Hebraism and man's moral impulses, so the great movement which goes by the name of the Renascence [40] was an uprising and reinstatement of man's intellectual impulses and of Hellenism. We in England, the devoted children of Protestantism, chiefly know the Renascence by its subordinate and secondary side of the Reformation. The Reformation has been often called a Hebraising revival, a return to the ardour and sincereness of primitive Christianity. No one, however, can study the development of Protestantism and of Protestant churches without feeling that into the Reformation too, — Hebraising child of the Renascence and offspring of its fervour, rather than its intelligence, as it undoubtedly was, — the subtle Hellenic leaven of the Renascence found its way, and that the exact respective parts, in the Reformation, of Hebraism and of Hellenism, are not easy to separate. But what we may with truth say is, that all which Protestantism was to itself clearly conscious of, all which it succeeded in clearly setting forth in words, had the characters of Hebraism rather than of

38. Christianity.

39. In the dialogue *Phaedo* Plato tells of the conversation by Socrates, on the topic of death, just before his enforced suicide.

40. I have ventured to give the foreign *Renaissance* — destined to become of more common use amongst us as the movement which it denotes comes, as it will come, increasingly to interest us — an English form. [Arnold's note.]

Hellenism. The Reformation was strong, in that it was an earnest return to the Bible and to doing from the heart the will of God as there written. It was weak, in that it never consciously grasped or applied the central idea of the Renascence, — the Hellenic idea of pursuing, in all lines of activity, the law and science, to use Plato's words, of things as they really are. Whatever direct superiority, therefore, Protestantism had over Catholicism was a moral superiority, a superiority arising out of its greater sincerity and earnestness, — at the moment of its apparition at any rate, — in dealing with the heart and conscience. Its pretensions to an intellectual superiority are in general quite illusory. For Hellenism, for the thinking side in man as distinguished from the acting side, the attitude of mind of Protestantism towards the Bible in no respect differs from the attitude of mind of Catholicism towards the Church. The mental habit of him who imagines that Balaam's ass spoke,[41] in no respect differs from the mental habit of him who imagines that a Madonna of wood or stone winked; and the one, who says that God's Church makes him believe what he believes, and the other, who says that God's Word makes him believe what he believes, are for the philosopher perfectly alike in not really and truly knowing, when they say *God's Church* and *God's Word*, what it is they say, or whereof they affirm.

In the sixteenth century, therefore, Hellenism re-entered the world, and again stood in presence of Hebraism, — a Hebraism renewed and purged. Now, it has not been enough observed, how, in the seventeenth century, a fate befell Hellenism in some respects analogous to that which befell it at the commencement of our era. The Renascence, that great reawakening of Hellenism, that irresistible return of humanity to nature and to seeing things as they are, which in art, in literature, and in physics, produced such splendid fruits, had, like the anterior Hellenism of the Pagan world, a side of moral weakness and of relaxation or insensibility of the moral fibre, which in Italy showed itself with the most startling plainness, but which in France, England, and other countries was very apparent too. Again this loss of spiritual balance, this exclusive preponderance given to man's perceiving and knowing side, this unnatural defect of his feeling and acting side, provoked a reaction. Let us trace that reaction where it most nearly concerns us.

Science has now made visible to everybody the great and pregnant elements of difference which lie in race, and in how signal a manner they make the genius and history of an Indo-European people vary from those of a Semitic people. Hellenism is of Indo-European growth, Hebraism is of Semitic growth; and we English, a nation of Indo-European stock, seem to belong naturally to the movement of Hellenism. But nothing more strongly marks the essential unity of man, than the affinities we can perceive, in this point or that, between members of one family of peoples and members of another. And no affinity of this kind is more strongly marked than that likeness in the strength and prominence of the moral fibre, which, notwithstanding immense elements of difference, knits in some special sort the genius and history of us English, and our American descendants across the Atlantic, to the genius and history of the Hebrew people. Puritanism, which has been so great a power in the English nation, and in the strongest part of the English nation, was originally the reaction in the seventeenth century of the conscience and moral sense of our race, against the moral indifference and lax rule of conduct which in the sixteenth century came in with the Renascence. It was a reaction of Hebraism against Hellenism; and it powerfully manifested itself, as was natural, in a people with much of what we call a Hebraising turn, with a signal affinity for the bent

41. *Numbers*, xxii,22–35.

which was the master-bent of Hebrew life. Eminently Indo-European by its *humour*, by the power it shows, through this gift, of imaginatively acknowledging the multiform aspects of the problem of life, and of thus getting itself unfixed from its own over-certainty, of smiling at its own over-tenacity, our race has yet (and a great part of its strength lies here), in matters of practical life and moral conduct, a strong share of the assuredness, the tenacity, the intensity of the Hebrews. This turn manifested itself in Puritanism, and has had a great part in shaping our history for the last two hundred years. Undoubtedly it checked and changed amongst us that movement of the Renascence which we see producing in the reign of Elizabeth such wonderful fruits. Undoubtedly it stopped the prominent rule and direct development of that order of ideas which we call by the name of Hellenism, and gave the first rank to a different order of ideas. Apparently, too, as we said of the former defeat of Hellenism, if Hellenism was defeated, this shows that Hellenism was imperfect, and that its ascendency at that moment would not have been for the world's good.

Yet there is a very important difference between the defeat inflicted on Hellenism by Christianity eighteen hundred years ago, and the check given to the Renascence by Puritanism. The greatness of the difference is well measured by the difference in force, beauty, significance, and usefulness, between primitive Christianity and Protestantism. Eighteen hundred years ago it was altogether the hour of Hebraism. Primitive Christianity was legitimately and truly the ascendant force in the world at that time, and the way of mankind's progress lay through its full development. Another hour in man's development began in the fifteenth century, and the main road of his progress then lay for a time through Hellenism. Puritanism was no longer the central current of the world's progress, it was a side stream crossing the central current and checking it. The cross and the check may have been necessary and salutary, but that does not do away with the essential difference between the main stream of man's advance and a cross or a side stream. For more than two hundred years the main stream of man's advance has moved towards knowing himself and the world, seeing things as they are, spontaneity of consciousness; the main impulse of a great part, and that the strongest part, of our nation has been towards strictness of conscience. They have made the secondary the principal at the wrong moment, and the principal they have at the wrong moment treated as secondary. This contravention of the natural order has produced, as such contravention always must produce, a certain confusion and false movement, of which we are now beginning to feel, in almost every direction, the inconvenience.[42] In all directions our habitual courses[43] of action seem to be losing efficaciousness, credit, and control, both with others and even with ourselves. Everywhere we see the beginnings of confusion, and we want a clue to some sound order and authority. This we can only get by going back upon the actual instincts and forces which rule our life, seeing them as they really are, connecting them with other instincts and forces, and enlarging our whole view and rule of life.

42. See Notes.

43. In the popular edition, 'courses' reads 'causes' — a misprint.

LITERATURE AND DOGMA

Chapter XII

The True Greatness of Christianity

No; the *mystery* hidden from ages and generations,[1] which none of the rulers of this world knew,[2] the mystery revealed finally by Jesus Christ and rejected by the Jews, was not the doctrine of the Trinity, nor anything speculative. It was the method and the secret of Jesus. Jesus did not change the object for men, — righteousness. He made clear what it was, and that it was this: — his *method* and his *secret*.

This was the *mystery*, and the Apostles had still the consciousness that it was. To 'learn Christ,'[3] to 'be taught the truth as it is in Jesus,'[4] was not, with them, to acquire certain tenets about One God in Trinity and Trinity in Unity. It was, '*to be renewed in the spirit of your mind, and to put on the new man which after God is created in righteousness and true holiness*.'[5] And this exactly amounts to the method and secret of Jesus.

For Catholic and for Protestant theology alike, this consciousness, which the Apostles had still preserved, was lost. For Catholic and Protestant theology alike, the truth as it is in Jesus, the mystery revealed in Christ, meant something totally different from his method and secret. But they recognised, and indeed the thing was so plain that they could not well miss it, they recognised that on all Christians the method and secret of Jesus were enjoined. So to this extent the method and secret of Jesus were preached and had their effect. To this extent true Christianity has been known, and to the extent before stated it has been neglected.

1. *Colossians*, i,26. [Arnold's note.]
2. *I Corinthians*, ii,8 [Arnold's note.]
3. *Ephesians*, iv,20.
4. *I John*, v,20.
5. *Ephesians*, iv,23,24. [Arnold's note.]

Now, as we say that the truth and grandeur of the Old Testament most comes out *experimentally*, — that is, by the whole course of the world establishing it, and confuting what is opposed to it — so it is with Christianity. Its grandeur and truth are far best brought out *experimentally*; and the thing is, to make people see this.

But there is this difference between the religion of the Old Testament and Christianity. Of the religion of the Old Testament we can pretty well see to the end, we can trace fully enough the experimental proof of it in history. But of Christianity the future is as yet almost unknown. For that the world cannot get on without righteousness we have the clear experience, and a grand and admirable experience it is. But what the world will become by the thorough use of that which is really righteousness, the method and the secret and the sweet reasonableness of Jesus, we have as yet hardly any experience at all. Therefore we, who in this essay limit ourselves to experience, shall speak here of Christianity and of its greatness very soberly. Yet Christianity is really all the grander for that very reason which makes us speak about it in this sober manner, — that it has such an immense development still before it, and that it has as yet so little shown all it contains, all it can do. Indeed, that Christianity has already done so much as it has, is a witness to it; and that it has not yet done more, is a witness to it too. Let us observe how this is so.

Few things are more melancholy than to observe Christian apologists taunting the Jews with the failure of Hebraism to fulfil the splendid promises of prophecy, and Jewish apologists taunting Christendom with the like failure on the part of Christianity. Neither has yet fulfilled them, or could yet have fulfilled them.

Certainly the restoration by Cyrus, the Second Temple, the Maccabean victories,[6] are hardly more than the shadows of a fulfilment of the magnificent words: 'The sons of them that afflicted thee shall come bending unto thee, and all they that despised thee shall bow themselves down at the soles of thy feet; thy gates shall not be shut day nor night, that men may bring unto thee the treasures of the Gentiles, and that their kings may be brought.'[7] The Christianisation of all the leading nations of the world is, it is said, a much better fulfilment of that promise. Be it so. Yet does Christendom, let us ask, offer more than a shadow of the fulfilment of *this*: 'Violence shall no more be heard in thy land; the vile person shall no more be called liberal, nor the churl bountiful; thy people shall be *all* righteous; they shall *all* know me, from the least to the greatest; I will put my law in their inward parts, and write it in their hearts; the Eternal shall be thine everlasting light, and the days of thy mourning shall be ended'?[8] Manifestly it does not. Yet the two promises hang together; one of them is not truly fulfilled unless the other is.

The promises were made to *righteousness*, with all which the idea of righteousness involves. And it involves Christianity. They were made on the immediate prospect of a small triumph for righteousness, the restoration of the Jews after the captivity in Babylon; but they are not satisfied by that triumph. The prevalence of the profession of Christianity is a larger triumph; yet in itself it hardly satisfies them any better. What satisfies them is the prevailing of that which righteousness really is, and nothing else satisfies them. Now, Christianity is that which righteousness really is. Therefore, if something called Christianity prevails, and yet the promises are not satisfied, the inference is that this *something* is not that which righteousness really is, and therefore not really Christianity. And as the course of the world is perpetually establishing the pre-eminence of righteousness, and confounding whatever denies this pre-eminence, so, too, the course of the world is for ever establishing what righteousness really is, — that is to say, true Christianity, — and confounding whatever pretends to be true Christianity and is not.

Now, just as the constitution of things turned out to be against the great unrighteous kingdoms of the heathen world, and against all the brilliant Ishmaels[9] we have seen since, so the constitution of things turns out to be against all false presentations of Christianity, such as the theology of the Fathers[10] or Protestant theology. They do not work successfully, they do not reach the aim, they do not bring the world to the fruition of the promises made to righteousness. And the reason is, because they substitute for what is really righteousness something else. Catholic dogma or Lutheran justification by faith they substitute for the method and secret of Jesus.

Nevertheless, as all Christian Churches do recommend the method and the secret of Jesus, though not in the right way or in the right eminency, still the world is made partially acquainted with what

6. Cyrus (d.529 B.C.), king of Persia. He restored the Israelites, taken in captivity to Babylon by his predecessor Nebuchadnezzar, to Jerusalem; also he caused the rebuilding of the first Temple, that had been pillaged and destroyed in Jerusalem. The Maccabees were a Jewish family that headed a religious revolt in the reign of Antiochus IV., 175–164 B.C.

7. *Isaiah*, lx,14,11. [Arnold's note.]

8. *Isaiah*, lx,18; xxxii,5; lx,21; *Jeremiah*, xxxi,34, 33; *Isaiah*, lx,20. [Arnold's note.]

9. Ishmael was the natural, or illegitimate son of Abraham (*cf. Genesis*, xvi–xvii). In Sect.V of Ch.xi of *Literature and Dogma* Arnold had used 'the vigorous, bold, brilliant young Ishmael' to typify the beauty and attractiveness of living according to Nature, and the fact that such a way of living is not satisfying to a righteous God.

10. Early Christian theological writers whose works are accepted as authentic source for the early history and doctrine of the Church.

righteousness really is, and the doctrine produces some effect, although the full effect is much thwarted and deadened by the false way in which the doctrine is presented. Still, the effect produced is great. For instance, the sum of individual happiness that has been caused by Christianity is, any one can see, enormous. But let us take the effect of Christianity on the world. And if we look at the thing closely, we shall find that its effect has been this: Christianity has brought the world, or at any rate all the leading part of the world, *to regard righteousness as only the Jews regarded it before the coming of Christ.* The world has accepted, so far as profession goes, that original revelation made to Israel: *the pre-eminence of righteousness.* The infinite truth and attractiveness of the method and secret and character of Jesus, however falsely surrounded, have prevailed with the world so far as this. And this is an immense gain, and a signal witness to Christianity. The world does homage to the pre-eminence of righteousness; and here we have one of those fulfilments of prophecy which are so real and so glorious. 'Glorious things are spoken of thee, O City of God! I will make mention of Rahab and Babylon as of them that know me! behold, the Philistines also, and Tyre, with the Ethiopians, — these were born *there*! And of Zion it shall be reported: This and that man was born in *her*! — and the Most High shall stablish her. The Eternal shall count, when he writeth up the people: This man was born *there*!'[11] That prophecy is at the present day abundantly fulfilled. The world's chief nations have now all come, we see, to reckon and profess themselves *born in Zion*, — born, that is, in the religion of Zion, *the city of righteousness.*

But there remains the question: *what* righteousness really is. The method and secret and sweet reasonableness of Jesus. But the world does not see this; for it puts, as righteousness, something else first and this second. So that here, too, as to seeing what righteousness really is, the world now is much in the same position in which the Jews, when Jesus Christ came, were. It is often said: If Jesus Christ came now, his religion would be rejected. And this is only another way of saying that the world now, as the Jewish people formerly, has something which thwarts and confuses its perception of what righteousness really is. It is so; and the thwarting cause is the same now as then: — the dogmatic system current, the so-called orthodox theology. This prevents now, as it did then, that which righteousness really is, the method and secret of Jesus, from being rightly received, from operating fully, and from accomplishing its due effect.

So true is this, that we have only to look at our own community to see the almost precise parallel, so far as religion is concerned, to the state of things presented in Judæa when Jesus Christ came. The multitudes are the same everywhere. The chief priests and elders of the people, and the scribes, are our bishops and dogmatists, with their pseudo-science of learned theology blinding their eyes, and always, — whenever simple souls are disposed to think that the method and secret of Jesus is true religion, and that the Great Personal First Cause and the Godhead of the Eternal Son[12] have nothing to do with it, — eager to cry out: *This people that knoweth not the law are cursed!*[13] The Pharisees,[14] with their genuine concern for religion, but total want of perception of what religion really is, and by their temper, attitude, and aims doing their best to

11. *Psalms*, lxxxvii,3–6. [Arnold's note.] Zion is here the city of Jerusalem.

12. Arnold is here referring satirically to the insistence, by formal, dogmatically ritualistic Christian churches, upon worship of a twofold or a threefold God, and to the mouth-filling traditional terminology used to indicate majestic mysteries.

13. *John*, vii,49. [Arnold's note.]

14. A sect among the ancient Jews, strictly ritualistic and obedient to tradition, having consequently pretensions to superior sanctity.

make religion impossible, are the Protestant Dissenters. The Sadducees [15] are our friends the philosophical Liberals, who believe neither in angel nor spirit but in Mr. Herbert Spencer. Even the Roman governor [16] has his close parallel in our celebrated aristocracy, with its superficial good sense and good nature, its complete inaptitude for ideas, its profound helplessness in presence of all great spiritual movements. And the result is, that the splendid promises to righteousness made by the Hebrew prophets, claimed by the Jews as the property of Judaism, claimed by us as the property of Christianity, are almost as ludicrously inapplicable to our religious state now, as to theirs then.

And this, we say, is again a signal witness to Christianity. Jesus Christ came to reveal what righteousness, to which the promises belong, really is; and so long as this, though shown by Jesus, is not recognised by us, we may call ourselves Christendom as much as we please, the true character of a Christendom will be wanting to us, because the great promises of prophecy will be still without their fulfilment. Nothing will do except righteousness; and no other conception of righteousness will do, except Jesus Christ's conception of it: — his *method* and his *secret*.

III

Yes, the grandeur of Christianity and the imposing and impressive attestation of it, if we could but worthily bring the thing out, is here: in that immense experimental proof of the necessity of it, which the whole course of the world has steadily accumulated, and indicates to us as still continuing and extending. Men will not admit assumptions, the popular legend they call a fairy-tale, the metaphysical demonstrations do not demonstrate, nothing but experimental proof will go down; and here is an experimental proof which never fails, and which at the same time is infinitely grander, by the vastness of its scale, the scope of its duration, the gravity of its results, than the machinery of the popular fairy-tale. Walking on the water, multiplying loaves, raising corpses, a heavenly judge appearing with trumpets in the clouds while we are yet alive, — what is this compared to the real experience offered as witness to us by Christianity? It is like the difference between the grandeur of an extravaganza and the grandeur of the sea or the sky, — immense objects which dwarf us, but where we are in contact with reality, and a reality of which we can gradually, though very slowly, trace the laws.

The more we trace the real law of Christianity's action, the grander it will seem. Certainly in the Gospels there is plenty of matter to call out our feelings. But perhaps this has been somewhat over-used and mis-used, applied, as it has been, chiefly so as to be subservient to what we call the fairy-tale of the three Lord Shaftesburys,[17] — a story which we do not deny to have, like other products of the popular imagination, its pathos and power, but which we have seen to be no solid foundation to rest our faith in the Bible on. And

15. The Sadducees, among the ancient Jews, refused belief in personal immortality and the existence of angels, etc. The philosophy of Herbert Spencer (1820–1903), widely influential, emphasized individualism, evolution, and materialism.

16. Pontius Pilate. See the account of his trial of Jesus, in *John*, xviii,28–xix,22, and in the other Gospels.

17. Arnold composed a 'parable' of an 'infinitely magnified and improved Lord Shaftesbury [Arnold had high admiration for the great philanthropist (1801–85) of that name], a younger Lord Shaftesbury, on the scale of his father and very dear to him,' and 'a third Lord Shaftesbury, still on the same high scale, who . . . works in a very occult manner.' This, without being in the least degrading, is the basis for the Protestant story of *Justification*, said Arnold — and explained. See *Literature and Dogma*, Ch.ix, Sect.VI (pp.278–79 of the New York, 1883 ed.). That this story serves to explain 'the contract in the Council in Trinity,' see *op.cit.*, p.298.

perhaps, too, we do wrong, and inevitably fall into what is artificial and unnatural, in labouring so much to produce in ourselves now, as the one impulse determining us to use the method and secret of Jesus, that conscious ardent sensation of personal love to him, which we find the first generation of Christians feeling and professing, and which was the natural motor for those who were with him or near him, and, so to speak, touched him; and in making this our first object. At any rate, misemployed as this motor has often been, it might be well to forego or at least suspend its use for ourselves and others for a time, and to fix our minds exclusively on the recommendation given to the method and secret of Jesus by their being *true*, and by the whole course of things proving this.

Now, just as the best recommendation of the oracle committed to Israel, *Righteousness is salvation*,[18] is found in our more and more discovering, in our own history and in the whole history of the world, that it *is* so, so we shall find it to be with the method and secret of Jesus. That this *is* the righteousness which is salvation, that the method and secret of Jesus, that is to say, conscience and self-renouncement, *are* righteousness, bring about the kingdom of God or the reign of righteousness, — this, which is the Christian revelation and what Jesus came to establish, is best impressed, for the present at any rate, by experiencing and showing again and again, in ourselves and in the course of the world, that it *is* so; that this is the righteousness which is saving, and that there is none other. Let us but well observe what comes, in ourselves or the world, of trying any other, of not being convinced that this is righteousness, and this only; and we shall find ourselves more and more, as by irresistible viewless hands, caught and drawn towards the Christian revelation, and made to desire more and more to serve it. No proof can be so solid as this experimental proof; and none again, can be so grand, so fitted to fill us with awe, admiration, and gratitude. So that feeling and emotion will now well come in after it, though not before it. For the whole course of human things is really, according to this experience, leading up to the fulfilment of Jesus Christ's promise to his disciples: *Fear not, little flock! for it is your Father's good pleasure to give you the kingdom.*[19] And thus that comes out, after all, to be true, which St. Paul announced prematurely to the first generation of Christians: *When Christ, who is our life, shall appear, then shall ye also appear with him in glory.*[20] And the author of the Apocalypse, in like manner, foretold: *The kingdom of the world is become the kingdom of our Lord and his Christ.*[21] The kingdom of the Lord the world is already become, by its chief nations professing the religion of righteousness. The kingdom of Christ the world will have to become, it is on its way to become, because the profession of righteousness, except as Jesus Christ interpreted righteousness, is vain. We can see the process, we are ourselves part of it, and can in our measure help forward or keep back its completion.

When the prophet, indeed, says to Israel, on the point of being restored by Cyrus: *'The nation and kingdom that will not serve thee shall perish!'*[22] the promise, applied literally, fails. But extended to that idea of righteousness, of which Israel was the depositary and in which the real life of Israel lay, the promise is true, and we can see it fulfilled. In like manner, when the Apostle says to the Corinthians or to the Colossians, instructed that the second advent would come in their own generation: *'We must all appear before the Judg-*

ment-seat of Christ! '[23] — '*When Christ, who is our life, shall appear, then shall ye also appear with him in glory!* '[24] the promise, applied literally as the Apostle meant it and his converts understood it, fails. But divested of this *Aberglaube*[25] or extra-belief, it is true; if indeed the world can be shown, — and it can, — to be moving necessarily towards the triumph of that Christ in whom the Corinthian and Colossian disciples lived, and whose triumph is the triumph of all his disciples also.

IV

Let us keep hold of this same experimental process in dealing with the promise of immortality; although here, if anywhere, *Aberglaube*, extra-belief, hope, anticipation, may well be permitted to come in. Still, what we need for our foundation is not *Aberglaube*, but *Glaube*; not extra-belief in what is beyond the range of possible experience, but belief in what can and should be known to be true.

By what futilities the demonstration of our immortality may be attempted, is to be seen in Plato's *Phædo*. Man's natural desire for continuance, however little it may be worth as a scientific proof of our immortality, is at least a proof a thousand times stronger than any such demonstration. The want of solidity in such argument is so palpable, that one scarcely cares to turn a steady regard upon it at all. And even of the common Christian conception of immortality the want of solidity is, perhaps, most conclusively shown, by the impossibility of so framing it as that it will at all support a steady regard turned upon it. In our English popular religion, for instance, the common conception of a future state of bliss is just that of the Vision of Mirza: 'Persons dressed in glorious habits with garlands on their heads, passing among the trees, lying down by the fountains, or resting on beds of flowers, amid a confused harmony of singing birds, falling waters, human voices, and musical instruments.'[26] Or, even, with many, it is that of a kind of perfected middle-class home, with labour ended, the table spread, goodness all around, the lost ones restored, hymnody incessant. '*Poor fragments all of this low earth!* ' Keble[27] might well say. That this conception of immortality cannot possibly be true, we feel, the moment we consider it seriously. And yet who can devise any conception of a future state of bliss, which shall bear close examination better?

Here, again, it is far best to take what is experimentally true, and nothing else, as our foundation, and afterwards to let hope and aspiration grow, if so it may be, out of this. Israel had said: 'In the way of righteousness is life, and in the pathway thereof there is no death.'[28] He had said: 'The righteous hath hope in his death.'[29] He had cried to his *Eternal that loveth righteousness*: 'Thou wilt not leave my soul in the grave, neither wilt thou suffer thy faithful servant to see corruption! thou wilt show me the path of life! '[30] And by a kind of short cut to the conclusion thus laid down, the Jews constructed their fairy-tale of an advent, judgment, and resurrection, as we find it in the Book of Daniel. Jesus, again, had said: 'If a man keep my word, he shall never see death.'[31] And by a kind of short cut to the conclusion thus laid down, Christians constructed their fairy-tale of the second

31. *John*, viii,51. [Arnold's note.]

advent, the resurrection of the body, the New Jerusalem.[32] But instead of fairy-tales, let us begin, at least, with certainties.

And a certainty is the sense of *life*, of being truly *alive*, which accompanies righteousness. If this experimental sense does not rise to be stronger in us, does not rise to the sense of being inextinguishable, that is probably because our experience of righteousness is really so very small. Here, therefore, we may well permit ourselves to trust Jesus, whose practice and intuition both of them went, in these matters, so far deeper than ours. At any rate, we have in our experience this strong sense of *life from righteousness* to start with; capable of being developed, apparently, by progress in righteousness into something immeasurably stronger. Here is the true basis for all religious aspiration after immortality. And it is an experimental basis; and therefore, as to grandeur, it is again, when compared with the popular *Aberglaube*, grand with all the superior grandeur, on a subject of the highest seriousness, of reality over fantasy.

At present, the fantasy hides the grandeur of the reality. But when all the *Aberglaube* of the second advent, with its signs in the sky, sounding trumpets and opening graves, is cleared away, then and not till then will come out the profound truth and grandeur of words of Jesus like these: 'The hour is coming, when they that are in the graves shall hear the voice of the Son of God; and they that hear shall *live*.'[33]

Finally, and above all. As, for the right inculcation of righteousness, we need the inspiring words of Israel's love for it, that is, we need the Bible; so, for the right inculcation of the method and secret of Jesus, we need the *epieikeia*, the sweet reasonableness, of Jesus. That is, in other words again, we need the ***Bible***; for only through the Bible-records of Jesus can we get at his *epieikeia*. Even in these records, it is and can be presented but imperfectly; but only by reading and rereading the Bible can we get at it at all.

Now, greatly as the failure, from the stress laid upon the pseudo-science of Church-dogma, to lay enough stress upon the method and secret of Jesus, has kept Christianity back from showing itself in its full power, it is probable that the failure to apply to the method and secret of Jesus, so far as these have at any rate been used, his sweet reasonableness or *epieikeia*, has kept it back even more. And the *infinite* of the religion of Jesus, — its immense capacity for ceaseless progress and farther development, — lies principally, perhaps, in the line of extricating more and more his sweet reasonableness, and applying it to his method and secret. For it is obvious from experience, how much our use of Christ's method and secret requires to be guided and governed by his *epieikeia*. Indeed, without this, his method and secret seem often of no use at all. The Flagellants[34] imagined that they were employing his secret; and the Dissenters, with their 'spirit of watchful jealousy,' imagine that they are employing his method. To be sure, Mr. Bradlaugh[35] imagines that the method and the secret of Jesus, nay, and Jesus himself too, are all baneful, and that the sooner we get rid of them all, the better. So far, then, the Flagellants and the Dissenters are in advance of Mr. Bradlaugh: they value Christianity, and they profess the method and secret of Jesus. But they employ them so ill, that one is tempted to say they might nearly as well be without them. And this is because they are wholly without his sweet reasonableness, or *epieikeia*. Now this can only be got, first, by knowing that it is in the

34. Christian fanatics who undertook to renounce the pleasures of this world and to 'mortify the flesh' by lashing themselves.

35. See 'Sweetness and Light,' note 28.

Bible, and looking for it there; and then, by reading and re-reading the Gospels continually, until we catch something of it.

This, again, is an experimental process. That the *epieikeia* or sweet reasonableness of Jesus may be brought to govern our use of his method and secret, and that it can and will make our use of his method and secret quite a different thing, is proved by our actually finding this to be so when we try. So that the culmination of Christian righteousness in the applying, to guide our use of the method and secret of Jesus, his sweet reasonableness or *epieikeia*, is proved from experience. We end, therefore, as we began, — by experience. And the whole series of experiences, of which the survey is thus completed, rests primarily, upon one fundamental fact, — itself, eminently, a fact of experience: *the necessity of righteousness.*

Conclusion

But now, after all we have been saying of the pre-eminency of righteousness, we remember what we have said formerly in praise of culture and of Hellenism, and against too much Hebraism, too exclusive a pursuit of the 'one thing needful,' as people call it.[1] And we cannot help wondering whether we shall not be reproached with inconsistency, and told that we ought at least to sing, as the Greeks said, a *palinode*;[2] and whether it may not really be so, and we ought. And, certainly, if we had ever said that Hellenism was three-fourths of human life, and conduct or righteousness but one-fourth, a palinode, as well as an unmusical man may, we would sing. But we have never said it. In praising culture, we have never denied that conduct, not culture, is three-fourths of human life.

Only it certainly appears, when the thing is examined, that conduct comes to have relations of a very close kind with culture. And the reason seems to be given by some words of our Bible, which, though they may not be exactly the right rendering of the original in that place, yet in themselves they explain the connection of culture with conduct very well. 'I have seen the travail,' says the Preacher, 'which God hath given to the sons of men to be exercised in it; he hath made everything beautiful in his time: also, he hath set the world in their heart.'[3] *He hath set the world in their heart!* — that is why art and science, and what we call culture, are necessary. They may be only one fourth of man's life, but they are *there*, as well as the three-fourths which conduct occupies. 'He hath set *the world* in their heart.' And, really, the reason which we hence gather for the close connection between culture and conduct, is so simple and natural that we are almost ashamed to give it; but we have offered so many simple and natural explanations in place of the abstruse ones which are current, that our hesitation is foolish.

Let us suggest then, that, having this one-fourth of their nature concerned with art and science, men cannot but somehow employ it. If they think that the three-fourths of their nature concerned with conduct are the whole of their nature, and that this is all they have to attend to, still the neglected one-fourth is there, it ferments, it breaks wildly out, it employs itself all at random and amiss. And hence, no doubt, our hymns and our dogmatic theology. Of our hymns we shall say a word presently;[4] but what is our dogmatic theology, except the mis-attribution to the Bible, — the Book of *conduct*, — of a science and an abstruse metaphysic which is not there, because our theologians have in themselves a faculty for science, for it makes one-eighth of them?

1. The reference is to *Culture and Anarchy*. The phrase 'one thing needful' refers to Ch.v of that book, which is entitled 'Porro Unum Est Necessarium.'
2. An ode or song retracting or contradicting something expressed in a former one.
3. *Ecclesiastes*, iii,10,11. [Arnold's note.]
4. See Notes.

But they do not employ it on its proper objects; so it invades the Bible, and tries to make the Bible what it is not, and to put into it what is not there. And this prevents their attending enough to what *is* in the Bible, and makes them battle for what is *not* in the Bible, but they have put it there; — battle for it in a manner clean contrary, often, to the teaching of the Bible. So has arisen, for instance, all religious persecution. And thus, we say, has conduct itself become impaired.

So that conduct is impaired by the want of science and culture; and our theologians really suffer, not from having too much science, but from having too little. Whereas, if they had turned their faculty for abstruse reasoning towards the proper objects, and had given themselves, in addition, a wide and large acquaintance with the productions of the human spirit and with men's way of thinking and of using words, then, on the one hand, they would not have been tempted to misemploy on the Bible their faculty for abstruse reasoning, for they would have had plenty of other exercise for it; and, on the other hand, they would have escaped that literary inexperience which now makes them fancy that the Bible-language is scientific and fit matter for the application of their powers of abstruse reasoning to it, when it is no such thing. Then they would have seen the fallacy of confounding the obscurity attaching to the idea of God, — that vast *not ourselves* which transcends us, — with the obscurity attaching to the idea of their Trinity, a confused metaphysical speculation which puzzles us. The one, they would have perceived, is the obscurity of the immeasurable depth of air, the other is the obscurity of a fog. And fog, they would have known, has no proper place in our conceptions of God; since whatever our minds *can* possess of God they know clearly, for no man, as Goethe says, possesses what he does not understand; but they can possess of Him but a very little. All this our dogmatic theologians would have known, if they had had more science and more literature. And therefore, simple as the Bible and conduct are, still culture seems to be required for them, — required to prevent our mis-handling and sophisticating them.

GOD AND THE BIBLE

Preface

In revising the present volume, the suspicion and alarm which its contents, like those of its predecessor,[1] will in some quarters excite, could not but be present to my mind. I hope, however, that I have at last made my aim clear, even to the most suspicious. Some of the comments on *Literature and Dogma* did, I own, surprise me, in spite of a tolerably long experience of men's propensity to mistake things. Again and again I was reproached with having done, in that book, just what I had formerly blamed the Bishop of Natal [2] for doing. But *Literature and Dogma* had altogether for its object, and so too has the present work, to show the truth and necessity of Christianity, and its power and charm for the heart, mind, and imagination of man, even though the preternatural, which is now its popular sanction, should have to be given up. To show this, was the end for which both books were written.

For the power of Christianity has been in the immense emotion which it has excited; in its engaging, for the government of man's conduct, the mighty forces of love, reverence, gratitude, hope, pity, and awe, — all that host of allies which

1. *Literature and Dogma*; *cf.* the note on the title of this selection.

2. Dr.Colenso. See the essay on the function of criticism, notes 36,37.

Wordsworth includes under the one name of *imagination*, when he says that in the uprooting of old thoughts and old rules we must still always ask: — [3]

'Survives *imagination*, to the change
Superior? Help to virtue does she give?
If not, O mortals, better cease to live!'

Popular Christianity, drenched in the preternatural, has enjoyed abundantly this help of the imagination to virtue and conduct. I have always thought, therefore, that merely to destroy the illusions of popular Christianity was indefensible. Time, besides, was sure to do it; but when it is done, the whole work of again cementing the alliance between the imagination and conduct remains to be effected. To those who effect nothing for the new alliance but only dissolve the old, we take once more our text from Wordsworth, and we say: —

'Why with such earnest pains dost thou provoke
The years to bring on the inevitable yoke,
Thus blindly with man's blessedness at strife?
Full soon his soul will have its earthly freight;' — [4]

soon enough will the illusions which charmed and aided man's inexperience be gone; what have you to give him in the place of them?

Dr. Colenso had nothing, and hence our dissatisfaction with his work. But undoubtedly it is not easy to reunite man's imagination with his virtue and conduct, when the tie between them has been once broken. And therefore there will always be many well-meaning people who say: Why meddle with religion at all? why run the risk of breaking a tie which it is so hard to join again? And the risk is not to be run lightly, and one is not always to attack people's illusions about religion merely because illusions they are. But at the present moment two things about the Christian religion must surely be clear to anybody with eyes in his head. One is, that men cannot do without it; the other, that they cannot do with it as it is.

And first, that they cannot do without it is shown by the certainty, — as Baur,[5] with whom I am glad to agree at last, well says, — by the certainty with which 'the predominance of an all-denying unbelief does but call forth a keener craving for belief.' Nowhere did the old Christian belief seem to be so reasoned down, laughed out of court, exploded and extinct as in France; and in no country do we witness such a recrudescence, as liberals would say, of superstition, so formidable a clerical reaction. In England the old Christian belief has never ceased to be a mighty power. Yet even here the voice of modern liberalism has of late more and more been raised to decry it and to foretell its speedy extinction; and the astonishing popularity of the American revivalists [6] is the answer. Why is this so?

It is so, because throughout the world there is a growing feeling, that, whatever may have been amiss with the old religion, modern liberalism, though it confidently professed to have perfect and sufficient substitutes for it, has not; and though it promised to make the world get on without it, cannot. Even Frenchmen are losing their long cherished belief in the gospel of the rights of man and the ideas of 1789 [7] as a substitute for it. Indeed, one

4. Wordsworth, *Ode: Intimations of Immortality*, ll. 123–26 (varied slightly).

5. Ferdinand Christian Baur (1792–1860), German historian, Biblical scholar, and critic. Arnold quotes three of his books in the first five paragraphs of this Preface — *cf.* the note on the title, above.

6. See, for instances, W. Hepworth Dixon's accounts as mentioned by Arnold in 'Barbarians, Philistines, Populace,' the passages with notes 21,24.

7. In Paris, in August 1789, the Constituent Assembly voted the 'Declaration of the Rights of Man,' a sort of creed, or confession of faith, for the new religion of the French Revolution; the

has only to keep one's head clear and one's judgment impartial, to see that however poorly men may have got on when their governing idea was: *The fear of the Lord is the beginning of wisdom*, they can get on even less by the governing idea that *all men are born naturally free and equal.* The barrenness and insufficiency of the revolutionary formulas are visible to common sense as they lose the gloss of novelty. Either they are vague; — as when Michelet, for instance, talks of 'my idea, and Proudhon's,[8] of Justice, of Revolution, an idea the opposite of Christianity;' where the term *Christianity* has no doubt a plain enough meaning for us, but the terms *Justice* and *Revolution*, its supposed opposites, have not. Or if the formula is explained, it turns out to be something jejune, after all, which is meant; — as when Michelet tells us what Justice, the *pensée du siècle*, the thought of the Age of Revolution, the opposite of Christianity is, and it is this: 'Unity of administration, gradual suppression of privilege, equal taxation.' But this is politics, it is merely what we call *machinery*; and the 'thought of the age,' the idea of Justice and Revolution, the idea which is the opposite of Christianity, must give us something more than this, or to replace Christianity it is quite ludicrously insufficient.

All this most people are now beginning to see clearly enough; hence the reaction on which secularists so little counted. But indeed it is much more surprising that they should ever have reckoned that their ideas of revolution and liberty, and of the spread of physical science dispelling a host of illusions, could at all do for the world what Christianity had done for it and serve as a substitute for Christianity, than that they should now find themselves to be out in their reckoning. For Christianity enabled, or professed to enable, mankind to deal with personal conduct, — with an immense matter, at least three-fourths of human life. And it seems strange that people should even imagine, either that men will not demand something enabling them to do this, or that revolution, and equality, and knowing that not the sky moves but the earth, can in any way do it. And so the revolutionists find themselves at fault in their calculations; and the best scientific specialists are forward to confess, what is evident enough, both that religion must and will have its claims attended to, and that physics and religion have, as Joubert[9] says, absolutely nothing to do with one another. Charlatans may bluster; but, speaking in defence of the genuine men of science, M. Réville[10] declares of them that 'they willingly recognise the legitimateness of the religious element in the human spirit, but they say that to provide the satisfaction due to it is not a business with which they are competent to deal.'

It is true, all specialists are not equally sober-minded. Thus we find a brilliant mathematician, Professor Clifford,[11] launching invectives which, if they are just, would prove either that no religion at all has any right to mankind's regard, or that the Christian religion, at all events, has none. He calls Christianity 'that awful plague which has destroyed two civilisations and but barely failed to slay such promise of good as is now struggling to

first two articles declared: (1) Men are born and remain free and equal in rights. (2) These rights are: liberty, property, security, and resistance to oppression. There were 17 articles in all. See Henri Martin, *A Popular History of France* (Boston, 1877), I,60–61.

8 Pierre Joseph Proudhon (1809–65), French socialist.

9. Arnold may have had in mind, in Joubert's *Pensées*, either Titre I,lxxviii, or Titre XVIII, xcii.

10. Albert Réville had criticized Arnold's *Literature and Dogma* in the *Academy*, and Arnold had expressed respect and gratitude for his work. *Cf.* the fifth paragraph of the Introduction to *God and the Bible*.

11. William Kingdon Clifford (1845–79), mathematician and metaphysician, professor of applied mathematics, University College, London, author of mathematical works and of philosophical treatises, severely materialistic.

live amongst men.' He warns his fellow-men against showing any tenderness to 'the slender remnant of a system which has made its red mark on history and still lives to threaten mankind.' 'The grotesque forms of its intellectual belief,' he sternly adds, by way of finish, 'have survived the discredit of its moral teaching.'

But these are merely the crackling fireworks of youthful paradox. One reads it all, half sighing, half smiling, as the declamation of a clever and confident youth, with the hopeless inexperience, irredeemable by any cleverness, of this age. Only when one is young and headstrong can one thus prefer bravado to experience, can one stand by the Sea of Time, and instead of listening to the solemn and rhythmical beat of its waves, choose to fill the air with one's own whoopings to start the echo. But the mass of plain people hear such talk with impatient indignation, and flock all the more eagerly to Messrs. Moody and Sankey.[12] They feel that the brilliant freethinker and revolutionist talks about their religion and yet is all abroad in it, does not know either that or the great facts of human life; and they go to those who know them better. And the plain people are not wrong. Compared with Professor Clifford, Messrs. Moody and Sankey are masters of the philosophy of history. Men are not mistaken in thinking that Christianity has done them good, in loving it, in wishing to listen to those who will talk to them about what they love, and will talk of it with admiration and gratitude, not contempt and hatred. Christianity is truly, as in *Literature and Dogma* I have called it, 'the greatest and happiest stroke ever yet made for human perfection.' Men do not err, they are on firm ground of experience, when they say that they have practically found Christianity to be something incomparably beneficent. Where they err, is in their way of accounting for this, and of assigning its causes.

And here we reach our second point: that men cannot do with Christianity as it is. Something true and beneficent they have got hold of in it, they know; and they want to rely upon this, and to use it. But what men rely upon and use, they seek to give themselves account of, they seek to make clear its right to be relied upon and used. Now, the old ways of accounting for Christianity, of establishing the ground of its claims upon us, no longer serve as they once did. Men's experience widens, they get to know the world better, to know the mental history of mankind better; they distinguish more clearly between history and legend, they grow more shy of recourse to the preternatural. I have quoted in the present volume the saying of Pascal:[13] 'In good truth, the world is getting mistrustful, and does not believe things unless they are evident to it.' But no one can more set this consideration at defiance than does Pascal himself in his account of Christianity. Gleams of astonishing insight he has, as well as bursts of unsurpassable eloquence; there is no writer on the Christian religion who more than Pascal deserves a close study. But the basis of his whole system is the acceptance, as positive history and literal matter of fact, of the story of Adam's fall. The historical difficulty of taking this legend seriously, for us so decisive, Pascal hardly saw at all; but he saw plenty of other difficulty. Nothing, he observes, can be 'more contrary to the rules of our miserable justice than to damn eternally a child born now for a crime committed six thousand years before he came

12. Dwight Lyman Moody (1837–99) and Ira David Sankey (1840–1908), American evangelists who drew great audiences when they visited England.

13. Arnold quotes it in Ch.ii, Sect.VI, of *God and the Bible*. For Arnold's quotations from Pascal's treatment of the problem of original sin, see Pascal's *Pensées*, ed. Leon Brunschvigg (Paris, 1904), II,348ff.

into being.' Nevertheless Pascal accepts the story, because 'without this mystery, the most incomprehensible of all mysteries, we are incomprehensible to ourselves.' That is, he sees no other way of explaining the mixture of grandeur and infirmity which he finds in man, — of desire for happiness and of inability to reach it. So that, if we put ourselves under Pascal's guidance, the necessary approach to our use of the salvation offered by the Christian religion is to believe the story of Adam's fall to be historical, and literally true. And his famous figure of the wager is used by Pascal to reconcile us the better to this belief. The chances are such, he says, that we shall do well at all events to lay our stake in favour of the story's truth. If we say we *cannot* believe it, let us set to work to attain belief as others have attained it; and how was *this*? 'By acting just as if they *did* believe it; by taking holy water, having masses said, etc.; *quite naturally that will make you believe, and render you stupid!* [14] — But that is just what I am afraid of. — And why; what have you to lose? What harm will come to you from taking this course? You will be faithful, honest, humble, grateful, charitable, sincere, a friend whom men can trust?'

Did ever a great reasoner reason so madly? And this is the man who saw that the world no longer believes things unless it has evidence of them! In the first place, there is no evidence that man is only comprehensible on the assumption that the story of Adam's fall is true. But even if it were so, man must still ask himself: *Is* the story true? And if it is not true, then the conclusion must be simply that man is not comprehensible. Now, sooner or later, as our experience widens, we must see that the story is not true; we must inevitably come to say to ourselves: 'It is all a legend! it never really happened, any of it!' It is no more real history than the Peruvian account of Manco Capac and Mama Ocollo, the children of the Sun, 'who appeared on the banks of the Lake Titicaca, sent by their beneficent parent, who beheld with pity the miseries of the human race, to instruct and to reclaim them.' [15] For a little while, even for a generation or two perhaps, man may, after he has begun to doubt the story's truth, still keep himself in the belief of it by 'taking holy water, rendering himself stupid'; but the time comes when he cannot. That a story will account for certain facts, that we wish to think it true, nay, that many have formerly thought it true and have grown faithful, humble, charitable, and so on, by thus doing, does not make the story true if it is not, and cannot prevent men after a certain time from seeing that it is not.

And on such a time we are now entering. The more we may have been helped to be faithful, humble and charitable by taking the truth of this story, and others equally legendary, for granted, the greater is our embarrassment, no doubt, at having to do without them. But we have to do without them none the less on that account. We may feel our hearts still vibrate in answer to the Old Testament telling us that 'the fear of the Lord is the beginning of wisdom,' and to the New telling us that Jesus Christ saves his people from their sins. But this fear of the Lord, and this safety through Jesus Christ, can

14. '*Naturellement même cela vous fera croire et vous abetira.*' The Port Royal editors suppressed this wonderful sentence, and indeed the whole passage which follows the words *and how was this?* What Port Royal substituted was the following: 'Imitez leurs actions extérieures, si vous ne pouvez encore entrer dans leurs dispositions intérieures; quittez ces vains amusements qui vous occupent tout entier.' Pascal's words were not restored until M. Cousin reverted to the original manuscript. See M. Havet's careful and valuable edition of Pascal's *Pensées*, vol.I, pp. 152,158. [Arnold's note.]

15. Robertson's *History of America*, book vi. [Arnold's note.]

have Adam's fall for their fundamental basis and explanation no longer.

Cardinal Manning[16] narrates the miraculous resuscitation of the Virgin Mary, and his argument for believing it is that the story is a beautiful one, and that it is a comfort and help to pious souls to think it true. Both may be freely conceded to him; but really as much may be said for the miraculous apparition of Cinderella's fairy godmother. The story is pathetic and beautiful, and it is a pleasure to kind souls to see the tables turned by enchantment in favour of the poor little good Cinderella. But this does not make the story true. And if a story is unsubstantial in its foundation and character, no connecting of it with our affections, or with what does us good, can in the end prevent people from saying: 'But it is not true! it never really happened, any of it!'

I heard Mr. Moody preach to one of his vast audiences on a topic eternally attractive, — salvation by Jesus Christ. Mr. Moody's account of that salvation was exactly the old story, to which I have often adverted, of the contract in the Council of the Trinity.[17] Justice puts in her claim, said Mr. Moody, for the punishment of guilty mankind; God admits it. Jesus intercedes, undertakes to bear their punishment, and signs an undertaking to that effect. Thousands of years pass; Jesus is on the cross on Calvary. Justice appears, and presents to him his signed undertaking. Jesus accepts it, bows his head, and expires. Christian salvation consists in the undoubting belief in the transaction here described, and in the hearty acceptance of the release offered by it.

Never let us deny to this story power and pathos, or treat with hostility ideas which have entered so deep into the life of Christendom. But the story is not true; it never really happened. These personages never did meet together, and speak, and act, in the manner related. The personages of the Christian Heaven and their conversations are no more matter of fact than the personages of the Greek Olympus and their conversations. Sir Robert Phillimore[18] seeks to tie up the Church of England to a belief in the personality of Satan, and he might as well seek to tie it up to a belief in the personality of Tisiphone.[19] Satan and Tisiphone are alike not real persons, but shadows thrown by man's guilt and terrors. Mr. Moody's audiences are the last people who will come to perceive all this; they are chiefly made up from the main body of lovers of our popular religion, — the serious and steady middle class, with its bounded horizons. To the more educated class above this, and to the more free class below it, the grave beliefs of the religious middle class in such stories as Mr. Moody's story of the Covenant of Redemption are impossible now; to the religious middle class itself they will be impossible soon. Salvation by Jesus Christ, therefore, if it has any reality, must be placed somewhere else than in a hearty consent to Mr. Moody's story. Something Mr. Moody and his hearers have experienced from Jesus, let us own, which does them good; but of this something they have not yet succeeded in getting the right history.

Now, if one feels impatience with people who, like Professor Clifford, lightly run a-muck at an august thing, so a man who is in earnest must feel impatience with those who lightly allege this or that as the true foundation of it. People who gravely offer us about Christianity their stories of the contract in the Council of

16. Henry Edward Manning (1808–92), English clergyman who became Roman Catholic and a cardinal; theological writer.

17. Arnold explains 'the contract in the Council of the Trinity' in the remainder of the paragraph; see also his explanation by the parable of the three Lord Shaftesburys — *cf.* 'The True Greatness of Christianity,' note 17.

18. Sir Robert Joseph Phillimore (1810–85), jurist and scholar.

19. Tisiphone, in Greek mythology, was one of the three furies or avenging spirits who pursue wrongdoers and make them insane.

the Trinity, or of the miraculous resuscitation of the Virgin, are just like Mr. Ruskin telling us in his assured way: [20] 'There is not a moment of any day of our lives, when nature is not producing picture after picture and working still upon such exquisite and constant principles of such perfect beauty, *that it is quite certain it is all done for us, and intended for our perpetual pleasure.*' It is *not* quite certain, we have not a particle of certainty about it, and to say that it is certain is utterly fantastic. However, Mr. Ruskin is talking only about the beauties of nature; and here, perhaps, it is an excuse for inventing certainties that what one invents is so beautiful. But religion is to govern our life. Whoever produces certainties to us on the subject of religion is bound to take care that they are serious ones; and yet on no subject is this so little regarded.

And there is no doubt that we touch here on a real fault both in Christians and in Christian theology; and that at Christianity's very first start in the world the heathen philosopher Celsus [21] hit this fault, when he remarked on the κουφότης τῶν Χριστιανῶν. We must not translate κουφότης simply *levity*, for the seriousness of Christianity in morals has been its charm and its power. Ὅσα σεμνά! as St. Paul says.[22] — *whatever things are nobly serious!* — may here well stand for its motto. But the κουφότης Celsus meant was *a want of intellectual seriousness*; and the reproach of this was not altogether undeserved by the first Christians, while it has been abundantly deserved by Christian theology since. The first Christians misunderstood Jesus and had the multitude's appetite for miracles, the multitude's inexact observation and boundless credulity. They it was who supplied the data which Christian theology took from them without question, and has ever since confidently built upon. But trained, critical, indifferent minds, which knew what evidence was and what popular beliefs were, could not but be struck with the looseness in the joints of the Christian belief, with the slightness of evidence for its miraculous data. They *were* struck with them; and if the old civilisation had not been on the wane, if a supply of instructed, critical, cool, indifferent minds had continued, Christianity could not have established itself in the precise form it did. For its establishment in that form the extinction of the old civilisation was necessary; — to flood and drown all which this civilisation was, and thought, and knew, with the barbarian nations of the north, men of infantine and untrained mental habit. The infancy of the world was renewed, with all its sweet illusions; and on this new world the popular Christian belief could lay hold freely. Professor Clifford execrates Christianity as an 'awful plague,' because its success thus involved the ruin of Roman civilisation. It was worth while to have that civilisation ruined fifty times over, for the sake of planting Christianity through Europe in the only form in which it could then be planted there. Civilisation could build itself up again; but what Christianity had to give, and from the first did give in no small measure, was indispensable, and the Roman civilisation could not give it. And Christianity's admixture of popular legend and illusion was sure to be cleared away with time, according to that profound saying of Jesus himself: 'There is nothing covered which shall not be uncovered, and hidden which shall not be known.' [23]

But the miraculous data supplied by the first Christians became in this manner speedily consecrated, the looseness of the

21. Celsus, an epicurean philosopher (fl. A.D. 178), who wrote a book against the Christian religion, which was answered by Origen (A.D. 248). See his *Contra Celsum*, III, and VI, xiv. The second and third Greek words here mean 'of the Christians.'

22. *Philippians*, iv,8. [Arnold's note.]

23. *Matthew*, x,26. [Arnold's note.]

evidence for them soon escaped scrutiny. Theology, the exhibition of Christianity in a scientific and systematic way, took these data as an assured basis. Many theologians have been very able men, and their reasonings and deductions have been very close and subtle. Still they have always had the defect of going seriously upon data produced and admitted with a *want of intellectual seriousness*. But science makes her progress, not merely by close reasoning and deduction, but also, and much more, by the close scrutiny and correction of the present commonly received data. And this scrutiny is just what theological science has never seriously given; and to listen to it, therefore, is, as we said in *Literature and Dogma*, like listening to Cosmas Indicopleustes the Christian cosmographer,[24] or any other early Christian writer in a department of science, who goes upon data furnished by a time of imperfect observation and boundless credulity. Whatever acuteness the writer may manifest, yet upon these data he goes. And Christian writers in other departments of science have now corrected their old data in them from top to bottom; half of these data they have clean abandoned and the other half they have transformed. But Christian theologians have not yet done so in their science of theology, and hence their unprofitableness.

Mr. Gladstone complains that objectors to the Athanasian Creed [25] seem to forget, most of them, 'that theology is a science, and that it therefore has a technical language which is liable to be grossly misunderstood by those who have never made it the subject of study.' And this is a very usual complaint from our theologians. But the fact is, that their science is a science going gravely and confidingly upon the uncorrected data of a time of imperfect observation and boundless credulity, and that, therefore, the more formal and technical it gets, the more hollow it is. And the hollowness of the results exhibited by theologians is more apparent than the reason thereof, and a clear-headed man can often perceive that what the theologians say is futile, although he may never have been led to see that the untrustworthiness of their miraculous data is the real cause. Dr. Littledale [26] adjures people to 'study theology, instead of practically maintaining, as Dr. Arnold in all sincerity did, that the best preparation for laying down authoritative decisions in theology is to know nothing whatever about it.' But Dr. Arnold,[27] who had a sound historical instinct, could tell at once, from the warnings of this instinct, that theology, which is a series of conclusions upon the history in the Bible, had apprehended that history all wrong; that it was faulty, therefore, in its very base, and so could not be a true theology, a science of the Christian religion, at all. And most certainly it is not the best preparation for forming right

24. In *Literature and Dogma*, Ch.ix,Sect.II, Arnold explains: 'Cosmas Indicopleustes, a Christian navigator of Justinian's time, denies that the earth is spherical, and asserts it to be a great flat surface with the sky put over it like a dish-cover.'

25. The Athanasian Creed (once attributed to Athanasius, Bishop of Alexandria) is a statement of faith used in the Church of England on certain feasts, and in the Roman Catholic Church on certain Sundays; it is not in the Prayerbook of the Protestant Episcopal Church in the United States. It reads, 'Whosoever will be saved: before all things it is necessary that he hold the Catholic Faith: 2. Which Faith except every one do keep whole and undefiled: without doubt he shall perish everlastingly. 3. And the Catholic Faith is this: That we worship one God in Trinity, and Trinity in Unity; 4. Neither confounding the Persons: nor dividing the Substance. 5. For there is one Person of the Father: another. . . .' It is too long to be quoted completely; *cf.* Philip Schaff, *The Creeds of Christendom* (New York, 1896), II,66–71.

26. Richard Frederick Littledale (1833–90), Anglican clergyman and theological writer, opposed Roman Catholicism.

27. Thomas Arnold (1795–1842), father of Matthew; headmaster of Rugby School; clergyman in the Church of England; author; D.D., 1828.

judgments in a true theology, to have one's head stuffed full of a false.

Moreover, this original vice of Christian theology seems to have affected, where things religious are concerned, the whole mental habit of those who receive it, and to have afflicted them with a malady which cannot be better described than as the κουφότης τῶν Χριστιανῶν, want of intellectual seriousness on the part of lovers and defenders of Christianity. Men's experience widens, they get a clearer sense of what fact is and what proof is, they are more aware when they talk nonsense and more shy of talking it; only where religion is concerned does this check of sober reason seem quite to desert them, and levity to reign. We have noticed Cardinal Manning's ground for believing the miraculous resuscitation of the Virgin Mary: that the story is so beautiful. But the same levity is shown by more cautious Catholics discussing the Pope's infallibility, seeking to limit its extent, to lay down in what sense he is really infallible and in what sense he is not; for in no sense whatever is or can he be infallible, and to debate the thing at all shows a want of intellectual seriousness. The same when Lord Herries [28] thinks to mend matters by saying, that 'the Pope is the organ of the Church, and an Almighty Power of infinite wisdom and of infinite truth established his Church to teach all truth unto the end of the world, and as such that Church must be infallible;' for there is plainly no such thing existing as the said infallible Church, and it is a want of intellectual seriousness to make believe that there is when there is not. The same when Dr. Ward [29] thinks to clear the doctrine of the Real Presence, by talking of 'the divine substance in the Host [30] separable from all that group of visible and tangible phenomena which suggests the presence of bread.' All that this acute mind effects, by thus gravely cheating itself with words, is to illustrate the κουφότης τῶν Χριστιανῶν, the want of intellectual seriousness found in Christians. The same, finally, when Mr. Moody, the question being what Christian salvation positively is, tells us his story about Justice and her contract. However honest and earnest Mr. Moody may be, all we can say of a man who at the present juncture bases Christian salvation on a story like that, is that he shows a fatal want of intellectual seriousness.

For Protestantism has the same want of intellectual seriousness as Catholicism, its advantage being, however, that it more possesses in itself the means of deliverance. On this, the advantage of Protestantism, we do not at the present moment insist; we rather point out the weakness, common to it and to Catholicism, of building confidently upon miraculous data lightly admitted. True, Catholicism has more levity in admitting new miraculous data; but Protestantism admits unreservedly one set of miraculous data and builds everything on them, because they are written in a book which, it says, cannot err; and this is levity. At the stage of experience where men are now arrived, it is evident to whoever looks at things fairly that the miraculous data of the Bible have not this unique character of trustworthiness; that they, like other such data, proceed from a medium of imperfect observation and boundless credulity. The story of the magical birth and resuscitation of Jesus was bred in such a medium; and not to see this, to build confidently on the story, is hardly more serious than to admit the story of the magical birth and resuscitation of the Virgin because it is so beautiful.

It is of the utmost importance to be per-

28. Sir John Charles Herries (1815–83), financier.

29. William George Ward (1812–82), Roman Catholic theologian and philosopher; controversial writer; edited the *Dublin Review*, 1863–78; wrote against liberalism and for the infallibility of the pope.

30. The Host (Latin *hostia*, sacrifice) in the services of the Roman Catholic Church is the consecrated wafer, or bread, considered to have become by 'transubstantiation' the body of Christ.

fectly honest here. M. de Laveleye [31] is struck, as any judicious Catholic may well be struck, with the superior freedom, order, stability, and even religious earnestness, of the Protestant nations as compared with the Catholic. But at the present moment the Protestant nations are living partly upon their past, partly upon their powers of self-transformation; great care is required to consult and use aright the experience which they offer. True, their religion has made them what they are, and their religion involved severance from Rome and involved the received Protestant theology. But it would be a grave mistake to suppose that the secret of the Protestant nations lies in severance from Rome and in the received Protestant theology; or that, in now merely adopting those from them, a modern nation could find freedom, order, stability, and religious earnestness. The true force of Protestantism was its signal return to the individual conscience, — to the method of Jesus. This strengthened the man, this founded him on rock, this invigorated his action on all lines. It induced separation from Rome (so far as this was not due to causes political), and it induced the received Protestant theology. But a man's conscience does not necessarily tell him right on all points all at once; and now the conscience of the Protestant nations is beginning to tell them that in their theology of the sixteenth century it did not tell them right. Conscience told them right in asserting its own general supremacy as ultimate court of appeal; it did not tell them right in its particular decision that the sixteenth century theology was the true one. Protestantism's secret is undoubtedly its religion; but it has not at this moment a science of religion, or theology, to give to the Catholic nations, for it is working out its own anew. What it has to give them is the sincere, uncompromising return to the method of Jesus, with the deep and firm sense of reality which this return inspires. But if it gives them this, it will have given to the Catholic nations what enables them to do all the rest for themselves.

It is the habit of increased intellectual seriousness, bred of a wider experience and of a larger acquaintance with men's mental history, which is now transforming religion in our country. Intelligent people among the educated classes grow more and more sceptical of the miraculous data which supply the basis for our received theology. The habit is a conquest of the advancing human race; it spreads and spreads; it cannot but be, and will be, on the whole and in the end a boon to us. But many and many an individual it may find unprepared for it, and may act upon him injuriously. Goethe's [32] saying is well known: 'All which merely frees our spirit, without giving us the command over ourselves, is deleterious.' It is of small use by itself alone, however it may be indispensable this one single current of intellectual seriousness; of small use to those who are untouched by the great current of seriousness about conduct. To a frivolous and sensual upper class, to a raw and sensual lower class, to feel the greater current may be more than a compensation for not feeling the lesser. They do now feel the lesser current, however; and it removes them farther than ever from the influence of the greater.

For fear of losing their religious convictions, the pious part of our people would fain shut off from themselves the intellectual current, which they fear might carry them away to shores of desolation. They may succeed for a longer or a shorter time. Their love of the old, and their fear of the new, alike give them energy; and we have repeatedly said that the nature of the debate as to the miraculous ground in Christianity is such, that the conviction of its

31. See his excellent pamphlet: *Le Protestantisme et le Catholicisme*, Brussels, Muquardt. [Arnold's note.]

32. Goethe, *Maximen und Reflexionen, XII.* See his *Werke* (ed. Berlin, 1923), III,416.

unsoundness must form itself in a man's own mind, it cannot be forced upon him from without. It is true, what apologists are always urging, that there is no other example of such a success as that of the Christian religion, where the successful religion had an erroneous belief in miracles for its foundation. It is true, what was well pointed out in the *Guardian*,[33] that the rich crop of non-Christian miracles contemporary with the rise of Christianity, and which is often brought as proof of the hollowness of the Christian miracles may naturally have been called up by the miracles of Christianity. The answer, no doubt, is, that no other religion with an unsound foundation of miracles has succeeded like Christianity, because no other religion had, in close conjunction with its unsound belief in miracles, such an element of soundness as the personality and word of Jesus. And the suggestion of non-Christian miracles by the Christian ones only proves a superior force somewhere in the Christian religion; and this it undoubtedly had, but not from its miracles. However, a religious man may still shut his eyes to all this, and may keep fast his old faith in the Christian miracles. But before very long the habit of intellectual seriousness will reach him also, and change him. Not a few religious people are even now gained by it against their will, and to their deep distress and bewilderment. So that, whether we look about us at the religious world or at the irreligious, the conclusion is the same; people cannot any longer do with Christianity just as it is.

The reader whom the present work has in view is not the man still striving to be content with the received theology. With him we do not seek to meddle. Neither is it intended for a frivolous upper class in their religious insensibility, nor for a raw lower class in their religious insensibility, nor for Liberal secularists at home or abroad, nor for Catholics who are strangers, or very nearly so, to the Bible. Some or all of these may perhaps come to find the work useful to them one day, and after they have undergone a change; but it is not directly aimed at them. It is meant for those who, won by the modern spirit to habits of intellectual seriousness, cannot receive what sets these habits at nought, and will not try to force themselves to do so; but who have stood near enough to the Christian religion to feel the attraction which a thing so very great, when one stands really near to it, cannot but exercise, and who have some acquaintance with the Bible and some practice in using it.

Of such persons there are in this country, and probably in America also, not a few. The familiarity with the Bible extends in Protestant countries throughout those large classes which have been religiously brought up, and is invaluable to them. It is the excellent fruit which Protestantism gained by its return at the Reformation to the individual conscience, — to the method of Jesus. The Bible itself was made the standard, and what the Bible really said. It matters not that the Protestant's actual interpretation of the Bible has hitherto been little better than the Catholic's; he has still been conversant with the Bible, has felt its grandeur, has conceived the just idea that in its right use is salvation. M. Sainte-Beuve, the finest critical spirit of our times, conceived of the Bible so falsely, simply from not knowing it, that he could cheerfully and confidently repeat the Liberal formula: 'Unless we mean to prefer Byzantinism [34] to progress we must say goodbye *aux vieilles Bibles*, — to the old Bibles.' Liberals, who think that religion

33. The *Guardian*, a weekly periodical; in *Literature and Dogma* Arnold more than once refers to 'the clergymen who write to the *Guardian*,' and implies their unenlightened holding to tradition. For one reference to a theological controversy in its issues for Nov. 1881, see the 'Notice' to the 4th ed. of H.I.D. Ryder, *Catholic Controversy*.

34. Sterile, scholastic culture.

in general is an obstacle to progress, may naturally, however, be ignorant of the virtue there is in knowing one's Bible. But Catholics, although they may love religion, are for the most part in like case with its Liberal foes in not being aware what virtue there lies in knowing the Bible. And therefore a Catholic, who has once come to perceive the want of intellectual seriousness in what his Church lays down, and in what he has been told of her infallibility, thinks that there the thing ends, and that the Christian religion itself has as little intellectual seriousness as the dogmas of his Church. So we see how many Catholics break violently with religion altogether, and become its sworn enemies. And even with Catholics who have been so near to it that they cannot help feeling its attraction, what they feel is merely, when the dogmas of their church have lost credibility for them, a vague sentiment at variance with their reason; capable, perhaps, of making them view with dislike all who raise questions about religion, but not capable of affording them any sure stay. Therefore Niebuhr [35] might well say that 1517 ought to precede 1789; and even the fanaticism of Exeter Hall [36] can hardly assert too roundly that the Catholic nations will never really improve until they know the Bible better. For easily and always does a religious Protestant remain aware that religion is not at an end because the dogmas of a church cannot stand. He knows that the Bible is behind; and although he may be startled on first hearing that what creeds and confessions have for centuries been giving as the sum and substance of the Bible is not its sum and substance, yet he knows the vastness and depth of the Bible well enough to understand that, after all, this may very likely be quite true.

For such a reader is the present work meant; — for a reader who is conversant with the Bible, who can feel the attraction of the Christian religion, but who has acquired habits of intellectual seriousness, has been revolted by having things presented solemnly to him for his use which will not hold water, and who will start with none of such things even to reach what he values. If there are but ten people in the world who deal with religion fairly, he is resolved to be one of those ten.

It is the aim of the present volume, as it was the aim of *Literature and Dogma*, to show to such a man that his honesty will be rewarded. Plenty of people there are who labour solely for the diffusion of habits of intellectual seriousness, at whatever cost. Perhaps they do well, perhaps ill; at all events I do not, in the present volume and in its predecessor, write as one of them. I write to convince the lover of religion that by following habits of intellectual seriousness he need not, so far as religion is concerned, lose anything. Taking the Old Testament as Israel's magnificent establishment of the theme: *Righteousness is salvation!* taking the New as the perfect elucidation by Jesus of what righteousness is and how salvation is won,[37] I do not fear comparing even the power over the soul and imagination of the Bible, taken in this sense, — a sense which is at the same time solid, — with the like power in the old materialistic and

35. Berthold Georg Niebuhr (1776–1831), Danish-German historian and leader in the science of history, in the study of origins and sources. In 1517 the Roman Catholic monk Martin Luther posted his famous theses on the door of his church in Wittenberg, Germany, and commenced the Protestant Reformation; 1789 saw the beginning of the French Revolution.

36. 'The Bishop of Exeter chooses to say that his main objection to keeping the Athanasian Creed is that it endangers the doctrine of the Trinity, which is so important,' wrote Arnold in *Literature and Dogma*, Ch.xi,Sect.III. For an attack by Arnold on the 'fanatic' insistence on the belief in the Trinity, see *ibid.*, Ch.ix, Sect.III, last paragraph. Exeter Hall, in the Strand, was the meeting-place of zealous Evangelicals.

37. *Cf.* 'The True Greatness of Christianity,' the paragraph with note 18.

miraculous sense for the Bible, which is not.

The solidity itself is indeed an immense element of grandeur. *To him that ordereth his conversation right shall be shown the salvation of God!* [38] Or conversely, and in modern phrase: *Nations and men, whoever is shipwrecked, is shipwrecked on conduct!* In vain do philosophical Radicals devise fine new programmes which leave it out; in vain does France trumpet the ideas of '89 which are to do instead. Whoever leaves it out of his programme, whoever fancies that anything else will do instead, is baffled and confounded by the sure event; experience keeps again and again sending him back to learn better, like a schoolboy with an ill-got lesson. France, which was in such terror of Byzantinism and so resolved to have done with 'the old Bibles,' France, with all her eminent social instincts and gifts, is she not, in her forty and fifty editions of M. Adolphe Belot's [39] novels, faring towards the real Byzantinism, a Byzantinism from which 'the old Bibles,' perhaps, can alone save her? For, as it is true that men are shipwrecked on conduct, so it is true that the Bible is the great means for making men feel this, and for saving them. It makes them feel it by the irresistible power with which Israel, the Seer of the Vision of Peace,[40] testifies it; it saves them by the method and secret of Jesus.

The indispensableness of the Bible and of Christianity, therefore, cannot be exaggerated. In morals, which are at least three-fourths of life, to do without them is, as was said in *Literature and Dogma*, exactly like doing in æsthetics without the art of Greece. To do with 'the common places of morality couched in modern and congenial language,' which is what some of our Liberal friends propose, answers precisely to doing with English, French, and German art in æsthetics. To do with the very best and finest, in the way of morals, that has outside the Bible been produced, answers to doing, in æsthetics, with Flemish and Italian art. Every lover of art knows that perfection in art, salvation in art, will never be thus reached, will never be reached without knowing Greece. So it is with perfection and salvation in conduct, men's universal concern, *the way of peace*; they are not to be reached without the Bible and Christianity. By the Bible and Christianity, though not by what our missionaries now offer as such, the non-Christian nations will finally be won, and will come to regard their old religions much as a Christian, wide-minded, reverent, and profound, would regard them now. So will be fulfilled the word of Israel's Eternal: *My house shall be called the house of prayer for all nations; there shall be one Eternal, and his name one.*[41] And although we may willingly allow to Professor Rauwenhoff [42] that the mind and life of our Aryan race has deeply modified the religion of Semitic Israel already, and will yet modify it much more, still that cannot prevent the root of the matter for us, in this immense concern of religion, being in the Israel of the Bible, and he is our spiritual progenitor: — *A Syrian ready to perish was thy father.*[43]

Thus neither in respect of the grandeur of the Bible and Christianity, nor in re-

41. *Isaiah*, lvi,7; *Zechariah*, xiv,9. [Arnold's note.]

42. Arnold points out in the fifth paragraph of the Introduction to *God and the Bible* that a noteworthy criticism of *Literature and Dogma* had been published 'by Professor Rauwenhoff in the Theological Review of Leyden.'

43. *Deuteronomy*, xxvi,5. [Arnold's note.] This verse, beginning where Arnold does, reads: 'A Syrian ready to perish was my father, and he went down into Egypt, and sojourned there with a few, and became there a nation, great, mighty, and populous.' Arnold's point is that as the size of the world's population increases, the influence of the Hebrew Old Testament will increase.

spect of their world-wide importance, will the lover of religion, who brings habits of intellectual seriousness to bear upon them, find that he has to change his notions. Nor will he even have to revolutionise his phraseology. He will be aware, indeed, that of the constitution of God we know nothing, and that those who, like Christian philosophers in general, begin by admitting this, and who add, even, that 'we are utterly powerless to conceive or comprehend the idea of an infinite Being, Almighty, All-knowing, Omnipotent, and Eternal, of whose inscrutable purpose the material universe is the unexplained manifestation,'[44] but then proceed calmly to affirm such a Being as positively as if he were a man they were acquainted with in the next street, talk idly. Nevertheless, admitting that all this cannot be affirmed about the God of our religion, but only that our God is the Eternal not ourselves that makes for righteousness, we yet know also that men inevitably use anthropomorphic language about whatever makes them feel deeply, and the Biblical language about God we may therefore freely use, but as approximative and poetical merely. To seek to discard, like some philosophers, the name of God and to substitute for it such a name as the Unknowable, will seem to a plain man, surely, ridiculous. For *God*, — the name which has so engaged all men's feelings, — is at the same time by its very derivation a positive name, expressing that which is the most blessed of boons to man, Light;[45] whereas *Unknowable* is a name merely negative. And no man could ever have cared anything about God in so far as he is simply unknowable. 'The Unknowable is our refuge and strength, a very present help in trouble,'[46] is what would occur to no man to think or say. Men cared about God for the sake of what they knew about him, not of what they did not. And they knew about him that he was the Eternal not ourselves that makes for righteousness, and as such they gave him that name for what gives light and warmth, *God*. It adds, indeed, to our awe of God that although we are able to know of him what so greatly concerns us, we know of him nothing more; but simply to be able to know nothing of him could beget in us no awe whatever.

Finally, he who most seizes the real significance of the Bible and of Jesus, will be least disposed to cut himself off in religion from his fellow-men, to renounce all participation in their religious language and worship. True, this language is approximative merely while men imagine it to be adequate; it is *thrown out* at certain realities which they very imperfectly comprehend. It is materialised poetry, which they give as science; and there can be no worse science than materialised poetry. But poetry is essentially concrete; and the moment one perceives that the religious language of the human race is in truth poetry, which it mistakes for science, one cannot make it an objection to this language that it is concrete. That it has long moved and deeply engaged the affections of men, that the Christian generations before us have all passed that way, adds immensely to its worth as poetry. As the Catholic architecture, so the Catholic worship is likely to survive and prevail, long after the intellectual childishness of Catholic dogma, and the political and social mischiefs of the Roman system, have tired out men's patience with them. Catholic worship is likely, however modified, to survive as the general worship of Christians, because it is the worship which, in a sphere where poetry is permissible

45. 'Strictly and formally the word "God," we now learn from philologists, means, like its kindred Aryan words, *Theos*, *Deus*, and *Deva*, simply *shining* or brilliant.' — Arnold, *Literature and Dogma*, Ch.i, paragraph 4.

46. See *Psalms*, xlvi,1 ('God is our refuge,' etc.).

and natural, unites the most of the elements of poetry.

Everything turns on its being at realities that this worship and its language are aimed. Its anthropomorphic language about God is aimed at a vast, though ill-apprehended, reality. So is its materialistic language about the death, the rising again, and the reign of Christ. Baur says that the important thing is not whether Jesus really rose from the dead or no; the important thing is, Baur says, that his disciples believed him to have risen. Mr. Appleton,[47] in a just and instructive review of the labours of Strauss,[48] invites our approval for Strauss' early position that what is best in Christianity was not due to the individual Jesus, but was developed by the religious consciousness of humanity. But the religious consciousness of humanity has produced in Christianity not ideas, but imaginations; and it is ideas, not imaginations, which endure. The religious consciousness of humanity produced the doctrines of the Incarnation and of the Real Presence,[49] — beautiful imaginations, but if Christianity depended upon them it would dissolve. It will live, because it depends upon a true and inexhaustible fruitful idea, the idea of death and resurrection as conceived and worked out by Jesus. *Baptized into Christ's death, if by any means we might attain to the resurrection from the dead*,[50] is the true, the just, the only adequate account of a Christian and his religion. The importance of the disciples' belief in their Master's resurrection lay in their believing what was true, although they materialised it. Jesus *had* died and risen again, but in his own sense not theirs. The strength of the Christian religion lies in its being founded on a truth; on a truth which hitherto Christendom has been able to apprehend only by materialising it, but which it will one day apprehend better, and which men could come to apprehend better only by passing through a materialistic stage. We can use their language because it is thrown out at an admirable truth; only it is not, as they suppose, their sense for their own language which is real while our sense is figurative, but it is our sense which is real, and theirs is merely figurative.

The freethinking of one age is the common-sense of the next, and the Christian world will certainly learn to transform beliefs which it now thinks to be untransformable. The way will be found. And the new Christianity will call forth more effort in the individual who uses it than the old, will require more open and instructed minds for its reception; and this is progress. But we live at the beginning of a great transition which cannot well be accomplished without confusion and distress. I do not pretend to operate a general change of religious opinion, such as can only come to pass through the operation of many labourers working, all of them, towards a like end, and by the instrumentality, in a very considerable degree, of the clergy. *One man's life, what is it?* says Goethe; but even one man in his short term may do something to ease a severe transition, to diminish violent shocks in it and bitter pain. With this end in view, I have addressed myself to men such as are happily not rare in this country, men of free and active minds, who, though they may be profoundly dissatisfied with the received theology, are yet interested in religion and more or less acquainted with the Bible. These I have endeavoured to help; and they, if they are helped, will in their turn help others. To

one country and nation, and to one sort of persons in it, and to one moment in its religious history, have I addressed myself; and if the attempt thus confessedly partial has even a partial success, I am enough rewarded. May even that partial success be looked for? A calmer and a more gradual judgment than that of the immediate present will decide. But however that judgment may go, whether it pronounce the attempt here made to be of solid worth or not, I have little fear but that it will recognise it to have been an attempt conservative, and an attempt religious.

IRISH ESSAYS

A Speech at Eton

THE philosopher Epictetus, who had a school at Nicopolis in Epirus at the end of the first century of our era,[1] thus apostrophizes a young gentleman whom he supposes to be applying to him for education: —

'Young sir, at home you have been at fisticuffs with the manservant, you have turned the house upside down, you have been a nuisance to the neighbors; and do you come here with the composed face of a sage, and mean to sit in judgment upon the lesson, and to criticize my want of point? You have come in here with envy and chagrin in your heart, humiliated at not getting your allowance paid you from home; and you sit with your mind full, in the intervals of the lecture, of how your father behaves to you, and how your brother. What are the people down at home saying about me? — They are thinking: Now he is getting on! they are saying: He will come home a walking dictionary! — Yes, and I should like to go home a walking dictionary; but then there is a deal of work required, and nobody sends me anything, and the bathing here at Nicopolis is dirty and nasty; things are all bad at home, and all bad here.'

Nobody can say that the bathing at Eton is dirty and nasty. But at Eton, as at Nicopolis, the moral disposition in which the pupil arrives at school, the thoughts and habits which he brings with him from home and from the social order in which he moves, must necessarily affect his power of profiting by what his schoolmasters have to teach him. This necessity is common to all schooling. You cannot escape from it here any more than they could at Nicopolis. Epictetus, however, was fully persuaded that what he had to teach was valuable, if the mental and moral frame of his pupils were but healthy enough to permit them to profit by it. I hope the Eton masters have the same conviction as to the native value of what they teach. But you know how many doubters and deniers of the value of a classical education we nowadays meet with. Let us put aside all that is said of the idleness, extravagance, and self-indulgence of the schoolboy. This may pair off with the complaint of Epictetus about the unsatisfactory moral state of his pupil. But with us there are many people who go on and say: 'And when the schoolboy, in our public schools, does learn, he learns nothing that is worth knowing.'

It is not of the Eton schoolboy only that this is said, but of the public schoolboy generally. We are all in the same boat, — all of us in whose schooling the Greek and Latin classics fill the principal place. And it avails nothing, that you try and appease the gainsayer by now acquainting yourselves with the diameter of the sun and moon, and with all sorts of matters which to us of an earlier and ruder generation were unknown. So long as the Greek and

1. Epictetus (*60?–120?*), Roman Stoic philosopher, was in banishment from Rome at Nicopolis, in Epirus, in northwestern Greece, after A.D. 89. For the quotation, see his *Discourses*, II,xxi,11–14.

Latin classics continue to fill, as they do fill, the chief place in your school work, the gainsayer is implacable and sticks to his sentence, 'When the boy does learn, he learns nothing that is worth knowing.'

Amidst all this disparagement, one may well ask oneself anxiously what is really to be said on behalf of studies over which so much of our time is spent, and for which we have, many of us, contracted a fondness. And after much consideration I have arrived at certain conclusions, which for my own use I find sufficient, but which are of such extreme simplicity that one ought to hesitate, perhaps, before one produces them to other people. However, such as they are, I have been led to bring them out more than once, and I will very briefly rehearse them now. It seems to me, firstly, that what a man seeks through his education is to get to know himself and the world; next, that for this knowledge it is before all things necessary that he acquaint himself with the best which has been thought and said in the world; finally, that of this *best* the classics of Greece and Rome form a very chief portion, and the portion most entirely satisfactory. With these conclusions lodged safe in one's mind, one is stanch on the side of the humanities.

And in the same spirit of simplicity in which these conclusions have been reached, I proceed further. People complain that the significance of the classics which we read at school is not enough brought out, that the whole order and sense of that world from which they issue is not seized and held up to view. Well, but the best, in literature, has the quality of being in itself formative, — silently formative; of bringing out its own significance as we read it. It is better to read a masterpiece much, even if one does that only, than to read it a little, and to be told a great deal about its significance, and about the development and sense of the world from which it issues. Sometimes what one is told about the significance of a work, and about the development of a world, is extremely questionable. At any rate, a schoolboy, who, as they did in the times of ignorance at Eton, read his Homer and Horace through, and then read them through again, and so went on until he knew them by heart, is not, in my opinion, so very much to be pitied.

Still that sounding phrase, 'the order and sense of a world,' sends a kind of thrill through us when we hear it, especially when the world spoken of is a thing so great and so interesting as the Græco-Roman world of antiquity. If we are not deluded by it into thinking that to read fine talk about our classical documents is as good as to read the documents themselves, the phrase is one which we may with advantage lay to heart. I remember being struck, long ago, with a remark on the Greek poet Theognis[2] by Goethe, who did not know Greek well and had to pick out its meaning by the help of a Latin translation, but who brought to everything which he read his powerful habits of thought and criticism. 'When I first read Theognis,' says Goethe, in substance, 'I thought him querulous and morbid, and disliked him. But when I came to know how entirely his poetry proceeded from the real circumstances of his life, from the situation of parties in Megara, his native city, and from the effects of that situation upon himself and his friends, then I read him with quite another feeling.' How very little do any of us treat the poetry of Theognis and other ancients in that fashion! was my thought after reading Goethe's criticism. And earlier still I remember being struck at hearing a schoolfellow, who had left the sixth form at Rugby for Cambridge, and who had fallen in somewhere with one of Bunsen's[3] sons, who is now a member of the

2. Theognis (540?–500 B.C.), Greek elegiac poet.
3. Christian Karl Josias, Baron von Bunsen (1791–1860), German diplomat, archeologist, and theologian; Prussian minister to England.

German Parliament, — at hearing this schoolfellow contrast the training of George Bunsen, as we then called him, with our own. Perhaps you think that at Rugby, which is often spoken of, though quite erroneously, as a sort of opposition establishment to Eton, we treated the classics in a high philosophical way, and traced the sequence of things in ancient literature, when you at Eton professed nothing of the kind. But hear the criticism of my old schoolfellow. 'It is wonderful,' said he; 'not only can George Bunsen construe his Herodotus, but he has a view of the place of Herodotus in literary history, a thing none of us ever thought about.' My friend spoke the truth; but even then, as I listened to him, I felt an emotion at hearing of the place of Herodotus in literary history. Yes, not only to be able to read the admirable works of classical literature, but to conceive also that Græco-Roman world, which is so mighty a factor in our own world, our own life, to conceive it as a whole of which we can trace the sequence, and the sense, and the connection with ourselves, this does undoubtedly also belong to a classical education, rightly understood.

But even here, too, a plain person can proceed, if he likes, with great simplicity. As Goethe says of life: [4] Strike into it anywhere, lay hold of it anywhere, it is always powerful and interesting, — so one may almost say of classical literature. Strike into it where you like, lay hold of it where you like, you can nearly always find a thread which will lead you, if you follow it, to large and instructive results. Let us tonight follow a single Greek word in this fashion, and try to compensate ourselves, however imperfectly, for having to divert our thoughts, just for one evening's lecture, from the diameter of the sun and moon.

The word I will take is the word *eutrapelos*, *eutrapelia*.[5] Let us consider it first as it occurs in the famous Funeral Oration put by Thucydides into the mouth of Pericles.[6] The word stands there for one of the chief of those qualities which have made Athens, says Pericles, 'the school of Greece'; for a quality by which Athens is eminently representative of what is called Hellenism: the quality of flexibility. 'A happy and gracious flexibility,' Pericles calls this quality of the Athenians; and it is no doubt a charming gift. Lucidity of thought, clearness and propriety of language, freedom from prejudice and freedom from stiffness, openness of mind, amiability of manners, — all these seem to go along with a certain happy flexibility of nature, and to depend upon it. Nor does this suppleness and flexibility of nature at all necessarily imply, as we English are apt to suppose, a relaxed moral fiber and weakness. In the Athenian of the best time it did not. 'In the Athenians,' says Professor Curtius,[7] 'the sense of energy abhorred every kind of waste of time, their sense of measure abhorred bombast and redundancy, and their clear intelligence everything partaking of obscurity or vagueness; it was their habit in all things to advance directly and resolutely to the goal. Their dialect is characterized by a superior seriousness, manliness, and vigour of language.'

There is no sign of relaxation of moral fibre here; and yet, at the same time, the Athenians were eminent for a happy and gracious flexibility. That quality, as we all know, is not a characteristic quality of the Germanic nations, to which we ourselves belong. Men are educable, and when we read of the abhorrence of the

friend of Arnold's father. His son George is referred to.

4. *Cf.* Goethe, *Autobiography*, tr. Oxenford, ed. 1903, I,185.

5. The first is the adjective form, the second the noun.

6. Thucydides, *History*, II,xxxv–xlvi.

7. Ernst Curtius (1814–96), German historian whose *History of Greece* appeared in English trans. by A.W.Ward in 1867. For the quotation, *cf.* Bk.II,Ch.ii (Vol.I,p.430, of the New York, 1871, ed.).

Attic mind for redundancy and obscurity of expression, its love for direct and telling speech, and then think of modern German, we may say with satisfaction that the circumstances of our life have at any rate educated us into the use of straightforward and vigorous forms of language. But they have not educated us into flexibility. All around us we may observe proofs of it. The state of Ireland is a proof of it. We are rivals with Russia in Central Asia, and at this moment it is particularly interesting to note how the want of just this one Athenian quality of flexibility seems to tell against us in our Asiatic rivalry with Russia. 'Russia,' observes one who is perhaps the first of living geographers, — an Austrian, Herr von Hellwald,[8] — 'possesses far more shrewdness, *flexibility*, and congeniality than England; qualities adapted to make the Asiatic more tractable.' And again: 'There can be no dispute which of the two, England or Russia, is the more civilized nation. But it is just as certain that the highly civilized English understand but indifferently how to raise their Asiatic subjects to their own standard of civilization; whilst the Russians attain, with their much lower standard of civilization, far greater results amongst the Asiatic tribes, whom they know how to assimilate in the most remarkable manner. Of course they can only bring them to the same level which they have reached themselves; but the little which they can and do communicate to them counts actually for much more than the great boons which the English do not know how to impart. Under the auspices of Russia the advance in civilization amongst the Asiatics is indeed slow and inconsiderable, but steady, and suitable to their natural capacities and the disposition of their race. On the other hand, they remain indifferent to British civilization, which is absolutely incomprehensible to them.'

Our word 'flexibility' has here carried us a long way, carried us to Turkestan [9] and the valleys of the Jaxartes and Oxus. Let us get back to Greece, at any rate. The generation of Pericles is succeeded by the generation of Plato and Aristotle. Still the charming and Athenian quality of *eutrapelia* continues to be held in high esteem. Only the word comes to stand more particularly for flexibility and felicity in the give-and-take of gay and light social intercourse. With Aristotle it is one of the virtues: the virtue of him who in this pleasant sort of intercourse, so relished by the Greeks, manages exactly to hit the happy and right mean; the virtue opposed to buffoonery on the one side, and to morose rusticity, or clownishness, on the other. It is in especial the virtue of the young, and is akin to the grace and charm of youth. When old men try to adapt themselves to the young, says Plato, they betake themselves, in imitation of the young, to *eutrapelia* and pleasantry.

Four hundred years pass, and we come to the date of the Epistle to the Ephesians. The word *eutrapelia* rises in the mind of the writer of that Epistle. It rises to St. Paul's mind, and he utters it; but in how different a sense from the praising and admiring sense in which we have seen the word used by Thucydides and Aristotle! *Eutrapelia*, which once stood for that eminently Athenian and Hellenic virtue of happy and gracious flexibility, now conveys this favourable sense no longer, but is ranked, with filthiness and foolish talking, among things which are not convenient. Like these, it is not to be even so much as once named among the followers of God: 'neither filthiness, nor foolish talking, nor jesting (*eutrapelia*), which are not convenient.' [10]

8. Friedrich A. H. von Hellwald (1842–92), author of popular works on geography. For the quotations, see his *The Russians in Central Asia*, trans. from the German by Lieut.-Col. Theodore Wirgman, London, 1874, p.308.

9. A section of central Asia, part of which is in Russia. The two great rivers named flow through Turkestan to the Aral Sea.

10. *Ephesians*, v,4.

This is an extraordinary change, you will say. But now, as we have descended four hundred years from Aristotle to St. Paul, let us ascend, not four hundred, not quite even one hundred years, from Thucydides to Pindar.[11] The religious Theban poet, we shall see (and the thing is surely very remarkable), speaks of the quality of *eutrapelia* in the same disapproving and austere way as the writer of the Epistle to the Ephesians. The young and noble Jason[12] appears at Iolcos, and being questioned about himself by Pelias, he answers that he has been trained in the nurture and admonition of the old and just Centaur, Chiron. 'From his cave I come, from Chariclo and Philyra, his stainless daughters, who there nursed me. Lo, these twenty years am I with them, and there hath been found in me neither deed nor word that is not convenient; and now, behold, I am come home, that I may recover my father's kingdom.' The adjective *eutrapelos,* as it is here used in connection with its two nouns, means exactly a word or deed, in Biblical phrase, *of vain lightness*, a word or deed *such as is not convenient.*

There you have the history of the varying use of the words *eutrapelos, eutrapelia.* And now see how this varying use gives us a clue to the order and sense, as we say, of all that Greek world so nearly and wonderfully connected with us, so profoundly interesting for us, so full of precious lessons.

We must begin with generalities, but we will try not to lose ourselves in them, and not to remain amongst them long. Human life and human society arise, we know, out of the presence in man of certain needs, certain instincts, and out of the constant endeavour of these instincts to satisfy and develop themselves. We may briefly sum them up, these needs or instincts, as being, first and foremost, a general instinct of expansion; then, as being instincts following diverse great lines, which may be conveniently designated as the lines of conduct, of intellect and knowledge, of beauty, of social life and manners. Some lines are more in view and more in honour at one time, some at another. Some men and some nations are more eminent on one line, some on another. But the final aim, of making our own and of harmoniously combining the powers to be reached on each and all of these great lines, is the ideal of human life.[13] And our race is for ever recalled to this aim, and held fast to it, by the instinct of self-preservation in humanity.

The ideal of human life being such as it is, all these great and diverse powers, to the attainment of which our instincts, as we have seen, impel us, hang together, — cannot be truly possessed and employed in isolation. Yet it is convenient, owing to the way in which we find them actually exhibiting themselves in human life and in history, to treat them separately, and to make distinctions of rank amongst them. In this view, we may say that the power of conduct is the greatest of all the powers now named; that it is even three-fourths of life. And wherever much is founded amongst men, there the power of conduct has surely been present and at work, although of course there may be and are, along with it, other powers too.

Now, then, let us look at the beginnings of that Greece to which we owe so much, and which we may almost, so far as our intellectual life is concerned, call the mother of us all. 'So well has she done her part,' as the Athenian Isocrates[14]

11. The quotation given later in the paragraph is from Pindar's *Pythian Odes*, IV.ll.101–06.

12. In Greek mythology Jason was the son of Aeson, and the nephew of Pelias, king of Iolchos, who sent Jason in search of the Golden Fleece in order to keep him from the throne. Chiron was a centaur (half man, half horse), famed for his wisdom and knowledge of medicine.

13. This is a concise rephrasing of the main thought of Arnold's 'Sweetness and Light,' of course.

14. Isocrates (436–338 B.C.), Greek orator; the quotation is from his *Panegyricus*, 49–50.

truly says of her, 'that the name of Greeks seems no longer to stand for a race but to stand for intelligence itself; and they who share in Hellenic culture are called Greeks even before those who are merely of Hellenic blood.'

The beginnings of this wonderful Greece, what are they?

Greek history begins for us with the sanctuaries of Tempe and Delphi, and with the Apolline worship and priesthood which in those sanctuaries under Olympus and Parnassus established themselves.[15] The northern sanctuary of Tempe soon yielded to Delphi as the center of national Hellenic life and of Apolline religion. We are accustomed to think of Apollo as the awakener and nourisher of what is called genius, and so from the very first the Greeks, too, considered him. But in those earliest days of Hellas, and at Delphi, where the hardy and serious tribes of the Dorian Highlands made their influence felt, Apollo was not only the nourisher of genius, he was also the author of every higher moral effort. He was the prophet of his father Zeus, in the highest view of Zeus, as the source of the ideas of moral order and of right. For to this higher significance had the names of Zeus and Phœbus, — names originally derived from sun and air, — gradually risen. They had come to designate a Father, the source of the ideas of moral order and of right; and a Son, his prophet, purifying and inspiring the soul with these ideas, and also with the idea of intellectual beauty.

Now, the ideas of moral order and of right which are in human nature, and which are, indeed, a main part of human nature, and which are, indeed, a main part of human life, were especially, we are told, a treasure possessed by the less gay and more solitary tribes in the mountains of northern Greece. These Dorian tribes were Delphi's first pupils. And the graver view of life, the thoughts which give depth and solemnity to man's consciousness, the moral ideas, in short, of conduct and righteousness, were the governing elements in the manner of spirit propagated from Delphi. The words written upon the temple at Delphi called all comers to *soberness and righteousness*. The Doric and Æolic[16] Pindar felt profoundly this severe influence of Delphi. It is not to be considered as an influence at war with the idea of intellectual beauty; — to mention the name of Pindar is in itself sufficient to show how little this was, or could be, the case. But it was, above all, an influence charged with the ideas of moral order and of right.

And there were confronting these Dorian founders of Hellas, and well known to them, and connected with them in manifold ways, other Greeks of a very different spiritual type; the Asiatic Greeks of Ionia,[17] full of brilliancy and mobility, but over whom the ideas of moral order and of right had too little power, and who could never succeed in founding among themselves a serious and powerful state. It was evident that the great source of the incapacity which accompanied, in these Ionians of Asia, so much brilliancy, that the great enemy in them to the *Halt*, as Goethe calls it, the steadiness, which moral natures so highly prize, was their extreme mobility of spirit, their gay lightness, their *eutrapelia*. For Pindar, therefore, the word *eutrapelos*, expressing easy flexibility and mobility, becomes a word of stern opprobrium, and conveys the reproach of vain folly.

The Athenians were Ionians. But they were Ionians transplanted to Hellas, and who had breathed, as a Hellenic nation,

15. Temples to the god Apollo were established at Tempe, at the foot of Mount Olympus in northern Greece, and at Delphi, at the foot of Mount Parnassus, not far to the west and north of Athens.

16. In ancient Greece, Doris was the section just south of Thessaly; and Aeolis the section just across the Aegean Sea, on the shore of Asia Minor.

17. In ancient Greece the section called Ionia lay in Asia Minor, along the east shore of the Aegean Sea, just south of Aeolis.

the air of Delphi, that bracing atmosphere of the ideas of moral order and of right. In this atmosphere the Athenians, Ionian as they were, imbibed influences of character and steadiness, which for a long while balanced their native vivacity and mobility, distinguished them profoundly from the Ionians of Asia, and gave them men like Aristides.[18]

Still, the Athenians were Ionians. They had the Ionian quickness and flexibility, the Ionian turn for gayety, wit, and fearless thinking, the Ionian impatience of restraint. This nature of theirs asserted itself, first of all, as an impatience of *false* restraint. It asserted itself in opposition to the real faults of the Dorian spirit, — faults which became more and more manifest as time went on, — to the unprogressiveness of this spirit, to its stiffness, hardness, narrowness, prejudice, want of insight, want of amiability. And in real truth, by the time of Pericles, Delphi, the great creation of the Dorian spirit, had broken down, and was a witness to that spirit's lack of a real power of life and growth. Bribes had discredited the sanctity of Delphi; a seriousness and vital power had left it. It had come to be little more than a name, and what continued to exist there was merely a number of forms.

Now then was the turn of the Athenians. With the idea of conduct, so little grasped by the Ionians of Asia, still deeply impressed on their soul, they freely and joyfully called forth also that pleasure in life, that love of clear thinking and of fearless discussion, that gay social temper, that ease and lightness, that gracious flexibility, which were in their nature. These were their gifts, and they did well to bring them forth. The gifts are in themselves gifts of great price, like those other gifts contributed by the primitive and serious Dorian tribes, their rivals. Man has to advance, we have seen, along several lines, and he does well to advance along them. 'In the morning sow thy seed, and in the evening withhold not thine hand; for thou knowest not whether shall prosper, either this or that, or whether they both shall be alike good.'[19]

And at this moment Thucydides, a man in whom the old virtue and the new reason were in just balance, has put into the mouth of Pericles, another man of the same kind, an encomium on the modern spirit, as we may call it, of which Athens was the representative. By the mouth of Pericles, Thucydides condemned old-fashioned narrowness and illiberality. He applauded enjoyment of life. He applauded freedom from restraint. He applauded clear and fearless thinking, — the resolute bringing of our actions to the rule of reason. His expressions on this point greatly remind me of the fine saying of one of your own worthies, 'the ever-memorable Mr. John Hales, of Eton College.' 'I comprise it all,' says Hales,[20] 'in two words: *what* and *wherefore*. That part of your burden which contains *what*, you willingly take up. But that other, which comprehends *why* — that is either too hot or too heavy; you dare not meddle with it. But I must add that also to your burden, or else I must leave you for idle persons; for without the knowledge of *why*, of the grounds or reasons of things, there is no possibility of not being deceived.' It seems to me not improbable that Hales had here in his mind the very words of the Funeral Oration: 'We do not esteem discussion a hurt to action; what we consider mischievous is rather the setting oneself to work without first getting the guidance of reason.'[21] Finally, Thucydides applauded the quality of nature which above all others made the Athenians the men

21. Thucydides, *History*, II,xl.

for the new era, and he used the word *eutrapelos* in its proper and natural sense, to denote the quality of happy and gracious flexibility.

Somewhat narrowed, so as to mean especially flexibility and adroitness in light social intercourse, but still employed in its natural and favourable sense, the word descends, as we saw, to Plato and Aristotle. Isocrates speaks of the quality as one which the old school regarded with alarm and disapproval; but, nevertheless, for him too the word has evidently, in itself, just the same natural and favourable sense which it has for Aristotle and Plato.

I quoted, just now, some words from the Book of Ecclesiastes, one of the wisest and one of the worst understood books in the Bible. Let us hear how the writer goes on after the words which I quoted. He proceeds thus: 'Truly the light is sweet, and a pleasant thing it is for the eyes to behold the sun; yea, if a man live many years, let him rejoice in them all; and let him remember the days of darkness, for they shall be many. All that is future is vanity. Rejoice, O young man, in thy youth, and let thy heart cheer thee in the days of thy youth, and walk in the ways of thine heart and in the sight of thine eyes; — but know thou that for all these things God will bring thee into judgment.'[22] Let us apply these admirable words to the life and work of the Athenian people.

The old rigid order, in Greece, breaks down; a new power appears on the scene. It is the Athenian genius, with its freedom from restraint, its flexibility, its bold reason, its keen enjoyment of life. Well, let it try what it can do. Up to a certain point it is clearly in the right; possibly it may be in the right altogether. Let it have free play, and show what it can do. 'In the morning sow thy seed, and in the evening withhold not thine hand; for thou knowest not whether shall prosper, either this or that, or whether they both shall be alike good.' Whether the old line is good, or the new line, or whether they are both of them good, and must both of them be used, cannot be known without trying. Let the Athenians try, therefore, and let their genius have full swing. 'Rejoice; walk in the ways of thine heart and in the sight of thine eyes; — *but know thou that for all these things God will bring thee into judgment.*' In other words: Your enjoyment of life, your freedom from restraint, your clear and bold reason, your flexibility, are natural and excellent; but on condition that you know how to live with them, that you make a real success of them.

And a man like Pericles or Phidias[23] seemed to afford promise that Athens would know how to make a real success of her qualities, and that an alliance between the old morality and the new freedom might be, through the admirable Athenian genius, happily established. And with such promise before his eyes, a serious man like Thucydides might well give, to the new freedom, the high and warm praise which we see given to it in the Funeral Oration.

But it soon became evident that the balance between the old morality and the new freedom was not to be maintained, and that the Athenians had the defects, as the saying is, of their qualities. Their minds were full of other things than those ideas of moral order and of right on which primitive Hellas had formed itself, and of which they themselves had, as worshipers in the shadow of the Parnassian sanctuary,[24] once deeply felt the power. These ideas lost their predominance. The predominance for Athens, — and, indeed, for Hellas at large, — of a national religion of righteousness of grave ideas of conduct and moral order, predominating over all other ideas, disappeared with the decline of Delphi, never to return. Not only did these ideas lose exclusive predominance,

they lost all due weight. Still, indeed, they inspired poetry; and then, after inspiring the great Attic poets, Æschylus and Sophocles, they inspired the great Attic philosophers, Socrates and Plato. But the Attic nation, which henceforth stood, in fact, for the Hellenic people, could not manage to keep its mind bent sufficiently upon them. The Attic nation had its mind bent on other things. It threw itself ardently upon other lines, which man, indeed, has to follow, which at one time, in Greece, had not been enough followed, of which Athens strongly felt the attraction, and on which it had rare gifts for excelling. The Attic nation gave its heart to those powers which we have designated, for the sake of brevity and convenience, as those of expansion, intellect, beauty, social life and manners. Athens and Greece allowed themselves to be diverted and distracted from attention to conduct, and to the ideas which inspire conduct.

It was not that the old religious beliefs of Greece, to which the ideas that inspire conduct had attached themselves, did not require to be transformed by the new spirit. They did. The greatest and best Hellenic souls, Anaxagoras,[25] Pericles, Phidias, Sophocles, Socrates, Plato, felt, and rightly felt, that they did. The judicious historian of Greece, whom I have already quoted, Professor Curtius, says expressly: [26] 'The popular faith was everywhere shaken, and a life resting simply on the traditionary notions was no longer possible. A dangerous rupture was at hand, unless the ancient faith were purged and elevated in such a manner as to meet the wants of the age. Mediators in this sense appeared in the persons of the great poets of Athens.' Yes, they appeared; but the current was setting too strongly another way. Poetry itself, after the death of Sophocles, 'was seized,' says Professor Curtius, 'by the same current which dissolved the foundations of the people's life, and which swept away the soil wherein the emotions of the classical period had been rooted. The old perished; but the modern age, with all its readiness in thought and speech, was incapable of creating a new art as a support to its children.'

Socrates was so penetrated with the new intellectual spirit that he was called a sophist. But the great effort of Socrates was to recover that firm foundation for human life, which a misuse of the new intellectual spirit was rendering impossible. He effected much more for after times, and for the world, than for his own people. His amount of success with Alcibiades may probably be taken as giving us, well enough, the measure of his success with the Athenian people at large.[27] 'As to the susceptibility of Alcibiades,' we are told, 'Socrates had not come too late, for he still found in him a youthful soul, susceptible of high inspirations. But to effect in him a permanent reaction, and a lasting and fixed change of mind, was beyond the power even of a Socrates.' Alcibiades oscillated and fell away; and the Athenian people, too, and Hellas as a whole, oscillated and fell away.

So it came to pass, that after Æschylus had sadly raised his voice to deprecate 'unblessed freedom from restraint,' and after complaints had been heard, again and again, of the loss of 'the ancient morality and piety,' of 'the old elements of Hellas, reflection and moderation, discipline and social morality,' it came to pass that finally, at the end of the Peloponnesian war, 'one

27. Alcibiades (450–404 B.C.), a gay young man appearing as a character in the *Dialogues* of Plato and the *Memorabilia* of Xenophon; pupil of Socrates and ward of Pericles. He stands for the sort of person on whom the greatest advantages are thrown away. For the quotation, see Ernst Curtius, *History of Greece*, tr. Ward, Bk.IV,Ch.iv.

result,' the historian tells us — 'one result alone admitted of no doubt; and that was, the horribly rapid progress of the demoralization of the Hellenic nation.' [28]

Years and centuries rolled on, and, first, the Hellenic genius issued forth invading and vanquishing with Alexander; and then, when Rome had afterwards conquered Greece, conquered the conquerors and overspread the civilized world. And still, joined to all the gifts and graces which that admirable genius brought with it, there went, as a kind of fatal accompaniment, moral inadequacy. And if one asked why this was so, it seemed as if it could only be because the power of seriousness, of tenacious grasp upon grave and moral ideas, was wanting. And this again seemed as if it could only have for its cause, that these Hellenic natures were, in respect of their impressionability, mobility, flexibility, under the spell of a graceful but dangerous fairy, who would not let it be otherwise. 'Lest thou shouldst ponder the path of life,' says the Wise Man, '*her ways are movable, that thou canst not know them.*' [29] Then the new and reforming spirit, the Christian spirit, which was rising in the world, turned sternly upon this gracious flexibility, changed the sense of its name, branded it with infamy, and classed it, along with 'filthiness and foolish talking,' among 'things which are not convenient.'

Now, there you see the historical course of our words *eutrapelos*, *eutrapelia*, and a specimen of the range, backwards and forwards, which a single phrase in one of our Greek or Latin classics may have.

And I might go yet further, and might show you, in the mediæval world, *eutrapelia*, or flexibility, quite banished, clear, straightforward Attic thinking quite lost; restraint, stoppage, and prejudice, regnant. And coming down to our own times, I might show you fearless thinking and flexibility once more, after many vicissitudes, coming into honour; and again, perhaps, not without their accompaniment of danger. And the moral from all this, — apart from the particular moral that in our classical studies we may everywhere find clues which will lead us a long way, — the moral is, not that flexibility is a bad thing, but that the Greek flexibility was really not flexible enough, because it could not enough bend itself to the moral ideas which are so large a part of life. Here, I say, is the true moral: that man has to make progress along diverse lines, in obedience to a diversity of aspirations and powers, the sum of which is truly his nature; and that he fails and falls short until he learns to advance upon them all, and to advance upon them harmoniously.

Yes, this is the moral, and we all need it, and no nation more than ours. We so easily think that life is all on one line! Our nation, for instance, is above all things a political nation, and is apt to make far too much of politics. Many of us, — though not so very many, I suppose, of you here, — are Liberals, and think that to be a Liberal is quite enough for a man. Probably most of you here will have no difficulty in believing that to be a Liberal is not alone enough for a man, is not saving. One might even take, — and with your notions it would probably be a great treat for you, — one might take the last century of Athens, the century preceding the 'dishonest victory' of the Macedonian [30] power, and show you a society dying of the triumph of the Liberal party. And then, again, as the young are generous, you might like to give the discomfited Liberals a respite, to let the other side have its turn; and you might consent to be shown, as

28. *Cf.* the citation of Curtius in note 26, above.

29. *Proverbs*, v,6.

30. Philip II of Macedon, with his son Alexander, swept victoriously southward over Attica and the remainder of Greece in the year 338 B.C. *Cf.* the discussion of the party dissension and the war against Macedon in Ernst Curtius. *History of Greece*, tr. Ward, ed. 1874, V. 225ff.

you could be shown in the age of Trajan and of the Antonines,[31] a society dying of the triumph of the Conservative party. They were excellent people, the Conservative Roman aristocracy of that epoch; — excellent, most respectable people, like the Conservatives of our own acquaintance. Only Conservatism, like Liberalism, taken alone, is not sufficient, is not of itself saving.

But you have had enough for one evening. And besides, the tendencies of the present day in education being what they are, before you proceed to hear more of this sort of thing, you ought certainly to be favoured, for several months to come, with a great many scientific lectures, and to busy yourselves considerably with the diameter of the sun and moon.

31. The golden age of the Roman Empire, in the 1st and 2nd centuries, A.D. Trajan was emperor from 98–117. For the Antonines, see Arnold's essay on Marcus Aurelius.

DISCOURSES IN AMERICA

Literature and Science

PRACTICAL people talk with a smile of Plato and of his absolute ideas; [1] and it is impossible to deny that Plato's ideas do often seem unpractical and unpracticable, and especially when one views them in connexion with the life of a great work-a-day world like the United States. The necessary staple of the life of such a world Plato regards with disdain; handicraft and trade and the working professions he regards with disdain; but what becomes of the life of an industrial modern community if you take handicraft and trade and the working professions out of it? The base mechanic arts and handicrafts, says Plato, bring about a natural weakness in the principle of excellence in a man, so that he cannot govern the ignoble growths in him, but nurses them, and cannot understand fostering any other. Those who exercise such arts and trades, as they have their bodies, he says, marred by their vulgar businesses, so they have their souls, too, bowed and broken by them. And if one of these uncomely people has a mind to seek self-culture and philosophy, Plato compares him to a bald little tinker, who has scraped together money, and has got his release from service, and has had a bath, and bought a new coat, and is rigged out like a bridegroom about to marry the daughter of his master who has fallen into poor and helpless estate.[2]

Nor do the working professions fare any better than trade at the hands of Plato. He draws for us an inimitable picture of the working lawyer, and of his life of bondage; he shows how this bondage from his youth up has stunted and warped him, and made him small and crooked of soul, encompassing him with difficulties which he is not man enough to rely on justice and truth as means to encounter, but has recourse, for help out of them, to falsehood and wrong. And so, says Plato, this poor creature is bent and broken, and grows up from boy to man without a particle of soundness in him, although exceedingly smart and clever in his own esteem.[3]

One cannot refuse to admire the artist who draws these pictures. But we say to ourselves that his ideas show the influence of a primitive and obsolete order of things, when the warrior caste and the priestly caste were alone in honour, and the humble work of the world was done by slaves. We have now changed all that; the modern majesty consists in work, as Emerson declares; [4] and in work, we may

add, principally of such plain and dusty kind as the work of cultivators of the ground, handicraftsmen, men of trade and business, men of the working professions. Above all is this true in a great industrious community such as that of the United States.

Now education, many people go on to say, is still mainly governed by the ideas of men like Plato, who lived when the warrior caste and the priestly or philosophical class were alone in honour, and the really useful part of the community were slaves. It is an education fitted for persons of leisure in such a community. This education passed from Greece and Rome to the feudal communities of Europe, where also the warrior caste and the priestly caste were alone held in honour, and where the really useful and working part of the community, though not nominally slaves as in the pagan world, were practically not much better off than slaves, and not more seriously regarded. And how absurd it is, people end by saying, to inflict this education upon an industrious modern community, where very few indeed are persons of leisure, and the mass to be considered has not leisure, but is bound, for its own great good, and for the great good of the world at large, to plain labour and to industrial pursuits, and the education in question tends necessarily to make men dissatisfied with these pursuits and unfitted for them!

That is what is said. So far I must defend Plato, as to plead that his view of education and studies is in the general, as it seems to me, sound enough, and fitted for all sorts and conditions of men, whatever their pursuits may be. 'An intelligent man,' says Plato, 'will prize those studies which result in his soul getting soberness, righteousness, and wisdom, and will less value the others.' [5] I cannot consider *that* a bad description of the aim of education, and of the motives which should govern us in the choice of studies, whether we are preparing ourselves for a hereditary seat in the English House of Lords or for the pork trade in Chicago.

Still I admit that Plato's world was not ours, that his scorn of trade and handicraft is fantastic, that he had no conception of a great industrial community such as that of the United States, and that such a community must and will shape its education to suit its own needs. If the usual education handed down to it from the past does not suit it, it will certainly before long drop this and try another. The usual education in the past has been mainly literary. The question is whether the studies which were long supposed to be the best for all of us are practically the best now; whether others are not better. The tyranny of the past, many think, weighs on us injuriously in the predominance given to letters in education. The question is raised whether, to meet the needs of our modern life, the predominance ought not now to pass from letters to science; and naturally the question is nowhere raised with more energy than here in the United States. The design of abasing what is called 'mere literary instruction and education,' and of exalting what is called 'sound, extensive, and practical scientific knowledge,' is, in this intensely modern world of the United States, even more perhaps than in Europe, a very popular design, and makes great and rapid progress.

I am going to ask whether the present movement for ousting letters from their old predominance in education, and for transferring the predominance in education to the natural sciences, whether this brisk and flourishing movement ought to prevail, and whether it is likely that in the end it really will prevail. An objection may be raised which I will anticipate. My

majority'; but Emerson wrote 'majesty,' which is certainly intended here by Arnold. Emerson wrote: 'Feudalism and Orientalism had long enough thought it majestic to do nothing; the modern majesty consists in work.'

5. *Cf.* Plato, *Republic*, IX,xiii,591B,C.

own studies have been almost wholly in letters, and my visits to the field of the natural sciences have been very slight and inadequate, although those sciences have always strongly moved my curiosity. A man of letters, it will perhaps be said, is not competent to discuss the comparative merits of letters and natural science as means of education. To this objection I reply, first of all, that his incompetence, if he attempts the discussion but is really incompetent for it, will be abundantly visible; nobody will be taken in; he will have plenty of sharp observers and critics to save mankind from that danger. But the line I am going to follow is, as you will soon discover, so extremely simple, that perhaps it may be followed without failure even by one who for a more ambitious line of discussion would be quite incompetent.

Some of you may possibly remember a phrase of mine which has been the object of a good deal of comment; an observation to the effect that in our culture, the aim being *to know ourselves and the world*, we have, as the means to this end, *to know the best which has been thought and said in the world*.[6] A man of science, who is also an excellent writer and the very prince of debaters, Professor Huxley, in a discourse at the opening of Sir Josiah Mason's college at Birmingham,[7] laying hold of this phrase, expanded it by quoting some more words of mine, which are these: 'The civilised world is to be regarded as now being, for intellectual and spiritual purposes, one great confederation, bound to a joint action and working to a common result; and whose members have for their proper outfit a knowledge of Greek, Roman, and Eastern antiquity, and of one another. Special local and temporary advantages being put out of account, that modern nation will in the intellectual and spiritual sphere make most progress, which most thoroughly carries out this programme.'[8]

Now on my phrase, thus enlarged, Professor Huxley remarks that when I speak of the above-mentioned knowledge as enabling us to know ourselves and the world, I assert *literature* to contain the materials which suffice for thus making us know ourselves and the world. But it is not by any means clear, says he, that after having learnt all which ancient and modern literatures have to tell us, we have laid a sufficiently broad and deep foundation for that criticism of life, that knowledge of ourselves and the world, which constitutes culture. On the contrary, Professor Huxley declares that he finds himself 'wholly unable to admit that either nations or individuals will really advance, if their outfit draws nothing from the stores of physical science. An army without weapons of precision, and with no particular base of operations, might more hopefully enter upon a campaign on the Rhine, than a man, devoid of a knowledge of what physical science has done in the last century, upon a criticism of life.'

This shows how needful it is for those who are to discuss any matter together, to have a common understanding as to the sense of the terms they employ, — how needful, and how difficult. What Professor Huxley says, implies just the reproach which is so often brought against the study of *belles lettres*, as they are called: that the study is an elegant one, but slight and ineffectual; a smattering of Greek and Latin and other ornamental things, of little use for any one whose object is to get at truth, and to be a practical man. So, too, M. Renan talks[9] of the 'superficial humanism' of a school-course which treats us as if we were all going to be poets, writ-

6. *Cf.* the fourth-last paragraph of Arnold's essay on the function of criticism.

7. Delivered Oct. 1, 1880; reprinted ('Science and Culture') in this volume.

8. *Cf.* Arnold's essay on the function of criticism, the fourth-last paragraph.

9. See Ernest Renan, 'L'Instruction Supérieur en France,' *Questions Contemporaines*, ed. Paris [1902], especially p.103 (the end of Sect.II).

ers, preachers, orators, and he opposes this humanism to positive science, or the critical search after truth. And there is always a tendency in those who are remonstrating against the predominance of letters in education, to understand by letters *belles lettres*, and by *belles lettres* a superficial humanism, the opposite of science or true knowledge.

But when we talk of knowing Greek and Roman antiquity, for instance, which is the knowledge people have called the humanities, I for my part mean a knowledge which is something more than a superficial humanism, mainly decorative. 'I call all teaching *scientific*,' says Wolf,[10] the critic of Homer, 'which is systematically laid out and followed up to its original sources. For example: a knowledge of classical antiquity is scientific when the remains of classical antiquity are correctly studied in the original languages.' There can be no doubt that Wolf is perfectly right; that all learning is scientific which is systematically laid out and followed up to its original sources, and that a genuine humanism is scientific.

When I speak of knowing Greek and Roman antiquity, therefore, as a help to knowing ourselves and the world, I mean more than a knowledge of so much vocabulary, so much grammar, so many portions of authors in the Greek and Latin languages, I mean knowing the Greeks and Romans, and their life and genius, and what they were and did in the world; what we get from them, and what is its value. That, at least, is the ideal; and when we talk of endeavouring to know Greek and Roman antiquity, as a help to knowing ourselves and the world, we mean endeavouring so to know them as to satisfy this ideal, however much we may still fall short of it.

The same also as to knowing our own and other modern nations, with the like aim of getting to understand ourselves and the world. To know the best that has been thought and said by the modern nations, is to know, says Professor Huxley, 'only what modern *literatures* have to tell us; it is the criticism of life contained in modern literature.' And yet 'the distinctive character of our times,' he urges, 'lies in the vast and constantly increasing part which is played by natural knowledge.' And how, therefore, can a man, devoid of knowledge of what physical science has done in the last century, enter hopefully upon a criticism of modern life?

Let us, I say, be agreed about the meaning of the terms we are using. I talk of knowing the best which has been thought and uttered in the world; Professor Huxley says this means knowing *literature*. Literature is a large word; it may mean everything written with letters or printed in a book. Euclid's *Elements* and Newton's *Principia* are thus literature. All knowledge that reaches us through books is literature. But by literature Professor Huxley means *belles lettres*. He means to make me say, that knowing the best which has been thought and said by the modern nations is knowing their *belles lettres* and no more. And this is no sufficient equipment, he argues, for a criticism of modern life. But as I do not mean, by knowing ancient Rome, knowing merely more or less of Latin *belles lettres*, and taking no account of Rome's military, and political, and legal, and administrative work in the world; and as, by knowing ancient Greece, I understand knowing her as the giver of Greek art, and the guide to a free and right use of reason and to scientific method, and the founder of our mathematics and physics and astronomy and biology, — I understand knowing her as all this, and not merely knowing certain Greek poems, and histories, and treatises, and speeches, — so as to the knowledge of modern nations also. By knowing modern nations, I mean not merely knowing their *belles lettres*, but knowing also what has

10. Friedrich August Wolf (1759–1824), German critic and scholar, chiefly of Homer and ancient learning.

been done by such men as Copernicus, Galileo, Newton, Darwin. 'Our ancestors learned,' says Professor Huxley, 'that the earth is the centre of the visible universe, and that man is the cynosure of things terrestrial; and more especially was it inculcated that the course of nature had no fixed order, but that it could be, and constantly was, altered.' 'But for us now,' continues Professor Huxley, 'the notions of the beginning and the end of the world entertained by our forefathers are no longer credible. It is very certain that the earth is not the chief body in the material universe, and that the world is not subordinated to man's use. It is even more certain that nature is the expression of a definite order, with which nothing interferes.' 'And yet,' he cries, 'the purely classical education advocated by the representatives of the humanists in our day gives no inkling of all this.'

In due place and time I will just touch upon that vexed question of classical education; but at present the question is as to what is meant by knowing the best which modern nations have thought and said. It is not knowing their *belles lettres* merely which is meant. To know Italian *belles lettres* is not to know Italy, and to know English *belles lettres* is not to know England. Into knowing Italy and England there comes a great deal more, Galileo and Newton amongst it. The reproach of being a superficial humanism, a tincture of *belles lettres*, may attach rightly enough to some other disciplines; but to the particular discipline recommended when I proposed knowing the best that has been thought and said in the world, it does not apply. In that best I certainly include what in modern times has been thought and said by the great observers and knowers of nature.

There is, therefore, really no question between Professor Huxley and me as to whether knowing the great results of the modern scientific study of nature is not required as a part of our culture, as well as knowing the products of literature and art. But to follow the processes by which those results are reached, ought, say the friends of physical science, to be made the staple of education for the bulk of mankind. And here there does arise a question between those whom Professor Huxley calls with playful sarcasm 'the Levites of culture,' and those whom the poor humanist is sometimes apt to regard as its Nebuchadnezzars.[11]

The great results of the scientific investigation of nature we are agreed upon knowing, but how much of our study are we bound to give to the processes by which those results are reached? The results have their visible bearing on human life. But all the processes, too, all the items of fact, by which those results are reached and established, are interesting. All knowledge is interesting to a wise man, and the knowledge of nature is interesting to all men. It is very interesting to know, that, from the albuminous white of the egg, the chick in the egg gets the materials for its flesh, bones, blood, and feathers; while, from the fatty yolk of the egg, it gets the heat and energy which enable it at length to break its shell and begin the world. It is less interesting, perhaps, but still it is interesting, to know that when a taper burns, the wax is converted into carbonic acid and water. Moreover, it is quite true that the habit of dealing with facts, which is given by the study of nature, is, as the friends of physical science praise it for being, an excellent discipline. The appeal, in the study of nature, is constantly to observation and

11. To the Levites, among the ancient Hebrews, was intrusted supervision over ceremonial observance of traditional rites and customs. Nebuchadnezzar was the king of Babylon (c. 604–561 B.C.) who captured Jerusalem. Thus Huxley, the physical scientist, is saying that those who insist on a classical education are custom-bound; and the humanist, wishing education to be classical, is saying that those who insist on a 'scientific' education are too materialistic and too practical.

experiment; not only is it said that the thing is so, but we can be made to see that it is so. Not only does a man tell us that when a taper burns the wax is converted into carbonic acid and water, as a man may tell us, if he likes, that Charon [12] is punting his ferry-boat on the river Styx, or that Victor Hugo is a sublime poet, or Mr. Gladstone the most admirable of statesmen; but we are made to see that the conversion into carbonic acid and water does actually happen. This reality of natural knowledge it is, which makes the friends of physical science contrast it, as a knowledge of things, with the humanist's knowledge, which is, say they, a knowledge of words. And hence Professor Huxley is moved to lay it down that, 'for the purpose of attaining real culture, an exclusively scientific education is at least as effectual as an exclusively literary education.' And a certain President of the Section for Mechanical Science in the British Association is, in Scripture phrase, 'very bold,' and declares that if a man, in his mental training, 'has substituted literature and history for natural science, he has chosen the less useful alternative.' But whether we go these lengths or not, we must all admit that in natural science the habit gained of dealing with facts is a most valuable discipline, and that every one should have some experience of it.

More than this, however, is demanded by the reformers. It is proposed to make the training in natural science the main part of education, for the great majority of mankind at any rate. And here, I confess, I part company with the friends of physical science, with whom up to this point I have been agreeing. In differing from them, however, I wish to proceed with the utmost caution and diffidence. The smallness of my own acquaintance with the disciplines of natural science is ever before my mind, and I am fearful of doing these disciplines an injustice. The ability and pugnacity of the partisans of natural science make them formidable persons to contradict. The tone of tentative inquiry, which befits a being of dim faculties and bounded knowledge, is the tone I would wish to take and not to depart from. At present it seems to me, that those who are for giving to natural knowledge, as they call it, the chief place in the education of the majority of mankind, leave one important thing out of their account: the constitution of human nature. But I put this forward on the strength of some facts not at all recondite, very far from it; facts capable of being stated in the simplest possible fashion, and to which, if I so state them, the man of science will, I am sure, be willing to allow their due weight.

Deny the facts altogether, I think, he hardly can. He can hardly deny, that when we set ourselves to enumerate the powers [13] which go to the building up of human life, and say that they are the power of conduct, the power of intellect and knowledge, the power of beauty, and the power of social life and manners, — he can hardly deny that this scheme, though drawn in rough and plain lines enough, and not pretending to scientific exactness, does yet give a fairly true representation of the matter. Human nature is built up by these powers; we have the need for them all. When we have rightly met and adjusted the claims of them all, we shall then be in a fair way for getting soberness and righteousness, with wisdom. This is evident enough, and the friends of physical science would admit it.

But perhaps they may not have sufficiently observed another thing: namely, that the several powers just mentioned are not isolated, but there is, in the generality of mankind, a perpetual tendency to relate them one to another in divers ways. With one such way of relating them I am particularly concerned now. Follow-

12. In Greek mythology, the immortal being who ferries souls across the River Styx into Hades.

13. By 'powers' Arnold means 'passions' or 'desires and capacities.' *Cf.* the essay 'Sweetness and Light.'

ing our instinct for intellect and knowledge, we acquire pieces of knowledge; and presently, in the generality of men, there arises the desire to relate these pieces of knowledge to our sense for conduct, to our sense for beauty,[14] — and there is weariness and dissatisfaction if the desire is baulked. Now in this desire lies, I think, the strength of that hold which letters have upon us.

All knowledge is, as I said just now, interesting; and even items of knowledge which from the nature of the case cannot well be related, but must stand isolated in our thoughts, have their interest. Even lists of exceptions have their interest. If we are studying Greek accents, it is interesting to know that *pais* and *pas*, and some other monosyllables of the same form of declension, do not take the circumflex upon the last syllable of the genitive plural, but vary, in this respect, from the common rule. If we are studying physiology, it is interesting to know that the pulmonary artery carries dark blood and the pulmonary vein carries bright blood, departing in this respect from the common rule for the division of labour between the veins and the arteries. But every one knows how we seek naturally to combine the pieces of our knowledge together, to bring them under general rules, to relate them to principles; and how unsatisfactory and tiresome it would be to go on for ever learning lists of exceptions, or accumulating items of fact which must stand isolated.

Well, that same need of relating our knowledge, which operates here within the sphere of our knowledge itself, we shall find operating, also, outside that sphere. We experience, as we go on learning and knowing, — the vast majority of us experience, — the need of relating what we have learnt and known to the sense which we have in us for conduct, to the sense which we have in us for beauty.

14. The emphasis is upon the word 'relate'; *cf.* the last sentence of this essay.

A certain Greek prophetess of Mantineia in Arcadia, Diotima by name, once explained[15] to the philosopher Socrates that love, and impulse, and bent of all kinds, is, in fact, nothing else but the desire in men that good should for ever be present to them. This desire for good, Diotima assured Socrates, is our fundamental desire, of which fundamental desire every impulse in us is only some one particular form. And therefore this fundamental desire it is, I suppose, — this desire in men that good should be for ever present to them, — which acts in us when we feel the impulse for relating our knowledge to our sense for conduct and to our sense for beauty. At any rate, with men in general the instinct exists. Such is human nature. And the instinct, it will be admitted, is innocent, and human nature is preserved by our following the lead of its innocent instincts. Therefore, in seeking to gratify this instinct in question, we are following the instinct of self-preservation in humanity.

But, no doubt, some kinds of knowledge cannot be made to directly serve the instinct in question, cannot be directly related to the sense for beauty, to the sense for conduct. These are instrument-knowledges; they lead on to other knowledges, which can. A man who passes his life in instrument knowledges is a specialist. They may be invaluable as instruments to something beyond, for those who have the gift thus to employ them; and they may be disciplines in themselves wherein it is useful for every one to have some schooling. But it is inconceivable that the generality of men should pass all their mental life with Greek accents or with formal logic. My friend Professor Sylvester,[16] who is one of the first mathematicians in

15. See Plato, *Symposium*, 201–07 (*cf.* the *Dialogues*, tr. Jowett (New York, 1885), I.494–99).

16. James Joseph Sylvester (1814–97), distinguished English mathematician, professor at the Johns Hopkins University, 1877–83, and at Oxford University, 1883–97.

the world, holds transcendental doctrines as to the virtue of mathematics, but those doctrines are not for common men. In the very Senate House and heart of our English Cambridge [17] I once ventured, though not without an apology for my profaneness, to hazard the opinion that for the majority of mankind a little of mathematics, even, goes a long way. Of course this is quite consistent with their being of immense importance as an instrument to something else; but it is the few who have the aptitude for thus using them, not the bulk of mankind.

The natural sciences do not, however, stand on the same footing with these instrument-knowledges. Experience shows us that the generality of men will find more interest in learning that, when a taper burns, the wax is converted into carbonic acid and water, or in learning the explanation of the phenomenon of dew, or in learning how the circulation of the blood is carried on, than they find in learning that the genitive plural of *pais* and *pas* does not take the circumflex on the termination. And one piece of natural knowledge is added to another, and others are added to that, and at last we come to propositions so interesting as Mr. Darwin's famous proposition that 'our ancestor was a hairy quadruped furnished with a tail and pointed ears, probably arboreal in his habits.' [18] Or we come to propositions of such reach and magnitude as those which Professor Huxley delivers, when he says that the notions of our forefathers about the beginning and the end of the world were all wrong, and that nature is the expression of a definite order with which nothing interferes.

Interesting, indeed, these results of science are, important they are, and we should all of us be acquainted with them. But what I now wish you to mark is, that we are still, when they are propounded to us and we receive them, we are still in the sphere of intellect and knowledge. And for the generality of men there will be found, I say, to arise, when they have duly taken in the proposition that their ancestor was 'a hairy quadruped furnished with a tail and pointed ears, probably arboreal in his habits,' there will be found to arise an invincible desire to relate this proposition to the sense in us for conduct, and to the sense in us for beauty. But this the men of science will not do for us, and will hardly even profess to do. They will give us other pieces of knowledge, other facts, about other animals and their ancestors, or about plants, or about stones, or about stars; and they may finally bring us to those great 'general conceptions of the universe, which are forced upon us all,' says Professor Huxley, 'by the progress of physical science.' But still it will be *knowledge* only which they give us: knowledge not put for us into relation with our sense for conduct, our sense for beauty, and touched with emotion by being so put; not thus put for us, and therefore, to the majority of mankind, after a certain while, unsatisfying, wearying.

Not to the born naturalist, I admit. But what do we mean by a born naturalist? We mean a man in whom the zeal for observing nature is so uncommonly strong and eminent, that it marks him off from the bulk of mankind. Such a man will pass his life happily in collecting natural knowledge and reasoning upon it, and will ask for nothing, or hardly anything, more. I have heard it said that the sagacious and admirable naturalist whom we lost not very long ago, Mr. Darwin, once owned to a friend that for his part he did not experience the necessity for two things which most men find so necessary to them, — religion and poetry; science and the domestic affections, he thought, were enough. To a born naturalist, I can well understand that this should seem so. So

17. In Cambridge University the study of mathematics has long been notably important.

18. Charles Darwin, *The Descent of Man* (first publ. 1871), Pt.II,Ch.xxi. In the New York ed. of 1871, see II,372.

absorbing is his occupation with nature, so strong his love for his occupation, that he goes on acquiring natural knowledge and reasoning upon it, and has little time or inclination for thinking about getting it related to the desire in man for conduct, the desire in man for beauty. He relates it to them for himself as he goes along, so far as he feels the need; and he draws from the domestic affections all the additional solace necessary. But then Darwins are extremely rare. Another great and admirable master of natural knowledge, Faraday, was a Sandemanian.[19] That is to say, he related his knowledge to his instinct for conduct and to his instinct for beauty, by the aid of that respectable Scottish sectary, Robert Sandeman. And so strong, in general, is the demand of religion and poetry to have their share in a man, to associate themselves with his knowing, and to relieve and rejoice it, that, probably, for one man amongst us with the disposition to do as Darwin did in this respect, there are at least fifty with the disposition to do as Faraday.

Education lays hold upon us, in fact, by satisfying this demand. Professor Huxley holds up to scorn mediæval education, with its neglect of the knowledge of nature, its poverty even of literary studies, its formal logic devoted to 'showing how and why that which the Church said was true and must be true.' But the great mediæval Universities were not brought into being, we may be sure, by the zeal for giving a jejune and contemptible education. Kings have been their nursing fathers, and queens have been their nursing mothers, but not for this. The mediæval Universities came into being, because the supposed knowledge, delivered by Scripture and the Church, so deeply engaged men's hearts, by so simply, easily, and powerfully relating itself to their desire for conduct, their desire for beauty. All other knowledge was dominated by this supposed knowledge and was subordinated to it, because of the surpassing strength of the hold which it gained upon the affections of men, by allying itself profoundly with their sense for conduct, their sense for beauty.

But now, says Professor Huxley, conceptions of the universe fatal to the notions held by our forefathers have been forced upon us by physical science. Grant to him that they are thus fatal, that the new conceptions must and will soon become current everywhere, and that every one will finally perceive them to be fatal to the beliefs of our forefathers. The need of humane letters, as they are truly called, because they serve the paramount desire in men that good should be for ever present to them, — the need of humane letters, to establish a relation between the new conceptions, and our instinct for beauty, our instinct for conduct, is only the more visible. The Middle Age could do without humane letters, as it could do without the study of nature, because its supposed knowledge was made to engage its emotions so powerfully. Grant that the supposed knowledge disappears, its power of being made to engage the emotions will of course disappear along with it, — but the emotions themselves, and their claim to be engaged and satisfied, will remain. Now if we find by experience that humane letters have an undeniable power of engaging the emotions, the importance of humane letters in a man's training becomes not less, but greater, in proportion to the success of modern science in extirpating what it calls 'mediæval thinking.'

Have humane letters, then, have poetry and eloquence, the power here attributed to them of engaging the emotions, and do they exercise it? And if they have it and exercise it, *how* do they exercise it, so as to exert an influence upon man's sense for conduct, his sense for beauty? Finally,

19. Michael Faraday (1791–1867), great physicist and chemist. The Sandemanian sect of Protestant Christianity followed Robert Sandeman (1718–71), Scottish manufacturer, clergyman, writer.

even if they both can and do exert an influence upon the senses in question, how are they to relate to them the results, — the modern results, — of natural science? All these questions may be asked. First, have poetry and eloquence the power of calling out the emotions? The appeal is to experience. Experience shows that for the vast majority of men, for mankind in general, they have the power. Next, do they exercise it? They do. But then, *how* do they exercise it so as to affect man's sense for conduct, his sense for beauty? And this is perhaps a case for applying the Preacher's words: 'Though a man labour to seek it out, yet he shall not find it; yea, farther, though a wise man think to know it, yet shall he not be able to find it.'[20] Why should it be one thing, in its effect upon the emotions, to say, 'Patience is a virtue,' and quite another thing, in its effect upon the emotions, to say with Homer,

τλητὸν γὰρ Μοῖραι θυμὸν θέσαν ἀνθρώποισιν. —[21]

'for an enduring heart have the destinies appointed to the children of men'? Why should it be one thing, in its effect upon the emotions, to say with the philosopher Spinoza, *Felicitas in eo consistit quod homo suum esse conservare potest* — 'Man's happiness consists in his being able to preserve his own essence,'[22] and quite another thing, in its effect upon the emotions, to say with the Gospel, 'What is a man advantaged, if he gain the whole world, and lose himself, forfeit himself?'[23] How does this difference of effect arise? I cannot tell, and I am not much concerned to know; the important thing is that it does arise, and that we can profit by it. But how, finally, are poetry and eloquence to exercise the power of relating the modern results of natural science to man's instinct for conduct, his instinct for beauty? And here again I answer that I do not know *how* they will exercise it, but that they can and will exercise it I am sure. I do not mean that modern philosophical poets and modern philosophical moralists are to come and relate for us, in express terms, the results of modern scientific research to our instinct for conduct, our instinct for beauty. But I mean that we shall find, as a matter of experience, if we know the best that has been thought and uttered in the world, we shall find that the art and poetry and eloquence of men who lived, perhaps, long ago, who had the most limited natural knowledge, who had the most erroneous conceptions about many important matters, we shall find that this art, and poetry, and eloquence, have in fact not only the power of refreshing and delighting us, they have also the power, — such is the strength and worth, in essentials, of their authors' criticism of life, — they have a fortifying, and elevating, and quickening, and suggestive power, capable of wonderfully helping us to relate the results of modern science to our need for conduct, our need for beauty. Homer's conceptions of the physical universe were, I imagine, grotesque; but really, under the shock of hearing from modern science that 'the world is not subordinated to man's use, and that man is not the cynosure of things terrestrial,' I could, for my own part, desire no better comfort than Homer's line which I quoted just now,

τλητὸν γὰρ Μοῖραι θυμὸν θέσαν ἀνθρώποι-

'for an enduring heart have the destinies appointed to the children of men'!

And the more that men's minds are cleared, the more that the results of science are frankly accepted, the more that poetry and eloquence come to be received and studied as what in truth they really are, — the criticism of life by gifted men, alive and active with extraordinary power

at an unusual number of points; — so much the more will the value of humane letters, and of art also, which is an utterance having a like kind of power with theirs, be felt and acknowledged, and their place in education be secured.

Let us therefore, all of us, avoid indeed as much as possible any invidious comparison between the merits of humane letters, as means of education, and the merits of the natural sciences. But when some President of a Section for Mechanical Science insists on making the comparison, and tells us that 'he who in his training has substituted literature and history for natural science has chosen the less useful alternative,' let us make answer to him that the student of humane letters only, will, at least, know also the great general conceptions brought in by modern physical science; for science, as Professor Huxley says, forces them upon us all. But the student of the natural sciences only, will, by our very hypothesis, know nothing of humane letters; not to mention that in setting himself to be perpetually accumulating natural knowledge, he sets himself to do what only specialists have in general the gift for doing genially. And so he will probably be unsatisfied, or at any rate incomplete, and even more incomplete than the student of humane letters only.

I once mentioned in a school-report, how a young man in one of our English training colleges having to paraphrase the passage in *Macbeth* beginning,

> 'Can'st thou not minister to a mind diseased?' [24]

turned this line into, 'Can you not wait upon the lunatic?' And I remarked what a curious state of things it would be, if every pupil of our national schools knew, let us say, that the moon is two thousand one hundred and sixty miles in diameter, and thought at the same time that a good paraphrase for

> 'Can'st thou not minister to a mind diseased?'

was, 'Can you not wait upon the lunatic?' If one is driven to choose, I think I would rather have a young person ignorant about the moon's diameter, but aware that 'Can you not wait upon the lunatic?' is bad, than a young person whose education had been such as to manage things the other way.

Or to go higher than the pupils of our national schools. I have in my mind's eye a member of our British Parliament who comes to travel here in America, who afterwards relates his travels, and who shows a really masterly knowledge of the geology of this great country and of its mining capabilities, but who ends by gravely suggesting that the United States should borrow a prince from our Royal Family, and should make him their king, and should create a House of Lords of great landed proprietors after the pattern of ours; and then America, he thinks, would have her future happily and perfectly secured. Surely, in this case, the President of the Section for Mechanical Science would himself hardly say that our member of Parliament, by concentrating himself upon geology and mineralogy, and so on, and not attending to literature and history, had 'chosen the more useful alternative.'

If then there is to be separation and option between humane letters on the one hand, and the natural sciences on the other, the great majority of mankind, all who have not exceptional and overpowering aptitudes for the study of nature, would do well, I cannot but think, to choose to be educated in humane letters rather than in the natural sciences. Letters will call out their being at more points, will make them live more.

I said that before I ended I would just touch on the question of classical education, and I will keep my word. Even if literature is to retain a large place in our

24. *Macbeth*, V,iii,40.

education, yet Latin and Greek, say the friends of progress, will certainly have to go. Greek is the grand offender in the eyes of these gentlemen. The attackers of the established course of study think that against Greek, at any rate, they have irresistible arguments. Literature may perhaps be needed in education, they say; but why on earth should it be Greek literature? Why not French or German? Nay, 'has not an Englishman models in his own literature of every kind of excellence?'[25] As before, it is not on any weak pleadings of my own that I rely for convincing the gainsayers; it is on the constitution of human nature itself, and on the instinct of self preservation in humanity. The instinct for beauty is set in human nature, as surely as the instinct for knowledge is set there, or the instinct for conduct. If the instinct for beauty is served by Greek literature and art as it is served by no other literature and art, we may trust to the instinct of self-preservation in humanity for keeping Greek as part of our culture. We may trust to it for even making the study of Greek more prevalent than it is now. Greek will come, I hope, some day to be studied more rationally than at present; but it will be increasingly studied as men increasingly feel the need in them for beauty, and how powerfully Greek art and Greek literature can serve this need. Women will again study Greek, as Lady Jane Grey[26] did; I believe that in that chain of forts, with which the fair host of the Amazons[27] are now engirdling our English universities, I find that here in America, in colleges like Smith College in Massachusetts, and Vassar College in the State of New York, and in the happy families of the mixed universities out West, they are studying it already.

Defuit una mihi symmetria prisca,— 'The antique symmetry was the one thing wanting to me,' said Leonardo da Vinci;[28] and he was an Italian. I will not presume to speak for the Americans, but I am sure that, in the Englishman, the want of this admirable symmetry of the Greeks is a thousand times more great and crying than in any Italian. The results of the want show themselves most glaringly, perhaps, in our architecture, but they show themselves, also, in all our art. *Fit details strictly combined, in view of a large general result nobly conceived;* that is just the beautiful *symmetria prisca* of the Greeks, and it is just where we English fail, where all our art fails. Striking ideas we have, and well-executed details we have; but that high symmetry which, with satisfying and delightful effect, combines them, we seldom or never have. The glorious beauty of the Acropolis at Athens did not come from single fine things stuck about on that hill, a statue here, a gateway there; — no, it arose from all things being perfectly combined for a supreme total effect. What must not an Englishman feel about our deficiencies in this respect, as the sense for beauty, whereof this symmetry is an essential element, awakens and strengthens within him! what will not one day be his respect and desire for Greece and its *symmetria prisca*, when the scales drop from his eyes as he walks the London streets, and he sees such a lesson in meanness as the Strand, for instance, in its true deformity! But here we are coming to our friend Mr. Ruskin's province,[29] and I will not intrude upon it, for he is its very sufficient guardian.

And so we at last find, it seems, we find

25. *Cf.* Huxley's essay 'Science and Culture,' thirteenth-last paragraph.

26. Lady Jane Grey (1537–54), daughter of the Duke of Suffolk. She was a Greek scholar and a humanist. Proclaimed queen in 1553, but executed in 1554.

27. Arnold is here of course referring to the establishment in England of colleges for women.

28. Leonardo da Vinci (1452–1519). *Cf.* Pater's essay on him.

29. That is, the province of the correspondence between the character of a people and the architecture of that people. *Cf.* especially Ruskin's essay 'Traffic,' in *The Crown of Wild Olive.*

flowing in favour of the humanities the natural and necessary stream of things, which seemed against them when we started. The 'hairy quadruped furnished with a tail and pointed ears, probably arboreal in his habits,' this good fellow carried hidden in his nature, apparently, something destined to develop into a necessity for humane letters. Nay, more; we seem finally to be even led to the further conclusion that our hairy ancestor carried in his nature, also, a necessity for Greek.

And therefore, to say the truth, I cannot really think that humane letters are in much actual danger of being thrust out from their leading place in education, in spite of the array of authorities against them at this moment. So long as human nature is what it is, their attractions will remain irresistible. As with Greek, so with letters generally: they will some day come, we may hope, to be studied more rationally, but they will not lose their place. What will happen will rather be that there will be crowded into education other matters besides, far too many; there will be, perhaps, a period of unsettlement and confusion and false tendency; but letters will not in the end lose their leading place. If they lose it for a time, they will get it back again. We shall be brought back to them by our wants and aspirations. And a poor humanist may possess his soul in patience, neither strive nor cry, admit the energy and brilliancy of the partisans of physical science, and their present favour with the public, to be far greater than his own, and still have a happy faith that the nature of things works silently on behalf of the studies which he loves, and that, while we shall all have to acquaint ourselves with the great results reached by modern science, and to give ourselves as much training in its disciplines as we can conveniently carry, yet the majority of men will always require humane letters; and so much the more, as they have the more and the greater results of science to relate to the need in man for conduct, and to the need in him for beauty.

Numbers; or the Majority and the Remnant

THERE is a characteristic saying of Dr. Johnson: 'Patriotism is the last refuge of a scoundrel.'[1] The saying is cynical, many will even call it brutal; yet it has in it something of plain, robust sense and truth. We do often see men passing themselves off as patriots, who are in truth scoundrels; we meet with talk and proceedings laying claim to patriotism, which are these gentlemen's last refuge. We may all of us agree in praying to be delivered from patriots and patriotism of this sort. Short of such, there is undoubtedly, sheltering itself under the fine name of patriotism, a good deal of self-flattery and self-delusion which is mischievous. 'Things are what they are, and the consequences of them will be what they will be; why, then, should we desire to be deceived?'[2] In that uncompromising sentence of Bishop Butler's is surely the right and salutary maxim for both individuals and nations.

Yet there is an honourable patriotism which we should satisfy if we can, and should seek to have on our side. At home I have said so much of the characters of our society and the prospects of our civilisation, that I can hardly escape the like topic elsewhere. Speaking in America, I cannot well avoid saying something about the prospects of society in the United States. It is a topic where one is apt to touch people's patriotic feelings. No one will accuse me of having flattered the

1. Boswell, *Life of Samuel Johnson*, Oxford Standard ed., I,583.
2. Joseph Butler, 'Sermon VII. — Upon the Character of Balaam.' See his *The Analogy of Religion . . . and Fifteen Sermons*, new ed. (1897), p.452. Arnold's interest in Butler is readily understandable when we learn that Butler (see *ibid.*, p.442n.) 'declaims again and again against indulging in vain speculations as to what *ought to be*: we have to deal with things *as they are*.'

patriotism of that great country of English people on the other side of the Atlantic, amongst whom I was born. Here, so many miles from home, I begin to reflect with tender contrition, that perhaps I have not, — I will not say flattered the patriotism of my own countrymen enough, but regarded it enough. Perhaps that is one reason why I have produced so very little effect upon them. It was a fault of youth and inexperience. But it would be unpardonable to come in advanced life and repeat the same error here. You will not expect impossibilities of me. You will not expect me to say that things are not what, in my judgment, they are, and that the consequences of them will not be what they will be. I should make nothing of it; I should be a too palpable failure. But I confess that I should be glad if in what I say here I could engage American patriotism on my side, instead of rousing it against me. And it so happens that the paramount thoughts which your great country raises in my mind are really and truly of a kind to please, I think, any true American patriot, rather than to offend him.

The vast scale of things here, the extent of your country, your numbers, the rapidity of your increase, strike the imagination, and are a common topic for admiring remark. Our great orator, Mr. Bright,[3] is never weary of telling us how many acres of land you have at your disposal, how many bushels of grain you produce, how many millions you are, how many more millions you will be presently, and what a capital thing this is for you. Now, though I do not always agree with Mr. Bright, I find myself agreeing with him here. I think your numbers afford a very real and important ground for satisfaction.

Not that your great numbers, or indeed great numbers of men anywhere, are likely to be all good, or even to have the majority good. 'The majority are bad,' said one of the wise men of Greece;[4] but he was a pagan. Much to the same effect, however, is the famous sentence of the New Testament: 'Many are called, few chosen.'[5] This appears a hard saying; frequent are the endeavours to elude it, to attenuate its severity. But turn it how you will, manipulate it as you will, the few, as Cardinal Newman well says, can never mean the many. Perhaps you will say that the majority *is*, sometimes, good; that its impulses are good generally, and its action is good occasionally. Yes, but it lacks principle, it lacks persistence; if today its good impulses prevail, they succumb tomorrow; sometimes it goes right, but it is very apt to go wrong. Even a popular orator, or a popular journalist, will hardly say that the multitude may be trusted to have its judgment generally just, and its action generally virtuous. It may be better, it is better, that the body of the people, with all its faults, should act for itself, and control its own affairs, than that it should be set aside as ignorant and incapable, and have its affairs managed for it by a so-called superior class, possessing property and intelligence. Property and intelligence cannot be trusted to show a sound majority themselves; the exercise of power by the people tends to educate the people. But still, the world being what it is, we must surely expect the aims and doings of the majority of men to be at present very faulty, and this in a numerous community no less than in a small one. So much we must certainly, I think, concede to the sages and to the saints.

Sages and saints are apt to be severe, it

3. For John Bright, see the Preface to *Culture and Anarchy*, note 26.

4. See Plato — *cf.* note 6, below. Goethe, always influential with Arnold, had said: 'All that is great and sensible exists with the minority. . . . It is not to be imagined that reason will ever become popular. Passions and feelings may become popular, but reason will always be the property of only a few leaders.' — *Cf.* Eckermann, *Gespräche mit Goethe* ('Conversations with Goethe'), Feb. 12, 1829.

5. *Matthew*, xx,16, and xxii,14.

is true; apt to take a gloomy view of the society in which they live, and to prognosticate evil to it. But then it must be added that their prognostications are very apt to turn out right. Plato's account of the most gifted and brilliant community of the ancient world, of that Athens of his to which we all owe so much, is despondent enough. 'There is but a very small remnant,' he says,[6] 'of honest followers of wisdom, and they who are of these few, and who have tasted how sweet and blessed a possession is wisdom, and who can fully see, moreover, the madness of the multitude, and that there is no one, we may say, whose action in public matters is sound, and no ally for whosoever would help the just, what,' asks Plato, 'are they to do? They may be compared,' says Plato, 'to a man who has fallen among wild beasts; he will not be one of them, but he is too unaided to make head against them; and before he can do any good to society or his friends, he will be overwhelmed and perish uselessly. When he considers this, he will resolve to keep still, and to mind his own business; as it were standing aside under a wall in a storm of dust and hurricane of driving wind; and he will endure to behold the rest filled with iniquity, if only he himself may live his life clear of injustice and of impiety, and depart, when his time comes, in mild and gracious mood, with fair hope.'

Plato's picture here of democratic Athens is certainly gloomy enough. We may be sure the mass of his contemporaries would have pronounced it to be monstrously overcharged. We ourselves, if we had been living then, should most of us have by no means seen things as Plato saw them. No, if we had seen Athens even nearer its end than when Plato wrote the strong words which I have been quoting, Athens in the very last days of Plato's life, we should most of us probably have considered that things were not going badly with Athens. There is a long sixteen years' administration, — the administration of Eubulus,[7] — which fills the last years of Plato's life, and the middle years of the fourth century before Christ. A temperate German historian thus describes Athens during this ministry of Eubulus: [8] 'The grandeur and loftiness of Attic democracy had vanished, while all the pernicious germs contained in it were fully developed. A life of comfort and a craving for amusement were encouraged in every way, and the interest of the citizens was withdrawn from serious things. Conversation became more and more superficial and frivolous. Famous courtesans formed the chief topic of talk; the new inventions of Thearion, the leading pastrycook in Athens, were hailed with loud applause; and the witty sayings which had been uttered in gay circles were repeated about town as matters of prime importance.'

No doubt, if we had been living then to witness this, we should from time to time have shaken our heads gravely, and said how sad it all was. But most of us would not, I think, have been very seriously disquieted by it. On the other hand, we should have found many things in the Athens of Eubulus to gratify us. 'The democrats,' says the same historian whom I have just quoted, 'saw in Eubulus one of their own set at the head of affairs'; and I suppose no good democrat would see that without pleasure. Moreover, Eubulus was of popular character. In one respect he seems to have resembled your own 'heathen Chinee';[9] he had 'guile-

8. *Cf.* Ernst Curtius, *History of Greece*, tr. Ward, ed. New York, 1874, V,147. The sixteen years were from 354 to 338 B.C.

9. The reference is to 'The Heathen Chinee,' the humorous poem of poker-playing, written by the American Francis Bret Harte (1836–1902).

less ways,' says our historian, 'in which the citizens took pleasure.' He was also a good speaker, a thorough man of business; and, above all, he was very skilful in matters of finance. His administration was both popular and prosperous. We should certainly have said, most of us, if we had encountered somebody announcing his resolve to stand aside under a wall during such an administration, that he was a goose for his pains; and if he had called it 'a falling among wild beasts' to have to live with his fellow-citizens who had confidence in Eubulus, their country, and themselves, we should have esteemed him very impertinent.

Yes; — and yet at the close of that administration of Eubulus came the collapse, and the end of Athens as an independent State. And it was to the fault of Athens herself that the collapse was owing. Plato was right after all; the majority were bad, and the remnant were impotent.

So fared it with that famous Athenian State, with the brilliant people of art and intellect. Now let us turn to the people of religion. We have heard Plato speaking of the very small remnant which honestly sought wisdom. *The remnant!* — it is the word of the Hebrew prophets also, and especially is it the word of the greatest of them all, Isaiah. Not used with the despondency of Plato, used with far other power informing it, and with a far other future awaiting it, filled with fire, filled with hope, filled with faith, filled with joy, this term itself, *the remnant*, is yet Isaiah's term as well as Plato's. The texts are familiar to all Christendom. 'Though thy people Israel be as the sand of the sea, only a remnant of them shall return.'[10] Even this remnant, a tenth of the whole, if so it may be, shall have to come back into the purging fire, and be again cleared and further reduced there. But nevertheless, 'as a terebinth tree, and as an oak, whose substance is in them, though they be cut down, so the stock of that burned tenth shall be a holy seed.'[11]

Yes, the small remnant should be a holy seed; but the great majority, as in democratic Athens, so in the kingdoms of the Hebrew nation, were unsound, and their State was doomed. This was Isaiah's point. The actual commonwealth of the 'drunkards' and the 'blind,' as he calls them, in Israel and Judah,[12] of the dissolute grandees and gross and foolish common people, of the great majority, must perish; its perishing was the necessary stage towards a happier future. And Isaiah was right, as Plato was right. No doubt to most of us, if we had been there to see it, the kingdom of Ephraim or of Judah, the society of Samaria and Jerusalem,[13] would have seemed to contain a great deal else besides dissolute grandees and foolish common people. No doubt we should have thought parts of their policy serious, and some of their alliances promising. No doubt, when we read the Hebrew prophets now, with the larger and more patient temper of a different race and an augmented experience, we often feel the blame and invective to be too absolute. Nevertheless, as to his grand point, Isaiah, I say, was right. The majority in the Jewish State, whatever they might think or say, whatever their guides and flatterers might think or say, the majority were unsound, and their unsoundness must be their ruin.

Isaiah, however, does not make his remnant confine itself, like Plato's, to standing aside under a wall during this life and then departing in mild temper and good hope when the time for departure comes; Isaiah's remnant saves the State. Undoubtedly he means to represent it as doing

10. *Isaiah*, x,22 (somewhat changed).

11. *Isaiah*, vi,13 (somewhat changed).

12. *Cf. Isaiah*, v,11–12,20–22.

13. Ephraim is another name for the district called Israel; it included the city of Samaria. To the south of it lay Judah, which included the city of Jerusalem.

so. Undoubtedly he imagines his Prince of the house of David who is to be born within a year's time, his royal and victorious Immanuel,[14] he imagines him witnessing as a child the chastisement of Ephraim and the extirpation of the bad majority there; then witnessing as a youth the chastisement of Judah and the extirpation of the bad majority there also; but finally, in mature life, reigning over a State renewed, preserved, and enlarged, a greater and happier kingdom of the chosen people.

Undoubtedly Isaiah conceives his remnant in this wise; undoubtedly he imagined for it a part which, in strict truth, it did not play, and could not play. So manifest was the nonfulfilment of his prophecy, taken strictly, that ardent souls feeding upon his words had to wrest them from their natural meaning, and to say that Isaiah directly meant something which he did not directly mean. Isaiah, like Plato, with inspired insight foresaw that the world before his eyes, the world of actual life, the State and city of the unsound majority, could not stand. Unlike Plato, Isaiah announced with faith and joy a leader and a remnant certain to supersede them. But he put the leader's coming, and he put the success of the leader's and the remnant's work, far, far too soon; and his conception, in this respect, is fantastic. Plato betook himself for the bringing in of righteousness to a visionary republic in the clouds; [15] Isaiah, — and it is the immortal glory of him and of his race to have done so, — brought it in upon earth. But Immanuel and his reign, for the eighth century before Christ, were fantastic. For the kingdom of Judah they were fantastic. Immanuel and the remnant could not come to reign under the conditions there and then offered to them; the thing was impossible.

The reason of the impossibility is quite simple. The scale of things, in petty States like Judah and Athens, is too small; the numbers are too scanty. Admit that for the world, as we hitherto know it, what the philosophers and prophets say is true: that the majority are unsound. Even in communities with exceptional gifts, even in the Jewish State, the Athenian State, the majority are unsound. But there is 'the remnant.' Now the important thing, as regards States such as Judah and Athens, is not that the remnant bears but a small proportion to the majority; the remnant always bears a small proportion to the majority. The grave thing for States like Judah and Athens is, that the remnant must in positive bulk be so small, and therefore so powerless for reform. To be a voice outside the State, speaking to mankind or to the future, perhaps shaking the actual State to pieces in doing so, one man will suffice. But to reform the State in order to save it, to preserve it by changing it, a body of workers is needed as well as a leader; — a considerable body of workers, placed at many points, and operating in many directions. This considerable body of workers for good is what is wanting in petty States such as were Athens and Judah. It is said that the Athenian State had in all but 350,000 inhabitants. It is calculated that the population of the kingdom of Judah did not exceed a million and a quarter. The scale of things, I say, is here too small, the numbers are too scanty, to give us a remnant capable of saving and perpetuating the community. The remnant, in these cases, may influence the world and the future, may transcend the State and survive it; but it cannot possibly transform the State and perpetuate the State: for such a work it is numerically too feeble.

Plato saw the impossibility. Isaiah refused to accept it, but facts were too strong for him. The Jewish State could not be

14. *Cf. Isaiah*, vii,14. Ephraim was to be chastised because it had split from Judah, and gone over to the invading Assyrians (see *Isaiah*, vii,2.17, etc.).

15. See Plato, *Republic*. The model for his state, said Socrates, is, probably, in heaven. *Cf.* the end of Bk.IX.

renewed and saved, and he was wrong in thinking that it could. And therefore I call his grand point this other, where he was altogether right: that the actual world of the unsound majority, though it fancied itself solid, and though most men might call it solid, could not stand. Let us read him again and again, until we fix in our minds this true conviction of his, to edify us whenever we see such a world existing: his indestructible conviction that such a world, with its prosperities, idolatries, oppression, luxury, pleasures, drunkards, careless women, governing classes, systems of policy, strong alliances, shall come to nought and pass away; that nothing can save it. Let us do homage, also, to his indestructible conviction that States are saved by their righteous remnant, however clearly we may at the same time recognise that his own building on this conviction was premature.

That, however, matters to us little. For how different is the scale of things in the modern States to which we belong, how far greater are the numbers! It is impossible to overrate the importance of the new element introduced into our calculations by increasing the size of the remnant. And in our great modern States, where the scale of things is so large, it does seem as if the remnant might be so increased as to become an actual power, even though the majority be unsound. Then the lover of wisdom may come out from under his wall, the lover of goodness will not be alone among the wild beasts. To enable the remnant to succeed, a large strengthening of its numbers is everything.

Here is good hope for us, not only, as for Plato's recluse, in departing this life, but while we live and work in it. Only, before we dwell too much on this hope, it is advisable to make sure that we have earned the right to entertain it. We have earned the right to entertain it, only when we are at one with the philosophers and prophets in their conviction respecting the world which now is, the world of the unsound majority; when we feel what they mean, and when we go thoroughly along with them in it. Most of us, as I have said already, would by no means have been with them when they were here in life, and most of us are not really with them now. What is saving? [16] Our institutions, says an American; the British Constitution, says an Englishman; the civilising mission of France, says a Frenchman. But Plato and the sages, when they are asked what is saving, answer: 'To love righteousness, and to be convinced of the unprofitableness of iniquity.' [17] And Isaiah and the prophets, when they are asked the same question, answer to just the same effect: that what is saving is to 'order one's conversation right'; to 'cease to do evil'; to 'delight in the law of the Eternal'; and to 'make one's study in it all day long.' [18]

The worst of it is, that this loving of righteousness and this delighting in the law of the Eternal sound rather vague to us. Not that they are vague really; indeed, they are less vague than American institutions, or the British Constitution, or the civilising mission of France. But the phrases sound vague because of the quantity of matters they cover. The thing is to have a brief but adequate enumeration of these matters. The New Testament tells us how righteousness is composed. In England and America we have been brought up in familiarity with the New Testament. And so, before Mr. Bradlaugh [19] on our side of the water, and the Congress of American Freethinkers on yours, banish it from our education and memory, let us take from the New Testament a text showing what it is that both Plato and the prophets mean when they

16. That is, 'What brings salvation? Wherein lies our hope of happiness, heaven on earth (and afterward)?'

17. *Cf.* note 6, above.

18. *Cf. Psalms*, l,23; *Isaiah*, i,16; *Psalms*, i,2; *Psalms*, i,2.

19. For the politician Bradlaugh, see 'Sweetness and Light,' note 28.

tell us that we ought to love righteousness and to make our study in the law of the Eternal, but that the unsound majority do nothing of the kind. A score of texts offer themselves in a moment. Here is one which will serve very well: 'Whatsoever things are true, whatsoever things are elevated, whatsoever things are just, whatsoever things are pure, whatsoever things are amiable, whatsoever things are of good report; if there be any virtue, and if there be any praise; have these in your mind, let your thoughts run upon these.'[20] That is what both Plato and the prophets mean by loving righteousness, and making one's study in the law of the Eternal.

Now the matters just enumerated do not come much into the heads of most of us, I suppose, when we are thinking of politics. But the philosophers and prophets maintain that these matters, and not those of which the heads of politicians are full, do really govern politics and save or destroy States. They save or destroy them by a silent, inexorable fatality; while the politicians are making believe, plausibly and noisily, with their American institutions, British Constitution, and civilising mission of France. And because these matters are what do really govern politics and save or destroy States, Socrates maintained that in his time he and a few philosophers, who alone kept insisting on the good of righteousness and the unprofitableness of iniquity, were the only real politicians then living.[21]

I say, if we are to derive comfort from the doctrine of *the remnant* (and there is great comfort to be derived from it), we must also hold fast to the austere but true doctrine as to what really governs politics, overrides with an inexorable fatality the combinations of the so-called politicians, and saves or destroys States. Having in mind things true, things elevated, things just, things pure, things amiable, things of good report; having these in mind, studying and loving these, is what saves States.

There is nothing like positive instances to illustrate general propositions of this kind, and to make them believed. I hesitate to take an instance from America. Possibly there are some people who think that already, on a former occasion, I have said enough about America without duly seeing and knowing it. So I will take my instances from England, and from England's neighbour and old co-mate in history, France. The instance from England I will take first. I will take it from the grave topic of England's relations with Ireland. I am not going to reproach either England or Ireland. To reproach Ireland here would probably be indiscreet. As to England, anything I may have to say against my own countrymen I prefer to say at home; America is the last place where I should care to say it. However, I have no wish or intention now to reproach either the English or the Irish. But I want to show you from England's relations with Ireland how right the philosophers and prophets are. Every one knows that there has been conquest and confiscation in Ireland. So there has elsewhere. Every one knows that the conquest and the confiscation have been attended with cupidity, oppression, and ill-usage. So they have elsewhere. 'Whatsoever things are just' are not exactly the study, so far as I know, of conquerors and confiscators anywhere; certainly they were not the study of the English conquerors of Ireland. A failure in justice is a source of danger to States. But it may be made up for and got over; it has been made up for and got over in many communities. England's confiscations in Ireland are a thing of the past; the penal laws against Catholics are a thing of the past; much has been done to make up for the old failure in justice; Englishmen generally think that it has been pretty well made up for, and that Irishmen ought to think so too. And politicians in-

20. *Philippians*, iv,8. [Arnold's note.] This is in part rephrased.

21. See Plato, *The Apology of Socrates*.

vent Land Acts for curing the last results of the old failure in justice, for insuring the contentment of the Irish with us, and for consolidating the Union: and are surprised and plaintive if it is not consolidated. But now see how much more serious people are the philosophers and prophets than the politicians. *Whatsoever things are amiable!* — the failure in amiability, too, is a source of danger and insecurity to States, as well as the failure in justice. And we English are not amiable, or at any rate, what in this case comes to the same thing, do not appear so. The politicians never thought of that! Quite outside their combinations lies this hindrance, tending to make their most elaborate combinations ineffectual. Thus the joint operation of two moral causes together, — the sort of causes which politicians do not seriously regard, — tells against the designs of the politicians with what seems to be an almost inexorable fatality. If there were not the failure in amiability, perhaps the original failure in justice might by this time have been got over; if there had not been the failure in justice, perhaps the failure in amiability might not have mattered much. The two failures together create a difficulty almost insurmountable. Public men in England keep saying that it will be got over. I hope that it will be got over, and that the union between England and Ireland may become as solid as that between England and Scotland. But it will not become solid by means of the contrivances of the mere politician, or without the intervention of moral causes of concord to heal the mischief wrought by moral causes of division. Everything, in this case, depends upon the 'remnant,' its numbers and its powers of action.

My second instance is even more important. It is so important, and its reach is so wide, that I must go into it with some little fulness. The instance is taken from France. To France I have always felt myself powerfully drawn. People in England often accuse me of liking France and things French far too well. At all events I have paid special regard to them, and am always glad to confess how much I owe to them. M. Sainte-Beuve wrote to me in the last years of his life: 'You have passed through our life and literature by a deep inner line, which confers initiation, and which you will never lose.' *Vous avez traversé notre vie et notre littérature par une ligne intérieure, profonde, qui fait les initiés, et que vous ne perdrez jamais.* I wish I could think that this friendly testimony of that accomplished and charming man, one of my chief benefactors, were fully deserved. But I have pride, and pleasure in quoting it; and I quote it to bear me out in saying, that whatever opinion I may express about France, I have at least been a not inattentive observer of that great country, and anything but a hostile one.

The question was once asked by the town clerk of Ephesus: 'What man is there that knoweth not how that the city of the Ephesians is a worshipper of the great goddess Diana?'[22] Now really, when one looks at the popular literature of the French at this moment, — their popular novels, popular stage-plays, popular newspapers, — and at the life of which this literature of theirs is the index, one is tempted to make a goddess out of a word of their own, and then, like the town clerk of Ephesus, to ask: 'What man is there that knoweth not how that the city of the French is a worshipper of the great goddess Lubricity?'[23] Or rather, as Greek is the classic and euphonious language for names of gods and goddesses, let us take her name from the Greek Testament, and call her the goddess Aselgeia. That goddess has always been a sufficient power amongst mankind, and her worship was generally supposed to need restraining rather than encouraging. But here is now a whole popular literature, nay, and art too, in France at her service!

22. *Acts*, xix,35.

23. Another name for Lubricity, or Aselgeia, would be Lasciviousness.

stimulations and suggestions by her and to her meet one in it at every turn. She is becoming the great recognised power there; never was anything like it. M. Renan [24] himself seems half inclined to apologise for not having paid her more attention. 'Nature cares nothing for chastity,' says he; *Les frivoles ont peut-être raison*; 'The gay people are perhaps in the right.' Men even of this force salute her; but the allegiance now paid to her, in France, by the popular novel, the popular newspaper, the popular play, is, one may say, boundless.

I have no wish at all to preach to the French; no intention whatever, in what I now say, to upbraid or wound them. I simply lay my finger on a fact in their present condition; a fact insufficiently noticed, as it seems to me, and yet extremely potent for mischief. It is well worth while to trace the manner of its growth and action.

The French have always had a leaning to the goddess of whom we speak, and have been willing enough to let the world know of their leaning, to pride themselves on their Gaulish salt, their gallantry, and so on. But things have come to their present head gradually. Catholicism was an obstacle; the serious element in the nation was another obstacle. But now just see the course which things have taken, and how they all, one may say, have worked together for this goddess. First, there was the original Gaul, the basis of the French nation; the Gaul, gay, sociable, quick of sentiment, quick of perception; apt, however, very apt, to be presumptuous and puffed up. Then came the Roman conquest, and from this we get a new personage, the Gallo-Latin; with the Gaulish qualities for a basis, but with Latin order, reason, lucidity, added, and also Latin sensuality. Finally, we have the Frankish conquest and the Frenchman. The Frenchman proper is the Gallo-Latin, with Frankish or Germanic qualities added and infused. No mixture could be better. The Germans have plenty of faults, but in this combination they seem not to have taken hold; the Germans seem to have given of their seriousness and honesty to the conquered Gallo-Latin, and not of their brutality. And mediæval France, which exhibits the combination and balance, under the influence then exercised by Catholicism, of Gaulish quickness and gaiety with Latin rationality and German seriousness, offers to our view the soundest and the most attractive stage, perhaps, in all French history.

But the balance could not be maintained; at any rate, it was not maintained. Mediæval Catholicism lost its virtue. The serious Germanic races made the Reformation, feeling that without it there was no safety and continuance for those moral ideas which they loved and which were the ground of their being. France did not go with the Reformation; the Germanic qualities in her were not strong enough to make her go with it. 'France did not want a reformation which was a moral one,' is Michelet's [25] account of the matter: *La France ne voulait pas de réforme morale*. Let us put the case more favourably for her, and say that perhaps, with her quick perception, France caught sense, from the very outset, of that intellectual unsoundness and incompleteness in the Reformation, which is now so visible. But, at any rate, the Reformation did not carry France with it; and the Germanic side in the Frenchman, his Germanic qualities, thus received a check. They subsisted, however, in good force still; the new knowledge and new ideas, brought by the revival of letters, gave an animating stimulus; and in the seventeenth century the Gaulish gaiety and quickness of France, the Latin rationality, and the still subsist-

24. Ernest Renan (1823–92), French humanist scholar; the quotation, as Arnold says later in this essay, is from his autobiography: see his *Souvenirs d'enfance et de jeunesse*, ed. Irving Babbitt, p.244 (Ch.vi,Sect.iv).

25. Jules Michelet (1798–1874), French historian.

ing German seriousness, all combining under the puissant breath of the Renascence, produced a literature, the strongest, the most substantial and the most serious which the French have ever succeeded in producing, and which has, indeed, consummate and splendid excellences.

Still, the Germanic side in the Frenchman had received a check, and in the next century this side became quite attenuated. The Germanic steadiness and seriousness gave way more and more; the Gaulish salt, the Gaulish gaiety, quickness, sentiment, and sociability, the Latin rationality, prevailed more and more, and had the field nearly to themselves. They produced a brilliant and most efficacious literature, — the French literature of the eighteenth century. The goddess Aselgeia had her part in it; it was a literature to be praised with reserves; it was, above all, a revolutionary literature. But European institutions were then in such a superannuated condition, straightforward and just perception, free thought and rationality, were at such a discount, that the brilliant French literature in which these qualities predominated, and which by their predominance was made revolutionary, had in the eighteenth century a great mission to fulfil, and fulfilled it victoriously.

The mission is fulfilled, but meanwhile the Germanic quality in the Frenchman seems pretty nearly to have died out, and the Gallo-Latin in him has quite got the upper hand. Of course there are individuals and groups who are to be excepted; I will allow any number of exceptions you please; and in the mass of the French people, which works and is silent, there may be treasures of resource. But taking the Frenchman who is commonly in view — the usual type of speaking, doing, vocal, visible Frenchman — we may say, and he will probably be not at all displeased at our saying, that the German in him has nearly died out, and the Gallo-Latin has quite got the upper hand. For us, however, this means that the chief source of seriousness and of moral ideas is failing and drying up in him, and that what remains are the sources of Gaulish salt, and quickness, and sentiment, and sociability, and sensuality and rationality. And, of course, the play and working of these qualities is altered by their being no longer in combination with a dose of German seriousness, but left to work by themselves. Left to work by themselves, they give us what we call the *homme sensuel moyen*, the average sensual man. The highest art, the art which by its height, depth, and gravity possesses religiousness, — such as the Greeks had, the art of Pindar and Phidias; such as the Italians had, the art of Dante and Michael Angelo, — this art, with the training which it gives and the standard which it sets up, the French have never had. On the other hand, they had a dose of German seriousness, a Germanic bent for ideas of moral duty, which neither the Greeks had, nor the Italians. But if this dies out, what is left is the *homme sensuel moyen*. This average sensual man has his very advantageous qualities. He has his gaiety, quickness, sentiment, sociability, rationality. He has his horror of sour strictness, false restraint, hypocrisy, obscurantism, cretinism,[26] and the rest of it. And this is very well; but on the serious, moral side he is almost ludicrously insufficient. Fine sentiments about his dignity and his honour and his heart, about the dignity and the honour and the heart of France, and his adoration of her, do duty for him here; grandiose phrases about the spectacle offered in France and in the French Republic of the ideal for our race, of the *épanouissement de l'élite de l'humanité*, 'the coming into blow of the choice flower of humanity.' In M. Victor Hugo we have (his worshippers must forgive me for saying so) the average sensual man impassioned and grandiloquent; in M. Zola we have the average sensual man going near the ground. 'Happy the

26. *Cretinism*: inherited idiocy accompanied by physical deformity.

son,' cries M. Victor Hugo, 'of whom one can say, "He has consoled his mother!" Happy the poet of whom one can say, "He has consoled his country!"' The French themselves, even when they are severest, call this kind of thing by only the mild name of emphasis, '*emphase*,'—other people call it fustian. And a surly Johnson will growl out in answer, at one time, that 'Patriotism is the last refuge of a scoundrel'; at another time, that fine sentiments about *ma mère* are the last refuge of a scoundrel. But what they really are is the creed which in France the average sensual man rehearses, to do duty for serious moral ideas. And, as the result, we have a popular literature and a popular art serving, as has been already said, the goddess Aselgeia.

Such an art and literature easily make their way everywhere. In England and America the French literature of the seventeenth century is peculiarly fitted to do great good, and nothing but good; it can hardly be too much studied by us. And it is studied by us very little. The French literature of the eighteenth century, also, has qualities to do us much good, and we are not likely to take harm from its other qualities; we may study it to our great profit and advantage. And it is studied by us very little. The higher French literature of the present day has more knowledge and a wider range than its great predecessors, but less soundness and perfection, and it exerts much less influence than they did. Action and influence are now with the lower literature of France, with the popular literature in the service of the goddess Aselgeia. And this popular modern French literature, and the art which corresponds to it, bid fair to make their way in England and America far better than their predecessors. They appeal to instincts so universal and accessible; they appeal, people are beginning boldly to say, to Nature herself. Few things have lately struck me more than M. Renan's dictum, which I have already quoted, about what used to be called the virtue of chastity. The dictum occurs in his very interesting autobiography, published but the other day. M. Renan, whose genius I unfeignedly admire, is, I need hardly say, a man of the most perfect propriety of life; he has told us so himself. He was brought up for a priest, and he thinks it would not have been in good taste for him to become a free liver. But this abstinence is a mere matter of personal delicacy, a display of good and correct taste on his own part in his own very special circumstances. 'Nature,' he cries, 'cares nothing about chastity.' What a slap in the face to the sticklers for 'Whatsoever things are pure.'

I have had to take a long sweep to arrive at the point which I wished to reach. If we are to enjoy the benefit, I said, of the comfortable doctrine of the remnant, we must be capable of receiving also, and of holding fast, the hard doctrine of the unsoundness of the majority, and of the certainty that the unsoundness of the majority, if it is not withstood and remedied, must be their ruin. And therefore, even though a gifted man like M. Renan may be so carried away by the tide of opinion in France where he lives, as to say that Nature cares nothing about chastity, and to see with amused indulgence the worship of the great goddess Lubricity, let us stand fast, and say that her worship is against nature, human nature, and that it is ruin. For this is the test of its being against human nature, that for human societies it is ruin. And the test is one from which there is no escape, as from the old tests in such matters there may be. For if you allege that it is the will of God that we should be pure, the sceptical Gallo-Latins will tell you that they do not know any such person. And in like manner, if it is said that those who serve the goddess Aselgeia shall not inherit the kingdom of God,[27] the Gallo-Latin may tell you that he does not believe in any such

27. *Cf. I Corinthians*, vi,9.

place. But that the sure tendency and upshot of things establishes that the service of the goddess Aselgeia is ruin, that her followers are marred and stunted by it and disqualified for the ideal society of the future, is an infallible test to employ.

The saints admonish us to let our thoughts run upon whatsoever things are pure, if we would inherit the kingdom of God; and the divine Plato tells us that we have within us a many-headed beast and a man, and that by dissoluteness we feed and strengthen the beast in us, and starve the man; [28] and finally, following the divine Plato among the sages at a humble distance, comes the prosaic and unfashionable Paley,[29] and says in his precise way that 'this vice has a tendency, which other species of vice have not so directly, to unsettle and weaken the powers of the understanding; as well as, I think, in a greater degree than other vices, to render the heart thoroughly corrupt.' True; and once admitted and fostered, it eats like a canker, and with difficulty can ever be brought to let go its hold again, but for ever tightens it. Hardness and insolence come in its train; an insolence which grows until it ends by exasperating and alienating everybody; a hardness which grows until the man can at last scarcely take pleasure in anything, outside the service of his goddess, except cupidity and greed, and cannot be touched with emotion by any language except fustian. Such are the fruits of the worship of the great goddess Aselgeia.

So, instead of saying that Nature cares nothing about chastity, let us say that human nature, *our* nature, cares about it a great deal. Let us say that, by her present popular literature, France gives proof that she is suffering from a dangerous and perhaps fatal disease; and that it is not clericalism [30] which is the real enemy to the French so much as their goddess; and if they can none of them see this themselves, it is only a sign of how far the disease has gone, and the case is so much the worse. The case is so much the worse; and for men in such case to be so vehemently busy about clerical and dynastic intrigues at home, and about alliances and colonial acquisitions and purifications of the flag abroad, might well make one borrow of the prophets and exclaim, 'Surely ye are perverse'! perverse to neglect your really pressing matters for those secondary ones. And when the ingenious and inexhaustible M. Blowitz, of our great London *Times*, who sees everybody and knows everything, when he expounds the springs of politics and the causes of the fall and success of ministries, and the combinations which have not been tried but should be, and takes upon him the mystery of things in the way with which we are so familiar, — to this wise man himself one is often tempted, again, to say with the prophets: 'Yet the Eternal also is wise, and will not call back his words.' [31] M. Blowitz is not the only wise one; the Eternal has his wisdom also, and somehow or other it is always the Eternal's wisdom which at last carries the day. The Eternal has attached to certain moral causes the safety or the ruin of States, and the present popular literature of France is a sign that she has a most dangerous moral disease.

Now if the disease goes on and increases, then, whatever sagacious advice M. Blowitz may give, and whatever political combinations may be tried, and whether France gets colonies or not, and whether she allies herself with this nation or with that, things will only go from bad to worse with her; she will more and more lose her powers of soul and spirit, her intellectual productiveness, her skill

31. *Cf. Jeremiah*, xliv,28.

in counsel, her might for war, her formidableness as a foe, her value as an ally, and the life of that famous State will be more and more impaired, until it perish. And this is that hard but true doctrine of the sages and prophets, of the inexorable fatality of operation, in moral failure of the unsound majority, to impair and destroy States. But we will not talk or think of destruction for a State with such gifts and graces as France, and which has had such a place in history, and to which we, many of us, owe so much delight and so much good. And yet if France had no greater numbers than the Athens of Plato or the Judah of Isaiah, I do not see how she could well escape out of the throttling arms of her goddess and recover. She must recover through a powerful and profound renewal, a great inward change, brought about by 'the remnant' amongst her people; and, for this, a remnant small in numbers would not suffice. But in a France of thirty-five millions, who shall set bounds to the numbers of the remnant, or to its effectualness and power of victory?

In these United States (for I come round to the United States at last) you are fifty millions and more. I suppose that, as in England, as in France, as everywhere, so likewise here, the majority of people doubt very much whether the majority is unsound; or, rather, they have no doubt at all about the matter, they are sure that it is not unsound. But let us consent tonight to remain to the end in the ideas of the sages and prophets whom we have been following all along; and let us suppose that in the present actual stage of the world, as in all the stages through which the world has passed hitherto, the majority is and must be in general unsound everywhere, — even in the United States, even here in New York itself. Where is the failure? I have already, in the past, speculated in the abstract about you, perhaps, too much. But I suppose that in a democratic community like this, with its newness, its magnitude, its strength, its life of business, its sheer freedom and equality, the danger is in the absence of the discipline of respect; in hardness and materialism, exaggeration and boastfulness; in a false smartness, a false audacity, a want of soul and delicacy. 'Whatsoever things are *elevated*,' whatsoever things are nobly serious, have true elevation,[32] — that perhaps, in our catalogue of maxims which are to possess the mind, is the maxim which points to where the failure of the unsound majority, in a great democracy like yours, will probably lie. At any rate let us for the moment agree to suppose so. And the philosophers and the prophets, whom I at any rate am disposed to believe, and who say that moral causes govern the standing and the falling of States, will tell us that the failure to mind whatsoever things are elevated must impair with an inexorable fatality the life of a nation, just as the failure to mind whatsoever things are just, or whatsoever things are amiable, or whatsoever things are pure, will impair it; and that if the failure to mind whatsoever things are elevated should be real in your American democracy, and should grow into a disease, and take firm hold on you, then the life of even these great United States must inevitably suffer and be impaired more and more, until it perish.

Then from this hard doctrine we will betake ourselves to the more comfortable doctrine of the *remnant*. 'The remnant shall return'; shall 'convert and be healed' itself first, and shall then recover the unsound majority. And you are fifty millions and growing apace. What a remnant yours may be, surely! A remnant of how great numbers, how mighty strength, how irresistible efficacy! Yet we must not go too fast, either, nor make too sure of our efficacious remnant. Mere multitude will not give us a saving remnant with certainty. The Assyrian Empire had multi-

32. Ὅσα σεμνά. [Arnold's note.] *Cf.* note 20, above.

tude, the Roman Empire had multitude; yet neither the one nor the other could produce a sufficing remnant any more than Athens or Judah could produce it, and both Assyria and Rome perished like Athens and Judah.

But you are something more than a people of fifty millions. You are fifty millions mainly sprung, as we in England are mainly sprung, from that German stock which has faults indeed, faults which have diminished the extent of its influence, diminished its power of attraction and the interest of its history, and which seems moreover just now, from all I can see and hear, to be passing through a not very happy moment, morally, in Germany proper. Yet of the German stock it is, I think, true, as my father said more than fifty years ago, that it has been a stock 'of the most moral races of men that the world has yet seen, with the soundest laws, the least violent passions, the fairest domestic and civil virtues.' You come, therefore, of about the best parentage which a modern nation can have. Then you have had, as we in England have also had, but more entirely than we and more exclusively, the Puritan discipline. Certainly I am not blind to the faults of that discipline. Certainly I do not wish it to remain in possession of the field for ever, or too long. But as a stage and a discipline, and as means for enabling that poor inattentive and immoral creature, man, to love and appropriate and make part of his being divine ideas, on which he could not otherwise have laid or kept hold, the discipline of Puritanism has been invaluable; and the more I read history, the more I see of mankind, the more I recognise its value. Well, then, you are not merely a multitude of fifty millions; you are fifty millions sprung from this excellent Germanic stock, having passed through this excellent Puritan discipline, and set in this enviable and unbounded country. Even supposing, therefore, that by the necessity of things your majority must in the present stage of the world probably be unsound, what a remnant, I say, — what an incomparable, all transforming remnant, — you may fairly hope with your numbers, if things go happily, to have!

ESSAYS IN CRITICISM, SECOND SERIES

The Study of Poetry

'THE future of poetry is immense, because in poetry, where it is worthy of its high destinies, our race, as time goes on, will find an ever surer and surer stay. There is not a creed which is not shaken, not an accredited dogma which is not shown to be questionable, not a received tradition which does not threaten to dissolve. Our religion has materialized itself in the fact, in the supposed fact; it has attached its emotion to the fact, and now the fact is failing it. But for poetry the idea is everything; the rest is a world of illusion, of divine illusion. Poetry attaches its emotion to the idea; the idea *is* the fact. The strongest part of our religion today is its unconscious poetry.' [1]

Let me be permitted to quote these words of my own, as uttering the thought which should, in my opinion, go with us and govern us in all our study of poetry. In the present work [2] it is the course of one great contributory stream to the world-river of poetry that we are invited to follow. We are here invited to trace the stream of English poetry. But whether we set ourselves, as here, to follow only one

1. This paragraph is a slightly condensed version of the closing paragraph of Arnold's short introduction to *The Hundred Greatest Men* (London: Sampson, Low & Co., 1879).
2. *Cf.* the note on the title.

of the several streams that make the mighty river of poetry, or whether we seek to know them all, our governing thought should be the same. We should conceive of poetry worthily, and more highly than it has been the custom to conceive of it. We should conceive of it as capable of higher uses, and called to higher destinies, than those which in general men have assigned to it hitherto. More and more mankind will discover that we have to turn to poetry to interpret life for us, to console us, to sustain us. Without poetry, our science will appear incomplete; and most of what now passes with us for religion and philosophy will be replaced by poetry. Science, I say, will appear incomplete without it. For finely and truly does Wordsworth [3] call poetry 'the impassioned expression which is in the countenance of all science'; and what is a countenance without its expression? Again, Wordsworth finely and truly calls poetry 'the breath and finer spirit of all knowledge': our religion, parading evidences such as those on which the popular mind relies now; our philosophy, pluming itself on its reasonings about causation and finite and infinite being; what are they but the shadows and dreams and false shows of knowledge? The day will come when we shall wonder at ourselves for having trusted to them, for having taken them seriously; and the more we perceive their hollowness, the more we shall prize 'the breath and finer spirit of knowledge' offered to us by poetry.

But if we conceive thus highly of the destinies of poetry, we must also set our standard for poetry high, since poetry, to be capable of fulfilling such high destinies, must be poetry of a high order of excellence. We must accustom ourselves to a high standard and to a strict judgment. Sainte-Beuve [4] relates that Napoleon one day said, when somebody was spoken of in his presence as a charlatan: 'Charlatan as much as you please; but where is there *not* charlatanism?' — 'Yes,' answers Sainte-Beuve, 'in politics, in the art of governing mankind, that is perhaps true. But in the order of thought, in art, the glory, the eternal honour is that charlatanism shall find no entrance; herein lies the inviolableness of that noble portion of man's being.' It is admirably said, and let us hold fast to it. In poetry, which is thought and art in one, it is the glory, the eternal honour, that charlatanism shall find no entrance; that this noble sphere be kept inviolate and inviolable. Charlatanism is for confusing or obliterating the distinctions between excellent and inferior, sound and unsound or only half sound, true and untrue or only half-true. It is charlatanism, conscious or unconscious, whenever we confuse or obliterate these. And in poetry, more than anywhere else, it is unpermissible to confuse or obliterate them. For in poetry the distinction between excellent and inferior, sound and unsound or only half-sound, true and untrue or only half-true, is of paramount importance. It is of paramount importance because of the high destinies of poetry. In poetry, as a criticism of life [5] under the conditions fixed for such a criticism by the laws of poetic truth and poetic beauty, the spirit of our race will find, we have said, as time goes on and as other helps fail, its consolation and stay. But the consolation and stay will be of power in proportion to the power of the criticism of life. And the criticism of life will be of power in proportion as the poetry conveying it is ex-

3. In the Preface to the 2nd ed. of *Lyrical Ballads* (1800).

4. Sainte-Beuve, *Les Cahiers*, Paris, 1876, p.51.

5. That poetry, and all literature, is to be considered as 'a criticism of life,' is a favorite principle with Arnold. He first used the phrase in his essay on Joubert (1864); but in his *On Translating Homer* (1861) he had written: 'The noble and profound application of ideas to life is the most essential part of poetic greatness.' In his essay on Wordsworth (1879) he declared: 'It is important therefore to hold fast to this: that poetry is at bottom a criticism of life. . . .' *Cf.* also his essay on Byron.

cellent rather than inferior, sound rather than unsound or half-sound, true rather than untrue or half-true.

The best [6] poetry is what we want; the best poetry will be found to have a power of forming, sustaining, and delighting us, as nothing else can. A clearer, deeper sense of the best in poetry, and of the strength and joy to be drawn from it, is the most precious benefit which we can gather from a poetical collection such as the present. And yet in the very nature and conduct of such a collection there is inevitably something which tends to obscure in us the consciousness of what our benefit should be, and to distract us from the pursuit of it. We should therefore steadily set it before our minds at the outset, and should compel ourselves to revert constantly to the thought of it as we proceed.

Yes; constantly in reading poetry, a sense for the best, the really excellent, and of the strength and joy to be drawn from it, should be present in our minds and should govern our estimate of what we read. But this real estimate, the only true one, is liable to be superseded, if we are not watchful, by two other kinds of estimate, the historic estimate and the personal estimate, both of which are fallacious. A poet or a poem may count to us historically, they may count to us on grounds personal to ourselves, and they may count to us really. They may count to us historically. The course of development of a nation's language, thought, and poetry, is profoundly interesting; and by regarding a poet's work as a stage in this course of development we may easily bring ourselves to make it of more importance as poetry than in itself it really is, we may come to use a language of quite exaggerated praise in criticising it; in short, to over-rate it. So arises in our poetic judgments the fallacy caused by the estimate which we may call historic. Then, again, a poet or a poem may count to us on grounds personal to ourselves. Our personal affinities, likings, and circumstances, have great power to sway our estimate of this or that poet's work, and to make us attach more importance to it as poetry than in itself it really possesses, because to us it is, or has been, of high importance. Here also we overrate the object of our interest, and apply to it a language of praise which is quite exaggerated. And thus we get the source of a second fallacy in our poetic judgments — the fallacy caused by an estimate which we may call personal.

Both fallacies are natural. It is evident how naturally the study of the history and development of a poetry may incline a man to pause over reputations and works once conspicuous but now obscure, and to quarrel with a careless public for skipping, in obedience to mere tradition and habit, from one famous name or work in its national poetry to another, ignorant of what it misses, and of the reason for keeping what it keeps, and of the whole process of growth in its poetry. The French have become diligent students of their own early poetry, which they long neglected; the study makes many of them dissatisfied with their so-called classical poetry, the court-tragedy of the seventeenth century, a poetry which Pellisson [7] long ago reproached with its want of the true poetic stamp, with its *politesse stérile et rampante*,[8] but which nevertheless has reigned in France as absolutely as if it had been the perfection of classical poetry indeed. The dissatisfaction is natural; yet a lively and accomplished critic, M. Charles d'Héricault,[9] the editor of Clément Marot,[10] goes too far when he says that 'the

6. *Cf.* the fourth-last paragraph of the essay on the function of criticism, where Arnold gives his definition of criticism.

7. Paul Pellisson (1624–93), French author and critic.

8. 'Artificiality, or civility, barren and bombastic.'

9. D'Héricault, French journalist and critic, was editor of the poems of Marot (publ. 1868–72) for the publisher Jannet.

10. Clément Marot (1496–1544), court poet to the French king Francis I.

cloud of glory playing round a classic is a mist as dangerous to the future of a literature as it is intolerable for the purposes of history.' 'It hinders,' he goes on, 'it hinders us from seeing more than one single point, the culminating and exceptional point; the summary, fictitious and arbitrary, of a thought and of a work. It substitutes a halo for a physiognomy, it puts a statue where there was once a man, and hiding from us all trace of the labour, the attempts, the weaknesses, the failures, it claims not study but veneration; it does not show us how the thing is done, it imposes upon us a model. Above all, for the historian this creation of classic personages is inadmissible; for it withdraws the poet from his time, from his proper life, it breaks historical relationships, it blinds criticism by conventional admiration, and renders the investigation of literary origins unacceptable. It gives us a human personage no longer, but a God seated immovable amidst His perfect work, like Jupiter on Olympus; and hardly will it be possible for the young student, to whom such work is exhibited at such a distance from him, to believe that it did not issue ready made from that divine head.'

All this is brilliantly and tellingly said, but we must plead for a distinction. Everything depends on the reality of a poet's classic character. If he is a dubious classic, let us sift him; if he is a false classic, let us explode him. But if he is a real classic, if his work belongs to the class of the very best (for this is the true and right meaning of the word *classic*, *classical*), then the great thing for us is to feel and enjoy his work as deeply as ever we can, and to appreciate the wide difference between it and all work which has not the same high character. This is what is salutary, this is what is formative; this is the great benefit to be got from the study of poetry. Everything which interferes with it, which hinders it, is injurious. True, we must read our classic with open eyes, and not with eyes blinded with superstition; we must perceive when his work comes short, when it drops out of the class of the very best, and we must rate it, in such cases, at its proper value. But the use of this negative criticism is not in itself, it is entirely in its enabling us to have a clearer sense and a deeper enjoyment of what is truly excellent. To trace the labour, the attempts, the weaknesses, the failures of a genuine classic, to acquaint oneself with his time and his life and his historical relationships, is mere literary dilettantism unless it has that clear sense and deeper enjoyment for its end. It may be said that the more we know about a classic the better we shall enjoy him; and, if we lived as long as Methuselah [11] and had all of us heads of perfect clearness and wills of perfect steadfastness, this might be true in fact as it is plausible in theory. But the case here is much the same as the case with the Greek and Latin studies of our schoolboys. The elaborate philological groundwork which we require them to lay is in theory an admirable preparation for appreciating the Greek and Latin authors worthily. The more thoroughly we lay the groundwork, the better we shall be able, it may be said, to enjoy the authors. True, if time were not so short, and schoolboys' wits not so soon tired and their power of attention exhausted; only, as it is, the elaborate philological preparation goes on, but the authors are little known and less enjoyed. So with the investigator of 'historic origins' in poetry. He ought to enjoy the true classic all the better for his investigations; he often is distracted from the enjoyment of the best, and with the less good he overbusies himself, and is prone to over-rate it in proportion to the trouble which it has cost him.

The idea of tracing historic origins and historical relationships cannot be absent from a compilation like the present. And naturally the poets to be exhibited in it will be assigned to those persons for exhi-

11. This was 969 years, according to *Genesis*, v, 27.

bition who are known to prize them highly, rather than to those who have no special inclination towards them. Moreover the very occupation with an author, and the business of exhibiting him, disposes us to affirm and amplify his importance. In the present work, therefore, we are sure of frequent temptation to adopt the historic estimate, or the personal estimate, and to forget the real estimate; which latter, nevertheless, we must employ if we are to make poetry yield us its full benefit. So high is that benefit, the benefit of clearly feeling and of deeply enjoying the really excellent, the truly classic in poetry, that we do well, I say, to set it fixedly before our minds as our object in studying poets and poetry, and to make the desire of attaining it the one principle to which, as the *Imitation* says, whatever we may read or come to know, we always return. *Cum multa legeris et cognoveris, ad unum semper oportet redire principium.*[12]

The historic estimate is likely in especial to affect our judgment and our language when we are dealing with ancient poets; the personal estimate when we are dealing with poets our contemporaries, or at any rate modern. The exaggerations due to the historic estimate are not in themselves, perhaps, of very much gravity. Their report hardly enters the general ear; probably they do not always impose even on the literary men who adopt them. But they lead to a dangerous abuse of language. So we hear Cædmon,[13] amongst our own poets, compared to Milton.[14] I have already noticed the enthusiasm of one accomplished French critic for 'historic origins.' Another eminent French critic, M. Vitet,[15] comments upon that famous document of the early poetry of his nation, the *Chanson de Roland.*[16] It is indeed a most interesting document. The *joculator* or *jongleur* Taillefer, who was with William the Conqueror's army at Hastings,[17] marched before the Norman troops, so said the tradition, singing 'of Charlemagne and of Roland and of Oliver, and of the vassals who died at Roncevaux';[18] and it is suggested that in the *Chanson de Roland* by one Turoldus or Théroulde,[19] a poem preserved in a manuscript of the twelfth century in the Bodleian Library at Oxford, we have certainly the matter, perhaps even some of the words, of the chant which Taillefer sang. The poem has vigour and freshness; it is not without pathos. But M. Vitet is not satisfied with seeing in it a document of some poetic value, and of very high historic and linguistic value; he sees in it a grand and beautiful work, a monument of epic genius. In its general design he finds the grandiose conception, in its details he finds the constant union of simplicity with greatness, which are the marks, he truly says, of the genuine epic, and distinguish it from the artificial epic of literary ages.

12. 'When you have read and learned many things, you ought always to return to the one principle.'—*The Imitation of Christ*, III, xliii.2.

13. Cædmon (d. c.680), first important religious poet in Old English, sometimes called 'the father of English poetry.'

14. Milton's *Paradise Lost* treats of the same subject as the Anglo-Saxon *Genesis*, attributed to Cædmon.

15. Ludovic Vitet (1802–73), French politician and man of letters; contributed to the *Revue des deux mondes*.

16. The *Chanson de Roland* is an old French poem of 4,000 lines, composed in the 11th century, sometimes called a folk epic.

17. 'Jongleur,' from the Latin 'joculator,' a jester, was the name given to a wandering minstrel among the Norman French. The Battle of Hastings, in 1066, was won by the Norman-French William the Conqueror, and led to his conquest of England. For the Taillefer story, *cf.* Freeman's *History of the Norman Conquest of England* (New York, 1873), III,319–20.

18. The poem tells how Roland and Oliver and other peers of the great Emperor Charlemagne were overtaken and slain by the Saracens at Roncevaux, or Roncevalles, in the Pyrenees Mountains, and how Charlemagne avenged their death.

19. Turoldus has not been identified; he may have been the scribe who copied the manuscript.

One thinks of Homer; this is the sort of praise which is given to Homer, and justly given. Higher praise there cannot well be, and it is the praise due to epic poetry of the highest order only, and to no other. Let us try, then, the *Chanson de Roland* at its best. Roland, mortally wounded, lays himself down under a pine-tree, with his face turned towards Spain and the enemy —

'De plusurs choses a remembrer li prist,
De tantes teres cume li bers cunquist,
De dulce France, des humes de sun lign,
De Carlemagne sun seignor ki l'nurrit.' [20]

That is primitive work, I repeat, with an undeniable poetic quality of its own. It deserves such praise, and such praise is sufficient for it. But now turn to Homer —

Ὣς φάτο τοὺς δ' ἤδη κάτεχεν φυσίζοος αἶα
ἐν Λακεδαίμονι αὖθι, φίλῃ ἐν πατρίδι γαίῃ.[21]

We are here in another world, another order of poetry altogether; here is rightly due such supreme praise as that which M. Vitet gives to the *Chanson de Roland*. If our words are to have any meaning, if our judgments are to have any solidity, we must not heap that supreme praise upon poetry of an order immeasurably inferior.

Indeed there can be no more useful help for discovering what poetry belongs to the class of the truly excellent, and can therefore do us most good, than to have always in one's mind lines and expressions of the great masters, and to apply them as a touchstone [22] to other poetry. Of course we are not to require this other poetry to resemble them; it may be very dissimilar. But if we have any tact we shall find them, when we have lodged them well in our minds, an infallible touchstone for detecting the presence or absence of high poetic quality, and also the degree of this quality, in all other poetry which we may place beside them. Short passages, even single lines, will serve our turn quite sufficiently. Take the two lines which I have just quoted from Homer, the poet's comment on Helen's [23] mention of her brothers; — or take his

Ἀλλὰ σφὼ μὲν ἔπειτα δόμεν Πηλῆϊ ἄνακτι
θνητῷ· ὑμεῖς δ' ἐστὸν ἀγήρω τ' ἀθανάτω τε.
ἦ ἵνα δυστήνοισι μετ' ἀνδράσιν ἄλγε' ἔχητον;[24]

the address of Zeus to the horses of Peleus; — or take finally his

Καὶ σέ, γέρον, τὸ πρὶν μὲν ἀκούομεν ὄλβιον εἶναι·[25]

the words of Achilles to Priam, a suppliant before him. Take that incomparable line and a half of Dante, Ugolino's tremendous words —

'Io no piangeva; si dentro impietrai.
Piangevan elli . . .' [26]

20. 'Then began he to call many things to remembrance, — all the lands which his valour conquered, and pleasant France, and the men of his lineage, and Charlemagne his liege lord who nourished him.' — *Chanson de Roland*, iii. 939–942. [Arnold's note.]

21. 'So said she; they long since in Earth's soft arms were reposing,
There, in their own dear land, their fatherland, Lacedaemon.'
— *Iliad*, iii.243,244 (translated by Dr. Hawtrey). [Arnold's note.]

22. *Touchstone*: a stone used to test the purity of gold and silver, and, hence, any criterion or test by which to try a thing's qualities.

23. Helen was wife of the Greek king Menelaus; her abduction by the Trojan prince Paris caused the Trojan War.

24. 'Ah, unhappy pair, why gave we you to King Peleus, to a mortal? but ye are without old age, and immortal. Was it that with men born to misery ye might have sorrow?' *Iliad*, xvii.443–445. [Arnold's note.] Peleus was the husband of Thetis and the father of Achilles.

25. 'Nay, and thou too, old man, in former days wast, as we hear, happy.' — *Iliad*, xxiv.543. [Arnold's note.] Achilles, the Greek hero, had slain Hector, mightiest son of the aged Priam, king of Troy.

26. 'I wailed not, so of stone I grew within; — they wailed.' — *Inferno*, xxxiii.39,40. [Arnold's note.] Actually the lines are 49,50.

take the lovely words of Beatrice to Virgil —

'Io son fatta da Dio, sua merce, tale,
Che la vostra miseria non mi tange,
Ne fiamma d'esto incendio non m'assale . . .' [27]

take the simple, but perfect, single line —

'In la sua volontade e nostra pace.' [28]

Take of Shakespeare a line or two of Henry the Fourth's expostulation with sleep —

'Wilt thou upon the high and giddy mast
Seal up the ship-boy's eyes, and rock his brains
In cradle of the rude imperious surge . . .' [29]

and take, as well, Hamlet's dying request to Horatio —

'If thou didst ever hold me in thy heart,
Absent thee from felicity awhile,
And in this harsh world draw thy breath in pain
To tell my story . . .' [30]

Take of Milton that Miltonic passage —

'Darken'd so, yet shone
Above them all the archangel; but his face
Deep scars of thunder had intrench'd, and care
Sat on his faded cheek . . .' [31]

add two such lines as —

'And courage never to submit or yield
And what is else not to be overcome . . .' [32]

and finish with the exquisite close to the loss of Proserpine, the loss

'. . . which cost Ceres all that pain
To seek her through the world.' [33]

These few lines, if we have tact and can use them, are enough even of themselves to keep clear and sound our judgments about poetry, to save us from fallacious estimates of it, to conduct us to a real estimate.

The specimens I have quoted differ widely from one another, but they have in common this: the possession of the very highest poetical quality. If we are thoroughly penetrated by their power, we shall find that we have acquired a sense enabling us, whatever poetry may be laid before us, to feel the degree in which a high poetical quality is present or wanting there. Critics give themselves great labour to draw out what in the abstract constitutes the characters of a high quality of poetry. It is much better simply to have recourse to concrete examples; — to take specimens of poetry of the high, the very highest quality, and to say: The characters of a high quality of poetry are what is expressed *there*. They are far better recognised by being felt in the verse of the master, than by being perused in the prose of the critic. Nevertheless if we are urgently pressed to give some critical account of them, we may safely, perhaps, venture on laying down, not indeed how and why the characters arise, but where and in what they arise. They are in the

Dante Alighieri (1265–1321), pictures himself in his vision, described in his *Divina Commedia*, as guided by the Roman poet Virgil. Beatrice was a noble Florentine lady who had been loved and idealized by Dante; after her death he continued his devotion. One of the shades whom Dante met in Hell was that of Ugolino, a political leader who in 1288 had been imprisoned, together with his two sons and two little grandsons. Dante tells the gruesome story of their death by starvation; the little boys wailed.

27. 'Of such sort hath God, thanked be His mercy, made me, that your misery toucheth me not, neither doth the flame of this fire strike me.' — *Inferno*, ii.91–93. [Arnold's note.]
28. 'In His will is our peace.' — *Paradiso*, iii.85. [Arnold's note.]
29. *II Henry IV*, III,i,18–20.
30. *Hamlet*, V,ii,357–60.
31. *Paradise Lost*, I,599–602.
32. *Ibid.*, I,108–09.
33. *Ibid.*, IV,271–72.

matter and substance of the poetry, and they are in its manner and style. Both of these, the substance and matter on the one hand, the style and manner on the other, have a mark, an accent, of high beauty, worth, and power. But if we are asked to define this mark and accent in the abstract, our answer must be: No, for we should thereby be darkening the question, not clearing it. The mark and accent are as given by the substance and matter of that poetry, by the style and manner of that poetry, and of all other poetry which is akin to it in quality.

Only one thing we may add as to the substance and matter of poetry, guiding ourselves by Aristotle's profound observation that the superiority of poetry over history consists in its possessing a higher truth and a higher seriousness (*φιλοσοφώτερον καὶ σπουδαιότερον*).[34] Let us add, therefore, to what we have said, this: that the substance and matter of the best poetry acquire their special character from possessing, in an eminent degree, truth and seriousness. We may add yet further, what is in itself evident, that to the style and manner of the best poetry their special character, their accent, is given by their diction, and, even yet more, by their movement. And though we distinguish between the two characters, the two accents, of superiority, yet they are nevertheless vitally connected one with the other. The superior character of truth and seriousness, in the matter and substance of the best poetry, is inseparable from the superiority of diction and movement marking its style and manner. The two superiorities are closely related, and are in steadfast proportion one to the other. So far as high poetic truth and seriousness are wanting to a poet's matter and substance, so far also, we may be sure, will a high poetic stamp of diction and movement be wanting to his style and manner. In proportion as this high stamp of diction and movement, again, is absent from a poet's style and manner, we shall find, also, that high poetic truth and seriousness are absent from his substance and matter.

So stated, these are but dry generalities; their whole force lies in their application. And I could wish every student of poetry to make the application of them for himself. Made by himself, the application would impress itself upon his mind far more deeply than made by me. Neither will my limits allow me to make any full application of the generalities above propounded; but in the hope of bringing out, at any rate, some significance in them, and of establishing an important principle more firmly by their means, I will, in the space which remains to me, follow rapidly from the commencement the course of our English poetry with them in my view.

Once more I return to the early poetry of France, with which our own poetry, in its origins,[35] is indissolubly connected. In the twelfth and thirteenth centuries, that seed-time of all modern language and literature, the poetry of France had a clear predominance in Europe. Of the two divisions of that poetry, its productions in the *langue d'oil* and its productions in the *langue d'oc*,[36] the poetry of the *langue d'oc*, of southern France, of the troubadours, is of importance because of its effect on Italian literature; — the first literature of modern Europe to strike the true and grand note, and to bring forth, as in Dante and Petrarch it brought forth, classics. But

34. Aristotle, *Poetics*, IX: 'They [the Historian and the Poet] are distinguished by this — that the one relates what has been, the other what might be. On this account Poetry is a *more philosophical and a more serious* thing than History: for Poetry is chiefly conversant about general truth, History about particular.'

35. Arnold passes over Anglo-Saxon poetry, which had existed in England long before the 12th and 13th centuries.

36. The *langue d'oïl* or *langue d'oui*, spoken in northern France, was so termed because 'yes' in that dialect was *oïl* or *oui*; modern French is derived from that dialect. The *langue d'oc* of southern France used *oc* for 'yes.' The troubadours were lyric, romantic poets.

the predominance of French poetry in Europe, during the twelfth and thirteenth centuries, is due to its poetry of the *langue d'oïl*, the poetry of northern France and of the tongue which is now the French language. In the twelfth century the bloom of this romance-poetry was earlier and stronger in England, at the court of our Anglo-Norman kings, than in France itself. But it was a bloom of French poetry; and as our native poetry formed itself, it formed itself out of this. The romance-poems which took possession of the heart and imagination of Europe in the twelfth and thirteenth centuries are French; 'they are,' as Southey justly says, 'the pride of French literature, nor have we anything which can be placed in competition with them.' Themes were supplied from all quarters: but the romance-setting which was common to them all, and which gained the ear of Europe, was French. This constituted for the French poetry, literature, and language, at the height of the Middle Age, an unchallenged predominance. The Italian Brunetto Latini,[37] the master of Dante, wrote his *Treasure* in French because, he says, 'la parleure en est plus délitable et plus commune à toutes gens.' In the same century, the thirteenth, the French romance-writer, Christian of Troyes,[38] formulates the claims, in chivalry and letters, of France, his native country, as follows: —

'Or vous ert par ce livre apris,
Que Gresse ot de chevalerie
Le premier los et de clergie;
Puis vint chevalerie a Rome,
Et de la clergie la some,
Qui ore est en France venue.
Diex doinst qu'ele i soit retenue
Et que li lius li abelisse
Tant que de France n'isse
L'onor qui s'i est arestée!'

'Now by this book you will learn that first Greece had the renown for chivalry and letters; then chivalry and the primacy in letters passed to Rome, and now it is come to France. God grant it may be kept there; and that the place may please it so well, that the honour which has come to make stay in France may never depart thence!'

Yet it is now all gone, this French romance-poetry, of which the weight of substance and the power of style are not unfairly represented by this extract from Christian of Troyes. Only by means of the historic estimate can we persuade ourselves now to think that any of it is of poetical importance.

But in the fourteenth century there comes an Englishman nourished on this poetry; taught his trade by this poetry, getting words, rhyme, meter from this poetry; for even of that stanza which the Italians used, and which Chaucer[39] derived immediately from the Italians, the basis and suggestion was probably given in France. Chaucer (I have already named him) fascinated his contemporaries, but so too did Christian of Troyes and Wolfram of Eschenbach.[40] Chaucer's power of fascination, however, is enduring; his poetical importance does not need the assistance of the historic estimate; it is real. He is a genuine source of joy and strength, which is flowing still for us and will flow always. He will be read, as time goes on, far more generally than he is read now. His language is a cause of difficulty for us; but so also, and I think in quite as great a

37. Latini (1210?–1294?), Italian scholar, philosopher; friend of Dante. During exile in France he wrote his prose *Livres dou Trésor*, a great encyclopedia of knowledge, in French because 'the French is a more pleasant speech and more common to all peoples.'

38. Chrétien de Troyes (1140?–1191?), French poet, first writer of Arthurian romances in verse. The quotation is from his *Cligès*, ll.30–39.

39. Chaucer's seven and eight-line stanzas in heroic verse were imitated from the French. See B. ten Brink, *The Language and Meter of Chaucer* (1901), pp.253–57.

40. Wolfram von Eschenbach (c.1165–c.1220), German writer of *Parzival* (an epic poem of Arthurian romance), etc.

degree, is the language of Burns. In Chaucer's case, as in that of Burns, it is a difficulty to be unhesitatingly accepted and overcome.

If we ask ourselves wherein consists the immense superiority of Chaucer's poetry over the romance-poetry — why it is that in passing from this to Chaucer we suddenly feel ourselves to be in another world, we shall find that his superiority is both in the substance of his poetry and in the style of his poetry. His superiority in substance is given by his large, free, simple, clear yet kindly view of human life, — so unlike the total want, in the romance-poets, of all intelligent command of it. Chaucer has not their helplessness; he has gained the power to survey the world from a central, a truly human point of view. We have only to call to mind the Prologue to *The Canterbury Tales*. The right comment upon it is Dryden's: [41] 'It is sufficient to say, according to the proverb, that *here is God's plenty*.' And again: 'He is a perpetual fountain of good sense.' It is by a large, free, sound representation of things, that poetry, this high criticism of life, has truth of substance; and Chaucer's poetry has truth of substance.

Of his style and manner, if we think first of the romance-poetry and then of Chaucer's divine liquidness of diction, his divine fluidity of movement, it is difficult to speak temperately. They are irresistible, and justify all the rapture with which his successors speak of his 'gold dew-drops of speech.' [42] Johnson misses the point entirely when he finds fault with Dryden for ascribing [43] to Chaucer the first refinement of our numbers, and says that Gower also can show smooth numbers and easy rhymes. The refinement of our numbers means something far more than this. A nation may have versifiers with smooth numbers and easy rhymes, and yet may have no real poetry at all. Chaucer is the father of our splendid English poetry; he is our 'well of English undefiled,' [44] because by the lovely charm of his diction, the lovely charm of his movement, he makes an epoch and founds a tradition. In Spenser, Shakespeare, Milton, Keats, we can follow the tradition of the liquid diction, the fluid movement, of Chaucer; at one time it is his liquid diction of which in these poets we feel the virtue, and at another time it is his fluid movement. And the virtue is irresistible.

Bounded as is my space, I must yet find room for an example of Chaucer's virtue, as I have given examples to show the virtue of the great classics. I feel disposed to say that a single line is enough to show the charm of Chaucer's verse; that merely one line like this —

'O martyr souded in virginitee!' [45]

has a virtue of manner and movement such as we shall not find in all the verse of romance-poetry; — but this is saying nothing. The virtue is such as we shall not find, perhaps, in all English poetry, outside the poets whom I have named as the special inheritors of Chaucer's tradition. A single line, however, is too little if we have not the strain of Chaucer's verse well in our memory; let us take a stanza. It is from *The Prioress's Tale*, the story of the Christian child murdered in a Jewry —

'My throte is cut unto my nekke-bone
Saidè this child, and as by way of kinde
I should have deyd, yea, longè time agone;
But Jesu Christ, as ye in bookès finde,
Will that his glory last and be in minde,

41. The two quotations are from Dryden's Preface to his *Fables* (1700).

42. John Lydgate (1370–1451?), poet, praises Chaucer thus in his poem 'The Life of Our Lady.' See C.F.E.Spurgeon, *Five Hundred Years of Chaucer Criticism and Allusion*, I, 19; also see I.53.

43. The passage referred to is in Dryden's Preface to his *Fables*.

44. Spenser, *The Faerie Queene*, IV,ii,stanza 32.

45. 'The Prioress's Tale,' l.127; Chaucer has 'souded *to*.' Lat. *solidare*, 'to make solid'; Fr. *soudé*, 'soldered, fixed fast.'

And for the worship of his mother dere
Yet may I sing *O Alma* loud and clere.' [46]

Wordsworth has modernized this Tale, and to feel how delicate and evanescent is the charm of verse, we have only to read Wordsworth's first three lines of this stanza after Chaucer's —

'My throat is cut unto the bone, I trow,
Said this young child, and by the law of kind
I should have died, yea, many hours ago.'

The charm is departed. It is often said that the power of liquidness and fluidity in Chaucer's verse was dependent upon a free, a licentious dealing with language, such as is now impossible; upon a liberty, such as Burns too enjoyed, of making words like *neck*, *bird*, into a dissyllable by adding to them, and words like *cause*, *rhyme*, into a dissyllable by sounding the *e* mute. It is true that Chaucer's fluidity is conjoined with this liberty, and is admirably served by it; but we ought not to say that it was dependent upon it. It was dependent upon his talent. Other poets with a like liberty do not attain to the fluidity of Chaucer; Burns himself does not attain to it. Poets, again, who have a talent akin to Chaucer's, such as Shakespeare or Keats, have known how to attain to his fluidity without the like liberty.

And yet Chaucer is not one of the great classics. His poetry transcends and effaces, easily and without effort, all the romance-poetry of Catholic Christendom; it transcends and effaces all the English poetry contemporary with it, it transcends and effaces all the English poetry subsequent to it down to the age of Elizabeth. Of such avail is poetic truth of substance, in its natural and necessary union with poetic truth of style. And yet, I say, Chaucer is not one of the great classics. He has not their accent. What is wanting to him is suggested by the mere mention of the name of the first great classic of Christendom, the immortal poet who died eighty years before Chaucer, — Dante. The accent of such verse as

'In la sua volontade è nostra pace . . .'

is altogether beyond Chaucer's reach; we praise him, but we feel that this accent is out of the question for him. It may be said that it was necessarily out of the reach of any poet in the England of that stage of growth. Possibly; but we are to adopt a real, not a historic, estimate of poetry. However we may account for its absence, something is wanting, then, to the poetry of Chaucer, which poetry must have before it can be placed in the glorious class of the best. And there is no doubt what that something is. It is the σπουδαιότης, the high and excellent seriousness, which Aristotle assigns as one of the grand virtues of poetry. The substance of Chaucer's poetry, his view of things and his criticism of life, has largeness, freedom, shrewdness, benignity; but it has not this high seriousness. Homer's criticism of life has it, Dante's has it, Shakespeare's has it. It is this chiefly which gives to our spirits what they can rest upon; and with the increasing demands of our modern ages upon poetry, this virtue of giving us what we can rest upon will be more and more highly esteemed. A voice from the slums of Paris, fifty or sixty years after Chaucer, the voice of poor Villon [47] out of his life of riot and crime, has at its happy moments (as, for instance, in the last stanza of *La Belle Heaulmière* [48]) more of this important poetic

46. A Latin medieval hymn began *Alma Redemptoris mater*, 'Gracious mother of the Redeemer.'

47. François Villon (1431–84), French poet and thief. See Stevenson's essay on him.

48. The name Heaulmière is said to be derived from a headdress (helm) worn as a mark by courtesans. In Villon's ballad, a poor old creature of this class laments her days of youth

virtue of seriousness than all the productions of Chaucer. But its apparition in Villon, and in men like Villon, is fitful; the greatness of the great poets, the power of their criticism of life, is that their virtue is sustained.

To our praise, therefore, of Chaucer as a poet there must be this limitation: he lacks the high seriousness of the great classics, and therewith an important part of their virtue. Still, the main fact for us to bear in mind about Chaucer is his sterling value according to that real estimate which we firmly adopt for all poets. He has poetic truth of substance, though he has not high poetic seriousness, and corresponding to his truth of substance he has an exquisite virtue of style and manner. With him is born our real poetry.

For my present purpose I need not dwell on our Elizabethan poetry, or on the continuation and close of this poetry in Milton. We all of us profess to be agreed in the estimate of this poetry; we all of us recognize it as great poetry, our greatest, and Shakespeare and Milton as our poetical classics. The real estimate, here, has universal currency. With the next age of our poetry divergency and difficulty begin. An historic estimate of that poetry has established itself; and the question is, whether it will be found to coincide with the real estimate.

The age of Dryden, together with our whole eighteenth century which followed it, sincerely believed itself to have produced poetical classics of its own, and even to have made advance, in poetry, beyond all its predecessors. Dryden regards as not seriously disputable the opinion 'that the sweetness of English verse was never understood or practised by our fathers.'[49] Cowley could see nothing at all in Chaucer's poetry.[50] Dryden heartily admired it, and, as we have seen, praised its matter admirably; but of its exquisite manner and movement all he can find to say is that 'there is the rude sweetness of a Scotch tune in it, which is natural and pleasing, though not perfect.' Addison, wishing to praise Chaucer's numbers, compares them with Dryden's own.[51] And all through the eighteenth century, and down even into our own times, the stereotyped phrase of approbation for good verse found in our early poetry has been, that it even approached the verse of Dryden, Addison, Pope, and Johnson.

Are Dryden and Pope poetical classics? Is the historic estimate, which represents them as such, and which has been so long established that it cannot easily give way, the real estimate? Wordsworth and Coleridge, as is well known, denied it;[52] but the authority of Wordsworth and Coleridge does not weigh much with the young generation, and there are many signs to show that the eighteenth century and its judgments are coming into favour again. Are the favourite poets of the eighteenth century classics?

It is impossible within my present limits to discuss the question fully. And what

and beauty. The last stanza of the ballad runs thus —

'Ainsi le bon temps regretons
Entre nous, pauvres vieilles sottes,
Assises bas, à croppetons,
Tout en ung tas comme pelottes;
A petit feu de chenevottes
Tost allumées, tost estainctes,
Et jadis fusmes si mignottes!
Ainsi en prend a maintz et maintes.'

'Thus amongst ourselves we regret the good time, poor silly old things, low-seated on our heels, all in a heap like so many balls; by a little fire of hemp-stalks, soon lighted, soon spent. And once we were such darlings! So fares it with many and many a one.' [Arnold's note.]

49. *Cf.* in Dryden, Preface to the *Fables*, the sentence just following that with the passage about 'the rude sweetness.'

50. Dryden quotes the Earl of Leicester to this effect about Cowley (1618–67), in the Preface to the *Fables*.

51. *Cf.* Addison, 'An Account of the Greatest English Poets,' in his *Works*, ed. Hurd, 1811, I,29.

52. See Wordsworth, 'Essay, Supplementary to the Preface,' *Poems*, 1815; and Coleridge, *Biographia Literaria*, Chs.i,xviii.

man of letters would not shrink from seeming to dispose dictatorially of the claims of two men who are, at any rate, such masters in letters as Dryden and Pope; two men of such admirable talent, both of them, and one of them, Dryden, a man, on all sides, of such energetic and genial power? And yet, if we are to gain the full benefit from poetry, we must have the real estimate of it. I cast about for some mode of arriving, in the present case, at such an estimate without offence. And perhaps the best way is to begin, as it is easy to begin, with cordial praise.

When we find Chapman,[53] the Elizabethan translator of Homer, expressing himself in his preface thus: 'Though truth in her very nakedness sits in so deep a pit, that from Gades to Aurora and Ganges [54] few eyes can sound her, I hope yet those few here will so discover and confirm that, the date being out of her darkness in this morning of our poet, he shall now gird his temples with the sun,' — we pronounce that such a prose is intolerable. When we find Milton [55] writing: 'And long it was not after, when I was confirmed in this opinion, that he, who would not be frustrate of his hope to write well hereafter in laudable things, ought himself to be a true poem,' — we pronounce that such a prose has its own grandeur, but that it is obsolete and inconvenient. But when we find Dryden telling us: [56] 'What Virgil wrote in the vigour of his age, in plenty and at ease, I have undertaken to translate in my declining years; struggling with wants, oppressed with sickness, curbed in my genius, liable to be misconstrued in all I write,' — then we exclaim that here at last we have the true English prose, a prose such as we would all gladly use if we only knew how. Yet Dryden was Milton's contemporary.

But after the Restoration [57] the time had come when our nation felt the imperious need of a fit prose. So, too, the time had likewise come when our nation felt the imperious need of freeing itself from the absorbing preoccupation which religion in the Puritan age had exercised. It was impossible that this freedom should be brought about without some negative excess, without some neglect and impairment of the religious life of the soul; and the spiritual history of the eighteenth century shows us that the freedom was not achieved without them. Still, the freedom was achieved; the preoccupation, an undoubtedly baneful and retarding one if it had continued, was got rid of. And as with religion amongst us at that period, so it was also with letters. A fit prose was a necessity; but it was impossible that a fit prose should establish itself amongst us without some touch of frost to the imaginative life of the soul. The needful qualities for a fit prose are regularity, uniformity, precision, balance. The men of letters, whose destiny it may be to bring their nation to the attainment of a fit prose, must of necessity, whether they work in prose or in verse, give a predominating, an almost exclusive attention to the qualities of regularity, uniformity, precision, balance. But an almost exclusive attention to these qualities involves some repression and silencing of poetry.

We are to regard Dryden as the puissant and glorious founder, Pope as the splendid high priest, of our age of prose and reason, of our excellent and indispensable eighteenth century. For the purposes of their mission and destiny their poetry, like their prose, is admirable. Do you ask

53. George Chapman (1559?–1634). For the quotation, see the 'Commentarius' at the end of Bk.I of his *Iliad*; *cf.* Chapman's *Works*, ed. R.H.Shepherd, 1903, p.25.

54. 'Gades,' or Cadiz, a town in Spain; Aurora, the dawn; the Ganges, a river in India. The phrase hence means 'from farthest west to farthest east.'

55. In *An Apology for Smectymnuus*; *cf.* Milton, *Prose Works* (1901), III,117–18.

56. Dryden's commencement in his 'Postscript to the Reader' in his translation of Virgil (1697).

57. The Restoration of the monarchy came in 1660.

me whether Dryden's verse, take it almost where you will, is not good?

'A milk-white Hind, immortal and unchanged,
Fed on the lawns and in the forest ranged.' [58]

I answer: Admirable for the purposes of the inaugurator of an age of prose and reason. Do you ask me whether Pope's verse, take it almost where you will, is not good?

'To Hounslow Heath I point, and Banstead Down;
Thence comes your mutton, and these chicks my own.' [59]

I answer: Admirable for the purposes of the high priest of an age of prose and reason. But do you ask me whether such verse proceeds from men with an adequate poetic criticism of life, from men whose criticism of life has a high seriousness, or even, without that high seriousness, has poetic largeness, freedom, insight, benignity? Do you ask me whether the application of ideas to life in the verse of these men, often a powerful application, no doubt, is a powerful *poetic* application? Do you ask me whether the poetry of these men has either the matter or the inseparable manner of such an adequate poetic criticism; whether it has the accent of

'Absent thee from felicity awhile . . .'

or of

'And what is else not to be overcome . . .'

or of

'O martyr souded in virginitee!'

I answer: it has not and cannot have them; it is the poetry of the builders of an age of prose and reason. Though they may write in verse, though they may in a certain sense be masters of the art of versification, Dryden and Pope are not classics of our poetry, they are classics of our prose.

Gray [60] is our poetical classic of that literature and age; the position of Gray is singular, and demands a word of notice here. He has not the volume or the power of poets who, coming in times more favourable, have attained to an independent criticism of life. But he lived with the great poets, he lived, above all, with the Greeks, through perpetually studying and enjoying them; and he caught their poetic point of view for regarding life, caught their poetic manner. The point of view and the manner are not self-sprung in him, he caught them of others; and he had not the free and abundant use of them. But whereas Addison and Pope never had the use of them, Gray had the use of them at times. He is the scantiest and frailest of classics in our poetry, but he is a classic.

And now, after Gray, we are met, as we draw towards the end of the eighteenth century, we are met by the great name of Burns. We enter now on times where the personal estimate of poets begins to be rife, and where the real estimate of them is not reached without difficulty. But in spite of the disturbing pressures of personal partiality, of national partiality, let us try to reach a real estimate of the poetry of Burns.

By his English poetry Burns in general belongs to the eighteenth century, and has little importance for us.

'Mark ruffian Violence, distain'd with crimes,
Rousing elate in these degenerate times;
View unsuspecting Innocence a prey,
As guileful Fraud points out the erring way;
While subtle Litigation's pliant tongue
The life-blood equal sucks of Right and Wrong!' [61]

58. The beginning of *The Hind and the Panther*, an allegory of religious controversy. The Hind represents the Roman Catholic Church.

59. *Imitations of Horace*, Bk.II, Satire 2, ll.143–44.

60. The best work of Thomas Gray (1716–71) was done during the two decades 1740–60.

61. 'On the Death of Lord President Dundas.'

Evidently this is not the real Burns, or his name and fame would have disappeared long ago. Nor is Clarinda's love-poet, Sylvander,[62] the real Burns either. But he tells us himself: 'These English songs gravel me to death. I have not the command of the language that I have of my native tongue. In fact, I think that my ideas are more barren in English than in Scotch. I have been at *Duncan Gray* to dress it in English, but all I can do is desperately stupid.'[63] We English turn naturally, in Burns, to the poems in our own language, because we can read them easily; but in those poems we have not the real Burns.

The real Burns is of course in his Scotch poems. Let us boldly say that of much of this poetry, a poetry dealing perpetually with Scotch drink, Scotch religion, and Scotch manners, a Scotchman's estimate is apt to be personal. A Scotchman is used to this world of Scotch drink, Scotch religion, and Scotch manners; he has a tenderness for it; he meets its poet half way. In this tender mood he reads pieces like the *Holy Fair* or *Hallowe'en*. But this world of Scotch drink, Scotch religion, and Scotch manners is against a poet, not for him, when it is not a partial countryman who reads him; for in itself it is not a beautiful world, and no one can deny that it is of advantage to a poet to deal with a beautiful world. Burns's world of Scotch drink, Scotch religion, and Scotch manners, is often a harsh, a sordid, a repulsive world; even the world of his *Cotter's Saturday Night* is not a beautiful world. No doubt a poet's criticism of life may have such truth and power that it triumphs over its world and delights us. Burns may triumph over his world, often he does triumph over his world, but let us observe how and where. Burns is the first case we have had where the bias of the personal estimate tends to mislead; let us look at him closely, he can bear it.

Many of his admirers will tell us that we have Burns, convivial, genuine, delightful, here —

'Leeze me on drink! it gies us mair
Than either school or college;
It kindles wit, it waukens lair,
It pangs us fou o' knowledge.
Be 't whisky gill or penny wheep
Or ony stronger potion,
It never fails, on drinking deep,
To kittle up our notion
By night or day.'[64]

There is a great deal of that sort of thing in Burns, and it is unsatisfactory, not because it is bacchanalian poetry, but because it has not that accent of sincerity which bacchanalian poetry, to do it justice, very often has. There is something in it of bravado, something which makes us feel that we have not the man speaking to us with his real voice; something, therefore, poetically unsound.

With still more confidence will his admirers tell us that we have the genuine Burns, the great poet, when his strain asserts the independence, equality, dignity, of men, as in the famous song *For a' that and a' that* —

'A prince can mak' a belted knight,
A marquis, duke, and a' that;
But an honest man 's aboon his might,
Guid faith he mauna fa' that!
For a' that, and a' that,
Their dignities, and a' that,
The pith o' sense, and pride o' worth,
Are higher rank than a' that.'

Here they find his grand, genuine touches; and still more, when this puissant genius,

62. Under the sentimental name Sylvander, Burns corresponded with a Mrs. Maclehose, whom he called Clarinda.

63. In a letter to Mr. George Thomson, Oct. 19, 1794.

64. From 'The Holy Fair,' stanza xix. *Leeze me on*: dear and pleasant to me is; *lair*: learning; *whisky gill*: a glass of whisky; *penny wheep*: a glass of small beer; *kittle up our notion*: enliven our mind. In the next quotation, *mauna fa'*: cannot make.

who so often set morality at defiance, falls moralizing —

'The sacred lowe o' weel-placed love
Luxuriantly indulge it;
But never tempt th' illicit rove,
Tho' naething should divulge it.
I waive the quantum o' the sin,
The hazard o' concealing,
But och! it hardens a' within,
And petrifies the feeling.' [65]

Or in a higher strain —

'Who made the heart, 't is He alone
Decidedly can try us;
He knows each chord, its various tone;
Each spring, its various bias.
Then at the balance let 's be mute,
We never can adjust it;
What 's *done* we partly may compute,
But know not what 's resisted.' [66]

Or in a better strain yet, a strain, his admirers will say, unsurpassable —

'To make a happy fire-side clime
To weans and wife,
That 's the true pathos and sublime
Of human life.' [67]

There is criticism of life for you, the admirers of Burns will say to us; there is the application of ideas to life! There is, undoubtedly. The doctrine of the last-quoted lines coincides almost exactly with what was the aim and end, Xenophon [68] tells us, of all the teaching of Socrates. And the application is a powerful one; made by a man of vigorous understanding, and (need I say?) a master of language.

But for supreme poetical success more is required than the powerful application of ideas to life; it must be an application under the conditions fixed by the laws of poetic truth and poetic beauty. Those laws fix as an essential condition, in the poet's treatment of such matters as are here in question, high seriousness; — the high seriousness which comes from absolute sincerity. The accent of high seriousness, born of absolute sincerity, is what gives to such verse as

'In la sua volontade é nostra pace . . .'

to such criticism of life as Dante's, its power. Is this accent felt in the passages which I have been quoting from Burns? Surely not; surely, if our sense is quick, we must perceive that we have not in those passages a voice from the very inmost soul of the genuine Burns; he is not speaking to us from these depths, he is more or less preaching. And the compensation for admiring such passages less, for missing the perfect poetic accent in them, will be that we shall admire more the poetry where that accent is found.

No; Burns, like Chaucer, comes short of the high seriousness of the great classics, and the virtue of matter and manner which goes with that high seriousness is wanting to his work. At moments he touches it in a profound and passionate melancholy, as in those four immortal lines taken by Byron as a motto for *The Bride of Abydos*, but which have in them a depth of poetic quality such as resides in no verse of Byron's own —

'Had we never loved sae kindly,
Had we never loved sae blindly,
Never met, or never parted,
We had ne'er been broken-hearted.' [69]

But a whole poem of that quality Burns cannot make; the rest, in the *Farewell to Nancy*, is verbiage.

We arrive best at the real estimate of Burns, I think, by conceiving his work as having truth of matter and truth of manner, but not the accent or the poetic virtue

65. From 'Epistle to a Young Friend.' *Lowe*: flame.
66. From 'Address to the Unco Guid.'
67. From 'Epistle to Dr. Blacklock.' *Weans*: children.
68. *Cf.* Xenophon, *Memorabilia*, IV,iv.
69. Burns, 'Ae Fond Kiss' — also called the 'Farewell to Nancy.'

of the highest masters. His genuine criticism of life, when the sheer poet in him speaks, is ironic; it is not —

'Thou Power Supreme, whose mighty scheme
These woes of mine fulfil,
Here firm I rest, they must be best
Because they are Thy will!' [70]

It is far rather: *Whistle owre the lave o't!* [71] Yet we may say of him as of Chaucer, that of life and the world, as they come before him, his view is large, free, shrewd, benignant, — truly poetic, therefore; and his manner of rendering what he sees is to match. But we must note, at the same time, his great difference from Chaucer. The freedom of Chaucer is heightened, in Burns, by a fiery, reckless energy; the benignity of Chaucer deepens, in Burns, into an overwhelming sense of the pathos of things; — of the pathos of human nature, the pathos, also, of non-human nature. Instead of the fluidity of Chaucer's manner, the manner of Burns has spring, bounding swiftness. Burns is by far the greater force, though he has perhaps less charm. The world of Chaucer is fairer, richer, more significant than that of Burns; but when the largeness and freedom of Burns get full sweep, as in *Tam o' Shanter*, or still more in that puissant and splendid production, *The Jolly Beggars*, his world may be what it will, his poetic genius triumphs over it. In the world of *The Jolly Beggars* there is more than hideousness and squalor, there is bestiality; yet the piece is a superb poetic success. It has a breadth, truth, and power which make the famous scene in Auerbach's Cellar,[72] of Goethe's *Faust*, seem artificial and tame beside it, and which are only matched by Shakespeare and Aristophanes.

Here, where his largeness and freedom serve him so admirably, and also in those poems and songs where to shrewdness he adds infinite archness and wit, and to benignity infinite pathos, where his manner is flawless, and a perfect poetic whole is the result, — in things like the address to the mouse whose home he had ruined, in things like *Duncan Gray*, *Tam Glen*, *Whistle and I'll come to you my Lad*, *Auld Lang Syne* (this list might be made much longer), — here we have the genuine Burns, of whom the real estimate must be high indeed. Not a classic, nor with the excellent σπουδαιότης of the great classics, nor with a verse rising to a criticism of life and a virtue like theirs; but a poet with thorough truth of substance and an answering truth of style, giving us a poetry sound to the core. We all of us have a leaning towards the pathetic, and may be inclined perhaps to prize Burns most for his touches of piercing, sometimes almost intolerable, pathos; for verse like —

'We twa hae paidl't i' the burn
From mornin' sun till dine;
But seas between us braid hae roar'd
Sin auld lang syne . . .' [73]

where he is as lovely as he is sound. But perhaps it is by the perfection of soundness of his lighter and archer masterpieces that he is poetically most wholesome for us. For the votary misled by a personal estimate of Shelley, as so many of us have been, are, and will be, — of that beautiful spirit building his many-colored haze of words and images

'Pinnacled dim in the intense inane' — [74]

no contact can be wholesomer than the contact with Burns at his archest and soundest. Side by side with the

70. From 'Winter: A Dirge.'

71. That is, whistle over what's left of it, or, make the best of what's left. *Cf.* the refrain of Burns's poem beginning 'First when Maggie was my care.'

72. A great scene of revelry and drinking in Goethe's *Faust* takes place in Auerbach's Cellar, a public wine-cellar or tavern drinking-room.

73. From 'Auld Lang Syne.' *Burn*: brook.

74. Shelley, *Prometheus Unbound*, III,iv, last line.

'On the brink of the night and the morning
My coursers are wont to respire,
But the Earth has just whispered a warning
That their flight must be swifter than fire . . .'[75]

of *Prometheus Unbound*, how salutary, how very salutary, to place this from *Tam Glen* —

'My minnie does constantly deave me
And bids me beware o' young men;
They flatter, she says, to deceive me;
But wha can think sae o' Tam Glen?'

But we enter on burning ground as we approach the poetry of times so near to us — poetry like that of Byron, Shelley, and Wordsworth — of which the estimates are so often not only personal, but personal with passion. For my purpose, it is enough to have taken the single case of Burns, the first poet we come to of whose work the estimate formed is evidently apt to be personal, and to have suggested how we may proceed, using the poetry of the great classics as a sort of touchstone, to correct this estimate, as we had previously corrected by the same means the historic estimate where we met with it. A collection like the present, with its succession of celebrated names and celebrated poems, offers a good opportunity to us for resolutely endeavouring to make our estimates of poetry real. I have sought to point out a method which will help us in making them so, and to exhibit it in use so far as to put any one who likes in a way of applying it for himself.

At any rate the end to which the method and the estimate are designed to lead, and from leading to which, if they do lead to it, they get their whole value, — the benefit of being able clearly to feel and deeply to enjoy the best, the truly classic, in poetry, — is an end, let me say it once more at parting, of supreme importance.

75. *Ibid.*, II,v, opening lines.

We are often told that an era is opening in which we are to see multitudes of a common sort of readers, and masses of a common sort of literature; that such readers do not want and could not relish anything better than such literature, and that to provide it is becoming a vast and profitable industry. Even if good literature entirely lost currency with the world, it would still be abundantly worth while to continue to enjoy it by oneself. But it never will lose currency with the world, in spite of momentary appearances; it never will lose supremacy. Currency and supremacy are insured to it, not indeed by the world's deliberate and conscious choice, but by something far deeper, — by the instinct of self-preservation in humanity.

Wordsworth

I REMEMBER hearing Lord Macaulay say, after Wordsworth's death, when subscriptions were being collected to found a memorial of him, that ten years earlier more money could have been raised in Cambridge[1] alone, to do honour to Wordsworth, than was now raised all through the country. Lord Macaulay had, as we know, his own heightened and telling way of putting things, and we must always make allowance for it. But probably it is true that Wordsworth has never, either before or since, been so accepted and popular, so established in possession of the minds of all who profess to care for poetry, as he was between the years 1830 and 1840, and at Cambridge. From the very first, no doubt, he had his believers and witnesses. But I have myself heard him declare that, for he knew not how many years, his poetry had never brought him in enough to buy his shoe-strings. The poetry-reading public was very slow to recognise him, and was very easily drawn away from him. Scott effaced him with this public. Byron effaced him.

The death of Byron seemed, however, to

1. Wordsworth (1770–1850) had attended St. John's College, Cambridge University.

make an opening for Wordsworth. Scott, who had for some time ceased to produce poetry himself, and stood before the public as a great novelist; Scott, too genuine himself not to feel the profound genuineness of Wordsworth, and with an instinctive recognition of his firm hold on nature and of his local truth, always admired him sincerely, and praised him generously. The influence of Coleridge upon young men of ability was then powerful, and was still gathering strength; this influence told entirely in favour of Wordsworth's poetry. Cambridge was a place where Coleridge's influence had great action, and where Wordsworth's poetry, therefore, flourished especially. But even amongst the general public its sale grew large, the eminence of its author was widely recognised, and Rydal Mount [2] became an object of pilgrimage. I remember Wordsworth relating how one of the pilgrims, a clergyman, asked him if he had ever written anything besides the *Guide to the Lakes*. Yes, he answered modestly, he had written verses. Not every pilgrim was a reader, but the vogue was established, and the stream of pilgrims came.

Mr. Tennyson's decisive appearance dates from 1842.[3] One cannot say that he effaced Wordsworth as Scott and Byron had effaced him. The poetry of Wordsworth had been so long before the public, the suffrage of good judges was so steady and so strong in its favour, that by 1842 the verdict of posterity, one may almost say, had been already pronounced, and Wordsworth's English fame was secure. But the vogue, the ear and applause of the great body of poetry-readers, never quite thoroughly perhaps his, he gradually lost more and more, and Mr. Tennyson gained them. Mr. Tennyson drew to himself, and away from Wordsworth, the poetry-reading public, and the new generations. Even in 1850, when Wordsworth died, this diminution of popularity was visible, and occasioned the remark of Lord Macaulay which I quoted at starting.

The diminution has continued. The influence of Coleridge has waned, and Wordsworth's poetry can no longer draw succour from this ally. The poetry has not, however, wanted eulogists; and it may be said to have brought its eulogists luck, for almost every one who has praised Wordsworth's poetry has praised it well. But the public has remained cold, or, at least, undetermined. Even the abundance of Mr. Palgrave's [4] fine and skilfully chosen specimens of Wordsworth, in the *Golden Treasury*, surprised many readers, and gave offense to not a few. To tenth-rate critics and compilers, for whom any violent shock to the public taste would be a temerity not to be risked, it is still quite permissible to speak of Wordsworth's poetry, not only with ignorance, but with impertinence. On the Continent he is almost unknown.

I cannot think, then, that Wordsworth has, up to this time, at all obtained his deserts. 'Glory,' said M. Renan the other day, 'glory after all is the thing which has the best chance of not being altogether vanity.' [5] Wordsworth was a homely man, and himself would certainly never have thought of talking of glory as that which, after all, has the best chance of not being altogether vanity. Yet we may well allow that few things are less vain than *real* glory. Let us conceive of the whole group of civilised nations as being, for intellectual and spiritual purposes, one great confederation, bound to a joint action and working towards a common result; a confederation whose members have a due knowledge both of the past, out of which

2. Wordsworth's home, at Grasmere, in the Lake District, from 1813–50.

3. Alfred, Lord Tennyson (1809–92), published in 1842 his *Poems* (2-vol. ed.), which went through many editions.

4. Francis Turner Palgrave (1824–97) first published *The Golden Treasury* in 1861.

5. Ernest Renan, 'Discours de Réception à l'Académie Française (3 Avril 1879),' *Discours et Conférences*, 2nd ed., 1887, p.3.

they all proceed, and of one another. This was the ideal of Goethe, and it is an ideal which will impose itself upon the thoughts of our modern societies more and more. Then to be recognised by the verdict of such a confederation as a master, or even as a seriously and eminently worthy workman, in one's own line of intellectual or spiritual activity, is indeed glory; a glory which it would be difficult to rate too highly. For what could be more beneficent, more salutary? The world is forwarded by having its attention fixed on the best things; and here is a tribunal, free from all suspicion of national and provincial partiality, putting a stamp on the best things, and recommending them for general honour and acceptance. A nation, again, is furthered by recognition of its real gifts and successes; it is encouraged to develop them further. And here is an honest verdict, telling us which of our supposed successes are really, in the judgment of the great impartial world, and not in our private judgment only, successes, and which are not.

It is so easy to feel pride and satisfaction in one's own things, so hard to make sure that one is right in feeling it! We have a great empire. But so had Nebuchadnezzar.[6] We extol the 'unrivalled happiness' of our national civilisation.[7] But then comes a candid friend, and remarks that our upper class is materialised, our middle class vulgarised, and our lower class brutalised.[8] We are proud of our painting, our music. But we find that in the judgment of other people our painting is questionable, and our music non-existent. We are proud of our men of science. And here it turns out that the world is with us; we find that in the judgment of other people, too, Newton among the dead, and Mr. Darwin among the living, hold as high a place as they hold in our national opinion.

Finally, we are proud of our poets and poetry. Now poetry is nothing less than the most perfect speech of man, that in which he comes nearest to being able to utter the truth. It is no small thing, therefore, to succeed eminently in poetry. And so much is required for duly estimating success here, that about poetry it is perhaps hardest to arrive at a sure general verdict, and takes longest. Meanwhile, our own conviction of the superiority of our national poets is not decisive, is almost certain to be mingled, as we see constantly in English eulogy of Shakespeare, with much of provincial infatuation. And we know what was the opinion current amongst our neighbours the French — people of taste, acuteness, and quick literary tact — not a hundred years ago, about our great poets. The old *Biographie Universelle*[9] notices the pretension of the English to a place for their poets among the chief poets of the world, and says that this is a pretension which to no one but an Englishman can ever seem admissible. And the scornful, disparaging things said by foreigners about Shakespeare and Milton, and about our national over-estimate of them, have been often quoted, and will be in every one's remembrance.

A great change has taken place, and Shakespeare is now generally recognised, even in France as one of the greatest of poets. Yes, some anti-Gallican[10] cynic will say, the French rank him with Corneille and with Victor Hugo! But let me have the pleasure of quoting a sentence about Shakespeare, which I met with by accident not long ago in the *Correspondant*, a French review which not a dozen English people, I suppose, look at. The

6. Nebuchadnezzar, king of Babylon from about 604–561 B.C. *Cf. Daniel*, i–iv.

7. See the quotation from Roebuck, in Arnold's 'Barbarians, Philistines, Populace,' the passage with note 40.

8. The 'candid friend' is Arnold himself. *Cf.* the tenth-last paragraph of his essay 'Equality.'

9. The *Biographie Universelle* was originally published, in Paris, 1781, as *Dictionnaire Historique*, by F.-X. de Feller.

10. Anti-French.

writer is praising Shakespeare's prose. With Shakespeare, he says, 'Prose comes in whenever the subject, being more familiar, is unsuited to the majestic English iambic.' And he goes on: 'Shakespeare is the king of poetic rhythm and style, as well as the king of the realm of thought; along with his dazzling prose, Shakespeare has succeeded in giving us the most varied, the most harmonious verse which has ever sounded upon the human ear since the verse of the Greeks.' M. Henry Cochin,[11] the writer of this sentence, deserves our gratitude for it; it would not be easy to praise Shakespeare, in a single sentence, more justly. And when a foreigner and a Frenchman writes thus of Shakespeare, and when Goethe says of Milton, in whom there was so much to repel Goethe rather than to attract him, that 'nothing has been ever done so entirely in the sense of the Greeks as *Samson Agonistes*,'[12] and that 'Milton is in very truth a poet whom we must treat with all reverence,' then we understand what constitutes a European recognition of poets and poetry as contradistinguished from a merely national recognition, and that in favour both of Milton and of Shakespeare the judgment of the high court of appeal has finally gone.

I come back to M. Renan's praise of glory, from which I started. Yes, real glory is a most serious thing, glory authenticated by the Amphictyonic Court[13] of final appeal, definite glory. And even for poets and poetry, long and difficult as may be the process of arriving at the right award, the right award comes at last, the definitive glory rests where it is deserved. Every establishment of such a real glory is good and wholesome for mankind at large, good and wholesome for the nation which produced the poet crowned with it. To the poet himself it can seldom do harm; for he, poor man, is in his grave, probably, long before his glory crowns him.

Wordsworth has been in his grave for some thirty years, and certainly his lovers and admirers cannot flatter themselves that this great and steady light of glory as yet shines over him. He is not fully recognised at home; he is not recognised at all abroad. Yet I firmly believe that the poetical performance of Wordsworth is, after that of Shakespeare and Milton, of which all the world now recognises the worth, undoubtedly the most considerable in our language from the Elizabethan age to the present time. Chaucer is anterior; and on other grounds, too, he cannot well be brought into the comparison. But taking the roll of our chief poetical names, besides Shakespeare and Milton, from the age of Elizabeth downwards, and going through it, — Spenser, Dryden, Pope, Gray, Goldsmith, Cowper, Burns, Coleridge, Scott, Campbell, Moore, Byron, Shelley, Keats (I mention those only who are dead), — I think it certain that Wordsworth's name deserves to stand, and will finally stand, above them all. Several of the poets named have gifts and excellences which Wordsworth has not. But taking the performance of each as a whole, I say that Wordsworth seems to me to have left a body of poetical work superior in power, in interest, in the qualities which give enduring freshness, to that which any one of the others has left.

But this is not enough to say. I think it certain, further, that if we take the chief poetical names of the Continent since the death of Molière, and, omitting Goethe, confront the remaining names with that of Wordsworth, the result is the same. Let us take Klopstock, Lessing, Schiller,

11. Henri Cochin, 'Un Poëte Américain: Walt Whitman,' *Le Correspondant*, CIX (Nov. 1877), 652.

12. *Cf.*, for both quotations, *Conversations of Goethe with Eckermann and Soret*, trans. John Oxenford (rev.ed.,1909), p.430 (item for Sun., Jan. 31, 1830).

13. In ancient Greece, a court or council composed of representatives from the members of an amphictyony, or league of states, who were uniting to protect a temple and maintain in it the worship of a deity.

Uhland, Rückert, and Heine [14] for Germany; Filicaja, Alfieri, Manzoni, and Leopardi [15] for Italy; Racine, Boileau, Voltaire, André Chénier, Béranger, Lamartine, Musset, M. Victor Hugo [16] (he has been so long celebrated that although he still lives I may be permitted to name him) for France. Several of these, again, have evidently gifts and excellences to which Wordsworth can make no pretension. But in real poetical achievement it seems to me indubitable that to Wordsworth, here again, belongs the palm. It seems to me that Wordsworth has left behind him a body of poetical work which wears, and will wear, better on the whole than the performance of any one of these personages, so far more brilliant and celebrated, most of them, than the homely poet of Rydal. Wordsworth's performance in poetry is on the whole, in power, in interest, in the qualities which give enduring freshness, superior to theirs.

This is a high claim to make for Wordsworth! But if it is a just claim, if Wordsworth's place among the poets who have appeared in the last two or three centuries is after Shakespeare, Molière, Milton, Goethe, indeed, but before all the rest, then in time Wordsworth will have his due. We shall recognise him in his place, as we recognise Shakespeare and Milton; and not only we ourselves shall recognise him, but he will be recognised by Europe also. Meanwhile, those who recognise him already may do well, perhaps, to ask themselves whether there are not in the case of Wordsworth certain special obstacles which hinder or delay his due recognition by others, and whether these obstacles are not in some measure removable.

The *Excursion* and the *Prelude*, his poems of greatest bulk, are by no means Wordsworth's best work. His best work is in his shorter pieces, and many indeed are there of these which are of first-rate excellence. But in his seven volumes the pieces of high merit are mingled with a mass of pieces very inferior to them; so inferior to them that it seems wonderful how the same poet should have produced both. Shakespeare frequently has lines and passages in a strain quite false, and which are entirely unworthy of him. But one can imagine him smiling if one could meet him in the Elysian Fields [17] and tell him so; smiling and replying that he knew it perfectly well himself, and what did it matter? But with Wordsworth the case is different. Work altogether inferior, work quite uninspired, flat and dull, is produced by him with evident unconsciousness of its defects, and he presents it to us with the same faith and seriousness as his best work. Now a drama or an epic fill the mind, and one does not look beyond them; but in a collection of short pieces the impression made by one piece requires to be continued and sustained by the piece following. In reading Wordsworth the impression made by one of his fine pieces is too often dulled and spoiled by a very inferior piece coming after it.

Wordsworth composed verses during a space of some sixty years; and it is no exaggeration to say that within one single decade of those years, between 1798 and 1808, almost all his really first-rate work was produced. A mass of inferior work remains, work done before and after this golden prime, imbedding the first-rate work and clogging it, obstructing our approach to it, chilling, not unfrequently, the

14. Friedrich G. Klopstock (1724–1803); Gotthold Lessing (1729–81); Johann von Schiller (1759–1805); Johann Uhland (1787–1862); Friedrich Rückert (1788–1866); Heinrich Heine (1797–1856).

15. Vincenzo da Filicaja (1642–1707); Vittoria, Count Alfieri (1749–1803); Alessandro Manzoni (1785–1873); Giacomo, Count Leopardi (1798–1837).

16. Jean Racine (1639–99); Nicholas Boileau-Despréaux (1636–1711); Voltaire (1694–1778); André de Chénier (1762–94); Pierre Jean de Béranger (1780–1857); Alphonse de Lamartine (1790–1869); (Louis Charles) Alfred de Musset (1810–57).

17. In classical mythology, the dwelling-place after death of the souls of the blessed.

high-wrought mood with which we leave it. To be recognised far and wide as a great poet, to be possible and receivable as a classic, Wordsworth needs to be relieved of a great deal of the poetical baggage which now encumbers him. To administer this relief is indispensable, unless he is to continue to be a poet for the few only, — a poet valued far below his real worth by the world.

There is another thing. Wordsworth classified his poems not according to any commonly received plan of arrangement, but according to a scheme of mental physiology. He has poems of the fancy, poems of the imagination, poems of sentiment and reflection, and so on. His categories are ingenious but far-fetched, and the result of his employment of them is unsatisfactory. Poems are separated one from another which possess a kinship of subject or of treatment far more vital and deep than the supposed unity of mental origin, which was Wordsworth's reason for joining them with others.

The tact of the Greeks in matters of this kind was infallible. We may rely upon it that we shall not improve upon the classification adopted by the Greeks for kinds of poetry: that their categories of epic, dramatic, lyric, and so forth, have a natural propriety, and should be adhered to. It may sometimes seem doubtful to which of two categories a poem belongs; whether this or that poem is to be called, for instance, narrative or lyric, lyric or elegiac. But there is to be found in every good poem a strain, a predominant note, which determines the poem as belonging to one of these kinds rather than the other; and here is the best proof of the value of the classification, and of the advantage of adhering to it. Wordsworth's poems will never produce their due effect until they are freed from their present artificial arrangement, and grouped more naturally.

Disengaged from the quantity of inferior work which now obscures them, the best poems of Wordsworth, I hear many people say, would indeed stand out in great beauty, but they would prove to be very few in number, scarcely more than a half a dozen. I maintain, on the other hand, that what strikes me with admiration, what establishes in my opinion Wordsworth's superiority, is the great and ample body of powerful work which remains to him, even after all his inferior work has been cleared away. He gives us so much to rest upon, so much which communicates his spirit and engages ours!

This is of very great importance. If it were a comparison of single pieces, or of three or four pieces, by each poet, I do not say that Wordsworth would stand decisively above Gray, or Burns, or Coleridge, or Keats, or Manzoni, or Heine. It is in his ampler body of powerful work that I find his superiority. His good work itself, his work which counts, is not all of it, of course, of equal value. Some kinds of poetry are in themselves lower kinds than others. The ballad kind is a lower kind: the didactic kind, still more, is a lower kind. Poetry of this latter sort counts, too, sometimes, by its biographical interest partly, not by its poetical interest pure and simple; but then this can only be when the poet producing it has the power and importance of Wordsworth, a power and importance which he assuredly did not establish by such didactic poetry alone. Altogether, it is, I say, by the great body of powerful and significant work which remains to him, after every reduction and deduction has been made, that Wordsworth's superiority is proved.

To exhibit this body of Wordsworth's best work, to clear away obstructions from around it, and to let it speak for itself, is what every lover of Wordsworth should desire. Until this has been done, Wordsworth, whom we, to whom he is dear, all of us know and feel to be so great a poet, has not had a fair chance before the world. When once it has been done, he will make his way best, not by our advocacy of him, but by his own worth and power. We may

safely leave him to make his way thus, we who believe that a superior worth and power in poetry finds in mankind a sense responsive to it and disposed at last to recognise it. Yet at the outset, before he has been duly known and recognised, we may do Wordsworth a service, perhaps, by indicating in what his superior power and worth will be found to consist, and in what it will not.

Long ago, in speaking of Homer,[18] I said that the noble and profound application of ideas to life is the most essential part of poetic greatness. I said that a great poet receives his distinctive character of superiority from his application, under the conditions immutably fixed by the laws of poetic beauty and poetic truth, from his application, I say, to his subject, whatever it may be, of the ideas

'On man, on nature, and on human life,'[19]

which he has acquired for himself. The line quoted is Wordsworth's own; and his superiority arises from his powerful use, in his best pieces, his powerful application to his subject, of ideas 'on man, on nature, and on human life.'

Voltaire, with his signal acuteness, most truly remarked that 'no nation has treated in poetry moral ideas with more energy and depth than the English nation.' And he adds: 'There, it seems to me, is the great merit of the English poets.'[20] Voltaire does not mean, by 'treating in poetry moral ideas,' the composing moral and didactic poems; — that brings us but a very little way in poetry. He means just the same thing as was meant when I spoke above 'of the noble and profound application of ideas to life'; and he means the application of these ideas under the conditions fixed for us by the laws of poetic beauty and poetic truth. If it is said that to call these ideas *moral* ideas is to introduce a strong and injurious limitation, I answer that it is to do nothing of the kind, because moral ideas are really so main a part of human life. The question, *how to live*, is itself a moral idea; and it is the question which most interests every man, and with which, in some way or other, he is perpetually occupied. A large sense is of course to be given to the term *moral*. Whatever bears upon the question, 'how to live,' comes under it.

'Nor love thy life, nor hate; but, what thou liv'st,
Live well; how long or short, permit to heaven.'[21]

In those fine lines Milton utters, as every one at once perceives, a moral idea. Yes, but so too, when Keats consoles the forward-bending lover on the Grecian Urn, the lover arrested and presented in immortal relief by the sculptor's hand before he can kiss, with the line,

'Forever wilt thou love, and she be fair — '[22]

he utters a moral idea. When Shakespeare says, that

'We are such stuff
As dreams are made on, and our little life
Is rounded with a sleep,'[23]

he utters a moral idea.

Voltaire was right in thinking that the energetic and profound treatment of moral ideas, in this large sense, is what distinguishes the English poetry. He sincerely meant praise, not dispraise or hint of limitation; and they err who suppose that poetic limitation is a necessary consequence of the fact, the fact being granted as Voltaire states it. If what distinguishes the greatest poets is their powerful and

18. *Cf. On Translating Homer*, ed. 1896, p.172. It appeared first in his *On Translating Homer: Last Words* (1862).

profound application of ideas to life, which surely no good critic will deny, then to prefix to the term ideas here the term moral makes hardly any difference, because human life itself is in so preponderating a degree moral.

It is important, therefore, to hold fast to this: that poetry is at bottom a criticism of life; [24] that the greatness of a poet lies in his powerful and beautiful application of ideas to life, — to the question: How to live. Morals are often treated in a narrow and false fashion; they are bound up with systems of thought and belief which have had their day; they are fallen into the hands of pedants and professional dealers; they grow tiresome to some of us. We find attraction, at times, even in a poetry of revolt against them; in a poetry which might take for its motto Omar Khayyám's words: 'Let us make up in the tavern for the time which we have wasted in the mosque.' [25] Or we find attractions in a poetry indifferent to them: in a poetry where the contents may be what they will, but where the form is studied and exquisite. We delude ourselves in either case; and the best cure for our delusion is to let our minds rest upon that great and inexhaustible word *life*, until we learn to enter into its meaning. A poetry of revolt against moral ideas is a poetry of revolt against life; a poetry of indifference towards moral ideas is a poetry of indifference towards *life*.

Epictetus [26] had a happy figure for things like the play of the senses, or literary form and finish, or argumentative ingenuity, in comparison with 'the best and master thing' for us, as he called it, the concern, how to live. Some people were afraid of them, he said, or they disliked and undervalued them. Such people were wrong; they were unthankful or cowardly. But the things might also be over-prized, and treated as final when they are not. They bear to life the relation which inns bear to home. 'As if a man, journeying home, and finding a nice inn on the road, and liking it, were to stay forever at the inn! Man, thou hast forgotten thine object; thy journey was not *to* this, but *through* this. "But this inn is taking." And how many other inns, too, are taking, and how many fields and meadows! but as places of passage merely. You have an object, which is this: to get home, to do your duty to your family, friends, and fellow-countrymen, to attain inward freedom, serenity, happiness, contentment. Style takes your fancy, arguing takes your fancy, and you forget your home and want to make your abode with them and to stay with them, on the plea that they are taking. Who denies that they are taking? but as places of passage, as inns. And when I say this, you suppose me to be attacking the care for style, the care for argument. I am not; I attack the resting in them, the not looking to the end which is beyond them.'

Now, when we come across a poet like Théophile Gautier [27] we have a poet who has taken up his abode at an inn, and never got farther. There may be inducements to this or that one of us, at this or that moment, to find delight in him, to cleave to him; but after all, we do not change the truth about him, — we only stay ourselves in his inn along with him. And when we come across a poet like Wordsworth, who sings

> 'Of truth, of grandeur, beauty, love and hope,
> And melancholy fear subdued by faith,
> Of blessed consolations in distress,
> Of moral strength and intellectual power,
> Of joy in widest commonalty spread — ' [28]

24. *Cf.* Arnold's essay on the study of poetry, note 5.

28. *The Recluse*, ll.767–71.

then we have a poet intent on 'the best and master thing,' and who prosecutes his journey home. We say, for brevity's sake, that he deals with *life*, because he deals with that in which life really consists. This is what Voltaire means to praise in the English poets, — this dealing with what is really life. But always it is the mark of the greatest poets that they deal with it; and to say that the English poets are remarkable for dealing with it, is only another way of saying, what is true, that in poetry the English genius has especially shown its power.

Wordsworth deals with it, and his greatness lies in his dealing with it so powerfully. I have named a number of celebrated poets above all of whom he, in my opinion, deserves to be placed. He is to be placed above poets like Voltaire, Dryden, Pope, Lessing, Schiller, because these famous personages, with a thousand gifts and merits, never, or scarcely ever, attain the distinctive accent and utterance of the high and genuine poets —

'Quique pii vates et Phœbo digna locuti,' [29]

at all. Burns, Keats, Heine, not to speak of others in our list, have this accent; — who can doubt it? And at the same time they have treasures of humour, felicity, passion, for which in Wordsworth we shall look in vain. Where, then, is Wordsworth's superiority? It is here; he deals with more of *life* than they do; he deals with *life*, as a whole, more powerfully.

No Wordsworthian will doubt this. Nay, the fervent Wordsworthian will add, as Mr. Leslie Stephen does, that Wordsworth's poetry is precious because his philosophy is sound; that his 'ethical system is as distinctive and capable of exposition as Bishop Butler's'; that his poetry is informed by ideas which 'fall spontaneously into a scientific system of thought.' [30]

But we must be on our guard against the Wordsworthians, if we want to secure for Wordsworth his due rank as a poet. The Wordsworthians are apt to praise him for the wrong things, and to lay far too much stress upon what they call his philosophy. His poetry is the reality, his philosophy — so far, at least, as it may put on the form and habit of 'a scientific system of thought,' and the more that it puts them on — is the illusion. Perhaps we shall one day learn to make this proposition general, and to say: Poetry is the reality, philosophy the illusion. But in Wordsworth's case, at any rate, we cannot do him justice until we dismiss his formal philosophy.

The *Excursion* abounds with philosophy and therefore the *Excursion* is to the Wordsworthian what it never can be to the disinterested lover of poetry, — a satisfactory work. 'Duty exists,' says Wordsworth, in the *Excursion*; and then he proceeds thus —

'. . . Immutably survive,
For our support, the measures and the forms,
Which an abstract Intelligence supplies,
Whose kingdom is, where time and space are not.' [31]

And the Wordsworthian is delighted, and thinks that here is a sweet union of philosophy and poetry. But the disinterested lover of poetry will feel that the lines carry us really not a step farther than the proposition which they would interpret; that they are a tissue of elevated but abstract verbiage, alien to the very nature of poetry.

Or let us come direct to the centre of Wordsworth's philosophy, as 'an ethical system, as distinctive and capable of systematical exposition as Bishop Butler's' —

'. . . One adequate support
For the calamities of mortal life
Exists, one only; — an assured belief
That the procession of our fate, howe'er
Sad or disturbed, is ordered by a Being

29. Virgil, *Aeneid*, VI,662. 'Those pious prophets who speak things worthy of Phoebus.' Phoebus, in Greek mythology, was the god of music and poetry; known also as Apollo.

31. *The Excursion*, IV,73–76.

Of infinite benevolence and power;
Whose everlasting purposes embrace
All accidents, converting them to good.' [32]

That is doctrine such as we hear in church too, religious and philosophic doctrine; and the attached Wordsworthian loves passages of such doctrine, and brings them forward in proof of his poet's excellence. But however true the doctrine may be, it has, as here presented, none of the characters of *poetic* truth, the kind of truth which we require from a poet, and in which Wordsworth is really strong.

Even the 'intimations' of the famous Ode,[33] those corner-stones of the supposed philosophic system of Wordsworth, — the idea of the high instincts and affections coming out in childhood, testifying of a divine home recently left, and fading away as our life proceeds, — this idea, of undeniable beauty as a play of fancy, has itself not the character of poetic truth of the best kind; it has no real solidity. The instinct of delight in Nature and her beauty had no doubt extraordinary strength in Wordsworth himself as a child. But to say that universally this instinct is mighty in childhood, and tends to die away afterwards, is to say what is extremely doubtful. In many people, perhaps with the majority of educated persons, the love of nature is nearly imperceptible at ten years old, but strong and operative at thirty. In general we may say of these high instincts of early childhood, the base of the alleged systematic philosophy of Wordsworth, what Thucydides [34] says of the early achievements of the Greek race: 'It is impossible to speak with certainty of what is so remote; but from all that we can really investigate, I should say that they were no very great things.'

32. *Ibid.*, IV,10–17.
33. Wordsworth's *Ode on the Intimations of Immortality from Recollections of Early Childhood.*
34. Thucydides, *History of the Peloponnesian War*, I,i.

Finally, the 'scientific system of thought' in Wordsworth gives us at least such poetry as this, which the devout Wordsworthian accepts —

'O for the coming of that glorious time
When, prizing knowledge as her noblest wealth
And best protection, this Imperial Realm,
While she exacts allegiance, shall admit
An obligation, on her part, to *teach*
Them who are born to serve her and obey;
Binding herself by statute to secure,
For all the children whom her soil maintains,
The rudiments of letters, and inform
The mind with moral and religious truth.' [35]

Wordsworth calls Voltaire dull,[36] and surely the production of these un-Voltarian lines must have been imposed on him as a judgment! One can hear them being quoted at a Social Science Congress; one can call up the whole scene. A great room in one of our dismal provincial towns; dusty air and jaded afternoon daylight; benches full of men with bald heads and women in spectacles; an orator lifting up his face from a manuscript written within and without to declaim these lines of Wordsworth; and in the soul of any poor child of nature who may have wandered in thither, an unutterable sense of lamentation, and mourning, and woe!

'But turn we,' as Wordsworth says,[37] 'from these bold, bad men,' the haunters of Social Science Congresses. And let us be on our guard, too, against the exhibitors and extollers of a 'scientific system of thought' in Wordsworth's poetry. The poetry will never be seen aright while they thus exhibit it. The cause of its greatness is simple, and may be told quite simply. Wordsworth's poetry is great because of

35. *The Excursion*, IX,293–302.

37. From Wordsworth's 'To the Lady Fleming,' stanza 9.

the extraordinary power with which Wordsworth feels the joy offered to us in nature, the joy offered to us in the simple primary affections and duties; and because of the extraordinary power with which, in case after case, he shows us this joy, and renders it so as to make us share it.

The source of joy from which he thus draws is the truest and most unfailing source of joy accessible to man. It is also accessible universally. Wordsworth brings us word, therefore, according to his own strong and characteristic line, he brings us word

'Of joy in widest commonalty spread.'

Here is an immense advantage for a poet. Wordsworth tells of what all seek, and tells of it at its truest and best source, and yet a source where all may go and draw for it.

Nevertheless, we are not to suppose that everything is precious which Wordsworth, standing even at this perennial and beautiful source, may give us. Wordsworthians are apt to talk as if it must be. They will speak with the same reverence of *The Sailor's Mother*, for example, as of *Lucy Gray*. They do their master harm by such lack of discrimination. *Lucy Gray* is a beautiful success; *The Sailor's Mother* is a failure. To give aright what he wishes to give, to interpret and render successfully, is not always within Wordsworth's own command. It is within no poet's command; here is the part of the Muse, the inspiration, the God, the 'not ourselves.'[38] In Wordsworth's case, the accident, for so it may almost be called, of inspiration, is of peculiar importance. No poet, perhaps, is so evidently filled with a new and sacred energy when the inspiration is upon him; no poet, when it fails him, is so left 'weak as is a breaking wave.'[39] I remember hearing him say that 'Goethe's poetry was not inevitable enough.' The remark is striking and true; no line in Goethe, as Goethe said himself, but its maker knew well how it came there.[40] Wordsworth is right, Goethe's poetry is not inevitable; not inevitable enough. But Wordsworth's poetry, when he is at his best, is inevitable, as inevitable as Nature herself. It might seem that Nature not only gave him the matter for his poem, but wrote his poem for him. He has no style. He was too conversant with Milton not to catch at times his master's manner, and he has fine Miltonic lines; but he has no assured poetic style of his own, like Milton. When he seeks to have a style he falls into ponderosity and pomposity. In the *Excursion* we have his style, as an artistic product of his own creation; and although Jeffrey completely failed to recognise Wordsworth's real greatness, he was yet not wrong in saying of the *Excursion*, as a work of poetic style: 'This will never do.'[41] And yet magical as is that power, which Wordsworth has not, of assured and possessed poetic style, he has something which is an equivalent for it.

Every one who has any sense for these things feels the subtle turn, the heightening, which is given to a poet's verse by his genius for style. We can feel it in the

'After life's fitful fever, he sleeps well'—[42]

of Shakespeare; in the

'. . . though fall'n on evil days,
On evil days though fall'n, and evil tongues'—[43]

of Milton. It is the incomparable charm

38. By 'the "not ourselves"' Arnold refers to God; in his *Literature and Dogma*, Ch.i, the fourth-last paragraph, he had defined God as 'the enduring power, not ourselves, which makes for righteousness.'

42. *Macbeth*, III,ii,23.

43. *Paradise Lost*, VII,25–26.

of Milton's power of poetic style which gives such worth to *Paradise Regained*, and makes a great poem of a work in which Milton's imagination does not soar high. Wordsworth has in constant possession, and at command, no style of this kind; but he had too poetic a nature, and had read the great poets too well, not to catch, as I have already remarked, something of it occasionally. We find it not only in his Miltonic lines; we find it in such a phrase as this, where the manner is his own, not Milton's —

> 'the fierce confederate storm
> Of sorrow barricadoed evermore
> Within the walls of cities;' [44]

although even here, perhaps, the power of style which is undeniable, is more properly that of eloquent prose than the subtle heightening and change wrought by genuine poetic style. It is style, again, and the elevation given by style, which chiefly makes the effectiveness of *Laodameia*. Still the right sort of verse to choose from Wordsworth, if we are to seize his true and most characteristic form of expression, is a line like this from *Michael* —

> 'And never lifted up a single stone.'

There is nothing subtle in it, no heightening, no study of poetic style, strictly so called, at all; yet it is expression of the highest and most truly expressive kind.

Wordsworth owed much to Burns, and a style of perfect plainness, relying for effect solely on the weight and force of that which with entire fidelity it utters, Burns could show him.

> 'The poor inhabitant below
> Was quick to learn and wise to know,
> And keenly felt the friendly glow
> And softer flame;
> But thoughtless follies laid him low
> And stain'd his name.' [45]

Every one will be conscious of a likeness here to Wordsworth; and if Wordsworth did great things with this nobly plain manner, we must remember, what indeed he himself would always have been forward to acknowledge, that Burns used it before him.

Still Wordsworth's use of it has something unique and unmatchable. Nature herself seems, I say, to take the pen out of his hand, and to write for him with her own bare, sheer, penetrating power. This arises from two causes; from the profound sincereness with which Wordsworth feels his subject, and also from the profoundly sincere and natural character of his subject itself. He can and will treat such a subject with nothing but the most plain, first-hand, almost austere naturalness. His expression may often be called bald, as, for instance, in the poem of *Resolution and Independence*; but it is bald as the bare mountain tops are bald, with a baldness which is full of grandeur.

Wherever we meet with the successful balance, in Wordsworth, of profound truth of subject with profound truth of execution, he is unique. His best poems are those which most perfectly exhibit this balance. I have a warm admiration for *Laodameia* and for the great *Ode*; but if I am to tell the very truth, I find *Laodameia* not wholly free from something artificial, and the great *Ode* not wholly free from something declamatory. If I had to pick out poems of a kind most perfectly to show Wordsworth's unique power, I should rather choose poems such as *Michael*, *The Fountain*, *The Highland Reaper*.[46] And poems with the peculiar and unique beauty which distinguishes these, Wordsworth produced in considerable number; besides very many other poems of which the worth, although not so rare as the worth of these, is still exceedingly high.

On the whole, then, as I said at the beginning, not only is Wordsworth eminent

44. *The Recluse*, ll.831–33.

45. From Burns's 'A Bard's Epitaph' (written as his own epitaph).

46. The last title refers to 'The Solitary Reaper.'

by reason of the goodness of his best work, but he is eminent also by reason of the great body of good work which he has left to us. With the ancients I will not compare him. In many respects the ancients are far above us, and yet there is something that we demand which they can never give. Leaving the ancients, let us come to the poets and poetry of Christendom. Dante, Shakespeare, Molière, Milton, Goethe, are altogether larger and more splendid luminaries in the poetical heaven than Wordsworth. But I know not where else, among the moderns, we are to find his superiors.

To disengage the poems which show his power, and to present them to the English-speaking public and to the world, is the object of this volume. I by no means say that it contains all which in Wordsworth's poems is interesting. Except in the case of *Margaret*, a story composed separately from the rest of the *Excursion*, and which belongs to a different part of England, I have not ventured on detaching portions of poems, or on giving any piece otherwise than as Wordsworth himself gave it. But under the conditions imposed by this reserve, the volume contains, I think, everything, or nearly everything, which may best serve him with the majority of lovers of poetry, nothing which may disserve him.

I have spoken lightly of Wordsworthians; and if we are to get Wordsworth recognised by the public and by the world, we must recommend him not in the spirit of a clique, but in the spirit of disinterested lovers of poetry. But I am a Wordsworthian myself. I can read with pleasure and edification *Peter Bell*, and the whole series of *Ecclesiastical Sonnets*, and the address to Mr. Wilkinson's spade, and even the *Thanksgiving Ode*; — everything of Wordsworth, I think, except *Vaudracour and Julia*. It is not for nothing that one has been brought up in the veneration of a man so truly worthy of homage; that one has seen him and heard him, lived in his neighbourhood, and been familiar with his country. No Wordsworthian has a tenderer affection for this pure and sage master than I, or is less really offended by his defects. But Wordsworth is something more than the pure and sage master of a small band of devoted followers, and we ought not to rest satisfied until he is seen to be what he is. He is one of the very chief glories of English Poetry; and by nothing is England so glorious as by her poetry. Let us lay aside every weight which hinders our getting him recognised as this, and let our one study be to bring to pass, as widely as possible and as truly as possible, his own word concerning his poems:[47] 'They will cooperate with the benign tendencies in human nature and society, and will, in their degree, be efficacious in making men wiser, better, and happier.'

Byron

WHEN at last I held in my hand the volume of poems which I had chosen from Wordsworth,[1] and began to turn over its pages, there arose in me almost immediately the desire to see beside it, as a companion volume, a like collection of the best poetry of Byron. Alone amongst our poets of the earlier part of this century, Byron and Wordsworth not only furnish material enough for a volume of this kind, but also, as it seems to me, they both of them gain considerably by being thus exhibited. There are poems of Coleridge and of Keats equal, if not superior, to anything of Byron or Wordsworth; but a dozen pages or two will contain them, and the remaining poetry is of a quality much inferior. Scott never, I think, rises as a poet to the level of Byron and Wordsworth at all. On the other hand, he never falls below his own usual level very far; and by a volume of selections from him, there-

47. *Cf.* Wordsworth's 'Essay, Supplementary to the Preface,' in his *Poems*, ed. 1815, I,375.

1. *Poems of Wordsworth, Chosen and Edited by Matthew Arnold* (1879).

fore, his effectiveness is not increased. As to Shelley there will be more question; and indeed Mr. Stopford Brooke, whose accomplishments, eloquence, and love of poetry we must all recognise and admire, has actually given us Shelley in such a volume.[2] But for my own part I cannot think that Shelley's poetry, except by snatches and fragments, has the value of the good work of Wordsworth and Byron; or that it is possible for even Mr. Stopford Brooke to make up a volume of selections from him which, for real substance, power, and worth, can at all take rank with a like volume from Byron or Wordsworth.

Shelley knew quite well the difference between the achievement of such a poet as Byron and his own. He praises Byron too unreservedly, but he sincerely felt, and he was right in feeling, that Byron was a greater poetical power than himself. As a man, Shelley is at a number of points immeasurably Byron's superior; he is a beautiful and enchanting spirit, whose vision, when we call it up, has far more loveliness, more charm for our soul, than the vision of Byron. But all the personal charm of Shelley cannot hinder us from at last discovering in his poetry the incurable want, in general, of a sound subject-matter, and the incurable fault, in consequence, of unsubstantiality. Those who extol him as the poet of clouds, the poet of sunsets, are only saying that he did not, in fact, lay hold upon the poet's right subject-matter; and in honest truth, with all his charm of soul and spirit, and with all his gift of musical diction and movement, he never, or hardly ever, did. Except, as I have said, for a few short things and single stanzas, his original poetry is less satisfactory than his translations, for in these the subject-matter was found for him. Nay, I doubt whether his delightful Essays and Letters, which deserve to be far more read than they are now, will not resist the wear and tear of time better, and finally come to stand higher, than his poetry.

There remain to be considered Byron and Wordsworth. That Wordsworth affords good material for a volume of selections, and that he gains by having his poetry thus presented, is an old belief of mine which led me lately to make up a volume of poems chosen out of Wordsworth, and to bring it before the public. By its kind reception of the volume, the public seems to show itself a partaker in my belief. Now Byron also supplies plenty of material for a like volume, and he too gains, I think, by being so presented. Mr. Swinburne[3] urges, indeed, that 'Byron, who rarely wrote anything either worthless or faultless, can only be judged or appreciated in the mass; the greatest of his works was his whole work taken together.' It is quite true that Byron rarely wrote anything either worthless or faultless; it is quite true also that in the appreciation of Byron's power a sense of the amount and variety of his work, defective though much of his work is, enters justly into our estimate. But although there may be little in Byron's poetry which can be pronounced either worthless or faultless, there are portions of it which are far higher in worth and far more free from fault than others. And although, again, the abundance and variety of his production is undoubtedly a proof of his power, yet I question whether by reading everything which he gives us we are so likely to acquire an admiring sense even of his variety and abundance, as by reading what he gives us at his happier moments. Varied and abundant he amply proves himself even by this taken alone. Receive him absolutely without omission or compression, follow his whole outpouring stanza by stanza and line by line from the very

2. Rev. Stopford A. Brooke (1832–1916), clergyman and man of letters. *Poems from Shelley, Selected and Arranged by Stopford A. Brooke* appeared in 1880.

3. Algernon C. Swinburne, 'Byron,' in *Works*, Bonchurch ed., 1926, XV,120.

commencement to the very end, and he is capable of being tiresome.

Byron has told us himself [4] that the *Giaour* 'is but a string of passages.' He has made full confession of his own negligence. 'No one,' says he, 'has done more through negligence to corrupt the language.' This accusation brought by himself against his poems is not just; but when he goes on to say of them, that 'their faults, whatever they may be, are those of negligence and not of labour,' he says what is perfectly true. '*Lara*,' he declares, 'I wrote while undressing after coming home from balls and masquerades, in the year of revelry, 1814. The *Bride* was written in four, the *Corsair* in ten days.' He calls this 'a humiliating confession, as it proves my own want of judgment in publishing, and the public's in reading, things which cannot have stamina for permanence.' Again he does his poems injustice; the producer of such poems could not but publish them, the public could not but read them. Nor could Byron have produced his work in any other fashion; his poetic work could not have first grown and matured in his own mind, and then come forth as an organic whole; Byron had not enough of the artist in him for this, nor enough of self-command. He wrote, as he truly tells us, to relieve himself, and he went on writing because he found the relief become indispensable. But it was inevitable that works so produced should be, in general, 'a string of passages,' poured out, as he describes them, with rapidity and excitement, and with new passages constantly suggesting themselves, and added while his work was going through the press. It is evident that we have here neither deliberate scientific construction, nor yet the instinctive artistic creation of poetic wholes; and that to take passages from work produced as Byron's was is a very different thing from taking passages out of the *Oedipus* or the *Tempest*, and deprives the poetry far less of its advantage.

Nay, it gives advantage to the poetry, instead of depriving it of any. Byron, I said, has not a great artist's profound and patient skill in combining an action or in developing a character, a skill which we must watch and follow if we are to do justice to it. But he has a wonderful power of vividly conceiving a single incident, a single situation; of throwing himself upon it, grasping it as if it were real and he saw and felt it, and of making us see and feel it too. The *Giaour* is, as he truly called it, 'a string of passages,' not a work moving by a deep internal law of development to a necessary end; and our total impression from it cannot but receive from this, its inherent defect, a certain dimness and indistinctness. But the incidents of the journey and death of Hassan, in that poem, are conceived and presented with a vividness not to be surpassed; and our impression from them is correspondingly clear and powerful. In *Lara*, again, there is no adequate development either of the character of the chief personage or of the action of the poem; our total impression from the work is a confused one. Yet such an incident as the disposal of the slain Ezzelin's body passes before our eyes as if we actually saw it. And in the same way as these bursts of incident, bursts of sentiment also, living and vigorous, often occur in the midst of poems which must be admitted to be but weakly-conceived and loosely-combined wholes. Byron cannot but be a gainer by having attention concentrated upon what is vivid, powerful, effective in his work, and withdrawn from what is not so.

Byron, I say, cannot but be a gainer by this, just as Wordsworth is a gainer by a like proceeding. I esteem Wordsworth's poetry so highly, and the world, in my opinion, has done it such scant justice, that I could not rest satisfied until I had ful-

4. See his letter to Moore, in Byron's *Works*, ed. R.H.Stoddard (Boston, 1900), XIII,156. For his statements about 'Lara,' etc., see John Nichol, *Byron* (1880), p.75.

filled, on Wordsworth's behalf, a long-cherished desire; — had disengaged, to the best of my power, his good work from the inferior work joined with it, and had placed before the public the body of his good work by itself. To the poetry of Byron the world has ardently paid homage; full justice from his contemporaries, perhaps even more than justice, his torrent of poetry received. His poetry was admired, adored, 'with all its imperfections on its head,' — in spite of negligence, in spite of diffuseness, in spite of repetitions, in spite of whatever faults it possessed. His name is still great and brilliant. Nevertheless the hour of irresistible vogue has passed away for him; even for Byron it could not but pass away. The time has come for him, as it comes for all poets, when he must take his real and permanent place, no longer depending upon the vogue of his own day and upon the enthusiasm of his contemporaries. Whatever we may think of him, we shall not be subjugated by him as they were; for, as he cannot be for us what he was for them, we cannot admire him so hotly and indiscriminately as they. His faults of negligence, of diffuseness, of repetition, his faults of whatever kind, we shall abundantly feel and unsparingly criticise; the mere interval of time between us and him makes disillusion of this kind inevitable. But how then will Byron stand, if we relieve him too, so far as we can, of the encumbrance of his inferior and weakest work, and if we bring before us his best and strongest work in one body together? That is the question which I, who can even remember the latter years of Byron's vogue, and have myself felt the expiring wave of that mighty influence, but who certainly also regard him, and have long regarded him, without illusion, cannot but ask myself, cannot but seek to answer. The present volume is an attempt to provide adequate data for answering it.

Byron has been over-praised, no doubt. 'Byron is one of our French superstitions,' says M. Edmond Scherer;[5] but where has Byron not been a superstition? He pays now the penalty of this exaggerated worship. 'Alone among the English poets his contemporaries, Byron,' said M. Taine,[6] '*atteint à la cime*, — gets to the top of the poetic mountain.' But the idol that M. Taine had thus adored M. Scherer is almost for burning. 'In Byron,' he declares, 'there is a remarkable inability ever to lift himself into the region of real poetic art, — art impersonal and disinterested, — at all. He has fecundity, eloquence, wit, but even these qualities themselves are confined within somewhat narrow limits. He has treated hardly any subject but one, — himself; now the man, in Byron, is of a nature even less sincere than the poet. This beautiful and blighted being is at bottom a coxcomb. He posed all his life long.'

Our poet could not well meet with more severe and unsympathetic criticism. However the praise often given to Byron has been so exaggerated as to provoke, perhaps, a reaction in which he is unduly disparaged. 'As various in composition as Shakespeare himself, Lord Byron has embraced,' says Sir Walter Scott,[7] 'every topic of human life, and sounded every string on the divine harp, from its slightest to its most powerful and heart-astounding tones.' It is not surprising that some one with a cool head should retaliate, on such provocation as this, by saying: 'He has treated hardly any subject but one, *himself*.' 'In the very grand and tremendous drama of *Cain*,' says Scott, 'Lord Byron has certainly matched Milton on his own ground.' And Lord Byron has done all this, Scott adds, 'while managing

5. Edmond Scherer, *Études critiques de littérature* (Paris, 1876). His unfavorable essay on Byron in this book is a criticism of Taine's praise of Byron.

6. Hippolyte Taine, *History of English Literature*, Bk.IV.Ch.i; *cf.* the New York, 1872, ed., II, 269.

7. Sir Walter Scott, 'Byron,' in *Miscellaneous Works* (1880), IV,348.

his pen with the careless and negligent ease of a man of quality.' Alas, 'managing his pen with the careless and negligent ease of a man of quality,' Byron wrote in his *Cain* —

'Souls that dare look the Omnipotent tyrant in
His everlasting face, and tell him that
His evil is not good;' [8]

or he wrote —

'. . . And *thou* would'st go on aspiring
To the great double Mysteries! the *two Principles*!' [9]

One has only to repeat to oneself a line from *Paradise Lost* in order to feel the difference.

Sainte-Beuve,[10] speaking of that exquisite master of language, the Italian poet Leopardi,[11] remarks how often we see the alliance, singular though it may at first sight appear, of the poetical genius with the genius for scholarship and philology. Dante and Milton are instances which will occur to every one's mind. Byron is so negligent in his poetical style, he is often, to say the truth, so slovenly, slipshod, and infelicitous, he is so little haunted by the true artist's fine passion for the correct use and consummate management of words, that he may be described as having for this artistic gift the insensibility of the barbarian; — which is perhaps only another and a less flattering way of saying with Scott, that he 'manages his pen with the careless and negligent ease of a man of quality.' Just of a piece with the rhythm of

'Dare you await the event of a few minutes'
Deliberation?' [12]

or of

'All shall be void —
Destroy'd!' [13]

is the diction of

'Which now is painful to these eyes,
Which have not seen the sun to rise;' [14]

or of

'. . . there let him lay!' [15]

or of the famous passage beginning

'He who hath bent him o'er the dead;' [16]

with those trailing relatives, that crying grammatical solecism, that inextricable anacoluthon! To class the work of the author of such things with the work of the authors of such verse as

'In the dark backward and abysm of time' — [17]

'Presenting Thebes, or Pelops' line,
Or the tale of Troy divine' — [18]

is ridiculous. Shakespeare and Milton, with their secret of consummate felicity in diction and movement, are of another and an altogether higher order from Byron, nay, for that matter, from Wordsworth also; from the author of such verse as

'Sol hath dropt into his harbour' — [19]

or (if Mr. Ruskin pleases) as

'Parching summer hath no warrant' — [20]

8. *Cain*, I,i. Byron wrote: 'Souls who dare.'
9. *Cain*, II,ii. The italics are in the original.

as from the author of

'All shall be void —
Destroy'd!'

With a poetical gift and a poetical performance of the very highest order, the slovenliness and tunelessness of much of Byron's production, the pompousness and ponderousness of much of Wordsworth's are incompatible. Let us admit this to the full.

Moreover, while we are hearkening to M. Scherer, and going along with him in his fault-finding, let us admit, too, that the man in Byron is in many respects as unsatisfactory as the poet. And, putting aside all direct moral criticism of him, — with which we need not concern ourselves here, — we shall find that he is unsatisfactory in the same way. Some of Byron's most crying faults as a man, — his vulgarity, his affectation, — are really akin to the faults of commonness, of want of art, in his workmanship as a poet. The ideal nature for the poet and artist is that of the finely touched and finely gifted man, the εὐφυής [21] of the Greeks; now, Byron's nature was in substance not that of the εὐφυής at all, but rather, as I have said, of the barbarian. The want of fine perception which made it possible for him to formulate either the comparison between himself and Rousseau, or his reason for getting Lord Delawarr excused from a 'licking' at Harrow,[22] is exactly what made possible for him also his terrible dealings in, *An ye wool; I have redde thee; Sunburn me; Oons, and it is excellent well.*[23]

It is exactly, again, what made possible for him his precious dictum that Pope is a Greek temple,[24] and a string of other criticisms of the like force; it is exactly, in fine, what deteriorated the quality of his poetic production. If we think of a good representative of that finely touched and exquisitely gifted nature which is the ideal nature for the poet and artist, — if we think of Raphael, for instance, who truly is εὐφυής just as Byron is not, — we shall bring into clearer light the connection in Byron between the faults of the man and the faults of the poet. With Raphael's character Byron's sins of vulgarity and false criticism would have been impossible, just as with Raphael's art Byron's sins of common and bad workmanship.

Yes, all this is true, but it is not the whole truth about Byron nevertheless; very far from it. The severe criticism of M. Scherer by no means gives us the whole truth about Byron, and we have not yet got it in what has been added to that criticism here. The negative part of the true criticism of him we perhaps have; the positive part, by far the more important, we have not. Byron's admirers appeal eagerly to foreign testimonies in his favour. Some of these testimonies do not much move me; but one testimony there is among them which will always carry, with me at any rate, very great weight, — the testimony of Goethe.[25] Goethe's sayings about Byron were uttered, it must however be remembered, at the height of Byron's vogue, when that puissant and splendid personality was exercising its full power of attraction. In Goethe's own household there was an atmosphere of glowing Byron-worship; his daughter-in-law was a passionate admirer of Byron, nay, she enjoyed and prized his poetry,

as did Tieck [26] and so many others in Germany at that time, much above the poetry of Goethe himself. Instead of being irritated and rendered jealous by this, a nature like Goethe's was inevitably led by it to heighten, not lower, the note of his praise. The Time-Spirit, or *Zeit-Geist*, he would himself have said, was working just then for Byron. This working of the *Zeit-Geist* in his favour was an advantage added to Byron's other advantages, an advantage of which he had a right to get the benefit. This is what Goethe would have thought and said to himself; and so he would have been led even to heighten somewhat his estimate of Byron, and to accentuate the emphasis of praise. Goethe speaking of Byron at that moment was not and could not be quite the same cool critic as Goethe speaking of Dante, or Molière, or Milton. This, I say, we ought to remember in reading Goethe's judgments on Byron and his poetry. Still, if we are careful to bear this in mind, and if we quote Goethe's praise correctly, — which is not always done by those who in this country quote it, — and if we add to it that great and due qualification added to it by Goethe himself, — which so far as I have seen has never yet been done by his quoters in this country at all, — then we shall have a judgment on Byron, which comes, I think, very near to the truth, and which may well command our adherence.

In his judicious and interesting Life of Byron, Professor Nichol quotes Goethe as saying that Byron 'is undoubtedly to be regarded as the greatest genius of our century.' [27] What Goethe did really say was 'the greatest *talent*,' not 'the greatest *genius*.' The difference is important, because, while talent gives the notion of power in a man's performance, genius gives rather the notion of felicity and perfection in it; and this divine gift of consummate felicity by no means, as we have seen, belongs to Byron and to his poetry. Goethe said that Byron 'must unquestionably be regarded as the greatest talent of the century.' [28] He said of him moreover: 'The English may think of Byron what they please, but it is certain that they can point to no poet who is his like. He is different from all the rest, and in the main greater.' Here, again, Professor Nichol translates: 'They can show no (living) poet who is to be compared to him;' — inserting the word *living*, I suppose, to prevent its being thought that Goethe would have ranked Byron, as a poet, above Shakespeare and Milton. But Goethe did not use, or, I think, mean to imply, any limitation such as is added by Professor Nichol. Goethe said simply, and he meant to say '*no* poet.' Only the words which follow [29] ought not, I think, to be rendered, 'who is to be compared to him,' that is to say, '*who is his equal as a poet*.' They mean rather, 'who may properly be compared with him,' '*who is his parallel*.' And when Goethe said that Byron was 'in the main greater' than all the rest of the English poets, he was not so much thinking of the strict rank, as poetry, of Byron's production; he was thinking of that wonderful personality of Byron which so enters into his poetry, and which Goethe called 'a personality such, for its eminence, as has never been yet, and such as is not likely to come again.' He was thinking of that 'daring, dash, and grandiosity,' [30] of Byron, which are indeed so splendid; and which were, so Goethe maintained, of a character to do good, because 'everything great is formative,' and what is thus formative does us good.

26. Ludwig Tieck (1773–1853), German romantic novelist.

27. John Nichol, *Byron* (1880), p.205.

28. 'Der ohne Frage als das grösste Talent des Jahrhunderts anzusehen ist.' [Arnold's note.] *Cf.* J.P.Eckermann, *Gespräche mit Goethe*, July 5, 1827.

29. 'Der ihm zu vergleichen wäre.' [Arnold's note.] *Cf.* Eckermann, *op.cit.*, March 26, 1826.

30. 'Byron's Kühnheit, Keckheit und Grandiosität, ist das nicht alles bildend? — Alles Grosse bildet, sobald wir es gewahr werden.' [Arnold's note.] *Cf.* Eckermann, *op.cit.*, Dec. 16, 1828.

The faults which went with this greatness, and which impaired Byron's poetical work, Goethe saw very well. He saw the constant state of warfare and combat, the 'negative and polemical working,' which makes Byron's poetry a poetry in which we can so little find rest; he saw the *Hang zum Unbegrenzten*, the straining after the unlimited, which made it impossible for Byron to produce poetic wholes such as the *Tempest* or *Lear*; he saw the *zu viel Empirie*,[31] the promiscuous adoption of all the matter offered to the poet by life, just as it was offered, without thought or patience for the mysterious transmutation to be operated on this matter by poetic form. But in a sentence which I cannot, as I say, remember to have yet seen quoted in any English criticism of Byron, Goethe lays his finger on the cause of all these defects in Byron, and on his real source of weakness both as a man and as a poet. 'The moment he reflects, he is a child,' says Goethe; — '*sobald er reflectirt ist er ein Kind*.'[32]

Now if we take the two parts of Goethe's criticism of Byron, the favourable and the unfavourable, and put them together, we shall have, I think, the truth. On the one hand, a splendid and puissant personality — a personality 'in eminence such as has never been yet, and is not likely to come again'; of which the like, therefore, is not to be found among the poets of our nation, by which Byron 'is different from all the rest, and in the main greater.' Byron is, moreover, 'the greatest talent of our century.' On the other hand, this splendid personality and unmatched talent, this unique Byron, 'is quite too much in the dark about himself;'[33] nay, 'the moment he begins to reflect, he is a child.' There we have, I think, Byron complete; and in estimating him and ranking him we have to strike a balance between the gain which accrues to his poetry, as compared with the productions of other poets, from his superiority, and the loss which accrues to it from his defects.

A balance of this kind has to be struck in the case of all poets except the few supreme masters in whom a profound criticism of life exhibits itself in indissoluble connection with the laws of poetic truth and beauty. I have seen it said that I allege poetry to have for its characteristic this: that it is a criticism of life; and that I make it to be thereby distinguished from prose, which is something else. So far from it, that when I first used this expression, *a criticism of life*, now many years ago, it was to literature in general that I applied it, and not to poetry in especial. 'The end and aim of all literature,' I said, 'is, if one considers it attentively, nothing but that: *a criticism of life*.'[34] And so it surely is; the main end and aim of all our utterance, whether in prose or in verse, is surely a criticism of life. We are not brought much on our way, I admit, towards an adequate definition of poetry as distinguished from prose by that truth; still a truth it is, and poetry can never prosper if it is forgotten. In poetry, however, the criticism of life has to be made conformably to the laws of poetic truth and poetic beauty. Truth and seriousness of substance and matter, felicity and perfection of diction and manner, as these are exhibited in the best poets, are what constitute a criticism of life made in conformity with the laws of poetic truth and poetic beauty; and it is by knowing and feeling the work of those poets, that we learn to recognise the fulfilment and non-fulfilment of such conditions.

The moment, however, that we leave the small band of the very best poets, the true classics, and deal with poets of the next rank, we shall find that perfect truth and seriousness of matter, in close alliance with perfect truth and felicity of manner,

31. 'The *too much of empiricism*.' Arnold explains the phrase, in the remainder of the sentence.

32. Eckermann, *op.cit.*, Jan. 18, 1825.

34. *Cf.* the essay on the study of poetry, note 5.

is the rule no longer. We have now to take what we can get, to forego something here, to admit compensation for it there; to strike a balance, and to see how our poets stand in respect to one another when that balance has been struck. Let us observe how this is so.

We will take three poets, among the most considerable of our century: Leopardi, Byron, Wordsworth. Giacomo Leopardi was ten years younger than Byron, and he died thirteen years after him; both of them, therefore, died young — Byron at the age of thirty-six, Leopardi at the age of thirty-nine. Both of them were of noble birth, both of them suffered from physical defect, both of them were in revolt against the established facts and beliefs of their age; but here the likeness between them ends. The stricken poet of Recanati had no country, for an Italy in his day did not exist; he had no audience, no celebrity. The volume of his poems, published in the very year of Byron's death, hardly sold, I suppose, its tens, while the volumes of Byron's poetry were selling their tens of thousands. And yet Leopardi has the very qualities which we have found wanting to Byron; he has the sense for form and style, the passion for just expression, the sure and firm touch of the true artist. Nay, more, he has a grave fulness of knowledge, an insight into the real bearings of the questions which as a sceptical poet he raises, a power of seizing the real point, a lucidity, with which the author of *Cain* has nothing to compare. I can hardly imagine Leopardi reading the

'. . . And *thou* would'st go on aspiring
To the great double Mysteries! the *two Principles*!'

or following Byron in his theological controversy with Dr. Kennedy,[35] without having his features overspread by a calm and fine smile, and remarking of his brilliant contemporary, as Goethe did, that 'the moment he begins to reflect, he is a child.' But indeed whoever wishes to feel the full superiority of Leopardi over Byron in philosophic thought, and in the expression of it, has only to read one paragraph of one poem, the paragraph of *La Ginestra,* beginning

'Sovente in queste piagge,'[36]

and ending

'Non so se il riso o la pietà prevale.'[37]

In like manner, Leopardi is at many points the poetic superior of Wordsworth too. He has a far wider culture than Wordsworth, more mental lucidity, more freedom from illusions as to the real character of the established fact and of reigning conventions; above all, this Italian, with his pure and sure touch, with his fineness of perception, is far more of the artist. Such a piece of pompous dulness as

'O for the coming of that glorious time,'[38]

and all the rest of it, or such lumbering verse as Mr. Ruskin's enemy,

'Parching summer hath no warrant'—

would have been as impossible to Leopardi as to Dante. Where, then, is Wordsworth's superiority? for the worth of what he has given us in poetry I hold to be greater, on the whole, than the worth of what Leopardi has given us. It is in Wordsworth's sound and profound sense

'Of joy in widest commonalty spread;'[39]

whereas Leopardi remains with his thoughts ever fixed upon the *essenza insanabile,*[40] upon the *acerbo, indegno mi-*

35. For Byron's conversations with Dr. Kennedy, a Scotch physician whom he met in Greece shortly before his death, see John Nichol, *Byron* (1880), pp.184–86.

36. 'Often upon these slopes.'

37. 'I do not know whether laughter or pity prevails.'

38. Wordsworth, *The Excursion,* IX,293.

39. *The Recluse,* l.771.

40. 'Unhealthy essence.'

stero delle cose.[41] It is in the power with which Wordsworth feels the resources of joy offered to us in nature, offered to us in the primary human affections and duties, and in the power with which, in his moments of inspiration, he renders this joy, and makes us, too, feel it; a force greater than himself seeming to lift him and to prompt his tongue, so that he speaks in a style far above any style of which he has the constant command, and with a truth far beyond any philosophic truth of which he has the conscious and assured possession. Neither Leopardi nor Wordsworth are of the same order with the great poets who made such verse as

Τλητὸν γὰρ Μοῖραι θυμὸν θέσαν ἀνθρώ-

'In la sua volontade e nostra pace';[43]

or as

'. . . Men must endure
Their going hence, even as their coming hither;
Ripeness is all.'[44]

But as compared with Leopardi, Wordsworth, though at many points less lucid, though far less a master of style, far less of an artist, gains so much by his criticism of life being, in certain matters of profound importance, healthful and true, whereas Leopardi's pessimism is not, that the value of Wordsworth's poetry, on the whole, stands higher for us than that of Leopardi's, as it stands higher for us, I think, than that of any modern poetry except Goethe's.

Byron's poetic value is also greater, on the whole, than Leopardi's; and his superiority turns in the same way upon the surpassing worth of something which he had and was, after all deduction has been made for his shortcomings. We talk of Byron's *personality,* 'a personality in eminence such as has never been yet, and is not likely to come again'; and we say that by this personality Byron is 'different from all the rest of English poets, and in the main greater.' But can we not be a little more circumstantial, and name that in which the wonderful power of this personality consisted? We can; with the instinct of a poet Mr. Swinburne has seized upon it and named it for us. The power of Byron's personality lies in 'the splendid and imperishable excellence which covers all his offences and outweighs all his defects: *the excellence of sincerity and strength.*'[45]

Byron found our nation, after its long and victorious struggle with revolutionary France, fixed in a system of established facts and dominant ideas which revolted him. The mental bondage of the most powerful part of our nation, of its strong middle-class, to a narrow and false system of this kind, is what we call British Philistinism. That bondage is unbroken to this hour, but in Byron's time it was even far more deep and dark than it is now. Byron was an aristocrat, and it is not difficult for an aristocrat to look on the prejudices and habits of the British Philistine with scepticism and disdain. Plenty of young men of his own class Byron met at Almack's or at Lady Jersey's,[46] who regarded the established facts and reigning beliefs of the England of that day with as little reverence as he did. But these men, disbelievers in British Philistinism in private, entered English public life, the most conventional in the world, and at once they saluted with respect the habits and ideas of British Philistinism as if they were a part of the

order of creation, and as if in public no sane man would think of warring against them. With Byron it was different. What he called the *cant* of the great middle part of the English nation, what we call its Philistinism, revolted him; but the cant of his own class, deferring to this Philistinism and profiting by it, while they disbelieved in it, revolted him even more. 'Come what may,' are his own words, 'I will never flatter the million's canting in any shape.' [47] His class in general, on the other hand, shrugged their shoulders at this cant, laughed at it, pandered to it, and ruled by it. The falsehood, cynicism, insolence, misgovernment, oppression, with their consequent unfailing crop of human misery, which were produced by this state of things, roused Byron to irreconcilable revolt and battle. They made him indignant, they infuriated him; they were so strong, so defiant, so maleficent, — and yet he felt that they were doomed. 'You have seen every trampler down in turn,' he comforts himself with saying, 'from Buonaparte to the simplest individuals.' [48] The old order, as after 1815 [49] it stood victorious, with its ignorance and misery below, its cant, selfishness, and cynicism above, was at home and abroad equally hateful to him. 'I have simplified my politics,' he writes, 'into an utter detestation of all existing governments.' And again: 'Give me a republic. The king-times are fast finishing; there will be blood shed like water and tears like mist, but the peoples will conquer in the end. I shall not live to see it, but I foresee it.' [50]

Byron himself gave the preference, he tells us, to politicians and doers, far above writers and singers. But the politics of his own day and of his own class, — even of the Liberals of his own class, — were impossible for him. Nature had not formed him for a Liberal peer, proper to move the Address in the House of Lords, to pay compliments to the energy and self-reliance of British middle-class Liberalism, and to adapt his politics to suit it. Unfitted for such politics, he threw himself upon poetry as his organ; and in poetry his topics were not Queen Mab, and the Witch of Atlas, and the Sensitive Plant [51] — they were the upholders of the old order, George the Third and Lord Castlereagh and the Duke of Wellington and Southey,[52] and they were the canters and tramplers of the great world, and they were his enemies and himself.

Such was Byron's personality, by which 'he is different from all the rest of English poets, and in the main greater.' But he posed all his life, says M. Scherer.[53] Let us distinguish. There is the Byron who posed, there is the Byron with his affectations and silliness, the Byron whose weakness Lady Blessington,[54] with a woman's acuteness, so admirably seized: 'His great defect is flippancy and a total want of self-possession.' But when this theatrical and easily criticised personage betook himself to poetry, and when he had fairly warmed to his work, then he became another man; then the theatrical personage passed away; then a higher power took possession of him and filled him; then at last came forth into light that true and puissant personality, with its direct strokes, its ever-welling force, its satire, its energy, and its agony. This is the real Byron; whoever stops at the theatrical preludings does not know him. And this

real Byron may well be superior to the stricken Leopardi, he may well be declared 'different from all the rest of English poets, and in the main greater,' in so far as it is true of him, as M. Taine well says, that 'all other souls, in comparison with his, seem inert';[55] in so far as it is true of him that with superb, exhaustless energy, he maintained, as Professor Nichol well says,[56] 'the struggle that keeps alive, if it does not save, the soul;' in so far, finally, as he deserves (and he does deserve) the noble praise of him which I have already quoted from Mr. Swinburne; the praise for 'the splendid and imperishable excellence which covers all his offences and outweighs all his defects: *the excellence of sincerity and strength.*'

True, as a man, Byron could not manage himself, could not guide his ways aright, but was all astray. True, he has no light, cannot lead us from the past to the future; 'the moment he reflects, he is a child.' The way out of the false state of things which enraged him he did not see, — the slow and laborious way upward; he had not the patience, knowledge, self-discipline, virtue, requisite for seeing it. True, also, as a poet, he has no fine and exact sense for word and structure and rhythm; he has not the artist's nature and gifts. Yet a personality of Byron's force counts for so much in life, and a rhetorician of Byron's force counts for so much in literature! But it would be most unjust to label Byron, as M. Scherer is disposed to label him, as a rhetorician only. Along with his astounding power and passion he had a strong and deep sense for what is beautiful in nature, and for what is beautiful in human action and suffering. When he warms to his work, when he is inspired, Nature herself seems to take the pen from him as she took it from Wordsworth, and to write for him as she wrote for Wordsworth, though in a different fashion, with her own penetrating simplicity. Goethe has well observed of Byron, that when he is at his happiest his representation of things is as easy and real as if he were improvising. It is so; and his verse then exhibits quite another and a higher quality from the rhetorical quality, — admirable as this also in its own kind of merit is, — of such verse as

'Minions of splendour shrinking from distress,'[57]

and of so much more verse of Byron's of that stamp. Nature, I say, takes the pen for him; and then, assured master of a true poetic style though he is not, any more than Wordsworth, yet as from Wordsworth at his best there will come such verse as

'Will no one tell me what she sings?'[58]

so from Byron, too, at his best, there will come such verse as

'He heard it, but he heeded not; his eyes
Were with his heart, and that was far away.'[59]

Of verse of this high quality, Byron has much; of verse of a quality lower than this, of a quality rather rhetorical than truly poetic, yet still of extraordinary power and merit, he has still more. To separate, from the mass of poetry which Byron poured forth, all this higher portion, so superior to the mass, and still so considerable in quantity and to present it in one body by itself, is to do a service, I believe, to Byron's reputation, and to the poetic glory of our country.

Such a service I have in the present volume attempted to perform. To Byron, after all the tributes which have been paid to him, here is yet one tribute more—

'Among thy mightier offerings here are mine!'

55. Taine, *History of English Literature*, Bk.IV, Ch.ii.

56. John Nichol, *Byron* (1880), p.211.

57. Byron, *Childe Harold's Pilgrimage*, II, stanza 26.

58. Wordsworth, 'The Solitary Reaper,' l.17.

59. Byron, *Childe Harold's Pilgrimage*, IV, stanza 141.

not a tribute of boundless homage certainly, but sincere; a tribute which consists not in covering the poet with eloquent eulogy of our own, but in letting him, at his best and greatest, speak for himself. Surely the critic who does most for his author is the critic who gains readers for his author himself, not for any lucubrations on his author; — gains more readers for him, and enables those readers to read him with more admiration.

And in spite of his prodigious vogue, Byron has never yet, perhaps, had the serious admiration which he deserves. Society read him and talked about him, as it reads and talks about *Endymion* [60] today; and with the same sort of result. It looked in Byron's glass as it looks in Lord Beaconsfield's, and sees, or fancies that it sees, its own face there; and then it goes its way, and straightway forgets what manner of man it saw. Even of his passionate admirers, how many never got beyond the theatrical Byron, from whom they caught the fashion of deranging their hair, or of knotting their neck-handkerchief, or of leaving their shirt-collar unbuttoned; how few profoundly felt his vital influence, the influence of his splendid and imperishable excellence of sincerity and strength!

His own aristocratic class, whose cynical make-believe drove him to fury; the great middle-class, on whose impregnable Philistinism he shattered himself to pieces, — how little have either of these felt Byron's vital influence! As the inevitable break-up of the old order comes, as the English middle-class slowly awakens from its intellectual sleep of two centuries, as our actual present world, to which this sleep has condemned us, shows itself more clearly, — our world of an aristocracy materialised and null, a middle-class purblind and hideous, a lower class crude and brutal, — we shall turn our eyes again, and to more purpose, upon this passionate and dauntless soldier of a forlorn hope, who, ignorant of the future and unconsoled by its promises, nevertheless waged against the conservation of the old impossible world so fiery battle; waged it till he fell, — waged it with such splendid and imperishable excellence of sincerity and strength.

Wordsworth's value is of another kind. Wordsworth has an insight into permanent sources of joy and consolation for mankind which Byron has not; his poetry gives us more which we may rest upon than Byron's, — more which we can rest upon now, and which men may rest upon always. I place Wordsworth's poetry, therefore, above Byron's on the whole, although in some points he was greatly Byron's inferior, and although Byron's poetry will always, probably, find more readers than Wordsworth's, and will give pleasure more easily. But these two, Wordsworth and Byron, stand, it seems to me, first and pre-eminent in actual performance, a glorious pair, among the English poets of this century. Keats had probably, indeed, a more consummate poetic gift than either of them; but he died having produced too little and being as yet too immature to rival them. I for my part can never even think of equalling with them any other of their contemporaries; — either Coleridge, poet and philosopher wrecked in a mist of opium; or Shelley, beautiful and ineffectual angel, beating in the void his luminous wings in vain. Wordsworth and Byron stand out by themselves. When the year 1900 is turned, and our nation comes to recount her poetic glories in the century which has then just ended, the first names with her will be these.

60. *Endymion* (1880), the last novel by Benjamin Disraeli, Earl of Beaconsfield (1804–81).

Civilisation in the United States

Two or three years ago I spoke in this Review on the subject of America; [1] and

1. 'A Word More about America,' *Nineteenth Century*, XVII (Feb. 1885), 219–36.

after considering the institutions and the social condition of the people of the United States, I said that what, in the jargon of the present day, is called 'the political and social problem,' does seem to be solved there with remarkable success. I pointed out the contrast which in this respect the United States offer to our own country, a contrast, in several ways, much to their advantage. But I added that the solution of the political and social problem, as it is called, ought not so to absorb us as to make us forget the human problem; and that it remained to ask how the human problem is solved in the United States. It happened that Sir Lepel Griffin, a very acute and distinguished Indian official, had just then been travelling in the United States, and had published his opinion,[2] from what he saw of the life there, that there is no country calling itself civilised where one would not rather live than in America, except Russia. Certainly then, I said, one cannot rest satisfied, when one finds such a judgment passed on the United States as this, with admiring their institutions and their solid social condition, their freedom and equality, their power, energy, and wealth. One must, further, go on to examine what is done there towards solving the human problem, and must see what Sir Lepel Griffin's objection comes to.

And this examination I promised that I would one day make. However, it is so delicate a matter to discuss how a sensitive nation solves the human problem, that I found myself inclined to follow the example of the Greek moralist Theophrastus,[3] who waited, before composing his famous Characters, until he was ninety-nine years old. I thought I had perhaps better wait until I was about that age, before I discussed the success of the Americans in solving the human problem. But ninety-nine is a great age; it is probable that I may never reach it, or even come near it. So I have determined, finally, to face the question without any such long delay, and thus I come to offer to the readers of this Review the remarks following. With the same frankness with which I discussed here the solution of the political and social problem by the people of the United States, I shall discuss their success in solving the human problem.

Perhaps it is not likely that any one will now remember what I said three years ago here about the success of the Americans in solving the political and social problem. I will sum it up in the briefest possible manner. I said that the United States had constituted themselves in a modern age; that their institutions complied well with the form and pressure of those circumstances and conditions which a modern age presents. Quite apart from all question how much of the merit for this may be due to the wisdom and virtue of the American people, and how much to their good fortune, it is undeniable that their institutions do work well and happily. The play of their institutions suggests, I said, the image of a man in a suit of clothes which fits him to perfection, leaving all his movements unimpeded and easy; a suit of clothes loose where it ought to be loose, and sitting close where its sitting close is an advantage; a suit of clothes able, moreover, to adapt itself naturally to the wearer's growth, and to admit of all enlargements as they successively arise.

So much as to the solution, by the United States, of the political problem. As to the social problem, I observed that the people of the United States were a community singularly free from the distinction of classes, singularly homogeneous; that the division between rich and poor was consequently less profound there than in countries where the distinction of classes accentuates that division. I added that I believed there was exaggeration in the reports of their administrative and judicial corruption; and altogether, I con-

2. Sir Lepel Griffin, *The Great Republic* (1884).
3. Theophrastus (d.287 B.C.), Greek philosopher and essayist.

cluded, the United States, politically and socially, are a country living prosperously in a natural modern condition, and conscious of living prosperously in such a condition. And being in this healthy case, and having this healthy consciousness, the community there uses its understanding with the soundness of health; it in general, as to its own political and social concerns, sees clear and thinks straight. Comparing the United States with ourselves, I said that while they are in this natural and healthy condition, we on the contrary are so little homogeneous, we are living with a system of classes so intense, with institutions and a society so little modern, so unnaturally complicated, that the whole action of our minds is hampered and falsened by it; we are in consequence wanting in lucidity, we do not see clear or think straight, and the Americans have here much the advantage of us.

Yet we find an acute and experienced Englishman saying that there is no country, calling itself civilised, where one would not rather live than in the United States, except Russia! The civilisation of the United States must somehow, if an able man can think thus, have shortcomings, in spite of the country's success and prosperity. What is civilisation? It is the humanisation of man in society, the satisfaction for him, in society, of the true law of human nature.[4] Man's study, says Plato,[5] is to discover the right answer to the question *how to live?* our aim, he says, is very and true life. We are more or less civilised as we come more or less near to this aim, in that social state which the pursuit of our aim essentially demands. But several elements or powers, as I have often insisted, go to build up a complete human life. There is the power of conduct, the power of intellect and knowledge, the power of beauty, the power of social life and manners; we have the instincts responding to them all, requiring them all.[6] And we are perfectly civilised only when all these instincts in our nature, all these elements in our civilisation, have been adequately recognised and satisfied. But of course this adequate recognition and satisfaction of all the elements in question is impossible; some of them are recognised more than others, some of them more in one community, some in another; and the satisfactions found are more or less worthy.

And meanwhile, people use the term *civilisation* in the loosest possible way, for the most part attaching to it, however, in their own mind some meaning connected with their own preferences and experiences. The most common meaning thus attached to it is perhaps that of a satisfaction, not of all the main demands of human nature, but of the demand for the comforts and conveniences of life, and of this demand as made by the sort of person who uses the term.

Now we should always attend to the common and prevalent use of an important term. Probably Sir Lepel Griffin had this notion of the comforts and conveniences of life much in his thoughts when he reproached American civilisation with its shortcomings. For men of his kind, and for all that large number of men, so prominent in this country and who make their voice so much heard, men who have been at the public schools and universities, men of the professional and official class, men who do the most part of our literature and our journalism, America is not a comfortable place of abode. A man of this sort has in England everything in his favour; society appears organised expressly for his advantage. A Rothschild[7] or a Vanderbilt can buy his way anywhere, and can have what comforts and luxuries he likes whether in America or England. But it is in England that an income of from three

7. Nathan Rothschild (1777–1836), German Jewish financier in London, founder of a great fortune.

or four to fourteen or fifteen hundred[8] a year does so much for its possessor, enables him to live with so many of the conveniences of far richer people. For his benefit, his benefit above all, clubs are organised and hansom cabs ply; service is abundant, porters stand waiting at the railway stations. In America all luxuries are dear except oysters and ice; service is in general scarce and bad; a club is a most expensive luxury; the cab-rates are prohibitive — more than half of the people who in England would use cabs must in America use the horse-cars, the tram. The charges of tailors and mercers[9] are about a third higher than they are with us. I mention only a few striking points as to which there can be no dispute, and in which a man of Sir Lepel Griffin's class would feel the great difference between America and England in the conveniences at his command. There are a hundred other points one might mention, where he would feel the same thing. When a man is passing judgment on a country's civilisation, points of this kind crowd to his memory, and determine his sentence.

On the other hand, for that immense class of people, the great bulk of the community, the class of people whose income is less than three or four hundred a year, things in America are favourable. It is easier for them there than in the Old World to rise and to make their fortune; but I am not now speaking of that. Even without making their fortune, even with their income below three or four hundred a year, things are favourable to them in America, society seems organised there for their benefit. To begin with, the humbler kind of work is better paid in America than with us, the higher kind worse. The official, for instance, gets less, his office-keeper gets more. The public ways are abominably cut up by rails and blocked with horse-cars; but the inconvenience is for those who use private carriages and cabs, the convenience is for the bulk of the community who but for the horse-cars would have to walk. The ordinary railway cars are not delightful, but they are cheap, and they are better furnished and in winter are warmer than third-class carriages in England. Luxuries are, as I have said, very dear — above all, European luxuries; but a working man's clothing is nearly as cheap as in England, and plain food is on the whole cheaper. Even luxuries of a certain kind are within a labouring man's easy reach. I have mentioned ice, I will mention fruit also. The abundance and cheapness of fruit is a great boon to people of small incomes in America. Do not believe the Americans when they extol their peaches as equal to any in the world, or better than any in the world; they are not to be compared to peaches grown under glass. Do not believe that the American Newtown pippins appear in the New York and Boston fruit-shops as they appear in those of London and Liverpool; or that the Americans have any pear to give you like the Marie Louise. But what labourer, or artisan, or small clerk, ever gets hot-house peaches, or Newtown pippins, or Marie Louise pears? Not such good pears, apples, and peaches as those, but pears, apples, and peaches by no means to be despised, such people and their families do in America get in plenty.

Well, now, what would a philosopher or a philanthropist say in this case? which would he say was the more civilised condition — that of the country where the balance of advantage, as to the comforts and conveniences of life, is greatly in favour of the people with incomes below three hundred a year, or that of the country where it is greatly in favour of those with incomes above that sum?

Many people will be ready to give an answer to that question without the smallest hesitation. They will say that they are, and that all of us ought to be, for the greatest happiness of the greatest number. However, the question is not one which I feel

8. That is, hundred *pounds*.
9. Dealers in textile fabrics.

bound now to discuss and answer. Of course, if happiness and civilisation consist in being plentifully supplied with the comforts and conveniences of life, the question presents little difficulty. But I believe neither that happiness consists, merely or mainly, in being plentifully supplied with the comforts and conveniences of life, nor that civilisation consists in being so supplied; therefore I leave the question unanswered.

I prefer to seek for some other and better tests by which to try the civilisation of the United States. I have often insisted on the need of more equality in our own country, and on the mischiefs caused by inequality over here. In the United States there is not our intense division of classes, our inequality; there is great equality. Let me mention two points in the system of social life and manners over there in which this equality seems to me to have done good. The first is a mere point of form, but it has its significance. Everyone knows it is the established habit with us in England, if we write to people supposed to belong to the class of gentlemen, of addressing them by the title of *Esquire*, while we keep *Mr.* for people not supposed to belong to that class. If we think of it, could one easily find a habit more ridiculous, more offensive? The title of *Esquire*, like most of our titles, comes out of the great frippery shop of the Middle Age; it is alien to the sound taste and manner of antiquity, when men said *Pericles* and *Camillus*.[10] But unlike other titles, it is applied or withheld quite arbitrarily. Surely, where a man has no specific title proper to him, the one plain title of *Master* or *Mr.* is enough, and we need not be encumbered with a second title of *Esquire*, now quite unmeaning, to draw an invidious and impossible line of distinction between those who are gentlemen and those who are not; as if we actually wished to provide a source of embarrassment for the sender of the letter, and of mortification for the receiver of it.

The French, those great authorities in social life and manners, find *Mr.* enough, and the Americans are more and more, I am glad to say, following the French example. I only hope they will persevere, and not be seduced by *Esquire* being 'so English, you know.' And I do hope, moreover, that we shall one day take the same course and drop our absurd *Esquire*.

The other point goes deeper. Much may be said against the voices and intonation of American women. But almost every one acknowledges that there is a charm in American women — a charm which you find in almost all of them, wherever you go. It is the charm of a natural manner, a manner not self-conscious, artificial, and constrained. It may not be a beautiful manner always, but it is almost always a natural manner, a free and happy manner; and this gives pleasure. Here we have, undoubtedly, a note of civilisation, and an evidence, at the same time, of the good effect of equality upon social life and manners. I have often heard it observed that a perfectly natural manner is as rare among Englishwomen of the middle classes as it is general among American women of like condition with them. And so far as the observation is true, the reason of its truth no doubt is, that the Englishwoman is living in presence of an upper class, as it is called — in presence, that is, of a class of women recognised as being the right thing in style and manner, and whom she imagines criticising *her* style and manner, finding this or that to be amiss with it, this or that to be vulgar. Hence self-consciousness and constraint in her. The American woman lives in presence of no such class; there may be circles trying to pass themselves off as such a class, giving themselves airs as such, but they command no recognition, no authority. The American woman in general is perfectly uncon-

10. Camillus (d.364 B.C.), famous Roman dictator. *The point is that in antiquity no title of address was employed.*

cerned about their opinion, is herself, enjoys her existence, and has consequently a manner happy and natural. It is her great charm; and it is moreover, as I have said, a real note of civilisation, and one which has to be reckoned to the credit of American life, and of its equality.

But we must get nearer still to the heart of the question raised as to the character and worth of American civilisation. I have said how much the word civilisation really means — the humanisation of man in society; his making progress there towards his true and full humanity. Partial and material achievement is always being put forward as civilisation. We hear a nation called highly civilised by reason of its industry, commerce, and wealth, or by reason of its liberty or equality, or by reason of its numerous churches, schools, libraries, and newspapers. But there is something in human nature, some instinct of growth, some law of perfection, which rebels against this narrow account of the matter. And perhaps what human nature demands in civilisation, over and above all those obvious things which first occur to our thoughts — what human nature, I say, demands in civilisation, if it is to stand as a high and satisfying civilisation, is best described by the word *interesting*. Here is the extraordinary charm of the old Greek civilisation — that it is so *interesting*. Do not tell me only, says human nature, of the magnitude of your industry and commerce; of the beneficence of your institutions, your freedom, your equality; of the great and growing number of your churches and schools, libraries and newspapers; tell me also if your civilisation — which is the grand name you give to all this development — tell me if your civilisation is *interesting*.

An American friend of mine, Professor Norton, has lately published the early letters of Carlyle.[11] If any one wants a good antidote to the unpleasant effect left by Mr. Froude's *Life of Carlyle*,[12] let him read those letters. Not only of Carlyle will those letters make him think kindly, but they will also fill him with admiring esteem for the qualities, character, and family life, as there delineated, of the Scottish peasant. Well, the Carlyle family were numerous, poor, and struggling. Thomas Carlyle, the eldest son, a young man in wretched health and worse spirits, was fighting his way in Edinburgh. One of his younger brothers talked of emigrating. 'The very best thing he could do!' we should all say. Carlyle dissuades him. 'You shall never,' he writes, 'you shall never seriously meditate crossing the great Salt Pool to plant yourself in the Yankeeland. That is a miserable fate for any one, at best; never dream of it. Could you banish yourself from all that is interesting to your mind, forget the history, the glorious institutions, the noble principles of old Scotland — that you might eat a better dinner, perhaps?'

There is our word launched — the word *interesting*. I am not saying that Carlyle's advice was good, or that young men should not emigrate. I do but take note, in the word *interesting*, of a requirement, a cry of aspiration, a cry not sounding in the imaginative Carlyle's own breast only, but sure of a response in his brother's breast also, and in human nature.

Amiel, that contemplative Swiss whose journals[13] the world has been reading lately, tells us that 'the human heart is, as it were, haunted by confused reminiscences of an age of gold; or rather, by aspirations towards a harmony of things which every day reality denies to us.' He says that the splendour and refinement of

11. *Early Letters of Thomas Carlyle*, ed. Charles Eliot Norton (1886); for the quotation, see p.204.

12. James Anthony Froude (1818–94) published his biography of Carlyle in 1882–84. It has been widely attacked for its handling of the Carlyle family life.

13. *Cf.* Henri-Frédéric Amiel, *Fragments d'un journal intime*, 11th ed., Geneva, 1911, II, 77–78.

high life is an attempt by the rich and cultivated classes to realise this ideal, and is 'a form of poetry.' And the interest which this attempt awakens in the classes which are not rich or cultivated, their indestructible interest in the pageant and fairy tale, as to them it appears, of the life in castles and palaces, the life of the great, bears witness to a like imaginative strain in them also, a strain tending after the elevated and the beautiful. In short, what Goethe describes as 'was uns alle bändigt, *das Gemeine* — that which holds us all in bondage, the common and ignoble,'[14] is, notwithstanding its admitted prevalence, contrary to a deep-seated instinct of human nature and repelled by it. Of civilisation, which is to humanise us in society, we demand, before we will consent to be satisfied with it — we demand, however much else it may give us, that it shall give us, too, the *interesting*.

Now, the great sources of the *interesting* are distinction and beauty: that which is elevated, and that which is beautiful. Let us take the beautiful first, and consider how far it is present in American civilisation. Evidently this is that civilisation's weak side. There is little to nourish and delight the sense of beauty there. In the long-settled States east of the Alleghanies the landscape in general is not interesting, the climate harsh and in extremes. The Americans are restless, eager to better themselves and to make fortunes; the inhabitant does not strike his roots lovingly down into the soil, as in rural England. In the valley of the Connecticut you will find farm after farm which the Yankee settler has abandoned in order to go West, leaving the farm to some new Irish immigrant. The charm of beauty which comes from ancientness and permanence of rural life the country could not yet have in a high degree, but it has it in an even less degree than might be expected. Then the Americans come originally, for the most part, from that great class in English society amongst whom the sense for conduct and business is much more strongly developed than the sense for beauty. If we in England were without the cathedrals, parish churches, and castles of the catholic and feudal age, and without the houses of the Elizabethan age, but had only the towns and buildings which the rise of our middle class has created in the modern age, we should be in much the same case as the Americans. We should be living with much the same absence of training for the sense of beauty through the eye, from the aspect of outward things. The American cities have hardly anything to please a trained or a natural sense for beauty. They have buildings which cost a great deal of money and produce a certain effect — buildings, shall I say, such as our Midland Station at St. Pancras: but nothing such as Somerset House or Whitehall. One architect of genius they had — Richardson.[15] I had the pleasure to know him; he is dead, alas! Much of his work was injured by the conditions under which he was obliged to execute it; I can recall but one building, and that of no great importance, where he seems to have had his own way, to be fully himself; but that is indeed excellent. In general, where the Americans succeed best in their architecture — in that art so indicative and educative of a people's sense for beauty — is in the fashion of their villa-cottages in wood. These are often original and at the same time very pleasing, but they are pretty and coquettish, not beautiful. Of the really beautiful in the other arts, and in literature, very little has been produced there as yet. I asked a German portrait-painter, whom I found painting and prospering in America, how he liked the country? 'How *can* an artist like it?' was his answer. The American artists live chiefly in Europe; all Americans of cultivation and wealth visit Europe more and more

14. *Cf.* Arnold's essay on the literary influence of academies, note 12.

15. Henry Hobson Richardson (1838–86), American architect.

constantly. The mere nomenclature of the country acts upon a cultivated person like the incessant pricking of pins. What people in whom the sense for beauty and fitness was quick could have invented, or could tolerate, the hideous names ending in *ville*, the Briggsvilles, Higginsvilles, Jacksonvilles, rife from Maine to Florida; the jumble of unnatural and inappropriate names everywhere? On the line from Albany to Buffalo you have, in one part, half the names in the classical dictionary to designate the stations; it is said that the folly is due to a surveyor who, when the country was laid out, happened to possess a classical dictionary; but a people with any artist-sense would have put down that surveyor. The Americans meekly retain his names; and indeed his strange Marcellus or Syracuse is perhaps not much worse than their congenital Briggsville.

So much as to beauty, and as to the provision, in the United States, for the sense of beauty. As to distinction, and the interest which human nature seeks from enjoying the effect made upon it by what is elevated, the case is much the same. There is very little to create such an effect, very much to thwart it. Goethe says somewhere that 'the thrill of awe is the best thing humanity has': —

'Das Schaudern ist der Menschheit bestes Theil.' [16]

But, if there be a discipline in which the Americans are wanting, it is the discipline of awe and respect. An austere and intense religion imposed on their Puritan founders the discipline of respect, and so provided for them the thrill of awe; but this religion is dying out. The Americans have produced plenty of men strong, shrewd, upright, able, effective; very few who are highly distinguished. Alexander Hamilton is indeed a man of rare distinction; Washington, though he has not the high mental distinction of Pericles or Caesar, has true distinction of style and character. But these men belong to the pre-American age. Lincoln's recent American biographers declare that Washington is but an Englishman, an English officer; the typical American, they say, is Abraham Lincoln. Now Lincoln is shrewd, sagacious, humorous, honest, courageous, firm; he is a man with qualities deserving the most sincere esteem and praise, but he has not distinction.

In truth everything is against distinction in America, and against the sense of elevation to be gained through admiring and respecting it. The glorification of 'the average man,' who is quite a religion with statesmen and publicists there, is against it. The addiction to 'the funny man,' who is a national misfortune there, is against it. Above all, the newspapers are against it.

It is often said that every nation has the government it deserves. What is much more certain is that every nation has the newspapers it deserves. The newspaper is the direct product of the want felt; the supply answers closely and inevitably to the demand. I suppose no one knows what the American newspapers are, who has not been obliged, for some length of time, to read either those newspapers or none at all. Powerful and valuable contributions occur scattered about in them. But on the whole, and taking the total impression and effect made by them, I should say that if one were searching for the best means to efface and kill in a whole nation the discipline of respect, the feeling for what is elevated, one could not do better than take the American newspapers. The absence of truth and soberness in them, the poverty in serious interest, the personality and sensation-mongering, are beyond belief. There are a few newspapers which are in whole, or in part, exceptions. The *New York Nation*, a weekly paper, may be paralleled with the *Saturday Review* as it was in its old and good days; but the *New York Nation* is conducted by a foreigner, and has an extremely small

16. Goethe, *Faust*, l.6272 (Pt.II,Act I).

sale. In general, the daily papers are such that when one returns home one is moved to admiration and thankfulness not only at the great London papers, like the *Times* or the *Standard*, but quite as much at the great provincial newspapers too — papers like the *Leeds Mercury* and the *Yorkshire Post* in the north of England, like the *Scotsman* and the *Glasgow Herald* in Scotland.

The Americans used to say to me that what they valued was news, and that this their newspapers gave them. I at last made the reply: 'Yes, news for the servants' hall!' I remember that a New York newspaper, one of the first I saw after landing in the country, had a long account, with the prominence we should give to the illness of the German Emperor or the arrest of the Lord Mayor of Dublin, of a young woman who had married a man who was a bag of bones, as we say, and who used to exhibit himself as a skeleton; of her growing horror in living with this man, and finally of her death. All this in the most minute detail, and described with all the writer's powers of rhetoric. This has always remained by me as a specimen of what the Americans call news.

You must have lived amongst their newspapers to know what they are. If I relate some of my own experiences, it is because these will give a clear enough notion of what the newspapers over there are, and one remembers more definitely what has happened to oneself. Soon after arriving in Boston, I opened a Boston newspaper and came upon a column headed: 'Tickings.' By *tickings* we are to understand news conveyed through the tickings of the telegraph. The first 'ticking' was: 'Matthew Arnold is sixty-two years old' — an age, I must just say in passing, which I had not then reached. The second 'ticking' was: 'Wales says, Mary is a darling'; the meaning being, that the Prince of Wales expressed great admiration for Miss Mary Anderson. This was at Boston, the American Athens. I proceeded to Chicago. An evening paper was given me soon after I arrived; I opened it, and found under a large-type heading, '*We have seen him arrive*,' the following picture of myself: 'He has harsh features, supercilious manners, parts his hair down the middle, wears a single eyeglass and ill-fitting clothes.' Notwithstanding this rather unfavourable introduction I was most kindly and hospitably received at Chicago. It happened that I had a letter for Mr. Medill, an elderly gentleman of Scotch descent, the editor of the chief newspaper in those parts, the *Chicago Tribune*. I called on him, and we conversed amicably together. Some time afterwards, when I had gone back to England, a New York paper published a criticism of Chicago and its people, purporting to have been contributed by me to the *Pall Mall Gazette* over here. It was a poor hoax, but many people were taken in and were excusably angry, Mr. Medill of the *Chicago Tribune* amongst the number. A friend telegraphed to me to know if I had written the criticism. I, of course, instantly telegraphed back that I had not written a syllable of it. Then a Chicago paper is sent to me; and what I have the pleasure of reading, as the result of my contradiction, is this: 'Arnold denies; Mr. Medill [my old friend] refuses to accept Arnold's disclaimer; says Arnold is a cur.'

I once declared that in England the born lover of ideas and of light could not but feel that the sky over his head is of brass and iron.[17] And so I say that, in America, he who craves for the *interesting* in civilisation, he who requires from what surrounds him satisfaction for his sense of beauty, his sense for elevation, will feel the sky over his head to be of brass and iron. The human problem, then, is as yet solved in the United States most imperfectly; a great void exists in the civilisation over there: a want of what is

17. In 'Heinrich Heine,' the eleventh paragraph.

elevated and beautiful, of what is interesting.

The want is grave; it was probably, though he does not exactly bring it out, influencing Sir Lepel Griffin's feelings when he said that America is one of the last countries in which one would like to live. The want is such as to make any educated man feel that many countries, much less free and prosperous than the United States, are yet more truly civilised; have more which is interesting, have more to say to the soul; are countries, therefore, in which one would rather live.

The want is graver because it is so little recognised by the mass of Americans; nay, so loudly denied by them. If the community over there perceived the want and regretted it, sought for the right ways of remedying it, and resolved that remedied it should be; if they said, or even if a number of leading spirits amongst them said: 'Yes, we see what is wanting to our civilisation, we see that the average man is a danger, we see that our newspapers are a scandal, that bondage to the common and ignoble is our snare; but under the circumstances our civilisation could not well have been expected to begin differently. What you see are *beginnings*, they are crude, they are too predominantly material, they omit much, leave much to be desired — but they could not have been otherwise, they have been inevitable, and we will rise above them;' if the Americans frankly said this, one would have not a word to bring against it. One would *then* insist on no shortcoming, one would accept their admission that the human problem is at present quite insufficiently solved by them, and would press the matter no further. One would congratulate them on having solved the political problem and the social problem so successfully, and only remark, as I have said already, that in seeing clear and thinking straight on *our* political and social questions, we have great need to follow the example they set us on theirs.

But now the Americans seem, in certain matters, to have agreed, as a people, to deceive themselves, to persuade themselves that they have what they have not, to cover the defects in their civilisation by boasting, to fancy that they well and truly solve, not only the political and social problem, but the human problem too. One would say that they do really hope to find in tall talk and inflated sentiment a substitute for that real sense of elevation which human nature, as I have said, instinctively craves — and a substitute which may do as well as the genuine article. The thrill of awe, which Goethe pronounces to be the best thing humanity has, they would fain create by proclaiming themselves at the top of their voices to be 'the greatest nation upon earth,' by assuring one another, in the language of their national historian, that 'American democracy proceeds in its ascent as uniformly and majestically as the laws of being, and is as certain as the decrees of eternity.' [18]

Or, again, far from admitting that their newspapers are a scandal, they assure one another that their newspaper press is one of their most signal distinctions. Far from admitting that in literature they have as yet produced little that is important, they play at treating American literature as if it were a great independent power; they reform the spelling of the English language by the insight of their average man. For every English writer they have an American writer to match. And him good Americans read; the Western States are at this moment being nourished and formed, we hear, on the novels of a native author called Roe, instead of those of Scott and Dickens.[19] Far from admitting that their average man is a danger, and that his predominance has brought about a plentiful

18. See George Bancroft, *History of the United States*, ed. New York, 1882, I,2–3,VI,474. Similar sentiments appear in Charles Bancroft's American history, *The Footprints of Time*. . . . (Burlington, Iowa, 1875), p.8.

19. Edward Payson Roe (1838–88), very popular American sentimental novelist.

lack of refinement, distinction, and beauty, they declare in the words of my friend Colonel Higginson, a prominent critic at Boston, that 'Nature said, some years since: "Thus far the English is my best race, but we have had Englishmen enough; put in one drop more of nervous fluid and make the American." And with that drop a new range of promise opened on the human race, and a lighter, finer, more highly organised type of mankind was born.'[20] Far from admitting that the American accent, as the pressure of their climate and of their average man has made it, is a thing to be striven against, they assure one another that it is the right accent, the standard English speech of the future. It reminds me of a thing in Smollett's dinner-party of authors. Seated by 'the philosopher who is writing a most orthodox refutation of Bolingbroke, but in the meantime has just been presented to the Grand Jury as a public nuisance for having blasphemed in an alehouse on the Lord's day' — seated by this philosopher is 'the Scotchman who is giving lectures on the pronunciation of the English language.'[21]

The worst of it is, that all this tall talk and self-glorification meets with hardly any rebuke from sane criticism over there. I will mention, in regard to this, a thing which struck me a good deal. A Scotchman who has made a great fortune at Pittsburg, a kind friend of mine, one of the most hospitable and generous of men, Mr. Andrew Carnegie, published a year or two ago a book called *Triumphant Democracy*, a most splendid picture of American progress.[22] The book is full of valuable information, but religious people thought that it insisted too much on mere material progress, and did not enough set forth America's deficiencies and dangers.

20. *Cf.* Thomas Wentworth Higginson, *Atlantic Essays* (Boston, 1871), pp.52–53.

21. Tobias Smollett, *The Expedition of Humphry Clinker*, ed. 1894, pp.131–32.

22. Andrew Carnegie, *Triumphant Democracy* (New York, 1886).

And a friendly clergyman in Massachusetts, telling me how he regretted this, and how apt the Americans are to shut their eyes to their own dangers, put into my hands a volume written by a leading minister among the Congregationalists, a very prominent man, which he said supplied a good antidote to my friend Mr. Carnegie's book. The volume is entitled *Our Country*.[23] I read it through. The author finds in evangelical Protestantism, as the orthodox Protestant sects present it, the grand remedy for the deficiencies and dangers of America. On this I offer no criticism; what struck me, and that on which I wish to lay stress, is, the writer's entire failure to perceive that such self-glorification and self-deception as I have been mentioning is one of America's dangers, or even that it *is* self-deception at all. He himself shares in all the self-deception of the average man among his countrymen, he flatters it. In the very points where a serious critic would find the Americans most wanting he finds them superior; only they require to have a good dose of evangelical Protestantism still added. 'Ours is the elect nation,' preaches this reformer of American faults — 'ours is the elect nation for the age to come. We are the chosen people.' Already, says he, we are taller and heavier than other men, longer lived than other men, richer and more energetic than other men, above all, 'of finer nervous organisation' than other men. Yes, this people, who endure to have the American newspaper for their daily reading, and to have their habitation in Briggsville, Jacksonville, and Marcellus — this people is of finer, more delicate nervous organisation

23. The book is apparently *Our Country: or, The American Parlor Keepsake*, ed. the Rev.Wm. H.Ryder (Boston, 1854). Among its articles is one by Ryder, entitled 'Protestantism in America,' passages in which may have been in Arnold's mind as he made the 'quotations' below; see pp.162–65. See also passages by other writers, pp.211,231. The entire book does praise evangelical Protestantism very strongly.

than other nations! It is Colonel Higginson's 'drop more of nervous fluid,' over again. This 'drop' plays a stupendous part in the American rhapsody of self-praise. Undoubtedly the Americans are highly nervous, both the men and the women. A great Paris physician says that he notes a distinct new form of nervous disease, produced in American women by worry about servants. But this nervousness, developed in the race out there by worry, overwork, want of exercise, injudicious diet, and a most trying climate — this morbid nervousness our friends ticket as the fine susceptibility of genius, and cite it as a proof of their distinction, of their superior capacity for civilisation! 'The roots of civilisation are the nerves,' says our Congregationalist instructor again; 'and, other things being equal, the finest nervous organisation will produce the highest civilisation. Now, the finest nervous organisation is ours.'

The new West promises to beat in the game of brag even the stout champions I have been quoting. Those belong to the old Eastern States; and the other day there was sent to me a California newspaper which calls all the Easterners 'the unhappy denizens of a forbidding clime,' and adds: 'The time will surely come when all roads will lead to California. Here will be the home of art, science, literature, and profound knowledge.'

Common sense criticism, I repeat, of all this hollow stuff there is in America next to none. There are plenty of cultivated, judicious, delightful individuals there. They are our hope and America's hope; it is through their means that improvement must come. They know perfectly well how false and hollow the boastful stuff talked is; but they let the storm of self-laudation rage, and say nothing. For political opponents and their doings there are in America hard words to be heard in abundance; for the real faults in American civilisation, and for the foolish boasting which prolongs them, there is hardly a word of regret or blame, at least in public. Even in private, many of the most cultivated Americans shrink from the subject, are irritable and thin-skinned when it is canvassed. Public treatment of it, in a cool and sane spirit of criticism, there is none. In vain I might plead that I had set a good example of frankness, in confessing over here, that, so far from solving our problems successfully, we in England find ourselves with an upper class materialised, a middle class vulgarised, and a lower class brutalised.[24] But it seems that nothing will embolden an American critic to say firmly and aloud to his countrymen and to his newspapers, that in America they do not solve the human problem successfully, and that with their present methods they never can. Consequently the masses of the American people do really come to believe all they hear about their finer nervous organisation, and the rightness of the American accent, and the importance of American literature; that is to say, they see things not as they are, but as they would like them to be; they deceive themselves totally. And by such self-deception they shut against themselves the door to improvement, and do their best to make the reign of *das Gemeine* eternal. In what concerns the solving of the political and social problem they see clear and think straight; in what concerns the higher civilisation they live in a fool's paradise. This it is which makes a famous French critic speak of 'the hard unintelligence of the people of the United States' — *la dure inintelligence des Américains du Nord* — of the very people who in general pass for being specially intelligent — and so, within certain limits, they are. But they have been so plied with nonsense and boasting that outside those limits, and where it is a question of things in which their civilisation is weak, they seem, very many of them, as if in such things they had no power of perception whatever, no idea of a proper

24. *Cf.* Arnold's essay on Wordsworth, note 8.

scale, no sense of the difference between good and bad. And at this rate they can never, after solving the political and social problem with success, go on to solve happily the human problem too, and thus at last to make their civilisation full and interesting.

To sum up, then. What really dissatisfies in American civilisation is the want of the *interesting*, a want due chiefly to the want of those two great elements of the interesting, which are elevation and beauty. And the want of these elements is increased and prolonged by the Americans being assured that they have them when they have them not. And it seems to me that what the Americans now most urgently require, is not so much a vast additional development of orthodox Protestantism, but rather a steady exhibition of cool and sane criticism by their men of light and leading over there. And perhaps the very first step of such men should be to insist on having for America, and to create if need be, better newspapers.

To us, too, the future of the United States is of incalculable importance. Already we feel their influence much, and we shall feel it more. We have a good deal to learn from them; we shall find in them, also, many things to beware of, many points in which it is to be hoped our democracy may not be like theirs. As our country becomes more democratic, the malady here may no longer be that we have an upper class materialised, a middle class vulgarised, and a lower class brutalised. But the predominance of the common and ignoble, born of the predominance of the average man, is a malady too. That the common and ignoble is human nature's enemy, that, of true human nature, distinction and beauty are needs, that a civilisation is insufficient where these needs are not satisfied, faulty where they are thwarted, is an instruction of which we, as well as the Americans, may greatly require to take fast hold, and not to let go. We may greatly require to keep, as if it were our life, the doctrine that we are failures after all, if we cannot eschew vain boasting and vain imaginations, eschew what flatters in us the common and ignoble, and approve things that are truly excellent.

I have mentioned evangelical Protestantism. There is a text which evangelical Protestantism — and for that matter Catholicism too — translates wrong and takes in a sense too narrow. The text is that well-known one: 'Except a man be born again he cannot see the kingdom of God.'[25] Instead of *again*, we ought to translate *from above*; and instead of taking the kingdom of God in the sense of a life in Heaven above, we ought to take it, as its speaker meant it, in the sense of the reign of saints, a renovated and perfected human society on earth, the ideal society of the future. In the life of such a society, in the life *from above*, the life born of inspiration or *the spirit* — in that life elevation and beauty are not everything; but they are much, and they are indispensable. Humanity cannot reach its ideal while it lacks them: 'Except a man be born *from above*, he cannot have part in the society of the future.'

METHODS AND RESULTS

III

On the Physical Basis of Life

In order to make the title of this discourse generally intelligible, I have translated the term 'Protoplasm,' which is the scientific name of the substance of which I am about to speak, by the words 'the physical basis of life.' I suppose that, to many, the idea that there is such a thing as a physical basis, or matter, of life may be novel — so widely spread is the conception of life as a something which works through matter, but is independent of it; and even those who are aware that matter and life are inseparably connected, may not be prepared for the conclusion plainly suggested by the phrase, '*the* physical basis or matter of life,' that there is some one kind of matter which is common to all living beings, and that their endless diversities are bound together by a physical, as well as an ideal, unity. In fact, when first apprehended, such a doctrine as this appears almost shocking to common sense.

What, truly, can seem to be more obviously different from one another, in faculty, in form, and in substance, than the various kinds of living beings? What community of faculty can there be between the bright-coloured lichen, which so nearly resembles a mere mineral incrustation of the bare rock on which it grows, and the painter, to whom it is instinct with beauty, or the botanist, whom it feeds with knowledge?

Again, think of the microscopic fungus — a mere infinitesimal ovoid particle, which finds space and duration enough to multiply into countless millions in the body of a living fly; and then of the wealth of foliage, the luxuriance of flower and fruit, which lies between this bald sketch of a plant and the giant pine of California, towering to the dimensions of a cathedral spire, or the Indian fig, which covers acres with its profound shadow, and endures while nations and empires come and go around its vast circumference. Or, turning to the other half of the world of life, picture to yourselves the great Finner whale,[1] hugest of beasts that live, or have lived, disporting his eighty or ninety feet of bone, muscle and blubber, with easy roll, among waves in which the stoutest ship that ever left dockyard would flounder hopelessly; and contrast him with the invisible animalcules — mere gelatinous specks, multitudes of which could, in fact, dance upon the point of a needle with the same ease as the angels of the Schoolmen could, in imagination.[2] With these images before your minds, you may well ask, what community of form, or structure, is there between the animalcule and the whale; or between the fungus and the fig-tree? And, *a fortiori*,[3] between all four?

Finally, if we regard substance, or material composition, what hidden bond can connect the flower which a girl wears in her hair and the blood which courses through her youthful veins; or, what is there in common between the dense and resisting mass of the oak, or the strong fabric of the tortoise, and those broad disks

1. A whale, from sixty to ninety feet long, with a dorsal fin.
2. The Schoolmen, or Scholastics, were philosophers, usually theological, of the schools and universities of the Middle Ages. Huxley refers to their insistence that an angel, or many angels, could dance upon the point of a single needle. *Cf.* Baldwin's *Dictionary of Philosophy and Psychology*.
3. 'With even greater force' (you may well ask).

of glassy jelly which may be seen pulsating through the waters of a calm sea, but which drain away to mere films in the hand which raises them out of their element?

Such objections as these must, I think, arise in the mind of every one who ponders, for the first time, upon the conception of a single physical basis of life underlying all the diversities of vital existence; but I propose to demonstrate to you that, notwithstanding these apparent difficulties, a threefold unity — namely, a unity of power or faculty, a unity of form, and a unity of substantial composition — does pervade the whole living world.

No very abstruse argumentation is needed, in the first place to prove that the powers, or faculties, of all kinds of living matter, diverse as they may be in degree, are substantially similar in kind.

Goethe has condensed a survey of all powers of mankind into the well-known epigram: —

'Warum treibt sich das Volk so und schreit? Es will sich ernähren
Kinder zeugen, und die nähren so gut es vermag.
. . . . . .
Weiter bringt es kein Mensch, stell' er sich wie er auch will.' [4]

In physiological language this means, that all the multifarious and complicated activities of man are comprehensible under three categories. Either they are immediately directed towards the maintenance and development of the body, or they effect transitory changes in the relative positions of parts of the body, or they tend towards the continuance of the species. Even those manifestations of intellect, of feeling, and of will, which we rightly name the higher faculties, are not excluded from this classification, inasmuch as to every one but the subject of them, they are known only as transitory changes in the relative positions of parts of the body. Speech, gesture, and every other form of human action are, in the long run, resolvable into muscular contraction, and muscular contraction is but a transitory change in the relative positions of the parts of a muscle. But the scheme which is large enough to embrace the activities of the highest form of life, covers all those of the lower creatures. The lowest plant, or animalcule, feeds, grows, and reproduces its kind. In addition, all animals manifest those transitory changes of form which we class under irritability and contractility; and, it is more than probable, that when the vegetable world is thoroughly explored, we shall find all plants in possession of the same powers, at one time or other of their existence.

I am not now alluding to such phænomena, at once rare and conspicuous, as those exhibited by the leaflets of the sensitive plants, or the stamens of the barberry, but to much more widely spread, and at the same time, more subtle and hidden, manifestations of vegetable contractility. You are doubtless aware that the common nettle owes its stinging property to the innumerable stiff and needle-like, though exquisitely delicate, hairs which cover its surface. Each stinging-needle tapers from a broad base to a slender summit, which, though rounded at the end, is of such microscopic fineness that it readily penetrates, and breaks off in, the skin. The whole hair consists of a very delicate outer case of wood, closely applied to the inner surface of which is a layer of semifluid matter, full of innumerable granules of extreme minuteness. This semi-fluid lining is protoplasm, which thus constitutes a kind of bag, full of a limpid liquid, and roughly corresponding in form with the interior of the hair which it fills. When

4. 'Why do people shove one another and shout? They want to support themselves, to beget children, and to support them as well as is possible. . . . No man can advance farther, let him put himself where he will.' *Cf.* Goethe, 'Venetianische Epigramme,' No.10 (*Werke*, Berlin [,1923], I,515–16).

viewed with a sufficiently high magnifying power, the protoplasmic layer of the nettle hair is seen to be in a condition of unceasing activity. Local contractions of the whole thickness of its substance pass slowly and gradually from point to point, and give rise to the appearance of progressive waves, just as the bending of successive stalks of corn by a breeze produces the apparent billows of a cornfield.

But, in addition to these movements, and independently of them, the granules are driven, in relatively rapid streams, through channels in the protoplasm which seem to have a considerable amount of persistence. Most commonly, the currents in adjacent parts of the protoplasm take similar directions; and, thus, there is a general stream up one side of the hair and down the other. But this does not prevent the existence of partial currents which take different routes; and sometimes trains of granules may be seen coursing swiftly in opposite directions within a twenty-thousandth of an inch of one another; while, occasionally, opposite streams come into direct collision, and, after a longer or shorter struggle, one predominates. The cause of these currents seems to lie in contractions of the protoplasm which bounds the channels in which they flow, but which are so minute that the best microscopes show only their effects, and not themselves.

The spectacle afforded by the wonderful energies prisoned within the compass of the microscopic hair of a plant, which we commonly regard as a merely passive organism, is not easily forgotten by one who has watched its display, continued hour after hour, without pause or sign of weakening. The possible complexity of many other organic forms, seemingly as simple as the protoplasm of the nettle, dawns upon one; and the comparison of such a protoplasm to a body with an internal circulation, which has been put forward by an eminent physiologist, loses much of its startling character. Currents similar to those of the hairs of the nettle have been observed in a great multitude of very different plants, and weighty authorities have suggested that they probably occur, in more or less perfection, in all young vegetable cells. If such be the case, the wonderful noonday silence of a tropical forest is, after all, due only to the dulness of our hearing; and could our ears catch the murmur of these tiny Maelstroms,[5] as they whirl in the innumerable myriads of living cells which constitute each tree, we should be stunned, as with the roar of a great city.

Among the lower plants, it is the rule rather than the exception, that contractility should be still more openly manifested at some periods of their existence. The protoplasm of *Algæ* and *Fungi*[6] becomes, under many circumstances, partially, or completely, freed from its woody case, and exhibits movements of its whole mass, or is propelled by the contractility of one, or more, hair-like prolongations of its body, which are called vibratile cilia. And, so far as the conditions of the manifestation of the phænomena of contractility have yet been studied, they are the same for the plant as for the animal. Heat and electric shocks influence both, and in the same way, though it may be in different degrees. It is by no means my intention to suggest that there is no difference in faculty between the lowest plant and the highest, or between plants and animals. But the difference between the powers of the lowest plant, or animal, and those of the highest, is one of degree, not of kind, and depends, as Milne-Edwards[7] long ago so well pointed out, upon the extent to which the principle of the di-

5. The Maelstrom is a famed and dangerous whirlpool in the ocean off the northwest coast of Norway, between two islands. See Poe's 'Descent into the Maelstrom.'

6. These are names of types of 'the lower plants' referred to in the preceding sentence.

7. Henry Milne-Edwards (1800–85), French zoologist. His famous *Elémens de Zoologie* appeared in Paris in 1834.

vision of labour is carried out in the living economy. In the lowest organism all parts are competent to perform all functions, and one and the same portion of protoplasm may successfully take on the function of feeding, moving, or reproducing apparatus. In the highest, on the contrary, a great number of parts combine to perform each function, each part doing its allotted share of the work with great accuracy and efficiency, but being useless for any other purpose.

On the other hand, notwithstanding all the fundamental resemblances which exist between the powers of the protoplasm in plants and in animals, they present a striking difference (to which I shall advert more at length presently), in the fact that plants can manufacture fresh protoplasm out of mineral compounds, whereas animals are obliged to procure it ready made, and hence, in the long run, depend upon plants. Upon what condition this difference in the powers of the two great divisions of the world of life depends, nothing is at present known.

With such qualifications as arise out of the last-mentioned fact, it may be truly said that the acts of all living things are fundamentally one. Is any such unity predicable of their forms? Let us seek in easily verified facts for a reply to this question. If a drop of blood be drawn by pricking one's finger, and viewed with proper precautions, and under a sufficiently high microscopic power, there will be seen, among the innumerable multitude of little, circular, discoidal bodies, or corpuscles, which float in it and give it its colour, a comparatively small number of colourless corpuscles, of somewhat larger size and very irregular shape. If the drop of blood be kept at the temperature of the body, these colourless corpuscles will be seen to exhibit a marvellous activity, changing their forms with great rapidity, drawing in and thrusting out prolongations of their substance, and creeping about as if they were independent organisms.

The substance which is thus active is a mass of protoplasm, and its activity differs in detail, rather than in principle, from that of the protoplasm of the nettle. Under sundry circumstances the corpuscle dies and becomes distended into a round mass, in the midst of which is seen a smaller spherical body, which existed, but was more or less hidden, in the living corpuscle, and is called its *nucleus*. Corpuscles of essentially similar structure are to be found in the skin, in the lining of the mouth, and scattered through the whole framework of the body. Nay, more; in the earliest condition of the human organism, in that state in which it has but just become distinguishable from the egg in which it arises, it is nothing but an aggregation of such corpuscles, and every organ of the body was, once, no more than such an aggregation.

Thus a nucleated mass of protoplasm turns out to be what may be termed the structural unit of the human body. As a matter of fact, the body, in its earliest state, is a mere multiple of such units; and in its perfect condition, it is a multiple of such units, variously modified.

But does the formula which expresses the essential structural character of the highest animal cover all the rest, as the statement of its powers and faculties covered that of all others? Very nearly. Beast and fowl, reptile and fish, mollusk, worm, and polype, are all composed of structural units of the same character, namely, masses of protoplasm with a nucleus. There are sundry very low animals, each of which, structurally, is a mere colourless blood-corpuscle, leading an independent life. But, at the very bottom of the animal scale, even this simplicity becomes simplified, and all the phænomena of life are manifested by a particle of protoplasm without a nucleus. Nor are such organisms insignificant by reason of their want of complexity. It is a fair question whether the protoplasm of those simplest forms of life, which people an immense extent of

the bottom of the sea, would not outweigh that of all the higher living beings which inhabit the land put together. And in ancient times, no less than at the present day, such living beings as these have been the greatest of rock builders.

What has been said of the animal world is no less true of plants. Imbedded in the protoplasm at the broad, or attached, end of the nettle hair, there lies a spheroidal nucleus. Careful examination further proves that the whole substance of the nettle is made up of a repetition of such masses of nucleated protoplasm, each contained in a wooden case, which is modified in form, sometimes into a woody fibre, sometimes into a duct or spiral vessel, sometimes into a pollen grain, or an ovule. Traced back to its earliest state, the nettle arises as the man does, in a particle of nucleated protoplasm. And in the lowest plants, as in the lowest animals, a single mass of such protoplasm may constitute the whole plant, or the protoplasm may exist without a nucleus.

Under these circumstances it may well be asked, how is one mass of non-nucleated protoplasm to be distinguished from another? why call one 'plant' and the other 'animal'?

The only reply is that, so far as form is concerned, plants and animals are not separable, and that, in many cases, it is a mere matter of convention whether we call a given organism an animal or a plant. There is a living body called *Æthalium septicum*, which appears upon decaying vegetable substances, and, in one of its forms, is common upon the surfaces of tan-pits. In this condition it is, to all intents and purposes, a fungus, and formerly was always regarded as such; but the remarkable investigations of De Bary [8] have shown that, in another condition, the *Æthalium* is an actively locomotive creature, and takes in solid matters, upon which, apparently, it feeds, thus exhibiting the most characteristic feature of animality. Is this a plant; or is it an animal? Is it both; or is it neither? Some decide in favour of the last supposition, and establish an intermediate kingdom, a sort of biological No Man's Land for all these questionable forms. But, as it is admittedly impossible to draw any distinct boundary line between this no man's land and the vegetable world on the one hand, or the animal, on the other, it appears to me that this proceeding merely doubles the difficulty which, before, was single.

Protoplasm, simple or nucleated, is the formal basis of all life. It is the clay of the potter: which, bake it and paint it as he will, remains clay, separated by artifice, and not by nature, from the commonest brick or sun-dried clod.

Thus it becomes clear that all living powers are cognate, and that all living forms are fundamentally of one character. The researches of the chemist have revealed a no less striking uniformity of material composition in living matter.

In perfect strictness, it is true that chemical investigation can tell us little or nothing, directly, of the composition of living matter, inasmuch as such matter must needs die in the act of analysis, — and upon this very obvious ground, objections, which I confess seem to me to be somewhat frivolous, have been raised to the drawing of any conclusions whatever respecting the composition of actually living matter, from that of the dead matter of life, which alone is accessible to us. But objectors of this class do not seem to reflect that it is also, in strictness, true that we know nothing about the composition of any body whatever, as it is. The statement that a crystal of calc-spar consists of carbonate of lime, is quite true, if we only mean that, by appropriate processes, it may be resolved into carbonic acid and quicklime. If you pass the same carbonic acid over the very quicklime thus obtained, you will obtain carbonate of lime again; but it will not be calc-spar, nor

8. Heinrich Anton De Bary (1831–88), German botanist.

anything like it. Can it, therefore, be said that chemical analysis teaches nothing about the chemical composition of calc-spar? Such a statement would be absurd; but it is hardly more so than the talk one occasionally hears about the uselessness of applying the results of chemical analysis to the living bodies which have yielded them.

One fact, at any rate, is out of reach of such refinements, and this is, that all the forms of protoplasm which have yet been examined contain the four elements, carbon, hydrogen, oxygen, and nitrogen, in very complex union, and that they behave similarly towards several reagents. To this complex combination, the nature of which has never been determined with exactness, the name of Protein has been applied. And if we use this term with such caution as may properly arise out of our comparative ignorance of the things for which it stands, it may be truly said, that all protoplasm is proteinaceous, or, as the white, or albumen, of an egg is one of the commonest examples of a nearly pure protein matter, we may say that all living matter is more or less albuminoid.

Perhaps it would not yet be safe to say that all forms of protoplasm are affected by the direct action of electric shocks; and yet the number of cases in which the contraction of protoplasm is shown to be affected by this agency increases every day.

Nor can it be affirmed with perfect confidence, that all forms of protoplasm are liable to undergo that peculiar coagulation at a temperature of 40° — 50° centigrade, which has been called 'heat-stiffening,' though Kühne's[9] beautiful researches have proved this occurrence to take place in so many and such diverse living beings, that it is hardly rash to expect that the law holds good for all.

9. Willy Kühne (1837–1900), German physiologist, noted for research in the physiology of muscles and nerves, and in the chemistry of digestion.

Enough has, perhaps, been said to prove the existence of a general uniformity in the character of the protoplasm, or physical basis, of life, in whatever group of living beings it may be studied. But it will be understood that this general uniformity by no means excludes any amount of special modifications of the fundamental substance. The mineral, carbonate of lime, assumes an immense diversity of characters, though no one doubts that, under all these Protean[10] changes, it is one and the same thing.

And now, what is the ultimate fate, and what the origin, of the matter of life?

Is it, as some of the older naturalists supposed, diffused throughout the universe in molecules, which are indestructible and unchangeable in themselves; but, in endless transmigration, unite in innumerable permutations, into the diversified forms of life we know? Or, is the matter of life composed of ordinary matter, differing from it only in the manner in which its atoms are aggregated? Is it built up of ordinary matter, and again resolved into ordinary matter when its work is done?

Modern science does not hesitate a moment between these alternatives. Physiology writes over the portals of life —

'Debemur morti nos nostraque,'

with a profounder meaning than the Roman poet attached to that melancholy line.[11] Under whatever disguise it takes refuge, whether fungus or oak, worm or man, the living protoplasm not only ultimately dies and is resolved into its mineral and lifeless constituents, but is always dying, and, strange as the paradox may sound, could not live unless it died.

In the wonderful story of the *Peau de*

10. 'Exceedingly variable' In Greek mythology, Proteus was one of the lesser gods of the sea, and possessed the power of changing his shape at will.

11. *Cf.* Horace, *Ars Poetica*, l.63: 'We owe ourselves, and all we have, to death.'

Chagrin,[12] the hero becomes possessed of a magical wild ass' skin, which yields him the means of gratifying all his wishes. But its surface represents the duration of the proprietor's life; and for every satisfied desire the skin shrinks in proportion to the intensity of fruition, until at length life and the last handbreadth of the *peau de chagrin*, disappear with the gratification of a last wish.

Balzac's studies had led him over a wide range of thought and speculation, and his shadowing forth of physiological truth in this strange story may have been intentional. At any rate, the matter of life is a veritable *peau de chagrin*, and for every vital act it is somewhat the smaller. All work implies waste, and the work of life results, directly or indirectly, in the waste of protoplasm.

Every word uttered by a speaker costs him some physical loss; and, in the strictest sense, he burns that others may have light — so much eloquence, so much of his body resolved into carbonic acid, water, and urea. It is clear that this process of expenditure cannot go on for ever. But, happily, the protoplasmic *peau de chagrin* differs from Balzac's in its capacity of being repaired, and brought back to its full size, after every exertion.

For example, this present lecture, whatever its intellectual worth to you, has a certain physical value to me, which is, conceivably, expressible by the number of grains of protoplasm and other bodily substance wasted in maintaining my vital processes during its delivery. My *peau de chagrin* will be distinctly smaller at the end of the discourse than it was at the beginning. By and by, I shall probably have recourse to the substance commonly called mutton, for the purpose of stretching it back to its original size. Now this mutton was once the living protoplasm, more or less modified, of another animal — a sheep. As I shall eat it, it is the same matter altered, not only by death, but by exposure to sundry artificial operations in the process of cooking.

But these changes, whatever be their extent, have not rendered it incompetent to resume its old functions as matter of life. A singular inward laboratory, which I possess, will dissolve a certain portion of the modified protoplasm; the solution so formed will pass into my veins; and the subtle influences to which it will then be subjected will convert the dead protoplasm into living protoplasm, and transubstantiate sheep into man.

Nor is this all. If digestion were a thing to be trifled with, I might sup upon lobster, and the matter of life of the crustacean would undergo the same wonderful metamorphosis into humanity. And were I to return to my own place by sea, and undergo shipwreck, the crustacean might, and probably would, return the compliment, and demonstrate our common nature by turning my protoplasm into living lobster. Or, if nothing better were to be had, I might supply my wants with mere bread, and I should find the protoplasm of the wheat-plant to be convertible into man, with no more trouble than that of the sheep, and with far less, I fancy, than that of the lobster.

Hence it appears to be a matter of no great moment what animal, or what plant, I lay under contribution for protoplasm, and the fact speaks volumes for the general identity of that substance in all living beings. I share this catholicity of assimilation with other animals, all of which, so far as we know, could thrive equally well on the protoplasm of any of their fellows, or of any plant; but here the assimilative powers of the animal world cease. A solution of smelling-salts in water, with an infinitesimal proportion of some other saline matters, contains all the elementary bodies which enter into the composition of

12. 'Skin of a wild ass.' The novel, written by Honoré de Balzac (1799–1850), appeared in Paris in 1834.

protoplasm; but, as I need hardly say, a hogshead of that fluid would not keep a hungry man from starving, nor would it save any animal whatever from a like fate. An animal cannot make protoplasm, but must take it ready-made from some other animal, or some plant — the animal's highest feat of constructive chemistry being to convert dead protoplasm into that living matter of life which is appropriate to itself.

Therefore, in seeking for the origin of protoplasm, we must eventually turn to the vegetable world. A fluid containing carbonic acid, water, and nitrogenous salts, which offers such a Barmecide feast [13] to the animal, is a table richly spread to multitudes of plants; and, with a due supply of only such materials, many a plant will not only maintain itself in vigour, but grow and multiply until it has increased a million-fold, or a million million-fold, the quantity of protoplasm which it originally possessed; in this way building up the matter of life, to an indefinite extent, from the common matter of the universe.

Thus, the animal can only raise the complex substance of dead protoplasm to the higher power, as one may say, of living protoplasm; while the plant can raise the less complex substances — carbonic acid, water, and nitrogenous salts — to the same stage of living protoplasm, if not to the same level. But the plant also has its limitations. Some of the fungi, for example, appear to need higher compounds to start with; and no known plant can live upon the uncompounded elements of protoplasm. A plant supplied with pure carbon, hydrogen, oxygen, and nitrogen, phosphorus, sulphur, and the like, would as infallibly die as the animal in his bath of smelling-salts, though it would be surrounded by all the constituents of protoplasm. Nor, indeed, need the process of simplification of vegetable food be carried so far as this, in order to arrive at the limit of the plant's thaumaturgy.[14] Let water, carbonic acid, and all the other needful constituents be supplied except nitrogenous salts, and an ordinary plant will still be unable to manufacture protoplasm.

Thus the matter of life, so far as we know it (and we have no right to speculate on any other), breaks up, in consequence of that continual death which is the condition of its manifesting vitality, into carbonic acid, water, and nitrogenous compounds, which certainly possess no properties but those of ordinary matter. And out of these same forms of ordinary matter, and from none which are simpler, the vegetable world builds up all the protoplasm which keeps the animal world a-going. Plants are the accumulators of the power which animals distribute and disperse.

But it will be observed, that the existence of the matter of life depends on the pre-existence of certain compounds; namely, carbonic acid, water, and certain nitrogenous bodies. Withdraw any one of these three from the world, and all vital phænomena come to an end. They are as necessary to the protoplasm of the plant, as the protoplasm of the plant is to that of the animal. Carbon, hydrogen, oxygen, and nitrogen are all lifeless bodies. Of these, carbon and oxygen unite in certain proportions and under certain conditions, to give rise to carbonic acid; hydrogen and oxygen produce water; nitrogen and other elements give rise to nitrogenous salts. These new compounds, like the elementary bodies of which they are composed, are lifeless. But when they are brought together, under certain conditions, they give rise to the still more complex body, protoplasm, and this protoplasm exhibits the phænomena of life.

13. An illusion of plenty. In the *Arabian Nights*, a member of the wealthy Persian Barmecide family invited a hungry beggar to dinner, placed a succession of empty dishes before him, and pretended that they were filled with fine food.

14. Wonder-work, or magic.

I see no break in this series of steps in molecular complication, and I am unable to understand why the language which is applicable to any one term of the series may not be used to any of the others. We think fit to call different kinds of matter carbon, oxygen, hydrogen, and nitrogen, and to speak of the various powers and activities of these substances as the properties of the matter of which they are composed.

When hydrogen and oxygen are mixed in a certain proportion, and an electric spark is passed through them, they disappear, and a quantity of water, equal in weight to the sum of their weights, appears in their place. There is not the slightest parity between the passive and active powers of the water and those of the oxygen and hydrogen which have given rise to it. At 32° Fahrenheit, and far below that temperature, oxygen and hydrogen are elastic gaseous bodies, whose particles tend to rush away from one another with great force. Water, at the same temperature, is a strong though brittle solid whose particles tend to cohere into definite geometrical shapes, and sometimes build up frosty imitations of the most complex forms of vegetable foliage.

Nevertheless we call these, and many other strange phænomena, the properties of the water, and we do not hesitate to believe that, in some way or another, they result from the properties of the component elements of the water. We do not assume that a something called 'aquosity' entered into and took possession of the oxidated hydrogen as soon as it was formed, and then guided the aqueous particles to their places in the facets of the crystal, or amongst the leaflets of the hoar-frost. On the contrary, we live in the hope and in the faith that, by the advance of molecular physics, we shall by and by be able to see our way as clearly from the constituents of water to the properties of water, as we are now able to deduce the operations of a watch from the form of its parts and the manner in which they are put together.

Is the case in any way changed when carbonic acid, water, and nitrogenous salts disappear, and in their place, under the influence of pre-existing living protoplasm, an equivalent weight of the matter of life makes its appearance?

It is true that there is no sort of parity between the properties of the components and the properties of the resultant, but neither was there in the case of the water. It is also true that what I have spoken of as the influence of pre-existing living matter is something quite unintelligible; but does anybody quite comprehend the *modus operandi*[15] of an electric spark, which traverses a mixture of oxygen and hydrogen?

What justification is there, then, for the assumption of the existence in the living matter of a something which has no representative, or correlative, in the not living matter which gave rise to it? What better philosophical status has 'vitality' than 'aquosity'? And why should 'vitality' hope for a better fate than the other 'ities' which have disappeared since Martinus Scriblerus accounted for the operation of the meat-jack by its inherent 'meat-roasting quality,' and scorned the 'materialism' of those who explained the turning of the spit by a certain mechanism worked by the draught of the chimney.[16]

If scientific language is to possess a definite and constant signification whenever it is employed, it seems to me that we are logically bound to apply to the protoplasm, or physical basis of life, the same conceptions as those which are held to be legitimate elsewhere. If the phænomena

15. 'Way, or method, of working.'

16. Martinus Scriblerus was a fictitious character whose *Memoirs* were written by several 18th-century satirists, chiefly Arbuthnot, Pope, and Swift. For the allusion here, see Pope's *Works*, ed. Elwin and Courthope, London, 1886, X, 332–33. A meat-jack is a mechanical contrivance for turning meat, on a spit, before a fire, to roast it.

exhibited by water are its properties, so are those presented by protoplasm, living or dead, its properties.

If the properties of water may be properly said to result from the nature and disposition of its component molecules, I can find no intelligible ground for refusing to say that the properties of protoplasm result from the nature and disposition of its molecules.

But I bid you beware that, in accepting these conclusions, you are placing your feet on the first rung of a ladder which, in most people's estimation, is the reverse of Jacob's,[17] and leads to the antipodes of heaven. It may seem a small thing to admit that the dull vital actions of a fungus, or a foraminifer, are the properties of their protoplasm, and are the direct results of the nature of the matter of which they are composed. But if, as I have endeavoured to prove to you, their protoplasm is essentially identical with, and most readily converted into, that of any animal, I can discover no logical halting-place between the admission that such is the case, and the further concession that all vital action may, with equal propriety, be said to be the result of the molecular forces of the protoplasm which displays it. And if so, it must be true, in the same sense and to the same extent, that the thoughts to which I am now giving utterance, and your thoughts regarding them, are the expression of molecular changes in that matter of life which is the source of our other vital phænomena.

Past experience leads me to be tolerably certain that, when the propositions I have just placed before you are accessible to public comment and criticism, they will be condemned by many zealous persons, and perhaps by some few of the wise and thoughtful. I should not wonder if 'gross and brutal materialism' were the mildest phrase applied to them in certain quarters. And, most undoubtedly, the terms of the propositions are distinctly materialistic. Nevertheless two things are certain; the one, that I hold the statements to be substantially true; the other, that I, individually, am no materialist, but, on the contrary, believe materialism to involve grave philosophical error.

This union of materialistic terminology with the repudiation of materialistic philosophy I share with some of the most thoughtful men with whom I am acquainted. . . .

Permit me to enforce this most wise advice. Why trouble ourselves about matters of which, however important they may be, we do know nothing, and can know nothing? We live in a world which is full of misery and ignorance, and the plain duty of each and all of us is to try to make the little corner he can influence somewhat less miserable and somewhat less ignorant than it was before he entered it. To do this effectually it is necessary to be fully possessed of only two beliefs: the first, that the order of Nature is ascertainable by our faculties to an extent which is practically unlimited; the second, that our volition [18] counts for something as a condition of the course of events.

Each of these beliefs can be verified experimentally, as often as we like to try. Each, therefore, stands upon the strongest foundation upon which any belief can rest, and forms one of our highest truths. If we find that the ascertainment of the order of nature is facilitated by using one terminology, or one set of symbols, rather than another, it is our clear duty to use the former; and no harm can accrue, so long as we bear in mind, that we are dealing merely with terms and symbols.

In itself it is of little moment whether we express the phænomena of matter in

17. *Cf. Genesis*, xxviii,12: And Jacob 'dreamed, and behold a ladder set up on the earth, and the top of it reached to heaven. . . .' *Antipodes*: place diametrically opposite — literally, with the feet directly opposite.

18. Or, to speak more accurately, the physical state of which volition is the expression. [Huxley's note, in 1892.]

terms of spirit; or the phænomena of spirit in terms of matter: matter may be regarded as a form of thought, thought may be regarded as a property of matter — each statement has a certain relative truth. But with a view to the progress of science, the materialistic terminology is in every way to be preferred. For it connects thought with the other phænomena of the universe, and suggests inquiry into the nature of those physical conditions, or concomitants of thought, which are more or less accessible to us, and a knowledge of which may, in future, help us to exercise the same kind of control over the world of thought, as we already possess in respect of the material world; whereas, the alternative, or spiritualistic, terminology is utterly barren, and leads to nothing but obscurity and confusion of ideas.

Thus there can be little doubt, that the further science advances, the more extensively and consistently will all the phænomena of Nature be represented by materialistic formulae and symbols.

But the man of science, who, forgetting the limits of philosophical inquiry, slides from these formulae and symbols into what is commonly understood by materialism, seems to me to place himself on a level with the mathematician, who should mistake the x's and y's with which he works his problems, for real entities — and with this further disadvantage, as compared with the mathematician, that the blunders of the latter are of no practical consequence, while the errors of systematic materialism may paralyse the energies and destroy the beauty of a life.

[I cannot say I have ever had to complain of lack of hostile criticism; but the preceding essay has come in for more than its fair share of that commodity. It may be well, therefore, for the general reader to study, in connexion with it, the first chapter of the standard 'Textbook of Physiology,' by Dr. Foster, making fair allowance for the rapid progress of knowledge during the last quarter of a century. 1892.]

DARWINIANA

[*The Method of Scientific Investigation*]

THE method of scientific investigation is nothing but the expression of the necessary mode of working of the human mind. It is simply the mode at which all phenomena are reasoned about, rendered precise and exact. There is no more difference, but there is just the same kind of difference, between the mental operations of a man of science and those of an ordinary person, as there is between the operations and methods of a baker or of a butcher weighing out his goods in common scales, and the operations of a chemist in performing a difficult and complex analysis by means of his balance and finely graduated weights. It is not that the action of the scales in the one case, and the balance in the other, differ in the principles of their construction or manner of working; but the beam of one is set on an infinitely finer axis than the other, and of course turns by the addition of a much smaller weight.

You will understand this better, perhaps, if I give you some familiar example. You have all heard it repeated, I dare say, that men of science work by means of induction and deduction, and that by the help of these operations, they, in a sort of sense, wring from Nature certain other things, which are called natural laws, and causes, and that out of these, by some cunning skill of their own, they build up hypotheses and theories. And it is imagined by many, that the operations of the common mind can be by no means com-

pared with these processes, and that they have to be acquired by a sort of special apprenticeship to the craft. To hear all these large words, you would think that the mind of a man of science must be constituted differently from that of his fellow men; but if you will not be frightened by terms, you will discover that you are quite wrong, and that all these terrible apparatus [1] are being used by yourselves every day and every hour of your lives.

There is a well-known incident in one of Molière's plays, where the author makes the hero express unbounded delight on being told that he had been talking prose during the whole of his life.[2] In the same way, I trust, that you will take comfort, and be delighted with yourselves, on the discovery that you have been acting on the principles of inductive and deductive philosophy during the same period. Probably there is not one here who has not in the course of the day had occasion to set in motion a complex train of reasoning, of the very same kind, though differing of course in degree, as that which a scientific man goes through in tracing the causes of natural phenomena.

A very trivial circumstance will serve to exemplify this. Suppose you go into a fruiterer's shop, wanting an apple, — you take up one, and, on biting it, you find it is sour; you look at it, and see that it is hard and green. You take up another one, and that too is hard, green, and sour. The shopman offers you a third; but, before biting it, you examine it, and find that it is hard and green, and you immediately say that you will not have it, as it must be sour, like those that you have already tried.

Nothing can be more simple than that, you think; but if you will take the trouble to analyse and trace out into its logical elements what has been done by the mind, you will be greatly surprised. In the first place you have performed the operation of induction. You found that, in two experiences, hardness and greenness in apples went together with sourness. It was so in the first case, and it was confirmed by the second. True, it is a very small basis, but still it is enough to make an induction from: you generalise the facts, and you expect to find sourness in apples where you get hardness and greenness. You found upon that a general law that all hard and green apples are sour; and that, so far as it goes, is a perfect induction. Well, having got your natural law in this way, when you are offered another apple which you find is hard and green, you say, 'All hard and green apples are sour; this apple is hard and green, therefore this apple is sour.' That train of reasoning is what logicians call a syllogism, and has all its various parts and terms, — its major premiss, its minor premiss and its conclusion. And, by the help of further reasoning, which, if drawn out, would have to be exhibited in two or three other syllogisms, you arrive at your final determination, 'I will not have that apple.' So that, you see, you have, in the first place, established a law by induction, and upon that you have founded a deduction, and reasoned out the special particular case. Well now, suppose, having got your conclusion of the law, that at some time afterwards, you are discussing the qualities of apples with a friend: you will say to him, 'It is a very curious thing, — but I find that all hard and green apples are sour!' Your friend says to you, 'But how do you know that?' You at once reply, 'Oh, because I have tried them over and over again, and have always found them to be so.' Well, if we were talking science instead of common sense, we should call that an experimental verification. And, if still opposed, you go further, and say, 'I have heard from the people in Somer-

1. 'Apparatus' and 'apparatuses' are both recognized as plural forms of 'apparatus.'
2. M. Jourdain, in Molière's *Le Bourgeois Gentilhomme*, II,vi.

setshire and Devonshire, where a large number of apples are grown, that they have observed the same thing. It is also found to be the case in Normandy, and in North America. In short, I find it to be the universal experience of mankind wherever attention has been directed to the subject.' Whereupon, your friend, unless he is a very unreasonable man, agrees with you, and is convinced that you are quite right in the conclusion you have drawn. He believes, although perhaps he does not know he believes it, that the more extensive verifications are, — that the more frequently experiments have been made, and results of the same kind arrived at, — that the more varied the conditions under which the same results are attained, the more certain is the ultimate conclusion, and he disputes the question no further. He sees that the experiment has been tried under all sorts of conditions, as to time, place, and people, with the same result; and he says with you, therefore, that the law you have laid down must be a good one, and he must believe it.

In science we do the same thing; — the philosopher exercises precisely the same faculties, though in a much more delicate manner. In scientific inquiry it becomes a matter of duty to expose a supposed law to every possible kind of verification, and to take care, moreover, that this is done intentionally, and not left to a mere accident, as in the case of the apples. And in science, as in common life, our confidence in a law is in exact proportion to the absence of variation in the result of our experimental verifications. For instance, if you let go your grasp of an article you may have in your hand, it will immediately fall to the ground. That is a very common verification of one of the best established laws of nature — that of gravitation. The method by which men of science establish the existence of that law is exactly the same as that by which we have established the trivial proposition about the sourness of hard and green apples. But we believe it in such an extensive, thorough, and unhesitating manner because the universal experience of mankind verifies it, and we can verify it ourselves at any time; and that is the strongest possible foundation on which any natural law can rest.

So much, then, by way of proof that the method of establishing laws in science is exactly the same as that pursued in common life. Let us now turn to another matter (though really it is but another phase of the same question), and that is, the method by which, from the relations of certain phenomena, we prove that some stand in the position of causes towards the others.

I want to put the case clearly before you, and I will therefore show you what I mean by another familiar example. I will suppose that one of you, on coming down in the morning to the parlour of your house, finds that a tea-pot and some spoons which had been left in the room on the previous evening are gone, — the window is open, and you observe the mark of a dirty hand on the window-frame, and perhaps, in addition to that, you notice the impress of a hob-nailed shoe on the gravel outside. All these phenomena have struck your attention instantly, and before two seconds have passed you say, 'Oh, somebody has broken open the window, entered the room, and run off with the spoons and the tea-pot!' That speech is out of your mouth in a moment. And you will probably add, 'I know there has; I am quite sure of it!' You mean to say exactly what you know; but in reality you are giving expression to what is, in all essential particulars, an hypothesis. You do not *know* it at all; it is nothing but an hypothesis rapidly framed in your own mind. And it is an hypothesis founded on a long train of inductions and deductions.

What are those inductions and deductions, and how have you got at this hy-

pothesis? You have observed in the first place, that the window is open; but by a train of reasoning involving many inductions and deductions, you have probably arrived long before at the general law — and a very good one it is — that windows do not open of themselves; and you therefore conclude that something has opened the window. A second general law that you have arrived at in the same way is, that tea-pots and spoons do not go out of a window spontaneously, and you are satisfied that, as they are not now where you left them, they have been removed. In the third place, you look at the marks on the window-sill, and the shoe-marks outside, and you say that in all previous experience the former kind of mark has never been produced by anything else but the hand of a human being; and the same experience shows that no other animal but man at present wears shoes with hobnails in them such as would produce the marks in the gravel. I do not know, even if we could discover any of those 'missing links'[3] that are talked about, that they would help us to any other conclusion! At any rate the law which states our present experience is strong enough for my present purpose. You next reach the conclusion that, as these kind[4] of marks have not been left by any other animal than man, or are liable to be formed in any other way than a man's hand and shoe, the marks in question have been formed by a man in that way. You have, further, a general law, founded on observation and experience, and that, too, is, I am sorry to say, a very universal and unimpeachable one, — that some men are thieves; and you assume at once from all these premisses — and that is what constitutes your hypothesis — that the man who made the marks outside and on the window-sill, opened the window, got into the room, and stole your tea-pot and spoons. You have now arrived at a *vera causa*;[5] — you have assumed a cause which, it is plain, is competent to produce all the phenomena you have observed. You can explain all these phenomena only by the hypothesis of a thief. But that is a hypothetical conclusion, of the justice of which you have no absolute proof at all; it is only rendered highly probable by a series of inductive and deductive reasonings.

I suppose your first action, assuming that you are a man of ordinary common sense, and that you have established this hypothesis to your own satisfaction, will very likely be to go off for the police, and set them on the track of the burglar, with the view to the recovery of your property. But just as you are starting with this object, some person comes in, and on learning what you are about, says, 'My good friend, you are going on a great deal too fast. How do you know that the man who really made the marks took the spoons? It might have been a monkey that took them, and the man may have merely looked in afterwards.' You would probably reply, 'Well, that is all very well, but you see it is contrary to all experience of the way tea-pots and spoons are abstracted; so that, at any rate, your hypothesis is less probable than mine.' While you are talking the thing over in this way, another friend arrives, one of the good kind of people that I was talking of a little while ago. And he might say, 'Oh, my dear sir, you are certainly going on a great deal too fast. You are most presumptuous. You admit that all these occurrences took place when you were fast asleep, at a time when you could not possibly have known anything about what was taking place. How do you know that the laws of Nature are not suspended during the

3. In the study of man's evolution from lower types of animals, a 'missing link' in the evolutionary chain was hypothesized — thought of as a highly developed sort of anthropoid ape.

4. Although today 'kind' is considered singular, it has been considered plural; *cf. King Lear*, II, ii,107: 'These kind of knaves I know.'

5. 'true cause.'

night? It may be that there has been some kind of supernatural interference in this case.' In point of fact, he declares that your hypothesis is one of which you cannot at all demonstrate the truth, and that you are by no means sure that the laws of Nature are the same when you are asleep as when you are awake.

Well, now, you cannot at the moment answer that kind of reasoning. You feel that your worthy friend has you somewhat at a disadvantage. You will feel perfectly convinced in your own mind, however, that you are quite right, and you say to him, 'My good friend, I can only be guided by the natural probabilities of the case, and if you will be kind enough to stand aside and permit me to pass, I will go and fetch the police.' Well, we will suppose that your journey is successful, and that by good luck you meet with a policeman; that eventually the burglar is found with your property on his person, and the marks correspond to his hand and to his boots. Probably any jury would consider those facts a very good experimental verification of your hypothesis, touching the cause of the abnormal phenomena observed in your parlour, and would act accordingly.

Now, in this suppositious case, I have taken phenomena of a very common kind, in order that you might see what are the different steps in an ordinary process of reasoning, if you will only take the trouble to analyse it carefully. All the operations I have described, you will see, are involved in the mind of any man of sense in leading him to a conclusion as to the course he should take in order to make good a robbery and punish the offender. I say that you are led, in that case, to your conclusion by exactly the same train of reasoning as that which a man of science pursues when he is endeavouring to discover the origin and laws of the most occult phenomena. The process is, and always must be, the same; and precisely the same mode of reasoning was employed by Newton and Laplace [6] in their endeavours to discover and define the causes of the movements of the heavenly bodies, as you, with your own common sense, would employ to detect a burglar. The only difference is, that the nature of the inquiry being more abstruse, every step has to be most carefully watched, so that there may not be a single crack or flaw in your hypothesis. A flaw or crack in many of the hypotheses of daily life may be of little or no moment as affecting the general correctness of the conclusions at which we may arrive; but, in a scientific inquiry, a fallacy, great or small, is always of importance, and is sure to be in the long run constantly productive of mischievous if not fatal results.

Do not allow yourselves to be misled by the common notion that an hypothesis is untrustworthy simply because it is an hypothesis. It is often urged, in respect to some scientific conclusion, that, after all, it is only an hypothesis. But what more have we to guide us in nine-tenths of the most important affairs of daily life than hypotheses, and often very ill-based ones? So that in science, where the evidence of an hypothesis is subjected to the most rigid examination, we may rightly pursue the same course. You may have hypotheses, and hypotheses. A man may say, if he likes, that the moon is made of green cheese: that is an hypothesis. But another man, who has devoted a great deal of time and attention to the subject, and availed himself of the most powerful telescopes and the results of the observations of others, declares that in his opinion it is probably composed of materials very similar to those of which our own earth is made up: and that is also only an hypothesis. But I need not tell you that there is an enormous

6. Laplace (1749–1827), French astronomer and mathematician, famous for his theory, called the 'nebular hypothesis,' of the formation of the planetary systems.

difference in the value of the two hypotheses. That one which is based on sound scientific knowledge is sure to have a corresponding value; and that which is a mere hasty random guess is likely to have but little value. Every great step in our progress in discovering causes has been made in exactly the same way as that which I have detailed to you. A person observing the occurrence of certain facts and phenomena asks, naturally enough, what process, what kind of operation known to occur in Nature applied to the particular case, will unravel and explain the mystery? Hence you have the scientific hypothesis; and its value will be proportionate to the care and completeness with which its basis had been tested and verified. It is in these matters as in the commonest affairs of practical life: the guess of the fool will be folly, while the guess of the wise man will contain wisdom. In all cases, you see that the value of the result depends on the patience and faithfulness with which the investigator applies to his hypothesis every possible kind of verification.

SCIENCE AND EDUCATION

IV

A Liberal Education: and Where to Find It

THE business which the South London Working Men's College has undertaken is a great work; indeed, I might say, that Education, with which that college proposes to grapple, is the greatest work of all those which lie ready to a man's hand just at present.

And, at length, this fact is becoming generally recognised. You cannot go anywhere without hearing a buzz of more or less confused and contradictory talk on this subject — nor can you fail to notice that, in one point at any rate, there is a very decided advance upon like discussions in former days. Nobody outside the agricultural interest now dares to say that education is a bad thing. If any representative of the once large and powerful party, which, in former days, proclaimed this opinion, still exists in the semi-fossil state, he keeps his thoughts to himself. In fact, there is a chorus of voices, almost distressing in their harmony, raised in favour of the doctrine that education is the great panacea for human troubles, and that, if the country is not shortly to go to the dogs, everybody must be educated.

The politicians tell us, 'You must educate the masses because they are going to be masters.' The clergy join in the cry for education, for they affirm that the people are drifting away from church and chapel into the broadest infidelity. The manufacturers and the capitalists swell the chorus lustily. They declare that ignorance makes bad workmen; that England will soon be unable to turn out cotton goods, or steam engines, cheaper than other people; and then, Ichabod! Ichabod![1] the glory will be departed from us. And a few voices are lifted up in favour of the doctrine that the masses should be educated because they are men and women with unlimited capacities of being, doing, and suffering, and that it is as true now, as it ever was, that the people perish for lack of knowledge.[2]

These members of the minority, with whom I confess I have a good deal of sympathy, are doubtful whether any of the other reasons urged in favour of the education of the people are of much value — whether, indeed, some of them are based upon either wise or noble grounds of ac-

1. *Cf. I Samuel*, iv,21: 'And she named the child Ichabod, saying, The glory is departed from Israel.'

2. *Cf. Hosea*, iv,6: 'My people are destroyed for lack of knowledge.'

tion. They question if it be wise to tell people that you will do for them, out of fear of their power, what you have left undone, so long as your only motive was compassion for their weakness and their sorrows. And, if ignorance of everything which is needful a ruler should know is likely to do so much harm in the governing classes of the future, why is it, they ask reasonably enough, that such ignorance in the governing classes of the past has not been viewed with equal horror?

Compare the average artisan and the average country squire, and it may be doubted if you will find a pin to choose between the two in point of ignorance, class feeling, or prejudice. It is true that the ignorance is of a different sort — that the class feeling is in favour of a different class — and that the prejudice has a distinct savour of wrong headedness in each case — but it is questionable if the one is either a bit better, or a bit worse, than the other. The old protectionist theory is the doctrine of trades unions as applied by the squires, and the modern trades unionism is the doctrine of the squires applied by the artisans. Why should we be worse off under one *régime* than under the other?

Again, this sceptical minority asks the clergy to think whether it is really want of education which keeps the masses away from their ministrations — whether the most completely educated men are not as open to reproach on this score as the workmen; and whether, perchance, this may not indicate that it is not education which lies at the bottom of the matter?

Once more, these people, whom there is no pleasing, venture to doubt whether the glory which rests upon being able to undersell all the rest of the world, is a very safe kind of glory — whether we may not purchase it too dear; especially if we allow education, which ought to be directed to the making of men, to be diverted into a process of manufacturing human tools, wonderfully adroit in the exercise of some technical industry, but good for nothing else.

And, finally, these people inquire whether it is the masses alone who need a reformed and improved education. They ask whether the richest of our public schools [3] might not well be made to supply knowledge, as well as gentlemanly habits, a strong class feeling, and eminent proficiency in cricket. They seem to think that the noble foundations of our old universities are hardly fulfilling their functions in their present posture of half-clerical seminaries, half racecourses, where men are trained to win a senior wranglership, or a double-first,[4] as horses are trained to win a cup, with as little reference to the needs of after-life in the case of a man as in that of the racer. And, while as zealous for education as the rest, they affirm that, if the education of the richer classes were such as to fit them to be the leaders and the governors of the poorer; and, if the education of the poorer classes were such as to enable them to appreciate really wise guidance and good governance, the politicians need not fear mob-law, nor the clergy lament their want of flocks, nor the capitalists prognosticate the annihilation of the prosperity of the country.

Such is the diversity of opinion upon the why and the wherefore of education. And my hearers will be prepared to expect that the practical recommendations which are put forward are not less discordant. There is a loud cry for compulsory education. We English, in spite of constant experience to the contrary, preserve a touching faith in the efficacy of acts of Parliament; and I believe we should have compulsory education in the courses of next session,

3. By 'public schools' in England is meant private schools, such as Rugby and Eton.

4. A senior wrangler at Cambridge University had won the highest honors in mathematics. At Oxford, a student who had won first-class honors in both classics and mathematics received a 'double-first.'

if there were the least probability that half a dozen leading statesmen of different parties would agree what that education should be.

Some hold that education without theology is worse than none. Others maintain, quite as strongly, that education with theology is in the same predicament. But this is certain, that those who hold the first opinion can by no means agree what theology should be taught; and that those who maintain the second are in a small minority.

At any rate 'make people learn to read, write, and cipher,' say a great many; and the advice is undoubtedly sensible as far as it goes. But, as has happened to me in former days, those who, in despair of getting anything better, advocate this measure, are met with the objection that it is very like making a child practise the use of a knife, fork, and spoon, without giving it a particle of meat. I really don't know what reply is to be made to such an objection.

But it would be unprofitable to spend more time in disentangling, or rather in showing up the knots in, the ravelled skeins of our neighbours. Much more to the purpose is it to ask if we possess any clue of our own which may guide us among these entanglements. And by way of a beginning, let us ask ourselves — What is education? Above all things, what is our ideal of a thoroughly liberal education? — of that education which, if we could begin life again, we would give ourselves — of that education which, if we could mould the fates to our own will, we would give our children? Well, I know not what may be your conceptions upon this matter, but I will tell you mine, and I hope I shall find that our views are not very discrepant.

Suppose it were perfectly certain that the life and fortune of every one of us would, one day or other, depend upon his winning or losing a game of chess. Don't you think that we should all consider it to be a primary duty to learn at least the names and the moves of the pieces; to have a notion of a gambit,[5] and a keen eye for all the means of giving and getting out of check? Do you not think that we should look with a disapprobation amounting to scorn, upon the father who allowed his son, or the state which allowed its members, to grow up without knowing a pawn from a knight?

Yet it is a very plain and elementary truth, that the life, the fortune, and the happiness of every one of us, and, more or less, of those who are connected with us, do depend upon our knowing something of the rules of a game infinitely more difficult and complicated than chess. It is a game which has been played for untold ages, every man and woman of us being one of the two players in a game of his or her own. The chessboard is the world, the pieces are the phenomena of the universe, the rules of the game are what we call the laws of Nature. The player on the other side is hidden from us. We know that his play is always fair, just, and patient. But also we know, to our cost, that he never overlooks a mistake, or makes the smallest allowance for ignorance. To the man who plays well, the highest stakes are paid, with that sort of overflowing generosity with which the strong shows delight in strength. And one who plays ill is checkmated — without haste, but without remorse.

My metaphor will remind some of you of the famous picture in which Retzsch[6] has depicted Satan playing at chess with man for his soul. Substitute for the mocking fiend in that picture a calm, strong angel who is playing for love, as we say, and would rather lose than win — and I

5. An opening play in chess, by which a pawn, or another piece, is sacrificed to gain an advantage in position. A knight (mentioned in the next sentence) is of course more valuable than a pawn.

6. Friedrich August Moritz Retzsch (1779–1856), German etcher and painter.

should accept it as an image of human life.

Well, what I mean by Education is learning the rules of this mighty game. In other words, education is the instruction of the intellect in the laws of Nature, under which name I include not merely things and their forces, but men and their ways; and the fashioning of the affections and of the will into an earnest and loving desire to move in harmony with those laws. For me, education means neither more nor less than this. Anything which professes to call itself education must be tried by this standard, and if it fails to stand the test, I will not call it education, whatever may be the force of authority, or of numbers, upon the other side.

It is important to remember that, in strictness, there is no such thing as an uneducated man. Take an extreme case. Suppose that an adult man, in the full vigour of his faculties, could be suddenly placed in the world, as Adam is said to have been, and then left to do as he best might. How long would he be left uneducated? Not five minutes. Nature would begin to teach him, through the eye, the ear, the touch, the properties of objects. Pain and pleasure would be at his elbow telling him to do this and avoid that; and by slow degrees the man would receive an education which, if narrow, would be thorough, real, and adequate to his circumstances, though there would be no extras and very few accomplishments.

And if to this solitary man entered a second Adam or, better still, an Eve, a new and greater world, that of social and moral phenomena, would be revealed. Joys and woes, compared with which all others might seem but faint shadows, would spring from the new relations. Happiness and sorrow would take the place of the coarser monitors, pleasure and pain; but conduct would still be shaped by the observation of the natural consequences of actions; or, in other words, by the laws of the nature of man.

To every one of us the world was once as fresh and new as to Adam. And then, long before we were susceptible of any other mode of instruction, Nature took us in hand, and every minute of waking life brought its educational influence, shaping our actions into rough accordance with Nature's laws, so that we might not be ended untimely by too gross disobedience. Nor should I speak of this process of education as past for any one, be he as old as he may. For every man the world is as fresh as it was at the first day, and as full of untold novelties for him who has the eyes to see them. And Nature is still continuing her patient education of us in that great university, the universe, of which we are all members -- Nature having no Test-Acts.[7]

Those who take honours in Nature's university, who learn the laws which govern men and things and obey them, are the really great and successful men in this world. The great mass of mankind are the 'Poll,'[8] who pick up just enough to get through without much discredit. Those who won't learn at all are plucked; and then you can't come up again. Nature's pluck means extermination.

Thus the question of compulsory education is settled so far as Nature is concerned. Her bill on that question was framed and passed long ago. But, like all compulsory legislation, that of Nature is harsh and wasteful in its operation. Ignorance is visited as sharply as wilful disobedience — incapacity meets with the same punishment as crime. Nature's discipline is not even a word and a blow, and the blow first; but the blow without the word. It is left to you to find out why your ears are boxed.

The object of what we commonly call education — that education in which man

7. For the Universities Tests Act, see Arnold's Preface to *Culture and Anarchy*, note 25.

8. *Poll*: college slang for the great mass of students (Greek οἱ πολλοί, 'the many') who pass, but without honors. *Plucked*: failed, or 'flunked.'

intervenes and which I shall distinguish as artificial education — is to make good these defects in Nature's methods; to prepare the child to receive Nature's education, neither incapably nor ignorantly, nor with wilful disobedience; and to understand the preliminary symptoms of her pleasure, without waiting for the box on the ear. In short, all artificial education ought to be an anticipation of natural education. And a liberal education is an artificial education which has not only prepared a man to escape the great evils of disobedience to natural laws, but has trained him to appreciate and to seize upon the rewards, which Nature scatters with as free a hand as her penalties.

That man, I think, has had a liberal education who has been so trained in youth that his body is the ready servant of his will, and does with ease and pleasure all the work that, as a mechanism, it is capable of; whose intellect is a clear, cold, logic engine, with all its parts of equal strength, and in smooth working order; ready, like a steam engine, to be turned to any kind of work, and spin the gossamers as well as forge the anchors of the mind; whose mind is stored with a knowledge of the great and fundamental truths of Nature and of the laws of her operations; one who, no stunted ascetic, is full of life and fire, but whose passions are trained to come to heel by a vigorous will, the servant of a tender conscience; who has learned to love all beauty, whether of Nature or of art, to hate all vileness, and to respect others as himself.

Such an one and no other, I conceive, has had a liberal education; for he is, as completely as a man can be, in harmony with Nature. He will make the best of her, and she of him. They will get on together rarely; she as his ever beneficent mother; he as her mouthpiece, her conscious self, her minister and interpreter.

Where is such an education as this to be had? Where is there any approximation to it? Has any one tried to found such an education? Looking over the length and breadth of these islands, I am afraid that all these questions must receive a negative answer. Consider our primary schools and what is taught in them. A child learns: —

1. To read, write, and cipher, more or less well; but in a very large proportion of cases not so well as to take pleasure in reading, or to be able to write the commonest letter properly.

2. A quantity of dogmatic theology, of which the child, nine times out of ten, understands next to nothing.

3. Mixed up with this, so as to seem to stand or fall with it, a few of the broadest and simplest principles of morality. This, to my mind, is much as if a man of science should make the story of the fall of the apple in Newton's garden an integral part of the doctrine of gravitation, and teach it as of equal authority with the law of the inverse squares.[9]

4. A good deal of Jewish history and Syrian geography, and, perhaps, a little something about English history and the geography of the child's own country. But I doubt if there is a primary school in England in which hangs a map of the hundred[10] in which the village lies, so that the children may be practically taught by it what a map means.

5. A certain amount of regularity, attentive obedience, respect for others: obtained by fear, if the master be incompetent or foolish; by love and reverence, if he be wise.

So far as this school course embraces a training in the theory and practice of obedience to the moral laws of Nature, I gladly admit, not only that it contains a valuable educational element, but that, so far, it deals with the most valuable and important part of all education. Yet, con-

9. The law that the attraction of two bodies varies inversely as the square of the distance.

10. A section of a county, in England, intended originally for one hundred families.

trast what is done in this direction with what might be done; with the time given to matters of comparatively no importance; with the absence of any attention to things of the highest moment; and one is tempted to think of Falstaff's bill and 'the halfpenny worth of bread to all that quantity of sack.'[11]

Let us consider what a child thus 'educated' knows, and what it does not know. Begin with the most important topic of all — morality, as the guide of conduct. The child knows well enough that some acts meet with approbation and some with disapprobation. But it has never heard that there lies in the nature of things a reason for every moral law, as cogent and as well defined as that which underlies every physical law; that stealing and lying are just as certain to be followed by evil consequences, as putting your hand in the fire, or jumping out of a garret window. Again, though the scholar may have been made acquainted, in dogmatic fashion, with the broad laws of morality, he has had no training in the application of those laws to the difficult problems which result from the complex conditions of modern civilisation. Would it not be very hard to expect any one to solve a problem in conic sections[12] who had merely been taught the axioms and definitions of mathematical science?

A workman has to bear hard labour, and perhaps privation, while he sees others rolling in wealth, and feeding their dogs with what would keep his children from starvation. Would it not be well to have helped that man to calm the natural promptings of discontent by showing him, in his youth, the necessary connexion of the moral law which prohibits stealing with the stability of society — by proving to him, once for all, that it is better for his own people, better for himself, better for future generations, that he should starve than steal? If you have no foundation of knowledge, or habit of thought, to work upon, what chance have you of persuading a hungry man that a capitalist is not a thief 'with a circumbendibus?'[13] And if he honestly believes that, of what avail is it to quote the commandment against stealing, when he proposes to make the capitalist disgorge?

Again, the child learns absolutely nothing of the history or the political organisation of his own country. His general impression is, that everything of much importance happened a very long while ago; and that the Queen and the gentlefolks govern the country much after the fashion of King David and the elders and nobles of Israel — his sole models. Will you give a man with this much information a vote? In easy times he sells it for a pot of beer. Why should he not? It is of about as much use to him as a chignon,[14] and he knows as much what to do with it, for any other purpose. In bad times, on the contrary, he applies his simple theory of government, and believes that his rulers are the cause of his sufferings — a belief which sometimes bears remarkable practical fruits.

Least of all, does the child gather from this primary 'education' of ours a conception of the laws of the physical world, or of the relations of cause and effect therein. And this is the more to be lamented, as the poor are especially exposed to physical evils, and are more interested in removing them than any other class of the community. If any one is concerned in knowing the ordinary laws of mechanics one would think it is the hand-labourer, whose daily toil lies among levers and pulleys; or among the other implements of artisan work. And if any one is interested in the laws of health, it is the poor workman, whose strength is wasted by ill-prepared food, whose health is

11. See *1 Henry IV*, II,iv,550. *Sack*: wine.
12. Geometry dealing with ellipse, parabola, and hyperbola.
13. A thief by another name. *Circumbendibus* (a humorous word): circumlocution.
14. A knot of hair worn by a woman at the back of her head.

sapped by bad ventilation and bad drainage, and half whose children are massacred by disorders which might be prevented. Not only does our present primary education carefully abstain from hinting to the workman that some of his greatest evils are traceable to mere physical agencies, which could be removed by energy, patience, and frugality; but it does worse — it renders him, so far as it can, deaf to those who could help him, and tries to substitute an Oriental submission to what is falsely declared to be the will of God, for his natural tendency to strive after a better condition.

What wonder then, if very recently, an appeal has been made to statistics for the profoundly foolish purpose of showing that education is of no good — that it diminishes neither misery, nor crime, among the masses of mankind? I reply, why should the thing which has been called education do either the one or the other? If I am a knave or a fool, teaching me to read and write won't make me less of either one or the other — unless somebody shows me how to put my reading and writing to wise and good purposes.

Suppose any one were to argue that medicine is of no use, because it could be proved statistically, that the percentage of deaths was just the same, among people who had been taught how to open a medicine chest, and among those who did not so much as know the key by sight. The argument is absurd; but it is not more preposterous than that against which I am contending. The only medicine for suffering, crime, and all the other woes of mankind, is wisdom. Teach a man to read and write, and you have put into his hands the great keys of the wisdom box. But it is quite another matter whether he ever opens the box or not. And he is as likely to poison as to cure himself, if, without guidance, he swallows the first drug that comes to hand. In these times a man may as well be purblind, as unable to read — lame, as unable to write. But I protest that, if I thought the alternative were a necessary one, I would rather that the children of the poor should grow up ignorant of both these mighty arts, than that they should remain ignorant of that knowledge to which these arts are means.

It may be said that all these animadversions may apply to primary schools, but that the higher schools, at any rate, must be allowed to give a liberal education. In fact, they professedly sacrifice everything else to this object.

Let us inquire into this matter. What do the higher schools, those to which the great middle class of the country sends its children, teach, over and above the instruction given in the primary schools? There is a little more reading and writing of English. But, for all that, every one knows that it is a rare thing to find a boy of the middle or upper classes who can read aloud decently, or who can put his thoughts on paper in clear and grammatical (to say nothing of good or elegant) language. The 'ciphering' of the lower schools expands into elementary mathematics in the higher; into arithmetic, with a little algebra, a little Euclid.[15] But I doubt if one boy in five hundred has ever heard the explanation of a rule of arithmetic, or knows his Euclid otherwise than by rote.

Of theology, the middle class schoolboy gets rather less than poorer children, less absolutely and less relatively, because there are so many other claims upon his attention. I venture to say that, in the great majority of cases, his ideas on this subject when he leaves school are of the most shadowy and vague description, and associated with painful impressions of the weary hours spent in learning collects and catechism by heart.

Modern geography, modern history, modern literature; the English language,

15. Geometry — for Euclid (fl. 300 B.C.) of Alexandria composed a work on elementary geometry that was still used as a textbook in Huxley's time.

as a language; the whole circle of the sciences, physical, moral, and social, are even more completely ignored in the higher than in the lower schools. Up till within a few years back, a boy might have passed through any one of the great public schools with the greatest distinction and credit, and might never so much as have heard of one of the subjects I have just mentioned. He might never have heard that the earth goes round the sun; that England underwent a great revolution in 1688, and France another in 1789; that there once lived certain notable men called Chaucer, Shakspeare, Milton, Voltaire, Goethe, Schiller. The first might be a German and the last an Englishman for anything he could tell you to the contrary. And as for science, the only idea the word would suggest to his mind would be dexterity in boxing.

I have said that this was the state of things a few years back, for the sake of the few righteous who are to be found among the educational cities of the plain. But I would not have you too sanguine about the result, if you sound the minds of the existing generation of public schoolboys, on such topics as those I have mentioned.

Now let us pause to consider this wonderful state of affairs; for the time will come when Englishmen will quote it as the stock example of the stolid stupidity of their ancestors in the nineteenth century. The most thoroughly commercial people, the greatest voluntary wanderers and colonists the world has ever seen, are precisely the middle classes of this country. If there be a people which has been busy making history on the great scale for the last three hundred years — and the most profoundly interesting history — history which, if it happened to be that of Greece or Rome, we should study with avidity — it is the English. If there be a people which, during the same period, has developed a remarkable literature, it is our own. If there be a nation whose prosperity depends absolutely and wholly upon their mastery over the forces of Nature, upon their intelligent apprehension of, and obedience to, the laws of the creation and distribution of wealth, and of the stable equilibrium of the forces of society, it is precisely this nation. And yet this is what these wonderful people tell their sons: — 'At the cost of from one to two thousand pounds of our hard earned money, we devote twelve of the most precious years of your lives to school. There you shall toil, or be supposed to toil; but there you shall not learn one single thing of all those you will most want to know, directly you leave school and enter upon the practical business of life. You will in all probability go into business, but you shall not know where, or how, any article of commerce is produced, or the difference between an export or an import, or the meaning of the word "capital." You will very likely settle in a colony, but you shall not know whether Tasmania is part of New South Wales,[16] or *vice versa*.

'Very probably you may become a manufacturer, but you shall not be provided with the means of understanding the working of one of your own steam-engines, or the nature of the raw products you employ; and, when you are asked to buy a patent, you shall not have the slightest means of judging whether the inventor is an impostor who is contravening the elementary principles of science, or a man who will make you as rich as Croesus.[17]

'You will very likely get into the House of Commons. You will have to take your share in making laws which may prove a blessing or a curse to millions of men. But you shall not hear one word respecting the political organisation of your country; the meaning of the controversy between

16. New South Wales was a British colony in Australia; Tasmania, an island and British colony south of Australia.

17. A king of Lydia, in the 6th century B.C., famed for immense wealth.

free traders and protectionists shall never have been mentioned to you; you shall not so much as know that there are such things as economical laws.

'The mental power which will be of most importance in your daily life will be the power of seeing things as they are without regard to authority; and of drawing accurate general conclusions from particular facts. But at school and at college you shall know of no source of truth but authority; nor exercise your reasoning faculty upon anything but deduction from that which is laid down by authority.

'You will have to weary your soul with work, and many a time eat your bread in sorrow and in bitterness, and you shall not have learned to take refuge in the great source of pleasure without alloy, the serene resting place for worn human nature, — the world of art.'

Said I not rightly that we are a wonderful people? I am quite prepared to allow, that education entirely devoted to these omitted subjects might not be a completely liberal education. But is an education which ignores them all, a liberal education? Nay, is it too much to say that the education which should embrace these subjects and no others, would be a real education, though an incomplete one; while an education which omits them is really not an education at all, but a more or less useful course of intellectual gymnastics?

For what does the middle-class school put in the place of all these things which are left out? It substitutes what is usually comprised under the compendious title of the 'classics' — that is to say, the languages, the literature, and the history of the ancient Greeks and Romans, and the geography of so much of the world as was known to these two great nations of antiquity. Now, do not expect me to depreciate the earnest and enlightened pursuit of classical learning. I have not the least desire to speak ill of such occupations, nor any sympathy with those who run them down. On the contrary, if my opportunities had lain in that direction, there is no investigation into which I could have thrown myself with greater delight than that of antiquity.

What science can present greater attractions than philology? How can a lover of literary excellence fail to rejoice in the ancient masterpieces? And with what consistency could I, whose business lies so much in the attempt to decipher the past, and to build up intelligible forms out of the scattered fragments of long-extinct beings, fail to take a sympathetic, though an unlearned, interest in the labours of a Niebuhr, a Gibbon, or a Grote? [18] Classical history is a great section of the palæontology of man; and I have the same double respect for it as for other kinds of palæontology — that is to say, a respect for the facts which it establishes as for all facts, and a still greater respect for it as a preparation for the discovery of a law of progress.

But if the classics were taught as they might be taught — if boys and girls were instructed in Greek and Latin, not merely as languages, but as illustrations of philological science; if a vivid picture of life on the shores of the Mediterranean, two thousand years ago, were imprinted on the minds of scholars; if ancient history were taught, not as a weary series of feuds and fights, but traced to its causes in such men placed under such conditions; if, lastly, the study of the classical books were followed in such a manner as to impress boys with their beauties, and with the grand simplicity of their statement of the everlasting problems of human life, instead of with their verbal and grammatical peculiarities; I still think it as little proper that they should form the basis of a liberal

18. Three great historians: Barthold Georg Niebuhr (1776–1831), German, author of the *History of Rome*; Edward Gibbon (1737–94), English, author of *The Decline and Fall of the Roman Empire*; George Grote (1794–1871), English, author of the *History of Greece*.

education for our contemporaries, as I should think it fitting to make that sort of palæontology with which I am familiar, the back-bone of modern education.

It is wonderful how close a parallel to classical training could be made out of that palæontology to which I refer. In the first place I could get up an osteological primer so arid, so pedantic in its terminology, so altogether distasteful to the youthful mind, as to beat the recent famous production of the head-masters out of the field in all these excellences. Next, I could exercise my boys upon easy fossils, and bring out all their powers of memory and all their ingenuity in the application of my osteo-grammatical rules to the interpretation, or construing, of those fragments. To those who had reached the higher classes, I might supply odd bones to be built up into animals, giving great honour and reward to him who succeeded in fabricating monsters most entirely in accordance with the rules. That would answer to verse-making and easy-writing in the dead languages.

To be sure, if a great comparative anatomist were to look at these fabrications he might shake his head, or laugh. But what then? Would such a catastrophe destroy the parallel. What think you would Cicero, or Horace, say to the production of the best sixth form[19] going? And would not Terence[20] stop his ears and run out if he could be present at an English performance of his own plays? Would Hamlet, in the mouths of a set of French actors, who should insist on pronouncing English after the fashion of their own tongue, be more hideously ridiculous?

But it will be said that I am forgetting the beauty, and the human interest, which appertain to classical studies. To this I reply that it is only a very strong man who can appreciate the charms of a landscape, as he is toiling up a steep hill, along a bad road. What with short-windedness, stones, ruts, and a pervading sense of the wisdom of rest and be thankful, most of us have little enough sense of the beautiful under these circumstances. The ordinary schoolboy is precisely in this case. He finds Parnassus[21] uncommonly steep, and there is no chance of his having much time or inclination to look about him till he gets to the top. And nine times out of ten he does not get to the top.

But if this be a fair picture of the results of classical teaching at its best — and I gather from those who have authority to speak on such matters that it is so — what is to be said of classical teaching at its worst, or in other words, of the classics of our ordinary middle-class schools?[22] I will tell you. It means getting up endless forms and rules by heart. It means turning Latin and Greek into English, for the mere sake of being able to do it, and without the smallest regard to the worth, or worthlessness, of the author read. It means the learning of innumerable, not always decent, fables in such a shape that the meaning they once had is dried up into utter trash; and the only impression left upon a boy's mind is, that the people who believed such things must have been the greatest idiots the world ever saw. And it means, finally, that after a dozen years spent at this kind of work, the sufferer shall be incompetent to interpret a passage in an author he has not already got up; that he shall loathe the sight of a Greek or Latin book; and that he shall never open, or think of, a classical writer again, until, wonderful to relate, he insists upon submitting his sons to the same process.

These be your gods, O Israel![23] For the sake of this net result (and respectability)

19. The senior class in an English public school.
20. Publius Terentius Afer (185–159 B.C.), great writer of Latin comedies.
21. A mountain in Greece, sacred in classical times to Apollo and the Muses; mastery of the classics is referred to here.
22. For a justification of what is here said about the schools, see that valuable book, 'Essays on a Liberal Education,' *passim*. [Huxley's note.]
23. *Cf. Exodus*, xxxii,3,4.

the British father denies his children all the knowledge they might turn to account in life, not merely for the achievement of vulgar success, but for guidance in the great crises of human existence. This is the stone he offers to those whom he is bound by the strongest and tenderest ties to feed with bread.[24]

If primary and secondary education are in this unsatisfactory state, what is to be said to the universities? This is an awful subject,[25] and one I almost fear to touch with my unhallowed hands; but I can tell you what those say who have authority to speak.

The Rector of Lincoln College,[26] in his lately published, valuable 'Suggestions for Academical Organization with especial reference to Oxford,' tells us (p.127): —

'The colleges were, in their origin, endowments, not for the elements of a general liberal education, but for the prolonged study of special and professional faculties by men of riper age. The universities embraced both these objects. The colleges, while they incidentally aided in elementary education, were specially devoted to the highest learning. . . .

'This was the theory of the middle-age university and the design of collegiate foundations in their origin. Time and circumstances have brought about a total change. The colleges no longer promote the researches of science, or direct professional study. Here and there college walls may shelter an occasional student, but not in larger proportions than may be found in private life. Elementary teaching of youths under twenty is now the only function performed by the university, and almost the only object of college endowments. Colleges were homes for the life-study of the highest and most abstruse parts of knowledge. They have become boarding schools in which the elements of the learned languages are taught to youths.'

If Mr. Pattison's high position, and his obvious love and respect for his university, be insufficient to convince the outside world that language so severe is yet no more than just, the authority of the Commissioners who reported on the University of Oxford in 1850 is open to no challenge. Yet they write: —

'It is generally acknowledged that both Oxford and the country at large suffer greatly from the absence of a body of learned men devoting their lives to the cultivation of science, and to the direction of academical education.

'The fact that so few books of profound research emanate from the University of Oxford, materially impairs its character as a seat of learning, and consequently its hold on the respect of the nation.'

Cambridge can claim no exemption from the reproaches addressed to Oxford. And thus there seems no escape from the admission that what we fondly call our great seats of learning are simply 'boarding schools' for bigger boys; that learned men are not more numerous in them than out of them; that the advancement of knowledge is not the object of fellows of colleges; that, in the philosophic calm and meditative stillness of their greenswarded courts, philosophy does not thrive, and meditation bears few fruits.

It is my great good fortune to reckon amongst my friends resident members of both universities, who are men of learning and research, zealous cultivators of science, keeping before their minds a noble ideal of a university, and doing their best to make that ideal a reality; and, to me, they would necessarily typify the universities, did not the authoritative statements

24. *Cf. Matthew*, vii,9: 'Or what man is there of you, whom if his son ask bread, will he give him a stone?'

25. Burke's speech on 'Conciliation with America' has its second paragraph beginning 'Surely it is an awful subject.'

26. Mark Pattison (1813–84), educator and author, rector of Lincoln College, Oxford University.

I have quoted compel me to believe that they are exceptional, and not representative men. Indeed, upon calm consideration, several circumstances lead me to think that the Rector of Lincoln College and the Commissioners cannot be far wrong.

I believe there can be no doubt that the foreigner who should wish to become acquainted with the scientific, or the literary, activity of modern England, would simply lose his time and his pains if he visited our universities with that object.

And, as for works of profound research on any subject, and, above all, in that classical lore for which universities profess to sacrifice almost everything else, why, a third-rate, poverty-stricken German university turns out more produce of that kind in one year, than our vast and wealthy foundations elaborate in ten.

Ask the man who is investigating any question, profoundly and thoroughly—be it historical, philosophical, philological, physical, literary, or theological; who is trying to make himself master of any abstract subject (except, perhaps, political economy and geology, both of which are intensely Anglican sciences) whether he is not compelled to read half a dozen times as many German, as English, books? And whether, of these English books, more than one in ten is the work of a fellow of a college, or a professor of an English university?

Is this from any lack of power in the English as compared with the German mind? The countrymen of Grote and of Mill, of Faraday, of Robert Brown, of Lyell,[27] and of Darwin, to go no further back than the contemporaries of men of middle age, can afford to smile at such a suggestion. England can show now, as she has been able to show in every generation since civilisation spread over the West, individual men who hold their own against the world, and keep alive the old tradition of her intellectual eminence.

But, in the majority of cases, these men are what they are in virtue of their native intellectual force, and of a strength of character which will not recognise impediments. They are not trained in the courts of the Temple of Science, but storm the walls of that edifice in all sorts of irregular ways, and with much loss of time and power, in order to obtain their legitimate positions.

Our universities not only do not encourage such men; do not offer them positions, in which it should be their highest duty to do, thoroughly, that which they are most capable of doing; but, as far as possible, university training shuts out of the minds of those among them, who are subjected to it, the prospect that there is anything in the world for which they are specially fitted. Imagine the success of the attempt to still the intellectual hunger of any of the men I have mentioned, by putting before him, as the object of existence, the successful mimicry of the measure of a Greek song, or the roll of Ciceronian prose! Imagine how much success would be likely to attend the attempt to persuade such men, that the education which leads to perfection in such elegancies is alone to be called culture; while the facts of history, the process of thought, the conditions of moral and social existence, and the laws of physical nature, are left to be dealt with as they may, by outside barbarians!

It is not thus that the German universities, from being beneath notice a century ago, have become what they are now—the most intensely cultivated and the most productive intellectual corporations the world has ever seen.

The student who repairs to them sees in the list of classes and of professors a fair picture of the world of knowledge. Whatever he needs to know there is some one ready to teach him, some one competent

27. Michael Faraday (1791–1867), chemist and physicist; Robert Brown (1773–1858), botanist, eminent for investigations into the impregnation of plants; Sir Charles Lyell (1795–1875), geologist, propounder of evolution in geology.

to discipline him in the way of learning; whatever his special bent, let him but be able and diligent, and in due time he shall find distinction and a career. Among his professors, he sees men whose names are known and revered throughout the civilised world; and their living example infects him with a noble ambition, and a love for the spirit of work.

The Germans dominate the intellectual world by virtue of the same simple secret as that which made Napoleon the master of old Europe. They have declared *la carrière ouverte aux talents*,[28] and every Bursch [29] marches with a professor's gown in his knapsack. Let him become a great scholar, or man of science, and ministers will compete for his services. In Germany, they do not leave the chance of his holding the office he would render illustrious to the tender mercies of a hot canvass, and the final wisdom of a mob of country parsons.

In short, in Germany, the universities are exactly what the Rector of Lincoln and the Commissioners tell us the English universities are not; that is to say, corporations 'of learned men devoting their lives to the cultivation of science, and the direction of academical education.' They are not 'boarding schools for youths,' nor clerical seminaries; but institutions for the higher culture of men, in which the theological faculty is of no more importance, or prominence, than the rest; and which are truly 'universities,' since they strive to represent and embody the totality of human knowledge, and to find room for all forms of intellectual activity.

May zealous and clear-headed reformers like Mr. Pattison succeed in their noble endeavours to shape our universities towards some such ideal as this, without losing what is valuable and distinctive in their social tone! But until they have succeeded, a liberal education will be no more obtainable in our Oxford and Cambridge Universities than in our public schools.

If I am justified in my conception of the ideal of a liberal education; and if what I have said about the existing educational institutions of the country is also true, it is clear that the two have no sort of relation to one another; that the best of our schools and the most complete of our university trainings give but a narrow, one-sided, and essentially illiberal education — while the worst give what is really next to no education at all. The South London Working-Men's College could not copy any of these institutions if it would. I am bold enough to express the conviction that it ought not if it could.

For what is wanted is the reality and not the mere name of a liberal education; and this College must steadily set before itself the ambition to be able to give that education sooner or later. At present we are but beginning, sharpening our educational tools, as it were, and, except a modicum of physical science, we are not able to offer much more than is to be found in an ordinary school.

Moral and social science — one of the greatest and most fruitful of our future classes, I hope — at present lacks only one thing in our programme, and that is a teacher. A considerable want, no doubt; but it must be recollected that it is much better to want a teacher than to want the desire to learn.

Further, we need what, for want of a better name, I must call Physical Geography. What I mean is that which the Germans call '*Erdkunde*.' [30] It is a description of the earth, of its place and relation to other bodies; of its general structure, and of its great features — winds, tides, moun-

28. 'The career open to the talents.' *Cf.* J.R. Lowell, *Democracy, and Other Addresses*, ed. Boston, 1887, pp.36–37: 'For I take it that the real essence of democracy was fairly enough defined by the First Napoleon when he said that the French Revolution meant "la carrière ouverte aux talents" — a clear pathway for merit of whatever kind.'

29. 'German student.'

30. 'Earth-knowledge.'

tains, plains; of the chief forms of the vegetable and animal worlds, of the varieties of man. It is the peg upon which the greatest quantity of useful and entertaining scientific information can be suspended.

Literature is not upon the College programme; but I hope some day to see it there. For literature is the greatest of all sources of refined pleasure, and one of the great uses of a liberal education is to enable us to enjoy that pleasure. There is scope enough for the purposes of liberal education in the study of the rich treasures of our own language alone. All that is needed is direction, and the cultivation of a refined taste by attention to sound criticism. But there is no reason why French and German should not be mastered sufficiently to read what is worth reading in those languages, with pleasure and with profit.

And finally, by-and-by, we must have History; treated not as a succession of battles and dynasties; not as a series of biographies; not as evidence that Providence has always been on the side of either Whigs or Tories; but as the development of man in times past, and in other conditions than our own.

But, as it is one of the principles of our College to be self-supporting, the public must lead, and we must follow, in these matters. If my hearers take to heart what I have said about liberal education, they will desire these things, and I doubt not we shall be able to supply them. But we must wait till the demand is made.

VI

Science and Culture

FROM the time that the first suggestion to introduce physical science into ordinary education was timidly whispered, until now, the advocates of scientific education have met with opposition of two kinds. On the one hand, they have been poohpoohed by the men of business who pride themselves on being the representatives of practicality; while, on the other hand, they have been excommunicated by the classical scholars, in their capacity of Levites in charge of the ark of culture [1] and monopolists of liberal education.

The practical men believed that the idol whom they worship — rule of thumb — has been the source of the past prosperity, and will suffice for the future welfare of the arts and manufactures. They are of opinion that science is speculative rubbish; that theory and practice have nothing to do with one another; and that the scientific habit of mind is an impediment, rather than an aid, in the conduct of ordinary affairs.

I have used the past tense in speaking of the practical men — for although they were very formidable thirty years ago, I am not sure that the pure species has not been extirpated. In fact, so far as mere argument goes, they have been subjected to such a *feu d'enfer* [2] that it is a miracle if any have escaped. But I have remarked that your typical practical man has an unexpected resemblance to one of Milton's angels. His spiritual wounds, such as are inflicted by logical weapons, may be as deep as a well and as wide as a church door, but beyond shedding a few drops of ichor, celestial or otherwise, he is no whit the worse. So, if any of these opponents be left, I will not waste time in vain repetition of the demonstrative evidence of the practical value of science; but knowing that a parable will sometimes penetrate where syllogisms fail to effect an entrance, I will offer a story for their consideration.

Once upon a time, a boy,[3] with noth-

1. See Arnold's 'Literature and Science,' note 11. See also *Joshua*, vi.
2. 'fire of hell.'
3. Josiah Mason (1795–1881), a poor boy, sold cakes in the streets, and vegetables from door to door. In 1810 he taught himself shoemaking. Later he became carpenter, blacksmith, housepainter, carpet-weaver. Then he became a factory executive, and ultimately made a great fortune from manufacturing steel pens, and elec-

ing to depend upon but his own vigorous nature, was thrown into the thick of the struggle for existence in the midst of a great manufacturing population. He seems to have had a hard fight, inasmuch as, by the time he was thirty years of age, his total disposable funds amounted to twenty pounds. Nevertheless, middle life found him giving proof of his comprehension of the practical problems he had been roughly called upon to solve, by a career of remarkable prosperity.

Finally, having reached old age with its well-earned surroundings of 'honour, troops of friends,' the hero of my story bethought himself of those who were making a like start in life, and how he could stretch out a helping hand to them.

After long and anxious reflection this successful practical man of business could devise nothing better than to provide them with the means of obtaining 'sound, extensive, and practical scientific knowledge.' And he devoted a large part of his wealth and five years of incessant work to this end.

I need not point the moral of a tale which, as the solid and spacious fabric of the Scientific College assures us, is no fable, nor can anything which I could say intensify the force of this practical answer to practical objections.

We may take it for granted then, that, in the opinion of those best qualified to judge, the diffusion of thorough scientific education is an absolutely essential condition of industrial progress; and that the College which has been opened today will confer an inestimable boon upon those whose livelihood is to be gained by the practise of the arts and manufactures of the district.

The only question worth discussion is, whether the conditions, under which the work of the College is to be carried out, are such as to give it the best possible chance of achieving permanent success.

Sir Josiah Mason, without doubt most wisely, has left very large freedom of action to the trustees, to whom he proposes ultimately to commit the administration of the College, so that they may be able to adjust its arrangements in accordance with the changing conditions of the future. But, with respect to three points, he has laid most explicit injunctions upon both administrators and teachers.

Party politics are forbidden to enter into the minds of either, so far as the work of the College is concerned; theology is as sternly banished from its precincts; and finally, it is especially declared that the College shall make no provision for 'mere literary instruction and education.'

It does not concern me at present to dwell upon the first two injunctions any longer than may be needful to express my full conviction of their wisdom. But the third prohibition brings us face to face with those other opponents of scientific education, who are by no means in the moribund condition of the practical man, but alive, alert, and formidable.

It is not impossible that we shall hear this express exclusion of 'literary instruction and education' from a College which, nevertheless, professes to give a high and efficient education, sharply criticised. Certainly the time was that the Levites of culture would have sounded their trumpets against its walls as against an educational Jericho.[4]

How often have we not been told that the study of physical science is incompetent to confer culture; that it touches none of the higher problems of life; and, what is worse, that the continual devotion to scientific studies tends to generate a narrow and bigoted belief in the applicability of scientific methods to the search after truth of all kinds? How frequently one has reason to observe that no reply to a trouble-

tro-plating, etc. His chief philanthropy was the establishment of his Scientific College, at Birmingham, costing £180,000.

4. A town to be conquered, in the name of the Lord. *Cf. Joshua*, vi.

some argument tells so well as calling its author a 'mere scientific specialist.' And, as I am afraid it is not permissible to speak of this form of opposition to scientific education in the past tense; may we not expect to be told that this, not only omission, but prohibition, of 'mere literary instruction and education' is a patent example of scientific narrow-mindedness?

I am not acquainted with Sir Josiah Mason's reasons for the action which he has taken; but if, as I apprehend is the case, he refers to the ordinary classical course of our schools and universities by the name of 'mere literary instruction and education,' I venture to offer sundry reasons of my own in support of that action.

For I hold very strongly by two convictions: The first is, that neither the discipline nor the subject-matter of classical education is of such direct value to the student of physical science as to justify the expenditure of valuable time upon either; and the second is, that for the purpose of attaining real culture, an exclusively scientific education is at least as effectual as an exclusively literary education.

I need hardly point out to you that these opinions, especially the latter, are diametrically opposed to those of the great majority of educated Englishmen, influenced as they are by school and university traditions. In their belief, culture is obtainable only by a liberal education; and a liberal education is synonymous, not merely with education and instruction in literature, but in one particular form of literature, namely, that of Greek and Roman antiquity. They hold that the man who has learned Latin and Greek, however little, is educated; while he who is versed in other branches of knowledge, however deeply, is a more or less respectable specialist, not admissible into the cultured caste. The stamp of the educated man, the University degree, is not for him.

I am too well acquainted with the generous catholicity of spirit, the true sympathy with scientific thought, which pervades the writings of our chief apostle of culture [5] to identify him with these opinions; and yet one may cull from one and another of those epistles to the Philistines, which so much delight all who do not answer to that name, sentences which lend them some support.

Mr. Arnold tells us that the meaning of culture is 'to know the best that has been thought and said in the world.' [6] It is the criticism of life contained in literature. That criticism regards 'Europe as being, for intellectual and spiritual purposes, one great confederation, bound to a joint action and working to a common result; and whose members have, for their common outfit, a knowledge of Greek, Roman, and Eastern antiquity, and of one another. Special, local, and temporary advantages being put out of account, that modern nation will in the intellectual and spiritual sphere make most progress, which most thoroughly carries out this programme. And what is that but saying that we too, all of us, as individuals, the more thoroughly we carry it out, shall make the more progress?' [7]

We have here to deal with two distinct propositions. The first, that a criticism of life is the essence of culture; the second, that literature contains the materials which suffice for the construction of such criticism.

I think that we must all assent to the first proposition. For culture certainly means something quite different from learning or technical skill. It implies the possession of an ideal, and the habit of critically estimating the value of things by comparison with a theoretic standard. Perfect culture should supply a complete theory of life, based upon a clear knowl-

5. Matthew Arnold, whose essays urging culture for complacent materialists are here termed 'epistles to the Philistines.'

6. For this and the following quotation, see the fourth-last paragraph of Arnold's 'The Function of Criticism.'

7. *Essays in Criticism*, p.37. [Huxley's note.]

edge alike of its possibilities and of its limitations.

But we may agree to all this, and yet strongly dissent from the assumption that literature alone is competent to supply this knowledge. After having learnt all that Greek, Roman, and Eastern antiquity have thought and said, and all that modern literature have to tell us, it is not self-evident that we have laid a sufficiently broad and deep foundation for that criticism of life, which constitutes culture.

Indeed, to any one acquainted with the scope of physical science, it is not at all evident. Considering progress only in the 'intellectual and spiritual sphere,' I find myself wholly unable to admit that either nations or individuals will really advance, if their common outfit draws nothing from the stores of physical science. I should say that an army, without weapons of precision and with no particular base of operations, might more hopefully enter upon a campaign on the Rhine, than a man, devoid of a knowledge of what physical science has done in the last century, upon a criticism of life.

When a biologist meets with an anomaly, he instinctively turns to the study of development to clear it up. The rationale of contradictory opinions may with equal confidence be sought in history.

It is, happily, no new thing that Englishmen should employ their wealth in building and endowing institutions for educational purposes. But, five or six hundred years ago, deeds of foundation expressed or implied conditions as nearly as possible contrary to those which have been thought expedient by Sir Josiah Mason. That is to say, physical science was practically ignored, while a certain literary training was enjoined as a means to the acquirement of knowledge which was essentially theological.

The reason of this singular contradiction between the actions of men alike animated by a strong and disinterested desire to promote the welfare of their fellows, is easily discovered.

At that time, in fact, if any one desired knowledge beyond such as could be obtained by his own observation, or by common conversation, his first necessity was to learn the Latin language, inasmuch as all the higher knowledge of the western world was contained in works written in that language. Hence, Latin grammar, with logic and rhetoric, studied through Latin, were the fundamentals of education. With respect to the substance of the knowledge imparted through this channel, the Jewish and Christian Scriptures, as interpreted and supplemented by the Romish Church, were held to contain a complete and infallibly true body of information.

Theological dicta were, to the thinkers of those days, that which the axioms and definitions of Euclid are to the geometers of these. The business of the philosophers of the middle ages was to deduce from the data furnished by the theologians, conclusions in accordance with ecclesiastical decrees. They were allowed the high privilege of showing, by logical process, how and why that which the Church said was true, must be true. And if their demonstrations fell short of or exceeded this limit, the Church was maternally ready to check their aberrations; if need were, by the help of the secular arm.

Between the two, our ancestors were furnished with a compact and complete criticism of life. They were told how the world began and how it would end; they learned that all material existence was but a base and insignificant blot upon the fair face of the spiritual world, and that nature was, to all intents and purposes, the playground of the devil; they learned that the earth is the centre of the visible universe, and that man is the cynosure of things terrestrial, and more especially was it inculcated that the course of nature had no fixed order, but that it could be, and constantly was, altered by the agency of in-

numerable spiritual beings, good and bad, according as they were moved by the deeds and prayers of men. The sum and substance of the whole doctrine was to produce the conviction that the only thing really worth knowing in this world was how to secure that place in a better which, under certain conditions, the Church promised.

Our ancestors had a living belief in this theory of life, and acted upon it in their dealings with education, as in all other matters. Culture meant saintliness — after the fashion of the saints of those days; the education that led to it was, of necessity, theological; and the way to theology lay through Latin.

That the study of nature — further than was requisite for the satisfaction of everyday wants — should have any bearing on human life was far from the thoughts of men thus trained. Indeed, as nature had been cursed for man's sake,[8] it was an obvious conclusion that those who meddled with nature were likely to come into pretty close contact with Satan. And, if any born scientific investigator followed his instincts, he might safely reckon upon earning the reputation, and probably upon suffering the fate, of a sorcerer.

Had the western world been left to itself in Chinese isolation, there is no saying how long this state of things might have endured. But, happily, it was not left to itself. Even earlier than the thirteenth century, the development of Moorish civilisation in Spain and the great movement of the Crusades had introduced the leaven which, from that day to this, has never ceased to work. At first, through the intermediation of Arabic translations, afterwards by the study of the originals, the western nations of Europe became acquainted with the writings of the ancient philosophers and poets, and, in time, with the whole of the vast literature of antiquity.

Whatever there was of high intellectual aspiration or dominant capacity in Italy, France, Germany, and England, spent itself for centuries in taking possession of the rich inheritance left by the dead civilisations of Greece and Rome. Marvellously aided by the invention of printing, classical learning spread and flourished. Those who possessed it prided themselves on having attained the highest culture then within the reach of mankind.

And justly. For, saving Dante on his solitary pinnacle, there was no figure in modern literature at the time of the Renascence to compare with the men of antiquity; there was no art to compete with their sculpture; there was no physical science but that which Greece had created. Above all, there was no other example of perfect intellectual freedom — of the unhesitating acceptance of reason as the sole guide to truth and the supreme arbiter of conduct.

The new learning necessarily soon exerted a profound influence upon education. The language of the monks and schoolmen seemed little better than gibberish to scholars fresh from Virgil and Cicero, and the study of Latin was placed upon a new foundation. Moreover, Latin itself ceased to afford the sole key to knowledge. The student who sought the highest thought of antiquity, found only a second-hand reflection of it in Roman literature, and turned his face to the full light of the Greeks. And after a battle, not altogether dissimilar to that which is at present being fought over the teaching of physical science, the study of Greek was recognised as an essential element of all higher education.

Then the Humanists, as they were called, won the day; and the great reform which they effected was of incalculable service to mankind. But the Nemesis [9] of all reformers is finality; and the reformers of education, like those of religion, fell into the profound, however common, er-

8. *Cf. Genesis*, iii,17.

9. Among the ancient Greeks, the goddess who dealt out retributive or retaliatory justice.

ror of mistaking the beginning for the end of the work of reformation.

The representatives of the Humanists, in the nineteenth century, take their stand upon classical education as the sole avenue to culture, as firmly as if we were still in the age of Renascence. Yet, surely, the present intellectual relations of the modern and the ancient worlds are profoundly different from those which obtained three centuries ago. Leaving aside the existence of a great and characteristically modern literature, of modern painting, and, especially, of modern music, there is one feature of the present state of the civilised world which separates it more widely from the Renascence, than the Renascence was separated from the middle ages.

This distinctive character of our own times lies in the vast and constantly increasing part which is played by natural knowledge. Not only is our daily life shaped by it; not only does the prosperity of millions of men depend upon it, but our whole theory of life has long been influenced, consciously or unconsciously, by the general conceptions of the universe, which have been forced upon us by physical science.

In fact, the most elementary acquaintance with the results of scientific investigation shows us that they offer a broad and striking contradiction to the opinion so implicitly credited and taught in the middle ages.

The notions of the beginning and the end of the world entertained by our forefathers are no longer credible. It is very certain that the earth is not the chief body in the material universe, and that the world is not subordinated to man's use. It is even more certain that nature is the expression of a definite order with which nothing interferes, and that the chief business of mankind is to learn that order and govern themselves accordingly. Moreover this scientific 'criticism of life' presents itself to us with different credentials from any other. It appeals not to authority, nor to what anybody may have thought or said, but to nature. It admits that all our interpretations of natural fact are more or less imperfect and symbolic, and bids the learner seek for truth not among words but among things. It warns us that the assertion which outstrips evidence is not only a blunder but a crime.

The purely classical education advocated by the representatives of the Humanists in our day, gives no inkling of all this. A man may be a better scholar than Erasmus,[10] and know no more of the chief causes of the present intellectual fermentation than Erasmus did. Scholarly and pious persons, worthy of all respect, favour us with allocutions upon the sadness of the antagonism of science to their mediæval way of thinking, which betray an ignorance of the first principles of scientific investigation, an incapacity for understanding what a man of science means by veracity, and an unconsciousness of the weight of established scientific truths, which is almost comical.

There is no great force in the *tu quoque*[11] argument, or else the advocates of scientific education might fairly enough retort upon the modern Humanists that they may be learned specialists, but that they possess no such sound foundation for a criticism of life as deserves the name of culture. And, indeed, if we were disposed to be cruel, we might urge that the Humanists have brought this reproach upon themselves, not because they are too full of the spirit of the ancient Greek, but because they lack it.

The period of the Renascence is commonly called that of the 'Revival of Letters,' as if the influences then brought to bear upon the mind of Western Europe had been wholly exhausted in the field of literature. I think it is very commonly forgotten that the revival of science, effected

10. Desiderius Erasmus (1466?–1536), Dutch, one of the greatest scholars during the Renaissance.

11. 'You too,' or 'So are you!'

by the same agency, although less conspicuous, was not less momentous.

In fact, the few and scattered students of nature of that day picked up the clue to her secrets exactly as it fell from the hands of the Greeks a thousand years before. The foundations of mathematics were so well laid by them, that our children learn their geometry from a book written for the schools of Alexandria two thousand years ago.[12] Modern astronomy is the natural continuation and development of the work of Hipparchus and of Ptolemy;[13] modern physics of that of Democritus and of Archimedes;[14] it was long before modern biological science outgrew the knowledge bequeathed to us by Aristotle, by Theophrastus, and by Galen.[15]

We cannot know all the best thoughts and saying of the Greeks unless we know what they thought about natural phenomena. We cannot fully apprehend their criticism of life unless we understand the extent to which that criticism was affected by scientific conceptions. We falsely pretend to be the inheritors of their culture, unless we are penetrated, as the best minds among them were, with an unhesitating faith that the free employment of reason, in accordance with scientific method, is the sole method of reaching truth.

Thus I venture to think that the pretensions of our modern Humanists to the possession of the monopoly of culture and to the exclusive inheritance of the spirit of antiquity must be abated, if not abandoned. But I should be very sorry that anything I have said should be taken to imply a desire on my part to depreciate the value of classical education, as it might be and as it sometimes is. The native capacities of mankind vary no less than their opportunities; and while culture is one, the road by which one man may best reach it is widely different from that which is most advantageous to another. Again, while scientific education is yet inchoate and tentative, classical education is thoroughly well organised upon the practical experience of generations of teachers. So that, given ample time for learning and estimation for ordinary life, or for a literary career, I do not think that a young Englishman in search of culture can do better than follow the course usually marked out for him, supplementing its deficiencies by his own efforts.

But for those who mean to make science their serious occupation; or who intend to follow the profession of medicine; or who have to enter early upon the business of life; for all these, in my opinion, classical education is a mistake; and it is for this reason that I am glad to see 'mere literary education and instruction' shut out from the curriculum of Sir Josiah Mason's College, seeing that its inclusion would probably lead to the introduction of the ordinary smattering of Latin and Greek.

Nevertheless, I am the last person to question the importance of genuine literary education, or to suppose that intellectual culture can be complete without it. An exclusively scientific training will

12. Euclid (fl. 300 B.C.) was a Greek geometer in Alexandria, Egypt, then a great center of learning. His *Elements* of geometry is referred to.

13. Hipparchus (160?–125? B.C.), Greek astronomer who contributed much to the science of astronomy, including the system of indicating geographical positions by means of the circles of latitude and longitude. Ptolemy (fl. 2d century), Greco-Egyptian astronomer, whose conception of the earth as the fixed center about which the sun and stars revolve was generally accepted till the 16th century.

14. Democritus (460?–362? B.C.), Greek natural philosopher, who expounded an atomic theory of matter. Archimedes (287?–212 B.C.), Greek mathematician to whom is attributed the formulation of the principles on which the theory of specific gravity is based, and the invention of several engines for use in war.

15. Aristotle studied anatomy, and divided the animal kingdom into classes. Theophrastus (372?–287? B.C.), pupil of Plato and Aristotle, was especially concerned with botany. Claudius Galen (130–200?), Greek physician and medical writer, was esteemed till the 16th century as the authority on anatomy and physiology.

bring about a mental twist as surely as an exclusively literary training. The value of the cargo does not compensate for a ship's being out of trim; and I should be very sorry to think that the Scientific College would turn out none but lopsided men.

There is no need, however, that such a catastrophe should happen. Instruction in English, French, and German is provided, and thus the three greatest literatures of the modern world are made accessible to the student.

French and German, and especially the latter language, are absolutely indispensable to those who desire full knowledge in any department of science. But even supposing that the knowledge of these languages acquired is not more than sufficient for purely scientific purposes, every Englishman has, in his native tongue, an almost perfect instrument of literary expression; and, in his own literature, models of every kind of literary excellence. If an Englishman cannot get literary culture out of his Bible, his Shakespeare, his Milton, neither, in my belief, will the profoundest study of Homer and Sophocles, Virgil and Horace, give it to him.

Thus, since the constitution of the College makes sufficient provision for literary as well as for scientific education, and since artistic instruction is also contemplated, it seems to me that a fairly complete culture is offered to all who are willing to take advantage of it.

But I am not sure that at this point the 'practical' man, scotched but not slain, may ask what all this talk about culture has to do with an Institution, the object of which is defined to be 'to promote the prosperity of the manufactures and the industry of the country.' He may suggest that what is wanted for this end is not culture, nor even a purely scientific discipline, but simply a knowledge of applied science.

I often wish that this phrase, 'applied science,' had never been invented. For it suggests that there is a sort of scientific knowledge of direct practical use, which can be studied apart from another sort of scientific knowledge, which is of no practical utility, and which is termed 'pure science.' But there is no more complete fallacy than this. What people call applied science is nothing but the application of pure science to particular classes of problems. It consists of deductions from those general principles, established by reasoning and observation, which constitute pure science. No one can safely make these deductions until he has a firm grasp of the principles; and he can obtain that grasp only by personal experience of the operations of observation and of reasoning on which they are founded.

Almost all the processes employed in the arts and manufactures fall within the range either of physics or of chemistry. In order to improve them, one must thoroughly understand them; and no one has a chance of really understanding them, unless he has obtained that mastery of principles and that habit of dealing with facts, which is given by long-continued and well-directed purely scientific training in the physical and the chemical laboratory. So that there really is no question as to the necessity of purely scientific discipline, even if the work of the College were limited by the narrowest interpretation of its stated aims.

And, as to the desirableness of a wider culture than that yielded by science alone, it is to be recollected that the improvement of manufacturing processes is only one of the conditions which contribute to the prosperity of industry. Industry is a means and not an end; and mankind work only to get something which they want. What that something is depends partly on their innate, and partly on their acquired, desires.

If the wealth resulting from prosperous industry is to be spent upon the gratification of unworthy desires, if the increasing perfection of manufacturing processes is to be accompanied by an increasing de-

basement of those who carry them on, I do not see the good of industry and prosperity.

Now it is perfectly true that men's views of what is desirable depend upon their characters; and that the innate proclivities to which we give that name are not touched by any amount of instruction. But it does not follow that even mere intellectual education may not, to an indefinite extent, modify the practical manifestation of the characters of men in their actions, by supplying them with motives unknown to the ignorant. A pleasure-loving character will have pleasure of some sort: but, if you give him the choice, he may prefer pleasures which do not degrade him to those which do. And this choice is offered to every man, who possesses in literary or artistic culture a never-failing source of pleasures, which are neither withered by age, nor staled by custom,[16] nor embittered in the recollection by the pangs of self-reproach.

If the Institution opened today fulfils the intention of its founder, the picked intelligences among all classes of the population of this district will pass through it. No child born in Birmingham, henceforward, if he have the capacity to profit by the opportunities offered to him, first in the primary and other schools, and afterwards in the Scientific College, need fail to obtain, not merely the instruction, but the culture most appropriate to the conditions of his life.

Within these walls, the future employer and the future artisan may sojourn together for a while, and carry, through all their lives, the stamp of the influences then brought to bear upon them. Hence, it is not beside the mark to remind you, that the prosperity of industry depends not merely upon the improvement of manufacturing processes, not merely upon the ennobling of the individual character, but upon a third condition, namely, a clear understanding of the conditions of social life, on the part of both the capitalist and the operative, and their argument upon common principles of social action. They must learn that social phenomena are as much the expression of natural laws as any others; that no social arrangements can be permanent unless they harmonise with the requirements of social statics and dynamics; and that, in the nature of things, there is an arbiter whose decisions execute themselves.

But this knowledge is only to be obtained by the application of the methods of investigation adopted in physical researches to the investigation of the phenomena of society. Hence, I confess, I should like to see one addition made to the excellent scheme of education propounded for the College, in the shape of provision for the teaching of Sociology. For though we are all agreed that party politics are to have no place in the instruction of the College; yet in this country, practically governed as it is now by universal suffrage, every man who does his duty must exercise political functions. And, if the evils which are inseparable from the good of political liberty are to be checked, if the perpetual oscillation of nations between anarchy and despotism is to be replaced by the steady march of self-restraining freedom; it will be because men will gradually bring themselves to deal with political, as they now deal with scientific questions; to be as ashamed of undue haste and partisan prejudice in the one case as in the other; and to believe that the machinery of society is at least as delicate as that of a spinning-jenny,[17] and as little likely to be improved by the meddling of those who have not taken the trouble to master the principles of its action.

In conclusion, I am sure that I make myself the mouthpiece of all present in offering to the venerable founder of the In-

16. *Cf. Antony and Cleopatra*, II,ii,240–41.

17. This machine, for spinning cotton or wool, has a great many spindles.

stitution, which now commences its beneficent career, our congratulations on the completion of his work; and in expressing the conviction, that the remotest posterity will point to it as a crucial instance of the wisdom which natural piety leads all men to ascribe to their ancestors.

SCIENCE AND CHRISTIAN TRADITION

IX

Agnosticism and Christianity

NEMO ergo ex me scire quaerat, quod me nescire scio, nisi forte ut nescire discat. — Augustinus, *De Civ. Dei*, xii.7.[1]

The present discussion has arisen out of the use, which has become general in the last few years, of the terms 'Agnostic' and 'Agnosticism.'

The people who call themselves 'Agnostics' have been charged with doing so because they have not the courage to declare themselves 'Infidels.'[2] It has been insinuated that they have adopted a new name in order to escape the unpleasantness which attaches to their proper denomination. To this wholly erroneous imputation, I have replied[3] by showing that the term 'Agnostic' did, as a matter of fact, arise in a manner which negatives it; and my statement has not been, and cannot be, refuted. Moreover, speaking for myself, and without impugning the right of any other person to use the term in another sense, I further say that Agnosticism is not properly described as a 'negative' creed, nor indeed as a creed of any kind, except in so far as it expresses absolute faith in the validity of a principle, which is as much ethical as intellectual. This principle may be stated in various ways, but they all amount to this: that it is wrong for a man to say that he is certain of the objective truth of any proposition unless he can produce evidence which logically justifies that certainty. This is what Agnosticism asserts; and, in my opinion, it is all that is essential to Agnosticism. That which Agnostics deny and repudiate, as immoral, is the contrary doctrine, that there are propositions which men ought to believe, without logically satisfactory evidence; and that reprobation ought to attach to the profession of disbelief in such inadequately supported propositions. The justification of the Agnostic principle lies in the success which follows upon its application, whether in the field of natural, or in that of civil, history; and in the fact that, so far as these topics are concerned, no sane man thinks of denying its validity.

Still speaking for myself, I add, that though Agnosticism is not, and cannot be, a creed, except in so far as its general principle is concerned; yet that the application of that principle results in the denial of, or the suspension of judgment concerning, a number of propositions respecting which our contemporary ecclesiastical 'gnostics' profess entire certainty. And, in so far as these ecclesiastical persons can be justified in their old-established custom (which many nowadays think more honoured in the breach than the observance) of using opprobrious names to those who differ from them, I fully admit their right to call me and those who think with me 'Infidels'; all I have ventured to urge is that

1. 'No one, therefore, should seek to learn knowledge from me, for I know that I do not know — unless indeed he wishes to learn that he does not know.' From Augustine's *City of God*. Huxley had true respect for the Bible — see his Prologue to *Controverted Questions* (1892); *cf.* his *Science and Christian Tradition*, ed. New York, 1896, pp.55–58.
2. *Agnostic*: literally, a person who is 'not knowing.' *Infidel*: a person 'without faith.' *Atheist*: a person who believes that there is 'no God.'
3. *Cf.* 'Agnosticism' (1889), in *Science and Christian Tradition*, ed. New York, 1896, pp. 209ff.

they must not expect us to speak of ourselves by that title.

The extent of the region of the uncertain, the number of the problems the investigation of which ends in a verdict of not proven, will vary according to the knowledge and the intellectual habits of the individual Agnostic. I do not very much care to speak of anything as 'unknowable.' What I am sure about is that there are many topics about which I know nothing; and which, so far as I can see, are out of reach of my faculties. But whether these things are knowable by any one else is exactly one of those matters which is beyond my knowledge, though I may have a tolerably strong opinion as to the probabilities of the case. Relatively to myself, I am quite sure that the region of uncertainty — the nebulous country in which words play the part of realities — is far more extensive than I could wish. Materialism and Idealism; Theism and Atheism; the doctrine of the soul and its mortality or immortality — appear in the history of philosophy like the shades of Scandinavian heroes, eternally slaying one another and eternally coming to life again in a metaphysical 'Nifelheim.'[4] It is getting on for twenty-five centuries, at least, since mankind began seriously to give their minds to these topics. Generation after generation, philosophy has been doomed to roll the stone uphill; and, just as all the world swore it was at the top, down it has rolled to the bottom again. All this is written in innumerable books; and he who will toil through them will discover that the stone is just where it was when the work began. Hume saw this; Kant[5] saw it; since their time, more and more eyes have been cleansed of the films which prevented them from seeing it; until now the weight and number of those who refuse to be the prey of verbal mystifications has begun to tell in practical life.

It was inevitable that a conflict should arise between Agnosticism and Theology; or rather, I ought to say, between Agnosticism and Ecclesiasticism. For Theology, the science, is one thing; and Ecclesiasticism, the championship of a foregone conclusion[6] as to the truth of a particular form of Theology, is another. With scientific Theology, Agnosticism has no quarrel. On the contrary, the Agnostic, knowing too well the influence of prejudice and idiosyncrasy, even on those who desire most earnestly to be impartial, can wish for nothing more urgently than that the scientific theologian should not only be at perfect liberty to thresh out the matter in his own fashion; but that he should, if he can, find flaws in the Agnostic position; and, even if demonstration is not to be had, that he should put, in their full force, the grounds of the conclusions he thinks probable. The scientific theologian admits the Agnostic principle, however widely his results may differ from those reached by the majority of Agnostics.

But, as between Agnosticism and Ecclesiasticism, or, as our neighbours across the Channel call it, Clericalism, there can be neither peace nor truce. The Cleric asserts that it is morally wrong not to believe certain propositions, whatever the results of a strict scientific investigation of the evidence of these propositions. He tells us 'that religious error is, in itself, of an immoral nature.'[7] He declares that he has prejudged certain conclusions, and looks upon those who show cause for arrest of judgment as emissaries of Satan. It necessarily follows that, for him, the attainment of faith, not the ascertainment of truth, is the highest aim of mental life. And, on careful analysis of the nature of

5. David Hume (1711–76), Scottish historian and philosopher; Immanuel Kant (1724–1804), German philosopher.

6. 'Let us maintain, before we have proved. This seeming paradox is the secret of happiness.' (Dr. Newman: Tract 85, p.85.) [Huxley's note.]

7. Dr. Newman, *Essay on Development*, p.357. [Huxley's note.]

this faith, it will too often be found to be, not the mystic process of unity with the Divine, understood by the religious enthusiast; but that which the candid simplicity of a Sunday scholar once defined it to be. 'Faith,' said this unconscious plagiarist of Tertullian,[8] 'is the power of saying you believe things which are incredible.'

Now I, and many other Agnostics, believe that faith, in this sense, is an abomination; and though we do not indulge in the luxury of self-righteousness so far as to call those who are not of our way of thinking hard names, we do feel that the disagreement between ourselves and those who hold this doctrine is even more moral than intellectual. It is desirable there should be an end of any mistakes on this topic. If our clerical opponents were clearly aware of the real state of the case, there would be an end of the curious delusion, which often appears between the lines of their writings, that those whom they are so fond of calling 'Infidels' are people who not only ought to be, but in their hearts are, ashamed of themselves. It would be discourteous to do more than hint the antipodal opposition of this pleasant dream of theirs to facts.

The clerics and their lay allies commonly tell us, that if we refuse to admit that there is good ground for expressing definite convictions about certain topics, the bonds of human society will dissolve and mankind lapse into savagery. There are several answers to this assertion. One is that the bonds of human society were formed without the aid of their theology; and, in the opinion of not a few competent judges, have been weakened rather than strengthened by a good deal of it. Greek science, Greek art, the ethics of old Israel, the social organisation of old Rome, contrived to come into being, without the help of any one who believed in a single distinctive article of the simplest of the Christian creeds. The science, the art, the jurisprudence, the chief political and social theories, of the modern world have grown out of those of Greece and Rome — not by favour of, but in the teeth of, the fundamental teachings of early Christianity, to which science, art, and any serious occupation with the things of this world, were alike despicable.

Again, all that is best in the ethics of the modern world, in so far as it has not grown out of Greek thought, or Barbarian[9] manhood, is the direct development of the ethics of old Israel. There is no code of legislation, ancient or modern, at once so just and so merciful, so tender to the weak and poor, as the Jewish law; and, if the Gospels are to be trusted, Jesus of Nazareth himself declared that he taught nothing but that which lay implicitly, or explicitly, in the religious and ethical system of his people.

'And the scribe said unto him, Of a truth, Teacher, thou hast well said that he is one; and there is none other but he and to love him with all the heart, and with all the understanding, and with all the strength, and to love his neighbour as himself, is much more than all whole burnt offerings and sacrifices.' (Mark xii. 32,33.)

Here is the briefest of summaries of the teaching of the prophets of Israel of the eighth century; does the Teacher, whose doctrine is thus set forth in his presence, repudiate the exposition? Nay; we are told, on the contrary, that Jesus saw that he 'answered discreetly,' and replied, 'Thou art not far from the kingdom of God.'[10]

So that I think that even if the creeds, from the so-called 'Apostles'' to the so-

8. Tertullian (160?–230?), one of the Latin Church Fathers; *cf.* his treatise on baptism, ch. ii — in the Ante-Nicene Christian Library, Edinburgh, 1869, XI (*Writings of Tertullian*, I),232–33.

9. The ancient Greeks referred to all people not Greek as Barbarians, and condemned them as being brutal, harsh, and rude — since, not being Greeks, they must be relatively uncivilized

10. *Cf. Mark*, xii,34.

called 'Athanasian,'[11] were swept into oblivion; and even if the human race should arrive at the conclusion that, whether a bishop washes a cup or leaves it unwashed, is not a matter of the least consequence, it will get on very well. The causes which have led to the development of morality in mankind, which have guided or impelled us all the way from the savage to the civilised state, will not cease to operate because a number of ecclesiastical hypotheses turn out to be baseless. And, even if the absurd notion that morality is more the child of speculation than of practical necessity and inherited instinct, had any foundation; if all the world is going to thieve, murder, and otherwise misconduct itself as soon as it discovers that certain portions of ancient history are mythical; what is the relevance of such arguments to any one who holds by the Agnostic principle?

Surely, the attempt to cast out Beelzebub[12] by the aid of Beelzebub is a hopeful procedure as compared to that of preserving morality by the aid of immorality. For I suppose it is admitted that an Agnostic may be perfectly sincere, may be competent, and may have studied the question at issue with as much care as his clerical opponents. But, if the Agnostic really believes what he says, the 'dreadful consequence' argufier (consistently, I admit, with his own principles) virtually asks him to abstain from telling the truth, or to say what he believes to be untrue, because of the supposed injurious consequences to morality. 'Beloved brethren, that we may be spotlessly moral, before all things let us lie,' is the sum total of many an exhortation addressed to the 'Infidel.' Now, as I have already pointed out, we cannot oblige our exhorters. We leave the practical application of the convenient doctrines of 'Reserve' and 'Non-natural interpretation' to those who invented them.

I trust that I have now made amends for any ambiguity, or want of fulness, in my previous exposition of that which I hold to be the essence of the Agnostic doctrine. Henceforward, I might hope to hear no more of the assertion that we are necessarily Materialists, Idealists, Atheists, Theists, or any other ists, if experience had led me to think that the proved falsity of a statement was any guarantee against its repetition. And those who appreciate the nature of our position will see, at once, that when Ecclesiasticism declares that we ought to believe this, that, and the other, and are very wicked if we don't, it is impossible for us to give any answer but this: We have not the slightest objection to believe anything you like, if you will give us good grounds for belief; but, if you cannot, we must respectfully refuse, even if that refusal should wreck morality and insure our own damnation several times over. We are quite content to leave that to the decision of the future. The course of the past has impressed us with the firm conviction that no good ever comes of falsehood, and we feel warranted in refusing even to experiment in that direction.

11. *Creeds*: statements of belief. The Apostles' Creed is of unknown origin, formerly ascribed to the Apostles; it begins, 'I believe in God the Father Almighty,' etc. The Athanasian Creed was formerly attributed to Athanasius (d.373), bishop of Alexandria; *cf.* also Arnold's Preface to *God and the Bible*, note 25.

12. The prince of the devils; *cf. Matthew*, xii,24.

Alexander Smith
1830–1867
DREAMTHORP

Dreamthorp

It matters not to relate how or when I became a denizen of Dreamthorp; it will be sufficient to say that I am not a born native, but that I came to reside in it a good while ago now. The several towns and villages in which, in my time, I have pitched a tent did not please, for one obscure reason or another: this one was too large, t'other too small; but when, on a summer evening about the hour of eight, I first beheld Dreamthorp, with its westward-looking windows painted by sunset, its children playing in the single straggling street, the mothers knitting at the open doors, the fathers standing about in long white blouses, chatting or smoking; the great tower of the ruined castle rising high into the rosy air, with a whole troop of swallows — by distance made as small as gnats — skimming about its rents and fissures; — when I first beheld all this, I felt instinctively that my knapsack might be taken off my shoulders, that my tired feet might wander no more, that at last, on the planet, I had found a home. From that evening I have dwelt here, and the only journey I am like now to make, is the very inconsiderable one, so far at least as distance is concerned, from the house in which I live to the graveyard beside the ruined castle. There, with the former inhabitants of the place, I trust to sleep quietly enough, and nature will draw over our heads her coverlet of green sod, and tenderly tuck us in, as a mother her sleeping ones, so that no sound from the world shall ever reach us, and no sorrow trouble us any more.

The village stands far inland; and the streams that trot through the soft green valleys all about have as little knowledge of the sea, as the three-years' child of the storms and passions of manhood. The surrounding country is smooth and green, full of undulations; and pleasant country roads strike through it in every direction, bound for distant towns and villages, yet in no hurry to reach them. On these roads the lark in summer is continually heard; nests are plentiful in the hedges and dry ditches; and on the grassy banks, and at the feet of the bowed dikes, the blue-eyed speedwell smiles its benison on the passing wayfarer. On these roads you may walk for a year and encounter nothing more remarkable than the country cart, troops of tawny children from the woods, laden with primroses, and at long intervals — for people in this district live to a ripe age — a black funeral creeping in from some remote hamlet; and to this last the people reverently doff their hats and stand aside. Death does not walk about here often, but when he does, he receives as much respect as the squire himself. Everything round one is unhurried, quiet, moss-grown, and orderly. Season follows in the track of season, and one year can hardly be distinguished from another. Time should be measured here by the silent dial, rather than by the ticking clock, or by the chimes of the church. Dreamthorp can boast of a respectable antiquity, and in it the trade of the builder is unknown. Ever since I remember, not a single stone has been laid on the top of another. The castle, inhabited now by jackdaws and starlings, is old; the chapel which adjoins it is older still; and the lake behind both, and in which their shadows sleep, is, I suppose, as old as Adam. A fountain in the marketplace, all mouths and faces and curious

arabesques — as dry, however, as the castle moat — has a tradition connected with it; and a great noble riding through the street one day several hundred years ago, was shot from a window by a man whom he had injured. The death of this noble is the chief link which connects the place with authentic history. The houses are old, and remote dates may yet be deciphered on the stones above the doors; the apple-trees are mossed and ancient; countless generations of sparrows havé bred in the thatched roofs, and thereon have chirped out their lives. In every room of the place men have been born, men have died. On Dreamthorp centuries have fallen, and have left no more trace than have last winter's snowflakes. This commonplace sequence and flowing on of life is immeasurably affecting. That winter morning when Charles lost his head in front of the banqueting-hall of his own palace,[1] the icicles hung from the eaves of the houses here, and the clown kicked the snowballs from his clouted shoon, and thought but of his supper when, at three o'clock, the red sun set in the purple mist. On that Sunday in June while Waterloo was going on,[2] the gossips, after morning service, stood on the country roads discussing agricultural prospects, without the slightest suspicion that the day passing over their heads would be a famous one in the calendar. Battles have been fought, kings have died, history has transacted itself; but, all unheeding and untouched, Dreamthorp has watched apple-trees redden, and wheat ripen, and smoked its pipe, and quaffed its mug of beer, and rejoiced over its newborn children, and with proper solemnity carried its dead to the churchyard. As I gaze on the village of my adoption, I think of many things very far removed, and seem to get closer to them. The last setting sun that Shakspeare saw reddened the windows here, and struck warmly on the faces of the hinds coming home from the fields. The mighty storm that raged while Cromwell lay a-dying made all the oak-woods groan round about here, and tore the thatch from the very roofs I gaze upon. When I think of this, I can almost, so to speak, lay my hand on Shakspeare and on Cromwell. These poor walls were contemporaries of both, and I find something affecting in the thought. The mere soil is, of course, far older than either, but *it* does not touch one in the same way. A wall is the creation of a human hand, the soil is not.

This place suits my whim, and I like it better year after year. As with everything else, since I began to love it I find it gradually growing beautiful. Dreamthorp — a castle, a chapel, a lake, a straggling strip of gray houses, with a blue film of smoke over all — lies embosomed in emerald. Summer, with its daisies, runs up to every cottage door. From the little height where I am now sitting, I see it beneath me. Nothing could be more peaceful. The wind and the birds fly over it. A passing sunbeam makes brilliant a white gable-end, and brings out the colours of the blossomed apple-tree beyond, and disappears. I see figures in the street, but hear them not. The hands on the church clock seem always pointing to one hour. Time has fallen asleep in the afternoon sunshine. I make a frame of my fingers, and look at my picture. On the walls of the next Academy's Exhibition will hang nothing half so beautiful!

My village is, I think, a special favourite of summer's. Every window-sill in it she touches with colour and fragrance; everywhere she wakens the drowsy murmurs of the hives: every place she scents with apple-blossom. Traces of her hand are to be seen on the weir beside the ruined mill; and even the canal, along which the barges come and go, has a great white water-lily asleep on its olive-coloured face.

1. Charles I (1600–49) was executed in the open street before Whitehall, between the center of the Banqueting Hall and its north end, on January 30, 1649.
2. Napoleon was defeated at the battle of Waterloo on June 18, 1815.

Never was velvet on a monarch's robe so gorgeous as the green mosses that be-ruff the roofs of farm and cottage, when the sunbeam slants on them and goes. The old road out towards the common, and the hoary dikes that might have been built in the reign of Alfred, have not been forgotten by the generous adorning season; for every fissure has its mossy cushion, and the old blocks themselves are washed by the loveliest gray-green lichens in the world, and the large loose stones lying on the ground have gathered to themselves the peacefulest mossy coverings. Some of these have not been disturbed for a century. Summer has adorned my village as gaily, and taken as much pleasure in the task, as the people of old, when Elizabeth was queen, took in the adornment of the May-pole against a summer festival. And, just think, not only Dreamthorp, but every English village she has made beautiful after one fashion or another — making vivid green the hill slope on which straggling white Welsh hamlets hang right opposite the sea; drowning in apple-blossom the red Sussex ones in the fat valley. And think, once more, every spear of grass in England she has touched with a livelier green; the crest of every bird she has burnished; every old wall between the four seas has received her mossy and licheny attentions; every nook in every forest she has sown with pale flowers, every marsh she has dashed with the fires of the marigold. And in the wonderful night the moon knows, she hangs — the planet on which so many millions of us fight, and sin, and agonise, and die — a sphere of glow-worm light.

Having discoursed so long about Dreamthorp, it is but fair that I should now introduce you to her lions. These are, for the most part, of a commonplace kind; and I am afraid that, if you wish to find romance in them, you must bring it with you. I might speak of the old church-tower, or of the church-yard beneath it, in which the village holds its dead, each resting-place marked by a simple stone, on which is inscribed the name and age of the sleeper, and a Scripture text beneath, in which live our hopes of immortality. But, on the whole, perhaps it will be better to begin with the canal, which wears on its olive-coloured face the big white water-lily already chronicled. Such a secluded place is Dreamthorp that the railway does not come near, and the canal is the only thing that connects it with the world. It stands high, and from it the undulating country may be seen stretching away into the gray of distance, with hills and woods, and stains of smoke which mark the sites of villages. Every now and then a horse comes staggering along the towing-path, trailing a sleepy barge filled with merchandise. A quiet, indolent life these barge-men lead in the summer days. One lies stretched at his length on the sun-heated plank; his comrade sits smoking in the little dog-hutch, which I suppose he calls a cabin. Silently they come and go; silently the wooden bridge lifts to let them through. The horse stops at the bridge-house for a drink, and there I like to talk a little with the men. They serve instead of a newspaper, and retail with great willingness the news they have picked up in their progress from town to town. I am told they sometimes marvel who the old gentleman is who accosts them from beneath a huge umbrella in the sun, and that they think him either very wise or very foolish. Not in the least unnatural! We are great friends, I believe — evidence of which they occasionally exhibit by requesting me to disburse a trifle for drink-money. This canal is a great haunt of mine of an evening. The water hardly invites one to bathe in it, and a delicate stomach might suspect the flavour of the eels caught therein; yet, to my thinking, it is not in the least destitute of beauty. A barge trailing up through it in the sunset is a pretty sight; and the heavenly crimsons and purples sleep quite lovingly upon its glossy ripples. Nor does the eve-

ning star disdain it, for as I walk along I see it mirrored therein as clearly as in the waters of the Mediterranean itself.

The old castle and chapel already alluded to are, perhaps, to a stranger, the points of attraction in Dreamthorp. Back from the houses is the lake, on the green sloping banks of which, with broken windows and tombs, the ruins stand. As it is noon, and the weather is warm, let us go and sit on a turret. Here, on these very steps, as old ballads tell, a queen sat once, day after day, looking southward for the light of returning spears. I bethink me that yesterday, no further gone, I went to visit a consumptive shoemaker: seated here I can single out his very house, nay, the very window of the room in which he is lying. On that straw roof might the raven alight, and flap his sable wings. There, at this moment, is the supreme tragedy being enacted. A woman is weeping there, and little children are looking on with a sore bewilderment. Before nightfall the poor peaked face of the bowed artisan will have gathered its ineffable peace, and the widow will be led away from the bedside by the tenderness of neighbours, and the cries of the orphan brood will be stilled. And yet this present indubitable suffering and loss does not touch me like the sorrow of the woman of the ballad, the phantom probably of a minstrel's brain. The shoemaker will be forgotten — I shall be forgotten; and long after visitors will sit here and look out on the landscape and murmur the simple lines. But why do death and dying obtrude themselves at the present moment? On the turret opposite, about the distance of a gunshot, is as pretty a sight as eye could wish to see. Two young people, strangers apparently, have come to visit the ruin. Neither the ballad queen, nor the shoemaker down yonder, whose respirations are getting shorter and shorter, touches them in the least. They are merry and happy, and the graybeard turret has not the heart to thrust a foolish moral upon them. They would not thank him if he did, I daresay. Perhaps they could not understand him. Time enough! Twenty years hence they will be able to sit down at his feet, and count griefs with him, and tell him tale for tale. Human hearts get ruinous in so much less time than stone walls and towers. See, the young man has thrown himself down at the girl's feet on a little space of grass. In her scarlet cloak she looks like a blossom springing out of a crevice on the ruined steps. He gives her a flower, and she bows her face down over it almost to her knees. What did the flower say? Is it to hide a blush? He looks delighted; and I almost fancy I see a proud colour on his brow. As I gaze, these young people make for me a perfect idyl. The generous, ungrudging sun, the melancholy ruin, decked, like mad Lear, with the flowers and ivies of forgetfulness and grief, and between them, sweet and evanescent, human truth and love!

Love! — does it yet walk the world, or is it imprisoned in poems and romances? Has not the circulating library become the sole home of the passion? Is love not become the exclusive property of novelists and playwrights, to be used by them only for professional purposes? Surely, if the men I see are lovers, or ever have been lovers, they would be nobler than they are. The knowledge that he is beloved should — *must* make a man tender, gentle, upright, pure. While yet a youngster in a jacket, I can remember falling desperately in love with a young lady several years my senior — after the fashion of youngsters in jackets. Could I have fibbed in these days? Could I have betrayed a comrade? Could I have stolen eggs or callow young from the nest? Could I have stood quietly by and seen the weak or the maimed bullied? Nay, verily! In these absurd days she lighted up the whole world for me. To sit in the same room with her was like the happiness of perpetual holiday; when she asked

me to run a message for her, or to do any, the slightest, service for her, I felt as if a patent of nobility were conferred on me. I kept my passion to myself, like a cake, and nibbled it in private. Juliet was several years my senior, and had a lover — was, in point of fact, actually engaged; and, in looking back, I can remember I was too much in love to feel the slightest twinge of jealousy. I remember also seeing Romeo for the first time, and thinking him a greater man than Caesar or Napoleon. The worth I credited him with, the cleverness, the goodness, the everything! He awed me by his manner and bearing. He accepted that girl's love coolly and as a matter of course: it put him no more about than a crown and sceptre puts about a king. What I would have given my life to possess — being only fourteen, it was not much to part with after all — he wore lightly, as he wore his gloves or his cane. It did not seem a bit too good for him. His self-possession appalled me. If I had seen him take the sun out of the sky, and put it into his breeches' pocket, I don't think I should have been in the least degree surprised. Well, years after, when I had discarded my passion with my jacket, I have assisted this middle-aged Romeo home from a roystering wine-party, and heard him hiccup out his marital annoyances, with the strangest remembrances of old times, and the strangest deductions therefrom. Did that man with the idiotic laugh and the blurred utterance ever love? Was he ever capable of loving? I protest I have my doubts. But where are my young people? Gone! So it is always. We begin to moralise and look wise, and Beauty, who is something of a coquette, and of an exacting turn of mind, and likes attentions, gets disgusted with our wisdom or our stupidity, and goes off in a huff. Let the baggage go!

The ruined chapel adjoins the ruined castle on which I am now sitting, and is evidently a building of much older date. It is a mere shell now. It is quite roofless, ivy covers it in part; the stone tracery of the great western window is yet intact, but the coloured glass is gone with the splendid vestments of the abbot, the fuming incense, the chanting choirs, and the patient, sad-eyed monks, who muttered *Aves*, shrived guilt, and illuminated missals. Time was when this place breathed actual benedictions, and was a home of active peace. At present it is visited only by the stranger, and delights but the antiquary. The village people have so little respect for it, that they do not even consider it haunted. There are several tombs in the interior bearing knights' escutcheons, which time has sadly defaced. The dust you stand upon is noble. Earls have been brought here in dinted mail from battle, and earls' wives from the pangs of child-bearing. The last trumpet will break the slumber of a right honourable company. One of the tombs — the most perfect of all in point of preservation — I look at often, and try to conjecture what it commemorates. With all my fancies, I can get no further than the old story of love and death. There, on the slab, the white figures sleep; marble hands, folded in prayer, on marble breasts. And I like to think that he was brave, she beautiful; that although the monument is worn by time, and sullied by the stains of the weather, the qualities which it commemorates — husbandly and wifely affection, courtesy, courage, knightly scorn of wrong and falsehood, meekness, penitence, charity — are existing yet somewhere, recognisable by each other. The man who in this world can keep the whiteness of his soul, is not likely to lose it in any other.

In summer I spent a good deal of time floating about the lake. The landing-place to which my boat is tethered is ruinous, like the chapel and palace, and my embarkation causes quite a stir in the sleepy little village. Small boys leave their games and mud-pies, and gather round in silence; they have seen me get off a hun-

dred times, but their interest in the matter seems always new. Not unfrequently an idle cobbler, in red nightcap and leathern apron, leans on a broken stile, and honours my proceedings with his attention. I shoot off, and the human knot dissolves. The lake contains three islands, each with a solitary tree, and on these islands the swans breed. I feed the birds daily with bits of bread. See, one comes gliding towards me, with superbly arched neck, to receive its customary alms! How wildly beautiful its motions! How haughtily it begs! The green pasture lands run down to the edge of the water, and into it in the afternoons the red kine wade and stand knee-deep in their shadows, surrounded by troops of flies. Patiently the honest creatures abide the attacks of their tormentors. Now one swishes itself with its tail — now its neighbour flaps a huge ear. I draw my oars alongside, and let my boat float at its own will. The soft blue heavenly abysses, the wandering streams of vapour, the long beaches of rippled cloud, are glassed and repeated in the lake. Dreamthorp is silent as a picture, the voices of the children are mute: and the smoke from the houses, the blue pillars all sloping in one angle, float upward as if in sleep. Grave and stern the old castle rises from its emerald banks, which long ago came down to the lake in terrace on terrace, gay with fruits and flowers, and with stone nymph and satyrs hid in every nook. Silent and empty enough today! A flock of daws suddenly bursts out from a turret, and round and round they wheel, as if in panic. Has some great scandal exploded? Has a conspiracy been discovered? Has a revolution broken out? The excitement has subsided, and one of them, perched on the old banner-staff, chatters confidentially to himself as he, sideways, eyes the world beneath him. Floating about thus, time passes swiftly, for, before I know where I am, the kine have withdrawn from the lake to couch on the herbage, while one on a little height is lowing for the milkmaid and her pails. Along the road I see the labourers coming home for supper, while the sun setting behind me makes the village windows blaze; and so I take out my oars, and pull leisurely through waters faintly flushed with evening colours.

I do not think that Mr. Buckle could have written his 'History of Civilisation' in Dreamthorp,[3] because in it books, conversation, and the other appurtenances of intellectual life, are not to be procured. I am acquainted with birds, and the building of nests — with wild-flowers, and the seasons in which they blow — but with the big world far away, with what men and women are thinking, and doing, and saying, I am acquainted only through the *Times*, and the occasional magazine or review, sent by friends whom I have not looked upon for years, but by whom, it seems, I am not yet forgotten. The village has but few intellectual wants, and the intellectual supply is strictly measured by the demand. Still there is something. Down in the village, and opposite the curiously-carved fountain, is a schoolroom which can accommodate a couple of hundred people on a pinch. There are our public meetings held. Musical entertainments have been given there by a single performer. In that schoolroom last winter an American biologist terrified the villagers, and, to their simple understandings, mingled up the next world with this. Now and again some rare bird of an itinerant lecturer covers dead walls with posters, yellow and blue, and to that schoolroom we flock to hear him. His rounded periods the eloquent gentleman devolves amidst a respectful silence. His audience do not understand him, but they see that the clergyman does, and the doctor does; and so they are content, and look as attentive and wise as possible. Then, in

3. Henry Thomas Buckle (1821–62) published the first volume of his *History of Civilization in England* in 1857, the second in 1861, two years before the publication of *Dreamthorp*.

connexion with the schoolroom, there is a public library, where books are exchanged once a month. This library is a kind of Greenwich Hospital for disabled novels and romances. Each of these books has been in the wars; some are unquestionable antiques. The tears of three generations have fallen upon their dusky pages. The heroes and the heroines are of another age than ours. Sir Charles Grandison is standing with his hat under his arm. Tom Jones plops from the tree into the water, to the infinite distress of Sophia. Moses comes home from market with his stock of shagreen spectacles. Lovers, warriors, and villains — as dead to the present generation of readers as Cambyses — are weeping, fighting, and intriguing.[4] These books, tattered and torn as they are, are read with delight today. The viands are celestial if set forth on a dingy tablecloth. The gaps and chasms which occur in pathetic or perilous chapters are felt to be personal calamities. It is with a certain feeling of tenderness that I look upon these books; I think of the dead fingers that have turned over the leaves, of the dead eyes that have travelled along the lines. An old novel has a history of its own. When fresh and new, and before it had breathed its secret, it lay on my lady's table. She killed the weary day with it, and when night came it was placed beneath her pillow. At the sea-side a couple of foolish heads have bent over it, hands have touched and tingled, and it has heard vows and protestations as passionate as any its pages contained. Coming down in the world, Cinderella in the kitchen has blubbered over it by the light of a surreptitious candle, conceiving herself the while the magnificent Georgiana, and Lord Mordaunt,[5] Georgiana's lover, the pot-boy round the corner. Tied up with many a dingy brother, the auctioneer knocks the bundle down to the bidder of a few pence, and it finds its way to the quiet cove of some village library, where with some difficulty — as if from want of teeth, and with numerous interruptions — as if from lack of memory, it tells its old stories, and wakes tears, and blushes, and laughter as of yore. Thus it spends its age, and in a few years it will become unintelligible, and then, in the dust-bin, like poor human mortals in the grave, it will rest from all its labours. It is impossible to estimate the benefit which such books have conferred. How often have they loosed the chain of circumstance! What unfamiliar tears — what unfamiliar laughter they have caused! What chivalry and tenderness they have infused into rustic loves! Of what weary hours they have cheated and beguiled their readers! The big, solemn history-books are in excellent preservation; the story-books are defaced and frayed, and their out-of-elbows condition is their pride, and the best justification of their existence. They are tashed, as roses are, by being eagerly handled and smelt. I observe, too, that the most ancient romances are not in every case the most severely worn. It is the pace that tells in horses, men, and books. There are Nestors[6] wonderfully hale; there are juveniles in a state of dilapidation. One of the youngest books, 'The Old Curiosity Shop,' is absolutely falling to pieces. That book, like Italy, is possessor of the fatal gift; but happily, in its case, everything can be rectified by a new edition. We have buried warriors and poets, princes and queens, but no one of these was followed

4. Sir Charles Grandison, Tom Jones, Moses, and Cambyses are characters, respectively, in Samuel Richardson's *History of Sir Charles Grandison* (1753), Henry Fielding's *Tom Jones* (1749), Oliver Goldsmith's *Vicar of Wakefield* (1766), and Thomas Preston's *Lamentable Tragedy of Cambises* (1569).

5. Apparently these names are merely symbolical of the types of heroes and heroines in the romances of the circulating libraries.

6. Nestor, king of Pylos and Messenia, led his subjects to the Trojan war, and became famous in his old age for wisdom, justice, and eloquence.

to the grave by sincerer mourners than was little Nell.

Besides the itinerant lecturer, and the permanent library, we have the Sunday sermon. These sum up the intellectual aids and furtherances of the whole place. We have a church and a chapel,[7] and I attend both. The Dreamthorp people are Dissenters, for the most part; why, I never could understand; because dissent implies a certain intellectual effort. But Dissenters they are, and Dissenters they are likely to remain. In an ungainly building, filled with hard gaunt pews, without an organ, without a touch of colour in the windows, with nothing to stir the imagination or the devotional sense, the simple people worship. On Sunday, they are put upon a diet of spiritual bread-and-water. Personally, I should desire more generous food. But the labouring people listen attentively, till once they fall asleep, and they wake up to receive the benediction with a feeling of having done their duty. They know they ought to go to chapel, and they go. I go likewise, from habit, although I have long ago lost the power of following a discourse. In my pew, and whilst the clergyman is going on, I think of the strangest things — of the tree at the window, of the congregation of the dead outside, of the wheat-fields and the corn-fields beyond and all around. And the odd thing is, that it is during sermon only that my mind flies off at a tangent and busies itself with things removed from the place and the circumstances. Whenever it is finished fancy returns from her wanderings, and I am alive to the objects around me. The clergyman knows my humour, and is good Christian enough to forgive me; and he smiles good-humouredly when I ask him to let me have the chapel keys, that I may enter, when in the mood, and preach a sermon to myself. To my mind, an empty chapel is impressive; a crowded one, comparatively a commonplace affair. Alone, I could choose my own text, and my silent discourse would not be without its practical applications.

An idle life I live in this place, as the world counts it; but then I have the satisfaction of differing from the world as to the meaning of idleness. A windmill twirling its arms all day is admirable only when there is corn to grind. Twirling its arms for the mere barren pleasure of twirling them, or for the sake of looking busy, does not deserve any rapturous paean of praise. I must be made happy after my own fashion, not after the fashion of other people. Here I can live as I please, here I can throw the reins on the neck of my whim. Here I play with my own thoughts; here I ripen for the grave.

A Lark's Flight

Rightly or wrongly, during the last twenty or thirty years a strong feeling has grown up in the public mind against the principle, and a still stronger feeling against the practice, of capital punishments. Many people who will admit that the execution of the murderer may be, abstractly considered, just enough, sincerely doubt whether such execution be expedient, and are in their own minds perfectly certain that it cannot fail to demoralise the spectators. In consequence of this, executions have become rare; and it is quite clear that many scoundrels, well worthy of the noose, contrive to escape it. When, on the occasion of a wretch being turned off, the spectators are few, it is remarked by the newspapers that the mob is beginning to lose its proverbial cruelty, and to be stirred by humane pulses; when they are numerous, and especially when girls and women form a majority, the circumstance is noticed and deplored. It

7. *Church* and *chapel* refer, respectively, to the place of worship used by members of the Established Church and that used by Nonconformists, or Dissenters.

is plain enough that, if the newspaper considered such an exhibition beneficial, it would not lament over a few thousand eager witnesses: if the sermon be edifying, you cannot have too large a congregation; if you teach a moral lesson in a grand, impressive way, it is difficult to see how you can have too many pupils. Of course, neither the justice nor the expediency of capital punishments falls to be discussed here. This, however, may be said, that the popular feeling against them may not be so admirable a proof of enlightenment as many believe. It is true that the spectacle is painful, horrible; but in pain and horror there is often hidden a certain salutariness, and the repulsion of which we are conscious is as likely to arise from debilitation of public nerve, as from a higher reach of public feeling. To my own thinking, it is out of this pain and hatefulness that an execution becomes invested with an ideal grandeur. It is sheer horror to all concerned — sheriffs, halbertmen,[1] chaplain, spectators, Jack Ketch,[2] and culprit; but out of all this, and towering behind the vulgar and hideous accessories of the scaffold, gleams the majesty of implacable law. When every other fine morning a dozen cut-purses were hanged at Tyburn, and when such sights did not run very strongly against the popular current, the spectacle *was* vulgar, and could be of use only to the possible cut-purses congregated around the foot of the scaffold. Now, when the law has become so far merciful; when the punishment of death is reserved for the murderer; when he can be condemned only on the clearest evidence; when, as the days draw slowly on to doom, the frightful event impending over one stricken wretch throws its shadow over the heart of every man, woman, and child in the great city; and when the official persons whose duty it is to see the letter of the law carried out perform that duty at the expense of personal pain, a public execution is not vulgar, it becomes positively sublime. It is dreadful, of course; but its dreadfulness melts into pure awfulness. The attention is taken off the criminal, and is lost in a sense of the grandeur of justice; and the spectator who beholds an execution, solely as it appears to the eye, without recognition of the idea which towers behind it, must be a very unspiritual and unimaginative spectator indeed.

It is taken for granted that the spectators of public executions — the artisans and country people who take up their stations over-night as close to the barriers as possible, and the wealthier classes who occupy hired windows and employ opera-glasses — are merely drawn together by a morbid relish for horrible sights. He is a bold man who will stand forward as the advocate of such persons — so completely is the popular mind made up as to their tastes and motives. It is not disputed that the large body of the mob, and of the occupants of windows, have been drawn together by an appetite for excitement; but it is quite possible that many come there from an impulse altogether different. Just consider the nature of the expected sight — a man in tolerable health probably, in possession of all his faculties, perfectly able to realise his position, conscious that for him this world and the next are so near that only a few seconds divide them — such a man stands in the seeing of several thousand eyes. He is so peculiarly circumstanced, so utterly lonely — hearing the tolling of his own death-bell, yet living, wearing the mourning clothes for his own funeral — that he holds the multitude together by a shuddering fascination. The sight is a peculiar one, you must admit, and every peculiarity has its attractions. Your volcano is more attractive than your ordinary mountain. Then consider the unappeasable curiosity as to death which haunts every human being, and

1. *halbertmen*: guards, armed with halberds, long-handled weapons, used especially in the 15th and 16th centuries.
2. Jack Ketch (d.1686) was a notorious executioner of the 17th century. His name is used allusively for any official executioner.

how pathetic that curiosity is, in so far as it suggests our own ignorance and helplessness, and we see at once that people *may* flock to public executions for other purposes than the gratification of morbid tastes: that they would pluck if they could some little knowledge of what death is; that imaginatively they attempt to reach to it, to touch and handle it through an experience which is not their own. It is some obscure desire of this kind, a movement of curiosity not altogether ignoble, but in some degree pathetic; some rude attempt of the imagination to wrest from the death of the criminal information as to the great secret in which each is profoundly interested, which draws around the scaffold people from the country harvest-fields, and from the streets and alleys of the town. Nothing interests men so much as death. Age cannot wither it, nor custom stale it. 'A greater crowd would come to see me hanged,' Cromwell is reported to have said when the populace came forth on a public occasion. The Lord Protector was right in a sense of which, perhaps, at the moment he was not aware. Death is greater than official position. When a man has to die, he may safely dispense with stars and ribbands. He is invested with a greater dignity than is held in the gift of kings. A greater crowd *would* have gathered to see Cromwell hanged, but the compliment would have been paid to death rather than to Cromwell. Never were the motions of Charles I so scrutinised as when he stood for a few moments on the scaffold that winter morning at Whitehall.[3] King Louis was no great orator usually, but when on January 2, 1793, he attempted to speak a few words in the Place de la Revolution, it was found necessary to drown his voice in a harsh roll of soldiers' drums. Not without a meaning do people come forth to see men die. We stand in the valley, they on the hilltop, and on their faces strikes the light of the other world, and from some sign or signal of theirs we attempt to discover or extract a hint of what it is all like.

To be publicly put to death, for whatever reason, must ever be a serious matter. It is always bitter, but there are degrees in its bitterness. It is easy to die like Stephen with an opened heaven above you, crowded with angel faces.[4] It is easy to die like Balmerino[5] with a chivalrous sigh for the White Rose, and an audible 'God bless King James.' Such men die for a cause in which they glory, and are supported thereby; they are conducted to the portals of the next world by the angels, Faith, Pity, Admiration. But it is not easy to die in expiation of a crime like murder, which engirdles you with trembling and horror even in the loneliest places, which cuts you off from the sympathies of your kind, which reduces the universe to two elements — a sense of personal identity, and a memory of guilt. In so dying, there must be inconceivable bitterness; a man can have no other support than what strength he may pluck from despair, or from the iron with which nature may have originally braced heart and nerve. Yet, taken as a whole, criminals on the scaffold comport themselves creditably. They look Death in the face when he wears his cruellest aspect, and if they flinch somewhat, they can at least bear to look. I believe that, for the criminal, execution within the prison walls, with no witnesses save some half-dozen official persons, would be infinitely more terrible than execution in the presence of a curious, glaring mob. The daylight and the publicity are alien elements, which wean the man a little from himself. He steadies his dizzy brain on the crowd beneath and around him. He has his last part to play, and his manhood rallies to play it well.

3. See 'Dreamthorp,' present collection, note 1.

4. See *Acts*, vii,55–56.

5. James Elphinstone, 1st Baron Balmerino (1553?–1612), secretary of state for Scotland under James I (then James VI of Scotland); though condemned to death, he was subsequently released.

Nay, so subtly is vanity intertwined with our motives, the noblest and the most ignoble, that I can fancy a poor wretch with the noose dangling at his ear, and with barely five minutes to live, soothed somewhat with the idea that his firmness and composure will earn him the approbation, perhaps the pity, of the spectators. He would take with him, if he could, the good opinion of his fellows. This composure of criminals puzzles one. Have they looked at death so long and closely, that familiarity has robbed it of terror? Has life treated them so harshly, that they are tolerably well pleased to be quit of it on any terms? Or is the whole thing mere blind stupor and delirium, in which thought is paralysed, and the man an automaton? Speculation is useless. The fact remains that criminals for the most part die well and bravely. It is said that the championship of England was to be decided at some little distance from London on the morning of the day on which Thurtell was executed,[6] and that, when he came out on the scaffold, he inquired privily of the executioner if the result had yet become known. Jack Ketch was not aware, and Thurtell expressed his regret that the ceremony in which he was chief actor should take place so inconveniently early in the day. Think of a poor Thurtell forced to take his long journey an hour, perhaps, before the arrival of intelligence so important!

More than twenty years ago I saw two men executed, and the impression then made remains fresh to this day. For this there were many reasons. The deed for which the men suffered created an immense sensation. They were hanged on the spot where the murder was committed — on a rising ground, some four miles north-east of the city; and as an attempt at rescue was apprehended, there was a considerable display of military force on the occasion. And when, in the dead silence of thousands, the criminals stood beneath the halters, an incident occurred, quite natural and slight in itself, but when taken in connexion with the business then proceeding, so unutterably tragic, so overwhelming in its pathetic suggestion of contrast, that the feeling of it has never departed, and never will. At the time, too, I speak of, I was very young: the world was like a die newly cut, whose every impression is fresh and vivid.

While the railway which connects two northern capitals was being built, two brothers from Ireland, named Doolan, were engaged upon it in the capacity of navvies. For some fault or negligence, one of the brothers was dismissed by the overseer — a Mr. Green — of that particular portion of the line on which they were employed. The dismissed brother went off in search of work, and the brother who remained — Dennis was the Christian name of him — brooded over this supposed wrong, and in his dull, twilighted brain revolved projects of vengeance. He did not absolutely mean to take Green's life, but he meant to thrash him to within an inch of it. Dennis, anxious to thrash Green, but not quite seeing his way to it, opened his mind one afternoon, when work was over, to his friends — fellow-Irishmen and navvies — Messrs. Redding and Hickie. These took up Doolan's wrong as their own, and that evening, by the dull light of a bothy[7] fire, they held a rude parliament, discussing ways and means of revenge. It was arranged that Green should be thrashed — the amount of thrashing left an open question, to be decided, unhappily, when the blood was up and the cinder of rage blown into a flame. Hickie's spirit was found not to be a mounting one, and it was arranged that the active partners in the game should be Doolan and Redding. Doolan, as the aggrieved party, was to strike the first blow, and Redding, as the aggrieved party's particular friend, asked and obtained permis-

7. *bothy*: hut (Scot.)

sion to strike the second. The main conspirators, with a fine regard for the feelings of the weaker Hickie, allowed him to provide the weapons of assault — so that by some slight filament of aid he might connect himself with the good cause. The unambitious Hickie at once applied himself to his duty. He went out, and in due time returned with two sufficient iron pokers. The weapons were examined, approved of, and carefully laid aside. Doolan, Redding, and Hickie ate their suppers, and retired to their several couches to sleep, peacefully enough no doubt. About the same time, too, Green, the English overseer, threw down his weary limbs, and entered on his last sleep — little dreaming what the morning had in store for him.

Uprose the sun, and uprose Doolan and Redding, and dressed, and thrust each his sufficient iron poker up the sleeve of his blouse, and went forth. They took up their station on a temporary wooden bridge which spanned the line, and waited there. Across the bridge, as was expected, did Green ultimately come. He gave them good morning; asked, 'why they were loafing about?' received no very pertinent answer, perhaps did not care to receive one; whistled — the unsuspecting man! — thrust his hands into his breeches pockets, turned his back on them, and leaned over the railing of the bridge, inspecting the progress of the works beneath. The temptation was really too great. What could wild Irish flesh and blood do? In a moment out from the sleeve of Doolan's blouse came the hidden poker, and the first blow was struck, bringing Green to the ground. The friendly Redding, who had bargained for the second, and who, naturally enough, was in fear of being cut out altogether, jumped on the prostrate man, and fulfilled his share of the bargain with a will. It was Redding it was supposed who sped the unhappy Green. They overdid their work — like young authors — giving many more blows than were sufficient, and then fled. The works, of course, were that morning in consternation. Redding and Hickie were, if I remember rightly, apprehended in the course of the day. Doolan got off, leaving no trace of his whereabouts.

These particulars were all learned subsequently. The first intimation which we schoolboys received of anything unusual having occurred, was the sight of a detachment of soldiers with fixed bayonets, trousers rolled up over muddy boots, marching past the front of the Cathedral hurriedly home to barracks. This was a circumstance somewhat unusual. We had, of course, frequently seen a couple of soldiers trudging along with sloped muskets, and that cruel glitter of steel which no one of us could look upon quite unmoved; but in such cases, the deserter walking between them in his shirt-sleeves, his pinioned hands covered from public gaze by the loose folds of his great-coat, explained everything. But from the hurried march of these mud-splashed men nothing could be gathered, and we were left to speculate upon its meaning. Gradually, however, before the evening fell, the rumour of a murder having been committed spread through the city, and with that I instinctively connected the apparition of the file of muddy soldiers. Next day, murder was in every mouth. My schoolfellows talked of it to the detriment of their lessons; it flavoured the tobacco of the fustian artizan as he smoked to work after breakfast; it walked on 'Change amongst the merchants. It was known that two of the persons implicated had been captured, but that the other, and guiltiest, was still at large; and in a few days out on every piece of boarding and blank wall came the 'Hue and cry' — describing Doolan like a photograph, to the colour and cut of his whiskers, and offering £100 as reward for his apprehension, or for such information as would lead to his apprehension — like a silent, implacable bloodhound following close on the track of the

murderer. This terrible broadsheet I read, was certain that *he* had read it also, and fancy ran riot over the ghastly fact. For him no hope, no rest, no peace, no touch of hands gentler than the hangman's; all the world is after him like a roaring prairie of flame! I thought of Doolan, weary, foot-sore, heart-sore, entering some quiet village of an evening; and to quench his thirst, going up to the public well, around which the gossips are talking, and hearing that they were talking of *him*; and seeing from the well itself, IT glaring upon him, as if conscious of his presence, with a hundred eyes of vengeance. I thought of him asleep in out-houses, and starting up in wild dreams of the policeman's hand upon his shoulder fifty times ere morning. He had committed the crime of Cain, and the weird of Cain he had to endure. But yesterday innocent, how unimportant; to-day bloody-handed, the whole world is talking of him, and everything he touches, the very bed he sleeps on, steals from him his secret, and is eager to betray!

Doolan was finally captured in Liverpool, and in the Spring Assize the three men were brought to trial. The jury found them guilty, but recommended Hickie to mercy on account of some supposed weakness of mind on his part. Sentence was, of course, pronounced with the usual solemnities. They were set apart to die; and when snug abed o' nights — for imagination is most mightily moved by contrast — I crept into their desolate hearts, and tasted a misery which was not my own. As already said, Hickie was recommended to mercy, and the recommendation was ultimately in the proper quarter given effect to.

The evening before the execution has arrived, and the reader has now to imagine the early May sunset falling pleasantly on the outskirts of the city. The houses looking out upon an open square or space, have little plots of garden-ground in their fronts, in which mahogany-coloured wall-flowers and mealy auriculas are growing. The side of this square, along which the City Road stretches northward, is occupied by a blind asylum, a brick building, the bricks painted red and picked out with white, after the tidy English fashion, and a high white cemetery wall, over which peers the spire of the Gothic Cathedral; and beyond that, on the other side of the ravine, rising out of a populous city of the dead, a stone John Knox looks down on the Cathedral, a Bible clutched in his outstretched and menacing hand. On all this the May sunset is striking, dressing everything in its warm, pleasant pink, lingering in the tufts of foliage that nestle around the asylum, and dipping the building itself one half in light, one half in tender shade. This open space or square is an excellent place for the games of us boys, and 'Prisoners' Base' is being carried out with as much earnestness as the business of life now by those of us who are left. The girls, too, have their games of a quiet kind, which we hold in huge scorn and contempt. In two files, linked arm-in-arm, they alternately dance towards each other and then retire, singing the while, in their clear, girlish treble, verses, the meaning and pertinence of which time has worn away —

> The Campsie Duke's a riding, a riding, a-riding,

being the oft-recurring 'owercome' or refrain. All this is going on in the pleasant sunset light, when by the apparition of certain waggons coming up from the city, piled high with blocks and beams, and guarded by a dozen dragoons, on whose brazen helmets the sunset danced, every game is dismembered, and we are in a moment a mere mixed mob of boys and girls, flocking around to stare and wonder. Just at this place something went wrong with one of the waggon wheels, and the procession came to a stop. A crowd collected, and we heard some of the grown-up people say that the scaffold was being carried out for the ceremony of to-

morrow. Then, more intensely than ever, one realised the condition of the doomed men. *We* were at our happy games in the sunset, *they* were entering on their last night on earth. After hammering and delay the wheel was put to rights, the sunset died out, waggons and dragoons got into motion and disappeared; and all the night through, whether awake or asleep, I saw the torches burning, and heard the hammers clinking, and witnessed as clearly as if I had been an onlooker, the horrid structure rising, till it stood complete, with a huge cross-beam from which two empty halters hung, in the early morning light.

Next morning the whole city was in commotion. Whether the authorities were apprehensive that a rescue would be attempted, or were anxious merely to strike terror into the hundreds of wild Irishry engaged on the railway, I cannot say; in any case, there was a display of military force quite unusual. The carriage in which the criminals — Catholics both — and their attendant priests were seated, was guarded by soldiers with fixed bayonets; indeed, the whole regiment then lying in the city was massed in front and behind, with a cold, frightful glitter of steel. Besides the foot soldiers, there were dragoons, and two pieces of cannon; a whole little army, in fact. With a slenderer force battles have been won which have made a mark in history. What did the prisoners think of their strange importance, and of the tramp and hurly-burly all around? When the procession moved out of the city, it seemed to draw with it almost the entire population; and when once the country roads were reached, the crowd spread over the fields on either side, ruthlessly treading down the tender wheat braird. I got a glimpse of the doomed, blanched faces which had haunted me so long, at the turn of the road, where, for the first time, the black cross-beam with its empty halters first became visible to them. Both turned and regarded it with a long, steady look; that done, they again bent their heads attentively to the words of the clergyman. I suppose in that long, eager, fascinated gaze they practically *died* — that for them death had no additional bitterness. When the mound was reached on which the scaffold stood, there was immense confusion. Around it a wide space was kept clear by the military; the cannon were placed in position; out flashed the swords of the dragoons; beneath and around on every side was the crowd. Between two brass helmets I could see the scaffold clearly enough, and when in a little while the men, bareheaded and with their attendants, appeared upon it, the surging crowd became stiffened with fear and awe. And now it was that the incident so simple, so natural, so much in the ordinary course of things, and yet so frightful in its tragic suggestions, took place. Be it remembered that the season was early May, that the day was fine, that the wheat-fields were clothing themselves in the green of the young crop, and that around the scaffold, standing on a sunny mound, a wide space was kept clear. When the men appeared beneath the beam, each under his proper halter, there was a dead silence — every one was gazing too intently to whisper to his neighbour even. Just then, out of the grassy space at the foot of the scaffold, in the dead silence audible to all, a lark rose from the side of its nest, and went singing upward in its happy flight. O heaven! how did that song translate itself into dying ears? Did it bring in one wild burning moment father, and mother, and poor Irish cabin, and prayers said at bed-time, and the smell of turf fires, and innocent sweethearting, and rising and setting suns? Did it — but the dragoon's horse has become restive, and his brass helmet bobs up and down and blots everything; and there is a sharp sound, and I feel the great crowd heave and swing, and hear it torn by a sharp shiver of pity, and the men whom I saw so near but a moment ago are at

immeasurable distance, and have solved the great enigma — and the lark has not yet finished his flight: you can see and hear him yonder in the fringe of a white May cloud.

This ghastly lark's flight, when the circumstances are taken into consideration, is, I am inclined to think, more terrible than anything of the same kind which I have encountered in books. The artistic uses of contrast as background and accompaniment, are well known to nature and the poets. Joy is continually worked on sorrow, sorrow on joy; riot is framed in peace, peace in riot. Lear and the Fool always go together. Trafalgar is being fought while Napoleon is sitting on horseback watching the Austrian army laying down its arms at Ulm. In Hood's poem, it is when looking on the released schoolboys at their games that Eugene Aram remembers he is a murderer.[8] And these two poor Irish labourers could not die without hearing a lark singing in their ears. It is Nature's fashion. She never quite goes along with us. She is sombre at weddings, sunny at funerals, and she frowns on ninety-nine out of a hundred pic-nics.

There is a stronger element of terror in this incident of the lark than in any story of a similar kind I can remember.

A good story is told of an Irish gentleman — still known in London society — who inherited the family estates and the family banshee.[9] The estates he lost — no uncommon circumstance in the history of Irish gentlemen, — but the banshee, who expected no favours, stuck to him in his adversity, and crossed the channel with him, making herself known only on occasions of deathbeds and sharp family misfortunes. This gentleman had an ear, and, seated one night at the opera, the *keen*[10] — heard once or twice before on memorable occasions — thrilled through the din of the orchestra and the passion of the singers. He hurried home of course, found his immediate family well, but on the morrow a telegram arrived with the announcement of a brother's death. Surely of all superstitions that is the most imposing which makes the other world interested in the events which befall our mortal lot. For the mere pomp and pride of it, your ghost is worth a dozen retainers, and it is entirely inexpensive. The peculiarity and supernatural worth of this story lies in the idea of the old wail piercing through the sweet entanglement of stringed instruments and extinguishing Grisi.[11] Modern circumstances and luxury crack, as it were, and reveal for a moment misty and aboriginal time big with portent. There is a ridiculous Scotch story in which one gruesome touch lives. A clergyman's female servant was seated in the kitchen one Saturday night reading the Scriptures, when she was somewhat startled by hearing at the door the tap and voice of her sweetheart. Not expecting him, and the hour being somewhat late, she opened it in astonishment, and was still more astonished to hear him on entering abuse Scripture-reading. He behaved altogether in an unprecedented manner, and in many ways terrified the poor girl. Ultimately he knelt before her, and laid his head on her lap. You can fancy her consternation when glancing down she discovered that, *instead of hair, the head was covered with the moss of the moorland.* By a sacred name she adjured him to tell who he was, and in a moment the figure was gone. It was the Fiend, of course — diminished

8. Eugene Aram, a schoolmaster of Knaresborough, was tried and executed in 1759 for the murder of one Clarke. The story of his crime and execution was used by Bulwer Lytton in a novel of the same name (1832) and by Thomas Hood in 'The Dream of Eugene Aram,' published in the *Gem* (1829).

9. *banshee*: in Irish and Scotch folklore, a female spirit whose wailings forewarn families of the approaching death of a member.

10. *keen*: lamentation or dirge for the dead.

11. Giulia Grisi (1811–69), Italian opera singer, daughter of one of Napoleon's Italian officers; she was very popular in London during the early decades of the 19th century.

sadly since Milton saw him bridge chaos [12] — fallen from worlds to kitchen-wenches. But just think how in the story, in half-pity, in half-terror, the popular feeling of homelessness, of being outcast, of being unsheltered as waste and desert places, has incarnated itself in that strange covering of the head. It is a true supernatural touch. One other story I have heard in the misty Hebrides: A Skye gentleman was riding along an empty moorland road. All at once, as if it had sprung from the ground, the empty road was crowded by a funeral procession. Instinctively he drew his horse to a side to let it pass, which it did without sound of voice, without tread of foot. Then he knew it was an apparition. Staring on it, he knew every person who either bore the corpse or who walked behind as mourners. There were the neighbouring proprietors at whose houses he dined, there were the members of his own kirk-session, there were the men to whom he was wont to give good-morning when he met them on the road or at market. Unable to discover his own image in the throng, he was inwardly marvelling whose funeral it *could* be, when the troop of spectres vanished, and the road was empty as before. Then, remembering that the coffin had an invisible occupant, he cried out, 'It is my funeral!' and, with all his strength taken out of him, rode home to die. All these stories have their own touches of terror; yet I am inclined to think that my lark rising from the scaffold foot, and singing to two such auditors, is more terrible than any one of them.

William Morris
1834–1896

NEWS FROM NOWHERE

[*Visiting the England of the Future*]

. . . Quoth I: 'But have you no prisons at all now?'

As soon as the words were out of my mouth, I felt that I had made a mistake, for Dick flushed red and frowned, and the old man looked surprised and pained; and presently Dick said angrily, yet as if restraining himself somewhat:

'Man alive! how can you ask such a question? Have I not told you that we know what a prison means by the undoubted evidence of really trustworthy books, helped out by our own imaginations? And haven't you specially called me to notice that the people about the roads and streets look happy? and how could they look happy if they knew that their neighbours were shut up in prison, while they bore such things quietly? And if there were people in prison, you couldn't hide it from folk, like you may an occasional man-slaying; because that isn't done of set purpose, with a lot of people backing up the slayer in cold blood, as this prison business is. Prisons, indeed! O no, no, no!'

He stopped, and began to cool down, and said in a kind voice: 'But forgive me! I needn't be so hot about it, since there are *not* any prisons: I'm afraid you will think the worse of me for losing my temper. Of course, you, coming from the outlands, cannot be expected to know about these things. And now I'm afraid I have made you feel uncomfortable.'

In a way he had; but he was so generous in his heat, that I liked him the better for it, and I said: 'No, really 'tis all my fault for being so stupid. Let me change the subject, and ask you what the stately

building is on our left just showing at the end of that grove of plane trees? '

'Ah,' he said, 'that is an old building built before the middle of the twentieth century, and as you see, in a queer fantastic style not over beautiful; but there are some fine things inside it, too, mostly pictures, some very old. It is called the National Gallery; [1] I have sometimes puzzled as to what the name means: anyhow, nowadays wherever there is a place where pictures are kept as curiosities permanently it is called a National Gallery, perhaps after this one. Of course there are a good many of them up and down the country.'

I didn't try to enlighten him, feeling the task too heavy; but I pulled out my magnificent pipe and fell a-smoking, and the old horse jogged on again. As we went, I said:

'This pipe is a very elaborate toy, and you seem so reasonable in this country, and your architecture is so good, that I rather wonder at your turning out such trivialities.'

It struck me as I spoke that this was rather ungrateful of me, after having received such a fine present; but Dick didn't seem to notice my bad manners, but said:

'Well, I don't know; it *is* a pretty thing, and since nobody need make such things unless they like, I don't see why they shouldn't make them, *if* they like. Of course, if carvers were scarce they would all be busy on the architecture, as you call it, and then these "toys" (a good word) would not be made; but since there are plenty of people who can carve — in fact, almost everybody, and as work is somewhat scarce, or we are afraid it may be, folk do not discourage this kind of petty work.'

He mused a little, and seemed somewhat perturbed; but presently his face cleared, and he said: 'After all, you must admit that the pipe is a very pretty thing, with the little people under the trees all cut so clean and sweet; — too elaborate for a pipe, perhaps, but — well, it is very pretty.'

'Too valuable for its use, perhaps,' said I.

'What's that?' said he; 'I don't understand.'

I was just going in a helpless way to try to make him understand, when we came by the gates of a big rambling building, in which work of some sort seemed going on. 'What building is that?' said I, eagerly; for it was a pleasure amidst all these strange things to see something a little like what I was used to: 'it seems to be a factory.'

'Yes,' he said, 'I think I know what you mean, and that's what it is; but we don't call them factories now, but Banded-workshops; that is, places where people collect who want to work together.'

'I suppose,' said I, 'power of some sort is used there?'

'No, no,' said he. 'Why should people collect together to use power, when they can have it at the places where they live, or hard by, any two or three of them; or any one, for the matter of that? No; folk collect in these Banded-workshops to do handwork in which working together is necessary or convenient; such work is often very pleasant. In there, for instance, they make pottery and glass, — there, you can see the tops of the furnaces. Well, of course it's handy to have fair-sized ovens and kilns and glass-pots, and a good lot of things to use them for: though of course there are a good many such places, as it would be ridiculous if a man had a liking for pot-making or glass-blowing that he should have to live in one place or be obliged to forego the work he liked.'

'I see no smoke coming from the furnaces,' said I.

'Smoke?' said Dick; 'why should you see smoke?'

I held my tongue, and he went on: 'It's

1. A large London building, in the classical Greek style. It houses a remarkably fine collection of paintings.

a nice place inside, though as plain as you see outside. As to the crafts, throwing the clay must be jolly work: the glass-blowing is rather a sweltering job; but some folk like it very much indeed; and I don't much wonder: there is such a sense of power, when you have got deft in it, in dealing with the hot metal. It makes a lot of pleasant work,' said he, smiling, 'for however much care you take of such goods, break they will, one day or another, so there is always plenty to do.'

I held my tongue and pondered.

We came just here on a gang of men road-mending, which delayed us a little; but I was not sorry for it; for all I had seen hitherto seemed a mere part of a summer holiday; and I wanted to see how this folk would set to on a piece of real necessary work. They had been resting, and had only just begun work again as we came up; so that the rattle of the picks was what woke me from my musing. There were about a dozen of them, strong young men, looking much like a boating party at Oxford would have looked in the days I remembered, and not more troubled with their work: their outer raiment lay on the road-side in an orderly pile under the guardianship of a six-year-old boy, who had his arm thrown over the neck of a big mastiff, who was as happily lazy as if the summer day had been made for him alone. As I eyed the pile of clothes, I could see the gleam of gold and silk embroidery on it, and judged that some of these workmen had tastes akin to those of the Golden Dustman of Hammersmith.[2] Beside them lay a good big basket that had hints about it of cold pie and wine: a half-dozen of young women stood by watching the work or the workers, both of which were worth watching, for the latter smote great strokes and were very deft in their labour, and as handsome clean-built fellows as you might find a dozen of in a summer day. They were laughing and talking merrily with each other and the women, but presently their foreman looked up and saw our way stopped. So he stayed his pick and sang out, 'Spell ho, mates! here are neighbours want to get past.' Whereon the others stopped also, and drawing around us, helped the old horse by easing our wheels over the half undone road, and then, like men with a pleasant task on hand, hurried back to their work, only stopping to give us a smiling good-day; so that the sound of the picks broke out again before Greylocks had taken to his jog-trot. Dick looked back over his shoulder at them and said:

'They are in luck today: it's right down good sport trying how much pick-work one can get into an hour; and I can see those neighbours know their business well. It is not a mere matter of strength getting on quickly with such work; is it, guest?'

'I should think not,' said I, 'but to tell you the truth, I have never tried my hand at it.'

'Really?' said he gravely, 'that seems a pity; it is good work for hardening the muscles, and I like it; though I admit it is pleasanter the second week than the first. Not that I am a good hand at it: the fellows used to chaff me at one job where I was working, I remember, and sing out to me, "Well rowed, stroke!" "Put your back into it, bow!"'

'Not much of a joke,' quoth I.

'Well,' said Dick, 'everything seems like a joke when we have a pleasant spell

2. *Dustman*: in England, one whose business is the removal of ashes and other refuse. During an earlier part of his account of the 'vision' (Ch.iii), Morris wrote that he 'saw a splendid figure slowly sauntering over the pavement; a man whose surcoat was embroidered most copiously as well as elegantly, so that the sun flashed back from him as if he had been clad in golden armour.' This was the dustman of the village of Hammersmith, a very handsome and likable man. Another citizen laughingly admits that this man will dress showily, 'and get as much gold on him as a baron of the Middle Ages. As why should he not if he likes? only we are his special friends, you know, so of course we jest with him.'

of work on, and good fellows merry about us; we feel so happy, you know.' Again I pondered silently.

. . . the old man[3] turned to me, still smiling, and said:

'Frankly, my dear guest, you will do me a great service if you are come to set my old tongue wagging. My love of talk still abides with me, or rather grows on me; and though it is pleasant enough to see these youngsters moving about and playing together so seriously, as if the whole world depended on their kisses (as indeed it does somewhat), yet I don't think my tales of the past interest them much. The last harvest, the last baby, the last knot of carving in the market-place, is history enough for them. It was different, I think, when I was a lad, when we were not so assured of peace and continuous plenty as we are now — Well, well! Without putting you to the question, let me ask you this: Am I to consider you as an enquirer who knows a little of our modern ways of life, or as one who comes from some place where the very foundations of life are different from ours, — do you know anything or nothing about us?'

He looked at me keenly and with growing wonder in his eyes as he spoke; and I answered in a low voice:

'I know only so much of your modern life as I could gather from using my eyes on the way here from Hammersmith, and from asking some questions of Richard Hammond, most of which he could hardly understand.'

The old man smiled at this. 'Then,' said he, 'I am to speak to you as — '

'As if I were a being from another planet,' said I.

The old man, whose name, by the bye, like his kinsman's, was Hammond, smiled and nodded. . . .

'I know that there used to be such lunatic affairs as divorce courts. But just consider; all the cases that came into them were matters of property quarrels: and I think, dear guest,' said he, smiling, 'that though you do come from another planet, you can see from the mere outside look of our world that quarrels about private property could not go on amongst us in our days.'

Indeed, my drive from Hammersmith to Bloomsbury, and all the quiet happy life I had seen so many hints of, even apart from my shopping, would have been enough to tell me that 'the sacred rights of property,' as we used to think of them, were now no more. So I sat silent while the old man took up the thread of the discourse again, and said:

'Well, then, property quarrels being no longer possible, what remains in these matters that a court of law could deal with? Fancy a court for enforcing a contract of passion or sentiment! If such a thing were needed as a *reductio ad absurdum* of the enforcement of contract, such a folly would do that for us.'

He was silent again a little, and then said: 'You must understand once for all that we have changed these matters; or rather, that our way of looking at them has changed, as we have changed within the last two hundred years. We do not deceive ourselves, indeed, or believe that we can get rid of all the trouble that besets the dealings between the sexes. We know that we must face the unhappiness that comes of man and woman confusing the relations between natural passion, and sentiment, and the friendship which, when things go well, softens the awakening from passing illusions: but we are not so mad as to pile up degradation on that unhappiness by engaging in sordid squabbles about livelihood and position, and the power of tyrannising over the children

3. The young man Dick Hammond has taken Morris in to London, to visit Hammond's great-grandfather, who was greatly interested in history and might be able to answer Morris's questions.

who have been the result of love or lust.'

. . . He was silent for some time, and I would not interrupt him. At last he began again: 'But you must know that we of these generations are strong and healthy of body, and live easily; we pass our lives in reasonable strife with nature, exercising not one side of ourselves only, but all sides, taking the keenest pleasure in all the life of the world. So it is a point of honour with us not to be self-centred; not to suppose that the world must cease because one man is sorry; therefore we should think it foolish, or if you will, criminal, to exaggerate these matters of sentiment and sensibility: we are no more inclined to eke out our sentimental sorrows than to cherish our bodily pains; and we recognise that there are other pleasures besides love-making. You must remember, also, that we are long-lived, and that therefore beauty both in man and woman is not so fleeting as it was in the days when we were burdened so heavily by self-inflicted diseases. So we shake off these griefs in a way which perhaps the sentimentalists of other times would think contemptible and unheroic, but which we think necessary and manlike. As on the other hand, therefore, we have ceased to be commercial in our love-matters, so also we have ceased to be *artificially* foolish. The folly which comes by nature, the unwisdom of the immature man, or the older man caught in a trap, we must put up with that, nor are we much ashamed of it; but to be conventionally sensitive or sentimental — my friend, I am old and perhaps disappointed, but at least I think we have cast off *some* of the follies of the older world.' . . .

'This is how we stand. England was once a country of clearings amongst the woods and wastes, with a few towns interspersed, which were fortresses for the feudal army, markets for the folk, gathering places for the craftsmen. It then became a country of huge and foul workshops and fouler gambling-dens, surrounded by an ill-kept, poverty-stricken farm, pillaged by the masters of the workshops. It is now a garden, where nothing is wasted and nothing is spoilt, with the necessary dwellings, sheds, and workshops scattered up and down the country, all trim and neat and pretty. For, indeed, we should be too much ashamed of ourselves if we allowed the making of goods, even on a large scale, to carry with it the appearance, even, of desolation and misery. Why, my friend, those housewives we were talking of just now would teach us better than that.'

Said I: 'This side of your change is certainly for the better. But though I shall soon see some of these villages, tell me in a word or two what they are like, just to prepare me.'

'Perhaps,' said he, 'you have seen a tolerable picture of these villages as they were before the end of the nineteenth century. Such things exist.'

'I have seen several of such pictures,' said I.

'Well,' said Hammond, 'our villages are something like the best of such places, with the church or mote-house[4] of the neighbours for their chief building. Only note that there are no tokens of poverty about them: no tumble-down picturesque; which, to tell you the truth, the artist usually availed himself of to veil his incapacity for drawing architecture. Such things do not please us, even when they indicate no misery. Like the mediævals, we like everything trim and clean, and orderly and bright; as people always do when they have any sense of architectural power; because then they know that they can have what they want, and they won't stand any nonsense from Nature in their dealings with her.'

4. House for public meetings, especially suggesting the town-meeting (Anglo-Saxon *mōt*: meeting) of Old English times.

'Besides the villages, are there any scattered country houses?' said I.

'Yes, plenty,' said Hammond; 'in fact, except in the wastes and forests and amongst the sand-hills (like Hindhead in Surrey), it is not easy to be out of sight of a house; and where the houses are thinly scattered they run large, and are more like the old colleges than ordinary houses as they used to be. That is done for the sake of society, for a good many people can dwell in such houses, as the country dwellers are not necessarily husbandmen; though they almost all help in such work at times. The life that goes on in these big dwellings in the country is very pleasant, especially as some of the most studious men of our time live in them, and altogether there is a great variety of mind and mood to be found in them which brightens and quickens the society there.'

'I am rather surprised,' said I, 'by all this, for it seems to me that after all the country must be tolerably populous.'

'Certainly,' said he; 'the population is pretty much the same as it was at the end of the nineteenth century; we have spread it, that is all. Of course, also, we have helped to populate other countries — where we were wanted and were called for.'

Said I: 'One thing, it seems to me, does not go with your word of "garden" for the country. You have spoken of wastes and forests, and I myself have seen the beginning of your Middlesex and Essex forest. Why do you keep such things in a garden? and isn't it very wasteful to do so?'

'My friend,' he said, 'we like these pieces of wild nature, and can afford them, so we have them; let alone that as to the forests, we need a great deal of timber, and suppose that our sons and sons' sons will do the like. As to the land being a garden, I have heard that they used to have shrubberies and rockeries in gardens once; and though I might not like the artificial ones, I assure you that some of the natural rockeries of our garden are worth seeing. Go north this summer and look at the Cumberland and Westmoreland ones, — where, by the way, you will see some sheep feeding, so that they are not so wasteful as you think; not so wasteful as forcing-grounds for fruit out of season, *I* think. Go and have a look at the sheep-walks high up the slopes between Ingleborough and Pen-y-gwent, and tell me if you think we *waste* the land there by not covering it with factories for making things that nobody wants, which was the chief business of the nineteenth century.'

'I will try to go there,' said I.

'It won't take much trying,' said he.

Chapter XI

Concerning Government

'Now,' said I, 'I have come to the point of asking questions which I suppose will be dry for you to answer and difficult for you to explain; but I have foreseen for some time past that I must ask them, will I nill I. What kind of a government have you? Has republicanism finally triumphed? or have you come to a mere dictatorship, which some persons in the nineteenth century used to prophesy as the ultimate outcome of democracy? Indeed, this last question does not seem so very unreasonable, since you have turned your Parliament House into a dung-market. Or where do you house your present Parliament?'

The old man answered my smile with a hearty laugh, and said: 'Well, well, dung is not the worst kind of corruption; fertility may come of that, whereas mere dearth came from the other kind, of which those walls once held the great supporters. Now, dear guest, let me tell you that our present parliament would be hard to house in one place, because the whole people is our parliament.'

'I don't understand,' said I.

'No, I suppose not,' said he. 'I must

now shock you by telling you that we have no longer anything which you, a native of another planet, would call a government.'

'I am not so much shocked as you might think,' said I, 'as I know something about governments. But tell me, how do you manage, and how have you come to this state of things?'

Said he: 'It is true that we have to make some arrangements about our affairs, concerning which you can ask presently; and it is also true that everybody does not always agree with the details of these arrangements; but, further, it is true that a man no more needs an elaborate system of government, with its army, navy, and police, to force him to give way to the will of the majority of his *equals*, than he wants a similar machinery to make him understand that his head and a stone wall cannot occupy the same space at the same moment. Do you want further explanation?'

'Well, yes, I do,' quoth I.

Old Hammond settled himself in his chair with a look of enjoyment which rather alarmed me, and made me dread a scientific disquisition: so I sighed and abided. He said:

'I suppose you know pretty well what the process of government was in the bad old times?'

'I am supposed to know,' said I.

(Hammond) What was the government of those days? Was it really the Parliament or any part of it?

(I) No.

(H.) Was not the Parliament on the one side a kind of watch-committee sitting to see that the interests of the Upper Classes took no hurt; and on the other side a sort of blind to delude the people into supposing that they had some share in the management of their own affairs?

(I) History seems to show us this.

(H.) To what extent did the people manage their own affairs?

(I) I judge from what I have heard that sometimes they forced the Parliament to make a law to legalise some alteration which had already taken place.

(H.) Anything else?

(I) I think not. As I am informed, if the people made any attempt to deal with the *cause* of their grievances, the law stepped in and said, this is sedition, revolt, or what not, and slew or tortured the ring-leaders of such attempts.

(H.) If Parliament was not the government then, nor the people either, what was the government?

(I) Can you tell me?

(H.) I think we shall not be far wrong if we say that government was the Law-Courts, backed up by the executive, which handled the brute force that the deluded people allowed them to use for their own purposes; I mean the army, navy, and police.

(I) Reasonable men must needs think you are right.

(H.) Now as to those Law-Courts. Were they places of fair dealing according to the ideas of the day? Had a poor man a good chance of defending his property and person in them?

(I) It is a commonplace that even rich men looked upon a law-suit as a dire misfortune, even if they gained the case; and as for a poor one — why, it was considered a miracle of justice and beneficence if a poor man who had once got into the clutches of the law escaped prison or utter ruin.

(H.) It seems, then, my son, that the government by law-courts and police, which was the real government of the nineteenth century, was not a great success even to the people of that day, living under a class system which proclaimed inequality and poverty as the law of God and the bond which held the world together.

(I) So it seems, indeed.

(H.) And now that all this is changed, and the 'rights of property,' which mean the clenching the fist on a piece of goods

and crying out to the neighbours, You shan't have this! — now that all this has disappeared so utterly that it is no longer possible even to jest upon its absurdity, is such a Government possible?

(I) It is impossible.

(H.) Yes, happily. But for what other purpose than the protection of the rich from the poor, the strong from the weak, did this Government exist?

(I) I have heard that it was said that their office was to defend their own citizens against attack from other countries.

(H.) It was said; but was any one expected to believe this? For instance, did the English Government defend the English citizen against the French?

(I) So it was said.

(H.) Then if the French had invaded England and conquered it, they would not have allowed the English workmen to live well?

(I, laughing) As far as I can make out, the English masters of the English workmen saw to that: they took from their workmen as much of their livelihood as they dared, because they wanted it for themselves.

(H.) But if the French had conquered, would they not have taken more still from the English workmen?

(I) I do not think so; for in that case the English workmen would have died of starvation; and then the French conquest would have ruined the French, just as if the English horses and cattle had died of under-feeding. So that after all, the English *workmen* would have been no worse off for the conquest: their French masters could have got no more from them than their English masters did.

(H.) This is true; and we may admit that the pretensions of the government to defend the poor (*i.e.*, the useful) people against other countries come to nothing. But that is but natural; for we have seen already that it was the function of government to protect the rich against the poor. But did not the government defend its rich men against other nations?

(I) I do not remember to have heard that the rich needed defence; because it is said that even when two nations were at war, the rich men of each nation gambled with each other pretty much as usual, and even sold each other weapons wherewith to kill their own countrymen.

(H.) In short, it comes to this, that whereas the so-called government of protection of property by means of the law-courts meant destruction of wealth, this defence of the citizens of one country against those of another country by means of war or the threat of war meant pretty much the same thing.

(I) I cannot deny it.

(H.) Therefore the government really existed for the destruction of wealth?

(I) So it seems. And yet —

(H.) Yet what?

(I) There were many rich people in those times.

(H.) You see the consequences of that fact?

(I) I think I do. But tell me out what they were.

(H.) If the government habitually destroyed wealth, the country must have been poor?

(I) Yes, certainly.

(H.) Yet amidst this poverty the persons for the sake of whom the government existed insisted on being rich whatever might happen?

(I) So it was.

(H.) What *must* happen if in a poor country some people insist on being rich at the expense of the others?

(I) Unutterable poverty for the others. All this misery, then, was caused by the destructive government of which we have been speaking?

(H.) Nay, it would be incorrect to say so. The government itself was but the necessary result of the careless, aimless tyranny of the times; it was but the machinery of tyranny. Now tyranny has

come to an end, and we no longer need such machinery; we could not possibly use it since we are free. Therefore in your sense of the word we have no government. Do you understand this now?

(I) Yes, I do. But I will ask you some more questions as to how you as free men manage your affairs.

(H.) With all my heart. Ask away.

Chapter XII

Concerning the Arrangement of Life

'Well,' I said, 'about those "arrangements" which you spoke of as taking the place of government, could you give me any account of them?'

'Neighbour,' he said, 'although we have simplified our lives a great deal from what they were, and have got rid of many conventionalities and many sham wants, which used to give our forefathers much trouble, yet our life is too complex for me to tell you in detail by means of words how it is arranged; you must find that out by living amongst us. It is true that I can better tell you what we don't do, than what we do do.'

'Well?' said I.

'This is the way to put it,' said he: 'We have been living for a hundred and fifty years, at least, more or less in our present manner, and a tradition or habit of life has been growing on us; and that habit has become a habit of acting on the whole for the best. It is easy for us to live without robbing each other. It would be possible for us to contend with and rob each other, but it would be harder for us than refraining from strife and robbery. That is in short the foundation of our life and our happiness.'

'Whereas in the old days,' said I, 'it was very hard to live without strife and robbery. That's what you mean, isn't it, by giving me the negative side of your good conditions?'

'Yes,' he said, 'it was so hard, that those who habitually acted fairly to their neighbours were celebrated as saints and heroes, and were looked up to with the greatest reverence.'

'While they were alive?' said I.

'No,' said he, 'after they were dead.'

'But as to these days,' I said; 'you don't mean to tell me that no one ever transgresses this habit of good fellowship?'

'Certainly not,' said Hammond, 'but when the transgressions occur, everybody, transgressors and all, know them for what they are; the errors of friends, not the habitual actions of persons driven into enmity against society.'

'I see,' said I; 'you mean that you have no "criminal" classes.'

'How could we have them,' said he, 'since there is no rich class to breed enemies against the state by means of the injustice of the state?'

Said I: 'I thought that I understood from something that fell from you a little while ago that you had abolished civil law. Is that so, literally?'

'It abolished itself, my friend,' said he. 'As I said before, the civil law-courts were upheld for the defence of private property; for nobody ever pretended that it was possible to make people act fairly to each other by means of brute force. Well, private property being abolished, all the laws and all the legal "crimes" which it had manufactured of course came to an end. Thou shalt not steal, had to be translated into, Thou shalt work in order to live happily. Is there any need to enforce that commandment by violence?'

'Well,' said I, 'that is understood, and I agree with it; but how about the crimes of violence? would not their occurrence (and you admit that they occur) make criminal law necessary?'

Said he: 'In your sense of the word, we have no criminal law either. Let us look at the matter closer, and see whence crimes of violence spring. By far the greater part of these in past days were the result of the laws of private property, which forbade the satisfaction of their natural desires to

all but a privileged few, and of the general visible coercion which came of those laws. All *that* cause of violent crime is gone. Again, many violent acts came from the artificial perversion of the sexual passions, which caused over-weening jealousy and the like miseries. Now, when you look carefully into these, you will find that what lay at the bottom of them was mostly the idea (a law-made idea) of the woman being the property of the man, whether he were husband, father, brother, or what not. *That* idea has of course vanished with private property, as well as certain follies about the "ruin" of women for following their natural desires in an illegal way, which of course was a convention caused by the laws of private property.

'Another cognate cause of crimes of violence was the family tyranny, which was the subject of so many novels and stories of the past, and which once more was the result of private property. Of course that is all ended, since families are held together by no bond of coercion, legal or social, but by mutual liking and affection, and everybody is free to come or go as he or she pleases. Furthermore, our standards of honour and public estimation are very different from the old ones; success in besting our neighbours is a road to renown now closed, let us hope for ever. Each man is free to exercise his special faculty to the utmost, and every one encourages him in so doing. So that we have got rid of the scowling envy, coupled by the poets with hatred,[5] and surely with good reason; heaps of unhappiness and ill-blood were caused by it, which with irritable and passionate men — *i.e.*, energetic and active men — often led to violence.'

I laughed, and said: 'So that you now withdraw your admission, and say that there is no violence amongst you?'

'No,' said he, 'I withdraw nothing; as I told you, such things will happen. Hot blood will err sometimes. A man may strike another, and the stricken strike back again, and the result be a homicide, to put it at the worst. But what then? Shall we the neighbours make it worse still? Shall we think so poorly of each other as to suppose that the slain man calls on us to revenge him, when we *know* that if he had been maimed, he would, when in cold blood and able to weigh all the circumstances, have forgiven his maimer? Or will the death of the slayer bring the slain man to life again and cure the unhappiness his loss has caused?'

'Yes,' I said, 'but consider, must not the safety of society be safeguarded by some punishment?'

'There, neighbour!' said the old man, with some exultation. 'You have hit the mark. That *punishment* of which men used to talk so wisely and act so foolishly, what was it but the expression of their fear? And they had need to fear, since *they* — *i.e.*, the rulers of society — were dwelling like an armed band in a hostile country. But we who live amongst our friends need neither fear nor punish. Surely if we, in dread of an occasional rare homicide, an occasional rough blow, were solemnly and legally to commit homicide and violence, we could only be a society of ferocious cowards. Don't you think so, neighbour?'

'Yes, I do, when I come to think of it from that side,' said I.

'Yet you must understand,' said the old man, 'that when any violence is committed, we expect the transgressor to make any atonement possible to him, and he himself expects it. But again, think if the destruction or serious injury of a man momentarily overcome by wrath or folly can be any atonement to the commonwealth? Surely it can only be an additional injury to it.'

Said I: 'But suppose the man has a habit of violence, — kills a man a year, for instance?'

'Such a thing is unknown,' said he. 'In

5. See Spenser's *Faerie Queene*, iv,30ff.; Milton's *Paradise Lost*, ix,466; also *Richard II*, I,iii,131.

a society where there is no punishment to evade, no law to triumph over, remorse will certainly follow transgression.'

'And lesser outbreaks of violence,' said I, 'how do you deal with them? for hitherto we have been talking of great tragedies, I suppose?'

Said Hammond: 'If the ill-doer is not sick or mad (in which case he must be restrained till his sickness or madness is cured) it is clear that grief and humiliation must follow the ill-deed; and society in general will make that pretty clear to the ill-doer if he should chance to be dull to it; and again, some kind of atonement will follow, — at the least, an open acknowledgment of the grief and humiliation. Is it so hard to say, I ask your pardon, neighbour? — Well, sometimes it is hard — and let it be.'

'You think that enough?' said I.

'Yes,' said he, 'and moreover it is all that we *can* do. If in addition we torture the man, we turn his grief into anger, and the humiliation he would otherwise feel for *his* wrong-doing is swallowed up by a hope of revenge for *our* wrong-doing to him. He has paid the legal penalty, and can "go and sin again" with comfort. Shall we commit such a folly, then? Remember Jesus had got the legal penalty remitted before he said, "Go and sin no more."[6] Let alone that in a society of equals you will not find any one to play the part of torturer or jailer, though many to act as nurse or doctor.'

'So,' said I, 'you consider crime a mere spasmodic disease, which requires no body of criminal law to deal with it?'

'Pretty much so,' said he; 'and since, as I have told you, we are a healthy people generally, so we are not likely to be much troubled with *this* disease.'

'Well, you have no civil law, and no criminal law. But have you no laws of the market, so to say — no regulation for the exchange of wares? for you must exchange, even if you have no property.'

Said he: 'We have no obvious individual exchange, as you saw this morning when you went a-shopping; but of course there are regulations of the markets, varying according to the circumstances and guided by general custom. But as these are matters of general assent, which nobody dreams of objecting to, so also we have made no provision for enforcing them: therefore I don't call them laws. In law, whether it be criminal or civil, execution always follows judgment, and some one must suffer. When you see the judge on his bench, you see through him, as clearly as if he were made of glass, the policeman to emprison, and the soldier to slay some actual living person. Such follies would make an agreeable market, wouldn't they?'

'Certainly,' said I, 'that means turning the market into a mere battlefield, in which many people must suffer as much as in the battlefield of bullet and bayonet. And from what I have seen I should suppose that your marketing, great and little, is carried on in a way that makes it a pleasant occupation.'

'You are right, neighbour,' said he. 'Although there are so many, indeed by far the greater number amongst us, who would be unhappy if they were not engaged in actually making things, and things which turn out beautiful under their hands, — there are many, like the housekeepers I was speaking of, whose delight is in administration and organisation, to use long-tailed words; I mean people who like keeping things together, avoiding waste, seeing that nothing sticks fast uselessly. Such people are thoroughly happy in their business, all the more as they are dealing with actual facts, and not merely passing counters round to see what share they shall have in the privileged taxation of useful people, which was the business of the commercial folk in past days. Well, what are you going to ask me next?'

6. See *John*, viii,3–11.

Chapter XIII

Concerning Politics

Said I: 'How do you manage with politics?'

Said Hammond, smiling: 'I am glad that it is of *me* that you ask that question; I do believe that anybody else would make you explain yourself, or try to do so, till you were sickened of asking questions. Indeed, I believe I am the only man in England who would know what you mean; and since I know, I will answer your question briefly by saying that we are very well off as to politics, — because we have none. If ever you make a book out of this conversation, put this in a chapter by itself, after the model of old Horrebow's Snakes in Iceland.'[7]

'I will,' said I.

Chapter XIV

How Matters Are Managed

Said I: 'How about your relations with foreign nations?'

'I will not affect not to know what you mean,' said he, 'but I will tell you at once that the whole system of rival and contending nations which played so great a part in the "government" of the world of civilisation has disappeared along with the inequality betwixt man and man in society.'

'Does not that make the world duller?' said I.

'Why?' said the old man.

'The obliteration of national variety,' said I.

'Nonsense,' he said, somewhat snappishly. 'Cross the water and see. You will find plenty of variety: the landscape, the building, the diet, the amusements, all various. The men and women varying in looks as well as in habits of thought; the costume far more various than in the commercial period. How should it add to the variety or dispel the dulness, to coerce certain families or tribes, often heterogeneous and jarring with one another, into certain artificial and mechanical groups, and call them nations, and stimulate their patriotism — *i.e.*, their foolish and envious prejudices?'

'Well — I don't know how,' said I.

'That's right,' said Hammond cheerily; 'you can easily understand that now we are freed from this folly it is obvious to us that by means of this very diversity the different strains of blood in the world can be serviceable and pleasant to each other, without in the least wanting to rob each other: we are all bent on the same enterprise, making the most of our lives. And I must tell you whatever quarrels or misunderstandings arise, they very seldom take place between people of different race; and consequently since there is less unreason in them, they are the more readily appeased.'

'Good,' said I, 'but as to those matters of politics; as to general differences of opinion in one and the same community. Do you assert that there are none?'

'No, not at all,' said he, somewhat snappishly; 'but I do say that differences of opinion about real solid things need not, and with us do not, crystallise people into parties permanently hostile to one another, with different theories as to the build of the universe and the progress of time. Isn't that what politics used to mean?'

'H'm, well,' said I, 'I am not so sure of that.'

Said he: 'I take you, neighbour; they only *pretended* to this serious difference of opinion; for if it had existed they could not have dealt together in the ordinary business of life; couldn't have eaten together, bought and sold together, gambled together, cheated other people together, but must have fought whenever they met: which would not have suited them at all. The game of the masters of politics was to cajole or force the public to

7. *Cf.* Niels Horrebow (1712–60), *Natural History of Iceland*, London, 1758.

pay the expense of a luxurious life and exciting amusement for a few cliques of ambitious persons: and the *pretence* of serious difference of opinion, belied by every action of their lives, was quite good enough for that. What has all that got to do with us? '

Said I: 'Why nothing, I should hope. But I fear — In short, I have been told that political strife was a necessary result of human nature.'

'Human nature!' cried the old boy, impetuously; 'what human nature? The human nature of paupers, of slaves, of slaveholders, or the human nature of wealthy freemen? Which? Come, tell me that!'

'Well,' said I, 'I suppose there would be a difference according to circumstances in people's action about these matters.'

'I should think so, indeed,' said he. 'At all events, experience shows that it is so. Amongst us, our differences concern matters of business, and passing events as to them, and could not divide men permanently. As a rule, the immediate outcome shows which opinion on a given subject is the right one; it is a matter of fact, not of speculation. For instance, it is clearly not easy to knock up a political party on the question as to whether haymaking in such and such a countryside shall begin this week or next, when all men agree that it must at latest begin the week after next, and when any man can go down into the fields himself and see whether the seeds are ripe enough for the cutting.'

Said I: 'And you settle these differences, great and small, by the will of the majority, I suppose? '

'Certainly,' said he; 'how else could we settle them? You see in matters which are merely personal which do not affect the welfare of the community — how a man shall dress, what he shall eat and drink, what he shall write and read, and so forth — there can be no difference of opinion, and everybody does as he pleases. But when the matter is of common interest to the whole community, and the doing or not doing something affects everybody, the majority must have their way; unless the minority were to take up arms and show by force that they were the effective or real majority; which, however, in a society of men who are free and equal is little likely to happen; because in such a community the apparent majority *is* the real majority, and the others, as I have hinted before, know that too well to obstruct from mere pigheadedness; especially as they have had plenty of opportunity of putting forward their side of the question.'

'How is that managed? ' said I.

'Well,' said he, 'let us take one of our units of management, a commune, or a ward, or a parish (for we have all three names, indicating little real distinction between them now, though time was there was a good deal). In such a district, as you would call it, some neighbours think that something ought to be done or undone: a new town-hall built; a clearance of inconvenient houses; or say a stone bridge substituted for some ugly old iron one, — there you have undoing and doing in one. Well, at the next ordinary meeting of the neighbours, or Mote, as we call it, according to the ancient tongue [8] of the times before bureaucracy, a neighbour proposes the change, and of course, if everybody agrees, there is an end of discussion, except about details. Equally, if no one backs the proposer — "seconds him," it used to be called — the matter drops for the time being; a thing not likely to happen amongst reasonable men, however, as the proposer is sure to have talked it over with others before the Mote. But supposing the affair proposed and seconded, if a few of the neighbours disagree to it, if they think that the beastly iron bridge will serve a little longer and they don't want to be bothered with building a new one just then, they don't count heads that time, but put off the formal discussion to the next Mote; and meantime arguments *pro* and *con* are

8. The Anglo-Saxon, or Old English.

flying about, and some get printed, so that everybody knows what is going on; and when the Mote comes together again there is a regular discussion and at last a vote by show of hands. If the division is a close one, the question is again put off for further discussion; if the division is a wide one, the minority are asked if they will yield to the more general opinion, which they often, nay, most commonly do. If they refuse, the question is debated a third time, when, if the minority has not perceptibly grown, they always give way; though I believe there is some half-forgotten rule by which they might still carry it on further; but I say, what always happens is that they are convinced, not perhaps that their view is the wrong one, but they cannot persuade or force the community to adopt it.'

'Very good,' said I; 'but what happens if the divisions are still narrow?'

Said he: 'As a matter of principle and according to the rule of such cases, the question must then lapse, and the majority, if so narrow, has to submit to sitting down under the *status quo*. But I must tell you that in point of fact the minority very seldom enforces this rule, but generally yields in a friendly manner.'

'But do you know,' said I, 'that there is something in all this very like democracy; and I thought that democracy was considered to be in a moribund condition many, many years ago.'

The old boy's eyes twinkled. 'I grant you that our methods have that drawback. But what is to be done? We can't get *any one* amongst us to complain of his not always having his own way in the teeth of the community, when it is clear that *everybody* cannot have that indulgence. What *is* to be done?'

'Well,' said I, 'I don't know.'

Said he: 'The only alternatives to our method that I can conceive of are these. First, that we should choose out, or breed, a class of superior persons capable of judging on all matters without consulting the neighbours; that, in short, we should get for ourselves what used to be called an aristocracy of intellect; or, secondly, that for the purpose of safe-guarding the freedom of the individual will, we should revert to a system of private property again, and have slaves and slave-holders once more. What do you think of those two expedients?'

'Well,' said I, 'there is a third possibility — to wit, that every man should be quite independent of every other, and that thus the tyranny of society should be abolished.'

He looked hard at me for a second or two, and then burst out laughing very heartily; and I confess that I joined him. When he recovered himself he nodded at me, and said: 'Yes, yes, I quite agree with you — and so we all do.'

'Yes,' I said, 'and besides, it does not press hardly on the minority: for, take this matter of the bridge, no man is obliged to work on it if he doesn't agree to its building. At least, I suppose not.'

He smiled, and said: 'Shrewdly put; and yet from the point of view of the native of another planet. If the man of the minority does find his feelings hurt, doubtless he may relieve them by refusing to help in building the bridge. But, dear neighbour, that is not a very effective salve for the wound caused by the "tyranny of a majority" in our society; because all work that is done is either beneficial or hurtful to every member of society. The man is benefited by the bridge-building if it turns out a good thing, and hurt by it if it turns out a bad one, whether he puts a hand to it or not; and meanwhile he is benefiting the bridge-builders by his work, whatever that may be. In fact, I see no help for him except the pleasure of saying "I told you so" if the bridge-building turns out to be a mistake and hurts him; if it benefits him he must suffer in silence. A terrible tyranny our Communism, is it not? Folk used often to be warned against this very unhappiness in times

past, when for every well-fed, contented person you saw a thousand miserable starvelings. Whereas for us, we grow fat and well-liking on the tyranny; a tyranny, to say the truth, not to be made visible by any microscope I know. Don't be afraid, my friend; we are not going to seek for troubles by calling our peace and plenty and happiness by ill names whose very meaning we have forgotten!'

He sat musing for a little, and then started and said: 'Are there any more questions, dear guest? The morning is waning fast amidst my garrulity.'

Chapter XV

On the Lack of Incentive to Labour in a Communist Society

'Yes,' said I. 'I was expecting Dick and Clara to make their appearance any moment: but is there time to ask just one or two questions before they come?'

'Try it, dear neighbour — try it,' said old Hammond. 'For the more you ask me the better I am pleased; and at any rate if they do come and find me in the middle of an answer, they must sit quiet and pretend to listen till I come to an end. It won't hurt them; they will find it quite amusing enough to sit side by side, conscious of their proximity to each other.'

I smiled, as I was bound to, and said: 'Good: I will go on talking without noticing them when they come in. Now, this is what I want to ask you about — to wit, how you get people to work when there is no reward of labour, and especially how you get them to work strenuously?'

'No reward of labour?' said Hammond, gravely. 'The reward of labour is *life*. Is that not enough?'

'But no reward for especially good work,' quoth I.

'Plenty of reward,' said he — 'the reward of creation. The wages which God gets, as people might have said time agone. If you are going to ask to be paid for the pleasure of creation, which is what excellence in work means, the next thing we shall hear of will be a bill sent in for the begetting of children.'

'Well, but,' said I, 'the man of the nineteenth century would say there is a natural desire towards the procreation of children, and a natural desire not to work.'

'Yes, yes,' said he, 'I know the ancient platitude, — wholly untrue; indeed, to us quite meaningless. Fourier,[9] whom all men laughed at, understood the matter better.'

'Why is it meaningless to you?' said I.

He said: 'Because it implies that all work is suffering, and we are so far from thinking that, that, as you may have noticed, whereas we are not short of wealth, there is a kind of fear growing up amongst us that we shall one day be short of work. It is a pleasure which we are afraid of losing, not a pain.'

'Yes,' said I, 'I have noticed that, and I was going to ask you about that also. But in the meantime, what do you positively mean to assert about the pleasurableness of work amongst you?'

'This, that *all* work is now pleasurable; either because of the hope of gain in honour and wealth with which the work is done, which causes pleasurable excitement, even when the actual work is not pleasant; or else because it has grown into a pleasurable *habit*, as in the case with what you may call mechanical work; and lastly (and most of our work is of this kind) because there is conscious sensuous pleasure in the work itself; it is done, that is, by artists.'

'I see,' said I. 'Can you now tell me how you have come to this happy condition? For, to speak plainly, this change from the conditions of the older world seems to me far greater and more important than all the other changes you have

9. François Marie Charles Fourier (1772–1837), French socialist philosopher. See his *The Social Destiny of Man . . .*, tr. Henry Clapp,Jr., ed. New York, 1857, pp.53,219.

told me about as to crime, politics, property, marriage.'

'You are right there,' said he. 'Indeed, you may say rather that it is this change which makes all the others possible. What is the object of Revolution? Surely to make people happy. Revolution having brought its foredoomed change about, how can you prevent the counter-revolution from setting in except by making people happy? What! shall we expect peace and stability from unhappiness? The gathering of grapes from thorns and figs from thistles is a reasonable expectation compared with that! And happiness without happy daily work is impossible.'

'Most obviously true,' said I: for I thought the old boy was preaching a little. 'But answer my question, as to how you gained this happiness.'

'Briefly,' said he, 'by the absence of artificial coercion, and the freedom for every man to do what he can do best, joined to the knowledge of what productions of labour we really want. I must admit that this knowledge we reached slowly and painfully.'

'Go on,' said I, 'give me more detail; explain more fully. For this subject interests me intensely.'

'Yes, I will,' said he; 'but in order to do so I must weary you by talking a little about the past. Contrast is necessary for this explanation. Do you mind?'

'No, no,' said I.

Said he, settling himself in his chair again for a long talk: 'It is clear from all that we hear and read, that in the last age of civilisation men had got into a vicious circle in the matter of production of wares. They had reached a wonderful facility of production, and in order to make the most of that facility they had gradually created (or allowed to grow, rather) a most elaborate system of buying and selling, which has been called the World-Market; and that World-Market, once set a-going, forced them to go on making more and more of these wares, whether they needed them or not. So that while (of course) they could not free themselves from the toil of making real necessaries, they created in a never-ending series sham or artificial necessaries, which became, under the iron rule of the aforesaid World-Market, of equal importance to them with the real necessaries which supported life. By all this they burdened themselves with a prodigious mass of work merely for the sake of keeping their wretched system going.'

'Yes — and then?' said I.

'Why, then, since they had forced themselves to stagger along under this horrible burden of unnecessary production, it became impossible for them to look upon labour and its results from any other point of view than one — to wit, the ceaseless endeavour to expend the least possible amount of labour on any article made, and yet at the same time to make as many articles as possible. To this "cheapening of production," as it was called, everything was sacrificed: the happiness of the workman at his work, nay, his most elementary comfort and bare health, his food, his clothes, his dwelling, his leisure, his amusement, his education — his life, in short — did not weigh a grain of sand in the balance against this dire necessity of "cheap production" of things, a great part of which were not worth producing at all. Nay, we are told, and we must believe it, so overwhelming is the evidence, though many of our people scarcely *can* believe it, that even rich and powerful men, the masters of the poor devils aforesaid, submitted to live amidst sights and sounds and smells which it is in the very nature of man to abhor and flee from, in order that their riches might bolster up this supreme folly. The whole community, in fact, was cast into the jaws of this ravening monster, "the cheap production" forced upon it by the World-Market.'

'Dear me!' said I. 'But what happened? Did not their cleverness and facil-

ity in production master this chaos of misery at last? Couldn't they catch up with the World-Market, and then set to work to devise means for relieving themselves from this fearful task of extra labour?'

He smiled bitterly. 'Did they even try to?' said he. 'I am not sure. You know that according to the old saw the beetle gets used to living in dung; and these people, whether they found the dung sweet or not, certainly lived in it.'

His estimate of the life of the nineteenth century made me catch my breath a little; and I said feebly, 'But the labour-saving machines?'

'Heyday!' quoth he. 'What's that you are saying? the labour-saving machines? Yes, they were made to "save labour" (or, to speak more plainly, the lives of men) on one piece of work in order that it might be expended — I will say wasted — on another, probably useless, piece of work. Friend, all their devices for cheapening labour simply resulted in increasing the burden of labour. The appetite of the World-Market grew with what it fed on: the countries within the ring of "civilisation" (that is, organised misery) were glutted with the abortions of the market, and force and fraud were used unsparingly to "open up" countries *outside* that pale. This process of "opening up" is a strange one to those who have read the professions of the men of that period and do not understand their practice; and perhaps shows us at its worst the great vice of the nineteenth century, the use of hypocrisy and cant to evade the responsibility of vicarious ferocity. When the civilised World-Market coveted a country not yet in its clutches, some transparent pretext was found — the suppression of a slavery different from, and not so cruel as that of commerce; the pushing of a religion no longer believed in by its promoters; the "rescue" of some desperado or homicidal madman whose misdeeds had got him into trouble amongst the natives of the "barbarous" country — any stick, in short, which would beat the dog at all. Then some bold, unprincipled, ignorant adventurer was found (no difficult task in the days of competition), and he was bribed to "create a market" by breaking up whatever traditional society there might be in the doomed country, and by destroying whatever leisure or pleasure he found there. He forced wares on the natives which they did not want, and took their natural products in "exchange," as this form of robbery was called, and thereby he "created new wants," to supply which (that is, to be allowed to live by their new masters) the hapless, helpless people had to sell themselves into the slavery of hopeless toil so that they might have something wherewith to purchase the nullities of "civilisation." Ah,' said the old man, pointing to the Museum,[10] 'I have read books and papers in there, telling strange stories indeed of the dealings of civilisation (or organised misery) with "non-civilisation"; from the time when the British Government deliberately sent blankets infected with small-pox as choice gifts to inconvenient tribes of Redskins, to the time when Africa was infested by a man named Stanley,[11] who ——'

'Excuse me,' said I, 'but as you know, time presses; and I want to keep our question on the straightest line possible; and I want at once to ask this about these wares made for the World-Market — how about their quality; these people who were so clever about making goods, I suppose they made them well?'

'Quality!' said the old man crustily, for he was rather peevish at being cut short in his story; 'how could they possibly attend to such trifles as the quality of the

10. The British Museum, in London, contains a vast library, in addition to the objects of the sort usually found in museums.

11. Sir Henry Morton Stanley (1841–1904), British journalist and explorer of Africa, discoverer of the course of the Congo, etc. His explorations did much to open Africa to the white man's colonization and exploitation.

wares they sold? The best of them were of a lowish average, the worst were transparent make-shifts for the things asked for, which nobody would have put up with if they could have got anything else. It was a current jest of the time that the wares were made to sell and not to use; a jest which you, as coming from another planet, may understand, but which our folk could not.'

Said I: 'What! did they make nothing well?'

'Why, yes,' said he, 'there was one class of goods which they did make thoroughly well, and that was the class of machines which were used for making things. These were usually quite perfect pieces of workmanship, admirably adapted to the end in view. So that it may be fairly said that the great achievement of the nineteenth century was the making of machines which were wonders of invention, skill, and patience, and which were used for the production of measureless quantities of worthless make-shifts. In truth, the owners of the machines did not consider anything which they made as wares, but simply as means for the enrichment of themselves. Of course, the only admitted test of utility in wares was the finding of buyers for them — wise men or fools, as it might chance.'

'And people put up with this?' said I.

'For a time,' said he.

'And then?'

'And then the overturn,' said the old man, smiling, 'and the nineteenth century saw itself as a man who has lost his clothes whilst bathing, and has to walk naked through the town.'

'You are very bitter about that unlucky nineteenth century,' said I.

'Naturally,' said he, 'since I know so much about it.'

He was silent a little, and then said: 'There are traditions — nay, real histories — in our family about it: my grandfather was one of its victims. If you know something about it, you will understand what he suffered when I tell you that he was in those days a genuine artist, a man of genius, and a revolutionist.'

'I think I do understand,' said I: 'but now, as it seems, you have reversed all this?'

'Pretty much so,' said he. 'The wares which we make are made because they are needed: men make for their neighbours' use as if they were making for themselves, not for a vague market of which they know nothing, and over which they have no control: as there is no buying and selling, it would be mere insanity to make goods on the chance of their being wanted; for there is no longer any one who can be *compelled* to buy them. So that whatever is made is good, and thoroughly fit for its purpose. Nothing *can* be made except for genuine use; therefore no inferior goods are made. Moreover, as aforesaid, we have now found out what we want, so we make no more than we want; and as we are not driven to make a vast quantity of useless things, we have time and resources enough to consider our pleasure in making them. All work which would be irksome to do by hand is done by immensely improved machinery; and in all work which it is a pleasure to do by hand machinery is done without. There is no difficulty in finding work which suits the special turn of mind of everybody; so that no man is sacrificed to the wants of another. From time to time, when we have found out that some piece of work was too disagreeable or troublesome, we have given it up and done altogether without the thing produced by it. Now, surely you can see that under these circumstances all the work that we do is an exercise of the mind and body more or less pleasant to be done: so that instead of avoiding work everybody seeks it: and, since people have got defter in doing the work generation after generation, it has become so easy to do, that it seems as if there were less done, though probably more is produced. I suppose this explains that fear, which I hinted

at just now, of a possible scarcity in work, which perhaps you have already noticed, and which is a feeling on the increase, and has been for a score of years.'

'But do you think,' said I, 'that there is any fear of a work-famine amongst you?'

'No, I do not,' said he, 'and I will tell why; it is each man's business to make his own work pleasanter and pleasanter, which of course tends towards raising the standard of excellence, as no man enjoys turning out work which is not a credit to him, and also to greater deliberation in turning it out; and there is such a vast number of things which can be treated as works of art, that this alone gives employment to a host of deft people. Again, if art be inexhaustible, so is science also; and though it is no longer the only innocent occupation which is thought worth an intelligent man spending his time upon, as it once was, yet there are, and I suppose will be, many people who are excited by its conquest of difficulties, and care for it more than for anything else. Again, as more and more of pleasure is imported into work, I think we shall take up kinds of work which produce desirable wares, but which we gave up because we could not carry them on pleasantly. Moreover, I think that it is only in parts of Europe which are more advanced than the rest of the world that you will hear this talk of the fear of a work-famine. Those lands which were once the colonies of Great Britain, for instance, and especially America — that part of it, above all, which was once the United States — are now and will be for a long while a great resource to us. For these lands, and, I say, especially the northern parts of America, suffered so terribly from the full force of the last days of civilisation, and became such horrible places to live in, that they are now very backward in all that makes life pleasant. Indeed, one may say that for nearly a hundred years the people of the northern parts of America have been engaged in gradually making a dwelling-place out of a stinking dust-heap; and there is still a great deal to do, especially as the country is so big.'

'Well,' said I, 'I am exceedingly glad to think that you have such a prospect of happiness before you. . . .'

. . . Then said Hammond:

'Does anything especially puzzle you about our way of living, now you have heard a good deal and seen a little of it?'

Said I: 'I think what puzzles me most is how it all came about.'

'It well may,' said he, 'so great as the change is. It would be difficult indeed to tell you the whole story, perhaps impossible: knowledge, discontent, treachery, disappointment, ruin, misery, despair — those who worked for the change because they could see further than other people went through all these phases of suffering; and doubtless all the time the most of men looked on, not knowing what was doing, thinking it all a matter of course, like the rising and setting of the sun — and indeed it was so.'

'Tell me one thing, if you can,' said I. 'Did the change, the "revolution" it used to be called, come peacefully?'

'Peacefully?' said he; 'what peace was there amongst those poor confused wretches of the nineteenth century? It was war from beginning to end: bitter war, till hope and pleasure put an end to it.'

'Do you mean actual fighting with weapons?' said I, 'or the strikes and lock-outs and starvation of which we have heard?'

'Both, both,' he said. 'As a matter of fact, the history of the terrible period of transition from commercial slavery to freedom may thus be summarised. When the hope of realising a communal condition of life for all men arose, quite late in the nineteenth century, the power of the middle classes, the then tyrants of society, was so enormous and crushing, that to almost all men, even those who had, you may say despite themselves, despite their rea-

son and judgment, conceived such hopes, it seemed a dream. So much was this the case that some of those more enlightened men who were then called Socialists, although they well knew, and even stated in public, that the only reasonable condition of Society was that of pure Communism (such as you now see around you), yet shrunk from what seemed to them the barren task of preaching the realisation of a happy dream. Looking back now, we can see that the great motive-power of the change was a longing for freedom and equality, akin if you please to the unreasonable passion of the lover; a sickness of heart that rejected with loathing the aimless solitary life of the well-to-do educated men of that time: phrases, my dear friend, which have lost their meaning to us of the present day; so far removed we are from the dreadful facts which they represent.

'Well, these men, though conscious of this feeling, had no faith in it, as a means of bringing about the change. Nor was that wonderful: for looking around them they saw the huge mass of the oppressed classes too much burdened with the misery of their lives, and too much overwhelmed by the selfishness of misery, to be able to form a conception of any escape from it except by the ordinary way prescribed by the system of slavery under which they lived; which was nothing more than a remote chance of climbing out of the oppressed into the oppressing class.

'Therefore, though they knew that the only reasonable aim for those who would better the world was a condition of equality; in their impatience and despair they managed to convince themselves that if they could by hook or by crook get the machinery of production and the management of property so altered that the "lower classes" (so the horrible word ran) might have their slavery somewhat ameliorated, they would be ready to fit into this machinery, and would use it for bettering their condition still more and still more, until at last the result would be a practical equality (they were very fond of using the word "practical"), because "the rich" would be forced to pay so much for keeping "the poor" in a tolerable condition that the condition of riches would become no longer valuable and would gradually die out. Do you follow me?'

'Partly,' said I. 'Go on.'

Said old Hammond: 'Well, since you follow me, you will see that as a theory this was not altogether unreasonable; but "practically," it turned out a failure.'

'How so?' said I.

'Well, don't you see,' said he, 'because it involved the making of a machinery by those who didn't know what they wanted the machines to do. So far as the masses of the oppressed class furthered this scheme of improvement, they did it to get themselves improved slave-rations — as many of them as could. And if those classes had really been incapable of being touched by that instinct which produced the passion for freedom and equality aforesaid, what would have happened, I think, would have been this: that a certain part of the working classes would have been so far improved in condition that they would have approached the condition of the middling rich men; but below them would have been a great class of most miserable slaves, whose slavery would have been far more hopeless than the older class-slavery had been.'

'What stood in the way of this?' said I.

'Why, of course,' said he, 'just that instinct for freedom aforesaid. It is true that the slave-class could not conceive the happiness of a free life. Yet they grew to understand (and very speedily too) that they were oppressed by their masters, and they assumed, you see how justly, that they could do without them, though perhaps they scarce knew how; so that it came to this, that though they could not look forward to the happiness or peace of the freeman, they did at least look for-

ward to the war which a vague hope told them would bring that peace about.'

'Could you tell me rather more closely what actually took place?' said I; for I thought *him* rather vague here.

'Yes,' he said, 'I can. That machinery of life for the use of people who didn't know what they wanted of it, and which was known at the time as State Socialism, was partly put in motion, though in a very piecemeal way. But it did not work smoothly; it was, of course, resisted at every turn by the capitalists; and no wonder, for it tended more and more to upset the commercial system I have told you of, without providing anything really effective in its place. The result was growing confusion, great suffering amongst the working classes, and, as a consequence, great discontent. For a long time matters went on like this. The power of the upper classes had lessened, as their command over wealth lessened, and they could not carry things wholly by the high hand as they had been used to in earlier days. So far the State Socialists were justified by the result. On the other hand, the working classes were ill-organised, and growing poorer in reality, in spite of the gains (also real in the long run) which they had forced from the masters. Thus matters hung in the balance, the masters could not reduce their slaves to complete subjection, though they put down some feeble and partial riots easily enough. The workers forced their masters to grant them ameliorations, real or imaginary, of their condition, but could not force freedom from them. At last came a great crash. To explain this you must understand that very great progress had been made amongst the workers, though as before said but little in the direction of improved livelihood.'

I played the innocent and said: 'In what direction could they improve, if not in livelihood?'

Said he: 'In the power to bring about a state of things in which livelihood would be full, and easy to gain. They had at last learned how to combine after a long period of mistakes and disasters. The workmen had now a regular organisation in the struggle against their masters, a struggle which for more than half a century had been accepted as an inevitable part of the conditions of the modern system of labour and production. This combination had now taken the form of a federation of all or almost all the recognised wage-paid employments, and it was by its means that those betterments of the condition of the workmen had been forced from the masters: and though they were not seldom mixed up with the rioting that happened, especially in the earlier days of their organisation, it by no means formed an essential part of their tactics; indeed at the time I am now speaking of they had got to be so strong that most commonly the mere threat of a "strike" was enough to gain any minor point: because they had given up the foolish tactics of the ancient trades unions of calling out of work a part only of the workers of such and such an industry, and supporting them while out of work on the labour of those that remained in. By this time they had a biggish fund of money for the support of strikes, and could stop a certain industry altogether for a time if they so determined.'

Said I: 'Was there not a serious danger of such moneys being misused — of jobbery, in fact?'

Old Hammond wriggled uneasily on his seat, and said:

'Though all this happened so long ago, I still feel the pain of mere shame when I have to tell you that it was more than a danger: that such rascality often happened; indeed more than once the whole combination seemed dropping to pieces because of it: but at the time of which I am telling, things looked so threatening, and to the workmen at least the necessity of their dealing with the fast-gathering trouble which the labour-struggle had brought about, was so clear, that the con-

ditions of the times had begot a deep seriousness amongst all reasonable people; a determination which put aside all non-essentials, and which to thinking men was ominous of the swiftly-approaching change: such an element was too dangerous for mere traitors and self-seekers, and one by one they were thrust out and mostly joined the declared reactionaries.'

'How about those ameliorations,' said I; 'what were they? or rather of what nature?'

Said he: 'Some of them, and these of the most practical importance to the men's livelihood, were yielded by the masters by direct compulsion on the part of the men; the new conditions of labour so gained were indeed only customary, enforced by no law: but, once established, the masters durst not attempt to withdraw them in face of the growing power of the combined workers. Some again were steps on the path of "State Socialism"; the most important of which can be speedily summed up. At the end of the nineteenth century the cry arose for compelling the masters to employ their men a less number of hours in the day: this cry gathered volume quickly, and the masters had to yield to it. But it was, of course, clear that unless this meant a higher price for work per hour, it would be a mere nullity, and that the masters, unless forced, would reduce it to that. Therefore after a long struggle another law was passed fixing a minimum price for labour in the most important industries; which again had to be supplemented by a law fixing the maximum price on the chief wares then considered necessary for a workman's life.'

'You were getting perilously near to the late Roman poor-rates,' said I, smiling, 'and the doling out of bread to the proletariat.'

'So many said at the time,' said the old man drily; 'and it has long been a commonplace that that slough awaits State Socialism in the end, if it gets to the end, which as you know it did not with us. However, it went further than this minimum and maximum business, which by the bye we can now see was necessary. The government now found it imperative on them to meet the outcry of the master class at the approaching destruction of commerce (as desirable, had they known it, as the extinction of the cholera, which has since happily taken place). And they were forced to meet it by a measure hostile to the masters, the establishment of government factories for the production of necessary wares, and markets for their sale. These measures taken altogether did do something: they were in fact of the nature of regulations made by the commander of a beleaguered city. But of course to the privileged classes it seemed as if the end of the world were come when such laws were enacted.

'Nor was that altogether without a warrant: the spread of communistic theories, and the partial practice of State Socialism had at first disturbed, and at last almost paralysed the marvellous system of commerce under which the old world had lived so feverishly, and had produced for some few a life of gambler's pleasure, and for many, or most, a life of mere misery: over and over again came "bad times" as they were called, and indeed they were bad enough for the wage-slaves. The year 1952 was one of the worst of these times; the workmen suffered dreadfully: the partial, inefficient government factories, which were terribly jobbed, all but broke down, and a vast part of the population had for the time being to be fed on undisguised "charity" as it was called.

'The Combined Workers watched the situation with mingled hope and anxiety. They had already formulated their general demands; but now by a solemn and universal vote of the whole of their federated societies, they insisted on the first step being taken toward carrying out their demands: this step would have led directly to handing over the management of the whole natural resources of the country,

together with the machinery for using them into the power of the Combined Workers, and the reduction of the privileged classes into the position of pensioners obviously dependent on the pleasure of the workers. The "Resolution," as it was called, which was widely published in the newspapers of the day, was in fact a declaration of war, and was so accepted by the master class. They began henceforward to prepare for a firm stand against the "brutal and ferocious communism of the day," as they phrased it. And as they were in many ways still very powerful, or seemed so to be, they still hoped by means of brute force to regain some of what they had lost, and perhaps in the end the whole of it. It was said amongst them on all hands that it had been a great mistake of the various governments not to have resisted sooner; and the liberals and radicals (the name as perhaps you may know of the more democratically inclined part of the ruling classes) were much blamed for having led the world to this pass by their mis-timed pedantry and foolish sentimentality: and one Gladstone, or Gledstein (probably, judging by this name, of Scandinavian descent), a notable politician of the nineteenth century, was especially singled out for reprobation in this respect. I need scarcely point out to you the absurdity of all this. But terrible tragedy lay hidden behind this grinning through a horse-collar of the reactionary party. "The insatiable greed of the lower classes must be repressed" — "The people must be taught a lesson" — these were the sacramental phrases current amongst the reactionists, and ominous enough they were.'

The old man stopped to look keenly at my attentive and wondering face, and then said:

'I know, dear guest, that I have been using words and phrases which few people amongst us could understand without long and laborious explanation; and not even then perhaps. But since you have not yet gone to sleep, and since I am speaking to you as to a being from another planet, I may venture to ask you if you have followed me thus far?'

'O yes,' said I, 'I quite understand: pray go on; a great deal of what you have been saying was commonplace with us — when — when ——'

'Yes,' said he gravely, 'when you were dwelling in the other planet. Well, now for the crash aforesaid.

'On some comparatively trifling occasion a great meeting was summoned by the workmen leaders to meet in Trafalgar Square [12] (about the right to meet in which place there had for years and years been bickering). The civic bourgeois guard (called the police) attacked the said meeting with bludgeons, according to their custom; many people were hurt in the *mêlée*, of whom five in all died, either trampled to death on the spot, or from the effects of their cudgelling; the meeting was scattered, and some hundred of prisoners cast into gaol. A similar meeting had been treated in the same way a few days before at a place called Manchester, which has now disappeared.[13] Thus the "lesson" began. The whole country was thrown into a ferment by this; meetings were held which attempted some rough organisation for the holding of another meeting to retort on the authorities. A huge crowd assembled in Trafalgar Square and the neighbourhood (then a place of crowded streets), and was too big for the bludgeon-armed police to cope with; there was a good deal of dry-blow fighting; three or four of the people were killed, and half a score of policemen were crushed to death in the throng, and the rest got away as they could. This was a victory for the people as far as it went. The next day all London (remember

12. One of the most important squares, or open spaces bounded by streets and buildings, in London.

13. Manchester was in 1890, as it is now, a great industrial and manufacturing center.

what it was in those days) was in a state of turmoil. Many of the rich fled into the country; the executive got together soldiery, but did not dare to use them; and the police could not be massed in any one place, because riots or threats of riots were everywhere. But in Manchester, where the people were not so courageous or not so desperate as in London, several of the popular leaders were arrested. In London a convention of leaders was got together from the Federation of Combined Workmen, and sat under the old revolutionary name of the Committee of Public Safety; but as they had no drilled and armed body of men to direct, they attempted no aggressive measures, but only placarded the walls with somewhat vague appeals to the workmen not to allow themselves to be trampled upon. However, they called a meeting in Trafalgar Square for the day fortnight of the last-mentioned skirmish.

'Meantime the town grew no quieter, and business came pretty much to an end. The newspapers — then, as always hitherto, almost entirely in the hands of the masters — clamoured to the Government for repressive measures; the rich citizens were enrolled as an extra body of police, and armed with bludgeons like them; many of these were strong, well-fed, full-blooded young men, and had plenty of stomach for fighting; but the Government did not dare to use them, and contented itself with getting full powers voted to it by the Parliament for suppressing any revolt, and bringing up more and more soldiers to London. Thus passed the week after the great meeting; almost as large a one was held on the Sunday, which went off peaceably on the whole, as no opposition to it was offered, and again the people cried "victory." But on the Monday the people woke up to find that they were hungry. During the last few days there had been groups of men parading the streets asking (or, if you please, demanding) money to buy food; and what for goodwill, what for fear, the richer people gave them a good deal. The authorities of the parishes also (I haven't time to explain that phrase at present) gave willy-nilly what provisions they could to wandering people; and the Government, by means of its feeble national workshops, also fed a good number of half-starved folk. But in addition to this, several bakers' shops and other provision stores had been emptied without a great deal of disturbance. So far, so good. But on the Monday in question the Committee of Public Safety, on the one hand afraid of general unorganised pillage, and on the other emboldened by the wavering conduct of the authorities, sent a deputation provided with carts and all necessary gear to clear out two or three big provision stores in the centre of the town, leaving papers with the shop managers promising to pay the price of them: and also in the part of the town where they were strongest they took possession of several bakers' shops and set men at work in them for the benefit of the people; — all of which was done with little or no disturbance, the police assisting in keeping order at the sack of the stores, as they would have done at a big fire.

'But at this last stroke the reactionaries were so alarmed, that they were determined to force the executive into action. The newspapers next day all blazed into the fury of frightened people, and threatened the people, the Government, and everybody they could think of, unless "order were at once restored." A deputation of leading commercial people waited on the Government and told them that if they did not at once arrest the Committee of Public Safety, they themselves would gather a body of men, arm them, and fall on "the incendiaries," as they called them.

'They, together with a number of the newspaper editors, had a long interview with the heads of the Government and two or three military men, the deftest in their art that the country could furnish. The deputation came away from that in-

terview, says a contemporary eye-witness, smiling and satisfied, and said no more about raising an anti-popular army, but that afternoon left London with their families for their country seats or elsewhere.

'The next morning the Government proclaimed a state of siege in London,—a thing common enough amongst the absolutist governments on the Continent, but unheard of in England in those days. They appointed the youngest and cleverest of their generals to command the proclaimed district; a man who had won a certain sort of reputation in the disgraceful wars in which the country had been long engaged from time to time. The newspapers were in ecstasies, and all the most fervent of the reactionaries now came to the front; men who in ordinary times were forced to keep their opinions to themselves or their immediate circle, but who began to look forward to crushing once for all the Socialist, and even democratic tendencies, which, said they, had been treated with such foolish indulgence for the last sixty years.

'But the clever general took no visible action; and yet only a few of the minor newspapers abused him; thoughtful men gathered from this that a plot was hatching. As for the Committee of Public Safety whatever they thought of their position, they had now gone too far to draw back; and many of them, it seems, thought that the Government would not act. They went on quietly organising their food supply, which was a miserable driblet when all is said; and also as a retort to the state of siege, they armed as many men as they could in the quarter where they were strongest, but did not attempt to drill or organise them, thinking, perhaps, that they could not at the best turn them into trained soldiers till they had some breathing space. The clever general, his soldiers, and the police did not meddle with all this in the least in the world; and things were quieter in London that week-end; though there were riots in many places of the provinces, which were quelled by the authorities without much trouble. The most serious of these were at Glasgow and Bristol.

'Well, the Sunday of the meeting came, and great crowds came to Trafalgar Square in procession, the greater part of the Committee amongst them, surrounded by their band of men armed somehow or other. The streets were quite peaceful and quiet, though there were many spectators to see the procession pass. Trafalgar Square had no body of police in it; the people took quiet possession of it, and the meeting began. The armed men stood round the principal platform, and there were a few others armed amidst the general crowd; but by far the greater part were unarmed.

'Most people thought the meeting would go off peaceably; but the members of the Committee had heard from various quarters that something would be attempted against them; but these rumours were vague, and they had no idea of what threatened. They soon found out.

'For before the streets about the Square were filled, a body of soldiers poured into it from the north-west corner and took up their places by the houses that stood on the west side. The people growled at the sight of the red-coats; the armed men of the Committee stood undecided, not knowing what to do; and indeed this new influx so jammed the crowd together that, unorganised as they were, they had little chance of working through it. They had scarcely grasped the fact of their enemies being there, when another column of soldiers, pouring out of the streets which led into the great southern road going down to the Parliament House (still existing, and called the Dung Market), and also from the embankment by the side of the Thames, marched up, pushing the crowd into a denser and denser mass, and formed along the south side of the Square. Then any of those who could see what was go-

ing on, knew at once that they were in a trap, and could only wonder what would be done with them.

'The closely-packed crowd would not or could not budge, except under the influence of the height of terror, which was soon to be supplied to them. A few of the armed men struggled to the front, or climbed up to the base of the monument which then stood there, that they might face the wall of hidden fire before them; and to most men (there were many women amongst them) it seemed as if the end of the world had come, and to-day seemed strangely different from yesterday. No sooner were the soldiers drawn up aforesaid than, says an eye-witness, "a glittering officer on horseback came prancing out from the ranks on the south, and read something from a paper which he held in his hand; which something, very few heard; but I was told afterwards that it was an order for us to disperse, and a warning that he had legal right to fire on the crowd else, and that he would do so. The crowd took it as a challenge of some sort, and a hoarse threatening roar went up from them; and after that there was comparative silence for a little, till the officer had got back into the ranks. I was near the edge of the crowd, towards the soldiers," says this eye-witness, "and I saw three little machines being wheeled out in front of the ranks, which I knew for mechanical guns. I cried out, 'Throw yourselves down! they are going to fire!' But no one scarcely could throw himself down, so tight as the crowd were packed. I heard a sharp order given, and wondered where I should be the next minute; and then — It was as if the earth had opened, and hell had come up bodily amidst us. It is no use trying to describe the scene that followed. Deep lanes were mowed amidst the thick crowd; the dead and dying covered the ground, and the shrieks and wails and cries of horror filled all the air, till it seemed as if there was nothing else in the world but murder and death. Those of our armed men who were still unhurt cheered wildly and opened a scattering fire on the soldiers. One or two soldiers fell; and I saw the officers going up and down the ranks urging the men to fire again; but they received the orders in sullen silence, and let the butts of their guns fall. Only one sergeant ran to a machine-gun and began to set it going; but a tall young man, an officer too, ran out of the ranks and dragged him back by the collar; and the soldiers stood there motionless while the horror-stricken crowd, nearly wholly unarmed (for most of the armed men had fallen in that first discharge), drifted out of the Square. I was told afterwards that the soldiers on the west side had fired also, and done their part of the slaughter. How I got out of the Square I scarcely know: I went, not feeling the ground under me, what with rage and terror and despair."

'So says our eye-witness. The number of the slain on the side of the people in that shooting during a minute was prodigious; but it was not easy to come at the truth about it; it was probably between one and two thousand. Of the soldiers, six were killed outright, and a dozen wounded.'

I listened, trembling with excitement. The old man's eyes glittered and his face flushed as he spoke, and told the tale of what I had often thought might happen. Yet I wondered that he should have got so elated about a mere massacre, and I said:

'How fearful! And I suppose that this massacre put an end to the whole revolution for that time?'

'No, no,' cried old Hammond; 'it began it!'

He filled his glass and mine, and stood up and cried out, 'Drink this glass to the memory of those who died there, for indeed it would be a long tale to tell how much we owe them.'

I drank, and he sat down again and went on.

'That massacre of Trafalgar Square began the civil war, though, like all such events, it gathered head slowly, and people scarcely knew what a crisis they were acting in.

'Terrible as the massacre was, and hideous and overpowering as the first terror had been, when the people had time to think about it, their feeling was one of anger rather than fear; although the military organisation of the state of siege was now carried out without shrinking by the clever young general. For though the ruling-classes when the news spread next morning felt one gasp of horror and even dread, yet the Government and their immediate backers felt that now the wine was drawn and must be drunk. However, even the most reactionary of the capitalist papers, with two exceptions, stunned by the tremendous news, simply gave an account of what had taken place, without making any comment upon it. The exceptions were one, a so-called "liberal" paper (the Government of the day was of that complexion), which, after a preamble in which it declared its undeviating sympathy with the cause of labour, proceeded to point out that in times of revolutionary disturbance it behoved the Government to be just but firm, and that by far the most merciful way of dealing with the poor madmen who were attacking the very foundations of society (which had made them mad and poor) was to shoot them at once, so as to stop others from drifting into a position in which they would run a chance of being shot. In short, it praised the determined action of the Government as the *acmé* of human wisdom and mercy, and exulted in the inauguration of an epoch of reasonable democracy free from the tyrannical fads of Socialism.

'The other exception was a paper thought to be one of the most violent opponents of democracy, and so it was; but the editor of it found his manhood, and spoke for himself and not for his paper. In a few simple, indignant words he asked people to consider what a society was worth which had to be defended by the massacre of unarmed citizens, and called on the Government to withdraw their state of siege and put the general and his officers who fired on the people on their trial for murder. He went further, and declared that whatever his opinion might be as to the doctrines of the Socialists, he for one should throw in his lot with the people, until the Government atoned for their atrocity by showing that they were prepared to listen to the demands of men who knew what they wanted, and whom the decrepitude of society forced into pushing their demands in some way or other.

'Of course, this editor was immediately arrested by the military power; but his bold words were already in the hands of the public, and produced a great effect: so great an effect that the Government, after some vacillation, withdrew the state of siege; though at the same time it strengthened the military organisation and made it more stringent. Three of the Committee of Public Safety had been slain in Trafalgar Square: of the rest, the greater part went back to their old place of meeting, and there awaited the event calmly. They were arrested there on the Monday morning, and would have been shot at once by the general, who was a mere military machine, if the Government had not shrunk before the responsibility of killing men without any trial. There was at first a talk of trying them by a special commission of judges, as it was called — *i.e.*, before a set of men bound to find them guilty, and whose business it was to do so. But with the Government the cold fit had succeeded to the hot one; and the prisoners were brought before a jury at the assizes. There a fresh blow awaited the Government; for in spite of the judge's charge, which distinctly instructed the jury to find the prisoners guilty, they were acquitted, and the jury added to their verdict a presentment, in which they condemned the

action of the soldiery, in the queer phraseology of the day, as "rash, unfortunate, and unnecessary." The Committee of Public Safety renewed its sittings, and from thenceforth was a popular rallying-point in opposition to the Parliament. The Government now gave way on all sides, and made a show of yielding to the demands of the people, though there was a widespread plot for effecting a *coup d'état* set on foot between the leaders of the two so-called opposing parties in the parliamentary faction fight. The well-meaning part of the public was overjoyed, and thought that all danger of a civil war was over. The victory of the people was celebrated by huge meetings held in the parks and elsewhere, in memory of the victims of the great massacre.

'But the measures passed for the relief of the workers, though to the upper classes they seemed ruinously revolutionary, were not thorough enough to give the people food and a decent life, and they had to be supplemented by unwritten enactments without legality to back them. Although the Government and Parliament had the law-courts, the army, and "society" at their backs, the Committee of Public Safety began to be a force in the country, and really represented the producing classes. It began to improve immensely in the days which followed on the acquittal of its members. Its old members had little administrative capacity, though with the exception of a few self-seekers and traitors, they were honest, courageous men, and many of them were endowed with considerable talent of other kinds. But now that the times called for immediate action, came forward the men capable of setting it on foot; and a new network of workmen's associations grew up very speedily, whose avowed single object was the tiding over of the ship of the community into a simple condition of Communism; and as they practically undertook also the management of the ordinary labour-war, they soon became the mouthpiece and intermediary of the whole of the working classes; and the manufacturing profit-grinders now found themselves powerless before this combination; unless *their* committee, Parliament, plucked up courage to begin the civil war again, and to shoot right and left, they were bound to yield to the demands of the men whom they employed, and pay higher and higher wages for shorter and shorter day's work. Yet one ally they had, and that was the rapidly approaching breakdown of the whole system founded on the World-Market and its supply; which now became so clear to all people, that the middle classes, shocked for the moment into condemnation of the Government for the great massacre, turned round nearly in a mass, and called on the Government to look to matters, and put an end to the tyranny of the Socialist leaders.

'Thus stimulated, the reactionist plot exploded probably before it was ripe; but this time the people and their leaders were forewarned, and, before the reactionaries could get under way, had taken the steps they thought necessary.

'The Liberal Government (clearly by collusion) was beaten by the Conservatives, though the latter were nominally much in the minority. The popular representatives in the House understood pretty well what this meant, and after an attempt to fight the matter out by divisions in the House of Commons, they made a protest, left the House, and came in a body to the Committee of Public Safety: and the civil war began again in good earnest.

'Yet its first act was not one of mere fighting. The new Tory Government determined to act, yet durst not re-enact the state of siege, but it sent a body of soldiers and police to arrest the Committee of Public Safety in the lump. They made no resistance, though they might have done so, as they had now a considerable body of men who were quite prepared for extremities. But they were determined to

try first a weapon which they thought stronger than street fighting.

'The members of the Committee went off quietly to prison; but they had left their soul and their organisation behind them. For they depended not on a carefully arranged centre with all kinds of checks and counter-checks about it, but on a huge mass of people in thorough sympathy with the movement, bound together by a great number of links of small centres with very simple instructions. These instructions were now carried out.

'The next morning, when the leaders of the reaction were chuckling at the effect which the report in the newspapers of their stroke would have upon the public — no newspapers appeared; and it was only towards noon that a few straggling sheets, about the size of the gazettes of the seventeenth century, worked by policemen, soldiers, managers, and press writers, were dribbled through the streets. They were greedily seized on and read; but by this time the serious part of their news was stale, and people did not need to be told that the GENERAL STRIKE had begun. The railways did not run, the telegraph-wires were unserved; flesh, fish, and green stuff brought to market was allowed to lie there still packed and perishing; the thousands of middle-class families, who were utterly dependent for the next meal on the workers, made frantic efforts through their more energetic members to cater for the needs of the day, and amongst those of them who could throw off the fear of what was to follow, there was, I am told, a certain enjoyment of this unexpected picnic — a forecast of the days to come, in which all labour grew pleasant.

'So passed the first day, and towards evening the Government grew quite distracted. They had but one resource for putting down any popular movement — to wit, mere brute-force; but there was nothing for them against which to use their army and police: no armed bodies appeared in the streets; the offices of the Federated Workmen were now, in appearance, at least, turned into places for the relief of people thrown out of work, and under the circumstances, they durst not arrest the men engaged in such business, all the more, as even that night many quite respectable people applied at these offices for relief, and swallowed down the charity of the revolutionists along with their supper. So the Government massed soldiers and police here and there — and sat still for that night, fully expecting on the morrow some manifesto from "the rebels," as they now began to be called, which would give them an opportunity of acting in some way or another. They were disappointed. The ordinary newspapers gave up the struggle that morning, and only one very violent reactionary paper (called the *Daily Telegraph*) attempted an appearance, and rated "the rebels" in good set terms for their folly and ingratitude in tearing out the bowels of their "common mother," the English Nation, for the benefit of a few greedy paid agitators, and the fools whom they were deluding. On the other hand, the Socialist papers (of which three only, representing somewhat different schools, were published in London) came out full to the throat of well-printed matter. They were greedily bought by the whole public, who, of course, like the Government, expected a manifesto in them. But they found no word of reference to the great subject. It seemed as if their editors had ransacked their drawers for articles which would have been in place forty years before, under the technical name of educational articles. Most of these were admirable and straightforward expositions of the doctrines and practice of Socialism, free from haste and spite and hard words, and came upon the public with a kind of May-day freshness, amidst the worry and terror of the moment; and though the knowing well understood that the meaning of this move in the game was mere defiance, and a token of irreconcilable hostility to the then rulers of society,

and though, also, they were meant for nothing else by "the rebels," yet they really had their effect as "educational articles." However, "education" of another kind was acting upon the public with irresistible power, and probably cleared their heads a little.

'As to the Government, they were absolutely terrified by this act of "boycotting" (the slang word then current for such acts of abstention). Their counsels became wild and vacillating to the last degree: one hour they were for giving way for the present till they could hatch another plot; the next they all but sent an order for the arrest in the lump of all the workmen's committees; the next they were on the point of ordering their brisk young general to take any excuse that offered for another massacre. But when they called to mind that the soldiery in that "Battle" of Trafalgar Square were so daunted by the slaughter which they had made, that they could not be got to fire a second volley, they shrank back again from the dreadful courage necessary for carrying out another massacre. Meantime the prisoners, brought the second time before the magistrates under a strong escort of soldiers, were the second time remanded.

'The strike went on this day also. The workmen's committees were extended, and gave relief to great numbers of people, for they had organised a considerable amount of production of food by men whom they could depend upon. Quite a number of well-to-do people were now compelled to seek relief of them. But another curious thing happened: a band of young men of the upper classes armed themselves, and coolly went marauding in the streets, taking what suited them of such eatables and portables that they came across in the shops which had ventured to open. This operation they carried out in Oxford Street, then a great street of shops of all kinds. The Government, being at that hour in one of their yielding moods, thought this a fine opportunity for showing their impartiality in the maintenance of "order," and sent to arrest these hungry rich youths; who, however, surprised the police by a valiant resistance, so that all but three escaped. The Government did not gain the reputation for impartiality which they expected from this move; for they forgot that there were no evening papers; and the account of the skirmish spread wide indeed, but in a distorted form; for it was mostly told simply as an exploit of the starving people from the East-end; and everybody thought it was but natural for the Government to put them down when and where they could.

'That evening the rebel prisoners were visited in their cells by *very* polite and sympathetic persons, who pointed out to them what a suicidal course they were following, and how dangerous these extreme courses were for the popular cause. Says one of the prisoners: "It was great sport comparing notes when we came out anent the attempt of the Government to 'get at' us separately in prison, and how we answered the blandishments of the highly 'intelligent and refined' persons set on to pump us. One laughed; another told extravagant long bow stories to the envoy; a third held a sulky silence; a fourth damned the polite spy and bade him hold his jaw — and that was all they got out of us."

'So passed the second day of the great strike. It was clear to all thinking people that the third day would bring on the crisis; for the present suspense and ill-concealed terror was unendurable. The ruling classes, and the middle-class non-politicians who had been their real strength and support, were as sheep lacking a shepherd; they literally did not know what to do.

'One thing they found they had to do: try to get the "rebels" to do something. So the next morning, the morning of the third day of the strike, when the members of the Committee of Public Safety ap-

peared again before the magistrate, they found themselves treated with the greatest possible courtesy — in fact, rather as envoys and ambassadors than prisoners. In short, the magistrate had received his orders; and with no more to do than might come of a long stupid speech, which might have been written by Dickens in mockery, he discharged the prisoners, who went back to their meeting-place and at once began a due sitting. It was high time. For this third day the mass was fermenting indeed. There was, of course, a vast number of working people who were not organised in the least in the world; men who had been used to act as their masters drove them, or rather as the system drove, of which their masters were a part. That system was now falling to pieces, and the old pressure of the master having been taken off these poor men, it seemed likely that nothing but the mere animal necessities and passions of men would have any hold on them, and that mere general overturn would be the result. Doubtless this would have happened if it had not been that the huge mass had been leavened by Socialist opinion in the first place, and in the second place by actual contact with declared Socialists, many or indeed most of whom were members of those bodies of workmen above said.

'If anything of this kind had happened some years before, when the masters of labour were still looked upon as the natural rulers of the people, and even the poorest and most ignorant men leaned upon them for support, while they submitted to their fleecing, the entire break-up of all society would have followed. But the long series of years during which the workmen had learned to despise their rulers, had done away with their dependence upon them, and they were now beginning to trust (somewhat dangerously, as events proved) in the non-legal leaders whom events had thrust forward; and though most of these were now become mere figure-heads, their names and reputations were useful in this crisis as a stop-gap.

'The effect of the news, therefore, of the release of the Committee gave the Government some breathing time: for it was received with the greatest joy by the workers, and even the well-to-do saw in it a respite from the mere destruction which they had begun to dread, and the fear of which most of them attributed to the weakness of the Government. As far as the passing hour went, perhaps they were right in this.'

'How do you mean?' said I. 'What could the Government have done? I often used to think that they would be helpless in such a crisis.'

Said old Hammond: 'Of course I don't doubt that in the long run matters would have come about as they did. But if the Government could have treated their army as a real army, and used them strategically as a general would have done, looking on the people as a mere open enemy to be shot at and dispersed wherever they turned up, they would probably have gained the victory at the time.'

'But would the soldiers have acted against the people in this way?' said I.

Said he: 'I think from all I have heard that they would have done so if they had met bodies of men armed however badly, and however badly they had been organised. It seems also as if before the Trafalgar Square massacre they might as a whole have been depended upon to fire upon an unarmed crowd, though they were much honeycombed by Socialism. The reason for this was that they dreaded the use by apparently unarmed men of an explosive called dynamite, of which many loud boasts were made by the workers on the eve of these events; although it turned out to be of little use as a material for war in the way that was expected. Of course the officers of the soldiery fanned this fear to the utmost, so that the rank and file probably thought on that occasion that they were being led into a desperate battle with

men who were really armed, and whose weapon was the more dreadful, because it was concealed. After that massacre, however, it was at all times doubtful if the regular soldiers would fire upon an unarmed or half-armed crowd.'

Said I: 'The regular soldiers? Then there were other combatants against the people?'

'Yes,' said he, 'we shall come to that presently.'

'Certainly,' I said, 'you had better go on straight with your story. I see that time is wearing.'

Said Hammond: 'The Government lost no time in coming to terms with the Committee of Public Safety; for indeed they could think of nothing else than the danger of the moment. They sent a duly accredited envoy to treat with these men, who somehow had obtained dominion over people's minds, while the formal rulers had no hold except over their bodies. There is no need at present to go into the details of the truce (for such it was) between these high contracting parties, the Government of the empire of Great Britain and a handful of working men (as they were called in scorn in those days), amongst whom, indeed, were some very capable and "square-headed" persons, though, as aforesaid, the abler men were not then the recognised leaders. The upshot of it was that all the definite claims of the people had to be granted. We can now see that most of these claims were of themselves not worth either demanding or resisting; but they were looked on at that time as most important, and they were at least tokens of revolt against the miserable system of life which was then beginning to tumble to pieces. One claim, however, was of the utmost immediate importance, and this the Government tried hard to evade; but as they were not dealing with fools, they had to yield at last. This was the claim of recognition and formal status for the Committee of Public Safety, and all the associations which it fostered under its wing. This it is clear meant two things: first, amnesty for "the rebels," great and small, who, without a distinct act of civil war, could no longer be attacked; and next, a continuance of the organised revolution. Only one point the Government could gain, and that was a name. The dreadful revolutionary title was dropped, and the body, with its branches, acted under the respectable name of the "Board of Conciliation and its local offices." Carrying this name, it became the leader of the people in the civil war which soon followed.'

'O,' said I, somewhat startled, 'so the civil war went on, in spite of all that had happened?'

'So it was,' said he. 'In fact, it was this very legal recognition which made the civil war possible in the ordinary sense of war; it took the struggle out of the element of mere massacres on one side, and endurance plus strikes on the other.'

'And can you tell me in what kind of way the war was carried on?' said I.

'Yes,' he said; 'we have records and to spare of all that; and the essence of them I can give you in a few words. As I told you, the rank and file of the army was not to be trusted by the reactionists; but the officers generally were prepared for anything, for they were mostly the very stupidest men in the country. Whatever the Government might do, a great part of the upper and middle classes were determined to set on foot a counter revolution; for the Communism which now loomed ahead seemed quite unendurable to them. Bands of young men, like the marauders in the great strike of whom I told you just now, armed themselves and drilled, and began on any opportunity or pretence to skirmish with the people in the streets. The Government neither helped them nor put them down, but stood by, hoping that something might come of it. These "Friends of Order," as they were called, had some successes at first, and grew bolder; they got many officers of the regu-

lar army to help them, and by their means laid hold of munitions of war of all kinds. One part of their tactics consisted in their guarding and even garrisoning the big factories of the period: they held at one time, for instance, the whole of that place called Manchester which I spoke of just now. A sort of irregular war was carried on with varied success all over the country; and at last the Government, which at first pretended to ignore the struggle, or treat it as mere rioting, definitely declared for "the Friends of Order," and joined to their bands whatsoever of the regular army they could get together, and made a desperate effort to overwhelm "the rebels," as they were now once more called, and as indeed they called themselves.

'It was too late. All ideas of peace on a basis of compromise had disappeared on either side. The end, it was seen clearly, must be either absolute slavery for all but the privileged, or a system of life founded on equality and Communism. The sloth, the hopelessness, and, if I may say so, the cowardice of the last century, had given place to the eager, restless heroism of a declared revolutionary period. I will not say that the people of that time foresaw the life we are leading now, but there was a general instinct amongst them towards the essential part of that life, and many men saw clearly beyond the desperate struggle of the day into the peace which it was to bring about. The men of that day who were on the side of freedom were not unhappy, I think, though they were harassed by hopes and fears, and sometimes torn by doubts, and the conflict of duties hard to reconcile.'

'But how did the people, the revolutionists, carry on the war? What were the elements of success on their side?'

I put this question, because I wanted to bring the old man back to the definite history, and take him out of the musing mood so natural to an old man.

He answered: 'Well, they did not lack organisers; for the very conflict itself, in days when, as I told you, men of any strength of mind cast away all consideration for the ordinary business of life, developed the necessary talent amongst them. Indeed, from all I have read and heard, I much doubt whether, without this seemingly dreadful civil war, the due talent for administration would have been developed amongst the working men. Anyhow, it was there, and they soon got leaders far more than equal to the best men amongst the reactionaries. For the rest, they had no difficulty about the material of their army; for that revolutionary instinct so acted on the ordinary soldier in the ranks that the greater part, certainly the best part, of the soldiers joined the side of the people. But the main element of their success was this, that wherever the working people were not coerced, they worked, not for the reactionists, but for "the rebels." The reactionists could get no work done for them outside the districts where they were all-powerful: and even in those districts they were harassed by continual risings; and in all cases and everywhere got nothing done without obstruction and black looks and sulkiness; so that not only were their armies quite worn out with the difficulties which they had to meet, but the non-combatants who were on their side were so worried and beset with hatred and a thousand little troubles and annoyances that life became almost unendurable to them on those terms. Not a few of them actually died of the worry; many committed suicide. Of course, a vast number of them joined actively in the cause of reaction, and found some solace to their misery in the eagerness of conflict. Lastly, many thousands gave way and submitted to "the rebels"; and as the numbers of these latter increased, it at last became clear to all men that the cause which was once hopeless, was now triumphant, and that the hopeless cause was that of slavery and privilege.'

Chapter XVIII

The Beginning of the New Life

'Well,' said I, 'so you got clear out of all your trouble. Were people satisfied with the new order of things when it came?'

'People?' he said. 'Well, surely all must have been glad of peace when it came; especially when they found, as they must have found, that after all, they — even the once rich — were not living very badly. As to those who had been poor, all through the war, which lasted about two years, their condition had been bettering, in spite of the struggle; and when peace came at last, in a very short time they made great strides towards a decent life. The great difficulty was that the once-poor had such a feeble conception of the real pleasure of life: so to say, they did not ask enough, did not know how to ask enough, from the new state of things. It was perhaps rather a good than an evil thing that the necessity for restoring the wealth destroyed during the war forced them into working at first almost as hard as they had been used to before the Revolution. For all historians are agreed that there never was a war in which there was so much destruction of wares, and instruments for making them, as in this civil war.'

'I am rather surprised at that,' said I.

'Are you? I don't see why,' said Hammond.

'Why,' I said, 'because the party of order would surely look upon the wealth as their own property, no share of which, if they could help it, should go to their slaves, supposing they conquered. And on the other hand, it was just for the possession of that wealth that "the rebels" were fighting, and I should have thought, especially when they saw that they were winning, that they would have been careful to destroy as little as possible of what was so soon to be their own.'

'It was as I have told you, however,' said he. 'The party of order, when they recovered from their first cowardice of surprise — or, if you please, when they fairly saw that, whatever happened, they would be ruined, fought with great bitterness, and cared little what they did, so long as they injured the enemies who had destroyed the sweets of life for them. As to "the rebels," I have told you that the outbreak of actual war made them careless of trying to save the wretched scraps of wealth that they had. It was a common saying amongst them, Let the country be cleared of everything except valiant living men, rather than that we fall into slavery again!'

He sat silently thinking a little while, and then said:

'When the conflict was once really begun, it was seen how little of any value there was in the old world of slavery and inequality. Don't you see what it means? In the times which you are thinking of, and of which you seem to know so much, there was no hope; nothing but the dull jog of the mill-horse under compulsion of collar and whip; but in that fighting-time that followed, all was hope: "the rebels" at least felt themselves strong enough to build up the world again from its dry bones, — and they did it, too!' said the old man, his eyes glittering under his beetling brows. He went on: 'And their opponents at least and at last learned something about the reality of life, and its sorrows, which they — their class, I mean — had once known nothing of. In short, the two combatants, the workman and the gentleman, between them ——'

'Between them,' said I, quickly, 'they destroyed commercialism!'

'Yes, yes, YES,' said he; 'that is it. Nor could it have been destroyed otherwise; except, perhaps, by the whole of society gradually falling into lower depths, till it should at last reach a condition as rude as barbarism, but lacking both the hope and the pleasures of barbarism. Surely the sharper, shorter remedy was the happiest.'

'Most surely,' said I.

'Yes,' said the old man, 'the world was being brought to its second birth; how could that take place without a tragedy? Moreover, think of it. The spirit of the new days, of our days, was to be delight in the life of the world; intense and overweening love of the very skin and surface of the earth on which man dwells, such as a lover has in the fair flesh of the woman he loves; this, I say, was to be the new spirit of the time. All other moods save this had been exhausted: the unceasing criticism, the boundless curiosity in the ways and thoughts of man, which was the mood of the ancient Greek, to whom these things were not so much a means, as an end, was gone past recovery; nor had there been really any shadow of it in the so-called science of the nineteenth century, which, as you must know, was in the main an appendage to the commercial system; nay, not seldom an appendage to the police of that system. In spite of appearances, it was limited and cowardly, because it did not really believe in itself. It was the outcome, as it was the sole relief, of the unhappiness of the period which made life so bitter even to the rich, and which, as you may see with your bodily eyes, the great change has swept away. More akin to our way of looking at life was the spirit of the Middle Ages, to whom heaven and the life of the next world was such a reality, that it became to them a part of the life upon the earth; which accordingly they loved and adorned, in spite of the ascetic doctrines of their formal creed, which bade them contemn it.

'But that also, with its assured belief in heaven and hell as two countries in which to live, has gone, and now we do, both in word and in deed, believe in the continuous life of the world of men, and as it were, add every day of that common life to the little stock of days which our own mere individual experience wins for us: and consequently we are happy. Do you wonder at it? In times past, indeed, men were told to love their kind, to believe in the religion of humanity and so forth. But look you, just in the degree that a man had elevation of mind and refinement enough to be able to value this idea, was he repelled by the obvious aspect of the individuals composing the mass which he was to worship; and he could only evade that repulsion by making a conventional abstraction of mankind that had little actual or historical relation to the race; which to his eyes was divided into blind tyrants on the one hand and apathetic degraded slaves on the other. But now, where is the difficulty in accepting the religion of humanity, when the men and women who go to make up humanity are free, happy, and energetic at least, and most commonly beautiful of body also, and surrounded by beautiful things of their own fashioning, and a nature bettered and not worsened by contact with mankind? This is what this age of the world has reserved for us.'

'It seems true,' said I, 'or ought to be, if what my eyes have seen is a token of the general life you lead. Can you now tell me anything of your progress after the years of the struggle?'

Said he: 'I could easily tell you more than you have time to listen to; but I can at least hint at one of the chief difficulties which had to be met: and that was, that when men began to settle down after the war, and their labour had pretty much filled up the gap in wealth caused by the destruction of that war, a kind of disappointment seemed coming over us, and the prophecies of some of the reactionists of past times seemed as if they would come true, and a dull level of utilitarian comfort be the end for a while of our aspirations and success. The loss of the competitive spur to exertion had not, indeed, done anything to interfere with the necessary production of the community, but how if it should make men dull by giving them too much time for thought or idle musing? But, after all, this dull thunder-cloud only threatened us, and

then passed over. Probably, from what I have told you before, you will have a guess at the remedy for such a disaster; remembering always that many of the things which used to be produced — slave-wares for the poor and mere wealth-wasting wares for the rich — ceased to be made. That remedy was, in short, the production of what used to be called art, but which has no name amongst us now, because it has become a necessary part of the labour of every man who produces.'

Said I: 'What! had men any time or opportunity for cultivating the fine arts amidst the desperate struggle for life and freedom that you have told me of?'

Said Hammond: 'You must not suppose that the new form of art was founded chiefly on the memory of the art of the past; although, strange to say, the civil war was much less destructive of art than of other things, and though what of art existed under the old forms, revived in a wonderful way during the latter part of the struggle, especially as regards music and poetry. The art or work-pleasure, as one ought to call it, of which I am now speaking, sprung up almost spontaneously, it seems, from a kind of instinct amongst people, no longer driven desperately to painful and terrible overwork, to do the best they could with the work in hand — to make it excellent of its kind; and when that had gone on for a little, a craving for beauty seemed to awaken in men's minds, and they began rudely and awkwardly to ornament the wares which they made; and when they had once set to work at that, it soon began to grow. All this was much helped by the abolition of the squalor which our immediate ancestors put up with so coolly; and by the leisurely, but not stupid, country-life which now grew (as I told you before) to be common amongst us. Thus at last and by slow degrees we got pleasure into our work; then we became conscious of that pleasure, and cultivated it, and took care that we had our fill of it; and then all was gained, and we were happy. So may it be for ages and ages!' . . .

Walter Horatio Pater
1839–1894
THE RENAISSANCE

Preface

MANY attempts have been made by writers on art and poetry to define beauty in the abstract, to express it in the most general terms, to find some universal formula for it. The value of these attempts has most often been in the suggestive and penetrating things said by the way. Such discussions help us very little to enjoy what has been well done in art or poetry, to discriminate between what is more and what is less excellent in them, or to use words like beauty, excellence, art, poetry, with a more precise meaning than they would otherwise have. Beauty, like all other qualities presented to human experience, is relative; and the definition of it becomes unmeaning and useless in proportion to its abstractness. To define beauty, not in the most abstract but in the most concrete terms possible, to find not its universal formula, but the formula which expresses most adequately this or that special manifestation of it, is the aim of the true student of æsthetics.

'To see the object as in itself it really is,' has been justly said to be the aim of all true criticism whatever;[1] and in æsthetic criticism the first step towards see-

1. See Arnold, 'Byron,' note 34.

ing one's object as it really is, is to know one's own impression as it really is, to discriminate it, to realise it distinctly. The objects with which æsthetic criticism deals — music, poetry, artistic and accomplished forms of human life — are indeed receptacles of so many powers or forces: they possess, like the products of nature, so many virtues or qualities. What is this song or picture, this engaging personality presented in life or in a book, to *me*? What effect does it really produce on me? Does it give me pleasure? and if so, what sort or degree of pleasure? How is my nature modified by its presence, and under its influence? The answers to these questions are the original facts with which the æsthetic critic has to do; and, as in the study of light, of morals, of number, one must realise such primary data for one's self, or not at all. And he who experiences these impressions strongly, and drives directly at the discrimination and analysis of them, has no need to trouble himself with the abstract question what beauty is in itself, or what its exact relation to truth or experience — metaphysical questions, as unprofitable as metaphysical questions elsewhere. He may pass them all by as being, answerable or not, of no interest to him.

The æsthetic critic, then, regards all the objects with which he has to do, all works of art, and the fairer forms of nature and human life, as powers or forces producing pleasurable sensations, each of a more or less peculiar or unique kind. This influence he feels, and wishes to explain, by analysing and reducing it to its elements. To him, the picture, the landscape, the engaging personality in life or in a book, *La Gioconda*, the hills of Carrara, Pico of Mirandola,[2] are valuable for their virtues, as we say, in speaking of a herb, a wine, a gem; for the property each has of affecting one with a special, a unique, impression of pleasure. Our education becomes complete in proportion as our susceptibility to these impressions increases in depth and variety. And the function of the æsthetic critic is to distinguish, to analyse, and separate from its adjuncts, the virtue by which a picture, a landscape, a fair personality in life or in a book, produces this special impression of beauty or pleasure, to indicate what the source of that impression is, and under what conditions it is experienced. His end is reached when he has disengaged that virtue, and noted it, as a chemist notes some natural element, for himself and others; and the rule for those who would reach this end is stated with great exactness in the words of a recent critic of Sainte-Beuve: — *De se borner à connaître de près les belles choses, et à s'en nourrir en exquis amateurs, en humanistes accomplis.*[3]

What is important, then, is not that the critic should possess a correct abstract definition of beauty for the intellect, but a certain kind of temperament, the power of being deeply moved by the presence of beautiful objects. He will remember always that beauty exists in many forms. To him all periods, types, schools of taste, are in themselves equal. In all ages there have been some excellent workmen, and some excellent work done. The question he asks is always: — In whom did the stir, the genius, the sentiment of the period find itself? where was the receptacle of its refinement, its elevation, its taste? 'The ages are all equal,' says William Blake, 'but genius is always above its age.'[4]

Often it will require great nicety to disengage this virtue from the commoner

2. *La Gioconda*, also called *Mona Lisa*, a famous portrait by Leonardo da Vinci, now in the Louvre Gallery, Paris; Carrara, province in Italy where the famous Carrara marble is quarried; Giovanni Pico, Count of Mirandola (1463–94), Italian scholar and philosopher — see Pater's essay on him in *The Renaissance*.

3. 'To confine themselves to know at first hand beautiful things, and to develop themselves by these, as sensitive amateurs do, and accomplished humanists.'

elements with which it may be found in combination. Few artists, not Goethe or Byron even, work quite cleanly, casting off all *débris*, and leaving us only what the heat of their imagination has wholly fused and transformed. Take, for instance, the writings of Wordsworth. The heat of his genius, entering into the substance of his work, has crystallised a part, but only a part, of it; and in that great mass of verse there is much which might well be forgotten. But scattered up and down it, sometimes fusing and transforming entire compositions, like the Stanzas on *Resolution and Independence*, or the *Ode on the Recollections of Childhood*,[5] sometimes, as if at random, depositing a fine crystal here or there, in a matter it does not wholly search through and transmute, we trace the action of his unique, incommunicable faculty, that strange, mystical sense of a life in natural things, and of man's life as a part of nature, drawing strength and colour and character from local influences, from the hills and streams, and from natural sights and sounds. Well! that is the *virtue*, the active principle in Wordsworth's poetry; and then the function of the critic of Wordsworth is to follow up that active principle, to disengage it, to mark the degree in which it penetrates his verse.

The subjects of the following studies are taken from the history of the *Renaissance*,[6] and touch what I think the chief points in that complex, many-sided movement. I have explained in the first of them what I understand by the word, giving it a much wider scope than was intended by those who originally used it to denote that revival of classical antiquity in the fifteenth century which was only one of many results of a general excitement and enlightening of the human mind, but of which the great aim and achievements of what, as Christian art, is often falsely opposed to the Renaissance, were another result. This outbreak of the human spirit may be traced far into the middle age itself, with its motives already clearly pronounced, the care for physical beauty, the worship of the body, the breaking down of those limits which the religious system of the middle age imposed on the heart and the imagination. I have taken as an example of this movement, this earlier Renaissance within the middle age itself, and as an expression of its qualities, two little compositions[7] in early French; not because they constitute the best possible expression of them, but because they help the unity of my series, inasmuch as the Renaissance ends also in France, in French poetry, in a phase of which the writings of Joachim du Bellay[8] are in many ways the most perfect illustration. The Renaissance, in truth, put forth in France an aftermath, a wonderful later growth, the products of which have to the full that subtle and delicate sweetness which belongs to a refined and comely decadence, just as its earliest phases have the freshness which belongs to all periods of growth in art, the charm of *ascêsis*,[9] of the austere and serious girding of the loins in youth.

But it is in Italy, in the fifteenth century, that the interest of the Renaissance mainly lies, — in that solemn fifteenth century which can hardly be studied too much, not merely for its positive results in the things of the intellect and the imagination, its concrete works of art, its special and prominent personalities, with their profound æsthetic charm, but for its

general spirit and character, for the ethical qualities of which it is a consummate type.

The various forms of intellectual activity which together make up the culture of an age, move for the most part from different starting-points, and by unconnected roads. As products of the same generation they partake indeed of a common character, and unconsciously illustrate each other; but of the producers themselves, each group is solitary, gaining what advantage or disadvantage there may be in intellectual isolation. Art and poetry, philosophy and the religious life, and that other life of refined pleasure and action in the conspicuous places of the world, are each of them confined to its own circle of ideas, and those who prosecute either of them are generally little curious of the thoughts of others. There come, however, from time to time, eras of more favourable conditions, in which the thoughts of men draw nearer together than is their wont, and the many interests of the intellectual world combine in one complete type of general culture. The fifteenth century in Italy is one of these happier eras, and what is sometimes said of the age of Pericles is true of that of Lorenzo: [10] — it is an age productive in personalities, many-sided, centralised, complete. Here, artists and philosophers and those whom the action of the world has elevated and made keen, do not live in isolation, but breathe a common air, and catch light and heat from each other's thoughts. There is a spirit of general elevation and enlightenment in which all alike communicate. The unity of this spirit gives unity to all the various products of the Renaissance; and it is to this intimate alliance with mind, this participation in the best thoughts which that age produced, that the art of Italy in the fifteenth century owes much of its grave dignity and influence.

I have added an essay on Winckelmann,[11] as not incongruous with the studies which precede it, because Winckelmann, coming in the eighteenth century, really belongs in spirit to an earlier age. By his enthusiasm for the things of the intellect and the imagination for their own sake, by his Hellenism, his life-long struggle to attain to the Greek spirit, he is in sympathy with the humanists of a previous century. He is the last fruit of the Renaissance, and explains in a striking way its motive and tendencies.

Leonardo da Vinci

Homo Minister et Interpres Naturæ [1]

In Vasari's life of Leonardo da Vinci as we now read it there are some variations from the first edition.[2] There, the painter who has fixed the outward type of Christ for succeeding centuries was a bold speculator, holding lightly by other men's beliefs, setting philosophy above Christianity. Words of his, trenchant enough to justify this impression, are not recorded, and would have been out of keeping with a genius of which one characteristic is the tendency to lose itself in a refined and graceful mystery. The suspicion was but the time-honoured mode in which the world stamps its appreciation of one who has thoughts for himself alone, his high indifference, his intolerance of the common forms of things; and in the second edition the image was changed into something fainter and more conventional. But it is still by a certain mystery in his work, and something enigmatical beyond the

usual measure of great men, that he fascinates, or perhaps half repels. His life is one of sudden revolts, with intervals in which he works not at all, or apart from the main scope of his work. By a strange fortune the pictures on which his more popular fame rested disappeared early from the world, like the *Battle of the Standard*; or are mixed obscurely with the product of meaner hands, like the *Last Supper*. His type of beauty is so exotic that it fascinates a larger number than it delights, and seems more than that of any other artist to reflect ideas and views and some scheme of the world within; so that he seemed to his contemporaries to be the possessor of some unsanctified and secret wisdom; as to Michelet [3] and others to have anticipated modern ideas. He trifles with his genius, and crowds all his chief work into a few tormented years of later life; yet he is so possessed by his genius that he passes unmoved through the most tragic events, overwhelming his country and friends, like one who comes across them by chance on some secret errand.

His *legend*,[4] as the French say, with the anecdotes which every one remembers, is one of the most brilliant chapters of Vasari. Later writers merely copied it, until, in 1804, Carlo Amoretti applied to it a criticism which left hardly a date fixed, and not one of those anecdotes untouched.[5] The various questions thus raised have since that time become, one after another, subjects of special study, and mere antiquarianism has in this direction little more to do. For others remain the editing of the thirteen books of his manuscripts, and the separation by technical criticism of what in his reputed works is really his, from what is only half his, or the work of his pupils. But a lover of strange souls may still analyse for himself the impression made on him by those works, and try to reach through it a definition of the chief elements of Leonardo's genius. The *legend*, as corrected and enlarged by its critics, may now and then intervene to support the results of this analysis.

His life has three divisions — thirty years at Florence, nearly twenty years at Milan, then nineteen years of wandering, till he sinks to rest under the protection of Francis the First at the *Château de Clou*.[6] The dishonour of illegitimacy hangs over his birth. Piero Antonio, his father, was of a noble Florentine house, of Vinci in the *Val d'Arno*,[7] and Leonardo, brought up delicately among the true children of that house, was the love-child of his youth, with the keen, puissant nature such children often have. We see him in his boyhood fascinating all men by his beauty, improvising music and songs, buying the caged birds and setting them free, as he walked the streets of Florence, fond of odd bright dresses and spirited horses.

From his earliest years he designed many objects, and constructed models in relief, of which Vasari mentions some of women smiling. His father, pondering over this promise in the child, took him to the workshop of Andrea del Verrocchio, then the most famous artist in Florence. Beautiful objects lay about there — reliquaries, pyxes,[8] silver images for the pope's chapel at Rome, strange fancy-work of the middle age, keeping odd company with fragments of antiquity, then but lately discovered. Another student

7. 'The valley of the Arno.' The city of Florence stands on the banks of the river Arno.
8. *Pyxes*: boxes, or receptacles for holding the consecrated bread used during Mass in the Roman Catholic Church. Verrocchio lived from 1432 to 1488.

Leonardo may have seen there — a lad into whose soul the level light and aërial illusions of Italian sunsets had passed, in after days famous as Perugino.[9] Verrocchio was an artist of the earlier Florentine type, carver, painter, and worker in metals, in one; designer, not of pictures only, but of all things for sacred or household use, drinking-vessels, ambries,[10] instruments of music, making them all fair to look upon, filling the common ways of life with the reflection of some far-off brightness; and years of patience had refined his hand till his work was now sought after from distant places.

It happened that Verrocchio was employed by the brethren of Vallombrosa[11] to paint the Baptism of Christ, and Leonardo was allowed to finish an angel in the left-hand corner. It was one of those moments in which the progress of a great thing — here, that of the art of Italy — presses hard on the happiness of an individual, through whose discouragement and decrease, humanity, in more fortunate persons, comes a step nearer to its final success.

For beneath the cheerful exterior of the mere well-paid craftsman, chasing brooches for the copes of *Santa Maria Novella*,[12] or twisting metal screens for the tombs of the Medici,[13] lay the ambitious desire to expand the destiny of Italian art by a larger knowledge and insight into things, a purpose in art not unlike Leonardo's still unconscious purpose; and often, in the modelling of drapery, or of a lifted arm, or of hair cast back from the face, there came to him something of the freer manner and richer humanity of a later age. But in this *Baptism* the pupil had surpassed the master; and Verrocchio turned away as one stunned, and as if his sweet earlier work must thereafter be distasteful to him, from the bright animated angel of Leonardo's hand.

The angel may still be seen in Florence, a space of sunlight in the cold, laboured old picture; but the legend is true only in sentiment, for painting had always been the art by which Verrocchio set least store. And as in a sense he anticipates Leonardo, so to the last Leonardo recalls the studio of Verrocchio, in the love of beautiful toys, such as the vessel of water for a mirror, and lovely needle-work about the implicated hands in the *Modesty and Vanity*, and of reliefs, like those cameos which in the *Virgin of the Balances* hang all round the girdle of Saint Michael, and of bright variegated stones, such as the agates in the *Saint Anne*, and in a hieratic preciseness and grace, as of a sanctuary swept and garnished. Amid all the cunning and intricacy of his Lombard[14] manner this never left him. Much of it there must have been in that lost picture of *Paradise*, which he prepared as a cartoon for tapestry, to be woven in the looms of Flanders.[15] It was the perfection of the older Florentine style of miniature-painting, with patient putting of each leaf upon the trees and each flower in the grass, where the first man and woman were standing.

And because it was the perfection of that style, it awoke in Leonardo some seed of discontent which lay in the secret places of his nature. For the way to perfection is through a series of disgusts; and this picture — all that he had done so far in his life at Florence — was after all in the old slight manner. His art, if it was to be something in the world, must be weighted with more of the meaning of nature and

purpose of humanity. Nature was 'the true mistress of higher intelligences.'[16] He plunged, then, into the study of nature. And in doing this he followed the manner of the older students; he brooded over the hidden virtues of plants and crystals, the lines traced by the stars as they moved in the sky, over the correspondences which exist between the different orders of living things, through which, to eyes opened, they interpret each other; and for years he seemed to those about him as one listening to a voice silent for other men.

He learned here the art of going deep, of tracking the sources of expression to their subtlest retreats, the power of an intimate presence in the things he handled. He did not at once or entirely desert his art; only he was no longer the cheerful, objective painter, through whose soul, as through clear glass, the bright figures of Florentine life, only made a little mellower and more pensive by the transit, passed on to the white wall. He wasted many days in curious tricks of design, seeming to lose himself in the spinning of intricate devices of line and colour. He was smitten with a love of the impossible — the perforation of mountains, changing the course of rivers, raising great buildings, such as the church of *San Giovanni*, in the air; all those feats for the performance of which natural magic[17] professed to have the key. Later writers, indeed, see in these efforts an anticipation of modern mechanics; in him they were rather dreams, thrown off by the overwrought and labouring brain. Two ideas were especially confirmed in him, as reflexes of things that had touched his brain in childhood beyond the depth of other impressions — the smiling of women and the motion of great waters.

And in such studies some interfusion of the extremes of beauty and terror shaped itself, as an image that might be seen and touched, in the mind of this gracious youth, so fixed that for the rest of his life it never left him. As if catching glimpses of it in the strange eyes or hair of chance people, he would follow such about the streets of Florence till the sun went down, of whom many sketches of his remain. Some of these are full of a curious beauty, that remote beauty which may be apprehended only by those who have sought it carefully; who, starting with acknowledged types of beauty, have refined as far upon these, as these refine upon the world of common forms. But mingled inextricably with this there is an element of mockery also; so that, whether in sorrow or scorn, he caricatures Dante even. Legions of grotesques sweep under his hand; for has not nature, too, her grotesques — the rent rock, the distorting lights of evening on lonely roads, the unveiled structure of man in the embryo, or the skeleton?

All these swarming fancies unite in the *Medusa* of the *Uffizi*.[18] Vasari's story of an earlier Medusa, painted on a wooden shield, is perhaps an invention; and yet, properly told, has more of the air of truth about it than anything else in the whole legend. For its real subject is not the serious work of a man, but the experiment of a child. The lizards and glow-worms and other strange small creatures which haunt an Italian vineyard bring before one the whole picture of a child's life in a Tuscan dwelling — half castle, half farm — and are as true to nature as the pretended astonishment of the father for whom the boy has prepared a surprise.[19] It was not

17. The magic of physical nature.

18. The Uffizi art gallery in Florence. In Greek mythology, Medusa was one of the three Gorgons, women with snaky hair and horrible faces, a sight of which turned the beholder to stone.

19. Vasari's story is briefly as follows. A peasant on the estate of Leonardo's father asked him to take a plain wooden shield to Florence and have it painted. He took it to his son, the

in play that he painted that other Medusa, the one great picture which he left behind him in Florence. The subject has been treated in various ways; Leonardo alone cuts to its centre; he alone realises it as the head of a corpse, exercising its powers through all the circumstances of death. What may be called the fascination of corruption penetrates in every touch its exquisitely finished beauty. About the dainty lines of the cheek the bat flits unheeded. The delicate snakes seem literally strangling each other in terrified struggle to escape from the Medusa brain. The hue which violent death always brings with it is in the features; features singularly massive and grand, as we catch them inverted, in a dexterous foreshortening, crown foremost, like a great calm stone against which the wave of serpents breaks.

The science of that age was all divination, clairvoyance, unsubjected to our exact modern formulas, seeking in an instant of vision to concentrate a thousand experiences. Later writers, thinking only of the well-ordered treatise on painting which a Frenchman, Raffaelle du Fresne,[20] a hundred years afterwards, compiled from Leonardo's bewildered manuscripts, written strangely, as his manner was, from right to left, have imagined a rigid order in his inquiries. But this rigid order would have been little in accordance with the restlessness of his character; and if we think of him as the mere reasoner who subjects design to anatomy, and composition to mathematical rules, we shall hardly have that impression which those around Leonardo received from him. Poring over his crucibles, making experiments with colour, trying, by a strange variation of the alchemist's dream, to discover the secret, not of an elixir to make man's natural life immortal, but of giving immortality to the subtlest and most delicate effects of painting, he seemed to them rather the sorcerer or the magician, possessed of curious secrets and a hidden knowledge, living in a world of which he alone possessed the key. What his philosophy seems to have been most like is that of Paracelsus or Cardan; [21] and much of the spirit of the older alchemy still hangs about it, with its confidence in short cuts and odd byways to knowledge. To him philosophy was to be something giving strange swiftness and double sight, divining the sources of springs beneath the earth or of expression beneath the human countenance, clairvoyant of occult gifts in common or uncommon things, in the reed at the brookside, or the star which draws near to us but once in a century. How, in this way, the clear purpose was overclouded, the fine chaser's hand perplexed, we but dimly see; the mystery which at no point quite lifts from Leonardo's life is deepest here. But it is certain that at one period of his life he had almost ceased to be an artist.

The year 1483 — the year of the birth of Raphael and the thirty-first of Leonardo's life — is fixed as the date of his visit to Milan by the letter in which he recommends himself to Ludovico Sforza,[22] and

> young apprentice Leonardo, who 'began to consider what he could paint upon it that might best and most effectually terrify whosoever might approach it, producing the same effect as that formerly attributed to the head of Medusa. For this purpose, therefore, Leonardo carried to one of his rooms . . . a number of lizards, hedgehogs, newts, serpents, dragon-flies, locusts, bats, glow-worms, and every other sort of strange animal on which he could lay his hands: from this assemblage . . . he formed a hideous and appalling monster' as the device painted on the shield. When his father returned, Leonardo made him wait while he darkened the room, then showed him the shield, with light thrown on the painting. His father turned to rush out in fear. 'Leonardo withheld him, saying: — The shield will serve.'

20. Raphael Trichet Du Fresne (1611–61).

21. Theophrastus Paracelsus (1490?–1541), German physician and philosopher, held that the life of man is inseparable from that of the universe. Girolamo Cardan (1501–76), Italian scientist, held that all nature is interconnected, and causes change and development.

22. Nobleman (1451–1508) of Milan, who be-

offers to tell him, for a price, strange secrets in the art of war. It was that Sforza who murdered his young nephew by slow poison, yet was so susceptible of religious impressions that he blended mere earthly passion with a sort of religious sentimentalism, and who took for his device the mulberry-tree — symbol, in its long delay and sudden yielding of flowers and fruit together, of a wisdom which economises all forces for an opportunity of sudden and sure effect. The fame of Leonardo had gone before him, and he was to model a colossal statue of Francesco, the first Duke of Milan. As for Leonardo himself, he came not as an artist at all, or careful of the fame of one; but as a player on the harp, a strange harp of silver of his own construction, shaped in some curious likeness to a horse's skull. The capricious spirit of Ludovico was susceptible also to the power of music, and Leonardo's nature had a kind of spell in it. Fascination is always the word descriptive of him. No portrait of his youth remains; but all tends to make us believe that up to this time some charm of voice and aspect, strong enough to balance the disadvantage of his birth, had played about him. His physical strength was great; it was said that he could bend a horseshoe like a coil of lead.

The *Duomo*,[23] work of artists from beyond the Alps, so fantastic to the eye of a Florentine used to the mellow, unbroken surfaces of Giotto and Arnolfo,[24] was then in all its freshness; and below, in the streets of Milan, moved a people as fantastic, changeful, and dreamlike. To Leonardo least of all men could there be anything poisonous in the exotic flowers of sentiment which grew there. It was a life of brilliant sins and exquisite amusements: Leonardo became a celebrated designer of pageants; and it suited the quality of his genius, composed, in almost equal parts, of curiosity and the desire of beauty, to take things as they came.

Curiosity and the desire of beauty — these are the two elementary forces[25] in Leonardo's genius; curiosity, often in conflict with the desire of beauty, but generating, in union with it, a type of subtle and curious grace.

The movement of the fifteenth century was twofold; partly the Renaissance, partly also the coming of what is called the 'modern spirit,' with its realism, its appeal to experience. It comprehended a return to antiquity, and a return to nature. Raphael represents the return to antiquity, and Leonardo the return to nature. In this return to nature, he was seeking to satisfy a boundless curiosity by her perpetual surprises, a microscopic sense of finish by her *finesse*, or delicacy of operation, that *subtilitas naturae* which Bacon notices.[26] So we find him often in intimate relations with men of science, — with Fra Luca Paccioli[27] the mathematician, and the anatomist Marc Antonio della Torre. His observations and experiments fill thirteen volumes of manuscript; and those who can judge describe him as anticipating long before, by rapid intuition, the later ideas of science. He explained the obscure light of the unilluminated part of the moon, knew that the sea had once covered the mountains which contain shells, and of the gathering of the equatorial waters above the polar.

He who thus penetrated into the most secret parts of nature preferred always the more to the less remote, what, seeming exceptional, was an instance of law more refined, the construction about things of

came Leonardo's patron. In the next sentence, *device*: design on a shield.

27. Often called Luca di Borgo (1450?–1509?).

a peculiar atmosphere and mixed lights. He paints flowers with such curious felicity that different writers have attributed to him a fondness for particular flowers, as Clement the cyclamen, and Rio the jasmin;[28] while, at Venice, there is a stray leaf from his portfolio dotted all over with studies of violets and the wild rose. In him first appears the taste for what is *bizarre* or *recherché*[29] in landscape; hollow places full of the green shadow of bituminous rocks, ridged reefs of trap-rock which cut the water into quaint sheets of light, — their exact antitype is in our own western seas;[30] all the solemn effects of moving water. You may follow it springing from its distant source among the rocks on the heath of the *Madonna of the Balances*, passing, as a little fall, in the treacherous calm of the *Madonna of the Lake*, as a goodly river next, below the cliffs of the *Madonna of the Rocks*, washing the white walls of its distant villages, stealing out in a network of divided streams in *La Gioconda* to the seashore of the *Saint Anne* — that delicate place, where the wind passes like the hand of some fine etcher over the surface, and the untorn shells are lying thick upon the sand, and the tops of the rocks, to which the waves never rise, are green with grass, grown fine as hair. It is the landscape, not of dreams or of fancy, but of places far withdrawn, and hours selected from a thousand with a miracle of *finesse*. Through Leonardo's strange veil of sight things reach him so; in no ordinary night or day, but as in faint light of eclipse, or in some brief interval of falling rain at daybreak, or through deep water.

And not into nature only; but he plunged also into human personality, and became above all a painter of portraits; faces of a modelling more skilful than has been seen before or since, embodied with a reality which almost amounts to illusion, on the dark air. To take a character as it was, and delicately sound its stops,[31] suited one so curious in observation, curious in invention. He painted thus the portraits of Ludovico's mistresses, Lucretia Crivelli and Cecilia Galerani the poetess, of Ludovico himself, and the Duchess Beatrice. The portrait of Cecilia Galerani is lost, but that of Lucretia Crivelli has been identified with *La Belle Feronière* of the Louvre, and Ludovico's pale, anxious face still remains in the Ambrosian Library.[32] Opposite is the portrait of Beatrice d'Este,[33] in whom Leonardo seems to have caught some presentiment of early death, painting her precise and grave, full of the refinement of the dead, in sad earth-coloured raiment, set with pale stones.

Sometimes this curiosity came in conflict with the desire of beauty; it tended to make him go too far below that outside of things in which art really begins and ends. This struggle between the reason and its ideas, and the senses, the desire of beauty, is the key to Leonardo's life at Milan — his restlessness, his endless retouchings, his odd experiments with colour. How much must he leave unfinished, how much recommence! His problem was the transmutation of ideas into images. What he had attained so far had been the mastery of that earlier Florentine style, with its naïve and limited sensuousness. Now he was to entertain in this narrow medium those divinations of a humanity too wide for it, that larger vision of the opening world, which is only not too much for the

32. Also an art gallery; it is in Milan.

33. Beatrice d'Este (1475–97), duchess of Milan, one of the most beautiful and accomplished princesses of the Italian Renaissance.

great, irregular art of Shakespeare; and everywhere the effort is visible in the work of his hands. This agitation, this perpetual delay, give him an air of weariness and *ennui*. To others he seems to be aiming at an impossible effect, to do something that art, that painting, can never do. Often the expression of physical beauty at this or that point seems strained and marred in the effort, as in those heavy German foreheads — too heavy and German for perfect beauty.

For there was a touch of Germany in that genius which, as Goethe said, had 'thought itself weary' — *müde sich gedacht*. What an anticipation of modern Germany, for instance, in that debate on the question whether sculpture or painting is the nobler art![34] But there is this difference between him and the German, that, with all that curious science, the German would have thought nothing more was needed. The name of Goethe himself reminds one how great for the artist may be the danger of over-much science; how Goethe, who, in the *Elective Affinities* and the first part of *Faust*, does transmute ideas into images, who wrought many such transmutations, did not invariably find the spellword, and in the second part of *Faust* presents us with a mass of science which has almost no artistic character at all. But Leonardo will never work till the happy moment comes — that moment of *bien-être*,[35] which to imaginative men is a moment of invention. On this he waits with a perfect patience; other moments are but a preparation, or after-taste of it. Few men distinguish between them as jealously as he. Hence so many flaws even in the choicest work. But for Leonardo the distinction is absolute, and, in the moment of *bien-être*, the alchemy complete: the idea is stricken into colour and imagery: a cloudy mysticism is refined to a subdued and graceful mystery, and painting pleases the eye while it satisfies the soul.

This curious beauty is seen above all in his drawings, and in these chiefly in the abstract grace of the bounding lines. Let us take some of these drawings, and pause over them awhile; and, first, one of those at Florence — the heads of a woman and a little child, set side by side, but each in its own separate frame. First of all, there is much pathos in the reappearance, in the fuller curves of the face of the child, of the sharper, more chastened lines of the worn and older face, which leaves no doubt that the heads are those of a little child and its mother. A feeling for maternity is indeed always characteristic of Leonardo; and this feeling is further indicated here by the half-humorous pathos of the diminutive, rounded shoulders of the child. You may note a like pathetic power in drawings of a young man, seated in a stooping posture, his face in his hands, as in sorrow; of a slave sitting in an uneasy inclined attitude, in some brief interval of rest; of a small Madonna and Child, peeping sideways in half-reassured terror, as a mighty griffin with batlike wings, one of Leonardo's finest *inventions*, descends suddenly from the air to snatch up a great wild beast wandering near them. But note in these, as that which especially belongs to art, the contour of the young man's hair, the poise of the slave's arm above his head, and the curves of the head of the child, following the little skull within, thin and fine as some sea-shell worn by the wind.

Take again another head, still more full of sentiment, but of a different kind, a little drawing in red chalk which every one will remember who has examined at all carefully the drawings by old masters at the Louvre. It is a face of doubtful sex, set in the shadow of its own hair, the cheek-line in high light against it, with

34. How princely, how characteristic of Leonardo, the answer, *Quanto più, un'arte porta seco fatica di corpo, tanto più è vile*! [Pater's note. The Italian means 'The more evidence of physical strain an art reveals in its product, the lower it is.']

35. 'well-being.'

something voluptuous and full in the eyelids and the lips. Another drawing might pass for the same face in childhood, with parched and feverish lips, but much sweetness in the loose, short-waisted childish dress, with necklace and *bulla*,[36] and in the daintily bound hair. We might take the thread of suggestion which these two drawings offer, when thus set side by side, and, following it through the drawings at Florence, Venice, and Milan, construct a sort of series, illustrating better than anything else Leonardo's type of womanly beauty. Daughters of Herodias,[37] with their fantastic head-dresses knotted and folded so strangely to leave the dainty oval of the face disengaged, they are not of the Christian family, or of Raphael's. They are the clairvoyants, through whom, as through delicate instruments, one becomes aware of the subtler forces of nature, and the modes of their action, all that is magnetic in it, all those finer conditions wherein material things rise to that subtlety of operation which constitutes them spiritual, where only the final nerve and the keener touch can follow. It is as if in certain significant examples we actually saw those forces at their work on human flesh. Nervous, electric, faint always with some inexplicable faintness, these people seem to be subject to exceptional conditions, to feel powers at work in the common air unfelt by others, to become, as it were, the receptacle of them, and pass them on to us in a chain of secret influences.

But among the more youthful heads there is one at Florence which Love chooses for its own — the head of a young man, which may well be the likeness of Andrea Salaino, beloved of Leonardo for his curled and waving hair — *belli capelli ricci e inanellati*[38] — and afterwards his favourite pupil and servant. Of all the interests in living men and women which may have filled his life at Milan, this attachment alone is recorded. And in return Salaino identified himself so entirely with Leonardo, that the picture of *Saint Anne*, in the Louvre, has been attributed to him. It illustrates Leonardo's usual choice of pupils, men of some natural charm of person or intercourse like Salaino, or men of birth and princely habits of life like Francesco Melzi[39] — men with just enough genius to be capable of initiation into his secret, for the sake of which they were ready to efface their own individuality. Among them, retiring often to the villa of the Melzi at *Canonica al Vaprio*, he worked at his fugitive manuscripts and sketches, working for the present hour, and for a few only, perhaps chiefly for himself. Other artists have been as careless of present or future applause, in self-forgetfulness, or because they set moral or political ends above the ends of art; but in him this solitary culture of beauty seems to have hung upon a kind of self-love, and a carelessness in the work of art of all but art itself. Out of the secret places of a unique temperament he brought strange blossoms and fruits hitherto unknown; and for him, the novel impression conveyed, the exquisite effect woven, counted as an end in itself — a perfect end.

And these pupils of his acquired his manner so thoroughly, that though the number of Leonardo's authentic works is very small indeed, there is a multitude of other men's pictures through which we undoubtedly see him, and come very near to his genius. Sometimes, as in the little picture of the *Madonna of the Balances*, in which, from the bosom of His mother, Christ weighs the pebbles of the brook against the sins of men, we have a hand, rough enough by contrast, working upon some fine hint or sketch of his. Sometimes,

as in the subjects of the *Daughter of Herodias* and the *Head of John the Baptist*, the lost originals have been re-echoed and varied upon again and again by Luini [40] and others. At other times the original remains, but has been a mere theme or motive, a type of which the accessories might be modified or changed; and these variations have but brought out the more the purpose, or expression of the original. It is so with the so-called *Saint John the Baptist* of the Louvre — one of the few naked figures Leonardo painted — whose delicate brown flesh and woman's hair no one would go out into the wilderness to seek, and whose treacherous smile would have us understand something far beyond the outward gesture or circumstance. But the long, reedlike cross in the hand, which suggests Saint John the Baptist, becomes faint in a copy at the Ambrosian Library, and disappears altogether in another version, in the *Palazzo Rosso* at Genoa. Returning from the latter to the original, we are no longer surprised by Saint John's strange likeness to the *Bacchus* which hangs near it, and which set Theophile Gautier thinking of Heine's notion of decayed gods, who, to maintain themselves, after the fall of paganism, took employment in the new religion.[41] We recognise one of those symbolical inventions in which the ostensible subject is used, not as matter for definite pictorial realisation, but as the starting-point of a train of sentiment, subtle and vague as a piece of music. No one ever ruled over the mere *subject* in hand more entirely than Leonardo, or bent it more dexterously to purely artistic ends. And so it comes to pass that though he handles sacred subjects continually, he is the most profane of painters; the given person or subject, Saint John in the Desert, or the Virgin on the knees of Saint Anne, is often merely the pretext for a kind of work which carries one altogether beyond the range of its conventional associations.

About the *Last Supper*, its decay and restorations, a whole literature has risen up, Goethe's pensive sketch of its sad fortunes being perhaps the best.[42] The death in childbirth of the Duchess Beatrice was followed in Ludovico by one of those paroxysms of religious feeling which in him were constitutional. The low, gloomy Dominican church of *Saint Mary of the Graces* had been the favourite oratory [43] of Beatrice. She had spent her last days there, full of sinister presentiments; at last it had been almost necessary to remove her from it by force; and now it was here that mass was said a hundred times a day for her repose. On the damp wall of the refectory, oozing with mineral salts, Leonardo painted the *Last Supper*. Effective anecdotes were told about it, his retouchings and delays. They show him refusing to work except at the moment of invention, scornful of any one who supposed that art could be a work of mere industry and rule, often coming the whole length of Milan to give a single touch. He painted it, not in fresco,[44] where all must be *impromptu*, but in oils, the new method which he had been one of the first to welcome, because it allowed of so many afterthoughts, so refined a working out of perfection. It turned out that on a plastered wall no process could have been less durable. Within fifty years it had fallen into decay. And now we have to turn back to Leonardo's own studies, above all to one drawing of the central head at the *Brera*,[45] which, in a union of tenderness and se-

verity in the facelines, reminds one of the monumental work of Mino da Fiesole,[46] to trace it as it was.

Here was another effort to lift a given subject out of the range of its traditional associations. Strange, after all the mystic developments of the middle age, was the effort to see the Eucharist, not as the pale Host of the altar,[47] but as one taking leave of his friends. Five years afterwards the young Raphael, at Florence, painted it with sweet and solemn effect in the refectory of Saint Onofrio; but still with all the mystical unreality of the school of Perugino. Vasari pretends that the central head was never finished. But finished or unfinished, or owing part of its effect to a mellowing decay, the head of Jesus does but consummate the sentiment of the whole company — ghosts through which you see the wall, faint as the shadows of the leaves upon the wall on autumn afternoons. This figure is but the faintest, the most spectral of them all.

The *Last Supper* was finished in 1497; in 1498 the French entered Milan, and whether or not the Gascon bowmen used it as a mark for their arrows, the model of Francesco Sforza certainly did not survive. What, in that age, such work was capable of being — of what nobility, amid what racy truthfulness to fact — we may judge from the bronze statue of Bartolomeo Colleoni[48] on horseback, modelled by Leonardo's master, Verrocchio (he died of grief, it was said, because, the mold accidentally failing, he was unable to complete it), still standing in the *piazza*[49] of Saint John and Saint Paul at Venice. Some traces of the thing may remain in certain of Leonardo's drawings, and perhaps also, by a singular circumstance, in a far-off town of France. For Ludovico became a prisoner, and ended his days at Loches in Touraine.[50] After many years of captivity in the dungeons below, where all seems sick with barbarous feudal memories, he was allowed at last, it is said, to breathe fresher air for a while in one of the rooms of the great tower still shown, its walls covered with strange painted arabesques, ascribed by tradition to his hand, amused a little, in this way, through the tedious years. In those vast helmets and human faces and pieces of armour, among which, in great letters, the motto *Infelix Sum*[51] is woven in and out, it is perhaps not too fanciful to see the fruit of a wistful after-dreaming over Leonardo's sundry experiments on the armed figure of the great duke, which had occupied the two so much during the days of their good fortune at Milan.

The remaining years of Leonardo's life are more or less years of wandering. From his brilliant life at court he had saved nothing, and he returned to Florence a poor man. Perhaps necessity kept his spirit excited: the next four years are one prolonged rapture of ecstasy of invention. He painted now the pictures of the Louvre, his most authentic works, which came there straight from the cabinet of Francis the First, at Fontainebleau. One picture of his, the *Saint Anne* — not the *Saint Anne* of the Louvre, but a simple cartoon, now in London — revived for a moment a sort of appreciation more common in an earlier time, when good pictures had still seemed miraculous. For two days a crowd of people of all qualities passed in naïve excitement through the chamber where it hung,

46. Famous Florentine sculptor (1400–86).

47. The word 'Eucharist' usually means the Communion, or Sacrament of the Lord's Supper. Here by it Pater means Christ, at the Last Supper, giving thanks and breaking bread for his disciples to eat with him. The word 'Host,' capitalized, usually means the consecrated bread, or wafer, used at the altar in the Mass of the Roman Catholic Church. Here by it Pater means the person of Christ.

48. Famous Italian soldier of fortune (1400–75), who fought for Milan.

49. 'open place, or square.'

50. Touraine, an old province in west central France.

51. 'I am unhappy.'

and gave Leonardo a taste of the 'triumph' of Cimabue.[52] But his work was less with the saints than with the living women of Florence. For he lived still in the polished society that he loved, and in the houses of Florence, left perhaps a little subject to light thoughts by the death of Savonarola[53] — the latest gossip (1869) is of an undraped Monna Lisa,[54] found in some out-of-the-way corner of the late *Orleans* collection — he saw Ginevra di Benci, and Lisa, the young third wife of Francesco del Giocondo. As we have seen him using incidents of sacred story, not for their own sake, nor as mere subjects for pictorial realisation, but as a cryptic language for fancies all his own, so now he found a vent for his thought in taking one of these languid women, and raising her, as Leda or Pomona,[55] as Modesty or Vanity, to the seventh heaven of symbolical expression.

La Gioconda is, in the truest sense, Leonardo's masterpiece, the revealing instance of his mode of thought and work. In suggestiveness, only the *Melancholia* of Dürer[56] is comparable to it; and no crude symbolism disturbs the effect of its subdued and graceful mystery. We all know the face and hands of the figure, set in its marble chair, in that circle of fantastic rocks, as in some faint light under sea. Perhaps of all ancient pictures time has chilled it least.[57] As often happens with works in which invention seems to reach its limit, there is an element in it given to, not invented by, the master. In that inestimable folio of drawings, once in the possession of Vasari, were certain designs by Verrocchio, faces of such impressive beauty that Leonardo in his boyhood copied them many times. It is hard not to connect with these designs of the elder, by-past master, as with its germinal principle, the unfathomable smile, always with a touch of something sinister in it, which plays over all Leonardo's work. Besides, the picture is a portrait. From childhood we see this image defining itself on the fabric of his dreams, and but for express historical testimony, we might fancy that this was but his ideal lady, embodied and beheld at last. What was the relationship of a living Florentine to this creature of his thought? By what strange affinities had the dream and the person grown up thus apart, and yet so closely together? Present from the first incorporeally in Leonardo's brain, dimly traced in the designs of Verrocchio, she is found present at last in *Il Giocondo's* house. That there is much of mere portraiture in the picture is attested by the legend that by artificial means, the presence of mimes[58] and flute-players, that subtle expression was protracted on the face. Again, was it in four years and by renewed labour never really completed,[59] or in four months and as by stroke of magic, that the image was projected?

The presence that rose thus so strangely beside the waters, is expressive of what in the ways of a thousand years men had come to desire. Hers is the head upon which all 'the ends of the world are come,'[60] and the eyelids are a little weary. It is a beauty wrought out from within upon the flesh, the deposit, little cell by cell, of strange thoughts and fantastic rev-

52. Giovanni Cimabue (1240?–1302?), Florentine painter.

53. Girolamo Savonarola (1452–98), great Florentine religious reformer.

54. That is, a picture of Mona Lisa, or La Gioconda, showing her undraped.

55. Leda, in Greek mythology, the wife of a king of Sparta, was visited by Jove as a swan; she bore him Pollux, and Helen (of Troy). Pomona, the old Italian goddess of the fruit of trees.

56. Albrecht Dürer (1471–1528), German painter and engraver.

57. Yet for Vasari there was some further magic of crimson in the lips and cheeks, lost for us. [Pater's note; it is based on Vasari's description in his life of Leonardo.]

58. 'mimics; buffoons; clowns.'

59. Vasari says that it was labored on for four years, and never completed. See his *Lives*, trans. Blashfield and Hopkins, ed 1923, II, 395.

60. *Cf. I Corinthians*, x,11.

eries and exquisite passions. Set it for a moment beside one of those white Greek goddesses or beautiful women of antiquity, and how would they be troubled by this beauty, into which the soul with all its maladies has passed! All the thoughts and experience of the world have etched and moulded there, in that which they have of power to refine and make expressive the outward form, the animalism of Greece, the lust of Rome, the mysticism of the middle age with its spiritual ambition and imaginative loves, the return of the Pagan world, the sins of the Borgias.[61] She is older than the rocks among which she sits; like the vampire, she has been dead many times, and learned the secrets of the grave;[62] and has been a diver in deep seas, and keeps their fallen day about her; and trafficked for strange webs with Eastern merchants, and, as Leda, was the mother of Helen of Troy, and, as Saint Anne, the mother of Mary; and all this has been to her but as the sound of lyres and flutes, and lives only in the delicacy with which it has moulded the changing lineaments, and tinged the eyelids and the hands. The fancy of a perpetual life, sweeping together ten thousand experiences, is an old one; and modern philosophy has conceived the idea of humanity as wrought upon by, and summing up in itself, all modes of thought and life. Certainly Lady Lisa might stand as the embodiment of the old fancy, the symbol of the modern idea.

During these years at Florence Leonardo's history is the history of his art; for himself, he is lost in the bright cloud of it. The outward history begins again in 1502, with a wild journey through central Italy, which he makes as the chief engineer of Cæsar Borgia. The biographer, putting together the stray jottings of his manuscripts, may follow him through every day of it, up the strange tower of Siena, elastic like a bent bow, down to the seashore at Piombino, each place appearing as fitfully as in a fever dream.

One other great work was left for him to do, a work all trace of which soon vanished, *The Battle of the Standard*, in which he had Michelangelo for his rival. The citizens of Florence, desiring to decorate the walls of the great council-chamber, had offered the work for competition, and any subject might be chosen from the Florentine wars of the fifteenth century. Michelangelo chose for his cartoon an incident of the war with Pisa,[63] in which the Florentine soldiers, bathing in the Arno, are surprised by the sound of trumpets, and run to arms. His design has reached us only in an old engraving, which helps us less perhaps than our remembrance of the background of his *Holy Family* in the *Uffizi* to imagine in what superhuman form, such as might have beguiled the heart of an earlier world, those figures ascended out of the water. Leonardo chose an incident from the battle of Anghiari,[64] in which two parties of soldiers fight for a standard. Like Michelangelo's, his cartoon is lost, and has come to us only in sketches, and in a fragment of Rubens.[65] Through the accounts given we may discern some lust of terrible things in it, so that even the horses tore each other with their teeth. And yet one fragment of it, in a drawing of his at Florence, is far different — a waving field of lovely armour, the chased edgings running like lines of sunlight from side to side. Michelangelo was

61. The Borgia family was notorious for wildness and crime. Notable are Cesare Borgia (1476–1507), cardinal and military leader; Lucrezia Borgia (1480–1519), his sister, and Duchess of Ferrara.

62. An ancient and widespread superstition believes in vampires — bodies of dead persons, returned to life with supernatural powers, that leave their graves during the night to suck the blood of sleeping persons.

63. A town not far from Florence, and also on the river Arno.

64. Not far from Florence, in Tuscany.

65. Peter Paul Rubens (1577–1640), Flemish painter.

twenty-seven years old; Leonardo more than fifty; and Raphael, then nineteen years of age, visiting Florence for the first time, came and watched them as they worked.

We catch a glimpse of Leonardo again, at Rome in 1514, surrounded by his mirrors and vials and furnaces, making strange toys that seemed alive of wax and quicksilver. The hesitation which had haunted him all through life, and made him like one under a spell, was upon him now with double force. No one had ever carried political indifferentism farther; it had always been his philosophy to 'fly before the storm'; he is for the Sforzas, or against them, as the tide of their fortune turns. Yet now, in the political society of Rome, he came to be suspected of secret French sympathies. It paralysed him to find himself among enemies; and he turned wholly to France, which had long courted him.

France was about to become an Italy more Italian than Italy itself. Francis the First, like Lewis the Twelfth [66] before him, was attracted by the *finesse* of Leonardo's work; *La Gioconda* was already in his cabinet, and he offered Leonardo the little *Château de Clou*, with its vineyards and meadows, in the pleasant valley of the Masse, just outside the walls of the town of Amboise, where, especially in the hunting season, the court then frequently resided. *A Monsieur Lyonard, peinteur du Roy pour Amboyse* [67] — so the letter of Francis the First is headed. It opens a prospect, one of the most interesting in the history of art, where, in a peculiarly blent atmosphere, Italian art dies away as a French exotic.

Two questions remain, after much busy antiquarianism, concerning Leonardo's death — the question of the exact form of his religion, and the question whether Francis the First was present at the time. They are of about equally little importance in the estimate of Leonardo's genius. The directions in his will concerning the thirty masses and the great candles for the church of Saint Florentin are things of course, their real purpose being immediate and practical; and on no theory of religion could these hurried offices be of much consequence. We forget them in speculating how one who had been always so desirous of beauty, but desired it always in such precise and definite forms, as hands or flowers or hair, looked forward now into the vague land, and experienced the last curiosity.

66. Louis XII (1462–1515), king of France.

67. 'To Mr. Leonardo, the King's painter at Amboise.'

Conclusion [1]

Λέγει που Ἡράκλειτος ὅτι πάντα χωρεῖ καὶ οὐδὲν μένει [2]

To regard all things and principles of things as inconstant modes or fashions has more and more become the tendency of modern thought. Let us begin with that which is without — our physical life. Fix upon it in one of its more exquisite intervals, the moment, for instance, of delicious recoil from the flood of water in summer heat. What is the whole physical life in that moment but a combination of natural elements to which science gives their names? But those elements, phosphorus and lime and delicate fibres, are present not in the human body alone: we detect them in places most remote from it. Our physical life is a perpetual motion

1. This brief 'Conclusion' was omitted in the second edition of this book, as I conceived it might possibly mislead some of those young men into whose hands it might fall. On the whole, I have thought it best to reprint it here, with some slight changes which bring it closer to my original meaning. I have dealt more fully in *Marius the Epicurean* with the thoughts suggested by it. [Pater's note.]

2. Pater translates, in *Plato and Platonism*, Ch.i: 'Heraclitus says, "All things give way; nothing remaineth."' *Cf.* Plato, *Cratylus*, 402A.

of them — the passage of the blood, the waste and repairing of the lenses of the eye, the modification of the tissues of the brain under every ray of light and sound — processes which science reduces to simpler and more elementary forces. Like the elements of which we are composed, the action of these forces extends beyond us: it rusts iron and ripens corn. Far out on every side of us those elements are broadcast, driven in many currents; and birth and gesture [3] and death and the springing of violets from the grave are but a few out of ten thousand resultant combinations. That clear, perpetual outline of face and limb is but an image of ours, under which we group them — a design in a web, the actual threads of which pass out beyond it. This at least of flame-like our life has, that it is but the concurrence, renewed from moment to moment, of forces parting sooner or later on their ways.

Or, if we begin with the inward world of thought and feeling, the whirlpool is still more rapid, the flame more eager and devouring. There it is no longer the gradual darkening of the eye, the gradual fading of colour from the wall — movements of the shore-side, where the water flows down indeed, though in apparent rest — but the race of the mid-stream, a drift of momentary acts of sight and passion and thought. At first sight experience seems to bury us under a flood of external objects, pressing upon us with a sharp and importunate reality, calling us out of ourselves in a thousand forms of action. But when reflexion begins to play upon those objects they are dissipated under its influence; the cohesive force seems suspended like some trick of magic; each object is loosed into a group of impressions — colour, odour, texture — in the mind of the observer. And if we continue to dwell in thought on this world, not of objects in the solidity with which language invests them, but of impressions, unstable, flickering, inconsistent, which burn and are extinguished with our consciousness of them, it contracts still further: the whole scope of observation is dwarfed into the narrow chamber of the individual mind. Experience, already reduced to a group of impressions, is ringed round for each one of us by that thick wall of personality through which no real voice has ever pierced on its way to us, or from us to that which we can only conjecture to be without. Every one of those impressions is the impression of the individual in his isolation, each mind keeping as a solitary prisoner its own dream of a world. Analysis goes a step farther still, and assures us that those impressions of the individual mind to which, for each one of us, experience dwindles down, are in perpetual flight; that each of them is limited by time, and that as time is infinitely divisible, each of them is infinitely divisible also; all that is actual in it being a single moment, gone while we try to apprehend it, of which it may ever be more truly said that it has ceased to be than that it is. To such a tremulous wisp constantly reforming itself on the stream, to a single sharp impression, with a sense in it, a relic more or less fleeting, of such moments gone by, what is real in our life fines itself down. It is with this movement, with the passage and dissolution of impressions, images, sensations, that analysis leaves off — that continual vanishing away, that strange, perpetual weaving and unweaving of ourselves.

Philosophiren, says Novalis, *ist dephlegmatisiren, vivificiren*.[4] The service of philosophy, of speculative culture, towards the human spirit, is to rouse, to startle it to a life of constant and eager observation. Every moment some form grows perfect

3. *Gesture*: activity.

4. 'To philosophize is to cast off inertia, to make oneself alive.' Novalis, pseudonym of Friedrich von Hardenberg (1772–1801), German man of letters.

in hand or face; some tone on the hills or the sea is choicer than the rest; some mood of passion or insight or intellectual excitement is irresistibly real and attractive to us, — for that moment only. Not the fruit of experience, but experience itself, is the end. A counted number of pulses only is given to us of a variegated, dramatic life. How may we see in them all that is to be seen in them by the finest senses? How shall we pass most swiftly from point to point, and be present always at the focus where the greatest number of vital forces unite in their purest energy?

To burn always with this hard, gem-like flame, to maintain this ecstasy, is success in life. In a sense it might even be said that our failure is to form habits: for, after all, habit is relative to a stereotyped world, and meantime it is only the roughness of the eye that makes any two persons, things, situations, seem alike. While all melts under our feet, we may well grasp at any exquisite passion, or any contribution to knowledge that seems by a lifted horizon to set the spirit free for a moment, or any stirring of the senses, strange dyes, strange colours, and curious odours, or work of the artist's hands, or the face of one's friend. Not to discriminate every moment some passionate attitude in those about us, and in the very brilliancy of their gifts some tragic dividing of forces on their ways, is, on this short day of frost and sun, to sleep before evening. With this sense of the splendour of our experience and of its awful brevity, gathering all we are into one desperate effort to see and touch, we shall hardly have time to make theories about the things we see and touch. What we have to do is to be for ever curiously testing new opinions and courting new impressions, never acquiescing in a facile orthodoxy of Comte, or of Hegel,[5] or of our own. Philosophical theories or ideas, as points of view, instruments of criticism, may help us to gather up what might otherwise pass unregarded by us. 'Philosophy is the microscope of thought.' The theory or idea or system which requires of us the sacrifice of any part of this experience, in consideration of some interest into which we cannot enter, or some abstract theory we have not identified with ourselves, or of what is only conventional, has no real claim upon us.

One of the most beautiful passages of Rousseau is that in the sixth book of the *Confessions*,[6] where he describes the awakening in him of the literary sense. An undefinable taint of death had clung always about him, and now in early manhood he believed himself smitten by mortal disease. He asked himself how he might make as much as possible of the interval that remained; and he was not biassed by anything in his previous life when he decided that it must be by intellectual excitement, which he found just then in the clear, fresh writings of Voltaire. Well! we are all *condamnés* as Victor Hugo says: we are all under sentence of death but with a sort of indefinite reprieve — *les hommes sont tous condamnés à mort avec des sursis indéfinis*:[7] we have an interval, and then our place knows us no more. Some spend this interval in listlessness, some in high passions, the wisest, at least among 'the children of this world,'[8] in art and song. For our one chance lies in expanding that interval, in getting as many pulsations as possible into the given time. Great passions may give us this quickened sense of life, ecstasy and sorrow of love, the various forms of enthusiastic activity, disinterested or other-

5. Auguste Comte (1798–1857), French founder of positivism. Georg Wilhelm Friedrich Hegel (1770–1831), German founder of a philosophic system purporting to be all-inclusive.

6. *Cf.* J.J.Rousseau, *Œuvres complètes*, new ed., Lyon, 1796, XX,111ff.

7. 'Men are all condemned to death with indefinite reprieves.'

8. *Cf. Luke*, xvi,8: '. . . the children of this world are wiser in their generation than the children of light.'

wise, which come naturally to many of us. Only be sure it is passion — that it does yield you this fruit of a quickened, multiplied consciousness. Of such wisdom, the poetic passion, the desire of beauty, the love of art for its own sake, has most. For art comes to you proposing frankly to give nothing but the highest quality to your moments as they pass, and simply for those moments' sake.[9]

9. Pater himself indicates the existence of another purpose in art: *cf.* the eighth paragraph of 'Leonardo da Vinci,' where he says that Leonardo's early art had to be weighted with more of the meaning of nature and the purpose of humanity if it was 'to be something in the world'; and *cf.* also the final sentence of 'Style.'

IMAGINARY PORTRAITS

Sebastian van Storck

It was a winter-scene, by Adrian van de Velde, or by Isaac van Ostade.[1] All the delicate poetry together with all the delicate comfort of the frosty season was in the leafless branches turned to silver, the furred dresses of the skaters, the warmth of the red-brick house-fronts under the gauze of white fog, the gleams of pale sunlight on the cuirasses of the mounted soldiers as they receded into the distance. Sebastian van Storck, confessedly the most graceful performer in all that skating multitude, moving in endless maze over the vast surface of the frozen water-meadow, liked best this season of the year for its expression of a perfect impassivity, or at least of a perfect repose. The earth was, or seemed to be, at rest, with a breathlessness of slumber which suited the young man's peculiar temper. The heavy summer, as it dried up the meadows now lying dead below the ice, set free a crowded and competing world of life, which, while it gleamed very pleasantly russet and yellow for the painter Albert Cuyp,[2] seemed wellnigh to suffocate Sebastian van Storck. Yet with all his appreciation of the national winter, Sebastian was not altogether a Hollander. His mother, of Spanish descent and Catholic, had given a richness of tone and form to the healthy freshness of the Dutch physiognomy, apt to preserve its youthfulness of aspect far beyond the period of life usual with other peoples. This mixed expression charmed the eye of Isaac van Ostade, who had painted his portrait from a sketch taken at one of those skating parties, with his plume of squirrel's tail and fur muff, in all the modest pleasantness of boyhood. When he returned home lately from his studies at a place far inland, at the proposal of his tutor, to recover, as the tutor suggested, a certain loss of robustness, something more than that cheerful indifference of early youth had passed away. The learned man, who held, as was alleged, the doctrines of a surprising new philosophy, reluctant to disturb too early the fine intelligence of the pupil entrusted to him, had found it, perhaps, a matter of honesty to send back to his parents one likely enough to catch from others any sort of theoretic light; for the letter he wrote dwelt much on the lad's intellectual fearlessness. 'At present,' he had written, 'he is influenced more by curiosity than by a care for truth, according to the character of the young. Certainly, he differs strikingly from his equals in age, by his passion for a vigorous intellectual gymnastic, such as the supine character of their minds renders distasteful to most young men, but in which he shows a fearlessness that at times makes me fancy that his ultimate destination may be the military life; for indeed the rigidly logical tendency of his mind always leads him out upon the practical. Don't misun-

derstand me! At present, he is strenuous only intellectually; and has given no definite sign of preference, as regards a vocation in life. But he seems to me to be one practical in this sense, that his theorems will shape life for him, directly; that he will always seek, as a matter of course, the effective equivalent to — the line of being which shall be the proper continuation of — his line of thinking. This intellectual rectitude, or candour, which to my mind has a kind of beauty in it, has reacted upon myself, I confess, with a searching quality.' That 'searching quality,' indeed, many others also, people far from being intellectual, had experienced — an agitation of mind in his neighbourhood, oddly at variance with the composure of the young man's manner and surrounding, so jealously preserved.

In the crowd of spectators at the skating, whose eyes followed, so well-satisfied, the movements of Sebastian van Storck, were the mothers of marriageable daughters, who presently became the suitors of this rich and distinguished youth, introduced to them, as now grown to man's estate, by his delighted parents. Dutch aristocracy had put forth all its graces to become the winter morn: and it was characteristic of the period that the artist tribe was there, on a grand footing, — in waiting, for the lights and shadows they liked best. The artists were, in truth, an important body just then, as a natural consequence of the nation's hard-won prosperity; helping it to a full consciousness of the genial yet delicate homeliness it loved, for which it had fought so bravely, and was ready at any moment to fight anew, against man or the sea. Thomas de Keyser,[3] who understood better than any one else the kind of quaint new Atticism which had found its way into the world over those waste salt marshes, wondering whether quite its finest type as he understood it could ever actually be seen there, saw it at last, in lively motion, in the person of Sebastian van Storck, and desired to paint his portrait. A little to his surprise, the young man declined the offer; not graciously, as was thought.

Holland, just then, was reposing on its laurels after its long contest[4] with Spain, in a short period of complete wellbeing, before troubles of another kind should set in. That a darker time might return again, was clearly enough felt by Sebastian the elder — a time like that of William the Silent,[5] with its insane civil animosities, which would demand similarly energetic personalities, and offer them similar opportunities. And then, it was part of his honest geniality of character to admire those who 'get on' in the world. Himself had been, almost from boyhood, in contact with great affairs. A member of the States-General which had taken so hardly the kingly airs of Frederick Henry,[6] he had assisted at the Congress of Münster, and figures conspicuously in Terburgh's[7] picture of that assembly, which had finally established Holland as a first-rate power. The heroism by which the national wellbeing had been achieved was still of recent memory — the air full of its reverberation, and great movement. There was a tradition to be maintained; the sword by no means resting in its sheath. The age was still fitted to evoke a generous ambition; and this son, from whose natural gifts there was so much to hope for, might play his part, at least as a diplomatist, if the present quiet continued. Had not the learned man said that his natural disposition would lead him

out always upon practice? And in truth, the memory of that Silent hero had its fascination for the youth. When, about this time, Peter de Keyser,[8] Thomas's brother, unveiled at last his tomb of wrought bronze and marble in the *Nieuwe Kerk*[9] at Delft, the young Sebastian was one of a small company present, and relished much the cold and abstract simplicity of the monument, so conformable to the great, abstract, and unuttered force of the hero who slept beneath.

In complete contrast to all that is abstract or cold in art, the home of Sebastian, the family mansion of the Storcks — a house, the front of which still survives in one of those patient architectural pieces by Jan van der Heyde[10] — was, in its minute and busy wellbeing, like an epitome of Holland itself with all the good-fortune of its 'thriving genius' reflected, quite spontaneously, in the national taste. The nation had learned to content itself with a religion which told little, or not at all, on the outsides of things. But we may fancy that something of the religious spirit had gone, according to the law of the transmutation of forces, into the scrupulous care for cleanliness, into the grave, old-world, conservative beauty of Dutch houses, which meant that the life people maintained in them was normally affectionate and pure.

The most curious florists of Holland were ambitious to supply the Burgomaster van Storck with the choicest products of their skill for the garden spread below the windows on either side of the portico, and along the central avenue of hoary beeches which led to it. Naturally this house, within a mile of the city of Haarlem, became a resort of the artists, then mixing freely in great society, giving and receiving hints as to the domestic picturesque. Creatures of leisure — of leisure on both sides — they were the appropriate complement of Dutch prosperity, as it was understood just then. Sebastian the elder could almost have wished his son to be one of them: it was the next best thing to the being an influential publicist or statesman. The Dutch had just begun to see what a picture their country was — its canals, and *boompjis*,[11] and endless, broadly-lighted meadows, and thousands of miles of quaint water-side: and their painters, the first true masters of landscape for its own sake, were further informing them in the matter. They were bringing proof, for all who cared to see, of the wealth of colour there was all around them in this, supposably, sad land. Above all, they developed the old Low-country taste for interiors. Those innumerable *genre* pieces[12] — conversation, music, play — were in truth the equivalent of novel-reading for that day; its own actual life, in its own proper circumstances, reflected in various degrees of idealisation, with no diminution of the sense of reality (that is to say) but with more and more purged and perfected delightfulness of interest. Themselves illustrating, as every student of their history knows, the good-fellowship of family life, it was the ideal of that life which these artists depicted; the ideal of home in a country where the preponderant interest of life, after all, could not well be out of doors. Of the earth earthy — genuine red earth of the old Adam — it was an ideal very different from that which the sacred Italian painters had evoked from the life of Italy, yet, in its best types, was not without a kind of natural religiousness. And in the achievement of a type of beauty so national and vernacular, the votaries of purely Dutch art might well feel that the Italianisers, like Berghem,

Boll, and Jan Weenix [13] went so far afield in vain.

The fine organisation and acute intelligence of Sebastian would have made him an effective connoisseur of the arts, as he showed by the justice of his remarks in those assemblies of the artists which his father so much loved. But in truth the arts were a matter he could but just tolerate. Why add, by a forced and artificial production, to the monotonous tide of competing, fleeting existence? Only, finding so much fine art actually about him, he was compelled (so to speak) to adjust himself to it; to ascertain and accept that in it which should least collide with, or might even carry forward a little, his own characteristic tendencies. Obviously somewhat jealous of his intellectual interests, he loved inanimate nature, it might have been thought, better than man. He cared nothing, indeed, for the warm sandbanks of Wynants, nor for those eerie relics of the ancient Dutch woodland which survive in Hobbema and Ruysdael,[14] still less for the highly-coloured sceneries of the academic band at Rome, in spite of the escape they provide one into clear breadth of atmosphere. For though Sebastian van Storck refused to travel, he loved the distant — enjoyed the sense of things seen from a distance, carrying us, as on wide wings of space itself, far out of one's actual surrounding. His preference in the matter of art was, therefore, for those prospects *à vol d'oiseau* [15] — of the caged bird on the wing at last — of which Rubens had the secret, and still more Philip de Koninck,[16] four of whose choicest works occupied the four walls of his chamber; visionary escapes, north, south, east, and west, into a wide-open though, it must be confessed, a somewhat sullen land. For the fourth of them he had exchanged with his mother a marvellously vivid Metsu,[17] lately bequeathed to him, in which she herself was presented. They were the sole ornaments he permitted himself. From the midst of the busy and busy-looking house, crowded with the furniture and the pretty little toys of many generations, a long passage led the rare visitor up a winding staircase, and (again at the end of a long passage) he found himself as if shut off from the whole talkative Dutch world, and in the embrace of that wonderful quiet which is also possible in Holland at its height all around him. It was here that Sebastian could yield himself, with the only sort of love he had ever felt, to the supremacy of his difficult thoughts. — A kind of *empty* place! Here, you felt, all had been mentally put to rights by the working-out of a long equation, which had zero is equal to zero for its result. Here one did, and perhaps felt, nothing; one only thought. Of living creatures only birds came there freely, the sea-birds especially, to attract and detain which there were all sorts of ingenious contrivances about the windows, such as one may see in the cottage sceneries of Jan Steen [18] and others. There was something, doubtless, of his passion for distance in this welcoming of the creatures of the air. An extreme simplicity in their manner of life was, indeed, characteristic of many a distinguished Hollander — William the Silent, Baruch de Spinosa, the brothers de Witt.[19] But the simplicity of Sebastian

13. Jan Weenix (1621–60), Dutch painter of rustic scenes, portraits, and still-lifes. He studied in Italy. The Dutch painters Nicholas Berghem, or Berchem (1620–83), and Cornelius Bol studied under him.
14. Jan Wynants (1615?–82), Meindert Hobbema (1638–1709), Jacob Ruysdael (1628–82), Dutch landscape painters.
15. 'seen with a bird's-eye view.'
16. Peter Paul Rubens (1577–1640), great Flemish painter, most famous perhaps for his colorng. Philip de Koningh (1619–81), Dutch painter of historical subjects and portraits.
17. Gabriel Metsu (1630–67), Dutch painter, whose subjects were usually taken from low life.
18. Jan Steen (1626–79), Dutch painter, whose subjects, from low life, were treated with great precision.
19. Cornelius De Witt (1623–72), John De Witt (1625–72), Dutch statesmen.

van Storck was something different from that, and certainly nothing democratic. His mother thought him like one disembarrassing himself carefully, and little by little, of all impediments, habituating himself gradually to make shift with as little as possible, in preparation for a long journey.

The Burgomaster van Storck entertained a party of friends, consisting chiefly of his favourite artists, one summer evening. The guests were seen arriving on foot in the fine weather, some of them accompanied by their wives and daughters, against the light of the low sun, falling red on the old trees of the avenue and the faces of those who advanced along it: [20] — Willem van Aelst, expecting to find hints for a flower-portrait in the exotics which would decorate the banqueting-room; Gerard Dow, to feed his eye, amid all that glittering luxury, on the combat between candle-light and the last rays of the departing sun; Thomas de Keyser, to catch by stealth the likeness of Sebastian the younger. Albert Cuyp was there, who, developing the latent gold in Rembrandt, had brought into his native Dordrecht a heavy wealth of sunshine, as exotic as those flowers or the eastern carpets on the Burgomaster's tables, with Hooch, the indoor Cuyp, and Willem van de Velde, who painted those shore-pieces with gay ships of war, such as he loved, for his patron's cabinet. Thomas de Keyser came, in company with his brother Peter, his niece, and young Mr. Nicholas Stone from England, pupil of that brother Peter, who afterwards married the niece. For the life of Dutch artists, too, was exemplary in matters of domestic relationship, its history telling many a cheering story of mutual faith in misfortune. Hardly less exemplary was the comradeship which they displayed among themselves, obscuring their own best gifts sometimes, one in the mere accessories of another man's work, so that they came together tonight with no fear of falling out, and spoiling the musical interludes of Madame van Storck in the large back parlour. A little way behind the other guests, three of them together, son, grandson, and the grandfather, moving slowly, came the Hondecoeters — Giles, Gybrecht, and Melchior.[21] They led the party before the house was entered, by fading light, to see the curious poultry of the Burgomaster go to roost; and it was almost night when the supper-room was reached at last. The occasion was an important one to Sebastian, and to others through him. For, (was it the music of the duets? he asked himself next morning, with a certain distaste as he remembered it all, or the heady Spanish wines poured out so freely in those narrow but deep Venetian glasses?) on this evening he approached more nearly than he had ever yet done to Mademoiselle van Westrheene, as she sat there beside the *clavecin* [22] looking very ruddy and fresh in her white satin, trimmed with glossy crimson swans-down.

So genially attempered, so warm, was life become, in the land of which Pliny had spoken as scarcely dry land at all.[23] And, in truth, the sea which Sebastian so much loved, and with so great a satisfaction and sense of wellbeing in every hint of its nearness, is never far distant in Holland. Invading all places, stealing under one's feet, insinuating itself everywhere along an endless network of canals (by no means such formal channels as we understand by the name, but picturesque rivers, with sedgy banks and haunted by

20. Willem van Aelst (1620–79); Gerhard Douw, or Dow (1613–75), pupil of Rembrandt van Ryn (1606–69); Pieter de Hoogh (1643–1708); Willem Vandervelde, or Vandevelde (1610–93), whose patron was Admiral De Ruyter; Dutch painters. Nicholas Stone (1586–1647?), English architect and sculptor.

21. The Hondekoeters were Dutch landscape painters and painters of domestic fowls. Giles (1583–?), his son Gysbrecht (1613–53), and his grandson Melchior (1636–95).

22. 'harpsichord,' forerunner of the piano.

23. Pliny the Elder, Roman naturalist and historian (A.D. 23–79). See note 27, below.

innumerable birds) its incidents present themselves oddly even in one's park or woodland walks; the ship in full sail appearing suddenly among the great trees or above the garden wall, where we had no suspicion of the presence of water. In the very conditions of life in such a country there was a standing force of pathos. The country itself shared the uncertainty of the individual human life; and there was pathos also in the constantly renewed, heavily-taxed labour, necessary to keep the native soil, fought for so unselfishly, there at all, with a warfare that must still be maintained when that other struggle with the Spaniard was over. But though Sebastian liked to breathe, so nearly, the sea and its influences, those were considerations he scarcely entertained. In his passion for *Schwindsucht*[24] — we haven't the word — he found it pleasant to think of the resistless element which left one hardly a foot-space amidst the yielding sand; of the old beds of lost rivers, surviving now only as deeper channels in the sea; of the remains of a certain ancient town, which within men's memory had lost its few remaining inhabitants, and, with its already empty tombs, dissolved and disappeared in the flood.

It happened, on occasion of an exceptionally low tide that some remarkable relics were exposed to view on the coast of the island of Vleeland.[25] A countryman's waggon overtaken by the tide, as he returned with merchandise from the shore! you might have supposed, but for a touch of grace in the construction of the thing — lightly wrought timber-work, united and adorned by a multitude of brass fastenings, like the work of children for their simplicity, while the rude, stiff chair, or throne, set upon it, seemed to distinguish it as a chariot of state. To some antiquarians it told the story of the overwhelming of one of the chiefs of the old primeval people of Holland, amid all his gala array, in a great storm. But it was another view which Sebastian preferred; that this object was sepulchral, namely, in its motive — the one surviving relic of a grand burial, in the ancient manner, of a king or hero, whose very tomb was wasted away. — *Sunt metis metæ!*[26] There came with it the odd fancy that he himself would like to have been dead and gone as long ago, with a kind of envy of those whose deceasing was so long since over.

On more peaceful days he would ponder Pliny's account of those primeval forefathers, but without Pliny's contempt for them. A cloyed Roman might despise their humble existence, fixed by necessity from age to age, and with no desire of change, as 'the ocean poured in its flood twice a day, making it uncertain whether the country was a part of the continent or of the sea.'[27] But for his part Sebastian found something of poetry in all that, as he conceived what thoughts the old Hollander might have had at his fishing, with nets themselves woven of seaweed, waiting carefully for his drink on the heavy rains, and taking refuge, as the flood rose, on the sand-hills, in a little hut constructed but airily on tall stakes, conformable to the elevation of the highest tides, like a navigator, thought the learned writer, when the sea was risen, like a shipwrecked mariner when it was retired. For the fancy of Sebastian he lived with great breadths of calm light above and around him, influenced by, and, in a sense, living upon them, and surely might well complain, though to Pliny's so infinite surprise, on being made a Roman citizen.

And certainly Sebastian van Storck did not felicitate his people on the luck which, in the words of another old writer, 'hath disposed them to so thriving a genius.' Their restless ingenuity in making and

maintaining dry land where nature had willed the sea, was even more like the industry of animals than had been that life of their forefathers. Away with that tetchy, feverish, unworthy agitation! with this and that, all too importunate, motive of interest! And then, 'My son!' said his father, 'be stimulated to action!' he, too, thinking of that heroic industry which had triumphed over nature precisely where the contest had been most difficult.

Yet, in truth, Sebastian was forcibly taken by the simplicity of a great affection, as set forth in an incident of real life of which he heard just then. The eminent Grotius[28] being condemned to perpetual imprisonment, his wife determined to share his fate, alleviated only by the reading of books sent by friends. The books, finished, were returned in a great chest. In this chest the wife enclosed the husband, and was able to reply to the objections of the soldiers who carried it complaining of its weight, with a self-control, which she maintained till the captive was in safety, herself remaining to face the consequences; and there was a kind of absoluteness of affection in that, which attracted Sebastian for a while to ponder on the practical forces which shape men's lives. Had he turned, indeed, to a practical career it would have been less in the direction of the military or political life than of another form of enterprise popular with his countrymen. In the eager, gallant life of that age, if the sword fell for a moment into its sheath, they were for starting off on perilous voyages to the regions of frost and snow in search after that 'North-Western passage,' for the discovery of which the States-General had offered large rewards.[29] Sebastian, in effect, found a charm in the thought of that still, drowsy, spellbound world of perpetual ice, as in art and life he could always tolerate the sea. Admiral-general of Holland, as painted by Van der Helst, with a marine background by Backhuizen:[30] — at moments his father could fancy him so.

There was still another very different sort of character to which Sebastian would let his thoughts stray, without check, for a time. His mother, whom he much resembled outwardly, a Catholic from Brabant,[31] had had saints in her family, and from time to time the mind of Sebastian had been occupied on the subject of monastic life, its quiet, its negation. The portrait of a certain Carthusian prior,[32] which, like the famous statue of Saint Bruno, the first Carthusian, in the church of Santa Maria degli Angeli at Rome, could it have spoken, would have said, 'Silence!' kept strange company with the painted visages of men of affairs. A great theological strife was then raging in Holland. Grave ministers of religion assembled sometimes, as in the painted scene by Rembrandt, in the Burgomaster's house, and once, not however in their company, came a renowned young Jewish divine, Baruch de Spinosa, with whom, most unexpectedly, Sebastian found himself in sympathy, meeting the young Jew's far-reaching thoughts halfway, to the confirmation of his own; and he did not know that his visitor, very ready with the pencil, had taken his likeness as they talked on the fly-leaf of his note-book. Alive to that theological disturbance in the air all around him, he refused to be moved by it, as essentially a strife on small matters, anticipating a

vagrant regret which may have visited many other minds since, the regret, namely, that the old, pensive, use-and-wont Catholicism, which had accompanied the nation's earlier struggle for existence, and consoled it therein, had been taken from it. And for himself, indeed, what impressed him in that old Catholicism was a kind of lull in it — a lulling power — like that of the monotonous organ-music, which Holland, Catholic or not, still so greatly loves. But what he could not away with in the Catholic religion was its unfailing drift towards the concrete — the positive imageries of a faith, so richly beset with persons, things, historical incidents.

Rigidly logical in the method of his inferences, he attained the poetic quality only by the audacity with which he conceived the whole sublime extension of his premises. The contrast was a strange one between the careful, the almost petty fineness of his personal surrounding — all the elegant conventionalities of life, in that rising Dutch family — and the mortal coldness of a temperament, the intellectual tendencies of which seemed to necessitate straightforward flight from all that was positive. He seemed, if one may say so, in love with death; preferring winter to summer; finding only a tranquillising influence in the thought of the earth beneath our feet cooling down for ever from its old cosmic heat; watching pleasurably how their colours fled out of things, and the long sand-bank in the sea, which had been the rampart of a town, was washed down in its turn. One of his acquaintance, a penurious young poet, who, having nothing in his pockets but the imaginative or otherwise barely potential gold of manuscript verses, would have grasped so eagerly, had they lain within his reach, at the elegant outsides of life, thought the fortunate Sebastian, possessed of every possible opportunity of that kind, yet bent only on dispensing with it, certainly a most puzzling and comfortless creature. A few only, half discerning what was in his mind, would fain have shared his intellectual clearness, and found a kind of beauty in this youthful enthusiasm for an abstract theorem. Extremes meeting, his cold and dispassionate detachment from all that is most attractive to ordinary minds came to have the impressiveness of a great passion. And for the most part, people had loved him; feeling instinctively that somewhere there must be the justification of his difference from themselves. It was like being in love: or it was an intellectual malady, such as pleaded for forbearance, like bodily sickness, and gave at times a resigned and touching sweetness to what he did and said. Only once, at a moment of the wild popular excitement which at that period was easy to provoke in Holland, there was a certain group of persons who would have shut him up as no well-wisher to, and perhaps a plotter against, the common-weal. A single traitor might cut the dykes in an hour, in the interest of the English or the French. Or, had he already committed some treasonable act, who was so anxious to expose no writing of his that he left his very letters unsigned, and there were little stratagems to get specimens of his fair manuscript? For with all his breadth of mystic intention, he was persistent, as the hours crept on, to leave all the inevitable details of life at least in order, in equation. And all his singularities appeared to be summed up in his refusal to take his place in the life-sized family group (*très distingué et très soigné*,[33] remarks a modern critic of the work) painted about this time. His mother expostulated with him on the matter: — she must needs feel, a little icily, the emptiness of hope, and something more than the due measure of cold in things for a woman of her age, in the presence of a son who desired but to fade out of the world like a breath — and she suggested filial duty. 'Good mother,' he answered, 'there are duties towards the

33. 'very distinguished and very carefully executed.'

intellect also, which women can but rarely understand.'

The artists and their wives were come to supper again, with the Burgomaster van Storck. Mademoiselle van Westrheene was also come, with her sister and mother. The girl was by this time fallen in love with Sebastian; and she was one of the few who, in spite of his terrible coldness, really loved him for himself. But though of good birth she was poor, while Sebastian could not but perceive that he had many suitors of his wealth. In truth, Madame van Westrheene, her mother, did wish to marry this daughter into the great world, and plied many arts to that end, such as 'daughterful' mothers use. Her healthy freshness of mien and mind, her ruddy beauty, some showy presents that had passed, were of a piece with the ruddy colouring of the very house these people lived in; and for a moment the cheerful warmth that may be felt in life seemed to come very close to him, — to come forth, and enfold him. Meantime the girl herself taking note of this, that on a former occasion of their meeting he had seemed likely to respond to her inclination, and that his father would readily consent to such a marriage, surprised him on the sudden with those coquetries and importunities, all those little arts of love, which often succeed with men. Only, to Sebastian they seemed opposed to that absolute nature we suppose in love. And while, in the eyes of all around him tonight, this courtship seemed to promise him, thus early in life, a kind of quiet happiness, he was coming to an estimate of the situation, with strict regard to that ideal of a calm, intellectual indifference, of which he was the sworn chevalier. Set in the cold, hard light of that ideal, this girl, with the pronounced personal views of her mother, and in the very effectiveness of arts prompted by a real affection, bringing the warm life they prefigured so close to him, seemed vulgar! And still he felt himself bound in honour; or judged from their manner that she and those about them thought him thus bound. He did not reflect on the inconsistency of the feeling of honour (living, as it does essentially, upon the concrete and minute detail of social relationship) for one who, on principle, set so slight a value on anything whatever that is merely relative in its character.

The guests, lively and late, were almost pledging the betrothed in the rich wine. Only Sebastian's mother knew; and at that advanced hour, while the company were thus intently occupied, drew away the Burgomaster to confide to him the misgiving she felt, grown to a great height just then. The young man had slipped from the assembly: but certainly not with Mademoiselle van Westrheene, who was suddenly withdrawn also. And she never appeared again in the world. Already, next day, with the rumour that Sebastian had left his home, it was known that the expected marriage would not take place. The girl, indeed, alleged something in the way of a cause on her part; but seemed to fade away continually afterwards, and in the eyes of all who saw her was like one perishing of wounded pride. But to make a clean breast of her poor girlish worldliness, before she became a *béguine*,[34] she confessed to her mother the receipt of the letter — the cruel letter that had killed her. And in effect, the first copy of this letter, written with a very deliberate fineness, rejecting her — accusing her, so natural, and simply loyal! of a vulgar coarseness of character — was found, oddly tacked on, as their last word, to the studious record of the abstract thoughts which had been the real business of Sebastian's life, in the room whither his mother went to seek him next day, littered with the fragments of the one portrait of him in existence.

The neat and elaborate manuscript volume, of which this letter formed the final page (odd transition! by which a train of

34. A name for a member of certain lay sisterhoods in the Netherlands, devoted to a religious life.

thought so abstract drew its conclusion in the sphere of action) afforded at length to the few who were interested in him a much-coveted insight into the curiosity of his existence; and I pause just here to indicate in outline the kind of reasoning through which, making the 'Infinite' his beginning and his end, Sebastian had come to think all definite forms of being, the warm pressure of life, the cry of nature itself, no more than a troublesome irritation of the surface of the one absolute mind, a passing vexatious thought or uneasy dream there, at its height of petulant importunity in the eager, human creature.

The volume was, indeed, a kind of treatise to be: — a hard, systematic, well-concatenated train of thought, still implicated in the circumstances of a journal. Freed from the accidents of that particular literary form with its unavoidable details of place and occasion, the theoretic strain would have been found mathematically continuous. The already so weary Sebastian might perhaps never have taken in hand, or succeeded in, this detachment of his thoughts; every one of which, beginning with himself, as the peculiar and intimate apprehension of this or that particular day and hour, seemed still to protest against such disturbance, as if reluctant to part from those accidental associations of the personal history which had prompted it, and so become a purely intellectual abstraction.

The series began with Sebastian's boyish enthusiasm for a strange, fine saying of Doctor Baruch de Spinosa, concerning the Divine Love: — That whoso loveth God truly must not expect to be loved by him in return.[35] In mere reaction against an actual surrounding of which every circumstance tended to make him a finished egotist, that bold assertion defined for him the ideal of an intellectual disinterestedness, of a domain of unimpassioned mind, with the desire to put one's subjective side out of the way, and let pure reason speak.

And what pure reason affirmed in the first place, as the 'beginning of wisdom,' was that the world is but a thought, or a series of thoughts: that it exists, therefore, solely in mind. It showed him, as he fixed the mental eye with more and more of self-absorption on the phenomena of his intellectual existence, a picture or vision of the universe as actually the product so far as he really knew it, of his own lonely thinking power — of himself, there, thinking: as being zero without him: and as possessing a perfectly homogeneous unity in that fact. 'Things that have nothing in common with each other,' said the axiomatic reason, 'cannot be understood or explained by means of each other.'[36] But to pure reason things discovered themselves as being, in their essence, thoughts: — all things, even the most opposite things, mere transmutations of a single power, the power of thought. All was but conscious mind. Therefore, all the more exclusively, he must minister to mind, to the intellectual power, submitting himself to the sole direction of that, whithersoever it might lead him. Everything must be referred to, and, as it were, changed into the terms of that, if its essential value was to be ascertained. 'Joy,' he said, anticipating Spinosa — that,' for the attainment of which men are ready to surrender all beside — 'is but the name of a passion in which the mind passes to a greater perfection or power of thinking; as grief is the name of the passion in which it passes to a less.'[37]

Looking backward for the generative source of that creative power of thought in him, from his own mysterious intellectual being to its first cause, he still reflected, as one can but do, the enlarged pattern of himself into the vague region of hypothesis. In this way, some, at all events, would have explained his mental process.

35. *Cf.* Spinoza's *Works*, trans. Elwes, 1903, II,256 (*Ethics*, Pt.V, Prop.XIX).

36. *Cf. ibid.*, II,46 (*Ethics*, Pt.I, Axiom V).

37. *Cf. ibid.*, II,217 (*Ethics*, Pt.IV, Prop.XLII).

To him that process was nothing less than the apprehension, the revelation, of the greatest and most real of ideas — the true substance of all things. He, too, with his vividly-coloured existence, with this picturesque and sensuous world of Dutch art and Dutch reality all around that would fain have made him the prisoner of its colours, its genial warmth, its struggle for life, its selfish and crafty love, was but a transient perturbation of the one absolute mind; of which, indeed, all finite things whatever, time itself, the most durable achievements of nature and man, and all that seems most like independent energy, are no more than petty accidents or affections. Theorem and corollary! Thus they stood:

'*There can be only one substance*: (corollary) it is the greatest of errors to think that the non-existent, the world of finite things seen and felt, really is: (theorem) *for, whatever is, is but in that*: (practical corollary) one's wisdom, therefore, consists in hastening, so far as may be, the action of those forces which tend to the restoration of equilibrium, the calm surface of the absolute, untroubled mind, to *tabula rasa*,[38] by the extinction in one's self of all that is but correlative to the finite illusion — by the suppression of ourselves.'

In the loneliness which was gathering round him, and, oddly enough, as a somewhat surprising thing, he wondered whether there were, or had been, others possessed of like thoughts, ready to welcome any such as his veritable compatriots. And in fact he became aware just then, in readings difficult indeed, but which from their all-absorbing interest seemed almost like an illicit pleasure, a sense of kinship with certain older minds. The study of many an earlier adventurous theorist satisfied his curiosity as the record of daring physical adventure, for instance, might satisfy the curiosity of the healthy. It was a tradition — a constant tradition — that daring thought of his; an echo, or haunting recurrent voice of the human soul itself, and as such sealed with natural truth, which certain minds would not fail to heed; discerning also, if they were really loyal to themselves, its practical conclusion. — The one alone is: and all things beside are but its passing affections, which have no necessary or proper right to be.

As but such 'accidents' or 'affections,' indeed, there might have been found, within the circumference of that one infinite creative thinker, some scope for the joy and love of the creature. There have been dispositions in which that abstract theorem has only induced a renewed value for the finite interests around and within us. Centre of heat and light, truly nothing has seemed to lie beyond the touch of its perpetual summer. It has allied itself to the poetical or artistic sympathy, which feels challenged to acquaint itself with and explore the various forms of finite existence all the more intimately, just because of that sense of one lively spirit circulating through all things — a tiny particle of the one soul, in the sunbeam, or the leaf. Sebastian van Storck, on the contrary, was determined, perhaps by some inherited satiety or fatigue in his nature, to the opposite issue of the practical dilemma. For him, that one abstract being was as the pallid Arctic sun, disclosing itself over the dead level of a glacial, a barren and absolutely lonely sea. The lively purpose of life had been frozen out of it. What he must admire, and love if he could, was 'equilibrium,' the void, the *tabula rasa*, into which, through all those apparent energies of man and nature, that in truth are but forces of disintegration, the world was really settling. And, himself a mere circumstance in a fatalistic series, to which the clay of the potter was no sufficient parallel, he could not expect to be 'loved in return.'[39] At first, indeed, he had a kind of delight in his thoughts — in the

38. 'a smoothed, or blank, tablet.'

39. *Cf.* note 35, above.

eager pressure forward, to whatsoever conclusion, of a rigid intellectual gymnastic, which was like the making of Euclid. Only, little by little, under the freezing influence of such propositions, the theoretic energy itself, and with it his old eagerness for truth, the care to track it from proposition to proposition, was chilled out of him. In fact, the conclusion was there already, and might have been foreseen, in the premises. By a singular perversity, it seemed to him that every one of those passing 'affections' — he too, alas! at times — was for ever trying to be, to assert *itself*, to maintain its isolated and petty self, by a kind of practical lie in things; although through every incident of its hypothetic existence it had protested that its proper function was to die. Surely! those transient affections marred the freedom, the truth, the beatific calm, of the absolute selfishness, which could not, if it would, pass beyond the circumference of itself; to which, at times, with a fantastic sense of wellbeing, he was capable of a sort of fanatical devotion. And those, as he conceived, were his moments of genuine theoretic insight, in which, under the abstract 'perpetual light,' he died to self; while the intellect, after all, had attained a freedom of its own through the vigorous act which assured him that, as nature was but a thought of his, so himself also was but the passing thought of God.

No! rather a puzzle only, an anomaly, upon that one, white, unruffled consciousness! His first principle once recognised, all the rest, the whole array of propositions down to the heartless practical conclusion, must follow of themselves. Detachment: to hasten hence: to fold up one's whole self, as a vesture put aside: to anticipate, by such individual force as he could find in him, the slow disintegration by which nature herself is levelling the eternal hills: — here would be the secret of peace, of such dignity and truth as there could be in a world which after all was essentially an illusion. For Sebastian at least, the world and the individual alike had been divested of all effective purpose. The most vivid of finite objects, the dramatic episodes of Dutch history, the brilliant personalities which had found their parts to play in them, that golden art, surrounding us with an ideal world, beyond which the real world is discernible indeed, but etherealised by the medium through which it comes to one: all this, for most men so powerful a link to existence, only set him on the thought of escape — means of escape — into a formless and nameless infinite world, quite evenly grey. The very emphasis of those objects, their importunity to the eye, the ear the finite intelligence, was but the measure of their distance from what really is. One's personal presence, the presence, such as it is, of the most incisive things and persons around us, could only lessen by so much, that which really is. To restore *tabula rasa*, then, by a continual effort at self-effacement! Actually proud at times of his curious, well-reasoned nihilism, he could but regard what is called the business of life as no better than a trifling and wearisome delay. Bent on making sacrifice of the rich existence possible for him, as he would readily have sacrificed that of other people, to the bare and formal logic of the answer to a query (never proposed at all to entirely healthy minds) regarding the remote conditions and tendencies of that existence, he did not reflect that if others had inquired as curiously as himself the world could never have come so far at all — that the fact of its having come so far was itself a weighty exception to his hypothesis. His odd devotion, soaring or sinking into fanaticism, into a kind of religious mania, with what was really a vehement assertion of his individual will, he had formulated duty as the principle to hinder as little as possible what he called the restoration of equilibrium, the restoration of the primary consciousness to itself — its relief from that uneasy, tetchy, unworthy dream of a world, made so ill, or

dreamt so weakly — to forget, to be forgotten.

And at length this dark fanaticism, losing the support of his pride in the mere novelty of a reasoning so hard and dry, turned round upon him, as our fanaticism will, in black melancholy. The theoretic or imaginative desire to urge Time's creeping footsteps, was felt now as the physical fatigue which leaves the book or the letter unfinished, or finishes eagerly out of hand, for mere finishing's sake, unimportant business. Strange! that the presence to the mind of a metaphysical abstraction should have had this power over one so fortunately endowed for the reception of the sensible world. It could hardly have been so with him but for the concurrence of physical causes with the influences proper to a mere thought. The moralist, indeed, might have noted that a meaner kind of pride, the morbid fear of vulgarity, lent secret strength to the intellectual prejudice, which realised duty as the renunciation of all finite objects, the fastidious refusal to be or do any limited thing. But besides this it was legible in his own admissions from time to time, that the body, following, as it does with powerful temperaments, the lead of mind and the will, the intellectual consumption (so to term it) had been concurrent with, had strengthened and been strengthened by, a vein of physical *phthisis* [40] — by a merely physical accident, after all, of his bodily constitution, such as might have taken a different turn, had another accident fixed his home among the hills instead of on the shore. Is it only the result of disease? he would ask himself sometimes with a sudden suspicion of his intellectual cogency — this persuasion that myself, and all that surrounds me, are but a diminution of that which really is? — this unkindly melancholy?

The journal, with that 'cruel' letter to Mademoiselle van Westrheene coming as the last step in the rigid process of theoretic deduction circulated among the curious; and people made their judgments upon it. There were some who held that such opinions should be suppressed by law; that they were, or might become, dangerous to society. Perhaps it was the confessor of his mother who thought of the matter most justly. The aged man smiled, observing how, even for minds by no means superficial, the mere dress it wears alters the look of a familiar thought; with a happy sort of smile, as he added (reflecting that such truth as there was in Sebastian's theory was duly covered by the propositions of his own creed, and quoting Sebastian's favourite pagan wisdom from the lips of Saint Paul) 'in Him, we live, and move, and have our being.' [41]

Next day, as Sebastian escaped to the sea under the long, monotonous line of wind-mills, in comparative calm of mind — reaction of that pleasant morning from the madness of the night before — he was making light, or trying to make light, with some success, of his late distress. He would fain have thought it a small matter, to be adequately set at rest for him by certain well-tested influences of external nature, in a long visit to the place he liked best: a desolate house, amid the sands of the Helder, one of the old lodgings of his family, property now, rather, of the sea-birds, and almost surrounded by the encroaching tide, though there were still relics enough of hardy, sweet things about it, to form what was to Sebastian the most perfect garden in Holland. Here he could make 'equation' between himself and what was not himself, and set things in order, in preparation towards such deliberate and final change in his manner of living as circumstances so clearly necessitated.

As he stayed in this place, with one or two silent serving people, a sudden rising of the wind altered, as it might seem, in a few dark, tempestuous hours,

40. 'consumption' — or, tuberculosis of the lungs. *Cf.* note 24, above.

41. *Cf. Acts*, xvii,28.

the entire world around him. The strong wind changed not again for fourteen days, and its effect was a permanent one; so that people might have fancied that an enemy had indeed cut the dykes somewhere — a pinhole enough to wreck the ship of Holland, or at least this portion of it, which underwent an inundation of the sea the like of which had not occurred in that province for half a century. Only, when the body of Sebastian was found, apparently not long after death, a child lay asleep, swaddled warmly in his heavy furs, in an upper room of the old tower, to which the tide was almost risen; though the building still stood firmly, and still with the means of life in plenty. And it was in the saving of this child, with a great effort, as certain circumstances seemed to indicate, that Sebastian had lost his life.

His parents were come to seek him, believing him bent on self-destruction, and were almost glad to find him thus. A learned physician, moreover, endeavoured to comfort his mother by remarking that in any case he must certainly have died ere many years were passed, slowly, perhaps painfully, of a disease then coming into the world; disease begotten by the fogs of that country — waters, he observed, not in their place, 'above the firmament'[42] — on people grown somewhat over-delicate in their nature by the effects of modern luxury.

42. *Cf. Genesis*, i.7.

APPRECIATIONS

Style

SINCE all progress of mind consists for the most part in differentiation, in the resolution of an obscure and complex object into its component aspects, it is surely the stupidest of losses to confuse things which right reason has put asunder, to lose the sense of achieved distinctions, the distinction between poetry and prose, for instance, or, to speak more exactly, between the laws and characteristic excellences of verse and prose composition. On the other hand, those who have dwelt most emphatically on the distinction between prose and verse, prose and poetry, may sometimes have been tempted to limit the proper functions of prose too narrowly; and this again is at least false economy, as being, in effect, the renunciation of a certain means or faculty, in a world where after all we must needs make the most of things. Critical efforts to limit art *a priori*,[1] by anticipations regarding the natural incapacity of the material with which this or that artist works, as the sculptor with solid form, or the prose-writer with the ordinary language of men, are always liable to be discredited by the facts of artistic production; and while prose is actually found to be a coloured thing with Bacon, picturesque with Livy and Carlyle, musical with Cicero and Newman, mystical and intimate with Plato and Michelet and Sir Thomas Browne, exalted or florid, it may be, with Milton and Taylor,[2] it will be useless to protest that it can be nothing at all, except something very tamely and narrowly confined to mainly practical ends — a kind of 'good round-hand'; as useless as the protest that poetry might not touch prosaic subjects as with Wordsworth, or an abstruse matter as with Browning, or treat contemporary life nobly as with Tennyson. In subordination to one essential beauty in all good literary style, in all literature as a fine art, as there are many beauties of poetry so the beauties of prose are many, and it is the

1. 'presumptively; without a determining examination.'

2. Jules Michelet (1798–1874), French historian; Sir Thomas Browne (1605–82), physician and writer of religious prose; Jeremy Taylor (1613–67), clergyman and writer of religious prose.

business of criticism to estimate them as such; as it is good in the criticism of verse to look for those hard, logical, and quasi-prosaic excellences which that too has, or needs. To find in the poem, amid the flowers, the allusions, the mixed perspectives, of *Lycidas*[3] for instance, the thought, the logical structure: — how wholesome! how delightful! as to identify in prose what we call the poetry, the imaginative power, not treating it as out of place and a kind of vagrant intruder, but by way of an estimate of its rights, that is, of its achieved powers, there.

Dryden, with the characteristic instinct of his age, loved to emphasise the distinction between poetry and prose, the protest against their confusion with each other, coming with somewhat diminished effect from one whose poetry was so prosaic. In truth, his sense of prosaic excellence affected his verse rather than his prose, which is not only fervid, richly figured, poetic, as we say, but vitiated, all unconsciously, by many a scanning line.[4] Setting up correctness, that humble merit of prose, as the central literary excellence, he is really a less correct writer than he may seem, still with an imperfect mastery of the relative pronoun. It might have been foreseen that, in the rotations of mind, the province of poetry in prose would find its assertor; and, a century after Dryden, amid very different intellectual needs, and with the need therefore of great modifications in literary form, the range of the poetic force in literature was effectively enlarged by Wordsworth. The true distinction between prose and poetry he regarded[5] as the almost technical or accidental one of the absence or presence of metrical beauty, or, say! metrical restraint; and for him the opposition came to be between verse and prose of course; but, as the essential dichotomy in this matter, between imaginative and unimaginative writing, parallel to De Quincey's[6] distinction between 'the literature of power and the literature of knowledge,' in the former of which the composer gives us not fact, but his peculiar sense of fact, whether past or present.

Dismissing then, under sanction of Wordsworth, that harsher opposition of poetry to prose, as savouring in fact of the arbitrary psychology of the last century, and with it the prejudice that there can be but one only beauty of prose style, I propose here to point out certain qualities of all literature as a fine art, which, if they apply to the literature of fact, apply still more to the literature of the imaginative sense of fact, while they apply indifferently to verse and prose, so far as either is really imaginative — certain conditions of true art in both alike, which conditions may also contain in them the secret of the proper discrimination and guardianship of the peculiar excellences of either.

The line between fact and something quite different from external fact is, indeed, hard to draw. In Pascal,[7] for instance, in the persuasive writers generally, how difficult to define the point where, from time to time, argument which, if it is to be worth anything at all, must consist of facts or groups of facts, becomes a pleading — a theorem no longer, but essentially an appeal to the reader to catch the writer's spirit, to think with him, if one can or will — an expression no longer of fact but of his sense of it, his peculiar intuition of a world, prospective, or discerned below the faulty conditions of the present, in either case changed somewhat

3. A great elegiac poem (publ. 1638) by Milton.
4. A line that when looked over, or 'scanned,' is found to have rhythmically regular sound-groups, as a line of poetry does.
5. See his Preface to *Lyrical Ballads*. *Dichotomy*: division into two classes.
6. Thomas De Quincey (1785–1859), English critic and man of letters. For the quotation, see his *Works*, ed. Masson, 1897, XI,59 ('The Poetry of Pope'), and elsewhere — *e.g.*, X, 46 ff. ('Letters to a Young Man').
7. Blaise Pascal (1623–62), French mathematician and theologian. In July 1894, Pater delivered at Oxford a lecture on Pascal, printed in the *Contemporary Review*, Dec. 1894.

from the actual world. In science, on the other hand, in history so far as it conforms to scientific rule, we have a literary domain where the imagination may be thought to be always an intruder. And as, in all science, the functions of literature reduce themselves eventually to the transcribing of fact, so all the excellences of literary form in regard to science are reducible to various kinds of painstaking; this good quality being involved in all 'skilled work' whatever, in the drafting of an act of parliament, as in sewing. Yet here again, the writer's sense of fact, in history especially, and in all those complex subjects which do but lie on the borders of science, will still take the place of fact, in various degrees. Your historian, for instance, with absolutely truthful intention, amid the multitude of facts presented to him must needs select, and in selecting assert something of his own humour, something that comes not of the world without but of a vision within. So Gibbon [8] moulds his unwieldy material to a preconceived view. Livy, Tacitus, Michelet, moving full of poignant sensibility amid the records of the past, each, after his own sense, modifies — who can tell where and to what degree? — and becomes something else than a transcriber; each, as he thus modifies, passing into the domain of art proper. For just in proportion as the writer's aim, consciously or unconsciously, comes to be the transcribing, not of the world, not of mere fact, but of his sense of it, he becomes an artist, his work *fine* art; and good art (as I hope ultimately to show) in proportion to the truth of his presentment of that sense; as in those humbler or plainer functions of literature also, truth — truth to bare fact, there — is the essence of such artistic quality as they may have. Truth! there can be no merit, no craft at all, without that. And further, all beauty is in the long run only *fineness* of truth, or what we call expression, the finer accommodation of speech to that vision within.

— The transcript of his sense of fact rather than the fact, as being preferable, pleasanter, more beautiful to the writer himself. In literature, as in every other product of human skill, in the moulding of a bell or a platter for instance, wherever this sense asserts itself, wherever the producer so modifies his work as, over and above its primary use or intention, to make it pleasing (to himself, of course, in the first instance) there, 'fine' as opposed to merely serviceable art, exists. Literary art, that is, like all art which is in any way imitative or reproductive of fact — form, or colour, or incident — is the representation of such fact as connected with soul, of a specific personality, in its preferences, its volition and power.

Such is the matter of imaginative or artistic literature — this transcript, not of mere fact, but of fact in its infinite variety, as modified by human preference in all its infinitely varied forms. It will be good literary art not because it is brilliant or sober, or rich, or impulsive, or severe, but just in proportion as its representation of that sense, that soul-fact, is true, verse being only one department of such literature, and imaginative prose, it may be thought, being the special art of the modern world. That imaginative prose should be the special and opportune art of the modern world results from two important facts about the latter: first, the chaotic variety and complexity of its interests, making the intellectual issue, the really master currents of the present time incalculable — a condition of mind little susceptible of the restraint proper to verse form, so that the most characteristic verse of the nineteenth century has been lawless verse; and secondly, an all-pervading naturalism, a curiosity about everything whatever as it really is, involving a certain humility of attitude, cognate to what must, after all, be the less ambitious form of literature. And prose

8. Edward Gibbon (1737–94), English historian, author of *The Decline and Fall of the Roman Empire*, 4 vols., 1776–88.

thus asserting itself as the special and privileged artistic faculty of the present day, will be, however critics may try to narrow its scope, as varied in its excellence as humanity itself reflecting on the facts of its latest experience — an instrument of many stops, meditative, observant, descriptive, eloquent, analytic, plaintive, fervid. Its beauties will be not exclusively 'pedestrian': it will exert, in due measure, all the varied charms of poetry, down to the rhythm which, as in Cicero, or Michelet, or Newman, at their best, gives its musical value to every syllable.[9]

The literary artist is of necessity a scholar, and in what he proposes to do will have in mind, first of all, the scholar and the scholarly conscience — the male conscience in this matter, as we must think it, under a system of education which still to so large an extent limits real scholarship to men. In his self-criticism, he supposes always that sort of reader who will go (full of eyes) warily, considerately, though without consideration for him, over the ground which the female conscience traverses so lightly, so amiably. For the material in which he works is no more a creation of his own than the sculptor's marble. Product of a myriad various minds and contending tongues, compact of obscure and minute association, a language has its own abundant and often recondite laws, in the habitual and summary recognition of which scholarship consists. A writer, full of a matter he is before all things anxious to express, may think of those laws, the limitations of vocabulary, structure, and the like, as a restriction, but if a real artist will find in them an opportunity. His punctilious observance of the proprieties of his medium will diffuse through all he writes a general air of sensibility, of refined usage. *Exclusiones debitæ naturæ* — the exclusions, or rejections, which nature demands — we know how large a part these play, according to Bacon,[10] in the science of nature. In a somewhat changed sense, we might say that the art of the scholar is summed up in the observance of those rejections demanded by the nature of his medium, the material he must use. Alive to the value of an atmosphere in which every term finds its utmost degree of expression, and with all the jealousy of a lover of words, he will resist a constant tendency on the part of the majority of those who use them to efface the distinctions of language, the facility of writers often reinforcing in this respect the work of the vulgar. He will feel the obligation not of the laws only, but of those affinities, avoidances, those mere preferences, of his language, which through the associations of literary history have become a part of its nature, prescribing the rejection of many a neology,[11] many a license, many a gipsy phrase which might present itself as actually expressive. His appeal, again, is to the scholar, who has great experience in literature, and will show no favour to short-cuts, or hackneyed illustration, or an affectation of learning designed for the unlearned. Hence a contention, a sense of self-restraint and renunciation, having for the susceptible reader the effect of a challenge for minute consideration; the attention of the writer, in every minutest detail, being a pledge that it is worth the reader's while to be attentive too, that the writer is dealing scrupulously with his instrument, and therefore, indirectly, with the reader himself also, that he has the science

9. Mr. Saintsbury, in his *Specimens of English Prose, from Malory to Macaulay*, has succeeded in tracing, through successive English prose-writers, the tradition of that severer beauty in them, of which this admirable scholar of our literature is known to be a lover. *English Prose, from Mandeville to Thackeray*, more recently 'chosen and edited' by a younger scholar, Mr. Arthur Galton, of New College, Oxford, a lover of our literature at once enthusiastic and discreet, aims at a more various illustration of the eloquent powers of English prose, and is a delightful companion. [Pater's note.]

10. *Cf.* Francis Bacon, *Novum Organum*, Second Book of Aphorisms, No.XVIII.

11. A new word or phrase.

of the instrument he plays on, perhaps, after all, with a freedom which in such case will be the freedom of a master.

For meanwhile, braced only by those restraints, he is really vindicating his liberty in the making of a vocabulary, an entire system of composition, for himself, his own true manner; and when we speak of the manner of a true master we mean what is essential in his art. Pedantry being only the scholarship of *le cuistre* [12] (we have no English equivalent) he is no pedant, and does but show his intelligence of the rules of language in his freedoms with it, addition or expansion, which like the spontaneities of matter in a well-bred person will still further illustrate good taste. — The right vocabulary! Translators have not invariably seen how all-important that is in the work of translation, driving for the most part at idiom or construction; whereas, if the original be first-rate, one's first care should be with its elementary particles, Plato, for instance, being often reproducible by an exact following, with no variation in structure, of word after word, as the pencil follows a drawing under tracing-paper, so only each word or syllable be not of false colour, to change my illustration a little.

Well! that is because any writer worth translating at all has winnowed and searched through his vocabulary, is conscious of the words he would select in systematic reading of a dictionary, and still more of the words he would reject were the dictionary other than Johnson's; [13] and doing this with his peculiar sense of the world ever in view, in search of an instrument for the adequate expression of that, he begets a vocabulary faithful to the colouring of his own spirit, and in the strictest sense original. That living authority which language needs lies, in truth, in its scholars, who recognising always that every language possesses a genius, a very fastidious genius, of its own, expand at once and purify its very elements, which must needs change along with the changing thoughts of living people. Ninety years ago, for instance, great mental force, certainly, was needed by Wordsworth,[14] to break through the consecrated poetic associations of a century, and speak the language that was his, that was to become in a measure the language of the next generation. But he did it with the tact of a scholar also. English, for a quarter of a century past, has been assimilating the phraseology of pictorial art; for half a century, the phraseology of the great German metaphysical movement of eighty years ago; in part also the language of mystical theology: and none but pedants will regret a great consequent increase of its resources. For many years to come its enterprise may well lie in the naturalisation of the vocabulary of science, so only it be under the eye of a sensitive scholarship — in a liberal naturalisation of the ideas of science too, for after all the chief stimulus of good style is to possess a full, rich, complex matter to grapple with. The literary artist, therefore, will be well aware of physical science; science also attaining, in its turn, its true literary ideal. And then, as the scholar is nothing without the historic sense, he will be apt to restore not really obsolete or really worn-out words, but the finer edge of words still in use: *ascertain*, *communicate*, *discover* — words like these it has been part of our 'business' to misuse. And still, as language was made for man, he will be no authority for correctnesses which, limiting freedom of utterance, were yet but accidents in their

12. 'A pedant of the vulgar, narrow-minded sort.' The derivation is from the Latin *coquus*, a cook, and so suggests not mastery, but servility.

13. Dr. Samuel Johnson's great *Dictionary of the English Language* appeared in 1755, and went through many editions.

14. The *Lyrical Ballads* appeared first in 1798; its poems were written chiefly, as Wordsworth pointed out in the 'Advertisement,' in 'the language of conversation in the middle and lower classes of society.'

origin; as if one vowed not to say '*its*,' which ought to have been in Shakespeare; '*his*' and '*hers*,' for inanimate objects, being but a barbarous and really inexpressive survival.[15] Yet we have known many things like this. Racy Saxon monosyllables, close to us as touch and sight, he will intermix readily with those long, savoursome, Latin words, rich in 'second intention.' In this late day certainly, no critical process can be conducted reasonably without eclecticism. Of such eclecticism we have a justifying example in one of the first poets of our time. How illustrative of monosyllabic effect, of sonorous Latin, of the phraseology of science, of metaphysic, of colloquialism even, are the writings of Tennyson; yet with what a fine, fastidious scholarship throughout!

A scholar writing for the scholarly, he will of course leave something to the willing intelligence of his reader. 'To go preach to the first passer-by,' says Montaigne, 'to become tutor to the ignorance of the first I meet, is a thing I abhor';[16] a thing, in fact, naturally distressing to the scholar, who will therefore ever be shy of offering uncomplimentary assistance to the reader's wit. To really strenuous minds there is a pleasurable stimulus in the challenge for a continuous effort on their part, to be rewarded by securer and more intimate grasp of the author's sense. Self-restraint, a skilful economy of means, *ascêsis*,[17] that too has a beauty of its own; and for the reader supposed there will be an æsthetic satisfaction in that frugal closeness of style which makes the most of a word, in the exaction from every sentence of a precise relief, in the just spacing out of word to thought, in the logically filled space connected always with the delightful sense of difficulty overcome.

Different classes of persons, at different times, make, of course, very various demands upon literature. Still, scholars, I suppose, and not only scholars, but all disinterested lovers of books, will always look to it, as to all other fine art, for a refuge, a sort of cloistral refuge, from a certain vulgarity in the actual world. A perfect poem like *Lycidas*, a perfect fiction like *Esmond*, the perfect handling of a theory like Newman's *Idea of a University*,[18] has for them something of the uses of a religious 'retreat.' Here, then, with a view to the central need of a select few, those 'men of a finer thread' who have formed and maintain the literary ideal, everything, every component element, will have undergone exact trial, and, above all, there will be no uncharacteristic or tarnished or vulgar decoration, permissible ornament being for the most part structural, or necessary. As the painter in his picture, so the artist in his book, aims at the production by honourable artifice of a peculiar atmosphere. 'The artist,' says Schiller,[19] 'may be known rather by what he *omits*'; and in literature, too, the true artist may be best recognised by his tact of omission. For to the grave reader words too are grave; and the ornamental word, the figure, the accessory form or colour or reference, is rarely content to die to thought precisely at the right moment, but will inevitably linger awhile stirring a long 'brain-wave' behind it of perhaps quite alien associations.

Just there, it may be, is the detrimental tendency of the sort of scholarly attentiveness of mind I am recommending. But the true artist allows for it. He will re-

15. Shakespeare, following Elizabethan usage, has *his* for the neuter possessive; *cf. Hamlet*, I,iii,59–60: 'Give thy thoughts no tongue, Nor any unproportion'd thought his act.'

18. Thackeray's novel, *The History of Henry Esmond*, 1852; Newman's *Discourses on University Subjects*, delivered before the Catholics in Dublin in 1852, presented aims and principles of education.

19. Johann Christoph Friedrich von Schiller (1759–1805), German poet and dramatist.

member that, as the very word ornament indicates what is in itself non-essential, so the 'one beauty'[20] of all literary style is of its very essence, and independent, in prose and verse alike, of all removable decoration; that it may exist in its fullest lustre, as in Flaubert's *Madame Bovary*, for instance, or in Stendhal's *Le Rouge et Le Noir*,[21] in a composition utterly unadorned, with hardly a single suggestion of visibly beautiful things. Parallel, allusion, the allusive way generally, the flowers in the garden: — he knows the narcotic force of these upon the negligent intelligence to which any *diversion*, literally, is welcome, any vagrant intruder, because one can go wandering away with it from the immediate subject. Jealous, if he have a really quickening motive within, of all that does not hold directly to that, of the facile, the otiose, he will never depart from the strictly pedestrian process, unless he gains a ponderable something thereby. Even assured of its congruity, he will still question its serviceableness. Is it worth while, can we afford, to attend to just that, to just that figure or literary reference, just then? — Surplusage! he will dread that, as the runner on his muscles. For in truth all art does but consist in the removal of surplusage, from the last finish of the gem-engraver blowing away the last particle of invisible dust, back to the earliest divination of the finished work to be, lying somewhere, according to Michelangelo's fancy, in the rough-hewn block of stone.

And what applies to figure or flower must be understood of all other accidental or removable ornaments of writing whatever; and not of specific ornament only, but of all that latent colour and imagery which language as such carries in it. A lover of words for their own sake, to whom nothing about them is unimportant, a minute and constant observer of their physiognomy, he will be on the alert not only for obviously mixed metaphors of course, but for the metaphor that is mixed in all our speech, though a rapid use may involve no cognition of it. Currently recognising the incident, the colour, the physical elements or particles in words like *absorb*, *consider*, *extract*, to take the first that occur, he will avail himself of them, as further adding to the resources of expression. The elementary particles of language will be realised as colour and light and shade through his scholarly living in the full sense of them. Still opposing the constant degradation of language by those who use it carelessly, he will not treat coloured glass as if it were clear; and while half the world is using figure unconsciously, will be fully aware not only of all that latent figurative texture in speech, but of the vague, lazy, half formed personification — a rhetoric, depressing, and worse than nothing, because it has no really rhetorical motive — which plays so large a part there, and, as in the case of more ostentatious ornament, scrupulously exact of it, from syllable to syllable, its precise value.

So far I have been speaking of certain conditions of the literary art arising out of the medium or material in or upon which it works, the essential qualities of language and its aptitudes for contingent ornamentation, matters which define scholarship as science and good taste respectively. They are both subservient to a more intimate quality of good style: more intimate, as coming nearer to the artist himself. The otiose, the facile, surplusage: why are these abhorrent to the true literary artist, except because in literary as in all other art, structure is all-important, felt, or painfully missed, everywhere? — that architectural conception of work, which foresees the end in the beginning and never loses sight of it, and in every

20. *Cf.* the first paragraph of the present essay.

21. French novels by Gustave Flaubert (1821–80), and Stendhal, pseudonym for Marie Henri Beyle (1783–1842).

part is conscious of all the rest, till the last sentence does but, with undiminished vigour, unfold and justify the first — a condition of literary art, which, in contradistinction to another quality of the artist himself, to be spoken of later, I shall call the necessity of *mind* in style.

An acute philosophical writer, the late Dean Mansel [22] (a writer whose works illustrate the literary beauty there may be in closeness, and with obvious repression or economy of a fine rhetorical gift) wrote a book, of fascinating precision in a very obscure subject, to show that all the technical laws of logic are but means of securing, in each and all of its apprehensions, the unity, the strict identity with itself, of the apprehending mind. All the laws of good writing aim at a similar unity or identity of the mind in all the processes by which the word is associated to its import. The term is right, and has its essential beauty, when it becomes, in a manner, what it signifies, as with the names of simple sensations. To give the phrase, the sentence, the structural member, the entire composition, song, or essay, a similar unity with its subject and with itself: — style is in the right way when it tends towards that. All depends upon the original unity, the vital wholeness and identity, of the initiatory apprehension or view. So much is true of all art, which therefore requires always its logic, its comprehensive reason — insight, foresight, retrospect, in simultaneous action — true, most of all, of the literary art, as being of all the arts most closely cognate to the abstract intelligence. Such logical coherency may be evidenced not merely in the lines of composition as a whole, but in the choice of a single word, while it by no means interferes with, but may even prescribe, much variety, in the building of the sentence for instance, or in the manner, argumentative, descriptive, discursive, of this or that part or member of the entire design. The blithe, crisp sentence, decisive as a child's expression of its needs, may alternate with the long-contending, victoriously intricate sentence; the sentence, born with the integrity of a single word, relieving the sort of sentence in which, if you look closely, you can see much contrivance, much adjustment, to bring a highly qualified matter into compass at one view. For the literary architecture, if it is to be rich and expressive, involves not only foresight of the end in the beginning, but also development or growth of design, in the process of execution, with many irregularities, surprises, and afterthoughts; the contingent as well as the necessary being subsumed under the unity of the whole. As truly, to the lack of such architectural design, of a single, almost visual, image, vigorously informing an entire, perhaps very intricate, composition, which shall be austere, ornate, argumentative, fanciful, yet true from first to last to that vision within, may be attributed those weaknesses of conscious or unconscious repetition of word, phrase, motive, or member of the whole matter, indicating, as Flaubert was aware, an original structure in thought not organically complete. With such foresight, the actual conclusion will most often get itself written out of hand, before, in the more obvious sense, the work is finished. With some strong and leading sense of the world, the tight hold of which secures true *composition* and not mere loose accretion, the literary artist, I suppose, goes on considerately, setting joint to joint, sustained by yet restraining the productive ardour, retracing the negligences of his first sketch, repeating his steps only that he may give the reader a sense of secure and restful progress, readjusting mere assonances even, that they may soothe the reader, or at least not interrupt him on his way; and then, somewhere before the end comes, is burdened, inspired, with his con-

22. Henry L. Mansel (1820–71), Dean of St. Paul's Cathedral. His *Prolegomena Logica*, probably referred to here, appeared in 1851.

clusion, and betimes delivered of it, leaving off, not in weariness and because he finds *himself* at an end, but in all the freshness of volition. His work now structurally complete, with all the accumulating effect of secondary shades of meaning, he finishes the whole up to the just proportion of that ante-penultimate conclusion, and all becomes expressive. The house he has built is rather a body he has informed. And so it happens, to its greater credit, that the better interest even of a narrative to be recounted, a story to be told, will often be in its second reading. And though there are instances of great writers who have been no artists, an unconscious tact sometimes directing work in which we may detect, very pleasurably, many of the effects of conscious art, yet one of the greatest pleasures of really good prose literature is in the critical tracing out of that conscious artistic structure, and the pervading sense of it as we read. Yet of poetic literature too; for, in truth, the kind of constructive intelligence here supposed is one of the forms of the imagination.

That is the special function of mind, in style. Mind and soul: — hard to ascertain philosophically, the distinction is real enough practically, for they often interfere, are sometimes in conflict, with each other. Blake, in the last century, is an instance of preponderating soul, embarrassed, at a loss, in an era of preponderating mind. As a quality of style, at all events, soul is a fact, in certain writers — the way they have of absorbing language, of attracting it into the peculiar spirit they are of, with a subtlety which makes the actual result seem like some inexplicable inspiration. By mind, the literary artist reaches us, through static and objective indications of design in his work, legible to all. By soul, he reaches us, somewhat capriciously perhaps, one and not another, through vagrant sympathy and a kind of immediate contact. Mind we cannot choose but approve where we recognise it; soul may repel us, not because we misunderstand it. They way in which theological interests sometimes avail themselves of language is perhaps the best illustration of the force I mean to indicate generally in literature, by the word *soul*. Ardent religious persuasion may exist, may make its way, without finding any equivalent heat in language: or, again, it may enkindle words to various degrees, and when it really takes hold of them doubles its force. Religious history presents many remarkable instances in which, through no mere phrase-worship, an unconscious literary tact has, for the sensitive, laid open a privileged pathway from one to another. 'The altar-fire,' people say, 'has touched those lips!' The Vulgate, the English Bible, the English Prayer-Book, the writings of Swedenborg, the Tracts for the Times: [23] — there, we have instances of widely different and largely diffused phases of religious feeling in operation as soul in style. But something of the same kind acts with similar power in certain writers of quite other than theological literature, on behalf of some wholly personal and peculiar sense of theirs. Most easily illustrated by theological literature, this quality lends to profane writers a kind of religious influence. At their best, these writers become, as we say sometimes, 'prophets'; such character depending on the effect not merely of their matter, but of their matter as allied to, in 'electric affinity' with, peculiar form, and working in all cases by an immediate sympathetic contact, on which account it is that it may be called soul, as opposed to mind, in style. And this too is a faculty of choosing and rejecting what is congruous or otherwise, with a drift towards unity — unity of atmosphere here, as there of design — soul securing colour (or per-

23. The Vulgate, a Latin version of the Bible made by Jerome at the end of the 4th century; Emanuel Swedenborg (1688–1772), Swedish theologian and mystic, founder of the New Church, or Swedenborgians; Newman, Pusey, and others wrote the ninety numbers of the religious *Tracts for the Times*, 1833 to 1841.

fume, might we say?) as mind secures form, the latter being essentially finite, the former vague or infinite, as the influence of a living person is practically infinite. There are some to whom nothing has any real interest, or real meaning, except as operative in a given person; and it is they who best appreciate the quality of soul in literary art. They seem to know a *person*, in a book, and make way by intuition: yet, although they thus enjoy the completeness of a personal information, it is still a characteristic of soul, in this sense of the word, that it does but suggest what can never be uttered, not as being different from, or more obscure than, what actually gets said, but as containing that plenary substance of which there is only one phase or facet in what is there expressed.

If all high things have their martyrs, Gustave Flaubert might perhaps rank as the martyr of literary style. In his printed correspondence, a curious series of letters, written in his twenty-fifth year, records what seems to have been his one other passion — a series of letters which, with its fine casuistries, its firmly repressed anguish, its tone of harmonious grey, and the sense of disillusion in which the whole matter ends, might have been, a few slight changes supposed, one of his own fictions. Writing to Madame X. certainly he does display, by 'taking thought' mainly, by constant and delicate pondering, as in his love for literature, a heart really moved, but still more, and as the pledge of that emotion, a loyalty to his work. Madame X., too, is a literary artist, and the best gifts he can send her are precepts of perfection in art, counsels for the effectual pursuit of that better love. In his love-letters it is the pains and pleasures of art he insists on, its solaces: he communicates secrets, reproves, encourages, with a view to that. Whether the lady was dissatisfied with such divided or indirect service, the reader is not enabled to see; but sees that, on Flaubert's part at least, a living person could be no rival of what was, from first to last, his leading passion, a somewhat solitary and exclusive one.[24]

'I must scold you,' he writes, 'for one thing, which shocks, scandalises me, the small concern, namely, you show for art just now. As regards glory be it so: there, I approve. But for art! — the one thing in life that is good and real — can you compare with it an earthly love? — prefer the adoration of a relative beauty to the *cultus* of the true beauty? Well! I tell you the truth. That is the one thing good in me: the one thing I have, to me estimable. For yourself, you blend with the beautiful a heap of alien things, the useful, the agreeable, what not? —

'The only way not to be unhappy is to shut yourself up in art, and count everything else as nothing. Pride takes the place of all beside when it is established on a large basis. Work! God wills it. That, it seems to me, is clear. —

'I am reading over again the *Æneid*, certain verses of which I repeat to myself to satiety. There are phrases there which stay in one's head, by which I find myself beset, as with those musical airs which are for ever returning, and cause you pain, you love them so much. I observe that I no longer laugh much, and am no longer depressed. I am ripe. You talk of my serenity, and envy me. It may well surprise you. Sick, irritated, the prey a thousand times a day of cruel pain, I continue my labour like a true working-man, who, with sleeves turned up, in the sweat of his brow, beats away at his anvil, never troubling himself whether it rains or blows, for hail or thunder. I was not like that formerly. The change has taken place naturally, though my will has counted for something in the matter. —

'Those who write in good style are

24. Madame X was a Madame Louise Colet. For the quotations, see Flaubert's letters to her in his *Œuvres*, Paris, 1910, II,238–39,240,240–41,244–45.

sometimes accused of a neglect of ideas, and of the moral end, as if the end of the physician were something else than healing, of the painter than painting — as if the end of art were not, before all else, the beautiful.'

What, then, did Flaubert understand by beauty, in the art he pursued with so much fervour, with so much self-command? Let us hear a sympathetic commentator: — [25]

'Possessed of an absolute belief that there exists but one way of expressing one thing, one word to call it by, one adjective to qualify, one verb to animate it, he gave himself to superhuman labour for the discovery, in every phrase, of that word, that verb, that epithet. In this way, he believed in some mysterious harmony of expression, and when a true word seemed to him to lack euphony still went on seeking another, with invincible patience, certain that he had not yet got hold of the *unique* word. . . . A thousand preoccupations would beset him at the same moment, always with this desperate certitude fixed in his spirit: Among all the expressions in the world, all forms and turns of expression, there is but *one* — one form, one mode — to express what I want to say.'

The one word for the one thing, the one thought, amid the multitude of words, terms, that might just do: the problem of style was there! — the unique word, phrase, sentence, paragraph, essay, or song, absolutely proper to the single mental presentation or vision within. In that perfect justice, over and above the many contingent and removable beauties with which beautiful style may charm us, but which it can exist without, independent of them yet dexterously availing itself of them, omnipresent in good work, in function at every point, from single epithets to the rhythm of a whole book, lay the specific, indispensable, very intellectual, beauty of literature, the possibility of which constitutes it a fine art.

One seems to detect the influence of a philosophic idea there, the idea of a natural economy, of some pre-existent adaptation, between a relative, somewhere in the world of thought, and its correlative, somewhere in the world of language — both alike, rather, somewhere in the mind of the artist, desiderative, expectant, inventive — meeting each other with the readiness of 'soul and body reunited,' in Blake's rapturous design; [26] and, in fact, Flaubert was fond of giving his theory philosophical expression. [27]—

'There are no beautiful thoughts,' he would say, 'without beautiful forms, and conversely. As it is impossible to extract from a physical body the qualities which really constitute it — colour, extension, and the like — without reducing it to a hollow abstraction, in a word, without destroying it; just so it is impossible to detach the form from the idea, for the idea only exists by virtue of the form.'

All the recognised flowers, the removable ornaments of literature (including harmony and ease in reading aloud, very carefully considered by him) counted certainly; for these too are part of the actual value of what one says. But still, after all, with Flaubert, the search, the unwearied research, was not for the smooth, or winsome, or forcible word, as such, as with false Ciceronians,[28] but quite simply and honestly, for the word's adjustment to its meaning. The first condition of this must be, of course, to know yourself, to have ascertained your own sense exactly. Then, if we suppose an artist, he says to the reader, — I want you to see precisely what

28. *Ciceronians*: eloquent writers.

I see. Into the mind sensitive to 'form,' a flood of random sounds, colours, incidents, is ever penetrating from the world without, to become, by sympathetic selection, a part of its very structure, and, in turn, the visible vesture and expression of that other world it sees so steadily within, nay, already with a partial conformity thereto, to be refined, enlarged, corrected, at a hundred points; and it is just there, just at those doubtful points that the function of style, as tact or taste, intervenes. The unique term will come more quickly to one than another, at one time than another, according also to the kind of matter in question. Quickness and slowness, ease and closeness alike, have nothing to do with the artistic character of the true word found at last. As there is a charm of ease, so there is also a special charm in the signs of discovery, of effort and contention towards a due end, as so often with Flaubert himself — in the style which has been pliant, as only obstinate, durable metal can be, to the inherent perplexities and recusancy of a certain difficult thought.

If Flaubert had not told us, perhaps we should never have guessed how tardy and painful his own procedure really was, and after reading his confession may think that his almost endless hesitation had much to do with diseased nerves. Often, perhaps, the felicity supposed will be the product of a happier, a more exuberant nature than Flaubert's. Aggravated, certainly, by a morbid physical condition, that anxiety in 'seeking the phrase,' which gathered all the other small *ennuis*[29] of a really quiet existence into a kind of battle, was connected with his lifelong contention against facile poetry, facile art — art, facile and flimsy; and what constitutes the true artist is not the slowness or quickness of the process, but the absolute success of the result. As with those labourers in the parable, the prize is independent of the mere length of the actual day's work. 'You talk,' he writes, odd, trying lover, to Madame X. —[30]

'You talk of the exclusiveness of my literary tastes. That might have enabled you to divine what kind of a person I am in the matter of love. I grow so hard to please as a literary artist, that I am driven to despair. I shall end by not writing another line.'

'Happy,' he cries, in a moment of discouragement at that patient labour, which for him, certainly, was the condition of a great success —

'Happy those who have no doubts of themselves! who lengthen out, as the pen runs on, all that flows forth from their brains. As for me, I hesitate, I disappoint myself, turn round upon myself in despite: my taste is augmented in proportion as my natural vigour decreases, and I afflict my soul over some dubious word out of all proportion to the pleasure I get from a whole page of good writing. One would have to live two centuries to attain a true idea of any matter whatever. What Buffon said is a big blasphemy: genius is not long-continued patience. Still, there is some truth in the statement, and more than people think, especially as regards our own day. Art! art! art! bitter deception! phantom that glows with light, only to lead one on to destruction.'

Again —

'I am growing so peevish about my writing. I am like a man whose ear is true but who plays falsely on the violin: his fingers refuse to reproduce precisely those sounds of which he has the inward sense. Then the tears come rolling down from the poor scraper's eyes and the bow falls from his hand.'

Coming slowly or quickly, when it comes, as it came with so much labour of

29. 'tedious vexations.'

30. For the quotations, see Flaubert, *op.cit.*, II, 213–14. For the parable alluded to in the preceding sentence, see *Matthew*, xx,1–16.

mind, but also with so much lustre, to Gustave Flaubert, this discovery of the word will be, like all artistic success and felicity, incapable of strict analysis: effect of an intuitive condition of mind, it must be recognised by like intuition on the part of the reader, and a sort of immediate sense. In every one of those masterly sentences of Flaubert there was, below all mere contrivance, shaping and afterthought, by some happy instantaneous concourse of the various faculties of the mind with each other, the exact apprehension of what was *needed* to carry the meaning. And that it fits with absolute justice will be a judgment of immediate sense in the appreciative reader. We all feel this in what may be called inspired translation. Well! all language involves translation from inward to outward. In literature, as in all forms of art, there are the absolute and the merely relative or accessory beauties; and precisely in that exact proportion of the term to its purpose is the absolute beauty of style, prose or verse. All the good qualities, the beauties, of verse also, are such, only as precise expression.

In the highest as in the lowliest literature, then, the one indispensable beauty is, after all, truth: — truth to bare fact in the latter, as to some personal sense of fact, diverted somewhat from men's ordinary sense of it, in the former; truth there as accuracy, truth here as expression, that finest and most intimate form of truth, the *vraie vérité*.[31] And what an eclectic principle this really is! employing for its one sole purpose — that absolute accordance of expression to idea — all other literary beauties and excellences whatever: how many kinds of style it covers, explains, justifies, and at the same time safeguards! Scott's facility, Flaubert's deeply pondered evocation of 'the phrase,' are equally good art. Say what you have to say, what you have a will to say, in the simplest, the most direct and exact manner possible, with no surplusage: — there, is the justification of the sentence so fortunately born, 'entire, smooth, and round,' that it needs no punctuation, and also (that is the point!) of the most elaborate period, if it be right in its elaboration. Here is the office of ornament: here also the purpose of restraint in ornament. As the exponent of truth, that austerity (the beauty, the function, of which in literature Flaubert understood so well) becomes not the correctness or purism of the mere scholar, but a security against the otiose, a jealous exclusion of what does not really tell towards the pursuit of relief of life and vigour in the portraiture of one's sense. License again, the making free with rule, if it be indeed, as people fancy, a habit of genius, flinging aside or transforming all that opposes the liberty of beautiful production, will be but faith to one's own meaning. The seeming baldness of *Le Rouge et Le Noir* is nothing in itself; the wild ornament of *Les Misérables* is nothing in itself; and the restraint of Flaubert, amid a real natural opulence, only redoubled beauty — the phrase so large and so precise at the same time, hard as bronze, in service to the more perfect adaptation of words to their matter. Afterthoughts, retouchings, finish, will be of profit only so far as they too really serve to bring out the original, initiative, generative, sense in them.

In this way, according to the well-known saying, 'The style is the man,'[32] complex or simple, in his individuality, his plenary sense of what he really has to say, his sense of the world; all cautions regarding style arising out of so many natural scruples as to the medium through which alone he can expose that inward sense of things, the purity of this medium, its laws or tricks of refraction: nothing is to be left there which might give conveyance to any

31. 'true truth.'

32. *Cf.* Buffon, *Œuvres complètes*, new ed., Paris, 1824, I,clx ('Discours prononcé à l'Académie Française,' sur le style): 'le style est l'homme même.'

matter save that. Style in all its varieties, reserved or opulent, terse, abundant, musical, stimulant, academic, so long as each is really characteristic or expressive, finds thus its justification, the sumptuous good taste of Cicero being as truly the man himself, and not another, justified, yet insured inalienably to him, thereby, as would have been his portrait by Raffaelle,[33] in full consular splendour, on his ivory chair.

A relegation, you may say perhaps — a relegation of style to the subjectivity, the mere caprice, of the individual, which must soon transform it into mannerism. Not so! since there is, under the conditions supposed, for those elements of the man, for every lineament of the vision within, the one word, the one acceptable word, recognisable by the sensitive, by others 'who have intelligence' in the matter, as absolutely as ever anything can be in the evanescent and delicate region of human language. The style, the manner, would be the man, not in his unreasoned and really uncharacteristic caprices, involuntary or affected, but in absolutely sincere apprehension of what is most real to him. But let us hear our French guide again. — [34]

'Styles,' says Flaubert's commentator, '*Styles*, as so many peculiar moulds, each of which bears the mark of a particular writer, who is to pour into it the whole content of his ideas, were no part of his theory. What he believed in was *Style*: that is to say, a certain absolute and unique manner of expressing a thing, in all its intensity and colour. For him the *form* was the work itself. As in living creatures, the blood, nourishing the body, determines its very contour and external aspect, just so, to his mind, the *matter*, the basis, in a work of art, imposed, necessarily, the unique, the just expression, the measure, the rhythm — the *form* in all its characteristics.'

If the style be the man, in all the colour and intensity of a veritable apprehension, it will be in a real sense 'impersonal.'

I said, thinking of books like Victor Hugo's *Les Misérables*, that prose literature was the characteristic art of the nineteenth century, as others, thinking of its triumphs since the youth of Bach,[35] have assigned that place to music. Music and prose literature are, in one sense, the opposite terms of art; the art of literature presenting to the imagination, through the intelligence, a range of interests, as free and various as those which music presents to it through sense. And certainly the tendency of what has been here said is to bring literature too under those conditions, by conformity to which music takes rank as the typically perfect art. If music be the ideal of all art whatever, precisely because in music it is impossible to distinguish the form from the substance or matter, the subject from the expression, then, literature, by finding its specific excellence in the absolute correspondence of the term to its import, will be but fulfilling the condition of all artistic quality in things everywhere, of all good art.

Good art, but not necessarily great art; the distinction between great art and good art depending immediately, as regards literature at all events, not on its form, but on the matter. Thackeray's *Esmond*, surely, is greater art than *Vanity Fair*, by the greater dignity of its interests. It is on the quality of the matter it informs or controls, its compass, its variety, its alliance to great ends, or the depth of the note of revolt, or the largeness of hope in it, that the greatness of literary art depends, as *The Divine Comedy*, *Paradise Lost*, *Les Misérables*, *The English Bible*, are great art. Given the conditions I have tried to explain as constituting good art; — then, if it be devoted further to the increase of men's happiness, to the redemption of the oppressed, or the enlargement of our sym-

pathies with each other, or to such presentment of new or old truth about ourselves and our relation to the world as may ennoble and fortify us in our sojourn here, or immediately, as with Dante, to the glory of God, it will be also great art; if, over and above those qualities I summed up as mind and soul — that colour and mystic perfume, and that reasonable structure, it has something of the soul of humanity in it, and finds its logical, its architectural place, in the great structure of human life.

Coleridge

FORMS of intellectual and spiritual culture sometimes exercise their subtlest and most artful charm when life is already passing from them. Searching and irresistible as are the changes of the human spirit on its way to perfection, there is yet so much elasticity of temper that what must pass away sooner or later is not disengaged all at once, even from the highest order of minds. Nature, which by one law of development evolves ideas, hypotheses, modes of inward life, and represses them in turn, has in this way provided that the earlier growth should propel its fibres into the later, and so transmit the whole of its forces in an unbroken continuity of life. Then comes the spectacle of the reserve of the elder generation exquisitely refined by the antagonism of the new. That current of new life chastens them while they contend against it. Weaker minds fail to perceive the change: the clearest minds abandon themselves to it. To feel the change everywhere, yet not abandon oneself to it, is a situation of difficulty and contention. Communicating, in this way, to the passing stage of culture, the charm of what is chastened, high-strung, athletic, they yet detach the highest minds from the past, by pressing home its difficulties and finally proving it impossible. Such has been the charm of many leaders of lost causes in philosophy and in religion. It is the special charm of Coleridge, in connexion with those older methods of philosophic inquiry, over which the empirical philosophy of our day has triumphed.

Modern thought is distinguished from ancient by its cultivation of the 'relative' spirit in place of the 'absolute.' Ancient philosophy sought to arrest every object in an eternal outline, to fix thought in a necessary formula, and the varieties of life in a classification by 'kinds,' or *genera*. To the modern spirit nothing is, or can be rightly known, except relatively and under conditions. The philosophical conception of the relative has been developed in modern times through the influence of the sciences of observation. Those sciences reveal types of life evanescing into each other by inexpressible refinements of change. Things pass into their opposites by accumulation of undefinable quantities. The growth of those sciences consists in a continual analysis of facts of rough and general observation into groups of facts more precise and minute. The faculty for truth is recognised as a power of distinguishing and fixing delicate and fugitive detail. The moral world is ever in contact with the physical, and the relative spirit has invaded moral philosophy from the ground of the inductive sciences. There it has started a new analysis of the relations of body and mind, good and evil, freedom and necessity. Hard and abstract moralities are yielding to a more exact estimate of the subtlety and complexity of our life. Always, as an organism increases in perfection, the conditions of its life become more complex. Man is the most complex of the products of nature. Character merges into temperament: the nervous system refines itself into intellect. Man's physical organism is played upon not only by the physical conditions about it, but by remote laws of inheritance, the vibration of long-past acts reaching him in the midst of the new order of things in which he lives. When we have estimated these conditions he is still not yet simple and iso-

lated; for the mind of the race, the character of the age, sway him this way or that through the medium of language and current ideas. It seems as if the most opposite statements about him were alike true: he is so receptive, all the influences of nature and of society ceaselessly playing upon him, so that every hour in his life is unique, changed altogether by a stray word, or glance, or touch. It is the truth of these relations that experience gives us, not the truth of eternal outlines ascertained once for all, but a world of fine gradations and subtly linked conditions, shifting intricately as we ourselves change — and bids us, by a constant clearing of the organs of observation and perfecting of analysis, to make what we can of these. To the intellect, the critical spirit, just these subtleties of effect are more precious than anything else. What is lost in precision of form is gained in intricacy of expression. It is no vague scholastic abstraction that will satisfy the speculative instinct in our modern minds. Who would change the colour or curve of a rose-leaf for that *οὐσία ἀχρώματος, ἀσχημάτιστος, ἀναφὴς* — that colourless, formless, intangible being — Plato put so high?[1] For the true illustration of the speculative temper is not the Hindoo mystic, lost to sense, understanding, individuality, but one such as Goethe, to whom every moment of life brought its contribution of experimental, individual knowledge; by whom no touch of the world of form, colour, and passion was disregarded.

Now the literary life of Coleridge was a disinterested struggle against the relative spirit. With a strong native bent towards the tracking of all questions, critical or practical, to first principles, he is ever restlessly scheming to 'apprehend the absolute,' to affirm it effectively, to get it acknowledged. It was an effort, surely, an effort of sickly thought, that saddened his mind, and limited the operation of his unique poetic gift.

So what the reader of our own generation will least find in Coleridge's prose writings is the excitement of the literary sense. And yet, in those grey volumes, we have the larger part of the production of one who made way ever by a charm, the charm of voice, of aspect, of language, above all by the intellectual charm of new, moving, luminous ideas. Perhaps the chief offence in Coleridge is an excess of seriousness, a seriousness arising not from any moral principle, but from a misconception of the perfect manner. There is a certain shade of unconcern, the perfect manner of the eighteenth century, which may be thought to mark complete culture in the handling of abstract questions. The humanist, the possessor of that complete culture, does not 'weep' over the failure of 'a theory of the quantification of the predicate,' nor 'shriek' over the fall of a philosophical formula. A kind of humour is, in truth, one of the conditions of the just mental attitude, in the criticism of by-past stages of thought. Humanity cannot afford to be too serious about them, any more than a man of good sense can afford to be too serious in looking back upon his own childhood. Plato, whom Coleridge claims as the first of his spiritual ancestors, Plato, as we remember him, a true humanist, holds his theories lightly, glances with a somewhat blithe and naive inconsequence from one view to another, not anticipating the burden of importance 'views' will one day have for men. In reading him one feels how lately it was that Crœsus thought it a paradox to say that external prosperity was not necessarily happiness.[2] But on Coleridge lies the whole weight of the sad reflection that has since come into the world, with which for us the air is full, which the 'children

1. In *Phaedrus*, 247C: 'For the colourless, formless, and intangible truly existing essence, with which all true knowledge is concerned, holds this region [above the heaven] and is visible only to the mind, the pilot of the soul.' (Trans. H.N.Fowler.)

2. *Cf.* Herodotus, *History*, I,30–33.

in the market-place' repeat to each other. His very language is forced and broken lest some saving formula should be lost — *distinctities*, *enucleation*, *pentad of operative Christianity*;[3] he has a whole armoury of these terms, and expects to turn the tide of human thought by fixing the sense of such expressions as 'reason,' 'understanding,' 'idea.' Again, he lacks the jealousy of a true artist in excluding all associations that have no colour, or charm, or gladness in them; and everywhere allows the impress of a somewhat inferior theological literature.

'I was driven from life in motion to life in thought and sensation':[4] so Coleridge sums up his childhood, with its delicacy, its sensitiveness, and passion. But at twenty-five he was exercising a wonderful charm, and had already defined for himself his peculiar line of intellectual activity. He had an odd, attractive gift of conversation, or rather of monologue, as Madame de Staël[5] observed of him, full of *bizarreries*, with the rapid alternations of a dream, and here or there an unexpected summons into a world strange to the hearer, abounding in images drawn from a sort of divided imperfect life, the consciousness of the opium-eater, as of one to whom the external world penetrated only in part, and, blent with all this, passages of deep obscurity, precious, if at all, only for their musical cadence, echoes in Coleridge of the eloquence of those older English writers of whom he was so ardent a lover. And all through this brilliant early manhood we may discern the power of the 'Asiatic'[6] temperament, of that voluptuousness, which is connected perhaps with his appreciation of the intimacy, the almost mystical communion of touch, between nature and man. 'I am much better,' he writes, 'and my new and tender health is all over me like a voluptuous feeling.' And whatever fame, or charm, or life-inspiring gift he has had as a speculative thinker, is the vibration of the interest he excited then, the propulsion into years which clouded his early promise of that first buoyant, irresistible, self-assertion. So great is even the indirect power of a sincere effort towards the ideal life, of even a temporary escape of the spirit from routine.

In 1798 he visited Germany, then, the only half-known, 'promised land,' of the metaphysical, the 'absolute,' philosophy. A beautiful fragment of this period remains, describing a spring excursion to the Brocken.[7] His excitement still vibrates in it. Love, all joyful states of mind, are self-expressive: they loosen the tongue, they fill the thoughts with sensuous images, they harmonise one with the world of sight. We hear of the 'rich graciousness and courtesy' of Coleridge's manner, of the white and delicate skin, the abundant black hair, the full, almost animal lips — that whole physiognomy of the dreamer, already touched with narcotism.[8] One says, of the beginning of one of his Unitarian sermons: 'His voice rose like a stream of rich, distilled perfumes'; another, 'He talks like an angel, and does — nothing!'[9]

The *Aids to Reflection*, *The Friend*, *The Biographia Literaria*: those books came from one whose vocation was in the world of the imagination, the theory and practice of poetry. And yet, perhaps, of all books that have been influential in modern times, they are furthest from artistic form — bundles of notes; the original matter inseparably mixed up with that borrowed from others; the whole, just that mere preparation for an artistic effect

which the finished literary artist would be careful one day to destroy. Here, again, we have a trait profoundly characteristic of Coleridge. He sometimes attempts to reduce a phase of thought, subtle and exquisite, to conditions too rough for it. He uses a purely speculative gift for direct moral edification. Scientific truth is a thing fugitive, relative, full of fine gradations: he tries to fix it in absolute formulas. The *Aids to Reflection*, *The Friend*, are efforts to propagate the volatile spirit of conversation into the less ethereal fabric of a written book; and it is only here or there that the poorer matter becomes vibrant, is really lifted by the spirit.

De Quincey said of him that 'he wanted better bread than can be made with wheat': Lamb, that from childhood he had 'hungered for eternity.'[10] Yet the faintness, the continuous dissolution, whatever its cause, which soon supplanted the buoyancy of his first wonderful years, had its own consumptive refinements, and even brought, as to the 'Beautiful Soul' in *Wilhelm Meister*, a faint religious ecstasy — that 'singing in the sails' which is not of the breeze.[11] Here again is one of his occasional notes: —[12]

'In looking at objects of nature while I am thinking, as at yonder moon, dimglimmering through the window-pane, I seem rather to be seeking, as it were asking, a symbolical language for something within me, that already and for ever exists, than observing anything new. Even when the latter is the case, yet still I have always an obscure feeling, as if that new phenomenon were the dim awaking of a forgotten or hidden truth of my inner nature. While I was preparing the pen to make this remark, I lost the train of thought which had led me to it.'

What a distemper of the eye of the mind! What an almost bodily distemper there is in that!

Coleridge's intellectual sorrows were many; but he had one singular intellectual happiness. With an inborn taste for transcendental philosophy, he lived just at the time when that philosophy took an immense spring in Germany, and connected itself with an impressive literary movement. He had the good luck to light upon it in its freshness, and introduce it to his countrymen. What an opportunity for one reared on the colourless analytic English philosophies of the last century, but who feels an irresistible attraction towards bold metaphysical synthesis! How rare are such occasions of intellectual contentment! This transcendental philosophy, chiefly as systematised by the mystic Schelling,[13] Coleridge applied with an eager, unwearied subtlety, to the questions of theology, and poetic or artistic criticism. It is in his theory of poetry, of art, that he comes nearest to principles of permanent truth and importance: that is the least fugitive part of his prose work. What, then, is the essence of his philosophy of art — of imaginative production?

Generally, it may be described as an attempt to reclaim the world of art as a world of fixed laws, to show that the creative activity of genius and the simplest act of thought are but higher and lower products of the laws of a universal logic. Criticism, feeling its own inadequacy in dealing with the greater works of art, is sometimes tempted to make too much of those dark and capricious suggestions of *genius*, which even the intellect possessed by them is unable to explain or recall. It has seemed due to the half-sacred character of

10. *Cf.* De Quincey, 'Literary Reminiscences,' in *Collected Writings*, ed. Masson, 1896, II,185; he says here that he is using the words of Cervantes, and elsewhere he uses the same words to apply to Wordsworth (*cf.* his 'On Wordsworth's Poetry,' in *Literary Criticism*, ed. Boston, 1881, p.501). And *cf.* Charles Lamb, 'On the Death of Coleridge,' in his *Life and Works*, ed. Ainger, II,202.

13. Friedrich Schelling (1775–1854), German philosopher.

those works to ignore all analogy between the productive process by which they had their birth, and the simpler processes of mind. Coleridge, on the other hand, assumes that the highest phases of thought must be more, not less, than the lower, subject to law.

With this interest, in the *Biographia Literaria*, he refines Schelling's 'Philosophy of Nature' into a theory of art. 'There can be no plagiarism in philosophy,' says Heine:[14] — *Es giebt kein Plagiat in der Philosophie*, in reference to the charge brought against Schelling of unacknowledged borrowing from Bruno; and certainly that which is common to Coleridge and Schelling and Bruno alike is of far earlier origin than any of them. Schellingism, the 'Philosophy of Nature,' is indeed a constant tradition in the history of thought: it embodies a permanent type of the speculative temper. That mode of conceiving nature as a mirror or reflex of the intelligence of man may be traced up to the first beginnings of Greek speculation. There are two ways of envisaging those aspects of nature which seem to bear the impress of reason or intelligence. There is the deist's way, which regards them merely as marks of design, which separates the informing mind from its result in nature, as the mechanist from the machine; and there is the pantheistic way, which identifies the two, which regards nature itself as the living energy of an intelligence of the same kind as though vaster in scope than the human. Partly through the influence of mythology, the Greek mind became early possessed with the conception of nature as living, thinking, almost speaking to the mind of man. This unfixed poetical prepossession, reduced to an abstract form, petrified into an idea, is the force which gives unity of aim to Greek philosophy. Little by little, it works out the substance of the Hegelian[15] formula: 'Whatever is, is according to reason: whatever is according to reason, that is.' Experience, which has gradually saddened the earth's colours for us, stiffened its motions, withdrawn from it some blithe and debonair presence, has quite changed the character of the science of nature, as we understand it. The 'positive' method, in truth, makes very little account of marks of intelligence in nature: in its wider view of phenomena, it sees that those instances are a minority, and may rank as happy coincidences: it absorbs them in the larger conception of universal mechanical law. But the suspicion of a mind latent in nature, struggling for release, and intercourse with the intellect of man through true ideas, has never ceased to haunt a certain class of minds. Started again and again in successive periods by enthusiasts on the antique pattern, in each case the thought may have seemed paler and more fantastic amid the growing consistency and sharpness of outline of other and more positive forms of knowledge. Still, wherever the speculative instinct has been united with a certain poetic inwardness of temperament, as in Bruno, in Schelling, there that old Greek conception, like some seed floating in the air, has taken root and sprung up anew. Coleridge, thrust inward upon himself, driven from 'life in thought and sensation' to life in thought only, feels already, in his dark London school, a thread of the Greek mind on this matter vibrating strongly in him. At fifteen he is discoursing on Plotinus,[16] as in later years he reflects from Schelling that flitting intellectual tradition. He supposes a subtle, sympathetic co-ordination between the ideas of the human reason and the laws of the natural world. Science, the real knowledge of that natural world, is to be attained, not by observation, experiment, analysis, patient generalisation, but by the evolution

or recovery of those ideas directly from within, by a sort of Platonic 'recollection'; every group of observed facts remaining an enigma until the appropriate idea is struck upon them from the mind of a Newton, or a Cuvier,[17] the genius in whom sympathy with the universal reason becomes entire. In the next place, he conceives that this reason or intelligence in nature becomes reflective, or self-conscious. He fancies he can trace, through all the simpler forms of life, fragments of an eloquent prophecy about the human mind. The whole of nature he regards as a development of higher forms out of the lower, through shade after shade of systematic change. The dim stir of chemical atoms towards the axis of crystal form, the trance-like life of plants, the animal troubled by strange irritabilities, are stages which anticipate consciousness. All through the ever-increasing movement of life that was shaping itself; every successive phase of life, in its unsatisfied susceptibilities, seeming to be drawn out of its own limits by the more pronounced current of life on its confines, the 'shadow of approaching humanity' gradually deepening, the latent intelligence winning a way to the surface. And at this point the law of development does not lose itself in caprice: rather it becomes more constraining and incisive. From the lowest to the very highest acts of the conscious intelligence, there is another series of refining shades. Gradually the mind concentrates itself, frees itself from the limitations of the particular, the individual, attains a strange power of modifying and centralising what it receives from without, according to the pattern of an inward ideal. At last, in imaginative genius, ideas become effective: the intelligence of nature, all its discursive elements now connected and justified, is clearly reflected; the interpretation of its latent purposes being embodied in the great central products of creative art. The secret of creative genius would be an exquisitely purged sympathy with nature, with the reasonable soul antecedent there. Those associative conceptions of the imagination, those eternally fixed types of action and passion, would come, not so much from the conscious invention of the artist, as from his self-surrender to the suggestions of an abstract reason or ideality in things: they would be evolved by the stir of nature itself, realising the highest reach of its dormant reason: they would have a kind of prevenient necessity to rise at some time to the surface of the human mind.

It is natural that Shakespeare should be the favourite illustration of such criticism, whether in England or Germany. The first suggestion in Shakespeare is that of capricious detail, of a waywardness that plays with the parts careless of the impression of the whole; what supervenes is the constraining unity of effect, the ineffaceable impression, of Hamlet or Macbeth. His hand moving freely is curved round as if by some law of gravitation from within: an energetic unity or identity makes itself visible amid an abounding variety. This unity or identity Coleridge exaggerates into something like the identity of a natural organism, and the associative act which effected it into something closely akin to the primitive power of nature itself. 'In the Shakespearian drama,' he says, 'there is a vitality which grows and evolves itself from within.'[18]

Again —

'He, too, worked in the spirit of nature, by evolving the germ from within, by the imaginative power, according to the idea. For as the power of seeing is to light, so is an idea in mind to a law in nature. They are correlatives which suppose each other.'

Again —[19]

17. Georges Cuvier (1769–1832), French naturalist.

18. For this and the following quotation, see Coleridge, *Works*, ed. Shedd, New York, 1868, IV,256.

19. See *ibid.*, IV,55 ('Shakespeare, a Poet Generally').

'The organic form is innate: it shapes, as it develops, itself from within, and the fulness of its development is one and the same with the perfection of its outward form. Such as the life is, such is the form. Nature, the prime, genial artist, inexhaustible in diverse powers, is equally inexhaustible in forms: each exterior is the physiognomy of the being within, and even such is the appropriate excellence of Shakespeare, himself a nature humanised, a genial understanding, directing self-consciously a power and an implicit wisdom deeper even than our consciousness.'

In this late age we are become so familiarised with the greater works of art as to be little sensitive of the act of creation in them: they do not impress us as a new presence in the world. Only sometimes, in productions which realise immediately a profound influence and enforce a change in taste, we are actual witnesses of the moulding of an unforeseen type by some new principle of association; and to that phenomenon Coleridge wisely recalls our attention. What makes his view a one-sided one is, that in it the artist has become almost a mechanical agent: instead of the most luminous and self-possessed phase of consciousness, the associative act in art or poetry is made to look like some blindly organic process of assimilation. The work of art is likened to a living organism. That expresses truly the sense of a self-delighting, independent life which the finished work of art gives us: it hardly figures the process by which such work was produced. Here there is no blind ferment of lifeless elements towards the realisation of a type. By exquisite analysis the artist attains clearness of idea; then, through many stages of refining, clearness of expression. He moves slowly over his work, calculating the tenderest tone, and restraining the subtlest curve, never letting hand or fancy move at large, gradually enforcing flaccid spaces to the higher degree of expressiveness. The philosophic critic, at least, will value, even in works of imagination, seemingly the most intuitive, the power of the understanding in them, their logical process of construction, the spectacle of a supreme intellectual dexterity which they afford.

Coleridge's prose writings on philosophy, politics, religion, and criticism, were, in truth, but one element in a whole lifetime of endeavours to present the then recent metaphysics of Germany to English readers, as a legitimate expansion of the older, classical and native masters of what has been variously called the *a priori*, or absolute, or spiritual, or Platonic, view of things. His criticism, his challenge for recognition in the concrete, visible, finite work of art, of the dim, unseen, comparatively infinite, soul or power of the artist, may well be remembered as part of the long pleading of German culture for the things 'behind the veil.'[20] To introduce that spiritual philosophy, as represented by the more transcendental parts of Kant,[21] and by Schelling, into all subjects, as a system of reason in them, one and ever identical with itself, however various the matter through which it was diffused, became with him the motive of an unflagging enthusiasm, which seems to have been the one thread of continuity in a life otherwise singularly wanting in unity of purpose, and in which he was certainly far from uniformly at his best. Fragmentary and obscure, but often eloquent, and always at once earnest and ingenious, those writings, supplementing his remarkable gift of conversation, were directly and indirectly influential, even on some the furthest removed from Coleridge's own masters; on John Stuart Mill, for instance, and some of the earlier writers of the 'high-church' school. Like his verse, they display him also in two other char-

20. The things 'of the spirit.' *Cf.* Fitzgerald's trans. of the *Rubaiyat* of Omar Khayyam.

21. Immanuel Kant (1724–1804), German philosopher.

acters — as a student of words, and as a psychologist, that is, as a more minute observer or student than other men of the phenomena of mind. To note the recondite associations of words, old or new; to expound the logic, the reasonable soul, of their various uses; to recover the interest of older writers who had had a phraseology of their own — this was a vein of inquiry allied to his undoubted gift of tracking out and analysing curious modes of thought. A quaint fragment of verse on *Human Life* might serve to illustrate his study of the earlier English philosophical poetry.[22] The latter gift, that power of the 'subtle-souled psychologist,' as Shelley calls him,[23] seems to have been connected with some tendency to disease in the physical temperament, something of a morbid want of balance in those parts where the physical and intellectual elements mix most closely together, with a kind of languid visionariness, deep-seated in the very constitution of the 'narcotist,' who had quite a gift for 'plucking the poisons of self-harm,' and which the actual habit of taking opium, accidentally acquired, did but reinforce. This morbid languor of nature, connected both with his fitfulness of purpose and his rich delicate dreaminess, qualifies Coleridge's poetic composition even more than his prose; his verse, with the exception of his avowedly political poems, being, unlike that of the 'Lake School,' to which in some respects he belongs, singularly unaffected by any moral, or professional, or personal effort or ambition, — 'written,' as he says,[24] 'after the more violent emotions of sorrow, to give him pleasure, when perhaps nothing else could'; but coming thus, indeed, very close to his own most intimately personal characteristics, and having a certain languidly soothing grace or cadence, for its most fixed quality, from first to last. After some Platonic soliloquy on a flower opening on a fine day in February, he goes on — [25]

'Dim similitudes
Weaving in mortal strains, I've stolen one hour
From anxious self, life's cruel taskmaster!
And the warm wooings of this sunny day
Tremble along my frame and harmonise
The attempered organ, that even saddest thoughts
Mix with some sweet sensations, like harsh tunes
Played deftly on a sweet-toned instrument.'

The expression of two opposed, yet allied, elements of sensibility in these lines, is very true to Coleridge: — the grievous agitation, the grievous listlessness, almost never entirely relieved, together with a certain physical voluptuousness. He has spoken several times of the scent of the bean-field in the air: — the tropical touches in a chilly climate; his is a nature that will make the most of these, which finds a sort of caress in such things. *Kubla Khan*, the fragment of a poem actually composed in some certainly not quite healthy sleep, is perhaps chiefly of interest as showing, by the mode of its composition, how physical, how much of a diseased or valetudinarian temperament, in

22. Pater seems to refer to the following lines by Southwell, which Coleridge had copied (*cf.* Coleridge, *Poetical Works*, ed. Campbell, 1905, p.473):

'A Sober Statement of Human Life, or the True Medium

'A chance may win that by mischance was lost:
The net that holds no great, takes little fish;
In some things all, in all things none are crost;
Few all they need, but none have all they wish:
Unmeddled joys here to no man befall;
Who least, hath some; who most, hath never all!'

24. Cf. Gillman, *op.cit.*, I,97. The 'Lake School' of poets includes Wordsworth, Coleridge, and Southey.

25. 'On Observing a Blossom on the First of February, 1796,' ll.19ff.

its moments of relief, Coleridge's happiest gift really was; and side by side with *Kubla Khan* should be read, as Coleridge placed it, the *Pains of Sleep*, to illustrate that retarding physical burden in his temperament, that 'unimpassioned grief,'[26] the source of which lay so near the source of those pleasures. Connected also with this, and again in contrast with Wordsworth, is the limited quantity of his poetical performance, as he himself regrets so eloquently in the lines addressed to Wordsworth after his recitation of *The Prelude*. It is like some exotic plant, just managing to blossom a little in the somewhat un-English air of Coleridge's own south-western birthplace,[27] but never quite well there.

In 1798 he joined Wordsworth in the composition of a volume of poems — the *Lyrical Ballads*. What Wordsworth then wrote already vibrates with that blithe impulse which carried him to final happiness and self-possession. In Coleridge we feel already that faintness and obscure dejection which clung like some contagious damp to all his work. Wordsworth was to be distinguished by a joyful and penetrative conviction of the existence of certain latent affinities between nature and the human mind, which reciprocally gild the mind and nature with a kind of 'heavenly alchemy.'

> 'My voice proclaims
> How exquisitely the individual mind
> (And the progressive powers, perhaps, no less
> Of the whole species) to the external world
> Is fitted; and how exquisitely, too,
> The external world is fitted to the mind;
> And the creation, by no lower name
> Can it be called, which they with blended might
> Accomplish.'[28]

In Wordsworth this took the form of an unbroken dreaming over the aspects and transitions of nature — a reflective, though altogether unformulated, analysis of them.

There are in Coleridge's poems expressions of this conviction as deep as Wordsworth's. But Coleridge could never have abandoned himself to the dream, the vision, as Wordsworth did, because the first condition of such abandonment must be an unvexed quietness of heart. No one can read the *Lines composed above Tintern* without feeling how potent the physical element was among the conditions of Wordsworth's genius — 'felt in the blood and felt along the heart.'[29]

> 'My whole life I have lived in quiet thought!'

The stimulus which most artists require of nature he can renounce. He leaves the ready-made glory of the Swiss mountains that he may reflect glory on a mouldering leaf. He loves best to watch the floating thistledown, because of its hint at an unseen life in the air. Coleridge's temperament, ἀεί ἐν σφοδρᾷ ὀρέξει,[30] with its faintness, its grieved dejection, could never have been like that.

> 'My genial spirits fail;
> And what can these avail
> To lift the smothering weight from off my breast?
> It were a vain endeavour,
> Though I should gaze for ever
> On that green light that lingers in the west:
> I may not hope from outward forms to win
> The passion and the life whose fountains are within.'[31]

Wordsworth's flawless temperament, his fine mountain atmosphere of mind, that calm, sabbatic, mystic, wellbeing which

De Quincey, a little cynically, connected with worldly (that is to say, pecuniary) good fortune,[32] kept his conviction of a latent intelligence in nature within the limits of sentiment or instinct, and confined it to those delicate and subdued shades of expression which alone perfect art allows. In Coleridge's sadder, more purely intellectual, cast of genius, what with Wordsworth was sentiment or instinct became a philosophical idea, or philosophical formula, developed, as much as possible, after the abstract and metaphysical fashion of the transcendental schools of Germany.

The period of Coleridge's residence at Nether Stowey, 1797–1798, was for him the *annus mirabilis*.[33] Nearly all the chief works by which his poetic fame will live were then composed or planned. What shapes itself for criticism as the main phenomenon of Coleridge's poetic life, is not, as with most true poets, the gradual development of a poetic gift, determined, enriched, retarded, by the actual circumstances of the poet's life, but the sudden blossoming, through one short season, of such a gift already perfect in its kind, which thereafter deteriorates as suddenly, with something like premature old age. Connecting this phenomenon with the leading motive of his prose writings, we might note it as the deterioration of a productive or creative power into one merely metaphysical or discursive. In his unambitious conception of his function as a poet, and in the very limited quantity of his poetical performance, as I have said, he was a contrast to his friend Wordsworth. That friendship with Wordsworth, the chief 'developing' circumstance of his poetic life, comprehended a very close intellectual sympathy; and in such association chiefly, lies whatever truth there may be in the popular classification of Coleridge as a member of what is called the 'Lake School.' Coleridge's philosophical speculations do really turn on the ideas which underlay Wordsworth's poetical practice. His prose works are one long explanation of all that is involved in that famous distinction between the Fancy and the Imagination. Of what is understood by both writers as the imaginative quality in the use of poetic figures, we may take some words of Shakespeare as an example. —[34]

'My cousin Suffolk,
My soul shall thine keep company to heaven:
Tarry, sweet soul, for mine, then fly abreast.'

The complete infusion here of the figure into the thought, so vividly realised, that, though birds are not actually mentioned, yet the sense of their flight, conveyed to us by the single word 'abreast,' comes to be more than half of the thought itself: — this, as the expression of exalted feeling, is an instance of what Coleridge meant by Imagination. And this sort of identification of the poet's thought, of himself, with the image or figure which serves him, is the secret, sometimes, of a singularly entire realisation of that image, such as makes these lines of Coleridge, for instance, 'imaginative' —[35]

'Amid the howl of more than wintry storms,
The halcyon hears the voice of vernal hours
Already on the wing.'

There are many such figures both in Coleridge's verse and prose. He has, too, his passages of that sort of impassioned contemplation on the permanent and elementary conditions of nature and humanity, which Wordsworth held to be the

essence of a poet;[36] as it would be his proper function to awaken such contemplation in other men — those 'moments,' as Coleridge says, addressing him —

'Moments awful,
Now in thy inner life, and now abroad,
When power streamed from thee, and thy soul received
The light reflected, as a light bestowed.'

The entire poem from which these lines are taken 'composed on the night after Wordsworth's recitation of a poem on the growth of an individual mind,' is, in its high-pitched strain of meditation, and in the combined justice and elevation of its philosophical expression —[37]

'high and passionate thoughts
To their own music chanted;'

wholly sympathetic with *The Prelude* which it celebrates, and of which the subject is, in effect, the generation of the spirit of the 'Lake poetry.' The *Lines to Joseph Cottle* have the same philosophically imaginative character; the *Ode to Dejection* being Coleridge's most sustained effort of this kind.

It is in a highly sensitive apprehension of the aspects of external nature that Coleridge identifies himself most closely with one of the main tendencies of the 'Lake School'; a tendency instinctive, and no mere matter of theory, in him as in Wordsworth. That record of the[38]

'green light
Which lingers in the west,'

and again, of

'the western sky,
And its peculiar tint of yellow green,'

which Byron found ludicrously untrue, but which surely needs no defence, is a characteristic example of a singular watchfulness for the minute fact and expression of natural scenery pervading all he wrote — a closeness to the exact physiognomy of nature, having something to do with that idealistic philosophy which sees in the external world no mere concurrence of mechanical agencies, but an animated body, informed and made expressive, like the body of man, by an indwelling intelligence. It was a tendency, doubtless, in the air, for Shelley too is affected by it, and Turner,[39] with the school of landscape which followed him. 'I had found,' Coleridge tells us,[40]

'That outward forms, the loftiest, still receive
Their finer influence from the world within;
Fair ciphers of vague import, where the eye
Traces no spot, in which the heart may read
History and prophecy: . . .'

and this induces in him no indifference to actual colour and form and process, but such minute realism as this —[41]

'The thin grey cloud is spread on high,
It covers but not hides the sky.
The moon is behind and at the full;
And yet she looks both small and dull;'

or this, which has a touch of 'romantic' weirdness —

'Nought was green upon the oak
But moss and rarest mistletoe:'

or this —

'There is not wind enough to twirl
The one red leaf, the last of its clan,
That dances as often as dance it can,
Hanging so light, and hanging so high,
On the topmost twig that looks up at the sky:'

36. *Cf.* Preface to *Lyrical Ballads.*
37. The following lines are quoted, as are those just above, from Coleridge's 'To a Gentleman [Wordsworth],' ll.46–47,17–20.
38. The two quotations that follow are from Coleridge's 'Dejection' — l.44 (quoted inaccurately) and ll.28–29.
39. Joseph Mallord William Turner (1775–1851), great English landscape painter.
40. Coleridge, 'Lines Written in the Album at Elbingerode, in the Hartz Forest,' ll.16–21.
41. The three following quotations are taken from 'Christabel,' ll.16–19,33–34,48–52.

or this, with a weirdness, again, like that of some wild French etcher —[42]

'Lo! the new-moon winter-bright!
And overspread with phantom light
(With swimming phantom light o'erspread,
But rimmed and circled with a silver thread)
I see the old moon in her lap, foretelling
The coming on of rain and squally blast.'

He has a like imaginative apprehension of the silent and unseen processes of nature, its 'ministries' of dew and frost, for instance; as when he writes, in April —[43]

'A balmy night! and though the stars be dim,
Yet let us think upon the vernal showers
That gladden the green earth, and we shall find
A pleasure in the dimness of the stars.'

Of such imaginative treatment of landscape there is no better instance than the description of *The Dell,* in *Fears in Solitude* —[44]

'A green and silent spot amid the hills,
A small and silent dell! O'er stiller place
No singing skylark ever poised himself —

'But the dell,
Bathed by the mist is fresh and delicate
As vernal cornfield, or the unripe flax
When, through its half-transparent stalks, at eve,
The level sunshine glimmers with green light: —

'The gust that roared and died away
To the distant tree —

'heard and only heard
In this low dell, bowed not the delicate grass.'

This curious insistence of the mind on one particular spot, till it seems to attain actual expression and a sort of soul in it — a mood so characteristic of the 'Lake School' — occurs in an earnest political poem, 'written in April 1798, during the alarm of an invasion'; and that silent dell is the background against which the tumultuous fears of the poet are in strong relief, while the quiet sense of the place, maintained all through them, gives a true poetic unity to the piece. Good political poetry — political poetry that shall be permanently moving — can, perhaps, only be written on motives which, for those they concern, have ceased to be open questions, and are really beyond argument; while Coleridge's political poems are for the most part on open questions. For although it was a great part of his intellectual ambition to subject political questions to the action of the fundamental ideas of his philosophy, he was nevertheless an ardent partisan, first on one side, then on the other, of the actual politics proper to the end of the last and the beginning of the present century, where there is still room for much difference of opinion. Yet *The Destiny of Nations,* though formless as a whole, and unfinished, presents many traces of his most elevated manner of speculation, cast into that sort of imaginative philosophical expression, in which, in effect, the language itself is inseparable from, or essentially a part of, the thought. *France, an Ode*, begins with a famous apostrophe to Liberty —

'Ye Clouds! that far above me float and pause,
Whose pathless march no mortal may control!
Ye Ocean-waves! that wheresoe'er ye roll,
Yield homage only to eternal laws!
Ye Woods! that listen to the night-bird's singing,
Midway the smooth and perilous slope reclined,
Save when your own imperious branches swinging,

42. 'Dejection,' ll.9–14.
43. 'The Nightingale,' ll.8–11.
44. 'Fears in Solitude,' ll.1–3,7–11, and, slightly altered, ll.200–02.

Have made a solemn music of the wind!
Where like a man beloved of God,
Through glooms which never woodman trod,
How oft, pursuing fancies holy,
My moonlight way o'er flowering weeds I wound,
Inspired, beyond the guess of folly,
By each rude shape and wild unconquerable sound!
O ye loud Waves! and O ye Forests high!
And O ye Clouds that far above me soar'd!
Thou rising Sun! thou blue rejoicing Sky!
Yea, everything that is and will be free!
Bear witness for me, wheresoe'er ye be,
With what deep worship I have still adored
The spirit of divinest liberty.'

And the whole ode, though, after Coleridge's way, not quite equal to that *exordium*,[45] is an example of strong national sentiment, partly in indignant reaction against his own earlier sympathy with the French Republic, inspiring a composition which, in spite of some turgid lines, really justifies itself as poetry, and has that true unity of effect which the ode requires. Liberty, after all his hopes of young France, is only to be found in nature: —[46]

'Thou speedest on thy subtle pinions,
The guide of homeless winds, and playmate of the waves!'

In his changes of political sentiment, Coleridge was associated with the 'Lake School'; and there is yet one other very different sort of sentiment in which he is one with that school, yet all himself, his sympathy, namely, with the animal world. That was a sentiment connected at once with the love of outward nature in himself and in the 'Lake School,' and its assertion of the natural affections in their simplicity; with the homeliness and pity, consequent upon that assertion. The *Lines to a Young Ass*, tethered —

'Where the close-eaten grass is scarcely seen,
While sweet around her waves the tempting green,'

which had seemed merely whimsical in their day, indicate a vein of interest constant in Coleridge's poems, and at its height in his greatest poems — in *Christabel*, where it has its effect, as it were antipathetically, in the vivid realisation of the serpentine element in Geraldine's nature; and in *The Ancient Mariner*, whose fate is interwoven with that of the wonderful bird, at whose blessing of the water-snakes the curse for the death of the albatross passes away, and where the moral of the love of all creatures, as a sort of religious duty, is definitely expressed.

Christabel, though not printed till 1816, was written mainly in the year 1797: *The Rhyme of the Ancient Mariner* was printed as a contribution to the *Lyrical Ballads* in 1798; and these two poems belong to the great year of Coleridge's poetic production, his twenty-fifth year. In poetic quality, above all in that most poetic of all qualities, a keen sense of, and delight in beauty, the infection of which lays hold upon the reader, they are quite out of proportion to all his other compositions. The form in both is that of the ballad, with some of its terminology, and some also of its quaint conceits. They connect themselves with that revival of ballad literature, of which Percy's *Relics*,[47] and, in another way, Macpherson's *Ossian*[48] are monuments, and which afterwards so powerfully affected Scott —

'Young-eyed poesy
All deftly masked as hoar antiquity.'[49]

45. 'introduction, commencement.'
46. Coleridge, 'France: An Ode,' ll.97–98.
47. Thomas Percy, *Reliques of Ancient English Poetry*, 3 vols., 1765.
48. James Macpherson, *Fragments of Ancient Poetry* [by 'Ossian'].
49. Coleridge, 'Monody on the Death of Chatterton' [latest version], ll.143–44.

The Ancient Mariner, as also, in its measure, *Christabel*, is a 'romantic' poem, impressing us by bold invention, and appealing to that taste for the supernatural, that longing for *le frisson*, a shudder, to which the 'romantic' school in Germany, and its derivations in England and France, directly ministered. In Coleridge, personally, this taste had been encouraged by his odd and out-of-the-way reading in the old-fashioned literature of the marvellous — books like Purchas's *Pilgrims*, early voyages like Hakluyt's, old naturalists and visionary moralists, like Thomas Burnet,[50] from whom he quotes the motto of *The Ancient Mariner*, *'Facile credo, plures esse naturas invisibiles quam visibiles in rerum universitate, etc.'* [51] Fancies of the strange things which may very well happen, even in broad daylight, to men shut up alone in ships far off on the sea, seem to have occurred to the human mind in all ages with a peculiar readiness, and often have about them, from the story of the stealing of Dionysus [52] downwards, the fascination of a certain dreamy grace, which distinguishes them from other kinds of marvellous inventions. This sort of fascination *The Ancient Mariner* brings to its highest degree: it is the delicacy, the dreamy grace, in his presentation of the marvellous, which makes Coleridge's work so remarkable. The too palpable intruders from a spiritual world in almost all ghost literature, in Scott and Shakespeare even, have a kind of crudity or coarseness. Coleridge's power is in the very fineness with which, as by some really ghostly finger, he brings home to our inmost sense his inventions, daring as they are — the skeleton ship, the polar spirit, the inspiriting of the dead corpses of the ship's crew. *The Rhyme of the Ancient Mariner* has the plausibility, the perfect adaptation to reason and the general aspect of life, which belongs to the marvellous, when actually presented as part of a credible experience in our dreams. Doubtless, the mere experience of the opium-eater,[53] the habit he must almost necessarily fall into of noting the more elusive phenomena of dreams, had something to do with that: in its essence, however, it is connected with a more purely intellectual circumstance in the development of Coleridge's poetic gift. Some one once asked William Blake,[54] to whom Coleridge has many resemblances, when either is at his best (that whole episode of the re-inspirating of the ship's crew in *The Ancient Mariner* being comparable to Blake's well-known design of the 'Morning Stars singing together') whether he had ever seen a ghost, and was surprised when the famous seer, who ought, one might think, to have seen so many, answered frankly, 'Only once!' His 'spirits,' at once more delicate, and so much more real, than any ghost — the burden, as they were the privilege, of his *temperament* — like it, were an integral element in his everyday life. And the difference of mood expressed in that question and its answer,

51. 'I easily believe, there are more invisible things than visible, in this universe of things, etc.' Coleridge cites as his source Burnet's *De Archaeologiis Philosophicis*, 1692, p.68.

52. In Greek mythology, god of the fruitfulness of nature, especially of vegetation and the vine. Called also Bacchus. Once, in the form of a noble youth, he was stolen for ransom and taken aboard ship by sailors. They mocked him, and sailed on. But soon the ship stood still. All the sailors but one were changed into dolphins.

53. Coleridge started taking the narcotic opium solely to relieve the pain of rheumatism, 'and for the same reason continued it, till he acquired a habit too difficult under his own management to control.' *Cf.* Gillman, *op.cit.*, I, 245–46.

54. For the anecdote see Alexander Gilchrist, *Life of William Blake*, new ed., 1880, I,125.

is indicative of a change of temper in regard to the supernatural which has passed over the whole modern mind, and of which the true measure is the influence of the writings of Swedenborg. What that change is we may see if we compare the vision by which Swedenborg was 'called,' as he thought, to his work, with the ghost which called Hamlet, or the spells of Marlowe's *Faust* with those of Goethe's.[55] The modern mind, so minutely self scrutinising, if it is to be affected at all by a sense of the supernatural, needs to be more finely touched than was possible in the older, romantic presentment of it. The spectral object, so crude, so impossible, has become plausible, as

> 'The blot upon the brain,
> That *will* show itself without;'[56]

and is understood to be but a condition of one's own mind, for which, according to the scepticism, latent at least, in so much of our modern philosophy, the so-called real things themselves are but *spectra* after all.

It is this finer, more delicately marvellous supernaturalism, fruit of his more delicate psychology, that Coleridge infuses into romantic adventure, itself also then a new or revived thing in English literature; and with a fineness of weird effect in *The Ancient Mariner*, unknown in those older, more simple, romantic legends and ballads. It is a flower of medieval or later German romance, growing up in the peculiarly compounded atmosphere of modern psychological speculation, and putting forth in it wholly new qualities. The quaint prose commentary, which runs side by side with the verse of *The Ancient Mariner*, illustrates this — a composition of quite a different shade of beauty and merit from that of the verse which it accompanies, connecting this, the chief poem of Coleridge, with his philosophy, and emphasising therein that psychological interest of which I have spoken, its curious soul-lore.

Completeness, the perfectly rounded wholeness and unity of the impression it leaves on the mind of a reader who fairly gives himself to it — that, too, is one of the characteristics of a really excellent work, in the poetic as in every other kind of art; and by this completeness, *The Ancient Mariner* certainly gains upon *Christabel* — a completeness, entire as that of Wordsworth's *Leech-gatherer*, or Keats's *Saint Agnes' Eve*, each typical in its way of such wholeness or entirety of effect on a careful reader. It is Coleridge's one great complete work, the one really finished thing, in a life of many beginnings. *Christabel* remained a fragment. In *The Ancient Mariner* this unity is secured in part by the skill with which the incidents of the marriage-feast are made to break in dreamily from time to time upon the main story. And then, how pleasantly, how reassuringly, the whole nightmare story itself is made to end, among the clear fresh sounds and lights of the bay, where it began, with

> 'The moon-light steeped in silentness,
> The steady weather-cock.'

So different from *The Rhyme of the Ancient Mariner* in regard to this completeness of effect, *Christabel* illustrates the same complexion of motives, a like intellectual situation. Here, too, the work is of a kind peculiar to one who touches the characteristic motives of the old romantic ballad, with a spirit made subtle and fine by modern reflection; as we feel, I think, in such passages as —[57]

> 'But though my slumber had gone by,
> This dream it would not pass away —
> It seems to live upon mine eye;' —

55. Swedenborg's account was written after 1745, when his 'call' came; *Hamlet* was written by 1603; Goethe's *Faust* (Pt.I) was written by 1808, Marlowe's by 1593.

56. See Tennyson, *Maud*, Pt.II,iv,60–61.

57. The three passages are from 'Christabel,' ll. 557–59,375–76,385–86.

and —

'For she, belike, hath drunken deep
Of all the blessedness of sleep;' —

and again —

'With such perplexity of mind
As dreams too lively leave behind.'

And that gift of handling the finer passages of human feeling, at once with power and delicacy, which was another result of his finer psychology, of his exquisitely refined habit of self-reflection, is illustrated by a passage on Friendship in the *Second Part* —

'Alas! they had been friends in youth;
But whispering tongues can poison truth;
And constancy lives in realms above;
And life is thorny; and youth is vain;
And to be wroth with one we love,
Doth work like madness in the brain.
And thus it chanced, as I divine,
With Roland and Sir Leoline.
Each spake words of high disdain
And insult to his heart's best brother:
They parted — ne'er to meet again!
But never either found another
To free the hollow heart from paining —
They stood aloof the scars remaining,
Like cliffs which had been rent asunder;
A dreary sea now flows between;
But neither heat, nor frost, nor thunder,
Shall wholly do away, I ween,
The marks of that which once hath been.'

I suppose these lines leave almost every reader with a quickened sense of the beauty and compass of human feeling; and it is the sense of such richness and beauty which, in spite of his 'dejection,' in spite of that burden of his morbid lassitude, accompanies Coleridge himself through life. A warm poetic joy in everything beautiful, whether it be a moral sentiment, like the friendship of Roland and Leoline, or only the flakes of falling light from the water-snakes[58] — this joy, visiting him, now and again, after sickly dreams, in sleep or waking, as a relief not to be forgotten, and with such a power of felicitous expression that the infection of it passes irresistibly to the reader — such is the predominant element in the matter of his poetry, as cadence is the predominant quality of its form. 'We bless thee for our creation!' he might have said, in his later period of definite religious assent, 'because the world is so beautiful: the world of ideas — living spirits, detached from the divine nature itself, to inform and lift the heavy mass of material things; the world of man, above all in his melodious and intelligible speech; the world of living creatures and natural scenery; the world of dreams.' What he really did say, by way of *A Tombless Epitaph*, is true enough of himself —

'Sickness, 'tis true,
Whole years of weary days, besieged him close,
Even to the gates and inlets of his life!
But it is true, no less, that strenuous, firm,
And with a natural gladness, he maintained
The citadel unconquered, and in joy
Was strong to follow the delightful Muse.
For not a hidden path, that to the shades
Of the beloved Parnassian forest leads,
Lurked undiscovered by him; not a rill
There issues from the fount of Hippocrene,
But he had traced it upward to its source,
Through open glade, dark glen, and secret dell,
Knew the gay wild flowers on its banks, and culled
Its med'cinable herbs. Yea, oft alone,
Piercing the long-neglected holy cave,
The haunt obscure of old Philosophy,
He bade with lifted torch its starry walls
Sparkle, as erst they sparkled to the flame
Of odorous lamps tended by saint and sage.
O framed for calmer times and nobler hearts!

58. *Cf.* 'The Rime of the Ancient Mariner,' l.276.

O studious Poet, eloquent for truth!
Philosopher! contemning wealth and death,
Yet docile, childlike, full of Life and Love.'

The student of empirical science asks, Are absolute principles attainable? What are the limits of knowledge? The answer he receives from science itself is not ambiguous. What the moralist asks is, Shall we gain or lose by surrendering human life to the relative spirit? Experience answers that the dominant tendency of life is to turn ascertained truth into a dead letter, to make us all the phlegmatic servants of routine. The relative spirit, by its constant dwelling on the more fugitive conditions or circumstances of things, breaking through a thousand rough and brutal classifications, and giving elasticity to inflexible principles, begets an intellectual *finesse* of which the ethical result is a delicate and tender justice in the criticism of human life. Who would gain more than Coleridge by criticism in such a spirit? We know how his life has appeared when judged by absolute standards. We see him trying to 'apprehend the absolute,' to stereotype forms of faith and philosophy, to attain, as he says, 'fixed principles' in politics, morals, and religion, to fix one mode of life as the essence of life, refusing to see the parts as parts only; and all the time his own pathetic history pleads for a more elastic moral philosophy than his, and cries out against every formula less living and flexible than life itself.

'From his childhood he hungered for eternity.' There, after all, is the incontestable claim of Coleridge. The perfect flower of any elementary type of life must always be precious to humanity, and Coleridge is a true flower of the *ennuyé*,[59] of the type of René. More than Childe Harold, more than Werther, more than René himself, Coleridge, by what he did, what he was, and what he failed to do, represents that inexhaustible discontent, languor, and home-sickness, that endless regret, the chords of which ring all through our modern literature. It is to the romantic element in literature that those qualities belong. One day, perhaps, we may come to forget the distant horizon, with full knowledge of the situation, to be content with 'what is here and now'; and herein is the essense of classical feeling. But by us of the present moment, certainly — by us for whom the Greek spirit, with its engaging naturalness, simple, chastened, debonair, τρυφῆς, ἀβρότητος, χλιδῆς, χαρίτων, ἱμέρου, πόθου πατήρ,[60] is itself the Sangrail[61] of an endless pilgrimage, Coleridge, with his passion for the absolute, for something fixed where all is moving, his faintness, his broken memory, his intellectual disquiet, may still be ranked among the interpreters of one of the constituent elements of our life.

Dante Gabriel Rossetti

It was characteristic of a poet who had ever something about him of mystic isolation, and will still appeal perhaps, though with a name it may seem now established in English literature, to a special and limited audience, that some of his poems had won a kind of exquisite fame before they were in the full sense published. *The Blessed Damozel*, although actually printed twice [1] before the year 1870,

59. 'dissatisfied and yearning.' René, Childe Harold, and Werther are French, English, and German, respectively — the romantic, sentimental heroes of Chateaubriand's *René* (1805), Byron's *Childe Harold's Pilgrimage* (1812–17), and Goethe's *Die Leiden des jungen Werthers* [*The Sorrows of Young Werther*], (1774).

60. 'of wantonness, daintiness, luxury, grace, desire, and longing the sire.' From Plato, *Symposium*, 197D (trans. Shorey).

61. The Holy Grail of Arthurian legend and story.

1. In the *Germ*, in 1850; and the *Oxford and Cambridge Magazine*, in 1856.

was eagerly circulated in manuscript; and the volume which it now opens came at last to satisfy a long-standing curiosity as to the poet, whose pictures also had become an object of the same peculiar kind of interest. For those poems were the work of a painter, understood to belong to, and to be indeed the leader, of a new school [2] then rising into note; and the reader of today may observe already, in *The Blessed Damozel*, written at the age of eighteen, a prefigurement of the chief characteristics of that school, as he will recognise in it also, in proportion as he really knows Rossetti, many of the characteristics which are most markedly personal and his own. Common to that school and to him, and in both alike of primary significance, was the quality of sincerity, already felt as one of the charms of that earliest poem — a perfect sincerity, taking effect in the deliberate use of the most direct and unconventional expression, for the conveyance of a poetic sense which recognised no conventional standard of what poetry was called upon to be. At a time when poetic originality in England might seem to have had its utmost play, here was certainly one new poet more, with a structure and music of verse, a vocabulary, an accent, unmistakably novel, yet felt to be no mere tricks of manner adopted with a view to forcing attention — an accent which might rather count as the very seal of reality on one man's own proper speech; as that speech itself was the wholly natural expression of certain wonderful things he really felt and saw. Here was one, who had a matter to present to his readers, to himself at least, in the first instance, so valuable, so real and definite, that his primary aim, as regards form or expression in his verse, would be but its exact equivalence to those *data* [3] within. That he had this gift of transparency in language — the control of a style which did but obediently shift and shape itself to the mental motion, as a well-trained hand can follow on the tracing-paper the outline of an original drawing below it, was proved afterwards by a volume of typically perfect translations from the delightful but difficult 'early Italian poets': [4] such transparency being indeed the secret of all genuine style, of all such style as can truly belong to one man and not to another. His own meaning was always personal and even recondite, in a certain sense learned and casuistical, sometimes complex or obscure; but the term was always, one could see, deliberately chosen from many competitors, as the just transcript of that peculiar phase of soul which he alone knew, precisely as he knew it.

One of the peculiarities of *The Blessed Damozel* was a definiteness of sensible imagery, which seemed almost grotesque to some, and was strange, above all, in a theme so profoundly visionary. The gold bar of heaven from which she leaned, her hair yellow like ripe corn, are but examples of a general treatment, as naïvely detailed as the pictures of those early painters contemporary with Dante,[5] who has shown a similar care for minute and definite imagery in his verse; there, too, in the very midst of profoundly mystic vision. Such definition of outline is indeed one among many points in which Rossetti resembles the great Italian poet, of whom, led to him at first by family circumstances, he was ever a lover — a 'servant and singer,' faithful as Dante, 'of Florence and of Beatrice' [6] — with some close inward conformities of genius also, independent of any mere circumstances of edu-

5. A notable painter who lived after Dante was Raphael (1483–1520); hence Pater is explaining here the 'Pre-Raphaelite School' in English art, characterized by its 'care for minute and definite imagery.'

6. *Cf.* Rossetti, 'Dante at Verona,' ll.1–2.

cation. It was said by a critic of the last century, not wisely though agreeably to the practise of his time, that poetry rejoices in abstractions. For Rossetti, as for Dante, without question on his part, the first condition of the poetic way of seeing and presenting things is particularisation. 'Tell me now,' he writes, for Villon's [7]

'Dictes-moy où, n'en quel pays,
Est Flora, la belle Romaine'—

'Tell me now, in what hidden way is
Lady Flora the lovely Roman:'

—'way,' in which one might actually chance to meet her; the unmistakably poetic effect of the couplet in English being dependent on the definiteness of that single word (though actually lighted on in the search after a difficult double rhyme) for which every one else would have written, like Villon himself, a more general one, just equivalent to place or region.

And this delight in concrete definition is allied with another of his conformities to Dante, the really imaginative vividness, namely, of his personifications — his hold upon them, or rather their hold upon him, with the force of a Frankenstein,[8] when once they have taken life from him. Not Death only and Sleep, for instance, and the winged spirit of Love, but certain particular aspects of them, a whole 'populace' of special hours and places, 'the hour' even 'which might have been, yet might not be,' are living creatures, with hands and eyes and articulate voices.[9]

'Stands it not by the door—
Love's Hour — till she and I shall meet;
With bodiless form and unapparent feet
That cast no shadow yet before,
Though round its head the dawn begins to pour
The breath that makes day sweet?'—

'Nay, why
Name the dead hours? I mind them well:
Their ghosts in many darkened doorways dwell
With desolate eyes to know them by.'

Poetry as a *mania* — one of Plato's two higher forms of 'divine' mania — has, in all its species, a mere insanity incidental to it, the 'defect of its quality,' into which it may lapse in its moment of weakness; [10] and the insanity which follows a vivid poetic anthropomorphism like that of Rossetti may be noted here and there in his work, in a forced and almost grotesque materialising of abstractions, as Dante also became at times a mere subject of the scholastic realism of the Middle Age.

In *Love's Nocturn* and *The Stream's Secret*, congruously perhaps with a certain feverishness of soul in the moods they present, there is at times a near approach (may it be said?) to such insanity of realism — [11]

'Pity and love shall burn
In her pressed cheek and cherishing hands;
And from the living spirit of love that stands
Between her lips to soothe and yearn,
Each separate breath shall clasp me round in turn
And loose my spirit's bands.'

But even if we concede this; even if we allow, in the very plan of those two compositions, something of the literary conceit — what exquisite, what novel flowers of poetry, we must admit them to be, as they stand! In the one, what a delight in all the

natural beauty of water, all its details for the eye of a painter; in the other, how subtle and fine the imaginative hold upon all the secret ways of sleep and dreams! In both of them, with much the same attitude and tone, Love — sick and doubtful Love — would fain inquire of what lies below the surface of sleep, and below the water; stream or dream being forced to speak by Love's powerful 'control'; and the poet would have it foretell the fortune, issue, and event of his wasting passion. Such artifices, indeed, were not unknown in the old Provençal [12] poetry of which Dante had learned something. Only, in Rossetti at least, they are redeemed by a serious purpose, by that sincerity of his, which allies itself readily to a serious beauty, a sort of grandeur of literary workmanship, to a great style. One seems to hear there a really new kind of poetic utterance, with effects which have nothing else like them; as there is nothing else, for instance, like the narrative of Jacob's Dream in *Genesis*,[13] or Blake's design of the Singing of the Morning Stars, or Addison's Nineteenth Psalm.

With him indeed, as in some revival of the old mythopœic age, common things — dawn, noon, night — are full of human or personal expression, full of sentiment. The lovely little sceneries scattered up and down his poems, glimpses of a landscape, not indeed of broad open-air effects, but rather that of a painter concentrated upon the picturesque effect of one or two selected objects at a time — the 'hollow brimmed with mist,' or the 'ruined weir,' as he sees it from one of the windows, or reflected in one of the mirrors of his 'house of life' (the vignettes for instance seen by Rose Mary in the magic beryl) [14] attest, by their very freshness and simplicity, to a pictorial or descriptive power in dealing with the inanimate world, which is certainly also one half of the charm, in that other, more remote and mystic, use of it. For with Rossetti this sense of lifeless nature, after all, is translated to a higher service, in which it does but incorporate itself with some phase of strong emotion. Every one understands how this may happen at critical moments of life; what a weirdly expressive soul may have crept, even in full noonday, into 'the white-flower'd elder-thicket,' when Godiva saw it 'gleam through the Gothic archways in the wall,' at the end of her terrible ride.[15] To Rossetti it is so always, because to him life is a crisis at every moment. A sustained impressibility towards the mysterious conditions of man's everyday life, towards the very mystery itself in it, gives a singular gravity to all his work: those matters never became trite to him. But throughout, it is the ideal intensity of love — of love based upon a perfect yet peculiar type of physical or material beauty — which is enthroned in the midst of those mysterious powers; Youth and Death, Destiny and Fortune, Fame, Poetic Fame, Memory, Oblivion, and the like. Rossetti is one of those who, in the words of Mérimée, *se passionnent pour la passion*,[16] one of Love's lovers.

And yet, again as with Dante, to speak of his ideal type of beauty as material, is partly misleading. Spirit and matter, indeed, have been for the most part opposed, with a false contrast or antagonism, by schoolmen, whose artificial creation those abstractions really are. In our actual concrete experience, the two trains of phenomena which the words *matter* and *spirit* do but roughly distinguish, play inextricably into each other. Practically, the church of the Middle Age by its æsthetic worship, its sacramentalism, its real faith in the resurrection of the flesh, had

12. From Provence, an old province in southeast France.
13. See *Genesis*, xxviii,12–16.
14. See 'Rose Mary,' Pt.I, stanzas 43,28; and 'The House of Life: A Sonnet Sequence.'
15. See Tennyson, 'Godiva,' ll.63,64.
16. Those who 'rouse themselves into passion for the sake of the passion.' Prosper Mérimée (1803–70), French man of letters.

set itself against that Manichean[17] opposition of spirit and matter, and its results in men's way of taking life; and in this, Dante is the central representative of its spirit. To him, in the vehement and impassioned heat of his conceptions, the material and the spiritual are fused and blent: if the spiritual attains the definite visibility of a crystal, what is material loses its earthiness and impurity. And here again, by force of instinct, Rossetti is one with him. His chosen type of beauty is one,[18]

'Whose speech Truth knows not from her thought,
Nor Love her body from her soul.'

Like Dante, he knows no region of spirit which shall not be sensuous also, or material. The shadowy world, which he realises so powerfully, has still the ways and houses, the land and water, the light and darkness, the fire and flowers, that had so much to do in the moulding of those bodily powers and aspects which counted for so large a part of the soul, here.

For Rossetti, then, the great affections of persons to each other, swayed and determined, in the case of his highly pictorial genius, mainly by that so-called material loveliness, formed the great undeniable reality in things, the solid resisting substance, in a world where all beside might be but shadow. The fortunes of those affections — of the great love so determined; its casuistries, its languor sometimes; above all, its sorrows; its fortunate or unfortunate collisions with those other great matters; how it looks, as the long day of life goes round, in the light and shadow of them: all this, conceived with an abundant imagination, and a deep, a philosophic, reflectiveness, is the matter of his verse, and especially of what he designed as his chief poetic work, 'a work to be called *The House of Life*,' towards which the majority of his sonnets and songs were contributions.

The dwelling-place in which one finds oneself by chance or destiny, yet can partly fashion for oneself; never properly one's own at all, if it be changed too lightly; in which every object has its associations — the dim mirrors, the portraits, the lamps, the books, the hair-tresses of the dead and visionary magic crystals in the secret drawers, the names and words scratched on the windows, windows open upon prospects the saddest or the sweetest; the house one must quit, yet taking perhaps, how much of its quietly active light and colour along with us! — grown now to be a kind of raiment to one's body, as the body, according to Swedenborg,[19] is but the raiment of the soul — under that image, the whole of Rossetti's work might count as a *House of Life*, of which he is but the 'Interpreter.' And it is a 'haunted' house. A sense of power in love, defying distance, and those barriers which are so much more than physical distance, of unutterable desire penetrating into the world of sleep, however 'lead-bound,' was one of those anticipative notes obscurely struck in *The Blessed Damozel*, and, in his later work, makes him speak sometimes almost like a believer in mesmerism. Dream-land, as we said, with its 'phantoms of the body,' deftly coming and going on love's service, is to him, in no mere fancy or figure of speech, a real country, a veritable expansion of, or addition to, our waking life; and he did well perhaps to wait carefully upon sleep, for the lack of it became mortal disease with him. One may even recognise a sort of morbid and over-hasty making-ready for death itself, which increases on him; thoughts concerning it, its imageries, coming with a frequency and importunity, in excess, one might think, of even

17. Manichaeus, a Persian of the 3d century A.D., taught that the human body is the product of the Kingdom of Darkness, or Evil; and that the spirit is the product of the Kingdom of Light, or Good; and that hence there are two gods.

18. Rossetti, 'Love-Lily,' last lines.

19. Emanuel Swedenborg (1688–1772), Swedish scientist, theologian, mystic.

the very saddest, quite wholesome wisdom.

And indeed the publication of his second volume of *Ballads and Sonnets* preceded his death by scarcely a twelvemonth.[20] That volume bears witness to the reverse of any failure of power, or falling-off from his early standard of literary perfection, in every one of his then accustomed forms of poetry — the song, the sonnet, and the ballad. The newly printed sonnets, now completing the *House of Life*, certainly advanced beyond those earlier ones, in clearness; his dramatic power in the ballad, was here at its height; while one monumental, gnomic[21] piece, *Soothsay*, testifies, more clearly even than the *Nineveh* of his first volume, to the reflective force, the dry reason, always at work behind his imaginative creations, which at no time dispensed with a genuine intellectual structure. For in matters of pure reflection also, Rossetti maintained the painter's sensuous clearness of conception; and this has something to do with the capacity, largely illustrated by his ballads, of telling some red-hearted story of impassioned action with effect.
