In some Provinces, efforts have been made to revive the ancient handicrafts of the country and cottage industries by organizing co-operative societies for the cottage workers. Many of these societies merely provide cheap credit, but in some places they undertake the supply of raw materials and the sale of manufactured goods. The most important industry which flourished in India before the introduction of machinery was handloom weaving and efforts have been made to strengthen and develop it by the formation of co-operative societies of handloom weavers. Most of the weavers' societies are merely credit

societies, but some undertake the purchase of yarn for members, and others have store branches to sell the cloth produced by members. They have also been instrumental in introducing improved looms and methods among the conservative weaving classes. In Bengal and the Punjab, much success has attended the organization of central unions among weavers' societies, and similar intensive work in Bihar and Orissa and Bombay has also met with good results. Other industrial societies, to be found in very small numbers here and there are those for "gaolees" or milkmen, dyers, basket and brass workers in the Central Provinces, "Chammars" and "Dhors" in Bombay and the Punjab, lacquerware workers, carpenters, wood-carvers, blacksmiths and potters in Mysore, where the State provides special facilities in the shape of loans and technical assistance for the development of artisans' societies. In Bombay, the producers movement has extended to communities of workers like coppersmiths and goldsmiths, carpenters, dyers, and others, and drawing its inspiration from the ancient guild spirit animating the communities, it aims at creating a strong economic organization among these various industrial workers and craftsmen, based on self-help and self-government. Another off-shoot of this movement is the starting of co-operative societies among skilled or unskilled labourers on the lines of the labour societies of Italy. The initiative came from Kashmir, while experimental societies were also started in Madras, and in Bombay. The object of these is to organize labourers to tender for contracts for public or private works, to eliminate the middleman contractor, and to utilize the profits for the economic and social betterment of the labouring community. The Indian Industrial Commission in the course of their inquiries devoted some attention to the development of small and cottage industries and the possibility of reviving them by the introduction of co-operation. Their recommendations on this subject were, however, not very definite and no action appears to have been taken on these. The development of subsidiary occupations in rural areas also came up for consideration by the Royal Commission on Agriculture in India who were of opinion that technical education and co-operative organization were the only means by which the smaller industries could hold their own. The Commission particularly recommended the grant of advances to artisans' societies for purchase of improved machinery and suggested the linking up of the cultivator through co-operative agency with localized factories dealing with agricultural produce.

An interesting development during recent years is the provision of housing through co-operative societies. A good number of housing societies have been started in Bombay City and suburbs and also in a few other centres in the Presidency like Ahmedabad and Karachi. They are generally organized on the co-partnership system, under which the society owns the houses and lets them to members at fixed rents. The scheme is feasible for such sections of the middle classes as can provide a certain proportion of the initial capital. Tenant-ownership societies have also been started and are now more favoured than co-partnership societies. There are some building societies in Madras and a few more in Mysore, but their activities are confined mainly to the provision of capital for building schemes and only occasionally extend to the joint purchase of land or of building materials. The Punjab has only one society for co-operative housing and town planning. The Local Governments of Bombay and Madras as also the State of Mysore set apart annually some funds to be advanced to housing societies at fair rates of interest and with repayments spread over a number of years.

The province of Burma was a pioneer in the matter of cattle insurance, and to support the village insurance societies which have been started in the province, there was organized a central re-insurance society, which received some financial backing from Government. In the other provinces where it has been introduced co-operative insurance for cattle has made only slight progress, and in Burma, as also in the Punjab where the movement had advanced so far as to necessitate the starting of a re-insurance society there has been a set-back recently.

Agricultural Co-operation.—Co-operative societies have, until recently, been organized only to supply cheap credit to their members, but there are various other fields of work to which they may extend their activities. The total number of agricultural non-credit societies is 2,699 of which 390 were societies for purchase and sale, 792 for production, 889 for production and sale and 628 for other forms of co-operation. Grain banks have, in some provinces, been started with advantage, receiving deposits in kind and allowing these to accumulate to be sold at profitable rates or distributed to the members in times of scarcity. Such banks have been started in Bihar and Orissa, Bengal, Mysore and Coorg. Societies on a similar basis for the storage of fodder have been started in Baroda. Another direction in which the co-operative principle is being applied is the starting of societies for purchase of and distribution among members of pure and selected seed. A number of small societies for supply of seed, and seed unions have been organized in the Bombay Presidency and in the Central Provinces and Berar. Societies for the co-operative purchase and sale of manure will also prove a great boon, and a few such stores have been established in Madras, Bengal, Bihar and Orissa and Bombay. In the Punjab and in Madras, the supply of agricultural requisites has been undertaken either by the credit societies on the commission-indent system or special supply unions are organized for bulking orders, making contracts, distributing goods, and collecting payments.

Joint sale of produce gets popular as co-operative credit thrives and agriculturists become less dependent on local traders. While Burma led the way by starting societies for the joint sale of paddy, the most interesting developments in the direction have taken place in Bombay and Bengal Societies for the sale of agricultural commodities, chiefly cotton and jaggery, have been

started, in several districts all over the Bombay Presidency. Co-operative marketing of cotton has recently made much progress in the Dharwar, Broach and Surat districts where these have led to the starting of a few co-operative ginning factories controlled by cotton-growers. This aspect of co-operation has lately attracted considerable attention and attempts similar to those made in Bombay have been made in Madras and the Punjab, in the latter province with considerable success at Lyallpur and Montgomery. In Bengal, there has been a move recently to organize the sale of jute and paddy on co-operative lines. A vigorous propaganda has been undertaken for the purpose and a central depot has been opened for the sale of jute principally in Calcutta. It will indeed be a great achievement if these efforts are successful and the cultivator obtains adequate returns for his produce. At present he buys in the dearest market and sells in the cheapest. But if co-operative purchase and sale show good progress, his economic position will be much improved. Apart from separate societies for the purpose, credit societies and central banks, in a few parts of the country, arrange for the joint supply of agricultural requisites. In some places, credit societies undertake the joint purchase of agricultural implements for members, while in others separate registered societies are started for the purpose of selling implements or supplying these on hire. In some provinces in Upper India, this work is performed by central banks for the societies affiliated to them. Apart from separately registered societies in Bombay, the branches of the Provincial Bank have helped considerably in the distribution of seeds, manures and fertilizers, the supply of agricultural implements, and the sale of produce, particularly jaggery. As the work develops it is transferred to separate registered societies or unions.

Efforts have been made in various parts of the country to solve the problem of milk-supply—to reduce the price and increase the purity—by starting co-operative dairies, composed either wholly of gaolis or milkmen or the producers and the consumers together. The most successful of these efforts has been the group of milk supply societies started in the neighbourhood of Calcutta which have federated themselves into a union. The union has, with the help of the Calcutta Municipality and the expert officers of Government erected a well equipped modern plant for pasteurizing milk, and while the milk supply it controls has been satisfactory to consumers it is interesting to note that by co-operation the producers have also considerably improved their economic position, having paid off debts, bought more cattle, put up decent cattle sheds and accumulated substantial sums in their local societies in the shape of shares and reserves. A similar experiment his recently been undertaken in Madras. Co-operative creameries and ghee producing societies have also been started in one or two provinces. Another interesting development is the starting of cattle-breeding societies in the Punjab and elsewhere. It is anticipated that these societies will assist in supplying the keen demand that exists for bulls of good stock. In a few provinces there are societies for rice-hulling, the manufacture of jaggery and for joint irrigation. The latter is an interesting development of co-operation which though tried also in Bombay appears to have established itself in popular favour especially in the Burdwan Division of Bengal. This tract, once very flourishing, has been ravaged in recent years by frequent floods and famines, and the population had lost all initiative and sunk into poverty, while their lands deteriorated and malaria claimed a heavy toll. The starting of irrigation societies has opened a new chapter in the history of the tract and has revived the energy of the people and brought them together for common economic endeavour. Ginning on co-operative lines has also been attempted. An interesting experiment in agricultural co-operation is the starting in the Punjab of societies for the consolidation of small and scattered holdings. These arrange to regroup and re-allot the small and scattered holdings of members and if voluntary action proves sufficient for the purpose in other provinces, one of the gravest evils of modern Indian agriculture will be solved without the aid of State help or legislation. After the last floods that occurred four years ago in the central parts of the Madras Presidency co-operative societies were started to enable agriculturists to reclaim their land by clearing away the layers of sand and replacing the soil. These societies received assistance from Government, both in the shape of long term capital and facilities for transport of material. Similarly after the heavy flood of 1927 in North Gujarat and Western Sind reconstruction societies have been started in the devastated areas for repair and rebuilding of houses. The Punjab has, in canal areas, some societies for silt clearance and reclamation of waste lands and Burma has led the way in the colonization of newly developed lands on co-operative lines. A number of societies have recently been started in the Punjab to promote better farming, some of which merely call upon members to undertake certain improvements and introduce approved method of agriculture while others go a stage farther and employ a staff for local experiment, research and demonstration work. In Bombay, a beginning was made in the direction of starting co-operative societies for joint farming and the movement may lead to the evolution of a system of co-operative cultivation of land, such as has been extremely successful in Italy, in undeveloped tracts like those to be irrigated under the Sukkur Barrage Scheme. Proposals to encourage this form of co-operation have been submitted to the Government of Bombay by the Sind Co-operative Institute.

Co-operation has already been successful to some extent in assuaging the evil effects of the agriculturist, but if the improvement in his economic condition is to be permanent it is essential that he should be prevailed upon to adopt improved methods of production. The Agricultural Departments in various provinces do undertake propagandist work with this object, but their efforts have not proved as successful as they ought to be. A co-operative society provides an effective agency for reaching the agriculturist, and in many places societies have been the means of bringing home to him the need for improved methods and have been made the centres for conducting

the propagandist activities of the Agricultural Department and district Agricultural Associations. As a result, a few societies have been enterprising enough to purchase modern agricultural implements, and the machinery recommended by the Department and to use the proper manures and the certified varieties of seeds. "Wherever agriculture and co-operation have experienced the assistance which each can derive from association with the other they are fast developing a truly organic connection." To this end, joint efforts are being promoted in almost all provinces as both the Departments are in charge of one Minister. This co-ordination is secured by joint conferences, and joint boards of co-operation and agriculture and the starting of local agricultural associations registered under the Co-operative Societies Act. Several of these bodies have lately been started in Bihar and Orissa and in Bombay. In Bombay the taluka development associations undertake active propagandist work, hold demonstrations, and assist in the work of general economic improvement of the agriculturists. The subject of agricultural co-operation and even of agricultural credit came under enquiry by the Royal Commission of Agriculture in India whose Report was published in 1928. The Commission describe the co-operative movement as the greatest hope for the salvation of the rural masses from their crushing burden of debt and look upon it as the natural basis for social educational and economic development in India where the predominant industry is agriculture. They admit that there are defects in the present organization for rural credit but are confident that under the influence of patient persistent and systematic education of the members in the principles and meaning of co-operation these defects are bound to disappear in course of time. The provision of this education in co-operation should, the Commission hold, be the principal care of provincial Co-operative Departments, and though the strengthening of the official staff is suggested the Commission also recommend the organization of supervising unions, federations and institutes and the grant to these bodies of financial support. Recommendations are also made for developing joint marketing of agricultural produce on co-operative lines and for utilizing the agency of co-operative organizations in the work of agricultural demonstration and propaganda, the supply of approved varieties of seeds, implements and manures, the consolidation of holdings and for social and educational betterment.

Committee on Co-operation in India.—In July 1914, the Government of India issued a lengthy Resolution on Co-operation in India, surveying its progress in the country during the previous ten years. In October of the same year, Government appointed a Committee under Sir Edward Maclagan to examine whether the movement, especially in its higher stages, and in its financial aspect was progressing on sound lines and to suggest any measures of improvement which seemed to be required. The enquiry was to be directed primarily to an examination of such matters as the constitution and working of central and provincial banks, the financial connection between the various parts of the co-operative organization, the audit, inspection, and management of all classes of societies, and the utilization of the reserve funds. In its Report, which was issued in September 1915, the Committee stated that it had not confined its enquiries to the subjects referred to it, for it had to recognise that the financial welfare of the higher stages of the co-operative system was largely based on the soundness of the foundation. The Government of India passed orders in 1918 on the recommendations in the light of the opinions of the Local Governments. With a view further to elicit opinion on the recommendations, a special conference of the Registrars was convened in August 1918, to which all the Registrars and a few selected non-official co-operators were invited. The Conference was also asked to consider the suggestion made by the Committee on Co-operation that as the financing of the movement involved grave difficulties which baffled solution unless the discounting of pro-notes was arranged through an Imperial State Bank or the several Presidency Banks, a careful examination of the question was immediately called for. A proposal was made for the appointment of an expert committee, but the Government of India shelved it by stating that they would assemble the committee at some date convenient to them. The question has again assumed some importance in view of the proposal for an all-India Co-operative bank referred to above and also in view of the fact that the Report of the External Capital Committee issued in 1925 makes prominent mention of the value of the co-operative organisation in developing credit facilities of the country. Pursuant to the recommendations of the External Capital Committee, the Chambers of Commerce, both Indian and European, have urged the appointment of a committee to enquire into the best methods of developing banking in India.

Provincial Legislation.—Under the Reforms, co-operation has been made a provincial subject and also a transferred subject. The control of Co-operative Departments has been entrusted to Ministers and in Bombay the United Provinces, and the Central Provinces, Bills have been drawn up for enactment by the local Legislative Councils to take the place of the Co-operative Societies Act. The Bombay Co-operative Societies Bill was introduced in the Bombay Legislative Council in July 1924, and was finally passed into law in 1925. It reproduces, in the main, the framework of the Act of 1912 but introduces the following important modifications:—

(*i*) The adoption of a scientific system of classifying societies.
(*ii*) The improvement of the procedure for liquidation of cancelled societies.
(*iii*) The extension of summary powers of recovery to the awards of arbitrators.
(*iv*) The provision of penalties against specified offences.

No other provincial Council except Burma where a Provincial Act was placed on the statue book in 1927 has yet enacted legislation on similar lines. This suggestion has been accepted by Government and committees of inquiries have been appointed in all the provinces, consisting

of eight members each including a representative of co-operative interests. On the Central Banking Inquiry Committee the co-operative movement has two representatives.

Provincial Inquiries.—In the Central Provinces, owing to the drying up of recoveries and the issue of large advances to agriculturists to tide over the bad season of 1920-21 the fluid resources of the movement were seriously depleted and the Apex Bank was able to meet its liabilities only with the financial assistance of Government. The fluid resources of the Provincial Bank were replenished and the Local Government, with the concurrence of the Government of India, placed credits at the disposal of the Provincial Bank and made advances direct to primary societies in the form of Tagavi loans. A Committee of Inquiry was appointed which made sweeping recommendations, the most important of which was a proposal to liquidate the Provincial Bank and to place central banks in direct touch with commercial banks. This recommendation was, however, subsequently turned down by the Local Government, although some other recommendations such as the division of agricultural finance into short-term crop loans and long-term non-crop loans met with a considerable measure of public support. In Bengal and the Punjab, the return of favourable seasons averted any breakdown of the system, which threatened to overtake the local co-operative organizations when agricultural scarcity on a wide scale caused serious difficulties some years ago. The same may now be asserted of the United Provinces, where there appeared to be some danger of the strain not being quite successfully withstood. The problem there is now that of pushing ahead, and a Committee was appointed in 1925 to hold a comprehensive inquiry and to suggest the lines of future development. The Report of the Committee contains numerous recommendations on matters of detailed administration and proposals for strengthening the official staff of the Co-operative Department. The Committee recommended that central banks should be relieved of the work of supervision and inspection which should be entrusted to a staff working under the directions of the Standing Committees of Co-operators. The Committee further suggested that a beginning might be made in the direction of constituting an apex bank for the province but their proposal has not found favour with the local Government. Committees of Inquiry were also appointed in Bihar and Orissa and Mysore, in the former to advise about financial organization and official control and in the latter to lay down a policy of development particularly in relation to higher finance, non-credit co-operation, agricultural improvement and the relief of indebtedness. Pursuant to the recommendation of the Agricultural Commission a further comprehensive inquiry has been ordered in Bihar and Orissa. In September 1927, on the recommendation of the Madras Legislative Council, the Government of Madras appointed a Committee to enquire into the progress of the Co-operative movement in the Presidency and to suggest suitable measures for effecting necessary improvements. The Report of the Committee was published in 1928, and deals exhaustively with the defects of the movement and sets forth in detail the suggested remedies. Prominent among these is the improvement and strengthening of the system of supervising unions and the linking up of these with the provincial unions through district federations. The provincial union and district federations are charged with the duty of providing education and training and a system of liberal grants-in-aid is proposed to these bodies. Central banks are advised to undertake the inspection of affiliated societies by appointing their own staff and at the time subsidising the federation for the work of supervision. All other important recommendations are the separation of short term and long term finance in rural credit societies and the creation of a central land mortgage bank for the issue of debentures to finance local land mortgage banks. The Agricultural Commission were of opinion that similar inquiries could, with advantage, be undertaken in other provinces and pursuant to this suggestion the Government of Burma appointed a Committee of inquiry, the report of which has already been published. The report indicates that both the primary societies and the financing agencies are not in a sound financial condition while the system of guaranteeing unions has failed altogether. Recommendations are made for the improvement of the arrangements, supervision, inspection and control and the Committee propose the winding up of the Provincial Bank and the creation of central banks for the districts. Government, however, have decided to reconstruct the Apex bank by granting to it a special credit of thirty lakhs of rupees.

Effect of Crises on Co-operation.—It is hardly possible without any close and scientific inquiry, such as has not yet been carried out, to appreciate accurately the effects of the co-operative movement in enabling agriculturists to resist the rigours of a famine as also to judge the reaction of the latter on the co-operative organisation as there is an interplay of various economic forces affecting the life and industry of agriculturists, the proportionate value of which cannot be estimated easily. The agricultural season of 1918-19, however, put the co-operative organisation in most provinces to a very severe test and the reports for the succeeding years afford some indication of the resisting power of the co-operative organization.

With a better appreciation of the dependence of agricultural finance on the vagaries of seasons, and a more systematic management of the funds of central societies it is anticipated that in future the situation arising out of a failure of rains will be satisfactorily met. In 1913 and the following months, practically the whole of the country was subjected to a banking crisis of considerable magnitude, but a marked feature of this crisis was a tendency to withdraw deposits from commercial institutions and to place them in co-operative banks. The outbreak of the War brought another set of influences into play and there was a temporary tendency to withdraw deposits and a temporary cessation of new deposits. The disturbance was not serious except in two or three provinces and by the end of the year 1914-15, the situation became practically normal. In two of the provinces where the situation caused some anxiety owing to the cessation of fresh deposits in central banks, the Government sanctioned advances

to central societies to be utilized in the grant of urgent loans to agricultural societies or to meet withdrawals of deposits. The floods that overtook practically the whole of North Gujarat and one district of Sind in the earlier part of the monsoon of 1927 affected the working of co-operative societies in the flooded areas, but on the whole, the movement rose to the occasion. Early arrangements were made for helping agriculturists to resow and to replenish their stocks of grain or fodder and replace lost cattle, implements or domestic necessaries of life. Advances were made for these purposes at the special rate of 5 per cent. interest and, later on, demands were investigated for rebuilding or repairing houses and funds were provided either through co-operative agency or suitable recommendations were made to the local officials of Government. A charitable fund was also started for relief of distress among members and contributions to this were received from all parts of India and also from Russia.

Social Reform.—Co-operation has in some places stimulated the desire for education and members of rural societies have been known, even at advanced ages, to receive the elements of education to enable them to put their signatures on their societies' papers, and to take a lively interest in the internal work of their institutions. In Bombay, night schools for adults were started with the aid of a splendid donation made by the late Sir Vithaldas D. Thackersey, while in the Punjab, Bihar, Bengal and elsewhere such expenditure on education is incurred by co-operative institutions themselves. In the Punjab separate rural societies have been registered to conduct night schools and also to insist on compulsory education for the children of members. The Punjab also possesses a number of societies for promotion of better living, the members of which societies lay down a social code for themselves. Breach of this code involves punishment by fines. The Madras Presidency has taken the lead in undertaking the work of rural reconstruction on a comprehensive basis in several districts, through the agency of local co-operative organizations financing the programme with the help of the central and provincial banks and co-ordinating it under the aegis of the provincial co-operative union. In Bengal, attempts have been made to fight the scourge of malaria and to promote village sanitation by starting anti-malarial co-operative societies. The societies are federated into a central union in Calcutta which supplements the local funds, co-ordinates the working of the societies, issues literature on hygiene and sanitation, and arranges with local doctors for provision of free medical relief to members. There are not a few cases where a society has set its face against drunkenness, expelled members notorious for their intemperate habits and has insisted on good moral conduct and attempted to improve the standard of life. Societies have occasionally condemned excessive expenditure on marriages, and have thus indirectly trained members to habits of thrift. The liquidation of old debts again has been rendered possible to a great extent and many an agriculturist who was formerly in a state of chronic indebtedness has been relieved of all his debts and as a result of the practice of thrift freed from the necessity of incurring new ones. Credit has been much cheapened and it is now possible for the agriculturist to borrow at 9 to 18 per cent. what he could not borrow at less than 20 to 75 per cent. formerly. It has been calculated that in interest alone the agriculturists of India, by taking loans from co-operative credit societies instead of from the village money-lenders, are even now saving themselves from an unnecessary burden of over two crores of rupees. The village rates of interest have naturally gone down considerably. And the Sowkar is, in most places, not the terror and the force that he was. Business habits have been inculcated with the beneficial result that the agriculturist has learnt to conduct his own work more efficiently. Thrift has been encouraged and the value of savings better appreciated. Special societies are started in the Punjab to promote thrift, while in Bombay, Bengal and Bihar & Orissa, savings of members are attracted to the village credit societies and either special facilities are provided or special propaganda is conducted to induce members to save and deposit voluntarily. Association in a public institution for common good has brought home to the people the blessings of unity and litigation has often decreased in villages with co-operative societies. In the Punjab, a number of societies have been started in rural areas whose members agree to refer all disputes to arbitration by their elected committees and to abide by the awards of arbitrators. Participation in the management of societies has instilled among members the important lessons of self-help and self-reliance; but the most important achievement of co-operation has been the development of a sense of communal life—a feeling of "all for each and each for all"—among members of village societies and the gradual revival of the corporate instincts which made Indian rural organization famous in the world's history.

The following statements show the progress of the co-operative movement in different provinces, and contain some information about their detailed working till the end of the official year 1927-28 :—

Number of Societies for all India, showing the increase since 1906-07.

It conducts a journal "The Proceedings of the Benares Mathematica Society" in which original papers on Mathematics are published and maintains a library. There are about 60 members from all parts of India. Admission fee Rs. 10. Annual subscription Rs. 12 (resident members) and Rs. 5 (non-resident members). *Patron*: Sir William Marris, K.C.S.I., K.C.I.E. *Life President:* Dr. Ganesh Prasad, M.A. (Cantab), D.Sc. *Secretary:* Prof. Chandi Prasad, M.A., B.Sc. *Treasurer:* Prof. Pashapati Prasad, M.A., B.Sc.

BHANDARKAR ORIENTAL RESEARCH INSTITUTE, POONA.—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of late Sir R. G. Bhandarkar, at the hands of H. E. Lord Willingdon, who became its first President. Its objects are to publish critical editions of texts and original works bearing on Oriental Antiquities, to provide an up-to-date Oriental Library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. The valuable library of the late Dr. Sir R. G Bhandarkar, which he had bequeathed already to the Institute, was handed over after his demise by his executors to the Institute and is now located in the Central Hall of the Institute. Since the 1st of April 1918 the Government of Bombay have transferred to the custody of the Institute the unique collection of nearly 20,000 manuscripts formerly in charge of the Deccan College, together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute a grant of Rs. 12,000 a year for the publication of the Government Oriental Series. The Institute has undertaken to edit the *Mahabharata* critically at the request of the Chief of Aundh who has promised a grant of Rs. 5,000 annually for that purpose. Grants are being received from the University of Bombay, and the Governments of Bombay, Burma, Baroda, Mysore and Madras as well as several Southern Mahratta States. The Institute has a journal called "Annals of the Bhandarkar Institute" published four times a year. It also held under its auspices the First Oriental Conference on the 5th, 6th and 7th of November 1919 under the patronage of H. E. Sir George Lloyd and the presidency of Sir R. G. Bhandarkar. Owing to liberal donations from the Tatas and the Jain community, supplemented by Grants in Aid from the Government of Bombay, the Institute is housed in a fine building near the hills behind the Home of the Servants of India Society. Since August 1927 the Institute has been conducting regular M. A. classes in Sanskrit and Ancient Indian Culture, where at present over 15 students, paying Rs. 20 per term, are attending. It is intended shortly to affiliate this class to the Bombay University. Minimum membership dues Rs. 10 a year or Rs. 100 compounded for life. Members can, subject to certain conditions, borrow books from the library and get the Journal free and other publications (a list covering about 100 names sent free upon request) at concession rates. *Secretary*: Dr. S. K. Belvalkar, M.A., Ph.D. (Harvard).

BOMBAY ART SOCIETY.—Founded 1888, to promote and encourage Art by exhibitions of Pictures and Applied Arts, and to assist in the establishment and maintenance of a permanent gallery for pictures and other works of Art. Annual exhibition usually held every January. Annual subscription Rs. 10; Life member Rs. 100. *Hon-Secretary*: V. V. Oak, Bar-at-Law. *Office*: Secretariat, Ground Floor, Bombay.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.—Founded 1804, to investigate and encourage Oriental Arts, Sciences and Literature. Annual subscription Rs. 60. *Secretary:* Dr. Edward Parker, Town Hall, Bombay.

BOMBAY NATURAL HISTORY SOCIETY. (Registered under Act XXI of 1860.)—Founded 1883 to promote the study of Natural History in all its branches. The Society has a membership of about 1,700 all over the world and a museum with a representative collection of the different vertebrates and invertebrates found in the Indian Empire and Ceylon. In 1921 the Society was entrusted with the management

of the Natural History Section of the Prince of Wales Museum, and a great part of the Society's collections have been transferred to that Museum. A Journal is published quarterly which contains articles on natural history and sport as well as descriptions of new species and local lists of different orders. The Society's library is open to members and books may be borrowed under special arrangement by members residing in the mofussil. The Society's Taxidermist Department undertakes the curing and mounting of trophies for members. Annual subscription Rs. 25. Entrance fee Rs. 20. *Patrons:* H. E. The Viceroy of India H. R. H. the Prince of Wales. *Vice-Patrons:* H. H. The Maharao of Cutch, G.C.S.I., G.C.I.E., H. H. the Maharaja of Jodhpur, K.C.S.I., K.C.V.O., H. H. the Maharaja of Rewa, K.C.S.I., H. H. the Maharani of Dhar, H. H. the Maharaja of Bhavnagar and Mr. F. V. Evans, Liverpool; Sir David Ezra, Kt., A. S. Vernay, Esq., London. *President:* H. E. The Rt. Hon. Major-General Sir Frederick Sykes, G.C.I.E., G.B.E., K.C.B. *Vice-Presidents:* The Hon. Mr. J. E. B. Hotson, C.S.I., I.C.S., H. H. The Maharao of Cutch, G.C.S.I., G.C.I.E., Rev. E. Blatter, S.J., PH.D., F.L.S. *Honorary Secretary:* Sir Reginald Spence, Kt., F.Z.S. *Curator:* S. H. Prater, C.M.Z.S. *Asstt. Curators:* C. McCann, V. S. La Personne. *Head Clerk:* Mr. A. F. Fernandes. *Offices:* 6, Apollo Street, Bombay.

BRITISH AND FOREIGN BIBLE SOCIETY.—Since 1811 the British and Foreign Bible Society has been at work in this country. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. The Bible or some portion of it is now to be had in nearly 100 different Indian languages and dialects and the circulation throughout India and Burma reached nearly 11,33,000 issues in 1928. The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Grants of English Scriptures are made to Students who pass University examinations, as under:—

The New Testament and Psalms to Matriculates and the Bible to Graduates.

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma:—

TABLE OF CIRCULATION OF THE B.F.B.S. IN INDIA.

Auxiliaries.	1927.	1926.	1925.	1924.
Calcutta	174,924	173,270	122,781	107,084
Bombay	169,593	155,116	164,820	161,263
Madras	223,125	211,787	238,371	215,247
Bangalore	68,936	17,461	20,315	29,088
North India	154,272	154,889	133,238	144,930
Punjab	106,628	73,843	81,593	61,781
Burma	78,613	75,452	71,328	63,472
Total ..	976,981	861,818	842,446	782,865

These returns do not include the copies which any Auxiliary has supplied to London or to other Auxiliaries and agencies during the year.

BRITISH INDIAN PEOPLES' ASSOCIATION.—To protect the interests of Domiciled Europeans, Anglo-Indians and Indians alike. *President:* Raja Rishee Case Law, C.I.E., M.L.C. *Joint Hony. Secretary:* Dr. H. W. B. Moreno, Ph.D. *Office:* 2, Wellesley Square, Calcutta.

BOMBAY MEDICAL UNION.—Founded 1883 to promote friendly intercourse and exchange of views and experiences between its members and to maintain the interest and status of the medical profession in Bombay. The entrance fee for Resident members Rs. 5, monthly subscription Rs. 2, Absent members Re. 1, and non-resident members yearly subscription Rs. 5. *Hon. President:* Dr. G. V. Deshmukh, *Hon. Vice Presiedens:* Dr. S. K. Vaidya and Dr. R. N. Cooper, *Hon. Librarians:* Dr. P. M. D. Jessawala and Dr. M. B. Thakore, *Hon. Treasurer*: Dr. Y. G. Nadgir, *Hon. Secretaries*: Dr. S. J. Popat and Dr. R. C. Lam, Top Floor, Alice Building, Hornby Road, Bombay.

BOMBAY SANITARY ASSOCIATION.—Founded to create an educated public opinion with regard to sanitary matters in general; (*b*) to diffuse the knowledge of sanitation and hygiene generally, and of the prevention of the spread of disease amongst all classes of people by means of lectures, leaflets and practical demonstrations and, if possible, by holding classes and examinations; (*c*) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise; (*d*) to arrange for homely talk or simple practical lectures for mothers and girls in the various localities and different chawls, provided the people in such localities or chawls give facilities. The Sanitary Institute Building in Princess Street, which has lately been built by the Association, at a cost of nearly Rs. 1,00,000 the foundation stone of which was laid by Lady Willingdon in March, 1914, and opened in March, 1915, is a large and handsome structure with a large Lecture Hall, Library, Museum, etc., and also provides accommodation for King George V. Anti-Tuberculosis League Dispensary transferred to the Municipality in 1924 and Museum and the office of the Assistant Health Officer, C and D Wards, and the Vaccination Station. *Hon. Secretary*, Dr. J. E. Sandilands, M.C., M.A., M.D., Executive Health Officer, Bombay.

CALCUTTA CHESS SOCIETY.—To encourage Chess and Chess contests, open to all. *Patrons:* J. R. Capablanca and Sir W. E. Greaves, Kt., L.L.D., *President:*—The Hon'ble Mr. Justice M. N. Mukerji, M.A., B.L., *Vice-President:* Dr. H. W. B. Moreno, *Hon. Secretary:* G. Dhara, *Hon. Treasurer:* B. B. Gosh, 93, Lower Circular Road, Calcutta.

CHILDREN'S AID SOCIETY was established in 1927 to help forward the operation of the Bombay Children's Act by taking over responsibility for the maintenance of the Umarkhadi Children's Remand Home, for the organisation of inquiry work regarding the cases of boys and girls dealt with by the Juvenile Court and for the co-ordination of work done by voluntary supervision workers appointed by the Court. The Society is a private charitable organisation with a grant-in-aid from Government. Its work lies amongst destitute children hailing from all parts of India, Juvenile offenders less than 16 years of age and children offended against by adult persons. *President:* H. E. The Rt Hon. Sir Frederick Sykes, P.C.; *Vice-President:* The Hon. Mr. J. E. B. Hotson, C.S.I., I.C.S.; *Chairman:* Mr. N. W. Faith; *Hon. Treasurer:* Mr. Meyer Nissim; and *Secretary:* Miss M. K. Davis, B.A.

EUROPEAN ASSOCIATION.—The European Association was established in 1883 under the title of the European and Anglo-Indian Defence Association and was re-established in 1912 under the title of the European Defence Association, but the present title was adopted in 1913. The Association has for its major object the organisation of European influence in the political life of India. The Head Offices (Central Administration) are at 17, Stephen Court, Park Street, Calcutta. *President*: Mr. W. L. Travers, C.I.E., O.B.E., M.L.C. *Vice-President:* Mr. W. H. Thomson, M.L.C. and The Hon'ble Sir Arthur Froom; *General Secretary*: Colonel J. D. Crawford, D.S.O., M.C., M.L.A.; *Asst. General Secretaries:* Mr. T. Chapman-Mortimer and Mr. H. L. Walker; *Hon. General Treasurer*: Mr. G. B. Morton; *Publication*: "The Review of India", obtainable from the General Secretary.

BRANCHES OF THE EUROPEAN ASSOCIATION.—

ASSAM.—*Chairman*, Mr. T. A. Chalmers, C.S.I., Bengal, Eastern. *Chairman*, Mr. J. M. Buttars, *Secretary*, Mr. N. J. Scott.

CACHAR.—*Chairman*: Mr. H. Emblen; *Secretary*, Mr. H. Emblen.
UNITED PROVINCES.—*Chairman*, Mr. J.G. Ryan, M.B.E.; *Secretary*: Mr. J.J. Fair.
TRICHINOPOLY.—*Chairman*, Mr. R. H. Martin. *Secretary*: Mr. R. H. Martin.
CALCUTTA.—*Chairman*, Mr. W.H. Thompson, M.L.C. *Secretary*: Mr. T. Chapman Mortimer.

INDIAN ASSOCIATION FOR THE CULTIVATION OF SCIENCE (Calcutta).—*Honorary Secretary*, Prof. C. V. Raman, M.A., D.Sc., F.R.S., 210, Bow Bazaar Street, Calcutta.

INDIAN CHEMICAL SOCIETY.—Was founded in 1924 with Sir P. C. Ray as *President*, and Professor J. N. Mukherjee, 92, Upper Circular Road, Calcutta, as *Secretary*. *Bombay Members of the Council*. Dr. A. R. Normand, PH. D. (Wilson College). Dr. A. N. Meldrum, D. SC. (Royal Institute of Science); Rev. Father J.F. Caius, S.J., F. L. S. (St Xavier's College).
Bombay Branch of the Indian Chemical Society. President: Rev. Father J. F. Caius, S. J., F.L.S., *Vice-Presidents*: Dr. A.N. Meldrum, D. SC, Dr. A. R. Normand, PH. D.; *Jt. Secretaries*: Dr. Mata Prasad, D. C., Mr. B. S. Pant, S. SC., *Treasurer*: Khan Bahadur Dr. A. K. Turner, L.M.&S., *Ordinary Members of the Executive Committee*: Dr. N. J. Vajifdar, B.A., L.M.&S., Mr. G. C. Mitter, M. SC., Mr.S.M. Mehta, M. SC.,

INDIAN INSTITUTE OF POLITICAL AND SOCIAL SCIENCE.—Founded on 30th March 1917 to promote a systematic study of political and social science in general and Indian political and social problems in particular in all their aspects taking the terms 'political' and 'social' in their widest sense; to organise free and well-informed discussions on current political and social topics as well as on abstract political and social questions; to formulate considered views on current political and social questions; to publish literature and make representations from time to time on questions arising or necessary to be raised in the interest of the public; and to form and maintain a library for the promotion of the above objects. Office: Servants of India Society, Sandhurst Road, Girgaum, Bombay. *President*: M. A. Jinnah, Bar-at-Law, *Vice-Presidents*: Mr. Jamnadas M. Mehta, Bar-at-Law, M.L.A., Mr. Bhulabhai J. Desai, M.A., LL.B., Advocate; *Hon. Secretaries*: Mr. S. G. Warty, M.A., and Mr. Mavji Govindji, *Treasurer*: Mr. V. R. Bhende.

INDIAN MATHEMATICAL SOCIETY.—Founded in 1907 for the advancement of Mathematical studies in India. It conducts a bi-monthly journal in which papers on mathematical subjects are published and maintains a library with current mathematical periodicals in all languages and new books on the subject. The library is located in the Fergusson College, Poona, whence the journals and books are circulated to members by post. The journal of the Society is published in Madras. There are about 225 members from all parts of India. *President*, V. Ramaswami Aiyar, M.A. (Retired), Deputy Collector, Chittoor. *Secretaries*, Dr. R. Vaidyanatha Swami, University, Madras, and Prof. Mukund Lal, Government College, Lahore. *Librarian*, Prof. V. B. Naik, Poona.

INDIAN ROADS AND TRANSPORT DEVELOPMENT ASSOCIATION, LTD.—The Association was formed in 1926 and registered in October 1927, and is conducted on similar lines to the European Association with a Council having Headquarters in Bombay. The subscriptions for membership of the Association are Rs. 10 (Life Membership) and Re. 1 annual subscription.

The aims and objects of the Association are to promote the cause of Road Development throughout India by making representations to the Government of India, Government of Provinces, District Boards and other public bodies concerned, regarding the construction, improvement and maintenance of Roads and Bridges and the improvement of methods of transport; to make representations to all or any of the bodies regarding the adjustment of taxation, customs duties and excise affecting motor vehicles and other modes of transport and employment of same, in such manner as to facilitate the development of Road Transport throughout India; to educate the public by means of propaganda work and to create authoritative public opinion with regard to the needs of, and advantages to be derived from improved road communications. All persons, firms or companies interested in Road and Transport problems are eligible for election as members.

The Council consist of the following Members—H. E. Ormerod, (President); Sir N. N. Wadia, K.B.E., C.I.E., (Vice-President); E. Miller, M.L.C., R. Ricardo; S. Guevrek; Sir Hugh Cocke, M.L.A., and G. H. Cooke, representing Madras Branch. Secretary and Treasurer—W. Chubb.

Branches are already in existence in Bombay. Calcutta, Madras, Karachi and Assam, and others are being formed in important centres.

INDIAN SOCIETY OF ORIENTAL ART (Calcutta.)—*President*, Sir Rajendra Nath Mookerjee, K.C.I.E.; *Vice-President*, Mr. O. C. Gangoly, Solicitor. Editor "*Rupam*"; *Joint Hon. Secretaries*, C. W. E. Cotton, and G. N. Tagore; *Assistant Secretary*, P. Chatterjee, *Hon. Treasurer*, Rai Fanindra Lal De, Bahadur. *Office*—6A, Corporation Street, Hindusthan Buildings, First-floor, Calcutta.

INDIA SUNDAY SCHOOL UNION.—The India Sunday School Union is an interdenominational organisation having for its object the strengthening of religious and moral education throughout the Indian Empire. It embraces a Score of Auxiliaries, which are generally associated with language areas. There is a number of full-time workers, European and Indian, but much help is given in all parts of the organisation by honorary helpers.

The I. S. S. U. was founded in Allahabad in 1876. Its general committee is made up of representatives from the National Christian Council of India, from the auxiliaries, and from other sources. Funds for the carrying on of the work are partially found in India, but the major part is still provided by The World's

Sunday School Association. The headquarters of the Union is at Coonoor in the Nilgiri Hills where besides the office and well-stocked book shop there is The St. Andrew Teacher Training Institution. In this Institution's leaders in religious education from all parts of India are trained for their duties.

Besides the central training college the chief activities of the Union are the providing of literature for the religious educational needs of India, good literature for teachers and for children, extension courses of lectures delivered in English or vernaculars in all parts of the Empire, the arranging of teachers' conventions and conferences, the arrangement of examinations in Scripture for teachers and scholars in the Sunday Schools.

The following journals and quarterlies are published by the I. S. S. U. :—

The India Sunday School Journal,

The Senior Lesson, Quarterly,

The Junior Lesson, Quarterly,

Senior Scholars' Self-Teaching Quarterly.

Approximately a million scholars in Sunday Schools and Day Schools are touched by the activities of the Union, and 60,000 to 70,000 teachers.

The officers of the I. S. S. U. are—*President*—Bishop J. W. Robinson, Delhi; *Treasurer*—W. H. Warren, Madras; *General Secretary*—E. A. Annett, Coonoor.

INSTITUTION OF ENGINEERS (INDIA).—The organisation of the Institution commenced in 1919 and it was inaugurated by H. E. Lord Chelmsford early in 1921. Its object is to promote and advance the science, practice and business of engineering in India on the same lines as are adopted by the Institutions of Civil, Mechanical and Electrical Engineers in the United Kingdom. The standard of qualification is the same. Membership is divided into four classes, *viz.*, Members, Associate Members, Companions and Associates, and there is an additional class for students. *President*, R. D. T. Alexander, D.S.O., O.B.E., T.D. *Secretary*, F. Powell Williams. *Offices*—8, Esplanade Row, East. P. O. Box 669, Calcutta.

MADRAS FINE ARTS SOCIETY.—*Patron*, H. E. the Rt. Hon. Viscount Goschen; *President*, The Hon. Mr. Justice E. H. Wallace; *Secretary*, P. F. Fyson, Chepauk, Presidency College, Madras.

MADRAS LITERARY SOCIETY AND AUXILIARY OF THE ROYAL ASIATIC SOCIETY.—*Secretary*, B. W. Batchelor, Messrs. Binney & Co., Madras.

NATIONAL HORSE-BREEDING AND SHOW SOCIETY OF INDIA.—Formed in 1923. Objects: To form a national body of public opinion on horse-breeding matters; to encourage and promote horse-breeding in India; to protect and promote the interests of horse-breeders and to give them every encouragement; to improve and standardise the various types of horses bred in India; to prepare an Indian stud book; and to promote uniformity in all matters connected with horse shows in India. *Patron-in-Chief*:—H. E. The Viceroy, *President*, Colonel E. Hearle Cole, C.B., C.M.G., Coleyana, Montgomery District, Punjab; *Secretary*, Major-General Sir Bernard James, C.B., C.I.E., M.V.O. The Society issues the following publications: An Illustrated Quarterly Journal in English and Urdu, Stallion Register and Supplement, Indian Stud Book, Record of Country Bred Racing, Ahmednagar Stud Book, Show Judging Pamphlet. The Society holds The Imperial Delhi Horse Show Annually in February. *Registered Office*—Remount Camp, Kingsway, Delhi.

NATIONAL INDIAN ASSOCIATION.—Founded in 1870. Its objects are:—(*a*) To extend in England, knowledge of India, and interest in the people of that country. (*b*) To co-operate with all efforts made for advancing Education and Social reform in India. (*c*) To promote friendly intercourse between English people and the people of India. In all the proceedings of the Association the principle of non-interference in religion and avoidance of political controversy is strictly maintained. It has branches in Bombay, Madras, Ahmedabad, Nagpur, Calcutta, Rangpur and Lahore. *Hon. Secretary*, Miss Beck, 21, Cromwell-road, London. Publication, *The Indian Magazine and Review*,(8 members a year) which chronicles the doings of the Association in England and in India, and takes note of movements for educational and social progress. It publishes articles about the East to interest Western readers, and articles about the West to interest readers in the East. *Life Members*—Ten Guineas. Annual Subscriptions: Members, one Guinea; County Members, Ten shillings; Associates Students, Seven shillings and Six pence.

PASSENGERS' AND TRAFFIC RELIEF ASSOCIATION. (Established in 1915). *Head Office*—139, Medows Street, Fort, Bombay. Objects: (*a*) To inquire into and ascertain grievances with respect to passengers in India generally. (*b*) To petition Government, Local bodies, Railway, Steamers and other companies carrying passengers and traffic; to take all proper and necessary steps to obtain redress with regard to the said grievances. (*c*) To hold periodical meetings and discuss questions relating to grievances. (*d*) To start branch offices throughout India, and to affiliate societies and bodies having objects similar to this Association. (*e*) To start a fund to meet expenses for carrying out the objects of the Association. *President*—Meyer Nissim, Esquire, M.A., *Vice-Presidents*—L. R. Tairsee Esquire, B.A., Lachmandas Daga, Esquire. *Hon. Secretaries*—Jivraj G. Nensey, Esquire, Khan Bahadur P. E. Ghamat. *Assistant Secretary*—Pestonji Jamsetji, Esquire.

PHILATELIC SOCIETY OF INDIA.—Formed March 1897; Annual subscription Rs. 15. *Secretary*, Jno. Godinho, 15, Burrow's Street, Bombay.

PHOTOGRAPHIC SOCIETY OF INDIA (Calcutta):—Annual subscription Rs. 30 (Town Members) and Rs. 15 (Mofussil members). Entrance fee Rs. 20 and Rs. 10. The Society is affiliated to the Royal Photographic Society of Great Britain, London and holds annual exhibitions, distributes a monthly journal to members, and undertakes developing, printing and enlarging work from its members only

There are excellent work-rooms apparatus and reading room at the Society's Headquarters at 229, Lower Circular Road, Calcutta. *Hon. Secretary:* A. Hearn, 229, Lower Circular Road, Calcutta.

POONA SEVA SADAN SOCIETY.—This Institution was started in 1909 by the late Mrs. Ramabai Ranade, Mr. G. K. Devadhar and a few other ladies and gentlemen in Poona and registered in 1917. It is now working independently though for a few years in the beginning it was conducted as a branch of the Bombay Seva Sadan. Its main object is to make women self-reliant and to train them for missionary work undertaking educational and medical activities for their sisters and brethren, especially the former in backward areas and working on a non-sectarian basis. Nominal fees are now being charged for instruction, except for the Music Classes, for Special Classes in English, and for High School classes, etc. There are eight different departments subdivided into 60 classes. Arrangements are made for training Nurses and Midwives and women Sub-Assistant Surgeons at the Sassoon Hospital, Poona, and a hostel is maintained for the former and two for those attending the Sub-Assistant Surgeon's Classes. There is a Public Health School affiliated to the Lady Chelmsford League for Maternity and Child Welfare, Delhi. The number in these three hostels is now about 85. Besides there is a full-fledged Training College named after Bai Motlibai Wadia with about 46 students excluding those in the V. F. Class for being trained as Mistresses for Vernacular schools. This College is probably the only college in India maintained by a non-official, non-Christian missionary body teaching the full course. The results of the Certificate Examinations held in the year 1927-28 under the authority of the local Government Training College for Women were as follows: I year senior 12. The total number of certificates granted so far is 347 now. The Practising School for little girls attached to the Training College has now eleven classes with 265 students reading up to the Marathi VI Standard, English being taught in the V standard class. Primary Classes for grown up women teaching up to the Marathi V Standard are attended by about 105 women. It is here that poor women are recruited for training as a teacher, nurse, midwife, or doctor. Special classes for teaching English, First Aid, Home Nursing were attended by about 93 students; the Music Classes by 112 students, and the Work-room Classes for teaching Sewing, Embroidery, Hosiery and Weaving by 158 women. Thus, the total number of pupils is 984 to-day. There are two branches of the Society started at Satara and Baramati which are named after Lady Vithaldas Thakersey, the wife of the greatest helper of the Society so far, the late Sir Vithaldas D. Thakersey. Besides there are branches started at Bombay (Dadar and Girgaum), Sholapur, Ahmednagar Alibag, Nasik, Nagpur, Gwallor and Madras for either educational or medical work or for both. Thus the total number of women and girls including about 150 duplications on the rolls at these various Centres of the Society is over 1,500. There are in Poona six hostels, three of which are located at the headquarters and the other three in the Raste's Peth and the Somwar Peth for Nurses, etc., under training at the Sassoon Hospital. The number of resident students is above 260 in these six hostels. One of the three hostels at the headquarters is intended for women of depressed classes. The number of these women at present is 7. In connection with the medical branch a Committee has been formed in England, which will enable the Society to send fully qualified Nurses there to undergo further training. Two fully qualified Nurses have so far been sent by the Society for their post graduate course in Public Health Nursing at Bedford College for women, London, with the partial help of a scholarship of the League of Red Cross Society, Paris. There is an active Infant Welfare centre and ante-natal clinics with the average daily attendance of 50 excluding expectant mothers. The Society has extended its medical activities in Bombay by undertaking, with the help of two charitable Trusts in Bombay, to work out the scheme of Matetnity, Infant Welfare, Child Welfare and General Nursing for the women and children of the Bhatia Community under the supervision of Mr. G. K. Devadhar, the organiser of the society. This scheme has a Maternity Hospital and Nursing Home, and three Infant Welfare centres. Besides, there are Maternity Hospitals and Nursing Homes at Ahmednagar, Alibag, Nasik, and Sholapur under the management of the society in connection with other organizations. Now Her Excellency the Countess of Irwin, the Countess of Reading, Lady Wilson, Lady Lloyd, Lady Willingdon, Lady Sydenham and Lady Chelmsford are Hon. Patronesses. The institution is largely dependent upon public contributions and Government assistance. The annual expenditure of the whole organization now exceeds Rs. 2,50,000. *President*: Shrimant Saubhagyavati H.H. the Ranisaheb of Sangli; *Honorary Organiser and General Secretary*: Mr. Gopal Krishna Devadhar, M.A., C.I.E.; *Local Secretary and Treasurer*: Mrs. Yamunabai Bhat; *Lady Superintendent and Secretary for Development and Collections*: Mrs. Janakibai Bhat (Kaiser-i-Hind Silver Medal); *Joint Lady Superintendents*: Mrs. Saralabai Naik, M.A., and Miss Dwarkabai Bhat, B.A., B.T.; *Hon: Secretaries, Nursing and Medical Education Committee*: Rao Bahadur Dr. P. V. Shikhare, L.M. & S., Dr. V. C. Gokhale, L.M. & S. and Dr. N. L. Ranade, B.A., M.B.B.S.

PRESS-OWNERS' ASSOCIATION, Bombay—Started on 30th April 1919 to promote the interests of the printing and litho presses and allied trades, to bring about harmony and co-operation among press owners and proprietors and to take such steps as may be necessary in furtherance of the above objects.

Office:—Gaiwadi, Girgaum, Bombay 4.

President:—Shet Pandurang Javjee, J. P.

Secretary—Mr. Manilal C. Modi.

RANGOON LITERARY SOCIETY.—*President*, H. E. The Governor of Burma. *Hon. Secretary*, Mrs. C. Peacock, 17, York Road.

RECREATION CLUB INSTITUTE.—This Institution was started in 1912-13 by the members of the Ismaily Dharmic (religious) Library in Bombay. Its central office is in Bombay with branches at Ahmedabad, Ahmednagar, Karachi, Hyderabad (Sindh), Poona, Warangal, etc. The aims and objects of the society are to elevate and improve the social, economic and spiritual condition of the depressed and poor classes of people and with that intent to found primary schools, associations and such departments and to take all constructive means to achieve the above objects. The Institute has 2 orphanages with 150 inmates, industrial works, domestic industries, sales depots, clubs, libraries, etc. It also issues two Anglo-Vernacular papers, The *Ismaily* (a weekly) and The *Nizari* (a monthly). *Hon. Secretary*, Mr. Hasan Lalji Devraj.

ROYAL SOCIETY OF ARTS, INDIAN SECTION.—This Society was founded in London in 1754. Its recently published history by Sir Henry Trueman Wood, late Secretary of the Society, gives the following account of the Indian Section. In 1857, a proposition was made by Mr. Hyde Clarke, who wrote to the Council suggesting that "a special section be formed for India, another for Australia, one for English, America and so on." It was suggested that the Indian Section should meet once a fortnight for the reading of papers. Nothing came of the suggestion until ten years later when Mr. Hyde Clarke returned to England, and in 1868 he renewed his proposal, but only proposing the formation of a Committee which should organise conferences on Indian subjects. This time the suggestion was taken up more warmly. Mr. Hyde Clarke himself was placed on the Council, and the Indian Conferences, which soon developed into the Indian Section, were started. "The Indian Section thus established became a most important department of the Society. It has had great results in India by spreading information as to the directions which the development of Indian manufactures and Indian products could most usefully take, and in England by giving similar information as to the industrial resources and progress of India itself. The Section has received great help from the Indian press and it has in return been of service to the Indian press in supplying useful information to it. It has been of great value to the Society itself as the means by which many members have been added to its list, so that in fact, thanks to a very large extent to the work of the Indian Section and of the allied section for the Colonies, a large proportion of the present number of members come from the dependencies of the Empire abroad." *Secretary of the Society*: G. K. Menzies, M.A.; *Secretary of the Indian and Dominions and Colonies Sections*: W. Perry, B.A., I.C.S. (retired) 18, John Street, Adelphi, London, W. C. 2.

SERVANTS OF INDIA SOCIETY.—The Servants of India Society, founded by the late Hon. Mr. G. K. Gokhale in 1905, is a body of men who are pledged to devote all their lives to the service of the country on such allowances as the Society may be able to give. Its objects are to train national missionaries for the service of India and to promote, by all constitutional means the interests of the Indian people. Its present strength is 22 Ordinary members, 2 members under training, 2 permanent assistants, 1 Attache and 2 probationers. The Society has its headquarters in Poona with branches at Madras, Bombay, Allahabad and Nagpur and other Centres of work at Dohad in Gujerat; Mangalore and Calicut in the Madras Presidency Lucknow in U. P., Lahore in the Punjab and Cuttack in Bihar and Orissa.

The Society's work is primarily political but as it believes in all round progress of the Indian people, it has always laid equal emphasis on social economic, educational, labour and depressed class activities and has worked in these fields. The political work is done through the legislatures, the non-official political organizations, deputations to foreign countries and propaganda. The Right Hon. V. S. Srinivasa Sastri was in the old Imperial Legislative Council and in the new Council of State till 1924 and has to his credit many achievements. Pandit Hirday Nath Kunzru was a member of the U. P. Legislative Council and is now a member of the Legislative Assembly. He takes special interest in the questions of the Indianisation of Army, public services, education and Indians overseas. Mr. N. M. Joshi has been a nominated member of the Assembly since 1921 and has to his credit many a labour legislation. Mr. N. A. Dravid was for three years a member of the C. P. Council. Mr. Joshi was a member of Bombay Municipal Corporation and Mr. R. R. Bakhale a member of the Board of the Port of Bombay for a short period. Mr. Kunzru has been the General Secretary of the National Liberal Federation of India, and Messrs. Joshi, S. P. Andrews, Dube and K. P. Kaul are Secretaries of its Provincial branches and have all done the work of organising political conferences. Messrs. Sastri and Kunzru were members of the Liberal Party's deputation to England during the Reforms period of 1919-20. Mr. Sastri again toured some of the Dominions in 1921 on behalf of the Government of India to secure legitimate rights for Indians there; attended as India's representative the Assembly of the League of Nations and the Washington Naval Disarmament Conference; went to England in 1923 as a Leader of the Kenya Deputation of the Indian Legislature; went in 1927 to South Africa as Agent-General of the Government of India under the now famous Cape Town Agreement for eighteen months; and lastly went to Kenya in 1929 on behalf of Government to place the Kenya Indian's case before Sir Samual Wilson. His achievements in South Africa are a marvel to the world and brought the White and Indian communities together. Mr. Kunzru went in 1929 to Kenya to preside over the East African Congress and to England as the spokesman of the Kenya Indians to put their case before the British Government. Mr. P. Kodand Rao was in South Africa with Mr. Sastri and in Kenya with Mr. Kunzru and has mastered the question of Indians there. Mr. Tiwari was a member of the Government delegation to a few British Colonies in 1921-22. Mr. Joshi was a member

of the Nehru Committee which is the author of the now famous Nehru Report on Constitutional Reforms.

In the field of social economic and educational work, the Society's activities are equally varied. Some of its members are practically the founders of such institutions as the Poona Seva Sadan, Bombay and Madras Social Service Leagues, the U. P. Seva Samiti, the Bhil Seva Mandal catering for the needs and uplift of the aboriginal tribes in Gujerat. The Seva Sadan has been a model institution for the education of women which gives training to over 1,500 girls and women in all useful directions. It has many branches in different parts of India carrying on social and educational work. The Social Service League has done good co-operative, educational and welfare work for the mill workers in Bombay by starting Co-operative Societies, adult night and technical schools and conducting welfare centres. The Seva Samiti is an unique organization in Upper India doing service to the pilgrims going to religious places such as Hardwar and Benares, and working in times of epidemics. Its Boy Scouts organization is a well-knit body recognised both by the public and Government. Mr. Chitalla conducts the Bhagini Samaj for social educational work among the Gujarati ladies. The Society has been conducting a model Depressed Class Mission in the orthodox region of Malabar and is conducting through it and the Devadhar Malabar Reconstruction Trust many social activities at Calicut and Mangalore. In the Co-operative movement the Society has done the pioneering work in the Bombay and Madras presidencies. During natural calamities such as floods, famines and epidemics, the Society has done relief work in every part of India. By its work in the Moplah rebellion, the Society has become a household name in Malabar. Mr. Sastri was for many years a member of the Madras University Senate. Mr. Kunzru is a member of the Allahabad and Benares University Senates and Syndicates and Mr. Dube a member of the Lucknow University Court and of the Lucknow District Local Board.

The Society has taken equally prominent part in various labour activities. Messrs. Joshi and Bakhale have been General and Assistant Secretaries of the All-India Trade Union Congress since 1925 and are greatly responsible for the shape given to the labour movement and for the organisational work particularly in Bombay. They have been President and General Secretary of the Bombay Textile Labour Union since 1926 and have conducted many Textile strikes. Mr. Joshi attended five times the International Labour Conference at Washington and Geneva as Indian Worker's Delegate and the British Commonwealth Labour Conference in 1925. Mr. Bakhale went to Europe in 1928 to attend on behalf of Indian labour, the Geneva International Labour Conference, the British Commonwealth Labour Conference, the International Textile Worker's Congress, the Labour and Socialist International Congress and the British Trades Union Congress. He studied the Trade Union movement in Great Britain, Germany and Russia. Mr. Parulekar and a few other members of the Society are doing similar labour work. Messrs. Sastri and Joshi are members of the Royal Commission on Indian Labour.

The Society conducts three papers.—The *Servants of India*, an English weekly of which Mr. S. G. Vaze is Editor, the *Dnyan Prakash*, the oldest Marathi daily of which Mr. Limaye is the Editor and the *Hitawad*, a bi-weekly. Mr. Parulekar conducts the *All-India Trade Union Bulletin*, Mr. K. G. Sivaswami the *Co-operative Bulletin* in Madras, and Mr. A. V. Patwardhan, the *Sansthani Swaraj*, a Marathi weekly for the benefit of the subjects of Indian States. The Society has also published several pamphlets on public questions of the day.

The question of the subjects of the Indian States has also engaged the attention of the Society and some of its members, particularly Messrs. A. V. Patwardhan and A. V. Thakkar are devoting a part of their energies for that work.

Mr. G. K. Devadhar is the President of the Society after Mr. Sastri who occupied that post from 1915 to 1927. Messrs. Sastri, Devadhar, Kunzru and Dravid are senior members of the four branches. Mr. Patwardhan is the Secretary of the Society and Mr. Joshi the Secretary of the Bombay Branch.

The Society is a non-communal, non-sectarian body which does not recognise any caste distinctions.

SEVA SADAN.—The Seva Sadan Society was started on the 11th of July 1908, by the late Mr. B. M. Malabari. It is the pioneer Indian ladies' society for training Indian sisters ministrant and serving (through them) the poor, the sick and the distressed. To spread its Gospel far and wide, the first branch was opened at Poona as early as 1909. The Society has its headquarters in Gamdevi, Bombay. The Society maintains the following departments of work: (1) Home for the Homeless; (2) Ashrams (Training Homes); (3) Marathi Normal Classes; (4) Home Education Classes; (5) Industrial Department including a workroom, Sewing, Cutting, Hosiery, Cane-work, Cookery, Fancy Embroidery and Artificial Flowers are among the chief industries taught. Total number of women in the different classes is nearly 450.

Secretary, Miss B. A. Engineer, M.A., LL.B., M.B.E., J.P.

CONSUMPTIVES' HOME SOCIETY.—This Society was started by the late Mr. B. M. Malabari and Mr. Dayaram Gidumal on the 1st of June 1909. It was registered under Act XXI of 1860. Mr. Malabari secured a large grant of land in a Himalayan pine forest in Dharampur (Simla Hills) from H. H. the Maharaja of Patiala, for a Sanatorium for Consumptives. His Highness also gave a donation of Rs. one lakh. In 1911 by special permission the Sanatorium was named "The King Edward VII Sanatorium." The Sanatorium has its special water works known as the Lady Hardinge Water Works, presented by the late Sir Chinubhai Madhavlal, Bart., of Ahmedabad. The Sanatorium has a Guest House: The Noshirwan Adul Guest House for visitors to Dharampore. It has accommodation for 90 patients including the special Punjab Block built from a grant of the Punjab Government and reserved for European patients. Most of the blocks and cottages are built by Parsis. The Sanatorium has its own dairy and is called the Ba-

Pirojbai R. H. Patuck Dairy. The Recreation Hall is called "The Sir Bhupinder Singh Recreation Hall" after the name of the Maharaja of Patiala. Mr. Malabari collected an Endowment Fund of about Rs 67,000 lodged with the Treasurer, Charitable Endowments, under Act VI of 1890. Nearly Rs. 2,60,000 have been spent on laying out the sites, buildings, etc., and the current annual expenditure is about Rs. 46,000. The Senior and Junior Medical Officers are in charge of the Sanatorium. The Office of this Society is situated at the Seva Sadan Buildings, Gamdevi, Bombay. Mr. S.P. Wadia is the Hon. Secretary and Diwan Bahadur K. M. Jhaveri is the Hon. Treasurer.

SOCIETY FOR THE PROTECTION OF CHILDREN IN WESTERN INDIA.—Office and Homes at King's Circle, Matunga.

Founded—To prevent the public and private wrongs of children and the corruption of their morals; to take action for the enforcement of the laws for their protection, and, if necessary, to suggest new laws or amendments of the existing laws; to provide and maintain an organization for these objects; to promote education; and to do all other lawful things incidental or conducive to the attainment of the foregoing objects. Subscription for annual membership, Rs. 10; for Life Membership, Rs. 100. *President*:—Dr. Sir Temulji B. Nariman, Kt.

Honorary Secretaries: Dr. Mrs. D. A. De-Monte, and Mr. R. P. Masani, M.A., *Hon. Treasurer*, Khan Bahadur H. S. Katrak.

THEOSOPHICAL EDUCATIONAL TRUST.—This Society was established in 1913 and stands for the education of Indian boys and girls, in which the physical, emotional, intellectual and religious welfare are equally attended to. The general educational policy of the Trust is embodied in "Principles of Education" by Dr. Besant. The chief schools and colleges maintained are (1) Theosophical School and College at Adyar (Residential and Co-educational); (2) Theosophical College and High School at Madanpalli (Co-Educational); (3) Theosophical School for Boys at Benares; (4) Theosophical College for Women at Benares. It is under contemplation to open a Unitary Residential University at Madanapalli and apply for a charter. *President*, Dr. Annie Besant; *Secretary*, Mr. Iqbal Narain Gurtu, M.L.C. Mr. G. V. Subba Rao, *Additional Secretary*; *Treasurer*, Mr. A. Schwarz, (*Headquarters* are at Adyar.)

WESTERN INDIA NATIONAL LIBERAL ASSOCIATION—(*Founded in* 1919).—The Association was formed, in pursuance of clause (*b*) of Resolution XI of the First Session of the All-India Conference of the Moderate Party, with a view—to do sustained work for the political progress and the moral and material welfare of the people; to give expression from time to time to the considered opinion of the Party on matters of public interest; and to inform and educate public opinion in this presidency in support of its views, policy and methods.

The Association accepts Article I of the Constitution of the Indian National Congress Organization as it stood in 1919 and will work for the fulfilment of the declaration made by His Majesty's Government on the 20th August 1917, in accordance with the principles embodied therein. For the promotion of its aims and objects the Association shall pursue the following principles, policy and methods:—(*a*) Law-abiding and constitutional methods of agitation or work; (*b*) Co-operation with Government, whenever possible and constitutional opposition to it, whenever necessary; and (*c*) Fostering a spirit of broadminded liberalism based on principles of liberty, equality and fraternity, among the different classes and communities of the people.

The affairs of the Association are conducted by a Council consisting of 46 members who are elected every three years.

President, The Hon'bleSir D. E. Wacha, Kt. M.C.S.; *Vice-President*, Sir Chimanlal H. Setalvad, K.C.I.E., LL.D., *Hon. Secretaries*, Mr. Kazi Kabiruddin, Bar.-at-Law; Mr. J. R. B. Jeejeebhoy; Mr. J. R. Gharpure, B.A., LL.B., and Mr. N. M. Joshi, B.A., M.L.A. *Assistant Secretary*:—Mr. V. R. Bhende.

Office:—Alice Building, Hornby Road, Fort, Bombay.

WOMEN'S INDIAN ASSOCIATION.—This Association was started in Advar, Madras, in 1917, with aims of service to women similar to those of the Seva Sadan in Bombay. In ten years it has been able to start 70 branches and it has now over 3,000 members. It establishes classes, meeting places, and regular lecture programmes for women in each of these branches. Each branch is autonomous and works according to the need of the locality. Classes are held to teach the vernaculars, English, needle-work—plain and fancy—first-aid, rattan-work and music. Weekly lectures are given on subjects of general interest relating to women, such as health, education, religion, civic responsibilities, woman suffrage, etc. Though started entirely as an educational institution, the movement for the Reform Bill proved that a most necessary part of work for the advancement of women was propaganda in support of woman suffrage. Accordingly the gaining of the vote for women was added to the objects of the Association and the Association specialises on woman suffrage and the removal of sex disqualification from all franchises and candidatureship for local boards, municipal and legislative councils. Valuable work along these lines has been done by the Association as this is the only woman suffrage organization in India. The Association publishes a monthly magazine, *Stri-Dharma* Edited by Shrimati Malati Patwardham, B. A., in English with Hindi, Tamil and Telugu articles. (Rs. 4 to non-members, Rs. 2 to members). It is an all-India Association. Its largest branch is in Bombay, its greatest number of branches in South India, but yearly additional branches are being started in other provinces, and there are flourishing branches as far north as Lahore and Lashkar. The prospects of rapid growth for the Association are very bright as it has been found that women everywhere welcome the self-development which the establishment of these branches brings. The Association is affiliated with the International Woman Suffrage Alliance and the International Women's League for Peace and Freedom

Objects :—
To present to women their responsibility as daughters of India;
To band women into groups for the purpose of self-development, education, and the definite service of others ;
To secure the abolition of child-marriage and child-parenthood ;
To help them to realise that the future of India lies largely in their hands, for as wives and mothers, they have the task of training and guiding and forming the character of the future rulers of India ;
To secure for women the vote for Municipal and Legislative Councils as it is or may be granted to men ;
To secure for women the right to be elected as members on all Municipal and Legislative Councils.
Headquarters : Adyar, Madras. *President*—Dr. Annie Besant. *Vice-Presidents*—Dr. Multhulakshmi, M.L.C. Mrs. Jinarajadasa. *Hon. General Secretary*—Shrimati Malati Patwardhom, B.A. *Hon. Treasurer*—Shrimati Ammu Swaminadhan.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—This Association, which was founded by the late Sir George Williams in 1844, is now a world-wide movement, well established in almost every country in both the hemispheres. The aim of the Association is, through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men.

The Young Men's Christian Association, though relatively new to India, is spreading rapidly. The 'local' Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a National Council which is responsible for the supervision and expansion of all forms of the Association work in India, Burma and Ceylon.

There are now over 60 Associations affiliated to the national union and many other village Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve as the local headquarters :—Allahabad ; Bangalore ; Alleppey ; Bombay ; Calcutta ; Calicut ; Coimbatore ; Colombo ; Galle ; Hyderabad ; Jubbulpore ; Kandy ; Karachi ; Kunnamkulam ; Kottayam; Lahore ; Madras ; Nagpur ; Naini Tal ; Poona ; Rangoon ; Secunderabad ; Simla ; Ootacamund ; Wellington ; Delhi; Jaffna ; Madura ; Murree ; Risalpur ; Trivandrum. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 107 specially trained full-time Secretaries. A feature of the Y.M. C. A. in India is the international character of its Secretariat. It is made up of 14 Americans, 4 Canadians, 19 Englishmen, 2 Scotchmen, 1 Swiss, 2 Anglo-Indians, 1 Dane, 3 Australians and 60 Indians and Ceylonese.

The classes of people reached by the Indian Y. M. C. A. and the lines of service it attempts to do for them may be stated as follows :—
Generally :—1. Literature :—Publication of original works and reprints; Four series: "Heritage of India ;" "Religious Quest of India ;" "Religious Life of India "; "Makers of Modern India."
2. Lecture Bureau :—Many thousands of slides on a wide variety of educational and recreational topics serving a clientele in over 700 centres in India.
3. Physical—Training Physical Directors for schools and colleges, fostering playground movement, Olympics.
4. British Army Work in a number of centres and especially on the N. W. Frontier.
Boys :—Scouting, Boys' Clubs, Camps, etc.
Students :—Hostels and Institutes in most University Centres.
Indian students in Britain :—Specially in London, Edinburgh and Glasgow.
"*Citizens*" :—(*i.e.*, English-educated Indians Ceylonese and Burmese): Reading Rooms, Libraries, Lectures, Group Conferences ; Study-Circles ; handling many subjects of vital interest—social, intellectual and religious.
Soldiers :—Institutes and Holiday Homes.
Anglo-Indians :—Hostels, Institutes, Employment Bureaux.
Europeans:—Hostels, Institutes, Employment Bureaux.
Labourers in Mills :—" Welfare" Work.
Indians in Fiji.—
Rural Communities .—" Rural Reconstruction" work embracing Co-operative Banking, Distribution, Cattle Insurance and Arbitration, Cottage Industries, and Adult Education in four Selected Centres.
A monthly magazine, the YOUNG MEN OF INDIA, is issued at Rs. 5 per annum, including postage.
The work of the National Council (excluding that of the 170 local Y.M.C.As.) calls for a Budget of Rs. 2,04,480 in 1929. Of this sum, Rs. 66,650 has to be raised from the public in India.
The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are :—
Patron :—His Excellency the Rt. Hon. Baron Irwin of Kirby-Underdale, P.C., G.C.S.I., G.C.I E. Viceroy and Governor-General of India.
President of the National Council :—The Most Rev. Dr. Foss Westcott, Metropolitan of India.
General Secretary K. T. Paul, O.B.E., B.A.

The Bombay Association now possesses four well-equipped buildings :—Wodehouse Road, Lamington Road, Rebsch Street, and Reynolds Road. The President is Mr. W. H. Neilson, O.B.E., M.I.C.E., and the General Secretary is Mr. W. H. Bryant, M.B.E. In connection with each branch there is a well managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied activities designed to meet the physical, spiritual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting five centres, serving mill workers, Municipal menial employees and Railway employees. A programme of education, lectures, physical culture, play and general

uplift, profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city, which are financed by the Municipality. Three new centres will shortly open, two more for Municipal menial employees and one for the Port Trust families in Antop village.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON.—This Association founded in the year 1875 was organized nationally in 1896. The aim of the Association is to promote the physical, intellectual, social and spiritual welfare of young women and girls in India, European, Anglo-Indian and Indian. This is done by the establishment of local branches in different centres. At present they number 92 including city and student branches. The Associations in big cities have a large membership including most classes of the community. The needs of girls are met by physical drill, recreation, clubs and classes, lectures, commercial classes, Bible Study and devotional meetings, and meetings for social intercourse. Boarding Homes, some of them holding as many as 70 girls, are established where there is a demand for them and the Association, at present, owns 21 including 8 holiday homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to holiday homes Summer Conferences are held annually at Anandagiri. The Conference estate owned by the Association in Ootacamund and in the North Indian Centre. Special Girls Camps are arranged from time to time in many centres.

Travellers' aid work is done in the large ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Homes in these centes. The Association also runs employment bureaux through the agency of which many girls find positions. The Commercial schools train girls for office and business life. These larger Associations are manned by a staff of trained secretaries, some of whom come from Great Britain, America, Australia, New Zealand and Canada. The others are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year. The majority of the Indian branches are also carried on in this way. The Student Department is affiliated to the World's Student Christian Federation and has 40 branches in the various Schools and Colleges.

The Association, which is affiliated to the World's Committee of the Young Women's Christian Association, is international and inter-denominational. Full membership is confined to members of the Christian Church, but Associate membership is open to any girl or woman of good character, no matter what her religion may be. The National Headquarters are situated in Calcutta and business is conducted by the National Committee which has a representative membership in all parts of India, also in Burma and Ceylon.

The Patroness of the Association is H. E. Lady Irwin.

Copies of the annual reports and other printed matter can be obtained from the National Office which is at 1C, Ashutosh Mukerji Road, (P. O. Elgin Road), Calcutta. The Official Organ of the Association is the "Woman's Outlook," an illustrated monthly magazine, which supplies women living in India with a good magazine at the price of Rs. 2-0-0, post free, per annum.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are:—

(1) To facilitate intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the British Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates; but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has four branches. The addresses of the Honorary Secretaries are as follows:—

Hon. General Secretary:—Mrs. E. F. Hingeley, c/o P. O. B. 535, Bombay.

Hony. Local Secretaries.

Bombay	..Mrs. Blair, Arthur House, Cooperage, Bombay.
Calcutta	..Hon. Secretary c/o Miss Cornelia Sorabji, 28, Chowinghee, Calcutta.
Delhi	..Mrs. Blomfield, Aurinzet Rd., Raisina, Delhi.
Punjab	..Mrs. Irving, 16, Davis Road, Lahore.

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly inter-

vened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organized public meeting for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of **Women's Employment Bureau** in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council ; the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

Federation of University Women in India.

This is an organization conceived to unite for service and fellowship all University Women of whatever race or University who may be resident in India. Units representing British Universities, Indian Universities and American Universities severally have existed since 1913 (Britain) and 1920 (India and America) respectively.

These Units are now fused together into one body ; and are as such affiliated to the International Federation of University Women which embraces 31 countries of the world and has its headquarters at Crosby Hall, Cheque Walk, London.

This International Federation is then a kind of League of Nations in which the University is the Unit : and the opportunities it affords for better understanding for world-friendship, and world-service, will easily be imagined.

As forming one Family, its Members help the common cause of women : they help one another by inspiration and interchange of service : they help the country for which as individual Units they stand, inasmuch as that country is swept forthwith by reason of its place within the International Federation alone, into world statistics and the dignity of recognition by the League of Nations at Geneva.

The benefit to Members individually also is great. The Club Houses of the Federation all over the world are open to them. Equally so are all Scholarships and Fellowships offered by the Federation.

During 1929 these last have included, Scholarships from Great Britain and America which gave free tuition, board and residence at certain Colleges to students for a degree : residential scholarships at Crosby Hall, valuable Fellowships and Prizes offered chiefly for Medical or Scientific research by Australia and America.

A special scholarship was offered in 1929 by Barnard College, Columbia University to under-graduates from India.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit.

Subscriptions.—British Unit ..Rs. 3 a year.
Indian Unit ..Rs. 2 a year.
American Unit .Rs. 2 a year.

The Federation has Branches in Bombay, Calcutta, Lahore, Madras, Kodaikanal. Each Branch has its local Committee. But as a whole the Federation is under a Central Committee with Headquarters at Calcutta for the years 1928 and 1929. Headquarters are at Bombay for 1930-31.

OFFICE BEARERS, CENTRAL COMMITTEE.

President—Mrs. Stewart Macpherson.

LOCAL REPRESENTATIVES.

Bombay	..Miss Pipper.
	Miss Kanga.
Calcutta	..Miss Cornelia Sorabji.
Punjab	..Mrs. Skemp
	Miss Zutsi.
Madras	..Miss P. Seetha.

Honorary General Secretary Mrs. Doctor Hirji Mansions, Bombay.

Applications for membership should be made to the Honorary General Secretary who will forward the same to the Local Secretary to whose Unit it may appertain.

THAYETMYO (1929) Pres. W. L. Barretto; Hon. Secy., U Ba Thein. Every Saturday, 5 p.m Rotary Club House.

The Church.

The Church of England in India became on March 1, 1930, a self-governing branch of the Anglican Communion. Until that date it had been an integral part of the Church of England and its bishops were considered to be suffragans of the Archdiocese of Canterbury. This legal bond was severed by the passing of the Indian Church Act and Measure in 1927, and from the date of severance appointed under the Act, the Church of India, Burma and Ceylon has been free to manage its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Like all the other branches of the Anglican communion the Church of India Burma and Ceylon is Episcopal. It is composed of fourteen sees, Calcutta, Madras, Bombay, Colombo, Lahore, Rangoon, Travancore and Cochin, Chota Nagour, Lucknow, Tinnevelley and Madura, Nagpur, Dornakal, Assam and Nasik. Of these the first to be erected was Calcutta in 1814 and the last was Nasik in 1930. Vacancies on the Episcopal Bench are filled by election each diocese electing its own bishop. The Bishops rule the Church and to them is reserved the final word in all matters of faith and order, but they rule in conjunction with a system of Councils which has been framed so as to give the greatest possible amount of represen tation to the whole body of the faithful. The foundation of the system is the **Parochial Council** of which the Parish Priest is the convenor and chairman. Every baptised, and confirmed member of the Church residing in the parochial area who contributes, in some recognised way, to the financial support of the Church, is a member of the Parochial Council of the ecclesiastical area in which he resides and is called a Qualified Elector.

Above the Parochial Councils come the **Diocesan Councils.** All Priests holding the Bishop's license are members of the Diocesan Council and to it are sent Lay Representatives elected by the Qualified Electors of every Parochial Council. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council. General Councils are held not less than every three years and usually at Calcutta. They consist of three "Houses," Bishops, Priests and Laymen. Every Diocesan Bishop has a place in the House of Bishops. The other two Houses are formed by the elected representatives of the Diocesan Councils. The three Houses usually sit and vote together, but any House has the right to meet alone if it desires to do so in order to formulate its policy or classify its opinions. A "Canon" of the Church is a Resolution passed with

additional precautions ensuring due consideration by all three Houses. In all questions touching faith or Order the position of the episcopate as the divinely authorised teacher of the Church is most carefully safeguarded and the Bishops alone, without the concurrence of the other Houses, can issue Determinations about both subjects. But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Every priest before being licensed to work in the Church of India Burma and Ceylon takes an oath of obedience to the Canons.

The Ecclesiastical Establishment.—At the time of the passing of the Indian Church Act and Measure the Government of India acknowledged that it was responsible for providing for the spiritual needs of the Soldiers and Civilians whom it brought out to India. These responsibilities it discharges by maintaining an establishment of chaplains and churches for the four principal denominations of Christians—Anglican, Presbyterian, Roman Catholic and the Free Churches. The Chaplains of the two first named groups are appointed by the Secretary of State for India, the Anglicans on the recommendation of a Selection Committee of which the Archbishop of Canterbury is the Chairman. They are paid by Government and pensioned after a covenanted period of service. Although they form a definite Department of Government they are not subject to the orders of anyone save their own ecclesiastical superiors. The Presbyterian Chaplains are sometimes appointed to stations and sometimes to regiments. The Anglican chaplains are always chaplains of stations and have the pastoral care of all the inhabitants of the station who do not deliberately withdraw themselves from their ministrations, but when troops are included in the number of their parishioners Government orders that they shall have the first claim on their services. The chaplains and their congregations are members of the Church of India Burma and Ceylon during their residence in India and have full rights of representation in the Councils of the Church. Their right to the use in worship of the Prayer Book of the Church of England is not only acknowledged in the Constitution of the Church but is also safeguarded by clauses in the Indian Church Act.

Government gives to the Metropolitan an annual block grant which is divided between the seven bishops whom Government recognises as having jurisdiction over the Establishment Chaplains and their congregations. These are the Bishops of Calcutta, Madras, Bombay, Lahore, Lucknow, Rangoon and Nagpur. Before 1930 they formed part of the Establishment. One of the difficulties which the Church is facing is that the Government Block Grant is not large enough to provide for all the needs of these bishops. In consequence the Church is struggling to raise Diocesan Endowment Funds to make up deficits. More serious still, however, is the situation brought about by the action of Government in 1924, when in pursuance of a general policy of economy necessitated by post-war conditions it cut down the number of its chaplains by sixty. This set the dioceses a very difficult task. It became necessary suddenly to provide the salaries of Diocesan Chaplains and to furnish funds for the upkeep of the churches of many civil stations previously maintained by Government. Realising the magnitude of this burden Government agreed to help for a period of seven years by means of a very generous Block Grant. The question of the continuance of this grant is to be reconsidered in 1931. If the grant is considerably reduced the situation in most dioceses will be very serious. Either the Church must raise and devote to its European work a greatly increased sum of money or many of the churches in up-country stations will have to be closed. The chief sufferers will be the Anglo-Indian and Domiciled community which on account of "Indianisation" is less able than ever to carry the burden which it seems must inevitably be laid upon it. The difficulty of raising funds for the education of the children of this community and of obtaining priests to work for it becomes greater year by year. Nevertheless the Domiciled Community is the backbone of the Church in India and it is through this community that the conversion of India must come.

The Churches in India have not been wholly blind to these facts and have made desperate attempts to cope with the needs of the community in spite of lack of real support from home. The education of its children is very largely in the hands of the Christian denominations though there are a few institutions such as the La Martiniere Schools, on a non-denominational basis; but they are exceptional. In all the large centres there exist schools of various grades as well as orphanages, for the education of Europeans and Anglo-Indians under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire; and they maintain a high standard of efficiency. The Anglican Church comes next, and the American Methodists have established some excellent schools in the larger hill-stations. The Presbyterians are also well represented in this field, particularly by the admirable institution for destitute children at Kalimpong, near Darjeeling. Schools of all denominations receive liberal grants-in-aid from Government, and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities.

Christian Missions.

The tradition that St. Thomas, the Apostle, was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christians is known to have existed in Malabar. Since then the so-called **Syrian Church** in south-west India has had a continuous life. Except in its infancy this Church (or rather these Churches for the Syrian Christians are now divided into four communions) has displayed little of the missionary spirit until quite recent times.

Western Christianity was first introduced into India by the Portuguese, who established their hierarchy throughout their sphere of influence, Goa being the metropolitical see of the Indies. St. Francis Xavier, a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success, but many of the fruits of his labour were lost with the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the **Propaganda** in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 1,823,000, of whom 332,000 were added during the decade 1911-1921. The total of "Syrian" Christians (exclusive of those who while using the Syrian liturgy, are of the Roman obedience) is 315,000, as against 367,000 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 2,980,000, an increase of 547,000 since 1911. Thus, the total number of Christians of all denominations in India is now close on five millions. In fact it probably exceeds that figure at the present moment, as these statistics are taken from the Census Report of 1911, and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to evangelise India till 1813. They have thus been at work in the Indian mission field for over 110 years, and the statistical results of their efforts are given above. It is now, however, generally recognized that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The **Protestant missions** fill a considerable part in the elementary education of the country. According to the 1923 *Report of the National Christian Council for India* they are teaching 420,255 children in 12,699 elementary schools, mostly situated in villages. The majority (243,895) of children in these schools are non-Christians. The same is true also of the secondary schools and in a still greater degree of the colleges. The former number 523 with 70,254 male and 25,303 female pupils. There are 40 colleges affiliated to Universities, containing 20,062 male and 1,309 female students. Of these as many as 14,148 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes, and the higher educational ideals maintained by their staffs. The principal **University colleges** under Protestant auspices are the Madras Christian College; the Duff College, Calcutta; the Wilson College, Bombay; the Forman College, Lahore, and three women's colleges—the Women's Christian College at Madras, the Isabella Thoburn College at Lucknow, and the Women's Christian Medical College at Ludhiana. The Roman Catholics have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts; but compared with Hindus and Mahomedans it is conspicuously higher. The Roman Catholics have some 3,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures, however, include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more wider spread results, is the **philanthropic work** of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions. **Hospitals and dispensaries** have sprung up in all parts of the mission field; and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the **Salvation Army** hold a prominent place; and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public, and such movements as "The Servants of India" and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion.—For very many years Indian Christians have shown that they felt much more acutely than Europeans the scandal and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognized to political causes, and in the political conflicts of the sixteenth and seventeenth centuries, when they became crystallised, India had no part. Even those differences amongst Christians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great dividing line is that between Christ and Mahommed or Shiva and Vishnu. Standing before a back-

ground of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian, the differences of "confession" and "order" which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world, is nowhere so strong as in India. In South India it has already resulted in the formation of the South India United Church, which is a group-union of five of the principal Protestant communions, and as these bodies are in communion individually with all, or almost all, the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S.I.U.C. is at present negotiating with the Anglican Church. If as seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India, except the Roman Catholics, on the basis of the last Lambeth encyclical. This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of Evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the Historic Episcopate, it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies.

The Church Missionary Society carries on work in India in seven different missions—the United Provinces, South India, Travancore and Cochin Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work well to the fore; but it also has important medical missions, especially on the N.-W. Frontier, and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon is 160, European laymen 30 and European laywomen 258. The Society claims a Christian community of 2,21,359 of whom 63,655 are adult communicants.

Society for the propagation of the Gospel.—Statistics of the work of this Society are not easily ascertained, as much of it is done through Diocesan institutions, which, while financed and in many cases manned by the S. P. G., are entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and School. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocese of Tinnevelly-Madura. The S. P. G. also maintains an important Criminal Tribes Settlement at Hubli, in the Bombay Carnatic. There are 116,000 Indian Christians under the aegis of the S. P. G.; 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1880. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission priests of this Society, and 16 Sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houses at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres upon the Church of Holy Cross, Umarkhadi, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay population. At Poona the Society co-operates with the Wantage Sisters and in Bombay with the All-Saints' Sisters. Other Anglican sisterhoods represented in India are the Clewer Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St. Hilda's Deaconesses' Association of Lahore carries on important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Palampur (Punjab) should also be mentioned under the head of Anglican Missions.

An interesting development has lately taken place in the Anglican communion. In 1922 the foundations were laid of a new Religious community called the Christa Seva Sangh or the Society of the Servants of Christ. The aim of its members is to enable Indians and Europeans to live together a common life based upon the three-fold vows of poverty, chastity and obedience and by living together to develop the Religious life along lines peculiarly suited to India. Indians appreciate fully the value of "renunciation". The Sangh hopes to commend Christianity to India by presenting it with a concrete illustration of Christian asceticism. The first Ashram of the Brotherhood was consecreted by Dr. Palmer, Bishop of Bombay, in 1928. It is situated in Poona and it contained at the time of consecration 13 Brothers, of whom 6 were Indians and 7 Europeans. It shows every sign of life and growth.

Bengal Ecclesiastical Department.

Westcott, Most Rev. Foss, D.D.	Lord Bishop of Calcutta and Metropolitan of India.

SENIOR CHAPLAINS.

Ridsdale, Rev. Arthur Cyril, M.A., D.D., F.R.A.S., F.R. MET. S.	On leave from 1st November 1927.
Grimes, Ven'ble Cecil John	Archdeacon of Calcutta and Senior Chaplain, St. John's Church, Calcutta.

Dyer, Rev. Basil Saunders, B.A. .. .. .. Chaplain, Kasauli, Punjab.
Birch, Rev. Ormonde Winstanley, M.C. .. .. Chaplain, Shillong, Assam.
Thomson, Rev. Thomas Albert .. .. .. On leave.
Williams, Rev. Henry Frank Fulford, M.A. .. Chaplain, St. John's Church, Calcutta.
Wilkinson, Rev. Ernest Roland, M. A. .. .. Chaplain, Darjeeling.
Lee, Rev. Philip Erskine, M.A. .. .. .. Chaplain, Kidderpur.

And 8 Junior Chaplains.

CHURCH OF SCOTLAND.

Mitchell, Rev. James Donald, M.A., B.D., J. P. .. Presidency Senior Chaplain, Church of Scotland Bengal, and Senior Chaplain, St. Andrew Church, Calcutta.
McCaul, Rev. Matthew Wilson, B.A. .. . Senior Chaplain, Church of Scotland.
Hort, Rev. George Murray Davidson, M.A., B.D. Second Chaplain, St. Andrews' Church, Calcutta

CHURCH OF ROME.

Perier, The Most Rev. Dr. Ferdinand, S.J. .. Arch-bishop, Calcutta.
Bryan, Rev. Leo. S. J. .. .. Chaplain, Alipore Central Jail.

Bombay Ecclesiastical Department.

Acland, Right Revrend Richard Dyke, M.A. .. Lord Bishop, Bombay.
Martindale, Ven'ble Henry, M.A. .. .. .. Archdeacon.
Walker, G. L. .. .. Registrar of the Diocese.

SENIOR CHAPLAINS.

Collier, Rev. Charles Bernard Gray, M.A. .. .. Chaplain, St. Mary's, Poona.
Hewitt, Rev. George .. .. (On leave.)
Ryall, Rev. Charles Richard, M.A., D.D., B.A. .. (On leave.)
Mason, Rev. Charles Douglas Thomas, M.A., A.K.C. . Chaplain, Deolali.
Harvey, Rev. George Frederick, M.A. .. .. Senior Presidency Chaplain.
Dart, Rev. John Lovering Campbell, M.A. .. .. Domestic Chaplain to the Bishop of Bombay
Wormald, Rev. Robert Leonard, M.A. .. Belgaum.
Ashley-Brown, Rev. W. .. .. Kirkee.
Dossetor Rev. F. E. M.A. .. .. (On leave).

And 6 Junior Chaplains.

CHAPLAINS OF THE CHURCH OF SCOTLAND.

Rennie, Rev. J. Y., M.A., B.D., D. Litt. .. .. (On leave.)
McLean, Rev. L., M.A., B.D. .. .. .. Chaplain, Poona and Kirkee
Mclellan, Rev. D. T. H. .. .. (On Deputation.)
Rustledge, Rev. J. W., M.A. .. .. Chaplain, Karachi.

CHAPLAINS OF THE CHURCH OF ROME.

Lima, Most Rev. Joachim .. .. Archbishop of Bombay.

Assam Ecclesiastical Department.

CHAPLAINS.

Birch, The Rev. O. W., M.C. .. .. .. Shillong.
Brown, Rev., H. G. .. .. Darrang. } Paid from All-India Grant.
Farrimond, Rev. W. M.A., M.C. .. .. .. Lakhimpur
Wood, Rev. W. H. S., M.C. .. .. .. Silchar.
Sefton, Rev. T. .. .. Sibsagar.

Bihar and Orissa Ecclesiastical Department.

CHAPLAINS.

Young, Rev. E. J. .. .. Senior Chaplain, Bankipore.
Cowham, Rev. A. G. .. .. Chaplain of Dinapore.

ADDITIONAL CLERGY.

Perfect, Rev. H. .. .. Bhagalpur.
Sage, Rev. W. H. .. .. Monghyr and Jamalpur.
Ethelred Judah, Rev. E. A. .. .. .. Muzaffapur and Darbhanga.
Bewsher, Rev. Robert .. .. Ranchi.

Burma Ecclesiastical Deparment.

The right Reverend Norman Henry Tubbs, Lord Bishop of Rangoon. M.A., D.D.

SENIOR CHAPLAINS.

Cowper-Johnson, The Ven'ble Wilfrid Harry, M.A.	Archdeacon of Rangoon and Bishop's Commissary.
Anderson, Rev. Nicol Keith, M.A.	Chaplain, Rangoon Cathedral.
Park, Rev. William Robert, C.I.E., O.B.E, M.A. ..	Chaplain, Mandalay.
Thursfield, Rev. Gerald Arthur Richard, M.A. ..	Chaplain, Maymyo. (On leave).
Delahay, Rev. William	Chaplain, Rangoon Cantonment, Rangoon.

Central Provinces Ecclesiastical Department.

Wood, Right Reverend Alex., M.A., Ph. D., O.B.E., D.D.	Lord Bishop of Nagpur.
Ledgard, The Ven'ble Ralph Gilbert, M.A. ..	Archdeacon. (On leave).
Roberts, The Ven'ble Arthur Betton	On leave.
Bridges, The Rev. Francis, M.A.	Kamptee.
Carter, Rev. Bryan Barnard, M.A.	Mhow.
Horwood, Rev. K. C.	Saugor.
Clarke, Rev. Richard Charles Bolingbroke, M.A. ..	(On leave).
Martin, Rev. Frederick William	Services placed at the disposal of the U. P. Government 25th February, 1929.
Day, Rev. Edward Ridlay, M.A.	Nagpur.
Warmington, Rev. Guy Wilson, M.A.	Nasirabad.
de Salis, Revd. Andrew Augustine Fane, B.A. ..	Garrison Chaplain, Jubbulpore.
Sandes, Revd. A. M., M.A.	Mhow. Second Chaplain.

Madras Ecclesiastical Department.

CHURCH OF ENGLAND.

Waller, Right Reverend Edward Harry Mansfield, D.D.	Lord Bishop of Madras.
Crichton, Ven'ble Walter Richard	Archdeacon. Senior Joint Chaplain, St. George's Cathedral, and Domestic Chaplain to the Bishop.
Sell, W. C.	Registrar of the Diocese and Secretary to the Lord Bishop.
Partridge, Mr. P. W., Maitland-Jones, Mr. H.	Acting Registstrar of the Diocese and Secretary to the Lord Bishop.

SENIOR CHAPLAINS.

Borlase, Rev. John Jennings Dingle, B.A., LL.D., M.B.M.	Chaplain of St. Mark's Church, Bangalore, an of Mercara and Mysore.
Hacking, Rev. Henry, M.A.	On leave.
Bull, Rev. Francis Faulkner	Do.
Jones, Rev. Hugh, M.A.	Chaplain, Vepery
Langdale Smith, Rev. Richard Marmaduke B.A.,	Fort St. George.

And 10 Junior Chaplains.

CHURCH OF SCOTLAND.

Lee, Rev. R. E.	Presidency Senior Chaplain, St. Andrew's Church, Madras.
Short, Rev. G., M.D.	Secunderabad.
Mackenzie, Rev. Donald Francis, M.A.	Bangalore.

North-West Frontier Ecclesiastical Department.

SENIOR CHAPLAIN.

Devenish, Rev. C.R.S., B.A.	Nowshera.

JUNIOR CHAPLAINS.

Evers, Rev. M. S.	Hazara (Abbottabad.)
Lester-Garland, Rev. G. H.	Razmak (Waziristan.)
Strip, Rev. E. A. K.	Peshawar.
Claydon, Rev. E.	Derajat (Kohat.)
Tucker, Rev. G. E.	Risalpur.

Punjab Ecclesiastical Department.

Durrant, The Right Reverend H. B., M.A., D.D. .	Lord Bishop of Lahore.
Wheeler, The Ven'ble Canon Hugh Trevor, M.A.	Archdeacon, Lahore. Bishop's Commissary in Addition.

SENIOR CHAPLAINS.

Padfield, Rev. George Augustus Selwyn ..	(On leave).
Meyler, Rev. Edward Mowbray, B.A.	
Cotton, Rev. Canon Ben, M.A.	Chaubattra.
Smith, Rev. Francis Herbert, M.A.	(On leave).
Bill, The Ven'ble Sidney Alfred, M.A.	(On leave).
Cohu, Rev. Clifford John, M.A.	Naini Tal.
Talbot Rev. Alfred Dixon	Allahabad. (Civil).
Dunlop, Rev. Douglas Lyall Chandlee, M.A. ..	Lucknow. (Cantt.)
Maynard, Rev. Bertram Martin	Cawnpore.
Broughton, Rev. Arthur Hardwicke, M.A. ..	Jhansi.
Rigg, Rev. Arthur Cecil Pletroni, M.A.	Agra.

ADDITIONAL CLERGY.

CHURCH OF SCOTLAND.

Ingram, Rev. James William, M.A., B.D. ..	Attached. Army Department, Delhi. On leave.)
McLian, Rev. Lanchlan	Ditto. (Officiating.)
McLellan, Rev. Duncan Tait Hutchinson, M.A. ..	Jhansi (Army.)
Rutledge, Rev. James William Renwik, M.A. ..	Cawnpore (Army.)

ACTING CHAPLAIN.

Hazlert Rev. Calvin H. B.A.	Allahabad.

THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the *Catholic Directory of India*, 1924, gives the following tables:—

——	1901	1911	1921
1. *British India and Indian States*—			
(*a*) Latin Rite	1,312,224	1,614,620	1,851,408
(*b*) Syriac Rite	315,923	364,660	440,488
2. *French India*	25,859	25,918	25,480
3. *Portuguese India*	262,650	296,148	288,741
Total, India	1,916,656	2,301,346	2,606,117
4. Ceylon	285,018	322,163	363,986
Total, India and Ceylon ..	2,201,674	2,623,509	2,970,103

NOTE (1):—In 1860, the total for India and Ceylon was 1,170,854. In 1880 it had risen to 1,610,265, and in 1900 to 2,201,674.

NOTE (2):—In 1926 the total for India and Ceylon has been worked out at 3,241,744, showing an increase of quarter of a million in five years.

NOTE (3):—The number of Catholics under the Portuguese Jurisdiction in 1921 were reckoned at 604,802, of whom more than half are in British India.

NOTE (4):—In 1860 there were 1,504 priests. In 1921 there were 3,156.

The Catholic community as thus existing is composed of the following elements:—

(1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicars Apostolic. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syriac rite.

(2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.

(3) European immigrants at all times, including British troops.

(4) Modern converts from Hinduism and Animism in recent mission centres.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886. At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Of the **Portuguese Jurisdiction**:—

The archbishopric of Goa (having some extension into British territory) with suffragan bishoprics at Cochin and Mylapore (both in British territory).

Of the **Propaganda Jurisdiction**:—

The archbishopric of Agra with suffragan bishoprics of Allahabad and Ajmere.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly, and Tuticorin.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur and Patna and the Prefecture Apostolic of Assam.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam and Nagpur.

The archbishopric of Pondicherry (French) with suffragan bishoprics of Mysore, Coimbatore and Kumbakonam.

The archbishopric of Simla with suffragan bishopric of Lahore and the Prefecture Apostolic of Kashmere.

The archbishopric of Colombo (Ceylon) with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

The archbishopric of Verapoly, with suffragan bishopric of Quilon.

One archbishopric and three bishoprics of the Syriac rite for the Syrian Christians of Malabar.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

Propaganda changes:—

New dioceses formed:—Tuticorin by division of Trichinopoly; Calicut by division of Mangalore; Chittagong by division of Dacca; Dinajpur by division of Krishnagar; Ranchi by division of Calcutta. Separate missions have been established at Cuttack, Bellary and Jubbulpore.

Padroado changes:—

In May 1928 an agreement was made between the Holy See and Portugal to modify the arrangements of the Concordat of 1886. The diocese of Damaun is merged in the Archdiocese of Bombay, and a complete readjustment has taken place in relation to Mylapore and Madras, the main object being to obliterate "double jurisdiction."

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number about 1,000 besides which there is a body of secular clergy mostly native to the

country, numbering about 2,000 and probably about 2,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 143,051 boys and 78,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota Nagpur; Krishnagar, Gujerat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of *the Society for the Propagation of the Faith* and of *the Holy Childhood*; helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is usually represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev Edward Mooney, D.D., appointed in 1925.

THE CHURCH OF SCOTLAND.

The Church of Scotland and the United Free Church have become one. The Union, effected in October 1929, has already exerted a profound influence upon the life of the Church of Scotland in India. The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated: Calcutta 1914; Bombay, 1919; Madras, 1921. Since 1903 there have been eighteen chaplains on the staff, of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bsombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been built, in all considerable military stations, *e.g.*, Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot, Umballa and Jubbulpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Lahore, Cawnpore, Meerut, Mhow and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousie, and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1819 and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptised Christian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1919 over 24,787 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Its two Churches in Bombay have six representatives on the governing body of the Anglo-Scotish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregation supports the school for poor children. The Ayrolieff Girls' Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simla. The now well-known St.

Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons; "The Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

Though the former Churches of the United Free Church now belong to the Church of Scotland they remain independent of the establishment recognised by Government. They have only three purely European congregations in India, two in Calcutta, and one in Bombay.

The Church carries on Mission work in seven different areas. They are Bengal (Calcutta, Kalna and Chinsura); the Santal Parganas, with five stations; Western India (Bombay, Poona and Alibag); Hyderabad State (Jalna, Bethel and Parbhani); Madras (Madras City, Chingleput, Sriperumbudur and Conjeeveram); the Central Provinces (Nagpur, Bhandara, Wardha, and Amraoti); Rajputana, where the extensive work instituted by the United Presbyterian Church in 1860 is now carried on from eleven centres.

The work falls into three main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's Hospitals, in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is well-known. The Madras Christian College, which owes so much to the work of Dr. William Miller, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay and Hislop College, Nagpur.

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar and Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 220 missionaries and about 1,094 Indian and Singalese workers. Connected with the Society are 347 Indian and Singhalese Churches, 277 Primary Day Schools, 24 Middle and High Schools, and 4 Theological Training Colleges. The Church membership at the close of 1928 stood at 20,492 and the Christian community at 59,108. The membership during the past ten years has increased by about 53 per cent. and the community by 50 per cent. in the same period. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack and Delhi, where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Danish Majesty in 1827, confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in 1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, Arts and Theological. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the College. In Arts, the College prepares for the Calcutta Arts Examinations. *Principal*: Rev. G. H. C. Angus, M.A., B.D.

There is a vernacular Institute also at Cuttack for the training of Indian preachers nd Bible schools in several centres.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 6 Hospitals and 8 Dispensaries. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretaries of the Mission are the Rev. W. C. Hunter (*pro. tem.*) and W. Craig Eadie, Esq., 48, Ripon Street, Calcutta.

The Headquarters of the Mission are at 19, Furnival Street, Holborn, London. The total expenditure of the Society for 1928 amounted to £206,119.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Telugu Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 22 stations and 396 outstations with a staff of 99 missionaries, including 8 qualified physician, and 1,151 Indian workers, with Gospel preaching in 2,251 villages. Organised Churches number 100 communicants 20,574 and adherents 8,134 for the past year. Twenty-four Churches are entirely self-supporting. In the Educational department are 526 village day schools, with 16,737 children, 13 boarding schools, 2 High schools, a Normal Training school, a Bible Training School for Women, a Theological Seminary providing in all for 1,000 pupils, and an Industrial school. There are 6 Hospitals, two leper asylums and an Orphanage. The Mission publishes a Telugu newspaper. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 80 per cent., the Christian community by 85 per cent., and scholars by 500 per cent. Indian Secretary is the Rev. E. J. Church, Yellamanchil, Vizagapatam.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma begun 1814; Assam 1836; Bengal and Orissa 1836; South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 33 main stations in Burma, 13 in Assam, 10 in Bengal Orissa, 29 in South India, besides many outstations. All forms of missionary enterprise come within the scope of the Society.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-Women, and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens, whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages and large efforts are made amongst the employes of the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

Last year the field staff numbered 314 missionaries, 7,064 Native workers. There were 1,892 Churches of which 1,272 were self supporting. Church members number 1,27,828. In the 2,107 Sunday Schools were enrolled 9,60,000 pupils. The Mission conducted 2,741 schools of all grades with 91,091 students enrolled. 14 Hospitals and 34 Dispensaries treated 6,364 in-patients and 1,05,879 out-patients. Indian Christians contributed over Rs. 6,74,000 for this religious and benevolent work during the year.

THE AMERICAN BAPTIST ASSAM MISSION was opened in 1836. and has 13 main stations staffed by about 45 missionaries. There are 725 Native workers, 384 organized churches, 37,149 baptised members, 318 Schools of all grades including 1 High, 2 Normal, 2 Bible and 13 Station schools. 3 Hospitals and 8 Dispensaries treated 826 in-patients and 18,032 out-patients during the year. Mission work is carried on in 9 different languages.

Secretary: Mr. C. E. Olney, Gauhati, Assam.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION, commenced in 1836. Area of operation: Midnapore district of Lower Bengal, Balasore district of Orissa and Jamshedpur Mission staff 36, Indian workers 300. Two English Churches and 25 Vernacular Churches, Christian Community 5,000. Two dispensaries. Educational: One Theological and two Boys' High Schools and two Girls' High Schools and 118 Elementary Schools, pupils 4,000. One Industrial School for carpentering, iron work and motor mechanics. The Vernacular Press of this mission printed the first literature in the Santali language.

Secretary: Rev. H. I. Frost, Balasore, Orissa.

THE AMERICAN BAPTIST TELUGU MISSION;—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, parts of the Deccan and an important work in Madras and the surrounding vicinity. Its main work is evangelism, but there are also Educational and Medical Institutions of importance. Industrial Settlement work for the Erukalas is carried on at Kavali and vicinity. Industrial departments are maintained also in connection with the Mission High Schools at Nellore, Ongole and Kurnool. Organized Telugu Churches number 260, with 94,410 baptized communicants. There are 102 missionaries, and 2,720 Indian workers. The mission maintains a Theological Seminary at Ramapatnam for the training of Indian preachers. A Bible Training School for the training of Telugu women is located in Nellore. A total of 33,923 receive instruction in 1,270 primary schools, 16 secondary schools and 4 high schools. In Medical work 8 Hospitals and 12 Dispensaries report 4,303 in-patients, 95,108 out-patients, and 115,073 treatments during the year.

Secretary: Rev. F. Kurtz, D.D., Madira, Deccan

THE AUSTRALIAN BAPTIST MISSION.—With 2 missionaries, established at Serajgunge, E. Bengal.

Missionary-in-charge: Rev. T. C. Kelly, (on leave) Rev. A. E. Smith (acting), Mission House, Serajgunge.

THE AUSTRALIAN BAPTIST FOREIGN MISSION.—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 43 Australian workers. There are 2,692 communicants and a Christian community of 55,841.

Secretary, Field Council: Rev. A. J. Grace, Pabna, E. B.

THE STRICT BAPTIST MISSION.—Has 15 European Missionaries, and 120 Indian workers in Madras, and Salem District. Communicants number 270; organised Churches 8; elementary schools 41, with 1,625 pupils.

Treasurer and Secretary: Rev. D. Morling, Namakal, S. India.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION.—Operates in Gujarat and Kathiawar with a staff of 38 Missionaries of whom 7 are qualified doctors and an Indian staff of 422 including school teachers. There are 12 Organised Churches, a communicant roll of 1,866, and a Christian community of 7,114. In Medical work there are 3 Hospitals, 6 Dispensaries, with 13,811 in-patients and 13,655 new cases and a total attendance of 47,267. The Mission conducts 3 High schools, 2 Anglo-Vernacular schools and 132 Vernacular schools affording tuition for 6,232 pupils. 4 Orphanages, a Divinity College at Ahmedabad, a Teachers' Training College for Women at Borsad and a Mission Press at Surat. The Mission has made a speciality of Farm Colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 6 missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts, with Farm Colonies attached.

Secretary: Rev. G. Wilson, B.A., Ahmedabad.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The Sialkot Mission of the above Church was opened at Sialkot, Punjab, in 1855. It is now carrying on work in ten districts in the Punjab and in one district of the North-West Frontier Province. Its missionaries number 140 and its Indian workers 830. Its educational work comprises one Theological Seminary, one College, five High Schools, one Industrial School, eight Middle Schools, and 151 Primary Schools. The total enrolment in all schools in 1928 was 13,721. The Mission is also carrying on Medical work through five Hospitals and eight Dispensaries. The total membership of the Church which has been established is 43,070 and of the Christian community 86,208.

General Secretary: Rev. Robert Maxwell, Gujranwala, Panjab.

THE AMERICAN PRESBYTERIAN MISSION operates in 3 main sections known as the Punjab, North India and Western India Missions. The American Staff (including women) numbers 266 and the Indian Staff 1,352. There are 35 main stations and about 240 out-stations. Organized churches number 82, 25 of which are self-supporting. There are 11,985 communicants and a total baptized community of 82,000. Educational work as follows: 2 Men's Colleges, and an interest in the Isabella Thoburn and the Kinnaird Colleges for women, students 1,820, Theological School 1, students 24; Training Schools for village workers 2, students about 180; High Schools 14, students about 2,100; Industrial Schools 4; Agricultural Demonstration Farms 3; Teachers' Training Departments 7; The Miraj Medical School and an interest in the Ludhiana Medical School for women, students 170; Elementary Schools 230; Schools of all grades 241, pupils 12,023; Medical work: Hospitals 6; Dispensaries 17. Sunday Schools 371 with 13,401 pupils. Contributions for Church and Evangelistic work on the part of the Indian Church, Rs. 51,422.

The Hospital at Miraj founded by Sir William Wanless, and now under the care of C.E. Vail, is well-known throughout the whole of S.W. India, and the Forman Christian College at Lahore under the principalship of Rev. E. D. Lucas, D.D., is equally well-known and valued in the Punjab. The Ewing Christian College (Dr. C. H. Rice, Principal) has grown rapidly in numbers and influence.

Secretary of Council of A.P. Missions in India Rev. H. C. Velte, M.A., D.D., Saharanpur.

Secretary, Punjab Mission: Rev. W. J. Weir, M.A., Lahore.

Secretary, North India Mission: Rev. W. L. Allison, M.A., Gwalior, C.I.

Secretary, Western India Mission: Rev. H. K. Wright, M.A., Ahmednagar.

THE NEW ZEALAND PRESBYTERIAN MISSION:—Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary · Miss A. E. Henderson, Jagadhri Dist. Ambalia.

THE UNITED CHURCH OF CANADA MISSION—Commenced in 1877 has 12 main stations in Indore, Gwalior, Rutlam, Dhar, Jaora, Sitamau and Banswara. The Mission staff numbers 73; Indian workers 290. This Mission works in conjunction with the Malwa Church Council of the United Church of Northern India, which reports for this part of its territory. Organised Churches 17. Unorganised Churches 14, Communicants 1,771, Baptised non-communicants 4,881. Total Christian community 6,652.

Educational work comprises Elementary and Middle Schools, High Schools for boys and girls, College, Theological Seminary and Classes. Industrial teaching and work are done in the three Girls' Boarding Schools, women's industrial work in Mhow and Rutlam and in Rasalpura Boys' (vocational) School. Technical and practical training is given in Printing, Weaving and Carpentry. The Medical work is large. There are three General Hospitals, where both men and women ar treated, and five Women's Hospitals and also a number of dispensaries in central and out-stations.

Secretary of Mission.—Rev. J. T. Taylor, D.D. Indore, C. I.

Secretary of Church.—Rev. Johan Masih, D.D. Murwahi, (C. P.), Nantanwa (near Nepal),

THE CANADIAN PRESBYTERIAN BHIL MISSION Alirajpur, Jobat and Barwani States, are now under the Canadian Presbyterian Bhil Mission.

Secretary:—Rev. J. Buchanan, M.D., D.D. (on furlough); E. Toombs, Amkhut, Alirajpur, C. I.

THE WELSH CALVINISTIC METHODIST (PRESBYTERIAN) MISSION established in 1840 with a staff of 40 Missionaries, 950 Indian workers, occupies stations in Assam in the Khassia and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khassia language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has also been produced in the Lushai language. Communicants number 29,850; the total Christian community 81,461; organised Churches 650; Elementary schools number 626, Scholars 17,209: in addition

to Industrial Schools and Training Institutions and 2 Theological Seminaries. Three Hospitals and several Dispensaries provide annually for more than 10,000 patients.

Secretary: Rev. F. J. Sandy, Durtlang, Aijal.

THE ARCOT MISSION of the Reformed Church in America organised in 1853 occupies most of the North and South Arcot and Chittoor districts in S. India with a staff of 52 Missionaries and 718 Indian ministers and workers. Churches number 17, Communicants 5,527; total Christian community 20,761; Boarding schools 16, scholars 1,057; Theological school 1, students 30; Voorhees' College, Vellore, students 139. High schools 3, scholars 2,013; Training schools 2, students 92; Industrial schools 2, Agricultural Farm and School 1, total pupils 229; Elementary schools 221, scholars 8,497. Two Hospitals and 4 Dispensaries with a staff of 45 provided for 1,975 in-patients and 29,380 out-patients excluding the Union Medical College, Hospitals and Dispensaries, Vellore.

The Union Mission Medical College for South India and a Union Mission Training School are located at Vellore, the headquarter of the Mission. The Union Mission Tuberculosis Sanitarium for S. India is near Madanapalle, Arogiavaram P. O., Chittoor Dist.

Secretary: Rev. W. H. Farrar, Arni, S. India

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS.—Has two large Missions, the American Marathi Mission, and the Madura Mission. The Marathi Mission covers a considerable part of the Bombay Presidency, with centres at Bombay, Ahmednagar, Satara and Sholapur. It was commenced in 1813, the first American Mission in India. Its activities are large and varied. The staff at the beginning of 1928 consisted of 49 missionaries and 619 Indian workers operating in 8 Stations and 121 out-stations exclusive of Bombay City. Organised Churches number 68 with 7,539 communicants, and 6,145 adherents. There is a Leper work at Sholapur. The Educational work embraces 14 training and secondary schools, with 1,132 pupils and 121 primary schools, with 5,954 pupils, three-fifths of whom are non-Christians. A Theological College at Ahmednagar trains for the Indian Ministry. Zenana work and Industrial work are vigorously carried on, the latter embracing carpentry and lace work. A school for the blind is conducted on both Educational and Industrial lines. 53,751 Patients were treated in the Hospitals and dispensaries of the Mission last year. This Mission was the first to translate the Christian scriptures into the Marathi tongue. At Sholapur, a settlement for Criminal Tribes is carried on under the supervision of Government. *Secretary*: Rev. William HAZEN, M.A., Sholapur.

THE MADURA MISSION.—In the south of the Presidency, founded in 1834, has a staff of 61 missionaries and 992 Indian workers, operates in the Madura and Ramnad Districts and has a communicant roll of 11,346 and a total Christian community of 30,158 and 33 organized Churches most of which are entirely self-supporting and self-governing. These Chruches are an integral part of the South India United Church. Schools number 339 with 17,568 pupils. In Madura there are a First Grade College, High and Training schools for girls and hospitals for men and women. At Pasumalai, three miles from Madura, a High School, Training School, Theological Institution, Trade School and School of Agriculture. Five elementary Boarding Schools are found in as many out-stations, industrial work is increasingly a part of the curricula of all schools above the lower grade. The *Secretary* is the Rev. John J. Banninga, M.A., D.D., Pasumalai.

THE ARCOT MISSION commenced under the American Board was transferred to the Reform Church of America in 1851.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA.—Embraces two Branches, one in Bengal and the other in Khandesh. The mission staff in Khandesh is represented by fourteen missionaries, and forty Indian workers. There are 154 communicants and 58 non-communicants and 468 under Christian instruction; 15 Elementary Schools provide for 393 pupils.

Secretaries: Rev. Paul Ringdahl, Amalner, East Khandesh; and Rev. Dover, Baksa Duar, Bengal.

THE SWEDISH ALLIANCE MISSION.—Working among the Bhils in West Khandesh has 21 missionaries and 68 Indian workers. There are 8 congregations with a total membership of 927 of whom 416 are communicants. There are 8 Elementary Schools, 2 Training Schools and 5 School Homes. The pupils in all schools are 339.

Secretary: Rev. Gustaf Westmo, Dondaiche, West Khandesh.

FREE CHURCH OF FINLAND MISSION.—Total Mission Staff is represented by 6 Missionaries, 3 native Pastors, two Catechists, three Teachers. There are about 120 communicants and total community 400. There are three day schools, one evening school, one hospital, four dispensaries, Weaving and Hand-Carder industries.

Secretary: Miss E. Kronquist, Lachen, *via* Gangtok, Sikkim State.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1798 and occupies 3 centres in N. India, 12 in S. India and 7 in Travancore. The Mission engages in every form of Missionary activity.

The European staff numbers 135, Indian workers 2,380; Organised Churches 520; Communicants 21,824 and Christian Community 142,255. There are 1 Christian College, students 159; 2 Theological Institutions, students 70; 4 Training Institutions, pupils 114; 12 high schools, pupils 4,849; 25 Boarding schools, scholars, 1,167 and 862 Elementary schools with 46,371 scholars. In medical work Hospitals number 6, Dispensaries 14, qualified doctors 9 Europeans, 61 Assistants and 8,880 in patients and 198,757 out-patients for the year.

The main centres of the Mission in N. India are at Calcutta and Murshidabad L.M.S. work in the United Provinces is being closed but a Union Mission of the W. M. S., C. M. S. and L. M. S. is shortly to be opened in Benares City with the Rev. J. C. Jackson of the L. M. S. as Superintendent. This Mission will concentrate

especially on work amongst pilgrims and students. Special efforts are made amongst the Nama Sudras and the aboriginal tribes known as the Majhwars, Cheros and Pankas. The S. India district and Travancore are divided into the Kanarese, Telugu, Tamil, and Malayalam fields with 19 stations and 800 outstations. At Nagercoil Travancore) is the Scott Memorial College with 985 students, a Church and congregation said to be the largest in India, and a large Printing Press, the centre of the S. Travancore Tract Society.

Bengal Secretary: Rev. Vaughan Rees, Behrampore, Dist. Murshidabad. *Benares Superintendent.*—Rev. J. C. Jackson, Benares, U. P.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE.—Dates from the year 1893 under the name of the International Missionary Alliance, but a number of its missionaries were at work in Berar Province much earlier. Work is carried on in the Provinces of Berar, Khandesh, Gujarat. There is a staff of 75 missionaries and 135 Indian workers. The number of mission stations is 19, with additional out-stations. There is a Christian community of 2,306 adults. There are 4 Boarding Schools, 2 for boys and 2 for girls, 1 Training School for Indian workers and 1 English congregation at Bhusawal.

Executive Secretary: Rev. W. Moyser, Akola, Berar, C.P.

THE CHURCH OF THE BRETHREN (AMERICAN)—Opened work in 1895, and operates in Broach Surat and Thana Districts, also in Baroda and Rajpipla States. Its staff number 53 foreign workers including missionaries' wives, and 205 Indian workers. The Baptized (immersed) membership stands at 3,892. Education is carried on in 7 Girls' Boarding Schools, 7 Boarding Schools for Boys, and 129 Village Day Schools. Females under instruction number 554, males 2,655, total under instruction 3,209. There are 91 Sunday Schools having 165 teachers and a total enrolment of 3,061. There were 32,815 calls at mission dispensaries in 1928. The foreign medical staff consists of 4 doctors, 4 nurses, and 1 medical Evangelist. Industrial work is carried on in six of the Boarding Schools, and a vocational training school was opened at Ankleswar in June 1924. Evangelistic, Temperance and Publicity work receives due emphasis, the "Prakash Patra," a Christian monthly of 400 copies, are published. *Secretary*: L. A. Blickenstaff, Bulsar, Surat District.

THE POONA AND INDIAN VILLAGE MISSION.—Founded in 1893. Mission Stations—Khed Shivapur, Poona District; Nasrapur (Bhor State), Poona District; Lonand, M. S. M. Ry., Satara District; Phaltan Sahara District; and Pandharpur, Sholapur District. The staff consists of 36 European and 45 Indian workers, with a community of about 50 Indian Christians and their families. The main work is evangelising in the villages, women's zenana work, and primary education. Medical work is conducted each station, with at a hospital at Pandharpur. *Headquarters*: 44, Lassoon Road, District. *Secretary:* J. W. Stothard.

THE AMERICAN CHURCHES OF GOD MISSION.—Has two missionaries at Bogra, one at Khanjanpur, Bogra District, Bengal, and two at Ulubaria, Howrah District.

Executive Secretary: Rev. Howard W. Cover, M.A., Bogra, E.B.R.

Recording Secretary: Rev. A. E. Myers, B.A., Ulubaria, Howrah.

THE INDIA CHRISTIAN MISSION.—Founded in 1897, has 41 Organised Churches, 17 Missionaries, 43 stations and out-stations, 1,759 Communicants, 45 Primary schools and one Industrial School and Bible School in the Ellore District, also Station Dodballapur, near Bangalore, S. India. stations also in Nuwara Eliya, Mulpotha Uva Province and Polgahawella, Ceylon; Girls' Orphanage at Nuwara Eliya; Industrial Homes for children of mixed parentage, Nuwara Eliya. Total Christian community 4,092. *Director:* Rev. A. S. Paynter, Nuwara Eliya, Ceylon.

THE CHURCH OF THE NAZARENE MISSION:—Has its headquarters for Western India at Buldana, Berar, where it has a Boys' Boarding School with 70 boys. It also has fifty girls in school. This Mission also has three stations in Thana District, namely, Khardi, Vasind, and Murbad. At present there are only eight missionaries in this part of India, also 32 Indian preachers and Bible women.

President of the Council: Rev. A D. Fritzlan Buldana, Berar.

The headquarters for Eastern India are at Kishorganj, Mymensingh District, with an orphanage and a force of 3 missionaries: also about 16 Indian preachers and Bible women. This makes a total at present of 11 missionaries and about 48 Indian workers for The Church of The Nazarene in India.

President of the Council: Rev. G. F. Franklin Kishorganj, Mymensingh District.

THE TANAKPUR AND LOHAGHAT BIBLE AND MEDICAL MISSION—Was established in 1910. It is now carried on in Tanakpur and District only, that neighbourhood having again been attached to the Naini Tal District in Kumaon. *Address*: Tanakpur, Rohilkhand and Kumaon Railway, United Provinces.

THE HEPHZIBAH FAITH MISSIONARY ASSOCIATION—Has three missionaries in India. They are the Rev. S. V. Christenson, Adra, Mrs. S. V. Christenson, Adra, B. N. Rly., Manbhum, and Miss E. K. Landis, Raghunathpur, Manbhum.

THE TIBETAN MISSION—Has 4 Missionaries with headquarters at Darjeeling, and Tibet as its objective. *Secretary*: Miss J. Ferguson, Darjeeling.

THE INDIAN MISSIONARY SOCIETY OF TINNEVELLY (DORNAKAL MISSION)—Opened in 1904 operates in the Warangal District of the Nizam's Dominions as well as among the hill tribes called Paliars in the British and Travancore Hills. It is the missionary effort of the Tamil

Christians of Tinnevelly. There are now nearly 4,655 Telugu Christians in 109 villages and 384 Paliar Christians in the hills. *Secretary*: Rev. S. S. Moses, Palamcottah.

THE MISSION TO LEPERS—Founded in 1874, is an inter-denominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children working in 15 countries but largely in India, China, Korea and Japan. Its work in India is carried on through co-operation with 30 Missionary Societies. In India alone the Mission now has 37 Asylums of its own with upwards of 5,000 inmates and is aiding or has some connection with work for lepers at 23 other places in India. Altogether in India over 7,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 750 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases both adults and children are now benefiting.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India, but the bulk of the money expended by the Mission in India, is received from Britain, although the provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers, of which H. E. Lady Sykes, who represents the Bombay Presidency, is a Vice-President.

Hon. Treasurer: Henry F. Lewis, Esq., 12, Dalhousie Sq., Calcutta.

The General Secretary of the Mission is Mr. W. H. P. Anderson, 33, Henrietta St., Covent Garden, London, W. C. The Secretary for India is Mr. A. Donald Miller, Purulia, Bihar.

THE REGIONS BEYOND MISSIONARY UNION.—An inter-denominational Society commenced work at Motihari, Bihar, in 1900, and now occupies 6 stations and 7 out-stations in the Champaran and Saran Districts, with a staff of 18 European and 2 Indian Missionaries and 45 other Indian workers. The Mission maintains 1 Hospital, 1 Girls' Orphanage, 1 Boys' Orphanage and Boarding School with Carpentry industrial department, 1 M. E. School with 200 pupils. Communicants number 80. *Secretary*: Rev. Alex. L. Banks, Siwan, District Saran.

THE NATIONAL MISSIONARY SOCIETY OF INDIA—Established 1905, it has a staff of 27 Missionaries and 88 helpers and Volunteers. Operates in Montgomery District (the Punjab), Nukkar Tahsil (U. P.), Haluaghat, Mymensingh District (Bengal), Jharsauudah (B. & O.), Murwahi (C.P.), Nantanwa (near Nepal), North Kanara, Mirajgaon and Karmala Talukas (Bombay), Parkal Taluq (Nizam's Dominions) and Tirupattur Taluk (N. Arcot). Christian community over 7,000 Thirtythree Elementary Schools and 1 High School with hostel, one printing press, two Dispensaries and one Hospital. Annual expenditure Rs. 73,500. Supported by Indian Christians of all denominations and Provinces. Organs: *The National Missionary Intelligencer* (a monthly journal in English sold at Re. 1 per year post free), *Qasid* (a monthly journal in Persian Urdu) at Rs. 2-8-0, *Deepekai* (a monthly journal in Tamil and Kanarese) at 8 as. per year, post free.

Address: N. M S. Office, Vepery, Madras.

General Secretary: Rai Bahadur A. C. Mukerji, B.A. *Associate Secretary*: Thos. David, B.A., B.D.

THE SEVENTH DAY ADVENTISTS:—The Seventh-day Adventists commenced mission work in India in 1893, and now employ a staff of five hundred and fifty-two workers European and Indian, including one hundred and three ordained and licensed ministers. Evangelistic and educational work is conducted in fifteen vernaculars, besides work for English-speaking peoples in the large cities. For administrative purposes, the work is organised into five Union Missions located as follows:—

Bombay Union Mission of S. D. A. (A. W. Cormack, Superintendent). *Office Address*: Post Box 15, Poona.

Burma Union Mission of S. D. A. (J. Phillips, Superintendent). *Office address*: 30, Voyle Road, Rangoon Cantonment, Burma.

North-East India Union Mission of S. D. A. (G. G. Lowry, Superintendent). *Office address*: Hinoo P. O., Ranchi.

North-WestI ndia Union Mission of S. D. A. (A. H. Williams, Superintendent). *Office address*: 17, Abbott Road, Lucknow.

South India Union Mission of S. D. A. (H. Christensen, Superintendent). *Office address*: 7, Cunningham Road, Bangalore.

The general headquarters for India and Burma is located at Salisbury Park, Poona. (A. W. Cormack *President*; C. L. Torrey, *Secretary and Treasurer. Office address*: Post Box No. 15, Poona). On the same estate is an up-to-date publishing house devoted entirely to the printing of evangelical and associated literature. (*Address:* Oriental Watchman Publishing Association, Post Box No. 35, Poona). A large number of day and boarding vernacular and Anglo-vernacular schools are conducted in different parts of the country; and at Vincent Hill School, Mussoorie, European education is provided, a regular high-school course, with more advanced work for commercial and other special students, being available. In all the denominational boarding schools increasing emphasis is being laid on vocational work, the students being required to share in the domestic work of the institutions, and in many cases to engage in some trades or other work. Eight physicians, one maternity worker, (C.M.B.) and a number of qualified nurses are employed, regular medical work being conducted at fourteen stations. The baptised membership (adult) is 2,775 organised into 74 churches; and in addition a substantial community of enquirers is receiving systematic instruction. 232 Sabbath Schools are conducted with an enrolled membership of 5,800.

THE AMERICAN MENNONITE MISSION.—Established 1899, works in the C. Provinces. Mission staff numbers 33, Indian workers 80, Church members 1,300, 1 Industrial Training Institution, 1 High, School, 1 Vernacular Middle School and 1 Anglo-Vernacular Middle School, 1 Normal School, 1 Men's Home, 2 Homes for untainted children of lepers, 1 Bible School, 2

Orphanages 1 Widows' Home, 1 Leper Asylum; Elementary Schools, 9; Dispensaries, 6. Leper Clynics 2.

Secretary: Rev. J. N. Kaufman, Dhamtari, C. P.

THE GENERAL CONFERENCE—MENNONITE MISSION—Started in 1901 in the C. Provinces. Workers number 27; Leper, Medical, Orphan, Zenana, Evangelistic and Educational work carried on. *Secretary*: Rev. P. W. Penner, Janigir, C. P.

THE KURKU AND CENTRAL INDIA HILL MISSION—Established 1890 in the C. P. and Berar, has a mission staff of 17, Indian workers 13, Churches 8, Communicants 229: Christian community 392; 2 Boarding schools with 62 boarders and 3 Elementary schools. *Secretary*: Rev. Carl Wyder, Ellichpur, Berar, C. P.

THE CEYLON AND INDIA GENERAL MISSION—Established 1892, occupies stations in India in Mysore State in the Coimbatore and Anantapur Districts and also stations in Panadura, Ceylon. Mission Staff 31; Indian workers 147, Churches 14, with Communicants 664, and Christian Community 2,719; Orphanages 5; Elementary schools 49, Pupils 1,566.
Secretary: A. Scott, Kadiri, S. India.

THE BOYS' CHRISTIAN HOME MISSION—Owes its existence to a period of famine, was commenced in 1899. Mission staff 17, Indian workers 125. There are elementary schools with three orphanages, two boys and one girl, and a Widows' Home, where Industrial training is given. There are four main stations—At Dhond, in the Poona District and at Bahraich, Orai and Benares in United Provinces. At Benares there is an Industrial Training Institution with about one hundred attendants learning the Motor, Electrical and Carpentry trades. There are also 34 out-stations. *Director*: Rev. John E. Norton, Dhond, Poona District. *Secretary*: W. K Norton, Benares, U. P.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an inter-denominational society, with headquarters, 33, Surrey Street, London, working among women and girls in six stations in the Bombay Presidency, 10 in United Provinces, and 3 in the Punjab. There are 80 European Missionary ladies on the staff and 36 Assistant Missionaries, 200 Indian teachers and nurses and 47 Bible women. During 1927 there were 3,979 in-patients in the five hospitals supported by the Society (Nasik, Benares, Jaunpur, Lucknow and Patna), but the Victoria Hospital, Benares, was closed. There were 28,585 out-patients, 102,813 attendances at the Dispensaries. In their 33 schools were 2,833 pupils, and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas, 1,207 women were regularly taught and 963 houses were visited. The 57 Bible women visited 429 villages; the number of houses was 961; major operations 606; minor operations 1,277. Total expenditure £ 60,329-14-4.

Hon. Treasurer: The Lord Meston of Dunottar.

Secretaries: Rev. Dr. Carter, Rev. E. S. Carr, M.A. (Hon.), and Miss E. Marriner.

WOMEN'S CHRISTIAN MEDICAL COLLEGE, WITH WHICH IS INCORPORATED THE PUNJAB MEDICAL SCHOOL FOR WOMEN.—In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influences to Indian Women. Doctor Edith Brown, M.A., M.D., was its Founder and Principal. The School was Inter-denominational, and trained students for various Missionary Societies.

Clinical work was at first given at the Charlotte Hospital which belonged to the Ludhiana Zenana and Medical Mission. The Memorial Hospital was opened in 1900, and has now 200 beds. In 1913 non-Christian Students were also admitted for training, and the name was modified to its present title given above.

In 35 years, 189 Medical Students have qualified as doctors, besides 120 as Compounders, 131 as Nurses and 370 as dais and Midwives.

At present 240 are in training—90 as Medical Students, 20 as Compounders, 50 as Nurses, and 80 as Nurse Dais.

New laboratories have been built for Clinical Pathology, for Physiology, and for Chemistry and Physics. New quarters for Sisters and Nurses, and this year also, new quarters for the Assistant Staff. A new Dispensary for out-patients has recntly been opened.

Two new departments are being planned to open in October one for the training of Health Visitors and the other for training in Mothercraft, according to the Truby King Method of Infant Feeding. The restoration of breast milk is a revelation to those who have never watched its results.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1896. Its work is religious, social and international. The Settlement supplies a hostel for University students of all nationalities and a few Indian professional women. Classes for educated girls are provided and teaching is also given in pupils' homes. The Settlement staff take part in many of the organised activities for women's work in the city. The Settlement is also partly responsible for the support of a Social Training Centre for women: Taqi Mansion, Bellasis Road, Byculla. There is a Holiday house at Bordi, Thana District. In March 1930 the Settlement will move to its permanent house at Reynolds Road, Agripada (near to the new central station and on bus and tram routes to the city). *Warden*: Miss E. C. Gedge, J.P., Vacchagandhi Road, P.O. 7, Bombay.

THE RAMABAI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in 1925) the well-known work of the late Pandita Ramabai, shelters about 600 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kedgaon, Poona District.

Miss M. Lissa Haslie, *Corresponding Secretary*.

Disciple Societies.

The India Mission Disciples of Christ, under the United Christian Missionary Society, Indianapolis, Indiana, U.S.A., began work in India in 1882. It works in the Central Provinces and South United Provinces. There are 67 missionaries, including missionaries' wives, and 285 Indian workers. There are 16 organized churches with the membership of 2,375. There is a Christian community of 4,700. There are 5 hospitals and 10 dispensaries, in which 1,412 in-patients, and 73,229 out-patients were treated last year, with a total of 220,028 treatments. There is an orphanage are children under 8 years of age, with the older orphans provided for in the boarding schools and hostels. A boarding schools for girls and one for boys, with 2 hostels for boys and one for girls show 632 inmates. There is one Leper Asylum with 120 inmates. A Tuberculosis Sanatorium admitted 102 patients during the year. An Industrial School in conducted at Damoh in connection with which a 400 acre farm is used for practical work. In the Training Home for women at Kulpahar,needlework, gardening, etc., are taught in connection with which a large business is done each year. The Mission Press at Jubbulpore printed about 3,000,000 pages of Christian Litterature. There is a High School; also 5 Middle Schools and 14 Primary Schools, with about 2,000 under instruction.

The Australian Branch has 3 Mission Stations in the Poona District. The Great Britain and Ireland Branch in Mirzapur District of U.P. and Palamau District in Orissa. These two have no organised connection with the India Mission Disciples of Christ.

Secretary and Treasurer: W. B. Alexander, Jubbulpore, C.P.

Undenominational Missions.

THE CENTRAL ASIAN MISSION. Objective: Salvation of Central Asia; from Afghanistan to Tibet (including N. E. portion of Peshawar District), North Kashmir, etc. Protestant Evangelical, Inter-denominational. Head-quarters in India, Mardan, N. W. F. P.; in London 52 Lincoln's Inn Fields. THE OLD CHURCH HEBREW MISSION was established in 1858, in Calcutta, and is said to be the only Hebrew Christian Agency in India. *Secretary:* The Chaplain, 11, Mission Row, Calcutta.

THE OPEN BRETHREN—Occupy 46 stations in the U. Provinces, Bengal, S. Mahratta, Godaveri, Delta, Kanarese, Tinnevelly, Malabar Coast, Coimbatore and Nilgiri Districts. They hold an annual Conference at Bangalore.

Lutheran Societies.

THE INDIA MISSION OF THE UNITED LUTHERAN CHURCH IN AMERICA.—Commonly known as the United Lutheran Church Mission. Now working in close co-ordination with the recently organized Andhra Evangelical Lutheran Church. The Mission and Church together carry on work in East Godavari, West Godavari, Guntur, Nellore and Kurnool Districts. Foreign staff on the field in 1929, 69; Indian staff of all grades, 2,859; Baptised membership, 140,462; schools, 1,032; pupils 34,712. There are a First Grade College, three High Schools for boys, one High School for girls, two Normal Training Schools for masters and one for Mistresses, a Theological Seminary an Agricultural school, five Hospitals and a Printing Press.

President of U. L. C. Mission.—Rev. Victor McCauley, D.D., Tenali, Guntur District.

President of Andhra Evangelical Lutheran Church.—Rev. R. M. Dunkelberger, M.A., S.T.D., Rajahmundry.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF STOCKHOLM, SWEDEN.—A Church of Sweden Society, founded in 1856, occupies the Districts of Saugor, Betul, and Chhindwara in the Central Provinces. There are about 2,425 Church members constituted into an indigenous Church called The Evangelical Lutheran Church of the Central Provinces. The European and Indian staff numbers 30 and 175 respectively. One Theological Seminary for training catechists and pastors and one Training School for training Women Workers. 25 Day Schools with 1,330 children. 42 Sunday Schools with 651 Christian and 1,126 non Christian children. 9 Dispensaries with 16,939 patients during 1928. 3 Workshops, one of them with an aided Carpentary School. One Female Industrial School. One Widows, Home with 61 women; 9 Orphanages with 223 boys and 254 girls. One Boarding School for Christian girls on the Middle School standard.

Rev. G. A. Bjork, B.D., Chhindwara, C. P.

THE KANARESE EVANGELICAL MISSION with Headquarters at Mangalore, South Kanara, was organised on January 1st, 1919, to take over the Mission work done formerly by the Basel Evangelical Mission in two of her fields, namely, the Districts of South Kanara and South Mahratta. In 1926 a union was effected between the Home Board at Lausanne and Basel, and in July 1927, this mission handed back to the Basel Evangelical mission the two mission fields of South Kanara and South Mahratta. The last available figures are: 12 chief stations and 56 outstations with a total missionary staff of 35 and 412 Indian workers. There are 48 organised congregations with a total membership of 12,324, which gave a total contribution of Rs. 16,107-1-11 for church and mission work.

Educational work embraces 72 schools, of which there are 3 High Schools. The total number of scholars is 8,626.

Medical work is done at Betgeri, South Mahratta, with a full staff and a hospital and two branch hospitals and dispensaries. A Women's and Children's Hospital was opened in June 1923 at Udipi, South Kanara, and has been enlarged of late.

The Mission maintains a Home-Industrial Department for women's work and a large Publishing Department at Mangalore with a bookshop and a printing press occupying some 150 hands and doing work in many languages.

Chairman and Secretary: Rev. A. Schosser residing at Mangalore, S. K.

This Mission now forms a part of the Basel Evangelical Mission field comprising Malabar, South Canara and Coorg.

THE CHURCH OF SWEDEN MISSION was founded in 1874. Operated till 1915 in the Madura, Tanjore, Trichinopoly and Ramnad Districts. Since 1915 the Mission having taken full charge of the former Leipzig Evangelical Lutheran Mission field, working also in the Madras, Chingleput, Coimbatore, Salem, S. Arcot Districts with diaspora congregations in Rangoon, Penang, Kuala-Lumpur and Colombo.

L. E. L. M. (Leipzig Evangelical Lutheran Mission) re-entered into the work, in 1927. Hence the Church of Sweden Mission now works in the Trichinopoly, Coimbatore, Madura and Ramnad Districts with the diaspora congregations at Colombo. The L. E. L. M. works in the Madras, Chingleput, South Arcot and Tanjore Districts with the diaspora congregations at Rangoon, Penang and Kuala-Lumpur.

The Church (Tamil Evangelical Lutheran Church) was constituted on 14th January 1919 and is working in connection with the two Missions.

CHURCH OF SWEDEN MISSION. European staff; 35; Schools, 132; Teaching staff, 233; Pupils, Boys, 4,688; Girls 1,293.

President.—Rev. J. Sandegren, M.A., B.D., "Gurukul," Kilpauk, Madras.

LEIPZIG EVANGELICAL LUTHERAN MISSION. European staff, 11; Schools, 10, Teaching Staff 96; Pupils, Boys 1,217; Girls, 669.

President. Rev. Provost Th. Meyner, Mayavaram.

INSTITUTIONS COMMON TO BOTH MISSIONS. School, 2; Teaching Staff, 29; Pupils, Boys, 72; Girls 329.

TAMIL EVANGELICAL LUTHERAN CHURCH. Organised churches, 43; Ordained Indian Ministers, 34; Other Indian workers, 92; Baptized membership, 23,646; Baptized membership Schools, 259; Teaching staff, 459; Pupils, 10,546 (boys 8,425, girls 2,121).

President: The Rt. Rev. Bishop D. Bexell, Trichinopoly.

MISSOUR EVANGELICAL LUTHERAN INDIA MISSION is located in North Arcot (Ambur, Vaniyambadi), Salem (Krishnagri), Tanjore (Tanjore, Negapatam), Madura (Madura), Tinnevelli Vadakangulam, (Vallioor) Districts, in Travancore (Nagercoil, Trivandrum, Aleppey), in Cochin, and in Kolar Goldfields. There are 36 missionaries (6 of these on furlough in America), 1 nurse 1 deaconess-nurse, 1 Doctor (Indian), 1 American Teacher in charge of School-Home for missionary children (Kodaikanal), and 1 Lady educationist. Besides three Training Institutes there are two complete High Schools, and among the Elementary Schools there are six complete Vernacular Middle Schools. In addition to evangelistic and educational work the Mission runs an up-to-date Dispensary and Lying-in Hospital with 16 beds in Ambur. Statistics, November 1928: Souls, 10,383, Baptized members, 5,769, catechumens, 4,614, 3 Indian pastors, 9 evangelists, 54 catechists, 80 day-schools, 4 night chools, 8 boarding schools.—*Secreatry*, Rev. R. W. Goerss, Nagercoil, Travancore.

President: Rev. P. Lange, B.A., B.D., Nellikuppam.

Treasurer: Rev. K. Heiberg, B.A., B.D., Madras.

THE SANTAL MISSION OF THE NORTHERN CHURCHES (formerly known as the India Home Mission to the Santals)—Founded in 1867, works in the Santal Parganas, Goalpara (Assam), Maida and Dinajpur. Work is principally among the Santals. The mission staff numbers 27; Indian workers 480; communicants 4,000; Christian community 23,000; organised churches 36; boarding schools 4; pupils 508; elementary schools 69; pupils 1,035; industrial schools 2; Orphanage 1; children 29. *Secretary*: Rev. P. O. Bodding, Dumka, Santal Parganas.

MISSIONS AND ENEMY TRADING ACT.—In May 1918, the following notice regarding Missions was published in the "Gazette of India":—"The following missions or religious associations are declared companies under Act 2 (the Enemy Trading Act) of 1916:—The Leipzig Evangelical Lutheran Mission, Madras, the Hermansberg Evangelical Lutheran Mission, Madras, the Schleswig-Holstein Evangelical Lutheran Mission, Madras, the Gosner Evangelical Lutheran Mission of the United Provinces and Behar and Orissa, the German Evangelical Lutheran Mission of Ranchi, Behar and Orissa. The Governor-General in Council notifies that the powers conferred under Section 7 of the said Act shall extend to the property, movable and immovable, of these missions or religious associations."

In June, 1919, the Government of India stated:—"Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials, and those Boards of Trust

tees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council.

Methodist Societies.

The Methodist Episcopal Church is the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1856, at first confining its activities to what is now the United Provinces. From that centre it spread until the outposts of its work were found in Baluchistan, Burma, Malaysia, Netherlands Indies and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of over half a million of whom approximately 20,000 were baptised the year ending 1926.

The avowed task of the Church has been the uplift of the depressed classes, and its work has been largely among that class. As a matter of fact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extending.

The educational work of the Church is extensive, it having in this area a total of 1,301 schools of all grades, including three colleges twenty-two high schools, and numerous normal training and the logical institutions. The registered attendants in these schools number 42,529.

Special effort is made for the instruction and evelopment of the young people of the Church, here now being 483 chapters of the Epworth League with 20,253 enrolled members, and 5,345 organized Sunday Schools with an enrolment 159,520.

The publishing interests of the Church are represented in two presses at Madras and Lucknow, the former doing work in four vernaculars and the latter in six. The periodicals issued cover the interests of both the evangelistic and the educational field, the Indian Witness, the Junior Methodist and Methodist Education being in English, while the Kaukab-i-Hind, the Rafiq-i-Niswan, the Bal Hit Karak, and other periodicals for women and children are issued in several of the vernaculars.

The governing body of the Church is the General Conferences held quadrennially in America in which the ten conferences now existing in India are represented by twenty-eight delegates. The polity of the Church in India looks forward to complete independence under the general governing body, there at present being but about three hundred and fifty American men and women as compared to 480 ordained and 3,162 unordained Indian and Burmese workers. At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by four Bishops, elected by the General Conference, and resident as follows: Bishop Frank W. Warne, Bangalore; Bishop John W. Robinson, Delhi; Bishop Frederick B. Fisher, Calcutta; and Bishop Brenton T. Badley, Bombay.

THE AMERICAN WESLEYAN METHODIST MISSION, Sanjan, Thana District Headquarters-Stations with missionaries, Danda, Maroli, *via* Nargol, Thana District. Vapi (Daman Road Station), Surat District. Pardi 6, Surat District. Eight missionaries on field. Two on furlough. One under appointment. Four main stations. Two boarding schools. One industrial school. One Bible school. Six village schools. *Superintendent:* C.B. Harvey, Sanjan, Thana District.

THE REFORMED EPISCOPAL CHURCH OF AMERICA at Latipur and Lucknow, U. P., has 2 Missionaries, 4 Outstations, 1 Hospital, 2 Orphanages and a membership of nearly 100.

The Methodist Protestant Mission began work in India in 1919, has a staff of seven missionaries, and one under appointment The work is confined to Dhulia Taluka, with one Main station, Dhulia. There two boarding schools, district evangelistic work and medical work. *Secretary:* Miss Mildred Miskimen, Dhulia, West Khandesh.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India, apart from Ceylon, is organised into 7 District Synods with 2 Provincial Synods. There is a large English work connected with the Society, 20 ministers giving their whole time to Military work and English churches.

The districts occupied include 68 main stations in Bengal, Madras, Mysore, Bombay, Punjab, Central Provinces, Hyderabad (Nizam's Dominions), United Provinces and Burma. The Burma Synod has recently been attached to the Ceylon Provincial Synod for purposes of administration. Its statistics are no longer included in this statement. The European staff numbers 102 with 75 Indian Ministers and 791 Indian workers; Communicants 18 513, and total Christian community 101,245. There are 7 large numbers of organised Churches many of which are self-supporting.

Educational work comprises 3 Christian Colleges students, 2,033; 5 Theological Institutions, students, 329; 7 High Schools, pupils, 3,427; 14 Industrial schools, pupils, 400; 923 Elementary schools, with 26,180 scholars In Medical work there are 3 hospitals, 12 dispensaries, 1,127 in-patients and 65,431 out-patients.

The Women's Auxiliary carry on an extensive work in the places occupied by the W. M. M. S. There are 93 women workers from abroad of whom 16 are qualified doctors. The Indian women workers number 382. There are 109 girls' day schools with 13,377 pupils and 28 boarding schools with 1,979 boarders. There are several philanthropic institutions for the rescue and training of women. The Women's Auxiliary manage 12 hospitals and 9 dispensaries, which had 8,041 in-patients and 97,533 out-patients. The cost of the work to the Women's Auxiliary in 1925 was nearly £ 25,000.

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 17 Missionaries and 45 Indian workers. Organised churches 4, 1 Theological school and 9 Elementary schools, and 2 Anglo-Vernacular schools and Dispensaries 3 *Secretary*: Rev. Elizabeth Moreland, Yeotmal, Berar.

THE SALVATION ARMY.

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker; and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 5 Territories, each under a Territorial Commander; and two smaller Commands.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Eastern Command, with Headquarters at Calcutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory.—The area in this Territory, is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Pubjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformative work was commenced), and also in the Punjab. Great progress has been made. A special Settlement has also been opened in the Andamans during the last few years.

A Land colony 2,000 acres in extent is in existence in the Multan District, where a populalation of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces; and also in a number of Dispensaries.

Other institutions include, Day and Boarding Schools, Weaving Schools, Agricultural and Fruit Farms, a Home for Stranded Europeans and for British Military Soldiers.

Villages centres at which the S. A.	
Works	1,657
Officers and Employees	588
Social Institutions	21

Territorial Headquarters: 32, Ferozepur Road, Lahore, Punjab.

Territorial Commander: Lt. Commissioner N. Muthiah.

Chief Secretary.—Lt.-Colonel N. L. Madsen.

Western India.—The Western India Territory comprises Bombay, Gujerat, Panch Mahals and the Maratha country.

Besides the distinctly evangelistic operations, there are established a large General Hospital—Thomas Emery Memorial—several Dispensaries at which during the year about 24,000 patients are treated, 240 Day and Boarding Schools, a Home for Juvenile Criminals, an Industrial and Rescue Home for Women, conditionally Released Prisoners' Home, Weaving Schools; a Factory for Weaving, Warping, and Reeling Machines, and a Land Colony having a population of some hundreds of Salvationists.

Corps, 316: Outposts, 461: Societies 497; Officers and Cadets 681 of whom 595 are Indian: employees and teachgers, 100: Social Institutions, 16.

Territorial Headquarters: S. A., Morland, Road, Byculla, Bombay.

Territorial Commander: Lieut. Commissioner Ewens.

Madras and Telugu Territory.—This Territory comprises the city of Madras and work situated in the Nellore, Guntur, Kistna and West Godaveri Districts of the Northern Circars of the Madras Presidency, also Bangalore.

There are the following agencies at work:—225 Corps and Outposts, *viz.*, places in which work is systematically done.

116 Village Primary Schools, 3 Settlements for Criminal Tribes with a total population of 3209. 1 Industrial School for children of Criminal Tribes, 1 Rescue Home, 1 Silk Farm at Bangalore, 2 Institutions for the training of Officers and one Boarding School for Boys and 1 for Girls.

1 Leper Colony at Bapatla (newly taken over by us) Present number of lepers in the Colony is 103.

1 Trade Department, where cloth, leather, goods, furniture, carpets, silk, lace, etc., the products of Industrial Institutions, are disposed of.

Territorial Headquarters: The Salvation Army, Broadway, Madras.

Territorial Commander: Lieut.-Commissioner N. Muthiah.

Chief Secretary: Major E. H. Maslin.

The South Indian Territory of the Salvation Army is operating in the Native States of Travancore and Cochin and in the Tinnevelly District of British India.

They are working amongst six castes, and calls have been received from other castes, amongst whom they have not yet been able to commence operations. Even among the six castes, there are districts from which the people are calling us which they are not able to meet yet. Work is carried on in 1,228 villages, there are 1,291 Officers and Teachers and 315 Day Schools.

There have been advances in every department of the work, in addition to the erection of a number of Village Halls and Officers' Quarters, three Central Halls have been completed and two others are in course of erection. A new Training Garrison for the Men Cadets of the Malayalam area of the Territory, is being erected in Trivandrum. A Divisional Headquarters has also been erected for Kalkulam Division in Thucklai, and a second reconstructed at Kottarakara.

Further improvements have been made in the Medical Department, and since the return of the Senior Medical Officer, much work has been done towards the same. The new Eye Ward

and Women's Block are rapidly nearing completion and a Cholera Isolation Ward and Septic tank system are also being planned, at the Catherine Booth Hospital at Nagercoil. Of the Branches, a new In-patients' Block is being constructed at Chembanvillai, whilst the Old Hospital from Muttackadu has been removed and reconstructed at Kothanallur. There are two schemes under consideration for work among the Lepers; one in the Cochin State and the other in North Travancore.

There are 92 Boys and 27 Girls in the three Boarding Schools, at Nagercoil and Trivandrum.

The children attend the Vernacular and English Schools.

Industrial Departments, though the market for certain branches of the work are very slack, are maintaining their position and also doing good work amongst the women whom they employ.

Territorial Headquarters: The Salvation Army Kuravanconam, Trivandrum.

Territorial Commander: Colonel (Mrs.) A. Trounce.

Chief Secretary:—Lieut.-Colonel Yesu Dasen

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1820; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, was became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes are now in force.

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that

European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884 by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans.....Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered." Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (55443-463) the new Chapter XXXIII (55443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code.

High Courts.

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more judges; in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction; his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtiars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar.

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex-officio*, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1923 relating to the constitution of Bar Councils for the several High Courts in India have been recently adopted by the Indian Bar Courts Act, XXXVIII of 1926.

Composition of the Bar.

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development. "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the remainder Indian."

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counse and the Government Solicitor. There are Advocates-General and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General-in-Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High

Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power.

The supreme power of Parliament to legislate for the whole of India cannot be questioned in practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q.v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

Bengal Judicial Department.

Rankin, The Hon'ble Sir George Claus, Kt., K.C., Bar-at-Law.	Chief Justice.
Ghosh, The Hon'ble Mr. Justice Charu Chunder, Kt., Bar-at-Law.	Puisne Judge.
Buckland, The Hon'ble Mr. Justice Philip Lindsay, Kt., Bar-at-Law.	Do.
Suhrawardy, The Hon'ble Mr. Justice Zahhadur Rahim Zahid, Kt., Bar-at-Law.	Do.
Cuming, The Hon'ble Mr. Justice Arthur Herbert, Kt., I.C.S.	Do.
Pearson, The Hon'ble Mr. Justice Herbert Grayhurst, Bar-at-Law.	Do.
Page, The Hon'ble Mr. Justice Arthur, K.C., Bar-at-Law.	Do.
Mukharji, The Hon'ble Mr. Justice Manmatha Nath, M.A., B.L.	Do.
Costello, The Hon'ble Mr. Justice Leonard Wilfred James, M.A., LL.B., Bar-at-Law.	Do.
Graham, The Hon'ble Mr. Justice John Fuller, I.C.S.	Do.
Lort-Williams, The Hon. Mr. Justice John, K.C., Bar-at-Law.	Do.
Mallik, The Hon. Mr. Justice Satyendra Chandra, I.C.S.	Do.

(a) Excludes 4,581 suits of "Superior Courts."

(b) Excludes 43 cases transferred to Settlement Courts.

(c) 2 Suits instituted in the court of one Hony. Munsif.

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary thanadars (Police Station Officers) and subordinates.

In Madras in 1816 Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Presidency.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauderers into excellent police; and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras, and Bombay, which has its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned, subject only "to the general control" of the Governor General.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary; and Police Station Officers may also be dismissed by the D.S.P.

The D. S. P. is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of law and the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police, Inspector-General of Police, and Home Department. Generally speaking, the D. S. P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C. I. D.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as **Criminal Investigation Departments** and work under a Deputy Inspector General. They collate information about crime, edit the *Crime Gazette*, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux.

Headquarters and Armed Police.—At the chief town of each District the D. S. P. has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D. S. P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 303 service rifles. At most head-quarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mofussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complaint in a cognisable case not only has his complaint recorded and investigated without payment fee. If the thanadar succeeds in establishing a *prima facie* case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is generally a junior pleader, engaged by Government to conduct police cases in the lower courts. Cases committed

to the Sessions are conducted by the Public Prosecutor or one of his Assistants, and the reports of these officers and the comments of the judge are a means for the D. S. P. to know whether his thanadars are doing their work properly.

Out Posts.—When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant thana. The secret of good mofussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion.—Ordinarily the constable may aspire to become a jamadar, or with ability and luck, a Police Station Officer or even Inspector. The directly recruited matriculate who comes in through the Police Training School as a Thanadar may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy-Inspector General. The direct Assistant Superintendent, whether from England, or from India, is sure of a Superintendentship, and has chances of D. I. G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund.

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is superseded in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give upto six months or Rs. 200 fine summarily, *i.e.*, without formal record of proceedings; and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

Round Figures.—The process of reorganisation and retrenchment goes on ceaselessly, annual administration reports for the ten major provinces and four minor administrations appeared tardily, and there are no unified statistics for the police of India and Burma. The following figures are therefore merely to be regarded as approximations, giving a general idea of the numbers of police and the volume of work put through yearly:—There are about 30,000 Military Police, chiefly in Burma, Assam, and Bengal, and these cost about one and a third crores. The maintenance of them is a departure from the principles laid down by the 1860 Commission and the 1861 Act.

Provincial Police including Burma total about 200,000 and cost ten and a half crores or an average of about one crore per major Province.

There are about 10,000 Thanas or Police Stations which annually investigate from five to six thousand murders, four thousand dacoities, twenty-five thousand cattle thefts, one hundred and seventy ordinary thefts, and as many burglaries. They place on trial every year about three-quarters of a million persons, of whom about half a million or more are convicted. The jail population of India, which is over a hundred thousand, consists of many habituals who on release proceed to prey on the public until such time as the police again secure their conviction and incarceration.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognizable crime :—

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails** at the head-quarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1915, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee.—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments and is subject to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led lately to the appointment of a Jails Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation; of recruiting a better class of warders; of providing education for prisoners; and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders; the adoption of the English system of release on license in the case of adolescents; and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners; the provision of separate accommodation for prisoners under trial; the institution of the star-class system; and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid

warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—*i.e.*, those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905, a special class for selected juveniles and young adults was established at the Dharwar jail in Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Meiktila jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces; and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases; a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—If any fresh attempt at colonisation is made, it should be in an entirely new locality. A fresh attempt at colonisation in the Middle Andaman is not recommended. The retention of the settlement at Port Blair on the present lines is not recommended. The entire abandonment of the Andamans as a place of deportation is not recommended. Deportation to the Andamans should cease, except in regard to specially dangerous prisoners and any others whose removal from Indian jails is considered by the Government to be in the public interests. The existing restrictions as to age and physical condition of prisoners sentenced to transportation to the Andamans should, unless special medical grounds exist in any particular case, cease to apply. The Indian Penal Code should be amended by the substitution of rigorous imprisonment for transportation. In provinces where the available prison accommodation will not permit of the immediate cessation of deportation of all but selected prisoners, the Star class should be the first, and the habitual the last, to be detained in Indian jails. No female should in future be deported to the Andamans, and those now there should be brought back to India and distributed among the Provinces to which they belong. In those Provinces where the jails are insufficient to detain prisoners now deported, additional accommodation should be provided as soon as possible.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The variations of the jai population in British India during the five years ending 1927 are shown in the following table:—

——	1927.	1926	1925.	1924	1923.
Jail population of all classes on 1st January	132,253	129,753	128,314	126,478	134,286

Convict population on 31st December.	116,161	113,274	111,395	110,399	109,314

More than one half of the total number of convicts received in jails during 1927 came from the classes engaged in agriculture and cattle tending, about 136,000 out of 170,000 are returned as illiterate.

The percentage of previously convicted prisoners was 19·43 as against 20·94 in 1926 while the number of youthful offenders fell from 378 to 359. The following table shows the **nature and length of sentences** of convicts admitted to jails in 1925 to 1927.—

Nature and Length of Sentence.	1927.	1926.	1925.
Not exceeding one month	31,122	30,637	32,499
Above one month and not exceeding six months.	67,356	64,147	64,286
„ six months „ „ one year ..	35,420	34,971	31,429
„ one year „ „ five years ..	28,714	25,912	23,299
„ five years „ „ ten „ ..	3,980	3,790	3,581
Exceeding ten years	485	524	350
Transportation beyond seas—			
(*a*) for life	1,555	1,685	1,540
(*b*) for a term	89	36	117
Sentenced to death	1,112	1,057	988

The total daily average population for 1927 was 114,879, the total offences dealt with by criminal courts was 371, and by Superintendents 131,462. The corresponding figures for 1926 were 111,892; 199 and 117,433, respectively.

The total number of corporal punishments showed an increase, *viz.*, from 204 to 243. The total number of cases in which penal diet (with and without solitary confinement) was prescribed was 6,668 as compared with 5,312 in the preceding year.

Total expenditure increased from Rs. 1,71,22,795 to Rs. 1,79,90,944 while total cash earnings decreased from Rs. 25,55,913 to Rs. 23,90,169; there was consequently an increase of Rs. 10,31,428 in the net cost to Government.

The death rate slightly decreased from 12·86 per mille in 1926 to 12·82 in 1927. The admissions to hospital were lower, and the daily average number of sick fell from 21·07 to 20·82.

The Laws of 1929

BY

RATANLAL RANCHODDAS, *Advocate.*

AND

MANHAR R. VAKIL, *Barrister-at-Law.*

1. The Indian Limitation (Amendment) Act.—Section 10 of the principal Act under which no suit against express trustees and their representatives is barred by any length of time was not so far held applicable to the manager of a Hindu or Muhammadan religious or charitable endowment. To protect endowments of this nature the amendment enlarges the scope of this section so as to put Hindu, Muhammadan or Buddhist endowments on the same footing as other trust funds and declares the manager of such property a trustee. Article 133 which referred to recovery of moveable property, conveyed in trust and afterwards bought from the trustee, is omitted. It now reappears as Article 48A, with this difference that the period of limitation is reduced from 12 to 3 years and is made to run from the date when the sale becomes known to the plaintiff. Similarly, for Article 134, the period of limitation is made to run from the date when the transfer becomes known to the plaintiff.

2. The Hindu Law of Inheritance (Amendment) Act.—This Act removes sex disqualification which under the archaic rules of Hindu Law excludes one's nearest female relations from inheritance altogether and also gives the sister's son a higher place amongst *bandhus*. The Act includes son's daughter, daughter's daughter, sister and the sister's son after the paternal grandfather and before the paternal uncle. The Act extends to persons subject to the Law of Mitakshara country and only in the case of the property of males not held in coparcenary and not disposed of by will.

3. The Presidency-Towns Insolvency, (Amendment) Act.—Sub-section (2) of section 69 of the principal Act requires the Official Assignee to declare and distribute the first dividend (if any) within six months after the adjudication. As this provision has proved unworkable in practice the amendment has extended that period to one year.

4. The Indian Tariff (Amendment) Act.—Following the recommendations of the Tariff Board this Act imposes an *ad valorem* import duty of 5 per cent. upon rubber-insulated copper wires and cables of certain size and alters the import duty upon printing type from 2½ per cent. *ad valorem* to a specific duty of one anna per pound.

5. The Workmen's Compensation (Amendment) Act.—As before, compensation payable in respect of a workman whose injury has resulted in death must be deposited with the Commissioner. No such payment made directly by an employer will be deemed to be a payment of compensation. An exception, however, is made in the case of an employer who may advance money to the dependants of the deceased workman either for funeral expenses, not exceeding rupees fifty, and any other advance on account of compensation not exceeding one hundred rupees to any one dependant. The advance made to defray funeral expenses may be deducted by the employer from the lump sum to be deposited with the Commissioner; and the advance made to dependants may be deducted by the Commissioner when awarding compensation. Any other sum amounting to not less than ten rupees which is payable as compensation may be deposited with the Commissioner on behalf of the person entitled thereto (section 8, sub-section 2). The receipt of the Commissioner is a sufficient discharge in respect of any compensation deposited with him (sub-section 3). The following additions are made to sub-section 5 of section 8 of the principal Act. Compensation deposited in respect of a deceased workman must be apportioned among the dependants of the deceased workman in such proportion as the Commissioner *thinks* fit or at the discretion of the Commissioner be allotted to any one dependant (sub-section 5). Provision has been made (by the addition of a new sub-section to s. 8 of the original Act to enable the Commissioner to recover any amount which has been paid as compensation to any person through fraud or other improper means (sub-section 9, section 8). The protection afforded by compulsory registration of agreements is extended to the cases where compensation settled by agreement is payable to a woman or any person under a legal disability. The following new clauses are added in Schedule II to the list of persons who are included in the definition of workmen, *viz.*, those employed upon a railway, &c., or employed as inspector, sorter or van peon in the railway mail service, employed in winning natural petroleum or natural gas, or employed in any occupation involving blasting operations.

6. The Indian Finance Act.—Following the recommendation of the Indian Road Development Committee this Act has increased the import and excise duties on motor spirit from 4 annas to 6 annas a gallon (s. 6). Three clauses of the new Act merely provide for the continuance of the rates of salt duty, postage, income-tax and super-tax prescribed by the Indian Finance Act, 1928. The remaining clause provides for the credit to revenue for a further period of one year of interest on securities forming part of the Paper Currency Reserve (section 4).

7. The Trade Disputes Act.—In 1924 the Government of India prepared a draft Bill for enabling the investigation and settlement of trade disputes and circulated it in order to ascertain the views of those directly interested and of the public generally on the subject. As a result of the inquiries made the Government of India were satisfied that legislation for the prevention and settlement of trade disputes was likely to prove of considerable value. The present Act was, therefore, passed. The Act is to remain in force for a period of five years. It is meant to afford a panacea for strikes with which every industry in the country is more or less threatened. A trade dispute is defined as

any difference between employers and workmen, or between workmen and workmen, with reference to employment or conditions of labour or person (s. 2 (*j*). The workman includes any person employed in any trade or industry to do any skilled or unskilled manual or clerical work for hire or reward (*k*). The provisions of the Act fall into three parts. Sections 3 to 14 relate to the establishment of tribunals for the investigations and settlement of trade disputes. The tribunals, namely, the Courts of Enquiry and the Boards of Conciliation may be appointed *ad hoc* in order to deal with particular disputes either by the Local Government or the Governor-General in Council. Where both parties to a dispute apply that a particular tribunal be appointed to investigate their dispute the authority, having the power to appoint, if satisfied that the persons applying represent the majority of each party, should appoint such a tribunal. A Court of Inquiry should either consist of independent persons (*i.e.*, unconnected with the dispute under investigation and with any trade or industry directly affected by the dispute) including a Chairman or only one independent person. Its duties are to inquire into the matters referred to it and report thereon to the authority which appointed it (section 4). A Board of Conciliation must consist of an independent chairman with either two or four other independent members or the other members must be in equal numbers to represent the parties to the dispute. The latter must be appointed on the recommendation of the parties A Board may also consist of only one independent person (section 6). Its duties are to investigate the dispute referred to it and to endeavour to bring about a settlement of it. If a settlement of a dispute is arrived at by the parties after it has been referred to a Board and during its investigation a memorandum of the settlement must be drawn up by the Board and signed by the parties. The Board should send this memorandum with a report of the settlement to the authority which appointed it. If, however, no settlement is arrived at the Board must, after the close of the investigation, send a full report regarding the dispute to the authority appointing it, and its recommendation for the settlement of the dispute (section 7). Both Courts of Enquiry and Courts of Conciliation are empowered to enforce the attendance of witnesses, compel the production of documents and material objects and may issue Commission for the examinations of witnesses (section 9). The reports of both these tribunals should be published by the appointing authority (section 12). Information obtained by either tribunal in the course of its investigation or inquiry as to any Trade Union or as to any individual business, which is not available otherwise than through evidence given before it, cannot be included in any report or publication without the consent in writing of the secretary of the Trade Union or of the person in question (section 13). The second part of the Act consists of section 15 which relates to "public utility services." "Public utility service" is defined in section 2 (*g*) as a railway service, or postal telegraph or telephone service, or an undertaking supplying light or water to the public or any system of conservancy or sanitation (s. 2 (*g*)). The section makes it an offence (penalised by imprisonment of one month or fine of Rs. 50) either for any worker employed in a public utility service to go on strike without previous notice to his employer of one month before going on strike or a fifteen days' notice of his intention to go on strike or for any employer carrying on any public utility service to lock out his workmen without giving them previous notice (section 15). It is based on the principle that persons whose work is vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time has been given to examine the merits of their grievances and to explore the possibilities of arriving at a peaceful settlement. Sections 16 to 18 contain special provisions relating to illegal strikes and lock outs. They are applicable only in the case of strikes and lock-outs which satisfy both of the two conditions; in the first place, the strike or lock-out must have other objects than the mere furtherance of a trade dispute within the industry to which the strikers or employers belong, and, in the second place, the strike or lock-out must be designed to coerce the Government by inflicting severe, general and prolonged hardship on the community. If these conditions are satisfied the strike or lock-out becomes illegal. Persons furthering such strike or lock-out are liable to be sentenced to simple imprisonment for three months or a fine of Rs. 200 (section 17), and are deprived of the protection granted to them by the Indian Trade Unions Act, while persons refusing to take part in it are protected from trade union disabilities to which they might otherwise be subjected (section 18). A civil Court may under the Act in lieu of ordering a person who has been expelled from membership of a trade union or society to be restored to membership, order that compensation or damages be paid to him from the funds of the Trade Union or Society (section 18).

8. The Indian Soft Coke Cess Act.—Indian collieries have for some years past suffered from trade depression, particularly those producing the quality of coal generally known as second class. The owners of such collieries have found some relief in the manufacture and sale of soft coke, suitable for domestic consumption, but the market for soft coke is limited, partly owing to the competition of other fuels, and partly because the value of soft coke as a domestic fuel is not generally realised. In these circumstances the Indian Mining Federation approached the Government of India with the suggestion that a cess should be collected by official agency from the trade for the purpose of creating a fund to finance measures for promoting the sale and improving the methods of manufacture of soft coke. The Act embodies these suggestions. A cess of two annas per ton is imposed on all soft coke despatched by rail from collieries in Bengal and Bihar and Orissa; the cess to be collected by the Railway Administrations concerned by means of a surcharge on freight (section 3). The administration of the fund so created is entrusted to a committee consisting of the following members: The Chief Mining Engineer to the Railway Board (*ex-officio*), one person nominated by each of the local Governments of Bengal and of Bihar and Orissa, seven persons nominated by the Indian Mining Federation, and one person nominated by the Indian Mining

Association (section 4). The Committee will apply the proceeds of the soft coke cess for the promotion of the interests of the soft coke industry in the provinces of Bengal, Bihar and Orissa (section 5). The cess will continue to be levied till December 31, 1934.

9. The Indian Boilers (Amendment) Act.—The definition of 'boiler' in clause (*b*) of secton 2 of the Indian Boilers Act, 1923, has been found to be defective, as it excludes vessels used for generating steam under pressure for use *inside* such vessels. Such vessels are as much liable as other vessels to explode if improperly constructed, used or maintained, and may be a source of considerable danger. To remedy this, an amendment is made in the above clause by omitting the words "for use outside such vessels." The Indian Boiler Regulations, 1924, Regulation 3, clause 2, prohibit the use of a boiler if a structural part subject to pressure is made of cast-iron. This restriction was found to be a serious impediment to the economic heating of buildings and the supply of hot water. Consequently a clause is added to section 34 of the Indian Boilers Act, 1923, empowering Local Governments to exempt from the operation of the Act, subject to such conditions and restictions as they may think fit to impose, any boilers or classes or types of boilers which are used exclusively for the heating of buildings or for the supply of hot water.

10. The Indian Census Act.—This Act provides for the taking of a census in 1931. It reproduces, with the necessary verbal alterations, the provision of the Indian Census Act, 1920. Census officers are clothed with the privileges of public servants (s. 3). The next section empowers the District Magistrate to call upon certain persons, *viz.*, the captain of a ship, or the keeper of a lunatic asylum, hospital, prison, &c., or the manager of a hotel or the occupant of immoveable property on which not less than twenty persons are living, to act as census officers (section 4). The District Magistrate can also call upon certain other persons, *e.g.*, owners and occupiers of land, village officers, panchayats, to give assistance (section 5). It is the right of a census officer to put questions (section 6); and it is the duty of persons to answer those questions (section 7). This is coupled with an important proviso which gives sanction to the quaint Hindu customs which forbids a husband or wife to mention the name of the married spouse. Every occupier of a house is bound to allow access to his house and to permit affixing of numbers (section 8). He is also bound to fill up the schedule when asked to do so by a census officer (section 9). A penalty of Rs. 50 can be imposed for neglect to carry out an order or requisition (s. 10). The records of census are not open to inspection or admissible in evidence ordinarily (section 12). It is competent to the Local Government to charge the census expenses to Municipal, Local, union or village fund (section 14).

11. The Bengal Pilot Service (Centralisation of Administration) Act.—The Bengal Pilot Service was hitherto administered through the agency of the Governor of Bengal. As the central subject "Shipping and Navigation" is now administered direct by the Government of India this Act brings the Bengal Pilot Service (which is a central service) under the direct control of the Government of India. This is effected by (1) the substitution, in ss. 2, 3, 4, 17, 18, 19 and 20 of the Calcutta Pilots Act, 1859, of the words "Governor General in Council," for "Lieutenant Governor of Bengal"; and (2) the addition of a proviso to sub-section (1) of section 35 of the Indian Ports Act, 1908, empowering the Governor General in Council to fix the pilotage fees leviable for pilotage in the Port of Calcutta.

12. The Indian Income-Tax (Provident Funds Relief) Act.—This is a fiscal Act which stands in need of perennial amendment. Everytime the cordon of its provisions is tightened round a tax-payer to prevent him from escaping his liability. This Act is, however, meant to give him some respite. The principal Act exempted from income tax the premia paid for life insurance. This Act gives similar exemption to contributions made to private provident funds. It extends to contributions made both by the employer and employee, and protects them up to one-sixth of the employee's salary. The Commissioner of Income Tax is authorized to recognise a private provident fund for the purpose (s. 58 *B*). But there are certain conditions which the fund must satisfy: (1) all employees should be employed in India; (2) the contributions must bear a definite proportion to the salary; (3) the fund should be vested in 2 or more trustees; and (4) the accumulations should be made payable on the day the employer ceases to be such (section 58 *C*). The annual accretion to the fund is to be deemed to be income received (s. 58*E*); but it will be exempted from income-tax as long as it does not exceed one-sixth of the salary (s. 58*E*). Again, where the accumulated balance has accrued during a continuous service of five years or upwards, it is exempt from the tax (s. 58*G*). The balances to the fund prior to the recognition of the fund are liable to pay the tax (s. 58*J*).

13. The Indian Territorial Force (Amendment) Act.—Section 5 of the Indian Territorial Force Act, 1920, permits the enrolment in the Indian Territorial Force of only those subjects of Indian States, who are for the time being resident in a province of British India. It does not permit the enrolment of subjects of Indian States who continue to reside in the territories of their respective States. A comparatively small number of Indian State subjects, who reside in Indian States, have already been enrolled in certain units of the Indian Territorial Force, under a misinterpretation of the law. The Act legalises the position of these men.

14. The Indian Cotton Cess (Amendment) Act.—The Royal Commission on Agriculture had recommended that on the constitution of the Council of Agricultural Research, the post of the Agricultural Adviser to the Government of India should be abolished and that the Chairmanship of the Indian Central Cotton Committee, which was then held by the Agricultural Adviser *ex-officio* under s. 5 of the Indian Cotton Cess Act, 1923, should be taken over by the Chairman of the Research Council. The Imperial Council of Agricultural Research has now been established, but the advisory duties of the Agricultural Adviser are

taken over by the Vice-Chairman and his two expert colleagues. In pursuance of this in ss. 4 (*i*) and 5 (2) of the principal Act, the words "the Vice-Chairman of the Imperial Council of Agricultural Research" are substituted for the words "the Agricultural Adviser to the Government of India." Provision is also made by the addition of a new clause for the appointment of the Expert Adviser to the Imperial Council of Agricultural Research in agricultural matters as an ex-officio member of the Indian Central Cotton Committee.

15. The Indian Registration (Amendment) Act.—Section 56 of the Indian Registration Act, 1908, directs that every Sub-Registrar shall send periodically to the District Registrar a copy of all entries made by him in Indexes Nos. I, II and III and that every Registrar receiving such copy shall file it in his office. The preparation of duplicate indexes has been found to be wasteful of time and labour and serves no useful purpose. The Section, therefore, is repealed under the new act.

16. The Burma Salt (Amendment) Act.—Section 5 of the Burma Salt Act, 1917, empowers the Central Board of Revenue to delegate the power of appointing officers to the Commissioner of Salt Revenue, Burma, but does not allow the Commissioner further to delegate the power of appointment to the Collector or to Superintendents. As it was found desirable that there should be such delegation in respect of subordinate ranks the following amendment is made. In clause (*d*) of S. 5 of the original Act after the words "conferred on them by" the words "or under" are inserted.

17. The Guardians and Wards (Amendment) Act.—The Guardians and Wards Act, 1890, contains no specific provision for the auditing of the accounts of minors' estates and the meeting of the cost of the audit out of the estates. With a view to checking the possibility of defalcation an adequate audit of these accounts was desirable. The present amendment, therefore, gives express power to the Court to appoint a person to audit the accounts and to award remuneration to him for auditing accounts out of the income of the property. The High Court is also empowered to make rules as to the audit of accounts, the class of persons who should be appointed to audit them, and the scales of remuneration to be granted to the auditors.

18. The Indian Succession (Amendment) Act.—The Indian Succession Act, 1865, contained a definition of the expression "District Judge," which was omitted by the Indian Succession Act, 1925, with the result that the expression "District Judge" is not held to include a High Court in the exercise of its ordinary or extraordinary civil jurisdiction. Numerous powers contained in the Indian Succession Act, 1925, and given to District Judges, are not given to the High Court on its Original Side. This effect of the omission of the definition from the Act of 1925 was not foreseen and is now remedied by the addition of the following clause to S. 2 of the principal Act: "District Judge" means the Judge of a principal Civil Court of original jurisdiction." The provisions of the other sections of the Indian Succession Act, 1925, set out in Schedule III are made applicable to the class of wills dealt with in S. 57(2) of the principal Act.

19. The Child Marriage Restraint Act.—This important enactment is directed against a custom so long established and so widely prevalent as that of child marriage. It provides restraint upon the solemnisation of child marriages by imposing criminal penalty upon those who participate in them. It lays down the minimum marriageable ages of boys and girls, at eighteen years in the case of the former and fourteen years in the case of the latter. "Child" is defined in the Act as "a person who, if a male, is under eighteen years of age, and if a female, is under fourteen years of age." The following participants in a child marriage are criminally liable: (Punishment for offences under the act is fixed at simple imprisonment up to one month, fine up to one thousand rupees or both). A male above 18 years of age and below 21 marrying a child is punishable with fine only; but a male above 21 years of age, marrying a child, is liable to be sentenced to imprisonment or fine or both. A person who performs, conducts or directs any child marriage is subjected to like penalty unless he proves that he had reason to believe that the marriage was not a child marriage. The parent or guardian of a minor, under eighteen years of age, who promotes or permits or negligently fails to prevent a minor contracting a child marriage can be visited with imprisonment or fine or both; but in the case of a female parent or guardian the punishment for imprisonment cannot be inflicted. The remaining sections of the Act contain certain provisions of procedure which are designed to avoid the risk of frivolous prosecutions and harassment. It is provided that only Courts of Presidency Magistrates and District Magistrates have jurisdiction in cases concerning child marriages. Cognizance of the offence can be taken only upon complaint made within one year of the solemnisation of the marriage. The Court taking cognizance, unless it dismisses the complaint, must make a preliminary enquiry under section 202 of the Criminal Procedure Code. A provision is also added requiring the complainant to give security for payment of any compensation that may be awarded against him under section 250 of the Code.

20. The Transfer of Property (Amendment Act.—Since the passing of the Transfer of Property Act in 1882 its provisions have been amended on no less than twelve occasions But it does not appear that the general revision. of the Act was undertaken or any new principle of importance or substance introduced. The passage of time has brought recognition to new principles in the law of property, and the conflict of judicial decisions with regard to some of its provisions and defects revealed by experience of its working for nearly half a century had made a revision of the Act necessary. The new Act being of a highly technical nature it is desirable here to draw attention only to some of the important points of principles included in it. By the omission of the words "Hindu" and "or Buddhist" from section 2 of the principal Act, the provisions of Chapter II are made applicable to all cases except those governed by a special rule of Muhammadan law (section 3). A new provision is added

making registration amount to notice of a registered document. Where a transaction relating to immoveable property has been effected (as required by law) by a registered instrument, a person acquiring such property is deemed to have notice of such instrument from the date of registration. This amendment upholds the view that long prevailed in the Bombay High Court (*Lakshmandas* v. *Dasrat*, I.L.R. 6 Bom. 168) that registration amounts to notice. The Bombay view was negatived by the Privy Council in the case of *Tilakdhari Lal* v. *Kundan Lal* (22 Bom. L. Rep. 1319). Now the Privy Council view is overruled by the Legislature (section 4). A person has notice of a fact if his agent acquires notice thereof whilst acting on his behalf in the course of business to which that fact is material. If the agent fraudulently conceals the fact, the principal cannot be charged with notice thereof as against any person who was a party to or otherwise cognizant of the fraud (section 4). The denotation of the phrase "living person" is extended by including in it "Company, association or body of individuals whether incorporated or not" (section 6). To the categories of non-transferable properties one more is added, *viz.*, "A right to future maintenance, in whatsoever manner arising, secured, or determined, cannot be transferred" (section 7). In section 15, for the words, "as regards the whole class, the words "in regard to those persons only and not in regard to the whole class" are substituted. Therefore, transfers in favour of a class of persons when some members of that class are unable to take by reason of the rules contained in sections 13 and 14 are now declared valid, so far as respect those members of the class who are capable of taking (section 9). A new section is added to validate the direction as to accumulation of income arising from a property, for a certain period and for certain purposes. Accumulations are permitted during the following periods only:—(1) the life of the transferor, or (2) a period of 18 years from the date of the transfer. A direction for accumulation for a period which exceeds the longer of the aforesaid periods will be void to that extent. The above provisions do not apply to a direction for accumulation for the purpose of the payment of the debts of the transferor or the raising of portions for children or the preservation or maintenance of the property transferred (section 10). A transfer in perpetuity for the benefit of the public in the advancement of religion, knowledge, commerce, health, safety, etc., is valid (sec. 10). In enacting the rule of *lis pendens* (pending suits) section 52 employed the phrase "during the active prosecution" which gave rise to conflict of judicial opinion: that conflict is set at rest by substituting the words "during the pendency," for "during the active prosecution" (sec. 14). The doctrine of "fraudulent preference," as stated in section 53, is now re-stated in amended form. "Every transfer of immoveable property made with intent to defeat or delay the creditors of the transferor shall be voidable at the option of any creditor so defeated or delayed." The statement made now is plain and obvious; and will not be the starting point of fresh litigation (sec. 15). Curiously enough there was a *lacuna* in the Act as to the doctrine of part-performance. Where there is agreement in writing to transfer any property, and the transferee takes possession in performance of the contract and remains in possession and is willing to do his part, the contract is complete even though the writing is not registered (sec. 53A). By the substitution of a new clause, in place of the old clause (*a*), to section 67, the right of a mortgagee to institute a suit for foreclosure is abolished, except in the case of a mortgage by conditional sale or an anomalous mortgage providing expressly for foreclosure (section 17). The right of marshalling the securities by the subsequent purchaser is more precisely defined by section 18. The equitable mortgage, or as it is called the mortgage by deposit of title deeds, is clearly defined and confined to presidency and named towns (section 19); and the definition of "anomalous mortgage" is made more plain (section 19). A redeeming mortgagor has the right to call upon the mortgagee to reconvey the property to a third party, if he so desires (section 60A). During the subsistence of a mortgage, the mortgagor has the right to inspect all documents of title to the property mortgaged (section 60B). A mortgagor who has executed two or more mortgages in favour of the same mortgagee has the right to redeem the mortgages separately or simultaneously (section 61). The law of improvements to mortgaged property finds definite expression in section 63A. A mortgagee is entitled to claim from the mortgagor the cost of improvements effected by him in the mortgaged property; if the improvements are done at the instance of a public authority, the mortgagee is entitled not only to the cost of the improvements but to interest also. A mortgagor is given the power to lease the mortgaged property in his possession; and such a lease is binding on the mortgagee (section 65A). Under certain circumstances, detailed in sec. 67A, a mortgagee is bound to bring one suit on several mortgages. Section 68 of the amended act relates to the right of a mortgagee to recover the mortgage money personally from the mortgagor and indicates the circumstances under which the right accrues or the cause of action arises, namely, (1) when the mortgagor binds himself personally to repay the debt, (2) when the mortgage security is wholly or partially destroyed or rendered insufficient in consequences of any cause other than the wrongful act or default of the mortgagor or mortgagee and the mortgagor has failed to provide further security to render the whole security sufficient; (3) when the mortgagee is deprived of his security by or in consequence of the wrongful act or default of the mortgagor; (4) where the mortgagee being entitled to possession, the mortgagor fails to deliver possession of the mortgaged property or to secure to him the undisturbed possession thereof. It is further provided that in the cases mentioned in clauses (1) and (2) the mortgagee should exhaust all his available remedies against the mortgaged property before he seeks to pursue the personal remedy against the mortgagor. In certain cases mentioned in section 69 of the principal Act, a mortgagee is entitled to exercise the powers of sale in default of payment of the mortgage money, without the intervention of the Court. A mortgagee having such a right is entitled to appoint a receiver of the income of the mortgaged property. This is provided for by the

addition of a new section which also sets out the rights and liabilities of such receiver and the procedure to be followed when such appointment is made. Section 91 of the new Act specifies the following persons besides the mortgagor who may sue for redemption of the mortgaged property: (1) Any person (other than the mortgagee) who has any interest in, or charge upon, the property mortgaged or in or upon the right to redeem the same; (2) any surety for the payment of the mortgage-debt; (3) any creditor of the mortgagor who has in a suit for the administration of his estate obtained a decree for sale of the mortgaged property. Section 92 deals with the right of subrogation. Any person, referred to in the previous section (other than the mortgagor) and any co-mortgagor has, on redeeming property subject to the mortgage, so far as regards redemption, foreclosure or sale of such property, the same rights as the mortgagee whose mortgage he redeems may have against the mortgagor or any other mortgagee. The right of subrogation cannot be claimed unless the mortgage in respect of which the right is claimed has been redeemed in full. A person who has advanced money to a mortgagor (with which the mortgage is redeemed) is subrogated to the rights of the mortgagee, if the mortgagor by a registered instrument agrees to it. Section 93 sets out the prohibition to the tacking of mortgages. The mortgagor who redeems the mortgage is entitled to recover costs of redemption (Section 95). Section 101 of the principal Act relates to the principle of "merger." The new section substituted in its place modifies this principle. A mortgagee of immoveable property may purchase or otherwise acquire the rights in the property of the mortgagor or owner, without thereby causing the mortgage to be merged as between himself and any subsequent mortgagee of the same property; no such subsequent mortgagee is entitled to foreclosure or sell such property, without redeeming the prior mortgage. A new paragraph is added to section 107 of the principal Act which requires that a lease of immoveable property, made by a registered instrument, must be executed by both the lessor and the lessee. The principle of forfeiture of a lease for breach of a covenant is hedged round with certain reliefs; and no forfeiture is allowed unless the lessor (1) specifies the particular breach complained of, and (2) asks for remedying of the breach if that is possible (sec. 114A). Where a party is deprived of a thing received in exchange, he is entitled to the return of the thing transferred by him (section 119).

21. The Transfer of Property (Amendment) Supplementary Act.—This Act is supplementary to the Transfer of Property (Amendment) Act, 1929, and provides for amendments which are consequential or necessary in other Acts *pari materia* in view of the amendments in the latter Act. A new section is added to the Specific Relief Act, 1877, to give effect to the principle of part performance embodied in section 53A of the Transfer of Property (Amendment) Act. In Order XXXIV of the Civil Procedure Code, 1908, amendments are made which make it clear that the right of redemption is not extinguished till a final decree is passed. The Court is given power to extend the time for the payment of the amount due from a mortgagor after a preliminary decree in a suit for foreclosure or sale is passed. Extension of time cannot be granted after the final decree is passed. In consequence of the amendments made in Order XXXIV, forms 3 to 11, in Appendix D to the First Schedule to the Civil Procedure Code, 1908, are revised and amplified. In the Indian Registration Act, 1908, amendments are introduced in section 17 making the registration of the following documents compulsory; non-testamentary instruments transferring or assigning any decree or order of a Court or any award which relates to immoveable property; a decree or order expressed to be made on a compromise and comprising immoveable property other than that which is the subject matter of the suit or proceeding. In sections 48 and 49 of the same Act amendments are made which empower Courts to admit unregistered instruments (affecting immoveable property) in evidence in giving effect to the doctrine of part-performance. Sections 115 to 117 of the Indian Succession Act, 1925, are amended in consequence of the amendments of sections 15 to 18 of the Transfer of Property Act, which are identical in scope. Minor amendments are also introduced in the following Acts: The Married Women's Property Act, 1874; the Hindu Transfers and Bequests Act, 1914; the Hindu Disposition of Property Act, 1916; and the Hindu Transfers and Bequests (City of Madras) Act, 1921.

Labour in India.

During previous years very little authentic information was available regarding Labour in India, and the sections dealing with this question in *The Indian Year Book* were more or less confined to a description of the main Acts in Labour Legislation in India and to such information as could be gleaned from the official Reports of the administration of these Acts and from the Reports published of Enquiries conducted by the Labour Office of the Government of Bombay. With the appointment of a Royal Commission on Labour in India all Provincial Governments and Railways, and many of the larger labour-employing organisations and Associations of such organisations have made enquiries into labour conditions in their respective territories and jurisdictions, and have compiled fairly comprehensive Memoranda for submission to the Royal Commission. Many of these Memoranda have been published, and contain a fund of the most valuable information possible. No use could, of course, be made of

such information as the Governments and others submitting these Memoranda desire to keep confidential. But, where descriptions are given of existing conditions which must be known to large bodies of persons in the respective localities concerned and which could easily be obtained by any person enquiring into them, use has been made of them and every endeavour has been made to make this section as complete as possible by the presentation of essential facts. The Editors of *The Indian Year Book* gratefully acknowledge the sources which have been made use of in the compilation of this note.

GROWTH OF THE LABOUR PROBLEM.

India is and has always been a pre-eminently and predominantly agricultural country and 72·98 per cent. of her people are dependent on the soil for their livelihood. Except in a comparatively few cases there is no settled and permanent labour force in most industrial centres in India. The vast majority of industries draw the labour they require from the village—labour which seldom breaks its contact with village life and periodically returns to renew its associations with it. This fact cannot be too strongly emphasised. If it is lost sight of it would be most difficult to understand how large bodies of comparatively low paid men and women can afford to participate in strikes involving complete stoppage of work and loss in wages for periods of half a year. Such strikes would be impossible if Indian industrial labour did not have agriculture to fall back upon as a subsidiary or main occupation during periods of prolonged industrial disputes.

The emergence of Indian industrial labour as such may be considered to be associated with the year 1880. Its growth and development since that date may be divided, for purposes of broad generalisation, into four periods. (1) from 1880 to 1915; (2) from 1916 to 1921; (3); from 1922 to 1927; and (4) from 1928 to the present day. The first period marks the growth of factory development with a slow but steady decline in cottage industries. The total number of cotton mills in India rose from 58 to 264 and the number of persons employed from 40,000 to 260,000. The total number of jute mills rose from 22 to 65 and the number of persons employed from 27,000 to 216,000. There was a vast expansion in railways and many new industries were established. Labour was immobile, earnings in agricultural pursuits were phenomenally low, commodities were comparatively cheap, and industrialists were able to get all the labour they wanted by tapping the adjacent villages at any rates of wages they liked to offer so long as they were higher than those which could be earned by work in the fields. Both the men and the women employed were considered to be a part of the plant of the factory, child labour was exploited, and little thought was given to the human element behind the worker. Hours of work were excessive, no amenities were provided because the only thing that the worker was expected to do was to work, eat and sleep. The provision of housing was a necessary evil which had to be provided where factories were situated away from towns. The Factories Act was modelled more on the lines of providing against loss of life due to accident rather than from the grinding work which a factory worker was expected to do. The humanitarian employer was considered to be a pest who would ruin industry and all that industrialists thought of was the greatest return which could be obtained from th ecapital invested.

The second period emerged soon after the outbreak of war. Large contingents of Indian troops were sent overseas, and had to be supplied with adequate clothing and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and materials to the various seats of war. Heavy demands were made by the belligerent countries for raw products. India secured the opportunity which she had been looking for for generations. Her credit expanded, her industries thrived and the returns on capital invested in every branch of trade and industry became phenomenal. Prices soared high. Owing to the influx of large bodies of persons to the towns, housing became hopelessly inadequate and rents rose to such an extent as to call for legislative restrictions. But nobody thought of those who were mainly responsible for the creation of the added wealth of India. Labour was still considered to be that inarticulate part of the plant of the factory which it had always been. The end of the War brought visions of an Utopia. Big commercial and industrial enterprises were floated. Agriculturists were securing peak prices for their produce. Labour was in great demand not only in agriculture but also in commerce and industry. The successes which labour met with during the war in demands for increases in rates of wages impelled them to demand further increases with each increase in the cost of living. Where demands were not granted strikes were threatened. The Influenza epidemic of 1918 which swept away large masses of the population of the country created a big gap in the available supply of labour, and almost all the strikes of the period for increases in wages were successful owing partly to the necessity for speeding up production and partly to the shortage in the available supply of labour. With increase in wages the standard of life improved and workers had more money to spend.

The gradual demobilisation of the Armies of the War and the closing up of the various Munitions Works disbanded millions of men and women who rapidly spent the savings secured during the War. The pre-war industries in the belligerent countries could not be reorganised at once. The spectre of unemployment loomed large. Credit fell. With the fall in credit the demand for manufactured articles declined and prices began to show a marked downward tendency. The year 1922 may be considered as the beginning of this period of reaction and depression and the beginning of the third period in the history of Indian industrial labour. Labour all over the world demanded an improvement in the conditions of life and work. The creation of an International Organisation to deal with all questions connected with labour from an Inter-

national point of view and the commitment of India, as one of the signatories to the Treaty of Versailles, to the ratification and acceptance, as far as possible, of the Conventions and Recommendations adopted by the International Labour Conference have made it obligatory for her to fall into line with the other industrial countries of the world in ameliorating the conditions of labour. The beginning of this period therefore saw a radical revision of the existing Factory Law by an Amending Act passed early in 1922. The existing Indian Mines Act was replaced by another Act of 1923 during which year a Workmen's Compensation Act was also passed for the first time. A Trade Union Act was passed in 1926.

The depression in trade and industry which set in in 1922 has continued ever since and it has never been so acute as it is to-day. Various attempts have been made by all classes of industrialists to reduce the wages of labour in order to reduce costs of production. Concerted action taken by the Ahmedabad Mill-owners' Association to reduce the wages of operatives in the Ahmedabad cotton mills by 20 per cent. with effect from the 1st April 1923 was successful to the extent of an eventual cut of 15.625 per cent. being agreed to after a general strike lasting more than two months. A similar attempt made by the Bombay Mill-owners' Association in 1925 to reduce wages by 11¼ per cent. was, however, frustrated by a strike lasting for nearly three months which was eventually settled on the removal of the Excise Duty of 3½ per cent. on cotton manufactures in India by a Special Ordinance issued by the Governor-General in Council. Similar attempts made in individual concerns in the Districts succeeded mainly for want of effective combination among the workers. No other organised attempts were made to effect reductions in wages. There were several reasons for this. The most important reason was that after the period of the decline in prices had set in after 1920, real wages, in comparison with the standard of life of the year 1914, began to improve and labour was determined not to let go the advantage gained in the struggles immediately following the end of the War. This period was one in which a considerable number of Acts in connection with labour were placed on the Statute Book. In addition to these, the Government of India had asked Provincial Governments to consider proposals for legislating with regard to prompter payment of wages. The enquiries held in 1926-27 into the question of Deductions from Wages or Payments in respect of fines indicated legislation on the lines of the Truck Acts. It was becoming obvious to the Industrial Employer that Government were most anxious to do all they could to improve labour conditions in India. The employers, as a whole, therefore, did not desire to precipitate matters by insisting on reduction in wages. It was imperative, however, that something should be done, and done quickly to reduce costs of production. The only way to do this without reducing wages was to ask the worker to do more work during the existing hours of employment so as to enable the employer to dispense with a number of workers and thus to reduce his Wages Bill.

The fourth period beginning with the year 1928, therefore, saw the advent of **Rationalisation** or efficient methods of working. Employers proposed to ask workers to mind more machines in return for a compensatory increase in wages. Some advanced firms controlling cotton mill agencies actually introduced various efficiency measures in their mills. The introduction of these measures necessitated reductions in the numbers employed. The beginning of this period coincided with the entry of the Communists into the Trade Union movement in India.

When the so-called Labour Group of the Indian National Congress failed to obtain acceptance of their ideas by the Congress, they formed in January 1927 a **Workers and Peasants Party**, one of whose objects was "to promote the organisation of trade unions and to wrest them from their alien control." Communist emissaries were sent out to India by the Third International to further war against Imperialism, the destruction of capital and the creed of revolution. The Workers and Peasants Party started a paper called the "Kranti" (Revolution) in May 1927 which, however, had to cease publication at the end of the year owing to financial difficulties. The members of the Party took an active part in the strike of the operatives in the cotton mills in the Sassoon group early in 1928, but their attempts to bring about a general strike in the cotton mills in Bombay failed owing to the opposition of the Bombay Textile Labour Union which had been formed by Mr. N. M. Joshi in January, 1926. When another great group of mills in Bombay under the agency of Messrs. Currimbhoy Ebrahim and Sons sought to introduce efficient methods of work, the Communists saw their opportunity. All the operatives of the Currimbhoy group were brought out on the 16th April 1928; and the Communists, with the help of the turbulent elements in the industry brought about a complete stoppage of work by picketing, intimidation and stone throwing in all other mills in Bombay (except two mills at Colaba) by the 26th April. Owing to internal dissensions in another Union of cotton mill workers called the Girni Kamgar Mahamandal, they secured the support of Mr. A. A. Alwe, its President, and formed a new Union called the Bombay **Girni Kamgar Union** on the executive of which several prominent Communists were appointed. The Communists revived the publication of their paper the "Kranti" and they were successful, by holding almost daily meetings at which revolutionary speeches were delivered and by the publication of hand-bills, in capturing the imagination of the workers and keeping the strike going for a period of nearly six months. They also took an active part in the prolonged strikes of the same year in the Tata Iron and Steel Works at Jamshedpur and in the workshops of the Bengal-Nagpur Railway at Kharagpur. They actively associated themselves with the strike on the South Indian Railway and they secured an entry into several Unions connected with Municipalities, Port Trusts and other Public Utility Services. After the calling off of the General Strike in the Bombay Mills on the 6th October, 1928, they endeavoured to paralyse the cotton mill industry in Bombay by calling several lightning strikes in individual mills on the

flimsiest of pretexts, even though the terms of the settlement of that strike required that all disputes between the employers and employed on the interpretation of the terms of agreement should be referred to the Bombay Strike Enquiry Committee which had been appointed by the Government of Bombay to express opinions on the matters in contention.

Bombay has seen few riots and disturbances of the type which broke out in the City on the 3rd February 1929 and which resulted in the death of 149 persons and the destruction of property. The **Riots Enquiry Committee** appointed by the Government of Bombay found that the origin of the riots was the series of inflammatory speeches delivered by certain leaders of the Girni Kamgar Union during the General Mill Strike of 1928 and again during the Bombay Oil Strike which lasted from the 7th December 1928 till after the date of the riots.

In 1929 the (Communist) Girni Kamgar Union succeeded in calling another General Strike in the Bombay Mills on questions connected with dismissals which they interpreted as a direct attack by the Millowners to undermine the Union. The strike, although not so complete in character as the strike of 1928, nevertheless lasted from 26th April to 18th September, 1929, and was called off only when the Court of Enquiry appointed by the Government of Bombay under the Trade Disputes Act had reported in unequivocal terms that the whole blame for this strike lay with the Bombay Girni Kamgar Union. But the Communist group was able to capture the **Indian Trade Union Congress** at the 11th Session held in Nagpur and to force the moderate elements, consisting of Messrs. Diwan Chaman Lall, N. M. Joshi, B. Shiva Rao, V. V. Giri, R. R. Bakhale, etc., to secede from the Congress on that body passing resolutions boycotting the Royal Commission on Labour in India and the International Labour Conference, by appointing the Workmen's Welfare League, a Communist organisation in England, as their Agents for Great Britain, and the declaration of Independence and the establishment of a Socialist Republican Government of the Working Classes in India.

It is of importance to lay stress on the problems connected with the **Communist menace in India**. It is true to a great extent that the basic factors underlying the several big strikes which have occurred during the period commencing with the year 1928 were partly economic in character, but they were, at the same time, such as could have been suitably adjusted by organised effort and friendly discussions between the representatives of the employers and the employed. The existence of grievances which, it must be admitted, were *bona fide* in many cases, have given the Communists the great opportunity for which they have been waiting. The object of the Communists is not so much the welfare of labour as the spread of revolution. Their ultimate aim is the destruction of capital and the replacement of the established Government by a dictatorship of the proletariat. The manner in which they can achieve this is by penetrating trade unions, by calling strikes in industries, by unduly prolonging them by putting up strings of preposterous and absurd demands, by refusing conciliation or arbitration; and by sending masses of workers seething with discontent into the districts to preach their gospels of class hatred and class war to the ignorant masses in the villages of India.

Royal Commission on Indian Labour.

The British Government, in consultation with the Government of India, appointed on 24th May, 1929 a Royal Commission "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India, on health, efficiency and standard of living of workers and on relations between employers and employed; and to make recommendations." The Royal Commission consists of the Right Honourable Mr. J. H. Whitley as Chairman with the Rt. Hon. Mr. Srinivasa Sastri, P.C., Sir Alexander Murray, Kt., C.B.E., Sir. Ibrahim Rahimtoolah, Kt., K.C.S.I., C.I.E., Sir. Victor Sassoon Bart., Dewan Chaman Lal, M.L.A., Miss Beryl M. Le Power Power, Deputy Chief Inspector, Trade Boards, England, and Messrs. N. M. Joshi, M.L.A., A. G. Clow, C.I.E., I.C.S., G. D. Birla, M.L.A., Kabeer-ud-din Ahmed M.L.A., and John Cliff, Assistant General Secretary, Transport and Railway Workers Union England, as members, and with Messrs. S. Lall, I.C.S., and A. Dibdin from the India Office, London, as Joint Secretaries. Mr. J. H. Green, M.B.E., is Assistant Secretary. Lt. Col. A. J. H. Russell, C.B.E., I.M.S., was subsequently appointed as a Medical Assessor and Mr. S. R. Deshpande, B. Litt. (Oxon), Senior Investigator of the Labour Office, Government of Bombay, was appointed as a Statistician to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the Railways and Associations of Employers and Employed left for England on the 22nd March 1930. The Commission will return to India again in October 1930 and after touring Burma and the more important industrial centres again will write their Report which they hope to submit early in 1931.

The Royal Commission will no doubt make several important recommendations. They have already shown the lines on which many of their recommendations will be made by their close and searching enquiries into the possibilities of devising Unemployment and Sickness Insurance Schemes, the creation by the Central and Provinvial Governments of Departments of Industrial Relations, and the expansion of measures to ameliorate the conditions of industrial labour by the extension of welfare work, provision of adequate and sanitary housing and the introduction of measures to protect the health of the workers and their safety from accidents.

Industrial Workers in India.

The last census of India was taken in the year 1921. In 1922 India obtained recognition by the League of Nations as one of the eight chief Industrial States in the world. The grounds on which this claim was based are stated in the Memorandum prepared by the Ind Office

which gave the following figures to illustrate the industrial importance of the country:—

"28,000 agricultural workers (excluding peasant proprietors); 141,000 maritime workers, lascars, etc., a figure second only to that for the United Kingdom; over 20,000,000 workers in industries, including cottage industries, mines and transport; railway mileage in excess of that in any country except the United States."

It is impossible to say how far and to what extent the figures given above hold good to-day. The Railways of India alone offer employment to very nearly a million workers. The number of workers employed in Plantations according to the 1921 Census amounted to over three quarters of a million. The latest figures for the numbers employed in factories are those available in the All-India Report for Factories for 1927, which are reproduced in Summary Form in the tables given below:—

Growth of Factories.

Year.	Number of Factories.	Average Daily Number of Persons Employed.
1921	4,059	1,266,395
1922	5,144	1,361,002
1923	5,985	1,409,173
1924	6,406	1,455,592
1925	6,926	1,494,958
1926	7,251	1,518,391
1927	7,515	1,533,382

Age and Sex Distribution of Factory Labour.

MIGRATION.

The industrial centres in India are not able to supply the necessary labour that is required for industrial undertakings and there is consequently a considerable amount of migration from other parts of India to such centres. The extent of this migration is given in detail in Chapter III, Vol. I, Report of the Census of India for 1921, as follows:—"The labour reserves are found chiefly among the lower classes of the centre and south of the country. The centre supplies the tea plantations and mining industries of the Eastern provinces, the south meets the southern industrial demand, and the bulk of the Burmah and overseas demand, while the more technical industries in the cities of the Western provinces are supplied chiefly from the neighbouring agricultural tracts."

Among those provinces and States which attract a larger number of emigrants from other provinces and States are Assam, Bengal, Burma, Bombay, Mysore, Central Provinces and Berar, and Punjab and Delhi. According to the 1921 Census there were nearly a million and a quarter immigrants in Assam as against 75,000 emigrants. In Bengal there were more than a million and three-fourths immigrants as against about a quarter of a million emigrants. Bombay gained a little over a million but sent out 568,000 to the other provinces. The population figures for Central Provinces and Berar and Punjab and Delhi shows number of immigrants amounting to more than 600,000 in each case. The number of emigrants from the Central Provinces and Berar amounted to a little more than 400,000 and from Punjab and Delhi to half a million. In all these cases industrial and other employers were not able to recruit their requirements from their own territories. The position, however, is vastly different in the case of Bihar and Orissa, the United Provinces, Madras, Rajputana and to a small extent Hyderabad (Deccan). The number of emigrants from Bihar and Orissa amounted to nearly two million as against 387,000 immigrants with a net loss of over a million and a half to the province. In the case of the United Provinces there were 1,400,000 emigrants as against a little over 400,000 immigrants with a net loss of nearly a million. Madras lost nearly a quarter of a million and Rajputana 625,000.

Within the Provinces.—It is neither necessary nor feasible to deal with the various streams of migration between district and district of the same province or within a district. These movements vary according to times and seasons, but it may be useful to show the extent to which and the source from which some of the more important industrial centres draw their labour force.

In Bombay, according to the Census Report for the year 1921 the percentage of the total population which had actually been born in the City has steadily declined at each census. In 1872 the percentage of the persons born in Bombay to total population was 31.1, in 1891 25, in 1911 19·6 and in 1921 16. An important point, however, to remember in considering these figures is the fact that, whenever possible, workers send their wives to their native places for purposes of confinement. Many of those returned in the Census as having been born outside the city are not really fresh immigrants in the strictest sense of the term because they are the off-spring of the parents already residing in the city. According to the figures given in the 1921 Census Report for the numbers of emigrants into Bombay city from their districts of origin it is seen that 235,566 or 20 per cent. of a total population of 1,175,914 came from the Ratnagiri District. Poona district supplied 89,231, Kathiawar 72,435 and Satara 65,953. Among the provinces which contribute to the population of Bombay City the United Provinces comes first with 70,911. The sex ratio is only 525 females to 1,000 males as compared with a ratio in the Presidency as a whole of 919 females to 1,000 males. The figure of 525 for Bombay City may be compared with a big non-industrial city of Poona where the figure is 912. In a recent enquiry made by the Labour Office into the length of service of mill workers which covered 1,400 millhands it was found that not one of them had been born in Bombay City, 63 per cent were born in the Konkan and 27 per cent. in the Deccan, the remainder coming from different parts of the country.

Certain figures regarding birthplaces of the workers in Ahmedabad were obtained during the Family Budget investigation conducted there by the Labour Office in the year 1926. These figures together with those obtained at the Census of 1921 and enquiries made from Mill Officers and the Labour Union officials at Ahmedabad show that the cotton mill workers of Ahmedabad come from different places in the porportion of 20 per cent. from the City itself, 25 per cent. from the Ahmedabad district excluding the City, 20 per cent. from Baroda State, 10 per cent. from Rajputana, 10 per cent. from the Gujarat Division excluding the above, 5 per cent. each from Kathiawar, the Deccan and the Konkan combined, and from other places including the United Provinces, the Central Provinces, Madras, etc.

In Sholapur the labour force is mainly local and it is immigrant to a very small extent. The figures collected as a result of the Family Budget Enquiry conducted by the Labour Office of the Government of Bombay in that centre in the year 1925 show that 60 per cent. of cotton mill workers in the City were born in Sholapur, 32 per cent. in the Deccan and about 8 per cent. in the rest of India.

Calcutta, like Bombay, relies on imported labour, but in addition depends, much more than almost any other centre on labour from other provinces. This is attributable to the fertility of the land and the dislike of the Bengalee for factory work.

The Census figures of 1921 show that just less than a quarter of the inhabitants of Calcutta and the Suburban Municipalities of Cossipore, Maniktolah, Tollygunge, the South Suburbs, Garden Reach, and Howrah were born in the city while rather less than a quarter or 22.25 per cent. were born in the neighbouring areas of 25-Parganas and Howrah, and that rather more than half were born further afield.

Nearly 35 per cent. came from other provinces. Bihar and Orissa supplied nearly one in five, and the United Provinces one in ten of the total population of the City. 183 females accompanied every 1,000 males from Bihar and Orissa, 327 to 1,000 from the United Provinces and 813 females to every 1,000 males from Madras. In the other mill towns of Bengal only about one-fifth of the total population was born in the area surrounding the towns. In Tatagarh, a compact manufacturing area, no less than 90 per cent. of the inhabitants were born outside Bengal. The figures for the number of females to 1,000 males in Calcutta were 552 in 1872, 556 in 1881, 526 in 1891, 507 in 1901, 475 in 1911 and 470 in 1921. This is very largely due to the influx of single male workers who have left their families behind.

The position of **Jamshedpur** in many respects is unique in India. What was a dense jungle a little more than twenty years ago is now a town of over 100,000 inhabitants and a great industrial area. The Tata Iron and Steel Company Limited is not only an employer of labour, but is also landlord and provides Municipal services. The operatives in the Iron and Steel works are drawn from every province of India and from a very large number of districts. On the 5th July 1929 out of a total labour force of 15,917 persons employed, 5,190 came from all districts in Bihar and Orissa, 3,810 from the United Provinces, 2,076 from Bengal, 1,327 from the Central Provinces, 1,482 from the Punjab and the North West Frontier Province, 839 from Madras, 319 from Bombay, 275 from Assam and 221 from independent States and foreign countries.

In the Jharia coalfields a committee appointed in 1917 found that 15 per cent. of colliery labour was settled and that most of it was Santali labour, 75 per cent. came for weeks or months together and lived in *Dhowras* provided in mines, and that there was no sign of a labour force divorced from agriculture coming into existence.

Cawnpore, the principal industrial town of the United Provinces, is in a very curious position. It not only imports labour for the various industries which are to be found there, but also exports it to surrounding districts and to other provinces. Any shortage of labour that it experiences is satisfied from the densely populated districts which surround the city.

The mobility of Indian labour is of considerable advantage to the agricultural population as it helps to relieve the increasing pressure on the land. In India the movement of labour between province and province is entirely unrestricted by Government with the exception of the movement of labour from certain provinces to eight districts in Assam, *viz.*, Lakhimpur, Sibsagar, Nowgong, Darrang, Kamrup, Golpara, Cachar and Sylhet. These districts are known as labour districts and under the Assam Labour and Emigration Act No. VI of 1921 as amended by Act XI of 1908, Act VIII of 1915, Act XI of 1915, Act XXXVIII of 1920 (Devolution Act) and Act XXXI of 1927, the provinces of Madras, Bengal, the United Provinces, Bihar and Orissa, the Central Provnces and Assam can, by notification in the local official Gazette, "prohibit all persons from recruiting, engaging, inducing or assisting any native of India or any specified class of natives of India to emigrate from the whole or any specified part of the province to any labour district or any specified portion of any labour district, either absolutely or otherwise than in accordance with such of the provisions of the Act as may be specified."

The following are the main **types of migration** of Indian Labour :—

(1) Casual migration consisting of movements between adjacent villages;
(2) Temporary movements of labour on works of construction or by exigencies of trade or the stress of famine, business journeys, pilgrimages, etc.;
(3) Periodic migration owing to the seasonal demands for agricultural labour;
(4) Semi-permanent migration when the inhabitants of one place migrate to another for trade, but return at intervals to their native place where they sometimes even leave their families and spend their declining years; and
(5) Permanent migration where economic or other reasons have caused a permament displacement of population.

In the first three cases the emigrants invariably return to their villages. In the fourth and fifth cases the majority of workers return for a short visit after two or three years, but there is a considerable minority which has settled down at the industrial centres in which they have worked. Evidence is, however, overwhelming that owing to the home loving character of the Indian worker he seldom or never breaks his contact with his village home. The number of workmen of rural origin who have served their connexion with their village and with agriculture is very small and is usually confined to such skilled workers as have left their homes permanently to settle in the important centres of factory industry. As the large majority of workers return home annually or biennially there is little disturbance of family life, except in the case of Assam where the system of recruitment now in force directly encourages the importation of families, and women are almost as numerous as men in the residential labour population on the tea estates.

RECRUITMENT OF LABOUR.

The methods adopted for the recruitment of labour in India have received general condemnation even from employers. The Indian Tariff Board (Cotton Textile Industry Enquiry), which was appointed by the Government of India in 1926, *inter alia*, to investigate the condition of the cotton textile industry in India with special reference to the industry in Bombay and Ahmedabad, and to make recommendations dealt with the question of recruitment of labour in the following terms :—

"It was urged, in evidence before us, that the system of recruitment of labour in Bombay leaves much to be desired and does not tend to efficiency as it places too much power in the hands of the jobber or foreman who recruits not neces-

sarily the most efficient man but the one who is willing to pay him the largest commission or in whom he is otherwise interested. The Mill-owners' Association, on the other hand, whilst admitting that the present system furnishes openings for corruption, hold that it is the only possible system in Bombay conditions, as the jobber is in touch with labour to an extent that no official of the mill can possibly be and that it does not necessarily follow that because a jobber produces men, they are engaged by the mill. They further contend that it is not always possible for all vacancies to be filled from the applicants waiting at the mill gates for employment and that, when this is the case, the only course open is to send out jobbers to the homes of the operatives to collect men. This should, however, only be necessary in abnormal conditions. We are of opinion that the present system is undoubtedly open to the objection that it places too much power in the hands of the jobber and that it is desirable that all labour should be engaged directly by the officer of the mill in charge of the department which requires it or by a responsible assistant. This we were told was the practice in Ahmedabad and in most of the up-country centres we visited and we see no reason why it should not be followed in Bombay".

Recruitment, except in the case of special apprentices and higher paid workers employed on railways, is effected either through Sardars (Recruiters) or Contractors, or direct at the mill or factory gates. The difficultics in connexion with recruiment are due (1) to the want of a stable labour force at any particular town or centre, (2) to the general illiteracy of the Indian labourer, and (3) to the inherent attachment of the worker taking up industrial employment to his village life and home.

The contractor is sent out to overcome the innate conservatism of the Indian peasant. He is helped in his work by the poverty and indebtedness of the peasant and also by occasional bad harvests, but in addition he not infrequently indulges in fraud and misrepresentation by painting a rosy picture of the future that awaits the peasant in a town with its crowded bazaars and other amusements, which are absent in the village. The essence of the system is the payment of an advance to the prospective labourer in order to enable him to free himself from his pecuniary difficulties. The contractor retains some form of control over his recruits and takes good care to recover the amount of the advance together with the interest, which is generally calculated at an exorbitant rate. Generally, the employers do not deal directly with the labourers recruited by a contractor. The latter is paid a lump-sum from which he pays his men and retains a portion for himself. In the Central Provinces, however, it is reported that labour is actually purchased from private contractors at so much per head. The system of recruitment by contractors is most in use in Burma owing to the scarcity of labour in that province and the necessity of recruitment from distant places. Practically all the unskilled labourers in most of the mills in Burma are maistry coolies, *i.e.*, coolies who are recruited and paid by the employers' labour contractors or maistries. The general practice is for the employer to enter into a contract with a maistry for the supply of unskilled labour for the various operations carried on in the mills. In most contracts, no mention is made of the number of workmen required: the maistry agrees to supply labour as and when required at the piece-rates laid down in the contract. Sometimes the contractor sublets his contract to another person who may even be unknown to the employer. The person who arranges for the supply of labour at the mills is known as the head maistry, and the work is executed through sub-maistries who pay premia to the head maistry for the privilege of getting the work. It is the sub-maistries who either themselves come to India or send their agents to negotiate with prospective recruits. They make the necessary advances and on arrival in Burma their recruits are made to sign promissory notes for sums never less than the total amount spent on them. The payment of advances has become somewhat risky since the repeal of the Workmen's Breach of Contract Act and the system of recruitment through contractors is, therefore, gradually losing its importance. An increasing number of Indians go to Burma on their own and seek employment, independently of maistries. Generally, they form themselves into gangs, each of which nominates a leader from among its members. The gang moves about in search of work and its leader usually arrives at an arrangement with a head maistry by which the latter secures work for the gang and pays what is known as *bucksheesh*, which is first given as a loan but is eventually treated as a gift if the gang remains in service under the head maistry until the close of the busy season. These *bucksheesh* coolies are paid at the same rates as the coolies recruited from India.

The method of recruitment through Sardars is also dependent on the payment of advances, which however are made at the cost of the employer. The Sardar is an operative already on work in the mill or plantation and is sent out to recruit labour from among his relations, acquaintances or neighbours. He is drawn therefore from the same class as the recruits themselves and can therefore be relied on to deal more fairly with them. Another advantage of this system of recruitment is that the men recruited are insured against unemployment and find work waiting for them at their destination. It is, however, only in plantations that this form of recruitment has been used to any appreciable extent.

The recruitment of labour at the mill-gate or at the surface of mines is the form of recruitment which is gradually gaining in importance over the other two methods. The news of the very much higher rates of wages paid in towns (which to the villager sounds fabulous as he has no idea of the higher cost of living) spreads throghout the countryside and draws large crowds of would-be workers. They are to be found at convenient gathering places on the thoroughfares waiting to be picked up for employment. The older hands also return from their village with groups of friends, relations and neighbours who come in the hope of finding employment in the mills. But the ignorance, simplicity and poverty of the Indian peasant render his exploitation an easy matter. The employer does not recruit himself the men required for his establishment but holds the overseer, jobber or mukadam responsible for the adequate supply of labour in the department. The latter takes the place of

the contractor and exacts bribes from the new recruits. He also acts as a money-lender and thereby reaps a double harvest from the needy labourer. It would appear therefore that education and organisation are the only means by which Indian workers can escape from the clutches of intermediaries who like harpies are ever ready to prey on them.

In the coalfields in Bihar and Orissa unskilled labour is recruited by means of Sardars. The Sardar visits villages and brings the labour with him, and the labour brought by him forms his gang. He has to pay the labour *buckshesh*, *khoraki* and travelling expenses, and for this purpose he frequently receives advances either from the contractor or from the Company concerned. At the Bhowra colliery advances varying from Rs. 3 to Rs. 10 are paid to the recruits in addition to their travelling allowances and food. Such advances are seldom recovered and never if the gang maintains good attendance at work. The Sardar obtains remuneration for his services in various ways. Sometimes he is paid a commission and a salary, but generally he is paid a certain amount on each ton of coal raised by miners working in his gang. Independent recruiters are paid at 9 pies per tub raised. In the Central Provinces the recruiters or mukadams as they are called receive 3 pies per head per week from the individual labourers whom they recruit and wages from the employers.

The Tata Iron and Steel Company at Jamshedpur maintain an Employment Bureau where skilled and unskilled workers are registered and employed. Applicants for work assemble in a yard and daily requirements are selected by the officer in charge. No outside recruitment is done in the literal sense of the word, but in the event of special qualifications being required and no applicants being available, the post is advertised in a few leading newspapers.

The methods adopted by different Indian railways for the recritment of unskilled labour are generally the same as those which obtain in other industries. In the case of workshopmen, a trade test is generally given and in every case a medical examination has to be gone through. Special apprentices for the higher grades are engaged by all Railways. The terms and conditions attached to apprenticeship in most cases are similar.

Recruitment for Assam—It has already been stated that the Assam tea industry is the only industry which is controlled in its recruitment of Indian Labour. Other industries, and even the tea industry in the Duars, Darjeeling and Madras Presidency are free from Governmental control. There is a considerable body of opinion in favour of freeing the Assam tea industry from control, but the Indian Tea Association is not only not in favour of this but has definitely urged that Government control should continue. The Association contend that if recruiting were free, abuses would arise as they did in the past from the competitive spending of money to secure labour. There appears little doubt that if control were removed, all the abuses which were associated with the *Arkati* system of recruitment would be revived.

The present system of recruitment is controlled by Act VI of 1901 called the Assam Labour and Emigration Act, 1901, as amended by Act XI of 1908, Act VIII of 1915, Act XI of 1915, Act XXXVIII of 1920 (Devolution Act) and Act XXXI of 1927. The Act extends to the Provinces of Bengal, Bihar and Orissa, United Provinces, Central Provinces, Madras and Assam. In the Bombay Presidency Act No. VI of 1901 is not enforced. There the Government of Bombay have allowed recruitment provided the emigrants are produced before a Magistrate. The most important provision of the Amending Act of 1915 is the abolition of the system of recruitment by contractors, and their recruiters, commonly known as Arkatis. In all recruiting areas, where the provisions of Act VI of 1901 are in operation, except the local areas in which recruitment is prohibited by notification under section 3, recruitment is carried out only through the medium of garden sirdars, under the provisions of Chapter IV, working under a local agent duly licensed under section 64 of the Act. The only recruiter now recognised is the sirdar who must himself engage the coolies. Any arrangement for the direct supply of coolies to a tea estate by a contractor or for the supply to sirdars of coolies collected through the agency of a contractor or arkati would be illegal and would render every person who is a party to such an arrangement liable to prosecution and punishment under section 164 of the Act. Even an employer cannot himself legally engage labour in a recruiting district; he must do so through the agency of his garden sirdars. In the Bombay Presidency, agents other than garden sirdars are allowed.

Latest Statistics.—The Annual Report on the working of the Assam Labour Board during the year ending the 30th June 1929 has been published. The Report shows that the total number of persons recruited during the year was 73,198 as against 39,549 in the previous year. The average number of recruits per sirdar was 1·63 as compared with ·99 for the year ending 30th June 1928. This very favourable recruitment during the year under report was due to scarcity and famine in various parts of the country. The average of advances to garden sirdars for each adult recruit felt in 20 and rose in 15 agencies as compared with the preceding year. No cases occurred in which the local Agents were found to be extravagant or indiscreet in the matter of giving advances to sirdars. The total number of garden sirdars prosecuted for offences in connexion with recruitment was 75 as compared with 85 in the previous year. The rate of cess on garden sirdars and emigrants was Rs. 1-8-0 per head during 1928-29. The actual receipts from the cess amounted to Rs. 1,35,720.

Reforms in the Bombay Cotton Mill Industry.—In a circular letter dated the 8th January 1930 the Bombay Millowners' Association have instructed all mills affiliated to the Association to introduce, wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. The introduction of a system for providing Discharge Certificates to operatives leaving service has also been recommended. The certificates are to contain a record of the

service of the operative concerned and in all cases of recruitment, the men presenting themselves for employment will be asked to produce their Discharge Certificates. Notices are to be posted at all mills stating (*a*) that all persons will be engaged by the Manager or by the head of the department concerned, and (*b*) that any heads of departments, assistants or jobbers accepting bribes from the workpeople will be instantly dismissed.

ABSENTEEISM AND LABOUR TURNOVER.

Though there is meagre statistical information available on this subject, it may be stated with a fair amount of accuracy that the Indian worker is more habituated to absent himself from work than his prototype in other countries. It would not be far from the truth to say that he prefers taking a day or two off during a month to working on all the days in a wage period and thus to earn the maximum obtainable. The Indian worker has yet to get himself thoroughly adapted to the industrial environment in which he finds himself. The reasons for his absence are not always connected with his love of rest as indicated above but in many cases it is due to causes beyond his control such as sickness, domestic difficulties, etc. The effects which poor and indifferent housing have on his work have been dealt with in the Section on Industrial Housing.

The Factory Labour Commission of 1907 made an inquiry into the number of absent workers and came to the conclusion that the average worker took 2 days off every month and a further holiday of from 3 to 7 weeks every year. In addition, he receives the weekly holiday and from 4 to 10 Indian holidays during the year. The question of absenteeism received the attention of the Indian Tariff Board (Cotton Textile Industry) and it was urged in evidence before them that the efficiency of labour in Bombay was greatly reduced by the high percentage of absenteeism among the operatives. The Board came to the conclusion that Ahmedabad had a great advantage over Bombay in the matter of absenteeism, both in respect of a low rate throughout the year and also of the absence of the wide seasonal variations which were apparent in other centres of the textile industry. They therefore recommended that in order to minimise the effect of absenteeism there should be a general adoption of a system already in force in a few mills in Bombay under which a certain number of spare hands are entertained in each department, except the weaving. The Board said "The percentage of extra men in each department is not necessarily the same, but we were given to understand that spread over the whole of the mill, it usually worked out at about 10 per cent."

The Labour Office of the Government of Bombay publishes in the *Labour Gazette* every month statistics of absenteeism in the textile mills at the important centres of the cotton industry in the Bombay Presidency and in Engineering workshops in Bombay and in Engineering workshops of the Bombay and Karachi Port Trusts. If figures of absenteeism for each day during any month are examined it is found that they are higher on days immediately following pay day. The following two tables give the figures for percentage absenteeism for each month of the year 1929.

PERCENTAGE ABSENTEEISM IN THE TEXTILE INDUSTRY.

	Bombay.	Ahmedabad.	Sholapur.	Broach.
January	6·67	3·65	15·79	7·08
February	13·71	3·45	14·80	7·64
March	10·89	3·76	15·34	7·66
April	10·25	3·92	16·30	8·14
May	*	4·15	14·76	7·97
June	*	3·48	18·89	7·48
July	*	3·45	13·70	6·84
August	*	3·32	13·55	6·66
September	*	3·45	13·24	7·39
October	10·37	3·59	13·61	7·53
November	8·58	3·24	13·76	6·97
December	8·03	2·93	13·76	7·20

* Owing to the strike in the cotton mills in Bombay City no figures were compiled for these months.

PERCENTAGE ABSENTEEISM IN THE ENGINEERING INDUSTRY.

	Engineering Workshops in Bombay.	Chief Engineer's Department of the Bombay Port Trust.	Engineering Works of the Karachi Port Trust.
January	10.91	8.60	9.30
February	18.20	10.06	7.60
March	17.32	11.30	8.90
April	13.58	10.00	7.60
May	15.26	9.60	9.00
June	13.44	9.17	6.10
July	12.38	7.26	6.50
August	11.04	7.19	7.30
September	12.77	8.10	7.50
October	12.60	9.57	7.60
November	13.57	9.77	9.08
December	12.63	10.91	10.60

During the Third Enquiry into Wages and Hours of Labour in the cotton mill industry conducted by the Labour Office in 1926, more accurate statistics regarding absenteeism amongst the operatives covered by the enquiry in Bombay Ahmedabad and Sholapur were obtained. The following table gives these statistics for men, women, children and all operatives, by centres.

PERCENTAGE ABSENTEEISM.

Age and Sex Group.	Bombay.	Ahmedabad.	Sholapur.
Men	7.13	8.04	12.50
Women	11.86	7.40	10.81
Children	....	3.62	15.61
All operatives	8.26	7.73	12.33

In the Electrical and Mechanical Departments of Railways, absenteeism generally amounts from 10 to 11 per cent. As in cotton mills, absenteeism is greater immediately after pay day. In Railways in Burma, absenteeism is lower and roughly amounts to 2.50 per cent.

Labour Turnover.—A charge is very often levelled against the Indian worker that owing to his migratory character, he changes his place of employment very frequently and that this results in a high rate of labour turnover. There is, however, very little information available regarding the average period of service or the rates of turnover at important industrial centres in India. In the case of the Empress Mills at Nagpur, it has been estimated that since 1908, the average period of continuous service of the employees amounted to 7.89 years. In another cotton mill in the Central Provinces the average duration of employment worked out at about 40 months while in the case of other factories it roughly amounted to about 30 months. Out of a total number of 3,700 workers engaged in the Pench Valley Coal Mines it was found that 1,550 workers were in employment for less than a year, 650 from 1 to 2 years, 700 from 2 to 3 years and 800 workers had more than 3 years' continuous service to their credit. In the manganese mines in the Central Provinces the average duration of employment comes to about 9 to 10 months for the whole of the labour force in any one year. One to two years is on an average the period of employmet of workers in the Tata Iron and Steel Works. The total labour turnover during normal working for the three years 1925, 1926 and 1927, in the same Works amounted to 36.6 per cent. 31.3 per cent. and 24.1 per cent. respectively. In the Indian Cable and Company in Bihar and Orissa, however, skilled labour has remained practically unchanged during the last five years but the unskilled workers recruited from the aboriginal class had changed to the extent of about 30 per cent. annually. In one of the mills at Cawnpore the average period of continous service amouted to 8.87 years.

The Labour Office conducted a special enquiry into the length of service of cotton mill workers in Bombay City in 1927-28. A sample of 1 in 10 tenements was decided upon and the information was collected on suitable schedules by the lady investigators of the Labour Office from the inmates of such tenements who were reported to be cotton mill workers. Only the predominant working class localities were visited for the purposes of the enquiry and the total number of schedules accepted for final tabulation was 1,348.

Of the 1,348 workers, 988 or 73.29 per cent. were men and 360 or 26.71 per cent. were women.

Nearly 21 per cent. of the operatives began work in the mills before the 15th year, 38 per cent. between the 15th and the 20th year, 32

per cent. between the 20th and the 30th year and the remaining 9 per cent. joined the first mill after they had attained the age of 30.

Sixty-three per cent. of the workers were born in the Konkan and 27 per cent. in the Deccan while the rest came from different parts of the country. Not a single worker gave his place of origin as Bombay City.

About 48 per cent. of the workers covered by the sample continued in the employment of the same mill without change, 34 per cent. served in two or three mills and 18 per cent. had served in 4 or more mills. The highest number of mills served by an individual was 15. The cause of leaving the mills was "for going to native place" in 26 per cent. cases, "low wages and for bettering prospects" in 21 per cent. cases, "absence due to illness" in 14 per cent. cases and "retrenchment" in 10 per cent. cases. Other causes for leaving mills were unsuitable conditions of work, dismissal, strike, resignation, etc.

The approximate period of total service (including the period of non-attendance) was reported to be less than 5 years in 37.54 per cent. cases, 5 to 10 years in 23.37 per cent. cases, 10 to 15 years in 15.88 per cent. cases, 15 to 20 years in 9.13 per cent. cases and more than 20 years in 14.08 per cent. cases. The percentages of workers who had not changed mills was 67 in the case of operatives with less than 5 years' service and 42 for workers with 5 to 10 years' service. In the other service groups, the percentage of operatives working in the same mill varied between 25 and 45.

The actual active service was reported to be less than 5 years in 46.51 per cent. cases, 5 to 10 years in 24.26 per cent. cases, 10 to 15 years in 13.95 per cent. cases and 15 to 20 years in 7.20 per cent. cases. In the remaining 8.08 per cent. cases the actual service was more than 20 years.

A large number of workers in the age groups 15.20 and 20.25 had served for a period of less than 5 years while the most common period of service in the age group 25-30 was between 5 and 10 years. In the age group 30-35 about 30 per cent. of the workers had served for less than 5 years and 19 per cent. for a period of 5 to 10 years. Among workers of 35 to 40 years of age, the number of those falling in each of the first five service groups was between 16 and 20 per cent.

LABOUR IN FACTORIES.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. Under the chief provisions of the amended Act Local Governments were empowered to appoint Inspectors of Factories and Certifying Surgeons to testify as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half; their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to 7 and their employment at night-time was forbidden; children below the age of 9 were not to be employed. Provision was made for fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

The next Factory Act to be passed into law was Act XII of 1911. This Act extended the definition of "factory" so as to include seasonal factories working for less than 4 months in the year; shortened the hours within which children, and, as a general rule, women might be employed and further restricted the employment of women by night by allowing it only in the case of cotton ginning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. *The Act, for the first time, applied a statutory restriction to the hours of employment of adult* males by laying down that, subject to certain exceptions, "no person shall be employed in any textile factory for more than 12 hours in any one day." It also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions, which were factories worked in accordance with an approved system of shifts) no person may be employed before 5-30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The Acts now in force.—The ratification by India of the Conventions adopted by the International Labour Conference held in Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911. This was undertaken during 1921 and the Indian Factories Amendment Act, 1922, introduced a series of important reforms including the adoption of a 60-hours' week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extention of the Act to a large number of small factories, drastic restriction of the exempting provisions, etc. The principal object of the amending Act of 1923 was the removal of a difficulty which had arisen in connection with the law relating to the weekly holiday. The experience gained during the three years which immediately followed the revision of the Act in 1922 indicated that the amending Act had worked smoothly and that the main principles followed in 1922 commanded general acceptance. It was not considered necessary, therefore, to modify any of the main principles of the Act; but several administrative difficulties had arisen in connection with some sections of the Act—one such difficulty relating to Section 21 which provided for intervals. Local Governments were asked in June 1923 to consider a possible solution of the difficulty and to bring to the notice of the Government of India any difficulties which might have arisen

in connection with other provisions. On receipt of their replies, a conference of Chief Inspectors of Factories was convened. The conference recommended a number of alterations designed by allowing greater elasticity in some directions and by increasing control in others in order to make for smoother working. The Factories Amendment Act of 1926 was, therefore, passed on the recommendations of that conference and on the opinions received from the Local Governments. The more important alterations effected include the widening of the definition of "factories" so as to bring within the control of the Act such establishments as Electrical Generating Stations, water works, etc., the prevention of the issue of age certificates by Certifying Surgeons to children who are not fit for employment, the prevention of cleaning machinery in motion, even by men, in cases where Local Governments were of opinion that the work is attended by danger to the operatives; a clearer definition of the periods prescribed for intervals of rest; and, while still preventing the employment of children in two factories on the same, day, the permitting of women to work in two factories on the same day provided that the limits for hours of work were not exceeded.

Hours of Work.—The Indian Factories Act prescribes a daily as well as a weekly limit to the hours of work in factories and provides for rest intervals and for a weekly holiday. Section 28 of the Act provides that no person shall be employed in any factory for more than 11 hours in any one day; and Section 27 provides that no person shall be employed in a factory for more than 60 hours in any one week. Section 21 of the Act makes it obligatory for the occupier of a factory to provide for each person employed a rest period of at least one hour at intervals not exceeding 6 hours, or at the request of the employees concerned two rest periods of half an hour each, at intervals not exceeding 5 hours, the total duration of the periods of rest on that day not being less than one hour for each period of 6 hours worked generally. With the previous sanction of the Local Government and at the request of the employees concerned the rest interval may also be reduced to half an hour for each male person provided that he is not employed for more than 8½ hours on each working day and is not required to work for more than five hours continuously. For children, Section 23 (*c*) provides that no child shall be employed in a factory for more than 6 hours in any one day. Section 21 (*b*) provides that for each child working more than 5½ hours in any one day a period of rest of not less than half an hour shall be given and the period of rest has to be so fixed that no child shall be required to work continuously for more than 4 hours. Sections 23 (*b*) and 24 (*a*) further provide that no child or woman may be employed in any factory before half past five o'clock in the morning or after 7 o'clock in the evening. Under Section 25 a child cannot be employed in two factories on the same day but adults may be so employed in such circumtances as may be prescribed. Under the provisions of Sections 26 every Manager of a factory has to fix specified hours for the employment of each person employed in such factory and no person is allowed to be employed except during such specified hours. The Governments of Madras, Bombay, the United Provinces, the Punjab and the Central Provinces are the only Local Governments which have prescribed the circumstances under which adults may be employed in more than one factory on the same day. The rules framed by these Local Governments invest the Inspector of Factories with the power to sanction such employment if he is satisfied that the adults concerned are not employed for more than 10 hours on any one day and that they received the weekly holiday prescribed by Section 22 of the Act. In addition to the notice *re* hours of work for particular period, every factory has to maintain a register of all persons employed in a factory in the form prescribed by the Local Government showing their hours of work and the nature of their respective employment.

The latest statistics available in connection with the administration of the Indian Factories Act are for 1927. The data published in connection with the normal weekly hours of work show that for the whole of British India men were required to work for more than 54 hours a week in 4,383 factories, above 48 and not above 54 in 1,031 factories, and under 48 hours per week in 2,025 factories. In the case of those factories employing women 2,887 required female workers to work for more than 54 hours per week whereas 1,639 fixed their hours at below 48 per week. 683 factories had hours above 48 but not above 54. Out of the 1,564 factories employing children, 563 had hours below 30 for children and 1,001 above 30 but not above 36—the maximum permitted by the Act. The details in connection with the various provinces will be found in summary form in the All-India Factories Reports or in a more detailed form in the Provincial Reports themselves. The statistics of factories do not show the hours of work in particular industries.

All railway workshops come under the Indian Factories Act. Hours of work in railway workshops in all provinces are generally average 8 per day and 48 per week. In most cases the hours are so arranged as to provide for a half day off on Saturday provided that a total of 48 hours is worked during any particular week.

With regard to intervals for rest 5,299 factories out of a total number of 7,515 factories registered in India in 1927 observe an interval of one hour.

Proposed Change for the Bombay Cotton Mills:—The Indian Tariff Board (Cotton Textile Industry) recommended that a minor, but in their opinion, a very essential reform which should be immediately introduced into Bombay mills is the fixation of a definite period of rest to enable the operatives to take their morning meal. The Board were greatly struck during the inspection of the mills by the number of operatives they found taking food in the mill compounds an hour or two after the commencement of work. In their opinion this materally affected efficiency and they were of opinion that the commencement of work should be put back to 6-30 a.m. a period of rest of half an hour being granted from 9 a.m. to 9-30 a.m. or 9-30 a.m. to 10 a.m., to permit of meals being taken. In accordance with this recommendation the Bombay Millowners' Association in the standardised Standing Orders which they proposed to introduce in all cotton mills in Bombay affiliated to the Association formulated

a rule that the hours of work for adult operatives would be from 7 a.m. to 9-30 a.m., 10 a.m. to 1 p.m., and 1-45 p.m. to 6-15 p.m. with two recesses from 9-30 a.m. to 10 a.m. and from 1 p.m. to 1-45 p.m. These Standing Orders formed one of the references to the Bombay Strike Enquiry Committee. This Committee endorsed the opinion of the Tariff Board that a morning recess was desirable but they did not consider it reasonable that the millowners should reduce the present number of working hours from 10 in order to enable this recess to be provided, so long as there is no general reduction of that kind made for all factories by legislation or otherwise. Nor, on the other hand, did the Committee think that the millowners could reasonably insist on the operatives reducing the mid-day hour recess and stay in one quarter of an hour longer in the mill in order to enable the half hour morning recess to be given. The Committee proposed a modification of this order.

Holidays.—Section 22 of the Act provides that no person shall be employed in any factory on a Sunday unless (*a*) he has had, or will have, a holiday for a whole day on one of the three days immediately preceding or succeeding the Sunday, and (*b*) the Manager of the factory has, previous to the Sunday or the substituted day, whichever is earlier, given notice to the Inspector of his intention so to employ the said person and of the day which is to be substituted and has, at the same time, affixed notice to the same effect in some conspicuous place near the main entrance of every factory, in English and in the language of the majority of the operatives in such factory. Sub-clause 2 of this section further provides that where any person is employed on a Sunday in consequence of his having had a holiday on one of the three days preceding that Sunday, that Sunday shall, for purposes of calculating the weekly hours of work of such person be deemed to be included in the previous week. The statistics of factories for 1927 show that holidays were granted on Sundays in 2,091 factories and on week days and Sundays in 3,704 factories.

Employment of Children.—By the Amending Act of 1926 the maximum age of children was raised from 14 to 15 years and the minimum age from 9 to 12. Section 23 of the Act provides that no child shall be employed in any factory unless he is in possession of a certificate granted by a Certifying Surgeon showing that he is not less than 12 years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate. Further, no child is allowed to be employed in any factory before half past five o'clock in the morning or after seven o'clock in the evening and no child is to be employed for more than six hours in any one day. The number of children employed in factories during the years 1921 to 1927 is shown in the following table :—

Year.	Boys.	Girls.	Total.
1921	56,926	11,187	68,113
1922	56,552	11,106	67,658
1923	61,841	12,779	74,620
1924	60,240	12,291	72,531
1925	57,199	11,526	68,725
1926	50,015	10,079	60,094
1927	40,028	9,534	49,562

The decrease in the number employed since 1921 has been a little over 20 per cent. Whilst the total factory population rose during the same period from 1,266,395 to 1,533,382, or by 21 per cent. and the total number of factories increased from 4,059 to 7,515 or by 85 per cent. The reduction in the number of children employed would have been much greater had it not been for the fact that the revision of the Indian Factories Act in 1922 brought a number of seasonal factories which employed a larger percentage of children than perennial factories under the scope of the Act. An examination of the figures in the above table will show that the number of children employed rose from 67,658 to 74,620 in 1923. This was due to the fact that the tea factories in Assam which employed about 11,000 children were brought within the scope of the Act for the first time in that year. Further, the amendment of the Act in 1922 did not apply to children who were lawfully employed in a factory on or before the 1st July 1921 and it was not until 1924 that full effect was given to the new age restrictions for children.

Employment of Women.—The number of women employed in factories during the years 1921 to 1927 has increased steadily from 187,596 employed in 1921 to 253,158 employed in 1927 or by 35 per cent. The total factory population during the same period rose, as has been shown above, by only 21 per cent. The large increase in the employment of women is due partly to the restrictions imposed on the employment of children and partly to the inclusion within the scope of the Act of all quasi-agricultural factories for example, in the tea gardens which are dependent on female labour to a larger extent than other factories. An important change which the revision of 1922 made in connection with the employment of women was the repeal of Section 27 of the Act of 1911 which permitted the employment of women at night in ginning factories. In view of this amendment the Government of India considered that they were in a position to ratify the Convention concerning the employment of women during the night adopted by the First International Labour Conference held at Washington in 1919 without undertaking any further legislation.

Overtime.—Section 31 of the Indian Factories Act provides that in those factories where exemptions are granted from the provision that

no person shall be employed in a factory for more than 60 hours in any one week, every person employed in such a factory for more than 60 hours in any one week shall be paid, in respect of overtime worked, at a rate which shall be at least one and a quarter times the rate at which he is normally paid. In most of those factories which work normally less than 60 hours per week overtime is paid for at normal rates up to 60 hours per week and at a time and a quarter for overtime work over 60 hours. Some factories, however, pay either the full time and a quarter rate to be granted under the Factories Act for all overtime worked over and above the normal daily hours or even grant higher rates irrespective of the weekly limitation of 60 hours under the Act. No detailed statistics are available to show the, number of workers who were paid overtime during any particular period except in the case of a few Railways and some of the larger industrial organisations.

LABOUR IN MINES.

The conditions of employment of labour in mines are governed by the provisions of the Indian Mines Act, 1923, which came into force with effect from the 1st July 1924 replacing the former enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff, but it contained no provisions regulating the employment of labour. Labour in the mines was subject, therefore, to no restrictions in regard to hours of work, holidays, etc. The question of amending the old Act was brought to a head in 1922 by the introduction of the Reforms Scheme under which the regulation of mines became a Central Subject. As the then existing Act made no clear distinction between the functions of the Central Government and those of the Local Government in regard to its administration, a line of division between the two was considered necessary. It was proposed that the Central Government on whom the duty of regulating mines and securing the safety of workers devolved, should have power to deal with the technical administration of the Act while Local Governments would deal with minor matters of administration in their respective provinces. Further, the acceptance by the Government of India of certain conventions passed at the International Labour Conference held at Geneva in 1919 necessitated the regulation of hours of employment and of the employment of children. In accordance, too, with the recommendation of the third Session of the International Labour Conference a weekly day of rest was to be provided. And the experience of the working of the Act of 1901 showed that the existing definitions of a "child" and of a 'mine' required revision. 'A Bill to amend and consolidate the law relating to the regulation and inspection of Mines' was therefore introduced in the Legislative Assembly on the 15th September 1922, with a view to make provisions for the above matters. The Bill was referred to a Joint Select Committee of 18 members representing both Houses of the Central Legislature and the report of the Committee was published on the 13th January 1923. The most important question which came before the Committee was that of the exclusion of women from mines. The extent to which coal mines in particular depended on women's labour was a main factor which weighed against any proposal for immediate exclusion of women from the mines. The Joint Committee so amended the Bill as to provide that the power to exclude women should rest with the Government of India and they recommended that the question of the employment of women below ground in mines should be taken up at a very early date with a view to prohibiting such employment either in all mines or in particular classes of mines at the end of a specified period. When the Bill as amended by the Select Committee came up before the Legislative Assembly for discussion on the 29th January 1923, many important amendments were moved. Of these, one relating to a proposal to impose a daily limit on hours of work involved a considerable amount of discussion. A suggestion was made that a compulsory shift system might be introduced in order to bring about an automatic restriction on the daily hours of work. The Coalfields Committee who investigated the question reported that the enforcement of such a system in existing conditions would be premature. The Government of India indicated that they would make a reference to Local Governments regarding the possibility of introducing a statutory system of shifts. The Assembly, thereupon, passed the Bill as it emerged from the Select Committee, and the Act received the assent of the Governor-General on the 23rd February 1923.

Working of the Act.—The Annual Reports of the Chief Inspector of Mines in India show that Section 26 which prohibits the employment of children in mines was contravened in nearly every class of mine and in nearly every province in British India in 1925. This was found to be due to a misinterpretation of the Section, nearly every one having taken the Section to prohibit the employment of children in underground workings only. With regard to the employment of children underground a common explanation was that the children had been employed for only a few days, unknown to the management and had been dismissed as soon as they were discovered. In order to clarify the position, the Mining Department issued a circular letter to all mineowners drawing their attention to the requirements of the Act with respect to the employment of children. The prohibition of the employment of children brought into increased prominence the necessity of providing education and facilities for recreation for the young. The prohibition of child labour has, however, had no effect on the attendance of women.

The restrictions imposed by the Act in regard to hours of work had practically no effect in the case of the coal mines in Bengal, where very few mines worked for more than 4 days in a week or more than 54 hours. Their earnings have not been reduced but their attendances have not increased. The industry did not suffer in the average output per man shift which, as a matter of fact, increased. In Bihar and Orissa the normal hours of work in coal mines varies from 8 to 12. At the Lodna colliery in the Jharia coalfields a system of shifts, two per day with an interval of two hours between shifts,

has been in operation for over a year. With regard to the number of days worked in the week, the miner works only on as many days as he feels inclined. The mines are closed generally on Sunday and the miners are paid on that day. The great majority of miners will not work on Monday also. In order to induce the miners to attend on Monday, the Bhagatdih colliery pays one anna extra per tub for raisings on Monday but the desired result has not been achieved. The main effects of restricting the weekly hours to 60 were: (1) a reduction in the number of hours in which a miner remains underground; (2) the supervising staff, attendants, etc., enjoy a weekly rest day because the mines are closed for one day per week, and (3) an additional number of skilled hands, such as pump *khalasis* and boiler *khalasis*, has to be entertained as it is not convenient to arrange for changes of shift of such workers within the limits of a 54-hour week. The argument that when children were taken out of the mine the women would not go down to work has been falsified and any labour that left the mine on this account was insignificant.

The exclusion of women from mines will not be a hardship to the industry if male labour is recruited for female labour, generally employed as coal carriers, or, if recourse be made to modern methods of loading coal by machinery. The earnings of the miner's family, as a whole, is bound to suffer on account of the prohibition of women in mines but the loss can, to a certain extent, be made up by more regular attendance. Two large manganese mines, in which there is underground working, owned by the Central Provinces Manganese Ore Company, Limited, one in the Balaghat District and the other in the Nagpur District, are reported to be hard hit by the new regulations regarding the exclusion of women. In the Madras Presidency women have lately been excluded from work in the mines in certain districts. Owing to this exclusion, 50 per cent. of the workers in the Cuddapah District left the mines and secured service elsewhere. In the salt mines in the Punjab women are still employed but the number is being systematically reduced with a view to ultimate abolition. This reform does not appeal to the men. It is stated that "women are at a premium in the Punjab and the more their work is concentrated on the care of the rising generation the better for the province." With effect from October 1928 no women have been employed in underground workings in Assam but a few were doing light work in open workings or on the surface. The miners in Assam actually worked for only 4½ days in a week, the total hours being shorter than the maximum permitted under the Act.

Number of Mines.—The following table gives the number of mines which came under the Act each year, classified according to the minerals raised:—

Year	Number of mines					Total Number of all mines
	Coal	Mica	Manganese	Tin and Wolfram	Other minerals	
1924	846	513	186	87	172	1,804
1925	810	571	214	204	212	2,011
1926	722	601	221	210	143	1,897
1927	644	630	220	200	298	1,992
1928	556	674	184	203	331	1,948

Number employed.—The number of persons employed in mines during the years 1925-1928 were as follows:—

Year.	Total No. of mines which came under the Act.	Number of persons employed.		
		Below Ground.	Above Ground.	Total.
1924	1,804	167,719	90,498	258,217
1925	2,011	169,554	84,303	253,857
1926	1,897	189,371	70,742	260,113
1927	1,992	196,341	72,949	269,290
1928	1,948	197,398	70,273	267,671

The sex distribution of the persons employed in mines during the years 1926 to 1928 was as shown below :—

Year.	Number of males employed.			Number of females employed.		
	Underground.	In open workings.	On the surface.	Underground.	In open workings.	On the surface.
1926 ..	86,343	43,306	51,967	31,889	27,833	18,775
1927 ..	86,766	50,028	53,903	31,850	27,697	19,046
1928 ..	86,155	51,005	52,430	31,785	28,453	17,843

Labour on Railways.—All railway workshops come under the administration of the Factories Act. The Indian railways employ nearly a quarter of a million workers in other occupations for which no provisions regarding control of hours of work, etc., have yet been made by legislation.

The Conventions adopted by the International Labour Conference in 1919 and 1921 prescribed a 60-hour week and a weekly rest of not less than 24 consecutive hours for all workers in British India employed in factories, in mines and in such branches of railway work as may be specified for this purpose by the competent authority. The Indian Factories Act which was amended in 1922 to give effect to the Conventions limited the hours of work in factories to 11 in any one day and to 60 in any one week. Provisions were also made for intervals of rest and a weekly holiday. Similar limitations were imposed under the Indian Mines Act of 1923 in respect of coolliery staff. Both these restrictions apply to factories and mines controlled by railway administrations. The application of the Conventions to other departments of railway organisation has been found to be a problem beset with many difficulties and has been a subject of prolonged investigations. Orders were issued by the Railway Board in 1921 that the 60-hour week should be adopted for station staff not employed in connection with the working of trains. The Indian Railway Conference Association drew up a set of rules in 1927 and these received the general approval not only of the Railway Board but also of the Boards of Directors of the lines managed by companies. Subsequently, however, it was found that these rules while they aim at applying the spirit of the Conventions do not adequately fulfil the statutory obligations imposed upon Government by the ratification of the Conventions. The whole question was therefore again exhaustably reviewed and a Bill amending the Indian Railways Act with the object of empowering the Governor-General in Council to make rules on the subject was introduced in the Legislative Assembly in the autumn session of 1929 and was referred for consideration to a Select Committee.

Working of overtime on Indian railway is more prevalent on construction than on the open line due to (1) the working season in the monsoon areas being confined to eight months in the year, (2) special measures taken to speed up all heavy work to avoid the locking up of capital; and (3) wet foundation work in bridges which necessitate continuous work. Usually overtime in such cases is paid at a rate fixed beforehand.

Seamen.—The Indian Merchant Shipping Act, 1923, provides that no seaman shall be "signed on" for service on a ship unless he enters into a contract in the manner specified with the Master of the ship. All agreements entered into between Masters and Seamen for service on foreign-going ships have to be signed in the presence of a Shipping Master. The agreement forms contain the rules and regulations provided for under the Act for maintaining discipline and for the fines which may be inflicted for the breach thereof.

CONTRACT LABOUR.

In most industrial concerns in India working connection with building, loading and unloading carting receiving, and despatching of goods and work involving the employment of unskilled labour over which supervision is either difficult or costly is given out on contract. In the textile mills industry work in connection with bleaching and dyeing is also generally done on contract at all centres. In the cotton mills in Ahmedabad work in the Mixing and Waste Room and the Yarn Bundling and Baling Department, in the Drawing in Department and Beam Carrying is given out on contract in various mills. In most cases no supervision is exercised over the labour engaged by the contractor to whom the contract is given. Perhaps the most efficient method of control and supervision over contract labour is that which obtains on several railways. This will be dealt with separately lower down. Exceptions to the general remarks made above are as follows.

In the coal mines in Bihar and Orissa contractors are employed by a large number of collieries to provide the labour required for cutting the coal and loading it on wagons. The contractors are paid at a fixed rate per ton for all coal loaded on wagons. In some cases, however, the rate paid per ton is increased either because coal is being extracted from difficult places in the mine or because the contractor has difficulties in maintaining his labour supply. The extent to which contractors are employed is considerable and probably more than half the coal raised in the Jharia coal fields is raised on the contract system. Definite figures are not available but the Indian Mining Association reports that 90 per cent.

of the coal raised in the mines belonging to that Association in the Jharia coal fields is raised by contract labour. In some cases contractors are only employed to provide the labour for cutting the coal. The contractor is generally responsible only for raising the coal while the colliery supervising staff is responsible for seeing that the mines are run safely.

FORCED LABOUR.

The question of Forced Labour which is an item on the Agenda of the Fourteenth Session of the International Labour Conference to be held at Geneva on the 9th June, 1930 was, under the double discussion procedure, given a preliminary consideration at the 12th session held in June 1929 and a comprehensive questionnaire was issued by the International Labour Office in order to elicit public opinion as to how and to what extent Forced Labour should be regulated with a view to ultimately abolishing the system. The question of Forced Labour appears first to have been brought within the sphere of international consideration by the Peace Conference. The Temporary Slavery Commission of the League of Nations considered, amongst other things, two main questions, *viz.*, (1) Systems of compulsory labour, public or private, paid or unpaid; and (2) the measures taken or contemplated to facilitate the tansition from servile or compulsory labour to free wage labour or Independant production, and they recommended that an International Convention on the subject was desirable and suggested (1) that forced or compulsory labour, except for essential public works and services, should be prohibited and (2) that certain precautions should be laid down to be observed by the authorities in the recruiting of labour. In pursuance of the recommendations of this Commission, the Seventh Assembly of the League of Nations in 1926 adopted a Draft Convention called the "Slavery Convention" which has been ratified by India. Article 5 of the Convention reads as follows:—"The High Contracting Parties recognise that recourse to compulsory or forced labour may have grave consequences and undertake, each in respect of the territories placed under its sovereignty, jurisdiction, protection, suzerainty or tutelage to take all necessary measures to prevent compulsory or forced labour from developing into conditions analogous to slavery.

"It is agreed that:

"(1) Subject to the transitional provisions laid down in paragraph (2) below, compulsory or forced labour may only be exacted for public purposes.

"(2) In territories in which compulsory or forced labour for other than public purposes still survives, the High Contracting Parties shall endeavour progressively and as soon as possible to put an end to the practice. So long as such forced or compulsory labour exists, this labour shall invariably be of an exceptional character, shall always receive adequate remuneration, and shall not involve the removal of the labourers from their usual place of residence.

"(3) In all cases the responsibility for any recourse to compulsory or forced labour shall rest with the competent central authorities of the territory concerned".

The following are some of the Internationally accepted principles regarding Forced Labour—

(*a*) That no forced labour is permissible except for essential public works and services.

(*b*) As a general rule forced labour for public purposes should not be resorted to unless it is impossible to obtain voluntary labour.

(*c*) All forced labour is to be adequately remunerated.

The general public purposes for which forced labour is used are classified under five main heads:—(1) Public works, (2) Porterage, (3) Emergencies, (4) Compulsory cultivation, and (5) other purposes. The International Labour Office conducted an enquiry into the practices with regard to forced labour obtaining in the various countries, including India, prior to the drafting of the questionnaire on the subject. The extent to which forced labour is exacted in India and the legal sanction, if any, behind it are dealt with below.

Public Works.—In Bihar and Orissa in British India, compulsory work is exacted by the Government in certain aboriginal areas in connexion with the upkeep of public roads and minor public buildings in the vicinity of the village community from which the labour is levied. It is not quite clear how far this work may be regarded as being performed for general public purposes as distinct from local public purposes.

Porterage.—In British India, under Bengal Regulation XI of 1806, the landholders of places through which troops, military officers, or other travellers are passing are bound, on requisition of the local civil authority, to provide carts, bearers, coolies and necessary supplies for payment at rates fixed by that authority'. In the Bombay Presidency labour can be impressed under Rule 42 of the Bombay Regulation XXII of 1827 which reads as follows—

"42. First When emergent occasions require the immediate march of troops, and more extensive aid towards it (than is allowed by the preceding section) is necessary, the (District) Magistrate may resort to impressment under the following rules, being careful to define the nature of the employment for which the impressment is made, and the period it is to continue". The remuneration for services or supplies procured by impressment is to be fixed by the District Magistrate on a liberal scale. It is stated that these Regulations are now very rarely, if ever, used, as both military units and civil officers have their own means of transport. Carts for touring officers are impressed in the Districts of the Bombay Presidency. In some districts a list of carts available in each village is kept by Police Patels and the carts are taken in turn. No cart is taken beyond twenty miles and hire is paid according to a fixed scale which is never below the local market rate.

Emergencies.—In British India, labour may be impressed to avert sudden and serious damage to irrigation works under the following Acts: the Northern India Canal and Drainage Act, 1873, the Bombay Irrigation Act, 1879, the Punjab Minor Canals Act, 1905, and the Madras Compulsory Labour Act, 1858.

'In Bihar and Orissa compulsory labour is exacted by the Government in certain aboriginal areas. In parts of the Santhal parganas (districts) and of Singhbhum, the Government instead of imposing local taxation, require village communities to maintain each their own share of the public roads minor public buildings in the immediate neighbourhood of their homes. The distrubution of work is left to the village headman, the work is done at the leisure of the villagers, and the method is considered appropriate to the state of economic and political development of these areas.' In the West Khandesh District, of the Bombay Presidency labour is liable to be exacted from Watandar Mahars and Bhils in pursuance of the Watan settlements where there is occasionally a clause to the effect that the body of Mahars or Bhills should supply men, if necessary. Such a demand is, however, reported to be seldom made.

Forced Labour for Private Purposes.

LABOUR DUES FOR LANDHOLDERS.—"Forced labour for private purposes is not countenanced by the Government of India. Mention must be made, however, of the labour dues which are exacted in many parts of India, under ancient custom, by land-holders from tenants and agricultural labourers. In most, if not all cases the duty of providing this labour carries corresponding rights. Thus an agricultural tenant or labourer usually has the right to free grazing on the landholders' ground, to cut wood and thatching grass for the construction and repair of his house and well, and to the free occupation of the land on which his house stands. Similarly, a low-caste labourer who works in leather has the right to the skins of all cattle dying in the village."

In the Talukdari villages in the Bombay Presidency impressed labour for private purposes is unpaid and of feudal character both in its scope and origin. The traditional village services continue to be performed by tenants in the Ratnagiri District where they work on the land of the *Khots* for nominal payment in kind. Section 35 of the Khoti Act, however, discountenances such exactions from the tenants who are however found to be unwilling to depart from the age long custom. In the other parts of the Presidency, modern ideas are beginning to influence the tenants who are increasingly opposed to the system of forced labour exacted by the Talukdars.

It was also the custom in Sind for the revenue and other officials to exact "chher" or free labour whenever required for public or private purposes. The Committee appointed by the Government of Bombay to deal with the subjects of "Rasai" (levy of free supplies) "Lapo" (share of produce) and "Chher" (compulsory free labour) have dealt with the question in their Report, published in 1921.

The principal recommendations of the Committee were (1) that casual labour should be employed wherever obtainable; (2) that the principle of full payment strictly enforced; (3) that steps should be taken to prevent excessive supply of labourers by the Zamindars; and (4) that requisitions for road repairs be strictly prohibited otherwise than on full payment of the labourers. These recommendations were approved by the Local Government who ordered that they should be carried out in practice. No reference to this old institution of "chher" is now reported.

The Penal Code provides that any person who unlawfully compels a person to labour against the will of that person may be punished with imprisonment with or without hard labour for a period not exceeding one year or with a fine, or with both. It appears that this provision is intended to put a stop to the practice of forced labour which was, and is still to a certain extent, in vogue and is aimed at the abuses arising from forced labour which ryots were in former times compelled to render to great landholders.

The extent and the nature of the system prevalent in the Indian States are as follows:—

"According to the census report of 1921, there were 160,755 slaves in Rajputana and Central India alone, including 10,884 born domestic slaves in Bikaner and 48,100 in Jodhpur. They are known by various names such as Darogas, Huzaris, Ravana Rajpurs, Chelas and Golas, and are owned by princes, Hindu and Moslem alike. They are bound to be lifelong servants of their masters and are not allowed to own property, except a few necessaries, Their masters exercise the power of disposing of their wives and daughters and to a great extend control their marriages and divorces. If they run away to other States they are liable to be brought back and returned to their masters.

"In Jodhpur, if the Darogas fail to give service commensurate with the position and requirements of the master, the latter is legally entitled to compel them to do so. Rajputs who have Darogas born in their houses and who have brought them up are entitled to give away their daughters as part of the dowry of their own daughters. In Kotak, agricultural labourers, shepherds, cowherds and serfs of the State are not allowed to emigrate to another State unless they have arrived at a settlement with their masters. They are also prohibited from entering State service.

"The systems of *Veth* and *Begar* (forced labour) prevail in almost all the Indian States and all classes of labourers and artisans are compelled to work for the princes and their officials for remuneration which in practice is nothing but their food. They are compelled to work at any time and for such time as the State wishes and are also forced to travel long distances from their homes to distant villages or to the hills and jungles, when princes and their guests go hunting or officials are on tours.

"According to the Bundi State regulations, several classes of people, such as barbers, oil-makers, betel-sellers, butchers, peasants and Bhils (aborigines), must work for nothing or supply free of charge such material as fuel, skins for drums, and dried cow-dung. For all labour carried out for State purposes food must be given and for all work done for public servants wages must be paid, but such labour must be done by the classes hereditarily bound to perform it, and if members of these classes refuse to do their work they must be properly punished.

"Before the Commission of Enquiry appointed in the Udaipur State in 1923 to investigate the grievances of the peasants, one of the complaints was that Bolas, Bhils and Balais, even if they had given up their calling, were compelled to build roads and carry the bedding of officials from one village to another without payment.

"In Kathiawar those who are liable to forced labour belong to depressed classes, such as Dheds, Dublas and the Dhodias and are often called Chakars or Golas. Those who are privileged to exact their labour are known as *Dhaniamas* or *Anavlas* (masters). The latter are a class of well-to-do landholders. The relation between the two classes is that of bond slaves and their masters.

"In the Surat district this class of indentured labourers is called *Halis*. A man becomes a *Hali* by reason of debt contracted either by him or by his forefathers. When a man of this class contracts a debt for a marriage or funeral ceremony, he pledges the only thing he has of any value—his labour—for the rest of his life or till the debt is repaid and becomes a Hali and his creditor a *Dhaniama*. But the debt has a way of constantly increasing and never diminishing. As long as the debt remains, he also remains the slave of his *Dhaniama* and after him his children inherit the debt and the status of the *Hali* thus becomes perpetuated from generation to generation. These debts range from 100 to about 800 rupees, interest being calculated at rates varying from 9 per cent to 12 per cent. The *Khata* or account is of course kept by the *Dhaniama*, and he takes care to get his *Hali's* thumb impression on the *Khata* periodically so as to keep him in constant terror of the civil court. The landlord has his *Halis* as part and parcel of his property and uses them for field labour or domestic work according to his needs.

Until not long ago the *Halis* were treated virtually as a commodity which could be purchased or sold in liquidation of debt, and even to this day such transactions, though not common, are not unknown. The *Hali* or *Dubla* form of labour is a well-organised feature in the agricultural industry in the Surat district and these *Halis* and *Dublas* change hands like a commodity."

UNEMPLOYMENT.

The problems connected with unemployment in India are quite different from the problems which have arisen in highly industrialised countries like England, the United States of America and Germany. In the latter countries labour is divided into two distinct classes (1) industrial, and (2) agricultural. During periods of depression in industry those workers who are thrown out of employment either on account of a temporary or a partial closing down of concerns cannot fall back upon agriculture for earning their livelihood. It is necessary to repeat here, in order to understand this question clearly, that more than 70 per cent. of the population of India derive their livelihood from various occupations in connection with agriculture. This does not mean that agriculture is a perennial source of employment. Considerable unemployment and distress occurs during periods when the monsoon fails. Even during those years when the monsoon is generally successful, there are several parts of the country where the rainfall is deficient and there is not enough scope for the employment of all the abour available. Both the Government of India and the various Provincial Governments have devised various schemes for famine relief and the variations in the visitations of nature with their consequent periods of prosperity and distress have now been brought more effectively under human control than ever before in the history of India. It is not necessary to go into the details of the questions connected with famine relief in this section. The point which it is intended to bring out is that owing to the agricultural character of industrial labour in India, the problems connected with employment and unemployment are very closely related to those connected with the success or the failure of the monsoon.

In the main, Indian labour, generally, migrates to industrial centres during the slack season in agriculture. A large percentage of persons already employed in industry temporarily give up their employment during the sowing, transplanting and harvesting seasons. During periods of depression in trade and industry, industrial workers released from employment fall back upon agriculture. If the depression in trade and industry synchronises with the failure of the monsoon, the amount of unemployment becomes considerable and the resulting distress is enormous. Various States have devised schemes of Employment Exchanges for the purpose of studying the problems in connexion with the demand and supply of labour to control the movements of labour and to place it where it is required. The Government of India and the various Provincial Governments have considered the question of creating Employment Exchanges in India several times during the last ten years, but opinion is universally unanimous that owing to the preponderatingly agricultural character of Indian labour it is practically impossible to devise any satisfactory scheme for the formation of Employment Exchanges.

India is a State Member of the International Labour Conference, and as such she is bound according to the terms of the Treaty of Peace, to ratify and adopt, wherever possible, any Convention or Recommendation adopted by the International Labour Conference. The consideration of industrial unemployment was thrust upon the Government of India by the Washington Convention, which was adopted by the First International Labour Conference held in Washington in 1919. Each Member ratifying this Convention was required—

(*i*) to communicate to the International Labour Office all information, statistical or otherwise, concerning unemployment, including reports on measures taken or contemplated to combat unemployment;

(*ii*) to establish a system of free public employment agencies under the control of the central authority, and to appoint Committees,

including representatives of employers and workers, to advise on matters concerning the operation of these agencies ;

(*iii*) where systems of insurance against unemployment have been established, to make arrangements, upon terms to be agreed upon between the members concerned, whereby workers belonging to one Member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those of the latter.

In addition to this Convention, the First International Labour Conference also adopted a Recommendation which advocated—

(*a*) the abolition of employment agencies, which charge fees or which carry on their business for profit ;

(*b*) the establishment of an effective system of unemployment insurance ; and

(*c*) the execution of public works as far as practicable during periods of unemployment and in districts most affected by it.

The draft Convention was ratified by India but, in communicating this ratification to the International Labour Organisation at Geneva, the Secretary of State for India found it necessary " in order to avoid subsequent misunderstanding " to explain at some length the peculiar position of India in this matter and to emphasise the difficulties connected with a complete ratification by India owing to the predominently agricultural character of the country. The Government of India, in addressing the local Governments on the question arising out of the draft Convention and Recommendation adopted by the International Labour Conference, invited views on the following points—

(*i*) Advisability of creating Public Employment Agencies in congested areas to facilitate the migration of surplus labour to industrial areas where there is a shortage of labour.

(*ii*) Advisability of utilising Public Employment Agencies in connexion with recruitment for Assam.

(*iii*) Advisability of establishing Public Employment Agencies for the dissemination of information regarding employment during times of famine and scarcity to those in search of employment.

(*iv*) Advisability of appointing Committees representing employers and workers to advise on matters concerning the operation of Public Employment Agencies.

(*v*) Advisability of abolishing or controlling Employment Agencies which charge fees or which carry on their business for profit. The replies of the local Governments indicated that in most provinces the demand for labour exceeded the supply, that, even in provinces from which there was a large migration of labour, no difficulty had been experienced in obtaining information with regard to the areas where labour was in demand, that the establishment of public employment agencies would serve no useful purpose, and that such agencies might excite suspicion and be liable to be misunderstood by the people. With regard to the recruitment of labour for Assam, the local governments concerned were agreed that any experiment on the lines suggested would be risky. On the question of the abolition of control of employment agencies which charge fees or which carry on their business for profit, the replies of the local Governments indicated that employment agencies of this character were practically unknown in India. In the circumstances, the Government of India decided to take no further action on the draft Convention or Recommendation concerning unemployment.

Middle-class unemployment.—In recent years unemployment among the educated middle classes has been assuming alarming proportions and has attracted widespread public attention. In January 1926, a Resolution was passed by the Legislative Assembly in the following terms :—

" This Assembly recommends to the Governor General in Council that he may be pleased to appoint a Committee with a non-official majority to investigate into the problem of unemployment in general, and among the educated classes in particular, and devise suitable remedies, whether by a system of industrial and technical education, or by a revision of the existing system of education, or by offering encouragement to the starting of new industries, or by opening new avenues of employment, or by the establishment of employment bureaux, or by all these or any other means; and that the said Committee do make a report on the latter problem as early as possible. "

Similar Resolutions were also passed in some of the local Legislative Councils. The Government of India did not consider that the appointment of a Central Committee would serve any useful purpose, but in a circular letter drew the attention of the local Governments to the gravity of the problem of middle-class unemployment in India. As a result of the Resolutions passed by the local Councils, Committees were appointed by some of the local Governments. The reports of most of these Committees refer almost exclusively to middle-class unemployment, but the Punjab and the Bengal Committees also dealt with general unemployment. The Punjab Committee came to the conclusion that " there was no unemployment worthy of mention among the uneducated classes " : whilst the Bengal Committee observed as follows :—

" The labourer, if we may use the term, has not yet been divorced completely from the land, and he frequently possesses or has an interest in a small plot of land in his native place on the cultivation of which he can fall back in times of depression. Added to this, is the fact that industrial labour is still comparatively scarce in Bengal and in fact had to be imported from other provinces. The effect therefore of trade depressions on the industrial labourer in Bengal is so far very small".

Jute and Cotton Mill Industries.—In the jute mill industry in Bengal a large number of mills have, during the last two or three years, changed over from the multiple to the single shift system. It is estimated that on the single shift about 25 to 33 per cent. less labour force is required than on the multiple shift, but in spite of the changes no trouble has been reported

with regard to unemployment. In the Bombay cotton mill industry, out of about 140,000 workers employed, approximately 10,000 have been thrown out of employment on account of the introduction of efficiency methods of work whereby spinners are required to mind two sides of a spinning frame instead of one and where the ordinary two loom weaver is required to tend three looms. The Bombay Strike Enquiry Committee dealt with this aspect of the question in their report and they recommended the creation of an Out-of-Work Donation Fund. This has been dealt with in the summary given with regard to the findings of this Committee in the Section on Conciliation and Arbitration. Owing to a considerable depression in trade in thecotton mill industry in India, several cotton mills are being compelled either to close down completely or to resort to short time working by increasing the normal number of holidays in a month from four to eight. As we go to press two mills in Bombay have already notified their workers of short time working and one large group has given notice to all its employees that unless trade conditions improve it will be necessary to close down the mills altogether till such time as conditions improve. Several mills affiliated to the Ahmedabad Millowners' Association are also considering the question of resorting to short time working on the same basis as those mills which have already done so in Bombay.

INDUSTRIAL SAFETY AND INSPECTION.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The total accident rate per 100 000 employees in factories rose from 520 in 1904 to 1,025 in 1927 whilstin mines the total accident rate per 100,000 operatives also rose from 146 in 1904 to 357 in 1927.

Statistics for 1927.—The numbers of accidents classified according to fatal, serious and minor in each of the British Provinces in India the year 1927 are shown in the following table :—

Province.	Fatal	Serious	Minor	Total
Madras	11	260	962	1,233
Bombay	59	1,169	3,572	4,800
Bengal	66	1,165	2,320	3,551
United Provinces	14	81	1,131	1,226
Punjab	16	14	677	707
Burma	28	275	1,149	1,452
Bihar and Orissa	36	346	1,671	2,053
Central Provinces and Berar	3	44	246	293
Assam	5	34	28	67
North-West Frontier Province	..	1	..	1
Baluchistan	..	..	16	16
Ajmer-Merwara	1	10	206	217
Delhi	3	4	45	52
Bangalore and Coorg	..	..	43	43
Total	242	3,403	12,066	15,711
Total for the year 1926	270	3,155	11,441	14,866

The total for the year 1926 are added for purposes of comparison. The accident rate in factories is highest in Bihar and Orissa where it was 2,875 per 100,000 operatives. This is due to the steel industry which was alone responsible for 75 per cent. of the total number of accidents in the whole province. The accident rates in other privinces were Burma 1,433, Pubjab 1,412, United Provincess 1,388, Bombay 1,257, Madras 920, Bengal 634, Central Provinces 427 and Assam 138 per 100,000 operatives. In the Punjab, the United Provinces, Bombay and Madras a large proportion of the accidents occured in the railway workshops, but, as the result of an investigation made by the Railway Board, it was discovered that railway workshops reported a number of very trivial accidents which had not been required to be reported under the Indian Factories Act.

Factory Inspection.—The administrations of the Indian Factories Act is entrusted to Factory Inspectors in each province. Where breaches of the Act are discovered the managers of factories are prosecuted and in most cases such prosecutions result in convictions. All provinces except Assam have Factories Departments. In the Bombay Presidency the full time factory staff consists of the Chief Inspector of Factories, three Inspectors, three Assistant Inspectors and one Woman Inspector The Chief Inspector, two Inspectors and two Assistants have their headquarters in Bombay City. An Inspector and an Assistant are stationed in Ahmedabad. The Woman Inspector had headquarters in Bombay but has jurisdiction over the whole Presidency. She deals with problems mainly affecting women The Bombay Presidency is the only province in India which has a Lady Inspector of Factories. Full time Certifying Surgeons are stationed in Bombay and Ahmedabad. They have been appointed as Divisional Inspectors with powers under the Health and Sanitary section

of the Factories Act. They have also been granted powers under the provisions of the Bombay Maternity Benefit Act. The Director and Assistant Directors of Public Health have also been appointed as Divisional Inspectors under the Health and Sanitary sections of the Act. Their reports are sent to the Chief Inspector who passes orders on the same. Local Magistrates in the districts have ex-officio powers under the Employment sections of the Act.

Reporting of accidents.—Section 34 of the Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious *i.e.*, accidents which prevent a person returning to work for 21 days or more, and minor, are to be reported to the Inspector of Factories and to the District Magistrate and, in cases of any accident resulting in death to the officer in charge of the Police Station. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the reponsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Local Government, even though no injury may have resulted therefrom to any person. So far notifications have been issued under this section only in Bombay, Bengal and Burma.

Accident Prevention.—The chief influences in the prevention of accidents are (a) the powers of Inspectors under the Factories Act to compel managers to erect adequate fencing and to take precautions against accidents; (b) the voluntary interest of managers in safety measures and safety precautions; and (c) the interest of insurance companies as a result of the operation of the Workmen's Compensation Act. In many provinces the existing rules made under the Factories Act cover "*Safety-First*" measures such as compelling certain classes of workers to wear tightly fitting clothes, to prohibit children from entering into certain parts of factories, etc. but no serious attempt has been made in the shape of a "*Safety-First*" campaign except in the case of a few solitary instances. In some provinces the first three resolutions adopted by the eleventh Session of the International Labour Conference have been communicated to all industrial concerns, In the Bombay Presidency the Millowners Mutual Insurance Association have recognised the value of safety posters as an aid in the reduction of accidents and have undertaken the preparation of some posters for the textile industry. The posters which are under preparation will illustrate the danger of carding machines at the front plate either during or after the shifting process, dangers at the underside of the lickers-in, dangers of wearing unsuitable clothing and the danger from careless sweeping under ring frames.

The railways are of course pioneers in the introduction and the continuance of active propaganda in "*Safety-First*" work in all departments. These activities cover railway workshops (which come under the Indian Factories Act) as well. In order to present a complete picture of this work on railways the work done for railway workshops will be dealt with under Railways. Perhaps the best known instance where first class "Safety-First" work is being carried on in India is that done by the Tata Iron and Steel Company at Jamshedpur. The Company has since 1920 subscribed to the British Industrial Safety-First Association and has installed notice boards all over the plant exhibiting the posters supplied by that Association. The literature received from the Association has also been circulated broadcast throughout the works.

First-Aid and Medical Relief.—Some of the Local Governments have framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first-aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing 500 and more operatives. Most of the factories are situated within easy reach of Government hospitals or hospitals maintained by Local Authorities but many of the larger and enlightened employers are already maintaining their own medical staff and equipment which are easily available in cases of accidents. In the Tata Iron and Steel Works at Jamshedpur boxes with first-aid supplies are maintained in each department and two first-aid hospitals in different parts of the plant are staffed with doctors and compounders in readiness to render first-aid to injured persons.

Mines.—The Indian Mines Act of 1923 empowers the Governor-General in Council to frame regulations for the safety of persons employed in mines (Section 29, clauses (k) to (p). Local Governments are also empowered to frame rules under the Act to ensure the proper fencing of a mine for the protection of the public. In addition, the Chief Inspector of Mines may call upon the owner, agent or manager of a mine to frame bye-laws which are not inconsistent with the provisions of the Act, regulations or rules to prevent accidents and to provide for the safety, convenience and discipline of the persons employed in the mine (Section 32). The bye-laws, when approved by the Local Government, have effect as enacted under the Act. Further, Section 19 of the Act gives special powers to the Inspector of Mines to take action when any danger is apprehended which is not expressly provided for by the Act, regulations, rules and the bye-laws. The Governor-General in Council has framed two sets of regulations, namely, the Indian Coal Mines Regulations, 1926, which apply only to coal mines and the Indian Metalliferous Mines Regulations, 1926, which apply to all other mines. These regulations provide for the proper maintenance of shafts and outlets, roads and working places, haulage arrangements, fencing and gates; for the restrictions which have to be observed in raising or lowering persons or materials; for the precautions to be taken in the use of explosives; and for adequate ventilation and lighting.

Railways.—The Railway Department conducts an intensive "Safety-First" propaganda every year which embraces the following among other activities:—

(1) Safety posters and safeguards are put up on prominent points both in English and in the vernacular. Some of these, *e.g.*, on the Bombay, Baroda and Central India Railway, are prepared from actual photographs of safe and unsafe methods of working in selected branches of manufacture and maintenance work in the railway workshops.

(2) An illustrated booklet was compiled by the Great Indian Peninsula Railway during the year 1926-27 which has been translated into a number of vernacular languages and distributed throughout the line on certain railways

(3) Photographs and special articles are published in the Railway magazines for the instruction of the staff.

(4) Inspecting subordinates are instructed to take the opportunity, while visiting stations, of addressing the staff on "Safety-First".

(5) Coloured pictures showing the right and wrong way of doing a job are posted at several places for the benefit of the illiterate staff.

(6) A "Safety-First" film was prepared by the Central Publicity Bureau during the year 1927-28 and copies distributed to railways. The film is displayed weekly by the travelling cinemas of the railways.

(7) A "Safety-First" pamphlet has been prepared by the Central Publicity Bureau and is being issued to all railway administrations.

WORKMEN'S COMPENSATION.

The Workmen's Compensation Act of 1923 came into force on July 1st, 1924. This measure when originally introduced in the Legislative Assembly, contained clauses modifying the ordinary law in respect of employer's liability and making it easier for injured workmen to sue their employers for damages in the Civil Courts. These clauses applied only to workmen who come under the workmen's compensation provisions, so that, although they omitted the limit to damages which governs their counterpart in England, they were not likely to be much used. The clauses in question were deleted from the measure by the Legislative Assembly. The Act as passed by the Legislature covers ten classes of workmen. Some of these such as members of fire brigades, telegraph and telephone linesmen, sewage workers and tramwaymen are small, and as the definition of seamen is limited to those employed are on certain is inland vessels, only a very small proportion of Indian seamen come under Act. The five important classes covered are the workers in factories, mines, docks, and on railways, practically all of whom are included and those engaged in certain types of building work, notably the construction of industrial and commercial buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than Rs. 300 a month are excluded, except on the railways. Power is taken to include other hazardous occupations by notification from time to time. All occupations involving blasting operations were thus proposed to be declared by the Governor-General in Council, as hazardous occupations. Compensation is to be given as in the English Act, for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workmen contracts a scheduled disease, it will usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally difficult to get compensation for disease, as they will have to prove that the disease arises "solely and directly" from the employments, The diseases scheduled at present are anthrax, lead poisoning and phosphorous poisoning. Whether compensation can be claimed for diseases other than those scheduled is doubtful, but the list is made capable of extension. Mercury poisoning was thus added to Schedule III by notification, dated 28th September 1926.

In order to bring the Indian law into conformity with the provisions of the Draft Convention concerning Workmen's Compensation for occupational diseases adopted at the Seventh International Labour Conference held at Geneva in 1925, which has been ratified by India, necessary changes were made in sub-section (2) of section 3 and in the list of occupational diseases given in Schedule III of the Act. Certain occupations in connection with operations for winning natural petroleum or natural gas and in connection with the loading, unloading and fuelling of a ship in any harbour, roadstead or navigable water were also brought within the purview of the Act by notification issued by the Governor-General in Council in exercise of the powers conferred by sub-section (3) of section 2 of the Act.

The Amending Act of 1929.—A number of amendments have suggested themselves or have been proposed by Commissioners for Workmen's Compensation and Local Governments. Some of the proposals involved the modification of the principles underlying the Act of 1923 or of its more important features. So far as these are concerned, the Government of India consider it advisable to consult Local Governments and the public generally before forming conclusions. With a view to revise the Act so as to amend those Sections or parts of Sections which were admittedly defective and to introduce changes which were likely to raise no important controversial questions and which would be generally recognised as improvements, the Government of India introduced into the

Legislative Assembly on 21st September 1928, a Bill further to amend the Workmen's Compensation Act, 1923. The main features of this Amending Act are (1) that the discriminating restrictions placed on workmen employed in the construction, repair or demolition of a building or bridge, with regard to their ineligibility for compensation except in the case of death or permanent total disablement has been removed; (2) that all payments to dependants of the deceased workmen (except advances to the extent of Rs. 50 for funeral expenses of the deceased workman and to the extent of a hundred rupees on account of compensation to any dependent) and any lump sums payable to minors should be paid through the Commissioner; (3) deposits of trivial amounts, *i.e.*, less than Rs. 10 has been done away with; (4) provision is made for the protection of lump sums payable to a woman or a person under legal disability by empowering the Commissioner to invest, apply or otherwise deal with them for the benefit of the women, or of such person during his disability; (5) powers are vested in the Commissioner to recover any amount obtained by any person by fraud, impersonation or other improper means: and (6) the benefits of the Act are extended to (*a*) any person employed for the purpose of loading, unloading, fuelling, constructing, repairing, demolishing cleaning or painting any ship of which he is not the master or a member of the crew, or (*b*) employed on a railway as defined in Sections 3 (4) and 148 (1) of the Indian Railways Act, 1890, by a person fulfilling a contract with a railway administration or (*c*) employed as an inspector, mail guard, sorter or van peon in the Railway Mail Service, or (*d*) employed in connexion with operations for winning natural petroleum or natural gas as a rig-builder, driller, driller's helper, oil-well puller or bailing or cleaning oil wells or putting in and taking out casings or drill pipes in oil wells or (*e*) employed in any occupation involving blasting operations.

As a result of the experience gained of the working of the Act, the Government of India have thought it desirable to re-examine the principles underlying the Act as it stands to-day and its more important features. The enactment of 1923 was admittedly an experimental measure and many of its features owe their origin more to a desire to minimise the difficulties attendant on the introduction of an entirely new measure of this kind than to any belief in their permanent value.

Statistics.—The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the Act came into force. These statistics relate to the more important classes of workers, *i.e.*, workers in factories, mines and docks and on railways and tramways. The total amount of compensation paid to these classes of workers was about 6¼ lakhs of rupees in 1925, 8¼ lakhs in 1926 and 11 lakhs in 1927. The total amount of compensation paid in respect of accidents in the Tata Iron and Steel Works at Jamshedpur where over 25,000 persons were employed, was as follows:—

	Rs.
1926	58,266
1927	52,418
1928	78,503

Occupational diseases have figured for the first time in 1927 in connexion with the working of the Act in India. It is reported that a compositor in a printing press in Bengal owned by the Local Government was found to have fallen a victim to lead poisoning for which he was paid Rs. 2,730 as compensation. The following table shows the number of cases, classified by nature of injuries, and the amounts of compensation paid in each year since 1924:—

Year.	Number of Cases.			Amount of Compensation paid for.		
	Fatal.	Non-Fatal.	Total.	Fatal Cases.	Non-Fatal Cases.	All Cases.
				Rs.	Rs.	Rs.
1924 *—						
Adults ..	249	3,898	4,147	82,085	66,248	148,333
Minors ..	2	19	21	375	1,516	1,891
1925—						
Adults ..	583	10,751	11,334	345,995	295,535	641,530
Minors ..	7	30	37	200	2,391	2,591
1926—						
Adults ..	631	13,387	14,048	425,935	394,385	820,320
Minors ..	3	45	48	460	695	1,155
1927—						
Adults ..	777	14,397	15,174	581,400	527,984	1,109,384
Minors ..	6	36	42	840	1,030	1,870

* The figures for 1924 relate to only the six months from 1st July to 31st December.

The following tables set out the proportion of contested cases out of the total number of applications received by the Commissioners in each year:—

Year.	No. of Applications disposed of.	Number of contested Cases.	Percentage of contested cases to total disposed of.
1924	92	14	15·2
1925	539	100	18·6
1926	835	198	23·7
1927	1,223	281	22·9

The details of agreements (*i*) disposed of, (*ii*) registered as filed and (*iii*) rejected on account of inadequacy are given below for each year:—

Year.	Number of Agreements.			
	Disposed of.	Registered as filed.	Registered after modification.	Not registered on account of inadequacy, etc.
1924	41	33	1	7
1925	399	390	3	6
1926	591	583	5	3
1927	701	682	12	7

Compensation on Railways.—The total amount of compensation paid under the Act by the principal railways in India, since 1st July 1924, was over Rs. 13,00,000, the average per year being nearly 3,00,000. This is over and above the compensation paid under departmental rules.

Effect on Industry.—A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*vide* para 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the small coal mines have been compelled to close down their mines due mainly to the severe depression with which the industry has been faced. In the Punjab the proprietors of the coal mines in the Jhelum District are reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them have had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta, Bombay and Madras. In these three provinces insurance is widely resorted to by the employers but in the other Provinces accident insurance does not appear to have made much progress.

INDUSTRIAL HOUSING.

One of the most vital problems facing industrial employers in India to-day is that connected with the housing of the labour which they employ. The importance and the urgency for providing decent housing cannot be sufficiently emphasized.

The conditions of industrial housing in India are, in many, cases appalling and the majority of buildings, tenements or huts in which industrial labourers are housed are insanitary and more or less uninhabitable from Western points of view. Provincial Governments, Municipalities, Improvement Trusts and the larger employers have done a great deal to mitigate the evils resulting from an insufficiency of decent sanitary housing for labour, but a considerable amount still remains to be done before this question can be considered to have been satisfactorily solved.

Several commissions and committees of inquiry appointed by the Government of India and the Provincial Governments in connection with various subjects have dealt with the question of industrial housing. The Industrial

Commission in 1918 urged that, in addition to the scheme followed by the Improvement Trust in Bombay, other measures should be adopted such as the refusal of permission with a few exceptions, to fresh industrial concerns to be established, the setting up of a special area for industrial development, the removal of the existing railway workshops from the city, supply of housing accommodation to the employees by railways, Government departments and public bodies, improved communications with a view to creating industrial suburbs, and a definite programme of construction to be taken up by local authorities. The findings of other commissions and committees with regard this question follow similar lines.

Bombay Presidency.—The first attempt to improve housing conditions in Bombay City was made after the plague of 1896 when the heavy mortality and the great exodus that followed paralysed the trade and industry of Bombay. The Bombay Improvement Trust was established in 1898 " for the work of making new streets, opening out crowded localities, reclaiming lands from the sea to provide room for the expansion of the city and constructing sanitary dwellings for the poor and the police." Owing to its limited powers and the various difficulties which it encountered the Trust had to content itself for the first few years of its existence with "slum-patching," the development of a few building sites, the construction of a few chawls and the development of main roads. In more recent years, however, the Trust has been able to do considerable good work in the direction of industrial housing and has built over 1,300 tenements for housing its own labour and 99 chawls containing 8,896 tenements in all for housing labour in general. The Bombay Port Trust which engages on an average about 8,300 manual workers in all its departments has provided accommodation for a little over 3,000 of its workers. The Bombay Municipality has provided a large number of chawls for its employees as will be evidenced by the fact that 5,538 out of 7,537 scavengers employed are provided with quarters. Varying proportions of the numbers of employees in the other departments of the Municipality are also provided with adequate housing. According to the information collected by the Bombay Labour Office in 1925, 28 out of the 76 textile mills in Bombay City which furnished information for the enquiry had provided housing for their operatives. 7 out of these mills provided residential accommodation only for employees in the Watch and Ward Department and the rooms provided were given free of rent. In the 22 mills which provide partial housing for all classes of operatives, the number of workers who lived in the tenements provided amounted to 12,149 out of 64,720 employed. The G.I.P. Railway owns 20 chawls containing 841 one-room tenements and the B. B. & C. I. Railway owns 303 one-room tenements for housing their employees.

No action was taken by the Local Government in Bombay City for housing general industrial labour till after the end of the war. A broad and comprehensive policy was drawn up just after the end of the war by the Government of Bombay under the personal inspiration of Lord Lloyd, then Governor of Bombay, for dealing with the problem. A Development Directorate was formed in 1920 to co-ordinate the various housing activities of Government, the Municipality, the Improvement Trust and the larger labour employing organisations. The original intention of the Directorate was to construct 625 chawls located in 3 industrial centres and to comprise of 50,000 tenements for working classes, within a period of 9 years from 1921 to 1929. The original estimated cost was 5¼ crores of rupees and a " town duty " of a rupee per bale of cotton on all cotton entering Bombay was imposed under the City of Bombay Municipal and Improvement Act of 1920 The scheme was launched at a time when the industrial prosperity of the country was at its zenith and labour conditions in the City were abnormal. By the end of 1927, 207 chawls with 16,524 tenements were constructed but only 123 chawls with 8,234 rooms were occupied. These chawls did not attract industrial labour in Bombay to live in them, the reasons attributed to the failure being the distance of the chawls from the mills, the absence of travelling facilities and other amenities of city life. The average economic rent per tenement worked out at Rs. 16 per month but the actual rents charged were fixed, on an average at barely 50 per cent of the economic rent and accommodation can now be had in the chawls at Worli at Rs. 5 per room on all floors. The rents in the Naigaum and Sewri chawls are Rs. 7 per room on all floors and for those in the chawls at DeLisle Road Rs. 8 per room per month on all floors. One rupee extra is charged for certain corner rooms. The rents charged prior to 1st April 1929 were, however, higher for all centres. The figure of the number of rooms occupied on the 31st December 1927, namely, 8,234 was the highest ever recorded. Frequent strikes in the cotton textile mills and general industrial unrest in Bombay City have been largely responsible for the non-occupation of the rooms in the chalws of the Development Department during the last two years and the figure for the number of tenements occupied on the 31st March 1929 was only 6,805 or a little over 40 per cent. of the number of tenements available.

Ahmedabad City.—Probably in no other industrial centre in India is the condition of the housing of the working classes so bad as it is in Ahmedabad. The Textile Labour Union at Ahmedabad has recently published a pamphlet entitled " A plea for Municipal Housing for the Working Classes in the City of Ahmedabad " for submission to the Ahmedabad Municipality. In this pamphlet the Union deals with 23,706 tenements observed and studied by it. The Union reports that there is absolutely no provision of water in the case of 5,669 tenements: 3,117 tenements have a supply of some sort of wells. Even those which are supposed to possess the advantage of Municipal water have a hopelessly inadequate arrangement in this respect—a tap or two in a compound for a group of 200 or more families. Bathing and washing accommodation has not been thought of except in one or two chawls erected by mills. 5,360 tenements have no latrine accommodation. In most of the remaining tenements the Union reports that the arrangements are miserable in quality and grossly insufficient

in quantity and that urinals are conspicuous by their total absence. Only a few tenements are provided with any sort of drainage. No other drainage arrangement exists.

The evils of bad housing in Ahmedabad were considerably aggravated as a result of the flood of July 1927 in Gujarat which destroyed over seven thousand houses in the City of Ahmedabad. The bulk of these houses belonged to the working classes. The Union in the pamphlet referred to, reports that the situation which had arisen in consequence of the flood was grave beyond words. Of the thousands who had been unhoused many came to share with their relatives and friends the accommodation that was already heavily overcrowded. Hundreds were altogether without shelter. The relief operations that were then carried out included the construction of huts intended to provide temporary accommodation to a number of those who could make no arrangement of their own. The Relief Committee set up by the leading citizens of Ahmedabad for reconstruction work recommended that the Municipality should take as early step as possible to construct 5,000 sanitary tenements by raising a loan for the purpose.

In the opinion of the Labour Union the solution of the question of housing constitutes one of the obligatory duties of the Municipality and a growing appreciation of this aspect of the housing question on the part of the authorities has led to the incorporation in the City Municipalities Act (1925) under section 71, of a provision permitting City Municipalities to undertake provision of sanitary dwellings for the poorer classes.

Bengal Presidency.—Housing is generally provided in Bengal by employers but the extent and quality of the housing depend on the cheapness and availability of land. In the more congested areas in Calcutta, Howrah and the nearer neighbourhood housing facilities are not provided on so big or so good a scale as in other areas. Most jute mills provide for their workers rooms constructed in the neighbourhood of the mills at rents varying from annas 8 to Re. 1 per room per month. The sizes of the rooms vary from 8′×8′ to 10′×10′ and in some cases to 12′×10′. In nearly all cases the rooms are constructed back to back and in most pucca floors and tiled roofs have been provided with narrow verandahs generally 4′ wide used for cooking purposes. Very often the rooms are dark and in none of them sun light can penetrate through. Ventilation is unsatisfactory owing to the method of construction and the only openings in the rooms are the doors. If windows are provided they are kept shut. No chimneys or openings are provided for the escape of smoke in the majority of the houses. Recent enquiries made into the condition of housing in Bengal show that drainage, water supply and conservancy arrangements in *bastis* are abominable. Government and other public agencies do not provide housing, as in Bombay, for industrial purposes but some Government and public concerns do provide quarters for their own employees.

Madras Presidency.—As a result of the exertions of the Labour Department of the Government of Madras and the Co-operative Building Societies and a number of local authorities some houses have been built for poor workmen in Madras City. Out of 14,080 registered factories 211 factories are reported to have provided housing for a small number of their employees. Almost all plantation estates in the Nilgiris, Malabar and Coimbatore provide "lines" for the cooly labour employed.

United Provinces.—Out of 330 regulated factories 83 make some provision for the housing of workmen and their families. Altogether about 5,400 single room and 1,045 double room tenements are provided by the employers. The McRobertsganj, Allenganj and the Juhi settlements of the British India Corporation at Cawnpore are about the only important examples of housing provided by employers for their workmen in that city. A scheme has however been launched by some of the owners of factories in Cawnpore for providing housing for some twenty thousand workmen and their families but it is still under discussion. Except as employers the Government of the United Provinces has done nothing in connection with industrial housing. The Improvement Trust of Cawnpore has put up some temporary housing and the Improvement Trust of Lucknow has put up a model barrack in the area set apart as an industrial area. In the *bastis* or *hatas* where housing is provided by private landlords the type of tenement available is usually a small mud hut with a room at the back and a room or a verandah in front. The size and height vary. The usual size is 10′×8′. The normal height is 6′ to 8′. The only outlet for ventilation is the small main door. Even such tenements are reported to be shared by 2, 3 or even 4 families and as many as 10 persons may be found as inmates.

Central Provinces.—Housing is provided for about 7,500 workers by some of the larger factories and mills in the Central Provinces. Nineteen per cent. of textile labour and 7·5 per cent. of the labour employed in minor industries is housed. The Pulgaon Cotton Mill maintains a settlement covering an area of 15 acres on which the millhands are allowed to build their own houses in payment of a nominal ground rent of annas 4 per annum per 100 sq. ft. Probably the most magnificent scheme of industrial housing conceived in India is that launched by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. These mills have leased a plot of 200 acres at Indera, a suburb of Nagpur, two miles from the mills. The scheme is based on a desire to establish a model village. The ideas are to build houses of the bungalow type standing on their own ground in plots measuring 36′×53′ with the limitation that building will not be allowed on more than one-third of the space provided.

Bihar and Orissa.—All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses. Their design, construction, ventilation and general amenities are governed by the Jharia Mines Board of Health. Workers recruited from villages within five miles from the mine frequently prefer to live in their own villages and walk backwards and forwards to their work. In five collieries employing about ten thousand workers 4,775 houses are provided, five of the worst equipped mines employing 424 workers

provide 156 houses and five normally equipped mines employing 3,084 workers provide 1,162 houses. In many cases more than one employee is accommodated in one *dhowra* or house. Very frequently a man and his wife and his family all of whom may be recorded as separate labourers in the figures of the mining population occupy one house. Every house must be licensed. Licenses are not given unless the standards are complied with. If labourers are found in occupation of unlicensed premises the management is liable to prosecution. No rent is however charged and subletting is not known.

The Tata Iron and Steel Works at Jamshedpur have built 4,521 residential buildings. Of these, 301 are rented at over Rs. 20 per month. Sixteen are rated as hotels. The accommodation provided at present is insufficient and one of the problems the Company will have to face is the provision of a larger amount of housing.

Assam.—Free quarters are provided for all residential employees on tea estates. Such non-resident labour as is employed is casual labour which comes from the adjoining villages and lives in its own houses. In the mines and oil fields free quarters are provided for the labour force employed. A Committee of Inquiry appointed in 1921-22 recommended that endeavours should be made to house immigrants from different provinces together in hamlets instead of putting workers from all provinces indiscriminately into barracks or lines. The main objection to this recommendation is the want of land as all available land is under tea. The housing conditions in the coal and oil fields are reported as being quite satisfactory. In Assam the tea estates are regularly inspected by District and Sub-Divisional officers. Although the legal powers of interference have been curtailed by the abolition of indentured labour and the repeal of so much of Act VI of 1901 as related to such labour, still in practice the inspecting officers do invariably report on the condition of the lines. They are quick to call attention to the need of improvement and the management is generally ready to effect such improvements as are considered necessary.

Other Provinces.—No special remarks are necessary in connection with the question of industrial housing in other provinces. Generally speaking no industrial slums as such or any big urban inflammation due to the presence of agglomerations of factory or other workers is particularly noticeable and the housing of labour is not to be differentiated from the ordinary poor citizen. Except in those cases where Government action has been definitely indicated, the governments of the various other provinces in India have done nothing for the improvement of industrial housing.

Railways.—The general policy on railways is to provide residential quarters where it is necessary for special reasons to provide accommodation for certain classes close to their work and where conditions are such that private enterprise does not adequately meet the demand for housing the staff. The total expenditure incurred on housing provided by the principal railways since the commencement of operations amounts to Rs. 22·41 crores while the expenditure incurred during the last four years exceeds four and a half crores. The programme for the next two years contemplates a further expenditure of Rs. 1·87 crores. Notwithstanding this expenditure there is, at present, a considerable dearth of quarters on most railways. Endeavours are, however, continuously made to construct new houses in accordance with an annually pre-arranged programme as funds permit.

Acquisition of Land for Workers' Houses.—Except the Railways, which can obtain land under the Land Acquisition Act for railway purposes which include building quarters for necessary maintenance of the staff, no other industry in India is covered by that Act. Considerable difficulty has been experienced by collieries in the Jharia coal fields for acquiring land for purposes of housing schemes. In 1920 the Coal Fields Committee suggested that every facility should be offered to a Colliery Company or proprietor to acquire land under the Land Acquisition Act for the housing of labour. In considering the amendment of the Land Acquisition Act in 1922, the Governmen- of Bihar and Orissa suggested that some amendment might be made in order to give facilities for the acquisition of land for colliery housing purposes. The Government of India, however, did not include any such amendment in their amending Act. The matter has again been before the Local Governement in connection with the revision of Sections 49 and 50 of the Chota Nagpur Tenancy Act and a Bill was introduced and passed in the winter session of the local Legislative Council in 1929. Slight alterations were found necessary in the Bill to improve its working and these changes have recently been passed by the Legislative Council.

HEALTH.

Owing to the migratory habits of the Indian industrial workers it is very difficult to keep any satisfactory statistics regarding health conditions, *e.g.*, morbidity rates among the workers, their average weight, height, etc., and in the absence of any statistical information it is not possible to generalise about these matters. Health conditions in the important industrial centres in India cannot however be said to be very satisfactory. This is due to many causes such as poor diet, overcrowded and insanitary dwellings, want of open air and exercise, etc. But the main cause of ill health particularly among the workers in Bombay and Bengal, appears to be the prevalence of malaria in the localities in which they live. Major Covell, the Special Officer appointed by the Government of Bombay to enquire into Malarial conditions in Bombay City who submitted his report in 1928, says: "It (Malaria) is still present in certain quarters of the southern portion of the City to a serious extent, but the most intense malaria at the present time exists in the vicinity of the mills, more especially in Worli and Parel sections. In the northernmost portion of Worli section, malaria is also slight, but as soon as the edge of the mill area is reached the incidence of the disease rises abruptly and extends over the greater part of Worli and Parel. The correlation between the intensity of Malaria

and the proximity of mills was most striking, especially in certain cases where a single isolated mill happened to be present, *e.g.*, the Victoria Mill in Chowpaty and the Colaba Land Mill in Colaba. The vast majority of the mills in Bombay are situated in the highly malarious area."

In the mines in the Madras Presidency, Malaria prevails in the Cuddapah district and at every change of season there is a prevalence of widespread fever. Malaria also prevails in the Thummaragudi mines throughout the year and the cold winds during the rainy season from Sandur Hills affect the health of the labourers in the mines of Tonasigeri. Tuberculosis prevails among industrial workers in the United Provinces and Bihar and Orissa, and *Kala Azar* is common among workers in certain tracts like Bihar and Orissa. Hookworm is generally regarded as an industrial disease associated with miners.

The following table gives the birth and death rates and the rate of infant mortality per thousand of the population for some of the important industrial centres. The figures, however, relate to the whole population in most cases and as such are not likely to give an adequate idea regarding mortality, etc., among industrial workers. Besides, in certain cities like Bombay, it is customary for married working class women to leave the city for their confinement and register births in the mofussil.

A table showing (a) Birth-rate and (b) Death rate per thousand of population and (c) Infant mortality for 1,000 *registered births for certain important industrial centres.*

Centre.	Period.	Birth-rate per 1,000 of population.	Death-rate per 1,000 of population.	Infant mortality per 1,000 registered births.

Working conditions.—In the Bombay Presidency the working conditions in the factories are usually considerably in advance of the conditions in the homes of the workers. The Factories Department has recently effected an appreciable improvement in the development of ventilation in factories. The working conditions in the average Cotton Mill in the U. P. are reported to be not very satisfactory and those in the Central Provinces and Berar leave plenty of scope for improvement especially in ventilation, maintenance of suitable temperature, suitable flooring, proper spacing of machinery and provision of places for meals. Considerable improvements are required in the seasonal factories for alleviating the dust nuisance and for proper lighting. In the Jute mills in Bengal, especially in the sorting and carding section there are no adequate arrangements for taking off the dust and the workers get a particular kind of rash all over their bodies in the beginning of their employment. Women are mostly employed in this Department and they bring their infants and children who live in that dust-laden and hot atmosphere during working hours. Working conditions are, however, generally satisfactory in jute mills and other large industrial concerns.

A question closely connected with the health of the workers is that relating to ventilation and humidification in cotton mills. For the spinning and weaving of cotton a humid atmosphere is required. Artificial humidification is necessary in the hot season and when this is effected by the letting in of steam when the temperature of the factory is high it produces very trying conditions of work. The Government of India instituted a special enquiry into this question in 1921. Mr. T. Maloney (now Secretary to the Bombay Millowners, Association) who was appointed special adviser for the purpose, presented to the Government of India a report entitled "Humidification in Cotton Mills" in 1923. The replies from local Governments received by the Government of India showed complete unanimity in regard to the suggestion in the report to the effect that the use of steam should be prohibited when the temperature in a Department of a factory exceeded 85 degrees F. In 1925 the Government of India suggested that a rule should be framed by the local Governments under the Factory Act prohibiting the use of live steam at temperatures beyond 85 degrees F. Such a rule has been issued in all the provinces concerned except Delhi, where it is expected to be issued very shortly, and Bombay. The Government of Bombay is in favour of such a rule but it considers that it would be *ultra vires* the provisions of the Factory Act. However, the Bombay Millowners themselves are discontinuing the practice of using steam for the purpose of humidification when the temperature is above 85 degrees F. The problem affects the Bombay Presidency most and notable progress has already been made in this direction in that Presidency. Thus Ahmedabad has generally recognised the need of efficient ventilation and cooling arrangements to neutralise the trying climatic conditions of that centre and the mills in Sholapur have installed several special ventilatory, cooling and humidifying plants that have considerably improved the working conditions in those mills.

Extent of Medical Facilities provided.—The result of the enquiry into Welfare work conducted by the Labour Office in 1926 show that the provision of facilities for medical attendance and the supply of medicines is fairly general in all the larger labour-employing organisations in the Bombay Presidency. Thus 68 out of 76 mills which supplied information in Bombay city reported that they maintained dispensaries for the supply of medicines, 4 mills, provided only medical attendance and 3 mills supplied ordinary drugs. Out of 59 working mills in Ahmedabad, 41 mills provide both for medical attendance and supply of medicines and four mills maintain hospitals in addition to dispensaries. All the five mills in Sholapur provide both medical attendance and medicines. One mill maintains a hospital. In most cases the dispensaries are attended by qualified medical practitioners, The mills make no or only a nominal charge for the supply of medicines. The Bombay Port Trust maintains several dispensaries, with qualified medical men in attendance for each department. The Karachi Port Trust provides a free dispensary with a medical officer at Manora. The Bombay Municipality maintains 2 special small dispensaries for its employees at Love Grove and Kurla in addition to the several Municipal dispensaries in the City. The Bombay Improvement Trust provides 4 dispensaries and 2 hospitals for its employees. Among Government Departments in Bombay, the Royal Indian Marine Dockyard maintains a dispensary under a permanent Medical Officer. The Yeravda Prison Hospital gives free medical aid to the employees of the Yeravda Prison Press, The Security Printing Press at Nasik has a dispensary with a Sub-Assistant Surgeon. The Social Service League conducts a charitable dispensary at Parel for the benefit of womens and children of the poor, middle and workin classes. The Textile Labour Union in Ahmedabad is the only association of employees which provides medical facilities for its members. There are also Government Municipal or charitable hospitals and dispensaries which are open to the public and which are used by the labouring classes. In the United Provinces ,many of the larger employers maintain dispensaries but no hospitals. The Dufferin Fund, a private organisation aided by grants from Government and local bodies, maintains female hospitals at the most important towns. The Lady Chelmsford Maternity and Child Welfare League maintains a number of centres for child welfare and the treatment of maternity cases. Many of the employers in the Central Provinces and Berar have provided well-equipped dispensaries and medical facilities are within easy reach of the workers in almost all the factories and every important mining area in the Province. Some of the larger concerns in Bihar and Orissa and in the Punjab also provide medical facilities for their employees. In Madras only a few large factories provide dispensaries. Medical factories in the plantations are very good. All the jute mills in the neighbourhood of Calcutta provide dispensaries but most of the doctors in charge are not registered medical graduates. In all the tea gardens in Assam and in Bengal medical attendance and medicine are provided for, for all classes of employees. The medical arrange-

ments in a large number of estates are supervised by European medical officers. Well-equipped hospitals are also provided for the labour force in the mines and oil-fields in Assam. Part-time medical attendance and medicines are provided by the employers in the Asansol Mines Board Area. Medical facilities are also provided in the mines in Madras. In the Jharia Mining Settlement eight hospitals are maintained by employers, the number of beds varying from 6 to 12 in each ward.

Sickness Insurance.

The Government of India considered the possibility of introducing a scheme of sickness insurance in India in connection with the Draft Conventions and Recommendations adopted by the Tenth International Labour Conference in 1927 and came to the conclusion that owing to the migratory character of industrial labour, the want of qualified medical practitioners in sufficient numbers, the existence of indigenous systems of medicine and the opposition of the worker to any system involving compulsory deductions from pay, it would not be practicable to introduce a comprehensive scheme of sickness insurance on the lines of the Conventions. The Government of India, however, invited the views of Local Governments in this matter. But it was pointed out that the Indian worker, owing to his illiteracy, would not appreciate the advantages of any such schemes and that he would object to the payment of any contribution, particularly because he gets medical treatment free of charge in most cases. The main difficulty in the way of the introduction of any scheme of sickness insurance was stringency of finance.

Maternity Benefits.

The first International Labour Conference at Washington in 1919 adopted a draft Convention concerning the employment of women before and after child birth. The Conference also adopted a resolution inviting the Government of India to make a study of the question of the employment of women before and after confinement and of maternity benefits. In pursuance of certain suggestions put forward in the Legislative Assembly, the Government of India made enquiries in 1924 regarding the extent to which maternity benefit schemes were in force in India. The results were published in 1925 in Bulletin No. 32 of Indian Industries and Labour. Since that date maternity benefit schemes have been introduced by certain employers, an important scheme being started at Jamshedpur from January 1929 by the Tata Iron and Steel Company.

In September 1924, Mr. N. M. Joshi made the first attempt in the Legislative Assembly to introduce a Bill to make provision for the payment of maternity benefits in certain industries. Under this Bill, the Local Governments were to be asked to establish a Maternity Benefit Fund and to make payments out of this Fund. The Bill, after circulating, was thrown out by the Assembly in August 1925. But the clue was taken up by some Provincial Legislatures and in August 1926, the Bihar and Orissa Legislative Council passed a resolution recommending to Government to take early steps to protect female labour employed in the coal-fields and all industrial plants of the Province and to prohibit their employment during the advanced state of pregnancy and three weeks after childbirth.

A Maternity Benefits Bill was introduced in 1929 in the Central Provinces Council by Mr. R. W. Fulay, a non-official member of the Council, and was referred to a Select Committee in August 1929. Maternity Benefits are being given at present at the Empress Mills at Nagpur and at four other factories in the Central Provinces. All these schemes are similar, leave on absence on full wages for a period varying from one to two months being given to expectant mothers who are required to obtain from the mill octor an opinion regarding the probable date of confinement.

The only Province in India that has passed a Maternity Benefit Act is Bombay. The Act came into force on 1st July 1929. According to this Act, the payment of maternity benefits is an obligation which is imposed directly on the employer. The Bombay Municipality has started since February 1928, a maternity benefit scheme by which benefit is given to halalkhore and scavenging women in the form of leave with full pay not exceeding 42 consecutive days, including the date of confinement, as certified by the Executive Health Officer, if the birth takes place in Bombay, and by a Police Patel or by hospital authorities if it takes place out of Bombay.

In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain, at work, they are put on light work on full rates of pay. During the period of advanced pregnancy and after childbirth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at childbirth is often granted in addition. The bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company the next largest employers of labour in Assam, grants six months' leave on half pay provided the women have been examined by the medical officers and attend hospital once a week. The Assam Oil Company grants leave on half pay for three months. On some estates in Coimbatore District female coolies are fed free for a month before and a month after confinement. On other estates maternity benefit ranging from Rs. 3 to Rs. 5 is paid and in some other estates free feeding of the women for two weeks before and three weeks after confinement is arranged.

WELFARE WORK.

(Excluding Health and Housing).

The importance of Welfare Work undertaken by employers to ameliorate conditions of work and leisure of their workers especially when they are not actually employed, and of the development of facilities for the utilisation of spare time, does not require too much emphasis. Facilities for sport and recreation are of great benefit to the workers and provide a means of keeping them healthily employed during their leisure hours. Benefits derived from the provision of cheap grain shops, co-operative societies and stores, technical schools, etc., amount to a real increase in wages and are of greater advantage than actual increases in cash rates which might

be misspent. The modern system of large-scale production makes it impossible for the employer to pay individual attention to the numerous employees who are working in his factory and the absence of personal touch between the employer and the worker makes the promotion of facilities for Welfare Work all the more necessary for the existence of a contented labour force. This aspect of the labour problem in India has, however, received little attention from employers as a whole and such efforts as have been made in the direction of ameliorating worker's conditions take the form more of providing medical aid, minor educational facilities and housing. Activities expressly directed towards the development of the physical, intellectual, material and moral qualities which is the object of those interested in the proper use of workers' spare time are practically negligible as far as employers are concerned except in the case of some of the larger organisations such as the Railways, the Port Trusts and a few individual employers and private organisations. The notable exceptions among individual employers are the Tata Iron and Steel Company at Jamshedpur, the Empress Mills at Nagpur, the Currimbhoy Group of Mills in Bombay, the Sholapur Spinning and Weaving Mills at Sholapur, the British India Corporation at Cawnpore and the Buckingham and Carnatic Mills at Madras.

The need of Welfare Work is all the greater in this country because of the migratory habits of the workers. Situated in strange surroundings the majority of workers are exposed to all the temptations of the life of great industrial cities which gradually make for their demoralisation and ruin. If the worker is encouraged to spend his time in healthy recreation he may be saved from the attractions of the liquor shop. The provision of facilities which will add a little colour to the drab life in industrial employment will also tend to draw the workers nearer to the employer. It is clear therefore that one of the most essential conditions for the maintenance of a stable and efficient labour force is an improvement in the working and living conditions of the labouring classes. Satisfactory labour conditions are a stimulus and not a handicap to industrial progress. And hence much stress should not be laid on the financial aspects of Welfare Work. Although the increase in efficiency of labour will never completely compensate the employer for the expenditure that he will incur for providing additional facilities for the amelioration of labour, the employer can always depend upon the moral support of the workers and will thus be free from heavy losses due to reckless strikes owing to the absence of harmonious relations beteeen the employers and the employed.

At the same time it is necessary to bear in mind that welfare activities, such as are conducted in highly organised factories in the West presuppose a certain cultural basis which, in its turn, largely depends upon literacy. The vast majority of the workers in India are illiterate and it is not to be expected that they can appreciate benefits which presuppose a certain standard of education, even though the standard may not be very high. It is also difficult to expect the wholehearted co-operation of workers in schemes which are foreign to their habits and modes of living. Thus, the attempts made to start schools have failed in many cases from the lack of interest shown by employees. In the case of sports also the results have not been very encouraging. Attempts have been made to provide amusement either by indigenous games or cinema entertainments but these also have had very moderate success. The labour force in this country is generally of a temporary and floating character and heterogeneous in composition. Workers of the same communities naturally try to form themselves into separate groups, thus introducing some complications in any general scheme of welfare work. In spite of the above difficulties satisfactory progress has been achieved in recent years by individual employers and private organisations such as the Social Service League in Bombay. An All-India Industrial Welfare Conference was convened in 1922 at Bombay by the Social Service League which had been entrusted since 1918 with the organisation and management of two workmen's institutes for the benefit of operatives employed in the cotton mills under the agencies of Messrs. Currimbhoy Ibrahim & Sons and Messrs. Tata & Sons. The Conference was attended by the representatives of the Central Government and of some of the Provincial Governments and was presided over by Mr. (now Sir) Atul Chatterjee. The object of the Conference was to discuss several problems connected with welfare work and to secure some co-ordination between the activities of the various agencies at the different centres.

In 1926, the Government of India requested all Provincial Governments to collect full and comprehensive information with regard to the measures undertaken and the efforts made to ameliorate the conditions under which the workers live when they are not actually employed. The enquiry originated as the result of the Recommendation adopted by the Sixth Session of the International Labour Conference in connexion with the development of facilities for the utilisation of workers' spare time. The results of this enquiry, which the Government of India hope to publish in due course, will be of considerable interest. The Labour Office conducted an enquiry in the Bombay Presidency, the results of which were published in the issue of the *Labour Gazette* for January 1927.

Apart from the few individual employers who have organised welfare work on Modern and Western lines, the first organised attempt to introduce welfare activities of a particular type was taken by the Bombay Millowners' Association early this year. In a circular letter dated 8th January, 1930, addressed to the mills affiliated to the Bombay Millowners' Association, this Association have requested all mills in Bombay City to give their wholehearted co-operation to their efforts for devising machinery for the improvement of the relations between the management and labour by giving immediate effect, wherever it is possible, among other things, to those classes of welfare work which have been uniformly successful, *e.g.*, (*a*) periodical social gathering of workpeople; (*b*) provision of free mill dispensaries as soon as financial considerations permit: and (*c*) the establishment of creches at all mills.

Employment of Welfare Officers and Workers.—The All-India Industrial Welfare Conference of 1922 passed a resolution that

social service organisations should be asked to take up the work of training welfare workers. The establishments of workers' committees in all industrial establishment was also urged but very little progressappears to have been made so far in this direction.

In the Bombay Presidency except in the case of the Sholapur Spinning and Weaving Mills in Sholapur and the Currimbhoy Ebrahim Workmen's Institute at Bombay, no other employers have employed any special welfare officers or workers to conduct their welfare activities.

In Bihar and Orissa, the Tata Iron and Steel Company has recently appointed a welfare officer with an office and staff to co-ordinate the various welfare activities that have been carried on by the Steel Company.

In the Central Provinces and Berar, except at the Empress Mills, no regular staff of welfare officer and workers has been appointed.

In the United Provinces, the British India Corporation employ a full-time welfare superintendent and a trained staff consisting of 4 doctors, 5 nurses, 8 matrons, 8 compounders, about a dozen midwives, 19 teachers and 2 sergeant patrols.

Messrs. Begg, Sutherland and Company have recently engaged the services of a superintendent to organise welfare work for their employees.

Provision of Educational Facilities by Employers.—A problem which is now assuming great importance is that relating to the education of the children of the workers from among whom the future supply of labour will be drawn but progress in this direction is necessarily slow as many workers do not keep their families with them for a sufficiently long period. The education of the adult workers presents difficulties because of the indifference of the average worker to education after the long hours of work in a factory. It is, however, being gradually realised that the efficiency of the workers cannot be sufficiently improved without education and some enlightened employers in the country have taken whatever measures that were possible to promote education among their workers also among their children whom they hope in time to attract to their mills. The nature of the special facilities provided in each Province for the education of the workers and their children are briefly as follows :

In Bengal, attempts have been made by some mills to set up day and night schools but many of such schools are reported to have been closed owing to the lack of interest shown by the employees. Except for the facilities for technical training that are provided at the Icchapur Rifle Factory, the Cossipore Gun and Shell Factory and the Government Weaving School at Serampore there is little or no organised provision for industrial and vocational training in the industrial centres in Bengal.

In Bombay, the Bombay Municipality has introduced compulsory education in F and G Wards which are chiefly peopled by millhands. In the Government factories at Kirkee, the Kirkee Education Society which is well supported by the factory authorities conducts six night schools. The Gokak Falls Mills Company manitains one night school for adult workers. In Ahmedabad one mill runs a school for half-timers and eight mills maintain schools for workers' children. Three mills in the Sholapur district and the Government workshop at Dapur provide for the primary education of half-timers.

The Social Service League, Bombay, maintains 9 night schools and a Textile Technical School at Parel, for imparting practical and theoretical training to actual mill workers. The Bombay Y.M.C.A. conducts 14 night schools with an average daily attendance of about 200. The Ahmedabad Labour Union conducted in 1928, 10 day schools, 12 night schools, one Nursery school, one boarding school for boys and one boarding school for girls.

In Bihar and Orissa, the Tata Iron and Steel Company has established a Technical Institute at Jamshedpur to train in theory and practice certain selected students for positions in the operating departments. The Company also maintains twenty-two schools for the education of the children of its employees.

In Madras, seventy factories registered under the Indian Factories Act have provided schools for half-timers and in some cases for employes' children also. The Buckingham and Carnatic Mills maintain a day as well as a night school. The day school is an elementary school with 5 standards and has a technical section attached to it.

In Burma, very few firms provide facilities for education. The Burma Oil Company maintains schools in the Yenang-Yaung Oilfield for about 800 children and proposes to start a night school for its employees. The Burma Corporation makes an annual donation of Rs. 1,000 for the maintenance of the Anglo-Vernacular Middle School at Namtu and is also constructing a school at Bawdwin for the education of the children of its employees.

In the United Provinces, the British India Corporation maintained in 1928 four day schools for boys and girls, two night schools and two industrial classes, for employees. The Elgin Mills at Cawnpore, the United Agra Mills, Agra, and the B. N. W. Railway Workshops at Gorakhpur also provide for the education of the children of the employees.

In the Punjab, only the new Egerton Woollen Mills Company, Dhariwal, maintains a school.

In the Central Provinces and Berar, the Empress Mills in Nagpur have Nursery and primary classes for the children in the creches. The educational work outside the mills is conducted by the Young Men's Christian Association which has established 9 centres where the mill-workers reside. Of these, 8 centres have night schools. The Empress Mills also make annual contributions of about Rs. 3,500 to other schools where the children of the workpeople study.

In Assam, some of the tea gardens maintain schools for children ; but these schools are not popular as the labourers are generally recruited from the aboriginal tribes with whom education is at a discount, particularly as it interferes with the earnings of their children who find employment in the gardens. The Assam Oil Company maintains a Middle English School and the Assam Railways and Trading Company provides a Middle English and a Primary School for the children of their employees. No industry provides schools for adult labourers.

RAILWAYS.

Recreation.—Railways as a group are the largest employers of labour in India and their welfare work is therefore being dealt with separately. All Railways provide facilities for recreation for their employees and their children. The number of recreational clubs or institutes provided on each railway are shown in the following table :—

Name of Railway.	Number of Institutes.	
	Europeans and Anglo-Indians.	Indians.
North-Western Railway	32	19
East Indian Railway	33	26
Eastern Bengal Railway	11	14
Burma Railways	15 in all.	
Great Indian Peninsula Railway	27	29 (2 for all nationalities).
Bombay, Baroda and Central India Railway ..	17	12
Bengal Nagpur Railway	14	19
Madras and Southern Maharatta Railway ..	24	7
South Indian Railway	19 in all.	

Each institute is regarded as a club provided by the Railway free of rent. The institutes provide for a reading room, indoor and outdoor games, etc., and are generally self-supporting although grants are made from fine funds to meet the recurring expenses in deserving cases. The railways also undertake to recover the subscriptions of the members through the paysheets and to remit them to the manager of the institute. The membership of the institutes is compulsory on some railways.

Sports committees and athletic clubs have been formed on several railways, *e.g.*, the G.I.P. and the East Indian Railways with the object of promoting athletic sports among the employees and organizing tournaments. The Indian Railway Athletic Association has been recently formed for the promotion and development of inter-railway athletic competitions of all kinds. This is a registered association and it membership is open to the Railway Board and its subordinate offices as well as to railways which are parties to the Indian Railway Conference Association. Inter-districts or inter-divisional competitions are also run by local sports committees with the idea of encouraging sports among all classes of staff. The inter-railway boxing wrestling and foot-ball competitions are arranged in four groups.

The cinema shows and magic lantern lectures which are being recently organized for the recreation of railway employees are growing in popularity with the staff.

Education.—Almost all Railways provide facilities for the education of their illiterate staffs as well as the children of Railway employees. The progress made in this direction on each railway may be briefly stated as follows :—

The N. W. Railway have started two experimental schools for adult workers in the running locomotive sheds at Lahore and Sibi respectively. It is also intended to open another at Kotri shed shortly. The experiment has so far been confined to the locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway provide 37 schools for the employees of the Operating Department. The Eastern Bengal Railway provide 9 night schools for adult employees, the daily average attendance at these schools being 309. On the Burma Railways educational facilities for adult workmen have hitherto proved a failure and another experimental school has recently been opened for firemen.

The B. B. & C. I. Railway have recently opened classes for imparting instruction in the three R's at 3 centres on the Broad Gauge and 3 on the Metre Gauge systems. As an inducement to study, a bonus of Rs. 5 is paid to each man passing a simple test. On the A. B. Railway, the Locomotive Department holds classes at Lunding, Badarpur and Chittagong to assist drivers to qualify as "English speaking" which grade carries a higher pay. The only facilities given by the B. & N. W. Railway are first aid classes and subjects of a technical nature in the Locomotive Department. The Bengal Nagpur Railway provides 14 schools for imparting elementary training in reading, writing and rudimentary arithmetic to Indian drivers, shunters and firemen so as to enable them to make themselves personally acquainted with the rules and orders affecting train working. On the M. & S. M. Railway there are two night schools at Hubli and Guntakal respectively both of which receive financial support from the Company.

Schools for the education of adult workmen do not exist on the G. I. P. Railway but a school is established at Bina for imparting technical instruction and conducting refresher courses in Railway working.

For Workers' Children.—The facilities provided for the education of the children of railway employees are as under:

97 schools for European and Anglo-Indian children and 123 schools for Indian children are maintained at suitable centres and the total number of pupils on the rolls is 4,155 and 15,967 respectively. The total expenditure from revenue on the European and Anglo-Indian schools is Rs. 402 lakhs per annum and on the Indian schools Rs. 1·4 lakhs. The Railway Department also aids certain schools for children of railway employees. The total number of children in railway aided schools is 3,521 (European and Anglo-Indian) and 7,704 (Indian) and the total annual grants made by the Railway are Rs. 49,365 and Rs. 46,584 respectively. The Railway Department also gives direct financial assistance to its employees towards the education of their children in certain hill schools. The total expenditure on this account in 1927-28 was Rs. 3·5 lakhs for Europeans and Anglo-Indians and Rs. 28·8 thousands for Indians.

Facilities are also afforded by the grant of passes and concession tickets to enable the children to attend schools.

The present methods of assistance have recently evoked public criticism on the score of their being more favourable to European and Anglo-Indian employees than to the Indian and with a view to eliminating all trace of racial discrimination the Railway Board placed Mr. C. E. W. Jones, C.I.E., I.E.S., on special duty in 1927 with instructions to collect all facts and figures regarding the assistance given by railways for the education of the children of their employees. On a consideration of Mr. Jones' report the Board have now formulated their future policy on the following lines :—

All railway schools would be transferred to local authorities or private bodies, special grants being given out of railway funds where necessary. The assistance given by the Railway Department would be confined to employees who draw pay below a prescribed maximum and obliged to send their children to boarding schools. The assistance would take the form of grants to the employees of a fixed proportion not exceeding one-half of the board and tuition fees, the proportion depending upon the pay drawn by the parent and falling with the increase in pay. The assistance would be open to all employees without distinction of community, race or creed.

Several companies' railways have also signified their willingness to adopt a similar policy. But the question is still receiving further consideration because of the representations received in connexion with the scheme.

Welfare Funds.—The fine funds to which are credited the provident funds bonuses forfeited as well as the fines inflicted on the staff, have formed a valuable source from which it has been possible for Agents to give assistance to the subordinate staff for recreation and educational purposes as well as compassionate grants in cases of exceptional hardship. The principal railways contributed in 1928-29 Rs. 81 thousand for schools and Rs. 3·06 lakhs for recreation clubs from the fine fund.

Co-operation.—The Railway Administration have noticed that heavy indebtedness, degrades the employee and impairs his efficiency and they have therefore encouraged the formation of co-operative credit societies and co-operative stores by the employees.

Co-operative Credit Societies have been formed on all railways and are managed by committees generally elected from among the shareholders. But in some cases, the heads of the departments are required to be the chairmen of the Committees and they have power to nominate some of the members of the committee.

WAGES.

It was in 1873 that one of the earliest attempts to collect wage statistics in India was made by issuing instructions to District Officers to submit half yearly returns showing the overage monthly wages of certain classes of skilled and unskilled labour. The returns thus collected were utilized for compiling a series of comparable statistics of wages for selected Districts in each Province and these statistics were published in the publication "Prices and Wages" issued annually by the Director General of Commercial Intelligence and Statistics. A reference, however, to Mr. Dutt's Report on an Enquiry into Rise of Prices in India would show that these statistics were found to be wholly unreliable and consequently these half yearly returns from District Officers have been discontinued since 1910. In their place a quinquennial wage census was adopted in all Provinces, except in the Central Provinces where an annual return was obtained from District Officers. The first quinquennial wage census was held in 1911-12 and the second in 1916-17. The statistics regarding wages continued to be published in "Prices and Wages" which gave the results of the quinquennial wage censuses in respect of a few urban and rural occupations. As the statistics were still far from satisfactory the third wage census, which was due in 1921-22, was abandoned except in Madras and the Punjab. In 1921 an attempt was made by the Government of India to hold an All-India census of industrial wages with the active and voluntary co-operation of employers, but nothing could be done partly because a number of employers either failed to submit returns or submitted incomplete returns and partly because neither the Central nor the Local Governments were able to provide the staff required for the purpose owing to financial stringency. The annual issues of Prices and Wages were also suspended in 1923 as a result of retrenchment and no regular official wage statistics are now published for British India as a whole.

In the United Provinces a scheme for a census of Industrial Wages to be taken along with the regular census was considered but was not carried through. A periodical survey of wages has been carried out every five years since 1912 in the Punjab. These surveys deal with the wages of certain classes of workers in three principal towns, in selected villages unaffected by urban conditions, and at certain Railway stations to secure a means of comparison with rural wages in the same neighbourhood. Beyond

the figures of average monthly wages of certain classes of labour submitted by factories in all Provinces every year for inclusion in the annual Reports on the Administration of the Indian Factories Act, no regular and detailed statistics of industrial wages are available in Bengal and in the Central Provinces and Berar. In Madras quinquennial wages censuses have been conducted since 1908 showing the average wages of certain artisans (as well as farm servants employed in agricultural labour) in respect of homogenous tracts and districts. These censuses, however, only related to rural and urban wages and not to industrial wages. A thorough investigation of the conditions of labour, and particularly the rates of wages on tea estates in Assam, was made in 1921-22 by a Committee appointed by the Government of that Province. The Labour Office of the Government of Bombay conducted three enquiries into the wages of workers in the cotton mills in the Bombay Presidency in 1921, 1923 and 1926 respectively. Apart from these enquiries, the Labour Office has also conducted enquiries into (1) Wages of peons in Bombay, (2) Agricultural Wages, (3) Wages of Municipal workers, (4) Clerical Wages in Bombay City and (5) Wages of Printing Press Workers in selected Printing Presses in Bombay City. The results of all these enquiries except the last have been published either in the form of special Reports or in the "Labour Gazette."

WAGE RATES.

Agriculture.—Whether wages paid to agricultural labour in India have kept pace with the increase in the cost of living is, for several reasons, a very difficult question to answer. Firstly conditions vary so markedly between province and province that it is almost impossible to obtain accurate and comparable figures of wages for different classes of agricultural labour. Secondly there exists a variety of methods adopted for remunerating the workers engaged in different agricultural areas in India. For example, in the Punjab, there are four forms of wages, such as (*a*) purely cash wages, (*b*) cash wages with supplements which may consist of food, tobacco, lodging, bedding, clothing, etc., (*c*) purely grain wages, and (*d*) wages other than in cash or grain. In the Punjab the last quinquennial wages survey was held in December 1927. This survey shows that the following were the average daily wages of the three important classes of agricultural labour in rural areas in the Punjab:—

Carpenters ..	.. 16 to 32 annas a day.
Masons ..	.. 16 to 38 annas a day.
Unskilled labourers	.. 5½ to 16½ annas day.

As regards the last occupation it may be pointed out that the most frequent wage was between 7½ to 8½ annas. The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which gave the average daily earnings of three classes of agricultural labour, *viz.*, skilled labour, ordinary labour and field labour in each of the 26 districts of the Bombay Presidency separately for urban arreas and rural areas for each of 23 years from 1900 to 1922. The figures for each year from 1923 to 1927 have been published in the Bombay Administration Reports. The wages prevailing in other provinces for similar types of labour do not compare very unfavourably with wages in the Bombay Presidency for any particular year for which a comparison is made. This statement requires an important qualification. It is not meant that the money amounts actually paid are similar. The rates of wages in different provinces vary according to the extent of their industrialisation and money wages in provinces which are mainly agricultural are on a lower level than the money wages in Provinces which are highly industrialised such as Bombay and Bengal. There is no doubt whatever that wages have considerably improved in all parts of India between 1918 to 1928. Taking the Bombay Presidency as a whole the downward tendency in the level of wages which set in 1925 and continued up to the end of 1927 was checked during the year 1928 during which period wages of all classes of agricultural labour, except field labour in urban areas and ordinary labour in rural areas, either remained stationary or showed a definite upward tendency.

Comparison of conditions in India to-day with the pre-war year shows that during this particular period the condition of the Indian labourer has undoubtedly improved. This is amply proved by the figures given below showing the index numbers of daily average wages of skilled labourers, ordinary labourers and field labourers for urban areas and for rurual areas for the Bombay Presidency.

AGRICULTURAL WAGES (NOMINAL).

Index Numbers for the Bombay Presidency (including Sind) 1913=100.

Year.	Urban areas.			Rural Areas.

The Cotton Textile Industry.—The most important centres of the cotton textile industry in India are situated in the Bombay Presidency. The main sources of information as regards the wages paid in this industry are the Reports of three Enquiries conducted by the Labour Office of the Government of Bombay, into Wages and Hours of Labour in the Cotton Mill Industry in the Bombay Presidency.

It is claimed that the 1926 Enquiry as compared with the previous two Enquiries, was more satisfactory in its method, more detailed in its scope and more accurate and reliable in its results as the information collected related to each individual worker and not to groups of workers in each occupation as was the case in the previous Enquiries. The results of this Enquiry give among other things, figures for average daily earnings of all occupations of cotton mill operatives, average monthly earnings for operatives covered in Bombay and Sholapur, the average number of days worked, the number of operatives working 'Full time' *i.e.*, working on all the working days during the Census month, the average earnings of these working full time, frequency of attendance for the mills in Bombay, the percentage absenteeism by departments and details regarding amounts of bonuses secured by the workers.

Wages in the Bombay and the Sholapur mills are paid monthly irrespective of the fact whether they are based on time rates or piece rates or fixed on a daily or a monthly basis or in any other manner. While in the case of the Ahmedabad mills wages are paid fortnightly or by 'haptas' referring to a period generally of 14 days for piece workers and to a period of 16 days for time workers.

Different systems are adopted at these three centres with regard to the methods of calculating wages. In the case of the mills in Bombay City there is first a "basic" rate to which is added a dearness allowance of 80 per cent. for malepiece workers and 70 per cent. for male time workers and all female workers. Those mills which grant a good attendance bonus add the amount of the bonus granted, to the gross wage from which are deducted any fines that might be inflicted before arriving at the net wages payable.

The term 'basic' in the case of the Bombay mills may be generally considered to apply to the pre-war year although in the case of some individual mills it might apply to any year between 1913 and 1918 in which year the first increase of 15 per cent. was granted as dearness allowance. This was increased to 35 per cent. on the 1st January 1919. The next increase granted on 1st February 1920 was 20 per cent. extra to male workers on time rates and to female workers both on time and piece rates, and 40 per cent. extra to male operatives on piece rates—the total percentages amounting to 55 and 75 respectively. On the 1st November 1920 the 55 per cent. was raised to 70 per cent. and the 75 per cent. to 80 per cent. There have been no changes in these percentages since the year 1921.

In the Ahmedabad mills there is a complete lack of uniformity in the methods adopted for calculating the different additions and deductions before arriving at the final earnings.

The methods of calculating wages in Sholapur are different from those in Bombay and Ahmedabad. There are five items which go to make the full wage of an operative. These items are (1) the basic rate, (2) dearness allowance which is 35 per cent. in the case of all female workers and all male time workers and 40 per cent. in the case of all male piece workers, (3) the number of grace days granted for which payment is made, (4) bonus, and (5) the benefit derived for the grain concession. The following table gives the average daily earnings by centres for all adult male operatives, all adult female operatives, all children and all adult operatives, covered by the 1926 Enquiry:—

Centre.	Average daily earnings for.			
	Men.	Women.	Children	All adults.
	Rs.a. p.	Rs. a. p.	Rs. a. p.	Rs.a. p.
Bombay ..	1 8 0	0 11 11	..	1 5 3
Ahmedabad.	1 6 8	0 12 6	0 5 6	1 4 8
Sholapur .	1 0 5	0 6 8	0 4 0	0 14 8

The average monthly earnings of all workers in mills selected for the 1926 Enquiry at Bombay and Sholapur in the month of July 1926 in each age and sex group were as follows:—

Sex and Age group.	Centre.	
	Bombay.	Sholapur.
	Rs. a. p.	Rs. a. p.
Men	37 10 2	23 15 5
Women ..	17 12 4	9 15 7
Children ..	..	5 10 4
All adults ..	32 14 0	21 7 9

The following table shows by centres for each sex and age group the average monthly earnings of all operatives who worked on all the working days in the census months for Bombay and Sholapur and for Ahmedabad. The figures for Ahmedabad were arrived, at by multiplying the average daily earnings by 27.

Average monthly earnings of Full Time Workers.

Jute Industry.

The jute industry holds the premier position amongst the industries in the Bengal Presidency. The following table gives the average monthly wages of some important occupations in a jute mill, The figures are not the exact averages of wages of the total number of employees in the industry. They are averages obtained from the actual payments made in some representative mills.

Department.	Designation.	Average monthly wages.	
		Multiple shift.	Single shift.
	Men.	Rs. a. p.	Rs. a. p.
Roving Machines	Rovers	12 15 0	14 7 0
	Shifters	12 6 0	14 2 0
Spinning Frames	Warp spinners	13 4 0	16 14 0
	Weft spinners	16 0 0	17 10 0
	Bobbin cleaners	10 0 0	11 0 0
Winding	Warp winders (piece workers) ..	21 6 0	23 0 0
	Weft ,, (,, ,,) ..	26 8 0	28 2 0
Weaving	Hessian weavers (,, ,,)	28 3 0	31 0 0
	Sacking weavers (piece-workers)	29 5 0	32 1 0
Dressing and Beaming	Beamers and dressers	28 8 0	32 0 0
Sack sewing workers Sewing machine	Machine sewers (piece)	21 11 0	25 10 0
Engineering Section Engine Staff.	Oilers	19 0 0	22 8 0
	Firemen	28 1 0	30 2 0
	Mason	34 0 0	34 0 0
Workshop hands—			
Machine shop fitting	Carpenters (Chinese)	85 0 0	93 5 0
	Carpenters (Indian)	30 0 0	33 2 0
	Turners (Metal)	40 0 0	40 0 0
Tin Smithy	Tin Smith	30 0 0	30 0 0
Blacksmith shop	Blacksmith	36 0 0	36 0 0
	Women.		
Batching Softners	Fedders	11 12 0	13 5 0
	Receivers	11 8 0	13 5 0
Teasers	Feeders	9 6 0	12 9 0
Preparing Breaker Carding Machines	Feeders	9 8 0	11 13 0
	Receivers	9 0 0	11 2 0
Finishing Carding Machines ..	Feeders	10 6 0	11 7 0
	Receivers	9 7 0	11 0 0
Drawing machines	Feeders	10 0 0	11 2 0
	Receivers	10 0 0	11 2 0
Roving machines	Feeders	10 6 0	11 6 0
	Sweepers	9 6 0	11 2 0
Twist Frames	Twisters	13 8 0	14 15 0
Weaving	Sweepers	12 1 0	12 10 0
Sack Sewing	Hand Sewers	13 5 0	14 11 0

It will be seen from the above table that there is an appreciable monetary advantage to workers in the single-shift system.

MINES.

The tables given below show the daily earnings in the month of December for each of two years 1927 and 1928 for workers in the main occupations in coalfields and the other important mines, in British India.

Daily earnings of underground workers in important coalfields in British India.

Gins and Presses.

The male coolies in the gin factories in Madras and the Punjab earn on an average annas 8 per day while the female coolies get only as. 5-1 and as. 6 respectively. In the Central Provinces the average daily earnings of male and female coolies are as. 10-2 and As. 5-10 respectively.

The average daily wages of female press coolies in Madras and the Central Provinces amount to annas 5-10 while those of male coolies amount to annas 9-6 and annas 13-10 respectively.

The Plantations.—Labour in the tea gardens in Assam is paid on a piece-work basis. In addition to the standard daily task which the worker must execute in order to earn his wages (called *Harira*) the labourer is given an opportunity at certain seasons to supplement his earnings by the performance of second task the payment for which is known as *ticca*. In some cases where it is impracticable to prescribe a definite task as in leaf plucking at the beginning and the end of the season payment is made by time. A distinctive feature of work

in the gardens is that the labourer usually brings his family with him and the wife and sometimes the children are also wage earners. The joint earnings of a family must always be taken into consideration. The average family of a labourer has been calculated as consisting of one working man, one working woman, about three-tenths of a working child and non-working child and about two-tenths of an adult non-working dependant. The following table give the average monthly earnings of the labourers in the tea gardens in Assam.

Table showing the average family monthly earnings in the tea gardens in Assam calculated on the average daily strength in 1914, 1922 *and* 1928.

Periods of Wage Payment.—There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various important branches of organised industry in India. In scarcely any industry is there a single period of wagep ayment. Different systems are found in establishments belonging to the same industry and in the same district and within the same establishment different classes of workers are frequently paid for different periods. The month, the fortnight and the week are generally the periods of wage payment in Cement and Brick Works, Cotton Ginning and Pressing Factories, Flour Mills and Engineering Works. Monthly payment of wages is mainly adopted for workers in Printing Presses, Municipalities, Tramways and Railways. In the Cotton Mill Industry wages are calculated on a monthly basis in all the mills outside Ahmedabad. In the case of the Ahmedabad mills, wages of process operatives are calculated on a fortnightly basis and of workers in the maintenance department on a monthly basis.

In mines, tea gardens and rice mills the predominant periods of wage payment are a month and a week. In jute mills wages are calculated per week. Wages are calculated on both the monthly and the fortnightly basis in the Iron and Steel Industry, Sugar Mills and in Tanneries. The system of monthly payment appears to be universal in its application to supervisory and clerical staffs engaged in all different industrial establishments, while the most general system in the case of casual labour is of a daily payment of wages.

Periods elapsing before payment.—The "waiting period" or the time which elapses between the end of the period for which wages are earned and the date of payment varies considerably from industry to industry and from establishment to establishment in the same industry. It may be generally stated that the longer the wage period the more delayed is the payment of wages. Monthly wages are not paid so promptly as fortnightly wages, weekly wages are withheld for still shorter periods and daily wages of casual labour are nearly always paid on the day on which they are earned or on the following day. Speaking generally the average period of waiting may be considered to be 10 to 15 days in the case of monthly payments, 5 to 7 days for fortnightly payments, and 2 to 4 days in the case of weekly payments. Another factor which affects the period of waiting is the method of payments. Where workers are paid on piece rates, intricate calculations are required to ascertain the amount due, and consequently piece rate wages cannot be paid so promptly as wages of workers on fixed time rates of pay.

Indebtedness.—Prevails to a very great extent among the labourers, but no reliable figures are available except those for the Bombay Presidency which were collected by the Bombay Labour Office during its enquiries into the workers' family budgets for different centres. From the statistics of the Empress Mills the percentage of labourers indebted appears to be more than 50, Though exact figures for the Punjab are not available it is reported that the volume of indebtedness amongst the agriculturists is greater than anywhere else in India. As regards urban and industrial labourers it may safely be assumed that a greater majority are in debt to their food suppliers. In Madras the indebtedness of the worker is heavy especially in the case of plantations where it is reported that 75 per cent. of the wages of the labourers are taken away by money lenders on pay days. The mine managers of the Jharia coalfields in Bihar and Orissa generally put this figure at one week's wages. It is also stated that the extent of indebtedness varies with caste and social custom. In Bombay City, interest on debts forms nearly three per cent. of the total monthly expenditure. Of the families considered for the Labour Office enquiry no fewer than 47 per cent. were in debt. The extent of the indebtedness of the family in debt is ordinarily the equivalent of two and a half months' earnings. The extremes were 14 months' and one third of a month's earnings respectively. As regards single men, for whom 603 budgets were collected, 45 per cent. were in debt, the average expenditure on interest being as.12-3 and the average expenditure on interest for those in debt being Rs. 1-11-2 per month. Enquiries for the Bombay Port Trust workers showed that over 80 per cent. of the families considered were found to be in debt. In the majority of cases the amount of debt varied from a month's income to four months' income. In Ahmedabad during 1926 about 69 per cent. of the families were in debt. The amount of debt varied from a few rupees to many times the monthly income. According to an enquiry made by the Labour

Office in the year 1925 into the family budgets of cotton mill workers in Sholapur City, 63 per cent. of the cotton mill workers' families in Sholapur were in debt, the extent of which varied from less than a month's income to many times the monthly income. In 49 per cent. of cases, however, it was equal to between one and four months' income of the family.

Bonus and Profit Sharing Schemes.—"The successful working of a profit sharing scheme pre-supposes the realisation by the worker of an identity between the various interests engaged in the concern and a conscientious efforts on their part to do their best for its maximum success. The employers of labour do not feel that labour conditions in India are such as to justify the hope that this high ideal of co-operation will be realised in a substantial measure in practice." The only solitary concerns in which profit sharing schemes have been tried are the Tata Iron and Steel Company, and in the Buckingham and the Carnatic Mills. In 1928 the Tata Iron and Steel Company introduced a scheme under which a monthly bonus based on production is paid to all men drawing less than Rs. 300 per mensem or Rs. 10 per day, whose work contributes to the production obtained and who have been in the Company's service for at least six months. In the Buckingham and the Carnatic Mills a bonus is paid to the workmen on a basis relative to the dividend declared.

Bonuses are paid for a variety of reasons. Some concerns grant bonus for regular attendances and for economical utilization of material. In some collieries in Bihar and Orissa a worker is paid a short of bonus for working six days a week. A bonus is also being granted for raising and loading extra tubs. The Tata Iron and Steel Company grant bonuses; (1) for general production, (2) for departmental output, and (3) regular attendance. This is paid to all employees drawing less than as. 8 per day. The Company has also introduced a 'Jack pot scheme.' The idea of this scheme is that if 50 men are required to perform certain duties connected with the operation of any unit and the full force is not present, the wages which would have been payable to the absentees are distributed amongst those present.

The system of paying bonus in addition to a cash wage either for better work or for better attendance obtains in several industrial concerns in the Bombay Presidency and may be said to be almost general in textile mills especially in Bombay and Ahmedabad. An enquiry by the Labour Office in 1926-27, showed that in the textile industry no fewer than 109 out of the 144 mills in the Presidency which furnished information reported that bonus was granted for regular attendance and 76 or 52.8 per cent. stated that bonuses were given for turning out work better than specified standards. Several cotton gins and presses also reported that such bonuses were granted but in the majority of such cases, these rewards took the form of annual bonuses given on the results of a season's working. In a few cases the system is similar to that of profit sharing—the bonus payable being dependent on the profits made by a concern during the year. Bonuses for better work, were, however, not generally granted in Public Utility Companies, Municipalities, commercial offices, and Government and other non-factory organisations.

RAILWAYS.

Wages.—Owing to the different types of grades of pay which are prevalent on the Railways it is not possible to give particulars for all of them. Scales of pay of some important classes of railway servants on some principal railways have therefore been set out in the tables below. The limits of pay given in the tables, show the minimum of the lower grade and the maximum attainable in the higher grade.

Statement showing scales of pay of important class of Railway servants other than Workshop employees and Colliery Staff on the principal Railway.

Besides the usual pay the employees of the railways are granted allowances and perquisites for special work, climatic and local conditions, etc.

sent to villages.—In the absence of a completely urbanised industrial labour force in India, the practice of remitting part of the wages earned by workers in industrial centres to their place of origin appears to be very common. But no authorised or statistical information for a definite period of time is available as regards the amounts sent by workpeople in this manner. If statistics pertaining to this subject were compiled, it would help a good deal in estimating the agrarian contact of Indian industrial workers. In the Central Provinces and Berar 80 per cent. of immigrants from the United Provinces leave their families behind in their villages to look after cultivation. These labourers are reported to be remitting more than 50 per cent. of their income home. The other immigrants in that provinces from Central India and the Bombay Presidency are said to be sending 25 per cent. of their earnings to their homes. Estimates of amounts sent by money order by the various post offices in the jute mill areas in Bengal are annually published in the reports of the Indian Jute Mills Association. The figure for 1928 comes to Rs. 1,73,57,816-1-2, but it does not purely represent the amounts sent by Jute mill employees only. Labourers from coal mines in Bengal coming from outside the coal fields are reported to send or take home to their villages from 30 to 40 per cent. of their earnings. In the case of the miner in the mining fields of Bihar and Orissa it is roughly estimated that he sends home, all his savings—which amount to about 8 annas to Re 1-8-0 per week. Results of a special enquiry made in the case of an important cotton mill at Cawnpore in which wages are paid fortnightly showed that during the particular period of two weeks covered by the enquiry, 3.8 per cent. of the wages received by workmen was remitted by money orders through the office attached to that mill. In the course of its family budget investigation, the Labour Office of the Government of Bombay collected some information regarding remittance of amounts by workers' families. In Bombay City a large number of workers do not maintain an establishment, but live as boarders and though married keep their dependants in their native places. In the case of resident families the average monthly amount remitted comes to Rs. 1-11-1 which constitutes 3.2 per cent. of the family income which is Rs. 52- 4-6 per month. In the case of persons living singly in the Bombay City, the average monthly remittance comes to Rs. 11-7-1 which constitues 36.2 per cent. of their monthly income. The labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore remittances to dependants is not an important item in the workers budget. It appears that nearly 7 per cent. of the working class families in Ahmedabad remit money to their dependants living away from them. The average for only those families remitting money comes to Rs. 6-6-9 per month. Sholapur draws its labour force from the immediate neighbourhood and the labour there is not of the same cosmopolitan character as in Bombay. Of the total number of families whose budgets were collected during the family budget enquiry at that centre only 6 per cent. reported that they had to remit money every month to their dependants in villages. The average of the amount remitted by such families comes to Rs. 4-12-7.

EXTENT OF STANDARDISATION.

In spite of a good scope for effecting standardisation of wages in certain important industries in India, few attempts appear to have been made in this direction. Wages are not standardised in different industries or in the same industry. Besides, it is found that different rates are prevalent in the same industry, in the same locality and even for the same type of work performed in a unit. In the Tata Iron and Steel Company a standardisation of rates has been carried out as far as could be done in order to minimise complaints which are frequently made that men when engaged are promised certain rates and eventually they find that they get somewhat less. Under this standardisation scheme each job is rated and every employee understands what his minimum and maximum rate will be in that grade and what he can expect when promoted from it to other grades. This has the advantage of rating all men doing the same work so as to yield the same or about the same remuneration irrespective of the Department in which employees are working. Standardisation of wages has been effected in the Indian Cable Company in those cases particularly where men perform the same kind of work with the exception that some mechanics who are more efficient receive higher rates than others and some old workmen are still receiving higher rates than the rate of the job. Prior to the proposal made by the Bombay Millowners' Association during the general strike of the year 1928 to standardize wages in all the cotton mills in Bombay City there was nothing like standard rates of wages in any industry or centre in the Bombay Presidency except to a limited extent in the case of basic time rates for process operatives in the spinning sections in the Ahmedabad cotton mills. There exsts no standardisation or similarity in rate whatever in the Ahmedabad mills with regard to piece rates. These vary from mill to mill for the same class of production although two or more mills may give similar rates. Propinquity plays an important part in the fixing of time and piece rates in all industries at all centres. There is little similarity between the rates of different workers of the same class even in the same mill, the rates depending on the degree of individual skill, industry and experience. The question of standardisation of wages in the cotton mills in Bombay City has been under consideration by the Bombay Millowners' Association for several years. The advantage of standardisation was perceived by the Association as far back as 1891 when the late Honourable Mr. N. N. Wadia had prepared a draft scheme. The attempt was, however, not successful. Several attempts were made subsequently, but for one reason or another the old system was allowed to continue. In January 1927 the Indian Tariff Board (Cotton Textile Industry Enquiry) definitely recommended standardisation of wages.

In accordance with this recommendation the Bombay Millowners' Association appointed a sub-committee to "investigate and report as

to the measures which might reasonably be taken towards the standardisation of muster rolls and wage rates." The sub-committee called for information from all the mills affiliated to the Association regarding the rates of wages paid and the number of men required for stated operations for a certain number of machines in each mill. This was classified and tabulated and averages of the rates of wages were arrived at. All bonuses like the good attendance bonus, weekly bonus, electric light bonus etc. were consolidated in the rates proposed. The main principles on which the standardisation scheme was based were as follows:—

(1) There should be no variation between mill and mill in the rates of wages of operatives of the same class doing the same amount of work with the same skill and similar machinery and material and that variations in the earnings of individuals should depend on their individual labour and skill as tested by production.

(2) Operatives should not suffer owing to defects in machinery or material.

(3) All the operatives except the weavers should get at least the same average wages that they have been hitherto getting provided they work with reasonable efficiency.

It was proposed, however, to effect a cut of 7½ per cent. in the average wages of weavers during standardisation. This scheme as put forward by the Bombay Millowners' Association was considerably modified as a result of discussions that took place between the Sub-Committee of the Association and the Joint Strike Committee which was formed during the General Strike of the Bombay cotton mills in 1928. The scheme was considered by the Bombay Strike Enquiry Committee whose findings on it are given in the Section on Conciliation and Arbitration. The scheme has not yet been put into practice owing to the strikes and industrial unrest in the textile industry during 1929.

Application of a Minimum Wage Principle.—One of the main defects of minimum wage legislation is the prevention of sweating or the prevention of the payment of unduly low wages to the workers and the elimination of unfair competition between the employers with regard to wages. The payment of unduly low wages in any occupation or industry may be due either to depression in the industry or to inefficient organisation of production or to exploitation of labour. With regard to the first two causes, minimum wage-fixing machinery is unable to change the economic condition of an industry while it is closely related to the third cause. Exploitation of labour may be defined as taking advantage of the inferior bargaining power of the workers to pay them a lower wage than that justified by the economic value of their work. This weakness in bargaining power is due to insufficient organisation, but minimum wage-fixing machinery, by establishing greater equality or bargaining power can ensure the payment of a wage "adequate to maintain a reasonable standard of life." It can also indirectly help to develop organisation amongst the workers. Besides this, minimum wage legislation, like any other piece of social legislation, goes a long way in promoting industrial peace.

Minimum wage laws differ considerably with regard to the basis adopted for fixing wage rates. The three main bases of fixing minimum wages are (1) the fixing of minimum wages in any trade in relation to the wages paid to workers in the same trade in adjoining districts, (2) the living wage and (3) the capacity of an individual industry to pay what is regarded as the minimum wage. When the bases of legislation to be framed are decided upon there are various methods of applying these principles. By the first method different minima may be fixed for different industries by *ad hoc* boards appointed to deal with each industry as is done under the Trade Board system in England and by Wages Boards in certain Australian States. By the second method, national minima may be fixed for various industries as is done in certain parts of Canada, the United States of America, etc. The third method aims at enacting a minimum wage for general application to the country as a whole. The Minimum Wages Act of New South Wales of 1908 is an illustration of this.

The importance of Minimum Wage Legislation can be better judged when it is stated that "the provision of an adequate living wage" is mentioned among the problems of urgent importance in the Preamble to Part XIII of the "Treaty of Peace." The International Labour Conference at its Eleventh Session held at Geneva in 1928, adopted a draft Convention and a recommendation concerning the creation of minimum wage-fixing machinery. The Convention contemplates the creation of such machinery only in the case of trades or parts of trades (and in particular homeworking trades) in which no arrangements exist for effective regulation of wages by collective agreements or otherwise and in which wages are exceptionally low. A State Member ratifying this Convention is placed under an obligation to create such a machinery and to communicate annually to the International Labour Office a general statement giving a list of trades or parts of the trades in which it has been applied and certain other particulars. The nature and form of the machinery and the trades to which it should apply are considerations which are left to the discretion of the State concerned.

The acceptance of this Convention by India would mean the creation of an extensive machinery for fixation of wages in several trades as labour is for most part unorganised in this country. But the fixation of a minimum wage in India is itself a problem beset with great difficulties. In many countries, even in those with advanced labour legislation, minimum wage regulation has received little consideration. This question is quite new to India and has not been considered in any province except probably in Bengal where a resolution was moved in the Legislative Council of that province, but it was lost. Wages in India are not standardised and until in practice wages in the same or similar industries are more or less on the same level, it will be very difficult to introduce or to operate successfully any scheme of minimum wages. A further difficulty arises from the fact that the cost of a suitable standard of living varies from province to province and as between different parts in a province. It is also doubtful whether the fixation of a minimum wage would be very

beneficial to labour in its present unorganised state in India as there is always a tendency for wages to gravitate towards the minimum fixed by law.

The only instance in which minimum rates of wages were fixed by statute in India was in connection with indentured labour on tea estates in Assam. But with the abolition of such labour the law is no longer in operation. The recent occasion on which this question of a minimum wage was considered in India was in relation to the Bombay cotton mills. The observations of the Bombay Strike Enquiry Committee who considered this question are significant. No definite standard for a minimum wage was suggested by them as it was not within the scope of the terms of their reference, but they said: "In the present case, we have material for safely saying that any considerable increase in the wages bill would hamper the industry to an unjustifiable extent, in the existing circumstances of trade depression; but we may well decline to go further and say that the state of the trade does not permit of even a small increase in the lowest wage proposed to be paid if it is shown that that wage does not enable the worker concerned to maintain a suitable standard of living." Discussing the question whether the minimum wage should apply to female as well as male operatives the Committee however arrived at the conclusion that a woman can maintain herself in Bombay on Rs. 18 per month.

DEDUCTIONS.

In June 1926 the Government of India requested Local Governments to make enquiries, in their respective administrations, as to the extent to which fines and other deductions were being realised by employers in India from their workpeople. The views of Local Governments were also invited on the desirability of taking any action legislative or otherwise to counter any abuses which might be found to prevail. The information given below is based mostly on the various Provincial enquiries made for the purpose, but there is no reason to believe that the conditions have changed materially since then.

The system of making deductions from wages in respect of fines is general in the textile industry, and other industrial concerns. With regard to factories the system exists in almost all Government and Local Fund factories and in the majority of the more organised and larger workshops. It is also associated with municipalities, factories and establishments working regularly throughout the year. It does not appear to be the general practice in seasonal establishments such as gins and presses. In offices the system is almost wholly limited to the fining of peons and menials in the establishments where the system exists although in a few cases clerks are also occasionally fined. Fining is general in the large hotels, clubs and restaurants but it can be said to be almost absent in most of the larger commercial organisations such as shops, stores, etc. The only notable concerns in which fines are very rarely imposed are the tea gardens in Assam and Bengal and the coalfields in Bengal and Bihar and Orissa. The abuse is said to be limited by the consideration that the shortage of labour compels the employers to treat their employees with everey consideration.

COST OF LIVING AND STANDARD OF LIFE.

A large number of strikes and lockouts in India since the war were due to wage disputes and in the absence of any reliable data regarding the movements of prices and their effect on the cost of living of the working classes it was found extremely difficult to arrive at any satisfactory conclusions about the comparative relation between wages and cost of living. The Government of India took up the question of constructing cost of living index numbers for the working classes and after a Conference held in Delhi at the beginning of 1921 they addressed Local Governments on the subject of index numbers.

The chief difficulty in the preparation of a satisfactory scheme designed to measure movements in the cost of living of industrial classes throughout India was the absence of any estimate of the comparative expenditure of the Industrial workers on different items that could be regarded as even moderately correct. The basis for calculating such expenditure is usually furnished by the collection of budgets showing the actual monthly expenditure for typical families. But no budgets on which reliance could be placed were then available. An alternative method of assessing the comparative expenditure is to estimate the exports, imports and production of different commodities for a particular area, and thus arrive at the average quantity consumed by the inhabitants of that area. The only area for which it is possible to obtain statistics of exports, imports and production is India as a whole so that an index number for India or for any part of India constructed on these lines in open to criticism on two grounds apart from any inherent errors in the statistics used. In the first place it assumes that the differences between one province and another are not such as to vitiate the application of averagess based on All-India figures to particular industrial centres. Secondly, it ignores differences between the mode of living of the industrial classes and that of the population of India as a whole. The Government of India recognized the possibility of constructing index numbers by the aggregate expenditure method, but cast doubts on the appropriateness of this method as applied to India, and suggested that, while it might be used in the first instance, the results should be checked by a collection of family budgets.

The majority of Local Governments were willing to co-operate but the most important exception was Bengal where financial stringency was making itself felt. But the investigations led the Government of India to the conclusion that the construction of an All-India index number should not be undertaken. The publication of a cost of living index number on a pre-war

base for the working classes in Bombay City was started in the *Labour Gazette* from September 1921 and the scope and method of its compilation are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. The index number is based on what is known as the aggregate expenditure method and includes in all 24 items representing food, fuel and lighting, clothing and rent. The table below gives the Bombay working class cost of living index numbers month by month from January 1915.

Bombay working class cost of living index numbers by months

(July 1914=100).

The Labour Office conducted in the year 1926 an enquiry into working class budgets in Ahmedabad and the results of this enquiry have been used in the construction of a cost of living index for that centre. The Ahmedabad working class cost of living index number has been compiled on a post-war base and is being published in the *Labour Gazette* since January 1930. Items representing food, fuel and lighting, clothing, house-rent and miscellaneous groups have been included in the index. The following table gives the index numbers from August 1927 to November 1929:—

Ahmedabad working class cost of living index numbers by months

(Average prices from August 1926 to July 1927 =100.)

Months.	Index No.	Month	Index No.
1927.		1928—*contd.*	
August	101	October	97
September	101	November	97
October	100	December	99
November	98	1929.	
December	96	January	99
1928.		February	99

May	91	July	98
June	95	August	98
July	97	September	97
August	96	October	98
September	96	November	98

A cost of living index number based on the results of the enquiry into family budgets of cotton mill workers in Sholapur conducted by the Labour Office in 1925 is also under preparation. In the Central Provinces cost of living index numbers with January 1927 as the base have been prepared from January 1925 for the industrial workers at Nagpur and Jubbulpore and published in the Department of Industrial Bulletin No. 3.

Standard of Life.—Very little information is available regarding the standard of living of the working classes in India. The most satisfactory method of obtaining this information is by means of a family budget enquiry in which information is collected regarding the composition, income and more particularly about various items on which expenditure is ordinarily incurred by a family. To enable general conclusions to be drawn from investigations of this type it is always necessary to conduct the enquiries by what is known as the extensive method, an attempt being made to secure the information from a large number of families so as to minimise the effect of the peculiarities of exceptional cases. The information collected according to this method is, generally not of a detailed character, but the results are, on the whole, found to be more representative of the group or the community studied. The sampling method is often resorted to in conducting extensive family budget enquiries because of the impracticability of collecting data by the census method. It is essential that the sample should be representative if the final results are to yield satisfactory general conclusions.

At the Third International Labour Conference of Labour Statisticians held at Geneva in October 1926, the Committee on family budgets passed a resolution that in order to provide adequate information with regard to actual standards of living, enquiries should be conducted generally at intervals of not more than ten years into the income, expenditure and conditions of living of families representative of large homogeneous sections of the population. It was also decided that for a complete enquiry information should be collected as to the district in which the family resides, the composition of the household, the industries and occupations of members of the family, the nature of the housing accommodation and the amount of each important item of family income and expenditure together with quantities of purchases, where practicable. It was agreed, however, that a less detailed investigation omitting the particulars of the family income would be sufficient where the sole object of the enquiry is to provide weights for the calculation of cost of living index numbers.

Family budgets were collected by the Labour Office for 3,076 working class families in Bombay City in 1921-22 and the report based on the results thereof was published in 1923. It has been decided to undertake a new family budget enquiry when industrial conditions become normal in Bombay City and to use weights based on the results of that enquiry in compiling a fresh cost of living index number for Bombay on a new base period. The Labour Office collected 985 budgets of working class families in Ahmedabad in 1926 and 1,133 budgets of cotton mill workers in Sholapur in 1925. The reports based on the results of these enquiries were published in 1928.

In the United Provinces a number of budgets were collected at Cawnpore with the object of compiling a cost of living index number. But the results of the enquiry were not found to be satisfactory and the province has not been compiling any cost of living index number.

The Labour Statistics Bureau, Rangoon, which was established by the Government of Burma in 1926, has made an extensive enquiry into the Standard and cost of living of the working classes in Rangoon and the report based on 4,309 budgets was published in 1928. The results of this enquiry have been separately analysed for Burmese, Telugu, Tamil, Uriya, Hindustani, and Chittagongian workers. Separate index numbers for each of the different classes of workers have also been published at the end of the report. 1,002 budgets for the working class families in Nagpur and 507 budgets for working class families at Jubbulpore were collected between September 1926 and January 1927 for compiling cost of living index numbers for these two centres.

TRADE UNIONS.

The history of trade unionism in India is a history of recent years. It was not until 1918 that labour had begun definitely to organise itself. Previous to that year very little effort appears to have been made to establish organisations of labour. The earliest association of workers in India was the Amalgamated Society of Railway Servants of India and Burmah which had been registered under the Indian Companies Act and its main activities were in connexion with the provision of various benefits to its members, such as Legal Defence, Sickness Insurance, Life Assurance, etc. After the Indian Trade Unions Act, 1926, came into force this Association registered under it as a Trade Union with the new name of the National Union of Railwaymen of India and Burmah. The Bombay Postal Union, founded in 1907, mainly for the clerical classes employed in the Bombay Post Offices, a Union of warpers in the Ahmedabad cotton mills formed in 1917; the Clerks' Union, Bombay, established in April 1918 in order to organise the various classes of clerical labour employed in commercial and other offices in Bombay city; and the Madras Labour Union formed in 1918 for the textile workers in the three mills in the city of Madras, were the main labour organisations in existence at the end of the year 1918. In addition, there existed certain benevolent social institutions such as the Kamgar Hitwardhak Sabha and the Social Service League, whose activities were directed towards the betterment of the condition of the working classes. But these Societies were not composed of workers themselves.

The year 1918 may be said to be a landmark in the history of the Indian Trade Union movement; for, from that year onwards there has been a more or less steady growth of trade unions despite the inevitable fluctuations in their prosperity. The economic circumstances of the time must be regarded as the dominant factor contributing to the establishment of trade unionism in India. As a result of the Great War the prices of all commodities, including the necessities of life, soared high. This remarkable rise in prices was due partly to world factors and partly to factors peculiar to India. The intensive competition by belligerent countries for commodities of all kinds, the diversion of huge numbers of those formerly engaged in production to the Army and supply services, and the creation of a huge additional volume of credit and currency to finance the war, reacted on India with the following two main results: (1) the demand for her products was increased and consequently industries flourished making huge profits, and (2) labour was in greater demand than ever before. The unprecedented rise in prices coupled with the comparatively slow movement of the level of wages tended to reduce the real value of the workers' income. The general economic unrest that followed the Armistice affected the Indian labourer also, who like his prototype elsewhere, began to demand from his employer more wages, better housing conditions, more leisure and increased opportunities for bettering himself. A period of industrial strife followed and a few strikes were quickly successful. These successes taught the labourers in India, as nothing else could, the efficiency of organisation. Indeed, to many workmen, concerted action in the nature of strikes, attended by rapid and unvarying successes seemed almost infallible. This was the period during which active trade unionism in India may be considered to have begun. In the two years following 1918, the epidemic of industrial strife assumed serious proportions and reached a climax towards the close of the year 1920. The number of labour unions also increased very rapidly and unions were formed of workers in all possible industries and occupations. Most of these Unions were, however, merely Strike Committees brought into existence either before or after particular strikes in order either to engineer or to conduct them. These Committees were either dissolved as soon as their purpose was served or remained dormant until another strike in the trade broke out. Most of the remaining Unions formed during the period 1918-20 were unstable and nearly 75 per cent of them died an early death in the following year. There was a definite check in the progress of the trade union movement in India during the next two or three years. But although individual Unions collapsed as rapidly as they were formed the movement itself showed signs of permanence and vitality.

Obstacles to rapid growth.—The difficulties in the way of organising permanent trade unions in India were almost insuperable. Most of the earlier Unions had no regular constitution or a definite basis of revenue, no system of auditing or publishing accounts and no funds for providing help to women and children in times of distress. The membership of the Unions became effective when the workers possessed definite and real grievances and particularly when there was a marked gap between nominal wages and the cost of living. But when the economic stringency passed away, the bond which united the workers constituting all but the few really well organised Unions, tended greatly to weaken.

Further, labour in India is still migratory. The average Indian labourer who is an agriculturist by tradition, is domiciled in a locality remote from that in which he works. His love of home makes him return constantly to his native village only to retrace his steps to the industrial centre as soon as he feels the pinch of want. During his absence away at his home, he does not feel inclined to continue his membership of any trade union with which he might have been associated. The want of a steady working class population was thus an important factor which stood in the way of the growth of the movement. The difficulties arising out of the widely differing social customs of the several castes and creeds that make up the Indian labouring classes were also contributing factors militating against the progress of trade unionism in India. Ignorance and illiteracy were, and still are, to a large extent, serious obstacles in the way of labour organising itself. The general poverty of the working classes is yet another factor to be reckoned with. Many labourers disliked the idea of regular contributions and were not amenable to Union discipline, with the result that a Union could rarely embrace more than a small percentage of the men employed in any establishment. The authority which could be exercised by the smaller Unions over the men, as a whole, was consequently very restricted. The paradox of Trade Unionism in India was that the persons who most needed organisation were those who were unable, on account of their poverty and ignorance, to combine.

Notwithstanding the reasons given above, perhaps the most important factor which retarded the growth in the movement immediately following the successes which met the earlier formations or Strike Committees which they really were was the definitely hostile attitude of the employers to all combinations of their employees. It was not until the passage of the Indian Trade Unions Act which made it morally obligatory on employers to recognise those Unions of their employees which had registered under the Act, that a change in the angle of vision was noticeable.

Nature of leadership.—The Indian Trade Union movement, in its early beginnings, was essentially an economic one, and to regard labour unions as being engineered solely by politicians as the result of their propaganda is to misread the origin of this movement. The Indian workman is predominantly illiterate and has even now few leaders from his own class to whom he can turn for guidance. In consequence, trade unions in India have been led by middle class men, especially professional lawyers and others, who have not perhaps in all cases made a distinction between economic and political considerations. In the words of Mr. A. R. Burnett-Hurst, "social workers did not take the initiative" but "allowed the lawyer-politician class to capture and control these bodies." Many of the so-called leaders of Indian Labour who were drawn from the lawyer-politician

class often exploited the ignorance and credulity of the labour force for their own material advantage, or for the propagation of their pet political doctrine, in addition to looking after the welfare of the labourers. There were, however, several notable exceptions. Leaders like Mr. N. M. Joshi, Dewan Chaman Lal, the Rev. C. F. Andrews, Mr. M. K. Gandhi, Mr. V. V. Giri, Mr. B. Shiva Rao and Miss Anasuya Sarabhai endeavoured to create Unions for the benefit of the workers and for the general improvement in the conditions of life and work of the labouring classes. During the last two years, however, the principles of communism have been disseminated amongst the masses of India by the members of the Workers and Peasants Party which is an agent in India of the Communist International. The Communist agents took advantage of the economic unrest prevalent in the country early in the year 1928 and usurped the leadership of the working classes within a short period of time and were able to assume control over the executive of the principal textile and railway unions in Bombay, Madras and Bengal. The Communists captivated the minds of the workers by painting the existing conditions as black as possible and contrasting them with a supreme state of wealth and happiness which is promised under the regime of a dictatorship of a workers' proletariat. The discontentment amongst the workers over conditions of work has been aggravated by the incessant preachings of revolutionary doctrines. The credulity of the Indian labourer has been of great advantage to these emissaries of revolution in creating in him a class hatred against the employers and also instilling in his mind an abhorrence for the Government established by law in the country. These agitators, occupying positions of vantage, have instigated disastrous strikes in pursuance of purely political ends often with a callous disregard of the subsequent sufferings and losses inflicted on their ignorant and hapless dupes. The hold which the Communists have over the labour movement in India to-day shows no signs of abatement. The sanity and sobriety of moderate leadership have no great attraction for the large majority of the labourers. The moderate leaders have, however, been fighting their battles for leadership with the extremist revolutionaries, and were for a time successful in keeping the latter under control. At the moment of writing, it has become impossible fo the moderates and the avowed Communists to work shoulder to shoulder in the labour movement, and a split has occurred between the two, the Unions standing for constitutional progress rallying under the banner of the Moderates while those in favour of Communist principles accepting the leadership of the Red Flag Organisations.

Progress of Trade Unions since 1918.—The trade union movement spread to various industries and occupations in India during the years following the Armistice, but a number of them passed out of existence very soon after they were started. The more stable Unions were of clerks, railway workers, postal employees and seamen. The peculiar feature of the trade union movement in India is that it did not in the early stages of its progress make much headway in the more important manufacturing industries and this constituted a weak point in the movement. Whereas in other countries, the clerical employees organised themselves on the model of the industrial workers long after the latter had well organised themselves in strong Unions, in India the former have come up if not first, at least simultaneously with industrial unions and have established themselves more permanently.

The following figures illustrates the growth of Trade Unions in the Bombay Presidency: -

Year.	No. of Unions.	No. of Members.
1922	22	51,472
1923	19	46,037
1924	36	52,227
1925	38	49,318
1926	56	74,875
1927	72	87,340
1928	94	198,072
1929	99	196,748

The distribution of the membership at the end of 1929 by classes of industries is as follows :—

Class of Industry.	No. of Unions.	Membership.	Percentage of membership to total.
Textiles	11	74,974	38.11
Railways (including railway workshops)..	19	64,665	32.87
Seamen	3	29,458	14.97
Post and Telegraphs	31	8,456	4.30
Municipal	5	1,918	0.97
Miscellaneous	30	17,277	8.78
Total ..	99	196,748	100.00

There are in addition two federations of Postal Unions, one of Railway Employees' Unions and a fourth which is a Central Union governing a number of individual Unions of textile workers in Ahmedabad. (For the constitution, membership and other particulars regarding these organisations, reference may be made to the issue of the Bombay *Labour Gazette*). The Central Labour Board and the Bombay Trades Council which had been included in the list of Federations in the Bombay Presidency are now defunct.

The Punjab has no heavy concentration of industrial labour and consequently the extent of organisation among both employers and employed is up to the present little. There is, however, a vague striving among the employed towards co-operation and combination especially for the purpose of demanding better remuneration and considering the question of resorting to direct action for enforcing their demands on their employers. No Communist influence has been noticeable in the Punjab where industrial disputes have been stated to have occurred as a result of the normal antagonism between employers and employed. The only large employers of labour in the Punjab are the N.-W. Railway Administration, and four out of the 16 registered Unions are of the employees of the various departments of the N.-W. Railway and cover, in all, 5,436 members.

In the United Provinces, the number of Associations of workers is rather small, compared to its industrial importance. There are in all about 8 Unions, all of recent growth. Some of the Associations formed during the general upheaval following the War and especially during the days of Non-Co-operation have since died or become moribund. Organised labour forms a very small proportion of the total. Organisation of labour outside Cawnpore is almost non-existent and even in Cawnpore only about 10 per cent. of the labour is organised. There has been a growing interest of labour in trade unionism which appears to have the prospect of a rapid development in the future.

The Central Provinces and Berar have six trade unions and four branches of outside organisations. The classes or workers who have been embraced by the Trade movement in this part of India are (1) Textile workers, (2) Press employees, (3) Scavengers, (4) Motor drivers, (5) Railway workers, (6) Postal employees and (7) Clerks. Trade unionism is stated to be yet in its infancy in this Province and the Labour Unions appear to have done little to improve the conditions under which their members work.

The trade union movement in **Madras** received a setback in 1921-22 as a result of the failure of the strike in the Buckingham and Carnatic mills. During the year 1922-23 most of the Unions were dormant and the only Union which showed signs of activity was the M. and S. M. Railway Workshop Employees' Union, Perambur. The trade union activities were revived in 1923-24 and the following Unions became once more active :- (1) The Madras Labour Union, (2) The Madras Tramwaymen's Union, (3) The Corporation Scavengers' Union, (4) the S. I. Railway Employees' Union and (5) the Coimbatore Labour Union. The Madras Harbour Port Trust Workmen's Union was revived in 1925-26. A section of the workmen of the Buckingham and Carnatic mills organised a separate Union in 1925-26 called the Buckingham and Carnatic Mills Employees' Union, as a rivival to the Madras Labour Union which is an old organisation in the same industry. The Cordite Factory Labour Union, Aruvankadu, came into prominence during 1926-27. Unions were newly formed for the employees of the Public Works Department workshops and the Government Central Press, Madras, while the Diocesan Press Employees' Union which had remained dormant was revived. The labourers working in the cotton ginning and pressing factories in Tiruppur, Coimbatore District, started a Union for their benefit. Most of the Unions included in their programme a demand for separate representation for Labour in the Legislative Council. The Oil Workers' Union and certain other Unions came into prominence only when there was an impending labour dispute.

RAILWAYS.

There are four Railway Associations of an All-India character with the following membership :—

	Membership.
The All-India Railwaymen's Federation	100,000
The Anglo-Indian and Domiciled European Association (This is not a Trade Union)	10,000
The All-India and Burma Covenanted Non-Gazetted Railway Services Association	265
The National Union of Railwaymen of India and Burma	2,000

In addition there are over 20 individual Unions distributed over the principal Railways in India. The following nine Unions on the principal Railways have each a membership of over 3,000 :-

Name of Railway.	Name of Union.	Membership.
N. W. Railway	(1) The N. W. Railway Union, Lahore	5,000
	(2) The General Workers' Union, Lahore ..	8,500
E. B. Railway	(3) The Eastern-Bengal Railway Indian Employees' Association, Calcutta	11,147
B. N. Railway	(4) The Bengal-Nagpur Railway Indian Labour Union.	14,000

Name of Railway.	Name of Union.	Membership.
M. & S. M. Railway ..	(5) The Madras and Southern Mahratta Railway Employees' Union, Perambur	8,000
G. I. P. Railway	(6) The G. I. P. Railway Staff Union, Bombay ..	5,505
	(7) The G. I. P. Railwaymen's Union, Bombay ..	41,000
B. B. & C. I. Railwaymen.	(8) The B. B. & C. I. Railway Employees' Association, Ahmedabad	6,556
	(9) The B. B. & C. I. Railway Employees' Union, Bombay	6,605

The main characteristics of the trade unions of Railway employees are that (1) they embrace in one Union all the varied classes of railway employees, (2) several of them are connected with workshop employees who by reason of their concentration in one place afford the best field for organisation, (3) the leaders are often of the lawyer class, (4) the membership increases during times of unrest and decreases at other times, and, (5) the funds of the Unions are consequently uncertain. Communist agitators have worked their way into the executives of some of the more important trade unions of railway employees especially on the the G. I. P., E.I. and S. I. Railways. In the case of these Railways they have pursued their revolutionary policy and instigated the workers to go on strikes which were at once disastrous to the public, the railway administration and to the workers. Unions conducted on sound trade union principles are encouraged by the Railway authorities who are also disposed to recognise Unions which are registered under the Indian Trade Unions Act. Representations and deputations from recognised Unions are received and sympathetically treated by the authorities. Freedom of action is granted to the Unions for the enrolment of members and collection of subscriptions so long as there is no interference with the duties of the railway staff.

ALL INDIA LABOUR ASSOCIATIONS.

The All India Railwaymen's Federation.—Twelve Unions of Railway workers are affiliated to it and its total membership amounts to nearly 1,00,000. It is growing in influence and popularity and in May 1929 a deputation waited on Sir George Rainy, the Railway Member of the Government of India, to discuss the grivances of railway employees in general. No less than 25 subjects were included for discussion but the more important of them related to wages and the position of daily rated men, hours of work and the weekly rest, insecurity of service and appeals, medical facilities, fines, extension of provident fund benefits and quarters. The Railway Board have initiated enquiries with a view to taking the necessary action in the matter.

The National Union of Railwaymen of India and Burma was started by the Amalgamated Society of Railway Servants of India and Burma which came into existence as a sequel to the Great Indian Peninsula Railway Guards' strike in 1897. It was at first registered under the Indian Companies Act, but after the Indian Trade Unions Act came into being, it altered its name, redrafted its constitution and registered as a Trade Union. It has a membership of over 2,000 employees.

The All India and Burmah Covenanted Non-Gazetted Railway Services Association.—This Association, whose membership is limited to covenanted Europeans employed as foremen in railway workshops in India, was started in October 1926 with the object of securing for its members the benefits of the Lee Commission's recommendations. It submitted a memorial to the Viceroy on this question in November 1926. It has a membership of about 300 employees scattered all over India and has its Head Office in Bombay. The Association registered with the Registrar of Trade Union, Bombay Presidency, in March 1928.

The All India Trade Union Congress.—This organisation was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual Labour Unions in India which till then remained incohate and were unable to take concerted action and (2) to recommend workers' delegates to the International Labour Conferences. When the Government of India had to select a Labour representative to attend the Washington Conference in 1919, there was no representative body of labour in India to be consulted and they therefore appointed Mr. N. M. Joshi as the Workers' Delegate. In order, therefore, that responsible Labour opinion in India might have a voice in the selection of the delegates to the International Labour Conferences, the All India Trade Union Congress was organised and the first session of the Congress was held in Bombay on the 31st October 1920. Eight hundred delegates from different parts of India were present and sixty Unions were affiliated and 42 others expressed their sympathy with the Congress. It became a central organisation of the trade union movement in India but from the beginning it had a strong political colour. Its presidents and secretaries have all been politicians first and labour leaders next, with the exceptions of a few persons like Mr. N. M. Joshi and Dewan Chaman Lal. The Congress appointed itself a permanent body to meet once a year. It has a definite constitution, an elected

Executive to carry on its work, and Provincial Councils which, under the Executive, are responsible for co-ordinating the work in the respective provinces. The main object of the Congress is "to co-ordinate the activities of all the labour organisations in all the provinces in India and generally to further the interests of Indian labour in matters economic, social and political. It may also co-operate and federate with organisations of labour having similar objects in any part of the world."

Every organisations of labour in India is entitled to be affiliated to the Congress on the following conditions:—

(*a*) That the Union seeking affiliation shall pay to the All-India Trade Union Congress an annual contribution on the basis of Rs. 10 for every 1,000 members or part thereof.

(*b*) That the Union seeking affiliation shall pay to the All-India Trade Union Congress the amount of a special levy of a contribution approved of by a majority of two-thirds of the members of the Executive Council in the same proportion as (*a*).

(*c*) That the Union seeking affiliation shall agree not to act in any manner prejudicial to the collective interests of the collective interests of the All-India Trade Union Congress.

(*d*) That the applications for affiliation shall be forwarded through the Provincial Committee to the General Secretary, with the decisions arrived at by it; but no application for affiliation shall be withheld by the Provincial Committee.

(*e*) That no Union shall be affiliated to the Congress without being first affiliated to the Provincial Committee. That no Union shall be affiliated which has not been in existence at least for one year and has not had its accounts and statement of paying members audited by a qualified auditor or an authorised representative of the All-India Trade Union Congress.

The Executive Council of the Congress consists of a Chairman, the Vice-Chairman or Vice-Chairmen, the Treasurer, the General Secretary or General Secretaries, the Secretary or Secretaries and the Assistant Secretary or Assistant Secretaries as ex-officio members and not more than ten additional members including the ex-Presidents of the All-India Trade Union Congress, elected at the annual session of the Congress and the representatives elected by the affiliated unions on the following basis:—

1 Representative for unions with a membership upto 1,000;

2 Representatives for unions with a membership between 1,000 and 3,000.

3 Representatives for unions with a membership between 4,000 and 5,000.

4 Representatives for unions with a membership above 5,000.

The individual Unions affiliated to the Congress are conceded full autonomy with regard to th management of their own affairs according to their rules.

The second Session of the Congress was held in 1921 at Jharia under the Presidentship of Mr. Joseph Baptista. The third session was held at Lahore in 1923 with Mr. C. R. Das as President. The fourth Session held at Calcutta in 1924 was also presided over by Mr. C. R. Das. Out of the 43 resolutions passed at this Session some dealt with the recruitment of Seamen and their eligibility for securing compensation under the Workmen's Compensation Act. The fifth session was held in Bombay in 1925 with Mr. Dhundiraj R. Thengdi of Nagpur in the chair. Mr. V. V. Giri of Berhampur was the President of the Sixth Session held in Madras in 1926. Delhi was the centre where the Seventh conference of the Congress was held in 1927 and the President was Rai Saheb Chandrika Prasad. Dewan Chaman Lall, M.L.A., was the President of the Cawnpore Session of the Congress held in 1927. The ninth session was held in 1928 at Jharia with Mr. M. Daud in the chair. It is significant that at this Conference Pandit Jawaharlal Nehru moved a resolution protesting against imperialism.

The tenth assembly of the Trade Union Congress which met at Nagpur in 1929 under the presidentship of Pandit Jawaharlal Nehru will remain as the most important land-mark in the history of organised labour in India. It marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by Communist Agents in India resulting in a split between the genuine trade union leadership on the one one hand and the votaries of communism on the other. The fundamental issue upon which the split in the Trade Union movement occurred was whether the labour movement in India shall be inspired and conducted for the betterment of the industrial workers or whether it shall be utilised as a means to promote and bring about revolution in the country. The proceedings at the Session made it impossible for the rival forces to carry on any longer under a common organisation. The reasons contributing to the ultimate split were as follows:—The Bombay Girni Kamgar Union and the G. I. P. Railwaymen's Union applied for affiliation, the former with a membership figure of 54,000 and the latter 45,000. The Bombay Girni Kamgar Union could produce no audited documents as required. However it was admitted a member on the basis of a membership of 40,000. The G. I. P. Railwaymen's Union was affiliated on a strength of 30,000 members. This meant that a large part of the voting power was vested in the representatives of these two Unions which were of communist persuation. The Executive of the Congress was also captured by the revolutionaries, and resolutions for the boycott of the Royal Commission on Indian Labour, affiliation of the Congress to the League Against Imperialism, the appointment of the Workers' Welfare League, a Communist organisation in England, as Agents of the Congress for Great Britain and the boycott of the International Labour Conferences at Geneva were passed both by the Executive Committee and the open session of the Congress. The moderate leaders of labour, including

Messrs. N. M. Joshi, V. V. Giri, B. Shiva Rao, R. R. Bakhale and Dewan Chaman Lall seceded from the Congress and set up a separate federation under the name of the "All India Trades Union Federation" in order to co-ordinate the activities of non-communist Trade Unions in India. Endeavours made to draw the seceders back into the fold of the All-India Trade Union Congress have not met with any success. The relative strength of the two organisations can be seen from the fact that the Trade Union Congress to-day consists of 19 Unions with an aggregate membership of 90,000 whereas the Trade Union Federation embraces about 30 Unions with a total membership of nearly 97,000. The position with regard to two other affiliated Unions is not yet known. The Labour Unions in Ahmedabad which draw their inspiration mainly from Mr. M. K. Gandhi have not during the ten years of the Trade Union movement in India shown any desire to become affiliated to the Congress.

The Trade Union Congress in 1925 brought out a Directory of Trade Unions in India which is the book of reference for those interested in Indian Trade Unionism. The utility of this publication will be by far enhanced, if the Central organisation makes it a point to bring the Directory upto date each year. The Congress also started publishing from 1924 a bulletin called the "All India Trade Union Bulletin" which contained notes on all vital questions concerning the trade union movement in India. Since the Nagpur split the "All India Trade Unions Federation" has proposed to publish a new journal entitled the "*Trade Union Record*.

Trade Union Legislation.

Article 427 of the Peace Treaty (to which India was a signatory) defines certain methods and principles relating to Labour. The second of these principles lays down "the right of Association for all lawful purposes by the employed as well as by the employers." This right could not be exercised by Trade Unions in India where it came into conflict with the laws of the land in regard to agreements in restraint of trade, tortuous acts and criminal conspiracy. This drawback was well brought out in consequence of a suit which arose out of a trade dispute in Madras. In 1920 a Company owning a mill whose workers were on strike brought a suit against the leader of the local labour union which was conducting the strike and others, seeking to restrain them from inducing the plaintiff's workmen to break their contracts, and suing for damages for their actions in this respect. The Madras High Court to whom the suit was referred gave their decision granting an *interim* injunction restraining the defendants from inciting the plaintiffs' employees to continue the strike. The case was eventually withdrawn but the proceedings suggested that, in the absence of legislation, even legitimate trade union activity was attended by considerable peril. As a result of a resolution moved by Mr. N. M. Joshi and accepted by the Legislative Assembly in March 1921, Government were committed to take steps as soon as practicable to introduce such legislation as might be necessary for the registration & protection of Trade Unions. The Government of India, accordingly, formulated certain tentative proposals and circulated them for eliciting public opinion. The opinions expressed were by no means unanimous,—some considered the proposed legislation premature, some others realised that legislation was necessary but at the same time considered Trade Unions as a pernicious and dangerous growth which should be rigidly controlled, and others again urged that sufficient license should be granted to them. In August 1924, the Government of India circularised a draft Bill for opinion. The Bill conferred certain privileges only on registered Trade Unions and left the question of registration at the option of Trade Unions themselves. Provision was also made to ensure that the funds of a registered Trade Union are not expended on causes in which the bulk of the members have little interest. A regular audit of the funds was proposed to be made compulsory and the manner in which the executive should be composed was also provided for.

A number of amendments were made by the Select Committee and in the Legislative Assembly. A clause permitting registered Trade Unions to maintain funds for political purposes was added. The provision was on the model of the British Law on the subject and those members who contracted out of the liability to subscribe should not be compelled to contribute to the Political Fund nor would failure to contribute involve any disability or disadvantage except in so far as the control and management of the Political Fund was concerned. The Bill was passed on the 8th February and received the assent of the Governor-General on the 25th March 1926. It came into effect from the 1st June 1927.

Mr. N. M. Joshi introduced in the Legislative Assembly on the 9th February 1928, a Bill to amend Section 43 of the Indian Penal Code in order to extend to the officers and members of unregistered Trade Unions the protection afforded by Section 17 of the Indian Trade Unions Act, 1926, which lays down that 'no officer or member of a registered Trade Union shall be liable to punishment under sub-section (2) of section 120B of the Indian Penal Code, in respect of any agreement made between the members for the purposes of furthering any such object of the Trade Union as is specified in Section 15, unless the agreement is an agreement to commit an offence.' The Assembly, however, threw out the Bill.

A Bill was introduced in the Legislative Assembly on the 4th September 1928 with a view to amending Section 11 of the Indian Trade Unions Act, 1926. It was pointed out in the Statement of Objects and Reasons that the existing Section 11 of the Act admitted of doubt in two respects namely: (1) Itdid not in dicate clearly whether the first appeal lay to the judge appointed for the area within which the Registrar's office is situated or to the judge appointed for the area within which the head office of the trade union is situated. The amendment is intended to make it clear that the latter is the competent court; (2) It did not indicate clearly what judge might be appointed to hear appeals in the Presidency towns and in Rangoon. The amendment is designed to make it clear that in such areas the appeal lies to the High Court and there is no second appeal. The opportunity has also been taken to define clearly the powers of the High Court in second appeals.

The Bill passed into an Act and received the assent of the Governor-General on 25th September 1928.

Working of the Act.—The Act has now been in operation for more than 2½ years. Full information regarding the total number of Unions registered in all Provinces in India is not available. The following table, however, shows the number of Unions registered and the character of the membership as at 1st April 1929 for those provinces for which information is available.

	Total No. of Unions registered.	Membership of registered Trade Unions.		
		Male.	Female.	Total.
Bombay	35	151,529*	552*	152,081*
Bengal	9	37,455	190	37,645
Burma	1	148	....	148
Central Provinces and Berar	3	1,914	600	2,514
Madras	10	16,393	220	16,613
N. W. F. Provinces	1	2,190	4	2,194
Punjab	13	14,507	....	14,507
United Provinces	4†	8,518	....	8,518

* The figures are approximate. † Two Unions did not furnish figures for membership.

No association of employers has yet applied for registration. No Trade Union was registered in the provinces of Assam, Ajmer-Merwara, Baluchistan, Coorg and Delhi, up to the end of March 1929. The great inducement to register has been the predisposition of employers generally to recognise Unions that are registered. In the case of Associations of Government Servants, one of the condition of their recognition by Government was that they should get themselves registered when the Trade Unions Act was brought into force. In view of the fact, however, that certain difficulties have arisen in connexion with the application of the Act to Government servants, the question is under the consideration of the Government of India who have not yet formulated any definite conclusions. Pending the consideration of this question, Government have relaxed the provision contained in the existing rules for the recognition of Associations of Government servants which requires them to register under the Act.

INDUSTRIAL DISPUTES.

The weapon of the "strike" in industry first came into prominence in India during the period immediately following the close of the War when the majority of the strikes as shown in the Introductory Section were designed to secure increases in wages commensurate with the rise in the cost of living. The epidemic of industrial strike which characterised the period 1919-20 reached a climax in the winter of 1921. During this period strikes took place purely from economic causes and most of them ended successfully from the view point of the workers, after a short struggle. After this period, however, they tended to be more prolonged and less successful and, partly owing to political causes, there were a number of fairly serious disputes in public utility services. In more recent years the machinations of the Communists have been increasingly responsible for the calling of general strikes and their undue prolongation. Many of these strikes were accompanied by considerable violence, bloodshed and sabotage.

Certain characteristics common to most of the strikes in India, in the words of the Industrial Disputes Committee appointed by the Government of Bombay in 1921, are—

(*a*) The frequency of the strike without notice;

(*b*) The absence of any clearly-defined grievance before striking.

(*c*) The multiplicity and sometimes the extravagance of the claims put forward after the strike has begun;

(*d*) The absence of any effective organisation to formulate the claims of the operatives and to secure respect for any settlement which may be made.

(*e*) The increasing solidarity of employers and employed and the capacity of the operatives to remain on strike for considerable periods despite the lack of any visible organisation.

Extent of Disputes.—All-India statistics of industrial disputes for each quarter and for each year have been compiled and published since 1920 by the Government of India in the Department of Industries and Labour.

The following tables show the number of disputes which occurred during the five years 1924-28 in each province and in each class of industry respectively :—

Provinces.	No. of disputes in				
	1924.	1925.	1926.	1927.	1928.
Bengal	55	43	57	34*	60
Bombay	51	69	57	54	111
Madras	16	4	2	19*	7
Central Provinces & Berar ..	3	6	4	2	1
United Provinces	4	6	3	3	2
Bihar & Orissa	1	2	3	4*	8
Burma	3	3	1	3	7
Punjab	..	1	..	..	2
Assam	..	..	1	12	5
Total ..	133	134	128	129	203

* One strike extended to three provinces.

Industries.	No. of disputes in				
	1924.	1925.	1926.	1927.	1928.
Cotton and woollen mills	55	69	57	60	110
Jute Mills	20	15	33	11	19
Engineering Workshops	8	7	4	6	11
Railways including Railway Workshops	4	6	3	3	9
Others	46	37	31	49	54
Total ..	133	134	128	129	203

The peak in respect of the number of industrial disputes (203) was reached in the year 1928. More than 50 per cent. of these disputes occurred in the Bombay Presidency while only about 30 per cent. occurred in Bengal. In none of the other provinces was there an average of at least one dispute per month during that year. The industry which was hit hardest was the cotton and woollen mill industry in which no less than 110 disputes took place during the year.

CONCILIATION AND ARBITRATION MACHINERY.

Prior to the passing of the Trade Disputes Act as an All India measure early in the year 1929, there was, with the exception of a conciliation panel in Bengal, which will be dealt with lower down, no official machinery for conciliation and arbitration in industrial disputes in India. The Employers and Workmen's (Disputes) Act which was passed in 1860 to make provision for the speedy termination of certain disputes between workmen engaged in railway and other public works and their employers and which was extended, in case of the Bombay Presidency, to the districts of Ahmednagar, Broach, Ahmedabad, Kaira, Poona, Sholapur, Surat and Thana in 1860 and 1861 and to Sind in 1873 deals with individuals and does not provide any machinery for the settlement of disputes in other trades or industries. No records are available to show the extent to which this Act has been made use of in India. The only provinces in which *ad hoc* Committees have been appointed during the previous ten years either to enquire into the question of providing machinery for the settlement of disputes or to deal with specific strikes are the Bengal and the Bombay Presidencies.

Bombay Presidency.—The first Committee to be appointed in the Bombay Presidency was the Industrial Disputes Committee appointed on the 18th November 1921 with Sir Stanley Reed as Chairman "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes." This Committee made several recommendations with regard to the standardization of wages, trade unions, the attitude employers should adopt towards Unions of their workers and the recognition of such Unions, Works Committees, Welfare Work, Co-operative Societies, Housing of Labour, etc. Their recommendations were in the nature of measures that might contribute to the prevention of industrial disputes With regard to the

methods of settlement when such disputes either develop irreconcilable differences between capital and labour or else become a menace to the community, the Committee recommended the formation of an Industrial Court of Enquiry to be followed, if necessary, by an Industrial Court of Conciliation. They were of the opinion that no outside agency and in particular the agency of the State, should be used until all other means had been employed and failed; or unless it was invited by one or other of the parties to the dispute; or unless the situation was such that peace, order and good government were prejudiced. The placing of the function of enquiry first and separate from the role of conciliation was done deliberately in order "to avoid too facile opportunism which seeks to patch up an industrial dispute by proposing a compromise between the views of the two parties without going down to the economic principles which are at stake." The Committee appended to its Report a draft for a Bombay Industrial Courts Act.

In pursuance of the recommendations made by the Industrial Disputes Committee, the Government of Bombay published a Bill to provide for enquiry into and settlement of trade disputes in the *Bombay Government Gazette* in May 1924. It was intended to introduce this Bill in the Bombay Legislative Council at the Poona session in July of the same year; but, in the meanwhile the Government of India asked the Local Government not to proceed with this measure because they themselves intended to introduce similar legislation for the whole of India. This, however, was not the first occasion on which the Government of India considered the question of the advisability of introducing legislation to provide for the settlement of disputes. In 1920 they circularised all Local Governments asking their opinions as to the advisability of providing legislation on the lines of the Industrial Courts Act 1919. The opinions obtained by provincial Governments were almost unanimous that labour was not properly organised and that therefore no useful purpose would be served by such legislation. The majority of the provincial Governments adopted the same view.

Bonus Dispute Enquiry Committee.—The next Committee to be appointed by the Government of Bombay was the Committee of Enquiry with Sir Norman Macleod, as Chairman to enquire into the general strike of the Bombay cotton mill workers of the year 1924 in connexion with the non-payment of an annual bonus for the year 1923 by the Bombay mills. The terms of reference were :—

(1) to consider the nature and basis of the bonus which was granted to the employees in the cotton mills of Bombay since 1919 and to declare whether the employees had established any enforceable claim, customary, legal or equitable; and

(2) to enquire into the profits made in each year since 1917 with a view to comparing these profits with the profits made in the year 1923, and to report on the contention of the millowners that the grant of a bonus such as was given in previous years was not justified by the profits of the mill industry as a whole in 1923.

The findings of the Committee on these points were :—

(1) That the mill workers had not established any enforceable claim, customary, legal, or equitable, to the annual payment of a bonus; and

(2) that the results of the working of the mill industry as a whole for the year 1923 were such as to justify the contention of the millowners that the profits did not admit of the payment of a bonus.

Bombay Strike Enquiry Committee.—The third *ad hoc* Committee to be appointed in the Bombay Presidency was the Bombay Enquiry Committee under the Chairmanship of Sir Charles Fawcett, Judge of the Bombay High Court, in connection with the general strike of the cotton mill workers in Bombay city of the year 1928 in pursuance of the agreement arrived at between the Bombay Millowners' Association and the Joint Strike Committee at a conference held under the Chairmanship of the Hon. Sir Ghulam Hussain Hidayatullah, General Member of the Government of Bombay on the 4th October 1928. The terms of reference to the Committee were :—

(*a*) whether the amended scheme of a standardised schedule of rates and of a standardised muster prepared by the Millowners' Association, and also the scheme prepared by the Joint Strike Committee was fair and reasonable;

(*b*) whether the Seventeen Demands advanced by the Joint Strike Committee were fair and reasonable, and to what extent, if any, they should be met; and

(*c*) whether the Standing Orders as amended and presented by the Millowners' Association on the 4th October 1928 were fair and reasonable.

This Committee sat for a continuous period of five and a half months and its Report was published on the 26th March 1929.

The main conclusions and recommendations of the Bombay Strike Enquiry Committee were as follows :—

(1) The proposals of the Millowners' Association (*a*) for standardization of wages, duties and numbers of operatives in a mill, and (*b*) for Standing Orders for the operatives about the conditions of their employment were in the main fair and reasonable

(2) While there was justification for the Association's proposal to make a cut of 7½ per cent. in weavers' wages, there were reasonable objections to be urged against its adoption in the present circumstances, and it was recommended that it should be dropped by the Association provided the Labour leaders undertook to co-operate in working the scheme for the standardization of wages.

(3) That part of the standardization scheme which is called the "Rational" or "Efficiency" system and which aims at

reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable.

(4) Although the principle at the back of the standardised Standing Orders was considered to be fair and reasonable, it was recommended that alterations should be made in the proposed rules in connexion with the following matters :—

(*a*) The finality of the order of a Manager or the Managing Agents should be without prejudice to any right of an operative affected by his or their decision to resort to legal proceedings in a court of law;

(*b*) The Standing Orders should not be altered without the previous consultation of, and consideration of objections by the operatives or their representatives ;

(*c*) A rule should be added about granting leave ;

(*d*) A rule should be inserted as to the method of calculating wages ;

(*e*) The right to "play off" for trade purposes should be restricted to a period of two days at a time ;

(*f*) An operative who is "played off" for a period longer than a week may be permitted to leave the Company's service on intimation of his intention without further notice ;

(*g*) A rule should be added entitling an operative to compensation for detention in a mill for over an hour in the event of stoppage of work owing to breakdown of machinery, etc. ;

(*h*) The period of notice for the termination of employment should be reduced to fourteen days.

(*i*) A rule should be added as to the payment of unclaimed wages.

With regard to some other important matters raised from the discussions of the Standing Orders the Committee found as follows : —

(*a*) As to the advisability of an extra morning recess they agreed with the Tariff Board as to its advisability and suggested that it should be tried as an experiment in suitable mills with a reduction of the working hours to 9½.

(*b*) As to exempting weavers from taking out and presenting Attendance tickets it was held that there was no sufficient reason to exempt them.

(*c*) As to the liability of operatives to be searched it was held that this was reasonable.

(*d*) As to payment of wages being made earlier than at present, it was recommended that an attempt should be made to pay them by the 10th of each month.

(*e*) As to the legality and fairness of "playing off," it was held that there is no objection to this in the case of stoppages due to causes for which the employer is not responsible, but that it should be restricted to a period not exceeding two days at a time in the case of "playing off" for trade purposes.

(*f*) As to the legality and fairness of forfeiture of wages for leaving without due notice the question was answered in the affirmative.

(*g*) As to the legality of operatives striking work without notice or inciting others to do so, it was held that this could rightly be treated as misconduct rendering an operative liable to dismissal.

(*h*) As to the proposed abolition of fines, the proposal was rejected pending the decision of the Indian Legislature on the subject on the Bill proposed to be framed in this matter by the Government of India.

(*i*) As to the compulsory purchase by weavers of spoilt cloth, it was held that its compulsory purchase is objectionable and a rule was suggested on the subject to restrict this present practice within reasonable limits.

(6) With regard to the Seventeen Demands submitted by the Joint Strike Committee the following demands were considered to be fair and reasonable—

(*a*) That the Millowners shall not vary any of the present conditions to the disadvantage of the workers before securing the approval of the workers through their organisations.

(*b*) That the Millowners' Association shall not permit its individual members to vary the conditions of service to the disadvantage of the workers without the sanction of the Association.

(*c*) The rates of new varieties shall be fixed by the Millowners' Association in consultation with the representatives of the Workers' organisations.

(*d*) Notices in vernacular showing the rates of piece work in detail should be posted in the Departments for the information of the workers.

(*e*) The rules regarding the forfeiture of wages remaining unclaimed for certain periods should be done away with.

(*f*) The conditions of employment, work and payment should be standardised.

(*g*) The present high prices allowances should be consolidated with the original wages.

(*h*) One month's notice must be given by either side before terminating the contract of service. (As a result of mutual agreement between the

parties, the period of notice was reduced during the discussions before the Committee to fourteen days).

(*i*) The Millowners' Association should make standard rules for the guidance of its members regarding the grant of leave to their employees.

(*j*) All the rules that are usually posted in the mills or departments should be standardised by the Millowners' Association so that they shall be uniform in all the mills.

(*k*) That none of these rules or regulations shall be such as may deprive the workers of their rights conferred on them by the existing law.

(*l*) Employment in the Weaving Department of the mills should be opened to the members of the so-called "Depressed Classes."

(*m*) That there should be no victimisation of men who had taken part in the strike or any Union activities.

All the above except (*g*) and (*h*) were eventually conceded by the Millowners' Association.

(7) The following demands were held to be unfair and unreasonable—

(*a*) The wages of those workers whose average monthly wage is less than Rs. 30 should be raised substantially

(*b*) The newly introduced system of compelling the workmen (1) to take out and present tickets of attendance and (2) to clean the machinery daily should be discontinued.

(8) The following demands were held to be partly fair and reasonable and partly not—

(*a*) The present practices resorted to by some millowners which result in the reduction of wages should be stopped and reductions and altered conditions already effected since 1925 should be restored.

(*b*) That where the daily hours of work of any class of workers were less than ten, the hours should not be raised to ten without the consent of the workers concerned expressed through their organisations. When the hours are thus increased the workmen should be paid for the same at the usual overtime rates.

(*c*) The system by which each worker is required to look after three looms or the whole spinning frame (two sides) should not be introduced or continued without the consultation and free consent of the workers expresssed through their organisations.

(9) The recommendations of the Committee for alleviating unemployment consequent on the introduction of efficiency methods of work were as follows:—

(*a*) The millowners should set up some machinery for taking note of all cases where workers are discharged on account of reduction of staff, and help them as far as possible to get suitable employment either in some other mill or in some other industry.

(*b*) The Millowners' Association should consider the advisability of a scheme for the payment of a gratuity to a worker, which may amount to say, four weeks or six weeks' wages according to his length of service payable in suitable cases to charged employees who may need help during the waiting period while they are seeking employment. The formation of an Out-of-Work Donation Fund on a voluntary basis to be created by a system of setting aside a contribution by the millowners of one anna per operative per month to which fund the operatives through their representatives should be invited to contribute one anna or at least half an anna per head per month was suggested.

(10) The Trade Unions should combine to arrange for the assistance of an expert technical adviser in dealing with disputes arising under the Standardisation Scheme.

(11) In view of the fact that several matters required adjustment in connexion with the scheme for wage standardisation after it had been brought into operation an with a view to avoiding strikes and lockouts, machinery was provided by "Mediation Rules" agreed to by both sides for setting up joint Committees to enquire into disputes arising under the scheme and to endeavour to arrange for their settlement. As these rules are the only rules of their kind yet framed in India they deserve to be reproduced in full.

MEDIATION RULES.

Objects.—The object of these rules is to secure the consideration and settlement of trade disputes in their early stages, and thereby to preserve good feeling between Employers and Operatives. For the purpose of carrying out this object, it is agreed as follows:—

1. In the event of a trade dispute arising between any member of the Milleowners' Association, Bombay, and any operative (s), member or members of a Trade Union registered in accordance with the provisions of the Trade Union Registration Act, 1927, in any mill or mills in Bombay City and Island, other than a trade dispute as to the correct interpretation of the Standard Orders or the Standardisation rates of wages laid down for Bombay Mills which are

members of the Bombay Millowners' Association the following course shall be taken:—

(I) Before any notice shall be given by either party to terminate employment for the purpose of a lockout or strike, the dispute shall be brought forthwith before a joint meeting of not less than two and not more than six authorised representatives of the mill or mills concerned and an equal number of representatives of the Trade Union or Unions of which the operatives is a (are) member(s) and such meeting shall be called within four days from the date of a written application by either party for such a meeting; and if a settlement of the dispute is not come to at such meeting or at an adjournment thereof, then

(II) Before any notice shall be given by either party to terminate for the purpose of a lockout or a strike, the dispute shall be brought before a joint meeting consisting of two or more members of the Employers' Mediation Panel and an equal number of the Textile Trade Union Mediation Panel, and such meeting shall be called within seven days from the date of an application by either party for such a meeting, and if a settlement of the dispute be not come to at that meeting, or at an adjournment thereof, then

(III) Before any notice shall be given by either party to terminate employment for the purpose of a lockout or strike, the dispute shall be brought before a joint meeting of the Committee of the Millowners' Association, Bombay, and the representatives of the registered Textile Trade Unions of Bombay, and such meeting shall be called within seven days from the date of an application by either party for such meeting, and if a settlement be not come to at such meeting, or at an adjournment thereof, then either party shall be at liberty to take whatever course it thinks fit.

2. In the event of a dispute arising as to the correct interpretation of the Standing Orders or the Standardisation Scheme of wages laid down for Bombay Mills which are members of the Bombay Millowners' Association, the following course shall be taken:—

(I) The dispute shall in the first instance be investigated without delay by the management of the mills concerned who shall, after completing investigations, in those cases in which a settlement is not arrived at, submit a report within seven days in writing to the Secretary of the Millowners' Association and to the Secretaries of the Textile Trade Unions registered in Bombay.

(II) Upon receipt of such communication by the Secretary of the Millowners' Association, the dispute shall be brought before a joint meeting consisting of two or more members of the Employer's Mediation Panel, and an equal number of the Textile Trade Union Mediation Panel, to be called within seven days from the date on which the Secretary of the Millowners' Association received the notification referred to in sub-clause (I), and if a settlement of the dispute be not come to at that meeting, or at an adjournment thereof, then

(III) Upon application of either party to the dispute, the dispute shall be brought before a joint meeting of the Committee of the Bombay Millowners' Association and the representative of the registered Textile Trade Unions of Bombay to be called within seven days from the receipt of an application by either party for such a meeting and if a settement be not come to at such a meeting, or at an adjournment thereof, then either party shall be at liberty to take whatever course it thinks fit.

3. Whenever a settlement of any trade dispute shall not have been come to and the operatives are on strike, or have been locked out, meetings shall be held periodically between the representatives of the Millowners' Associations and representatives of the members of the Trade Unions concerned in the dispute. The first of such meetings shall be called within four weeks after the commencement of the strike or lockout and subequent meetings at monthly or shorter intervals thereafter. The exact date, time and place of the first of such meetings shall be decided at the last joint meeting previous to the commencement of the strike or lockout.

4. Upon an application from either the Millowners' Association, or at least one-half of the registered Textile Trade Unions, a joint meetings of the Committee of the Millowners' Association and the representatives of the registered Textile Trade Unions shall be called within 28 days from the date of such an application to discuss any suggestions for altering or amending terms and/or conditions of employment affecting or likely to affect more than one quarter of the Cotton Textile Mills in Bombay.

5. The Secretary of the Millowner's Association, Bombay, shall record the decisions of any joint meetings held in accordance with the terms of Rules 1 (II), 1 (III), 2 (II), 2 (III), 3 and 4."

The scheme submitted by the Millowners' Association to the Bombay Strike Enquiry Committee for the standardisation of wages was never intended to be final and it was understood that it would be subject to changes wherever it was found, from actual experience of its working, to be necessary to alter. At the joint conferences held after the publication of the Committee's Report between Sub-Committee of the Association and the Joint Strike Committee which was in charge of the conduct of the general strike of the year 1928 on behalf of labour, the representatives of the Bombay

Girni Kamgar Union raised extraneous issues like victimisation, and the discussions for which the Conference was called were abandoned and the General Strike of 1929 declared on grounds which had nothing to do with the scheme as such.

Owing to the undue prolongation of the general strike in the Bombay Cotton Mills of the year 1929 and the consequent disruption of labour, it has not been possible for the Bombay Millowners' Association to bring into operation the Mediation Rules recommended by the Bombay Strike Enquiry Committee for the simple reason that there are no recognised Unions representatives of Bombay Cotton Mill workers in the City. The Bombay Textile Labour Union, of which Mr. N. M. Joshi, M.L.A., is the President has barely 3,000 members. The recognition accorded by the Bombay Millowners' Association to the Bombay Girni Kamgar Union which claims a membership of over fifty thousand after its registration in May 1928 was withdrawn by the Association on the publication of the reports of the Court of Enquiry appointed under the Trade Disputes Act to inquire into questions connected with the general strike of the year 1929 and the Riots Inquiry Committee. The Association has been giving anxious consideration to the practical steps which might be taken by mills to bring about better relations between employers and their workmen and for the prevention of accumulation of grievances. In a circular letter dated the 8th January 1930 addressed by the Association to all the mills affiliated to it, they have issued instructions that all mills should take immediate steps whereby complaints and grievances of the workers may be attended to by the management concerned at once. For this purpose complaint boxes are to be placed in the compounds of all mills in which workers are invited to put in petitions regarding their grievances or suggestions for improvement of conditions of work. The mills have been requested to give sympathetic consideration to any complaints or suggestions made and to redress or give effect to them wherever possible. Further measures calculated to improve the relations between the employers and the employed are under consideration. The Association have also devised measures for joint discussions between managers of mills and the Association on general question relating to the internal administration of the mills.

The next Committee to be appointed in the Bombay Presidency was a Court of Enquiry appointed under the Trade Disputes Act in connexion with the general strike of cotton mill operatives in Bombay City of 1929. This will be dealt with below under the heading "Trade Disputes Act."

Bengal.—Several special Committees were appointed by the Government of Bengal during the period of intense industrial unrest during the years 1920-21.

(1) As the result of a strike of taxi-drivers and professional drivers of private cars in Calcutta which was caused by objections to certain rules, particularly (*a*) a new rule requiring medical examination of applicants for professional driver's license, and (*b*) another rule forbidding the carrying of attendants in taxis, Government appointed a Committee of Enquiry into the existing licensing regulations and the control of taxicabs generally. The strike lasted from the 12th to the 20th January 1921, and ceased as a result of the institution of the Inquiry. The Committee made a number of proposals for amendments in the existing regulations. These proposals were ultimately accepted and brought into effect on the 12th October 1921.

(2) As the result of a strike of drivers and conductors of Calcutta and Howrah tramways, which lasted from the 27th January to the 24th February 1921, Government appointed a Committee of Enquiry after the resumption of work by the strikers on the 8th March 1921. The men resumed work towards the end of February on conditions (*a*) that the Calcutta Tramways Company would investigate their grievances and announce their decision within a week, and (*b*) that if the men were dissatisfied with the Company's decision, Government would appoint a Committee of Enquiry. There was general agreement between the Company and the men's representatives in regard to the majority of the Committee's recommendations. Some, however, of the Directors of the Company did not accept the terms. Another strike of the tramway employees of a much more protracted character broke out in 1922. It lasted from 20th December 1922 to 27th January 1923. No Committee of Enquiry was appointed, although the representatives of the men raised several points which arose from the previous inquiry. Work was resumed unconditionally.

(3) During a strike on the light railway of Messrs. Martin and Company in the 24 Parganas and Howrah which lasted from the 15th June to the 2nd July 1921, a special Conciliation Board was constituted by Government by a special resolution at the joint request of the employers and the employees concerned. The result of the Board's efforts was a compromise on most of the points raised by the workers, and as a result of the Board's recommendations it was agreed that joint works committees should be set up on the Howrah-Amta and Howrah-Sheakhala lines. Works Committees were established soon after the Board's report was published, but they failed to function owing to the men's indifference.

(4) The Bengal Legislative Council passed a resolution on the 4th March 1921 to the effect that Government should appoint a Committee to enquire into the general causes of the prevailing unrest and to suggest remedial measures. The report of the Committee was published on the 18th June 1921. The main recommendations of the Committee were—

(*a*) the establishment of joint works committees in industrial concerns;

(*b*) non-intervention of Government in private industrial disputes, which it was considered, should be settled by voluntary conciliation;

(*c*) the constitution by Government of a conciliation panel to deal with disputes in public utility services; and

(*d*) the appointment by Government of special conciliation bodies in the case of private industrial disputes, if both parties desired outside intervention.

As the result of the recommendations of this Committee, a conciliation panel was constituted under Government resolution dated the 29th August 1921. The panel contained thirty names, and was composed on a representative basis, leading public bodies being asked to recommend persons to serve on it. The panel was reconstituted every year till 1929, when it was superseded by the Trade Disputes Act. Several applications for Government intervention were received during the period of the panel's existence but in no case did Government consider that intervention was justified.

The Government of Bengal agreed with the Committee's view that there was no reason why voluntary conciliation boards, wisely constituted, should not achieve a large measure of success in labour disputes affecting public utility services, where the parties had come to a dead-lock, and a solution of the disputes could only be found in the intervention of outsiders. The panel was intended to deal only with disputes affecting public utility services in Calcutta and its neighbourhood. In the settlement of ordinary labour disputes not directly affecting the public, the Committee held that it was not ordinarily the duty of Government to intervene in such disputes either directly or indirectly, but if both parties express a desire that their differences should be investigated by an impartial authority, the Governor in Council should be prepared to establish a conciliation board to deal with the matter, or to take such other action as might be suitable in the circumstances of the case.

TRADE DISPUTES LEGISLATION.

The history with regard to proposals for legislation providing machinery for the prevention and settlement of industrial disputes in India covers a period of about ten years. The findings of the Industrial Disputes Committee appointed by the Government of Bombay in the year 1921 in pursuance of a Resolution moved in the Bombay Legislative Council for the appointment of a Committee "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes" has already been dealt with above. Mention has also been made of the action taken by the Government of Bombay under circumstances which led to its abandonment owing to the Government of India circularising a draft Bill as an All-India measure. The Bill circulated by the Government of India in August 1924 was very wide and comprehensive in scope and extent. It covered all workmen including the employees of the Government of India and of any Local Government. An important distinction was made in the general body of workmen by dividing them into employees in public utility services and other employees. In the case of public utility services and in those services to be specially notified as such by the Governor-General in Council it was provided that it would not be lawful for any employer to declare or force a lock-out or for any workmen to take part in a strike on account of any dispute, unless due notice of the proposed lock out or strike was sent to the prescribed officer. Such strikes or lock outs were not permitted until the expiry of 30 days after notice had been served, in cases where no order had been made for the reference of the dispute to a Board; and until the expiry of 30 days after notice had been served, in cases where such an order had been made or until the expiry of 7 days after the publication of a report by a Board, whichever of the two dates might be earlier. There was no separate provision in the Bill for Courts of Enquiry or Boards of Arbitration or Conciliation. The functions of these two separate institutions in industrial disputes legislation were vested under the Bill in one body which was to be called the Board of Investigation and Conciliation. The members of a Board were to be selected from permanent panels of (1) representatives of employers; (2) representatives of employees; and (3) persons to be appointed as Chairmen. Both the Government of India and each Local Government were to form their own panels. The functions of these Boards were to endeavour to bring about a settlement of any disputes by a thorough investigation of the circumstances and cause of each dispute. Nothing further was heard about this Bill until the end of 1925 when His Excellency the Viceroy in a speech at the Annual Meeting of the Associated Chambers of Commerce of India and Ceylon, at Calcutta, said: "The question of providing means of conciliation of trade disputes has been thoroughly explored but it would be premature to legislate on this question until the Trade Union Bill has become law." The Trade Unions Act was passed in the Legislative Assembly in March 1926 and was brought into operation with effect from the 1st June 1927.

In August 1928 the Government of India published their second Bill making provision for the investigation and settlement of trade disputes and for certain other purposes. This Bill was introduced in the Legislative Assembly for a motion for circulation on the 21st September 1928. The Bill differed in several important respects in comparison with the Government of India's original Bill of 1924. The main part of the Bill falls into three parts. Clauses 3 to 14 of the 1928 Bill related to the establishment of tribunals for the investigation and settlement of trade disputes. This part of the Bill was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference was that, whereas the British Act sets a Standing Industrial Court, the Conciliation Boards which the Bill proposes to establish were intended to be appointed *ad hoc* like the Courts of Inquiry, in order to deal with particular disputes. The object of Courts of Inquiry which would ordinarily be composed of persons having no direct

interest in the disputes would be to investigate and report on such questions connected with the dispute as might be referred to them. The objects of Boards of Conciliation which would ordinarily include representatives of the parties to a dispute would be to secure a settlement of the dispute. Provisions were made so as to enable both Courts of Inquiry and Boards of Conciliation to enforce the attendance of witnesses and the production of documents. Neither party would be under any obligation to accept the finding of the Court or the advise of the Board ; and in cases where the dispute is not brought to an end during the deliberations of the tribunal that had been appointed, reliance was to be placed on the force of public opinion which would be enabled by the publication of the report of the tribunal to arrive at just conclusions on the merits of the dispute.

The second part of the Bill consisted of clause 15 which related to public utility services. In accordance with the definition of " Public Utility Services " in clause 2 of the Bill, Clause 15 would be applicable to such railway services as would be notified by the Governor-General in Council. The clause made it a penal offence for workers employed on monthly wages in public utility services to strike without previous notice and also provided heavy penalties for persons abetting such an offence. The clause was based on the principle that persons whose work was vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time had been given to examine the merits of their grievances and to explore the possibilities of arriving at a possible settlement. Provisions of a somewhat similar type already exist in the Indian Post Offices Act, in a number of Municipal Acts in India, and the principle is one which is widely accepted in other countries.

Clauses 16 to 20 of the Bill contained certain special provisions relating to illegal strikes and lock-outs. These clauses followed closely the provsions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927. They were to be applicable only in the case of the strikes and lock-outs which satisfied both of two conditions : in the first place, the strike or lock-out must have other objects than the mere furtherance of a trade dispute within the industry to which the strikers or employers belonged ; and, in the second place, the strike or lock-out must be designed to coerce Government either directly or by inflicting hardship on the community. If these conditions were satisfied, the strike or lock-out would become illegal. Persons furthering the strike or lock-out were liable to punishment and would be deprived of the protection granted to them by the Indian Trade Unions Act, while persons refusing to take part in it would be protected from Trade Union disabilities to which they might otherwise be subjected.

The motion for circulation was adopted in the Legislative Assembly and the Bill was circulated to all Local Governments for opinion. Some Provincial Governments recommended that questions connected with picketing and intimidation of the type which were entirely responsible for the undue prolongation of the generarl strikes in the cotton mills of Bombay City of the years 1928 and 1929 and the rioting in Bombay in the year 1929, should also be covered. Bill was referred to a Select Committee of the Legislative Assembly in February 1929.

The Select Committee decided to limit the duration of the Act to five years. In connection with the definition of the term " Public Utility Services" they were of the opinion that the wide power enabling the Government to declare any industry, business or undertaking to be a public utility service was undersirable as well as unnecessary and the provision made for this in the draft Bill was omitted. Various proposals designed to lay upon the Government a definite obligation to convene a Court of Inquiry or a Board of Conciliation in cases where one of the parties so required were considered. But the Committee thought that unless both parties were agreed in desiring a reference it would be useless to fetter the discretion of the Government as to the time at which the matter was reported for action under clause 3. At the same time they held that no option should be left to the Government to refuse to appoint a Court or Board where the Government was assured that both parties were agreed as to the necessity as well as to the form which it should take. They therefore considered it necessary to provide that in every case a Court of Inquiry, where it consisted of one or more persons, should not include persons having an interest in the dispute or in any industry affected by it, and in this connection the Committee proposed a further definition of the term " An independent person." The clause relating to the publication of the findings of Courts and Boards was maintained on the lines of the English Act so as to make it quite clear that every report of a Court or Board, whether final or *interim*, must be published, and that only the publication of such information or evidence as the appointing authority thought fit should be left to its discretion. It was considered inadvisable to forbid the representation of parties before Courts and Boards by legal practitioners subject only to exceptions and they redrafted the clause in such a manner as to permit that such representation would ordinarily be permissible subject, however, to such conditions and restrictions as might be provided by the rules.

The Select Committee accepted the principle underlying the clause in connection with strikes in public utility services but they held that the clause as originally drafted was open to certain criticisms. For example, it was pointed out that many persons are actually employed upon a daily wage which is in practice paid monthly ; also that the clause as provided would appear to penalise abstention from work on the part of a particular individual ; and further that the clause was one-sided and inflicted no penalty upon an employer who locks out his workmen. The latter point was considered as one which should certainly be met as by the nature of his employment a casual or day-to-day labourer must be entitled to cease work at any moment and be similarly liable to dismissal and it was agreed that he should therefore be excluded altogether from the operation of this clause. The Committee adopted a suggestion made by the Government of Bombay which made it clear that the cessation of work must be in the nature

of a strike as defined in the Bill and it was provided that in order to render it a penal offence the strike must be in breach of a definite contract between the employer and the workmen. The Committee added a collateral provision penalising an employer for locking out his workmen in breach of any contract. The Committee adopted the clause in connection with illegal strikes but with some amendments which, in their opinion, would restrict its scope without materially impairing its effectiveness. In sub-clause 2 of this section they made it clear that, for the application of money to be illegal it must not merely tend to further or support the strike, but have the direct effect of so doing. This was intended to exclude a case in which money is spent upon the relief of the dependants of strikers. A further sub-clause, borrowed from a similar provision from the English Act of 1927 explaining the circumstances in which a group of workmen should be deemed to be within the same trade or industry was added. The penalties provided for the instigation of an illegal strike were modified. With regard to clause 20 of the draft Bill, the Committee held that there was no sufficient justification for giving an option to the Government to apply for injunctions restraining the expense of the funds of a Trade Union in connection with an illegal strike. It was considered that under clause 16 such expenditure had been declared illegal and the persons properly interested in seeing that the funds were not mis-spent are the members of the Trade Union concerned. The Committee were of the opinion that the Bill had not been so altered as to require republication and they recommended that it should be passed as duly amended by them.

The Select Committee as such did not deal with the question of making p ovision for picketing and intimidation in their report but in a minute of dissent Sir Victor Sassoon, Bart., stated that the alteration of the law relating to picketing was one for which, in his opinion, the time was ripe. Picketing of any kind should be rendered illegal while a Court or Board is sitting and the law on picketing at any time should be altered to render it illegal at or near a workmen's house as under the English Law. There appeared to be some doubt as to whether legislation of this kind should take place in this Bill or by an Amending Bill to section 503 of the Indian Penal Code. It had been stated that if an amendment of this kind were passed in the Select Committee it would delay the Bill. As he did not desire to delay the acceptance of the provisions of this Bill he did not press the point which was raised by other members of the Select Committee. Sir Victor Sassoon, however, thought that suitable action should be taken by Government either when the Bill came up before the House or by bringing out an amending Bill to the Indian Penal Code to deal with this most important and necessary point. The action taken by the Government of Bombay in connection with the passing of an Intimidation Act has been dealt with in the chapter on Industrial Disputes.

The Bill as amended by the Select Committee was passed by the Legislative Assembly on the 8th April 1929 without any change and received the assent of the Governor-General on the 12th April 1929.

INDIA AND INTERNATIONAL LABOUR CONVENTIONS.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve the conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were re-recognised by the High Contracting Parties to be of "special and urgent importance," but also brought into being the **International Labour Organisation** which was entrusted with the task of securing, as far as practicable, the observance of these principles. The International Labour Conference has been discussing various questions connected with industrial, agricultural and maritime labour since 1919 and has recorded its findings in conventions and recommendations. The Conventions and Recommendations adopted by the Conference are not automatically binding on the State Members, but they have to be submitted to the Legislature of each country, and this secures the regular examination both by the Executive Governments and the Legislatures of schemes which international opinion considers necessary and desirable for the amelioration of labour conditions. During the fourteen Conferences that have been held, 29 Conventions have been adopted. Out of these eleven have been ratified by India. The following is a full list of the Conventions which have been adopted, those ratified by India being marked with an asterisk.

First Conference (*Washington*, 1919).

1. Limiting hours of work in industrial undertakings.*
2. Unemployment.*
3. Employment of women before and after child-birth.
4. Employment of women during night.*
5. Night work of young persons employed in industry.*
6. Fixing the minimum age for admission of children to industrial employment.

Second Conference (*Genoa*, 1920).

7. Fixing the minimum age for admission of children to employment at sea.
8. Unemployment indemnity in case of loss or foundering of ships.
9. Establishing facilities for finding employment for seamen.

Third Conference (*Geneva*, 1921).

10. Age for admission of children to employment in agriculture.
11. Rights of Association and Combination of agricultural workers.*
12. Workmen's Compensation in agriculture.
13. Use of white lead in painting.

14. The application of the weekly rest in industrial undertakings.*
15. Fixing the minimum age for the admission of young persons to employment as trimmers or stokers.*
16. Compulsory medical examination of children and young persons employed at sea.*

Seventh Conference (*Geneva*, 1925).

17. Workmen's Compensation for accidents.
18. Workmen's Compensation for the occupational diseases.*
19. Equality of treatment for national and foreign workers as regards Workmen's Compensation for accidents.*
20. Nightwork in bakeries.
Eighth Conference (*Geneva*, 1926).
21. Simplification of the inspection of emigrants on board ship.*
Ninth Conference (*Geneva*, 1926).
22. Seamen's Articles of Agreement.
23. Repatriation of seamen.
Tenth Conference (*Geneva*, 1927).
24. Sickness Insurance for workers in industry and commerce and for domestic services.
25. Sickness insurance for agricultural workers.
Eleventh Conference (*Geneva*, 1928).
26. Creation of Minimum Wage Fixing machinery.
Twelfth Conference (*Geneva*, 1929).
27. Weight of packages transported by vessels.
28. Prevention of accidents in docks.

The Convention adopted in connexion with white phosphorus at the Berne Convention formed the subject of one of the Washington recommendations. This Convention has also been ratified by India, but as this Convention did not, strictly speaking, originate with the International Labour Organisation, it has not been included in the list of Conventions given above. Out of the eleven Conventions adopted by the International Labour Conference which have been ratified by India, only three involved no further legislation *viz.*, items (2), (9) and (19) above. Two Conventions, items (15) and (16) above, have, been ratified, but the necessary legislation has not yet been undertaken. In some other cases *e.g.*, items (6), (9) and (18) above, some action has been taken though the Conventions have not been ratified by the Government of India.

Recommendations.

In addition to the Conventions dealt with above, the International Labour Conferences have also adopted several Recommendations. These are shown below according to the years and at the Conferences at which they were adopted.

First Confe ence (*Washington*, 1919).

1. Unemployment.
2. Reciprocity of treatment.
3. Prevention of anthrax.
4. Protection of women and children against lead poisoning.
5. Government health services.

Second Conference (*Genoa*, 1920).

6. Hours of work (fishing industry).
7. Hours of work (inland navigation).
8. National seamen's codes.
9. Unemployment insurance (seamen).

Third Conference (*Geneva*, 1921).

10. Prevention of unemployment (agriculture).
11. Maternity (agriculture).
12. Night work of women (agriculture).
13. Night work of children and young persons (agriculture).
14. Technical agricultural education.
15. Living-in conditions (agriculture).
16. Social insurance (agriculture).
17. Weekly rest (commerce).

Fourth Conference (*Geneva*, 1922).

18. Migration statistics.
Fifth Conference (*Geneva*, 1923).
19. Factory inspection.

Sixth Conference (*Geneva*, 1924).

20. Utilisation of spare time.

Seventh Conference (*Geneva*, 1925).

21. Minimum scale of workmen's compensation.
22. Jurisdiction in disputes on workmen's compensation.
23. Workmen's compensation or occupational diseases.
24. Equality of treatment (workmen's compensation).

Eighth Conference (*Geneva*, 1926).

25. Protection of emigrant women and girls on boardship.

Ninth Conference (*Geneva*, 1926).

26. Repatriation of ship's masters and apprentices.
27. Inspection of conditions of work of seamen.

Tenth Conference (*Geneva*, 1927).

28. General principles of sickness insurance

Eleventh Conference (*Geneva*, 1928).

29. Minimum wage-fixing machinery.

Twelfth Conference (*Geneva*, 1929).

30. Prevention of industrial accidents.
31. Protection of machinery.
32. Consultation with industrial organisations on regulations under Convention 29.
33. Reciprocity (inspection certificates).

The Thirteenth Conference which was held at Geneva in October 1929 was a Maritime Session. No new draft Conventions or Recommendations were adopted and the Session confined itself merely to preliminary discussions of four questions relating to sea-farers which might be susceptible of treatment by Conventions, or Recommendations at a special Maritime Session to be held this year. On each of these four items—hours of work, sickness or injury, welfare in ports, and qualifications of officers—the business of this Session was to determine, after a general exchange of views, whether the question should be made the subject of a second and decisive discussion in 1930 and, if so, to indicate the points on which in the meantime the International Labour Office should collect the formal opinions of the States Members.

At the Twelfth Session of the Conference held in June 1929, two most important subjects

discussed, under the double discussion procedure, were (1) hours of work of salaried employees, and (2) forced labour. The question of forced labour is being discussed in a separate section. Two International Labour Conferences will be held at Geneva this year the fourteenth which will discuss the feasibility of adopting Conventions or Recommendations with regard to hours of work of salaried employees and forced labour and the 15th (a maritime session) which will discuss th feasibility of adopting Conventions or Recommendations in connection with the various matters discussed at the Thirteenth Conference. The present year will therefore see the benefits of the 8-hou s day, or a scheme based on the 8-hour principle conferred on two large classes of workers left outside the scope of the Washington Convention —salaried employees and seamen.

GOVERNMENT ADMINISTRATION.

During pre-Reform days Labour was not a question to which the Central or provincial Governments in India gave the same attention as they did to such subjects as education, health or justice. After the amendment of the Indian Factories Act of 1891 in 1911, the appointment of the **Indian Industrial Commission** in May, 1916, may be considered to be the first milestone in the progressive interest taken by Government in questions connected with labour. The active participation of India in the Great War led to the 'creation of an unprecedented opportunity' and 'the emergence of an unprecedented need' for a definite industrial policy for India as a whole. The examination of various industrial questions by the Industrial Commission included, to a certain extent, the examination of questions connected with labour as well. Previous to this date no provincial or All-India inquiries of a general character were held into conditions of labour with the exception of some quinquennial censuses into agricultural wages. No information was available in 1919 as to the rates of wages which were paid in industry, and, for that matter, very little information in this direction is available even to-day. Indian labour secured its first opportunity with her participation in the signing of the treaty of peace and her becoming a live member of the international comity of nations. The participation by India, in the first International Labour Conference held at Washington in the year 1919 made it necessary for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the Central and Provincial Legislatures but also to allocate to special departments or offices the administration of labour questions.

Under the Devolution Rules (Schedule I, Part 2, Rule 26) industrial matters included under the heads factories and welfare of labour fall within the scope of the provincial legislatures. Under the same rules "regulation of mines" and "inter-provincial migration" are central subjects. A Labour Bureau was established by the Government of India in the year 1920 but it was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The administration of labour matters since then has been in the hands of the Department of Industries and Labour with a Member of the Viceroy's Council holding the portfolio Amongst Local Governments, the Bengal and the Madras Presidencies were the first in the field for the creation of special Labour Officers.

Bengal.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws were to be administered in the Commerce Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency and also the number of labour organisations. From time to time, as circumstances permitted, he was to conduct special inquiries. He was, however, not provided with an adequate staff for the purpose. The staff of his office consisted of only one clerk and one stenographer. The Labour Intelligence Officer is also the Deputy Secretary to the Government of Bengal in the Commerce Department and since the bringing into effect of the Indian Trade Unions Act, 1926, he has also been appointed Registrar of Trade Unions. On his appointment as Registrar of Trade Unions the stenographer was replaced by an additional clerk. The Labour Intelligence Officer has made frequent inquiries into questions referred to the Local Government by the Government of India in connection with proposals for labour legislation but no special inquiries have been conducted or reports of such inquiries published.

Madras.

The Government of Madras appointed a Labour Commissioner in the same year, *viz.*, 1920, to watch and study at all times the conditions of labour particularly industrial labour throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them. In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case. He is also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Intelligence Officer, Bengal, the Labour Commissioner in Madras has also no special statistical office to deal with labour statistics and no reports have been published of any special inquiries into question connected with industrial labour in the Presidency. Since the creation of the Office the conduct of periodic censuses into agricultural wages is, however, placed in his hands.

The Bombay Labour Office.

The real pioneer work in the field of labour information and statistics in India during the last nine years has been done by the Labour Office of the Government of Bombay which was established in April 1921. In the Government resolution announcing the establishment of this

office the following were declared to be its functions :—

"(1) *Labour Statistics and Intelligence.*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters ;

"(2) *Industrial Disputes.*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise ; and

"(3) *Legislation and other matters relating to labour.*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws."

When the Labour Office was first started it was placed in charge of Director of Labour. The post of the Director of Labour was, however, abolished in 1926 and at present the Officer-in-Charge of the Labour Office is styled the Director of Information and Labour Intelligence. He is also the Registrar of Trade Unions and the Commissioner for Workmen's Compensation. In addition to the Director, there are three other Gazetted Officers who are styled Investigators, one of whom is in charge of the branch office at Ahmedabad. There are also three whole time time lady Investigators in Bombay. All Investigators receive conveyance allowances. The office staff contains two Statistical Assistants, three senior clerks, eight junior clerks, two stenographers, one typist, one cashier, one despatcher, one daffi and five peons in Bombay and one peon in Ahmedabad. The activities of the office comprise (1) prices and cost of living, (2) wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) International labour intelligence, (10) labour legislation, (11) the *Labour Gazette*, (12) library, and (13) office organisation.

The *Labour Gazette* has been published monthly from September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India. A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodical received from Labour Ministeries. International organisations and research organisations in various parts of the world.

The Labour Office had conducted several *special inquiries*, the results of which have either been published in the form of special reports or as special articles in the *Labour Gazette*. Among the inquiries the results of which have been published in the form of reports are three inquiries into wages and hours of labour in the Cotton Mill Industry in the Bombay Presidency for the years 1921, 1923 and 1926 ; four reports of inquiries into family budgets three of which related to working class family budgets in Bombay, Ahmedabad and Sholapur and the fourth for middle class family budgets in Bombay City. The remaining reports dealt with inquiries into agricultural wages in the Bombay Presidency an inquiry into deductions from wages or payments in respect of fines and an inquiry into middle class unemployment in the Bombay Presidency. Other special inquiries related to wages of peons and municipal workers, welfare works, rentals in Bombay and Ahmedabad, maternity cases among women operatives, methods of wage payments, creches, clerical wages in Bombay Presidency, etc. In the *Labour Gazette* statistics are regularly published for a working class cost of living index number for Bombay, wholesale prices index numbers for Bombay and Karachi, retail food prices for five important centres in the Bombay Presidency, for industrial disputes in the Bombay Presidency and for Workmen's Compensation, prosecutions under the Indian Factories Act, accidents in factories, production of cotton yarn and cloth and the employment situation. A new working class index number has been compiled for Ahmedabad and statistics with regard to this are being published in the issues of the *Labour Gazette* since January 1930. A working class cost of living index number for Sholapur is also under preparation and will shortly be published. Quarterly information is also collected with regard to all known Trade Unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months. The present staff of the Labour Office is as follows :—

Director of Information and Labour Intelligence.—Mr. J. F. Gennings, Bar-at-Law. J.P.

Senior Investigator :- Mr. S. R. Deshpande, B. Litt (Oxon). (With the Royal Commission on Indian Labour as Statistician).

Officiating Senior Investigator and Assistant to the Registrar of Trade Unions :—Mr. N. A, Mehrban, B.A.

Officiating Junior Investigator :—Mr. Syed Nurulla, B.A., M. Ed. (Leeds), Bar-at-Law.

Labour Investigator at Ahmedabad :—Mr. A. S. Iyengar, B.A., LL.B.

Senior Lady Investigator :—Mrs. K. Wagh.

Lady Investigators :—Misses G. Pimpalkhare and S. Dabholkar.

The Director of Information and Labour Intelligence has four offices under his charge : (1) The Labour Office ; (2) the Information Office; (3) the Office of the Commissioner for Workmen's Compensation, and (4) the Office of the Registrar of Trade Unions. In the case of the Office of the Registrar of Trade Unions one Investigator of the Labour Office has been appointed as Assistant to the Registrar of Trade Unions and the office work is being done

by a Statistical Assistant and a junior clerk from the staff of the Labour Office. The Information Office is under the administration of the Home Department. The Labour Office was under the administration of the Home Department till the year 1925, but it was transferred to the General Department. The Factories Office is under the immediate control of the Collector of Bombay and for administrative purposes under the General Department.

Central Provinces.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Revenue Department deals with mines. The Department of Industries under the Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit and Registrar of Trade Unions. The Factory Office is under the general supervision of the Director of Industries. There is no special Labour Office or Labour Officer in the Central Provinces but the factory staff is utilised for collecting such information on labour questions as may be required from time to time. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board. But the Board, however, acts purely in an advisory capacity.

Other Provinces.

In Burma a Labour Statistics Bureau with a Special Officer in charge was set up in 1926. This Bureau has conducted an extensive investigation into the standard and cost of living of the working classes in Rangoon. The Report of which was published in 1928. In the Punjab the Director of Industries is the administrative officer for all acts concerned with labour. In the United Provinces almost all departments of the Local Government deal with labour questions. Labour as such is with the Home Member, electricity is with the Finance Member, the factory staff is under the immediate control of the Director of Industries who is under the Minister of Education and Industries and Boiler Inspection is under the Public Works Department. The Registrar of Co-operative Societies of the United Provinces has been appointed Ex-officio Registrar of Trade Unions in the Province. In Assam the main question connected with labour is that concerning the recruitment of labour for the tea plantations from other provinces. As inter-provincial migration is a Central subject, the Local Government are not very actively interested in the special consideration of other labour questions.

Representation on Legislatures.—The Government of India nominates one member for labour interests in the Legislative Assembly. Since the last reforms were brought into operation Mr. N. M. Joshi, of the Servants of India Society, has been continuously nominated as labour member in the Legislative Assembly. In the Bombay Presidency the Local Government had provided one seat for labour, and Mr. S. K. Bole, was nominated as the labour member in the first two Councils after the reforms. In 1927 the Local Government increased the number of seats for labour to three but the principle of nomination was maintained. The three persons representing labour interests in the Bombay Legislative Council at present are Messrs. S. K. Bole, Syed Munwar and S. C. Joshi. In the Central Provinces, Mr. R. W. Fulay, a Nagpur pleader, has been nominated as a representative of urban factory labour. In Bengal there have been two nominated members to represent labour interests since the introduction of the reforms. The Assam Government reserves one seat for the nomination of a member to represent labour but it has been found impracticable to find any one who could adequately represent this constituency and therefore the seat is vacant in the present Assam Legislative Council.

Relation between Central and Local Governments.—It has already been stated above that under the Devolution Rules, factories, settlement of labour disputes and welfare of labour are reserved subjects. These subjects are, however, subject to central legislation. The provincial legislatures are not debarred from initiating legislation on these matters but they can only do so with the previous sanction of the Governor-General in Council. The actual administration of the Acts passed by the central legislature under the above heads falls on the Local Governments who have to bear the entire cost of administration, as it is not permissible under the constitution to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps, to some extent, responsible for the opposition shown by some of the Local Governments to labour measures on which their opinion have been invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the legislature in two ways: in the first place he is vested by Statute with the general power of superintendence, direction and control, and, secondly, these Acts in most cases either reserve certain powers to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India has been to grant to the provinces as free a hand as possible in the administration of the various All-India Acts.

Effect of differences in Law in Indian States and British India.—Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwalior and Travancore. Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a distinct tendency on the part of certain capitalists to endeavour to evade the provisions of the Factory Law in British India by establishing mills or factories in the territories of Indian States.

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials, or "chits," and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin, for the old Prussian Servants' Ordinances (Gesindeordnung) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in **Ceylon.** The act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word 'servant' means and includes head and under-servants, female servants, cooks, coachmen, horsekeepers and house and garden coolies. The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the Island or for any town or district, to which the Ordinance is made applicable, a registrar of domestic servants, who is to be under the general supervision and control of the Inspector-General of Police. A registry is kept by the registrar of all domestic servants employed within his town or district, and he has to enter therein the names of all the servants, the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service the registrar may grant him "provisional" registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether, but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various **penalties of fine** as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the **Straits Settlements,** where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions.

Sea Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West *via* Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. &. O., the Anchor Line, the City and Hall Line, the Lloyd Triestino and the British India line. The Natal line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and the West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes, the Bibby Lines, N. Y. K., Australian Commonwealth, and Royal Dutch Lines are the chief besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 15 days *via* Marseilles. The following are the fares which are convertible at approximately current rates of exchange :—

Peninsular and Oriental S. N. Co

CIVIL AVIATION.

Civil Aviation in India is under the control of the Director of Civil Aviation, whose newly instituted Department, like the Department of Posts and Telegraphs, comes within the portfolio of the Member of the Executive Council of the Governor-General for Industries and Labour. The present holder of the appointment is Lt.-Col. F. C. Shelmerdine, O.B.E. Eight Indians are now under training in England with a view to their future employment in the Civil Aviation Department as Aerodrome Officers, Inspectors of Aircraft and Engines, etc. Two more will be sent to England during 1930. These men are not being trained primarily as commercial pilots, but it is possible that some of them, if they show special aptitude and desire to adopt a pilot's career, may receive further training with this object in view. All of them receive a certain amount of training as pilots and they also go through a post-graduate course at the Imperial College of Science and Technology and periods of attachment to selected aircraft works and to the London Terminal Aerodrome at Croydon. The course lasts for two years and three months, during which time the men receive scholarships amounting to £ 210 per annum. A condition of eligibility for these scholarships is that applicants must possess a B. Sc. degree in Engineering or Physics.

An Indian State Air Service between Karachi and Delhi was inaugurated as a weekly service in each direction on 30 December 1929. It is operated by aircraft chartered from Imperial Airways, Ltd., under an agreement which is operative for two years. It runs in connection with the air mail between Karachi and England. It is hoped to extend this service to Calcutta in the autumn of 1930 and to Rangoon a few months later. These extensions will be run with machines owned and operated by the Government of India and special regard will be paid to the training of Indians, both as pilots and as mechanics. It will probably be necessary to suspend the operation of the Calcutta-Rangoon section during the monsoon of 1931, as it is not anticipated that the new landing grounds which are to be constructed during 1930 on this section will by then be sufficiently consolidated to permit of their use after heavy rain.

Instruction in aviation is given in India only through Clubs founded for the purpose. These are the Karachi Aero Club, which at the end of 1929 had 173 members, the Bombay Flying Club, with 174 members, the Delhi Flying Club, with 204 members and the Bengal Flying Club, with 357 members. Above these is the Aero Club of India and Burma, which exercises control and general co-ordination of activities under the Director of Civil Aviation with the Government of India.

The movement dates from March, 1927, when as a result of the interest taken in the subject by Sir Victor Sassoon, Bt., M.L.A., it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month the Aero Club of India was formed, composed of about 40 members of the Assembly. Its first meeting was held in Simla in September of the same year and during the next three months 100 more members of the Assembly and 197 other members joined. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with theobject of developing interest in the movement and in order to utilize the Government grants which were at this time proposed and the formation of local clubs followed. The Aero Club entered into an agreement with the Royal Aero Club of Great Britain and thereby became its official representative in India and Burma.

The Government of India in December, 1927, received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 50,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club formed, he would bear any deficit between the Clubs' income and expenditure until the grants became available. This they agreed to and they further announced that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. These grants commenced as from 1 April 1928 and were to continue for two years. Agreements were entered into between the Secretary of State and the Aero Club and between him and the provincial clubs, laying down the conditions of financial assistance. Moth aeroplanes manufactured by the De Haviland Aircraft Co. were selected as the training machines. Eight of these arrived in December, 1928, and training with them began in January, 1929.

Particulars regarding the Provincial Clubs are as follows:—

Bengal Flying Club, one privately owned machine besides the two provided by Government, 1,127 flying hours flown in 1 29; Bombay Flying Club, 7 privately owned machines, 688 flying hours in 1929; Delhi Flying Club, 2 privately owned machines, 635 flying hours in 1929; Karachi Flying Club, 2 privately owned machines, 1 540 flying hours in 1929. The average cost of training per pupil payable by pupils is—Europeans Rs. 341, Indians Rs. 507. The latter figure is the larger because Indians take longer to learn. The average time required to train pupils is 10 hours for Europeans and 21 hours for Indians. The average age of pupils is Europeans 30, Indians 26. The number of pupils trained in 1929 was 70, of whom 22 were Indians. These last figures include one English lady in Calcutta and one Indian lady in Bombay.

The officers of the Aero Club of India and Burma are—Chairman, Sir Victor Sassoon; Vice-Chairman, Mr. H. A. Sams, C.I.E., I.C.S.; Director of Posts and Telegraphs; Secretary, Wing Commander, A. R. C. Cooper. The Secretaries and Pilot Instructors of the provincial clubs are:—

KARACHI.—Secretary, Mr. K. H. Rugginz; Pilot Instructor, Flight Lieut. W. Jones.

BOMBAY.—Mr. A. R. Haselar and Mr. W. H. Vetch.

BENGAL.—Mr. E. Wilkinson and Mr. W. F. Warner.

DELHI.—Major C. M. Grant Govan and Captain A. I. Riley.

Application has been made to the Government of India for the necessary grants for the formation of two other clubs, at Lahore and Madras respectively, on 1 April 1930, and inquiries preparatory to the formation of new clubs have been received from seven other centres, including Rangoon.

THE SUEZ CANAL.

At the General Meeting of the Suez Canal Company, held in Paris in 1929, the Chairman said that the results for 1928 had been exceptionally satisfactory. The increase in the traffic as compared with that of the previous year amounted to nearly 3,000,000 tons, and had, as a matter of fact, been exceeded only once—in 1919. In addition, in spite of the reduction in dues of 25 centimes, which came into force on April 1, 1928, the transit receipts were greater by 7 per cent. than those for 1927. This enabled them to increase the dividend again, and it was proposed to fix the gross dividend per capital share at 644.57f., an increase of 67.05f. as compared with 1927.

Traffic Statistics.—The traffic through the Canal in 1928 showed, by comparison with that for 1927 (which itself broke all previous records), an increase of 2,943,854 tons net, to 31,905,902 tons—an increase of over 10 per cent. The number of transits was 6,084, against 5,545 in 1927. The average size of vessels had slightly increased, to 7,249 tons gross, and the proportion of transits made by vessels of more than 10,000 tons gross increased from 10·6 to 11 per cent. The average stay of vessels in the Canal was 15 hours 9 minutes—only three minutes longer than the record set up in 1927. An interesting transit was that of the Singapore floating dock in two sections, in August, which was carried out in four days with very little disturbance to traffic. The goods carried through the Canal amounted to 32,622,000 tons, exceeding by more than 3,000,000 tons the maximum recorded for 1927. With regard to south-bound traffic, the European exports of manufactured goods had been stimulated by the increased purchasing power in the countries beyond the Canal due to their shipments of raw materials in 1927. The north-bound traffic increased by 2,200,000 tons, and it was a remarkable fact that this increase was spread over nearly all categories of goods.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1ft., making it 30ft. English.

The maximum permissible draught of ships using the Canal was 24·4 feet in 1870; in 1890 ships drawing 25·4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 Feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. In June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 miles, and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the **protection of the entry** to the Canal, were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, completed to a length of 2,500 metres; the protective blocks were laid for 1,040 metres, and cemented for over 800 metres. The protection of the Channel is thus secured, and there is no need to any apprehension as to its future.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services. The Indian Railways provide facilities on the trunk lines unsurpassed by the *trains-de-luxe* of Europe, and the Indian hotel has grown into a really comfortable caravanserai.

In the touring season, which extends from November to March, there is the attraction of a perfect climate. It is never very hot; in the North indeed it is really cool, it is always fine and fresh and bracing. If there is one country in the world to which that elusive term applies, here we have at the season when the tourist arrives the real "Indian summer." Then there is its infinite variety. India is in no sense a nation and never will be. Its peoples are wide as the Poles as under, each has its own art, its own architecture, its own customs and its own civilisation. A certain superficial resemblance runs through each; beneath lies a never-ending variety which age cannot wither nor custom stale.

The Grand Tour.—People coming to India for the first time so often ask:—"Where shall I go?" Well, wherever else the tourist may go whatever else he should leave out, he should omit nothing on the Grand Tour. It is the foolish custom nowadays to sneer at those who follow the beaten tracks, but the visitor who shuns any part of the orthodox journey across India misses what nothing else can repay. **Bombay** is by far the most convenient point of departure, for here "the world end steamers wait," here is one of the finest cities in the British Empire, and here the traveller can best complete his outfit and arrangements. From Bombay stretch northwards the two great trunk lines of India. One the **Bombay, Baroda & Central India Railway,** leads through the pleasant garden of Gujarat to Ahmedabad, the ancient Moslem capital of the Province containing fine examples of Mahomedans and Jain architecture; thence to Abu for the famous Jain temples of Dilwara, and on to Ajmere, Jaipur and Agra. The other by the **Great Indian Peninsula Railway** carries the tourist over the Western Ghats by a superb mountain railway to Gwalior, whose rock fortress rises like a giant battleship from the plain, and so on to Agra. Of the glories of the Taj Mahal, Agra Fort, and the deserted city of Fatehpur Sikri it were supererogatory to speak. Another easy stage leads to **Delhi** that amazing collection of cities, dominated by the little Ridge where British valour kept the mutinous hordes at bay, and finally drove them from the city by a feat of arms unsurpassed in history. Then from Delhi the East Indian line leads comfortably to Benares, Lucknow and Calcutta with the opportunity of an excursion to Cawnpore, if the spirit moves. The great charm of the Grand Tour is that it reveals the best that India can show. This route has the additional advantage that it fits in with any digressions which the time and purse of the traveller may permit. No one who can spare the time should fail to push northwards from Delhi to Peshawar, where the flower of the army keeps watch and ward over the Khyber, and up the dread Pass to the eyrie where the fort of Ali Masjid bars the way to all invaders. **Calcutta** is the best starting point for Darjeeling, though unfortunately the magnificent mountain panorama visible from there is often obscured at this season by mists. Then from Calcutta two alternatives open. A fine service of mail steamers leads to **Burma,** and one of the unforgettable memories of the East is a voyage down the Irrawaddy from Bhamo or Mandalay to Prome. Again, either direct from Calcutta, or *via* Burma, is an easy route to **Madras** and by way of Madura and Trichinopoly, with their peerless Hindu temples, back to Bombay, or on through Tuticorin to **Colombo.** But indeed the possibilities of expanding this tour are endless. Bombay is the best centre for the rock temples of Elephanta, Kenheri, Karli, Ellora and Ajanta. Calcutta is only a short distance from Puri the one Indian temple where there is no caste, and perhaps the most remarkable Hindu temple in the country. From Calcutta also start the river steamers which thread the steamy plains of Bengal and run to the tea gardens of Assam.

SPECIMEN TOURS.

A number of specimen tours in India are given below. They are taken from one of Messrs. Thos. Cook & Sons, Ltd.'s publications, from which firm further information may be obtained. the traveller will also find he can obtain assistance from the principal Shipping Agents and Railway Companies, or from Messrs. Cox & Co., Messrs. Grindlay & Co., and Lloyds Bank:

	1st Class.	2nd Class Rail, 1st Class Steamer.
FROM BOMBAY TO CALCUTTA.	Rs. a.	Rs. a.
Via the North-West Provinces to Calcutta (including side trip from Calcutta to Darjeeling).		
TOUR I.—From Bombay per B. B. & C. I. Railway *via* Ahmedabad, Abu Road (for Mount Abu), Ajmer, Jaipur, Delhi, Agra, Cawnpore, Lucknow and Benares to Calcutta, thence to Darjeeling, and back to Calcutta.	243 8	127 (

	1st Class.	2nd Class Rail, 1st Class Steamer.
FROM BOMBAY TO CALCUTTA—*contd.*	Rs. a	Rs. a.
TOUR II.—From Bombay per G. I. P. Railway *via* Itarsi, Gwalior, Agra, Delhi, Tundla Junction, Cawnpore, Lucknow and Benares to Calcutta, thence to Darjeeling, and back to Calcutta	240 14	126 1
FROM BOMBAY TO COLOMBO.		
Via the North-West Provinces, Calcutta and Southern India to Colombo (including side trip from Calcutta to Darjeeling).		
TOUR III.—From Bombay as in Tour No. I (*via* B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta, thence *via* Khurda Road, for Puri (Juggannath), Madras, Tanjore, Trichinopoly, Madura, Danushkodi and Talaimannar to Colombo	425 13	220 4
TOUR IV.—From Bombay as in Tour No. II (*via* G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence as in Tour No. III to Colombo (*via* Southern India)	423 3	219 4
Via the North-West Provinces, Calcutta (including Darjeeling), Burma and Southern India		
TOUR V—From Bombay as in Tour No. I (*via* B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon, Rail to Mandalay. Irrawaddy Steamer to Prome, Rail to Rangoon; British India Steamer to Madras, Rail *via* Tanjore, Trichinopoly, Madura to Danushkodi; Steamer to Talaimannar and Rail to Colombo	633 4	439 13
TOUR VI.—From Bombay as in Tour No. II (*via* G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, thence as in Tour No V. to Colombo	630 14	438 7
FROM BOMBAY TO RANGOON.		
Via the North-West Province and Calcutta to Rangoon (including a tour in Burma, also including a side trip from Calcutta to Darjeeling).		
TOUR VII.—From Bombay as in Tour No. I (*via* B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon. Rail to Mandalay, Irrawaddy Steamer to Prome, Rail to Rangoon	454 13	295 7
TOUR VIII.—From Bombay as in Tour II (*via* G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon. Rail to Mandalay, Irrawaddy, Steamer to Prome, Rail to Rangoon ..	452 3	295 0
FROM CALCUTTA TO BOMBAY.		
Via the North-West Provinces.		
TOUR IX.—From Calcutta *via* Benares, Lucknow, Cawnpore, Tundla, Agra, Delhi, Rewari, Jaipur, Ajmer (for Udaipur), Abu Road (for Mt. Abu), Ahmedabad and Baroda to Bombay	159 12	79 15
TOUR X.—From Calcutta *via* Benares, Moghal Serai, Cawnpore, Tundla, Agra, Delhi, Rewari, Jaipur, Ajmer (for Udaipur), Abu Road (for Mt. Abu), Ahmedabad and Baroda to Bombay	157 13	78 15
TOUR XI.—From Calcutta *via* Benares, Moghal Serai, Cawnpore, Tundla, Agra, Gwalior and Itarsi to Bombay	139 7	69 12
TOUR XII.—From Calcutta *via* Benares, Moghal Serai, Cawnpore, Delhi Muttra, Agra, Gwalior and Itarsi to Bombay	155 3	77 11

	1st Class.	2nd Class Rail, 1st Class Steamer.
CIRCULAR TOUR FROM CALCUTTA.	Rs a.	Rs. a.
TOUR XIII.—From Calcutta *via* Benares, Lucknow, Cawnpore, Tundla, Agra, Bandikui, Jaipur, Delhi, and Allahabad to Calcutta	173 10	87 15
Extensions, Via Southern India to Colombo.		
TOUR XIV.—From Bombay *via*, Poona, Hyderabad, Wadi, Raichur, Madras, Tanjore, Trichinopoly, Madura, Danushkodi, and Talaimannar to Colombo	173 5	87 5
TOUR XV.—From Bombay *via* Poona, Hyderabad, Wadi, Guntakal, Bangalore, Erode, Trichinopoly, Madura, Danushkodi, and Talaimannar to Colombo	167 8	84 7
Extensions to above Tours.		
From Ajmer to Udaipur and return	46 4	23 2
From Abu Road to Mount Abu and return, one seat in motor (This excursion is strongly recommended, the scenery being very beautiful) ..	22 0	....
From Delhi to Lahore and return *via* Umballa and Amritsar	41 13	20 15
From Delhi *via* Bhatinda, Ferozepore to Lahore returning *via* Amritsar, Umballa to Delhi	41 13	20 15
From Calcutta to Darjeeling and return	82 12	5 4
From Colombo to Kandy and return	12 3	7 10
From Kurda Road to Puri (Jagannath) and return	7 12	3 14

(*All fares subject to change without previous notice.*)

HOTELS IN INDIA, BURMA, CEYLON AND MALAYA.

AGRA.—Cecil, Laurie's Great Northern, Metropole.
AHMEDABAD.—Grand.
ALLAHABAD.—Grand.

PENANG.—Eastern and Oriental, Runnymeds.
SINGAPORE.—Adelphi, Europe, Raffles, Sea-View.

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital were laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhis of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn.-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A report by a Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and two large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building is estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated to some Rs. 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1929. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Pahargunj, which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

For a temporary capital, for the use of the Government of India during the period of the building of the new capital an area was selected along the Alipur Road, between the existing civil station of Delhi and the Ridge. The architecture and method of construction were similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings have outlasted the transitional period for which they are intended. Army Headquarters were still housed in them in the winter until the season 1929-30 and others are occupied for various purposes including the temporary accommodation of Delhi University.

In October, 1912, by proclamation, there was constituted an administrative **enclave of Delhi** under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,269 and of the new area 14,552, or a total of 412,821. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allow for a population within it of 70,000, Its present population is approximately 40,000, Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a prolonged "battle of the styles" over Delhi Finally, to use the language of the architect, it has been the aim "to express, within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India,

of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architects' aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors have since then increased the amount, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount includes allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1923 estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. Actual expenditure upto approximately the end of 1929 was Rs. 14 crores.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts may be expected.

Progress of the work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenues, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. The present position is that all Government Departments including the Army Departments and Army Headquarters and R. A. F. Headquarters, have their offices in the new City buildings, on which the builders are completing the final details. The Members of H. E. the Viceroy's Executive Council, except H. E. the Commander-in-Chief, live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Commander-in-Chief continues at his old residence. Flagstaff House, Old Delhi, and will similarly transfer to New Delhi early in January 1930. The house originally built for him in New Delhi was in 1928 bought by H. H. The Maharaja of Kashmir and the erection of another residence for him was commenced soon afterwards. The Government have recently devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid-April and bringing it down from Simla again in mid-October. The experiment was not very successful and experience will show whether the new plan can reasonably be made permanent.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process *in situ*. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee, the out-of pocket expenses. paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but give no guarantee that the finished paintings will permanently be preserved. The Committee consisted of Sir John Marshall, Kt., C.I.E., Director-General of Archæology in India, as Chairman and one or more experts to be nominated by him as members. Government intimated that historical or allegorical subjects would be given preference over religious ones, and English artists living in India were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that Sir John Marshall and his fellow Committee men approved of nearly all. A great deal of painting has now been completed and the work is continually progressing. Government, meanwhile, launched a scheme for sending selected artists to Europe for finishing studies, to enable them the better to join in the work, and under the scheme students are now in England.

Opinion of the Legislature.—Considerable discussion regarding the new works took place in the Assembly in 1921. The following unofficial resolution was carried:—"This Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary

funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable."

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simla, moved a recommendation to Government "to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year." This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

H.R.H. the Duke of Connaught, on 12th February, 1921, laid the foundation stone of a large group of parliamentary buildings on a site close to the south-east of the Secretariats. The building is an imposing pile circular in shape, consisting in the main of three horse shoe-shaped Chambers for the Chamber of Princes, Council of State and Legislative Assembly respectively and surmounted by a large dome over a Central Library connecting all three Chambers.

H.E. the Viceroy (Baron Irwin) proceeded in state to the new Legislative buildings, henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The India legislature began its sessions in them next day.

During 1928, official and public attention became focussed on the need to effect drastic improvements in some of the crowded areas of the old city and to provide for its expansion and for suburban developments. This led to the examination of the possibilities of the area lying between the old and new cities and of the desirability of driving connecting roads through the City walls in order to give access outwards in this direction. Plans of this character are at the time of writing still under consideration.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation-stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. It is now practically complete.

The Memorial takes the form of a triumphal arch spanning Kingsway, the avenue running down the centre of the Vista. It is generally similar to the Arc de Triomphe in Paris but is simpler in a way which will probably increase its grandeur and dignity. The monument reaches a height of 160 feet and the inner height of the arch is 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts appears in capital letters the single word INDIA and this is flanked on each side by the initials MCM (*i.e.*, 1900) whilst immediately below them on the left hand are the initials XIV (*i.e.*, 14) and on the opposite side the figures XIX (*i.e* 19) above the Arch is a circular stone bowl 11½ feet in diameter. This is intended to be filled with burning oil on great anniversaries and other occasions so that there will be shining fire by night and a column of smoke by day. The memorial is solely Indian in purpose and will bear the names of Indian regiments only.

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still under consideration. To implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential university of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was, therefore, decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify, their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundation-stone of the university buildings in November, 1922, but this proved impracticable. The site for the new buildings required has not yet been settled. Government and the University Authorities are examining this point in consultation, particularly with reference to the question whether to build in the new capital or to utilise buildings that may become available elsewhere. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. For the present the University is housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until last year.

H. E. the Viceroy on 10th January 1930 laid the foundation stone of a large European and Indian General hospital to be built in the course of the next few years at a cost of Rs. 75 lakhs for the service of both old and new cities. A portion of the scheme will at a cost of Rs. 40 lakhs be executed as a first stage during the ensuing two years. This will provide 254 beds and the necessary laboratories and administrative and residential quarters. The second stage will provide another 110 beds.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfrett, Esq., authorising him to "open a new Lodge in Bengal." Of this personage nothing further is known but under Capt Farwinter, who in the following year succeeded him as Provincial Grand Master of India, Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17th, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol of Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the **United Grand Lodge of England** and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766 In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 17th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who

obtained a warrant, on the recommendation of the parent Lodge, from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to **Scottish Freemasonry** that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the **admission of Indian gentlemen** the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umra has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first; the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed

Bengal.

82 Lodges. Rt. Wor. Bro. H. R. Nevill, C.I.E., O.B.E., I.C.S., P.G.D. V. D., Dis. G. Master; Dy. D. V. D. G. M. Eric Studd, P.G.D.; Assist. D. G. M. R. L. B. Buckler.

Madras.

33 Lodges. Dis. G. M., Rt. Wor. Bro. A. Y. G. Campbell, C.S.I., C.I.E., C.B.E., I.C.S. P. G. D.; Dy. D. G. M. P. M. Sivangnanam Mudaliar, P. G. D.

Bombay.

48 D.G.M. Rt. Wor. Bro. Sir Reginald A. Spence, Kt., P.G.D.; Dy. D.G.M., R. H. A. Delves.

Punjab.

34 Lodges. Rt. W. Bro. C. A. Barron, C.S.I., C.I.E., C.V.O., I.C.S., District Grand Master, C. C. Mehta, Dy. D.G.M.

Burma.

19 Lodges. Rt. W. Bro. The Hon'ble Sir Guy Rutledge, Kt., K. C., District Grand Master. W. Kendall, P.A.G.D. of C., Dy. Dis. G. Master.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is elected by the Brethren subject to confirmation by the Grand Master Mason of Scotland. The Hon'ble Mr. J. E. B. Hotson, C.S.I., O.B.E., I.C.S., is the present incumbent of the office, and controls 73 Lodges. Under him the several districts are in charge of the followng Grand Superintendents:—

Lt.-Col. J. C. Colenso,	G.Supdt.,	Northern	India.
Col. A. A. Meaden ..	,, ,,	Central	,,
Lt.-Col. R.F.D. Burnett	,,	Southern	,,
A. Barr. Pollock ..	,, ,,	Eastern	,,

The Grand Secretary is R. W. Bro. J. C. Mistree, J. P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, *viz.*, English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year two other Lodges have sprung into being.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are ten Lodges, 4 in Calcutta, 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry.—Under England, the District Grand Master in any District is nearly always created also Grand Superintendent, his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under:—

Bengal.

30 Chapters. Grand Supdt. H. R. Nevill, C.I.E., O.B.E., I.C.S.

Madras.

17 Chapters. Grand Supdt. A. Y. G. Campbell, C.I.E., C.B.E., V.D., I.C.S.

Bombay.

25 Chapters. M. Ex. Comp. Sir Reginald A. Spence, Kt., Grand Superintendent.

Punjab.

21 Chapters. Most Ex. Compn. C. A. Barron, C.S.I., C.I.E., C.V.O., I.C.S., Grand Superintendent.

Burma.

7 Chapters. The Hon'ble Sir Guy Rutledge, Kt., K.C., Grand Superintendent.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Camp. A. M. Kajji under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

27 Lodges. H. R. Nevill, C.I.E., O.B.E., I.C.S., D.G.M.

Bombay.

18 Lodges. Rt. W. Bro. Sir Reginald Spence, District Grand Master.

Madras.

13 Lodges. A. Y. G. Campbell, C.I.E., C.B.E., V.D., I.C.S., District Grand Master.

Punjab.

13 Lodges. Rt. W. Bro. H. L. O. Garrett, District Grand Master.

Burma.

5 Lodges. Rt. W. Bro. Arthur Blake, District Grand Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but mostly in R. A. Chapters, in which the Excellent R.A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate chapters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.

St. Mary's Commandery No. 43, Bombay.

R. A. Mariner, 72, 514 and 662, Bombay.

R. A. Mariner, 61, 81, 82 and 106, Madras

R. A. Mariner, 98, 193, 219, 279 and 429, Punjab.

Secret Monitor, 14, 21, 36, 37, 40 and 42, Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

J. H. Simpson, 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P.A.G.R, P.D.G.W, Freemasons' Hall, Ravelin Street. Fort, Bombay.

D. G. S., Burma.

E. Meyer, D.G.S., E.C., Rangoon.

D. G. S., Madras.

S. T. Srinivasa Gopala Chari, Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

G. Reeves Brown, Freemasons' Hall, Lahore.

Scottish Constitution.—For information regarding the Benevolent Funds application should be made to Jehangir C. Mistree, J.P., 17, Murzban Road, Bombay.

Scientific Surveys.

The Board of Scientific Advice.—This Board in accordance with a recommendation of the Inchcape Retrenchment Committee is in abeyance. It consisted of the heads of the Meteorological, Geological, Botanical, Forest Survey, Agricultural and Civil Veterinary Departments, together with such other scientific authorities as might from time to time be invited by the Government of India to serve upon it. It was established in 1902 to co-ordinate official scientific inquiry, to ensure that research work is distributed to the best advantage, and to advise the Government of India in prosecuting practical research into those questions of economic or applied science on the solution of which the agricultural and industrial development of the country so largely depends. The programme of investigation of the various departments were annually submitted to the Board for discussion and arrangement, and an annual report was published on the work done.

The Secretary to the Government of India (Department of Education, Health and Lands, was *ex-officio* President of the Board, which included the Director-General of Observatories, the Director of the Zoological Survey, the Surveyor-General of India, the Director Imperial Institute of Veterinary Research, Muktesar, the Inspector-General of Forests, the Agricultural Adviser to the Government of India, the Director of the Geological Survey, the Director-General, Indian Medical Service, the consulting Engineer to the Government of India, the Librarian, Imperial Library and the Director of the Botanical Survey of India who was Secretary to the Board of Scientific Advice.

The Universities Conference, representing all Indian Universities, which met in Simla in 1925, recommended the revival of the Board, but the technical officers of the Government of India were of a different opinion and the Board continues in abeyance.

Zoological Survey.—A scheme for the formation of a Zoological Survey on the basis of the Zoological and Anthropological Section of the Indian Museum, Calcutta, came into force in July, 1916. The proposals as sanctioned by the Secretary of State mainly are as follows:—"The headquarters of the Survey will be the Indian Museum. The scheme regarding the Zoological Survey entails the breaking up of the organisation now known as the Zoological and Anthropological Section of the Indian Museum into two parts, one of which will become a Government department under the title of the Zoological Survey of India, and will be primarily concerned with zoological investigation and exercise such advisory functions as may be assigned to it by Government, while the other part will remain as the office of the Trustees of the Indian Museum and will be organised for the present on the lines laid down in the existing by-laws of the Museum. It will be the duty of the Zoological Survey to act as guardians of the standard zoological collection of the Indian Empire, and as such to give every assistance in their power both to officials and to others, in the identification of zoological specimens submitted to them, arranging, if requested to do so, to send collections to specialists abroad for identification in cases in which no specialist is available in India". The Zoological Survey is also responsible for the Anthropological and Ethnological collections in the Indian Museum and in 1927 the additional appointment on the Staff of an anthropologist was created. The Director of the Survey was Dr. Anandale until April, 1924, when he died—within a month of receiving the honour of Fellowship of the Royal Society. Dr. Baini Prashad was appointed Acting Director in his place and continued in that capacity until July, 1925, when Lt.-Col. R. B. Sewell, I.M.S., M.A., F.A.S.B., F.L.S., F.Z.S., was made Director.

Mammal Survey.—The Survey was instituted in the year 1912 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma and Ceylon, and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museums in India, the primary object of the Survey being the furtherance of our knowledge of Indian Mammalian Fauna. Up to 1891 Naturalists in India had to rely for information on Dr. Jerdon's "Mammals of India" published in 1874. In 1884 R. A. Sterndale published his Natural History of Indian Mammals a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr. Slater, Hon. Secretary to the Zoological Society and signed by Darwin, Hooker, Huxley, and other well known scientists, was presented to the Secretary of State for India. The memorial recommended that a series of Volumes dealing with the Fauna of India should be prepared and Dr. Blanford should be appointed its Editor. The memorial resulted in the publication in 1888-1890 of the Volume on Mammals in the "Fauna of British India" Series and since 1891 this volume has been the standard work on *Indian Mammals*. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the discoveries of new species have rendered Blanford practically obsolete.

To remedy this defect, at the instigation of the authorities of the British Museum, the Bombay Natural History Society decided to institute what is now known as the Mammal Survey, Mr. W. S. Millard, then Hon. Secretary of that Society, issued in an appeal to its members to enable the Society to engage the services of trained European collectors so as to make a

systematic collection of the mammals of India, Burma and Ceylon. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920, partly by subscriptions from the Society's members, contributions from Indian Princes, and grants from the Indian Government, the Government of Burma, Ceylon, Malay States, and the Provincial Governments. Subscriptions were also received from a few Learned Societies and Institutions in England and America. By the outbreak of the war the Survey had been carried on over large areas of the country, the districts covered being—In Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar; the Southern Maharatta country and Kanara in Southern India; in Coorg and Mysore; in the centre large tracts of the Central Provinces and some districts of Bengal and Behar; in Northern India the Society's collectors had worked over Kumaun, Darjeeling and Sikkim and the Bhutan Duars. In Burma, collections were made along the Chindwin river, in Central Burma and in the Shan States, Pegu and a portion of Tennaserim. The whole of Ceylon was also systematically surveyed.

The material, which up to the outbreak of War comprised some 17,000 specimens, was forwarded to the British Museum where the collections were scientifically worked out by the late Mr. R. C. Wroughton, formerly Inspector General of Forests, Mr. Oldfield Thomas, F.R.S., Curator of Mammals at the British Museum, Mr. Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the journal of the Bombay Natural History Society. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammalia has enabled the revision of Blanford's Mammalia to be undertaken and early in 1921 the Secretary of State for India commissioned Mr. R. C. Wroughton, since deceased, and Mr. M. C. Hinton to undertake the work.

When demobilization rendered it possible the work of the Survey which had been in abeyance during the war was resumed and a collector, Mr. C. Primrose, was sent to Assam and the Mergui Archipelago and Mr. Oldfield Thomas has written very appreciatively of his work among those islands. Mr. Primrose then began working inland but owing to the impracticability of continuing his work in Burma during the monsoon, he was transferred to Gwalior where H. H. the Maharaja kindly accorded permission to work in his territories.

After working a portion of the Eastern Ghats the next move was to the Kangra District in the North-West Himalayas and then on to the Punjab Salt Range. Two other collectors worked in Southern India. Permission was once more obtained from the Nepal Government for a collector to resume the Survey work in that country. The work in Nepal was brought to a successful close early in 1928 with a representative collection of interesting mammals and birds.

The Survey now has only one collector who is collecting in the foot hills of Himalayas and the Pindari Valley.

Botanical Survey.—The Botanical Survey Department of the Government of India is under the control of a Director who is also Superintendent of the Royal Botanic Garden, Calcutta. There is a staff at headquarters of two officers for systematic work and at the Indian Museum a curator who is engaged in the development and maintenance of the Industrial Section. The Director holds administrative charge of the Government of India's cinchona operations in Burma, of quinine manufacture in Bengal and of the distribution of cinchona products to the Government of India's area of distribution in Upper India. The question of the extension of cinchona cultivation in the Indian Empire has of late years formed a subject of interest to several bodies including the League of Nations' Health Section. The Royal Commission on Agriculture recommended that India should be made self-sufficient in the matter of quinine production. Attempts are now being made to overcome the financial and other difficulties hindering the ready use of quinine through India. The cinchona operations directly under the Government of India are for the present confined to the Tenasserim district in Lower Burma, where a large tract of country is held in reserve. Considerable success has already been achieved with the crop and it has been established that cinchona will grow in this area and that it can be grown at some profit but indications here, as elsewhere in India, point to the inadvisability of leaving production subject to the vagaries of the climate in one area and, generally, of localising effort. Other areas in Burma and in Assam seem suitable for this cultivation and await experimental proof, when the present financial and other obstacles to cinchona development have been overcome

The actual demand for the drug in India is difficult to estimate. Eight million cases of malaria fever go to the hospitals and dispensaries every year. If each of these is treated with 110 grains of quinine, which may be taken as the minimum for the cure of a paroxism, the demand for hospital and dispensary treatments alone would be 125,000 pounds a year. Patients do not get as much of the drug as they ought, because the cost of quinine is prohibitive. It is estimated that there are 100,000,000 sufferers from malaria who do not attend the hospitals. The potential demand is therefore somewhere between 125,000 pounds and 1,500,000 pounds. When the Italian Government, in 1903, made quinine a State industry and cheapened its retail price consumption in that country enormously increased and malaria mortality was reduced from 15,000 to 3,000 a year. The Public Health Commissioner with the Government of India says in a recent report that "it may be said that there is no question of the effective treatment of malaria in India until consumption of quinine approximates 500,000 pounds."

Survey of India.—The work of the Survey of India Department falls under various heads, namely, the trigonometrical survey, topographical and forest surveys, special surveys and explorations, and map production. Cadastral surveys are now carried out by the Provincial Land Records and Settlement Departments.

In 1904 attention was drawn to the defective state of the **topographical survey maps**, and a Committee was appointed to report on the subject. To overtake the arrears of revisional survey and to secure that the map of India should be brought up-to-date and revised at proper intervals, they recommended a considerable increase of establishment and an increased expenditure of Rs. 2,10,000 a year for the next 25 years. They also made recommendations for altering the size and improving the quality of the maps. After further inquiry the Government of India decided that a scale of 1 inch to the mile would ordinarily be sufficient, reserved forests and special areas being surveyed on the scale of 2 inches to the mile, and the ½-inch scale employed for waste and barren tracts. The work of the Department has in recent years greatly been hampered by the general need for retrenchment in expenditure. On the other hand, its organisation has lately been improved by the creation of a new North-West Frontier Circle, under a separate Director, this being the addition of a fifth Circle to the four already existing for all India and Burma. A recent valuable development has been the employment of aviators for survey work from the air in some parts of the country.

The department is responsible for all topographical survey; for explorations and the maintenance of geographical maps of the greater part of Southern Asia; for geodetic work, including the main trigonometrical framework which extends in some cases far beyond the frontiers of India, and control networks of precise levelling based on tidal observatories, tidal predictions and the publication of Tide Tables for nearly 40 ports between Suez and Singapore, the Magnetic Survey, astronomical observatories with seismographic and meteorological records at Dehra Dun, and geodetic investigations of an international character, in regard to which India enjoys a unique position between the greatest highlands of the world and a deep ocean extending to the Antarctic. Indian geodesy has thus disclosed by far the largest known anomalies of gravitational attraction in the earth's crust, which have led to some of the most important developments of modern geodetic research.

While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is steadily developing the policy of aiding local surveys in various ways, on payment by those concerned. These miscellaneous operations include: all forest and Cantonment surveys and work for Boundary Commissions; many riverain, irrigation, railway and city surveys, and surveys of tea gardens, mining areas, &c., with a great deal of control levelling for them; miscellaneous administrative assistance and officers are given to the revenue surveys of various Provinces and States. The Printing offices do much work for other Government departments, such as printing special maps, illustrations for Archæological Reports, all diagrams for Patents, &c. The Mathematical Instruments Office gives valuable aid to all Government departments by ensuring a high standard of instrumental equipment, especially in connection with optical work, and by the manufacture and repair of high-class instruments, which would otherwise have to be imported from abroad.

The department is also responsible for all survey operations required by the Army, and has been rapidly developing measures to meet the greatly increased complexity of modern military requirements, especially in connection with air survey. The development of air surveys for various civil purposes is also receiving all possible encouragement and assistance, while the latest methods of stereo-photography are being studied experimentally.

Administration is by the Surveyor Genera under the Education, Health and Lands Department of the Government of India. Headquarter offices are at Calcutta under the Assistant Surveyor General, and there are seven Directors, one for each of the five Survey Circles into which the country is divided, one for the Geodetic Branch at Dehra Dun, and one for the Map Publication and other technical offices at Calcutta.

Indian Science Congress.—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress, which is progressive and vigorous, meets in January each year, the proceedings last for six days. The Head of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research; when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund.—The progress of this Fund and its Association like the Board of Scientific Advice, was seriously affected by the policy of retrenchment enforced in pursuance of the recommendations of the Incheape Committee. Scientific research work is rapidly developing in India. In 1911 the sum of 5 lakhs (£33,000) out of the surplus opium revenue was set aside as an endowment for research into epidemic diseases in connection with the Central Research Institute at Kasauli. It was hoped that this sum might be largely augmented by private subscriptions. An Indian Research Fund Association was constituted, and a good deal of work was undertaken. Its

objects were defined as "the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation mode of spread and prevention of communicable diseases." Fresh investigations into kala azar and cholera were inaugurated, and an officer was deputed at the expense of the Fund to study yellow fever in the regions where it is endemic, with a view to taking steps to prevent its introduction into India. A further grant of 6 lakhs (£40,000) was made to the Central Research Fund from the opium surplus of 1911-12. It was decided to devote to research and anti-malarial projects 5 lakhs (£33,000) a year from Imperial revenue commencing in 1913-14. A new periodical "The Indian Journal of Medical Research," was instituted in 1913 for publication four times annually, as the official organ of the Research Fund. The journal was designed to deal with every branch of research directly or indirectly connected with medical and sanitary science, and form a record of what was being done in India for the advance of this work. In 1922 it was decided to devote the capital funds at the disposal of the Association to the erection of an Imperial Medical Research Institute and to the formation of a fund for its endowments. In the same year valuable results were achieved by Dr. Nishi Kanta De, working in Calcutta on the chemistry of drugs used in treatment of leprosy and on the chemistry of the blood of lepers and resistent animals. The treatment of cancer, of influenza, of pneumonia, the histology and pathology of deficiency diseases and special problems concerning Indian calucidæ, kala azar, the action of quinine in malaria treatment were among the particular subjects of investigations specially dealt with by various research experts in 1922.

Towards the end of 1923 a technical conference of Medical Research Workers was held in Calcutta and as a result of their deliberations the Government of India appointed an expert Commission to enquire into the origin and progress of Kala-azar. The Commission is still in existence. The conference proved of such value that a similar meeting was held in October 1924 and since then there has been an annual meeting in Calcutta during December. Financial stringency led to suspension of the subvention and hampered development; but in 1925-26 Government restored Rs. 3,00,000 of the subvention to the Association. Since then, with a brighter financial outlook, the original grant of Rs. 5,00,000 has been restored to the Association by the Government of India and, owing to a new system of showing charges in the budget, this grant has now been raised to Rs. 7,50,000 thus including the pay and allowances of 10 officers of the Medical Research Department who are working under the Association.

The Association finances numerous enquiries including investigations into malaria, plague, cholera, helminthology, kala-azar, leprosy, nutritional diseases, relapsing fever, dengue and sandfly fever, diabetes, dysentery, diarrhœa and skin diseases. During the year 1928-29 48 enquiries were in progress throughout India. In 1926 the Central Malaria Organisation, now termed the Malaria Survey of India was set up by the Association and continues to function till such time as it is able to be taken over by the Government of India. In commemoration of Sir Ronald Ross's intimate association with India the experimental malaria station opened at Karnal in January 1927, has been named "The Ross Field Experimental Station for Malaria." This latter is part of the activities of the Malaria Survey of India and is directed and run by it.

Considerable extensions of the activities of the Research Department in various directions are projected as a result of the report of the Committee on Medical Research presided over by Sir Waltair Fletcher, K.B.E., C.B., F.R.S., etc., but the details of these are still under consideration.

Geological Survey.—The ultimate aim for the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country mineral deposits of importance are frequently discovered. Such discoveries are published without delay and every endeavour is made to induce private firms to take up the exploitation of the mineral discovered. Collections of minerals, rocks and fossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in the capital of Bengal. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Mountain chain. These mountains are a comparatively low range running parallel with the Himalayas for a great distance and at a short distance from them. They are in fact a huge bank of detritus washed down during the ages from the Himalayas. They are believed to have covered up in the course of their formation such a quantity of palæolithic remains as exists nowhere else in the world. The discoveries of skeletons and fossils hitherto made have been the result of washaways after heavy rains or of other accidental circumstances and there exists no organisation or systematised method for either prosecuting discovery or collecting what chance brings to light. The Geological Survey also undertakes the examination and identification, without fee, of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the Memoirs, Records and Palæontologia Indica.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs who works in subordination to the Government of India in the Department of Industries and Labour. The superior staff of the Direction, in addition to the Director-General himself consists on the postal side of three Deputy Directors-General (who are officers of the rank of Postmaster-General), and six Assistant Directors-General (whose status is similar to that of Deputy Postmasters-General).

For postal purposes, the Indian Empire is divided into nine circles as shown below, each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs, Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways and inland steamers. All the Postmasters-General are provided with Assistant Postmasters-General while those in charge of the largest circles are also assisted by Deputy Postmasters-General. The nine Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the head-quarters of each revenue district and other post offices in the same district are usually subordinate to the head Office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmaster-General, The Presidency Postmasters, indeed, have one or more Superintendents subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shopkeepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The Inland Tariff (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows :—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
Letters.	Anna.		
Not exceeding two and a half tolas ..	1	Double the prepaid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).
Every additional two and a half tolas or part of that weight	1		
Book and pattern packets.			
Every 5 tolas or part of that weight ..	½		

Postcards.

Single .. .. .. ½ anna.
Reply .. .. .. 1 „

(The postage on cards of private manufacture must be prepaid in full.)

Parcels (prepayment compulsory).

(*a*) Parcels not exceeding 440 tolas in weight:—

	Rs. a.
Not exceeding 20 tolas	0 2
Exceeding 20 tolas but not exceeding 40 tolas	0 3
For every additional 40 tolas or part of that weight	3 annas

(*b*) Parcels exceeding 440 tolas in weight:—
Exceeding 440 tolas but not exceeding 480 tolas .. .. Rs. 3 0
4 annas for every additional 40 tolas or fraction thereof up to 800 tolas.

Registration is compulsory in the case of parcels weighing over 440 tolas.

These rates are not applicable to parcels for Portuguese India.

In the case of parcels for Ceylon a registration fee of 2 annas is chargeable on each parcel in addition to the rates shown above.

Registration fee.	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0 2

Ordinary Money Order fees.

On any sum not exceeding Rs. 10 ..	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 up to Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 2 annas.

Telegraphic money order fees.—The same as the fees for ordinary money orders *plus* a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message.

In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.—For every Rs. 100 of insured value 2 annas.

As regards Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon or to Portuguese India except in respect of insurance fees for parcels and parcel postage) is as follows:—

Letters.

To Great Britain and Northern Ireland other British Possessions and Egypt, including the Sudan.	2 annas for the first ounce and 1½ annas for each additional ounce or part of that weight.
To other countries, colonies or places.	3 annas for the first ounce and 1½ annas for every additional ounce or part of that weight.
Postcards, Single	1½ annas.
„ Reply	3 annas.

Printed Papers.—½ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 12 ounces in weight .. 3 annas.

For every additional 2 ounces or part of that weight .. .. ½ anna.

Samples.—1 anna for first 4 ounces and ½ anna per 2 ounces thereafter.

Parcels.

(*i*) Parcels not exceeding 20 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows:—

For a parcel—	*Via* Gibraltar. Rs. a. p.
Not over 3 lbs.	1 8 0
Over 3 lbs., but not over 7 lbs.	2 12 0
„ 7 „ „ 11 „	3 15 0
„ 11 „ „ 20 „	6 6 0

These parcels are delivered by the post office and the postage paid carries them to destination

(*ii*) Parcels which exceed 11 lbs. but which do not exceed 50 lbs. (the maximum allowed) in weight are forwarded from India through the medium of the P. & O.S.N. Co., and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of charge *within a radius of one mile from the Company's Head Office in London*; if addressed to any place beyond that radius, carrier's charges are levied from the addressees on delivery. Parcels thus forwarded through the P. & O. S. N. Co. cannot be insured during transit *beyond* India, but must, if they contain coin, etc., be insured *during transit in India*. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value-payable system.

Limits of Weight.

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers—To Great Britain and Northern Ireland, and the Irish Free State, British Australasian Colonies, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—No limit.

To all other destinations—4 lbs. 6 oz.

Samples—To Great Britain and Northern Ireland, and the Irish Free State, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—200 tolas.

To all other destinations—1 lb. 2 oz.

Parcels.—11 lbs.

Limits of Size.

Letters—1½ feet length by 1½ feet in width or depth. If in form of roll, 2½ feet in length and 4 inches in diameter.

Printed Papers and Business Papers—To Ceylon—2 feet in length by 1 foot in width or depth.

To all other destinations—1½ feet in length by 1½ feet in width or depth.

If in form of roll, dimensions in all cases are 30 inches in length and 4 inches in diameter.

Samples.—To Great Britain and Northern Ireland, and the Irish Free State, Ceylon, Hong-kong, the Straits Settlements, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth.

To all other destination—1½ feet in length by 8 inches in width and 4 inches in depth.

If in form of roll, dimensions in all cases are 1½ feet in length and 6 inches in diameter.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are the same as in the case of inland money orders.

To countries on which money orders have to be drawn in sterling, the rates are as follows:—

	Rs. a.
On any sum not exceeding £1	0 3
„ „ exceeding £1 but not exceeding £2	0 5
„ „ £2 „ „ £3	0 8
On any sum exceeding £2 but not exceeding £4	0 10
„ „ „ £4 „ „ £5	0 12
„ „ „ £5 „ „ „	0 12

for each complete sum of £5 and 12 annas for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 3 annas; if it does not exceed £2, the charge for it shall be 5 annas; if it does not exceed £3, the charge for it shall be 8 annas; and if it does not exceed £4, the charge for it shall be 10 annas.

Insurance fees (for registered letters and parcels only)

For insurance of letters and parcels to Mauritius, Iraq, British Somaliland, the Seychelles, and of parcels to Portuguese India, and Zanzibar—

	Annas.
Where the value insured does not exceed Rs. 200	5
For every additional Rs. 200 or fraction thereof	5

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries other than those mentioned above and for insurance of letters to Zanzibar.—

	Annas
Where the value insured does not exceed £12	5
For every additional £12 or fraction thereof	5

Acknowledgment fee.—3 annas for each registered article.

Magnitude of business in Post Office.—At the close of 1928-29 there were 112,711 postal officials, 22,820 post offices, and 166,941 miles of mail lines. During the year, 1,386 million articles, including 54 million registered articles were posted; stamps worth Rs. 62·5 millions were sold for postal purposes: over 40 million money orders of the total value of Rs. 933 millions were issued, a sum of Rs. 286 millions was collected from tradesmen and others on V. P. articles; about 5·7 million insured articles valued at 1,658 millions of rupees were handled. Customs duty, aggregating over 8·4 million rupees was realised on parcels and letters from abroad, pensions amounting to Rs. 15·6 millions were paid to Indian Military pensioners and 13,715 lbs. of quinine were sold to the public. On the 31st March 1929, there were 2,020,832 Savings Bank accounts with a total balance of Rs. 345 millions and 64,474 Postal Life Insurance policies with an aggregate assurance of Rs. 124·8 millions,

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the

Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs in charge of the two Circles. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer, Telegraphs, with one Dy. Chief Engineer. For traffic work there is a Deputy Director-General, with an Assistant and an Assistant Director-General. On the 27th March 1920 a Controller of Telegraph Traffic was appointed to assist the Deputy Director-General in the inspection of offices and in controlling telegraph traffic. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the engineering work is in charge of the Postmaster-General who is a Telegraph officer specially selected for the purpose. These six Circles were divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Director Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fresion of the three branches of work on the lines of the Burma Cicle, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster General in 1925 and this unification proved an unqualified success and was gradually extended to other circles. The fusion was completed in March 1930.

The telegraph traffic work is under the control of the Postmasters-General, each of whom is assisted by a Deputy Postmaster-General and a suitable staff of attached officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows:—

	For delivery in India. *Private and State.*		For delivery in Ceylon. *Private and State.*	
	Express.	Ordinary.	Express.	Ordinary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge.	1 8	0 12	2 0	1 0
Each additional word over 12..	0 2	0 1	0 3	0 2

The address is charged for.

Additional charges.

Minimum for reply-paid telegram	Minimum charge for an ordinary telegram.
Notification of delivery	
Multiple telegrams, each 100 words or less	4 annas.
Collation	One half of the charge for an ordinary telegram of same length.
For acceptance of an Express telegram during the hours when an office is closed,	Rs.
If both the offices of origin and destination are closed ..	2
If only one of the offices is closed .	1
If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office	1
Signalling by flag or semaphore to or from ships—per telegram	The usual inland charge *plus* a fixed fee of 8 annas.
Boat hire	Amount actually necessary.
Copies of telegrams each 100 words or less	4 annas.

	For delivery in India. *Press.* Express.	Ordinary.	For delivery in Ceylon. *Press.* Express.
	Rs. a.	Rs. a.	Rs. a.
Minimum charge ..	1 0	0 8	1 0
Each additional 6 words over 48 in respect of India, each additional four words over 32 in respect of Ceylon..	0 2	0 1	0 2

The address is free.

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and state telegrams to countries in Europe are as follows:—

	Urgent	Ordinary.	Deferred.	State (British Govt.)
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
All countries in Europe (except France, *via* Eastern ..	3 0	1 0	0 8	0 8
Do. *via* Indo ..	3 0	1 0	0 8	—
Great Britain and Northern Ireland *via* I.R.T.. ..	—	0 12	0 6	0 6
Most other countries in Europe *via* I.R.T.	—	1 0	0 8	0 8

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India or Burma and transmitted *via* the coast stations at Bombay, Calcutta, Karachi, Madras, Port Blair or Rangoon the charge is ten annas per word in nearly all cases.

The following are the charges excluding supplementany charges for radiotelegrams from Offices in India or Burma transmitted *to ships at sea* from the coast stations mentioned in the preceding paragraph:—

		Total charge per word. Rs.
(1)	All Government or Private Radio-telegrams, excepting those mentioned in (2) to (5) below ..	0 10
(2)	British, Indian or Colonial Government Radio-telegrams to His Britannic Majesty's Ships of War or Royal Indian Marine Ships	0 6
(3)	Private Radio-telegrams to His Britannic Majesty's Ships of War ..	0 6
(4)	Radio-telegrams to Spanish or Swedish ships ..	0 9

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R. P." followed by mention in Rupees and annas of the amount prepaid *e.g.*, R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language which are dealt with telegraphically throughout are accepted on any day of the week, excluding Sundays and telegraph holidays, and are ordinarily delivered to the addressee after forty-eight hours. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily a quarter of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 20 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

In the Daily Letter-Telegram service the special instructions relating to prepayment of replies are admitted other special services are inadmissible in DLT Telegrams.

Packed messages, *i.e.*, messages intended to be communicated to different persons, are not accepted in the text of Daily Letter-Telegrams.

The charge for a week-end letter telegram to Great Britain and Northern Ireland is 3 annas a word *via* Eastern or Indo and 2½ annas a word *via* I.R.T. subject to a minimum charge for 20 words per telegram including the indication WLT.

Week-end Letter Telegrams accepted on Saturday or any previous day of the week for delivery on the following Monday—2½ annas per word for Great Britain and Northern Ireland.

Daily and Week-end Letter Telegrams—Minimum charge for 20 words.

Ordinary rate telegrams may be written in Code.

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration Reply Paid, etc.

Full lists published in Post and Telegraph Guide.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 103,067 miles of line including cable and 549,199 miles of wire including conductors respectively, on the 31st March 1929. The numbers of departmental telegraph offices were 257 and 135 (including 17 Coast Radio offices),

† No deferred rate to Bulgaria, Russia, and Turkey.

respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 4,129.

The increase in the number of paid telegrams dealt with is shown by the following figures:—

		1897-98.	1928-29.
Inland ..	Private	4,107,270	15,341,465

The outturn of the workshops during 1928-29 represented a total value of Rs. 21,68,736.

Wireless.—The total number of Departmental wireless stations open at the end of 1927-28 was twenty-four, viz., Allahabad, Bombay, Calcutta, Delhi, Diamond Island, Jutogh, Karachi, Lahore, Madras (3 stations), Mhow, Nagpur, Peshawar, Poona, Port Blair, Quetta, Rangoon (3 stations), Sandheads (two pilot-vessels), Secunderabad, and Victoria Point of which only Port Blair and Victoria Point booked telegrams direct from the public.

The new Duplex high-speed service between Rangoon and Madras continued to work satisfactorily, the wheat stone system being employed generally for this circuit. Communication with the Imperial Air Mail Aeroplanes is maintained during flight by Karachi Radio between Karachi and Jask.

Telephones.—On the 31st March 1929 the number of telephone exchanges established by the Department was 288 with 17,354 straight line connections and 2,581 extension telephones. Of these exchanges, 144 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 22 with 33,750 connections.

The total staff employed on telegraphs telephones and wireless on the 31st March 1929 was 14,121.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year ended 31st March 1929 was Rs. 69,20,933 and Rs. 14,09,09,974 respectively. The receipts for the year ended 31st March 1929 amounted to Rs. 11,03,65,308 and charges (including interest on capital outlay) to Rs. 11,57,48,937, the result being a net loss Rs. 53,83,629.

Sanitation.

The history of the sanitary departments in India goes back for about fifty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated: the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India*, May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 475 *et seq.*) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. It is yet full early to attempt to indicate the effects of this change.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January, 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed." He quoted, the remark of the Government of India in their Resolution of 1914, that "in the land of the ox cart one must not expect the pace of the motor car."

The Public Health Commissioner in his annual report for the year 1925 noted the introduction of the political element into health matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fairway to maturing but that in other provinces "with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed." But, he says, "though the picture is neither bright nor the future rosy, it is becoming increasingly evident that a considerable section of the Indian

community is thinking seriously on these public health problems: amid much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive criticism can be met with which goes to prove my contention."

India's birth rate in 1925 was nearly wice that of England and Wales, her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 2½ times that of England and Wales and nearly 4½ times that of New Zealand. "The information furnished for the great group of infectious diseases of world import, *i.e.*, plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says the Public Health Report already cited) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera." The significance of these facts must, adds the Commissioner, be obvious to all who think: "Briefly their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children; of the effect of feeding on rickets scurvy and beri-beri; of the way in which malaria, cholera, yellow fever, dengue, ankylostomiasis and filariasis can be and have been over come we need have no fear in regard to India provided the necessary measures are put into operation."

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Calcutta in December, 1927, urged the importance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no Public Health Act for the whole of India, nor under existing administrative arrangements is one immediately possible, but the desirability of the Central Ministry of Health and of such an Act is likely to be urged in the course of the revision of the Constitutional Reforms now in progress.

The Commissioner in his latest annual report to Government (that for 1927) gives at the outset the following text for thought "Whether the institution of a Ministry of Health, which many of us think is long overdue for the Indian Empire, would accelerate progress of a matter of opinion; but there can be little doubt that such progress must depend not on a haphazard programme or on the fulfilment of an annual routine of measures sanctified by tradition but rather on the acceptance of such cardinal principles as have been laid down by the Chief Medical Officer of the British Ministry of Health in his 1927 report and by a genuine attempt to work to these. Sir George Newman points out that 'Nothing is more certain than the fact that the physical advancement and health of mankind is dependant not upon a doctor's stunt here or a sanitary institution there but upon the whole social evolution of the people. Now, these desired ends are not reached merely by announcing them, still less by leaving things to chance, drift or fate. They can in any case only be partly reached at all without foresight, organisation and expenditure.' He proceeds to inculcate four basic principles which it is necessary for any modern State to work to and which are as follow:

(*a*) ascertainment and accurate registration of the data obtainable;
(*b*) the establishing of a definite standard to work to, which should be based on health and physiology and not on disease or pestilence;
(*c*) the study of the character and incidence of disease, its causes and predisposing conditions, its mode of spread, its social factors which increase or reduce it and the means of its treatment and prevention;
(*d*) the establishment of a national organisation by the assent of public opinion, such organisation being an index of the aspirations and enlightenment of the people.

It is for consideration how far we in India are now working to these basic principles or are likely to in the future and whether our existing public health organisation is best suited to enable us to do this.

Province.	Birth Rates (per mille).		Death Rates (per mille).

Chief Causes of Mortality.—There are three main classes of fatal diseases: specific fevers, diseases affecting the abdominal organs, and lung diseases, Intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1,000 during 1927 :—

Province.	Cholera.	Small-pox.	Plague.	Fevers.	Dysentery and Diarrhœa.	Respiratory Diseases.	All other causes.

	1.26	.49	.18	14.22	.92	1.46	6.28

The Public Health Commissioner in his annual review shows that the outstanding data concerning public health in the year 1926 are briefly as follows :—

(1) The birth rate rose from 34.77 per mille in 1926 to 35.27 in 1927.

(2) The death rate rose from 26.76 in 1926 to 24.89 in 1927.

(3) The infantile death rate rose from 189 in 1926 to 167 in 1927.

The death rates of other countries in 1926 were: England and Wales 70, Canada (ex- Quebec) 102, U.S.A. 73, Japan (1922) 166.

Births in British India numbered 8,516,706, or 121,027 more than in 1926, the birth rate being 35.27 against 34.77 in 1926 and 33.96, the given quinquennial mean. The United Provinces, Madras, Punjab, Bihar and Orissa and Bengal recorded increases of 2.52, ·4, ·63, ·4 and and ·3 respectively as compared with the preceding year. With the exception of Bengal, Coorg and Burma, all provinces showed an ncreased birth rate compared with the quinquennial mean.

In the Madras Presidency the birth rates of the southern districts are systematically lower than those of the central and northern districts, partly, it is thought, as a result of greater emigration from them. In the Punjab, the two most extensively irrigated districts (Lyallpur and Amritsar) return the highest birth rates and the rate of Jullunder district, which is the most intensely congested district, is well above the provincial mean. The figures show in the opinion of the Health Commissioner, extreme density of population and intensive irrigation are not incompatible with high fecundity.

Birth ratios exceeded death ratios in all provinces except Coorg, where the death rate was in excess by 12.19. Among the big birth increases were Punjab 14.8, Central Provinces 14.27, United Provinces 14.13, Bihar and Orissa 12.5, Madras 12.2, Bombay 11.13, Delhi 10.21.

Deaths numbered 6,009,729 as compared with 6,460,610 in the preceding year, a decrease of 450,881. Registered births exceeded deaths by 2,506,977, as against 1,935,069 in 1926. Coorg excepted all the provinces contributed to this increase in the following order: U. P. 641,401, Madras 498,005, Bihar and Orissa 427,093, Punjab 304,007, Bombay 213,394, C. P. 198,570, Bengal 97,493, Burma 59,859, Assam 46,476, N. W. F. P. 15,443, Delhi 5,110, Ajmer Merwara 2,120.

The death rate was 24.89 as against 26.76 in 1926 and a quinquennial mean of 25.80. With the exception of Assam, Bengal and the N. W. F. P., a decrease in the death rate was general throughout India. The reduced mortality during the year indicates in the opinion of the Health Commissioner a greater degree of healthiness of the general population and implies comparative absence of epidemics. The urban death rate was 20.03 against 32.49 and the rural death rate 24.48 against 26.21 in 1926. The rural rates exceeded the urban ones in Bihar and Orissa and Delhi while the urban rates were in excess of the rural ones in Coorg by 32.61, in Burma by 18.88 and in the U. P. by 13.69.

A few Indian States, including Mysore and Baroda provided data from which the Public Health Commissioner compiled an addendum to his report on British India. This showed that in Mysore, which contains 5¾ millions of the 9¾ millions population concerned, the recorded birth rate per mille in 1927 was 18.54 against 20.52 in 1926 and ·30 in excess of the quinquennial mean. The recorded death rate was 14.06 per mille against 14.87 in 1926. The corresponding figures for Baroda were birth rate in 1927-8 27.9 per mille against 24.5 in the preceding year and death rate 21.6 against 19.6. In Baroda, infant deaths were 146.9 per mille of births as against 168 per mille in 1926-7 and the chief causes of these are stated as child marriage, faulty feeding, contamination of the milk supply, ignorant management of children, frequency of motherhood and insanitary conditions. Malaria is shown to be the chief sanitary problem in the State and caused 40 per cent. of the total mortality.

THE HEALTH OF THE ARMY.

British.—The average strength of British Troops, R. N. and R.A.F. on the strength in India during 1927 was 58,008 as compared with 60,007 in 1926. There were also on the strength 5,425 women and 7,212 children. The statistics of sickness also take account of pensioners and others not on the strength. The following table shows the main facts as regards ill health:—

——	Average Strength.	Admissions to Hospital.		Deaths.		Invalids sent Home.		Invalids Discharged from the service.		Average Constantly sick.	
		No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.
Officers ..	2,476	1,733	699.9	9	3.63	39	15.75	..	..	61.04	24.65
Other Ranks ..	55,632	34,666	633.1	149	2.68	829	14.90	738	13.26	1,654,22	29.74
Women ..	5,425	2,313	426.4	22	4.06	76	14.01	..	..	71.21	13.13
Women Parturition	..	633	..	..	..	..	..	..	..	24.39	..
Children ..	7,212	2,909	403.4	99	13.73	17	2.36	..	..	86.75	12.03
R.N., R.A.F., & Pensioners ..	..	1,197	..	14	..	5	..	..	..	..	..
Others ..	..	47	..	4	..	..	..	..	..	..	..

One invalid, other rank, was discharged in India and the figure is accounted for in the last two columns of the above table.

The health statistics of Officers and other ranks for the quinquennial periods 1910-14, 1915-19, and 1920-24 are given, with those for 1925, 1926 and 1927 separately for purposes of comparison :—

	Admissions.		Invalids.		Deaths.	
	Officers.	Other Ranks.	Officers.	Other Ranks.	Officers.	Other Ranks.
1910-14	567.5	567.2	16.30	7.03	5.14	4.36
1915-19	1,053.0	881.7	60.98	29.91	10.54	8.81
1920-24	676.7	791.9	20.99	18.91	6.71	5.24
1925	607.6	628.6	18.02	17.38	5.15	2.89
1926	675.2	649.5	19.81	16.02	6.22	3.01
1927	699.2	623.1	15.75	14.90	3.63	2.68

The principal causes of invaliding to the United Kingdom were :—

Inflammation of middle ear	155
Mental diseases	67
Pulmonary tuberculosis	73
Valvular disease of the heart ..	32
Disordered action of the heart ..	40
Epilepsy	46
Neurasthenia	27
Malaria	20

The average number constantly in hospital was 1,654 or 29.74 per 1000 of the strength compared with 31.86 in 1926, 31.41 in 1925 and 29.68 in 1913.

The average sick time to each soldier was 10.85 days and the average duration of each case 17.42 days. The corresponding figures were 11.3 and 17.90 in 1926, 11.46 and 18.24 in 1925, and 10.83 and 18.66 in 1913.

Men numbering 76,761 or 1,379.8 per mille of the strength, were treated as out-patients, with an average daily number under treatment of 1,045.57 or 18.79 per 1,000.

The combined ratio constantly sick in hospital and under treatment as out-patients was 48.53 per 1000 of the strength, compared with 51.12 in 1926 and 50·32 in 1925.

As in former years the preponderance of disease due to the bites of mosquitoes and sand-flies shows the importance of preventive measures directed against them. So runs the report of the Public Health Commissioner with the Government of India. He adds that a large number of the admissions for inflammation of areolar tissue are also attributable to the same cause.

Indian.—The following table shows the main health statistics of officers and Indian ranks for the quinquennial periods 1915-19 and 1920-24 and those for 1925, 1926 and 1927 :—

Period.	Admissions		Invalids.		Deaths.	
	Officers.	Other Ranks.	Officers sent Home.	Other Ranks Discharged.	Officers.	Other Ranks.
1915–19 ..	882.4	788.2	**	23.6*	8.29	16.81
1920–24 ..	698.3	593.2	3.65	18.25*	6.67	8.01
1925 ..	480.1	336.8	5.70	12.5*	5.22	4.01
1926 ..	607.7	388.6	4.49	11.6*	4.99	3.75
1927 ..	546.7	362.0	6.35	10.5	4.89	3.38

* Figures not available

The number admitted to hospital was 48,173 or 362 per 1000 of the strength, compared with 388.6 in 1926, 356.8 in 1925 and 531.7 in 1913. The decrease in the admission rate over 1926 was mainly due to improved treatment of Malaria and resulting diminution in relapses.

The average number constantly sick was in hospital 1,997.27, or 15.01 per 1000 of the strength, compared with 15.41 in 1926 and 21.4 in 1913. The figure 15.01 is the lowest recorded for the Indian Army. The average sick time to each soldier was 5.48 days and the average duration of each case 15.13 days. The number of men treated as out-patients was 134,183, or 1,008.3 per 1000 of strength. The number, constantly sick in hospital and under treatment as outpatients was in the ratio of 27.60 per 1000 of strength, compared with 29.60 in 1926 and 33.35 on 1924.

The main causes of deaths were :—

Pneumonia (lobar and lobular)	190
Local injuries	57
General ,,	21
Influenza	18
Malaria	17
Circulatory Diseases	16
Pulmonary Tuberculosis	15
Dysentery	11
Poisons	10
Enteric Group of fevers	9
Appendicitis	8

The principal causes of invaliding were :—

Pulmonary tuberculosis	343
Injuries	149
Diseases of ear and nose	136
,, ,, the eye	101
Organs of Locomotion	92
Other respiratory diseases	79
Diseases of the nervous system	72
Circulatory diseases	60
Malaria	44
Mental diseases	36
Diseases of Lymph system	30
Venereal Diseases	22
Hernia	16
Pneumonia	14

MORTALITY FROM WILD ANIMALS.

The total number of people killed by wild animals in British India during 1927 was 2,285 as against 1,985 in 1926 and 1,962 in 1925. Tigers were responsible for 1,033 deaths, leopards for 218, wolves for 465, bears for 78, elephants for 56, hyenas for 12. Deaths were highest from leopards and tigers in Madras, from wolves in the United Provinces, from bears in Bihar and Orissa and from elephants in Assam. Of the 423 deaths caused by "other" animals, about 136 are assigned to crocodiles, 85 to wild boars and pigs and 41 to Jackals. The highest number of deaths from all wild animals occurred in the Madras Presidency (579), the U.P., Bihar and Orissa and the C. P. and Berar coming next in order. Mortality from elephants showed a slight decrease. The majority of the provinces showed lower mortality from wild animals in 1927 than in the preceding year.

Deaths from snake bite decreased from 19,724 to 19,069. Bombay, Bengal, the U. P., Burma, the C. P. and Berar and Assam showed a decrease and increases occurred in Madras, the Punjab, Bihar and Orissa and the N.W.F.P.

During the year, 25,612 wild animals were reported to have been destroyed. Of these 1,368 were tigers, 4,390 leopards, 2,739 bears and 2,439 wolves. Rewards paid amounted to Rs. 1,39,453, against Rs. 1,40,061 in the preceding year. The number of snakes destroyed was 57,116, as against 46,012 in the preceding year and the rewards paid for thei destruction were Rs. 1,241 as against Rs. 1,615.

The report indicates that these figures are not very trustworthy "and may soon be discontinued."

MEDICAL INSTITUTIONS.

There were in existence in British India at the end of 1926 4,189 State, public, local fund and private aided civil hospitals and dispensaries as compared with 3,956 in 1925, an increase of 233.

The number of patients treated was 44,610,196 (including 766,855 in-patients) against 41,135,578 (including 732,975 in-patients) in 1925. The increase was noticeable in all provinces except the U. P. and Calcutta city, the increase in some provinces apparently being due to the opening of additional dispensaries. The number of operations rose from 1,711,695 in 1925 to 1,871,495 in 1926.

There are in British India 8 medical colleges and 23 medical schools.

LEPROSY IN INDIA

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. In 1921, when the last Census was made, leprosy was regarded as an *infirmity* like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,094 in 1911. But it is doubtful if this figure represents anything more than the more advanced cases and possibly a majority of this number are the begging and pauper lepers who are seen all over the country. Dr. E. Muir, M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, says that "recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy."

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,63,065 yielding an annual revenue of over Rs. 1,22,000.

In the scheme of anti-leprosy campaign which the Association has put into operation, the respective parts to be played by the Central and Provincial Committees in carrying forward the aims and objects of the Association are definitely apportioned. The Central Committee is vested with the task of promoting research, of preparing and publishing propaganda material, arranging for the training of doctors in the diagnosis and treatment of leprosy according to the latest methods and of conducting an expert survey of selected areas for the ascertainment of the facts regarding the incidence and endemic city of leprosy. Measures for the accommodation and treatment of leprous patients and other schemes of purely local interest are to be the concern of provincial committees as agents of the Indian Council in the Provinces.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest :—

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.

(2) Segregations is not the most appropriate method of dealing with lepers, for

(*a*) financially it would be impossible;
(*b*) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects :—

(*a*) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so

(*b*) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generation will become fewer.

The report of the Association for 1928 shows that the Central Committee spent, among other items, Rs. 11,971 on propaganda, Rs. 22,373 on Research, Rs. 20,066 on Survey, Rs. 13,650 on the training of Doctors and distributed Rs. 69,300 to the provincial committees. Special emphasis was laid in that report on the importance of survey. It said "there are four different aspects of the survey, which are all of great importance. In the first place there is the survey proper. In 1926, Dr. Muir made a short survey of certain endemic areas in the Central Provinces and the Bombay Presidency, and the important data which he then collected impressed upon the Central Committee the necessity of conducting surveys of selected areas throughout India, in order that the true position of the country in regard to the various important factors of the disease may be understood, and the campaign be directed in the light of the experiences thus gained. The Committee is of opinion that the survey is playing and will play an important part in helping the problem of leprosy to be studied in its true perspective. In the second place the survey party is training more doctors on the spot. Thirdly, comes the establishment of clinics in the provinces where the knowledge gained by the doctors trained, whether at Calcutta or elsewhere, can be put to practical use. Finally, it is impossible to over estimate the value of this part of the campaign in stimulating interest among the authorities concerned, as well as among the public, in the work as a whole, and in demonstrating the great potentialities of the campaign. The results which are being obtained are of a nature which will ultimately benefit all the Branches."

His Excellency the Viceroy is the President of the Indian Council, the Hon'ble Sir Henry Moncrieff Smith, Kt., C.I.E., I.C.S., the Chairman of the Executive Committee, Sardar Bahadur Balwant Singh Puri, the Honorary Secretary and Mr. W. J. Litster, C.I.E., O.B.E., the Honorary Treasurer.

CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling infant mortality. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the larger towns in India. The institution of an all India Baby Week, an undertaking to which Her Excellency the Countess of Reading has devoted great and successful enthusiasm has also given a stimulus to the work and promises to be an important perennial aid to its progress. In all the great centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infantile hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children. The admirable work done year by year by the National Association for supplying Female Medical Aid to the Women of India is recognised by the Government of India, which subsidises this organisation with a grant of Rs. 3,70,000 a year for the maintenance of the Women's Medical Service of Indian

Centres of Activity.—The Child Welfare Directory gives the following list of places where the movement is already at work:

Bombay.—The centre of much active and enthusiastic welfare work; the Lady Willingdon Maternity Homes near the people's chawls being unique of their kind in India. The Bombay Infant Welfare Society founded by Lady Lloyd has already established 8 Infant Welfare Centres where prenatal, maternity and child welfare work is being carried on.

Poona.—The work carried out by the Seva Sadan Society of Poona deserves special mention in this connection. Child welfare centres have been established in several places throughout the Presidency and are in charge of Public Health Nurses trained by the Seva Sadan Society. Certain of these Child Welfare centres are subsidized by the Bombay Branch of the Red Cross.

Surat.—The Henderson Ophthalmic Scheme for treating Ophthalmia Neonatorum and stemming "the enormous amount of preventible and curable blindness that is laying its shadow over the health, happiness and usefulness of this great portion of our Empire."

Bijapur.—Mr. Henderson, I.C.S., has now started the same beneficent work for blind babies as in Surat.

Delhi.—Work was started in 1915 by two lady health visitors brought out from England by the Government of India. Their salaries are now met by the Delhi Municipality, a substantial grant being paid towards them by Government; five infant welfare centres have been established and a comprehensive scheme for the training and supervision of indigenous *dais* is carried on. A training school for health visitors and midwife supervisors has been established in connection with this scheme and is financed by the Lady Chelmsford League. All particulars may be obtained from the Secretary, Lady Reading Health School, Viceregal Estates, Simla (and Imperial Secretariat, Delhi).

Madras.—Under the Provincial Branch of the Lady Chelmsford League and of the Red Cross Society a number of Infant Welfare Centres have been opened in the City, also a school for training health visitors under Mrs. Devanesan, M.B., the Medical Superintendent of the Corporation Child Welfare Scheme, by means of which trained midwives are provided for the City and much antenatal, maternity and infant welfare work is carried on. There are also local centres of both the Red Cross and the Lady Chelmsford League in the Madras mofussil.

Punjab.—The Punjab Health School is now entirely supported by the Local Government and trains workers for the province. Thirty-four centres are working, most of which receive a grant-in-aid from provincial funds. The centres are regularly visited and inspected.

United Provinces.—Infant Welfare centres exist in the following places:—Agra, Allahabad, Bareilly, Cawnpore, Dehra Dun, Gonda, Ghazipur, Lucknow. Other places are also taking up the work, and decrease in Infant mortality is noted as a result of the work in many places. There is now a Provincial Health School at Lucknow, and a midwives training centre.

Benyal.—Work is undertaken by the Corporation of *Calcutta*, and by the Indian Red Cross Society in that town. The latter body is now also financing a Health School for the training of workers. A centre at *Titaghur* financed by Thos. Duff & Co., Ltd., cares for the infants of the operatives in the Jute Mills. New centres have been opened at the Kankinara & Reliance Mills. A flourishing centre exists at *Dacca* where excellent work is being done.

Sind.—Karachi has two trained Health Visitors as well as 8 nurses, and there is a large amount of maternity work. Hyderabad is noted specially for its work among indigenous midwives.

Central Provinces.—In Nagpur city the work is being carried on by the Municipality very successfully. The Red Cross has also opened a centre in Civil Lines and in several places in the mofussil.

Rajputana.—At Ajmer there is Child Welfare work and a Maternity Home; the same activities are carried on at Jaipur.

N. W. F. P.—Dera Ismail Khan has a flourishing work, much appreciated by the people. Peshawar has a flourishing scheme for the benefit of sepoys' wifes and children.

Baluchistan.—A centre was established in Quetta in 1922, and has done steady work.

Central India.—Indore has a centre financed by the Red Cross Society.

Bangalore.—Has an enthusiastic Committee with two Health Centres.

Indian States.—Kolhapur, Baroda and Jaipur have undertaken definite Child Welfare work, while trained midwives are employed in a number of others.

So far all the schemes have devoted their attention to combating the prejudices of the mothers in respect of new-born children. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, under-nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

INDIAN RED CROSS SOCIETY.

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralized, and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of the Society may be spent are—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.

2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.

3. Child welfare.

4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.

5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.

6. Home Service Ambulance Work.

7. Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150 and anything between Re. 1 and Rs. 5 annually or consolidated payment of Rs. 50. In the end of 1928 there were 14,208 members of these various grades.

To stimulate interest for the aims and objects of the Society amongst the future generation of people, a Junior Red Cross movement has been instituted which embraces the Student population. The Punjab Provincial Branch has taken the lead in furthering this movement and has during the last two years enrolled no less than 45,000 members.

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-Presidents nominated by Provincial or State Branches,

8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is the Hon'ble Sir Henry Moncrieff Smith, Kt., C.I.E., I.C.S., and the Organising Secretary, Miss Norah Hill, A.R.R.C.

Finances.—The operations of the Joint War Committee were brought to a close in June 1926 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances in the end of December 1928, stood at a capital investment of the face value of Rs. 67,53,000-0-0. The income derived from the capital of the Society, (which is 3½ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund. A sum of Rs. 2,70,000-0-0 was so distributed to the Provincial Branches under this arrangement during the year 1928.

St. JOHN AMBULANCE ASSOCIATION.

(Indian Council.)

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects:—

(*a*) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured;

(*b*) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room;

(*c*) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic;

(*d*) The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps;

(*e*) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued 1,59,300 certificates of proficiency in First Aid, Home Nursing, Home Hygiene and Sanitation and 7,302 tokens such as Vouchers, Medallions, Labels and Pendants for special proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man, and the subject matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

In 1928 the Indian Council spent Rs. 48,249-2-2 in furthering its objects and closed the year with Govt. securities of the face value of Rs. 70,000. The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs. 1,000, Rs. 500, Rs. 100, Rs. 5, and Rs. 2.

Their Excellencies Lord and Lady Irwin and Field-Marshal Sir William Birdwood as President, Lady President and Chairman, respectively, with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble Sir Henry Moncrieff Smith, Kt., C.I.E., I.C.S., is the Chairman, and Miss Norah Hill, A.R.R.C., the General Secretary.

INSANITY AND MENTAL HOSPITALS IN INDIA.

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore State which has a small and highly archaic "mental hospital" at Bangalore, there are no mental hospitals in existence so that persons suffering from all forms of mental disease are confined in the Jails where, of course, no provision exists for any kind of treatment. According to the last Census (1921) out of a total population of 318,942,480 (India and Burma) there are 88,305 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded" an item that is not included in the figures for British India.

INDIA,

Provinces, States and Agencies.	General population.			Insane population.		
	Male.	Female.	Total.	Male.	Female.	Total.
Provinces under British Administration.	139,243,123	131,707,310	270,950,433	44,673	28,234	72,907
States and Agencies ..	24,752,431	23,239,616	47,992,047	9,478	5,920	15,398
Total for all India ..	163,995,554	154,946,926	318,942,480	54,151	34,154	88,305

For the care of the 88,305 insanes of India and Burma there exists accommodation in mental hospitals for 6,750 hence only one person in ten out of the total insane population can obtain accommodation in institutions which exist especially for their care and treatment.

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number discharged cured and died :—

Province.	No. of Mental Hospitals.	Admitted and readmitted during the year	Total Population of Mental Hospitals.			Discharged cured.	Died.	Daily average.		Criminal Lunatics.
			Males.	Females.	Total.			Strength.	Sick.	
Asam	1	66	410	95	505	21	47	438·47	59·35	249
Bihar and Orissa ..	2	364	1,535	398	1,933	206	53	1,604·49	74·68	614
United Provinces ..	3	779	1,561	412	1,973	174	106	1,274·83	155·03	425
Punjab	1	397	982	262	1,244	132	102	889·88	73·63	207
Central Provinces ..	1	87	389	95	484	33	19	410·96	20·37	135
Bombay	5	608	..	..	2,109	237	171	1,534·20	93·7	226
Madras	3	469	1,155	357	1,512	143	80	1,105·29	135·89	194
Burma	2	276	1,111	169	1,230	88	58	1,052·55	44·06	564
Total ..	18	3,046	..	..	11,040	..	636	8,305·67	656·71	2,601

It will be observed that there is now no mental hospital in Bengal. Insanes from this province are treated in one or other of the two mental hospitals at Ranchi. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over by the Commissioner of Chota-Nagpur. The so-called "Central" Mental Hospitals, that is to say, the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rangoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole-time medical officers who are usually trained alienists. The Administration of the remaining Mental Hospitals in British India and Burma, lies with the Civil Surgeon of the locality in which they happen to be situated. It is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up-to-date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over-crowded and under-staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing, in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

As regards the incidence of insanity among the various races of India as well as the incidence of insanity in relation to occupation, no reliable information is available in view of the comparative paucity of cases in proportion to the general population that come under observation. On the other hand the incidence by age is shown fairly well in the Census Report of 1921 which is as follows :—

INDIA

AGE.	Insane.		Distribution of the insane by age per 10,000 of each sex.	
	Male.	Female.	Male.	Female
YEARS				
0- 5	651	484	121	142
5-10	2,906	1,882	539	553
10-15	4,098	2,753	761	803
15-20	4,366	3,076	810	904
20-25	5,518	3,379	1,024	993
25-30	6,861	3,582	1,273	1,053
30-35	7,231	3,849	1,342	1,131
35-40	5,651	2,949	1,049	867
40-45	5,316	3,486	987	1,025
45-50	3,332	2,157	618	634
50-55	3,132	2,492	581	733
55-60	1,465	1,036	272	305
60-65	1,683	1,471	....	....
65-70	602	439	....	....
70 and over	1,070	1,006	....	....
Unspecified	270	133	....	....
Total for all India	54,151	34,154	623	857

A further result of the widespread ignorance and apathy both official and non-official, towards psychiatry and its cognate interests, is the lack of any provision for the care and treatment of mentally defective children. In 1925, the Hon'ble Haroon Jaffer moved the Council of State to recommend to the Governor-General in Council that the Provincial Governments be asked to investigate the best means of dealing quickly and adequately with cases of mental defectives. A discussion followed which was remarkable only for the ignorance of the subject displayed by all who took part in it. The motion was eventually withdrawn.

Finally there is still a lamentable failure everywhere to appreciate the intimate association of crime with mental disorder and the extreme paucity of medical men throughout the whole of India with any real knowledge of mental diseases leave the decision of questions involving what the law terms "responsibility" in crime in the hands of medical men who are in no sort of sense "experts". In other words the current ideas both as regards the theory and practice of dealing with insanity and crime in India can only be described as archaic.

(See also "Insanity in India" by Colonel G. F. W. Ewens, I.M.S., and "Lunacy in India" by Colonel A. W. Overbeck-Wright, M.D., D.P.E., I.M.S., and Colonel H. P. Jago Shaw's book.)

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition Branches were formed in each Province, each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial Branches; it gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women. It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs. 3,70,000 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors and a Junior service of 6 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H. E. Lady Irwin, C.I., The Hon. Secretary is the Surgeon to H.E. the Viceroy, and the Secretary Dr. A. C. Scott, C.M.G., W.M.S.

THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (*a*) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (*b*) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (*a*) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (*b*) Must be between the ages of twenty-four and thirty at entry. (*c*) She must be a first-class medical woman, *i.e.*, she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act: but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (*d*) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies, or to special institutions, which may be responsible for whole or part of the pay.

Pay.—The rates of pay are as follows:—

1st	to	3rd	year	Rs. 450	per month.
4th	to	6th	,,	,, 500	,,
7th	to	9th	,,	,, 550	,,
10th	to	12th	,,	,, 600	,,
13th	to	15th	,,	,, 650	,,
16th	to	18th	,,	,, 700	,,
19th	to	21st	,,	,, 750	,,
22nd	to	24th	,,	,, 800	,,
24th	and	after	,,	,, 850	,,

also an overseas allowance of Rs. 100 per month to those below 12 years' service and Rs. 150 per month to those of 12 years' service and over. Every officer of the Service shall pass an examination in such vernacular as the Executive Committee shall appoint within the first three years of her service, and shall receive no increment after that period until such examination has been passed. In addition

furnished quarters are provided free of rent or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of fifty-five. An officer recruited in England, whose appointment is not confirmed, or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(*a*) Casual Leave, which is occasional leave on full pay for a few days, and is not supposed to interrupt duty. (*b*) Leave on average pay is granted up to 2-11 of an officer's period on duty, according to Fundamental Rules. More than eight months' leave on average pay is not granted at one time. (*c*) Study leave may also be granted up to twelve months during the whole service. An allowance of 12 sh. per day is granted in addition to ½ average pay during study leave. (*d*) Extraordinary leave at any time at the discretion of the Executive Committee. (*e*) Leave not due may be granted subject to the following conditions:—(*i*) on medical certificate, without limit of amount; and (*ii*) otherwise than on medical certificate, for not more than three months at any one time and six months in all, reckoned in terms of leave on average pay. (*f*) The maximum period of continuous absence from duty on leave granted otherwise than on medical certificate is 18 months. (*g*) When an officer returns from leave which was not due and which was debited against her leave account, no leave will become due to her until the expiration of a fresh period spent on duty, sufficient to earn a credit of leave equal to the period of leave which she took before it was due. There are no allowances during extraordinary leave. A doctor appointed in England receives a sum of £100 to cover her passage and incidental expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also a Provident Fund, each member contributing monthly thereto ten per cent. of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent. per annum, "or at such rate as the Council can invest without risk to the funds of the Association."

An officer loses the contributions made to her account by the Association with the interest thereon if she resign (except on account of ill-health) before completing five years' service or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

Free Passages.—Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all-India services. The maximum number of return passages granted during an officer's entire term of service must not exceed four, the first falling due after 4 years service.

The Training Reserve of the Women's Medical Service.—This Service has a sanctioned cadre of eight, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs. 200 to Rs. 300 per month, with furnished quarters or the equivalent in money, to those employed in India.

2. Two of the eight members of the reserve, but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £ 200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work.

LADY CHELMSFORD ALL-INDIA LEAGUE FOR MATERNITY AND CHILD WELFARE.

By 1920 it had come to be realised that the Dufferin organization was not wide enough in that it did not include what may be called the field of preventive medicine. Lady Chelmsford decided to face this problem. Accordingly, with the aid of a public subscription she founded a separate All-India League for maternity and child-welfare, called after her name, and registered it as a separate organization under Act XXI of 1860. The objects of the Association, as described in the Memorandum of Association, are "the promotion of maternity and child welfare generally in India." It is also laid down that the funds of the League may be applied to the following, among other purposes:—

(1) The training of Health Visitors and Maternity Supervisors and the rendering of financial assistance in the employment of trained personnel where necessary.
(2) Propaganda in connection with the objects of the League.
(3) The formation and establishment of Branches of the League and the affiliation with the League of other bodies

having similar objects, without unduly interfering with the organization and administration of affiliated institutions or with their powers of raising money.

(4) The doing of all such things as are incidental or conducive to the attainment of the above kindred objects.

Branches of the League have been formed in Rajputana, Madras, the United Provinces, and the Punjab.

The original corpus of the League fund amounted to Rs. 8,18,657. To prevent overlapping with other activities, financial aid is not given to branches of the League in Governor's provinces, except for the purposes of Health Schools. In areas, other than Governor's provinces, financial help is given to child welfare activities generally. The bulk of the income of the League is thus devoted to Health Schools and propaganda, which latter includes National Baby Week.

The Lady Reading Health School which was formerly known as the Delhi Health School is the chief activity of the Lady Chelmsford League by whom it is entirely financed.

The Health School was started in 1919, and has trained over 100 students, who are now engaged in health work in all parts of India.

Amalgamation of Administration.—At a general meeting held in Simla in July 1923 it was decided that the administration of the Funds for the physical welfare of Indian women under the Presidency of the Viceroy's wife should be administered by a single committee and with identical rules. These funds are the Countess of Dufferin's Fund, Women's Medical Service for India, Victoria Memorial Scholarship Fund and Lady Chelmsford All-India Maternity League. The President of the Amalgamated Committee is H. E. the Lady Irwin and the Hon. and Joint Secretaries are respectively, the Surgeon to the Viceroy and Dr. A. C. Scott W.M.S. The Hon. Treasurer is the Hon'ble Mr. E. Burdon.

Lady Hardinge Medical College and Hospital.—The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All-India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Director General, Indian Medical Service. The Deputy Accountant-General, Central Revenues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 100 Medical students and 70 nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi (Raisina) within easy reach of the old city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu, Moslem, Sikh and Christian students. The hospital is a fine modern building with accommodation for 200 in-patients and a commodious out-patients' department. The College and Hospital are supported by a grant of Rs. 3,11,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the Intermediate Science Examination, and the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

SENIOR STAFF.

Principal and Professor of Midwifery and Gynæcology—Miss G. J. Campbell, M.D., Ch. B. (Glas.), Women's Medical Service.

Vice-Principal and Professor of Surgery—Miss Hamilton Browne, M.B. Ch. M. (Syd.), D.T.M. Calcutta), W.M.S

Professor of Medicine—Miss N. E. Trouton, M.B., B.S. (Lond.), M.R.C.S., L.R.C.P., D.T.M. Calcutta.

Professor of Ophthalmology—Miss R. Roulston, M.B., Ch. B. (Glas.), D.O. (Oxon.), W.M.S.

Professor of Pathology—Miss L. S. Chatterji, M.B., Ch. B. (Aberdeen), D.P.H., Cambridge, W.M.S.

Professor of Anatomy—Miss K. J. McDermott, M.B., B.S. (Punjab), W.M.S.

Professor of Physiology—Miss E. Surie, M. Sc.

Professor of Radiology—Miss E. Pilley, M.B. (London), W.M.S.

Lecturer in Physics and Mathematics, and Superintendent of the Science Department—Miss J. H. Ross, M.A., B.Sc. (Glas.)

Lecturer in Chemistry—Miss Soshella Ram, M.A. (Cantab.)

Lecturer in Biology—Miss C. C Burt, B.Sc. (Edin.)

Lecturer in English—Miss Ebbutt, M.A. (Dublin), Modern Language Tripos (Cantab).

Bursar and Warden—Miss M. W. Jesson, M.A. (Cantab.)

Attached to the Hospital there are: (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendents, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital, Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Nursing Bodies.—The Secretary of the Calcutta Hospital Nurses' Institution is Mr. A. R. Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4, Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road South; Nurses' Academy, 6, Suburban Hospital Road; and Nurses' Bureau, 37, McLeod Street. In **Madras** there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gosha Hospital at **Kilpauk**, the Royapetta Hospital and the Ophthalmic Hospital, also the Lady Ampthill Nurses' Institute and the South Indian Nursing Association (now amalgamated) President, Her Excellency Lady Goschen. The Association has under its management—*The Lady Ampthill Nurses' Institute*, Western Castle, Mount Road, Madras. Fully trained and experienced nurses for all cases of illness both among Europeans and Indians, always available. *The Lady Willingdon Nursing Home*, Western Castle, Mount Road, Madras, and *Nilgiri Nursing and Convalescent Home*, Ootacamund, for Medical, Surgical and Maternity cases. The Nilgiri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately, the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their works. This Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function however, was never carried out by the Bombay Presidency Nursing Association, and under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function of the examining and granting certificates to nurses and midwives, and maintaining a register of qualified nurses and midwives and also maintaining a Provident fund for the employees of the affiliated associations have been successfully carried out from 1911 to 1928. Memorandum, Rules and By-laws of the Association were however revised or brought into line with the actual working of the Association. Towards the end of 1927; the Committee decided that some steps must be taken to do so and accordingly appointe da sub-committee to consider th revision and amendment of the Memorandum, Rules and By-laws. The Sub-Committee reported that ir appeared to be impossible to amend and revise the present rules piecemeal and that the only way to put things in order would be to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom. Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from 1st April 1929.

The following are affiliated associations as well as Training Institutions:—

St. George's Hospital Nursing Association, Bombay, (for nurses only), Hon. Secretary: F. B. Thornely, Esq.

Jamshetji Jijibhoy Hospital Nursing Association, Bombay, (for nurses and Midwives), Hon. Secretary: Dr. Mehta, O.B.E., F.R.C.P.

Goculdas Tejpal Hospital Nursing Association, Bombay (for nurses only), Hon. Secretary: W. Dillon, Esq., I.C.S.

Cama & Albless Hospitals Nursing Association, Bombay, (for nurses and Midwives) Hon. Secretary: H. C. B. Mitchell, Esq.
Sassoon Hospital Nursing Association, Poona, (for nurses and Midwives), Hony. Secretary: N. J. Wadia, Esq., B.A., Bar-at-law.
Karachi Civil Hospital Nursing Association (for nurses only), Hon. Secretary: H. H. Hood, Esq.
Civil Hospital Nursing Association, Nasik (for nurse sand Midwives), Hon. Secretary: Civil Surgeon, Nasik.
Civil Hospital Nursing Association, Ahmedabad (for nurses and Midwives), Hon. Secretary: Civil Surgeon, Ahmedabad.
Victoria Nursing Association, Sholapur, (for nurses and Midwives), Hon. Secretary: Civil Surgeon, Sholapur.

The following are only affiliated Associations but not Training Institutions:—

Ahmednagar Civil Hospital Nursing Association, Hon. Secretary: Civil Surgeon, Ahmednagar.
Bijapur Civil Hospital Nursing Association, Hon. Secretary: Civil Surgeon, Bijapur.
Byramji Jijibhoy Nursing Association, Matheran, Hony. Secretary: Lt.-Col. M. S. Irani, I.M.S.
Dharwar Civil Hospital Nursing Association, Hony. Secretary: Civil Surgeon, Dharwar.
Kanara Nursing Association, Karwar, Hon. Secretary: Civil Surgeon, Karwar.
Panch-Mahals Nursing Association, Godhra, Hony. Secretary: Civil Surgeon, Godhra.
Prince of Wales Nursing Association, Aden, Hony. Secretary: G. Richmond, Esq.

The following are recognised Training Institutions:—

V. J. Hospital, Ahmedabad (for Nurses and Midwives).
State General Hospital, Baroda (for Nurses and Midwives.)
Civil Hospital, Belgaum (for Nurses and Midwives).
King Edward VII Memorial Hospital, Patel Bombay (for Nurses only.
Bai Yamunabai L. Nair Charitable Hospital, Lamington Road, Bombay(for Nurses only).
Bomanji Dinshaw Petiti Parsi General Hospital, Cumballa Hill, Bombay (for Nurses only).
Civil Hospital, Jalgaon (for Nurses only).
Lady Dufferin and Louise Lawrence Institute, Karachi (for Nurses and Midwives).
West Hospital, Rajkot (for Nurses only).
Morarbhai Vrajabhukandas Hospital, Surat (for Nurses and Midwives).
American Presbyterian Mission Hospital, Miraj (for Nurses only).
St. Luke's Hospital, Venguria(for Nurses only).
Parsi Lying-in-hospital, Bombay (for Midwives only).
St. Margaret's Hospital, Poona (for Midwives only).
King Edward Memorial Hospital, Poona (for Midwives only).
Nowrosji Wadia Maternity Hospital, Pare., Bombay (for midwives only).
Acharatlal Girdharlal Maternity Home, Ahmedabad (for Midwives only.)
Civil Hospital, Surat (for Midwives only).
Zenana Mission Hospital, Broach (for Midwives only).
Lady Dufferin Hospital, Sholapur.

Provision for retiring allowances is made for all members on the basis of a Provident Fund, and a Nursing Reserve has been established for employment in emergencies such as war, pestilence or public danger or calamity.

Address:—The Registrar, Bombay Presidency Nursing Association, Old Custom House, Fort. Bombay.

Lady Minto's Indian Nursing Association.—In 1906 this Association was inaugurated, replacing the Punjab and Up-country Nursing Association for Europeans in India, which Society, established in 1892, had accomplished much useful work in this country. Owing, however, to lack of funds it was found impossible to continue its administration and to carry out the expansion of the work so urgently called for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lyttleton, Lady Helen Munro Ferguson and Mrs. Cottrell, while Mrs. Shepherd, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organisation, but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for co-operation towards this project, and after much consideration and discussion with the Government of India, Lieut.-Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto, addressed to the public both in England and India, was responded to most generously, and sufficient funds were collected to form an endowment fund, which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before, largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Lady Irwin is President of the Central Committee in India.

Hon. Secretary: Lt.-Colonel Hay Thorburn, C.I.E. I.M.S.

Hon Treasurer: W. J. Litster, Esq., O.B.E., C.I.E.

Chief Lady Superintendent: Miss G. Beckett. Address—Central Committee, L.M.J, N.A., Viceregal Lodge, Simla, or Delhi.

Hon. Secretary, Home Committee: Lt.-Col Sir Warren R. Crooke-Lawless, C.B., C.I.E., O.B.E., LL.D., Thornfield Vine Road, Barnes, S. W. 13.

Secretary, Home Committee: Miss M. E. Ray, B.B.C., 10, Witherly Mansions, Earls Court Sq.

Nurses' Organizations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has the one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 472, including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the International Council of Nurses.

President: Mrs. G. D. Franklin, 33, Rajpur Road, Delhi.

Hon. Secretary and Treasurer: Miss Gadsden, General Hospital, Madras.

THE WOMAN SUFFRAGE MOVEMENT.

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seat in Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all party of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that 'a full measure of Local Self-

Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Travancore, a very progressive Indian State, was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the **Madras** Legislative Council to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion, in which it was evident that opposition came only from the Muhammadan members, the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future. When the division was taken, it resulted in the resolution being carried by a majority of 34. Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done this ungrudgingly and unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men.

Mr. Trivedi brought forward a Woman Suffrage Resolution in the **Bombay** Legislative Council during the same session, but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Saheb Harilal Desaibhai Desai of Ahmedabad, Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujerati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The **Bombay** Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Presidencies gave the lead to the other Provinces. In September, 1922, Mr. S. M. Bose, in the **Bengal** Council, moved a Woman Suffrage Resolution, which was debated for three days but finally defeated by 56 to 37 votes, a *bloc* of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38.

Mr. Devaki Prasad Sinha's similar Resolution in the **Behar and Orissa** Legislative Council was defeated by only a 10 votes' majority.

These Debates proved so educational to their respective Provinces that the **Bengal** and **Behar** Provinces have since granted qualified women the **Municipal Vote**.

In February, 1923, a world suffrage record was made by the *unanimous* vote of the **United Provinces** Legislative Council in favour of Woman Suffrage.

In 1926 the **Punjab** granted woman suffrage without a division, and in 1926 the **Central Provinces**.

The new Reform Bill for **Burma** has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1922, the **Mysore** Legislative Council unanimously passed the Woman Suffrage Resolution. The vote for the Representative Assembly of Mysore was granted to women

in October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. H. The Maharaja and His Privy Council in June 1923. In October, 1924, **Assam** Provincial Council granted Woman Suffrage for its Province by 26 to 8. It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members.

In 1929 soon after the All-India Women's Educational Reform was held in Patna, the Legislative Council of **Behar** and **Orissa** gave women the right of voting, election and nomination to the Council on the same terms as men. Thus the whole of British India has now given to women equal political rights with men. The result has already demonstrated itself in the remarkable advancement of all the interests of women along the lines of education, health, housing, morality and social customs.

The Indian Native States of **Travancore, Cochin and Rajkot** are the only places in India where the sex disqualification has been completely removed from the statute book. These have allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonem Lukhose became a member of the Travancore Legislative Council on taking the position of State Darbar Physician. She acted as Minister for Health to the State for three years. Cochin State nominated Mrs. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the disqualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament; and the gaining of this right remained as a further objective of the women suffragists. Many large, influential meetings were held claiming the right of women to entry of the Legislatures. A deputation of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has passed by a large majority a Resolution granting the Assembly franchise to the women of such Provinces. Accordingly in November 1923, women in India voted for the first time for the elections of both Provincial Legislative Councillors and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly lage in Bombay and Madras Presidencies and comprised women of all castes and communities.

In April, 1926, as a result of a favourable recommendation of the Muddiman Committee on Franchise Reforms, the Rule was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Again Madras Council, on the 17th July, was the first to pass a Resolution admitting women to its membership. Bombay and the Punjab followed its lead in August and October respectively. This enabled women to become members of the Councils which have been functioning since then. But the permission came too late for women to stand for election with any great chance of success, so the Women's Indian Association asked that women be nominated by Government for the new Councils in those Provinces which had voted to admit them, and that women also be nominated to the Assembly and the Council of State. Thus the year 1926 marked another milestone passed on the road to the complete political emancipation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal, all granted the Franchise to women. The year 1927 was notable for the nomination of the first woman member to a Legislative Council in British India, the recipient of the honour being DR. MUTHULAKSHMI AMMAL, and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the OFFICE OF DEPUTY-PRESIDENT OF THE COUNCIL. Since then Mrs. Kale has been nominated to the Legislative Council of the Central Provinces, and Mrs. Ahmed Shaw to that of the United Provinces. A Deputation from the All-India Women's Conference in Delhi in 1928 waited on the Viceroy requesting him to nominate two women to the Legislative Assembly That has still remained ungranted.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibilities will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and has been adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects, almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladies have identified themselves specially with the movement: Lady D. Tata, Lady A. Bose, Lady T. Sadasivaier, the Begum of Cambay, Mrs Ramabai Ranade, Mrs. Sarojini Naidu, Mrs. Jaiji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jinarajadasa, Dr. A. Besant, Mrs. M. E. Cousins, Mrs. Srirangamma, Mrs. Chandrasekhara Iyer, Miss S. Sorabji, Mrs. Khedkar, Dr. Mistry, Dr. Muthulakshmi Ammal, Mrs. Palmer, Mrs. Saraladevi Choudhuri, Mrs. Kumudini Basu, Mrs. K. N. Roy, Lady Shafi, Mrs. Hasan Imam, Miss S. B. Das, Mrs. P. K. Sen, Mrs. Rustomji Faridoonji, Mrs. B. Rama Rao, Mrs. Deep Narain Singh, Mrs. Raschid, Mrs. van Gildemeester, etc.

Warrant of Precedence.

A new Warrant of Precedence for India in supersession of the notification published on February 10, 1899, which has been approved by His Majesty the King Emperor of India, was published in 1922. Henceforth the following table will be observed with respect to the rank and precedence of persons named, as under:—

1. Governor-General and Viceroy of India.
2. Governors of Provinces within their respective charges.

Bombay, and Income-tax Officers drawing the maximum pay of the time-scale; and Sub-Deputy Opium Agents.

1. The entries in the above table apply exclusively to the persons entered therein, and while regulating their relative precedence with each other, do not give them any precedence over members of the non-official community resident in India who shall take their place according to usage.

2. Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se* according to the date of entry into that number.

3. When an officer holds more than one position in the table he will be entitled to the highest position accorded to him.

4. Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

5. All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades.

6. All other persons who may not be mentioned in this table to take rank according to general usage, which is to be explained and determined by the Governor-General in Council in case any question shall arise. When the position of any such person is so determined and notified, it shall be entered in the table in italics, provided he holds an appointment in India.

7. Nothing in the foregoing rules to disturb the existing practice relating to precedence at the Courts of Indian States or on occasions of intercourse with Indians, and the Governor-General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

8. The following will take courtesy rank as shown:—

Consuls-General, Immediately after article 37, which includes Colonels Commandant; Consuls, Immediately after article 40, which includes Colonels: Vice-Consuls, Immediately after article 63, which includes Majors.

Consular officers de carriere will in their respective grades take precedence of consular officers who are not de carriere.

9. The following may be given, by courtesy, precedence as shown below, provided that they do not hold appointments in India:—

Peers according to their precedence in England; Knights of the Garter, the Thistle and St. Patrick; Privy Councillors; Members of the Council of the Secretary of State for India.—Immediately after Members of the Governor-General's Executive Council, article 9.

Baronets of England, Scotland, Ireland and the United Kingdom, according to date of Patents Knights Grand Cross of the Bath; Knights Grand Commander of the Star of India; Knights Grand Cross of St. Michael and St. George; Knights Grand Commander of the Indian Empire; Knights Grand Cross of the Royal Victorian Order; Knights Grand Cross of the Order of the British Empire. Immediately after the Commissioner in Sind (Article 15); Knights Commander of the Bath; Knights Commander of the Star of India; Knights Commander of St. Michael and St. George; Knights Commander of the Indian Empire; Knights Commander of the Royal Victorian Order; Knights Commander of the Order of the British Empire; and Knights Bachelor.—Immediately after the Residents of the Second Class, Article 31.

10. All ladies, unless by virtue of holding an appointment themselves they are entitled to a higher position in the table, to take place according for the rank herein assigned to their respective husbands, with the exception of wives of Peers and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons such ladies to take place according to their several ranks, with reference to such precedence in England, immediately after the wives of Members of the Governor-General's Executive Council.

SALUTES.

Persons.	No. of guns.	Occasions on which salute is fired.

Indian Orders.

The Star of India.

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1875, 1876, 1897, 1902, 1911, 1915 and 1920 and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire; the second and third classes for services in the Indian Empire thirty years in the department of the Secretary of State for India. It consists of the Sovereign a Grand Master (the Viceroy of India), the first class of forty-four Knights Grand Commanders (22 British and 22 Indian), the second class of one hundred Knights Commanders, and the third class of two hundred and twenty-five Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown: all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular riband, tied at the ends and inscribed with the motto of the Order, *Heaven's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky-blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width of the same colours and pattern as a Knight Grand Commander, and pendent therefrom a badge of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon, tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears from his left breast a badge of the same form as appointed for a Knight Commander, but of a smaller size pendent to a like ribbon of the breadth of one and a half inches. All Insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order:—His Most Gracious Majesty The King-Emperor of India.

Grand Master of the Order:—His Excellency the Viceroy and Governor-General of India, the Right Honourable Lord Irwin, P.C., G.M.S.I., G.M.I.E.

Officers of the Order:—*Registrar*: Col. the Hon. Sir George Arthur Charles Crichton K.C.V.O., Secretary of the Central Chancery of the Orders of Knighthood, St. James' Palace, London, W. 1.

Secretary: The Hon'ble Sir Charles Watson, K.C.I.E., C.S.I., Secretary to the Government of India in the Foreign and Political Department.

Extra Knights Grand Commanders (G. C. S. I.)

The Most Eminent Order of the Indian Empire.

This Order, instituted by H. M. Queen Victoria, Empress of India, December 1877, and extended and enlarged in 1886, 1887, 1892, 1897, 1902, 1911, 1915 and 1920 is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, forty Knights Grand Commanders (of whom the Grand Master is first and principal), one hundred and forty Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 20 nominations in any one year); also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan. 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Govt. in India.

The Insignia are: (*i*) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride, and Indian roses, in the centre the Imperial Crown, the whole linked together with chains; (*ii*) The STAR of the Knight Grand Commander, comprised of five rays of silver, having a small ray of gold between each of them, the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatricis Auspiciis*, and surmounted by an Imperial Crown gold; (*iii*) The BADGE consisting of a rose, enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatricis Auspiciis*, surmounted by an Imperial Crown, also gold; (*iv*) The MANTLE is of Imperial purple satin, lined with and fastened by a cordon of white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order.

A Knight Commander wears: (*a*) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander, pendent therefrom a badge of smaller size: (*b*) on his left breast a star, similar to that of the first class, but the rays of which are all of silver.

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order at Calcutta.

A Companion wears from the left breast a badge (not returnable at death) of the same form as appointed for a Knight Commander, but of smaller size, pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order:—His Most Gracious Majesty The King-Emperor of India.

Grand Master of the Order:—H. E. the Viceroy Lord Irwin.

Officers of the Order:—The same as for the Order of the Star of India.

The Imperial Order of the Crown of India.

This Order was instituted Jan. 1, 1878, and for a like purpose with the simultaneously created Order of the Indian Empire. It consists of the Queen and Queen Mother with some Royal Princesses, and the female relatives of Indian Princes or of persons who have held conspicuous offices in connection with India. Badge, the Royal Cypher in jewels within an oval surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. Designation, the letters C. I.

Sovereign of the Order.

THE KING-EMPEROR OF INDIA.

Ladies of the Order (C. I.)

Her Majesty The Queen
H. M. the Queen of Norway
H. R. H. the Princess Royal
H. R. H. the Princess Victoria

H. M. The Queen of Roumania
H. R. H. Princess Beatrice
The Ex-Duchess of Cumberland
H. R. H. the Princess Louise (Duchess of Argyll)
H. I. and R. H. Grand Duchess Cyril.
Lady Patricia Ramsay
H. H. the Princess Marie-Louise

Baroness Kinloss
Lady Jane Emma Crichton
Dowager Countess of Lytton

Dowager Baroness Napier of Magdala
Dowager Marchioness of Dufferin and Ava
H. H. Maharani of Cooch-Behar

H. H. Rani Sahib of Gondal
H. H. the Dowager Maharani of Mysore
Lady George Hamilton
H. H. the Maharani Sahiba of Udaipur
Alice, Baroness Northcote
Amelia Maria, Lady White
Baroness Ampthill
The Lady Willingdon

Countess of Minto
Marchioness of Crewe
H. H. Begum of Bhopa
France Charlote, Lady Chelmsford
Countess of Reading
H. H. Maharani Chinkoo Raja Sahiba Scindia Alijah Bahadur of Gwalior
H. E. The Lady Irwin.

H. H. The Maharani Regent of Travancore State Viscountess Goschen.

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border, for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914, states:—The Government of India have recently had under consideration the question of the position in which **miniatures** of Indian titles should be worn, and have decided that they should be worn on the left breast fastened by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i-Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 28th, 1907, by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII, and on the reverse a laurel wreath encircling the words For Distinguished Service. The medal, $1\frac{3}{8}$ inches in diameter, is ordered to be worn immediately to the right of all war medals suspended by a red ribbon $1\frac{1}{4}$ in. wide, with blue edges $\frac{1}{4}$ in. wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co. in 1837, to reward personal bravery without any reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted, but in the event of the death of the recipient his relatives retain the decoration The order carries with it an increase of one-third in the pay of the recipient, and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points, $1\frac{3}{8}$ in. in diameter, having in the centre a ground of dark blue enamel bearing crossed swords in gold, within a gold circle, and the inscription Reward of Valour, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver, with the wreaths of laurel in gold; and the Third Class entirely of silver. The decoration is suspended from a simple loop and bar from a dark-blue ribbon $1\frac{1}{2}$ in. in width with red edges, bearing a gold or silver buckle according to class.

Order of British India.—This order was instituted at the same time as the Order of Merit, to reward native commissioned officers for long and faithful service in the Indian Army Since 1878, however, any person European or native, holding a commission in a native regiment, became eligible for admission to the Order without reference to creed or colour The First Class consists of a gold eight-pointed radiated star $1\frac{1}{2}$ in. in diameter. The centre is occupied by a lion statant gardant upon a ground of light-blue enamel, within a dark-blue band inscribed Order of British India, and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band $\frac{9}{10}$ in. in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is $1\frac{7}{10}$ in. in diameter with dark-blue enamelled centre: there is no crown on this class, and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title Sirdar Bahadur, and an additional allowance of two rupees a day and the Second the title of Bahadur, and an extra allowance of one rupee per day

Indian Meritorious Service Medal.—This was instituted on July 27th, 1888, and on receipt of the medal the order states "a non-commissioned officer must surrender his Long Service and Good Conduct medal": but on being promoted to a commission he may retain the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the legend Victoria Kaisar-i-Hind. On the reverse is a wreath of lotus leaves enclosing a wreath of palm tied at the base, having a star beneath; between the two wreaths is the inscription for meritorious service Within the palm wreath is the word India. The medal, 1⅜ in. in diameter, is suspended from a scroll by means of a red ribbon 1¼ in. wide. The medals issued during the reigns of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to EDWARDVS or GEORGIVS

THE KAISAR-I-HIND MEDAL.

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows:—"Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour: Now for the purpose of attaining an end so desirable as that of thus distinguishing such services aforesaid, We have instituted and created, and by these presents for Us, Our Heirs and Successors, do institute and create a new Decoration." The decoration is styled "The Kaisar-i-Hind Medal for Public Service in India" and consists of two classes. The Medal is an oval shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words "Kaisar-i-Hind for Public Service in India;" it is suspended on the left breast by a dark blue ribbon.

Recipients of the 1st Class.

Abdul Qaiyum, Khan Bhadur Nawab Sir Sahibzada, K.C.I.E., M.L.A.
Abdus Samad Khan of Rampur
Achariyar, Diwan Bahadur Tirumalai Desik

THE VICTORIA CROSS.

The announcement, made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross, gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following :—

Subadar (then Sepoy) Khudadad Khan, 129th Baluchis.—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed.

Naick Darwan Sing Negi, 1-39th Garhwal Rifles.—For great gallantry on the night of the 23rd-24th November 1914 near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches, and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jamadar) Mir Dast, 55th Coke's Rifles.—For most conspicuous bravery and great ability at Ypres on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 2-3rd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Mauquissart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Havildar (then Lance-Naick) Lala, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but Lance-Naik Lala insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh, 9th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then under cover of darkness, went back for assistance and brought the officer into safety.

Naick Shahamad Khan, 89th Punjabis.—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line within 150 yards of the enemy's entrenched position. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two belt-fillers, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance-Dafedar Govind Singh, 28th Cavalry —For most conspicuous bravery and devotion to duty in thrice volunteering to carry messages between the regiment and brigade headquarters, a distance of 1½ miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

Rifleman Karan Bahadur Rana, 2-3rd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions, and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire, in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No. 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur pushed the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew. Then switching his fire on the enemy bombers

and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day and when a withdrawal was ordered assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Ressaldar Badlu Singh, 14th Lancers attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron charged a strong enemy position on the west bank of the River Jordan, between the river and Kh. es Samariveh Village. On nearing the position Ressaldar Badlu Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when capturing one of the machine guns single-handed, but all the machine guns and infantry had surrendered to him before he died. His valour and initiative were of the highest order.

Rifleman Gobar Sing Negi, 2nd Battalion, 39th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy Ishaw Singh, 28th Punjabis.—For devotion and bravery "quite beyond all praise" in Waziristan on 10th April, 1921. He received a severe gunshot wound in the chest while serving a Lewis gun, and when all the havildars had been killed or disabled he struggled to his feet, called to his assistance two men, and charged and recovered the gun, restoring it to action. He refused medical attention, insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded him with his body and he submitted to medical attention himself only after he was exhausted through three hours' continual effort and by loss of blood.

PASSPORT REGULATIONS.

A.—British Subjects.

1. British Indian passports are issued only to:—(1) British subjects by birth, (2) wives and widows of such persons, (3) British subjects by naturalization and (4) British-protected persons.

2. The Indian Passport Regulations do not require persons to be in possession of passports for leaving India, but as practically every other country requires travellers to be in possession of passports before they are allowed to land at the port of such country, travellers are advised to obtain passports before embarkation. Members of His Majesty's Naval, Military or Air Forces or of the Indian Marine Service travelling on duty and members of the families of such persons when travelling to the United Kingdom on military entitled passages need not have passports.

3. Passports are not required for journeys by sea from Bombay to ports in India or to Burma or Ceylon; nor do natives of India travelling to the Federated Malay States or the Strait Settlements require passports unless they propose to continue their journey onward.

4. In order to obtain a passport, an application form (showing, among other things, the reasons for the proposed journey) should be filled in by the applicant and the applicant's declaration certified by a Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent, or Notary Public resident in India. Copies of the form can be obtained from any District Magistrate, from the Commissioner of Police, Bombay, by post from the Passport Officer to the Government of Bombay, by personal application at the Passport Office, or from any of the leading Banking and Shipping Agents in Bombay. Small duplicate unmounted copies of the photograph of the applicant and a fee of Rs. 3 should be forwarded with the application form. Fees are not accepted in stamps or by cheque.

5. The application form when filled in should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay, or should be presented at the Passport Office, Bombay.

6. The Passport Office in Bombay is situated in the Civil Secretariat. The office is open from 11 a.m. to 4 p.m. daily, except on Saturdays when it closes at 1 p.m. and on Sundays and public holidays.

7. As a passport is valid for five years, there is no objection to anyone applying for a passport weeks or even months in advance of the date of sailing and much inconvenience will be avoided by early application. A notice of at least four days should be given for the preparation of a new passport and at least two days for an endorsement, renewal or visa. The Passport Officer cannot issue passports outside office hours and as the preparations of a passport takes time, applicants who postpone application to the last moment do so at their risk.

Iraq.

8. Members of His Majesty's Naval, Military or Air Forces or of the Indian Marine Service in uniform and *bona fide* Muhammadan pilgrims (Haj or Zair) holding individual pilgrim passes do not require passports for their journey to Iraq. All other travellers must be in possession of national passports and visas for Iraq. In the absence of Iraq Consular Officers in India, visas for Iraq are granted by Passport Issuing Authorities in India on behalf of the

Iraq Government subject to the conditions stated below. The Iraq visas are of two kinds—Ordinary, valid for all entries into Iraq during a period of twelve months; and Transit, valid for a single journey only, allowing for stay of not more than fifteen days in Iraq, The fee for these visas is the same as for British visas—*vide* paragraph 17 below. Iraq national passports are valid for return to that country without any further visa or endorsement.

Except in the case of *bona fide* tourists, business representatives and employees of well established firms and persons with definite guarantee of employment in Iraq, visas for Iraq will not be granted without the previous permission of the Iraq Government. The Passport Offices will on request, ask for this permission by post or, if the applicant is prepared to defray the cost by cable. Applicants must state clearly the nature of their business and give one or more references in Iraq to enable the local authorities to make inquiries regardig the purpose of their journey.

With the exception of tourists who may remain for three months in Iraq without registration, all persons are required to obtain a "permis de sejour" from the police within fifteen days of their arrival in Iraq. Travellers are also warned that before departure from Iraq even on a transit visa they must obtain a passport endorsement of departure.

Egypt.

9. In the absence of Egyptian Consular Officers in India visas for Egypt are granted by Passport Issuing Authorities in India on behalf of the Egyptian Government. The fee for these visas is the same as for British visas—*vide* paragraph 17 below. Applicants for non-transit visas for Egypt should be able to produce evidence to show that they are in possession of ample and independent means or are the agents of houses of business of good standing or have secured permanent employment in Egypt. In all other cases the previous permission of the Ministry of Foreign Affairs in Egypt is necessary for the visit. Holders of the new-form Egyptian passports do not require visas to return to Egypt.

10. Restrictions also exist on travel to various parts of the British Empire, and to certain foreign countries. Among these may be mentioned Australia, Canada, Mexico, Mahommerah and Abadan, New Zealand, Palestine, Southern Rhodesia, Union of South Africa, South West Africa and the United States of America. The restrictions apply particularly to Indians. Detailed particulars with respect to each country will be supplied on application.

Foreign Countries.

11 Passports for journeys to or through foreign countries require, after issue, the visa of the Consul concerned. The addresses of the foreign consulates in Bombay will be found in the appendix below. Visas are, however, not necessary for Austria, Belgium, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxemberg, Norway, Portugal, Sarro, Spain, Sweden and Switzerland, provided the names of these countries are entered on the passport by a British Passport-issuing authority.

Renewal.

12. A passport is valid for five years from the date of issue and is renewable for a further period of from one to five years at the option of the holder; but in no case can a passport be extended beyond ten years from the original date of issue. On expiration of this period, or, if at any time the space provided for visas is covered and the holder wishes to travel to countries for which fresh visas are required a new passport must be obtained. Application for renewal must be made in the prescribed form, copies of which may be had from any of the officers mentioned in paragraph 4 above. The fee for renewals is Re. 1 for each year, or portion of a year, for which the passport is renewed

Endorsements

13. A passport is valid only for the country or countries endorsed on it and fresh endorsements from a British Passport authority are not needed during the validity of the passport for subsequent journeys to these countries. Fresh endorsements may, however, be obtained on the passport for additional countries. Passports endorsed as valid for the British Empire are also available for travelling to territories under British protection or mandate, not however including Palestine and Iraq, for which countries the passport must be specifically endorsed.

Marriage.

14. A lady on marriage or re-marriage requires a fresh passport.

15. In the case of a joint passport issued in favour of a husband and wife, the latter cannot travel alone on it, but should take out a fresh passport, surrendering the joint passport for cancellation of her name from it.

B.—Foreigners.

16. Foreigners proceeding direct to their own country, or to, or through, any other foreign country or countries do not require a British visa on their passports. The nationals of the following countries do not require a British visa for travelling to the United Kingdom. The concession also applies to certain nationals proceeding to certain British Dominions and Colonies and information on this point can be obtained from the Passport Officer. The concession does not apply to India.

Austria, Belgium, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxemburg, Norway, Portugal, Sarro, Spain, Sweden and Switzerland.

17. Foreigners who are subjects of the countries shown in the appendix below and who are travelling to British territories for which a British visa is necessary should first obtain passports from their consular representatives and should then present them to the Passport Officer for visa, together with a written statement of the reasons for the journey. British visas are of two kinds, *viz.*, the Non-transit and Transit. The fees for these are Rs. 5-8-0 and Re. 0-9-0, respectively, except in the case of nationals of state which levy higher fees, when the retaliatory scale of fees will be applied.

18. Other foreigners should apply for Identity certificates through the Commissioner of Police, Bombay, or, where such foreigners reside in the mofussil, through the District Magistrate of the district in which they are residing. Small duplicate copies of the applicant's photograph should accompany the application. The fee for an Identity Certificate is Rs. 1-8-0.

19. The holder of a foreign passport who has obtained a visa granted by a British Passport Authority outside India for a destination which involves landing in, or passing through, India does not need a further visa from the authorities in India.

20. Copies of this notice can be had free of charge on application.

ADDRESSES OF FOREIGN CONSULATES IN BOMBAY.

Afghanistan.—Amir's Bungalow, Walkeshwar Road, Malabar Hill.
Austria.—C/o E. Stella and Co., Taj Building, Wallace Street, Fort.
Belgium.—17, Cuffe Parade, Colaba.

Uruguay.—5, Fairlie Place.

N. B.—There are at present no Consuls for Costa Rica, Liberia and Mexico at Calcutta. The Consulate for Guatemala has been abolished.

The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, and Customs of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and adequate buildings, in Finsbury Circus, provided by the British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. The School provides teaching in more than sixty subjects In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken, as it is the aim of the School to provide as far as possible both European and

Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is now a whole time lecturer in Phonetics, the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff. Various Scholarships are given.

Patron, H. M. the King. *Chairman of the Governing Body*, Sir Harry L. Stephen, LL.M. *Director*, Professor Sir E. Denison Ross, C.I.E. Ph.D.

7. University Professor of Persian and Appointed Teacher. (Director).
9. University Professor of Sanskrit and Appointed Teacher.
1. University Professor of Swahili and other Bantu languages and Appointed Teacher.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing populations of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress; fishing and the fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste, and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse from amending methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of association with the low caste fishermen, and, except in the case of joint stock companies to engage in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras, which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906, and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal and Behar and Orissa. Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal, and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of seafishermen in India, there was less urgent need for State help in the industry. Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the abolition in 1924 of the short lived Department of Industries to which this subject was allotted.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 sq. miles; outside of a mere fringe inshore, this vast expanse of fish-surf-swept East Coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side, is the only possible seagoing fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor, and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. The people of this coast are found of fish and no difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. The 1921 census gave 66,684 adults as subsisting on fishing industries in Malabar and South Kanara, a small number after all considering the immense wealth of these seas. The chief fishes are sardines, mackerel, catfishes and jewfishes (kora or gol): the two first overshadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres; the material is largely cured export.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who, after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 110 of such yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein The total receipts on the administration of these yards for the year 1927-28 was Rs. 4,40,393 and expenditure Rs. 4,36,500. The credit balance on the year's working was therefore Rs. 3,893.

Pearl and Chank Fisheries.—There were two pearl fisheries held during the year, being the last of a series of fisheries held at Tuticorin since 1926. Though both were held in a small scale, they covered over the longest pearl-fishery period in a single fishery year, *viz.*, 97 fishing days and brought in a net revenue of Rs. 3,38,930-10-11 the highest on record, since the pearl fishery came under the British Rule the next in rank being in 1806-1807, *viz.*, Rs. 3,14,454. The total number of oysters fished amounted to nearly a crore. A cursory examination of the banks this year so far as weather permitted reveals that the oysters still remaining in the beds might not survive long and there is little prospect of another fishery during the next year.

Though the best season (February and March) could not be fully utilised for chank fishery, as is usually the case when pearl fishery occurs, chank fisheries were conducted both at the Ramnad Dt. as well as Tuticorin in the intervals between the Pearl Fisheries yielding a net revenue of Rs. 31,775.

The Inland Fisheries.—The Inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence inland fisheries are badly organized and few men devote themselves to fishing as their sole, or even main, occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water: only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh-water fishes of economic importance are the murrel, notable for its virtue of living for considerable period out of water, various carps, and catfishes, the hilsa (in East Coast Rivers only), and the catla. In the Nilgiris, the rainbow trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau.

The Madras Department of Fisheries.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organized and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr. James Hornell, F.L.S., as Director, and is now controlled by his successor Dr. B. Sundara Raj, M.A., Ph.D. The Higher staff consists of a Superintendent of Pearl and Chank Fisheries, and three Assistant Directors. These are respectively in charge of (*a*) the departmental fisheries (pearling, chanks, beche-de-mer, etc.); (*b*) the co-operative and socio-economic side of the Department's operations; (*c*) inland pisciculture; (*d*) deep-sea fishing and salt-transport. Other officers have charged respectively of sections dealing with education and industrial work, which include a Training Institute for village teachers, fish-curing yards, and oil and guano factories. All the public fish curing yards till now under the control of the Salt and Abkari Department have passed into the charge of the Fisheries Department. It is now possible to introduce the better methods of cure and improved hygiene which the Department has been straining to popularise, in all the yards. Due to the transfer of the yards the Fisheries Department has a large ramified staff of yard officers (Salt Sub-Inspectors, Petty Yard Officers and peons) in almost every large fishing village on the coast. Besides the direct work of issuing salt for curing, the Department will now set itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift, co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and quantity of sea fish caught and landed

The activities of the Department are so varied and far-reaching that it is difficult even to enumerate them in the space available much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade the creation of a fishguano industry, and the opening of an oyster farm conducted under hygienic conditions (For details see the Bulletins of the Department issued from the Government Press, Madras) Twenty-two volumes have been issued to date and the twenty-third volume is in press. All this work has been carried on under serious handicap for want of suitable accommodation for the research staff.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries.

Ever since its opening, being the first of its kind in Asia, it has been immensely popular with the public.

Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, three fish farms are in operation, and the construction of three more is in progress In these the chief fish bred are the Gourami, obtained from Java, the Murrel and Etroplus suratensis, which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; all three project their eggs while developing, a useful habit; both the Gouram, and Etroplus are largely vegetarian in diet. A further activity is represented by the breeding of small fishes specially addicted to feed upon the aquatic larvae of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved most successful in these places where the local authorities have given proper attention to the direction given. The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing, canning and oil manufacture; in co-operative propaganda and in the supply of zoological specimens for the use of college classes and

museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of zoology throughout India; there is now no need to obtain specimens from Europe.

Deep Sea Fishing and Research.—The Trawler *Lady Goschen* purchased in 1926 for conducting deep sea fishing experiments and research, economic salt transport and other requirements of the department, in spite of various difficulties as regards equipment and crew, was able to accomplish a considerable amount of preliminary work before the monsoon set in. She did half a dozen cruises off Madras, and a couple of trawls off Calicut, before she was engaged in a detailed survey of the fishing banks, and an exploration of the trawling grounds from off Tuticorin to Cape Comorin in the South. The sea bottom off Madras was found rocky in the places explored causing damages to net. Further trawling experiments will have to be conducted in this area to determine whether suitable trawling grounds exist anywhere in the neighbourhood.

The fishing experiments off the Cape Comorin plateau were confined to an area between 20 fathoms and 100 fathoms line. 60 hauls were made in this area in 31 days between 30th October 1927 to 30th May 1928, catching 27,683 lbs. of fish, of which 2,036 lbs. were sold as fresh, while the rest were gutted and salted on board the trawler, and subsequently cured at the Church Island fish curing yard near Tuticorin. Average catch per haul per hour was 145 lbs. Valuable biological datas were obtained and recorded daily. Samples of sea water were preserved and analysed for chlorine contents. A chart for the whole area so far surveyed showing the nature of the sea bottom, the kind of fish and other marine organisms obtainable, at particular periods at which trawls were made has been got ready. Certain hydrographical and meteorological data were obtained and also recorded. They, however, have not yet progressed far enough for utilization. Other lines of biological research on food fishes, and conditions on which their abundance depends await the provision of a laboratory on board the vessel.

During the intervals between fishing cruises, the trawler did 5 trips from Tuticorin to West Coast with a total quantity of 231,080 Mds. of salt. She was also engaged in dredging of pearl banks off the Tinnevelly coast with a view to ascertain the possibility of finding mother-of-pearl oyster beds in deeper waters than the 9-11-fathoms at present fished by naked divers.

The trawler was at Bombay from July to October 1928 for preparation of estimates for alterations and additions such as a laboratory, and a refrigeration chambers by the Royal Indian Marine Dockyard. The estimates are under consideration of Government. While at Bombay, the Dockyard undertook and completed certain repairs to the engines, etc., that were considered necessary.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the department has always recognized the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the west coast. The number of fishermen's co-operative societies in 1927-28 was 120. These societies it is reported worked satisfactorily, allowance being made for the inexperience and illiteracy of the members. But the formation and working of co-operative societies are not the only social activity among these fishermen. There is a vigorous temperance society at Mangalore The Collector of South Kanara has granted sites for the construction of village halls for the fishermen in two villages and the fishermen have themselves collected Rs. 3,000 for the building. In another village, Kizhur, the fishermen have already completed a building in which they hold meetings while one elementary school carries on its work in the same building. In Madras itself at Nadukuppam a temperance organisation has got to work with the assistance of the Fisheries Department. To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarized with the work carried on in the fishery stations at Tanur and Chaliyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. By the end of June 1928, 37 schools for the fisherfolk were being maintained by the department on the west coast with a total of 3,000 pupils. In some places the villagers themselves started the schools and then handed them over to the department. In other places schools were opened by the department at the request of the fishermen. Local men are appointed as honorary managers of schools

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1·6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2·6 in the Presidency, Raj Shahi, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that o ithe hilsa (*Clupea ilisha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great

rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Catla catla*), mrigela (*Cirrit uan nelgeta*); prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti (*Late calcrifer*) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polynemus*,) pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more steam trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Government has ordered that the Bengal Fisheries Department be reconstituted on an improved basis as soon as funds permit. A Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish byeproducts. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but the old Department made a beginning and once a few societies can be made successful, the news of the benefits conferred on the members will constitute the best possible form of propaganda. The temporary abolition of the Bengal Fisheries Department was regretted by many and it is hoped that it will soon be revived. The fishery wealth of Bengal is enormous and nothing but good can come of intensive investigation and propaganda.

Fresh-water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, though there is less necessity for a special department to develop marine industries, there is ample scope for most useful work in improving curing methods, in introducing canning, and in the development of minor marine industries particularly those connected with the utilization of bye-products. With this end in view the Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a change is needed in the mediæval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs. for a rupee.

Owing to retrenchment the appointments of Fisheries officers have been abolished.

The more important sea-fish are pomfrets, soles and sea-perches among which are included the valuable Jew-fishes (*Sciæna* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds." largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and rayfish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which show hows large they run in size.

In **Sind** considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, as shark, rays and jew-fishes. The edible oyster trade of Karachi was once extensive, the creeks of the Indus producing a species of oyster superior to that found in Bombay and Madras backwaters and estuaries. Unrestricted exploitation of beds of limited extent inflicted great harm, and now, when various salutary restrictions are imposed, the beds are slow to respond. Occasionally large deposits of the window pane oyster (*Placuna placenta*) are found in the Indus creeks and as these produce seed pearls in abundance, Government leased the beds to the highest bidder. The pearls are largely exported to China for use in medicine. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. In India of the profitable nature of well-directed scientific enquiry into fishery problems. The Baroda Government, continuing their enlightened interest in the fishery developments, have had two officers trained in the Madras Fisheries Department and now employ them in development work on the Baroda coast.

Experiments in canning are now in progress at one of the chief fishing centres on the Southern Kathiawar coast and already promise considerable success particularly with regard to pomfrets.

In 1910 Mr. W. H. Lucas, Collector of Salt Revenue, drew up a report on the improvement of the sea fisheries in the Bombay Presidency. The main conclusions at which he arrived were that the Indian consumer is so conservative that new methods of curing, canning, etc., have no chance of succeeding without the help of patient demonstration by Government as an initial step towards the investment of Indian capital in a new enterprise, and that therefore the establishment of a Government demonstration fishing station at some large fishing centre on the Ratnagiri or Kanara coast may be found advisable after the results of the Madras Government fishing station have been studied.

In 1930 the Bombay Government asked the present Collector of Salt Revenue to make a fresh survey of the fishing industry in order to bring up to date the report by Mr. Lucas which is referred to above.

Burma.

The exclusive right of fishing throughout the province of Burma belongs by custom of the country to Government, and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish. The work of the fisherfolk, involving as it does the taking of life, is generally viewed with disfavour by the Burman Buddhists. In certain tracts this attitude is intensified where the proportion of the fisherfolk is not only small but their economic conditions are more or less demoralised. Though fishing is generally denounced by Burman Buddhists, yet they consume the fish. The usual argument of the consumers is that they have not taken the life of the fish and therefore have committed no sin. Where fishing is the principal means of livelihood of the majority as in some Delta Districts, religious scruples tend to disappear.

Revenue.—The economic value of any industry or tract of country can, to some extent, be gauged by the revenue it yields. The fisheries yield a substantial revenue (about one-eighth of the total land revenue), and therefore they are one of the most important sources of national wealth. There are two methods of catching fish, namely by nets in the rivers and seas and by traps in leased fisheries. The fishery revenue demand from net licenses amounts to over four lakhs while that from the leased fisheries amounts to more than 46¾ lakhs. Of the net licenses the greatest revenue comes from Mergui District where not only is the Pearling industry carried on, but leases for collecting green snails and sea slugs are issued. Open lakes, pools of water and small rivers are classed as leased fisheries and are leased by Government to the highest and best bidders at public auction. Here the Irrawaddy Division equals in importance the rest of the province, and of the five districts in the Irrawaddy Division, Maubin District alone yields as much as half of the whole division. Maubin District therefore stands easily first in respect of fishery revenue, and out of the total collected in any year from the whole province, this district alone contributes about a quarter.

The Delta consists of a series of saucer-shaped islands, many of which have embankments round the greater part of them along the north, east and west; in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young fry come down-country from Upper Burma.

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkuyan, (2) Kathabaung, and (3) Kathahmyin. These are generally made into salt fish which fetch Rs. 2 to Rs. 3 per viss. The creek and fresh water fish from fisheries are generally ngakhu, ngayan and ngagyi. Most of them are sold fresh, but some are converted into salt fish. The fish caught in the rivers are generally ngathalauk, Ngagyin and ngamyinyin, the predaceous fish.

Fees for net licenses are charged according to the size of the nets. Fisheries which consist of lakes, pools and streams are put up to auction, but as no Burman fisherman has ever been known to keep a proper system of accounts, he seldom or never can gauge the real worth of the fisheries; this coupled with his impulsive nature frequently results in his bids at auction exceeding the value of the fisheries; several fishermen have thus not only brought ruin on themselves but also on their sureties who have not infrequently been sold up. Until these fisheries are brought under some settlement system for revenue assessment, bona fide fisherman must suffer from time to time. Moreover, the local authorities demand adequate securities and the furnishing as well as the verifying of these securities invariably mean much expenditure of time and money both to the fisherfolk and to the Government staff. With a view to ameliorate uneconomic conditions by rendering the provisions of security easier, as well as to facilitate collection Government introduced what is known as the group system whereby the value of the fisheries is fixed at a reasonable rental, and, instead of an individual system of furnishing security, the groups hold themselves severally responsible. It was thought that in order to enable the poorest of the actual workers to reap the benefit of their labours, nothing short of a co-operative system would be of any avail; this co-operative system was tried in the Tharrawaddy District. In spite of large sacrifices of revenue in allotment of group fisheries on unjustifiably low rents, they have not been popular with fishermen; have not prevented defaults; and have tended to collapse by dispute among the group members and civil suits over their liability for each others' defaults.

Another system known as Fair Rent and Tender System was introduced in Maubin as an experimental measure. Under this system, the lease is fixed at a fair rent and tenders of premia invited and the lease is given on a consideration of the premium offered plus the character of the person tendering and his previous connection with the fishing industry. The system, it is reported, is unpopular with lessees inspite of the favourable rents and the long-term leases. The Government has now stopped this system altogether. The Fishery Settlement Enquiry which was set on foot in 1928 will, it is hoped, lead to improvement of the Fishery Revenue Administration. The final report of the Enquiry is not yet out.

The principal articles of manufacture are ngapi (fish-paste) and salt-fish; the manufacturing methods are primitive and with more industrial education and capital, these could be considerably improved.

The Punjab.

There are now 18 districts of the Punjab under the Licensing Rules, and in six districts, in which leases have been in vogue for many years past, special rules have been issued to place the leases on a definite legal basis. This should go far to raise the revenue in these districts, and save the contractors from much petty litigation.

The number of licenses issued during the year shows a steady increase over previous years, thus:—In 1925-26 the total number of licenses issued was 7,277, in 1926-27 they increased to 7,909 and in the year ending 31st March 1928 to 8,197.

The Angler's Association and the Fishing Club at Rawalpindi continue to make steady progress. Trout Culture in the hills is also steadily progressing. Excellent sport was enjoyed thoughout the year in Kulu and in the Mandi State, and the small streams which have been stocked with trout in the Kangra Valley proper now show every indication that the trout are being firmly established. For the first time since experiments were started the Department achieved some success in Carp breeding at Chhanawan and Carp experiments will be carried out in various places in the future. The tanks at Mahopur have now been converted into Mahasir Hatcheries and this experiment will be watched with great interest. A very good sign this year was the very small number of disputes between professional fishermen and zamindars. Friendly relations between them are essential and these have been sadly strained in the past. The total income of the Department during the year ending 31st March 1928 was Rs. 55,363 as against an expenditure of Rs. 55,316.

Travancore

This State has affiliated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan, the Department has already accomplished a notable amount of development work. Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. Special Schools have been opened for the education of fisher loads.

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commencement, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to overestimate.

Types of Forest.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassed State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassed forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March 1927 was 251,755 square miles or 22·8 of the total area. This was classed as follows : Reserved 105,285 ; Protected 8,626 ; Unclassed State, 137,844.

Throughout this vast forest area, scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

(1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kika- (*Acacia arabica*), which however in the driest regions exists only by the aid of river inundations.

(2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.

(3) Evergreen forests.—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the eastern sub-Himalayan tract, and the moister parts of Burma and are characterized by the great variety and luxuriance of their vegetation.

(4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (*Pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (*Cedrus deodara*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (*Pinus excelsa*); towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long-needled pine (*Pinus longifolia*) which is tapped for resin.

(5) Littoral forests.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoreae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (*Heritiera fomes*).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1904 by the classification of the areas under the control of the Department into four broad classes, namely:—

(*a*) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the

retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosions and sudden floods.

(*b*) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sail forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(*c*) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(*d*) Pasture lands.—These are not "forests" in the generally understood sense of the term, but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the Hon. Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer in its own province.

Territorial charges.—The various provinces are divided into one or more Forest Circles; each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service; these Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties.

The Forest Service.—The Forest Service comprises three branches:—

(1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 399 officers consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 353 are to be recruited direct to the service and the balance obtained by promotion from the Provincial Forest Service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules, 1928:—

(*a*) by nomination in England in accordance with ..... these rules and such supplementary regulations as may be prescribed by the Secretary of State in Council:

(*b*) by competitive examination in India in accordance with .....these rules and such supplementary regulations as may be prescribed by the Governor-General in Council;

(*c*) by direct appointment in accordance with..... these rules of persons selected in India otherwise than by competitive examination;

(*d*) by the promotion in accordance with .....these rules on the recommendation of local Governments of members of the Provincial Forest Services;

(*e*) by the transfer of promotion in accordance with.....these rules of an officer belonging to a branch of Government Service in India other than a Provincial Forest Service.

The Rules provide that all appointment to the Indian Forests Service shall be made by the Secretary of State for India in Council; that no appointment shall be made to the Indian Forest Service by any method other than the five just quoted and that, subject to this last mentioned condition, the method or methods of recruitment to be employed for the purpose of filling any particular vacancies in the Indian Forest Service or such vacancies therein as may be required to be filled during any particular period and the number of candidates to be recruited by each method, shall be determined by the Secretary of State in Council.

(2) **The Indian Forest Engineering Service.**—This service was created in 1919 and at present consists of 17 Forest Engineers.

(3) **The Provincial Service.**—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Imperial Forest Service in 1920. Except for five unpromoted officers the class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Officers of this service are eligible for promotion to 12½ per cent. of the posts in the Indian Forest Service, such promotion being made by the Secretary of State for India. These officers are recruited and trained in India, their recruitment being a matter for the local Governments. A certain number of posts in the

service are filled by the promotion of specially promising Rangers. Owing to the establishment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1926, the Provincial Service course ceased to exist from 1928.

(4) The Subordinate Service consists of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces, Bihar and Orissa, Bombay and Madras), the Burma Forest School at Pyinmana (for Burma), and the Madras Forest College at Coimbatore (for Madras, Bihar and Orissa, Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912, respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Eardley-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. The Forest Research Institute, which is under the administrative control of the Inspector-General of Forests, is in the charge of a President. There are five main branches of research, namely Sylviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each branch being in charge of a research officer. In addition specialists are appointed temporarily when necessary and are attached to the Institute to carry out investigations in subjects of particular economic importance. Thus a paper pulp expert has been employed for some time to investigate possible new sources of paper-making materials of which the forests of India contain abundant supplies. Besides this, there are the Seasoning, the Timber Testing, and the Wood Preservation experts engaged temporarily on short term contracts. Indian Assistants have been appointed under them to receive the necessary technical training and experience in these subjects, with the object of eventually taking the place of experts if and when properly qualified.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings are being built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this and the employment of specialists in Seasoning, Timber Testing and Wood Preservation steady progress is being made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources during the quinquennium ended 31st March 1924, the latest date for which statistics are available, was 36,06,40,000 cubic feet against an average of 30,72,00,000 cubic feet per annum attained in the preceding quinquennium. The highest figure ever attained under this head occurred in 1921-22, when a total of 36,13,83,000 c.ft. was reached, the year 1923-24 coming next with 35,36,90,000 c.ft. The figures for 1921-22 and 1923-24 represent respectively 2·3 and 2·4 c.ft. per acre of all classes of forests. For reserved forests only the yield in 1923-24 was 3·7 c.ft. per acre as compared with 3·3 c.ft. per acre in 1918-19, the last year of the last preceding quinquennium. The year 1921-22 was marked by a phenomenal output of teak in Burma, *viz.*, 600,000 tons (30,000,000 cubic feet), which was more than 74 per cent. above the average annual output of the preceding quinquennium. With the output of teak for the year the revenue in Burma soared to Rs. 2,21,16,786 and the surplus to Rs. 1,30,33,692. The total outturn for the five years amounted to 2,476,849 tons, an increase of 751,000 tons, or 44 per cent. over the output in the preceding quinquennium.

The figures for the last quinquennium for which a report has been issued show that in 1923-24 the ratio of timber extracted by Government agency to that removed by purchasers was 5 to 29 compared with a ratio of 5 to 27 in 1919-20. During the period the outturn removed by Government agency rose by 41 per cent. whilst that removed by purchasers increased by 19 per cent. Timber and fuel to the value of Rs. 11,140 lakhs and minor products, including bamboos and grass, valued at Rs. 375 lakhs were removed by purchasers during the period. For the quinquennium 1918-19 the figures were Rs. 10,190 lakhs and Rs. 355 lakhs respectively.

Reviewing the figures of outturn, Government, in a report issued in October 1925, says: "The results on the whole, considering the general trade depression, are most satisfactory and point to more intensive working of the forests and to better exploitation."

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons while 3,000,000 persons, earning £30,000,000 a year, were employed in working up the raw material yielded by the forests. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an excessive scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and

many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Native States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The steady growth of forest revenue, expenditure and surplus during the past 50 years is shown in the following statement, which gives annual averages for quinquennial periods:—

Financial Results of Forest Administration in British India from 1864-65 *to* 1923-24 (*in lakhs of rupees*).

Quinquennial period.	(Gross revenue average per annum).	(Expenditure average per annum)	Surplus (average per annum).	Percentage of surplus to gross revenue.
	Lakhs.	Lakhs.	Lakhs.	Lakhs.
1864-65 to 1868-69	27·4	23·8	13·6	36·4
1869-70 to 1873-74	56·3	39·3	17·0	30·2
1874-75 to 1878-79	66·6	45·8	20·8	31·2
1879-80 to 1883-84	88·2	56·1	32·1	36·4
1884-85 to 1888-89	116·7	74·3	42·4	36·2
1889-90 to 1893-94	159·5	86·0	73·5	46·1
1894-95 to 1898-99	177·2	98·0	79·2	44·7
1899-1900 to 1903-04	196·6	112·7	83·9	42 7
1904-05 to 1908-09	257·0	141·0	116·0	45·1
1909-10 to 1913-14	296·0	163·7	132·3	44·7
1914-15 to 1918-19	371·3	211·1	160·2	43·1
1919-20 to 1923-24	551·7	367·1	184·6	33·5

The gross revenue and surplus were Rs. 468·2 lakhs and Rs.179·4 lakhs in 1918-19 and Rs. 544·9 lakhs and Rs. 195·6 lakhs in 1923-24 respectively. The surplus rose from Rs. 1,79,42,726 in 1918-19 to Rs. 2,19,12,540 in 1919-20, but during the next three years it steadily decreased, rising again to Rs. 1,84,60,547 during the last year of the quinquennium. The surplus in 1923-24 represents an average of 2·1 annas per acre of all classes of forest against 1·8 annas in 1918-19 The total surplus rose from Rs. 1,79,42,726 in 1918-19 to Rs. 1,95,60,943 in 1923-24. Government, reviewing the figures, state: "Financially, the Forest Department has had during the quinquennium to undergo a severe strain, even since the slump set in following on the short lived post-war boom in trade. But development solely with a view to increase the resources and earning capacity of the forests has never been lost sight of. Judging by the perceptible improvement in the general financial results all round, it is confidentally expected that the improvements initiated in this quinquennial period will produce much better results when the slump ends."

Prospects.—The past work of the Forest Department has already borne fruit, not only in a steady rise of revenue but also in the improved condition of the forests resulting from careful protection and tending. Much has been done in the way of opening up the forests to regular exploitation; but there is still room for enormous development in this respect, for there are extensive areas of valuable forest as yet almost untouched, and these represent a vast capital locked up and not only lying idle but even deteriorating. Perhaps the two most pressing needs at present are the introduction of improved sylvicultural systems and the extension of roads and other export works to facilitate and cheapen extraction. These two must proceed simultaneously, since they are inter-dependent, for it is obvious that timber and other produce can be extracted far more economically if it is available in large quantities within a limited radius than if it is scattered in small quantities over large tracts of country indeed this question must often decide whether extraction is possible or not. Sylviculture teaches us how to effect this concentration and is therefore the bed-rock on which future results, financial and otherwise, must rest; it is of little avail to seek and develop new markets for timbers and other products if these cannot be produced in regular and sufficient quantities and extracted at a reasonable cost.

Forest Products: Exploitation.—The exploitation by the Forest Department, as a Commercial Department on business lines, of the great timber forests which are among the most valuable natural assets of the country, continues to attract the special attention of the various local Governments. In Madras, for instance, the working of the Forest panchayat system, whereby the increased knowledge of the difficulties of forest administration which the villager obtains when he has a voice in forest management is bringing home to him an understanding of the necessity for that administration. A further important step taken in regard to forest exploitation was the recruitment of a Chief Forest Engineer and a Logging

* Excludes Delhi Province and the British Pargana of Manpur (Central India).

† Unclassed state forests or 'public forest lands,' as they are often called, include in many provinces all unoccupied waste, often entirely devoid of trees. So the statistics do not necessarily represent the wooded area.

(a) Includes 60,593 square miles for Federated Shan States. (b) Excluding figures for Shan States and Karenni.

(c) Including Rs. 1,16,167 on account of receipts under the head Imperial Forest College.

(d) Including expenditure under the following heads of the sums stated against them—Imperial (Rs. 61,661), Imperial Forest College Rs. 9,35,364). Excludes expenditure under 52 A Capital outlay not charged to Revenue (Rs. 3,86,730)

(e) After taking into account deficits under the following heads of the sums stated against them—Imperial (Rs.—61,661), Imperial Forest College (Rs.—8,19,197)

§ Revised.

Engineer from America. In Burma the work under way in the Government Timber Depot at Rangoon proves to be of great value to Government from the point of view of revenue and of considerable importance to the public from the point of view of industrial development. Research work on the seasoning of timbers has been started and results which promise to be of great value have already been obtained. Experimental work on the manufacture of furniture and in other similar directions are expected to give a value to a number of different timbers which are at present more or less unknown. The Myitmaka River Training Works started in 1905, which have since then been continued for the sale of Government teak timber, are of more than departmental interest. These works have also proved of great value to local people inasmuch as they have led to the reclamation of a very considerable amount of land which was previously too low lying and swampy to be fit for cultivation. In the United Provinces, the institution of the Government Sawmill and Turnery, the Government Central Wood Working Institute and the Resin Distillery have led to important results. These, and many other examples which could be quoted, go to show that local Governments are fully alive to the importance of exploiting their forest resources to the fullest possible extent for the benefit of the country

Agencies.—An agency has been established in India by the Government of India for the sale of Government timber and it is at present held by Messrs. Martin & Co., Calcutta. The agency held in England by Messrs. W. W. Howard Brothers terminated in December 1926 and the work of marketing Indian timbers in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the Superintendent, Government Printing, India, Calcutta.

PAPER MAKING.

There are five large paper mills in the country working on up-to-date Western lines, *viz.*, at Titagarh, Kankinara and Raniganj in Bengal, the Upper India Couper Mills at Lucknow and the Reay Mill at Poona. There are also two smaller mills at Bombay and Surat which make only country paper, and there are one or two other mills which recently were not working. The five large mills have a large Government connection, as the greater part of Government orders for paper is placed in India.

During the past year an interesting experimental paper-making plant has been installed at the Government of India Forest Research Institute at Dehra Dun. Specially designed to incorporate a new system patented by Mr. Raitt, Cellulose Expert to the Government of India, the object of this plant is to test the various paper-making fibres which are available over vast forest and hill areas in India and Burma, and thus encourage the establishment of pulp and paper mills on a commercial scale.

After many delays the Carnatic Paper Mills Company commenced operations at Rajahmundry, on the Godavari river, during the year, and it is estimated that the daily output will be ten tons of pulp and five tons of paper made from bamboos and paddy straw. In Southern India the Sri Minakshi Paper Mills, established many years ago as a small concern in Travancore State, appears to have taken a new lease of life and has ordered a new plant capable of turning out fifteen tons of paper per day, whilst in Assam a new company has been formed and is said to be waiting for the arrival of its plant. At Chittagong a new plant for manufacturing paper pulp from bamboos has commenced operations whilst another company has obtained a comprehensive concession for Bbabbar grass in the Punjab and is erecting a factory near the headworks of the Western Jumna Canal about 200 miles from Lahore.

The possibility of utilising the dense growths of bamboo in the hinterland of Cuttack has again been under consideration during the year, and the project has been investigated afresh by Mr. Raitt on behalf of the Government of Bihar and Orissa. Mr. Raitt estimates that in this area alone there is sufficient raw material for an output of 10,000 tons of paper pulp per annum.

Raw Materials.—The existence of the local industry depends chiefly on the supply of Sabai grass which on account of unfavourable seasons sometimes yields short crops. It is of great importance, therefore, to look for materials according a constant outturn, and various reports have been published on the available paper-making materials. Considerable attention has been devoted to **Bamboo**, since 1875 when it was found that this plant—of which there are four chief varieties in India—yielded a fibrous paper stock which made a quality of paper superior to esparto grass and at a considerably less cost. It was at that time estimated that one acre of bamboo would yield 10 tons of dried stems equivalent to 6 tons of merchantable cellulose. In 1905 Mr. R. W. Sindall was invited by Government to visit Burma with a view of enquiring into the possibility of manufacturing paper pulp. His report on the subject appeared in March 1906. He made numerous experiments with bamboo and woods of Burma and laid down lines along which further enquiry should be made. Subsequently Mr. W. Raitt, a pulp expert, was engaged at the Forest Research Institute in conducting tests on the treatment of bamboos by the soda and sulphate processed the treatment of bamboo before

boiling, with remarks on the utilisation of nodes and internodes. His results were embodied in the "Report on the investigation of Bamboo or Production of Paper-pulp," published in 1911. Mr. R. S. Pearson of the Forest Service, Dehra Dun, as the outcome of enquiries made throughout India published in 1912 a note on the Utilization of Bamboo for the manufacture of Paper-pulp. The yield per acre from bamboo is larger than that of grasses usually used for paper. The cost of working into pulp has been estimated to yield a product cheaper than imported unbleached spruce sulphite and unbleached sabai grass pulp. In 1915 Mr. Dhruva Sumanas published a pamphlet, Dendrocalamus Strictus Bamboo of the Dangs, as the result of investigations carried on in Bansda State.

In a paper read before the Royal Society of Arts in 1921 Mr. Raitt gave an answer to the question: "**What India can do** to fill the gap in the world's shortage of paper?" He said that he thought it was "a modest estimate to say that from bamboo, taking only that which is available under 'possible' manufacturing conditions, Burma, Bengal and South West India could produce ten million tons of pulp per annum, and Assam from Savannah grasses three million. India could therefore produce pulp for the whole world."

The leading Indian **paper grass** for the last thirty years has been the bhaib, bhabar, or sabai grass of Northern India. It is a perennial grass plentiful in drier tracts from Chota Nagpur and Rajmahal to Nepal and Garhwal. The Calcutta mills draw their supplies from Sahibganj, Chota Nagpur and the Nepal Terai. The quantity annually exported from Sahibganj is betwcen three to four lakhs of maunds The cutting in these districts is said to commence in October when the plants are six or seven feet high. Sabai grass yields from 36·6 to 45·5 per cent. of bleached cellulose. A report by Mr. R. S. Pearson, Forest Economist, Dehra Dun, on the use of **elephant grasses** in Assam was issued in 1919. The most important species of grass found in the areas in which investigation has been made are Khagra (*Saccharum spontaneum*) and Batta (*Saccharum narenga*), with patches of Nal (*Phragmites karka*) on the more swampy ground. Hand samples of the above grasses were sent to England to be tested on a laboratory scale, while several tons were sent to an Indian paper mill to be made into paper. The results were satisfactory and proved that a very fair quality of paper can be produced from these grasses at a relatively low price. Small samples of such paper can be obtained by persons interested in these grasses from the Forest Economist Forest Research Institute, Dehra Dun, who can also supply further details.

Indian paper manufacture is protected by special provisions in the import tariff.

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the Cable companies.

For reasons of economy, most of the inland wireless stations in India have been practically closed down and placed in charge of "Care and Maintenance" parties which carry out tests twice a month, the exceptions being Peshawar Radio, which maintains official communication with Kabul in Afghanistan and Kashgar in China, and Jotogh Radio which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Reuter's Agency for distribution to subscribing new papers.

The coast stations, however, have been maintained in a state of high efficiency and many improvements effected. The application of the Baudot system to the high-speed continuous-wave wireless stations at Madras Fort and Mingaladon (Rangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route *via* Calcutta. The traffic is interrupted occasionally by atmospheric interference, particulary during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay stations known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and now total about 20,000 per annum. Official telegrams are exchanged with the British Naval station at Matara (Ceylon) *via* Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula *via* Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon.

Safety at Sea.—A noticeable feature of wireless development during the past two years has been the provision of direction-finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned-in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta, the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations have each an aerial imput of three kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes are so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages.

Bombay broadcasts normally on a wavelength of 357 metres, and Calcutta on 370 metres, Reception in either of these cities, and for a distance of twenty or thirty miles around, is possible on crystal sets, of which a very large number have been sold. Valve sets are necessary for those living further afield, but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed and it is partly with a view to overcoming this problem and to render broadcasting available on two-valve sets in any part of India, that the Broadcasting Company is investigating the possibility of transmitting simultaneously no long and short waves.

Reports of the reception of foreign short-waves stations have been received from all parts of the country, and upon several occasions the Bombay station of the I. B. C. has relayed the programmes from the Dutch station PCJJ., but the results have not been entirely satisfactory.

The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Covernment of India.

Licenses.—Broadcast receiving licenses are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licenses for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, more than 300 have been issued The number of traders in wireless apparatus who are required to take out special Import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting (*q.v.*)

Prospects.—The Government of India has always encouraged the development of wireless in India by private enterprise and it is to this source that India must look in the immediate future for internal radio communication. There are two most promising lines of development, *viz.* —

(*a*) Erection of small sets either for speech or morse in districts where no land lines exist, and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either morse or speech at will and if used for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(*b*) The use of radio as a substitute for land-line to form the trunk telephone route between two cities which already have telephone facilities.

These will open up a new industry which if properly fostered would vary soon extend its sales outside the limits of India. There is no doubt that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and further such an industry would find the right kind of skilled labour already in India.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkaru*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stocqueler in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Silk Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and papers was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation.—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Governments, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending:—

(1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (*a*) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (*b*) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act; (*c*) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (*e*) any person challenging the orders of Government should do so in the local High Court; (*f*) the term of imprisonment prescribed in Sections 12; 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months; (*g*), the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

Press Association of India.—At the end of 1915 this Association was formed in Bombay. According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a Council.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks:—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. Put very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank:—Under the Imperial Bank of India Act (XLVII of 1920), the control of the Bank is entrusted to a Central Board of Governors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board, with the previous sanction of the Governor-General in Council may determine. The Central Board of Governors consists of—

(*a*) Managing Governors not exceeding two in number, appointed by the Governor-General in Council on recommendation by the Central Board;
(*b*) the Presidents, Vice-Presidents and Secretaries of the Local Boards;
(*c*) the Controller of the Currency, or other officer nominated by the Governor-General in Council; and
(*d*) not more than four non-officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Controller of the Currency and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not to vote under the agreement with Government. The Governor-General in Council is entitled to issue instructions to the Bank in respect of any matter which in his opinion vitally affects his financial policy or the safety of the Government balances, and if the Controller of the Currency or such other officer of Government as may be nominated by the Governor-General in Council to be a Governor of the Central Board shall give notice in writing to the Managing Governors that he considers that any action proposed to be taken by the Bank will be detrimental to the Government as affecting the matters aforesaid, such action shall not be taken without the approval in writing of the Governor-General in Council. Under the Imperial Bank of India Act provision was made for the increase of the capital of the Bank. The capital of the three Presidency Banks consisted of 3¾ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11¼ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 5,27,50,000 and the Balance Sheet of 30th June 1929 showed the Government balance at Rs. 20,74,36,242, other deposits at Rs. 72,33,05,053 and Cash Rs. 40,41,45,208, with a percentage of Cash to liabilities of 32,464.

Class of Business:—The Imperial Bank of India Act follows the Presidency Banks Act of 1876 in defining absolutely the class of business

in which the Bank may engage, though the older limitations are modified in some minor points. It permits for the first time the constitution of a London Office and the borrowing of money in England for the purpose of the Bank's business upon the security of assets of the Bank, but not the opening of cash credits, keeping cash accounts or receiving deposits in London except from former customers of the Presidency Banks. The Act provides for an agreement between the Bank and the Secretary of State, and this agreement, which was signed on the 27th January 1921 and is for a period of ten years determinable thereafter by either party with one year's notice, provides, *inter alia*, for the following important matters:—

(1) All the general banking business of the Government of India is to be carried out by the Imperial Bank

(2) The Bank will hold all the Treasury Balances at Headquarters and at its branches. This involves the abolition of the Reserve Treasury system.

(3) Within five years the Bank undertakes to open 100 new branches of which the Government of India may determine the location of one in four. The branches and agencies of the three Presidency Banks prior to the date of amalgamation numbered 69, including the Colombo branch of the Bank of Madras. The Bank of Bengal had no branches prior to the proposal to transfer Government business to the Bank in 1861-62 but no less than 18 branches were established before 1868.

(4) The management of the Public Debt will continue to be conducted by the Bank for specified remuneration

THE DIRECTORATE.

Managing Governors .. .. .. Sir Osborne A. Smith, Kt.
K. M. MacDonald, Esq., M. C.

Presidents, Vice-Presidents and Secretaries of the Local Boards.

In Schedule 1, Part 1, of the Act, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are :—

(1) Advancing money upon the security of :—
- (*a*) Stocks, &c., in which a trustee is authorised by Act to invest trust monies.
- (*b*) Securities issued by State aided Railways, notified by the Governor-General-in-Council.
- (*c*) Debentures, or other securities issued under Act, by, or on behalf of, a District Board.
- (*d*) Goods, or documents of title thereto, deposited with, or assigned to the Bank.
- (*e*) Accepted Bills of Exchange or Pro. Notes.
- (*f*) Fully paid shares and debentures of Companies with limited liability or immoveable property or documents of title relating thereto, as collateral security where the original security is one of those specified in *a*, *b*, *c*, *d* and, if authorised by the Central Board, in *e*.

(2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge.

(3) Drawing, accepting, discounting, buying and selling bills of exchange and other negotiable securities payable in India and Ceylon and, subject to the directions of the Governor-General in Council, the discounting, buying and selling of bills of exchange payable outside India for and from or to such Banks as may be approved.

(4) Investing the Banks' funds in the securities referred to in (1) *a*, *b*, *c*.

(5) Making Bank Post Bills and Letters of Credit payable in India and Ceylon.

(6) Buying and selling gold and silver.

(7) Receiving deposits.

(8) Receiving securities for safe custody.

(9) Selling such properties as may come into the Bank's possession in satisfaction of claims.

(10) Transacting agency business on commission.

(11) Acting as Administrator, for winding up estates.

(12) Drawing bills of exchange and granting letters of credit payable out of India for the use of principles in connection with (11) and also for private constituents for *bona fide* personal needs.

(13) Buying, for the purpose of meeting such bills, &c., bills of exchange payable out of India at any usance not exceeding six months.

(14) Borrowing money in India.

(15) Borrowing money in England upon security of assets of the Bank, but not otherwise.

The principal restrictions placed on the business of the Bank in Part 2 are as follows:—

(1) It shall not make any loan or advance:—

(*a*) For a longer period than six months;

(*b*) upon the security of stock or shares of the Bank,

(*c*) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immoveable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons or firms unconnected with each other in general partnership.

The Balance Sheet of the Bank as at 30th June 1929 was as follows:—

LIABILITIES.	Rs. a. p.	ASSETS.	Rs. a. p.
Subscribed Capital ..	11,25,00,000 0 0	Government Securities ..	21,21,55,480 6 2

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the Continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far *each* Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1928 of the undernoted Banks will give some idea of this

LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT.

	£.
Chartered Bank of India, Australia and China.	7,554,000
Eastern Bank, Ld.	629,000
Hongkong and Shanghai Banking Corporation.	5,717,000
Mercantile Bank of India, Ld. ..	3,759,000
National Bank of India, Ld. ..	6,701,000
P. & O. Banking Corporation, Ld. ..	6,043,000
	30,403,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

(1) Proceeds of import bills as they mature.

(2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.

(3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.

(4) Imports of bar gold and silver bullion.

(5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

An interesting event in Indian Banking history is the recent entry in the Banking field here of one of the English "Big Five." This has been brought about by the acquisition of the business of Cox & Co., by Lloyds Bank.

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1928:—

In Thousands of £.

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events of ten years ago confidence has been largely restored. But in April 1923 the Alliance Bank of Simla suspended payment and is now in voluntary liquidation. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets:—

In Lakhs of Rupees.

Sumitomo Bank	Ditto	67, Bishopsgate, E.C. 2.
Thomas Cook & Son	Ditto	Ludgate Circus, E. C. 4.
Yokohama Specie Bank	Ditto	7, Bishopsgate, E. C. 2.

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct, and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, *viz.*, (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or 1½ °/₀ is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rate since the Imperial Bank was constituted:—

Year.	1st Half-year.	2nd Half-year.	Yearly average.
1921	6·038	5·108	5·573
1922	7·132	4·510	5·821
1923	7·419	4·5	5·959
1924	8·05	5·315	6·682
1925	6·585	4·701	5·643
1926	5·651	4·	4·825
1927	6·508	4·956	5·732
1928	6·945	5·456	6·2
1929	6·878	..	....

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Imperial Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below:—

Total amount of Cheques Cleared Annually.

In lakhs of Rupees.

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (33 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway; (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22*d.* to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions; the result was that by 1869 the deficit on the Railway budget was Rs. 166½ lakhs. Seeking for some more economical method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-8[illegible]) the Southern Maratha (1882); and the Assam Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad-gauge; during he next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6562, the metre 1,865, and narrow 67). The ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through he desolate Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantej, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebates terms being found unattractive in view of the competition of 4 per cent. trustee stocks; they were revised in 189[illegible] to provide for an

absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Government in Madras, Punjab, Burma and Bombay.

Railway Profits Commence.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The terms in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there was no reason to anticipate a further deficit, but the net railway gain decreased to £3,767,000 in 1920-21 and there was an actual loss of £6,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921, this loss was changed into a gain of £813,000 in 1922-23.

The results in succeeding years showed further improvements as will be seen from the following statements :—

——	Contribution to General Revenues.	Railway Reserve Fund.	Total Gain.
	£	£	£
1923–24 ..	..	..	4,437,712
1924–25 ..	4,941,387	4,635,985	9,577,372
1925–26 ..	4,135,644	2,854,936	6,990,580
1926–27 ..	4,486,045	1,108,433	5,594,478
1927–28 ..	4,707,239	3,460,000	8,167,239
1928–29 ..	3,933,834	1,937,895	5,871,729

Rupees have been converted into £ at the average rate of exchange for the year.

Thanks to the separation of the Railway from the General Finances which is described later, and provided that the present railway policy is not influenced too much by political considerations, railways should continue to show a net yearly gain.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend

guaranteed at 22*d.* per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed, but chiefly for strategic purposes. The poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, keep this scheme in the background. There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre-gauge systems of Northern and Southern India must also be connected and Karachi given direct broad-gauge connection with Delhi, a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

Government Control and Re-organisation of Railway Board.

As the origina contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government

with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the junctions of —

(*a*) the directly controlling authority of the State-worked systems aggregating 18,499 miles in on the 31st March 1929,

(*b*) the representative of the predominant owning partner in systems aggregating 29,451 miles,

(*c*) the guarantor of many of the smaller companies, and

(*d*) the statutory authority over all railways n India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The statement of the varied responsibilities of the Government of India in regard to railways might be extended almost indefinitely. It will perhaps be sufficient to mention only the complications that may and do arise owing to the very considerable railway mileage in Indian States. In the exercise of all these functions the Railway Department is a Department of the Government of India, its policy must be in accord with the policy of the Government as a whole and every decision must be made with that consideration in mind. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who expressed the unanimous opinion that material changes were necessary in the constitution of the Railway Board. Amongst their recommendations they advised the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief of the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past. This object was effected by placing a responsible Director at the head of each of the main branches of the Board's work, namely, Civil Engineering, Mechanical Engineering, Traffic and Establishment. The former Chief Engineer and the Chief Mechanical Engineer, who had been employed mainly in cultivative work, became Directors and together with the Directors of Traffic and Establishment have been made responsible for the direct disposal of the work of their branches under the general orders of the Railway Board.

The posts of Joint Secretary and 4 Assistant Secretaries were replaced by 6 Deputy Directors working under the Directors and in charge of branches dealing with Establishment, Works, Projects, Stores, Statistics and Traffic. One Assistant Director was also added to supervise the Technical Branch and the Drawing Office. The disposal of the general work of the Railway Board was provided for by the continuance of the post of Secretary in whose name all letters and orders of the Board are issued.

The position of the Board as a Department of the Government of India has been maintained and it works under the Member for Commerce and Railway. As already stated the Chief Commissioner is the Secretary to the Government of India in the Railway Department and orders issued by the Board over the signature of the Secretary are orders of the Government of India.

Experience of the working of this organization during 1924-25 and the decision agreed to by the Legislative Assembly in September 1924 to separate railway finances from the general finances of the country made it necessary to appoint a Deputy Director and an Assitant Director of Finance. An Assistant Director of Statistics was also added during that year. Later a Director of Finance was added to the establishment occupying, as regards disposal of work, the same position as the Directors referred to above.

Further experience of the reduction of work resulting from the large delegation of powers and responsibility to the Agents of State-managed Railways and the Board of Directors of Company-managed railways enabled a rearrangement of work to be made during 1925-26 accompanied by a reduction in the staff. Under this rearrangement the posts of 3 Deputy Directors, an Assistant Director and the Assistant Secretary were held in abeyance. The personal work was transferred from the Directors of Establishment to the Secretary and a temporary post of Deputy Secretary was created. Further a separate technical office was established to take charge of the technical work of the engineering branches. The Technical Officer also acts as *ex-officio* Secretary to the permanent Standardization Committees which have been appointed to deal progressively with all questions of standards of equipment.

The necessity of some central organisation to co-ordinate the publicity work carried out on railways and to undertake on its own the many forms of railways publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st, 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular. The temporary appointments of a Deputy Director to assist the member in dealing with Labour questions has been approved and the question of making this appointment permanent is now under consideration. The appointment of a third member has relieved the Member General of some of his duties and enabled him to concentrate more on transportation and commercial questions. He is now called Member Traffic while the remaining member who is responsible for civil and mechanical engineering questions is known as Member Engineering.

Under the Railway Board's policy of progressive standardisation, it is proposed to standardise all classes of materials, plant and rolling stock commonly in use on the railways and to establish a Central Standardisation office to provide the means whereby such standardisation will be progressively effected in accordance with changing conditions and as the result of practical experience.

The nucleus of such an office has been formed on a temporary basis under a Chief Controller and the question of making this office is now under consideration.

The present superior staff under the Railway Board, therefore consists of 5 Directors, 5 Deputy Directors, a Technical Officer, 2 Assistant Directors, a Secretary and a Deputy Secretary in addition to the Chief Publicity Officer and the Officers in the Central Publicity Bureau and to the Chief Controller and the officers in the Central Standardisation Office.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State managed railways during 1929. The supervision of Account Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor General. The Chief Accounts Officers on railways are now under the Agent but have certain powers of direct reference to the Financial Commissioner of Railways.

Management

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. Some of the Company managed railways are still on a departmental basis with a Traffic Manager, Chief Engineer, Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the Transportation and Commercial duties of the Traffic Manager and combined the supervision of Locomotive running with Transportation. State managed lines have generally adopted the divisional organisation with a Chief Operating Superintendent, Chief Commericial Manager, Chief Engineer, Chief Mechanical Engineer, Controller of Stores and Chief Accounts Officer.

Clearing Accounts Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed

Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, and the Eastern Bengal Railway on the 1st January 1928. The Great Indian Peninsula Railway work was not transferred till after the close of the year.

At the request of the Bombay, Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay, Baroda & Central India Railway have recently agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Account Office, and it is hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and it has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3⅜ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaveri Railway, cannot be long delayed. All the Burma lines are on the metre-guage. Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre gauge.

The following statement brings out the more important features of the operation of Indian railways during the year 1928-29 together with similar information for the year 1927-28:—

		1927-28.	1928-29.
Mileage open on the 31st March—			
1.	Single line	36,156·09	37,382·95
2.	Double line or more	3,555·49	3,566·75
3.	Total route mileage	39,711·58	40,949·70
4.	Total track mileage	53,846·48	55,456·96
Capital and Revenue Earnings and Expenditure—			
5.	Total capital at charge including ferries and suspense on open line Rs.	8,22,86,25,000	8,31,39,30,000
6.	Gross earnings „	1,18,22,17,000	1,18,86,82,000
7	Gross earnings per train mile „	6·58	6·38

Number of employees			800,102	807,866

At the close of the year 1928-29, the total capital invested in railways was Rupees 8,31,39,30,000 represented by a property which in terms of route mileage amounted to 40,950 miles of railway. This property brought in to the owners a return of 5·32 per cent. on the capital at charge. Similar figures for the railways owned by the State are:—

	Rs.
Total capital at charge ..	7,34,31,16,000
Total route mileage ..	29,451
Return on capital outlay	5·23

State versus Company Management.— The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the managment of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 4¾ million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3½ million and 1⅞ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elswhere, where State ownership has thrown on the State the obligation to manage its own railways, has been to create by a statute an authority charged with the management of the State Railway property with statutry prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsdlo Railway followed suit The Naine-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925)

On January 1st 1929 the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

Notice has also been given to the Southern Punjab Railway Company of the purchase of their line of about 927 miles on the 31st December 1929. This line is worked by the North Western Railways. It is estimated that the financial result of the purchase which is likely to cost approximately Rs. 703 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances has been under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council: — "that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year *plus* one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in

(*a*) forming reserves for.

(*i*) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(*ii*) depreciation,

(*iii*) writing down and writing off capital,

(*b*) the improvement of services rendered to the public,

(*c*) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be prescribed by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, *i.e.*, will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways."

When introducing this resolution the Hon'ble Member for Commerce stated that it had been represented to him that there was a general feeling in the House that before the House was asked to commit itself to those proposals, it should be allowed to refer them to a committee of the House. He further stated that he had no objection to this course provided that the committee met rapidly. This was agreed to and members were appointed.

The committee met twice and considered the resolution but was not able within the time allowed to satisfy itself fully as to the effect of the proposals in the resolution on the control of the Assembly over railway finance and policy and as to the amount and form of contribution to be paid by the railways to general revenues. In the circumstances, the committee recommended that the consideration of the resolution be adjourned till the autumn session to allow the committee further time for examination. Government raised no objection to this proposal and it was agreed to by the Assembly.

The resolution was further examined by the Standing Finance Committee in September and as a result of the views expressed by the committee and in the Assembly certain modifications were introduced. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to

General Revenues should exceed 3 crores, only ⅓rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining ⅓rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23 and entailed :—

(*a*) the separation of the commercial and operative duties of the Traffic Department,

(*b*) the separation of the mechanical and running duties of the Locomotive Department,

(*c*) the fusion of the operative duties of the Traffic Department with the running duties of the Locomotive Department.

Under the new organisation there is now—

(1) a Chief Transportation Superintendent in charge of all operating functions,

(2) a Chief Traffic Manager in charge of the commercial side of the railway,

(3) a Chief Mechanical Engineer in charge of the design and construction of rolling stock and of all repairs and renewals of rolling stock carried out in the central workshops.

This organisation is more or less similar to the divisional organisation found on most American Railways with the exception that the Engineering Department works on a departmental basis. This, however, has been changed and the maintenance of Way and Works has been brought into the divisional organisation while new construction remains outside.

A somewhat similar organisation was introduced on the North-Western Railway from 1st October 1924, except that it follows rather the organisation in force on the South African Railways where the railways are divided into a number of areas or divisions each under one chief officer and all reporting to the General Manager who is assisted by a number of principal officers in charge of definite phases of the working. A similar organisation was also introduced on the East Indian and Oudh and Rohilkhand Railways early in 1925.

Investigation into the present form of Railway Accounts.—The investigation by Sir Arthur Dickinson into the system of accounts followed on Indian railways, was completed in March 1927 and his report submitted in August 1927. It has been found possible to adopt certain of his proposals and further investigations are being carried out concerning some of the others.

Standing Finance Committee for Railways.—The Committee met 14 times in 1928-29 and besides scrutinising the capital programmes of railways and discussing the budget proposals for 1929-30, they examined the proposals for construction of 13 projects of new railways costing an aggregate sum of 7 crores of rupees and also for the transfer of ownership to the Government of India, on certain agreed terms of two district board railways in South India, *viz.*, the Salem Suramangalam Railway and the Tanjore District Board Railway. They also considered various proposals pertaining to railway staff, including the revision of cadres, re-organisation of certain departments and the creation of a number of superior appointment on Indian Railways. They devoted considerable attention to the proposal to adopt as a permanent measure the system of separation of Accounts from Audit on Railways and the rules for the recruitment of candidates for establishments under the Financial Commissioner of Railways and to the scrutiny of the recommendations contained in Sir Arthur Dickinson's report on traffic, stores and workshop accounting.

Central Advisory Council for Railways—During the year 1928-29, two meetings of the Central Advisory Council were held, one during the September Session and the other during the February-March Session.

The subjects discussed were :—

(*i*) Improvement in the standard of comfort of passengers and

(*ii*) Assistance from railway funds to railway employees for the education of their children.

In regard to (*i*) the questions of overcrowding, dirty latrines, supply of drinking water, lack of waiting sheds, high level platforms, lack of benches, confusion and overcrowding at booking office windows and difficulty in purchasing tickets were examined. Various suggestions were made, some of which were accepted, and which will be brought to the notice of the Railway Administration.

The future policy of the Railway Board in regard to Railway Schools and the education of the children of Railway employees was explained. It was pointed out that railway officers had not the experience or the training to administer and control educational institutions. It was, therefore, considered desirable that Railway schools should be handed over to Provincial Governments or other authorities, who should be asked to provide educational facilities for the children of railway employees. The Memorandum outlining the policy was discussed and among the points touched upon were the pay and prospects of teachers and the ownership of the railway buildings on the transfer of railway educational institutions to Local Governments.

Imperial Indian Mail, Punjab Limited & Frontier Mail.—A new standard of travel in India was instituted in November 1926 by a weekly service between Bombay and Calcutta in connection with the English Mail steamers. The Imperial Indian Mail, as the train is called, is a joint service of the East Indian and Great Indian Peninsula Railways. The popularity of the train has been firmly established, and during the seasonal months the accommodation has been filled to capacity. The special features of this train are the provision of a parlour car, a compartment for luggage wanted on journey, bedding, the services of an experienced conductor and staff and high class catering. The train is vestibuled throughout, giving passengers access to all parts without the necessity of waiting for station halts. Accommodation is provided for 32 passengers in 14 two-berth and 4 single berth compartments. Seven of the two-berth compartments have two lower berths and the remainder a lower and an upper berth. The additional floor space in the latter compartments enables two easy-chairs to be provided. The exterior of the Imperial Indian Mail is finished in cream and gold, and the service as a whole compares favourably with the finest luxury train service provided by any railway in the world.

The success of this train naturally led to the introduction of similar services between Bombay and the north of India *via* Delhi and from October 7th, 1927, a special train called the Punjab Limited was inaugurated by the G.I.P. Railway for the benefit of overseas passengers travelling between Bombay and the Punjab.

From the same date the Bombay, Baroda and Central India Railway introduced in conjunction with the North Western Railway a new weekly train for first class long distance passengers and mails between Bombay and Peshawar connecting with the outward Mail steamers at Ballard Pier. This train reduced the time of the journey to Delhi and the Punjab as under:—

	Previous time.		New time.		Difference.	
	Hrs.	Mts.	Hrs.	Mts.	Hrs.	Mts.
Delhi ..	27	50	23	50	4	0
Lahore ..	39	5	32	0	7	5
Peshawar ..	51	55	42	35	9	20

With the close of the outward season, second class and local (1st & 2nd class) passengers were also carried on this train. The performance of this train has been uniformly excellent and has been freely commented on by the Press both in India and in England. On two occasions, when the Mail steamer has been late, the run between Bombay and Delhi has been performed in 21 hours, or at an average speed of 41 miles per hour for the 865 miles. The running of this train has effected delivery of the English mails a day earlier in Delhi and in most places in the Punjab. From 1st September 1928 a new train, the Frontier Mail, runs daily from Bombay to Peshawar to approximately the same timings. From a careful examination of the numbers of passengers using the Punjab Limited and the Frontier Mail during the winter season 1928-29 it has been found that the numbers do not justify the running of a special train connecting with the P. & O. Mail in addition to the Frontier Mail on the B. B. & C. I. Railway and the ordinary mail train on the G. I. P. Railway and so the running of the Punjab Limited was cancelled at the end of the winter season.

Earnings.—Of the total earnings on all Railways of Rs. 1,18,87 crores, Rs. 71,44 crores or 60.0 per cent. were from goods traffic, Rs. 38,16 crores or 32.1 per cent. from passenger traffic and Rs. 9,27 crores or 7.80 per cent. from parcels, luggage and miscellaneous earnings.

Passenger Earnings.—Passenger earnings showed a decrease of 2.60 per cent. from Rs. 39,18 to Rs. 38,16 crores. The following table shows the numbers of and earnings from passengers separately for each class for the 4 years previous to the War and for the 5 latest years.

Year.	Number of passengers carried (in thousands)				
	1st Class.	2nd Class.	Inter	3rd Class.	Season & Vendor's tickets.
	Rs.	Rs.	Rs.	Rs.	Rs.
1910	685	2,784	10,702	315,839	24,341
1911	703	2,947	11,409	331,055	25,687
1912	700	3,030	10,508	356,789	26,810
1913-14	715	3,253	12,000	390,412	30,114
1924-25 †	1,101	9,778	12,201	553,266	..
1925-26 †	1,033	9,901	13,602	574,608	..
1926-27 †	1,012	10,006	14,945	578,409	..
1927-28 †	980	9,963	17,361	594,821	..
1928-29 †	913	9,585	17,870	591,748	..

Year.	Earnings from passengers (in thousands of rupees)				
	1st class.	2nd class.	Inter.	3rd class.	Season & vendor's tickets.
	Rs.	Rs.	Rs.	Rs.	Rs.
1910	58,82	77,23	94,99	14,65,16	15,85
1911	66,38	83,83	1,08,88	15,73,15	16,85
1912	62,90	83,31	91,37	17,01,35	17,55
1913-14	68,94	88,70	1,03,48	18,37,03	19,36
1924-25 †	1,22,93	1,92,00	1,48,01	34,12,45	..
1925-26 †	1,20,42	1,89,42	1,59,61	34,76,45	..
1926-27 †	1,17,75	1,88,27	1,61,79	33,43,97	..
1927-28 †	1,13,71	1,95,67	1,69,32	34,39,25	..
1928-29 †	1,12,25	1,91,89	1,66,43	33,53,82	..

† The number of season and vendor's tickets and their earnings have been included under the respective classes, the former at the rate of 50 single journeys per month.

Rates Advisory Committee.

The Rates Advisory Committee was constituted in 1926 to investigate and make recommendations to Government on the following subjects :—

(1) Complaints of undue preference ;

(2) Complaints that rates are unreasonable in themselves ;

(3) Complaints or disputes in respect of terminals ;

(4) The reasonableness or otherwise of any conditions as to the packing of articles specially liable to damage in transit or liable to cause damage to other merchandise ;

(5) Complaints in respect of conditions as to packing attached to a rate ;

(6) Complaints that Railways do not fulfil their obligations to provide reasonable facilities under Section 42 (3) of the Indian Railways Act.

The Committee reported on the following nine cases that had been referred to them during 1928-29 :—

(*i*) Complaint of undue preference from two firms dealing in myrabolams against the Bengal Nagpur Railway in regard to the quotation of a lower rate for myrabolams from Seoni to Kidderpore Docks, as compared with the rates from other stations, the distance from which to Kidderpore Docks are less.

(*ii*) Complaint from certain cotton millowners in Calcutta against the North Western and East Indian Railways in connection with the rates for cotton from North Western Railway station to Howrah, which it is alleged, were unreasonable *per se*.

(*iii*) Complaint from certain cotton millowners in Calcutta (the same parties as were concerned in item (*ii*) above) against the Great Indian Peninsula and the Bengal Nagpur Railways) in regard to the rates for cotton from, stations in the Central Provinces to Shalimar, which were alleged to be unreasonable *per se*.

(*iv*) Complaint from the Bhannilal Glass Works against the Bombay Baroda and Central India, Great Indian Peninsula and East Indian Railways in regard to the enhancement in the rates for raw materials used in the manufacture of glass, consequent on the transfer of the administrative control of the Jubbulpore-Naini section from the East Indian, to the Great Indian Peninsula Railway.

(*v*) Complaint from the Bhannilal Glass Works against nine railways in regard to the rates for glass bangles from Firozabad, which were alleged to be so high as to preclude the works from competing effectively against imported bangles.

(*vi*) Complaint from certain cloth merchants at Delhi and cotton mill-owners at Sholapur against the Great Indian Peninsula Railway in regard ro the rate for piecegoods from Sholapur to Delhi, which it is alleged, was unreasonable, beacuse it was higher than the rate from Bombay to Delhi (a sohrter distance.)

(*vii*) Complaint from certain cloth merchants of amritsar and cotton mill-owners at Sholapur against the Great Indian Peninsula in regard to the Great Indian Peninsula Railway's proportion of the rate for piecegoods from Sholapur to Amritsar, which was alleged to be unreasonable, because of the Great Indian Peninsula Railway's proportion of the rate from Bombay to Amritsar (a shorter distance) being less.

(*viii*) Complaint from the Alembic Chemical Works Company, Limited, Baroda, against six of the principal railways in regard to the rates for industrial alcohol, country spirits, rectified spirits and locally manufactured medicines, which were alleged to be unreasonable *per se*.

(*ix*) Complaint from Messrs. Shambhu Nath & Sons, Amritsar, against the North-Western Railway, alleging that the rate for sulphur from Karachi to Cawnpore constituted undue preference in view of its being on a lower milleage basis than the rate applicable for traffic from Karachi to Cawnpore. The Committee's reports in the first eight cases, seven of which were received late in the year, were, under consideration by the Government of India at the close of the year. In case (*ix*), the Committee's recommendation was to the effect that, as no traffic was being booked from Karachi to Cawnpore, the special rate quoted was inoperative and should, therefore, be deleted from the Railway's tariffs. This recommendation was accepted. At the close of the year the Committee had under consideration three cases, *viz*:—

(*i*) against the Assam Bengal Railway in regard to the terminal charges for jute;

(*ii*) against the Great India Peninsula, Madras and South Mahratta and South Indian Railway as regards the rates for marbles;

(*iii*) against the Great Indian Peninsula and Bengal Nagpur Railwinays, regard to the rates for piecegoods.

nauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the newly electrified main line section of the G. I. P. Railway from Kalyan to Poona which was performed by H. E. Sir Frederick Sykes, Covernor of Bombay, on Tuesday, 5th November 1929, constitutes the first entirely main line length of track to be electrified in India and completes another large phase of this Railway's general scheme for the electrifications of its services between Bombay, Poona and Igatpuri.

Connected with the electrification scheme is that of the elimination of the Bhore Ghat Reversing Station. The problem of eliminating the Reversing Station has been seriously considered on several occasions in the past but it was not until 1923, when electrification had been definitely decided upon, that final survey operations became imperative.

Apart from the location of the realignment which called for the adoption of methods unusual in ordinary survey practice, the works involved in the construction of this double line broad guage section of railway were of considerable magnitude, chiefly in the form of heavy tunnel construction.

There are three tunnels in all aggregating 4,598 feet or ·87 of a mile. The longest of these is 3,100 feet built throughout on a curve of the sharpest radius which occurs in these ghats. Allowing for curvature and the considerably increased spacing of tracks necessitated by the adoption of the latest standard dimensions, a tunnel section of 34 feet 6 inches wide and 24 feet 6 inches high was decided upon. This is considered to be the largest tunnel section in the world

The steam trains to Poona took approximately 6 hours for the journey and it is anticipated that with electric traction this timing will be now reduced to approximately 3 hours.

It is expected that the section between Kalyan and Igatpuri will be completed by the end of March 1930. When this is done it is believed that the G. I. P. Railway will then have the greatest length of electrified main line in the British Empire and the entire scheme will be one of the most important main line electrifications in the world.

Publicity.

The year 1928-29 marked a very considerable advance in the Publicity activities of the Indian railways. The Central Publicity Bureau of the Railway Board was inaugurated on 1st April 1927, a Chief Publicity Officer was appointed and provided with an Assistant and a small clerical staff. The office was located in Victoria Terminus, Bombay, it being felt that, to commence with, Bombay's position as the main port of arrival in India, closer touch could be kept with travellers and further more, Bombay presented certain distinct advantages from the point of view of printing facilities, etc.

The first three months were spent in organising and in working out schemes for the development of existing Publicity business and in formulating a programme for progress in new fields. Among some of the principal lines upon which it was decided to concentrate attention are:—

Cinema film production and display;
Poster production and display;
Pamphlet production and display;
Publication of an *Indian State Railways Magazine*;

Demonstration Trains;
Upper and Lower class special excursion trains;

Press propaganda in India;
Press propaganda in Europe, America and other parts of the world;

Reciprocal publicity with the leading railways of the world.

One of the most important of these activities is undoubtedly the cinema film production and display as 80 per cent. of this is directed towards encouraging primary industries and the welfare of agriculturists and villagers. It must be

remembered in this connection that owing to the very large proportion of illiterates in India, the cinema is the outstanding method of conveying information to the masses. Each State Railway is provided with a travelling cinema projection outfit which moves continuously from place to place over the different systems and by this means the propaganda films issued from the Central Publicity Bureau are widely circulated. That these displays, which are free, are fully appreciated is proved by the patronage accorded to them. The work in this branch of the Publicity work has so increased that it was found necessary to appoint two officers specially for the work and in order to improve the standard a specialist film officer was recruited from England on a three years contract at the end of 1929. It is proposed to train suitable Indians in this work.

A large number of posters by leading artists has been prepared for display in India and in the principal countries of the world focussing attention on the attraction which India has to offer to travellers and tourists.

Following up these posters many attractive pamphlets have been written by first class journalists and are now available in the leading Information and Travel Bureaux in India, Europe, America and other countries.

The production of the *Indian State Railways Magazine* commenced in the month of October 1927, and from the outset proved extremely popular. This publication is intended to be partly a publicity medium and partly to encourage the railwaymen of India to take a wider outlook on railway and general affairs. It contains a variety of articles on travel, archaeology, shikar, transportation, welfare, fiction and natural history.

Upper and third class conducted tours and bazar specials have been run by several of the railways with considerable success and the extension of these is contemplated in the near future.

An intensive Advertising Campaign has been carried out in Great Britain and from the number of enquiries received regarding tours in India there can be no doubt that it has proved successful. A short campaign was also carried out for the first time during 1929 in America and the results were satisfactory.

Shortly after the inauguration of the Central Publicity Bureau, the need was felt for a representative in England to give information and advice to potential travellers and to handle enquiries arising out of the advertising campaign which it was decided to carry out. A Publicity Officer was appointed and temporary offices secured in London in which an Indian State Railways Bureau was opened. It was soon found that separate permanent offices were required and these have now been obtained n 57, Haymarket, London, where sufficient accommodation is available to deal adequately with the many visitors who come there. With the opening of 'India House' a Branch Office will also be provided there, and this will deal more particularly with enquiries concerning Goods rates, but general enquiries can also be answered there. In order to obtain an adequate share of the American tourist traffic, an Office has also been opened in New York and a Resident Manager appointed there. This office is at present temporarily in accommodation kindly provided by the Canadian Pacific Railway in their General Offices at 342, Madison Avenue; New York.

Capital Expenditure.—The outlay during the year 1928-29 was Rs. 27·53 crores, of which Rs. 25·41 crores represented expenditure incurred on State-owned lines.

Considerable progress has been made with the programme of new construction. Close on 1,300 miles of new railway were opened for traffic during 1928-29, and at the close of the year there were some 2,100 miles under construction.

Trade review.—The earnings of railways are dependent on the general prosperity of the country which in the case of India is most easily measured by the agricultural position and the returns of foreign trade.

The monsoon of 1928 was characterised by a marked deficiency of rainfall in north-west India, including the United Provinces, where persistently dry weather prevailed for a considerable period. The rainfall was also slightly defective in Central India, the Central Provinces, Mysore and Madras and normal or slightly above normal elsewhere. During the closing stages of the monsoon, exceptionally heavy rain occurred at the begining along the east coast of Madras resulting in floods: and the rainfall during this period was in large excess over the whole of Northern and Central India and normal or slightly above normal in the Peninsula. Taking the year as a whole, the rainfall was within 25 per cent. of the normal, except in Sind where it was very defective.

2. The gross revenue receipts of State-owned railways were practically the same as in the previous year, *viz.*, 104 crores, but the net receipts were less by 1.4 crores; being 37.5 crores against 38.9 crores in the previous year.

3. The number of passengers carried on all railways fell by 3 million, but the aggregate distance travelled by passengers increased by 392 million miles indicating that the average distance travelled by each passenger was greater than in the previous year. This may be attributed to the incentive to travel afforded by the reduction in the charge per passenger per mile, which, on an average for all classes together, fell from 3.47 pies to 3.32 pies and for 3rd class from 3.25 to 3.10 pies. The increase in the aggregate distance travelled did not, however, counterbalance the loss in earnings consequent on a smaller number of passengers being carried, the earnings falling from 39.18 crores in the previous year to 38.24 in 1928-29.

Goods traffic showed a slight improvement; the total tonnage carried having increased from 89·7 million tons in the previous year to 90.8 million tons in 1928-29. The average yield per ton per mile for all commodities together also increased from 6.08 pies to 6.24 pies, which, in spite of a decreease of 13 millions in the ton miles, helped to raise the earnings on goods traffic to 71.15 crores as against 69.40 crores in the previous year.

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below :—

Commodity.	1927-28.		1928-29.		Increase + or Decrease— in Earnings (lakhs.)
	No. of tons originating in millions.	Rs. in crores.	No. of tons originating in millions.	Rs. in crores.	
(1) Fuel for public and Foreign Railways ..	20·38	10·17	20·10	10.15	—2

	85·82	67·34	86·98	69·10	+176

Open Mileage.—The total route mileage on March 31st, 1929, was 40,949·70 made up of—

Broad-gauge..	20,069·69	miles
Metre-gauge.. ..	16·883·16	,,
Narrow-gauge	3,996·85	,,

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows :—

Class I	36,748·37
Class II	3,153·64
Class III	1,047·69

Class I includes all the 5'-6" gauge mileage, 14,548 miles or 86 per cent. of the metre-gauge, and 2,131 or 53 per cent. of the narrow-gauges.

The State owned 29,451 miles or about 72 per cent. and directly managed 18,499 miles or about 45 per cent. of the total mileage open at the end of the year.

During the year 1928-29, 1,282 miles of new lines were opened for public traffic. Of this mileage, 1,204 miles belong to Class I, and 71 miles to Class II Railways.

Additions to Equipment.—During 1928-29 a considerable number of old carriages were replaced during the year by new carriages of larger seating capacity with the result that there was an increase in third class accommodation of 2,725 on the broad-gauge and 11,210 in the metre-gauge making a total increase of 13,935. There was a decrease in goods wagons of 3,754 on the broad-gauge but an increase of 507 on the metre-gauge.

The following table shows total figures of seating accommodation under the four classes:—

Class I Railways.	Number of seats in passenger carriages.			
	1st.	2nd.	Inter.	Third.
5'-6" ..	23,174	38,791	62,000	644,544
3'-3½" ..	19,163	13,761	11,049	359,666

Financial Results of Working.—The total gross earnings of all railways in India during the year 1928-29 amounted to Rs. 118·87 crores as compared with 118·26 crores in 1927-28. These figures, however, include railways owned by Indian States and companies for which the Government of India has no direct financial responsibility. The figures of receipts and expenditure for railways with which the Government are directly concerned are as follows:—

	(Omitting 000 1928-29. Rs.	Rs.
Traffic receipts from Government Railways	97,50,52	
Interest on Depreciation and Reserve Fund balances, etc.	67,27	
Surplus profits from Subsidized Companies' railways	39,72	
Total	98,57,51	
Working expenses including depreciation		62,53,01
Surplus profits paid to Companies		1,65,56
Interest on Government debt		24,55,35
Land and subsidy to Companies		5,21
Miscellaneous		65,30
Contribution at 1% on Capital charge—Commercial lines	6,30,00	
Net gain	95,74,43	
Contribution at 1% on Capital at charge Surplus	2,83,08	
Contribution of one-fifth of Surplus	56,62	
Total contribution from Railway Revenues	6,86,62	
Deduct loss on strategic lines	1,63,42	
Net payment due from Railway to General Revenues in 1928-29.	5,23,20	

After meeting all interest and annuity charges Government therefore received a net profit of 7·81 crores on the capital at charge of the State *minus* the net receipts, that is the gross receipts *minus* the working expenses, have in recent years given the following returns:—

	Per cent.
1913-14	5·01
1922-23	4·38
1923-24	5·24
1924-25	5·85
1925-26	5·31
1926-27	4·95
1927-28	5·30
1928-29	5·22

Up-to-date figures of the results of working of other countries are not available, but the following table compares the latest available figures of average receipts per ton mile of those countries which have published statistics of working later than 1919:—

	Receipts per ton mile. Pies.
United States of America 1925	5·85
United Kingdom 1925	15·17
Japan 1924-25	7·22
Switzerland 1924	21·91
South Australia 1924-25	17·01
Canadian Railways 1925	5·30*
India 1926-27	6·12

In the case of receipts per passenger mile the figures for United States of America and India are as follows:—

United States of America 1928. 14·4 pies.

India 1928-29 .. .. .. 3·32 „

while in England the present fare charged per mile third class is 18 pies.

From the above it will be seen that railway transportation of freight in India is one of the cheapest in the world and still more so for passenger traffic.

An examination of the latest available figures of operating ratios of foreign countries brings out results not unfavourable to Indian Railways.

* Converted at $ 4·80=£ 1 and at Re. 1=1*s* 0*d*

	Year.	Operating Ratio
United States of America	1926	72·53 per cent.

Value of Railway Materials Purchased.—The value of stores purchased by the principal Indian Railways in 1928-29 shows a large decrease from Rs. 35·87 crores to Rs. 29·63 crores. The principal decreases were under Permanent Way (340 lakhs), Rolling Stock (198 lakhs, Building and Station materials and Fencing (47 lakhs), Tools and Stores (138 lakhs) workshop machinery (12 lakhs) and other materials (89 lakhs). The value of indigenous material fell from Rs. 15·16 crores to 12·81 crores

	Value of imported materials.			Value of indigenous materials.	Total purchases 1927-28.	Total purchases 1928-29.

* Other materials consist of coal and coke, stone, bricks Indian lime and ballast, etc.

Output of Railway owned Collieries.—The output of railway owned collieries during 1928-29 was 3,044,207 tons out of a total of 72,30,784 tons consumed on class I Railways.

Number of Staff.—The total number of employees on Indian Railways at the end of the year 1928-29 was 807,866 as compared with 802,209 at the end of 1928-29. The increase in route mileage during the same period was 1,239 miles. The following table shows the number of employees by communities on 31st March 1928 and 1929:—

	Europeans.	Statutory Indians.					Grand Total.
		Hindus.	Muhammadans.	Anglo-Indians.	Other Classes.	Total.	
1927-28	5,110	5,73,901	1,79,262	14,374	27,455	7,94,992	8,00,102
1928-29	4,988	5,76,345	1,78,474	14,416	33,643	8,02,878	8,07,866

Indianisation.—The various Railway Companies managing State and other Railway lines have followed the lead given by Government and accepted the recommendation of the Lee Commission that the extension of existing training facilities should be pressed forward as expeditiously as possible in order that recruitment in India may be advanced as soon as practicable up to 75 per cent. of the total number of vacancies in the Superior Services of the Railway concerned.

Schemes of recruitment.—The Secretary of State's approval to the schemes of recruitment and training of superior officers of the State Railways in the main branches of service—(1) Civil Engineering, (2) Transportation, (3) Commercial and (4) Mechanical Engineering—were received and the Regulations for the recruitment of these services issued under Railway Department Resolution No. 2508-E of 15th July 1926. The Regulations were revised in form and republished during 1927-28. Regulations for the recruitment and training in India of Officers for the Electrical Engineering and Signal Engineering Departments were incorporated in the Regulations for the Mechanical Engineering and Transportation (Power) Departments.

Nine vacancies in the Indian Railway Service of Engineers and seven in the Transportation (Traffic) and Commercial Departments were filled during the year under these Regulations. The quota committees formed by Provincial Local Administrations nominated 95 candidates to appear for the two competitive examinations.

Twelve special classes for the Mechanical Engineering and Transportation (Power) departments were recounted during 1927-28 and the same number during 1928-29. The Provincial Quota Committees duly nominated candidates for selection of the Public Service Commission.

The Board have under preparation a scheme for the recruitment and training in India of Officers for the State Railway Coal Department and also regulations for the recruitment in India of Medical Officers for State Managed Railways.

Public interest in the question has been maintained during the year, finding voice in the press and by interpellations in the Legislature. Considerable progress has been made with the scheme for the training of junior railway officers and of the senior subordinate staff on Indian railways. In this connection a Transportation School was opened at Chandausi on March 2nd, 1925, as a temporary measure as suitable buildings were available which could be adapted at small cost. Here Officers courses were held and the school also acted as an Area school for the E. I. Railway.

The foundation upon which the training scheme of Indian State Railways has been based is the Area School whose functions are :—

(*a*) The training of probationers who have not yet commenced their railway service, and

(*b*) The provision of periodical "Refresher" courses for those already in the railway service, certificates being granted on the results of each course.

Training will be provided for probationers in three groups :—

(*a*) The Station Group, comprising telegraph signallers, Assistant Station Masters and Station Masters.

(*b*) The Commercial Group, comprising Coaching and Goods Clerks.

(*c*) The Train Staff Group comprising Guards.

The courses will vary from 3 to 10 months depending on the group. The second function of the Area Schools, the provision of refresher courses is intended to provide course of training for the staff at intervals of 5 years, certificates being granted at the completion of the courses. It is hoped in time to ensure that no railway servant will be considered eligible for promotion to a higher post unless he holds the corresponding school certificate. The men selected for training as probationers are chosen on some railways by committees of officers on the various divisions and a central committee under the Personnel Officer at headquarters.

Above this comes the central school to carry out the same functions for Officers. The site selected for this central school, the **Railway Staff College**, was Dehra Dun, and the College opened for its first course in January 1930. Other services like the Army, the Navy and the Air Force have their Staff colleges but Indian Railways can claim the credit for being the first to open a staff college at which Junior and Senior Officers will undergo courses of instruction in Transportation and Commercial subjects and probationer officers will receive theoretical training sandwiched in with practical work on railways. The College is situated in an estate of some 155 acres near the Forest Research Institute at Dehra Dun. The surroundings are well wooded and picturesque. The College building itself has a handsome facade 360 ft. long, and is surmounted by a clock tower 90 ft. high. The main feature in the building is the Transportation Hall which is 120 ft. long by 49 ft. wide and has a height of 45 ft. from the floor to its arched roof. All around the floor runs a bench carrying a model railway of 2½" gauge used for demonstration purposes. This is worked electrically, and has 13 stations with 19 cabins, fully equipped with signals and block instruments. There are sections of double and single track, and in the West half of the room the lines converge into a terminal station worked by a 50 lever cabin. Around the hall runs a gallery with alcoves sufficiently wide to house book cases and museum exhibits. Next in size to the Transportation Hall, but none the less important on that account, is the Locomotive Model Room. It contains a full sized wagon showing the working of the Vacuum Brake, a full sized train lighting set, a model footplate showing the driver's controls, trollies fitted with automatic couplers : models illustrating superheating, steam distribution and lubrication, and many other items of equipment too numerous to catalogue.

The rest of the building contains the Telegraph Demonstration Rooms examination and lecture rooms, a library and meeting rooms, rooms for the instructional staff, the principals, and clerks' Offices, and last, but by no means,

least, a useful little workshop where are being undertaken not only the repairs to College equipment, but also model work for State Railways Area Schools.

Behind the College building are the hostels, arranged in four buildings. Each of these contain 16 units, each unit consisting of a bed sitting room and a bathroom provided with modern sanitary fittings. These four buildings are connected by pillared cloisters with a central building, which contains six mess rooms for the various communities, kitchens, two reading rooms, two billiard rooms, and a lounge.

Nor is outside recreation to be forgotten: a large area has been levelled to form a playing field, on the west side of which a pavilion is being erected. There are, in addition, six tennis courts, and, at an early date, it is intended to lay out a golf course.

The Area School for the North Western Railway was temporarily opened at Lyallpur but it has now moved into permanent quarters. A temporary training school for the G. I. P. Railway has been established at Bina, pending the provision of a permanent school at Dhond and the scheme for forming a similar school at Gomoh for the E. I. and E. B. Railways is under consideration.

Fatalities and Injuries.—During 1928-29 there was an increase of 288 in the number of persons killed and an increase of 922 in the number of persons injured as compared with the figures of 1927-28. The number of passengers killed shows an increase of 31 and the number of passengers injured shows an increase of 189.

The following table shows the numbers killed and injured separately under passengers' railway servants and others for 1928-29 as compared with 1927-28 :—

	Killed.		Injured.	
	1927-28.	1928-29.	1927-28.	1928-29.
A. Passengers—				
(1) Accidents to trains, rolling-stock, permanent-way, etc.	45	24	104	207
(2) Accidents caused by the movement of vehicles used exclusively on railways	339	390	1,046	1,131
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	3	4	29	30
B. Servants—				
(1) Accidents to trains, rolling stock, permanent-way, etc.	23	21	166	192
(2) Accidents caused by the movement of vehicles used exclusively on railways	323	341	1,323	1,492
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	54	49	2,713	3,180
C. Others—				
(1) Accidents to trains, rolling-stock, permanent-way, etc.	39	55	84	94
(2) Accidents caused by the movement of vehicles used exclusively on railways	2,203	2,448	732	775
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	41	26	68	86
Total ..	3,070	3,358	6,265	7,187

Of the total number of 3,358 persons killed 2,002 were trespassers on the line and 339 committed suicide. Thus 2,341 or over 69 per cent. of the persons killed on railway premises were for causes over which the railways have no control.

Local Advisory Committees.—115 meetings were held of the Local Advisory Committees on State-owned Railways during the year as compared with 108 in the previous year and 92 in 1926-27. Two new branch committees were formed during the year, one by the G. I. P. Railway at Cawnpore and the other by the M. & S. M.

Railway at Hubli. The number of meetings held on the different railways during the year was as follows:—

Railway.		*No. of meetings.*
Assam Bengal		3
Bengal and North-Western.	Muzaffarpur	4
	Gorakhpur	4
Bengal Nagpur	Calcutta	12
	Bihar & Orissa	3
	Central Provinces.	3
B.B. & C. I.		10
Burma		4
Eastern Bengal		8
East Indian	Calcutta	12
	Cawnpore	3
	Lucknow	3
G.I.P.	Bombay	11
	Nagpur	3
	Cawnpore	2
M. & S. M.	Madras	7
	Hubli	4
N. G. S.		3
North Western	Lahore	12
	Karachi	4
Rohilkhund and Kumaon		2
South Indian		4
	Total..	115

Many different subjects were discussed at the meetings thus indicating the increasing importance attached by the public to the existence of the Committees. The following may be mentioned as typical of the subjects discussed:—

Overcrowding in trains.
Alterations in Time Tables.
Arrangements for the provision of refreshments and drinking water for passengers.

Remodelling of and improvements to stations.
Facilities for 3rd Class passengers.
Reduction in fares.
Concession in fares.
Rates for goods traffic.
Opening of new stations.
Electrification schemes.

Design of railway carriages.
Sanitary arrangements in lavatories of 3rd class carriages.
Settlement of claims.
Passengers travelling without tickets.
Construction of new lines.

Running of through trains and carriages.
Return tickets.
Arrangements in connection with fairs and during rush periods.
Late running of trains.
Intermediate class accommodation on certain trains.

Mileage coupon tickets.
Railway risk notes.
Waiting rooms for Intermediate class passengers.
Travelling cinema cars.
Provision of lavatories in servants' compartments.

Electric fans in intermediate compartments.
Checking of passenger's luggage in trains.
Cold storage transit for fish and refrigerator vans for perishables.
Road motor competitions.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	1,185
Capital at charge	Rs. 24,07,76,000.
Net earnings	Rs. 1,08,11,000.
Earnings per cent.	4·49.

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatihar and the East Indian Railway at Benares and Mokameh Ghat.

Mileage open	2,079.
Capital at charge	Rs. 20,63,70,000.
Net earnings	Rs. 2,13,69,000.
Earnings per cent.	10·35.

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre gauge from Nagpur to Chhatisgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the board gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

Mileage open	3,117.
Capital at charge	Rs. 71,93,44,000.
Net earnings	Rs. 2,38,73,000
Earnings per cent.	3·32.

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana Malwa metre gauge system of State railways

was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Mileage open	.. ..	3,852.
Capital at charge	..	Rs. 75,40,06,000.

Burma Railways.

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1919, Sir Arthur Anderson said :—" During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chitagong and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam-Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee. From January 1st, 1929, its working will be taken over by the State.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholders by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhund railway was amalgamated with it.

Earnings per cent.	.. ..	5·79.

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15¾ miles on the Bhore Ghat and 9¼ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th 1925, when the State took over the management.

Madras and Southern Mahratta Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company.

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Net earnings	..	Rs. 4,98,18,000
Earnings per cent.	.. ..	3,39

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre gauge systems to the North and those to the South of the Ganges, a third rail was laid between Bhuriwai and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1925.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

The Indian States.

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State; the Kathiawar system of railways, constructed by subscriptions, among the several Chiefs in Kathiawar; the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

PROGRAMME OF FUTURE CONSTRUCTION.

At the end of the financial year 1928-29 a total of 2,896 miles of new lines was under construction, distributed as follows:—

	Miles.
5'-6" gauge	.. 1,375.66
3'-3¾" gauge	.. 1,288.74
2'-6" gauge	.. 231.77

During 1928-29 sanction was accorded to the construction of new lines totalling 65·3 miles.

	Miles.
5'-6" gauge	.. 440.81
3'-3¾" gauge	.. 212.19

Lines under Construction.

Of the total of 2,896 miles of lines of various gauges under construction at the end of the year, a brief account of some of the more important is given below. Owing to lack of funds, however, much of the work has had to be held in abeyance or slowed down.

Raipur-Vizianagram Railway.

This trunk line on the 5'-6" gauge, 261 miles in length, passes through a large undeveloped area, and will provide direct communication between the Central Provinces and the new Harbour now under construction at Vizgapatam on the east coast. The section of the line from Vizianagram to Parvatipuram, 48 miles long, was completed and opened to traffic in 1924 and another section of 62 miles from Raipur end in November 1929.

Work at the northern and southern ends is progressing well but on the middle portion sickness and delay in obtaining possession of land have impeded progress. The line will be opened by sections as they are ready, but it is not expected that the whole line will be opened throughout till 1933.

Vizagapatam Harbour.

Throughout the year reclamation work was vigorously pushed on, and bunds were constructed around the railway and the manganese wharf area on the north side of the dock reclamation area and the storage canal. Good progress was made with the sinking of the monoliths of the wharf wall, though work was at first somewhat hampered owing to the late delivery of the two loco cranes which had been ordered from England. The provision of an additional wharf for dealing exclusively with the manganese ore traffic, and of a dry dock, was sanctioned during 1928. Considerable progress has been made in the construction of the dry dock, and work on the construction of staff quarters is well in hand.

It has been decided that it will be more satisfactory in every way to construct a number of basins along the sides of which ships can berth rather than a number of projecting piers as this will facilitate the construction of suitable railway connections the working of the harbour when completed and the rapidity of construction. Certain anti-malarial measures were also carried out in accordance with the advice of the Director of the Central Malaria Organisation with the Government of India.

Lucknow-Sultanpur Jaunpur (E. I. Railway).

The question of constructing a railway between Jaunpur and Lucknow *via* Sultanpur has been long under consideration. The object of the scheme is to open out the country along the Goomti river between the Oudh and Rohilkhand main and loop lines. The railway will run more or less along the watershed between the Goomti and Sai Rivers and will cross a well cultivated fertile tract of country. The construction of the line which is about 142 miles long on the 5'-6" gauge was sanctioned in August 1927 and is expected to be ready by October 1931.

Unao-Madhoganj (E. I. Railway.)

The construction of a line between Unao and Madhoganj a distance of 48 miles on the 5'-6" gauge was sanctioned in August 1927. The principal object of this line is to open up the tract of country bounded on the west by the Ganges, on the east by the East Indian Railway main line Bareilly to Lucknow and on the south by the Lucknow-Cawnpore Branch. The line may eventually form part of a larger scheme for a through line between Unao and Chandausi *via* Jalalabad and Budaon; but as it was financially sound on its own merits and would not conflict with further developments it was decided to proceed with it independently especially in view of the fact that the area which the line would traverse, would be watered by the Sarda Canal under construction. It is hoped to have the line open for public traffic by May 1930.

Kartal-Kamasin (G. I. P. Railway).

The construction of this broad gauge branch on the Great Indian Peninsula Railway, 59 miles long, was sanctioned in February 1928. It is intended to serve a fertile and well irrigated area in the Banda District of the United Provinces, and will open out the Ken Baghain Doab commanded by the Ken Canal. Construction has been temporarily deferred.

Vasad-Borsad-Katana (B. B. & C. I. Railway).

The construction of this line, about 26 miles long on the Bombay, Baroda and Central India Railway broad gauge was sanctioned in December 1927. It will traverse a rich agricultural tract of the Borsad Taluka and will greatly stimulate trade and development therein. Arrangements are at present in hand to obtain possession of the land required for the line, and it is hoped to open it in 1930.

Chak Jhumra Khushab Railway.

The construction of this broad gauge chord line by the N. W. Railway was sanctioned in two parts, (*i*) from Chak Jhumra to Chiniot in November 1926 and (*ii*) the remainder in April 1927. It will provide across connection between the Lyallpur District and Shahpur which is badly required and will also provide a shorter alternative route to Waziristan to the relief of the main line north of Lahore. About 80 miles of new line are involved and two large bridges over the Chenab and Jhelum rivers. The line is being built in three sections. The Chak Jhumra Chiniot section was opened in 1928, and the Chiniot Khushab section in 1929 except for those lengths in which the bridges over the Chenab and Jhelum rivers come.

Lyallpur-Chananwala (N. W. Ry.)

The construction of the Lyallpur-Chananwala Railway, on the 5'-6" gauge, was sanctioned in February 1928, and with the Chak Jhumra-Khushab line will provide a cross connection from Kundian to Chananwala which will probably be extended to Bhatinda. The line, which is about 110 miles in length, will connect up the important towns of Sargodha, Chiniot, Lyallpur, Samundri, Tandlianwala, Okara, Dipalpur and Fazilka. Work, however, has been temporarily suspended.

Batala-Beas (N. W. Railway).

The construction of this railway, about 42 miles in length, was sanctioned in January 1928. It will form a loop connecting Batala on the Amritsar-Pathankot branch with Butari on the Amritsar-Jullundur section of the main line of the North Western Railway.

Besides touching three important places of pilgrimage it will traverse one of the most fertile tracts in the Punjab. The Batala Qadian section of twelve miles has been opened but the remainder of the work is being held in abeyance.

Dacca Aricha Railway.

The construction of the Dacca Aricha Railway, 64 miles long, has been sanctioned at a cost of Rs. 189 lakhs. This line will form a most important link. It is expected that the final location and land acquisition will take up to 1931 and the line be ready for opening in 1935.

Abdulpur-Nawabganj (E. B. Railway.)

The construction of this broad gauge line about 57 miles long was sanctioned in October 1927. From the railway point of view the line is very important as it will permit of traffic being diverted from the Godagari ferry to *via* the Sara bridge with a considerable reduction in working expenses. The line will serve Rampur Boalia or Rajshahi, a district town of considerable local importance. The section from Abdulpur to Rampur Boalia 28 miles was opened in February 1929 and the remainder is expected to be ready early in 1930.

Salem-Vriddhachalam (S. I. Railway.)

This railway is the outcome of several proposals, some dating as far back as 1909, for lines to serve the Salem and South Arcot district. The line which is to be on the metre-gauge, will be about 83 miles long and together with the Vriddhachalam-Cuddalore Railway now under construction, will form a cross feeder connecting Salem Junction on the broad-gauge with Cuddalore on the metre-gauge. It will also pass through fairly populous country and busy trade centres and will afford facilities for the general development of trade besides developing the well irrigated country to be traversed. It is expected to be ready early in 1931.

Trichinopoly-Manamadura (S. I. Railway).

The construction of this line 94 miles in length and on the metre-gauge, was sanctioned in the year 1927-28. It is one of the lines recommended by Mr. Izat, who was deputed in the year 1921, to investigate the railway requirements of Southern India. The line will traverse a thickly populated country and serve several important towns including Siviganaga in the vicinity of which there are several renowned temples largely attended by pilgrims. It will also afford the relief to the Trichinopoly-Manamadura Section of the South Indian Railway main line which will be needed when the Villupuram-Trichinopoly line is open. 33 miles to Pudukkottai were opened in April 1929 and the remainder is expected to be ready in March 1930.

Taungdwingyi-Kyankpadaung (Burma Railways.)

The first section from Taungdwingyi to Natmauk has already been opened for traffic. Steady progress has been maintained on the Natmauk-Pinchaung and Pinchaung Kyankpadaung Sections and a second section of 35 miles is expected to be opened early in 1930. The work on major bridges was hampered by heavy floods. It is expected that the whole line will be opened throughout in February 1931.

Minbu-Pakokku (Burma Railways.)

The construction of this important metre-gauge line, about 312 miles in length, as part of the Burma Railways system, was sanctioned in December 1927. It involves a wagon ferry over the Irrawaddy river connecting Patanago and Malun. The line is designed to open out a large area at present lacking in means of transportation. No work is, however, in progress at present.

Bridge over the Irrawaddy at Saiganj.

The construction of a bridge over the Irrawaddy at Saiganj has been sanctioned at an estimated cost of Rs. 188 lakhs. Considerable progress with the approaches has been made during 1929.

Electrification of the Madras Suburban Section South Indian Railways.

A scheme for the electrification of the suburban lines of the South Indian Railway from Madras Beach to Tambaram was sanctioned during the year 1927-1928 at an estimated cost of Rs. 42 lakhs approximately. It is anticipated that the introduction of electric traction on this section will not only enable the railway administration to cope with the normal increase in traffic, but will also considerably encourage the development of suburban passenger traffic in the area.

Madras Hydro-Electric Schemes.

Similarly further investigations had also to be made of the Madras Hydro-Electric projects and of the schemes for the electrification of the Madura-Trichinopoly and certain other section of the South Indian Railway for which it is intended to obtain power from hydro-electric sources. The results of these further investigations are understood to show that the electrification of the Nilgiri Railway can only be justified at present.

Electrification of Suburban Lines near Calcutta.

With regard to the Calcutta suburban electrification schemes, it was found necessary in view of the heavy expenditure involved to carry out further investigations both as to the probable development of traffic in the suburban area and the estimated cost of the project, in order to ascertain to what extent the introduction of electric traction on the section would be justified financially.

Terminal Facilities for Passenger Traffic of the Bombay, Baroda and Central India Railway at Bombay.

The Railway Board with the approval of the Secretary of State for India have sanctioned the construction of the Bombay, Baroda and Central India Railway terminal station at Bellasis Road, Bombay, for dealing with the long distance passenger traffic at an estimated cost of Rs. 1,52,90,000. The work is expected to be completed in 1930. When completed this station will take the place of Colaba station which will be closed and dismantled.

Calcutta Chord Railway.

This line starts from a point near Dankher station on the Burdwan-Howrah Chord of the East Indian Railway and joins the Eastern Bengal Railway near Dum Dum Junction.

It is about 8 miles in length and includes a bridge over the Hooghly river at Bally. This connection is primarily intended for export of coal from the East Indian Railway. But it is likely in the near future to be used also for coal from the Bengal Nagpur Railway Coalfields, and with the developments anticipated in the terminal arrangements at Calcutta and the electrification of the lower portion of the Eastern Bengal Railway a large proportion of the Suburban passenger traffic will eventually pass over it.

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20·05 miles of which 7·19 will be upon the dry land of the various lands, and 12·86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and head-quarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than hals a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft. aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

Main results of working of all Indian Railways treated as one system.

(*a*) Export f.o.b. value
(*b*) Excludes the value of antimonial lead.
(*c*) Export values.
(*d*) Export value for 1927-28 and 1928-29.

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out, in all but remote localities, the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, copperas, copper, lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The high quality of the native-made iron; the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago, the chemical manufacturer of Europe found among his by-products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper, and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

Coal.

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwana coal-fields. Outside Bengal and Bihar and Orissa the most important mines are those at Singareni in Hyderabad, and in Central Provinces but there are a number of smaller mines which have been worked at one time or another.

The subjoined statement shows the production of all mines in British India and in Indian States during 1928, as compared with 1927:—

Province.	1928.	1927.
	Tons.	Tons.
Assam	298,089	323,342
Baluchistan	17,931	14,444
Bengal	5,639,993	5,554,990
Bihar and Orissa ..	14,827,453	14,517,866
Central India	218,750	217,661
Central Provinces ..	732,353	666,758
Hyderabad	734,765	707,213
Punjab	46,152	62,704
Rajputana	27,386	17,358
Total ..	22,542,872	22,082,336

Coal Prices.—The value of the coal produced in India is reported annually by mine-owners. It represents the actual or estimated wholesale price of coal at the pit's mouth.

In spite of the increased output, the total value of the coal produced in India decreased from Rs. 9,48,70,013 (£7,079,852) in 1927 to Rs. 8,84,95,027 (£6,604,106) in 1928.

There was a reduction in the pit's mouth value per ton of coal for India as a whole from Rs. 4-4-9 to Rs. 3-14-10—a fall of Re. 0-5-11—and all provinces participated in this fall with the exception of Assam and Baluchistan, the rise in the case of Assam being 7 pies only. In the two great coal provinces, Bihar and Orissa and Bengal, the value dropped by Re. 0-5-5 and Re. 0-7-4 respectively. In the Central Provinces it fell by Re. 0-3-3; in Central India the fall was Re. 0-8-3, and in the Punjab Re. 0-6-10.

Labour in the Coal Mining Industry.

The average number of persons employed in the coalfields during 1928, showed a slight decrease in spite of the substantial increase in production. The average output per person employed, therefore, again showed an advance on the previous years, the figure of 110.5 tons for 1925 rising tto 113.1 tons for 1926, 122.3 tons for 1927 and 125.5 tons fo 1928. The figure for 1928 is higher than any previously recorded, and is the result, partly of an increased use of mechanical coal-cutters and partly to concentration of work. During the past few years a large number of collieries have been shut down and the labour absorbed in the remainder; this concentration permits of a proportional reduction in the supervising staff resulting in a larger tonnage per head.

There was a regrettable increase in the number of *deaths by accident;* these amounted to 234, which is, nevertheless, still an improvement on the annual average for the quinquennium 1919-23, which was 274. In addition, it relates to a production which is over 2¾ million tons in excess of the average for 1919-23. The death rate was 1.3 per thousand persons employed in 1928, against 1.1 for 1927; the average figure for the period 1919-23 was 1·36.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposit that no European ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot Districts. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was

originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the lastnamed district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonai States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Buru, a portion of Notu Buru, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite, often lateritised at the outcrop. Cross-cut into the interior of the deposit show that the hæmatite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. **The Tata Iron and Steel Company** at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hæmatite, with small proportions of magnetite, in close association with granite on the one hand and granulitic rocks on the other.

The production of iron ore in India is still steadily on the increase; India is now, in fact, the second largest producer in the British Empire, and yields place only to the United Kingdom. Her output is of course still dwarfed by the production in the United States (over 60 million tons) and France (over 40 million tons); her reserves of ore are, however, not much less than three-quarters of the estimated total in the United States, and there is every hope that India will in the early future take a much more important place among the world's producers of iron ore. In 1928 there was an increase in the Indian output over the previous year of 11.3 per cent. amounting to 209,246 tons. The figures shown against the Keonjhar and Mayurbhanj States in the following statistical table represent the production by the United Steel Corporation of Asia, Ltd., and the Tata Iron & Steel Co., Ltd., respectively. Of the total production of 1,131,746 tons shown against Singhbhum, 415,761 tons were produced by the Tata Iron & Steel Co., Ltd., from their Noamundi mine, 380,605 tons by the Bengal Iron Co., Ltd., from their Pansira, Ajita and Macleilan mines, and 321,730 tons by the Indian Iron & Steel Co., Ltd., from their mines at Gua; the remaining 13,650 tons were produced by another firm. The output of iron ore in Burma is by the Burma Corporation Limited and is used as a flux in lead smelting.

(a) Estimated.

The total number of indigenous furnaces that were at work in the Central Provinces during the year 1928 for the purpose of smelting iron ore was 190 against 205 in the previous year; 102 furnaces were operating in the Bilaspur district, 54 in Mandla, 16 in Drug, 14 in Raipur, 3 in Saugor and 1 in Jubbulpore.

Although the production of pig iron in India decreased from 1,140,051 tons in 1927 to 1,051,884 tons in 1928, the quantity exported rose from 383,960 tons in 1927 to 428,625 tons in 1928. The statistical table given below shows that Japan is still the principal consumer of Indian pig iron, nearly 75 per cent. of the total exports having gone to that country in 1928. There was a further rise in the export value per ton of pig iron from Rs. 45.4 (£3.39) in 1927 to Rs. 47.0 (£3.51) in 1928.

There was a further increase in the **production of pig-iron** in India from 902,433 tons in 1926 to 1,140,051 tons, whilst the quantity exported rose from 309,505 tons in 1926-27 to 393,249 tons in 1927-28. Japan was the principal consumer of Indian pig-iron in 1927-28, nearly 69 per cent. of the total exports going to that country. There was a very slight rise in the export value, which was Rs. 45·1 (£3·37) per ton in 1926-27 and Rs. 45.4 (£3.39) in the following year.

The Steel Industry (Protection) Act 1924—Act No. XIV of 1924—authorised, to companies employing Indians, bounties, which were granted upon rails and fishplates wholly manufactured in British India from material wholly or mainly produced from Indian iron-ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and consequently the payment of bounties ceased on the 31st March 1927, but the Industry is protected to a certain extent by varying tariffs on different classes of imported steel.

Exports of Pig Iron from India during the years 1927 and 1928.

MANGANESE ORE.

This industry commenced some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

Record Output in 1927.—Before the year 1926, the record production of manganese in India took place in the year 1907, when 902,291 tons were raised. In 1926, the output rose to 1,014,928 tons, valued at £2,590,357, f.o.b. Indian ports; the rise in output was, however, accompanied by a decrease in value. In 1927 the production rose to the highest yet recorded figure of 1,129,353 tons, accompanied by a rise in value to the peak figure of £2,844,237, f.o.b. Indian ports. During the year 1928, the upward tendency of manganese was not maintained, the output falling to 978,449 tons, valued at £2,321,201, f.o.b. Indian ports.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell in subsequent years until, in 1922, it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small, and the gold thus won is used locally for making jewellery.

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java, and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil-fields are found in the Irrawaddy valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and to 1886, prior to the annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil-fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fall to 31½ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyu district during 1911. Oil was struck at Minbu in 1910, the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

Output in 1928.—The world's production of petroleum in 1926 amounted to a little over 151½ million tons, of which India contributed 0.79 per cent. In 1927 the world's production jumped to some 171 million gallons, of which the Indian proportion on a practically stationary production fell to 0.72 per cent. India is now eleventh on the list of petroleum producing countries.

Petroleum statistics prove that it is becoming more and more difficult to maintain the output of India (including Burma) at the high levels it reached in 1919 and 1921 when peak productions of well over 305½ million gallons were reached. During 1928, the total production amounted to 305,943,711 gallons, which is the highest ever recorded. In spite of the fact that there was an increase in output not far short of 25 million gallons, there was a decrease in the value of the product amounting to Rs. 14,37,289 (£107,261). The refinery through-put was not increased, the excess of production over what was needed having been used to restore depleted stocks of crude oil. The increase in output, notable as it is, can only be regarded as an arrest in the decline which has set in and which, with possible interruptions, is likely to continue slowly and steadily during the present generation, unless a new field of importance is discovered. The chances of the latter recede year after year as exhaustive geological research continues to prove fruitless.

Amber Graphite and Mica.—Amber is found in very small quantities in Burma, the output for 1928 being 29 5 cwts. valued at Rs. 12,020. Graphite is found in small quantities in various places but little progress has been made in mining except in Travancore. The total output in 1921 was 25 tons. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 38,189 cwts. compared with 43,650 cwts. in 1913. Owing to necessary restrictions with regard to the export of mica, the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years.

There was an increase in the declared production of mica from 24,614 cwts. valued at Rs. 24,52,055 (£182,989) in 1927 to 45,112 cwts. valued at Rs. 24,10,499 (£179,887) in 1928. But the output figures are incomplete, and a more accurate idea of the size of the industry is to be obtained from the export figures. In both the years 1926 and 1927 the quantity exported was roughly double the reported production. The United States of America and the United Kingdom, which are the principal importers of Indian mica absorbed 52 per cent. and 35 per cent. respectively of the total quantity exported during 1926 and 23.7 per cent. and 49.4 per cent. respectively during 1927. During this latter year Germany took 14.2 per cent. of the quantity exported.

Tin, Copper, Silver and Lead.—The only persistent attempt to mine tin is in Burma. The output was for some time insignificant but rose in 1913 to 116 tons valued at £46,000 which fell to £38,000 in 1914. In 1925 Burma yielded 2,308 tons. Copper is found in Southern India, in Rajputana, and at various places along the outer Himalayas, but the ore is smelted for the metal alone, no attempt being made to utilize the by-products. In 1924 the production of 2,935 tons of copper-matte — valued at Rs. 15,94,527 was reported by tha Burma Corporation, Ltd., in the Northern Shan States.

Works at the Mosaboni Mine of the Indian Copper Corporation, Ltd., in the Singhbhum District, was practically suspended during the year 1926, pending the raising of the capital required for the erection of the necessary concentrating, smelting, refinery and power plants. Early in 1927 the Anglo-Oriental and General Investment Trust, Ltd., London, assumed control, a sum of £350,000 was subscribed and the erection of the new plant commenced at once at the company's new site at Moubhandar Ghatsila, together with an assisted siding from the Bengal-Nagpur Railway main line at Ghatsila, and an aerial ropeway from the mine.

A considerable decrease in the production of tin ore in Burma has to be reported for 1928 during which the output amounted to 2,780 tons, valued at Rs. 45,41,201 (£338,895), against 3,495 tons valued at Rs. 66,17,773 (£493,864) in the preceding year. This decrease of 715 tons is somewhat fictitious, as the figures for 1928 do not include 218 tons of low grade complex wolfram-scheelite-cassiterite ore recovered from the mine dumps of Mawchi in the Southern Shan States, and purchased from tributors for £4,018. No milling operations were performed, and the percentage composition of the mixed ore is, therefore not precisely known. The figure for 1927 included 836 tons from Mawchi, calculated to be the proportion of tin ore in 1,466 tons of concentrates derived from 27,266 tons of mixed wolfram-scheelite-cassiterite ore; these concentrates were assumed to contain 43 per cent. of wolfram and 57 per cent. of cassiterite. There is no reported output of block tin.

There was again a notable increase in the **production of silver** from the Bawdwin mines of Upper Burma, amounting to 1,400,291 oz. The output of silver obtained as a by-product from the Kolar gold mines of Mysore increased to the extent of 862 oz.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1913. In 1914 the production was 8,558 tons, and although the output fell to 96 tons in 1915, there is a prospect of India becoming an important producer of zinc ore in the future. Important silver-lead-zinc deposits occur at Bawdwin, in Tawngpeng State one of the Northern Shan States in Upper Burma. The mines are connected with the Mandalay-Lashio Branch of the Burma railways by a narrow-gauge line 51 miles long, the lines meeting at Manhpwe, which is about 544 miles from Rangoon. They were worked for many centuries by the Chinese for silver, and have long been known to contain zinc ore; until recently, however, no serious attempt appears to have been made to market the ore for its zinc

values. In 1907 the present undertaking was started by the Burma Mines, Ltd., with the idea of recovering the lead from the old slag heaps left by the Chinese, estimated at 125,000 to 160,000 tons, and later to work the deposit. Smelting operations on these slags were first carried out at Mandalay, but later the works were transferred to Namtu, about 13 miles below the mines on the narrow-gauge railway. The deposits, which comprise an area of about 2,500 acres, have now been taken over by the Burma Corporation, Ltd., and its production rose from 58,286 tons valued at Rs. 73,19,468 (£546,229) in 1927 to 64,122 tons valued at Rs. 74,96,118 (£559,412) in 1928. The exports during 1928 amounted to 76,031 tons valued at Rs. 74,10,889 (£553,051) against 67,135 tons valued at Rs. 70,06,018 (£522,737) in the preceding year.

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline garnet, rock-crystal, agate, cornelian, jadeite and amber. The production of diamonds in Central India rose from 68.60 carats valued at Rs. 28,559 (£2,131) in 1926 to 112.74 carats valued at Rs. 44,943 (£3,354) in 1927. Amber has already been referred to; of the rest only the ruby, sapphire and jadeite attain any considerable value in production and the export of the latter has declined owing to the disturbance in China, which is the chief purchaser of Burmese, jadeite. The output of the ruby mines in 124 was only 101,097 carats or less than half the average annual quantity produced during the two preceding quinquennial periods. In 1922 an exceptionally valuable ruby of nearly 23 carats was found of rare size and quality. A severe decline in the output from the Mogok ruby mines of Upper Burma in 1924, followed in 1925 by a marked drop in value, bore witness to a serious decline in the industry. The Burma Ruby Mines, Limited, ultimately decided to go into liquidation and the mines were offered for sale in September, 1926. The total production in 1928 was valued at Rs. 1,77,512.

Radio-active Minerals.—The General Report of the Director of the Geological Survey of India for 1913 includes a brief report by R. C. Burton on an occurrence of pitchblende at mica mines near Singar, Gaya district, Bengal. The pitchblende occurs as rounded nodules in a pegmatite that is intrusive in mica schists. Other minerals occurring in the pegmatite are mica, triplite, ilmenite, tourmaline, and uranium ochre; whitish columbite, zircon, and torbernite have also been recorded. Of these minerals triplite is stated to be the commonest.

The importance of the find of uranium oxide impregnating the triplite led to the discovery of weathered pitchblende, and as the pits were deepened the weathering became less and less until pure pitchblende was obtained. In the six months from July 1913 to February 1914, eight hundred weight of pitchblende was obtained from Abrakhi Hill together with six tons of uranium earth debris, five to six hundred tons of triplite and two tons of tantalite. These ores were raised under a prospecting license in respect of Abrakhi Hill alone and in March 1914, mining lease for thirty years was obtained in respect of sixty square miles of the Singar estate. The first intention was to work only the five square miles round Abrakhi and a syndicate was formed for this purpose, which on the outbreak of war, was refused a Trading License on account of the German element in it.

SALT.

There was an appreciable decrease in the total output of salt in 1928 amounting to 96,596 tons, the two chief contributors to the decline being Madras and Northern India. Aden shewed an increase of 41,014 tons and Bombay and Sind an increase of 27,880 tons. There was a small increase from Burma.

Stock Exchanges.

There are about 446 Share and Stock Brokers in **Bombay**. They carry on business on the Brokers' Hall, bought in 1899 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to fix the rates in times of emergencies. The official address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased and it was recently sold by public auction for Rs. 21,800. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. This building was pulled down and the extension was completed last year. The present value of the card is about Rs. 7,000. The rules of the Association were revised in October 1916 and from the New Year the purchaser of shares has to pay the stamp and transfer fee instead of the seller. There are two classes of Exchange Brokers, Europeans and Indians, the latter being certified for recognition by the native Stock Exchange. Business in Government Paper and all other Trustees' Authorised Securities is carried on under the rules of the Bombay Stock Exchange, but in the street outside the hall.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street, known as the **Bombay Stock Exchange, Ltd.** This separate Exchange no longer functions older body: it was revived in 1922. It has ceased to function again.

Committee of Enquiry.—In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, government, customs, practices, rules, regulations and methods of business of the Native Share and Stock Brokers' Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter appertaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee issued a report early in 1924 signed by all the members save one who appended a minority report. The majority report made several important recommendations for reform notably one aimed at the prevention of corners and another for facilitating the handling of legitimate complaints against the brokers on the part of the public. The Association, however, adopted the minority report which leaves the constitution and practice of the Exchange very little modified.

In the middle of the year 1925 there was heavy peculation in certain mill scrips. The market was tremendously oversold, the usual crisis ensured, leading to the temporary closing of the Exchange and the suspension of all dealings and a public agitation for thorough reform arose. The brokers were at first unwilling to yield to this demand. But a threat of Government intervention and control altered their attitude. In the end, they submitted new draft rules under which wild speculation will be discouraged and the recurrence of such crisis as that indicated above will be unlikely.

For many years the **Calcutta** Share Market had its meeting place in various gullies in the business quarter and was under no control except that of established market custom. In 1908 the **Calcutta Stock Exchange Association** was formed, a building was leased in New China Bazar Street now called Royal Exchange Place, a representative committee was formed, and the existing trade customs were focussed into rules drawn up for the conduct of business. Admittance as a member of the Stock Exchange is by vote of the committee, and the entrance fee is at present Rs. 500. The market custom differs very materially from that of most other Stock Exchanges since there are no settlement days, delivery is due the second day after the contract is passed and sales of securities are effected for the most part under blank transfers. Another difference in procedure as compared with the London Stock Exchange is that there are no "Jobbers" in the Calcutta market. The dealers who take their place, more or less, are not compelled to quote a buyer's and a seller's rate and are themselves Brokers as well as dealers, calling upon the Banks and other clients and competing with Brokers.

There are about 150 members, besides outside brokers, the former consisting of European, Jewish, Marwari, and Bengalee firms. The Marwaris predominate. The volume of *bona fide* investment business is comparatively small and insufficient for the number of Brokers. The principal business transacted on the Calcutta Stock Exchange is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, Miscellaneous Industrial concerns (such as Paper, Flour, Sugar). Railway and Transit Companies and Debentures, the latter comprising those of Industrial concerns and Trustees. Investment Securities, namely, Municipal and Port Trust Debentures. The association has an honorary secretary and is not at present affiliated to the Bengal Chamber of Commerce.

The **Madras** Stock Exchange situated at No. 9 Broadway consists of about 100 Members of which 25 are working Members. It was opened on 6th April 1920 and deals principally in Mill shares. Business is regulated by rules drawn up by the Directors. There is a Board of arbitration. There is an admittance membership card of Rs. 1,000 and an annual subscription of Rs. 100. The original 100 members were elected by the first Directors and each of the working members have deposited a security of Rs. 3,000.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr. (now the Hon. Sir) D. E. Wacha, President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress:—

I. The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE."

II. The Registered Office of the Chamber will be in Bombay.

III. The objects for which the Chamber is established are:—

(1) To discuss and consider questions concerning and affecting trade, commerce, manufactures and the shipping interests, at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.

(2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity.

(3) To organize Chambers of Commerce, Commercial Associations or Bodies in different trade centres of the Country.

(4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber.

The Articles of Association provided "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and "semi-annual or special meetings . . . may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary . . . ".

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta, the initiative in the new activities hailing, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located." Among the objects for which the Federation is established are the following:—

(a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.

(*b*) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business.

(*c*) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.

(*d*) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation.

(*e*) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.

(*f*) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.

(*g*) To draw, make, accept, discount, execute and issue bills of exchange, promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

The Rules provide for two classes of members, *viz.*, numbers consisting of Chambers of Commerce (Subscription Rs. 300) and others consisting of Commercial Associations (Subscription Rs. 150).

The following were elected a provisional Committee of the Federation :—

President—Sir Dinshaw M. Petit.

Members :—Messrs. G. D. Birla, Sir Purshottamdas Thakurdas, Vidyasagar Pandya, Jamal Mahomed, Lala Harkishen Lal, Adamji Haji Dawood, Jamshed N. R. Mehta, Vikramjit Singh, Shri Ram, W. C. Bannerjee, B. F. Madon, Kasturbhai Lalbhai, D. P. Khaitan and Rai Bahadur A. C. Bannerjee, the last two being appointed Treasurers.

The following are details of the principal Chambers of Commerce and kindred bodies in India at the present time :—

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. Other societies connected with the trade and commerce of the city are the Royal Exchange, the Bengal Bonded Warehouse Association, the Calcutta Trades Association, the Bengal National Chamber of Commerce and the Marwari Chamber of Commerce. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associated) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office bearers of the Chamber for the year 1929-30 :—

President.—The Hon'ble Mr. J. H. Fyfe (Messrs. Mackinnon, Mackenzie & Co.).

Vice-President.—Mr. J. A. Tassie (Messrs. James Finlay & Co., Ltd.).

Committee.—Mr. A. Alker (Messrs. Shaw Wallace & Co.); Mr. E. C. Benthall (Messrs. Bird & Co.); Mr. R. W. Buckley (Chartered Bank of India, Australia and China); Mr. T. W. Dowding (Messrs. Turner Morrison & Co., Ltd.); Mr. V. E. D. Jarrad (Bengal Nagpur Railway); Mr. C. de M. Kellock (Messrs. Gillanders Arbuthnot & Co.); Mr. J. Mein Austin (Messrs. Jardine, Skinner & Co.).

The Secretary of the Chamber is Mr. D. K. Cunnison. Assistant Secretary, Mr. A. C. Daniel.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned for the current year are :—

Council of State.—The Hon'ble Mr. J. H. Fyfe.

Bengal Legislative Council.—Mr. G. R. Dain, (The Calcutta Tramways Col., Ltd.); Mr. J. Insch (Messrs. Duncan Bros. & Co., Ltd.); Mr. R. B. Laird (Messrs. Thos. Duff & Co., Ltd.); Mr. S. A. Skinner (Messrs. Jessop & Co., Ltd.); Mr. W. H. Thompson (Bengal Telephone Corporation, Ltd.); Mr. W. C. Wadsworth (The Statesman, Ltd.).

Calcutta Port Commission.—The Hon'ble Mr. J. H. Fyfe (Messrs. Mackinnon Mackenzie & Co.); Mr. T. W. Dowding (Messrs. Turner, Morrison & Co., Ld.); Mr. C. de M. Kellock (Messrs. Gillanders, Arbuthnot & Co.); Mr. J. A. Tassie (Messrs. James Finlay & Co., Ltd.); Mr. A. McD. Eddis (Messrs. Gladstone, Wyllie & Co.) Mr. A. L. B. Tucker (Messrs. Kilburn & Co.).

Calcutta Municipal Corporation.—Mr. J. Campbell Forrester, M.I.C. (Smith Forrester & Co.); Mr. Geo. Morgan, C.I.E. (Morgan, Walker & Co.); Mr. H. H. Hessling (Messrs. Steiners Ltd.); H. C. N. Prance (The Bengal Telephone Co., Ld.); Mr. H. A. Luke (Messrs. W. Haworth & Co.); Mr. H. F. Wheeler (Messrs. Bird & Co.).

Bengal Boiler Commission.—Messrs. John Williamson (Union Jute Mills, South), H. H. Reynolds (Andrew Yule & Co.) and S. A. Skinner (Jessop & Co., Ltd.).

Board of Trustees of the Indian Museum.—Mr. T. W. Dowding (Turner, Morrison & Co., Ltd.).

Bengal Smoke Nuisances Commission.—Messrs. C. A. John Hendry (Burn & Co., Ltd.) and J. Williamson (Union Jute Coy.'s S. Mill).

Calcutta Improvement Trust.—Mr. Geo. Morgan, C.I.E., M.L.C. (Morgan, Walker & Co.).

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce:—

Calcutta Wheat and Seed Trade Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders' Association, Calcutta Fire Insurance Association, Calcutta Import Trade Association, Calcutta Marine Insurance Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association, Indian Engineering Association, Calcutta Jute Fabrics Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers' Association, Baled Jute Shippers' Association, Calcutta Jute Dealers' Association, Calcutta Hides and Skins Shippers' Association, Calcutta Sugar Importers' Association, Indian Lac Association for Research and Calcutta Accident Insurance Association, and Salt Importers' Association of Bengal.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burmah, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may, from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measurers Department controlled by a special committee. It includes a Superintendent (Mr. R. Ellis), Deputy Superintendent (Mr. A. H. Lugg), Head Office Manager (Mr. C. G. Smith) and six Assistant Superintendents (Messrs. J. G. Smyth) A. H. Mathews, G. C. G. Smyth and C. C. H. Bowden, J. B. F. Henfrey and B. Perry, and the staff at the time of the last official returns consisted of 100 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

INDIAN CHAMBER OF COMMERCE, CALCUTTA.

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned; to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians; to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular the Indians, engaged in trade, commerce or industries in India; to adjust controversies between members of this Chamber; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the Chamber; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta; and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of Members, local and mofussil. The local Members pay an annual subscription of Rs. 100 and the Mofussil Members Rs. 50. Merchants, Bankers, Ship-owners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1929:—

President.—Mr. Faizulla Gangjee.

Senior Vice-President.—Mr. Sheo Kissan Bhatter.

Vice-President.—Mr. A. L. Ojha.

Members.—Mr. G. D. Birla; Mr. D. P. Khaitan; Mr. Anandji Haridas; Mr. K. J. Purohit; Mr. G. L. Mehta; Mr. N. L. Puri; Mr. N. Rajabally; Mr. R. L. Nopany; Mr. H. P. Bagaria; Mr. Manecklal Nanavaty; Mr. B. B. Ghosh; Mr. Manilal Amarchand; Mr. Radha Kissen Chamria; Mr. Habib Mahomed; Mr. Narayandas Bajoria.

Secretary: Mr. M. P. Gandhi, M.A., F.R.E.S., F.S.S.

The following Associations are affiliated with the Chamber:—The Calcutta Rice Merchants' Association, East India Jute Association, Ltd., Exchange and Bullion Brokers' Association, Indian Steel Agents' Association, Calcutta Karana Association, Gunny Trades' Association and Bengal Jute Dealers' Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various

trades. With a view to cover the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades :—(1) Jute, (2) Gunny, (3) Piecegoods and Yarn, (4) Iron and Steel, (5) Coal and Minerals, (6) General.

Chamber's representatives on—

Calcutta Port Commissioners: Mr. K.J.Purohit.

Bengal-Nagpur Railway Advisory Committee: Mr. Anandji Haridas.

Railway Rates Advisory Committee: Messrs. Anandji Haridas, H. P. Bagaria, G. D. Birla, Faizulla Gangjee and D. P. Khaitan.

Calcutta Society for the Prevention of Cruelty to Animals: Mr. G. L. Mehta.

Bengal Conciliation Panel: Messrs. D. P. Khaitan, Anandji Haridas and N. Rajabally.

Chamber's Auditors.—Messrs. Batliboi and Purohit.

INTERNATIONAL CHAMBER OF COMMERCE, CALCUTTA.

The Indian National Committee of the Internationatl Chamber of Commerce is established for the following purposes :—

(*a*) To participate in the promotion of the objects for which the International Chamber of Commerce, hereinafter called the "International Chamber", is established, namely :

(*i*) To facilitate the commercial intercourse of countries.

(*ii*) To secure harmony of action on all international questions affecting finance, industry and commerce.

(*iii*) To encourage progress and to promote peace and cordial relations among countries and their citizens by the co-operation of business men and organizations devoted to the development of commerce and industry.

OFFICE BEARERS FOR THE YEAR 1929.

President—Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., M.L.A.

Vice-President.—Mr. D. P. Khaitan.

Members of the Executive Committee.—Mr. Kasturbhai Lalbai; Mr. R. K. Shanmukham Chetty, M.L.A.; Mr. Walchand Hirachand, C.I.E. J.P.; Mr. S. N. Haji, M.L.A.; Mr. R.C. Pandit; Khan Bahadur A. Chandoo; Mr. K. C. Neogy, M.L.A. and Mr. Fakirjee Cowasjee.

Honorary Treasurer.—Mr. Faizullabhai Gangjee.

Representatives on the Council.—Mr. D. P. Khaitan, Calcutta; Mr. D. S. Erulkar, London. Mr. N. M. Muzumdar, London.

Secretary.—Mr. M. P. Gandhi, M.A., F.R.E.S. F.S.S.

Assis'ant Secretary.—Mr. D. G. Mulherkar, B.A.

Address : 135, Canning Street, Calcutta.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in their Memorandum and Articles of Association, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency; to collect and classify information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests; and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns, the number of Chamber members is 169 and the number of Associated members is 13. Of these numbers 19 represent banking institutions, 7 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 11 insurance companies, 16 engineers and contractors, 123 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 360 and the Associate member's subscription is Rs. 300 per annum. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-President and seven members. The committee must, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for specific purpose.

The Chamber elects representatives as follows to various public bodies :—

The Council of State, one representative
Legislative Council of the Governor of Bombay, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Bombay Improvements Committee, one member, elected for two years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chamber for the year 1930-31 and their representatives on the various public bodies:—

President.—J. R. Abercrombie, Esq.

Vice-President.—L. A. Halsall, Esq.

Committee.—Sir Leslie Hudson, Kt., M.L.C.; Sir Ernest Jackson, Kt., C.I.E.; Sir Joseph Kay, Kt.; P. Barker, Esq.; J. R. Ingram, Esq.; W. M. Petrie, Esq.; Albert Raymond, Esq.

Secretary.—R. J. F. Sullivan, Esq.

Asst. Secretary.—H. Royal, Esq.

Representatives on—

Council of State: The Hon'ble Sir Arthur Froom, Kt.

Bombay Legislative Council: Sir Leslie Hudson, Kt., M.L.C.; E. Miller, Esq., M.L.C.

Bombay Port Trust: Sir Leslie Hudson, Kt., M.L.C.; F. C. Annesley, Esq.; P. Barker, Esq.; E. Miller, Esq., M.L.C., and G. L. Winterbotham, Esq.

Bombay Improvements Committee: R. H. Parker, Esq.

Bombay Municipal Corporation: D. J. C. Wallace, Esq.

Sydenham College of Commerce Advisory Board: H. H. Sawyer, Esq. and A. G. Gray, Esq.

Bombay Smoke Nuisances Commission: B. Brown, Esq.

Persian Gulf Lights Commitee: J. C. Reed, Esq.

St. George's Hospital Advisory Committee: F. B. Thornely, Esq.

Governor's Hospital Fund: C. N. Moberly, Esq., C.I.E.

Indian Central Cotton Committee: Sir Joseph Kay, Kt.

Empire Cotton Growing Corporation: B. C. Reade, Esq.

Back Bay Reclamation Scheme—Standing Advisory Committee and Lay-out Committee: Sir Leslie Hudson, Kt.

Bombay Development Department—Special Advisory Committee: A. M. Reith, Esq.

Auxiliary Force Advisory Committee: H. R. Watson, Esq.

Ex-Services Association: J. R. Abercrombie, Esq., (*Ex-officio*).

Bombay Seamen's Society: R. J. F. Sullivan, Esq.

Federation of Chambers of Commerce of the British Empire: Sir Malcolm Hogg, Kt.

Railway Advisory Committees—

G. I. P.: F. C. Annesley, Esq.

B. B. & C. I.: E. C. Reid, Esq.

Bombay Telephone Company, Ltd.: G. L. Winterbotham, Esq., M.L.C.

Railway Rates Advisory Committee: F. G. Travers, Esq.; L. A. Halsall, Esq.; J. F. Macdonell, Esq; E. Miller, Esq, M.L.C.; G. Sugdury, Esq.

Government of Bombay Road Board: E. Miller, Esq., M.L.C.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and snows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Three statements are issued once a month. One shows the quantity of exports of cotton, seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosine oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants.

The "Weekly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tomes in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 16, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents

as to the measurement of cotton and other goods in bales or packages. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late. The certificates granted show the following details:—

(*a*) The date, hour and place of measurement:
(*b*) the name of the shipper;
(*c*) the name of the vessel;
(*d*) the port of destination;
(*e*) the number and description of packages
(*f*) the marks;
(*g*) the measurement, and in the case of goods shipped by boats;
(*h*) the registered number of the boat
(*i*) the name of the tindal.

Certificates of weight and of origin are also issued by the Chamber.

Associated Chamber of Commerce of India and Ceylon.

HEAD OFFICE LOCATED IN CALCUTTA FOR 1930.

Bombay Millowners' Association.

The Bombay Millowners' Association was established in 1875 and its objects are as follows:—

(*a*) To encourage friendly feeling and unanimity amongst Millowners and users of steam water and/or electric power on all subjects connected with their common good.

(*b*) To secure good relations between members of the Association.

(*c*) To promote and protect the trade, commerce and manufactures of India in general and of the cotton trade in particular.

(*d*) To consider questions connected with the trade, commerce and manufactures of its members.

(*e*) To collect and circulate statistics and to collect, classify and circulate information relating to the trade, commerce and manufactures of its members.

Any individual partnership or company owning one or more mill or mills or one or more press or presses or one or more ginning or other factory or factories actuated by steam, water, electric and/or other power is eligible for membership, members being elected by ballot. Every member is entitled to one vote for every complete sum of Rs. 50 paid by him as annual subscription.

The membership of the Association in 1928 numbered 89.

The following is the Committee for 1929:—

H. P. Mody, Esq., (*Chairman*), Lalji Naranji Esq., M.L.C., (*Deputy Chairman*), Sir Dinshaw M. Petit, Bart, Sir Victor Sassoon, Bart., Sir Ness Wadia, K.B.E., C.I.E., The Hon'ble Sir Dinshaw E. Wacha, Kt., Sir Fazulbhoy Currimbhoy, Kt., C.B.E., Sir Joseph Kay, Kt., The Hon'ble Sir Munmohandas Ramji, Kt., A. Geddis, Esq., Jehangi B. Petit, Esq., M.L.C., the Hon'ble Mr. Ratansi D. Morarji, N. B. Saklatvala, Esq., C.I.E., S. D. Saklatvala, Esq., H. H. Sawyer, Esq., F. F. Stileman, Esq., F. Stones, Esq., O.B.E., Madhavji D. Thackersey, Esq., C. N. Wadia, Esq., C.I.E., and T. Watts, Esq., T. Maloney, Esq., (*Secretary.*)

The following are the Association's Representatives on public bodies:—

Bombay Legislative Council: Mr. Jehangir B. Petit.

Legislative Assembly: Mr. H. P. Mody.
Bombay Port Trust: Mr. A. Geddis.
City of Bombay Improvement Trust: Hon'ble Mr. Ratansi D. Morarji.

Victoria Jubilee Technical Institute: Mr. Jehangir B. Petit and Hon. Sir Manmohandas Ramji, Kt.

Bombay Smoke Nuisances Commission. Messrs. H. H. Lakin and W. A. Sutherland.

Advisory Board of Sydenham College of Commerce and Economics: Mr. S. D. Saklatvala.

Central Cotton Committee: Mr. S. D. Saklatvala.
Development of Bombay Advisory Committee: Mr. Jehangir B. Petit.
G. I. P. Railway Advisory Committee: Mr. A. Geddis.

B. B. & C. I. Railway Advisory Committee: Hon. Sir Manmohandas Ramji, Kt.
Bombay Municipal Corporation: Mr. H. P Mody,
University of Bombay:—Mr. Jehangir B. Petit.
Royal Institute of Science: Mr. H. P. Mody.

The Office of the Association is located in Temple Bar Building, Esplanade Road, Fort, Bombay, and the telephone number is 25350.

Millowners' Mutual Insurance Association, Ltd.

The Millowners' Mutual Insurance Association, Ltd., was registered on 30th June 1924, as a Company limited by guarantee. The registered office of the Association is located in Temple Bar Building, Esplanade Road, Fort, Bombay.

The objects of the Association are:—

(*a*) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependents for injuries or accidents, fatal or otherwise, arising out of and in the course of their employment; (*b*) the insurance of members of the Company against loss or damage by or incidental to fire, lightning, etc.; and (*c*) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counter-insurances and counter-guarantees, etc., etc., etc.

The Association consisted of 60 members on 1st October, 1929.

All members of the Millowners' Association are eligible for admission to the Mutual Company

Non-members are also eligible for membership of the Mutual, provided their application is approved of by the Committee of the Mill-owners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are :—

A. Geddis, Esq., (*Chairman*), Sir Victor Sassoon, Bart., M.L.A., Sir Ness Wadia, K.B.E., C.I.E., Sir Joseph Kay, Kt., The Hon'ble Sir Munmohandas Ramji, Kt., The Hon'ble Mr. Ratansi D. Morarji, C. N. Wadia, Esq., C.I.E., S.D. Saklatvala, Esq., G. M. Rose, Esq. and B. K. Mantri, Esq., B.A., Barrister-at-Law, Secretary of the Association.

Indian Merchants' Chamber.

The Indian Merchants' Chamber was established in the year 1907. Its objects are :—

(*a*) To encourage friendly feeling and unanimity among business community on all subjects connected with the common good of Indian merchants.

(*b*) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.

To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.

(*d*) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber and to make efforts for the spread of commercial and economic knowledge.

(*e*) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies and in general to take the initiative to secure the welfare of the business community in all respects.

(*f*) To make representations to Local, Central or Imperial authorities, Executive or Legislative on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.

(*g*) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.

(*h*) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.

(*i*) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other actions as may be conducive to the extension of trade, commerce or manufactures, or incidental to the attainment of the above objects.

(*j*) To secure the interests and well-being of the Indian business communities abroad.

(*k*) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

There are three classes of members :—

(1) Ordinary, (2) Patrons and (3) Honorary.

(1) There are three classes of ordinary members :—

(*a*)—Residents of Bombay and its suburbs who will have to pay Rs. 75 as annual subscription ; but joint stock Companies will have to pay Rs. 100 per year.

(*b*)—Mofussil members who will have to pay Rs. 25 as annual subscription.

(*c*)—Associations which will have to pay Rs. 125 as annual subscription.

Admission Fee :—All the ordinary members and patrons pay Rs. 100 as admission fee which is credited to a capital fund of the Chamber and not expended on revenue account except with the consent of the general body.

(2) Patrons:—Indian firms or individual Indian merchants can join as Patrons Firms will have to pay Rs. 5,000 and individuals Rs. 2,500 as donation, the proceeds of which will be credited to a capital fund which shall not be expended on revenue account but the interest whereof shall be taken to revenue account.

(3) Honorary members :—Gentlemen distinguished for public services or eminent in commerce and manufactures or otherwise interested in the aims and objects of the Chamber may be elected as Honorary members by a General Meeting of the Chamber on the recommendation of the Committee and as such shall be exempted from paying subscriptions. They shall not be entitled to vote at any meeting of the Chamber nor shall they be eligible to serve on the Committee.

Any Indian gentleman, firm or association engaged in mercantile pursuits or interested in trade and commerce desirous of joining the Chamber shall be eligible for membership.

Grain Merchants' Association.

The object of this body is "to promote the interests of the merchants and to put the grain and oil-seeds trade on a sound footing." It is an influential body of large membership. The office holders for the current year are as follows :—

Chairman.—Mr. Velji Lakhamsi, B.A., LL.B.
Vice-Chairman.—Mr. Peraj Khatau
Hony. Secretary.—Mr. Nathoo Cooverji
Secretary.—Mr. Uttamram Ambaram, B.A., LL.B.

The address of the Association is 262, Masjid Bunder Road, Mandvi Post, Bombay.

MAHARASHTRA CHAMBER OF COMMERCE.

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the City of Bombay, Bombay Suburban District Poona, Sholapur, Satara, Ratnagiri, Kolaba, Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and Indian States adjoining these districts.

President: Sheth Walchand Hirachand, C.I.E., J.P.

Vice-Presidents: R. B. Hanmantram Ramnath and M. L. Dahanukar. *Hon. Secretary*: G. S. Ranade.

Secretary :—D. V. Kelkar, M.A.

The offices of the Chamber are in the Phoenix Building, Graham Road, Ballard Estate, Bombay.

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon "any gentlemen interested in the affairs and objects of the Chamber." All new members joining the Chamber pay Rs. 750 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 7-8-0 per month. The affairs of the Chamber are managed by a committee of ten members, consisting of a Chairman, Vice-Chairman and eight members, elected at the annual general meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Bombay Legislative Council, four representatives on the Karachi Port Trust, two on the Karachi Municipality and two on the North Western Railway Advisory Committee, Karachi. There were 81 members of the Chamber in August, 1929. The following were the officers in 1929:—

Chairman: Mr. E. A. Pearson (Forbes, Forbes, Campbell & Co., Ltd.)

Vice-Chairman: Mr. W. D. Young (Couper and Young).

Committee.—Messrs. J. R. Affeltranger (Volkart Brothers), H. S. Bigg-Wither, O.B.E., (Burmah-Shell Oil Storage and Distributing Co. of India, Ltd.), C. Demetriadis (Ralli Brothers), J. W. Fletcher (National Bank of India, Ltd.) J. J. Flockhart (Macklinnon, Mackenzie & Co.), H. F. Lockwood (The North Western Railway). H. Macfarlane (Strauss & Co., Ltd.), and G. N. R. Morgan (The Bombay Co., Ltd.)

Representative on the Bombay Legislative Council: Mr. W. B. Hossack, M.L.C.

Representatives on the Karachi Port Trust: Messrs. E. A. Pearson, C. Demetriadis, J. J. Flockhart, and J. R. N. Graham, V.C.

Representatives on the Karachi Municipality: Mr. A. P. Darlow and Lieut. Comdr. R. Goldrich, R. N. (Retired).

Representatives on the North Western Railway Advisory Committee, Karachi: Messrs. E. A. Pearson and R. S. Backhouse.

Secretary and Public Measurers: Mr. Alan Duguid, A.F.C.

The following are the principal ways in which the Chamber gives special assistance to members:—The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements of disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per-pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers-of-attorney, as honorary members, subject to ballot Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership as by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscriptions shall not exceed Rs. 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chambers' finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is "that no trade mark or ticket shall be registered on behalf of an Indian firm trading under a European name."

The following publications are issued by the Chamber:—Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 56 members and 6 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows:—

Chairman: Mr. H. F. P. Hearson, M.L.C.
Vice-Chairman: Mr. K. Kay.
Committee.—Mr. W. B. MacBain; Mr. W. H. Ruddle; Mr. R. C. M. Strouts; Mr. F. B. Wathen; Mr. W. O. Wright.
Ex-Officio: Mr. C. E. Wood, M.L.C.

The following are bodies to which the Chamber is entitled to elect representatives and the representatives elected for the year:—

Madras Legislative Council: Messrs. H. F. P. Hearson and C. E. Wood.
Madras Port Trust: Messrs. K. Kay, C. E. Wood, R. C. M. Strouts and R. D. Denniston.
Corporation of Madras: Messrs. A. J. Powell, A. S. Rose and F. E. James.
Federation of Chamber of Commerce of the British Empire: Sir Gordon Fraser.
Secretary: Mr. W. Waddington.

SOUTHERN INDIA.

The Southern India Chamber of Commerce has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are two classes of members, permanent and honorary. The usual conditions as to eligibility for election prevail.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1915. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the right of electing a representative to that body. Under the Madras City Municipal Act, 1919, the Chamber has the right of electing two Councillors to the Madras Corporation. Under the State Aid to Industries Act 1923 the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Road Board, the Town Planning Trust the Provincial Cotton Committee, Vizagapatam Harbour Works Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Government Institute of Commerce Advisory Council, Madras, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, and the Board of Industries.

The Chamber has 362 members on the roll and has its own building.

President.—Mr. Jamal Mahomed Saib.
Vice-Presidents.—Dewan Bahadur Govindas Chathoorbhujadas and Mr. C. Gopal Menon, M.L.C.
Honorary Secretaries.—Yusuff Sait and V. C. Rangaswamy.
Assistant Secretary.—P. R. Nair, B.A., B. Com.

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore, Rs. 300 a year; an individual member resident or carrying on business in Cawnpore Rs. 300; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each, at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints arbitration Tribunals for the settlement and adjustment of disputes when invited, to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 67 members, one honorary member and six affiliated members.

The following are the officers:—

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October 1868.

The following are the members of the Chamber which has its head-quarters at Cocanada, the chief port on the Coromandel Coast north of Madras :—

Messrs. The Coromandel Co., Ltd.; Ripley & Co.; Volkart Bros.; Innes & Co.; Wilson & Co.; Gordon Woodroffe & Co. (Madras), Ltd., J. H. Vavasseur & Co., Ltd.; Burmah-Shell Oil Storage & Distributing Co. of India, Ltd.; Northern Circars Development Co.; The Agent, Imperial Bank of India.

MEMBERS OF THE COMMITTEE.

Mr S. A. Cheesman, (*Chairman*).
,, C. E. Buckley.
,, C. D. T. Shores.
,, G. Gompertz, (*Secretary*).

The rules of the Chamber provide that by the terms 'member' be understood a mercantile firm or establishment, or the permanent Agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. The subscription for each member whose place of business is in Cocanada is Rs.120 per annum, payable quarterly, and for each member whose place of business is elsewhere is Rs. 60 per annum, payable in advance. Committee meetings are held on the 1st Tuesday in the month and general meetings on the 3rd Tuesday or when ordered.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

CEYLON.

the Ceylon Chamber of Commerce was established on the 25th March 1839 and was incorporated in 1895, with its headquarters at Colombo. All firms and persons engaged in the general trade of Ceylon are admissible as members and every person or firm desirous of joining the Chamber must after having furnished one month's notice of their intention to apply for membership be proposed by one member, seconded by another and balloted for by the whole Chamber. The affairs of the Chamber are conducted by a Board of Directors consisting of Chairman and Vice-Chairman and 10 members.

The following is the membership of the Board at the present time :—

Hon'ble Mr. M. J. Cary (*Chairman*), Mr. A. S. Lampard (*Vice-Chairman*), Mr. M. D. Critchton, Mr. E. V. Cogliatti, Mr. T. Hunt, Sir Edwin Hayward, Mr. C. H. Figg, Hon'ble Mr. J. W. Oldfield, Mr. A. R. Quarme, Mr. G. G. Smith, Mr. R. A. Smith, and Mr. J. A. Tarbat.

Secretary.—Mr. C. F. Whitaker.

Representative in the Legislative Council.—Hon'ble Mr. M. J. Cary.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta, the headquarters of the Director-General. It embraces two distinct classes of work: (*a*) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (*b*) the compilation and publication of All-India statistics. Among the important publications for which the Director-General is responsible are the following annual volumes: Review of the Trade of India, Statement of the Foreign Sea-borne Trade and Navigation of Britssh India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (*a*) information as to tariff changes in foreign countries which affect Indian interests, (*b*) notices of tenders called for and contracts placed by Government departments and public bodies, (*c*) crop reports and forecasts, (*d*) Government orders, communiques and other notifications affecting trade, (*e*) analysis of Indian trade statistics, (*f*) market reports, prices and trade movements of the staple exports and imports, (*g*) trade enquiries for securing trade introductions, (*h*) summaries of the leading features of consular and other trade reports, and (*i*) abstracts of the proceedings of the various Chambers of Commerce in India.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the admi-

nistrative control of the Director-General. It has now been expanded into a first-class technical library containing over 11,400 volumes as well as Indian and foreign statistical publications, and over 400 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioner in London, with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world; by disseminating it to British manufacturers and exporters; by undertaking such special constructive activities as may be found possible; and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world; who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Mr. T. M. Ainscough, C.B.E., was appointed His Majesty's Senior Trade Commissioner in India in January 1918 and opened an office in Calcutta in March of that year. For five years, owing to the pressing need for economy in the Public Service, he was singlehanded in covering this vast territory. In 1923, howev, two additional Trade Commissioners were appointed to India. Mr. W. D. M. Clarke was posted to the Calcutta office and Major R. W. Clarke opened an office in Bombay at Exchange Buildings, Sprott Road, Ballard Estate. The territory is now divided between the Calcutta and Bombay posts and this development allows the Senior Officer to travel almost continuously to any part of India which may call for his attention and to devote his time to some of the broader politico-economic problems which are becoming so important in view of the changing political conditions in India.

Functions of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area; to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers; to visit the principal commercial centres; to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade; to make an annual general report on the conditions and prospects of trade in his area; and to furnish aspecial reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department; to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area; and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturing engineers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from

the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

For many years British traders have deplored the fact that there have not been available officials with commercial experience who could help them in voicing their difficulties and in meeting foreign competition. As a rule these complaints eulogized the Consuls of other countries and invited the attention of Government to their many virtues. In response to this agitation the greatest care has been taken by the British Government to select, as their trade officers Overseas, men of sound commercial raining and experience who have acquired some reputation in their respective spheres, and a comprehensive and businesslike organization has been built up at the Department of Overseas Trade, London, to deal with the information sent home. It now rests with the British mercantile community, both at home and also Overseas, to co-operate freely and frankly with the Trade Commissioners and to recognize the work they are doing in the Imperial interest by assisting them with such information and particulars with regard to foreign competing goods, conditions of trade, etc., as they are able to afford.

H. M.'s TRADE COMMISSIONERS IN INDIA.

Calcutta—
Mr. T. M. Ainscough, C.B.E.,
His Majesty's Senior Trade Commissioner in India and Ceylon.

Mr. W. D. Montgomery Clarke,
His Majesty's Trade Commissioner at Calcutta.

Post Box No. 683, Fairlie House, Fairlie Place.
Telegraphic Address—" Tradcom, Calcutta."
Telephone No. " Calcutta 1042."

Bombay—
Major R. W. Clarke,
His Majesty's Trade Commissioner at Bombay.

Post Box No. 815, Exchange Buildings, Sprott Road, Ballard Estate.
Telegraphic Address—" Tradcom, Bombay"
Telephone No.—" Bombay 23095."

Ceylon—
Imperial Trade Correspondent,
The Principal Collector of Customs
Colombo.

THE INDIAN CENTRAL COTTON COMMITTEE.

The Indian Central Cotton Committee of 1917-18, a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922, reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommendations was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton-growing industry generally, to advise the Government of India and Local Governments in regard to matters of cotton policy, especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921, and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows:—

President.—The Vice-Chairman, Imperial Council of Agricultural Research (*ex-officio*), Sir T. Vijayaraghavachariar, K.B.E.

Expert Adviser to the Imperial Council of Agricultural Research in Agricultural Matters, (*ex-officio*). Mr. B. C. Burt, M.B.E.

Representatives of Agricultural Departments.—Mr. G. R. Hilson, B. Sc., Director of Agriculture, Madras; Dr. W. Burns, D. Sc., Director of Agriculture, Bombay; Mr. G. Clarke, C.I.E. Director of Agriculture, United Provinces, Mr. M. Milne, C.I.E., Director of Agriculture, Punjab; Mr. F. J. Plymen, C.I.E., Director of Agriculture, Central Provinces; Mr. T. D. Stock, I.A.S., Deputy Director of Agriculture, Burma.

The Director-General of Commercial Intelligence and Statistics (*ex-officio*)—Dr. D. B. Meek, O.B.E.

Representatives of Chambers of Commerce and Associations.—Major W. Ellis Jones, M.L.C., East India Cotton Association; Mr. S. D. Saklatvala (*Vice-President*), Bombay Mill owners' Association; Mr. T. G. Ralli, Bombay Chamber of Commerce; Sir Purshotamdas Thakurdas, Kt., C.I.E, M.B.E, M.L.A., Indian Merchants Chamber, Bombay; Mr. G. C. R. Coleridge, Karachi Chamber of Commerce; Seth Kasturchand Lalbhai, Ahmedabad Millowners' Association; Mr. J. Voncsch, Tuticorin Chamber of Commerce; Mr. H. A. Wilkinson, Upper India Chamber of Commerce; Lala Niranjan Prasad, Karachi Indian Merchants' Association; Mr. W. Roberts, Empire Cotton Growing Corporation.

Representatives of Cotton Manufacturing or Cotton Ginning Industry Nominated by Local Governments.—Sir S. B. Mehta, Kt., C.I.E., Rao Bahadur K. J. Deshmukh, Central Provinces, Mr. Robert Lee, Madras; Rao Bahadur Lala Sewak Ram, M.L.C., Punjab; Mr. Girija Prasanna Chakravarty, Bengal.

Co-operative Banking Representative.—Rao Saheb V. Krishna Menon, B.A.,

Representatives of Cotton Growing Industry.—M.R. Ry. R. Appaswamy Naidu Garu, M.R.Ry. K. Sarabha Reddi Garu, M.L.C., Madras; Rao Bahadur Bhimbhai Ranchodji, M.L.C., Rao

Saheb Chinbasappa Shidramappa Shirahatty, Bombay; Rai Bahadur Amba Prasad, M.L.C. Rai Saheb Bikram Sinha, M.L.C., United Provinces; Capt. L. H. G. Conville, Sardar Ujja Singh, ML.C., Punjab; Rao Bahadur M. G Deshpande, Mr. M. P. Kolhe, M.L.C., Central Provinces and Berar.

Representatives of Indian States.—Mr. B. A. Collins, C.I.E., I.C.S., Director-General of Industry and Commerce, Hyderabad State; Mr. C. V. Sane, B. Ag.; M. Sc., Director of Agriculture, Baroda State; Mr. H. H. Paldya, Administrative Officer, Department of Agriculture, Gwalior State; Mr. A. Howard, C.I.E Director, Institute of Plant Industry, Indore, and Agricultural Adviser to the States in Central India and Rajputana.

Additional Members Nominated by the Governor-General-in-Council.—Mr. C. R. Palairet, Representative of the Indore State; Dr. W. Youngman, Economic Botanist to Government, Central Provinces; Dr. L. C. Coleman, Director of Agriculture, Mysore State; Mr. K. I. Thadani, Botanist, Sakrand Station, Sind.

Secretary.—Mr. J. H. Ritchie, M.A., B. Sc., IA.S.

Deputy Secretary.—Mr. W J. Jenkins, M.A., B. Sc., I.A.S.

Director, Technological Laboratory—Dr. A. James Turner, M.A., D. Sc.

Office.—Vulcan House, Nicol Road, Ballard Estate, Bombay.

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes, were reducing the returns of the grower and causing great economic loss to the country at large.

The Cotton Transport Act passed in 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration, and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and of the Baroda, Rajpipla, Chhota Udepur and Hyderabad States and with excellent results.

More recently the **Cotton Ginning and Pressing Factories Act, (XII of 1925)** has been passed which provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very marked improvement in the quality of Indian cottons.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up-country and primary cotton marketing. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of about 1" staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Cotton trade and of the cotton-growing industry thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research Studentships.—The Committee has also instituted a scheme of research studentships to enable distinguished graduates of Indian Universities to undertake research on cotton problems under the direction of experienced reasearch workers in India. Six to eight such studentships are awarded every year.

Statistics—By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to the raw cotton received, and of raw cotton consumed in the spinning mills in the British provinces and in the States of Hyderabad, Mysore, Baroda, Gwalior and Indore, the establishment of statistical returns relating to the number of bales of raw cotton pressed weekly in every Province and many of the Indian States, and the revival of the rail-borne trade returns of cotton for trade blocks are some of the results already achieved by the Committee in this direction.

Research.—By means of the Cotton Cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental, spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons, thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the standpoint of the grower.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants-in-aid to Agricultural Departments it has provided for specal investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton-growing provinces and now number twelve.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the out come of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, *viz.*, The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Muccadums' Association. Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the newly constituted East India Cotton Association under Bombay Act No. XIV of 1922. Since then the Association, subject to its By-laws being sanctioned by Government, has been regulating transactions in cotton.

The present constitution of the Board is as follows:—Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., M.L.A, President, Importers' Panel; Haridas Madhavdas, Esq., J.P., Vice-President, Exporters' Panel; The Hon'ble Mr. Ratansey D. Morarji; Lalji Naranji, Esq., M.L.C.; A. Geddis, Esq., Millowners' Panel; C. P. Bramble, Esq., G. Boyagis, Esq., Exporters' Panel; K. H. McCormack, Esq., Surajmal Khialiram, Esq., Importers' Panel; H. C. Short, Esq., Ramnarayan J. Rathi, Esq., Commission Agents' and Merchants' Panel; Bhaidas Nanalal, Esq., Jamnadas Ramdas, Esq., Jethawallas' Panel; Anandilal Podar, Esq., Major W. Ellis Jones, Chunilal B. Mehta, Esq., Brokers' Panel.

Officers.

D. Mehta, Esq., B.A., Secretary, F. F. Wadeson, Esq., J.P., Manager, Clearing House, C. M. Parikh, Esq., B. Com., Assistant Secretary.

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade; to establish just and equitable principles in the said Trade; to maintain uniformity of control of the said trade; to fix or adopt standards of classification of cotton, to acquire, preserve and disseminate useful information connected with the Cotton interest throughout all markets; to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton from India and the importation of Cotton into India in so far as it may be imported. To bring, prosecute, or defend, or aid in bringing, prosecuting, or defending any suits, actions proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association, and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has erected a fine Exchange Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson, Governor of Bombay, on the 1st December 1925 in the presence of a large gathering which included most of the prominent business men of the City and many leading citizens.

There is a membership of 441 members.

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales, but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available 1928-29 the total area in all the territories reported on was computed at 25,006,000 acres which is 1,194,000 acres the revised figures of last year. The total estimated outturn was 4,952,000 bales of 400 lbs. which is 528,000 bales below the yield of last year.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop:—

Provinces and States.	1928-29.	
	Acres in Thousands.	Bales of 400 lbs. (In thousands).
Bombay (*a*)	7,627	1,338
Central Provinces and Berar	4,972	1,301
Madras (*a*)	2,467	534

Total Bales (400 lbs.) ..	4,173,120	3,188,011	2,686,202	3,711,657

Bombay is the great centre of the cotton trade. The **principal varieties** are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to leaven the whole outturn, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 3 years:—

	1926-27.	1927-28.	1928-29.

GRAND TOTAL ..	807,116,133	808,940,373	648,283,337

(*a*) Figures for Cochin are being reported from April 1928.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 74 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 7 per cent. and 8 per cent. respectively, while Bengal and the Central Provinces produced 4·7 and 5·2 per cent. Elsewhere the production is as yet very limited.

BOMBAY ISLAND.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay island:—

	1926-27.	1927-28.	1928-29.
Nos. 1—10	72,797,525	61,759,076	32,435,744

TOTAL ..	807,116,133	808,940,373	648,283,337

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produces nearly 78·8 per cent. of the cloth woven in India. The United Provinces produces 8·2 per cent., the Central Provinces 4 per cent. and Madras 4 per cent. Grey and Bleached goods represent nearly 74 per cent. of the whole production.

Analysis of Woven Goods.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States:—

——	1926-27.	1927-28	1928-29.
Grey and Bleached piece-goods—			
Pounds	381,711,365	403,467,859	330,925,376
Yards	1,577,237,774	1,675,011,583	1,409,592,552
Coloured piece-goods—			
Pounds	145,320,476	148,297,621	102,175,898
Yards	681,478,291	681,553,222	483,676,103
Grey and coloured goods other than piece-goods—			
Pounds	4,151,302	4 205,147	3,330,960
Dozens	1,006,548	992,107	786,008
Hosiery—			
Pound	983,308	1,213,870	1,480,991
Dozens	35 ,919	438,257	448,809
Miscellaneous—			
Pounds	4,289,142	5,827,546	4,403,519
Cotton goods mixed with silk or wool—			
Pounds	2,313,760	4,794,002	3,211,762
Total—			
Pounds	538,769,353	567,806,045	445,528,506
Yards	2,258,716,065	2,356,564,805	1,893,268,655
Dozens	1,358,467	1,430 364	1,234,817

Bombay Woven Goods.

The output of woven goods during the three years in the Bombay Presidency was as follows:—

The weight (in pounds represents the weight of all woven goods; the measure in yards represents the equivalent of the weight of the grey and coloured piece-goods.)

——	1926-27.	1927-28.	1928-29.
Pounds	407,282,500	421,590,878	284,057,132
Yards	1,786,327,396	1,828,517,162	1,293,989,878
Dozens	829,849	920,817	640,677

The grand totals for all India are as follows:—

——	1926-27.	1927-28.	1928-29.
Pounds	538,769,353	567,806,045	445,528,506
Yards	2,258,716,065	2,356,564,805	1,893,268,655
Dozens	1,358,467	1,430,364	1,234,817

Progress of the Mill Industry.

The following statement shows the progress of the Mill Industry in the whole of India

Years ending 30th June	Number of Mills.	Number of Spindles.	Number of Looms.	Average No of Hands Employed Daily.	Approximate Quantity of Cotton Consumed.	
					Cwts.	Bales of 392 lbs.

* The Cotton Duties Act was abolished in April 1926.

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-looms.—The pioneer's example was followed by Mr. George Henderson of that silk and firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Manufacturing Co., Ld." Four other mills followed in succession—Gouripore, Serajgunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872–73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874–5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Belliaghatta-Barnagore branch mill), Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajgunge), and the Kinnison. A lull of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook

Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shews quinquennial averages from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1926-27 and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100 :—

	Number of mills at work.	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of		
			Persons employed daily (average.)	Looms.	Spindles.
Average—					
1879-80 to 1883-84 ..	21 (100)	270·7 (100)	38·8 (100)	5·5 (100)	88 (100)
1884-85 to 1888-89 ..	24 (114)	341·6 (126)	52·7 (136)	7 (127)	138·4 (157)
1889-90 to 1893-94 ..	26 (124)	402·6 (149)	64·3 (166)	8·3 (151)	172·6 (196)
1894-95 to 1898 99 ..	31 (148)	522 1 (193)	86·7 (223)	11·7 (213)	244·8 (278)
1899-1900 to 1903-04..	36 (171)	680 (251)	114·2 (294)	16·2 (295)	334·6 (380)
1904-05 to 1908 09 ..	46 (219)	960 (355)	165 (425)	24·8 (451)	510·5 (580)
1909-10 to 1913-14 ..	60 (286)	1,209 (443)	208·4 (537)	33·5 (609)	691·8 (786)
1914-15 to 1918-19 ..	73 (348)	1,403·6 (519)	259·3 (668)	39·7 (722)	821·2 (933)
1917-18	76 (362)	1,428·5(528)	266 (686)	40·6 (738)	834 (948)
1918-19	76 (362)	1,477·2(546)	275·5 (710)	40 (727)	839·9 (954)
1919-20	76 (362)	1,563·5(579)	280·4 (723)	41·0 (745)	856·3 (473)
1920-21	77 (367)	1,923·5 (712)	288·4 (758)	41·6 (745)	869·9 (908)
1921-22	81 (386)	2,122·4 (784)	288·4 (743)	43·0 (782)	908·3 (1,032)
1922-23	86 (409)	2,324·7(859)	321·2 (828)	47·5 (863)	1,003·1(1,140)
1923-24	89 (424)	2,685·8(992)	330·4 (851)	49·0 (891)	1,043·4(1,185)
1924-25	90 (424)	2,213·3(818)	341·7 (881)	50·3 (914)	1,067·6(1,213)
1925-26	90 (429)	2,134·7(788)	331·3 (854)	50·5 (918)	1,063·7(1,20·)
1926-27	93 (443)	2,119·8(783)	333·6 (860)	51·0 (927)	1,083·8(1,231)

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty-three times as great as the average value of the export in the period 1879-80 to 1883-84 :—

	Jute manufactures.		Value in lakhs of Rs.
	Gunny bags in millions of number.	Gunny cloths in millions of yards.	
1879-80 to 1883-84	54·9 (100)	4·4 (100)	124·9 (100)
1884-85 to 1888-89	77 (140)	15·4 (350)	162·9 (130)
1889-90 to 1893-94	111·5 (203)	41 (932)	289·3 (232)
1894-95 to 1898-99	171·2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04..	206·5 (376)	427·2 (9,709)	826·5 (662)
1904-05 to 1908-09	257·8 (469)	698 (15,864)	1,442·7 (1,154)
1909-10 to 1913-14	339·1 (618)	970 (2,045)	2,024·8 (1,621)
1914-15 to 1918-19	667·6 (1,216)	1,156 (26,273)	4,019·3 (3,218)
1919-20	342·7 (624)	1,275·1 (28,980)	5,001·5 (4,004)
1920-21	533·9 (987)	1,352·7 (33,800)	5,299·4 (4,273)
1921-22	396·7 (715)	1,120·5 (28,000)	2,999·5 (2,419)
1922-23	344·2 (637)	1,254·3 (31,350)	4,049·4 (3,265)
1923-24	413·7 (752)	1,348·7 (30,652)	4,228·3 (3,382)
1924-25	425·1 (774)	1,456·2 (33,095)	5,148·8 (4,122)
1925-26	425·0 (774)	1,461·3 (33,211)	5,752·1 (4,605)
1926-27	449·0 (818)	1,503·1 (34,161)	5,283·3 (4,222)
1927-28	463·1 (843)	1,552.7 (35,289)	5,321·8 (4,260)
1928-29	497·6 (906)	1,568·2 (35,640)	5,656·4 (4,528)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20 the exports showed an increase, as compared with the average of the war quinquennium (1914-15 to 1918-19). In the following two years, the exports recorded a decrease and in 1922-23 they again made a recovery and amounted to 578,000 tons:

Jute, raw, ton.

Average 1879-80 to 1883-84	375,000	(100)
,, 1884-85 to 1888-89	445,000	(119)
,, 1889-90 to 1893-94	500,000	(133)
,, 1894-95 to 1898-99	615,000	(164)
,, 1899-1900 to 1903-04	635,000	(169)
,, 1904-05 to 1908-09	755,000	(201)

,, 1925-26	647,000	(172)
,, 1926-27	708,000	(189)
,, 1927-28	892,000	(238)
,, 1928-29	898,000	(239)

The total quantity of jute manufactures exported by sea from Calcutta during the year 1922-23 was 668,000 tons as against 639,000 tons in the preceding year and 603,500 tons in the pre-war year 1913-14. The values of these exports amounted to Rs. 40·28 lakhs, or an increase of Rs. 10,36 lakhs over the preceding year and Rs. 12,08 lakhs over the pre-war year. The shipments of gunny bags were valued at Rs. 15,82 lakhs and of gunny cloth Rs. 24,24 lakhs as against Rs. 13,86 and Rs. 15,92 lakhs respectively in the preceding year and Rs. 12,48 and Rs. 15,58 lakhs in the pre-war year.

The price of raw jute reached a very high point in 1906-07, the rate being Rs. 65 per bale; in 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36·4 and Rs. 31, in 1917-18 it dropped to Rs. 38-8-0 but rose again in 1919-20 up to Rs. 77-8-0. In 1920-21 it dropped to Rs. 65 but rose again to Rs. 86. It again declined to Rs. 66. In 1921-22 the price rose to Rs. 73 at the end of September, but fell back again to Rs. 50 at the end of November and recovered at Rs. 64 at the close of the year.

	Average price of jute, ordinary, per bale of 400 lbs.			
	Rs.	a.	p.	
1879-80 to 1883-84	23	8	0	(100)

1928-29	22	12	10	(212)

The 1928 crop.—The final figures of outturn for the three provinces work out as follows:—

Province.	Bales. 1927.*	1928.
Bengal (including Cooch Behar & Tripura States)	9,054,700	8,589,000
Bihar and Orissa	† 717,000	† 743,000
Assam	466,300	624,200
Total	10,238,000	9,956,200

Province.	Area in acres. 1927.*	1928.
Bengal (including Cooch Behar & Tripura States)	2,962,100	2,702,300
Bihar and Orissa (including Nepal)	241,000	247,000
Assam	171,000	195,100
Total	3,374,100	3,144,400

* Revised. † Including Nepal.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new marks, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are:—*Chairman.*—Mr. R. B. Laird, M.L.C.

Members of Committee.—Mr. A. N. Mackenzie, Mr. D. J. Leckie, Mr. J. Meirn Austin and Mr. G. F. Rose, M. L. C.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion, backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

An Association, styled the **Calcutta Jute Dealers Association,** has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mill in and around Calcutta. The present Committee:—Mr. Geo. Morgan, C.I.E., *Chairman*, *Members*—Mr. J. A. Galloway, Mr. D. King, Mr. H. A. Lnake, Mr. G. C. Morn, and Mr. J. L. Ruthven.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent. above that of the previous year, *viz.*, 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent. below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly *via* Dunkirk), Russia (*via* Vladivostok and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent. in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, sand bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 41,292 looms and 863,339 spindles. The number of persons employed was 285,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 declined from 386 million bags to 342 million bags, but the value increased from Rs. 13,87 lakhs to Rs. 15,82 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards valued at Rs. 15,92 lakhs and Rs. 24,24 lakhs respectively.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Deccan hemp** plant (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft. to 12 ft. long, of an exceptionally light colour, well cleaned, and of good strength

it was valued at £18 per ton with Bimlipatam jute at £12 10s., and Bengal first mark jute at £17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance:—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the preparation of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 37 per cent. from 197,412 cwts. to 269,487 cwts. and the value from Rs. 26·93 lakhs to Rs. 36·68 lakhs.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet, and in normal years, from Afghanistan. Imports of raw wool in 1928-29 amounted to 6 million lbs. valued at Rs. 50 lakhs. Exports of raw wool were valued in that year at Rs. 4,88 lakhs.

Production in India.—The production of wool in India is estimated at 60 million lbs. the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of **carpet wools**, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of woollen mills at work in British India in 1902 was three, with an authorised capital of Rs. 38,50,000, and employing 23,800 spindles and 624 looms. The number of persons employed in the industry then was 2,559, and the quantity of woollen goods produced 2,148,000, lbs. At the end of 1917 the number of mills had risen to five, with an authorised capital of Rs. 2,56,50,000 employing 39,608 spindles and 1,155 looms. The weight of goods produced then was 9,744,264 lbs. and the number of persons employed 7,824. With regard to Indian States, there was one mill in Mysore in 1903 with a capital of Rs. 6,00,000, employing 1,430 spindles and 45 looms. The quantity of goods produced was 1,136,000 lbs. and the number of persons employed 297. In 1907 there was still only the one mill working in an Indian State—the authorised capital had been increased to Rs. 15,00,000, the quantity of goods produced to 1,724,087 lbs., and the number of persons employed to 563. Three of the mills manufacture all classes of woollen and worsted goods, the remainder manufacturing blankets only. The existence of these mills in India proved of great service to Government in the meeting of war requirements, and they were all employed to their fullest capacity in supplying army demands for greatcoat cloth, serges, putties, flannels, blankets and hosiery. Their total capacity, however, was not sufficient to meet the full requirements of the army, and consequently their supplies had to be supplemented by large imports from home. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mehta, Govt. Press, (Calcutta) (1919).

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the Silkworm were introduced. But the trade gradually declined for the following reasons:—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China, has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *korah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry-feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressingly as in India to treat the subject of silk and the silk industries under two sections, *viz.*, Bombycidae, the domesticated or mulberry-feeding silk worms; and Saturnlidae, the wild or non-mulberry-feeding worms. In India the mulberry worm (*Bombyx Mori*) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk-producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. Indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam as also of the Nilgiri hills.

India has three well-known purely indigenous silkworms; the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially these of the great central tableland, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The eri silk, on the other hand, is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross breeds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 3,000 a year to the Tata farm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut.-Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs. 2,000 towards the expenses. Sir Dorabji Tata has also made a donation of Rs. 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross-breeding experiments with a view to establish a multi-voltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows: the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled "First Report on the Experiments carried out at Pusa to improve the Mulberry Silk Industry." In a short Prefatory note

Mr. Bainbrigge Fletcher (Imperial Entomologist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa, in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and outturn than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal, for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1913 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1915, by Mr. M. N. De, Sericultural Assistant at Pusa, which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the provision of two small pulleys to the ordinary Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine) whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stifling and storage of cocoons and the temperature and quality of the water used in the reeling pans, great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has shown in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs. 12 lakhs to Rs. 27½ lakhs, of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 54¾ lakhs. In 1928-29 exports of raw silk amounted to Rs. 27 lakhs and of silk manufactures nearly Rs. 4 lakhs.

Indigo.

Indigo dyes are obtained from the Indigofera a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculia to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the maddar dye of Europe, then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo. (See Watt's "Commercial Products of India.") In this connection it may be noted that increases in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indigo. In February 1915 a conference was held at Delhi when the possibility of assisting the natural indigo industry was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs. Howard of Pusa in Bulletins Nos. 51 and 54 of

the Agricultural Research Institute. Other aspects of the question were fully examined last year in the Agricultural Journal of India by Mr. W. A. Davis, Indigo Research Chemist to the Government of India. An **Indigo Cess Bill** was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo, the proceeds of the cess being received and expended by Government

Decline of the Industry.—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

In 1928-29 the total yield of indigo was estimated at 12,600 cwts. on an area of 100,400 acres. The exports fell to 900 cwts. from 2,000 cwts. in 1927-28.

OILS AND OIL CAKES.

In 1928-29 seeds ranked fourth in order of importance in India's export trade, the first three groups being jute and cotton, raw and manufactured, and foodgrains. The total exports of oilseeds showed an increase of 10 per cent. in quantity and of 11 per cent. in value from 1,210,000 tons valued at Rs. 26,69 lakhs in 1927-28 to 1,328,000 tons valued at Rs. 29,63 lakhs in 1928-29. Compared with the pre-war average, there was, however, a decrease of 9 per cent. in quantity but an increase of 22 per cent in value. A considerable change has occurred, during and since the war, in India's trade in oilseeds. Local consumption, which is steadily on the increase, has been able to outbid a weak foreign demand. In copra, for example, India's exports averaged 31,000 tons annually during the pre-war period. In 1926-27 exports dwindled down to only 2,000 tons and practically disappeared in the following two years. In linseed, cotton seed, rapeseed and sesamum there has also been a substantial reduction in India's exportable surplus compared with the pre-war figures. But in the case of groundnuts internal consumption has not yet overtaken the increased production, resulting from extended cultivation, with the result that much larger quantities are available for export. The table below, shows the quantities of the principal kinds of seeds exported during the past three years and in the pre-war quinquennium.—

	Pre-war average	1926-27	1927-28	1928-29
	(Thousands of Tons)			
Linseed	379	192	222	157
Rape seed	273	94	66	77
Groundnuts ..	212	368	613	788
Castor	114	102	122	121
Cotton	240	51	153	131
Sesamum	119	2	11	30
Copra	31	2	..	..
Others	85	27	23	24
Total ..	1,453	838	1,210	1,328

A pamphlet on the subject recently published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any proposal to develop in India an **oil-milling industry** on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than cocoanut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for **oil cakes** is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea.

Tea cultivation in India is chiefly in Assam, Bengal and Southern India, the cultivation elsewhere being comparatively unimportant. The total production of tea in India was estimated at 404 million lbs. in 1928 as compared with 391 million lbs. in 1927 and 393 million lbs. in 1926. Assam contributed 61 per cent., Northern India (excluding Assam) 25 per cent. and Southern India 14 per cent., as compared with 60, 26 and 14 per cent., respectively, in the preceding year. The statement below shows the development of the industry during the past years.

——	1924	1925	1926	1927	1928
ACREAGE.	Acres.	Acres.	Acres.	Acres.	Acres.
Assam	413,300	416,500	420,400	424,000	427,200
Rest of Northern India ..	204,400	211,200	212,700	214,200	218,700
Southern India	97,000	100,000	106,300	117,800	127,100
Total ..	714,700	727,700	739,400	756,000	773,000
PRODUCTION.	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)
Assam	237,153	225,185	241,982	235,888	246,018
Rest of Northern India ..	91,351	89,017	99,804	101,923	100,475
Southern India	46,752	49,305	51,147	53,109	57,272
Total ..	375,256	363,507	392,933	390,920	403,76

Exports during the same years were as follows :—

Exports of tea by sea to foreign countries.

——	1924-25	1925-26	1926-27	1927-28	1928-29
	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)	lbs. (1,000)
From Northern India (Calcutta and Chittagong) ..	299,747	280,024	304,957	315,109	309,845
From Southern India (Madras ports)	37,717	43,945	44,172	46,142	49,503
From Bombay, Sind and Burma	2,643	2,576	1,373	761	436
Total	340,107	326,545	350,502	362,012	359,784

Exports during 1928-29 decreased by 1 per cent. in quantity and 18 per cent. in value as compared with 1927-28, and amounted to 360 million lbs. valued at Rs. 27 crores, as compared with 362 million lbs. valued at Rs. 32 crores in the preceding year. The United Kingdom took 298 million lbs. of black tea, valued at Rs. 22¼ crores as against 306 million lbs., valued at Rs. 28¼ crores in the previous year. She also took 439,000 lbs. green tea, as compared with 943,500 lbs. in 1927-28. About 83 per cent. of the exports went to the United Kingdom, whereas in 1927-28 her share had been 85 per cent. The re-exports of Indian tea from the United Kingdom also increased in 1928-29 to 52 million lbs. from 45 million lbs. in 1927-28, of which 18 million lbs. were shipped to the Irish Free State, 17 million lbs. to the Continent of Europe, 7 million lbs. to the United States and 5 million lbs. to Canada. Australia's demands for Indian tea nearly doubled and amounted to 6 million lbs. and exports to Ceylon, Iraq and Persia remained almost stationary and amounted to 4·6, 2·1 and 4·1 million lbs. respectively during 1928-29. Russia took 4 million lbs. as against 6 million lbs. in the previous year.

EXPORTS AND PRICES.

The following table shows the quantity of Tea exported by sea and by land to Foreign Countries from India, Ceylon, China and Java in the years 1899-1900 to 1928-29 with variations in index numbers, taking the figure of 1896-97 as 100‡ :—

—	India §	Ceylon.*	China.†		Java.†
			Black and green.	Brick, tabie and dust.	
	lbs.	lbs.	lbs.	lbs.	lbs.
1900-01	192,300,658 [128]	149,264,603 [136]	144,270,933 [90]	52,190,667 [66]	....
1901-02	182,594,356 [121]	144,275,608 [131]	119,390,000 [74]	42,740,533 [54]	....
1902-03	183,710,931 [122]	150,829,707 [137]	128,226,933 [79]	78,512,400 [100]	....
1903-04	209,552,150 [139]	149,227,236 [135]	140,607,867 [88]	83,813,600 [107]	....
1904-05	214,300,325 [142]	157,929,333 [143]	132,366,933 [83]	61,493,733 [78]	....

1928-29	11 4	189	11 10	169

Tea Cess Fund.—In 1903 an Act, known as the Indian Tea Cess Act, IX of 1903, was passed at the request of the trade for promoting its sale and manufacture. Under this Act a duty of ½ pie per lb was levied on all Indian tea exported up to the 30th April, 1921. From 1st May, 1921, the rate was raised to ¼ pie per lb, and from the 21st April, 1923, to 6 annas per 100 lbs (¼ pie per lb). The whole of the amount collected is made over to a fund known as the Tea Cess Fund, which is placed at the disposal of a Committee appointed for the purpose, and Government merely acts as a revenue collecting agency. The total amount collected in 1928-29 was Rs. 13,53,000, as against Rs. 13,75,000 in 1927-28 and Rs. 13,13,000 in 1926-27.

Quantity of Indian Tea exported by sea* (distinguished according to countries of final destination) and by land, in the years 1923-24 to 1928-29.

* Including shipments from the State of Travancore.

(*a*) Tea consigned from British India to Ceylon is almost entirely transhipped at Colombo to other countries and does not, therefore, appear in the Ceylon Customs Returns as imports into Ceylon.

(*b*) Exclusive of the exports from the North-West Frontier Province for the months, July 1923 to February 1924, for which returns were not received. † Includes Iraq.

‡ These figures are not strictly comparable with the previous figures as they represent all the trade registered at selected railway stations adjacent to the land frontiers, though a fair portion of them is frontier trade. The old system of registration of frontier trade by means of clerks posted on the important trade routes across the frontier has been discontinued from 1st April 1925. The figure for 1925-26 excludes exports from Burma.

Coffee.

The history of the introduction of coffee into India is very obscure. Most writers agree that it was brought to Mysore some two centuries ago by a Mahommedan pilgrim named Baba Budan, who, on his return from Mecca, brought seven seeds with him. This tradition is so universally believed in by the inhabitants of the greater part of South India, that there seems every chance of its being founded on fact. About the beginning of the 19th century there is no doubt coffee had found its way to India, and in 1823 a charter was granted to Fort Gloster, near Calcutta, authorising it to become a cotton mill, a coffee plantation and a rum distillery. Some of the coffee trees planted in fulfilment of that charter are supposed to be still alive, and about the same time coffee was successfully grown in the Botanic Gardens, Calcutta; but the industry of coffee planting nowhere found an abiding place on the plains of India but migrated to the hills of South India, in Mysore more especially, and thus into the very region where tradition affirms it had been introduced two centuries previously.

The first systematic plantation was apparently Mr. Cannon's near Chikmuglur. This was established in 1830. It is supposed, however, that Major Bevan may have actually grown coffee on the Wynad at a slightly earlier date and that Mr. Cockburn's Shevaroy plantation bears the same date as Mr. Cannon's. In 1840 Mr. Glasson formed a plantation at Manantoddy, and in 1846 plantations were organised on the Nilgiri hills.

The Position of the Industry. — The number of reporting plantations in 1927-28 was 3,315 covering a total area of 273,815 acres, as against 3,152 plantations with an area of 256,390 acres in 1926-27.

The Indian coffee crop of 1927-28 was estimated at 35½ million lbs. of cured coffee, or over 1 million lbs. more than that of the preceding declined year. Exports during 1928-29, however, by 29 per cent. in quantity and 27 per cent in value from 277,000 cwts. valued at Rs. 232 lakhs to 198,000 cwts, valued at Rs. 1,69 lakhs, there being plentiful supplies available from other producing countries. The Brazilian crop of the 1927-28 season was the largest harvested since 1922-23, while increased production was also reported from British East Africa. All the principal countries, with the exception of the Bahrein Islands, curtailed their requirements of Indian coffee. The United Kingdom took 41,000 cwts. against 75,000 cwts. in 1927-28 and France 56,000 cwts. against 66,000 cwts. in the preceding year. Exports to Germany and the Netherlands which had risen to 33,000 and 30,00 cwts. in 1927-28 fell to 23,000 and 15,000 cwts., respectively in 1928-29,

INDIAN TOBACCO.

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres: namely, (1) Eastern and Northern Bengal (more especially the District of Rangpur); (2) Madras, Trichinopoly, Dindigul, Coconada and Calicut in Southern India; and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural esearch Institute, Pusa, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties "Seywet-gyi," the large-leaved variety and "Seywet-gyun," a smaller-leaved variety with pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are:—(*i*) the Coimbatore and Dindigal tract of Madras, where the *Usi-Kappal* and *Wara Kappal* varieties are largely grown, the former supplying the Trichinopoly cigar; (*ii*) the Godavari Delta of Madras; (*iii*) the Rangpur tract of Bengal; (*iv*) the Districts of Bihar and Orissa; (*v*) Guzerat in Bombay and (*vi*) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the broom-like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar making.

Exports.—Exports of unmanufactured tobacco recorded a substantial improvement in 1928-29 and amounted to 33 million lbs. valued at R1,23 lakhs in 1928-29 as compared with 28 million lbs. valued at R99 lakhs in the preceding year, an increase of 18 per cent. in quantity and of 24 per cent. invalue. The increase was mostly noticeable in the shipments from Madras, as the development of tobacco cultivation in Guntur and neighbouring districts made larger supplies available for exports. Exports from Madras rose from 11 million lbs. to 15 million lbs. and those from Bombay from 7 to 9 million lbs. while the share of Bengal declined from 5 million lbs. to 4 million lbs. Owing to the preference accorded to Empire-grown tobacco, there has been a remarkable increase in the use of Indian tobacco in the United Kingdom although there is yet room for further improvement in the direction of curing, packing and grading of the Indian leaf. Before the war the average exports of unmanufactured tobacco from India the United Kingdom amounted to 135,000 lbs. only, while in 1928-29 the exports totalled 12 million lbs. compared with 8 million lbs. in 1927-28 and 10 million lbs. in 1926-27.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagoa and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police Officials and give the alarm when a raid is contemplated. During the War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese Sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out. In 1922-23 the largest seizure of cocaine made by the Excise Department in the Bombay Presidency was one of 10,500 grains, while in 1923-24 a seizure of 24,000 grains was effected. In October 1924 the Excise Department made a seizure of 46,500 grains in a single case.

The Review of the Customs Administration in India 1925-26 contains the following paragraph:

"Most of the cocaine seized on import into India appears to have come from the Far East. The biggest seizures during the year were—

825 oz. at Rangoon.
525 oz. at Calcutta.
275 oz. at Bombay.
250, 198, and 149 oz. at Calcutta.

The total amount of cocaine seized by Custom Houses during the year was 3,453 oz." The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Two descriptions of opium must be distinguished. *Benares* opium which is manufactured from poppy grown in the United Provinces; and *Malwa* opium which is almost entirely produced in certain Native States in Central India and Rajputana.

Benares Opium.—Cultivation of poppy is confined to a limited area in the United Provinces and is permissible only under a license. The cultivator to whom advances of about one-third of the total amount eventually due to them are made by Govt. free of interest is required to sell the whole of his produce to the Govt. at a rate fixed by them, now Rs. 10 per seer of 70° consistence, *i.e.*, containing 70% pure opium. The area under licensed cultivation has in recent years been much reduced: in 1912-13 it was 285,220 bighas yielding 26,813 maunds of opium, and in 1928-29 it stood at 67,497 bighas with an outturn of 7,159 maunds. The crude opium received from the cultivators is sent to the Govt. Factory at Ghazipur where it is made up into three different forms:—(1) For export to the Far East known as "Provision" opium. This opium is made up in cakes at 71° consistence, 40 cakes weighing 140 lbs. being packed in a chest; (2) For consumption in India known as "Excise" opium. This is also made up in cakes at 90° consistence, each weighing one seer, 60 cakes being packed in one chest; and (3) Medical opium, for use in India and for export to the United Kingdom only.

Malwa Opium.—The poppy from which Malwa opium is manufactured is grown chiefly in the Native States of Indore, Gwalior, Baroda, Ratlam, Jaora, Sitamau, Mewar, Partabgarh, Jhalawar, Kotah and Tonk. The British Indian Government have no concern with the cultivation of the poppy, or with the manufacture of the opium but in November 1927 in collaboration with the States, they engaged in investigations directed to the ultimate abandonment by the States of poppy cultivation. The Commitee which was appointed to inquire into the problem has finished its labours and the Government of India are now considering its report. The Government regulated, before exports to China were stopped, the import of Malwa opium into, and the transport through, its territories. As the chief market for Malwa opium was China, and as the States in which the drug is produced had no access to the sea, except through British territory, the British Government were able to impose a duty on the importation of the drug on its way to Bombay for exportation by sea.

Sales of Malwa opium for export to China have ceased since January 1913 and the trade has become extinct since 17th December of that year when the last shipment was made. Practically the whole of the Malwa opium exported from Bombay went to China and Government no longer permit export of opium from these States to places outside India.

The poppy is sown in November, the plants flower in February, and by the end of March the whole of the opium has been collected by the cultivators.

Revenue.—The gross revenue derived by the Government of India from opium in recent years is as follows:—

	Rs.
1915-16	2,87,02,712
1916-17	4,74,00,075
1917-18	4,61,83,538
1918-19	4,93,36,670
1919-20	4,55,62,212
1920-21	3,53,41,234
1921-22	3,07,24,798
1922-23	3,78,92,068
1923-24	4,24,81,654
1924-25	3,79,76,177
1925-26	4,14,99,781
1926-27	4,31,48,876
1927-28	3,94,52,000
1928-29	3,19,14,000

The only countries to which exports are now permitted are the United Kingdom (as regards medical opium) and the British Far Eastern Colonies, Siam, French Indo-China and the Dutch East Indies. To these last named territories of other nations, export only takes place on certificate of the Colonial Government whose people are affected The certificate declares that the opium is required for legitimate purposes and will not be re-exported. In 1926, the Government of India decided to extinguish exports to the Far East progressively, in 10 years ending December 31st, 1935, except for strictly medicinal or scientific purposes. Number of chests exported has fallen from 34,827 in 1912 to 6,685 in 1928. The figure for 1928 includes 169 cnests shipped at the end of December against the allotment for 1929

Agreement with China.—The fluctuations in the revenue derived from opium are directly attributable to the trade conditions arising out of the limitation of opium exports. In 1907 being satisfied of the genuineness of the efforts of the Chinese Government to suppress the habit of consuming opium in China, the Government of India agreed to co-operate by gradually restricting the amount of opium exported from India to China. In 1908 an arrangement was concluded by which the total quantity of opium exported from India was to be reduced annually by 5,100 chests from an assumed standard of 67,000 chests. Under a further agreement, signed in May 1911, the cessation of the trade was to be accelerated on evidence being shown of the suppression of the native production of opium in China, and in accordance with this agreement a further limitation was placed on exports to Chinese ports. The reduction of exports led to an increase in the price of the drug in China and a corresponding rise in the price obtained in India at the auction sales. For some considerable time, however, in 1912 the trade in China was paralysed by the imposition by Provincial Governors in defiance of instructions from the Central Government of restrictions on the importation and sale of Indian opium. Stocks accumulated rapidly at Shanghai and Hongkong and the position in December 1912 had become so acute that a strong and influential demand was made on the Government of India to relieve the situation by the suspension of sales. Sales were accordingly postponed both of Benares and Malwa opium and in order to afford the Malwa trade the most complete relief, the Government of India undertook to purchase for its own use 11,253 chests of Malwa opium which remained to be exported in 1913.

As the export trade to China has ceased since 1913, these details are now of historical importance only.

Internal Consumption.—The internal policy of the Government of India has been, and is, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit, or merely the indulgence of the almost universal desire of human beings (particularly those whose occupations involve exposure, or severe bodily exertion), for a stimulant or a narcotic. Excessive indulgence has always been suppressed. The total consumption in British India has gone down considerably; it was 5,03,595 seers in 1912-13 and 2,77,053 seers in 1927-28, the latest period for which figures are available.

GLASS AND GLASSWARE.

The total value of the imports of glass and glassware in 1928-29 was Rs.2,37½ lakhs as compared with Rs.2,48½ lakhs in 1927-28 and Rs.5.53 lakhs in 1926-27. As in the two preceding years, Japan maintained her premier position and increased her share from Rs.68¾ lakhs in 1927-28 to Rs.69½ lakhs in 1928-29, while the share of Czechoslovakia which, next to Japan, was the chief source of supply, further receded by Rs.4 lakhs to Rs.57 lakhs. Imports from Germany and the United Kingdom were valued at Rs.40¾ lakhs and Rs.20¾ lakhs as compared with Rs.49 lakhs and Rs.23 lakhs respectively in 1927-28. Imports from Belgium showed little improvement and were valued at Rs.25 lakhs as against R24½ lakhs in 1927-28. Glass bangles were less in demand and recorded a decrease from Rs.89½ lakhs in 1927-28 to Rs.76¾ lakhs in 1928-29, to which Czechoslovakia contributed R45½ lakhs and Japan Rs.22½ lakhs. Beads and false pearl drawn chiefly from Czechoslovakia and Japan with a fair quantity from Italy, were imported to the value of Rs.30½ lakhs as compared with Rs.26½ lakhs in the preceding year. Imports of bottles and phials rose from 516,000 gross valued at Rs.33 lakhs to 586,000 gross valued at Rs.36 lakhs. The chief sources of supply as usual, were Germany (Rs.12¾ lakhs), Japan (Rs12 lakhs) and the United Kingdom (Rs.8 lakhs). Imports of funnels, globes and glass parts of lamps declined from Rs.22 lakhs to Rs.19½ lakhs. Glass sheets and plates were imported to the extent of 24 million square feet as compared with 23½ million square feet in 1927-28 and were valued at Rs. 29¾ lakhs, almost the same as in the preceding year. The imports were, as usual, mostly from Belgium and, to a less extent, from the United Kingdom, the supplies from these two countries being valued at Rs.20 lakhs and Rs.5¾ lakhs as against Rs.18½ lakhs and Rs. 8½ lakhs respectively in 1927-28. Imports of tableware (including decanters, tumblers, etc.) showed an increase while those of scientific glassware registered a small decrease.

Manufacture of Glass in India.—Glass was manufactured in India in centuries before Christ and Pliny makes mention of "Indian Glass" as being of superior quality. As a result of recent archæological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the Industry. But no further traces of ancient Indian Glass Industry as such survive; yet, it is certain that by the sixteenth century it was an established Industry producing

mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed, while some are still clinging to life owing to war conditions. They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well-defined classes of the industry in its present stage, (i) indigenous Cottage Industry and (ii) the modern Factory Industry.

(i) The indigenous Cottage Industry which is representated in all parts of the country, but has its chief centres in Firozabad District of U. P., and Belgaum District, in the South, is mainly concerned with the manufacture of cheap bangles made from " glass cakes or blocks ", made in larger Factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose "silky" bangles are ousting the old type Indian ones.

(ii) The modern Factory type of organization of this Industry is just in its infancy at present. The existing Factories either stop at producing glass cakes for bangles as in Firozabad or simple kind of lampwares and bottles. With the existing state of knowledge and machinery in India they can neither produce sheet and plate glass, nor do they pretend to manufacture laboratory or table glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware, etc., and in order to meet the Indian demand for them, new Factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated, but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are at present 14 Factories engaged in the production of lampware, of which two or three only produce bottle and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijhoi and Ambala; while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the later years of the war period, a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass,

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventible causes, prominent among which were (1) Lack of enlightened management. (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (*a*) nearness of quartz and fire-clay, (*b*) nearness of fuel, and (*c*) by the nearness of market. At least two must be present. In some concerns, two were absent. (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles, and bangles, etc. (5) Paucity of sufficient fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contrib ted to the failure of some of these and hinder he progress of the rest. Chief among them are (1) The Industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Paucity of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are unamendable to management. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal-fields. (5) To a certain extent, competition from Japan and other European countries.

Alkali used is almost entirely of English manufacture being Carbonate of Soda 98-99% in a powdered form. This Alkali has almost completely taken place of the various Alkaline Earths formerly employed by the Glass Bangle manufactures as the latter cannot be used in the manufacture of glass which is to compete with the imported article. These points must be carefully noted for future guidance.

The Industry developed considerably under war conditions; but in peace times, in this transition stage, immediate efforts must be made in the direction of what the Indian Industrial Commission say in their Report (Appendix E)., *viz.*: "The Glass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

WILD BIRDS' PLUMAGE.

The Bill for prohibiting the importation into England of wild birds' plumage, which was introduced into Parliament in 1913, was the occasion of a fierce controversy on the nature of the plumage traffic. Organised opposition to the Bill, although successful in preventing it from becoming law, failed to convince the public that the plumage trade was not one of great cruelty. The controversy continued with unabated vigour until May 1921, when an agreement was arrived at between the two parties. The most important clause in the agreement stipulates that within four months of the Bill becoming law an Advisory Committee shall be appointed by the Board of Trade. This Committee will consist of an independent chairman, two expert ornithologists, three representatives of the feather trade, and four other independent members. The function of this Committee will be to advise the Board of Trade as to additions to and removals from the existing schedule (ostrich and eider duck) of birds whose plumage may be imported. The passing of the Plumage Bill will thus place England ab east of the United States and of her own daughter Dominions in the suppression of a barbarous industry, as all legitimate methods of breeding birds for their plumage will be safeguarded as definite exceptions under the Plumage Bill.

Plumage birds.—The birds most killed on account of their plumage in India are paddy birds, egrets, kingfishers, bustards, junglefowl, pheasants, paroquets, peafowl, hoopoes and rollers. Egrets and rollers (popularly known as Blue Jays) are perhaps the birds which hav been most extensively killed in the past, and of these, egrets have attracted the greatest attention. There are three species met with in India: the Large, Smaller and Little Egrets. All three are pure white slim birds which develop during the breeding season a dorsal train of feathers, which elongates and becomes "decomposed" as it is expressed, that is to say, the barbs are separate and distinct from each other, thus forming the ornamental plume or aigrette for which these birds are much sought after and ruthlessly destroyed. Thirty years ago the exports were valued at over six lakhs in one year, but since 1895 the export trade has steadily diminished. But, though legitimite exports have been stopped, the trade is so lucrative as to lead to many attempts at smuggling. Within a recent period of 12 months the Bombay Preventive Department, for example, seized egret plumes worth Rs. 2,19,047 in India and £44,000 in London. The rupee value represents the sum which the exporters paid to those who took the feathers from the birds, so the loss to the trade was considerable. In addition, penalties varying from Rs. 5,000 to Rs. 10,000 each and amounting altogether to Rs. 59,175 were inflicted on the ten merchants concerned in attempting to export the feathers. A case was reported from Rangoon in 1916 of a man being found in possession 22 lbs. of egret feathers valued at Rs. 66,000. Although frequently denied, there seem very little reason to doubt, that within the last decade egrets have been successfully bred in captivity by the fisherfolk in the province of Sind. But whether such birds can be bred without cruelty, and if so whether the export of their plumage could be legalised without encouraging barbaries in other areas of the peninsula, is a question which can only be decided as a result of a searching and exhaustive inquiry.

Legislation.—Indian legislation on the subject will be studied with interest by those who have followed the course of legislation on this subject in other countries. Until 1887 no legislation was considered necessary in India. An Act of that year enabled local governments and municipal and cantonment authorities to make rules prohibiting under penalties the sale or possession of wild birds recently killed or taken during their breeding seasons, and the importation into any Municipal or cantonment area of the plumage of any wild birds during those seasons; and local governments were empowered to apply these provisions to animals other than birds.

Afterwards, in 1902, action was taken under the Sea Customs Act to prohibit the exportation of the skins and feathers of birds, except feathers of ostriches and skins and feathers exported *bona fide* as specimens illustrative of natural history. Act VIII of 1912 goes much further than the previous law. It schedules a list of wild birds and animals to which the Act is to apply in the first instance, enables local governments to extend this list, empowers local governments to establish "close times," presumably during the breeding seasons, in the whole of their territories or in specified areas, for wild birds and animals to which the Act applies, and imposes penalties for the capture, sale, and purchase of birds and animals in contravention of the "close time" regulations, and for the sale, purchase and possession of plumage taken from birds during the close time. There is power to grant exemptions in the interests of scientific research, and there are savings for the capture or killing by any person of a wild animal in defence of himself or of any other person, and for the capture or killing of any wild bird or animal in *bona fide* defence of property.

One defect in the law may be noticed. When an exporter is discovered, the Customs Department can on a magistrate's warrant have his house searched and seize the feathers found there to produce as evidence that he is engaged in the trade. But they have to return the feathers and can only take possession of them if they are discovered presently in course of export.

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good; there was a large demand for hides, and prices ruled high. While in the continental markets stocks were high owing to overtrading in the previous year, the United States had a shortage which was estimated at approximately two million pieces. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries, especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India, it is well known, has hitherto been largely, if not quite entirely, in the hands of German firms or firms of German origin. Germany has had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent. of the total exports. In 1912-13 she took 32 per cent. and in 1913-14, 35 per cent. Raw hides were exported to Trieste in considerable quantities whence they were taken to Germany or Austria. In the four months before the outbreak of war 15 per cent. of India's exports passed through Trieste in 1913-14 the percentage was 21.

The trade showed a marked improvement in 1927-28 owing to a world shortage of hides and leather.

The total trade showed a small increase in 1928-29, although it registered a decline under certain heads. The demand from the United Kingdom as well as from Germany was on a lower level as compared with the preceding year. Though the prices in the latter part of the year were on the decline yet the declared values of raw hides and skins rose in 1928-29 as compared with 1927-28 by 7 pies per lb. from 9 as. 9 p. to 10 as. 4 p. per lb. Shipments of raw hides and skins during the year amounted to 66,100 tons valued at Rs. 9,56 lakhs as compared with 64,400 tons valued at Rs. 8,81 lakhs in the preceding year. Exports of raw hides declined from 40,700 tons in 1927-28 to 37,300 tons in 1928-29, accounting for 56 per cent. of the total exports as against 63 per cent. in the preceding year. In value however the exports increased from Rs. 3,85 lakhs to Rs. 4,05 lakhs. Exports of raw skins increased and amounted to 35 per-cent. of the total exports in 1928-29 as compared with 30 per cent. in 1927-28. Exports of raw skins amounted to 22,900 tons valued at Rs. 5,41 lakhs in the year under review as compared with 19,400 tons valued at Rs. 4,89 lakhs in the preceding year. Exports of tanned or dressed hides and skins increased from 23,300 tons to 23,500 tons, the increase in value being Rs. 24 lakhs from Rs. 9,07 lakhs to Rs. 9,31 lakhs. Tanned hides increased from 15,000 tons valued at Rs. 4,12 lakhs in 1927-28 to 16,400 tons valued at Rs. 4,40 lakhs in 1928-29. There was a slight decline in tanned skins from 7,500 tons valued at Rs. 4,95 lakhs in 1927-28 to 7,100 tons valued at Rs 4,91 lakhs in 1928-29.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect: it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

No large industry has changed more rapidly and completely than that of leather. By the **chrome process**, for example, superior leather may be produced from the strongest buffalo hides in seven days, from cowhide in twenty-four hours, and from sheep and goat skins in six to eight hours; and these operations formerly took thirty days or as much as eighteen months. Of these changes the native tanners of India were slow to take advantage, but in spite of general backwardness the leather produced by some of the tanneries, especially those under European management, is in certain respects equal to the best imported articles. But since the outbreak of war progress has been more rapid and considerable quantities of special forms of chrome leather, for which Indian hides are particularly suitable, have found a ready market in London.

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent. on hides and skins with a rebate of 10 per cent. on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended

to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire; and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

Indigenous methods.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrabolans. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

INDIAN INVENTIONS AND DESIGNS.

A handbook to the **Patent Office** in India which is published by the Government Press, Calcutta, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English "Statute of Monopolies" which was enacted in 1623, the 21st year of King James the First. In part this Act has been repealed, but the extant portion of the more important section 6 is as follows:—"Provided also that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient; the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made, and of none other."

The **existing Indian Patent Law** is contained in the Indian Patents and Designs Act, 1911, supplemented by the Indian Patents and Designs (Temporary Rules) Act, 1915, and by the Rules made under those Acts. The Patent Office does not deal with trade mark or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists, however, as owing to the absence of provision of law for the **registration of trade marks**, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter three, *viz.*, (1) Hyderabad (Deccan), (2) Mysore, (3) Gwalior have ordinances of their own, for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. The object of the Act of 1911 was to provide a simpler, more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They gave further protection both to the inventor, by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established, with

power to dispose of many matters previously referred to the Governor-General in Council, and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

Important amendments have been made in the Indian Patents and Designs Act since 1911, the most important being the priority given to Indian Inventors over others to apply for British patents within 12 months from the date of the Indian application. Similarly, an applicant for a British patent has priority over other applicants in India for 12 months from the date of his British application.

Printed Specification of applications for patents, which have been accepted (8 annas per copy), may be seen free of charge, together with other publications of the Patent Office at the following places:—

Note.—The quinquennial average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual figures and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(*a*) Excludes gold imported and exported on behalf of the Bank of England.

(*b*) Figures are for calendar year ending 31st December.

The Indian Tariff Board, 1929.

Three reports of the Indian Tariff Board have been published since its work was last reviewed in the Indian Year Book. They were—

(1) On the question of Tariff equality in respect of the manufacture of electric wires and cables.

(2) On the question of Tariff equality in respect of the manufacture of Manila rope

and

(3) On the question of Tariff equality in respect of the manufacture of printing type.

All these subjects were taken up by the Tariff Board as the outcome of representations which had been received by the Government of India that the development of certain industries in India was hampered by the fact that the duty on the finished article was lower than the duty on the materials which had to be imported for its manufacture.

Electric wires and cables.—The only application received by the Board in respect of these was that of the Indian Cable Company. Of the two classes of articles produced at this company's works, bare hard drawn copper conductors and rubber insulated cables, the Tariff Board found that the question of tariff inequality arose only in the case of rubber insulated cables. To remedy this inequality, it recommended that a duty of five per cent. should be imposed on all classes of rubber insulated wires and cables, other than those specified in Article 90-A. As regards bare copper conductors, the principal raw material required for the manufacture of which is " black rod " on which the Company had been granted exemption of duty since 1923, the Tariff Board recommended that the duty should be entirely removed from the Tariff Schedule on the ground that the Company was practically the only purchaser of this raw material.

Decision of the Government of India.—The Government of India accepted the recommendation of the Tariff Board and effect was given to it in the Indian Tariff Amendment Act, 1929, which was passed by the Imperial Legislature in March, 1929.

Manila Rope.—The applicants in this case were the three principal manufacturers of Manila rope in India, the Ganges Rope Company, Ltd., the Shalimar Rope Works, Ltd., and Messrs. W. H. Harton & Co. Their representations were the outcome of the fear which was entertained of the loss of business which might result from the establishment of bonded warehouses by shipping companies in India for the importation of all ships stores including Manila rope. The Tariff Board held that figures showing the proportion of the total Indian output of manila rope supplied to shipping companies, which in the previous three years had for the Ganges Rope Company been as high as 67 per cent or two-thirds of the total output, showed that the loss resulting from the establishment of bonded warehouses might be serious and might affect even the very existence of the Indian industry. It, therefore, found that the reduction which would be necessary in the duty on manila hemp, the principal raw material used in the manufacture of manila rope, to secure tariff equality for the industry, was from 15 per cent. to 5 per cent. It further found, however, that some further relief was required to enable Indian manufacturers to compete on equal terms in the export market and recommended that the duty on manila hemp should be entirely removed.

Decision of the Government of India.—In a Resolution issued on June 8th, 1929, the Government of India accepted in principle the recommendation of the Tariff Board that the duty on manila hemp should be entirely removed and expressed their intention of giving effect to it when financial considerations permitted.

Printing type.—Applications in this case were received from a number of type foundries. The Tariff Board held that the figures of cost of manufacture of printing type showed that the Indian manufacturers was subject to a tariff inequality of about Rs. 3 per 100 lbs. in the case of type metal manufactured locally and Rs. 4 per 100 lbs. in the case of imported type metal. It considered it necessary in devising measures for removing this inequality to adjust the duties so as to afford relief to type foundries which import type metal as well as those which manufacture it locally. It held that the only method of relief which would afford assistance to both classes of producers was an increase in the duty on printing type. A reduction in the duty on imported type metal would not benefit those who manufactured their own type metal whilst a reduction in the duties on the virgin metals used in the manufacture of the alloys employed in making type metal in Indian foundries would not merely fail to give relief to importers of type metal but would be open to serious objection from Indian metal interests. The Board, therefore, recommended that the duty on printing type should be fixed at a rate corresponding to the duty paid on imported type metal, the tariff inequality being higher in this case. Further, in consideration of the rapid decline in the prices of German type, it considered that the duty on printing type should be converted from an *ad valorem* to a specific duty. It estimated that the duty paid on imported type metal amounted to Rs. 5.51 per 100 lbs. of printing type or 10½ pies per pound. A specific duty at this rate would be sufficient on the basis of present prices to remove the tariff inequality. But it was of opinion that some allowance should be made for the possibility of a further immediate decline in the prices of German type which in the previous eighteen months had declined by two to three annas per pound. On this ground, the Board recommended that a specific duty of one anna per pound should be levied on printing type.

Decision of Government of India—The Government of India accepted the recommendation of the Tariff Board and effect was given to it in the Indian Tariff Amendment Act, 1929, which was passed by the Imperial Legislature in March 1929.

Other enquiries.—During the year, the Tariff Board completed its enquiry into the question of the removal of the import duties on

those *chemicals* which are used as materials in Indian industries but its report has not yet been published. It also commenced an enquiry into the desirability in the national interest that step should be taken to encourage the production of *salt* in India suitable for consumption in those markets which are at present largely supplied from abroad and the measures, if any, which should be taken with that object.

Import Tariff on Cotton Piecegoods and External competition in the Cotton Piecegoods Trade.—In July 1929, Mr. G. S. Hardy, I.C.S., Collector of Customs, Calcutta, was directed by the Government of India to examine the possibility of substituting a system of specific duties for the existing system of *ad valorem* assessment of cotton piecegoods. He was also directed to ascertain and report what changes had taken place since the Indian Tariff Board (Cotton Textile Enquiry) reported in 1927, in the volume of imports, classes of goods imported and the extent and severity of external competition with the products of Indian mills. This enquiry, which was completed in November, though not undertaken by the Indian Tariff Board is so closely connected with the work of the Board that its result may conveniently here be summarised.

Classification of piecegoods.—Under this head Mr. Hardy's main conclusions were that the revision of the statistical classifications of piecegoods is very urgently required as, so long as they remain in their present form, it is very difficult to gauge the progress of competition. The first aim of the revision should be the removal of ambiguities from the headings. The second aim should be the unification of the systems of classification adopted in the various returns. At present there are at least five different systems in force.

Production in India.—Under this head, Mr. Hardy found that the year 1927-28 typified the normal relations which might be expected between Bombay Island and other Indian centres of production when full working in Bombay is resumed. In that year, Bombay Island contributed 49 per cent. of the total Indian production of piecegoods, Ahmedabad 22 per cent, other mills in the Bombay Presidency and adjacent areas 21 per cent and the mills in other parts of India 8 per cent. Ahmedabad is the principal centre for the production of dhuties though the production in Bombay Island has increased since the Tariff Board reported. The respective shares of Ahmedabad and Bombay in the dhuti output in 1927-28 were 38 and 27. On the other hand, Bombay Island produced 61 per cent of the grey sheetings output in 1927-28 and Ahmedabad only 18 per cent. Only about one per cent of the cloth returned as grey or bleached by the Indian mills is bleached. About 90 per cent. of the bleached cloth is cloth with a coloured stripe or check, classified either as "coloured striped saris and susis" or as "coloured drills and jeans." Of this Bombay Island and Ahmedabad each produces about 100 million yards. Ahmedabad produces very little else in the way of coloured cloth, 80 per cent of the output of other coloured cloth being produced by Bombay. Calcutta is the principal market for grey cloth of Indian production, 90 per cent of the dhuties and 65 per cent of other grey goods being sold either on the Calcutta market or in the area served in respect of imports by Calcutta. On the other hand, less than 30 per cent. of the coloured goods produced in the Indian mills are sold in the Calcutta area. Roughly 80 per cent of the total output of piecegoods in the Indian mills and 75 per cent of the output of dhuties and sheetings are woven from counts below 25s. About 13 per cent of the dhuties and sheeting are woven from yarns 26s to 30s, 9 per cent from 31s. to 40s. and 3 per cent from 41s. and over. Some progress has been made in the weaving of fine counts since the Tariff Board reported but the results are not very striking.

The extent of external competition.—Under this head, Mr. Hardy found that the steady rise in imports from Japan during the last eight years has been the most prominent feature of the import trade. The progress made by Japan in this trade since the Tariff Board reported has been rapid and uninterrupted. The imports of *dhuties* from the United Kingdom have remained steady whilst the Indian mill production has increased. The two trades overlap only to a small extent in the region of medium counts and Ahmedabad is certainly not suffering from external competition in this trade. Bombay, on the other hand, competes with difficulty against Ahmedabad. Japan entered the dhuti trade seriously in 1925-26 and now provides about 10 per cent. of the imports. These consist almost entirely of dhuties woven from yarns above 30s. The most striking advance made by Japan has been in *shirtings*. Progress in this line was at first at the expense of Lancashire and imports from the United Kingdom have fallen to quite a small figure. In the last three years Japan has progressed at the expense of the Indian mills and the figures for the first half of 1929-30 when the imports from Japan and China were 149 million yards against 203 million yards for the whole of 1928-29 and 84 million yards for 1925-26 indicate the severity of the competition. The Bombay production of *sheetings* has fallen owing to the loss of overseas markets to which Japan has now established direct sailings. The production of sheetings elsewhere in India has not been greatly affected but competition in heavy sheetings from Japan has reacted unfavourably on the sales of Indian sheetings. The Indian mills hold their own in the production of *grey drills and jeans* in which the demand is almost entirely for a heavy class of goods. There is little, if any, production of the finer classes of grey goods in India but imports which are almost entirely from the United Kingdom have fallen off since the War. Japan has not seriously invaded the import trade in *white goods*, most of which remains in the hands of Lancashire. This trade consists largely of goods whose fineness is above the limit at which production from Indian cotton is possible. The increase in the imports of *printed goods* in the past three years, notably in drills and jeans from Japan, fancy prints and chintz from the United Kingdom and sheetings from Japan and Italy has been considerable. The printed drills and jeans are of fine quality and with the printed sheetings compete with Indian woven striped sheetings. Fancy prints and chintz do not compete with any Indian product. The

imports of *dyed goods* increased considerably in 1926-27 but have remained at the same level since. The imports of *coloured woven goods* increased up to 1926-27 but have since fallen off to a small extent. The principal competition in this line is from Japanese striped sheetings, twills and coarse drills, Mr. Hardy pointed out that only the roughest comparison between Indian and imported coloured cloth is possible owing to the extreme diversity of the trade and the ambiguity of the statistical headings. The maintenance of the export trade in Indian coloured cloth suggests, however, that competition is not so severely felt as in grey goods. He found that there is very little direct competition in coloured goods between the United Kingdom and Indian mills. The only serious external competitor at present is Japan, though there is evidence that Italy may become a serious rival in the near future.

The severity of external competition.—Under this head, Mr. Hardy's conclusion was that, if allowance were made for fluctuations in the price of raw cotton, there had been no general reduction in the price of Japanese cloth since the Tariff Board reported. Owing to the declining rates for raw cotton, the prices of both imported and local cloth fell appreciably during the four months from August to November 1929. His examination of the comparative prices of Indian and Japanese goods showed that over a range of cloth in which the cost of raw cotton per pound of cloth does not vary appreciably, the severity of competition increases with the price. The coarser imported grey cloths constitute such a range and, in consequence, there is a limiting price below which imported cloth is apparently unable to compete. Thus the lowest market prices of imported grey cloth in August 1929 were about 14 annas per pound in Bombay and about 13¼ annas at other ports. The limiting prices for coloured cloths are higher than for grey goods indicating that in general competition in coloured goods is less severe than in grey goods. The fact that, area for area, fine cloth is often cheaper than coarse cloth causes indirect competition between imported fine cloths and locally made coarse cloths. As regards competition from other textiles, Mr. Hardy found that artificial silk yarn is being used to an increasing extent in the weaving of striped cotton goods and the borders of dhuties. To this extent, artificial silk is an ally rather than a competitor of cotton. The imports of artificial silk cloth and of mixed cotton and artificial silk fabrics are in competition with real silk goods rather than with cotton goods.

The administrative aspect of the tariff on piece-goods.—Mr. Hardy's findings under this head were that specific duties are not necessarily simpler to administer than *ad valorem* duties. A check on value is often the most effective check on quantity available to the Customs officer. A classification depending on the actual counts of yarn from which a cloth has been woven is not practicable. A system of specific duties, if it were to approximate in incidence to the existing *ad valorem* duty, must involve the imposition of a series of different rates on different classes of goods. Without allowing for the effect of sizing, it would be impossible even by the indefinite multiplication of classes to avoid fairly wide variations of value in each. The smaller the number of classes, the more inequitable the incidence of the duty would be. The greater the number of classes, the greater the number of disputed "border line cases" that would arise. One effect of the division into classes would be the creation of a number of ranges of goods which cannot be profitably imported in competition with others more favourably treated by the new duties. The value of the trade marks applied to goods in these ranges would be greatly depreciated. Mr. Hardy's conclusion, therefore, was that on administrative grounds a change from the existing *ad valorem* method of assessing duty was undesirable.

The protective aspect of the tariff on piece-goods.—Dealing with the tariff on piece goods in its protective aspect, Mr. Hardy pointed out that if a protective duty is intended to be prohibitive, the method of assessment is immaterial. It is merely necessary to fix the rates sufficiently high. The only other form of protective duty that need be considered is one that aims at equalisation of prices. In deciding what form of duty is most suitable for this purpose, it is necessary to take into account variatons in price over the range of articles to be subjected to the duty as well as fluctuations in price over a period of time. When fluctuations affect imported and local products alike, a specific duty is more effective than an *ad valorem* duty in allowing for them. For other fluctuations or for variations among different classes of goods, an *ad valorem* duty is the more effective. The decision must, therefore, be in favour of *ad valorem* duties unless it is feasible to select classes in which the range of prices is small. Mr. Hardy held that such a selection was not feasible except among certain very limited types of piece goods. The fact that very little grey cloth woven from yarns finer than 42s. is shipped in lengths of more than 24 yards could, however, be used to simplify the classification of grey cloth for protective purposes. The factors contributing to variation in the price of dhuties are much more diverse than in the case of plain grey cloth and this, coupled with the fact that they are almost invariably packed in bales, leads to the conclusion that in is not possible to apply differential rates to dhuties. If it were desired to discriminate between coarse and fine coloured goods, an approximate division based on the price per pound would be the most convenient method. If a protective *ad valorem* duty were imposed on the cheaper type of goods and the present revenue duty were retained on more expensive goods, it would be both desirable and feasible to bridge the gap by a specific duty based on weight. In conclusion, Mr. Hardy pointed out that all the principal countries which have revenue tariffs have adopted *ad valorem* duties. The concentration of India's foreign trade into the five great ports, which are also the principal markets for a large hinterland makes *ad valorem* duties and, in particular assessment on local market value workable whereas in countries with a large number of small ports, the market value system would be unworkable. There is very little trade in baled goods into the countries which have protective specific duties.

Customs Tariff.

General import duties are levied for fiscal purposes and not for the protection of Indian industries. But the tariff has been modified with a view to admitting free or at favourable rates articles, the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances are admitted free. Machinery, printing materials, etc. are assessed at 2½ per cent. and iron and steel railway material and ships at 10 per cent. High duties are imposed on tobacco, liquors and matches.

Re-Imports.—Articles of foreign production on which import duty has been once paid, if subsequently exported, are on re-import exempted from duty on the following conditions:—

The Collector of Customs must be satisfied—

(1) of the identity of the articles;

(2) that no drawback of duty was paid on their export;

(3) that the ownership has not changed between the time of re-export and subsequent re-import;

(4) that they are private personal property re-imported for personal use, not merchandise for sale;

(5) that not more than three years have passed since they were re-exported.

Duty is, however, charged on the cost of repairs done to the articles while abroad which should be declared by the person re-importing the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification on re-importation an export certificate giving the necessary particulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examination.

This concession of free entry on re-importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks.—When any goods, capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation, are re-exported by sea from such Customs port to any foreign port, or as provisions or stores for use on board a ship proceeding to a foreign port, seven-eighths of such duties shall, except as otherwise hereinafter provided, be repaid as drawback:

Provided that, in every such case, the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re-export be made within two years from the date of importation, as shown by the records of the Custom House, or within such extended term as the Chief Customs Authority, or Chief Customs Officer on sufficient cause being shown, in any case determines, provided further that the Chief Customs Officer shall not extend the term to a period exceeding 3 years.

When any goods, having been charged with Import duty at one Customs port and thence exported to another, are re-exported by sea as aforesaid, drawback shall be allowed on such goods as if they had been so re-exported from the former port:

Provided that, in every such case, the goods be identified to the satisfaction of the Officer-in-Charge of the Custom House at the port of final exportation, and that such final exportation be made within three years from the date on which they were first imported into British India.

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re-export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for shipment.

Every person, or his duly authorised agent, claiming drawback on any goods duly exported, shall make and subscribe a declaration that such goods have been actually exported, and have not been re-landed and are not intended to be re-landed at any Customs port; and that such person was at the time of entry outwards and shipment, and continues to be, entitled to drawback thereon.

Merchandise Marks.—Importers into India especially from countries other than the United Kingdom, would do well to make themselves acquainted with the law and regulations relating to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Marks Act, 1889, and connected Acts and the notifications issued thereunder. The following summary of the regulations in force does not claim to be exhaustive. For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Infringements or offences may be classified conveniently under four heads:—

1. Counterfeit trade marks;
2. Trade descriptions that are false in respect of the country of origin;
3. Trade descriptions that are false in other respects; and
4. Lengths not properly stamped on piece goods.

Schedule II—(Import Tariff).

NOTE 1.—In the expression "*ad valorem*" used in these Schedules the reference is to "real value" as defined in Section 30 of the Sea Customs Act, 1878 (VIII of 1878), unless an article has a tariff value assigned to it.

NOTE 2.—Tariff valued heads are based on the ordinary trade description of each article and cover all reduced grades and mixtures unless they are separately provided for.

4	RICE, husked or unhusked, including rice flour, but excluding rice bran and rice dust, which are free.	Indian maund of 82 2/7 lbs. avoirdupois weight.	....	Three annas.

* Under Government of India Notification No. 1428, dated 17th November 1923, Jute Rags uch as are used for paper-making, are exempt from payment of export duty provided that the Customs Collector is satisfied that they are useless for any purpose to which cloth or rope is ordinarily put.

† Under Government of India, Finance Department (Central Revenues), Notification No. 35, dated the 25th September 1926, hide and skin cuttings and fleshings, such as are used for glue-making, are exempt from payment of export duty.

Trade.

India is pre-eminently an agricultural country, and that fact dominates the course of its trade. The great export staples are the produce of the soil—wheat, seeds, cotton and jute. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past, the outturn of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change, and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such year as 1896-97 and 1899-1900. Well over thirty per cent. of the culturable area of the Punjab is under irrigation, and huge new works are in progress to utilise the waters of the Sutlej, and of the Indus in Sind. Whilst these great works have been carried out or are in progress to spill on the land the floods of the snowfed rivers of the North, other works of a less imposing character have safeguarded the arid tracts of the South. A chain of storage lakes arrests the rains of the Western Ghats and through canals spreads them over the parched lands of the Deccan. The rivers of the South like the Cauvery are being harnessed to preserve their flood waters for Madras. All over India irrigation works, large and small, are being restlessly pressed forward, and their effect is to give a far greater stability to Indian agriculture.

The destination of these surplus crops is another factor of importance. The great customer for Indian cotton is Japan, and to a lesser extent the Continent of Europe. Continental Europe is also a large buyer of her oilseeds and another produce, and of her hides and skins. Whilst the United Kingdom is the great market for tea and wheat, foreign countries are very important facts in the Indian export trade; therefore India had a vital interest in the economic recovery of Europe. When the post-war boom collapsed it hit India hard and for a year or two the export trade reeled under the shock. The progress of the Dawes Plan and the measures taken under the League of Nations to assist Austria and Hungary back to industrial health had a special bearing on the prosperity of India; they have been elements of importance in inducing her recovery of prosperity.

But whilst India is pre-eminently an agricultural country, she ranks at the International Labour Office at Geneva as one of the great industrial countries of the world. Her manufacturing industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry, which has its home in the town and Island of Bombay, with important subsidiary centres at Ahmedabad, Sholapur and Nagpur. Next in importance is the jute industry. Raw jute is a virtual monopoly of Bengal, and the jute mills are concentrated in and near Calcutta. The metallurgical industry is of more recent growth. The principal centre is Jamshedpur, the seat of the works of the Tata Iron and Steel Company where subsidiary industries have sprung up to utilise the products of the blast furnaces and mills. A very large proportion of the jute manufactures is exported. The cotton textile industry has lost a considerable part of its export trade to Japan, the Far East and East Africa; the mills find their principal outlet in India itself, and even there they are subject to severe competition from Japan and China. The iron and steel industry is for the most part a home industry, through large quantities of Indian pig iron are shipped to the Far East, and in some years to the western ports of North and South America. Therefore, whilst India is still in the main an agricultural country, three-quarters of her population drawing their sustenance from the soil, her manufacturing industries are of large and growing importance, and their prosperity every year affects in an increasing degree the general prosperity of the people.

I.—GENERAL.

India's foreign trade, both exports and imports, again showed an improvement during 1928-29. The total value of the imports of merchandise advanced by Rs. 3 crores or 1 per cent to Rs. 2,53 crores, while that of exports rose by Rs. 9 crores or 3 per cent. to Rs. 3,38 crores. The monsoon was characterised by a marked deficiency of rainfall in the North-West of India, including the United Provinces, where persistently dry weather prevailed for a considerable time. On the other hand flooding took place in Madras and elsewhere during the retreating period. The varying weather conditions affected the various crops differently, but on the whole their condition was fair to good except in the case of wheat, where it was distinctly unfavourable. Exchange was fairly steady and India's credit stood at a high level. Labour unrest adversely affected some of the principal industries, including the Bombay mill industry, but apart from labour conditions, India had a period of settled and fair conditions in other economic matters.

The Volume of Trade.—The following figures show the values of imports and exports of merchandise on the basis of the declared values in 1913-14. These statistics are necessarily approximate, but they are sufficiently accurate to afford a fairly reliable measure of the course of trade :—

(In crores of Rupees.)

	1913–14	1921–22	1922–23	1923–24	1924–25	1925–26	1926–27	1927–28	1928–29
Imports	183	124	138	120	137	143	156	181	190
Exports	244	182	214	240	250	246	228	248	260
Total Trade in Merchandise, excluding Re-exports.	427	306	352	360	387	389	384	429	450

It will be noticed that the trade figures of the year 1928-29, as calculated on the basis of the declared value of 1913-14, are a record for both imports and exports. Imports in 1928-29 surpassed the figure for 1913-14. Similarly exports surpassed the pre-war figure as well as the record figure of 1924-25. The total trade in merchandise, excluding re-exports, was the highest on record.

Prices in India.—Prices in India were generally on a downward trend, though the decline was not of any great magnitude. On the whole it can be said that the index number for all commodities was fairly steady round about 145. As regards prices of particular commodities, except in three or four cases, the changes were not of any great magnitude. The most important fall in prices was recorded in the case of hides and skins which declined by nearly 26 points between April, 1928 and March, 1929. The index number for jute manufactures declined from 152 in April, 1928 to 139 in March, 1929. Prices of jute manufactures were on the increase from May to August, 1928 when 166 was registered, but after that the index number fell to 139 in March, 1929. Prices of raw cotton, tea and sugar declined more or less consistently during the year, the decline being 12, 12 and 8 points respectively in the three series. On the other hand, prices of oilseeds were generally on the increase during the year. As regards other commodities the changes were of a very small magnitude, being confined within 5 points in either direction. Thus it will be seen that prices in India were generally on a slightly downward trend, though no violent fluctuations were recorded except in the cases of hides and skins, cotton, tea and sugar. The decline in the prices of these articles was due to world conditions.

Imports and Exports.—On the import side, the trade in cotton piecegoods was more or less in a static condition, the total imports having declined only by 37 million yards to 1,937 million yards and by Rs. 1,32 lakhs to Rs. 53,81 lakhs. Grey goods, imports of which amounted to 839 million yards valued at Rs. 20,19 lakhs, accounted for a decline of 37 million yards in quantity and of Rs. 1,06 lakhs in value, owing primarily to a remarkably heavy reduction in the offtake of bordered grey goods. Under white goods, the requirements of the Indian markets for the year fell off slightly from 566 million yards to 554 million yards and the value showed a decline from Rs. 15,42 lakhs to Rs15,34 lakhs. Under coloured, printed or dyed goods, the size of the trade showed a small expansion from 505 million yards to 507 million yards, although the value shrank from Rs. 17,52 lakhs to Rs. 17,35 lakhs. Imports of cotton twist and yarn receded from 52 million lbs. to 44 million lbs., owing chiefly to a curtailment of the requirements of Bombay mills. Among other textiles, artificial silk (including yarns and manufactures) declined from Rs. 5,49 lakhs to Rs. 4,77 lakhs. The value of imports of silk, raw and manufactured, also fell off from Rs. 5,06 lakhs to Rs. 5,01 lakhs and that of imports of wool and woollens from Rs. 6,3 lakhs to 5,02lakhs. Imports of sugar, including molasses, were stimulated by the low prices ruling in the world market and reached 937,000 tons valued at Rs. 16,09 lakhs, an advance of 114,000 tons in quantity and of Rs. 1,18 lakhs in value. There was a weakening of demand for iron and steel manufactures, imports of which declined from 1,197,000 tons to 1,170,000 tons in quantity and from Rs. 21,44 lakhs to Rs. 20,24 lakhs in value. The year's imports of machinery and mill-work (which under the new system of classification adopted in April, 1928 includes railway locomotive engines and tenders and parts) were valued at Rs. 18,36 lakhs. The value of identical items for 1927-28 works out at Rs. 16,92 lakhs. The increased use of motor vehicles in India was reflected in larger imports, the value of the trade increasing from Rs. 6,17 lakhs to Rs. 7,72 lakhs. Concurrently with this there was a complementary increase in the import value of rubber manufactures from Rs. 2,71 lakhs to Rs. 2,86 lakhs. Imports of hardware value at Rs. 5,23 lakhs, which showed a very small decline of Rs. 1 lakh. Inspite of a decline in the absorption of fuel oils in the Bombay mills, imports of mineral oils rose in quantity from 232 million gallons to 242 million gallons, the value showing a comparatively small gain from Rs. 10,44 lakhs to Rs. 10,70 lakhs. Imports of kerosene oil advanced from 94 million gallons valued at Rs. 5,39 lakhs to a new record of 105 million gallons valued at Rs 5,76 lakhs, part of this increase being attributable to the price-cutting war in the Indian markets during the early quarter of the year. The value of provisions receded from Rs.6,41 lakhs to Rs. 6,21 lakhs, the most important single cause for the decline being a reduction in the prices of vegetable product under the pressure of competition. Imports of raw cotton declined from 66,000 tons, valued at Rs. 6,74 lakhs to 29,000 tons valued at Rs.3,90 lakhs, owing to a decline in the consumption of the Bombay mills. Imports of liquors declined from 7,118,000 gallons valued at Rs. 3,67 lakhs to 6,790,000 gallons valued at Rs. 3,57

lakhs. Receipts of paper and pasteboard increased from 2,089,000 cwts. to 2,313,000 cwts. in quantity and from Rs. 3,01 lakhs to Rs. 3,30 lakhs in value. An abnormal development in the import trade of the year was a remarkable increase in the imports of wheat from 69,000 tons to 562,000 tons in quantity and from Rs. 1,09 lakhs to Rs. 8,17 lakhs in value due to the shortage of the local crop in India.

Exports.—Coming to the export side, the total value of raw and manufactured jute shipped during the year amounted to Rs. 80 crores against Rs. 84 crores in the preceding year. Shipments of raw jute increased by 6,000 tons in quantity to 898,000 tons and by Rs.1,69 lakhs in value to Rs 32,35 lakhs. Under jute manufactures gunny bags recorded an advance from 463 millions valued at Rs. 23,27 lakhs to 498 millions valued at Rs. 24,93 lakhs in response to the increased demands made by the sugar and wheat trades of the world, while gunny cloth exported supplemented this gain by an increase from 1,553 million yards to 1,568 million yards in quantity and from Rs.29,94 lakhstoRs.31,64 lakhs in value. There was also an improvement of Rs.17,62 lakhs or 31 per cent in exports of raw and manufactured cotton, the total declared value for the group having been Rs.74,49 lakhs. The increase was due entirely to an improvement in exports of raw cotton which advanced by 38 per cent in quantity from 480,000 tons to 663,000 tons and by 39 per cent in value from Rs. 47,72 lakhs to Rs. 66,25 lakhs. The reason for this increase in exports was the long-drawn-out mill strike in Bombay which reduced the home demand for raw cotton and depressed Indian prices in comparison with the prices of American cotton, thus turning the parity in favour of India and thereby encouraging exports. The strike was also responsible for a decline in the exports of cotton manufactures which decreased in value by about 10 per cent from Rs. 8,67 lakhs to Rs. 7,80 lakhs. There were violent reactions in the export trade in foodgrains and flour which showed a remarkable decline from 2.8 million tons valued at Rs.42,92 lakhs to 2.3 million tons valued atRs.33,69 lakhs. Under rice alone, shipments of which amounted to 1.8 million tons valued at Rs. 26,47 lakhs, there was a reduction of 369,000 tons in quantity and of Rs. 7,54 lakhs in value. This was mainly due to the smaller exportable surplus of Burma the two successive bumper crops in the important rice exporting regions of Indo-China and Siam and the prohibition of imports into Japan. The decrease in exports of foodgrains was further accentuated by a simultaneous decline in shipments of wheat from 300,000 tons to 115,000 tons on the quantity side and from Rs, 4,41 lakhs to Rs. 1,69 lakhs on the value side. The adverse statistical position in the world's tea trade was abundantly reflected in a decline in the value of shipments from Rs32,48 lakhs toRs26,60 lakhs although the quantities registered during the year showed only a very small decline from 362 million lbs. to 360 million lbs. The value of shipments of oilseeds advanced from Rs. 26,69 lakhs to Rs. 29,63 lakhs, owing primarily to a steady development of the trade in groundnuts, which expanded in bulk from 613,000 tons to 788,000 tons. In spite of the depression in the leather industries of the United Kingdom and Germany, there was considerable vitality in the Indian trade in hides and skins, exports of which were valued at Rs. 9,56 lakhs as compared with Rs 8,81 lakhs in 1927-28. Lac made a very significant contribution, its shipments having risen both in quantiry and value from 544,000 cwts. with a declared value of Rs. 6,99 lakhs to 743,000 cwts. valued at Rs.8,64 lakhs. There was also an appreciable improvement in exports of raw wool, the value rising from Rs. 4,36 lakhs to Rs.4,89 lakhs. Among less important items, there was an interesting development in respect of oilcakes, exports of which swelled in value from Rs. 2,53 lakhs in 1926-27 to Rs. 3,14 lakhs in 1927-28 and Rs. 3,84 lakhs in the year under review.

Balance of Trade.—The visible balance of trade in merchandise and treasure for the year 1928-29 was in favour of India to the extent of Rs. 52 crores compared w th Rs. 50 crores in the preceding year, Rs. 40 crores in 1926-27 and the record figure of Rs. 109 crores in 1925-26. The net imports of treasure on private account rose from Rs.32 crores to Rs. 34 crores, of which net imports of gold were valued at Rs. 21 crores and of silver at Rs.13 crores. Net imports of currency notes amounted to Rs. 12 lakhs.

II—IMPORTS OF MERCHANDISE.

The following table shows the comparative importance of the principal articles imported into British India :—

IMPORTS.

(In thousands of Rupees.)

——	1924-25.	1925-26.	1926-27.	1927-28.	1928-29.	Percentage of proportion to total imports of merchandise in 1928-29.
Cotton and cotton goods.	86,57,25	69,31,26	70,08,13	71,90,16	67,15,16	26.51

TOTAL VALUE OF IMPORTS	2,46,62,54	2,26,17,78	2,31,22,08	2,49,84,66	2,53,30,60	100

Cotton manufactures (Rs. 63,24 lakhs).—The total value of the imports of cotton manufactures decreased during the year by nearly Rs. 2 crores, the decline due to piecegoods being nearly Rs. 1½ crores and to yarn just half a crore of rupees. In quantity also there was a fall of 37 million yards in piecegoods and 8½ million lbs. in yarn. The decline in the imports of yarn was chiefly due to the Bombay mill strike which reduced the demand for yarn for mill consumption. The slight falling away from the 1927-28 record should not be considered as abnormal.

The value of the different classes of imported cotton manufactures during the past five years and the pre-war year 1913-14 are set forth below :—

Imports of cotton manufactures.	1913-14 (pre-war year)	1924-25	1925-26	1926-27	1927-28	1928-29
	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)
Twist and yarn	4,16	9,66	7,77	6,62	6,79	6,29
Piecegoods—						
Grey (unbleached) ..	25,45	28,49	21,89	19,62	21,25	20,19
White (bleached) ..	14,29	20,23	15,99	17,53	15,42	15,33
Coloured, printed or dyed	17,86	20,02	15,92	17,22	17,52	17,35
Fents of all descriptions.	54	68	70	65	94	94
TOTAL PIECEGOODS ..	58,14	69,42	54,50	55,02	55,13	53,81
Hoisery	1,20	1,12	1,40	1,47	1,38	1,45
Handkerchiefs and shawls	89	31	22	19	17	16
Thread	39	73	84	74	77	71
Other sorts	1,52	1,08	94	1,02	92	82
GRAND TOTAL .	66,30	82,32	65,67	65,05	65,16	63,24

Cotton Twist and yarn (Rs.6,29 lakhs).—The imports of twist and yarn amounted to 43.8 million lbs. in quantity and Rs. 6,29 lakhs in value as compared with 52.3 million lbs. and Rs. 6,79 lakhs in 1927-28. Thus there was a decrease of 8.5 million lbs. in quantity and Rs. 50 lakhs in value. The average declared value per lb. of yarn imported during the year was Rs. 1-7-0 as compared with Rs. 1-4-9 in 1927-28 and Rs. 1-5-6 in 1926-27. The higher prices accounted for the relative smallness of the fall of Rs. 50 lakhs in the total value of the imports. Of the total imports, 23.1 million lbs. came from the United Kingdom and 7.6 million lbs. from Japan, while China accounted for 11·4 million lbs. The imports from these countries in 1927-28 were 20.6, 17 and 12.9 million lbs. respectively. Thus it will be seen that the imports from the United Kingdom increased by 2½ million lbs. whereas imports from Japan declined by 9.4 million lbs. and imports from China by about 1½ million lbs. As far as value is concerned, however, the trade with China showed an increase of over Rs. 7 lakhs. The United Kingdom is sending more and more yarn to India, whereas imports from Japan are declining very fast. In 1927-28 imports from Japan declined by about 10 million lbs. At the same time imports from China increased by about 12 million lbs. It would thus appear that China was replacing Japan as a source of supply of twist and yarn. In 1928-29 imports from Japan fell by another 9 million lbs. In the same period the total imports of yarn fell by about 8.5 million lbs. which meant that the whole decline in the total imports was at the cost of Japan. Other sources of imports of yarn to India included Italy (811,000 lbs.) and Switzerland (360,000 lbs.). There were no imports at all from the Netherlands.

Cotton Yarn.—The production of yarn in Indian mills declined to 648 million lbs. as compared with 809 million lbs. in the preceding year and 807 million lbs. in 1926-27. The decline of 161 million lbs. in the Indian mill production is due mainly to the mill strike in Bombay which lasted for nearly six months.

The share of the United Kingdom in the total trade in cotton twist and yarn increased from 39 per cent in 1927-28 to 53 per cent. in 1928-29. Japan's share, on the other hand, fell from 32 per cent. to 17 per cent. It is interesting to note that Japan's share was 65 per cent. in 1925-26. The share of China remained almost constant and was 26 per cent. in 1928-29 as compared with 25 per cent. in 1927-28.

Cotton Piecegoods.—The imports of cotton piecegoods, including fents, decreased by the relatively small amount of about 37 million yards as compared with 1927-28. The decrease in value, however, was considerable, being Rs. 1,32 lakhs. Compared with the pre-war year 1913-14 the imports of 1928-29 were less by over 1,260 million yards. The figures for the three important classes of cotton piecegoods from 1913-14 onwards are set forth in the table below :—

——	Grey (unbleached)	White (bleached)	Coloured, printed or dyed.
Year.	Million yards.	Million yards.	Million yards.
1913-14 ..	1,534.2	793.3	831.8
1914-15 ..	1,320.2	604.2	494.8
1915-16 ..	1,148.2	611.4	358.7
1916-17 ..	847.0	589.8	454.9
1917-18 ..	625.5	502.3	395.6
1918-19 ..	583.4	286.6	227.3
1919-20 ..	533.3	322.0	208.3
1920-21 ..	580.2	421.8	489.3
1921-22 ..	635.6	306.2	138.3
1922-23 ..	931.0	402.5	243.8
1923-24 ..	704.0	415.3	347.5
1924-25 ..	845.5	548.9	407.0
1925-26 ..	709.1	465.1	365.8
1926-27 ..	748.4	571.0	447.4
1927-28 ..	875.5	556.5	504.8
1928-29 ..	838.6	554.1	506.9

The imports of **coloured, printed and dyed goods from** 1922-23 are set forth below :—

The large increase in the volume of the imports of printed goods, tended to continue also into the year 1928-29, although the increase was not so great as in 1927-28. The total quantity imported in 1928-29 was 244.4 million yards as compared with 235.3 million yards in 1927-28 Owing to the decline in prices, however, the total value was Rs. 7,41 lakhs as compared with Rs. 7,53 lakhs in 1927-28.

Detailed figures relating to **Imported Piecegoods** are given below in million of yards :—

The United Kingdom's share in the imports of grey goods decreased from 651 million yards to 582 million, yards, a decrease of 69 million yards or 10½ per cent. The Japanese share, on the other hand, increased from 215 million yards to 242 million yards an increase of 27 million yards. The imports from China (including Hongkong) advanced from 7 millions to 13 million yards, but the share of the United States of America declined from 2.2 million to 1.6 million yards. White goods were, as usual, imported chiefly from the United Kingdom which shared to the extent of 525 million yards in a total of 554 million yards. In 1927-28 the United Kingdom sent 527 million yards out of the total imports of 556.5 million yards. During the year under review Switzerland's share, decreased from 12 million yards to 9 million yards whereas the share of the Netherlands increased by about a million yards. Japan exported nearly the same amount as in the preceding year. The British share of the imports remained practically constant,only slightly increasing from 94.7 per cent. in 1927-28 to 94.8 per cent. in the year under review.

In the imports of coloured, printed or dyed piecegoods the United Kingdom's share fell by about 17 million yards to 336 million yards. Imports from Italy have been increasing as was noted last year also, and in 1928-29 they stood at 36 million yards as compared with 24½ million yards in the previous year. The imports from Japan also showed a slight increase from 103 million yards in 1927-28 to 110 million yards in 1928-29. The share of the Netherlands again slightly declined from 12 to 11 million yards. The percentage shares, in 1913-14 and in the past five years of the United Kingdom and Japan, the two principal competitors in the Indian piecegoods import trade, in each of the three important classes of piecegoods, are set forth below :—

Percentage Shares of the United Kingdom and Japan in the imports of Cotton Piecegoods;

	1913-14.		1924-25.		1925-26.		1926-27.		1927-28.		1928-29.	
	United Kingdom.	Japan.	United Kingdom.	Japan.	United Kingdom.	Japan.	United Kingdom.	Japan.	United Kingdom.	Japan.	United Kingdom.	Japan.
Cotton piecegoods—												
Grey	98.8	.5	86.0	13.0	79.2	20.1	78.7	20.7	74.4	24.5	69.4	28.8

Artificial Silk (Rs. 4,77 Lakhs.—The rate of growth of the trade in artificial silk was not so great as in the preceding five years. It is satisfactory to note, however, that there was no serious set-back from the record imports of artificial yarn in 1927-28. The imports of artificial silk yarn in the year under review were 7.7 million lbs. as compared with 7.5 million lbs. in 1927-28, thus showing a slight increase of .2 million lbs. In value, however, the imports declined by about Rs. 14 lakhs from Rs. 1,49 lakhs in 1927-28 to Rs. 1,35 lakhs in 1928-29. The share of the United Kingdom fell from 2.3 million lbs. valued at Rs. 46.8 lakhs in 1927-28 to 1.7 million lbs. valued at Rs. 30, 5 lakhs. On the other hand, imports from Italy went up from 3.4 million lbs. in 1927-28 to 3.6 million lbs. in 1928-29. In value, however, the imports from Italy declined from Rs. 66 lakhs to Rs. 61 lakhs. It may be noted that the share of the United Kingdom went down, while that of Italy went up; out of the total quantity imported Italy contributed about 47 per cent. whereas the United Kingdom only about 22 per cent. The total imports of artificial silk yarn were valued at Rs. 1,35 lakhs, out of which Italy's share was Rs. 61 lakhs, the United Kingdom's Rs. 30.5 lakhs, the Netherlands' Rs. 13 lakhs and Germany's Rs. 10.5 lakhs. Thus the share of Italy was 45 per cent. of the United Kingdom 22.5 per cent. of the Netherlands nearly 10 per cent. and of Germany nearly 8 per cent. From October 1927, the duty on imports of artificial silk yarn was reduced from 15 to 7½ per cent. *ad valorem*. Imports of piecegoods of cotton and artificial silk showed a decline of 3.3 million yards in quantity and Rs. 56 lakhs in value. The total imports in the year were 49.8 million yards valued at Rs. 3,30 lakhs as compared with 53.1 million yards valued at Rs. 3,86 lakhs in 1927-28. As in the preceding year, Italy was the largest single supplier. The imports from that country rose from 16 million yards valued at Rs. 91 lakhs in 1927-28 to 17.8 million yards valued at Rs. 92.6 lakhs in 1928-29. The United Kingdom's share went down from 14 million yards valued at Rs. 99 lakhs in 1927-28 to 12.6 million yards valued at Rs. 84 lakhs in 1928-29; thus even in value the United Kingdom was displaced by Italy from the leading position. In the preceding year the United Kingdom was the leader as far as value, at least, was concerned, but during the year under review Italy occupied that position. The United Kingdom's trade is declining because of the competition of the cheaper types of cloth sent out by other countries. The British share of the total yardage imported was 25 per cent. whereas Italy's share was 36 per cent. an increase in the case of Italy of 6 per cent. over the previous year.

Silk raw and manufactured (Rs. 5, 01 lakhs.)—The imports of raw silk declined from 2.4 million lbs. to 2.1 million lbs., the decrease mainly occurring in imports from China, probably due to the unsettled conditions in that country. The decline in value was from Rs. 1,45 lakhs in 1927-28 to Rs. 1,24 lakhs in 1928-29. The predominant supplier of raw silk was, as usual, China (including Hongkong) which supplied 1.9 million lbs. out of the total imports of 2.1 million lbs., as compared with 2.3 million lbs. out of 2.4 million lbs. of imports in 1927-28. Imports from Japan increased from 63,000 to 126,000 lbs. and those from other countries from 12,000 to 125,000 lbs.

Wool, raw and manufactured (Rs. 5,02 lakhs).—Imports of raw wool increased from 5.8 million lbs. to 6 million lbs. The increase in value was from Rs. 45 lakhs to Rs. 50 lakhs. Imports from the United Kingdom decreased from 1.6 million to 1.2 million lbs., while those from Persia declined from 2.5 million to 2.4 million lbs. Australia, on the other hand, increased her share from 1.2 million lbs. to 1.8 million lbs. The increase in supplies from Australia has been continuous in the last three years. The imports of yarn and knitting wool declined from 1.2 million lbs. to 1.1 million lbs. The value of the imports, however, remained nearly at the same level of Rs. 34 lakhs. Imports of woollen piecegoods declined in the year under review as compared with 1927-28 by 15 per cent. In 1928-29 they amounted to 16 million yards as compared with 18.8 million yards in 1927-28.

Metals and manufactures thereof (Rs. 26,98 lakhs).—The imports of metals and manufactures thereof declined by 27,000 tons or 2 per cent. in quantity from 1,259,000 tons to 1,232,000 tons and by Rs. 1¼ crores or 5 per cent. in value from Rs. 28¼ crores to Rs. 27 crores. Iron and steel represented Rs. 20 crores of this total and, next to cotton manufactures, was the most important item among India's imports. If such items as machinery and millwork, hardware, cutlery, implements and instruments, and vehicles are included in one head with metals and manufactures thereof the total value would aggregate Rs. 67 crores while the value of the most important group among imports, *viz.*, yarn and textile fabrics, amounted to Rs. 78 crores. In the preceding year also the metals group accounted for Rs. 67 crores while the textiles head totalled Rs. 81 crores.

Iron and Steel (Rs. 20,24 lakhs).—The world's production of pig iron in 1928, estimated at 88 million tons, and of steel, at 110 million tons, constituted a record, to which the United Kingdom contributed 6¼ million tons and 8¼ million tons respectively, these being 9 and 6 per cent. less than the corresponding figures of 1927. While the United Kingdom produced 11 per cent. more steel than in 1913, the world production was 47 per cent. over the pre-war year. It is evident that the United Kingdom has not been able to keep pace with the increasing production in other countries and the stress of competition from Continental countries in particular, enjoying the advantages of much lower wages and longer working hours, has been most severe in recent years. As a result of this competition the United Kingdom lowered her prices in an attempt to maintain her position as the largest supplier of iron and steel material to India.

Other metals (Rs. 6,74 lakhs.).—Imports of metals, other than iron and steel, rose slightly from 62,100 tons to 62,400 tons in quantity, but fell in value from Rs. 6,96 lakhs to Rs. 6,74 lakhs. The demand for aluminium slackened and the imports fell from 135,000 cwts. valued at Rs. 1,18¾ lakhs to 127,000 cwts. valued at Rs. 1,07¾ lakhs. Imports of brass rose from 508,000 cwts. to 529,000 cwts in quantity and from Rs. 2,33¾ lakhs to Rs. 2,53½ lakhs in value. Germany increased her supplies

from 195,000 cwts. valued at Rs.88 lakhs to 234,000 cwts. valued at Rs.1,11 lakhs, while the share of the United Kingdom dropped from 168,000 cwts. valued at Rs. 75 lakhs to 153,000 cwts. valued at Rs. 71 lakhs. Imports from Japan showed an increase from 54,000 to 63,000 cwts. in quantity and from Rs. 27 lakhs to Rs. 31 lakhs in value. An increase in the imports of wrought copper from 217,000 cwts. valued at Rs. 1,10 lakhs to 232,000 cwts. valued at Rs.1,24 lakhs, combined with a decrease under unwrought copper from 38,000 cwts. valued at Rs.17 lakhs to 27,000cwts. valued at Rs.13 lakhs brought the total imports of copper to 270,000 cwts. valued at Rs. 1,42 lakhs as compared with 261,000 cwts. valued at Rs. 1,29 lakhs in the preceeding year.

Machinery and Millwork (Rs. 19,43 lakhs.)—With effect from April, 1928, owing to the discontinuance of the major head "Railway plant and rolling stock", railway locomotive engines; tenders and parts came to be classified under "Machinery and millwork" instead of under "Railway plant and rolling stock". As a result, the total figure relating to the imports of machinery and millwork, including belting for machinery and printing presses, in 1928-29, namely Rs. 19,43 lakhs, is not strictly comparable with, the imports recorded in 1927-28 which were valued at Rs. 16,99 lakhs. Leaving out of account Rs. 96 lakhs, the value of railway locomotive engines and tenders and parts, the actual gain in the value of the imports in 1928-29 is reduced to Rs. 1,48 lakhs. The important branches that showed increases were: cotton and jute mill machinery, electrical machinery, paper mill machinery, sugar machinery, tea machinery and refrigerating machinery, while mining machinery, oilcrushing and refining machinery, metalworking machinery (chiefly machine tools) and rice and flour mill machinery recorded decreases.

The most important among the major items included in the machinery group was, as usual textile machinery, the total valueof which rose during the year from Rs.3,09 lakhs to Rs. 3,65 lakhs. This represented an increase of Rs. 56 lakhs or 18 per cent. to which cotton machinery Contributed Rs. 19 lakhs and jute machinery Rs. 36 lakhs. Cotton machinery rose from Rs. 1,97 lakhs to Rs. 2,16 lakhs, there being an increase of Rs. 22 lakhs under cotton spinning machinery, which was partly set off by a decrease of Rs. 4½ lakhs under weaving machinery. Jute manufacturing machinery also showed an advance from Rs. 94 lakhs to Rs. 1,30 lakhs, while the imports of wool manufacturing machinery were valued at over Rs. 2 lakhs, as compared with Rs. 1¾ lakhs in 1927-28. As usual, the United Kingdom had the largest share in the textile machinery trade and supplied Rs. 3,41 lakhs or 93 per cent. of the total value of all textile machinery imported in 1928-29, as compared with Rs. 2,89 lakhs or 94 per cent. in the proceeding year. The recent development in connection with the electrification of railways and industry led to increased importations of electric machinery which were valued at Rs. 2,37 lakhs, as compared with Rs. 2,00 lakhs in 1927-28.

Motor Vehicles (Rs. 7,72 lakhs).—The year 1928-29 was noteworthy for its high motor car imports, which surpassed all previous records; The reduction in the initial cost of cars, consequent on a lowering of import duty from March 1927 and the competition among rival motor car interests to push their sales in India, combined with a reasonably low maintenance cost due to the comparatively lower prices of petrol, tyres, tubes and other accessories had the effect of increasing the demand for cars in India. The renewed activities of the Ford industries of America also contributed largely toward the growth of motor car imports during the year. The number of cars imported in 1928-29 was 19,567 valued at Rs. 4,21 lakhs, or an increase of 30 per cent in quantity and of 19 per cent in value as compared with 1927-28, when the imports nearly equalled in number the previous record of 1920-21 and total led 15,122 valued at Rs. 3,54 lakhs. While the number of British cars imported was on the increase, the progressiveness of the American industry in developing and improving its products assured it a very large business in India against all competition. Over 74 per cent of the cars imported into India came from the United States of America and Canada and 19 per cent from the United Kingdom as compared with 62 and 24 per cent respectively in the preceding year. Generally, Bengal had hitherto imported the largest number of cars, but the establishment of an assembling plant by the General Motors, Ltd. in Bombay with a view to reducing transport costs and meeting the growing competition led to the diversion of some traffic and the premier position was held by Bombay in 1928-29. Of the total number of cars imported during the year 6,705 cars (34 per cent.) were received in Bombay, 5,577 (29 per cent.) in Bengal, 3,399 (17 per cent.) in Madras 2,178 (11 per cent.) in Sind and 1,708 (9 per cent.) in Burma. The imports of motor cycles declined by 16 per cent. in number and by 15 per cent. in value from 2,146 valued at Rs. 12 lakhs to 1,802 valued at Rs. 10 lakhs. The trade was predominantly a British trade and the United Kingdom supplied 1,611 cycles or 89 per cent of the total as compared with 1,964 or 91 per cent. in the preceding year. The imports of motor omnibuses, vans and lorries expanded remarkably in 1928-29 and reached a total of 12,790 valued at Rs. 2,16½ lakhs as compared with 8,682 valued at Rs. 1,49½ lakhs in 1927-28, representing an increase of 47 per cent. in number and of 45 per cent. in value. Compared with 1926-27, here was an increase of 102 per cent. in number and of 80 per cent. in value. The bulk of the imports came, as usual, from Canada and the United States of America, these two countries together having supplied 95 per cent. of the trade as compared with 92 per cent. in 1927-28. British manufacturers, notwithstanding a substantial reduction in prices, had a very little part in the enormous increase in the sales of heavy motor vehicles in India, as the demand was chiefly for light types.

The following table shows the number of all classes of motor vehicles registered in the different provinces of British India upto the end of March, 1929 :—

Number of motor Vehicles registered in British India up to 31st March 1929.

Provinces.	Motor cars including taxi-cabs.	Motor cycles including scooters and auto-wheels.	Heavy motor vehicles (lorries, buses, etc.)	TOTAL.
	Number.	Number.	Number.	Number.

(*b*) Figures relate to the year ended 31st December 1928.

Sugar (Rs. 16.09 lakhs).—Java, as usual, supplied the largest proportion of the sugar imported into India. At the beginning of the financial year the stocks of sugar were low both in Calcutta and Bombay and there was a brisk demand for sugar on the spot and sugar available in the near future. There was, however, little or no demand for shipments later than July-September or October-December. This policy of postponing purchases till the last moment was due to the fact that the dealers had little faith in the maintenance of the prices for the new Java crop which, they feared, was underestimated. This, as a matter of fact, proved to be the case later. Owing, however, to spot demand the price of sugar remained at a fairly high level during April and the first few days of May when prices in the Calcutta market varied between Rs.10-9-0 and Rs. 11-6-0per maund for Java 25D. S. and above. From that time, however, prices gradually declined, owing, firstly, to the distrust of the estimates referred to above and, secondly, to the continuous drop in world sugar prices which had a depressing effect on the local market. The price fell from Rs 11-6-0 per maund on the 4th May to Rs. 9-9-6 per maund on the 20th July. A general review of price quotations for the year brings out the comparative steadiness of prices for the last nine months of the year. It was only in the first three months that fluctuations of any considerable magnitude occurred. From July 1928 to March 1929 the price of Java 25 D. S. and above at Calcutta was round about Rs. 9-8-0 per maund and the variation was never more than a few annas on either side of this figure. In passing, it may be noted that the chief feature of interest during the year was the Java Trust's action in making sales to exporters with a discount allowed if the sugar was shipped to ports west of Suez. This action aroused criticisms throughout the world and especially in India, as the subsequent return of this sugar to the East and the sale of cheaper British and European refined sugars to India has assisted in the present drop in prices.

In the Bombay market the quotation for Java, white, granulated T.M.O. quality, stood at Rs. 15-4-0 per cwt. on the 5th April. After that date, except for a slight relapse in the third and fourth weeks of May, the prices were generally on the increase and on the 27th June the record price for the year, Rs.18-0-0 per cwt. was reached. This was a purely artificial rise produced on account of shortage of stocks. Thereafter there was a sharp decline in prices and Rs. 14-14-0 per cwt. was registered on the 6th July. During the four weeks following, prices declined and by the 3rd August Rs.13-11-0 per cwt. was the price ruling in the market. From that date till the end of March prices were steady between Rs.13-8-0 per cwt. and about Rs. 14-3-0 per cwt. The comparative steadiness of prices, just as in the case of Calcutta from, August onwards is a feature of note in the year under review.

Imports of sugar of all sorts, excluding molasses, increased from 725,800 tons valued at Rs.14,50 lakhs in 1927-28 to 868,800 tons valued at Rs.15,86 lakhs in 1928-29. The increase was almost entirely due to heavy shipments of sugar, 16 D. S. and above, from Java (including consignments from the Straits Settlements) which during 1928-29 were 851,313 tons as compared with 693,206 tons in the preceding year. Ceylon sent 4 000

tons, China (including Hongkong) sent 2,100 tons and the United Kingdom 1,400 tons. Imports from the United Kingdom in 1927-28 were only 366 tons. Supplies from the United States of America almost disappeared, amounting to 16 tons only. Similarly, imports from Canada were only 99 tons.

Imports of Java sugar into the different maritime provinces during 1928-29 were as follows :—

Bengal	.. 348,700 tons	or 41	per cent.
Bombay	.. 193,400 ,,	,, 23	,, ,,
Sind	.. 206,900 ,,	,, 24	,, ,,
Madras	.. 62,300 ,,	,, 7	,, ,,
Burma	.. 40,300 ,,	,, 5	,, ,,

The total amount of beet sugar imported during the year was only 8,400 tons as compared with 18,000 tons in the preceding year. There were no imports from Russia, although in 1927-28 nearly 11,900 tons had been received from that country. Hungary supplied 2,100 tons and the United Kingdom 3,400 tons. In 1927-28 the United Kingdom supplied only one ton. As in the preceding year, the bulk of the imports of beet sugar was received in Bombay.

The total area under sugarcane in India was 2,578,000 acres in 1928-29; the total production of raw sugar (gur) was 2,715,000 tons as compared with 3,216,000 tons in 1927-28. The production of sugar by modern factories and refineries in the season 1927-28 amounted to 117,048 tons as compared with 121,028 tons in 1926-27 and 91,499 tons in 1925-26. This small drop was due to the fact that the output from refineries was less during 1927-28.

Mineral Oils (Rs. 10,70 Lakhs).—The total imports of all kinds of foreign mineral oils rose by 4 per cent. in quantity from 232 million gallons in 1927-28 to 242 million gallon in 1928-29 and by 2 per cent, in value from Rs. 10,44 lakhs to Rs. 10,171akhs. Of the total imports in 1928-29 kerosene oil and fuel oils each represented 43 per cent. and lubricating oils 11 per cent. During 1927-28 the imports of kerosene oil into India were stimulated by the price-cutting war which broke out between the Royal Dutch Shell group and the Standard Oil group. An agreement between these two was not reached until June, 1928. Imports in 1927-28 amounted to 94 million gallons and were much above the figure for any preceding year except 1919-20 when the imports nearly equalled those of 1927-28. In 1928-29 imports exceeded even this record figure and totalled 105 million gallons, or an increase of 11 million gallons over the preceding year. Imports of fuel oils in 1928-29 totalled 104 million gallons, compared with the record figure of 107 million gallons in 1927-28. The decline was mainly due to the lower consumption in Bombay cotton mills which remained practically closed for a considerable portion of the year.

The table shows the sources of the imports of kerosene during the past two years and the pre-war year 1913-14 :—

	1913-14 (pre-war year).	1927-28.	1928-29.
IMPORTS OF KEROSENE OIL	Gals. (1,000)	Gals. (1,000)	Gals. (1,000)
United States of America	42,311	47,133	14,000
Russia and Georgia	1,079	19,501	42,803
Persia	2,303	9,440	32,062
Borneo and Sumatra	20,815	12,406	12,676

Other Countries	2	1,971	2,258
TOTAL ..	68,850	94,406	104.660

Provisions (Rs. 6,21 Lakhs).—Prices of imported provisions were, for the most part, on lower levels and this resulted in a drop in the value of the total imports from Rs. 6,40⅝ lakhs to Rs. 6,21 lakhs. Canned and bottled provisions, which accounted for 45 per cent. of the total value of imported provisions as against 47 per cent. in 1927-28,fell from Rs.3,10 lakhs to Rs. 2,79 lakhs. Imports of vegetable product increased in quantity from 444,000 cwts. to 458,000 cwts. The chief source of supply of this article was, as usual, the Netherlands which sent 401,000 cwts. valued at Rs. 1,55 lakhs as compared with 372,000 cwts. valued at Rs. 1,61¼ lakhs in 1927-28. The remainder came mainly from Belgium (Rs. 19 lakhs) and Germany (Rs. 3 lakhs). Among other kinds of canned and bottled provisions, canned and bottled fruits registered an increase in quantity while tinned fish fell from 93,000 cwts. to 64,000 cwts. Imports of farinaceous foods in bulk increased in quantity from 352,000 cwts. to 365,000 cwts. Milk food for infants and invalids, imported mostly from the United Kingdom, and other kinds of farinaceous and patent foods recorded small increases. There was also a further expansion in imports of condensed Milk, the total amounting to 245,000 cwts. as against 224,000 cwts. the previous year.

Liquors (Rs. 3,57 lakhs).—The total quantity of liquors imported fell by 5 per cent. from 7,118,000 gallons in 1927-28 to 6,790,000 gallons in 1928-29, the corresponding decline in value being only of 3 per cent. from Rs.3,67 lakhs to Rs. 3, 57 lakhs. With the exception of Sind and Madras, imports into all other provinces showed decreases. As in the preceeding year, Bengal had the bulk of the trade and wes followed closely by Bombay, their respective shares being 1,951,000 gallons (Rs. 1,05½ lakhs) and 1,906,000 gallons(Rs. 94¼ lakhs)as compared with 2,142,000 gallons (Rs. 1,09 lakhs) and 2,076,000 gallons.

(Rs. 1,00 lakhs) in 1927-28. Imports into Burma also fell from 1,225,000 gallons valued at Rs. 64 lakhs to 1,065,000 gallons valued at Rs. 57 lakhs, while Sind and Madras imported to the value of Rs. 65½ lakhs and Rs. 34¾ lakhs as compared with Rs. 63½ lakhs and Rs. 31½ lakhs respectively in 1927-28. Over 64 per cent of the total quantity of imported liquors consisted of ale, beer and porter, 31 per cent. of spirits and 4 per cent. of wines.

Paper and Pasteboard (Rs. 3,30 lakhs).—The quantity of paper and pasteboard imported during 1928-29 amounted to 115,600 tons valued at Rs. 3,30 lakhs. Compared with the imports in 1927-28, which were returned at 104,500 tons. valued at Rs. 3,01 lakhs, this represented an increase of 11 per cent. in quantity and of 10 per cent. in value. Printing paper was imported to the extent of 34,600 tons valued at Rs. 1,06 lakhs as compared with 26,900 tons valued at Rs. 84 lakhs in the preceding year. To a small measure the increase was in newsprinting paper, derived chiefly from Scandinavia and Austria where there are plentiful resources of wood pulp.

Chemicals (Rs. 2,48 lakhs).—The total imports of chemicals (excluding chemical manures and medicines) declined by Rs. 17 lakhs from Rs. 2,65 lakhs to Rs. 2,48 lakhs, of which soda compounds accounted for Rs. 1,13 lakhs or 46 per cent. as compared with Rs. 1,12 lakhs or 42 per cent. in the preceding year. The United Kingdom supplied, as usual, the bulk of sodium carbonate, imports of which totalled 1,076,600 cwts. valued at Rs. 62 lakhs as against 1,061,200 cwts. valued at Rs. 60 lakhs in the preceding year.

Salt (Rs. 1,47 lakhs).—The quantity of foreign-salt imported into India increased by 3 per cent. from 596,000 tons in 1927-28 to 615,000 tons in 1928-29, but lower prices accounted for a decline in value by 16 per cent. from R 1,75 lakhs to R 1,47 lakhs. Aden and Egypt continued to be the chief sources of supply ; the former increased her share from 180,000 tons to 204,000 tons, while the latter reduced her consignments from 123,000 tons to 114,000 tons. The United Kingdom and Spain found the prices unremunerative and curtailed their supplies from 81,000 and 84,000 tons to 69,000 and 59,000 tons respectively. Imports from Italian East Africa also fell from 56,000 tons to 52,000 tons. The deficiency in supplies was, however, made up for by arrivals of cheap salt from new sources, such as Tripoli and Roumania, amounting to 25,000. and 12,000 tons respectively. Imports from Germany advanced in quantity from 57,000 to 64,000 tons but realised smaller values.

Cement (Rs. 68 lakhs).—Notwithstanding the competition of local cement works, imports of foreign cement advanced from 112,300 tons, to 127,300 tons in quantity and from Rs. 64½ lakhs to nearly Rs. 68 lakhs in value. The increase was mostly in the importation into Madras which owing to the remoteness of her situation from Indian factories was naturally more dependent on foreign supplies. The other chief importing provinces, Burma and Bengal, showed little. variation. The United Kingdom was, as usual the largest supplier.

Coal (Rs 33 lakhs).—Imports of foreign coal declined by 35 per cent. in quantity from263,000 tons in 1927-28 to 171,000 tons in 1928-29 and by 44 per cent. in value from Rs. 58½ lakhs to Rs. 33 lakhs. The decrease is partly attributable to the efforts made by the Indian coal industry to secure the home market by effecting economics in production, but, more particularly, to reduce demands from Bombay owing to industrial troubles. All the principal countries contributed to this decrease. Imports from Natal fell from 155,000 tons to 105,000 tons. There were also smaller supplies from the United Kingdom and Portuguese East Africa, amounting to 39,000 tons and 21,000 tons as against 52,000 tons and 35,000 tons respectively in 1927-28. Australia, which before the war had sent on an average 50,000 tons of coal to India, practically lost her export markets, as her cost of production was far above the competitive level. Imports from Australia in 1928-29 fell away to 1,000 tons from 9,000 tons in 1927-28 and 13,000 tons in 1926-27. The following table shows the sources of the imports of foreign coal during the past four years:—

	1925-26	1926-27	1927-28	1928-29
	Tons.	Tons.	Tons.	Tons.
United Kingdom	97,000	13,000	52,000	39,000
Natal	114,000	86,000	155.000	105,000
Japan	14,000	1,000	6,000	1,000
Portuguese East Africa	126,000	26,000	45,000	21,000
Australia	12,000	13,000	9,000	1,000

Matches (Rs. 17 lakhs).—The protection afforded by the rates of import duties imposed on matches in March, 1922, which have since been declared protective in accordance with the recommendations of the Indian Tariff Board, led to a substantial increase in local production which threatens to eliminate imports. Imports of foreign matches rapidly fell from 11 million gross of boxes in 1923-24 to 7 million gross in 1924-25, 3½ million gross in 1927-28 and to 1½ million gross in 1928-29 and correspondingly in value from Rs. 1,46 lakhs in 1923-24 to Rs. 8 lakhs in 1924-25, Rs. 39½ lakhs in 1927-28 and to Rs. 17 lakhs in 1928-29. Compared with the preceding year, imports in 1928-29 represented a decrease of 56 per cent. both in quantity and value. Both safety and other matches shared in this decrease, the former falling from 2½ million gross of boxes to a little over 1 million gross and the latter from 1 million gross to nearly half a million gross.

III.—EXPORTS OF MERCHANDISE.

The following table shows the comparative importance of the principal articles exported from British India :—

Exports.
(In thousands of Rupees)

———	1924-25	1925-26	1926-27	1928-28	1928-29	Percentage of proportion to total exports of merchandise in 1928-29
Jute, raw	29,09,30	37,94,57	26,78,04	30,66,26	35,34,92	9.80

Sugar	52,49	7,05	5,78	7,81	5,48	.02
All other articles	4,43,92	4,91,60	4,82,39	5,42,88	4,96,55	1.50
Total Value of Exports	3,84,66,53	3,74,84,21	3,01,43,58	3,19,15,35	3,30,12,79	100

Jute and jute manufactures (Rs. 89,25 lakhs).—The total area under jute in 1928 was 3,144,400 acres and the total outturn was 10 million bales. The outturn of jute in 1927 was 10.2 million bales, whereas in 1926 it was 12.1 million bales. Thus there was a decline in the outturn of jute in the year under review. This decline was due mostly to the unfavourable weather conditions in 1928. The total weight of raw and manufactured jute exported during the year amounted to 1,809,000 tons, or 32,000 tons more than in the preceding year, while the total value increased from Rs. 84,23 lakhs. to Rs. 89, 25 lakhs. Raw jute accounted for 36 per cent of this value and jute manufactures for 64 per cent. as in the preceding year. The following statement compares the quantities exported during 1913-14 and each of the past three years :—

	1913-14	1926-27	1927-28	1928-29
Jute (in thousand tons)	768	708	892	898
Bags (in millions)	369	449	463	498
Cloth (in million yards)	1,061	1,503	1,553	1,568

Cotton (Rs. 66,25 lakhs).—The Indian cotton crop of the season 1928-29 was estimated at 5,638,000 bales of 400 lbs. each as compared with 5,963,000 bales in the preceding year. Up to January, 1929 it was expected that the cotton crop of the year would be a large one, but the unseasonable cold weather and forest at the end of January and early in February caused a great deal of damage, especially in Gujarat, an important cotton-growing region, and the outturn, therefore, suffered considerably. The American crop of 1928 was larger than that of 1927, although it was not of the same dimensions as the crops of the two years 1925 and 1926. The American yield of 1928 was estimated at 14,478,000 bales of 500 lbs. each (equivalent to 18,097,000 bales of 400 lbs. each) as compared with 12,955,000 bales of 500 lbs. each for 1927. The outturn of Egyptian cotton also was better being 1,943,000 bales of 400 lbs. each as compared with 1,507,000 bales in 1927-28.

Strikes in the Bombay Mills reduced the home demand for Indian cotton, and its prices were lower relatively to the prices of American cotton. A natural result of this state of affairs was that export was encouraged to great extent. Exports of raw cotton from India showed an enormous increase as compared either with 1927-28 or 1926-27 These amounted to 3,712,000 bales as against 2,686,000 bales in 1927-28 and 3,188,000 bales in 1926-27.

The following statement gives the monthly exports of Indian cotton during the last five years together with the pre-war average :—

Exports of Indian Cotton in bales of 400 lbs.

	Pre-war average 1909-14.	1924-25.	1925-26.	1926-27.	1927-28.	1928-29.
April	303,600	348,900	430,100	385,400	226,100	323,600
May	248,800	283,500	405,900	295,200	200,600	372,800
June	218,900	253,300	452,400	280,100	240,300	304,900
July	190,100	138,000	308,400	237,800	180,400	285,200
August	110,300	109,300	208,400	208,200	201,600	216,000
September	75,300	113,000	136,000	104,700	152,800	191,000
October	66,800	62,300	87,400	39,300	88,300	254,000

March	295,800	633,200	545,700	576,700	384,800	559,500
TOTAL ..	2,407,300	3,326,400	4,173,400	3,188,000	2,686,200	3,711,700

Exports from Bombay amounted to 71 per cent of the total quantity of raw cotton exported from India, those from Karachi were 22 per cent. and from Madras a little over 4 per cent, as compared with 63, 27 and 5 per cent. respectively in 1927-28.

Cotton manufactures (Rs. 7,80 lakhs—The cotton industry in 1928-29 was thrown out of gear by the protracted strike in the Bombay mill industry and it is not possible to draw a correct picture of the situation from the statistics of the year. The production of yarn in mills in India for 1928-29 declined to 648 million lbs. as compared with 809 million lbs. in 1927-28 and 807 million lbs. in 1926-27.

Exports of yarn were almost the same in 1928-29 as in 1927-28. There was a decline of only about ½ million lbs. The exports amounted to 24½ million lbs. in 1928-29. The average exports in the five years ending 1913-14 were 193 millions lbs., while the average of the war period 130 million lbs. and of the post-war quinquennium 82 million lbs. The value of yarn exported, however, increased from Rs. 1,88 lakhs in 1927-28 to Rs. 1,96 lakhs in 1928-29. As in the preceding year, the exports to China were comparatively small, though they were a million lbs. more in 1928-29 than in 1927-28. The exports to other countries more or less maintained their position and the decline on the exports of 1926-27 was due entirely to the loss of the Chinese market.

Piecegoods (Rs.5,37) lakhs).—The production of piecegoods in Indian mills in 1928-29 declined by 20 per cent as compared with the preceding year. The proportion of the exports of piecegoods to the total production was 8 per cent. in 1928-29 as compared with 7 per cent in 1927-28 and 8,7 per cent in 1926-27, but the actual quantity exported, as compared with that in the preceding year, declined by 19 million yards or 11.3 per cent. Detailed figures of exports for the past three years and for 1913-14 are given. below :—

	1913-14. (pre-war year).	1926-27.	1927-28.	1928-29.
	Million. yards.	Million. yards.	Million. yards.	Million yards.
Grey and bleached piecegoods—				
Shirtings	2.2	.2	2.1	2.0
Chadars and dhutis	7.6	3.7	3.8	3.9
T. cloth and domestics	21.6	2.0	1.4	3.0
Drills and jeans	.6	.6	.4	.5
Other sorts	12.2	15.0	11.6	8.4
TOTAL ..	44.2	21.5	19.3	17.8
Coloured piecegoods	45.0	175.9	149.3	131.4
TOTAL PIECE-GOODS ..	89.2	197.4	168.6	149.2

Foodgrains and flour (Rs. 33,69 lakhs).—Exports under this head had a serious set-back owing to the short wheat crop of 1927-28 and the depressed condition of the rice trade. The total quantity exported amounted to 2,300,000 tons as against 2,784,000 tons in the preceding year, a decline of 484,000 tons. In value there was also a substantial decrease of nearly R 9½ crores from R 42.9 crores in 1927-28 to R 33.7 crores in 1928-29. Shipments of rice declined from 2,187,000 tons in 1927-28 to 1,817,000 tons in 1928-29, a decline of 370,000 tons. Exports of wheat also decreased from 300,000 tons in 1927-28 to 115,000 tons in the year under review, a fall of 185,000 tons. Exports of wheat flour also declined by 6,000 to nsto 54,000 tons. Thus the decline in the exports of rice, wheat and wheat flour amounted to 561,000 tons. On the other hand, however, exports of grain pulse and flour (other than rice, wheat and wheat flour) increased by 77,000 tons from 237,000 tons in 1927-28 to 314,000 tons in 1928-29. Thus the net decline in the total exports amounted to 484,000 tons, as stated above.

The detailed exports during the past three years, compared with the average exports under each head in the pre-war quinquennium, are given below:—

	Pre-war average.	1926-27.	1927-28.	1928-29.
	Tons (000)	Tons (000)	Tons (000)	Tons (000)

VALUE Rs. (lakhs) ..	45,81	39,25	42,92	33,69

Oilseeds (Rs. 29,63 lakhs).—Seeds ranked fourth in order of importance in India's export trade, the first three groups being jute and cotton, raw and manufactured, and foodgrains. The total exports of oilseeds showed an increase of 10 per cent. in quantity and of 11 per cent. in value from 1,210,000 tons valued at Rs. 26,69 lakhs in 1927-28 to 1,328,000 tons valued at Rs. 29,63 lakhs in 1928-29. Compared with the pre-war average, there was, however, a decrease of 9 per cent. in quantity but an increase of 22 per cent in value. It may be mentioned that a considerable change has occurred, during and since the war, in India's trade in oilseeds. Local consumption, which is steadily on the increase, has been able to outbid a weak foreign demand. In copra, for example, India's exports averaged 31,000 tons annually during the pre-war period. In 1926-27 exports dwindled down to only 2,000 tons and practically disappeared in the following two years. In linseed, cotton seed, rapeseed and sesamum there has also been a substantial reduction in India's exportable surplus compared with the pre-war figures. But in the case of groundnuts internal consumption has not yet overtaken the increased production, resulting from extended cultivation, with the result that much larger quantities are available for export. The following table shows the quantities of the principal kinds of seeds exported during the past three years and in the pre-war quinquennium:—

	Pre-war average	1926-27	1927-28	1928-29
	(Thousands of Tons.)			
Linseed	379	192	222	157
Rape seed	273	94	66	77
Groundnuts ..	212	368	613	788
Castor	114	102	122	121
Cotton	240	51	153	131
Sesamum	119	2	11	30
Copra	31	2	..	..
Others	85	27	23	24
Total ..	1,453	838	1,210	1,328

Tea (Rs. 26,60 lakhs).—The tea industry had a very bad season in the year 1928-29. Heavy stocks at the beginning of the year and a general increase in outturn from all producing countries made for a weak position and consequent low prices during the middle of the season. The production of tea in India during 1928 exceeded that of 1927 by 13 million lbs. Exports, however, showed a slight decline from 362 million lbs to 360 million lbs.

The total production of tea in India in 1928 was estimated at 404 million lbs. as compared with 391 million lbs. in 1927 and 393 million lbs. in 1926. As usual, Assam contributed the largest share, *viz.*, 246 million lbs. or 61 per cent. of the total output, while Northern India, excluding Assam, contributed 101 million lbs. or 25 per cent., and Southern India 57 million lbs. or 14 per cent. Production in Assam increased by 10 million lbs. whereas production in the rest of Northern India fell off by about 2 million lbs. The total area under tea in 1928 was 771,000 acres as against 754,000 acres in 1927.

Export of tea by sea to foreign countries.

Hides and Skins (Rs. 18,87 lakhs).—The total trade in 1928-29 showed a small increase over last year, although it registered a decline under certain heads. The demand from the United Kingdom as well as from Germany was on a lower level as compared with the preceding year. Though the prices in the latter part of the year were on the decline yet the declared values of raw hides and skins rose in 1928-29 as compared with 1927-28 by 7 p. per lb. from 9 as. 9 p. to 10 as. 4 p. per lb. Shipments of raw hides and skins during the year amounted to 66,100 tons valued at Rs. 9,56 lakhs as compared with 64,400 tons valued at Rs. 8,81 lakhs in the preceding year. Exports of raw hides declined from 40,700 tons in 1927-28 to 37,300 tons in 1928-29, accounting for 56 per cent of the total exports as against 63 per cent in the preceding year. In value, however, the exports increased from Rs. 3,85 lakhs to Rs. 405, lakhs. Exports of raw skins increased and amounted to 35 per cent of the total exports in 1928-29, as compared with 30 per cent in 1927-28. Exports of raw skins amounted to 22,900 tons valued at Rs. 5,41 lakhs as compared with 19,400 tons valued at Rs. 4,89 lakhs in the preceding year. Exports of tanned or dressed hides and skins increased from 23,300 tons to 23,500 tons, the increase in value being Rs. 24 lakhs from Rs. 9,07 lakhs to Rs. 931 lakhs. Tanned hides increased from 15,800 tons valued at Rs. 4,12 lakhs in 1927-28 to 16,400 tons valued at Rs. 4,40 lakhs in 1928-29. There was a slight decline in tanned skins from 7,500 tons valued at Rs. 4,95 lakhs in 1927-28 to 7,100 tons valued at Rs. 4,91 lakhs in 1928-29

Lac (Rs. 8,64 lakhs.)—The exports of lac rose by 37 per cent in quantity from 544,000 cwts. in 1927-28 to 743,000 cwts. in 1928-29 and by 24 per cent in value from Rs. 6,99 lakhs to Rs. 8,64 lakhs. All the varieties of lac shared in this increase. It is, however, interesting to note that before the war as well as during the war period about 90 per cent of the total quantity of lac exported consisted of shellac and button lac. Since then the demand for raw materials increased on account of the development of the mechanical process of refinement, and the proportion of shellac and button lac declined to 75 per cent in 1928-29.

Raw wool (Rs. 4,89 lakhs).—There was a further expansion of the trade in raw wool, exports rising from 50 million lbs. to 56 million lbs. in quantity and from Rs. 4,36 lakhs to Rs. 4,89 lakhs in value. Of the total quantity shipped, the United Kindgom took 46 million lbs. and the United States of America 8 million lbs. as compared with 44 and 5 million lbs. respectively in 1927-28. These figures do not, however, include re-exports of foreign wool, chiefly of Tibetan and Central Asian origin, brought into India across the frontier. Re-exports of wool fell slightly in quantity from over 12½ million lbs. in 1927-28 to nearly 12 million lbs. in 1928-29 but the value realised showed an increase from Rs. 89 lakhs to Rs. 94 lakhs.

Oils (Rs. 87 lakhs.)—The total value of the exports of oils of all sorts, as ocmpared with the preceding year, rose by Rs. 16 lakhs or 23 per cent to Rs. 87 lakhs in 1928-29. Owing to a rapid increase in the local consumption, exports of petroleum, dangerous, flashing below 76° F. (including petrol, benzine and benzol) practically ceased, and the trade in oils was chiefly confined to vegetable and essential oils. Exports of vegetable oils advanced from 1,193,000 gallons valued at Rs. 29 lakhs to 1,586,600 gallons valued at Rs. 37 lakhs.

Metals and Ores (Rs. 8,91 lakhs).—The total exports of ores amounted to 73½,000 tons in 1928-29 as compared with 760,000 tons in the preceding year, manganese ore representing about 92 per cent of the total. Exports of manganese ore from India declined from 704,000 tons to 681,000 tons in quantity but slightly rose in value from Rs.1,95 lakhs to Rs.1,97 lakhs. In order to meet the increased demand of her iron and steel industry, France took by far the largest quantity, while Belgium and the United Kingdom proved to be the next best customers. Exports to France rose from 150,000 tons to 230,000 tons, while those to the United Kingdom fell from 234,000 to 167,000 tons. Belgium and the United States of America reduced their purchases from 182,000 and 97,000 tons to 168,000 and 72,000 tons respectively, while Germany increased her requirements from 15,000 to 20,000 tons. The exports were, as usual,

mostly from Bengal and Bombay in the proportion of 58 and 40 per cent as compared with 60 and 38 per cent in the preceding year.

Pig Iron (Rs. 2,11¼ lakhs.)—Despite lower production of pig iron in India, owing to labour disputes in the Tata Iron and Steel Works at Jamshedpur which lasted for a considerable portion of the year, exports of Indian pig iron continued to advance and amounted to 449,000 tons valued at Rs. 2,11¼ lakhs as compared with 393,000 tons valued at Rs. 1,78¾ lakhs in the preceding year. To meet the ever-growing demands for cheap raw material for her steel works, Japan increased her takings from 271,000 tons to 354,000 tons while the United States of America reduced her purchases from 65,000 tons to 52,500 tons. There were also smaller shipments to the United Kngdom and Germany—these two countries taking 5,500 and 5,700 tons as against 21,000 and 12,000 tons respectively in 1927-28. On the other hand, exports to China increased from 4,000 tons to 14,600 tons. The following figures show the production of pig iron and steel in India during the past three years. The figures are in thousands of tons :—

	1926–27	1927–28	1928–29
Production of pig iron	957	1,162	1,050
Production of pig (ingots)	530	600	396
Production of finished steel	374	429	276

The Indian Stores Department.

The Indian Stores Department was instituted on 1st January 1922, after a specially appointed officer had during the preceding year investigated its possible sphere of work. The Government of India nearly half a century previously enunciated the policy of purchasing for State use stores of indigenous origin or manufacture rather than stores produced or manufactured abroad and for many years before the creation of the new department the rules governing stores purchase for public departments prescribed that subject to certain conditions as to quality and so forth preference should be given to articles manufactured wholly or in part in India. Revisions of these rules to make them better serve the purpose for which they were drafted were from time to time made but as Indian industrial development progressed and as Indian nationalism increased complaints that the policy presumed to be embodied in the rules was not in effect carried out grew in volume. The Indian Industrial Commission found that the industrial resources of the country were far from sufficiently utilised by Government Departments but that the reason was not due to restrictions in the stores purchase rules but to the failure of the Departments fully to avail themselves of the scope which the rules offered. They attributed this to lack of information as to sources and market values of Indian supplies and to the absence of inspecting agencies and they concluded that a central expert agency for the purchase and inspection of stores required for public purposes should be established. The Stores Purchase Committee which the Government of India appointed to advise them on this question unanimously supported the same conclusion and Government with the approval of the Secretary of State accepted the principles of the recommendation. The Indian Stores Department was thereupon instituted.

It was designed primarily to deal with the requirements of the Central purchasing departments and with those of the minor administrations directly controlled by the Government of India, it being impossible under the Reforms Constitution for the Government of India to compel the Provincial Governments similarly to utilise its services. The Central Government at the same time invited use of its services by Provincial Governments, Municipalities, Port authorities, company managed railways and other public or semi-public bodies.

Organisation.—The preliminary organisation of the Stores Department constituted on 1st January 1922 included as gazetted staff—

A Chief Controller of Stores.

A Director of Inspection.

A Director of Purchase and Intelligence.

A Director of Textiles Purchase.

An Assistant Chief Controller.

The designation of the Director of Textiles Purchase was early changed to Deputy Director of Purchase (Textiles) and within the first year an Assistant Controller of Textiles Purchase was appointed. The Department's growth has thus from its beginning constantly broadened and accelerated. The preliminary organisation was instituted temporarily but the department and its organisation were before the end of 1922 put on a permanent basis. The offices of Superintendent of Local Manufactures and Government Test House at Alipur and of the Metallurgical Inspector at Jamshedpur, hitherto under the direct administration of the Industries and Labour Department, were in July 1922 absorbed in the new organisation.

The number of gazetted officers in the department by the end of 1927-28 was 32 Europeans and 30 Indians.

The Functions of the new Department were early indicated as being—

(*a*) To act, subject to certain limitations, as a purchasing and inspection agency and in an advisory capacity on all matters connected with the purchase of stores in their widest sense for the public service on behalf of all Central Departments of Government and of the minor Local Governments and also on behalf of such major Local Governments, company worked railways, Corporations, Port Trusts, Municipalities and similar quasi-public bodies and Indian States as may desire to avail themselves of its assistance;

(*b*) To scrutinise the Home indents of all Central Departments, minor Local Governments and such other authorities as utilise its services with a view to ensure attention to the encouragement of Indian industries, so conducting its operations in this respect as to prevent the purchase of articles of non-Indian manufacture when goods of indigenous production of suitable quality and price are obtainable;

(*c*) To purchase and inspect in India for central departments and other buyers on the lines above indicated certain specified commodities;

(*d*) To inspect stores purchased otherwise than through the agency of the department;

(*e*) To draw up for the approval of departments and others which effect their purchases through the department specifications of the various classes of stores in demand and if so desired to advise and assist departments and others which make their own purchases in the preparation of specifications and the standardisation of patterns;

(*f*) To act as a central bureau of information on all matters affecting the purchase of stores and their prices, particularly with reference to the extent of Indian manufactures and their capacity from time to time.

In order to secure the benefit of the accumulated experience of over sixty years of purchase and inspection work in the foremost markets of the world which had been acquired by the India Store Department in London, advantage was taken of the presence of the Director of Purchase and Intelligence on leave in England to depute him to examine the system in force in the London organisation with a view to the embodiment of what was useful to the Indian Stores Department in its organisation and methods. It was at the outset decided that the Department should be quasi-commercial and self-supporting, charging a small percentage

upon the cost of its purchases and other minimum fees in other branches of activity to defray its establishment and other costs.

The Government of India in 1929 arranged with Messrs. Rendel, Palmer and Tritton, who for the past 50 years had been employed as the Consulting Engineers to the India Office and latterly to the High Commissioner, for the establishment of a branch office in India. This was considered necessary for the successful working of the "rupee tender system" which Government introduced by orders passed on 13 the September 1928. The functions of the new office, which is established in Calcutta, is to give advice and assistance in respect of specifications and tenders for technical stores, the standardisation of patterns and designs and cognate matters.

Past Year's Work.—The latest statistics of the work and progress of the Department are contained in its recently issued report for the official year 1928-29. They show that the total value of purchases for Government Departments by the Stores Department in that year was Rs. 3,60,48,074, against Rs. 3,73,03,846, in the preceding year and Rs. 3,98,82,245 in 1927-28. The drop occurred mainly in consequence of industrial strikes and lower productive capacity on that account in India and of diminution in heavy engineering purchases by various provincial Governments owing to the completion of capital works undertaken by them. Detailed examination of the statistics of his department leads the Controller of Stores to state in his annual report that it is still gradually being entrusted with an increasing volume of business. An interesting development during the past year followed an inquiry from the Controller of Stores and Manufactures under the Prison Commission in England whether it would be possible for him to buy his requirements of coir and jute yarns and fibres through the Department. Government passed orders that this new business should be undertaken.

As a result of inquiries during the year, 203 firms were added to the list of approved contractors, as compared with the addition of 326 firms in the preceding year. A further 95 firms were enlisted for utilisation by provincial purchase departments. Efforts to assist manufacturers in India to improve the quality of their products were continued.

During the year, 1,533 indents on the India Store Dept., London, of the estimated value of Rs. 6,28,85,361 were examined and stores to the aggregate value of Rs. 10,41,133 were challenged, Rs. 3,26,465 of this amount representing the estimated value of articles which could wholly or partly be manufactured in India, The result was the diversion of purchases to the value of Rs. 1,39,093 to the Indian markets. The Controller of Stores specially refers to the figures as proving the decrease in value of the indents prepared by consuming departments on the India Stores Dept., London.

The accounts of the departments for the year 1927-28 show a deficit of Rs. 2,39,699, following lesser deficits in the two preceding years, and the accounts for 1928-29 indicate a still more unfavourable condition. The Controller ascribes the deterioration in the past year to industrial strikes and consequent fall in purchases, seeing that the charges for the use of the Department are based on ad valorem rates on the stores concerned. He concludes that "the Department must be utilised to an appreciably larger extent than at present for the purchase of stores in regular demand before it can hope to secure financial equilibrium in the strict commercial sense."

Bombay Stamp Duties.

Exceeding Rs. 200 but does not exceed Rs. 300	4	8
For every Rs. 100 or part in excess of Rs. 100 up to Rs. 1,000	1	8
For every Rs. 500, or part thereof, in excess of Rs. 1,000,, ...	7	8

	Rs.	a.
Conveyance of landed property in Bombay City.—In respect of any instrument (not being a lease or transfer of a lease as defined in the Indian Stamp Act II of 1899, or an under-lease or sub-lease or an agreement to let or sub-let or a power-of-attorney) relating to immoveable property situate *within the City of Bombay*, for the entries in article 23 the following entries shall be substituted, namely:—		
23. Conveyance (as defined by section 2 (10) not being a Transfer changed or exempted under No. 62—		
Where the amount or value of the consideration for such conveyances as set forth therein does not exceed Rs. 50	0	8
Where it exceeds Rs. 50 but does not exceed Rs. 100	1	0
Where it exceeds Rs. 100 but does not exceed Rs. 200	2	
Where it exceeds Rs. 200 but does not exceed Rs. 300	8	8
Where it exceeds Rs. 300 but does not exceed Rs. 400	12	0
Where it exceeds Rs. 400 but does not exceed Rs. 500	15	8
Where it exceeds Rs. 500 but does not exceed Rs. 600	19	0
Where it exceeds Rs. 600 but does not exceed Rs. 700	22	8
Where it exceeds Rs. 700 but does not exceed Rs. 800	26	0
Where it exceeds Rs. 800 but does not exceed Rs. 900	29	8
Where it exceeds Rs. 900 but does not exceed Rs. 1,000	33	0
And for every Rs. 500 or part thereof in excess of Rs. 1,000	17	8
Copy or Extract—If the original was not chargeable with duty, or if duty with which it was chargeable does not exceed 1 Rupee..	1	0
In any other case	2	0
Counterpart or Duplicate—If the duty with which the original instrument is chargeable does not exceed one rupee —The same duty as is payable on the original. In any other case	2	0
Delivery Order	0	1
Entry in any High Court of an Advocate or Vakil 500	0	
In the case of an Attorney 500	0	
Instrument—Apprenticeship	10	0
Divorce	2	0
Other than Will, recording an adoption or conferring or purporting to confer Authority to adopt	20	0

Lease—Where rent is fixed and no premium is paid for less than 1 year, same duty as Bond for whole amount; not more than 3 years, same as Bond for average annual rent reserved; over 3 years, same as Conveyance for consideration equal to amount or value of the average annual rent reserved; for indefinite term, same as Conveyance for a consideration equal to the amount or value of the average annual rent which would be paid or delivered for the first ten years if the lease continued so long; in perpetuity, same as Conveyance for consideration equal to one-fifth of rents paid in respect of first 50 years. Where there is premium and no rent, same as Conveyance for amount of premium; premium with rent, same as Conveyance or amount of premium in addition to the duty which would have been payable on the lease if no fine or premium or advance had been paid or delivered.

	Rs.	a.
Letter—Allotment of Shares	0	2
Credit	0	2
License	10	0
Memo. of Association of Company—If accompanied by Articles of Association	30	0
If not so accompanied	80	0
Notarial Act	2	0
Note or Memo. intimating the purchase or sale—		
(*a*) Of any Goods exceeding in value Rs. 20	0	4
(*b*) Of any Stock or marketable Security exceeding in value Rs. 20—Subject to a maximum of Rs. 20, a. 2 for every Rs. 10,000, or part.		
Note of Protest by a Ship's Master ..	1	0
Partnership—Where the capital does not exceed Rs. 500	5	0
In any other case	20	0
Dissolution of	10	0
Policy of Insurance—		
(1) *Sea*—Where premium does not exceed rate of 2a., or ½ per cent. of amount insured	0	1
In any other case for Rs. 1,000 or part thereof	0	2
(2) *For time*—For every Rs. 1,000 or part insured, not exc. 6 months ..	0	2
Exceeding 6 and not exceeding 12 months	0	4
If drawn in duplicate, for each part.—Half the above rates, for Sea and Time.		
(3) *Fire*—When the sum insured does not exceed Rs. 5,000..	0	8
In any other case	1	0
In respect of each receipt for any payment of a premium on any renewal of an original policy—One half of the duty payable in respect of the original policy in addition to the amount, if any chargeable under Art. 53 (*Receipt*).		

	Rs.	a.
(4) *Accident and Sickness*—Against Railway accident, valid for a single journey only	0	1
In any other case—for the maximum amount which may become payable in the case of any single accident or sickness where such amount does not exceed Rs. 1,000, and also where amount exc. Rs. 1,000, for every Rs. 1,000 or part	0	2
(5) *Life, or other Insurance, not specifically provided for*—		
For every sum insured not exceeding Rs. 1,000 and also for every Rs. 1,000 or part	0	6
If drawn in duplicate, for each part	0	3
Insurance by way of indemnity against liability to pay damages on account of accidents to workmen employed by or under the insurer or against liability to pay compensation under the Workmen's Compensation Act of 1923. For every Rs. 100 or part payable as premium ..	0	1
In case of a re-insurance by one Company with another—¼ of duty payable in respect of the original insurance, but not less than 1 anna, or more than 1 Re.		
Policies of all classes of Insurance not included in Article 47 of Schedule 1 of Stamp Act of 1899 covering goods, merchandise, personal effects, crops and other property against loss or damage, are liable to the same duty as Policies of Fire Insurance.		
Power of Attorney—		
For the sole purpose of procuring the registration of one or more documents In relation to a single transaction or for admitting execution of one or more such documents	1	0
When required in suits or proceedings under the Presidency Small Causes Courts Act, 1882	1	0
Authorising 1 person or more to act in a single transaction other than that mentioned above	2	0
Authorising not more than 5 persons to act jointly and severally in more than 1 transaction, or generally ..	10	0
Authorising more than 5 but not more than 10 persons to act	20	0
When given for consideration and authorising the Attorney to sell any immovable property—The same duty as a *Conveyance* for the amount of the consideration.		
In any other case, for each person authorised	2	0
Promissory Notes—		
(*a*) When payable on demand—		
(i) When the amount or value does not exceed Rs. 250	0	1
(ii) When the amount or value exceeds Rs. 250 but does not exceed Rs. 1,000	0	2

	Rs.	a.
(iii) In any other case	0	4
(b) When payable otherwise than on demand—The same duty as a Bill of exchange for the same amount payable otherwise than on demand.		
Protest of Bill or Note	2	0
Protest by the Master of a Ship	2	0
Proxy	0	2
Receipt for value exc. Rs. 20	0	1
Reconveyance of mortgaged property—		
(a) If the consideration for which the property was mortgaged does not exceed Rs. 1,000—the same duty as a bond for the amount of such consideration as set forth in the Reconveyance.		
(b) In any other case	10	0
Release—that is to say, any instrument whereby a person renounces a claim upon another person or against any specified property—		
(a) If the amount or value of the claim does not exceed Rs. 1,000—The same duty as a Bond for such amount or value as set forth in the Release.		
(b) In any other case	10	0
Respondentia Bond—The same duty as a Bond for the amount of the loan secured.		
Security Bond—(a) When the amount secured does not exceed Rs. 1,000—The same duty as a Bond for the amount secured.		
(b) In any other case	10	0
Settlement—The same duty as a Bond for the sum equal to the amount or value of the property—settled as set forth in such settlement.		
Revocation of Settlement.—The same duty as a Bond for a sum equal to the amount or value of the property concerned as set forth in the instrument of revocation but not exceeding ten rupees.		

	Rs.	a.
Share-warrant to bearer issued under the Indian Companies Act.—One and a half times the duty payable on a conveyance for a consideration equal to the nominal amount of the shares specified in the warrant.		
Shipping Order	0	1
Surrender of Lease—When duty with which lease is chargeable does not exceed Rs. 5—The duty with which such Lease is chargeable.		
In any other case	5	0
Transfers of Shares—One-half of the duty payable on a Conveyance for a consideration equal to the value of the share		
Transfer of any Interest secured by a Bond, Mortgage-deed, or Policy of Insurance—If duty on such does not exceed Rs. 5—The duty with which such Bond, &c., is chargeable.		
In any other case	10	0
—of any property under the Administrator General's Act 1874, Section 31..	10	0
—of any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—Five rupees or such smaller amount as may be chargeable for transfer of shares.		
Transfer of Lease by way of assignment and not by way of under-lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer.		
Trust, Declaration of—Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding	15	0
Revocation of—Ditto, but not exceeding	10	0
Warrant for Goods	0	8

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immoveable properties are usually assessed at 16⅔ years purchase on the nett Municipal assessment. For estate under Rs. 10,000 the probate duty payable is 2 %; between Rs 10,000 and Rs. 50,000 the duty payable is 2½%. Over 50,000 rupees the duty payable is 3%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted :—

1. Debts left by the deceased including mortgage encumbrances.
2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immoveable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no-objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

The Reforms : Central Committee's Report.

The report of the Committee of the Central Indian Legislature co-operating with the Simon Commission was published simultaneously in India and England on December 24, 1929. The Committee was presided over by the Hon. Sir Sankaran Nair, Kt.,C.I.E., the other members being Nawab Sir Zulfikar Ali Khan, Kt., C.S.I., Sir Hari Singh Gour, Kt., the Hon. Sir Arthur Froom, Kt., the Hon. Raja Nawab Ali Khan, the Hon. Sardar Bahadur Shivdev Singh Uberoi, Dr. Abdulla Suhrawardy, Mr. Kikabhai Premchand and Rao Bahadur M. C. Rajah. All the members with the exception of Mr. Kikabhai Premchand, who submitted a separate report of his own, signed the main report subject, however, to minutes of dissent and separate memoranda by all the signatories.

The Committee's report is divided into two main sections, one dealing with the Provinces and the other with the Central Government. They recommend that Sind should be separated from Bombay but that Burma's demand for separation from India should not be conceded until all the questions at issue have received full and careful consideration.

The Provinces.—The following is a summary of their proposals for the future administration of the Provinces :—

The Executive Government in the Provinces should consist of a Governor appointed by the Crown and Ministers responsible to the Legislature. The distinction between the Reserved and the Transferred subjects should be abolished and all subjects save those specially classified as Central should be Provincial. The only exception they would make to this rule is that in Bengal they would retain law and order in charge of a member not directly responsible to the Legislature. Sir Arthur Froom holds that in all provinces except Madras law and order should be in charge of a nominated member.

The Governor should follow the English constitutional practice of selecting the Chief Minister and appointing the other ministers on his recommendation. The Governor should not be a member of the Cabinet.

The Governor of the Province should exercise the ordinary constitutional power of dismissing the Cabinet, but not an individual Minister. In dismissing, as in appointing, a Cabinet, he should follow the ordinary constitutional practice in the self-governing Dominions.

Peace and Order.—For the purpose of maintaining the peace and tranquillity in a Province the Governor should be empowered to take any steps to preserve peace and order. Apart from these, the Governor should not be given power to override the decision of the majority of the Cabinet.

The majority recommend that the present electorate should be doubled immediately, but three members (or four if Mr. Kikabhai Premchand is included) do not agree to any immediate extension of the electorate.

The official and nominated blocks in the Provincial Councils should be abolished and the Councils should consist of elected members only. The Governor may nominate not more than two experts to assist in the consideration of bills, but these experts would not have the power to vote.

Revenue.—Until the Government of India is constituted on a popular basis by the transfer of departments to Ministers, all the revenues of a Province should be at the disposal of the Local Government. The Provincial Government, however, should be subject to the obligation of paying to the Government of India such contribution as may be fixed by an impartial tribunal. This proposal is opposed by several members, including Sir Arthur Froom and Mr. Kikabhai Premchand, who maintain that the Central Government must continue to have its own sources of revenue.

Separate Electorates.—By the casting vote of the Chairman, the main Report recommends the abolition of separate electorates for Muslims. In Madras, Bombay, United Provinces, Bihar and Orissa, the Central Provinces and Assam there should be joint electorates with reservation of seats. In the Punjab there should be reservation of seats in joint electorates for the Hindus and Sikhs, while in Bengal there should be no separate electorates and no reservation of seats. This decision of the main Committee is, however, opposed by Sir Zulfikar Ali Khan, Dr. Suhrawardy and Sir Arthur Froom, who desire the continuance of separate electorates. Mr. Kikabhai Premchand agrees to separate electorates subject to the conditions already given.

The Committee recommend reservation of seats in joint electorates for other minority communities, except in Madras where they would give separate electorates to the Depressed Classes. Europeans should also have separate electorates. Special representation for labour and for women is recommended.

There should be no provincial Second Chambers except in the United Provinces, where the existence of a large landed aristocracy provides suitable material. Sir Arthur Froom is in favour of Second Chambers in all Provinces.

A Local Army.—In self-governing Provinces the Government should be given power to raise a local army for the maintenance of internal security.

The Governor-General should be given power to supersede a Local Government and carry on the administration in case of breakdown or inability to maintain law and order in the Provinces.

The Central Government.—All subjects except the Defence of India and Relations with Foreign Powers and the Indian States should be under the control of Ministers responsible to the Legislature. Sir Arthur Froom holds that for the present the Executive should be responsible to Parliament.

The Cabinet should consist of not more than two Executive Councillors and not more than six Ministers, at least half of whom should be Indians.

The Assembly should consist of 300 members, of whom 20 in addition to the Ministers and the Executive Councillors, would be nominated by the Governor-General, and the remainder elected. Seats would be allotted to the various communities and interests according to a given scale. The Assembly's life should be extended to five years.

The constitution of the Council of State should remain unchanged, but its membership should be increased from 60 to 100.

The powers of the Secretary of State should be curtailed and the raising of loans, the recruitment for the services, and the appointment of representatives to International organisations should be made by the Government of India or the Provincial Governments.

The Council of the Secretary of State should be abolished. If it is retained it should be reconstituted in such a way that half the members are Indians selected from the Central Legislature.

So long as the Secretary of State has to discharge the functions of superintendence and control over any subject not transferred to the Government of India he should be assisted by the appointment of two Indian Under-Secretaries of whom at least one should find a place in Parliament. Provision should be made for the representation of Indians in the British Parliament until India attains Dominion Status.

A Military College should be immediately established in India and in other respects the recommendations of the Skeen Committee should be carried out. A Supreme Court should also be established in India.

Provision should be made in the Government of India Act enabling full Dominion Status to be attained without the necessity for further inquiries by Statutory Commissions or other agency.

The memoranda and minutes of dissent appended to the Report are nearly five times as long as that document.

COPYRIGHT

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights, but the printer has to supply copies of these works as stated in that Act and in the Printing Presses and Books Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptations of them to Indian law and procedure, and some material modifications of them in their applications translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform of publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, "have not been published, *i.e.*, written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining **musical work** as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced."

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the Indian Year Book. The Congress was founded in 1885 by Mr. Allan Octavian Hume, a retired member of the Indian Civil Service, and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be:—

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India;

Secondly, the gradual regeneration, along all lines, mental, moral, social and political of the nation thus evolved; and

Thirdly, the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focussing the chief political grievances, and in providing a training ground for Indian politicians. But in 1907 the Extremists, chiefly of the Deccan and the Central Provinces, who had for some time chafed under the control of the older generation, succeeded in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that—

"The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country."

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambica Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial; the difference between the Moderates and the Extremists was fundamental; the Extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi and his lieutenants. In 1927 the Congress actually adopted independence as the goal of India. In the following two years the Congress made what the extreme leftists described as a climb-down, while the Liberals moved towards the left, with the result that for a time there appeared to be a commonness of purpose between the Liberals and Congressmen. Both boycotted the Statutory Commission on Indian Reforms and both collaborated in drawing up a scheme of Dominion Status for India. This state of undefined alliance continued for some months. At its 1928 Session the Congress, while adhering to Independence, agreed to accept Dominion Status if granted, on December 31, 1929. Things were tending towards a satisfactory settlement when in the latter half of 1929 the Congress insisted on the immediate grant of Dominion Status or an assurance thereof. Here was the parting of the ways. The Liberals went their way and the Congress its own. In fulfilment of the "ultimatum" issued at its previous Session, the Congress, at its 1929 Session, declared for complete independence or "Purna Swaraj."

THE NON-CO-OPERATION MOVEMENT.

It was in 1920 that Mr. Gandhi, who had only in the previous year unsuccessfully started his Passive Resistance struggle as a protest against the Rowlatt Act, conceived his idea of non-co-operation. Originally intended to be a protest against the British policy towards Turkey, the "fighting" of two other grievances was later on added to its first object, namely, the punishment of officials in the Punjab Martial Law regime and the securing of Swaraj for India. Mr. Gandhi and Mr. Shaukat Ali were able in 1920 to get the Calcutta Special Congress to endorse their programme of "progressive non-violent non-co-operation" which was reiterated by the annual session at Nagpur, which, on Mr. Gandhi's motion, changed its old creed into "the attainment by India of Swaraj by all legitimate and peaceful means." The stern measures adopted by local Governments led to the imprisonment of a large number of active Congressmen with the result that the Ahmedabad Congress in 1921 made a "grim resolve" to challenge the "repression movement" by appointing Mr. Gandhi as dictator and by resolving to start a "No Tax" campaign at Bardoli. The riots in Chauri Chaura in 1922, preceded by the Bombay riots in 1921 during the Prince of Wales' visit (see 1923 and 1924 editions of this book) opened Mr. Gandhi's eyes to the impossibility of maintaining a non-violent atmosphere under exciting conditions. He suspended his proposed civil disobedience campaign, and replaced it by what is known as the Bardoli Programme which suspended all the aggressive items of non-co-operation in favour of the promotion of inter-communal unity and khaddar. Soon after, Mr. Gandhi was arrested for sedition, tried and sentenced to undergo imprisonment for six years. (See 1923 and 1924 editions.)

This turn of events threw cold water on the enthusiasm of non-co-operators who got discouraged. In order, therefore, to sound the country's readiness for aggressive action once

more, the All-India Congress Committee appointed a Committee, known as the Civil Disobedience Committee, in June 1922. The Committee toured the country and in October, 1922, produced two reports, one favouring Council entry to offer obstruction to Government and the other recommending the adoption of the Bardoli programme. A battle royal ensued between the two parties at the Gaya Congress. The anti-Council Party won the day, and the Councilites, led by the Congress President, Mr. C. R. Das, formed the Swarajya Party in order to push their own Council programme. The Swarajya Party by its continuous propaganda gained considerable support in the country The No-Change Party seeing the trend of public opinion got the Congress to lift the ban on Council entry. The Swarajists secured a large number of seats in various provincial Councils and in the Assembly. The annual Congress at Cocanada, under the presidentship of Mr. Mahomed Ali, put an end, at any rate for some time, to the Council entry controversy.

The Congress had an eventful career in 1924. Mr. Gandhi, who had an attack of appendicitis of a serious form in the Yerowda Jail, was released by the Government of Bombay. Immediately, the No-Changers revived their hopes of fighting the Swarajists to a finish. After nearly six weeks' discussion, in May, 1924, Mr. Gandhi definitely dissociated himself from the Council Programme and the Swarajist obstructive policy; while the Swarajist leaders in a separate statement defended their policy. Public controversy again centred round the Council question. Mr. Gandhi went to Calcutta and, after a series of consultations with the Swarajist leaders, drew up what is now known as the Gandhi-Swarajist Pact by which Mr. Gandhi agreed to suspend the non co-operation movement and to recognise the Swarajists as the accredited representatives of the Congress on legislative bodies, while in return the Swarajists agreed to his spinning franchise which laid down 2,000 yards of hand-spun yarn every month as the subscription to Congress membership instead of the four annas a year as decided by the Nagpur Congress.

The Congress which met at Belgaum during Christmas week under Mr. Gandhi's presidency endorsed the Bengal Pact. Among the other resolutions passed by the Congress was one suspending the non-co-operation programme. Non-co-operation was thus practically dead, and, strange to say, it received its death-blow at the hands of the very author of its being. But the fond parent did not lose heart and bided his time. His chance came in 1928 when the Congress was split into two warring camps. One was ready to accept Dominion Status for India, while the other would have nothing short of independence. At the psychological moment, Mr. Gandhi staged a re-entry into the political arena—he had been but a silent spectator during the five preceding years—and, professing to effect a compromise within the Congress, provided a loophole for the revival of non-co-operation. Although Dominion Status was actually declared in 1929 to be the goal of Indian political progress, Mr. Gandhi insisted on having it on the spot and when that was naturally refused he returned to his old love, non-co-operation and boycott He had been biding his time, and the astute politician, that he is, he reintroduced in December 1929 his formula that had been dead five years. Now, it was not full boycott, the ban being placed only on the legislatures. Sadder and wiser—but, unfortunately, not sufficiently sad and wise—he exempted law courts, schools, etc., from his scheme. Complete independence was declared and non-co-operation was revived. Indeed the Congress Executive was authorised to give the signal also for a campaign of non-payment of taxes and civil disobedience.

Congress in 1925-28.

The policy of the Congress executive during the first half of 1925 was one of aimless drift The death of Mr. C. R. Das demoralised the Swarajists. Mr. Gandhi promptly went to their rescue and at the end of the year the Swarajists' political programme was formally adopted by the Cawnpore Congress. Of a more far-reaching character was the split that occurred in the ranks of the Swarajists themselves at Cawnpore. Messrs. Jayakar and Kelkar from Bombay and Dr. Moonje from the C. P. registered their emphatic protest and resigned their seats on the Legislatures professing thereby to liberate themselves from the Swarajist obligations and desiring to be free to propagate their own cult of Responsive Co-operation and acceptance of office.

The Responsive Co-operators, who had in the meanwhile strengthened their position and secured appreciable support to their creed of co-operation when possible and opposition when necessary, led the country's attack on the Swarajists.

The 41st session of the Congress, which met in Assam during Christmas week in 1926, set its face against the acceptance of ministerships or other offices in the gift of the Government and approved of the policy of rejection of budget and refusal of supplies until a response to the "national demand" was forthcoming.

All this talk and quarrel about the internal affairs of the Congress were set at rest by the non-inclusion of Indians on the personnel of the **Royal Commission on Indian Reforms** Most of the leaders fancied that it would be an insult to India if Indians were not appointed members of the Commission. Even moderates reputed for their sobriety and reasonableness affected extremism. The Viceroy endeavoured —but in vain—to explain the position to the leaders of the land (See Year Book of 1928).

Congressmen, of course, met during Christmas 1927 and resolved to boycott the Simon Commission, declared independence as the goal of India and offered some solutions for the Hindu-Muslim problem. The Working Committee was also asked to draft a Swaraj Constitution for India, in consultation with other political organisations. This was done in the following year which is important in another sense also. It was in 1928 that the Congress adopted in its open session at Calcutta a resolution declaring specifically, though conditionally, that Dominion

status would be acceptable to India. This, it will be recalled, marks a return to 1908 when, soon after the Surat split, it was stated that the objects of the Congress were, among other things, "the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire." Since this declaration of faith over a score of years ago the Congress has been drifting farther and farther from practical politics: it adopted complete non-co-operation; then practised a restricted form of that negative doctrine; discarded it altogether; resolved to boycott the Parliamentary Commission; and lastly, in 1927, set independence as the goal of India. From this there was a reaction which found expression in the Calcutta resolution. But this unfortunately proved to be a mere smoke. Screen raised by Congress tacticians, not excluding Mr. Gandhi to conceal from the world their real intention which was disclosed in December 1929. More about this presently.

The boycott of the Commission was a miserable failure and this reminded the Congressmen of the next duty which the Madras session had imposed on them, namely, the drafting of a "Swaraj" constitution for India. This they set out to do about the middle of 1928 when representatives of almost all political organisations met in Bombay at the invitation of the Congress Executive and appointed a Committee presided over by Pandit Motilal Nehru, to undertake the task. Congress President, presided on the occasion and declared the readiness of Congressmen to co-operatate with others in drafting a constitution "as a reply to Lord Birkenhead's challenge." The All Parties Conference—for that it was in a real sense—appointed a representative committee to undertake the task. The Committee was presided over by Pandit Motilal Nehru, the veteran Congressman and Swarajist, and included Sir Tej Bahadur, the Liberal leader, and Sir Ali Imam.

The Committee consulted various leaders in the country and after two or three months' hard labour produced a document, which however, instead of being an all parties' report evoked more controversy than any other proposal in recent years regarding the future of India (See Year Book of 1929). The advocates of complete independence and true, Muslim leaders, who were alarmed at the light-heartedness with which the report had dismissed their community's interests, were the loudest in declaiming it. It was in this atmosphere that the All Parties' Convention met at Calcutta for the purpose of receiving and considering the All Parties' Committee's report. The Convention adopted the Committee's proposal that India should have the same constitutional status in the community of nations known as the British Empire as the Dominions of Canada, the Commonwealth of Australia, the Dominion of New Zealand, the Union of South Africa and the Irish Free State, with a Parliament having powers to make laws for peace, order and government of India and an executive responsible to that Parliament.

The Convention, however, failed to find a solution acceptable to all for the communal question. (See Year Book of 1929).

The Congress which met in Calcutta during Christmas in 1928 under the presidency of Pandit Motilal Nehru, was divided into three camps; the advocates of complete independence led by Mr. Iyengar (for some time), Mr. Subhas Chandra Bose and Pandit Jawaharlal Nehru, son of the President; those who wanted Dominion status and nothing beyond that, led by Mrs. Besant; and Pandit Nehru sandwiched between the two, with one foot in either camp. The "Independents" denounced the others as seeking to convert the Congress into a moderate organisation, while Mrs. Besant declared that the Leftists were heading for ruin. This was just the opportunity for which Mr. Gandhi had apparently been waiting, and he staged a comeback at the psychological moment. He threw in his weight with Pandit Nehru and sponsored a compromise formula according to which, while adhering to the goal of independence, he was prepared to accept the Nehru constitution, on condition that the Congress would be free to revive non-co-operation if Dominion Status were not granted.

This satisfied neither wing but eventually a resolution was adopted which approved of the Nehru Report as a great step in political advance and, whilst adhering to the Madras resolution on independence, the Congress was prepared, subject to the exigencies of the political situation, to adopt the Nehru constitution, if it was accepted by the British Parliament before the expiry of 1929; and if that did not happen the Congress would revive non-violent non-co-operation; Congressmen could, in the meanwhile, carry on propaganda for independence.

The Congress in 1929.—Everyone knew that the Congress "ultimatum" meant nothing. Many thought that it was only the extremist's way of demanding a recognition of India's right to Dominion Status. Even the Nehru Report devoted much space to a discussion of this point. And it was as a kind of reply to the Calcutta Congress resolution that His Excellency said in January in the course of his address to the Legislative Assembly that the famous Declaration of 1917 stood as Britain's solemn pledge to India. This statement did allay to some extent the fears entertained in certain quarters that what was promised in 1917 might be denied. But the politicians wanted something more definite and specific. In asking for the rejection of the Finance Bill in the Assembly, Pandit Motilal Nehru explained the meaning of the Congress resolution and said that it was "an invitation to the Government to make up their minds within a year to fulfil the oft repeated promise to put India on her legs." The Congress waited for an answer and there was a lull in the political atmosphere.

Not that there were not internal quarrels among Congressmen. A move originated from the Madras Presidency "to extend the sphere of non-co-operation further." First it was non-co-operation from outside the legislatures then it was from within the legislatures; now, the latest suggestion was to non-co-operate from within the Government itself, that is, from within the Cabinet of each Province. Some controversy raged over this question of acceptance of office, but it was confined to Swarajists. It loomed as a question of first rate politica

importance for a time, but only for a time. The suggestion was based on the assumption that the legislatures would be dissolved after their usual terms. And the question of acceptance of office enjoyed the pride of place on the agenda of the All India Congress Committee which met in Bombay in May.

An element of comedy was introduced into the deliberations when the Madras group in the Committee actually tabled two sets of alternative resolutions, diametrically opposed to each other. While the first of these sought conditionally to authorise Congressmen to co-operate with members of other political parties, agreeing with them in certain particulars, for running the impending elections to the legislatures and to accept office if the "national demand" were conceded, the other resolution actually urged the launching of non-co-operation and civil disobedience. The expected battle royal, however, did not come off, as the wind was taken out of the sail of the Madras Congressmen by the announcement by the Viceroy of the extension of the life of the Legislative Assembly. This was soon followed by pronouncements by provincial governors extending the lives of the legislatures of their respective provinces. The reason ascribed by the Viceroy for his decision not to dissolve the Legislative Assembly in September, when its life was normally due to expire, was: "At the time when elections would normally be held, there will inevitably be speculation as to the possible recommendations of the Simon Commission and the bodies co-operating in its inquiry, and, forecasts, most of which must necessarily be without foundation, will b e widely published. The resulting uncertainty could not fail to be embarrassing both to the candidates and to the electors."

The questions of a genera election and Congressmen accepting office if returned to power did not, therefore, arise when the Congress Committee assembled. But, although the main item of interest was thus withdrawn from the arena, liveliness was lent to the proceedings of the All India Congress Committee by a scheme put forward by Mr. Gandhi for organising "nation-wide civil resistance and wholesale non-co-operation" by enrolling a quarter of the entire population of the country in the Congress so as to build "an irresistible structure the decisions of which will be felt by the Viceroy". This was described as the Congress's reply to the Government's "campaign of repression." At the conclusion of the Committee's meeting, Pandit Motilal Nehru, the President of the Congress, addressed a public at which he declared that the Congress was preparing itself to offer non-violent non-co-operation if its demand were not conceded before the expiry of the year. "Be prepared for the next signal on January 1, 1930," he announced.

While the Congress was thus threatening "dire consequences," the moderate elements in the country were making the same demand in different language. Meanwhile the terrorist organisations in the country began to make their existence markedly felt. Bombs, threats of murder and revolutionary propaganda of an open character disturbed the country's peace. Generally speaking, the "Red" activities took the form of stirring up strife in the industrial world of India with a view to creating a discontented labour population and the ultimate destruction of capitalism and the capitalistic society and State. Organisation of Youth Leagues all over the land and the exploitation of young and immature minds under the direction of Moscow constituted a new menace to the ordered progress of the country. These half-baked youths, hardly realising that they were walking into the parlour of the Soviet intriguer, imagined that it was patriotism to seek to destroy everything. In short, revolutionary crime was on the increase.

The political outlook was gloomy indeed, and there was a clear call for a generous gesture from Britain. Lord Irwin, the sympathetic Viceroy, saw this and strove his utmost to placate legitimate Indian feeling. He undertook a trip to England on four months' leave and had long conversations with the India Office Chief and the newly formed Labour Cabinet of Britain. He returned in the last week of October and within a few days of his arrival issued from Delhi a statement which has since become famous as the **Viceroy's Declaration** of October 31, 1929.

"I am authorised", he said, "on behalf of His Majesty's Government, to state clearly that, in their judgment, it is implicit in the Declaration of 1917 that the natural issue of India's constitutional progress, as there contemplated, is the attainment of Dominion Status." He assured Indians that opinion in Great Britain, puzzled, as it might be, by events in India or only perhaps partially informed as to their true significance, was unshaken in its determination that Great Britain should redeem to the full the pledges she had given for India's future. His Excellency alluded to certain correspondence between Sir John Simon, the Chairman of the Indian Statutory Commission and the British Premier in regard to the widening of the scope of the Statutory Commission's inquiry so as to include a consideration of the future position of the Indian States. Sir John had asked for the inclusion of this subject in the work of the Commission, and, if his proposal was accepted, suggested the convening of a conference of representatives of British India and Indian States to decide, in consultation with the British Government, on an agreed scheme of constitution for presentation to Parliament. This scheme being approved by the Premier, the Viceroy announced the British Government's decision to summon such a conference after the publication of the reports of the Simon Commission and the Indian Central Committee but before the stage of the Joint Parliamentary Committee was reached, to discuss British Indian and All-Indian problems for seeking the greatest possible measure of agreement for the final proposals to be placed before Parliament.

This pronouncement produced in the country unprecedented activity and led to repercussions even in British politics which at one time threatened the very safety of the new Labour Government. While die-hards in Britain were censuring the Cabinet and the Secretary of State for India for "surrendering to Indian threats" and for "slighting the Commission set up by Parliament," the extremists in India—

who were also joined by the Liberals—sought to impose conditions on the fulfilment of which Indians would consent to participate in the proposed Round Table Conference. Mr. Gandhi who had staged a re-entry into politics in December 1928 and was biding his time, was forced to appreciate the generosity of this gesture. But he did not accept it handsomely more. He persuaded even Liberal leaders to declare that it was vital for the success of the proposed conference that (*a*) a policy of general conciliation should be definitely adopted to induce a calmer atmosphere, (*b*) political prisoners should be granted general amnesty and (*c*) the adequate representation of all political organisations should be effectively secured and that the Indian National Congress, as the largest among them, should have predominant representation. The most important part of this leaders' manifesto in reply to the Viceroy's Declaration was, however, the assumption that "the conference is to meet not to discuss when Dominion Status is to be established but to frame a scheme of Dominion constitution for India."

In issuing this statement, the leaders had evidently thrown a feeler. The Liberals obviously did not mean to refuse to co-operate in the new scheme if the conditions were not fulfilled. And the Congressmen equally obviously did not yearn to co-operate. The former were trying to "hit above the mark to hit the mark." The latter only attempted publicly clear their conscience by making impossible demands. This, indeed, soon became evident. The leftists of the Congress raised a furore. He had no business to pledge the Congress to co-operation, they said. Thus while the moderates were finding means of taking concerted measures, in spite of the manifesto, the Congressmen were ignoring the whole thing and preparing to declare Independence at the annual session in Lahore. Only Mr. Gandhi and Pandit Motilal Nehru affected hope of securing their demands.

Thus it was that these two leaders, accompanied by Sir Tej Bahadur Sapru, on behalf of the Liberals, and Mr. M. A. Jinnah, in the name of Muslims, waited on the Viceroy on the eve of the Congress to ascertain the Government's intentions. It may here be noted that the Viceroy had just returned to Delhi from his tour after having had a miraculous escape from at attempt to wreck his special train by means of a bomb placed on the track very near Delhi. The conversations were confined to the functions of the proposed Conference in London. It was pointed out that any member of the Conference would be free to advocate any proposals and that any measure of unanimity at the Conference would necessarily carry weight with British opinion. On behalf of the Congress Party, the view was expressed that, unless previous assurances were given by His Majesty's Government that the purpose of the Conference was to draft a scheme of Dominion Status, which His Majesty's Government would undertake to support, there would be grave difficulty of the participation of the Congress. Sir Tej Bahadur Sapru and Mr. Jinnah urged that it should be open to anyone to demand the grant of full Dominion Status at the Round Table Conference and discuss the issue threadbare in all its implications. The Viceroy made it plain that the Conference was designed to elicit the greatest possible measure of agreement for the final proposals which it would be the duty of His Majesty's Government to submit to Parliament and that it was impossible for him or for His Majesty's Government in any way to prejudge the action of the Conference or to restrict the liberty of Parliament. The conversations then concluded. There was no discussion of the question of general amnesty to political prisoners and other "conditions precedent."

The leaders dispersed; the Congressmen went to Lahore to declare Independence and the Liberals to Madras to concert measures to work the proposed scheme. The stage was well set in Lahore. The President of the session was Pandit Jawaharlal Nehru, the son of the wrecker. The young President is well known for his extremist views and he did not try to conceal them. In fact, he declared in his presidential address to the Congress that he and the Congress were engaged in an open conspiracy "to free this country from foreign rule." "You, comrades, and all our countrymen and women are invited to join it," he added. Discussing the Round Table Conference, he held that the conditions for co-operation remained unfulfilled. "We, therefore, stand to-day for the fullest freedom of India. This Congress has not acknowledged, and will not acknowledge, the right of the British Parliament to dictate to us in any way. To it we make no appeal." He advocated the boycott of the legislatures but was of opinion that it would be unwise to declare a boycott of the courts and schools at that stage. He urged a programme of political boycott and the repudiation of all such public debts of India "as have notbeen used for purposes beneficial to the country." An elaboration of his theory of a socialistic state completed an address that might have done credit to a Moscow orator.

The main feature of the Congress session was the reascendancy to power of Mr. Gandhi. But it was obvious that he did not have an easy time of it. The prevalence within the Congress itself of a growing element of violence was an eye-opener to him. This became apparent from the stout opposition that was raised to the proposal to condemn the bomb-outrage on the Viceroy's train and to congratulate the Viceroy on his miraculous escape. Similarly there was very strong opposition to the inclusion in the main resolution of the Congress of an expression of appreciation of the Viceroy's efforts to bring about a peaceful solution of the Indian problem. And this portion would have been deleted if Mr. Gandhi had not, in his characteristic manner, made it an essential part of the resolution and threatened to drop the whole if the part were voted out. He actually suffered defeat in the Subjects Committee over two of his proposals, one of which was calculated to reduce the strength of the revolutionary section in Congress by reducing the number of the members of the All India Congress Committee. The principal resolution, however, went through successfully and, in fulfilment of the Calcutta Congress "ultimatum," Independence was declared when the New Year was rung in, the "Independence flag" was hoisted.

There were leftists from Bengal and Madras who would stiffen up the Congress programme by setting up a parallel government, while Pandit Madan Mohan Malaviya pleaded for a postponement of the change in the Congress creed until a future date. Both these proposals were turned down, and Mr. Gandhi's scheme was approved. The resolution, as adopted, laid down that "nothing can be gained in the existing circumstances by the Congress being represented at the proposed Round Table Conference, and, in pursuance of the resolution passed at the Calcutta Congress last year, this Congress now declares that 'Swaraj' in the Congress creed shall now mean 'complete independence'. Therefore, the Congress declares the Nehru scheme of Dominion Status to have lapsed and hopes that all parties in the Congress will devote their exclusive attention to the attainment of complete independence. The Congress declares a complete boycott of the central and provincial legislatures. . . The Congress authorises the All India Congress Committee, whenever it deems fit, to launch upon a programme of civil disobedience, including non-payment of taxes, whether in selected areas or otherwise and under such safeguards as it may consider necessary." Here were laid the foundations of a campaign of lawlessness that was to be begun in the next year.

The National Liberal Federation.

The definite breach between the moderate and extremist elements in the Congress at its special session in Bombay in August 1918 (*vide* 1919 edition of this book) witnessed the birth of the National Liberal Federation which has, since then, been the platform of Indian moderate leaders. It held its first session in Bombay in 1918, Sir Surendranath Banerjee presiding. The Federation adopted for its creed the old Congress formula which was set aside by the Nagpur Congress.

Those who had held the Federation in high esteem for its moderation, sobriety and balanced judgment suffered a rude shock in 1927 when the Liberal body and its leading lights proved the saying, "If you scratch a Liberal you will find an extremist." Liberal leaders bade good-bye to their avowed principle of co-operation with the Government when they expressed themselves in favour of a boycott of the Royal Commission on Indian Reforms on the ground that there was no Indian on it.

Thenceforward Liberal politics became negative and barren, and leaders who had enjoyed a reputation for sane-thinking came to be regarded as the "wild men" of the Congress Boycott was the breath of their nostrils, although they were declaring now and then that the door was still open for Government to "make a gesture of co-operation". Their monotonous stagnation was, however, slightly relieved by the efforts at constitution making undertaken at the instance of the Congres. Liberals heartily co-operated in this endeavour and attended the All Parties Conference summoned by the Congress in the middle of the year. Sir Tej Bahadur Sapru, President of the Liberal Federation, consented to serve on the Committee appointed by the Conference to draft a constitution for India. After months of toil the Committee produced a constitution according to which India would enjoy the status of the Dominions of the British Empire. The report also offered a solution for the communal dissensions and a formula to govern the relations between British India and the Indian States. It was, in a sense, a Liberal document, for the Liberals were the only group of men in the country who unanimously and unreservedly accepted the entire report.

The plea for the grant of Dominion status was very strongly urged by Sir Chimanlal Setalvad, President of the 1928 Session of the Liberal Federation, who said "I venture to think that every reasonable mind should accept the goal of Dominion status. Dominion status meets all national aspirations and carries with it the protection, safety and other advantages of partnership in the most powerful Empire in the world." He gave a list of the services done to the country by the Liberals and accused the Government of non-co-operating with them, adding that Government was responsible for creating extremism in the land by "blundering and hesitating policy." The trusteeship of England, he declared, was coming to an end. Britain had to deal with a people who had attained majority and were demanding from the so-called trustees their property and also asking for accounts. The British must change their mentality and must realise the mentality that was growing in the country, which, if not guided properly, would swallow everything. "It will swallow Dominion status and even British connection and British trade. If Government does not heed our voice and take our modest counsel into consideration, Heaven only knows what the consequences will be." This firm attitude on the part of the Liberals whom Government were not slow to recognise as their allies served to hasten the advent of a new era. Already the Labour Government in Britain which had just settled down was

turning its attention to Indian affairs with a view to redeeming the Labour Party's pledges of a more liberal administration of this country. The changing political situation was exhaustively reviewed at personal interviews between the British Cabinet and the India Office and Lord Irwin, who had gone home on four months' leave. As a result of these conversations, the Viceroy made soon after his return from leave what is now famous as the Proclamation of October 31, 1929. This served to clear the air considerably inasmuch as it removed all doubts concerning Britain's policy in India and besides clearly declaring Dominion status to be the country's goal, announced the British Government's decision to summon a Round Table Conference in London to settle the future Constitution of India. (For details see Congress section).

Now the Liberals had what they wanted. And they responded. At first their leaders subscribed to a joint manifesto by leaders of various schools of thought, including the Congress, which welcomed the pronouncement of the Viceroy but took it for granted that the Round Table Conference would meet to devise a scheme of Dominion constitution for India, not to discuss when it should be established. The manifesto made other demands which are enumerated in detail in the chapter dealing with the Congress. The spirit of bargaining was pursued for some weeks until a few days prior to the meeting of the Liberal Federation in Madras. Principal Congress, Liberal and Muslim leaders waited on the Viceroy. The Congress Party demanded an assurance that Dominion status would be granted before it could agree to participate in the Round Table Conference. What the Liberal spokesmen urged at this Conference it is not definitely known, but it seems fairly clear that no condition precedent to Liberals' co-operation was sought to be imposed. The Conference failed and the Liberals gathered at Madras to give public expression to their political views.

The 1929 Session.—By the time the Liberals foregathered at Madras, things had moved pretty rapidly in Congress circles. The failure of the leaders' conference with the Viceroy, which was more or less expected and in some quarters eagerly wished for, led Congressmen to talk of severance of British connection, civil disobedience and other wild schemes. This development was the signal for the Liberals to break away from the extremists whose friendship they had been courting since the appointment of the Simon Commission. Once again the Liberals expressed disapproval of Congress methods. Sir Phiroze Sethna, who presided, urged the grant of Dominion status without undue delay and insisted on the inclusion of this subject in the terms of reference to the Round Table Conference. He denounced the movement which aimed at the severance of India's connection with the Empire and opposed the campaign of civil disobedience and non-payment of taxes, as they were detrimental to the country's interests and would plunge the country into open conflict with the Government who would then be justified in taking every measure to put them down. He offered the Liberals' co-operation in the Round Table Conference. The Federation resolved to participate in the Round Table Conference and welcomed the Viceroy's announcement as it "authoritatively confirmed the view that Dominion status for India was what was intended by the Declaration of 1917, definitely recognises that British India and Indian States should together form a greater united India and concedes India's claim to the right to confer on a footing of equality with the British Cabinet on the form of the future constitution of India." But by far the most important resolution passed by this session was a decision to do constructive work by bringing about the combination of those who accepted the Viceroy's Statement "for the purpose of securing a constitution based on Dominion Status with such safeguards and reservations as may be necessary for the period of transition. The attitude of the Liberals was effectively voiced by Sir Phiroze Sethna in his concluding remarks when he said: "England is great. She is powerful. But let her stoop to conquer India's heart by the immediate grant of full responsible government and Dominion status."

The Moslem League.

The All-India Moslem League came into being in 1906 out of the universal desire among leading Mussalmans at that time for an effective organisation to protect their communal interests. With a view to secure separate Muslim representation in the legislative bodies of the land under the Minto-Morley scheme of constitutional reforms then under discussion, Indian Moslems who had been hitherto keeping aloof from politics organised the League. Its original objects were the promotion of loyalty to British Government, the protection of political and other rights of Mussalmans and to place their needs and aspirations before Government in temperate language and to promote inter-communal unity without prejudice to the other objects of the League. Moslem opinion slowly advanced; and in 1913 the securing of self-government within the British Empire was included in the objects. The League was a powerful and influential body in 1916 and 1917, and what is known as the Lucknow pact of communal representation arrived at between the League and the Congress in 1916 was bodily incorporated in the Government of India Act, 1919. The birth of the Khilafat Committee however overshadowed the League which from 1919 had almost disappeared till April 1923 when it met for a brief period under the presidentship of the late Mr. Bhurgri, but had to be

adjourned for want of a quorum. In 1924, however, some influential Moslem leaders like Mr. M. A. Jinnah thought that the Khilafat Committee's functions having ceased in view of the Turkish deposition of the Khalifa decided to revive the League which met under Mr. Jinnah's chairmanship at Lahore in May 1924. The Lahore session practically did nothing else save to reorganise the scattered branches of the League. The reconstructed League commanded comparatively less influence. And what little authority it exercised disappeared with the formation in 1928 of the All Parties Muslim Conference. This latter body was representative of the Muslim masses as well as classes in the sense that the Muslim League was not. This explains why the Conference is gradually, but none the less surely, replacing the League as the premier Muslim representative body in the country.

The League in 1925-28.—The 1925 and 1926 sessions of the League were noted for their virility. The Muslims displayed greater allegiance to their communal organisation in proportion to the loyalty of the Hindus to their Maha Sabha. Suspicion and distrust, enmity and open hostility began to prevail between the two communities. Proportionate distribution of the loaves and fishes of office, on the political side, and the questions of the Hindus playing music before mosques and the Mahomedans killing cows, on the religious side, constituted the points of difference which frequently led to inter-communal riots. The situation was regarded with grave concern by serious minded leaders, some of whom, under the leadership of Mr. Jinnah, met at Delhi early in 1927 and offered, in the name of the Muslims, to surrender their right to communal electorates, provided, among other things, Sind was constituted into a separate province and reforms were introduced in the N. W. Frontier Provinces and Baluchistan. This offer, however, was acceptable neither to the Hindus nor the Muslim masses who insisted on the continuance of the separate electorates. A schism set n in the Muslim League which was accentuated by the announcement of the personnel of the Statutory Commission on Indian Reforms. The non-inclusion of Indians on the Commission was construed by a certain section of the Muslims as an insult to India; and those who held this view decided to boycott the Commission. The majority of the community, however, thought otherwise and saw great advantages in co-operating in the Parliamentary inquiry and placing before the Commission the demands of the community. The split in the League became definite with the holding of two sessions, one at Lahore which decided to co-operate with the Commission and the other at Calcutta which voted for boycott. The gulf between the two sections widened during 1928, despite efforts to bring about a reconciliation. While persons who happened to hold the leadership of the two sections were quarrelling among themselves, those who had the interests of the community at heart strove to form a body outside the League. In these circumstances the rump of the League met in Calcutta under the presidency of the Maharajah of Mahmudabad who favoured the Nehru Report in its entirety. This session so much dissociated itself from the wishes of the community as to refuse to participate in the All Parties Muslim Conference, which had issued an invitation to the League (as to every other Muslim organisation in the country) to send representatives, and to send a deputation instead to the All Parties Convention which was engaged in formulating a constitution for India on the basis of the Nehru Report. The League found itself neither here nor there. Its delegation was treated with scant courtesy by the Convention which unceremoniously turned down Mr. Jinnah's request for the reservation of one-third the number of seats in the Assembly and the vesting of residuary powers in the provinces. The League Delegation walked out of the Convention Committee in protest and reported the matter to the League which adjourned *sine die*.

The 1929 Session.—Undaunted the pro-Nehru section of the League made repeated attempts to get the League to endorse the Nehru Report. With a view to accomplishing this object a meeting of the League Council was held in Delhi in March at which, after the anti-Nehru ites had left the meeting and after the bulk of the agenda had been completed a number of pro-Nehruites were elected to the Council. An attempt to even up matters later was frustrated by the pro-Nehruites who were already in a majority. Encouraged by the success of their tactics in the Council, the extremists hoped to carry the day in the open session of the League which was held during the Easter holidays. Thanks to the defective membership register of the League, the pro-Congress extremists held the key to the situation and the Subjects Committee of the League was able to carry a resolution adopting the Calcutta All Parties Convention formula as the "national demand" of India and accepting with certain modification, the communal solution put forward by the Convention. This resolution, which was a thinly veiled attempt to make the League endorse the main recommendations of the Nehru Committee, was naturally obnoxious to the Muslim community. Some prominent leaders walked out of the Committee. This notwithstanding, the pro-Congress section was bent upon rushing the Subjects Committee resolution through the open session of the League. But this was prevented by a large body of Delhi Muslims who had taken possession of the hall. Uproarious scenes were witnessed and the police were ready outside to intervene, but Mr. Jinnah, the permanent President of the League, who occupied the Chair in the absence of the President-elect, the Maharajah of Mahmudabad, saved the situation by adjourning the session *sine die*. This session besides provoking the remark from a prominent leader that "the Muslim League is finished and so are the Nehru Report and the Congress" served to strengthen the new organisation, the All Parties Muslim Conference. Refusing to walk into Mr. Jinnah's parlour the supporters of the All Parties Muslim Conference were engrossed in their constructive work. They were joined by the members of the Shafi section of the League who had come to Delhi in the hope of making up their differences with the Jinnah group but who were sadly disillusioned. It was in this atmosphere that prominent leaders, who are members of the All Parties Muslim Conference, met and discussed the formation of an "All-India Mejlis" to fight

the claims of militant Hindus and the Hindu-ridden Congress.

The All Parties Muslim Conference.—The publication of the Nehru Report hastened the advent of the All Parties Muslim Conference. As one of the speakers remarked, every provision of the report meant some disadvantage to the Muslims and some advantage to the Hindus. The Conference was called in 1928 to counter-act the effect of the Nehru Report and to formulate the Muslim community's demand in regard to the future constitution of India. Notwithstanding the refusal of the Jinnah Leaguers to participate in the proceedings, the Conference was attended by almost all the prominent Muslim leaders of the country, including a very large number of the members of the Councils and the Assembly. There was ready agreement on the unsuitability of the Nehru Report, but difference of opinion prevailed with regard to the goal of India. Persons like Mr. Mahomed Ali stood for complete independence and, of course, for the boycott of the Commission; while Sir Mahomed Shafi, who had a very large following, favoured co-operation with the Commission in the framing of a constitution within the Empire. Things wore a gloomy aspect for a while, but thanks mainly to the tact of the President, the Aga Khan, a compromise was reached whereby the mention either of "Dominion status" or "Independence" was omitted from the resolution put befor the Conference which demand ed merely "a federal constitution". Simiarly it referred neither to the Simon Commission nor to the Nehru Report, but insisted on compliance with the demands of the Conference by any agency which devised a constitution.

The success of this Conference dealt a serious blow at the League which was already losing its hold on the community. The Conference became the rallying point of the saner and serious-minded section of Muslims. It was bent upon safeguarding the rights of Muslims and was planning to run a thoroughly organised election campaign, but the lives of the Assembly and the Council were extended. The failure of the Easter session of the League lent further strength to the Conference which thenceforward came to be recognised as the only effective organ of Muslim opinion in the land. It soon had an occasion to make its voice felt. It gave its weighty support to the scheme of a Round Table Conference to settle the Indian constitution outlined by the Viceroy, and the co-operation of the entire Muslim population which the Conference vouchsafed was no mean accession of strength to the Government, particularly when the latter was faced with Congress extremist talks of Independence for India. The Conference has a great future before it and is bound to play an important part in the shaping of India's future.

The Khilafat Committee.

The Central Khilafat Committee owed its origin to the reticence shown by the All-India Congress Committee in 1920 to the question of the Khilafat and Non-co-operation. Messrs. Gandhi and Shaukat Ali started this organisation with a view to educative propaganda throughout the country and, if possible, to capture the Congress. The object of the Committee was stated to be the righting of the Khilafat "wrongs." As a result of intensive propaganda mainly led by Mr. Gandhi himself, prominent Indian publicists supported the view that the Indian Moslems being deeply concerned over the "exploitation of the Holy places of Islam," had a right to expect the Hindus to help them in securing their rights. Soon after, the Madras Khilafat Conference under the chairmanship of Mr. Shaukat Ali unfolded a programme of progressive non-co-operation and appealed to the country for support. The Khilafat Committee, with the huge funds at its disposal, was able to draft in a large number of delegates to the Calcutta special Congress in 1920 when the non-co-operation programme was accepted by that body with two more objects added to it, namely, the obtaining of Swaraj and the righting of the Punjab wrongs.

With the deposition of the Khalifa by the Kemalists and the revival of the Moslem League, the Committee's activities have been considerably restricted. Recently the Committee sent a deputation to Nejd to intervene and settle the dispute between the warring elements. Though the Government of India were willing to permit a deputation of the Committee to Turkey, the Turkish Government did not quite like the idea which had consequently to be abandoned.

The 1925 session of the Khilafat Conference was rendered lively by Mr. Hazrat Mohani whose speech strongly criticising Sultan Ibn Saud was subsequently expunged. The resolution adopted by the conference under the Presidentship of Mr. Abdul Kalam Azad condemned the British policy in Iraq and the League's decision on Mosul and declared that if the Turks went to war on the latter issue the Conference would deem it its duty to help them.

Since then one heard little about the public activities of the Committee, although many of its domestic quarrels engaged the attention of the public. Funds, however, continued to be collected for the "activities" of the Committee which could hardly be specified. Things

dragged on until the latter half of 1927, when the leaders found the Khilafat organisation a useful tool for purposes of their propaganda for boycotting the Statutory Commission on Indian Reforms. This was successfully achieved by the extremist wire-pullers at Madras in 1927.

In the next year, however, a peculiar situation arose as the result of the publication of the Nehru Report. This document raised many controversial issues. Its two main recommendations, namely, Dominion status for India and joint electorates with temporary reservation of seats, were not acceptable to the Khilafatists whose ideal was an extreme type of nationalism coupled with rank communalism. They wanted complete independence for India and in the same breath demanded the continuance of separate electorates. This state of mind found expression at the annual session of the Khilafat Conference which met in 1928 at Calcutta.

A resolution declaring Independence as the goal of India was carried by the Conference, the mover remarking that Dominion status was a form of slavery. Another demanded that the future constitution of India should be so framed as to provide for a federation of "free and united states of India." The federation should consist of fully autonomous provinces of India and large Indian States and groups of smaller States when they join the federation. The residuary powers of the federation should rest with the constituent members.

The Calcutta session of the Khilafat Conference was marked by one of the worst schisms that have ever prevailed among the Khilafatists. Although this did not manifest itself in the open session of the Conference, the differences none the less burst out into a free fight at a meeting of the Bengal Committee held to elect delegates to the Conference. As the Bengal Committee was known to be in favour of the Nehru Report the "Independencewallahs" sought to influence the voting for the election of delegates which resulted in great confusion and the manhandling of more than one. Different versions of the incident are current but it seems certain that the trouble arose in consequence of the Ali Brothers "invading" the meeting with a large following.

A few days after the Conference was over disturbances broke out across the North-Western Frontier leading to the abdication of Amanullah whom the Mussulmans of India had learnt to regard as the "King of Islam." They had fondly hoped that Muslims all over the world could be brought together under this new "Khalifa," but it was not to be. They had, therefore, to rest content with expressing sympathy for Amanullah and offering, if the Government of India permitted them to do so, to help Amanullah regain his throne.

The Government of India, however, announced a policy of absolute non-intervention in the internal affairs of Afghanistan, and the Khilafatists could only show up sympathy. This they did profusely and repeatedly condemned the regime of Bachcha Saqqa, the "robber king", who was since been defeated and executed by Nadir Khan. The Khilafatists have shown approval of the new regime, but they are not so enthusiastic now over affairs across the north western border as they were when Amanullah was at the helm.

There is nothing noteworthy to record about the political activities of the Khilafat during 1929. The annual session of the Conference was held at Lahore as a kind of side show to the Congress. Nawab Ismail Khan presided and urged the summoning of a conference of Indians to settle communal and other questions. The curious thing about this session was that it blew hot and cold in the same breath. It resolved upon independence for India including severance of the British connection, but at the same time decided to participate in the Round Table Conference to be convened by the British Government to settle the future constitution for India. While the latter reflects the true state of feeling among the Mussalmans of the country, the former is obviously a wordy sop to the Congress extremists in the Conference.

The Indian Legislature.

The winter session of the Indian Legislature commenced in Delhi on Monday, 28th January, with an address by His Excellency the Viceroy to the Members of the Legislative Assembly (The Council of State did not assemble until 12th February). His Excellency's address included certain important announcements. The first was that a compromise had been reached between Government and the President of the House in regard to the control of the separate Secretariat of the House by providing for recourse to the Public Service Commission in all cases in which the exercise by the Governor-General of his powers as head of the new Department might at any time bring him into conflict with the President or with the Assembly. The next bore reference to the newly published Report by the Commission appointed by His Majesty's Government on the problem of future policy in Eastern Africa and was to the effect that His Majesty's Government had agreed that "before any decision is taken, they will give the fullest consideration to the views of the Government of India on all matters affecting India". His Excellency further stated that the Governor of Kenya had, for the purpose of the discussion of the Report and with the approval of the Secretary of State for the Colonies, offered to appoint temporarily to the public service of Kenya, with a seat on the Executive Council, an officer of the I.C.S. nominated by the Viceroy. The Viceroy said that he had asked the Hon. Member of Government concerned to convene the Emigration Committee of the two Houses of the Legislature to consider the matter.

His Excellency announced with regard to the Report of the Royal Commission on Agriculture in India, issued during the past year, that Government proposed to accept, with certain modifications, the recommendations of the Report for the establishment of a Central Council of Agricultural Research, to promote, guide and co-ordinate research throughout India and for other purposes. "Our proposal is that its chief component parts should be, firstly, a Governing Body—the principal executive organ of the Council—presided over by the Member of the Governor-General's Council in charge of Agriculture and comprising 17 other members, of whom two will be chosen from the Legislative Assembly and one from the Council of State and nine will be nominated by the Governments of the nine major provinces; and, secondly, an advisory Council of 39 members whose function will be to give expert advice to the Governing Body and submit for its approval programmes of research inquiry". Lord Irwin said it was hoped that the major provinces would establish committees to work in close co-operation with the central organisation and that, for the lump grant of Rs. 50 lakhs which the Royal Commission favoured for the financing of the new organisation, the Government of India proposed to substitute a lump grant of Rs. 25 lakhs, to be paid in instalments, supplemented by annual recurring grants of Rs. 7·25 lakhs, which sums would vest in the Governing Body, who would consider all proposals for research and sanction expenditure and allot funds to meet it.

His Excellency referred to the serious development of labour troubles in different parts of India and announced that His Majesty had approved the appointment of a Royal Commission to undertake an inquiry into the conditions under which labour works, with a view to help in the removal of legitimate grievances, and that Mr. Whitley, lately speaker of the House of Commons, whose name was widely known for his association with the establishment of the Whitley Industrial Councils in England, would be its Chairman. His Excellency added a special reference to the disquieting spread of the methods of communism in India. "Not only have communist agents from abroad promoted a series of strikes in the industrial world, but the programme which they have openly set before themselves includes undisguised attacks on the whole economic structure of society: all classes alike are threatened by the spread of these doctrines, and no Government can afford to ignore this insidious danger." Government would, therefore, again place before the Legislature their proposals for dealing with communist agents from abroad.

His Excellency's address was chiefly remarkable for its reference to the general political situation. He said that he saw very clearly that nothing but harm could flow from a threat that, unless a particular condition were fulfilled, "which I believe to be mechanically impossible of fulfilment from the outset," an attempt would be made to plunge the country into all the possible chaos of civil disobedience. He continued "In conditions more favourable to cool judgment, I suppose that most persons would admit that British India, as we find it to-day, is a British creation and that it is the British power which has, during the last century, held together its constituent parts. If this centripetal influence is immediately or too suddenly withdrawn, is it wholly unreasonable to fear that some at any rate of the parts might fly asunder, and the dream of a strong united India, a nation among the nations of the world, as we may speak of the British or American nation, would vanish and be destroyed? Anxious as I am to see the realisation of this dream, I can hardly hope that any words of mine may suffice to disperse the black cloud of unwarranted mistrust that has enshrouded so much of Indian political thought. But I tell this Assembly again, and through them India, that the declaration of 1917 stands, and will stand for all time as the solemn pledge of the British [illegible] be done by one people to assist another to attain full national political stature, and that the pledge so given will never be dishonoured. And, as actions are commonly held more powerful than words, I will add that I should not be standing before you here to-day as Governor-General, if I believed that the British people had withdrawn their hand from that solemn covenant. Those, therefore, who preach that a new generation has arisen in England which seeks to explain away the significance of the 1927 declaration, are, consciously

or unconsciously, but not the less really, misrepresenting the purpose of Great Britain and poisoning the wells by which the common life of India and Great Britain is supported and sustained."

The Viceroy's address contained the further interesting announcement that the four Dominions of Canada, Australia, South Africa and New Zealand had made a generous offer to present to the capital of India four stone pillars, on the model of the famous Asoka columns, and that Government had gratefully accepted the gift, "which will fittingly simbolise the common loyalty of the Empire to the Person and Throne of His Majesty the King-Emperor."

Public Safety.

One of the first motions in the legislative business of the session was by the Home Member, Mr. James Crerar, for leave to introduce the Public Safety Bill. This having been accepted without discussion, he moved for reference of the measure to Select Committee, with instructions to report within a month. The Home Member briefly but comprehensively reviewed the dangerous progress being made by communist agitation in India, showed the importance of the passage of the new measure, the particular purpose of which was to add to the power of Government to expel foreign agitators the power similarly to dispose of agitators from abroad who were British citizens. The debate lasted four days and its main feature was the general opposition of the Hindu Parties to the Bill on the ground that if the House gave Government power to deal with immigrant communist agitators, Government would use the fact as a ground for asking for corresponding power for drastically dealing with Indian agitators in the same field. Among members in the centre and left centre of the House there appeared a feeling that Government had not made out a case for passing such drastic legislation and forcing it through against the wishes of a large section of the Legislature in order to secure the expulsion from India of two or three communist agents. A curious feature of the debate was a demand from several quarters of the Indian Benches that instead of passing this Bill, Government should deal with the people against whom it was aimed by utilising powers which they already possessed, in other words by employing those powers, including Regulation III of 1818, which those same Benches had hitherto regarded as anathema.

The Congress Party spokesmen were frank in their statements. Diwan Chamanlal, for instance, in objecting to a provision in the Bill against anyone who "seeks to foment or utilise industrial or agrarian disputes or other disputes of like nature with the direct object of subverting the organised Government in British India" added "Now, Sir, I suggest that one of the objects of the Swaraj Party and the Congress Party is to subvert the organised Government in British India". Pandit Motilal Nehru, speaking later as President of the Indian National Congress, quoted the observation by Diwan Chamanlal as meaning "that the creed of the Congress is to subvert this Government, I mean the present system of Government", and said "as the President of the Congress, with all the responsibility attaching to that position, I now, in this House, openly and publicly declare that that is the creed of the Congress." He objected to the Bill because it meant "cutting off of India from outside countries" and because the Bill was "direct attack on Indian nationalism, on the Indian National Congress". He said, "Now Sir, however much you may roll your R in pronouncing the world 'Revolution', it has no more than its dictionary meaning and professedly we are all peaceful revolutionaries. No one conceals the fact. The only difference is we are pledged against all kinds of violence In all other respects it has been said frankly times out of number that we are revolutionaries. We want a revolution, but not of the kind which has for its aid violence and things of that kind. We have told you—and it is not a thing you do not know—we have told you how we propose to accomplish that revolution. It is to be, at least on our side, a bloodless revolution. We wish to organise ourselves to disobey your unjust laws and to make it impossible for you to govern the country by those laws. That is the way which is ours. We may or may not succeed, it may be an idle dream very difficult to realise, but that is the only thing left to us and, in that sense, we certainly are revolutionaries". At the end of the debate the motion for reference to Select Committee was carried by 61 votes to 50, the Congress, Nationalist and Independent Parties voting solidly against and the Central Muslim Party being equally solid for.

The Report of the Select Committee was presented on the 20th February. The motion for its consideration arose only on the 28th March, when the Hon. Sir Brojendra Mitter rose to move it in the absence of the Home Member, who was suffering from fever. He pointed out that the Select Committee had made two important changes with a view to relieving the Bill of the suspicion that the real object of the measure was to hit political and labour movements in India. Mr. M. R. Jayakar immediately rose to urge the postponement of the motion. Sir Brojendra Mitter declared that Government were not prepared to agree to postponement and said that he would later state reasons why they had formed that decision The House then adjourned. The President, on 2nd April, made a statement pointing out what he regarded as certain difficulties in connection with the further discussion of the Bill without referring to matters which were subjudice in the Meerut trial. He said that he had, in the circumstances, decided, instead of giving any ruling, to advise Government in the first instance to postpone the Bill pending the Meerut trial or to withdraw the Meerut case and then proceed with the Bill. The Home Member said, on behalf of Government, that he was prepared to consider the President's observations "but if that implies a suggestion that Government are prepared to accept the further suggestion that the Bill should be postponed, that is a suggestion which I regret, on behalf of Government, I am unable to accept". The Home Member two days later stated that Government had given very careful consideration to the President's view and it appeared to them that it rested in part on a misunderstanding of the facts and in part on a misunderstanding of the powers conferred on the President by the Rules and Standing Orders.

The House had already accepted the principle of the Bill by a substantial majority, and the primary matter now before it was the consideration of the changes of detail made by the Select Committee. The House being seized of the Bill, he submitted that it was beyond the powers of the Chair to withhold the Bill from its consideration. Government, therefore, invited the President to direct the House to proceed, as soon as may be, with the consideration of the measure. On the following day, the President invited the members of the House to express their views on the point raised. There followed a long debate. On the following day, the Law Member asked the President when he would give his ruling in the matter. The President asked what was the business for the next week, and as Government could not fully detail their programme he refrained from making any statement. The next reference to the matter was on the 11th April when the President rose to give his ruling. At the end of a long statement, he said, "I am of opinion that, although power to rule this motion out of order is not expressed in so many words in any of the Rules and Standing Orders, it does arise by necessary implication and analogy, and I am further satisfied that, in any case, the Chair has the inherent power to rule out a motion on the ground that it involves an abuse of the forms and procedure of this House as this motion, I hold, does. I therefore rule it out of order."

The President then read a message from the Viceroy summoning the House for the next morning.

His Excellency the next day addressed the House, saying that he conceived that it had become imperative for Government to obtain the powers proposed in the Bill without further delay: "I have accordingly decided, after careful reveiw of all the facts, to avail myself of the authority conferred upon the Governor-General under section 72 of the Government of India Act in order to issue an Ordinance giving to the Governor-General in Council the powers in question." The Viceroy specially referred to the President's ruling. He said Government were constrained to recognise that the only appropriate person to interpret the rules was the President; but, "If, therefore, the interpretation of the rules by the President of either House gives rise, as now, to a situation in which Government, for grave reasons, are unable to acquiesce, the only effective remedy is that early measures should be taken to secure, by due authority, such amendment of the rules as may be necessary to prevent any recurrence in future of a similar interruption in the normal legislative procedure."

RAILWAY FINANCE.

The Government of India, as usual, presented their annual Financial Statements to the Legislature in two sections, the first dealing with Railway Finance and the second with the General Budget. The financial results of the year 1928-29, shown in the Railway Budget, were as follows: Total receipts of the Commercial lines Rs. 105¾ crores, or nearly Rs. 2 crores, higher than in the preceding year; total expenditure Rs. 95 crores, a rise of Rs. 3¾ crores, including Rs. 2 crores increase in interest charges; surplus of receipts over expenditure on commercial lines Rs. 10¾ crores against Rs 12¼ crores in 1927-28; absorbed out of surplus by loss on strategic lines Rs. 1¾ crores; balance going to general revenues Rs. 5½ crores, including Rs. 3¼ crores added to Reserve Fund.

The Railway Member, in elaborating these figures, showed that gross traffic receipts for the past year would exceed those of 1927-28 by Rs. 1¼ crores despite unsatisfactory conditions resulting from industrial unrest and partial failure of the monsoon. Traffic in all classes of commodities except coal had risen, the general increase being nearly 4 per cent. Coal, after a falling off, was recovering. Passenger earnings were down by Rs. 7 lakhs as compared with the estimated decline of Rs. 21 lakhs as a result of fare reductions. The number of passengers carried was less than in the preceding year but passenger miles increased by 49 millions, figures indicating that the average journey travelled was longer. Working expenses were up by Rs. 1¼ crores.

The estimates for 1929-30 showed total receipts Rs 107¼ crores, or Rs. 159 lakhs higher than in 1928-29, normal growth of traffic being expected, with a normal monsoon, to give an increase of Rs. 20 lakhs. The estimated working expenses were taken at Rs. 65¼ crores, or Rs. ¼ crore higher than in 1928-29, and other figures in the estimates were: interest charges up by Rs. 97 lakhs, expected surplus Rs. 11¼ crores as against Rs. 10¾ crores in 1928-29, the amount to go to general revenues, after meeting the loss of Rs. 1¾ crores on strategic railways, being Rs. 6¼ crores, leaving Rs. 3¼ crores to be added to Reserve Fund.

The Railway Member explained that Government expected to spend during 1928-29 Rs. 28 crores for capital purposes, including Rs. 4 crores for the purchase of the Burma Railways which had just been taken over by the State. Provision was made in the budget for 1929-30 for Rs. 33¼ crores for capital expenditure, including Rs. 7 crores for the purchase of the Southern Punjab Railway, the estimated expenditure for normal capital purposes being Rs. 26¼ crores or about the same as in the preceding year. The provision made for open line works was slightly over Rs. 18 crores and for new construction Rs. 8¼ crores.

The Railway Member, referring to the considerable unrest which had recently broken out on the railways as well as in private industrial concerns in different parts of India, said Government were setting on foot a systematic examination of the service conditions of the lower paid railway employees in order to ascertain what measures were most urgently needed in order to bring about an improvement, and that as the total Railway personnel now numbered over 800,000 men they proposed to appoint to the Railway Board another Member who would have charge of affairs concerning these and so relieve of the responsibility fo the General Member, who was overloaded. This last proposal the Standing Finance Committee had disapproved.

The point formed the subject of the whole day's debate in the Assembly and was considerably mixed up with the general question of Indianization. On a division, a motion from the Congress benches to refuse the cost of the proposed additional Member of the Board and His establishment was lost by 43 votes against 53. The general discussion of the Budget revealed little criticism.

The General Budget was the first presented by the Hon. Sir George Schuster, Finance Member in succession to Sir Basil Blackett. Reviewing the financial year drawing to a close, Sir George said that its general conditions had been bad in patches, though it would be a mistake to say that, as a whole, these gave ground for serious pessimism. Trade statistics were encouraging, the visible balance of trade in favour of India being 39·77 crores, against 33·07 crores in 1927 and 22·55 crores in 1926. Exports of merchandise showed an improvement of over 10 crores. Cotton exports rose from 28 to 43½ crores. Imports showed a fall of about one crore, the result of a drop in cotton and cotton yarn and manufactures. Money conditions had at times been difficult and in the last week had been affected by world conditions, which themselves were largely governed by the situation in the United States. The total seasonal expansion of currency in the latter part of the year had been well over 13 crores, It was expected to close the year with a surplus of 30 lakhs, instead of the 5 lakhs previously estimated. This sum would be credited to the Revenue Reserve Fund the balance to the credit of which would then stand at 104 lakhs. But the Finance Member showed that the gap caused in revenue by the final remission of provincial contributions had only been covered in 1928-29 by certain revenue belonging to 1927-28 being late and by further revenue belonging to 1929-30 falling into 1928-29 and that but for these items the year would actually have closed with a deficit of 75 lakhs. The budget for 1929-30 could only be balanced by utilising the Revenue Reserve Fund. He was unwilling for various reasons to impose new taxation, but he warned the House that new taxes might later be necessary.

Dealing with the ensuing year, the Finance Member specially stressed the increase of 50 lakhs interest charges on Government Cash Certificates and pointed out that these Certificates, which had now been employed for a few years, evidently brought in at the outset very large loan contributions at very low rates of interest, but that, as the Certificates reached maturity, Government obligations largely increased. He pointed out that the provisions for the existing general debt redemption scheme were in force up to the end of the year 1929-30 and would then have to be reviewed. He proposed that any provision for amortising the accrued obligations in respect of Cash Certificates should be considered together with that revision.

Another point of great importance which the Finance Member explained was that, in face of the obligation to modernize, which mainly meant mechanise the R.A.F. at great expense, a contract had been entered into between the Finance Department and the Army, the plan of which was that the Army budget should be maintained at 55 crores for four years, starting with the year 1928-29, and that the necessary special expenditure should be found within that limit, the Army authorities undertaking, on the other hand, to carry out a special economy campaign in order to provide savings in various directions and provide the additional money out of them. The total cost of the modernisation programme was estimated at 10 crores and the Army, in making particular savings for the benefit of it, would be released from their ordinary obligation to return to general revenues moneys not spent under definite allotments.

The general estimates for the ensuing year showed revenue 120 lakhs worse than that for 1928-29, so that, instead of thre being a surplus of 30 lakhs as in 1928-29, there would be a balance of 90 lakhs to make up from other sources. It was for this purpose that the Finance Member proposed to utilise the greater part of the Revenue Reserve Fund, the figures of revenue and expenditure thus both being 131·20 crores.

Sir George in reviewing the Ways and Means showed what enormous sums had been utilised for capital expenditure during the past few years without the money being raised by loan. During five years Rs. 108 crores and £36⅔ millions were provided from sources other than an increase in what is generally known as the public debt. It was clear that Government must in futnre be prepared to raise a larger proportion of their capital expenditure in the form of public loans, seeing that a great part of this sum (for instance reduction of 16¾ crores in the opening cash balance in India, was from non-recurr ings ources Government must, at the same time, be watchful not to overstrain their credit in the open market. The obvious corollary was to keep the capital expenditure under effective control. This specially affected the railways, which were the chief consumers of capital and were in the course of executing a large programme containing many projects, their works organisation having correspondingly been developed. Moreover, Government had given notice to purchase the Southern Punjab Railway on the 31st December, 1929, for £5¼ millions. They had accordingly provided 26½ crores for railway capital expenditure in the ensuing year, but the bulk of the money was to go on the execution of current work and new commitments had been cut down to a minimum. "Work is being continued on a scale which avoids the necessity of any general dismissal of construction staff, so that if, at the beginning of 1930, prospects are not unfavourable, new projects can again expeditiously be put in hand".

Th Finance Member also specially referred to the continued agitation for re-depreciation of the rupee exchange ratio from 1*s.* 6*d.* to 1*s.* 4*d.* He said, "I cannot believe that it really is taken seriously by the bulk of the business world, but still, talk by responsible Members of this House cannot be without some effect. Therefore I would appeal to those who have urged a contrary course and say to them, 'You have done your best what you thought right. Whether the course actually taken was right or wrong, it would be a far greater evil now to alter it and Government are bound to use all the resources at their command to prevent its alteration. The time has come, therefore, to look to the future in which the interest of the country

demand, above everything, that we should pull together to work out our salvation on the present level'."

Sir George Schuster concluded by a note of the greater inherent strength in the Indian financial position and the declaration of the confidence as to the future; and he finally pointed out that such confidence must have for its economic foundations political stability and he prayed that this vital consideration should not be forgotten.

The budget was generally well received and non-official members, who had hitherto taken a leading part in the exchange controversy pledged themselves to discontinue their agitation for a return to the 1*s.* 4*d.* rupee. Budget and the Finance Bill were eventually passed without serious alteration. A hostile amendment to reduce the Salt Excise Duty was carried but on a special recommendation by the Governor-General was reversed despite strenuous opposition from the Congress benches.

GENERAL LEGISLATION.

The Trades Disputes Bill, for investigation and conciliation in cases of industrial dispute, came up on report by Select Committee and was finally passed on 8th April by 56 votes to 38, after prolonged debate and opposition by Hindu non-official members. The Workmen's Compensation (Amendment) Bill, designed to remove certain defects in the original measure, was referred to Select Committee considered on report and passed on 16th March. The Hindu Child Marriage Bill, now through Select Committee amendments extended in scope to children of all Communities, came up on 29th January on a motion by Rai Saheb Harbilas Sarda, its promoter, for consideration of the Select Committee report. Keen opposition by the Brahman orthodox section of the House asserted itself and an amendment to postpone consideration until the report of the Age of Consent Committee became available to the House was carried.

Two bombs were thrown from the visitors into the official benches of the Assembly on 8th April, Several members received minor injuries, especially Sardar Sir Bomanji Dalal, a non-official member and considerable damage was done to the floor and benches.

The session closed on 11th April.

AUTUMN SESSION.

The September Session of the Indian Legislature was specially remarkable for the proceedings of the Lower House in regard to the private "Hindu Child Marriage Bill" promoted by Rai Sahib Harbilas Sarda to penalise marriages of boys below 18 and girls below 14 and to a Government Bill, and to the Code of Criminal Procedure (Amendment) Bill, to enable Courts of Justice to proceed with a trial in which the accused person, by hunger-strike or other method, wilfully avoids being present in court although he is in custody. The discussion of the Child Marriage Bill ran over several days. It was accompanied by the constant presentation of petitions against the measure and characterised by vehement opposition, stage by stage, by non-official members representing Hindu orthodoxy on the one hand and the Muslim religion on the other. The non-official European Group supported the measure. So did the Parsee non-official member of the House. The Hindu objections are so well understood that they need not here be repeated. The Muslim opposition was fundamentally political. Muslim boys and girls are, in practice, not married below the ages specified by the Bill. But the Shariat, or Muslim religious law, describes the attainment of puberty as marking the age when marriage for either sex is permissible. The fixing by the Bill of definite ages above that given by the Shariat is, therefore, regarded by influential sections of Muslims as an encroachment on the province of their religious law. The political aspect of the matter arises from the fact that the Bill, which was originally introduced as a measure applying only to Hindus, was amended in Select Committee so as to include Muslims. On the Select Committee the Hindu members numbered 14 out of a total of 18 the Muslims being practically unrepresented because the Bill when referred to the Committee was a Hindu one. The measure was not re-circulated for public opinion after it had been made to cover Muslims. It appeared, therefore, to Muslim critics as a case in which an effort was being made by a Legislature containing a large majority of Hindus to coerce their community in a matter affecting their religion or communal culture. Consideration of this aspect of the question aroused all those apprehensions which the Muslim minority throughout India claim to feel at the prospect of a democratic system of Government in India. The Bill, they held, if passed, would become a precedent. After prolonged debate, the motion for consideration of the Select Committee's Report upon the Bill was carried without a division. Various hostile amendments were rejected and the Bill was finally passed by 67 votes to 14, Government members voting with the majority.

The Hon. Home Member moved early in the session for leave to introduce his Bill further to amend the C.P.C. by the insertion of a new section 540-B. The President overruled the objection instantly raised that as the Bill referred to the case of the prisoners in the current Lahore Conspiracy case who were on hunger-strike it could not be proceed with as it would involve discussion of the case *sub-judice*. The main case for the Bill was that prisoners were by hunger-striking and, therefore, deliberately making it impossible for them to attend in court, obstructing the course of justice. Opposition to the measure was ostensibly on a variety of legal grounds and grounds of fair dealing towards accused persons, but was in the main transparently political. Thus, one of the prisoners condemned for throwing a bomb in the Legislative Assembly and under trial in the Lahore conspiracy case for another offence had written to the jail authorities demanding a number of consessions which sprecifically included special diet, literature, including

poetry, drama or fiction, improved accommodation and so forth. A similar demand was made on behalf of the Kakori prisoners, who were convicted in what is known as the Kakori Conspiracy case of committing decoities of a murderous and almost incredibly brutal character. Of these demands the Leader of the Congress Party said that "in point of fact the real demand of these people was a very resonable and a very simple one". As to the reasons why the demand should be regarded in this light he argued, "Are the people of England, France and America struggling for their liberty against an alien occupation ?" Mr. M. R. Jayakar, leader of the Nationalist Party, said," It is a futile attempt on the part of the Government to try to make out that these young men were wanting something for their own selfish comfort, that these men who are voluntarily laying down their lives were asking for some little conveniences here and there." On the side of Government, it was pointed out that the accused in the Lahore Conspiracy case were shown by their own letter to the Punjab Jail Inquiry Committee "for the sake of convenience however and keeping the idea of continued fight in view". to have divided themselves into groups, so that the hunger strike could be prolonged to the greatest possible extent, and that under the law as it stood at present there was no means of overcoming such obstruction. To the motion for consideration of the motion, an amendment was moved by a member of the Nationalist Party to circulate the Bill for eliciting public and legal opinions upon it, and after two days' debate upon this the Home Member intervened, at the commencement of the third day's debate, with an announcement that Government would accept the amendment. In his statement explaining the reasons for so doing, he said a grave and weighty appeal had been made to Government in the debate and that broadly speaking the first of the main contentions was that the Bill touched on some very fundamental issues and that the second Government comprehended to be as follows: "that while the House would not extend its sympathy and approval to acts which are directed only to impede or defeat or delay the ends of justice, many Honourable Members take a different view of and place a different interpretation upon what has occurred. They regard it as a protest against what has been represented as harshness, inequality and injustice in the treatment of under-trial and unconvicted prisoners. They contend that, if the grievances alleged were removed, it is at least possible that the necessity for this legislation might also be removed." The Home Member further stated that Government would specially communicate to the Provincial Governments the various points raised during the debate, including the question whether there were racial discriminations in the jail rules. He further invited leaders of the various Parties in the House to confer with him and to communicate any concrete suggestions they might desire to make for communication to the Local Governments. He concluded by saying that "Government remain unaltered in their determination to oppose indefinite impediments to the course of justice." The motion for circulation was thereupon accepted and the President said, "I must congratulate the House on the result".

A matter of widespread interest raised during the session was a private member's Bill for the reservation of Coastal Traffic to the Indian Shipping Companies. When the Bill came on for a motion for consideration, the President referred to a statement already made by the Commerce Member that when the Viceroy returned to India after his visit to England, Government would immediately take steps to convene a conference of all interests concerned to see if a way of progress by agreement in the development of Indian Mercantile Marine could be discovered. He, therefore, invited the promoter of the Bill to carry over his motion until the next session. This course was adopted.

The House passed an Indian Census Bill, a formal measure making the usual necessary provisions in connection with the next census which is due to be taken in 1931.

Indians Overseas.

NUMBERS.—The total Indian population resident in the countries to which Indians mainly emigrate for purposes of settlement, according to the latest available returns, is as follows:—

Name of Country.	Indian population.	Date of Census.
British Empire.		
1. Ceylon	820,000	1926
2. British Malaya*	660,000	1926
3. Hong Kong	2,555	1911
4. Mauritius	264,527	1921
5. Seychelles	332	1911
6. Gibralter	50 (approximately)	1920
7. Nigeria	100	1920
8. Kenya	26,759	1926
9. Uganda	5,604 (Asiatics)	1921
10. Nyasaland	515	1921
11. Zanzibar	12,841	1921
12. Tanganyika Territory	9,411	1921
13. Jamaica	18,401	1922
14. Trinidad	121,420	1921
15. British Guiana	124,938	1921
16. Fiji Islands	68,733	1921
17. Basutoland	179	1911
18. Swaziland	7	1911
19. Northern Rhodesia	56 (Asiatics)	1921
20. Southern Rhodesia	1,250 („)	1921
21. Canada	1,200	1920
22. Australia—		
Western Australia 300		
Southern Australia 200		
Victoria 400	2,000 (approximately)	1922
New South Wales 700		
Queensland 300		
Tasmania 100		
23. New Zealand	606	1921
24. Natal	141,336	1921
25. Transvaal	13,405	1921
26. Cape Colony	6,498	1921
27. Orange Free State	100	1921
28. Newfoundland	..	1921
Total for British Empire	2,294,724	
Foreign Countries.		
29. United States of America	3,175 (Asiatics)	1910
30. Madagascar	5,272 (Indians)	1917
31. Reunion	2,194	1921
32. Dutch East Indies	832,667 (Orientals, chiefly Chinese & Arabs) (say) 50,000 Indians.	
33. Surinam	34,957	1920
34. Mozambique	1,100 (Asiatics and half-castes)	Not known.
Persia	3,827	1922
Total for Foreign Countries	100,525	
Grand Total of Indians Overseas	2,395,249	

*Including Straits Settlements, Federated and Unfederated Malay States.

Origin of Indian Emigration.—Emigration is prohibited by the Hindu Shastras, and there is little evidence of any settlement of Indians overseas in early times except in Sumatra, Java and Ceylon. Emigration for purposes of labour dates from the beginning of the 19th century. From 1800 A. D. onwards Indians crossed the Bay to the Straits Settlements to work on the sugar, spice, tapioca, and cocoanut plantations of Penang, and this intercourse was allowed to continue for long without regulation. The first officially recorded instance of genuine recruitment for labour emigration occurred in 1830, when a French merchant, named Joseph Argand, carried some 150 artizans to Bourbon. The abolition of slavery in British colonies in 1834 gave the first great impetus to the movement. The sugar planters of Mauritius at once turned to India as their best recruiting ground, and between 1834 and 1837 obtained at least 7,000 recruits from Calcutta. The Government of India at a very early stage realised the necessity of bringing such emigration under regulation. The Law Commission was asked to investigate the case and to make recommendations for securing the well-being of emigrants. They advised that no legislation was required except in order to prevent undue advantage being taken of the simplicity and ignorance of emigrants by providing that a magistrate should satisfy himself that all contracts were entered into freely and understood by them and in order to secure that sufficient provision was made for their accommodation and sustenance during the voyage. A copy of every engagement was also to be transmitted to the Government under which the emigrants were to live. These recommendations were embodied in the first Emigration Act (V of 1837), which also provided that contracts should be determinable after 5 years.

History of Emigration.—Under the above Act emigration during 1837 was permitted to Mauritius, British Guiana and Australia (89 men, the first and last direct emigrants to Australia). In 1838 emigration was suspended owing to agitation in England regarding the abuses to which the system was liable, and a committee of enquiry reported in 1840 that emigrants were being entrapped by force or fraud, robbed of their wages and treated with brutality. In consequence, emigration was prohibited (Act XV of 1842) except to Mauritius and there control was tightened. In Act XXI of 1844 emigration under still stricter regulation was allowed to Jamaica, British Guiana and Trinidad. Act XIII of 1847 removed the restrictions on emigration to Ceylon. The emancipation of slaves in the French colonies in 1849 gave rise to a system of emigration from French Indian ports to Réunion and Bouron, which was largely based on crimping in British territory. This practice was checked by Act XXIV of 1852. In 1858 emigration was opened to St. Lucia, and in 1860 to St. Vincent, Natal and St. Kitts. In the latter year a more elaborate Act, based on a convention with the French Government was passed legalising and regulating emigration to Réunion Martinique, Guadeloupe, and French Guiana. At XIII of 1864 marks an important stage in the history of emigration, since it elaborated and consolidated the whole system of control. It was itself amended in 1869 and 1870 in important respects with the object of preventing epidemics on emigrant vessels and improving sanitary conditions in settlements. In 1869 emigration was permitted to Grenada, and in 1872 to Surinam. Owing to the removal of the Straits Settlements from the control of the Government of India in 1867, emigration to that colony came under all the restrictions imposed by the Emigration Act and was only permitted from the port of Negapatam. Owing to the injury caused to the agricultural industries of the colony, these restrictions were removed in 1872, subject only to magisterial control of recruitment in India. In 1870 complaints reached the Government of India of gross abuses in the treatment of emigrants in British Guiana. A commission of enquiry was appointed, and their report led to important legislation in the colony for the protection of Indian immigrants, which was subsequently extended to Trinidad. Owing to similar complaints from Natal and Mauritius, commissions of enquiry were also instituted in both these colonies, and their reports in 1872 brought to light a number of points requiring amendment.

Recent Legislation.—In 1871 a fresh consolidating Act was passed (Act VII of 1871) by which the Acts regulating emigration to the French Colonies and two amending Acts to Act XIII of 1864 were incorporated in the general law. The question of revision of the law again came up for consideration in 1882, when several cases of kidnapping and other objectionable practices were reported to the Government of India. The opportunity was taken to depute two officials (Major Pitcher and Mr. Grierson) to ascertain, in the N. W. P. and in Bengal respectively, the way in which the system of recruitment actually worked, the respects in which it was open to improvement, and the attitude of the people towards emigration. Their reports were reviewed by the Government of India, and finally in 1883 the law was again recast and consolidated by Act XXI of that year. This Act specifies the countries to which emigration is lawful, but empowers the Governor General in Council to add to the list by notification, and also to prohibit emigration to any of the countries in the list on the ground of epidemic disease and or excessive mortality among emigrants in such country, or on the ground that proper measures have not been taken for the protection of emigrants, or that the agreements made with them in India are not duly enforced. This Act with certain amendments of no importance to the system of indentured emigration remained in force until 1908, when a fresh revision of the law was undertaken.

Under the Act of 1908 (XVII of 1908) the countries to which emigration was lawful were the British Colonies of Mauritius, Jamaica, British Guiana, Trinidad, St. Lucia, Grenada, St. Vincent, Natal, St. Kitts, Nevis, Fiji, the Seychelles, the Netherlands Colony of Dutch Guiana and the Danish Colony of St. Croix. Emigration to St. Lucia, Grenada, St. Vincent, St. Kitts, Nevis, the Seychelles and St. Croix ceased soon after the passing of the Act, the

demand for fresh labour having died out Emigration to Natal was discontinued from the 1st July 1911 as the Government of India were satisfied that it was undesirable to continue to send Indian labour to that country. Emigration to the French Colonies of Reunion, Martinique and Guadeloupe had been suspended prior to the passing of the Act of 1908 on account of repeated complaints of the inadequate precautions taken for the proper treatment and repatriation of the immigrants.

The labour laws of the several Colonies provide for the protection and welfare of resident Indian labourers. The Government of India also occasionally depute to the colonies their officers to report on the condition of Indian labourers. Deputations from India visited Fiji and British Guiana in 1921. In spite of all precautions certain social and moral evils had grown up in connection with the indentured system of emigration and Indian public opinion has during the last decade been strongly opposed to it. The whole system was exhaustively examined by the Government of India in 1915 in the light of the report received from Messrs. McNeill and Chimanlal, and they arrived at the conclusion that the time has come when contract labour should be abolished. The Secretary of State for India accepted this policy and authorised the Government of India to announce the abolition of the indentured system and the announcement to this effect was made in 1916.

In 1922 a further step forward was taken in Act VII of 1922 which prohibited indentured emigration and all unskilled emigration, except to countries specially approved by the Legislature. Emigration to Ceylon and Malaya was brought under control, and the definition of "Emigrant" was extended to cover all persons "assisted" to depart from India.

References.—The following is a list of the most important reports on questions connected with Indian Emigration that have been published during recent years:—

Present Position.—Indian emigration questions have recently taken on a wider aspect. The status of Indians in the Empire generally is one in which the Indian public now take keen interest. It is no longer possible to deal with the treatment of Indian labour apart from other classes of Indian emigrants and travellers. In several colonies and dominions considerable Indian communities have sprung up, which although composed largely of the descendants of indentured labourers, are themselves free and lawfully domiciled citizens of the countries in which they are settled, but have not yet been placed on a footing of legal, social, political and economic equality with the rest of the population. The issues round which public interest at present centres are three:—

(*a*) Control of emigration.

(*b*) Rights of Indians to admission to other parts of the Empire.

(*c*) Rights and disabilities of Indians domiciled overseas.

These questions may be considered separately.

Control of Emigration.—So far as unskilled labour is concerned, the Government of India have assumed absolute powers of control. The terms of section 10 of the Emigration Act of 1922 are as follows:—

"10. (1) Emigration, for the purpose of unskilled work, shall not be lawful except to such countries and on such terms and conditions as the Governor-General in Council, by notification in the *Gazette of India*, may specify in this behalf.

"(2) No Notification shall be made under sub-section (1) unless it has been laid in draft before both Chambers of the Indian Legislature and has been approved by a resolution of each Chamber, either without modification or addition, or with modifications and additions to which both Chambers agree, but, upon such approval being given, the notification may be issued in the form in which it has been so approved."

Under this law emigration has been legalised to Ceylon on the following conditions:

(1) The emigrant shall—

(*a*) have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of Ceylon, or

(*b*) have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him.

(2) The emigrant shall not, before leaving British India, have entered into a contract of service for a period exceeding one month.

(3) Within six months from the issue of this Notification, or within such further period as the Governor General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that any contract of service for a period exceeding one month entered into by an emigrant shall be void.

(4) No part of the cost of his recruitment, subsistence during transport, or transport shall be recoverable from any emigrant and all expenses in this connection shall be defrayed from a common fund to be raised in such manner and managed by such agency as may appear suitable to the Colonial Government.

(5) The Government of Ceylon shall at any time when so desired by the Governor General in Council admit and give all facilities to an Agent appointed under section 7 of the Act.

(6) Within one year of his arrival in Ceylon any emigrant who has been assisted to emigrate at the cost of the common fund referred to in clause (4) shall, on satisfying the Agent appointed under section 7 of the Act that his return to his home is desirable either on the ground of the state of his health or on the ground that the work which he is required to do is unsuitable to his capacity, or that he has been unjustly treated by his employer, or for any other sufficient reason, be repatriated free of cost to the place of recruitment, and the costs of such repatriation shall be defrayed by the Government of Ceylon or the Ceylon Planters' Association.

(7) If at any time there is no Agent appointed under section 7 of the Act, the Government of Ceylon shall appoint a person to perform the duties of the Agent as set forth in clause (6).

(8) Within six months from the issue of this Notification, or within such further period as the Governor-General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that no payment made in India by a recruiter to an emigrant to enable him to pay off debts before emigrating shall be recoverable.

(9) The Government of Ceylon shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of persons emigrating to Ceylon in accordance with this Notification.

Similar conditions have been imposed in the case of Malaya. Emigration was also permitted to Mauritius for a period of 1 year only with effect from May 1st, 1923, and limited to a number not exceeding 1,500 labourers. The terms were more onerous than in the case of nearer Colonies and the arrangement has now lapsed.

Emigration to British Guiana for the purpose of unskilled work has also been declared lawful on the terms and conditions given below, but the date from which emigration is to commence has not yet been fixed:—

Emigration to British Guiana.—Emigration to British Guiana for the purpose of unskilled work shall be lawful with effect from such date as the Governor-General in Council may with the concurrence of the Governor of British Guiana notify in the *Gazette of India* on the following terms and conditions, which shall thereupon become operative:—

(1) The family shall be the unit for the purposes of emigration. Not more than 500 families shall be permitted to emigrate and the number of persons included in the said 500 families shall not exceed 1,500.

(2) The emigrants shall either have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of British Guiana, or have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him.

(3) No part of the cost of his recruitment of subsistence during transport shall be recoverable from any emigrant and all expenses in this connection shall be borne by the Government of British Guiana or met from funds at their disposal.

(4) The Government of British Guiana shall, at any time when so desired by the Governor General in Council, admit and give all facilities to an Agent appointed under section 7 of the Act.

(5) If at any time there is no Agent appointed under section 7 of the Act, or if the Agent is absent or unable to perform his duties, the Government of British Guiana shall at the request of the Governor-General in Council appoint a person to perform temporarily the duties of the Agent.

(6) Prior to the arrival of the emigrants a Settlement Commission shall be appointed in British Guiana to select and prepare suitable agricultural land for the emigrants and generally to supervise their employment. The Agent referred to in clause (4) shall, on appointment, be a member of such Commission.

(7) The Government of British Guiana shall offer to each family for its separate enjoyment a holding comprising not less than five acres of suitable agricultural land prepared for cultivation on the terms hereinafter set out in a locality which shall be healthy and shall have an adequate supply of good drinking water. All expenses in connection with the preparation of the holdings shall be borne by the Government of British Guiana and shall in no case be recoverable from an emigrant.

The annual rent of the holding shall be fixed by the Settlement Commission at a rate not exceeding the lowest rate paid in the locality.

After an emigrant has been in occupation of a holding for three years, he shall, provided that he has cultivated a portion of the holding either by himself or through some member of his family, be entitled to a grant of the holding on payment at any time during the ensuing four years of such fees not exceeding 24 dollars as may be fixed by the Settlement Commission.

On the expiry of seven years from the date of the commencement of his occupation of a holding an emigrant shall acquire absolute ownership in the holding provided that he has paid the rent and fees referred to in the foregoing paragraphs of this clause and has brought under cultivation either by himself or by some member of his family half the area of his holding.

(8) An emigrant on arrival in British Guiana shall be housed and maintained without charge by the Government of British Guiana for at least one month.

(9) If any emigrant so requires loans shall be made to him for maintenance, house accommodation, payment of rent and for agricultural purposes generally. Free medical assistance and free skilled supervision shall be provided.

(10) Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of 7 years from the date of his arrival in British Guiana.

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 3 and not more than 5 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of half of the cost of his passage from his residence in India to British Guiana.

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 5 and not more than 7 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of quarter of the cost of his passage from his residence in India to British Guiana.

(11) Notwithstanding anything contained in the last preceding clause the Government of British Guiana on the request of an Agent appointed under section 7 of the Act shall repatriate at its own expense and without any payment by or on behalf of the emigrant to the place of his former residence in India any emigrant at any time after his arrival in British Guiana.

(12) An emigrant shall be at liberty at any time after his arrival in British Guiana to take up work or employment other than or in addition to the cultivation of a holding on lease from the Settlement Commission.

(13) The ordinance enjoining compulsory education in British Guiana shall be enforced to the same extent in the case of Indian children as in the case of children belonging to other communities.

(14) Boards of arbitration in regard to wages shall be established before the arrival of the emigrants and Indians shall be adequately represented on such boards.

(15) Any Indian who has emigrated to British Guiana before the date of this notification and under any agreement in force at the date of this notification is entitled to an assisted return passage to India shall not be required to pay more than 25 per cent. of the excess in the cost of his return passage and clothing over the cost of such passage and clothing at the time of his first arrival in the colony.

(16) Any Indian who has emigrated to British Guiana before the date of this notification and has at the date of this notification become or thereafter becomes destitute shall be entitled to be repatriated to India at the expense of the Government of British Guiana without being further required to prove that he has become incapable of labour.

(17) The Government of British Guiana shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of the persons emigrating to the Colony in accordance with this notification.

Admission of Indians to Other Parts of the Empire.—On the motion of the Government of India this question was discussed at the Imperial War Conferences, 1917 and 1918, and the policy accepted by the self-governing dominions and the British Government was embodied in the following resolutions:—

"(1) It is an inherent function of the Governments of the several communities of the British Commonwealth including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities.

"(2) British citizens domiciled in any British country, including India, should be admitted into any other British country for visits, for the purpose of pleasure or commerce, including temporary residence for the purpose of education; such right shall not extend to a visit or temporary residence for labour purposes or to permanent settlement.

"(3) Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition: (*a*) That not more than one wife and her children shall be admitted for each such Indian; and (*b*) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian."

The first paragraph of this resolution has regularized the various restrictions on immigration which the self-governing dominions have, from time to time, adopted and which, without expressly differentiating against Indians are in practice used in order to check Indian immigration, the objections to which are stated to be not racial or political but economic. Australia prohibits the entry of any person who fails to pass a dictation test of not less than 50 words in any prescribed language. New Zealand prohibits the entry of any person who has not received in advance a permit from the Dominion Government which is refused to any person regarded as unsuitable to settle in the country. South Africa prohibits the entry of any person deemed by the Minister of the Interior on economic grounds or on account of his standard or habits of life to be unsuited to the requirements of the Union. Canada prohibits the landing of any person who has come to the Dominion otherwise than by continuous journey from the country of which he is a native and unless he possesses in his own right 250 dollars. Newfoundland and the Irish Free State impose no restrictions. All the self-governing Dominions have adopted special exemptions in favour of students, tourists and merchants visiting the countries for the temporary purposes of commerce, pleasure, or education. India on its side has assumed power to regulate the admission of immigrants from any other part of the Empire or foreign countries, by means of passports. A bill has also been passed by the Indian Legislature empowering the Government of India to make rules "for the purpose of securing that persons not being of Indian origin, domiciled in any British possession, shall have no greater rights and privileges as regards entry into and residence in British India, than are accorded by the law and administration of such possession to persons of Indian domicile." With regard to the Crown colonies and protectorates, the attitude of the Indian Government is that there is no justification for placing any restrictions on the immigration of British Indians, which are not placed on other classes of British subjects, and this principle has in practice been observed by the Colonial Office except in the case of Kenya colony where, as stated hereafter, the British Government has reserved to itself the right to impose restrictions on the immigration of classes of people whose entry into the colony may have an adverse effect on the economic evolution of the indigenous population.

Rights and Disabilities of Indians Lawfully Domiciled Overseas.—The policy of the Empire is summed up in the resolution of the Imperial Conference, 1921, which was recorded in the following terms:—

"This Conference reaffirms that each Community of the British Commonwealth should enjoy complete control over the composition of its own population by restricting immigration from any of the other communities, but recognises that there is incongruity between the position of India, as an equal member of the Empire, and the existence of disabilities upon British Indians lawfully domiciled in some parts of the Empire, and this Conference, therefore, is of opinion that in the interests of the solidarity of the Commonwealth it is desirable that the rights of such Indians to citizenship should be recognised."

"The representatives of South Africa regret their inability to accept this resolution in view of the exceptional circumstances of the greater part of the Union. The representatives of India while appreciating the acceptance of this resolution, nevertheless feel bound to record their profound concern at the position of Indians in South Africa and hope that by negotiations between India and South Africa a way can be found as soon as may be to reach a more satisfactory position."

The Right Hon'ble Srinivasa Sastri visited the Dominions of Australia, Canada, and New Zealand in the course of 1922 as the emissary of the Government of India to assist them in giving effect to this resolution. The main object of his mission was to appeal to the Governments and public of Canada and Australia fully to enfranchise qualified domiciled Indians. In Australia, Indians resident in Queensland and Western Australia have neither the provincial nor the federal franchise. In Canada, Indians resident in British Columbia are excluded from the dominion as well as the provincial franchise. While successful in securing a more sympathetic atmosphere towards Indians, he failed to bring about any modification in the existing electoral laws.

The question of giving effect to this resolution of 1921 was raised by the Indian representatives at the Imperial Conference, 1923. Their proposal was as follows:—

"Let the Dominion Governments who have an Indian population, let His Majesty's Government in the areas under their direct control, such as Kenya, Uganda, Fiji and other places where there are Indians resident, appoint Committees to confer with a Committee which the Government of India will send from India and explore the avenues of how best and how soonest the principle of equality implicit in the 1921 Resolution may be implemented."

This proposal was favourably received by the Dominion Premiers, excluding General Smuts; and by the Secretary of State for the Colonies who cordially agreed that there should be full consultation and discussions between him and a Committee appointed by the Government of India upon all questions affecting British Indians domiciled in British Colonies and protectorates and mandated territories. In pursuance of the proposal, the Government of India appointed a Committee in March 1924 composed of Mr. J. Hope Simpson, M.P., *Chairman*, H. H. the Aga Khan, Sir B. Robertson, Diwan Bahadur T. Rangachariar, M.L.A., and Mr. K. C. Roy with Mr. R. B. Ewbank, C.I.E., I.C.S., as Secretary to make representations to the Colonial Office on certain outstanding questions affecting Indians in Kenya and Fiji. The Committee assembled in London early in April 1924 and dispersed towards the end of July. During this period they had several interviews with the Secretary of State for the Colonies and the officials of the Colonial Office, in which they made representations upon a variety of important matters affecting Indians in Kenya, in Fiji and

in the mandated territory of Tanganyika. In regard to Kenya, the representations covered all questions of interest to India dealt with in the decision of His Majesty's Government. The result of these representations was announced by Mr. J. H. Thomas in the House of Commons on August 7th, 1924. The situation in Kenya also improved as a result of the work of the committee by the decision of the Indian community to relinquish their former attitude of non-co-operation and to accept an arrangement by which they will select five members to be nominated by the Governor to the Legislative Council. The result of the representations which the Committee made on certain outstanding questions relating to Indians in Fiji was announced on January 12th, 1927, when the Government of India published the more important papers relating to the negotiations which had been going on with the Colonial Office for some time.

Summary of present Position.—Outside Australia, N. Zealand and Canada the position stands as follows :—.

(1) **South Africa.**—The main grievances of Indians, which led to a passive resistance movement headed by Mr. Gandhi, were settled by the compromise embodied in the Indians Relief Act, 1914 and by the guarantee known as the Smuts-Gandhi agreement. The substance of this agreement is embodied in the following extracts from letters :—

(i) Mr. Gorges, Secretary for the Interior, to Mr. Gandhi, June 30th, 1914: "With regard to the administration of existing laws, the Minister desires me to say that it always has been, and will continue to be, the desire of the Government to see that they are administered in a just manner and with due regard to vested rights."

(ii) Mr. Gandhi to Mr. Gorges, July 7th, 1914:

"By vested rights I understand the right of an Indian and his successors to live and trade in the township in which he was living and trading, no matter how often he shifts his residence or business from place to place in the same township."

This has been officially interpreted to mean "that the vested rights of those Indians who were then living and trading in townships, whether in contravention of the law or not should be respected."

In 1920 an Asiatic Enquiry Commission was appointed to investigate the grivances of Indians regarding their rights to trade and hold land in the Union. Their main recommendations were as follows :—.

(1) Law 3 of 1885 (Transvaal), the Gold Law of the Transvaal (Act No. 35 of 1908) and Act No. 37 of 1919 should not be repealed.

(2) There should be no compulsory repatriation of Asiatics; but

(3) Voluntary repatriation should be encouraged.

(4) There should be no compulsory segregation of Asiatics; but

(5) A system of voluntary separation should be introduced under which municipalities should have the right, subject to certain conditions —

(*a*) to lay out residential areas for Asiatics;

(*b*) to set aside certain streets or portions of the town for Asiatic traders to which existing license holders should gradually be attracted.

(6) These areas should be selected and allocated by a board of independent persons in consultation with the Municipal Council and Asiatic community.

(7) In Natal the right of Asiatics to acquire and own land for farming or agricultural purposes, outside townships, should be confined to the coast belt, say, 20 to 30 miles inland.

(8) A uniform "License Law" applicable to all the Provinces of the Union should, be possible, be enacted. If that is impracticable, the law relating to the issue of Trade Licenses in the Cape Province, the Transvaal and Natal should be assimilated in a comprehensive consolidating Act of Parliament providing, *inter alia*:—

(*a*) That the granting of all licenses to trade (not being liquor licenses) shall be entrusted to municipal bodies within the area of their jurisdiction; outside those areas, to divisional Councils in the Cape Province, and in the other Provinces to special Licensing Officers appointed by the Administrator.

(*b*) The grounds upon which an application for the grant of a new license may be refused.

(*c*) That the reasons for the refusal to grant any license shall be recorded, together with any evidence tendered for or against the application.

(*d*) That, in the case of the refusal of a license on the ground that the applicant is not a fit and proper person to hold the same or to carry on the proposed business, there shall be a final appeal to a Special Appeal Board, appointed by the Administrator.

(*e*) That municipal bodies shall have the right to prohibit the license holder, or any other person, from residing in any shop, store or other place of business.

(9) There should be no relaxation in the enforcement of the Immigration Laws, and more active steps should be taken to deal with prohibited immigrants who have evaded the provisions of those laws.

(10) The administration of the Asiatic policy of the Government should be placed in the hands of one official, under whose charge would come all administrative functions, together with the official records relating to Asiatics. This officer should also be entrusted with the duty of securing full statistics regarding Asiatics in the Union and of the arrivals in and departures from South Africa. Details of all applications for trade licenses, and transactions in connection with the purchase of land and property made by Asiatics throughout the Union, should be sent to him in order to ensure the enforcement of the provisions of Section 8 of Act 22 of 1913.

On the other hand, he should keep in close touch with the various sections of the Indian community, see that the laws are applied in a just manner, give a ready ear to any complaints or grievances and generally safe-guard their interests.

From the above it will be observed that the Commission recommended the retention of a law prohibiting the ownership of land by Asiatics in the Transvaal, and another of its recommendations, threatened the right which Indians had previously enjoyed of acquiring and owning land in the Uplands of Natal. Against this latter proposal the Government of India earnestly protested, but it was not accepted by the Union Government.

Present Position.—Indians enjoy both the political and municipal franchise only in the Cape Province and the municipal franchise only in Natal. In the remaining two provinces they are not enfranchised. They are subjected to differential treatment in the matter of trading licenses, specially in the Transvaal. Their immigration into the Union is barred and severe restrictions exist on inter-provincial migration. In the Transvaal they are not allowed to acquire immovable property outside locations and on the Witwatersrand they are subject to the restrictions of the Gold Law.

The anti-Asiatic party have made several efforts, especially in Natal, further to curtail the rights of Indians. Some of these are merely irritating social disabilities, such as railway regulations debarring Indians from travelling in any other carriages except those reserved for them, and similar rules restricting their use of tramways at Durban, and excluding them from race courses and betting club rooms. Examples of recent anti-Asiatic legislation of major importance are:

(*a*) The Natal Rural Dealers Licensing Ordinance, transferring the power of granting trading licenses from the Licensing Officer to an elected Licensing Board, on which Indians may not sit.

(*b*) The Durban Land Alienation Ordinance. This Ordinance, which enables Municipalities in selling land to assign it for particular communities, and to that extent to secure segregation, has been allowed on condition that Asiatics are given reasonable opportunity for acquiring adequate residential sites.

Anti-Asiatic feeling in South Africa.—A bill for the segregation of Asiatics known as the Class Areas Bill was introduced in the Union Assembly in March 1924, which though not specifically directed against Indians, contained provisions which could be used for the compulsory segregation of all Asiatics in certain areas. Indian opinion was deeply agitated over the prospect of this legislation which it was apprehended might in the existing state of public opinion in South Africa result in the economic ruin of a large number of Indian traders in the Union. In response to the vigorous protests made by the Government of India the Union Government gave an assurance that it was their desire and intention to apply the measure if it became law in a spirit of fairness to the interests and reasonable requirements of resident Indians. The Government of India whilst welcoming the assurance were unable to rest satisfied with this position and made every effort to persuade the Union Government to abandon the project. For the moment they have succeeded, as in consequence of the unexpected dissolution of the South African Parliament the bill has lapsed.

In Natal an Ordinance was introduced in the Provincial Council in 1921 dealing with the township franchise to the detriment of the Indian community. It was again introduced in 1922 and in a modified form in 1923 but in each instance the Union Government withheld its approval. In 1923, the Union Government itself introduced a measure entitled "The Class Areas Bill," containing provisions which could be used in urban areas for the compulsory segregation of Asiatics. Indian opinion was deeply exercised over the prospects of this legislation, despite the assurance of the Union Government that it desired to apply the measure in a spirit of fairness to the interests and reasonable requirements of Indian residents. But in consequence of the unexpected dissolution of the South African House of Assembly in April, 1924, the Bill lapsed. Towards the end of December 1924, news was received that the Government of South Africa had given its consent to the Natal Borough Ordinance. This measure while safeguarding the rights of Indians already on the electoral roll of Boroughs, prevents further enrolment of Indians as burgesses. Similarly the Natal Township Franchise Ordinance (No. 3 of 1925) was passed to or to render Indians ineligible for Township Franchise in future. Further, towards the end of January 1925, news was received that the Union Government had gazetted a Bill to amend the Mines and Works Act in order to take powers to refuse certificates of competency to natives or Asiatics in certain occupations. The Government of India made suitable representations in the matter to the Union Government and the Select Committee to which the measure was referred altered its wording so as not to refer to Asiatics and natives directly. The Bill as amended by the Select Committee was passed by the Union Assembly but rejected by the Senate. In January 1926 it was reintroduced and in May it was adopted in a joint Session of the Senate and the Assembly, by eighty-three votes to sixty-seven. In reply to representations made by the Government of India they were informed that there was no present intention on the part of the Union Government of extending regulations beyond the position as it existed prior to the judgment of the Transvaal Provincial Division of the Supreme Court in the case Rex *versus* Hildick Smith when it was held that certain regulations with reference to mines and works which have actually been in force in the Union of South Africa since 1911 and in certain provinces for many years before that date were not valid under sections of the Act in terms of which they were promulgated. The Government of India were have assured that should any such extension of the scope of these regulations be contemplated in future every reasonable opportunity will be given to all the parties in the Union interested in the matter to make representations.

In July 1925, a more comprehensive Bill, known as the Areas Reservation and Immigration and Registration (Further Provision) Bill, was introduced in the Union Assembly. The Government of India made effective representations against the provisions of this Bill both on grounds of principle as well as of detail.

Deputation to S. Africa.

Towards the end of November 1925, the Government of India, with the concurrence of the Government of South Africa, sent a deputation to South Africa, the personnel of which was as follows :—

G. F. Paddison, Esq., C.S.I., I.C.S., Commissioner of Labour, Madras—*Leader.*
Hon'ble Syed Raza Ali, M.C.S.—*Member.*
Sir Deva Prasad Sarvadhikary, Kt., C.I.E.—*Member.*

G. S. Bajpai, Esq., C.B.E., I.C.S.—*Secretary.*

The main purpose of the deputation was to collect as soon as possible first-hand information regarding the economic condition and general position of the resident Indian community in South Africa and to form an appreciation of the wishes and requirements of the Indian community in South Africa. This deputation was followed by a return visit to India of a Parliamentary deputation from the Union Government of which the following were members :—

The Hon'ble F. W. Beyers, Minister of Mines and Industries, Patrick Duncan, K.C., C.M.G., Messrs. A. C. Fordom, J. S. Marwick, G. Reyburn, O. S. Vermooten, W. H. Rood, and J. R. Hartshorne. As a result of the investigations of these deputations, the Government of India and of the Union arranged for a meeting in the Union of a further delegation from India to explore every possible avenue, in order to arrive at a satisfactory solution of the Indian problem.

The Indian delegation whose members were : Sir Muhammad Habibullah, the Hon'ble Sir Phiroze Sethna, Sir Darcy Lindsay, Sir G. S. Paddison, the Rt. Hon'ble Srinivasa Sastri, Mr. G. L. Corbett and Mr. G. S. Bajpai, assembled in Conference with the Parliamentary deputation in Cape Town on the 17th December 1926. At the Session which lasted until the 11th January 1927, the contentions differences were discussed by the delegates freely and openly and in a spirit of determination to find a satisfactory solution of the outstanding difficulties. At the close of the Conference the delegates were therefore able to recommend the following articles, which were unhasitatingly approved of by the respective Governments, as a basis of agreement :—

(1) Both Governments reaffirm their recognition of the right of South Africa to use all just and legitimate means for the maintenance of Western Standard of life.

(2) The Union Government recognize that Indians domiciled in the Union, who are prepared to conform to Western Standards of life, should be enabled to do so.

(3) For these Indians in the Union who may desire to avail themselves of it, the Union Government will organise a scheme of assisted emigration to India or other countries where western standards are not required. Union domicile will be lost after three years' continuous absence from the Union in agreement with the proposed revision of the law relating to domicile, which will be of general application. Emigrants under the assisted Emigration Scheme, who desire to return to the Union within the three years, will be allowed to do so only on refund to the Union Government of the cost of the assistance received by them.

(4) The Government of India recognise their obligation to look after such emigrants on their arrival in India.

(5) The admission into the Union of the wives and minor children of Indians permanently domiciled in the Union will be regulated by paragraph 3 of Resolution XXI of the Imperial Conference of 1918.

(6) In the expectation that the difficulties with which the Union has been confronted will be materially lessened by the agreement which has now happily been reached between the two Governments and in order that the agreement may come into operation under the most favourable auspices and have a fair trial, the Government of the Union of South Africa have decided not to proceed further with Areas Reservation, Immigration and Registration (Further Provision) Bill.

(7) The two Governments have agreed to watch the working of the agreement now reached and to exchange views from time to time as to any changes that experience may suggest.

(8) The Government of the Union of South Africa have requested the Government of India to appoint an Agent in the Union in order to secure continuous and effective co-operation between the two Governments.

In India, the settlement was on the whole well-received. In South Africa the more responsible newspapers, both English and Dutch, *e.g.*, the "Cape Times" and "Die Burger," paid handsome tributes to both delegations for the statesmanship which they had brought to bear on their work, and the eminently reasonable and practical character of the results achieved by them. The majority of people in both countries doubtless regard it as a good first step in the solution of a complicated problem and the spirit, of which it is the outcome, as the best guarantee of a progressive and friendly adjustment honourable to both parties.

The friendly relations which were happily established between the Government of India and the Union Government of South Africa as a result of the agreement not only continue but have grown in warmth and sincerity. The Government of India sent out as their first Agent in South Africa the Right Hon'ble Srinivasa Sastri, P.C., who was a member of the Government of India's Delegation to the Cape Town Conference. His appointment

was received with universal approval both in India and South Africa, the satisfaction felt by the Union Government being indicated by their decision, as an act of grace to make his appointment, to extend an amnesty to all Indians illegally present in the Union. On their part the Union Government after the ratification of the Agreement by the two Governments, lost no time in introducing legislation to give effect to their undertakings under it, so that when Mr. Sastri arrived in South Africa in June 1927 all that remained to be done was to take action under Part III of the Agreement relating to the measures required for the upliftment of the Indian community. Most of the provisions of this part concern the Province of Natal where the bulk of the Indian population of the Union is resident, and the Union Government were not slow in moving the Provincial Administration to appoint a Commission to enquire into the condition of Indian education in that province and to devise the means necessary for its improvement. Co-operation with this Commission on the part of the Government of India was provided by the Deputation from India of two educational experts—Mr. K. P. Kichlu, I.E.S., Deputy Director of Education in the United Provinces, and Miss C. Gordon, B.E. (Edin.), Madras Educational Service, Lecturer in Kindergarten methods at the Government Training College at Saidapet, to advise and assist the Commission in its investigations and deliberations.

A notable feature of the present situation was the marked spirit of friendliness and goodwill which now animates the Union Government in dealing with all problems affecting the domiciled Indian community. An example of this occurred in the year 1927 when a measure was introduced in the Union Parliament known as the Liquor Bill, clause 104 of which purported to prohibit the employment of Indians on any licensed premises—hotels, clubs, breweries, etc. The appearance of this clause, which threatened the livelihood of 3,000 Indians engaged in such occupations, caused consternation among them and the Minister in charge decided to withdraw the clause from the scope of the Bill.

Much of the credit for the salutary measures referred to and the spirit of friendliness which they denote were due to the Right Hon'ble Mr. Sastri, the Agent of the Government of India in South Africa, whose tact and honesty earned for him the confidence of the European community, official and non-official alike and an increasing measure of their sympathy and assistance in furtherance of the Indian cause. Gratifying response was made by the Indians to this appeal for £20,000 for the purpose of opening a combined Teachers' Training and High School in Durban, an institution which is likely to meet an urgent need and considerably ease the problem of Indian education in the province. In India the Government of India have appointed officers to look after repatriates and their personal property immediately upon their return from South Africa, to arrange for their despatch to their homes and, if possible, to find them employment for which they may be suited.

Early in 1929, the Rt. Hon. V. S. Srinivasa Sastri retired on the expiration of his period of appointment, and Sir Kurma Venkata Reddi, Kt., was chosen as his successor. In December 1929, sudden and serious illness compelled Sir Kurma Reddi to return to India on sick leave. During the time he has held his post, Sir Kurma has amply justified his selection to this important office.

(2) **Kenya Colony.**—The grievances of Indians domiciled in this Colony are fully set forth in the published despatch of the Government of India, dated October 21st, 1920. The controversy centred round the following points:—

(*a*) FRANCHISE.—Indians have not the elective franchise. The Government of India proposed that there should be a common electoral roll and a common franchise on a reasonable property basis *plus* an educational test, without racial discrimination for all British subjects.

(*b*) SEGREGATION.—Professor Simpson who was sent to East Africa to report on Sanitary matters, recommended segregation on sanitary grounds. The Government of India objected, firstly, that it was impracticable; secondly, that it was commercially inconvenient; and thirdly, that Indians are in practice unfairly treated in the allocation of sites.

(*c*) THE HIGHLANDS.—Lord Elgin decided in 1908 that as a matter of administrative convenience grants of land in the upland area should not be made to Indians. The whole area has now been given out, and the Government of India claim that there is no land left to which Lord Elgin's decision applies. This decision has now, however, been extended so as to prohibit the transfer of land in the uplands to non-Europeans.

(*d*) IMMIGRATION—Suggestions have been put forward for restricting Asiatic immigration into Kenya. The Government of India claim that there is no case for restricting Indian immigration and that such restrictions would be in principle indefensible.

THE SETTLEMENT.—The decisions of the British Government were contained in a White Paper presented to Parliament in July 1923. It was held that the guiding principle should be that "the interests of the African native must be paramount," and in light of this it was decided:—

(*a*) FRANCHISE.—A communal franchise was adopted with 11 seats for elected Europeans, 5 elected Indians, one nominated Arab, one missionary representing the Africans, and a nominated official majority. One Indian is also appointed on the Governor's Executive Council.

(*b*) SEGREGATION.—The policy of segregation as between Europeans and Asiatics is abandoned.

(*c*) THE HIGHLANDS.—The existing practice is maintained both as regards initial grants of land and transfers. A similar reservation in the low lands is offered to Indians.

(*d*) IMMIGRATION.—Racial discrimination in immigration regulations is rejected. But in the economic interests of the Africans, further control over immigration is necessary. Some arrangement is required for securing a strictly

impartial examination of applications for entry into Kenya. The Governors of Kenya and Uganda have been instructed to submit joint proposals for legislation.

The Government of India reviewed their decisions in a resolution published on August 18th, 1923, and recorded " their deep regret that His Majesty's Government did not feel justified in giving greater effect to the recommendations made by them " and reserved liberty to reopen the case on a suitable opportunity. They stated their intention of making representations regarding the action to be taken to implement these decisions, particularly in the matter of the Immigration regulations.

Following upon the Kenya award statutory action was taken by the local administration on the franchise question. Adult sufferage on communal lines was conferred upon Indians. As regards immigration, the Government of India took the opportunity to urge the postponement of the bill giving effect to the decision of His Majesty's Government until such time as the Committee proposed by their representatives at the Imperial conference in 1923 had an opportunity of examining the question of the restrictions therein embodied. Accordingly the introduction of the bill was postponed at the instance of the Colonial Secretary. The Government of Kenya was also asked by His Majesty's Government for an explanatory statement regarding the method proposed for the administration of immigration measures. The Government of India received an assurance from the Colonial Secretary that ample opportunities would be afforded for the expression of their views; and that earnest attention would be given to any representation which their Committee desired to make. As has already been stated such a Committee was appointed in March 1924. The following statement made by the Secretary of State for the Colonies in the House of Commons on 7th August 1924 shows the result of the representation made by the Colonies Committee :—

"(1) IMMIGRATION.—My position is that if danger ever arises of such an influx of immigrants, of whatever class, race, nationality or character, as may likely be prejudicial to the economic interest of the natives, I hold myself entirely free to take any action which may be necessary. Conflicting statistics which have been laid before me have not enabled me to reach a definite conclusion as regards the extent of net Indian immigration. Accordingly steps will be taken to create a statistical department to obtain accurate information with regard to persons of all races arriving in or departing from Kenya. Meanwhile the Kenya Immigration Ordinance will not be enacted.

(2) FRANCHISE.—I have given careful consideration to representations in favour of a common poll, but I am not prepared to resist the conclusion already arrived at that in the special circumstances of Kenya, with four diverse communities, each of which will ultimately require electoral representation, the communal system is the best way to secure the fair representation of each and all of these communities.

(3) HIGHLANDS.—I consider that the Secretary of State for the Colonies has no alternative but to continue pledges, expressed or implied, which had been given in the past, and I can hold out no hope of the policy in regard to agricultural land in the Highlands being reconsidered.

(4) LOWLANDS.—It was proposed to reserve an area in the lowlands for agricultural immigrants from India. The Committee made it plain that it is averse from any reservation of land for any immigrant race, subject to the suggestion that before applications for land in lowland areas are invited an opportunity should be taken of sending an officer experienced in Indian settlement and agricultural methods to report on the areas. At present any consideration of the matter is in suspense pending receipt from the colony of reports from the native and agricultural points of view on the areas in question."

With regard to the announcement in connection with " Lowlands " the question of deputing an officer to examine these areas was considered by the Government of India who thought it inadvisable to proceed any further with the idea.

The work of the Colonies Committee did much to abate the bitterness which existed in the relations between the different classes of settlers in Kenya, and the situation was further improved by the decision of the Indian community to relinquish their attitude of non-co-operation and to select five members for nomination by the Governor to the Legislative Council.

In June 1924, His Majesty's Government announced the appointment of an East African Committee, under the Chairmanship of Lord Southborough, to consider and report on certain questions regarding the administration and economic development of British East African dependencies. Since this enquiry was likely to affect Indian interests, the Government of India urged that the Indian point of view should be heard before the Committee came to any conclusions. This request was granted, but further action in the matter was suspended, pending the publication of the report of the Commission presided over by Major Ormsby Gore, which visited East Africa to enquire into certain aspects of the questions referred to the Southborough Committee. The report of the Ormsby Gore Commission was published in the United Kingdom on May 7th, 1925. On June 9th, Major Ormsby Gore announced in the House of Commons that, in view of the completeness of the report presented by the Commission which, under his chairmanship, had visited East Africa, His Majesty's Government had decided that the Southborough Committee should not resume its sittings.

In November 1926, information reached the Government of India, that the Government of Kenya contemplated undertaking legislation at an early date in order to make the European and Indian communities responsible for the not cost of their education. It was originally intended to give effect to this decision by levying from Europeans a tax on domestic servants in their employ and from Indians a poll-tax. The Indian community resented this

differentiation and, ultimately, the Colonial Government decided that both communities should pay the same form of tax, *viz.*, an adult poll tax. For Europeans this has been fixed at 30 shillings and for Indians at 20 shillings. An Ordinance giving effect to this decision was passed by the Kenya Legislative Council and came into force from 1st January, 1927.

In view of the issue of another White Paper in July 1927, in which it was announced that His Majesty's Government had authorised the Secretary of State for the Colonies to send to Africa a special Commission to investigate the possibility of securing more effective co-operation between the Governments of Eastern and Central African Dependencies and make recommendations on this and cognate matters, the question regarding the position of Indians in Kenya again came to the forefront.

The announcement excited serious apprehensions in India with regard to the future position of Indians in those Colonies. A deputation drawn mainly from both houses of the Indian Legislature also waited on His Excellency the Viceroy on the 17th September, 1927, and represented the position of Indians in East Africa. One of the suggestions made by the deputation was that permission may be given for a small deputation appointed by the Government of India to go over to East Africa in order—

(*a*) to make a general survey of these territories in relation to Indian interests therein, and

(*b*) to help the resident Indian community in preparing their evidence for the Commission.

The Government of India readily accepted this suggestion and, with the approval of His Majesty's Government, sent Kunwar Maharaj Singh, C.I.E. and Mr. R. B. Ewbank, C.I.E., I.C.S., to East Africa. These officers visited Kenya, Uganda, Zanzibar and Tanganyika and their services are understood to have been greatly appreciated by the resident Indian communities. The personnel of the Commission was announced by the Secretary of State for the Colonies on November 14th, 1927, and was as follows:—The Right Hon'ble Sir Edward Hilton-Young, P.C., G.B.E., D.S.O., D.S.C., M.P. (*Chairman*), Sir Reginald Mant, K.C.I.E., C.S.I., Sir George Schuster, K.C.M.G., C.B.E., M.C., and Mr. G. H. Oldham, *Members*, with Mr. H. F. Downie, (*Secretary*). The Commission left England on December 22nd, 1927, and travelled *via* the Nile to Uganda, and thence to Kenya, Tanganyika, Zanzibar, Nyasaland, and Northern Rhodesia, visiting the chief centres and hearing the views of representatives of different sections of the community. The Commission also visited Salisbury for the purpose of conferring with the Government of Southern Rhodesia. The report of the Commission was published on the 18th January 1929.

It was examined by the Government of India in consultation with the Standing Emigration Committee of the Indian Legislature and with prominent representatives of all Parties in the Legislative Assembly, who were not members of the Committee. The tentative conclusions reached by Government on the main recommendations in the Report were set out in a telegram to the Secretary of State for India of the 19th March 1929, which was published in India in September 1929.

In March 1929, the Secretary of State for the Colonies sent out Sir Samuel Wilson, under Secretary of State for the Colonies, to East Africa to discuss the recommendations of the Hilton Young Commission for the closer union of Kenya, Tanganyika and Uganda (and such possible modification of these proposals for effecting the object in view as may appear desirable) with the Governments concerned and also with any bodies or individuals representing the various interests and communities affected, with a view to seeing how far it may be possible to find a basis of general agreement. Sir Samuel was also directed to ascertain on what lines a scheme for closer union would be administratively workable and otherwise acceptable and to report the outcome of his consultations. At the invitation of the Secretary of State for the Colonies, the Government of India deputed the Rt. Hon. V.S. Srinivasa Sastri, P.C., to East Africa to help the local Indian communities to state their views to Sir Samuel Wilson on matters arising out of the Hilton Young Commission's Report and to be at Sir Samuel Wilson's disposal, if he wished to make use of him in dealing with the Indian deputations.

In September 1929, the Indian Delegation from E. Africa was received by Sir Fasl-i-Husain, Member in charge of the Education, Health and Land Department of the Government of India at Simla. The delegation was represented by Mr. J. B. Pandya, Mr. C. P. Dala and Mr. Iswardas from E. Africa and Pt. H. N. Kunzru and Sir Purshotamdas Thakurdas, M.L.A.s, Sir Frank Noyce, Secretary, and Mr. A. B. Reid, Joint Secretary in the E. H. L. Department were also present.

Sir Fazl-i-Husain welcomed the delegation and requested them to tell him in what matter they wished the Government of India to help them. The delegation stated the views of the Indian Communities in E. Africa on the matters arising out of the Hilton Young Commission's Report which in their judgment most vitally affected Indian interests. The statement made by the delegation related principally to the question of common franchise in Kenya, the representation of the natives of the country on the Council, the Federation of the several territories in E. Africa along the lines suggested in the report, the reservation of land in Kenya for the settlement of Indians, the residential segregation of Indians in Kenya, the appointment of an Indian Trade Commissioner in East Africa, the improvement of educational facilities for Indians in East Africa, the appointment of Indians in the higher public services there and the better political representation of Indian interests in Uganda and Tanganyika. The delegation also requested the Government of India to nominate a representative to accompany the Deputation which they propose to send to London shortly to put the Indian case before His Majesty's Government before they pass any orders on the Hilton Young Commission's Report.

Sir Fazl-i-Husain thanked the delegation for their interesting statement, but said that, before he could make any statement on the attitude of

the Government of India in regard to the points advanced by the delegation or reply to their request for the nomination by the Government of India, of a representative to accompany the proposed deputation to London, he would like the members of the delegation to attend the meeting which the Government of India had arranged to hold upon the 14th September, with leading members of the Legislature and the Standing Emigration Committee, so that the latter might have the advantage of hearing the delegation themselves before they advised the Government of India upon the situation. The delegation expressed their readiness to attend the meeting and then withdrew.

Thereafter meetings of the Standing Emigration Committee were held and the decision arrived at by the Government of India was communicated to His Majesty's Government.

The report of Sir Samuel Wilson was published on the 5th October 1929. Another meeting of the Standing Emigration Committee was held soon thereafter to consider the report and a further communication was addressed to His Majesty's Government on the subject.

The question of the future Government of East Africa is now being considered by His Majesty's Government on whom the Government of India have impressed the keen interest evinced in this question by all communities in India, and the importance of having due regard in their treatment of this matter to legitimate Indian feeling.

During the year 1927, another matter which engaged Government and the public in India was the report of the local Government Commission which was appointed by the Governor of Kenya in July 1926, to make recommendations as to the establishment or extension of local Government for certain areas in the Colony :—The report of the Commission was submitted to the Governor of Kenya in February 1927. The recommendations made were numerous and so far as Indians were concerned they involved a decrease in the proportion of Indian representation on the local bodies at Nairobi and Mombasa and the creation of an European elected majority in both places. This caused resentment among Indians in the Colony and resulted in the abstention from the Legislative Council of four out of five Indian representatives. The Government of India submitted representations to His Majesty's Secretary of State for India on the subject.

(3). **Fiji and British Guiana.**—Emigration to Fiji was stopped in 1917, under Rule 16 (B) of the Defence of India (consolidated) Rules in pursuance of the general policy of stopping recruitment under the indentured system of emigration. With a view to secure if possible, a renewal of emigration to the Colony, an un-official mission composed of the Bishop of Polynesia and Mr. Rankine, Receiver-General to the Fiji Government, arrived in India in December 1919, and submitted a scheme of colonisation, which was referred to a committee of the Imperial Legislative Council on 4th February, 1920. To secure a favourable reception for the mission the Fiji Government cancelled all outstanding indentures of East Indian labourers from 2nd January, 1920, and also announced their intention to take early measures to provide for the representation of the Indian community on the Legislative Council on an elective basis by two members. In accordance with the recommendations made by the Committee the Government of India informed the mission in March 1920, that they would be willing to send a Committee to Fiji provided that the Government of Fiji and the Secretary of State for the Colonies would guarantee that "the position of the emigrants in their new home will in all respects be equal to that of any other class of His Majesty's subjects resident in Fiji." In July 1920, the Government of Fiji informed the Secretary of State for the Colonies of their willingness to give the pledge, subject to his approval. Arrangements with regard to the contemplated deputation, however, were postponed until January 1921, owing to the announcement of Lord Milner's policy in regard to Indians in Kenya, and the desirability of consulting the new Legislature in India. After consultation with the Fiji Government as to the terms of reference and personnel of the deputation, an announcement was made on the 27th June, 1921. But owing to the inability of the two Indian members Messrs. Srinivasa Sastri and Hirdaynath Kunzru, who had been nominated to join the Committee which as finally constituted consisted of Messrs. Venkatapati Raju, G. L. Corbett, Govind Sahai Sharma, and Lieutenant S. Hissam-ud-din Khan, did not reach Fiji until the end of January 1922.

The labour troubles in Fiji in the years 1920-21 had produced an unexpected result in India. The Government of Fiji cancelled the indentures of Indian labourers, as from January 1920, while arrangements were made for the early repatriation of such of them as desired to return to their own country. In consequence, large numbers left Fiji. Many arrived in India comparatively destitute ; while others, who were colonial born or whose long residence in the colonies had rendered them unfit for the old social conditions, found themselves utterly out of place—indeed foreigners—in their own country. Returned emigrants from other colonies also, being in difficulties owing to the unfavourable economic situation in India, strongly desired to return to the territories from which they had come. During the early part of 1921, from all parts of India there was a steady drift of destitute and distressed labourers in the direction of Calcutta where they hoped to find ships to take them back to the colonies in which they were certain of work and livelihood. At the earnest representation of the Fiji Government, and after full consultation with representative public men, arrangements were made to relax the emigration restriction in favour of those Indians who were born and had property in any colony, as well as of such near relations as they desired to take with them. Admirable work was done among these distressed persons by the Emigrants Friendly Service Committee which had been formed primarily to deal with the applications of repatriated Indians desirous of returning to Fiji. The Government of India gave discretion to this Committee to permit persons who could prove that they had been in Fiji to return there if they so desired. The local labour conditions stimulated the return of these unfortunate people by giving them assisted passages. The

Legislative Assembly had made a grant of £1,000 for the maintenance of these labourers, until such time as they were able to find work and settle down in India. The deputation from India left Fiji on the 3rd April, 1922, and submitted its report to the Government of India. It has not been published.

British Guiana.—The Indian population in this colony belong almost entirely to the labouring classes and their grievances are mainly economic. Towards the end of 1919, a deputation consisting of the Hon'ble Dr. J. J. Nunan, Attorney-General, and Mr. J. A. Luckhoo, a prominent Indian who was a member of the combined court, visited India to put forward a scheme for the colonisation of British Guiana by means of emigration from India. This was examined by a Committee of the Indian Legislature, which advised that a deputation be sent from India to investigate conditions on the spot. Owing to certain unforeseen circumstances it was not found possible to proceed with the proposal until 1922, when a deputation consisting of Messrs. Pillai, Keatinge and Tivary visited British Guiana. Mr. Keatinge was a former member of the Indian Civil Service who had retired from the post of Director of Agriculture, Bombay; Diwan Bahadur P. Kesava Pillai, was an elected member of the Madras Legislative Council of which he was also Vice-President; and Mr. Tivary was a member of the Servants of India Society who had done considerable amount of Social Welfare Work among the Depressed Classes in the United Provinces. The two reports of the deputation were published on the 21st of January, 1924. Towards the end of the month a deputation from the Colony of British Guiana, consisting of Sir Joseph Nunan, Kt., and the Hon. Mr. J. C. Luckhoo, K.C., arrived in India for further discussions. The Standing Emigration Committee of the Indian Legislature eventually reported that while they would be inclined to view with favour the colonization scheme put forward by the deputation, they would, before making any definite recommendation, like the Government of India to depute an officer to British Guiana to report on certain matter. Kunwar Maharaj Singh, M.A., C.I.E., Bar-at-Law, was deputed for this purpose. He proceeded to that Colony in September 1925. His report was received on February 1st, 1926, and published. He made certain criticisims and suggestions and the whole matter was thus satisfactorily settled. The colonisation scheme has not yet come into operation as the Colonial Government are not in a position at present to afford the cost which it involves.

In March 1928, following special inquiries by the Colonial Office, reports appeared in the press that a bill had been introduced in the House of Commons empowering His Majesty's Government to alter the constitution of British Guiana by Order in Council. The Government of India consulted in the matter the Standing Emigration Committee of the Indian Legislature and are now watching events.

(4) Other Parts of the Empire.—In Ceylon, Mauritius, and Malaya, the position of Indians has on the whole been satisfactory, and the matters have gone smoothly. The Government of India have now appointed their own Agents in Ceylon and Malaya. The question of the fixation of a standard minimum wage for Indian state labourers in Ceylon and Malaya has been the subject of negotiations between the Govt. of India and the Colonial Governments ever since the emigration of Indian labour to the Colonies for the purpose of unskilled work was declared lawful in 1923 under the provisions of the Indian Emigration Act, 1922. So far as Ceylon is concerned a settlement satisfactory to the Govt. of India and that of Ceylon has been arrived at, *i.e.*, the standard wage and other outstanding questions affecting the interests of the labourers and the draft legislation to give effect to it was passed by the Ceylon Legislative Council in December 1927 as "Indian Labour Ordinance No. 27 of 1927." The Standard Rates of Wages agreed upon have been introduced with effect from the 1st January 1929. In regard to Malaya, Standard Wage Rates which are considered suitable by both the Indian and Malayan Government have been introduced in certain areas and the question of their extension to the rest of Malaya is engaging attention.

In April 1924, the Government of Mauritius requested that emigration to the Colony might be continued for a further period of one year, but the Government of India in consultation with the Standing Committee on Emigration decided that consideration of the request should await the results of a local investigation. The Government of Mauritius agreed to receive an officer for the purpose and to give him all facilities; and in December, 1924, an Indian Officer of Government, Kunwar Maharaj Singh, left India to conduct the necessary inquiry.

Kunwar Maharaj Singh's report was publish- [illegible] ust 1925. The various recommendations made in the report have been commended to the consideration of the Colonial Government.

In February. 1926, the Government of India received a reply from the Colonial Government stating that they accepted the main conclusion formulated by Kunwar Maharaj Singh in regard to the renewal of emigration to Mauritius *viz.*, that no more unskilled Indian labour should be sent to Mauritius either in the immediate or near future. With regard to Kunwar Maharaj Singh's suggestions relating to other matters of interest to the Indian population now resident in the Island, the Colonial Govt. expressed their willingness to give effect to several of them.

The present position of Indians in the Dominions is that under the Canadian Dominion Election Act, Indians domicited in Canada enjoy the federal franchise in eight out of the nine provinces. In New Zealand, Indians enjoy the franchise on the same footing as all other British subjects. In Australia, a Bill was introduced in the Commonwealth Senate on the 12th June 1925, amending sub-section (5) of section 39 of the Commonwealth Electoral Act, 1918-24, by adding after the word "Asia" the words, "except British India." This measure gives the Commonwealth franchise to subjects of British India at present domiciled in Australia and is the fruition of the hopes held out by the Commonwealth Government to Mr. Sastri on the occasion of his visit to Australia in 1922. The Bill was passed by the Senate and under it the Indians will enjoy both the State and Commonwealth franchise throughout, Australia

except in Queensland and in Western Australia where Indians do not enjoy the suffrage in respect of election for the Lower House. By Acts which have recently been passed by the Commonwealth Parliament, British Indians in Australia have been admitted to the benefits of Invalid and Old Age Pensions and Maternity allowances from which they were hitherto excluded as Asiatics. Old Age Pension is payable to men above 65 years of age, or above 60 years, provided such persons are of good character and have resided continously for at least 20 years. An Invalid Pension is obtainable by persons, who, being above 16 years of age and not in receipt of an Old Age Pension, have whilst in Australia, become permanently incapacitated for work by reason of an accident or by reason of being an invalid or blind, provided they have resided continously in Australia for at least five years.

Maternity allowance to the amount of £ 5 is given to a woman of every child to which she gives birth in Australia, provided the child is born alive and the woman is an inhabitant on the Commonwealth or intends to settle there. This Legislation removes the last grievance of the Indian community in Australia which was remediable by the Federal Government. In Western Australia and Queensland they are still subject to certain disabilities of which exclusion from the State franchise, is perhaps, the most important.

Indians in Great Britain.

Some seventy years have gone by since the Parsee community, in the persons of the late Dadabhai Nauroji and other members of the firm of Cama & Co., led the way in the sojourn of Indians in England for business purposes. This lead it has since maintained, though there are both Hindu and Mahommedan business men firmly established there. Nor are the professions unrepresented, for there are in London and elsewhere practising barristers, solicitors and medical men of Indian birth. The number of the latter, especially Parsees, is considerable. Three Indians (all belonging to the Parsee community) have sat in the House of Commons. Since 1910 three Indians—the late Mr. Ameer Ali, the first Lord Sinha, and Sir Binode Mitter—have served on the Judicial Committee of the Privy Council. Three Indians, are on the Secretary of State's Council. In 1919, the late Lord Sinha was the first Indian to be raised to the peerage and to be appointed a member of the Home Government. In the spring of 1923 Mr. (now Sir) Dadiba Dalal was appointed High Commissioner for India being the first Indian to hold the office. He resigned towards the end of 1924 to be succeeded by Sir Atul Chatterjee, previously a member of the Government of India. The early years of the present century saw the gathering of a new Indian element in permanent residence—that of retired officials and business men, or people of independent means who from preference or in order to have their children educated in England, leave the land of their birth and seldom if ever visit it again. Further the stream of Indian summer visitors includes wealthy people who come regularly. There is an Indian Social Club, founded in 1912, which arranges for dinners and other functions to celebrate Indian festivals. Sectionally, however, the only Indian community to be fully organised is that of the Parsis. They have an incorporated and well-endowed Parsi Association of Europe. At its centre Zoroastrian House, 11, Russell Road, West Kensington opened in 1929, includes a room devoted to ritual and ceremonial purposes, a reading room and library, and rooms for social intercourse. The Arya Bhavan, a home for orthodox Hindus visiting London was opened at 30, Belsize Park, Hampstead, in the summer of 1928. Indian business interests have been organised by the formation of the Indian Chamber of Commerce in London, with Offices at 53, New Broad Street, E.C. 2. The East India Association established in 1867, provides a non-partisan platform for the discussion of Indian problems, and exists "to promote the welfare of the inhabitants of India." The British Indian Union, 10 Grosvenor Gardens, S. W. 1, under the presidency of H. R. H. the Duke of Connaught and with Lord Reading as Chairman, is a valuable agency for promoting friendship and understanding between the people of Great Britain and India.

India House:

In March, 1930, the office of the High Commissioner for India was transferred from the inadequate premises in Grosvenor Gardens to the new India House in Aldwych, erected and furnished at a cost of £324,000. The design of this noble building, which has a frontage of about 130 ft. opposite the Waldorf Hotel, was the work of Sir Herbert Baker, A.R.A., with Dr. Oscar Faber as consulting engineer. Although expression of the Indian character of the building is mainly found in the interior, the architect has given to the details of the external elevation, by means of carving, heraldry, and symbolism an individuality that proclaims it the London house of India. Including basement and mezzanine floors, there are twelve floors in all, the available space for clerical work alone being between 50,000 and 60,000 ft. The total height from the lower level in the courtyard on the Strand side to the roof is about 100 ft.

On the ground floor there is a great hall for exhibits of the products and art wares of India. This hall is carried up two floors, the upper floor being represented by a wide gallery, and on either side of the exhibition hall there are recesses after the style of an Indian bazaar for special exhibits. From the octagonal entrance hall a great public staircase leads to a gallery round the octagonal hall on the first floor. This gallery in its turn leads to a high vaulted library and reception rooms, and the central portion of the library provides accommodation for large receptions on special occasions.

The staircase, exhibition hall, octagonal hall and library markedly express the Indian character of the building. The walls of the staircase and the halls are of red stone similar in appearance to the Agra and Delhi sandstone, carved and pierced in the geometrical patterns of the *jali* in Indian architecture. Such of the carving as could be completely separated from the structure was actually worked at New Delhi by Indian workmen from Makara marble. The use throughout of Indian hardwoods, chiefly gurgan, for flooring obviates the need for any floor covering. From basement to roof scarcely any wood of non-Indian origin was employed. For panelling and decorative purposes in all parts of the great building silver gray, koko, laurel and the beautiful dark red padouk have been used. The domes and vaults of the building were designed for effective decoration for which the services of specially selected Indian artists were obtained. The water supply is entirely independent of municipal service, being obtained from two artesian wells sunk some 460 ft. below the basement, where the central heating apparatus is installed.

The Indian Trade Commissioner and his staff are at India House, with all other departments of the Office of the High Commissioner excepting the Stores Department which is at the depot off the Thames at Belvedere Road, Lambeth.

The Students.

Under normal conditions it is the student community which constitutes the greatly preponderating element and creates an Indian problem. Its numbers multiplied ten or twelvefold in the quarter of a century before the war. After a very considerable temporary check caused by the Great War the number rapidly expanded from 1919 in spite of pressure on college accommodation. In addition to the ordinary graduate or under-graduate student, there are some youths of good family, including heirs of Indian States, admitted into our public schools, such as Eton and Harrow. There are over 300 Indians at the Inns of Court. Since the war there has been a welcome increase in the number of technical and industrial students. Altogether including technical and medical students, there are fully 2,000 young Indians (some five per cent. of them women) in London, Edinburgh, Cambridge, Oxford, Glasgow, Manchester, Birmingham, Leeds, Sheffield, Liverpool and a few other centres. London absorbs about half the total.

The Advisers.

It is well known that until a few years ago the young Indian apart from inadequately supported unofficial effort and the chance of coming under the influence of English friends of their families, were practically left to their own devices. But in April 1909 Lord Morley, created for their benefit a Bureau of Information and appointed Dr. (now Sir) T. W. Arnold to the charge of it under the title of Educational Adviser. The Bureau was located at 21, Cromwell-road, together with the National Indian Association and the Northbrook Society, which were thus given spacious quarters for their social work among the young men. In India the provincial advisory committees to help and advise intending students, have been replaced in some instances by University Committees. The work of the Bureau rapidly expanded, and in consequence Lord Crewe in 1912 re-organised the arrangements under the general charge of a Secretary for Indian students, Mr. (now Sir) C. E. Mallet who resigned at the close of 1916. He was succeeded by Dr. Arnold under the designation of Educational Adviser for Indian Students to the Secretary of State. Mr. N. C. Sen followed Dr. Arnold as Local Adviser in London. At Oxford the Oriental Delegacy, and at Cambridge the Inter.-Collegiate Committee have bee instituted to deal with Oriental students generally; whilst Local Advisers for Indian students have been appointed at Manchester, Edinburgh and Glasgow.

These arrangements underwent far-reaching revision in the autumn of 1920 in connection with the setting up, under the Act of the previous year of a High Commissionership for India in the United Kingdom. The "agency work" Sir William Meyer, took over from the Secretary of State included that connected with Indian students. Sir T. W. Arnold accepted an appointment long pressed upon him as Professor of Arabic at the School of Oriental Studies, and the High Commissioner appointed Mr. N. C. Sen and Dr. Thomas Quayle at Joint Secretaries for the Education Department. The administrative work hitherto divided between the India Office and 21, Cromwell-road, was consolidated at the offices of the High Commissioner, thereby obviating a good deal of duplication of files and papers. Dr. Quayle is now Assistant Secretary in the Education Department of the Office of the High Commissioner.

The whole situation was investigated by a committee of inquiry which sat in 1921 under the chairmanship of Lord Lytton. Arrangements had been made for the Committee to continue their investigations in India in the cold weather of 1921-22, but were abandoned in consequence of the refusal of the Legislative Assembly to vote the necessary grant. This largely accounts for the somewhat tentative form of the recommendations of the unanimous report published in October 1922. The opinion was expressed that the only permanent solution of the problem is to be found in the development of education in India. Attention was invited to the diminution of the number of Indian students proceeding abroad that would result from giving effect to recommendations made for such development by previous commissions, and by the establishment of an Indian Bar. The Committee held that it should be possible to secure admission both to British universities and, subject to certain reservations, to the works of manufacturing firms in Great Britain for all Indian students competent to profit by the facilities afforded, provided that some machinery existed to ensure their distribution to the places best suited to their requirements. Subsequently a committee presided over by Sir Edward Chamier recommended the creation of Indian Bars, which should have the effect of much reducing the number of Indians going to the Inns of Court. An Act for the purpose was passed by the Indian Legislature in 1926.

The students have hosts of non-official friends and helpers and the report suggested that there should be a conference of representatives of all organisations interested in the social and intellectual welfare of young Indians in Great Britain to discuss the best means for co-ordinating their efforts. Accordingly the High Commissioner held a conference in July 1925, when plans were formulated to help to meet the needs of students more particularly in respect to suitable boarding accommodation in London: The subject had been previously discussed at a meeting of the East India Association (April 27, 1925) when a paper was read by Mr. F. H. Brown. The conference came to the conclusion that, since non-official effort admittedly does not meet the need fully the hostel and club at 21, Cromwell-Road should be maintained, more particularly to provide accommodation for new comers. A small committee with Mr. A. D. Banerjee (Warden of 21, Cromwell-Road) as Secretary was established to assist students in obtaining suitable accommodation. The increasing number of students coming from Indian States raises the question whether the time has not come for provision to be made for them on lines similar to those adopted by the Education Department of the Office of the High Commissioner. The Standing Committee of the Chamber of Princes has a skeleton organisation in London. The Mysore State opened last year an agency office at Grand Buildings, Trafalgar Square, and appointed a permanent Trade Commissioner.

Under the presidency of Lord Hawke an Indian Gymkhana Club in 1921 acquired its own sports ground at Osterley, the total cost of purchase and equipment being estimated at £15,000. Generous gifts were made by some Ruling Princes and others, particularly the Maharaja of Patiala, but further help is required. The cricket eleven of the Club has an excellent record in matches at Lords and the Oval and with suburban clubs.

A notable development of 1920 was the opening of the "Red Triangle" Shakespeare Hut in Bloomsbury, off Gower Street, as a union and hostel for Indian and Ceylonese students up to the number of 500. The hostel was removed to permanent premises 106–112, Gower-street, close to University College in the autumn of 1923. It is Indian both in conception and control, the warden and committee being responsible not to the National Council of Y. M. C. A. in London but to the Indian National Council in Calcutta. While the organization has a definitely moral and spiritual, as well as a social purpose, it is not a proselytising agency. There is a steady average of some 550 members and the hostel is exceptionally fortunate in securing the voluntary services of men and women of great distinction in many fields for the regular Sunday afternoon and other lectures. The cost of building and furnishing has been met and the question of extending the hostel accommodation is under consideration.

There has been some recent development in the matter of periodical literature devoted to India. A monthly entitled "India" pays special attention to the social side of British life in India: and Sir Albion Banerji is initiating a quarterly devoted entirely to Indian affairs. There are various political organisations connected with India.

SOCIETIES AND INSTITUTIONS IN LONDON CONNECTED WITH INDIA

BRITISH INDIAN UNION.—Promotes friendship and understanding between the two races. 10, Grosvenor Gardens, S.W. 1, *Secretary*, Major T. Moss.

CENTRAL ASIAN SOCIETY.—77, Grosvenor Street, W. 1, —*Hon. Secretaries:* Major-General Sir William Beynon, K.C.I.E., Colonel H. Stevens.

EAST INDIA ASSOCIATION.—To promote the welfare of the inhabitants of India, chiefly by lectures and discussions. 3, Victoria Street, S.W., 1, *Hon. Secretary:* F. H. Brown, C.I.E.

INDIA SOCIETY.—(The study of the arts and letters of India), 3, Victoria Street, S.W., 1, *Hon. Secretary:* F. J. P. Richter, M.A.

INDIAN STUDENTS UNION AND HOSTEL.—112, Gower Street, W.C. 1, *Chairman:* Dr. Edwyn Bevan.

INDIAN CHAMBER OF COMMERCE IN GREAT BRITAIN.—85, Gracechurch Street, E.C., 3. *Hon. Secretary:* R. J. Udani.

INDO-BRITISH MUTUAL WELFARE LEAGUE.—*Joint Hon. Secretaries:* Mrs. Hannah Sen and Mrs. C. Hegler (53, Elsworthy Road, N.W. 3.)

INDIAN GYMKHANA CLUB.—Thornbury Avenue, Osterley. To promote the physical wellbeing of Indian students. *Secretary:* Captain W. R. B. Berry, 10, King's Bench Walk, Temple E.C. 4.

NATIONAL INDIAN ASSOCIATION.—(Chiefly aims to promote the welfare of students) 21, Cromwell Road, S.W. 7, *Secretary:* Miss E. J. Beck.

NORTHBROOK SOCIETY—(Makes grants to deserving Indian students) 21, Cromwell Road, S.W. 7, *Hon. Secretary:* E. Oliver.

ROYAL ASIATIC SOCIETY.—(Research in the history and antiquities of Asia). 74, Grosvenor Street, W. 1, *Secretary:* Mrs. R. W. Frazer.

ROYAL EMPIRE SOCIETY.—(Formerly Royal Colonial Institute) Northumberland Avenue, W.C. 1. *Secretary:* George Pilcher.

ROYAL SOCIETY OF ARTS (has an Indian section before which lectures are delivered), 18 John Street, Adelphi. *Secretary:* G. K. Menzies, M.A.

ROYAL INSTITUTE OF INTERNATIONAL AFFAIRS, Chatham House, 10, St. Jame's Square, S.W. 1. *Secretary:* Stephen King Hall.

PARSEE ASSOCIATION OF EUROPE.—London, Zoroastrian House, 11, Russell Road, Olympia W. 14. *Hon Secretary:* Spittama Cama.

STUDENT CHRISTIAN MOVEMENT OF GREAT BRITAIN AND IRELAND.—*Secretary:* R. C. Mackie, Annandale, North End Road, Golders Green, N. W. 11.

VICTORIA LEAGUE.—81, Cromwell Road, S.W. 7 *Secretary:* Miss Gertrude Drayton, O.B.E.

Sport.

The year 1929 was an eventful one for Indian sport. There were one or two sensations in the sporting world which make it outstanding to say nothing of the visit of famous French tennis players which gave that game a tremendous filip all over the country. A big sensation was caused by trouble in football circles in Calcutta, trouble which very nearly resulted in a split between the European and Indian clubs which, fortunately, was avoided, though not before considerable negotiations had taken place. It arose over the suspension of a player of the Mohan Bagan club and the attitude of the supporters of that club who invaded the field during a league match. The President of the Indian Football Association strongly condemned this conduct and his remarks caused umbrage among the Indian clubs many of whom resigned their membership of the Indian Football Association. After football had been practically suspended as far as the Indian clubs were concerned, for nearly a fortnight, a settlement was arrived at and the breach healed.

Then came the Miss Ryan incident. The famous American lady player visited India for a holiday and, under pressure, agreed to play in a tournament at Delhi. Alleging that the undertaking given to her that she would not be required to play more than two matches a day had been broken she withdrew from the tournment and so the final between Miss Jenny Sandison, India's Lady champion and herself could not be played. This caused considerable disappointment in Indian tennis circles and a lot of hard things were said but fortunately nothing serious came of it.

The big event of the year.

The big event in the year was the visit of the team of French tennis stars, including Henri Cochet the Wimbledon Champion and Jacques Brugonon his partner in the doubles. Their visit gave a big filip to the game all over India and everywhere they went they were greeted with considerable enthusiasm. Their visit showed that while India has several good players she has not got one of the standard of the French stars, but many lessons will no doubt be learned from their visit and Indian tennis will accordingly be improved.

Sport in India continues to make progress from an organisation point of view. It is beginning to be realised that organised sport is the best and various sporting Associations are springing up. The Railway Athletic Association has consolidated itself during the year and it promises to do good work among the thousands of Railwaymen in this country in an athletic sense. Football, Hockey and Boxing championships have been instituted and Athletics follow in 1930. The Indian Board of Cricket Control has arranged for a visit from the M. C. C. in 1930 and they have secured recognition for Indian cricket from the Imperial Cricket authorities and it ought not to be long before Test Match status is reached.

Association Football continues to be one of the chief games in India and the main tournaments the I. F. A. Shield, the Durand, Rovers and Lahore Trades Cups, all proved very successful. The unfortunate trouble in Calcutta has already been referred to but the Indian Football Association is more firmly cemented together now than was the case before it. In Western India the game progresses and the Western India Football Association had a most successful season. There is still room however, for more ruling bodies for Association Football and signs are not wanting that they will soon come into being.

Tennis is booming all over the country, It and cricket are the two games the Indian has taken kindly to and some very excellent players have been produced. The Lawn Tennis Association however, is not as progressive as it might be but nevertheless it keeps a motherly eye on the game through out the country.

Athletics Lagging Behind.

Little progress has been made in Athletics and this is surprising as India has already sent a team to the Olympic Games. Athletic meetings are held in various parts of the country, but Athletics as a sport are not well organised in India. There is no money forthcoming for athletics and with no grounds at all where gate money can be taken, the sport relies solely on private individuals for its support. This is a most unsatisfactory state of affairs. The All India Olympic Council can do little as it has no money and it is this branch of sport which requires more attention than any other.

Rugby cannot be played for a very long period in India but during the Monsoon it is played in many parts and all the tournaments are well supported. Bombay, Calcutta and Madras are strongholds of Rugby football where great enthusiasm is shown during the season.

Rowing and Yachting are sports for the favoured few and the growth of these two branches of sport cannot be expected to be big. Golf is played everywhere and the big tournaments received splendid support. Rackets is keeping its head up but the lack of courts prevents its advancement. Amateur Boxing continues to grow and the advent of a Railway Boxing Association has strengthened this fine sport.

Cricket continues to forge ahead and the visit of another M. C. C. team is being eagerly looked forward to. The Bombay Quadrangular tournament again attracted great crowds and some splendid cricket was seen. Every Province now has its big cricket tournament and almost every District has one too. The practice however of awarding prizes for this game continues but steps are being taken everywhere to end it though it will probably be a long time before that takes place.

The Indian Turf is as popular as ever and the big owners are importing the best horses from England with the result that the standard will improve. All the big meetings during the year attracted big crowds and the Totalisator proved as popular as ever.

A summary of the chief sporting events of 1929 is given in the following pages.

Racing.

Bangalore.

The Chamiah Chetty Cup. Distance about 1 mile.—A handicap for Arab ponies.—

Mr. A. K. Kadir's Balkees (7st 61lbs.) Rankin 1

Mr. A. R. Taha's October (8st. 5lbs.) McQuade 2

Mr. Hamid Jamoor's Madha (8st. 2lbs.) Thompson 3

H. H. the Maharaja of Kolhapur's Yuvaraj (9st). A. Ckarke 4

Won by ½ a length. 2 lengths, 3 lengths. Time—1 min. 55 secs.

The R. C. T. C. Cup. Distance about 1½ miles A handicap for horses in class IV.—

Hajee Sir Ismail Sait's Killarney (9st) Howell and His Highness the Maharaja of Mysore's Theolad (9st 3lbs.) Hill .. } Dead heat 1

Mr. E. Paulle's Record (7st. 4lbs.)Japhats.. 3

Mr. J. J. Murpheys Merrilegs (9st. 3lbs.) Meekings 4

Won by a dead heat 3 lengths, 3½ lengths. Time.—2 mins. 10 4-5 secs.

The Bobbili Cup. Distance 1½ miles.—A handicap for Arabs.—

Mr. E. Hazamy's Cardinal (9st. 5lbs.) Hoyt 1

H. H. the Maharaja of Kolhapur's Friday (9st.) Clarke.. 2

Mr. J. J. Murphey's Austl (9st 5lbs.) Meekings 3

Mr. Eve's St. Andrew's Eve (8st 5lbs.) Behsman 4

Won by a neck, 2½ lengths, neck,Time—2 mins. 24 4-5 secs.

Barton Cup. Distance about 7 furlongs.—

Mr. S. Mahala's Moosaad (7st. 3lbs.) H. McQuade 1

Mr. A. C. Ardeshir's Buick (9st. 10lbs.) Howell 2

Messrs. Mohomed Jewesser and Khalid's Shallan (8st. 11b.) Aldridge 3

Mr. Habib Ismail's Sultana (9st. 4lbs) Thompson 4

Won by a head, length. Time—1 min. 39 3-5 secs.

H. H. The Yuvaraja of Mysore's Cup. Distance about 1 mile.—

A handicap for horses in Class IV. A Cup and Rs. 2,000 for the winner, Rs. 600 for the second and Rs. 400 for the third.

Messrs. Cope and Sayre's Corral (7st 11lbs.), S. Black 1

The Raja of Manipur's Plurvans (7st. 8lbs.), Alford 2

Mr. J. Murphy's Merrieledgs (9st.), S. J. Meekings 3

Messrs. Irwin and Jones' Colconda (9st.) Ringstead 4

Won by a neck, head, neck. Time—1 min. 43 2-5 secs.

Venktagiri Cup. Distance about 7 furlongs.—

Mr. J. K. Bose's Suvasini (3st 11b.), A Clarke 1

Mr. G. Bell's Sukhapala (7st 21lbs.), Wright 2

Mr. A. A. Majeed's Jayakumar (9st. 4lbs.), Howell 3

Mr. S. A. Annamalai Chettiar's Bhadra (8st 3lbs.), Hyt 4

Won by a length. Time—1min. 30 secs.

Bangalore Cup. Distance about 1¼ miles.—

M. Yoomis's Seraphenalla (7st 2lbs.) Wright .. ..

Mr. Eve's Red Rash (8st. 7lbs.), Brace .. 2

Hajee Sir Ismail Sait's Cindspear (7st. 11lbs. car. 7st 12lbs.), Howell 3

J. Carvalho's Jubilant (8st. 2lbs.)A. Clarke. 4

Won by half a length. Time—2 mins. 11 3-5 secs.

Apollo Cup. Distance about 1¼ miles.—

Mr. A. Hazamy's Ahnaf (8st. 9lbs.) Hoyt .. 1

Mr. A. C. Ardeshir's Buick (9st. 10lbs.) Howell 2

Mr. J. J. Murphy's Auhni (8st. 4lbs.) Meekings 3

Mr. A. R. Taha's White Cross (8st. 4lbs.) McQuade 4

Won by a head. Time—2 mins. 24 4-5 secs.

Murphy Cup. Distance about 6 furlongs.—

Mr. A. Walker's Lacy Primrose(9st. 2lbs.) Albridge 1

Mr. J. G. Clarke's Limp (8st. 2lbs.) Wright. 2

Mr. A. Sattar's Bath Bun (8st. 11lbs.) Bond 3

Mr. E. J. Gubbay's Pretty Ena (8st. 11b.) Howell 4

Won by half a length. Time—1 min. 17 2-5 secs.

Bombay.

The Doncaster Plate. Distance 6 furlongs.—
Messrs. Habib Esmail and N. Begmahomed's Ballybrophy (7st. 10lbs.) Dead
Fox .. .. heat 1
Mr. Vivian's Wrighley's Gun (7st. 4lbs.) Stokes 2
Mr. Kelso's Birdwood (8st. 4lbs.) Harding .. 3
Won by dead heat; head, 1 length. Time—1 min. 12 3-5 secs.

The Ayrshire Plare. Distance 1 mile, 1 furlong.—
Mr. V. Rosenthal's BrannocksTown (7st. 9lbs.) A. Behsman 1
Messrs. Heath and W. Bird's Tristan (8st. 2lbs.) Sibbritt 3
Won by ¾ length; short head; 1 length. Time.—1min. 54 1-5 secs.

The Grand Western Handicap. Distance 1¼ miles.

The Calendars.

A full Calendar will be found at the beginning of this book. Below are given details of the other Calendars in use in India.

The *Jewish* Calendar is in accordance with the system arranged A.D. 358. The Calendar dates from the Creation, which is fixed as 3,760 years and 3 months before the beginning of the Christian Era; the year is Luni-solar.

The *Mohammedan*, or era of the Hejira, dates from the day after Mahomet's flight from Mecca, which occurred on the night of July 15, 622 A.D The months are Lunar.

The *Fasli* year was derived from a combination of the Hejira and Samvat years by the order of Akbar; it is Luni-solar. The *Bengali* year seems also to have been related at one time to the Hejira, but the fact of its being Solar made it lose 11 days each year.

The *Samvat* era dates from 57 B.C., and is Luni-solar. The months are divided into two fortnights—*sudi*, or bright, and *badi*, or dark. Each fortnight contains 15 tithis, which furnish the dates of the civil days given in our calendars.

PUBLIC HOLIDAYS IN 1930.

Parsee (Shehenshahi).

Jamshedi Naoroz	March	21
Avan Jashan	April	15
Adar Jashan	May	14
Gatha Gambhars	September	5 & 6
New Year (2nd day) ..	,,	8
Khordad Sal	,,	13

Parsee (Kadmi).

MURAL PAINTINGS

OF THE

BOMBAY SCHOOL.

By

W. E. GLADSTONE SOLOMON, I.E.S.

(Director, Sir J. J. School of Art, Bombay.)

An exceptionally beautiful production, containing descriptive narratives of the School's work upto the completion of the Mural Paintings commissioned for New Delhi by the Government of India which gave opportunity for the publication of this excellent work.

Thirty full-page illustrations some of which are in full colours, reproductions of the original Mural Paintings, prepared by the Bombay School of Art, which form part of the beautiful decorations of New Delhi.

Brief studies of Indian decorative influences in the past which give a slight sketch of their effect to-day in Bombay, and the following articles "The Moghul Message of Beauty," "The Indian Art Renaissance," "Drawing the Rangoli at Diwali," and "Scenes at a Hindu Wedding in Bombay."

A MAGNIFICENT BOOK.

Price Rs. 10. **By V. P. P. Rs. 10-8.**

BABU PICHE LAL IN EUROPE.

SECOND EDITION.

BY THE AUTHOR OF "WARLIKE SNIPS AND SNAPS."

Few writers have succeeded so well in caricaturing without offence the idiosyncrasies and inconsistencies of the average Indian. Babu Piche Lal is one of the most humorously delightful figures in modern fiction. Europeans and Indians alike will find his eccentricities most entertaining.

Price : **Rs. 2.** By V.P.P. **Rs. 2-6-0.**

WORKS BY B. G. STEINHOFF.

A BOOK OF POEMS

Price : **Rs. 3.** By V.P.P. **Rs. 3-6-0**

The Temple of Devi and other Poems

Price : **Rs. 3.** By V.P.P. **Rs. 3-6-0.**

COGITATA ET VISA

Price : **Rs. 2.** By V.P.P. **Rs. 2-4-0.**

Each book contains an unusually good collection of poems possessing a delightful charm, some of which will very much appeal to students. A series worth possessing.

CRICKET AND HOW TO PLAY IT.

BY E. H. D. SEWELL, M.C.C.

A book of instruction on India's King of Games, written in an interesting style by the man who taught Jack Hobbs (the world's greatest batsman) to bat. Will be found equally interesting to beginner and accomplished player.

Cricketers and would-be cricketers read this book and acquire knowledge from one of the most successful coaches of this great game.

Price Re. 1-8. - - - By V. P. P. Rs. 1-12.

ENGINEERING, SANITATION, ETC.

THIRD EDITION.

SANITATION IN INDIA.

By The Late J. A. Turner, C.I.E., M.D., D.P.H.
Late Executive Health Officer, Bombay Municipality and
B. K. Goldsmith, M.B., D.P.H., with Contributions
By S. C. Hormusji, L.R.C.P., M.R.C.S., M.D., D.P.H.,
K. B. Shroff, L.M. & S., D.P.H., D.T.M., and
L. Godinho, L.M. & S., M.D., D.P.H.

" Although ostensibly intended for Indian students, we are certain that this work should appeal to students in every clime, for we do not think we have ever read a more comprehensive and yet at the same time eminently practical manual of sanitation. It does not consist, as do so many similar works, of clippings from ancient text books of theoretical hygiene, but it depicts sanitation in the making and as it is carried out in a region offering insuperable difficulties."—The SANITARY JOURNAL.

" The issue of a third edition of this well-known book will be welcomed by sanitarians in India. Considerable additions have been made in many sections and extensive alterations have been made in the chapters dealing with plague, tubercle, leprosy and influenza, so as to embody the latest discoveries in connection with the etiology, treatment, etc., of these diseases. Dr. Turner's book is the only one yet published on Municipal sanitation in India of any real value, and no Assistant Director of Public Health or Municipal Health Officer should be without a copy."—The PIONEER.

Price : **Rs. 15.** By V.P.P. **Rs. 16-2-0.**

"THE ILLUSTRATED WEEKLY OF INDIA" has long been acknowledged to be one of the best edited and most attractive journals in the East. Notwithstanding the high standard attained in the past, the publishers have recently introduced many new features and broadened the scope of the paper generally.

Prominence is given to Indian and other News of more than ordinary interest to India, and these together with the general News of the World are presented in a fully illustrated and most attractive way. Authoritative articles on current politics and kindred matters constitute a regular feature.

Sport and the Drama are ably dealt with by experts. The increasing activities and interests of ladies are given the fullest publicity.

Each issue contains upwards of 100 illustrations reproduced in a style comparable only with the best.

The "Illustrated Weekly" maintains its place as the recognised leading periodical of the East. It is indispensable to those whose interests centre on India and Indian affairs.

If you are not already a subscriber, fill in the attached form and forward it to us together with a remittance covering the period for which you desire to subscribe.

LITTLE PEOPLE OF INDIA.

By M. and C. ELGEE.

(Author of John's Rhymes of India.)

A beautifully produced gift book for children.

Full of delightful rhymes and containing many beautifully coloured illustrations and black and white drawings.

One of the best Gift Books ever produced for Kiddies in India.

Price Rs. 3 - - - - By V.P.P. Rs. 3-6

"ADJUSTABLE ASTRAL PLANISPHERE."

For Latitudes 40°N. to 10°. Applicable to India and Burma, and the Adjacent Colonies. Unique in design, and beautifully executed in colours; with 12" Revolving Disc. By J. C. CLANCEY, I.S.O., F.R.A.S., etc.

Price Rs. 2 only.

MONOGRAPH

on the

Religious Sects in India among the Hindus.

BY D. A. PAI, B.A.

Printed and Published under the patronage of the Municipal Corporation for the City of Bombay.

Well written and profusely illustrated with half-tone and coloured plates. This work has taken years of study to ensure accuracy in each and every detail, the result of which is this handsome book—the first of its kind.

A most interesting Book.

Price Rs. 7 - - - - By V.P.P. Rs. 7-8.

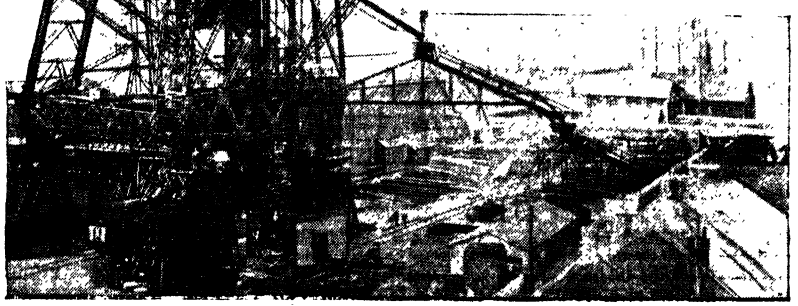
3,200,000 Tons



OF Concrete are to be mixed and laid by this and another similar tower in the construction of the huge dam across the Cauvery River in the Madras Presidency. The dam, when completed, will be the highest in the world.

There must be no question of stoppage, and as the towers, which were built by Messrs. Stothert & Pitt, Ltd., Bath, are electrically driven throughout, the question of the type of cables to be used was given special consideration. It is not surprising that the choice was "Maconite."

For absolute reliability, especially in difficult situations, let

"Maconite"
INSULATED CABLES
REGd. TRADE MARK No. 484148.

do the work. They cost no more.
